Illuminated initial letter "S" of the word *Salvus* at the opening of Psalm 68 (Vulgate; 69 according to the Masoretic text) in the Bohun Psalter, 14th century. The four scenes from the story of David are, top left, the Ark being carried up to Jerusalem (11 Sam. 6:1–15); right, Michal watches David dancing before the Ark (ibid., 16); bottom left, David reproves Michal for her criticism of him (ibid., 20–23); right, the prophet Nathan assures David of the endurance of his kingdom (11 Sam. 16). London, British Museum, EG 3277, fol. 46v.

SOM-SZ

SOMARY, FELIX (1881–1956), Austrian banker and economist. Born in Vienna, Somary began his career with the Anglo-Austrian Bank under Charles *Morawitz. During World War I he took part in the financial administration of the German-occupied part of Western Europe. From 1919 he was active as a banker in Zurich and later assisted in drafting the Young Plan designed to regulate German reparations to the Allied Powers. During World War II he was in the United States on behalf of the Swiss government and private interests.

He published his autobiography *Erinnerungen aus meinem Leben* (1955, 1959³). His many publications on international economics and finance include *Bankpolitik* (1915, 1934³); *Wandlungen der Weltwirtschaft seit dem Kriege* (1929; *Changes in the Structure of World Economics Since the War*, 1931); *Krisenwende!* (1933; *End the Crisis!* 1933).

[Joachim O. Ronall]

SOMBART, WERNER (1863–1941), German political economist and sociologist. Born in Ermsleben, Sombart acquired a reputation through his work *Der Moderne Kapitalismus* (2

vols., 1902, 1916²) in which he traced the development of capitalism from the late Middle Ages. In 1917 he was appointed professor of political economy at the University of Berlin. He wrote two works on capitalism and the Jews: *Die Juden und das Wirtschaftsleben* (1911; *The Jews and Modern Capitalism*, 1913, 1951), and *Die Zukunft der Juden* (1912) which aroused considerable controversy. In Sombart's view, the Jews were the principal cause of the disruption of the medieval economic system and its replacement by capitalism. The Jews, he held, were foreigners and came up against the hostility of the guilds which controlled the commerce of the medieval cities. Consequently they sought to break away from the restrictive economic framework of city life and, by doing so, became the pioneers of international trade. In this way they helped to lay the foundation of the capitalist system. Sombart maintained that the Jewish intellect, "concrete, stubborn, and systematic," was ideally suited to fostering a capitalist economy: "When Israel appears upon the face of Europe, the place where it appears comes to life; and when it departs, everything which had previously flourished withers away." Such statements made for

the ambivalent reception of Sombart's work among Jews at the time. Thus, while liberal Jews strongly criticized Sombart as an antisemite, others, particularly in the Zionist camp, praised him as a nonpartisan researcher and held up his theses as evidence of Jewish perseverance and as acknowledgement of the special contribution of the Jews.

Although it has been generally accepted that Jews played an important part in the early development of capitalism, Sombart's theories were generally considered to be wildly exaggerated. They provided Nazi Germany with considerable material for antisemitic propaganda, since he stressed the incompatibility of Jewish commercialism with the spirit of the "nordic farmer," and in *Deutscher Sozialismus* (1934) favored the Nazi policy of excluding Jews from German economic and cultural life.

In 1911, David Ben-Gurion translated Sombart's *Sozialismus und Soziale Bewegung im XIX Jahrhundert* into Hebrew. A Hebrew translation of Sombart's *Die Juden und das Wirtschaftsleben* was published in 1912 in Kiev by a group of young Zionists.

SOMBOR (Hung. **Zombor**), city in N.W. Yugoslavia, in the district of Bačka, province of Vojvodina; part of the Austro-Hungarian Empire until 1918. The first (registered) Jewish families came to settle in the mid-18th century. By the middle of the 19th century, a Jewish school existed where teaching was done in Hebrew and Yiddish, the use of the latter language eventually being objected to by the authorities and prohibited. The first synagogue in Sombor was erected in 1825 and the second in 1865. Among the founders of the *kehillah* was Jacob Stein. Conservative in doctrine, its first rabbi was David Kohn (d. 1884). By the end of the 19th century there were 200 Jewish taxpayers, and 650 Jews out of a total population of 25,000. The community had a *bikkur ḥolim* society and during the century the town and its *kehillah* grew considerably. In 1910 there were 1,000 Jews out of a population of 35,000, and by 1940 there were 1,200 out of 45,000 inhabitants in the city. A *talmud torah* was founded in 1925. In the 1920s and 1930s various youth and Zionist organizations opened chapters in Sombor. The last rabbi before the Holocaust was Michael Fischer. Like other places in Vojvodina, the Hungaro-German occupation resulted in the extermination of this once active Jewish community. The last Jews were sent to Auschwitz via Backa Topola on April 5, 1944. In 1953 a monument to the victims of the Holocaust was

erected. The synagogue was used by a local commercial enterprise.

[Zvi Loker]

SOMECK, RONNY (1951–), Hebrew poet. Someck was born in Baghdad, Iraq, and came to Israel as a child. He studied Hebrew literature and philosophy at Tel Aviv University and sketching at the Avni Art Institute. He worked as a counselor with street gangs, taught literature, and led writing workshops. Someck began publishing poetry in 1968 and published his first collection, *Goleh* ("Exile"), in 1976. Other collections include *Solo* (1978), *Asphalt* (1984), *Sheva Shurot al Pele ha-Yarkon* ("Seven Lines on the Wonder of the Yarkon River"), *Panter* (1989), *Bloody Mary* (1994), *Gan Eden le-Orez* ("Rice Paradise," 1996). The bustling life and alienating effect of the modern city, primarily Tel Aviv, figures prominently in his poetry, which addresses collective Israeli concerns, the ethnic issue as well as private experience. In 1997 Someck recorded with the musician Elliot Sharp the CD *Revenge of the Stuttering Child*. In 1998, together with artist Benny Efrat, Someck presented the exhibition "Nature's Factory" at the Israel Museum. With Shirley Someck he wrote a book for children, *Kaftor ha-Zehok* ("The Laughter Button," 1998). Someck's ninth poetry collection, *Maḥteret ha-Ḥalav* ("The Milk Underground"), appeared in 2005. He received the ACUM special Jubilee Prize, and in 2004 was awarded the Yehuda Amichai Prize. A collection of *Selected Poems* appeared in English translation (1999) as well as *The Fire Stays in Red* (2002).

[Anat Feinberg (2nd ed.)]

SOMEKH, ABDALLAH BEN ABRAHAM (1813–1889), rabbi and *posek* of Baghdad. Abdallah was born in *Baghdad and was a pupil of Jacob b. Joseph ha-Rofe. At first he engaged in business, acquiring considerable wealth. When he perceived that the study of Torah was being neglected, however, he abandoned his business and devoted himself to the dissemination of learning. He founded the *bet midrash* Abu Menashe which was established with funds provided by the

philanthropist Ezekiel b. Reuben Manasseh, after whom it was named. In 1840 he founded, with the help of the same philanthropist, the renowned Midrash Bet Zilkhah. He died in a plague that swept through Baghdad, and was buried there, against the orders of the government, in the court of the traditional tomb of the high priest Joshua. This caused an outbreak of riots, in consequence of which rabbis and communal leaders were imprisoned. After three months, Somekh's body had to be exhumed and buried in another cemetery.

Somekh was regarded as the supreme halakhic authority by communities of Baghdadi origin throughout the Far East. He was the author of *Zivhei Zedek* (2 pts., 1899), halakhic decisions on the *Yoreh De'ah* with appended responsa. In manuscript are two more parts of the same work; *Ez ha-Sadeh* on the tractate *Bezah*; novellae on most tractates of the Talmud; a commentary on the Passover *Haggadah*; *Hazon la-Mo'ed*, on the calendar; and responsa.

BIBLIOGRAPHY: A. Ben-Yaacob, *Toledot ha-Rav Abdallah Somekh* (1949); idem, *Yehudei Bavel* (1965), index.

[Abraham Ben-Yaacob]

SOMEKH, SASSON (1933–), professor emeritus of Arabic literature at Tel Aviv University. Born in Baghdad, he immigrated to Israel and specialized in modern Arabic literature and Semitic philology. Research, editing, and translating characterized his academic career, along with lecturing in Israeli, Swedish, and U.S. universities. Among his books are *The Changing Rhythm* (1973), a monograph on the Egyptian novelist Naguib Mahfuz; *Genre and Language in Modern Arabic Literature* (1991); three books (in Arabic) on the novelist Yūsuf Idrīs; four anthologies of modern Arabic poetry, translated into Hebrew; and an autobiography (in Hebrew), *Baghdad Yesterday* (2004). He was awarded the Israel Prize in Oriental Studies in 2005.

SOMEN, ISRAEL (1903–1984), public figure in Kenya. Born in London, Somen was taken to South Africa when he was a child, and in 1923 went to Kenya where he joined the colonial service. Somen was mayor of Nairobi from 1955 to 1957 and honorary consul for Israel before Kenya's independence. He was also president of the Nairobi Hebrew congregation.

SOMLYÓ, ZOLTÁN (1882–1937), Hungarian poet. Tried to earn his livelihood by writing and had a lifelong struggle against poverty. His lyric poetry is founded on the feeling of love and the Jewish feeling of loneliness. He wrote *Az átkozott költő* ("The accursed poet," 1911).

SOMMER, EMIL (1869–1947), Austrian soldier. Born in Dorna Watra / Vatra Dornei, Bukovina, Sommer was one of the top graduates from the cadets' school and served on the general staff. During World War I he commanded a regiment and was highly respected. In 1923 he retired as a full colonel and later received the brevet rank of major general. Sommer was head of the Austrian Jewish War Veterans (Bund juedischer Frontsoldaten Oesterreichs) until the organization split over his strong monarchist views in March 1934. He and his supporters founded a monarchist-oriented War Veterans Organization (Legitimistische Juedische Frontkaempfer). Following the *Anschluss* newspapers reported that he was forced to sweep the streets in his general's uniform with all his decorations. This false report was a pure invention; he was, however, arrested. In 1942 he and his wife, Anna, née Mittler, were deported to Theresienstadt. He managed to survive and after the liberation returned to Vienna. Sommer immigrated to the United States, where he died.

ADD. BIBLIOGRAPHY: E.A. Schmidl, *Juden in der K. (u.) K. Armee 1788–1918* (1989), 148; *The National Jewish Monthly* (Nov. 1946), 90–91.

[Mordechai Kaplan / Albert Lichtblau (2nd ed.)]

SOMMERSTEIN, EMIL (1883–1957), Zionist leader in Galicia and Polish Jewish leader. Born in the village of Hleszczawa in the district of Tarnopol, Galicia, Sommerstein practiced law in Lvov. His Zionist activities began during his student years, when he founded the Zionist Students' League in Galicia (1906). He later played a leading role in the Galician Zionist Federation, of which he became chairman. He was a member of the Polish Sejm from 1922 until 1939 (with a break from 1927–29). He was active in several Jewish institutions and organizations, especially economic ones. Due to him, the Jewish Academic House, the first of its kind in Europe, was established in Lvov in 1910. He specialized in economic and financial law and published several books on these subjects in Polish (1924–28). Sommerstein took part in the establishment of the *World Jewish Congress. At the end of September 1939, with the entry of the Soviet army into Lvov, he was arrested and taken to Kiev. He was transferred from prison to prison until he was liberated at the beginning of 1944 in a general amnesty.

In spring 1944 Sommerstein was invited by the Soviet authorities to represent Polish Jewry in Moscow and was even received by Stalin. Together with the Soviet-sponsored Association of Polish Patriots, he followed in the wake of the Soviet army's advance into Polish territory. He was co-opted onto the Polish Committee for National Liberation, which was established in Chelm in July 1944 and became the provisional government of liberated Poland. He moved to Lublin with the government and then to Warsaw (February 1945). Sommerstein was among the founding members of the Central Committee of Polish Jewry and also served as its president. He played an important role in arranging for the repatriation of 140,000 Polish Jewish refugees from the Soviet Union. He was a member of the editorial board of the central Jewish organ, *Dos Naye Lebn*, which commenced publication in liberated Poland. In April 1946 he headed a delegation of Polish Jews to the U.S., where he suffered from a paralytic disease from which he never recovered. He died in New York and his remains were taken to Israel and buried in Tel Aviv (See also *Poland, Contemporary).

[Nathan Eck]

SOMMO, JUDAH LEONE BEN ISAAC (also known as **Leone De Sommi Portaleone, Leone di Somi, Leone Ebreo de Somi, Leone de' Sommo Portaleone, Yehuda Sommo**; 1527–1592), dramatist, theater director, and poet in Hebrew and Italian. An outstanding contributor to the development of the theater during the Renaissance, Sommo, born in Mantua, was a descendant of the aristocratic *Portaleone family. He was educated in the spirit of the Renaissance in general and in Jewish subjects by Rabbi David b. Abraham *Provençal who planned to found a Jewish academy of sciences at Mantua. Provençal, however, opposed Jewish participation in the theater. In his youth Sommo served as tutor and copier and invented a method for manufacturing ink, which is mentioned in *Shiltei ha-Gibborim* (Mantua, 1612), authored by his relative Abraham Portaleone. At the age of 23 he wrote a five-act prose play, *Zahut Bedihuta de-Kiddushin* (“An Eloquent Marriage Farce”), which is the oldest Hebrew *drama extant. In 1557 he participated in a satirical literary competition on the subject of women, in their praise or censure. He submitted a long macaronic poem, *Magen Nashin* (“In Defense of Women”), with alternate stanzas in Hebrew and Italian, which he dedicated to Anna *Rieti.

Sommo seems to have been active from an early age in writing and staging plays for the Gonzaga court theater where European dignitaries were often in attendance. Each year the Jewish community of Mantua was obliged to present a play before the duke; Sommo was placed in charge of these performances. In 1565 he submitted to Cesare Gonzaga, patron of the literary school Accademia degl' Invaghiti (“Academy of the Lovesick”), *Dialoghi in materia di rappresentazioni sceniche* (“Dialogues on the Art of the Stage,” ed. F. Marotti, Milan, 1969). In recognition of this work Sommo was admitted a year later as the only Jewish *scrittore* (“writer”) in the academy. He ultimately became renowned throughout Europe as a dramatist and director, as well as an expert in stage design, make-up, and lighting effects. Sommo pioneered in the use of lighting by placing torches around the hall or on the stage. The torches were brightened or dimmed at appropriate times to heighten the emotional atmosphere of the play. The famous playwright Manfredi insisted that Sommo was the only director capable of staging his *Semiramis*. He befriended many famous actors and actresses who came to Mantua.

Although Sommo reached the height of fame in European theater, he did not neglect his activities in the Jewish community. In 1574 he aided Azariah dei *Rossi in publishing his controversial book *Me'or Einayim*. Like other famous Jewish artists and performers granted similar privileges, Sommo was exempted in 1580 from wearing the yellow *badge required of the Jews. In 1585 he was allowed to buy property in Mantua upon which he built a synagogue. In the same year Sommo was involved in an unsuccessful attempt to have the

duke of Mantua crowned king of Poland after the former king died leaving no male heir. In 1588 he submitted to the first duke of Vincenzo a prose comedy, *Le tre sorelle* (“The Three Sisters,” ed. F. Marotti, Milan, 1970).

Sommo's literary output, which remained in manuscript until the 20th century, comprised 16 volumes. Those works composed in Italian included 13 plays (comedies in prose and rhyme, pastorales, intermezzos), the *Dialoghi in materia di rappresentazioni Sceniche, 45 Salmi Davidici* (“Psalms of David”), poems, canzones, and satires. However, 11 of the Italian volumes, stored in the National Library of Turin, were destroyed by a fire in 1904. Only *Le tre sorelle*, the rhymed pastorelle *L'Hirifile*, and a few Italian poems survived. Numbered among his Hebrew works are the first Hebrew play (four copies), two short dialogues (one of which, *Shetei Sihot Tinok Omenet ve-Horim*, is the earliest piece of *children's literature in Hebrew), and several poems. J. *Schirrmann discovered *Zahut Bedihuta de-Kiddushin* in 1930 and it was subsequently printed for the first time in 1946, some 400 years after it was written. In 1937, *Dialogues on the Art of the Stage* first appeared in print in A. Nicoll's English translation and in 1969 it was first printed, together with *Le tre sorelle*, in Italian.

Sommo's greatest works are the *Dialoghi* and his Hebrew comedy of betrothal. The *Dialoghi*, among the most valuable discussions on Renaissance theater, are written in a lively and humorous style. Four in number, the *Dialoghi* are conducted by Veridico, a Jewish embroiderer of Mantua who directs performances at the ducal court, like Sommo himself, and two Italian devotees of the theater. Veridico tells his friends how he selects, rehearses, and readies a play for performance. Sommo's writings, although echoing the style of Aristotle and Horace who were very popular in Italy at that time, ventures the original opinion that it was the Jews who contributed drama to world literature. He maintains that the Book of Job, whose authorship Jewish tradition ascribes to Moses, was the first drama in history and influenced Plato to write in dialogue form, which, in turn, inspired the Greek dramatists. In the second dialogue Sommo asserts that dramatists divide their plays into five acts and limit the number of actors appearing on the stage at any time to five in order to correspond to the number of books in the Pentateuch. To prove the antiquity of Jewish drama he cites the Aramaic dramatic allegory “The Current of Life” (“*Corso della Vita*”), and traces the origin of the Italian word *scena* (“scene”) to the Hebrew *shekhunah* (“street” or “neighborhood”). Much of interest is to be found in his detailed discussion of various aspects of theatrical production (acting, costuming, makeup, and lighting); his advice on the method of acting resembles Hamlet's monologue on the same theme.

Written mainly in biblical Hebrew, *Zahut Bedihuta de-Kiddushin* is cast into the characteristic style of Renaissance comedy. The heroes are based on the stock figures of *commedia dell'arte* and the plot is taken from an *aggadah* of Midrash Tanhuma: a father on his deathbed bequeaths all his property

to his slave, leaving to his only son, who is abroad, the right to choose only one article from the estate as his own. The plan is based on the assumption that the son, upon his return, will choose the slave and thus, since a master automatically acquires all that belongs to his slave, he will obtain the whole estate. Until the son's return the inheritance will be safely guarded by the slave. However, the parents of the son's fiancée, believing that their intended son-in-law has been disinherited, cancel the engagement. The youth then plans to seduce his beloved in a vineyard and marry her by *nissu'ei bi'ah* ("marriage by intercourse"). In the finale, Rabbi Amittai ("speaker of truth," the counterpart of Veridico in the *Dialoghi*) solves the predicament and the youth regains both his fiancée and his inheritance. The comedy was designed not only to amuse the audience but also to criticize contemporary Jewish behavior in matters of betrothal and marriage and to demonstrate the literary potential of Hebrew. The play was apparently staged in Sommo's lifetime and later during the 17th century in Italy. It was produced for the first time in Israel in 1963 by a Hebrew University troupe and in 1968 by the Haifa Theater, which performed it two years later at the Venice Festival.

SOMOGYI, BÉLA (1868–1920), Hungarian political journalist. Born in Halastó, he taught in secondary schools and edited the social-democrat organ *Népszava*, as well as the German language organ *Volksstimme*. After the October Revolution (1918), he became director-general of the Ministry of Education. Under the brief Communist regime, he resigned. Nevertheless, when Somogyi protested against the murders of the White Terror (see *Hungary), he was kidnapped and with his companion, a non-Jewish author, B. Bacsó, murdered and his body thrown into the Danube. Somogyi wrote *A francia népoktatás* (1905) and *Az ipari szövetkezetek* (1905).

[Baruch Yaron]

ŞOMREI SABAT, Christian sect in *Transylvania; though chronologically the latest, it was the most extreme faction in the Reformation in Hungary. Founded in the 1580s in central Transylvania, the sect had distinct anti-Trinitarian trends.

During its long history the sect passed from denial of the Trinity to rejection of the New Testament until it approached very close to Judaism. The inhabitants of the Transylvanian village *Bezidul Nou, the majority of whom were adherents of the sect, converted to Judaism in 1868–69, and their descendants were completely absorbed in Judaism.

Ideologically, the history of the sect, which in 1971 still had a small number of followers in Transylvania, may be divided into two periods. In the first period, on the instructions of the sect's founder, the Transylvanian nobleman András Eössi (d. c. 1602), the Şomrei Sabat almost completely abandoned the principles of Christianity, though they still recognized Jesus as the messiah to reappear. But by that time, in religious as well as everyday life, they behaved according to the biblical precepts, observing "the Jewish Sabbath" as the day of rest instead of Sunday, and celebrating Jewish festivals according to the Jewish calendar: Passover, the New Moon, etc. In that early period the prayer rite of the sect was already influenced by Jewish liturgy. The Şomrei Sabat also refrained from eating ritually unclean food.

The second period, beginning in 1630, was marked by the outstanding personality of Simon *Péchi (c. 1575–1642), the adopted son of Eössi. A scholar with a command of the classical languages as well as Hebrew, Péchi performed important functions in the political administration of independent Transylvania and was chancellor at the princely courts. In 1621 Péchi was dismissed from all his posts, probably in connection with his religious views. Thereafter he devoted himself to the organization and development of the Şomrei Sabat sect and also became involved in clandestine activities. In this period the sect deviated even more from Christianity and came conspicuously close to Judaism. The leader of the sect as well as his disciples translated into Hungarian many Hebrew prayers of the Sephardi rite. At that time the Şomrei Sabat based themselves only on the Old Testament, observing the Jewish precepts and completely rejecting the principles of Christianity. It is estimated that the membership of the sect was then about 20,000.

In 1638, on instructions from the prince, the Transylvanian authorities started to persecute the members of the sect and its leaders. Some emigrated to *Turkey where several of them converted to Judaism. Those who had remained in Transylvania were put on trial, their property was confiscated, and some were sentenced to death. The leader of the sect also became impoverished as a result of the confiscations and spent the last years of his life in his rural home under house arrest. As a result of the persecutions the membership of the sect greatly diminished.

The spiritual leaders of the sect created a varied literature, including prayers, religious poems, etc., partly independent original literary creations but most of them showing Jewish influence. The outstanding Hungarian author, Zsigmond Kemény (1814–1875), gives a vivid description of the life of the sect, the persecutions, and the life of its leader, Péchi, in his historical novel *A rajongók* ("The Devoted"; first published in 1858).

[Yehouda Marton]

SONCINO, family of Hebrew printers active in Italy, Turkey, and Egypt in the 15th and 16th centuries. The Soncino family originated in Germany and claimed among their ancestors Moses of Speyer, mentioned in the *tosafot* by *Eliezer of Touques (13th century). Five generations later another MOSES, resident at Fuerth, succeeded in driving the wandering Franciscan monk and rabble-rouser John of Capistrano (1386–1456) out of the town (see title page of David Kimḥi's *Mikhlol*, Constantinople, 1532–34). His sons SAMUEL and SIMON left Fuerth for Italy, where in 1454 they obtained permission from Francesco Sforza, duke of Milan, to settle in Soncino near Cremona, from which they took their surname. Samuel's son ISRAEL NATHAN (d. 1492?), a physician, was renowned for his talmudic scholarship and piety; he died in Brescia. Printing had taken place in Italy from 1465, and it was, no doubt, under the influence of Israel Nathan and in partnership with him and his other sons (Benei Soncino) that his son JOSHUA SOLOMON (d. 1493) set up a Hebrew printing press which in 1484 produced its first book, the Talmud tractate *Berakhot*, with commentaries in the arrangement which became standard. This was followed by a complete, voweled Hebrew Bible (1488), the *Maḥzor Minhag Roma* (Soncino and Casalmaggiore, 1486), and 15 other works (to 1489). His were the first printed editions of the Hebrew Bible and Talmud tractates. From 1490 to 1492 Joshua Solomon printed at least nine works in Naples, and altogether more than 40 works are ascribed to his press.

His nephew GERSHOM BEN MOSES (d. 1534), also called Menzlein – perhaps for having learned the art of printing in Mainz – became one of the most successful and prolific printers of his time – and one of the finest of all times – printing from 1489 to 1534, not only in Hebrew (and Judeo-German?), but also in Latin, Greek, and Italian and using for non-Hebrew literature the names Hieronymus, Geronimo, or Girolamo. During his extensive travels, to France in particular, he obtained valuable manuscripts for publication, e.g., the *tosafot* of Eliezer of Touques which he was the first to publish. He was also the first to use woodcut illustrations in a Hebrew work (Isaac ibn Sahula's *Meshal ha-Kadmoni*, Brescia, c. 1491), and to produce secular Hebrew literature (Immanuel of Rome's *Maḥberot*, Brescia, 1492). Soncino also printed in small, pocket-size format, assembling an expert staff of literary advisers, typesetters, and proofreaders. His letters were cut by Francesco Griffio da Bologna, who also worked for the well-known Aldus Manutius.

Apart from Soncino and Casalmaggiore, Soncino also printed in Brescia, Barco, Fano, Pesaro, Ortona, Rimini, Ancona, and Cesena; both his Hebrew and non-Hebrew productions exceeded 100 volumes each, of which about 20 were

Hebrew *incunabula (before 1500). His constant wanderings were due as much to the chicaneries of the local overlords as to fierce and perhaps unfair competition, though in the decade 1494–1504 (with an interval from 1499 to 1502) he was the world's only Hebrew printer. Eventually Soncino had to leave Italy for Turkey, where he continued to print in *Salonika (1527) and *Istanbul (from 1530), assisted by his son ELIEZER (d. 1547). Gershom Soncino exerted himself in bringing relief to the victims of the Spanish and Portuguese expulsions of 1492 and 1497.

His brother SOLOMON is mentioned as printer in only one work: Jacob b. Asher's *Arba'ah Turim* (1490?), though he belonged no doubt to the collective Benei Soncino. His son MOSES printed a number of books in Salonika from 1521 to 1527. Eliezer b. Gershom Soncino continued printing after his father's death, and after he died the press was taken over by his partner Moses b. Eliezer Parnas. His son GERSHOM printed in Cairo, Egypt, in 1557, being the last of the known Soncino printers. JOSHUA *SONCINO (d. 1569) of Istanbul was the author of a volume of responsa and novellae (*Naḥalah li-Yhoshu'a*, 1531). It is believed that the Hebrew press in Prague, where printing began in 1512, was founded by the Soncino family.

[Abraham Meir Habermann]

SONCINO, JOSHUA (d. 1569), rabbi and halakhic authority; a scion of the famous *Soncino family from Italy, some of

whose descendants settled in Turkey. Soncino was the rabbi of the Sephardi Great Synagogue (Sinagoga Mayor) in Constantinople. In one of his responsa he intimates that his Ashkenazi friends disapproved of his holding that post. He maintained contact with R. Isaac *Luria and R. Bezalel *Ashkenazi, and was a close friend of R. Moses *Almosnino. His responsa and his commentaries on the tractates *Eruvin* and *Shevu'ot* were published by his grandson R. Joshua b. Menahem Soncino, under the title *Nahalal li-Yhoshua* (Constantinople, 1731). One of his responsa can be found in *Divrei Rivot* by R. Isaac *Adarbi (Salonika, 1582, no. 60). He was asked by Dona Gracia *Nasi to render halakhic decisions on business matters (responsa 12, 20). At the time of the proposed *Ancona boycott in 1556–57, which caused a great stir among Turkish Jews, Soncino originally favored the proposals, but later took up an attitude of vehement opposition. As the representative of Italian Jews who had settled in Turkey, he was of the opinion that pressure on the city by Turkish Jewry would further imperil the situation of Ancona's Jews (responsa 39–40). He thought that the solution to the difficulties facing Italian Jewry lay in their migration to the East.

[Abraham David]

SONCINO GESELLSCHAFT DER FREUNDE DES JUEDISCHEN BUCHES, Jewish bibliophile society, founded in Berlin in 1924, and liquidated by order of the Nazi government of Prussia in 1937.

The Society aimed at the typographic improvement of the Jewish and Hebrew book; 15 regular publications were primarily intended to introduce to the Jewish book-world suitable models to be imitated by the commercial producers. The Society, therefore, commissioned all the different types of literary products likely to appear in print, such as scholarly works and periodicals, novels, short stories, plays, texts illustrated by modern artists, and reprints of interesting rare books. The texts were chosen from Jewish literature of all periods and languages. Leading master-printers selected the printing type, size, and paper of each individual publication in order to design an external appearance in accordance with its contents.

The most ambitious enterprise of the Society was the creation of a new Hebrew printing type, a task not attempted for many generations. The letters were designed by Markus Behmer, who based his work on the script used by Gershom *Kohen in his *Haggadah*, printed in 1527 in Prague. The "Behmer type" appeared for the first, and last, time in the Pentateuch printed for the Society in 1930–33 by E.W. Tieffenbach at his "Officina Serpentis" printing press in Berlin.

The Society published *Soncino Blaetter*; *Beitraege zur Kunde des juedischen Buches*, edited between 1925 and 1937 by Herrmann Meyer, the founder and honorary secretary of the

Society. In addition, *Mitteilungen der Soncino Gesellschaft* appeared between 1928 and 1932 with A. Horodisch as editor.

[Herrmann M.Z. Meyer]

SONDERKOMMANDO, JEWISH. In May 1942, in the framework of the clandestine plan known as the "Final Solution of the Jewish Question," the mass-annihilation of the European Jewry began in the biggest extermination camp – Auschwitz-Birkenau. The killing process, which was characterized by its technical and industrial methods, was executed in the form of a production line run by ss personnel. Staff members were rewarded for their murderous activities with special rations, additional vacation, and a personal promotion.

To operate the crematoria and remove all traces of their crimes, the ss selected prisoners for a special squad shortly after their arrival without knowing the real aim of the work. For practical and ideological reasons the ss selected for this purpose mostly Jews, who from the middle of 1942 were the majority of the new prisoners coming to the camp. Ideologically, this was one the Germans' cruelest ways to humiliate the Jews and stamp them as sub-humans ("*Untermenschen*"). The inevitable death of these prisoners was a continuation of their spiritual death, which occurred during their horrible work in the death installations. The squad of prisoners thus symbolized the double death of the Jews: the mental and the physical. Another reason for choosing Jews for this squad could have been the desire to blur the distinction between the criminals and their victims, and to forcibly involve Jewish slave laborers in the process of mass killing and impose on them the onus of crimes committed solely by the Germans.

The ss euphemistically called these Jewish prisoners "*Sonderkommando*," "special squad." The members of the squad were given several privileges, which helped those who remained the professional core of the *Sonderkommando* survive. These prisoners got better food, improved living conditions, medical treatment from their own doctors, and from 1944 exemption from bodily punishment. They were always kept in isolated barracks, guarded day and night, and were not allowed to contact other prisoners. By giving them privileges, the administration of the camp achieved an additional moral separation of the *Sonderkommando* members from the other prisoners, who tended to accuse them of being collaborators. As a matter of fact these miserable and abused *Sonderkommando* prisoners had no choice at all. Anyone who refused to obey the orders or claimed that he was incapable of working was immediately shot by the ss.

The members of the *Sonderkommando* were organized in a hierarchic structure. At the base were the major-

ity of ordinary workers. A few were “functionaries,” e.g., the “*Vorarbeiter*” (foreman) and “*Kapo*” (head of work unit). The “*Oberkapo*” (head *Kapo*) and the “*Blockaelteste*” (head of the barrack) stood at the top of the *Sonderkommando* hierarchy. Orders, however, always came from the SS men, and through the functionaries were delivered to all members of the unit. The first *Sonderkommando* started to work in May 1942, in the old crematorium in the main camp (Stammlager-Auschwitz), as well as in the provisional gas chambers on the outskirts of the Birkenau camp. Parallel to this there operated from August 1942 the so-called “*Krematorium-Kommando*” in the main camp.

Between March and July 1943 four multifunctional crematoria were put into action in Birkenau. The work in the old crematorium at the main camp was stopped completely in July 1943. From May 1942 to January 1945 about 2,200 prisoners were recruited into the *Sonderkommando*. The number of members depended on the killing potential and the policy of extermination, as decided by the camp administration. The number at any one time ranged from 100 to 874 men.

As so-called “secret bearers,” these direct witnesses to the genocide of the Jewish people were doomed to death by the SS and were usually murdered after the completion of the bigger killing actions, on December 9, 1942; February 24, 1944; December 23, 1944; October 7, 1944; and November 26, 1944. As it was desired that the skilled and experienced workers in the commando should stay alive until the end, there was only one complete liquidation of the whole squad, on December 9, 1942.

The members of the commando were forced by their tormentors to welcome the Jews who were entering the dressing room, to calm them, to carry those who were not able to go to the gas chambers by themselves, to ensure a quick undressing process and fast movement into the gas chambers. After the killing by gas the prisoners were obliged to evacuate and clean the gas chambers, to inspect the bodies of the victims for valuables, to cut their hair (mainly women’s hair), to clean hair earmarked for industrial uses, to pull out gold teeth, and to remove prostheses. Subsequently, the prisoners were forced to burn the bodies of those murdered in the crematoria ovens or in the burning pits, to crush the remaining bones, and to spread the ashes. In the dressing room they were forced to collect all the belongings of the victims and to prepare these for dispatch by train. In the case of killing by shooting, they were obliged to distract the victims and hold them by force.

The total hopelessness and overwhelming helplessness in this extreme situation paralyzed almost every form of resistance and created an atmosphere of apathy and a loss of moral values among some of the members. Nevertheless, and amazingly, the will to survive remained in the hearts of many prisoners in the squads, who even developed an optimistic attitude.

Not only the contact with death was traumatic but also meeting the victims shortly before their deaths, including friends and relatives, not to mention the accusations by

other prisoners. All this exacerbated the moral dilemma of *Sonderkommando* prisoners and their mental suffering. The prisoners found themselves in an extreme psychological situation, full of self-contempt and self-reproach. As the sole eyewitnesses to the killing process, these prisoners were the last to have contact with the victims before they were murdered. For this reason, the Germans preferred to choose prisoners for the *Sonderkommando* who spoke the same language as the victims, especially before big killing actions. The members of the unit, in the age range from 16 to 54, came from 18 countries altogether, mostly from Poland, Slovakia, France, Holland, Greece, Romania, and Hungary, and communicated in 11 languages. Despite the common fate that awaited them, the society of the *Sonderkommando* members could not achieve complete solidarity, mainly because of differences in social and cultural backgrounds.

Motivated by a historical conscience, several members of the *Sonderkommando* clandestinely wrote the history of the mass murder of the Jews and their own histories of the *Sonderkommando*. These manuscripts were buried in the grounds of Birkenau, discovered in part between February 1945 and October 1980, and later published.

Wishing to warn the still living Hungarian Jews before their deportation to Auschwitz, the *Sonderkommando* men supplied the four Jewish prisoners Vrba, Wetzler, Rosin, and Mordowicz who escaped from Auschwitz successfully in spring 1944 with important information and evidence of the crimes committed in the camp. Unfortunately this information could not prevent the mass murder of the Hungarian Jews.

With the completion of four new crematoria in Birkenau between March and July 1943, the living and working conditions of the *Sonderkommando* improved significantly. This enabled the creation of an underground movement of prisoners within the *Sonderkommando*, which initially was part of the general underground movement in the camp. This movement planned a general armed uprising of prisoners. Because of basic misunderstandings and incompatible interests, the general plan for an uprising was canceled, and only the *Sonderkommando* continued to plan an uprising of its own. The preparations for such an action took place in the months of spring and summer 1944. During the preparation period, young Jewish female prisoners smuggled explosives from the Union Metallwerke for the use of the *Sonderkommando* fighters. Four of these women were publicly hanged on January 6, 1945.

The uprising, an act of despair, was launched on October 7, 1944, in an attempt to destroy the killing installations, to avenge the crimes against the Jews committed in the camp, and to ensure that at least someone remained alive from the commando to bear witness to what had occurred in the camp.

The uprising was crushed after few hours, ending in a bloodbath of 451 *Sonderkommando* prisoners who fell in the battle or were shot in retaliation. The fighters of the *Sonderkommando* succeeded in burning one of the crema-

torium buildings (No. IV), killing three SS members, and wounding probably 12 others. After the uprising was crushed, the remaining prisoners of the commando were obliged to burn the bodies of their fallen comrades and destroy the remaining crematorium buildings.

By the end of October 1944, after the gas chambers in Auschwitz-Birkenau were used for the last time, more than 1,100,000 Jews had already been murdered in the death factory of Auschwitz. The last surviving members of the commando left the camp on January 18, 1945. On the long death marches they were first deported to Mauthausen.

Altogether, about 110 men of the *Sonderkommando* survived the Shoah. Sixty years after the evacuation of Auschwitz 18 former *Sonderkommando* prisoners were still alive, most of them in Israel and the United States.

[Gideon Greif and Andreas Kilian (2nd ed.)]

SONDERLING, JACOB (1878–1964), rabbi. Sonderling was born in Lipine, Silesia. His mother was a descendant of the Yismah Moshe, the founder of Hungarian Hasidism. An ardent Zionist from youth, Sonderling was referred to as “my fighting rabbi” by Theodor Herzl.

After studying at the University of Vienna and Breslau as well as at seminaries in Vienna, Breslau, and Berlin, Sonderling received his Ph.D. from the University of Tuebingen in 1904. In 1908, he became rabbi of Hamburg’s celebrated Israelitische Temple Verein, the birthplace of Reform Judaism but in his congregation, the bastion of Reform Judaism, men and women sat separately. He was such an eloquent orator and prominent rabbi that the Hamburg synagogue offered him the position despite its well known anti-Zionism and his advocacy of Zionism. His tenure there was interrupted when, during World War I, he served as a German Army chaplain on the staff of Field Marshal Paul von Hindenburg, who was later the president of Germany. He was the chief Jewish chaplain on the German Eastern front and spent the war years in Russia, Poland, and Lithuania, where he ministered not only to German soldiers but to Eastern European Jews he encountered. He looked like the embodiment of a rabbi, with a long beard and distinguished face that as he aged became ever more impressive. His picture appeared on postcards of the Kaiser’s Army. He was called “God’s word on a horse.” At the war’s conclusion, he returned to his pulpit and remained until 1923, when he immigrated to the United States. Within weeks of his arrival in the United States he was lecturing on Zionism and drawing large audiences to hear his passionate advocacy. He then held pulpits in Chicago, New York, and Providence, where he developed what his Los Angeles colleague called new approaches to an old tradition. Religion must appeal to the senses – all five senses – not only to the ear and to the mind.

Upon moving to Los Angeles in 1935, he founded the Center for Jewish Culture (Fairfax Temple). Where else but in Hollywood could one combine art and religion? While living and working in Los Angeles, he collaborated with many

well-known musicians. He inspired Eric Zeisl to compose his requiem and Maria Jeritz to perform it. During World War II, he discovered that Arnold Schoenberg, then a refugee from Nazi Germany, needed some money, so he commissioned him to write the *Kol Nidre* service. He also worked with Ernst Toch in writing the text for “Cantata of the Bitter Herbs.” In 1941, he commissioned Erich W. Korngold to write the “Passover Psalm,” Opus 30.

Earlier in his career he inspired Freidrich *Adler (1878–1942), who died in Auschwitz and had been a member of his congregation, to make Jewish ceremonial objects. Adler was a master of applied art who worked with furniture, architecture, and functional ware. For the Cologne Werkbund of 1914, Adler designed a synagogue interior and Torah ornaments as well as an entire group of ceremonial objects for Sabbath and holiday home observances. The remaining part of that collection is the eternal light, which is in the collection of the Spertus Museum. The first piece of ceremonial art that Adler created was a *seder* plate of pewter and embossed and cut-out glass. Incorporated onto the *seder* plate is a lid that lifts up to hold the *matzot*, and when the lid is closed the cup of Elijah fits on top in the center of the plate. It is on loan to the Skirball Cultural Center from the family of Jacob Sonderling 363 days a year and returned each year just in time for the *seder*.

His colleague, Hollywood Rabbi Max Nussbaum, commented that in Los Angeles Sonderling “initiated the Seder in drama and music and the dramatization of the Bible at Friday evening services. Basically, Sonderling himself was a fusion of religion and art.”

His colleagues considered him more a teacher of teachers, a rabbi of rabbis, and he held his own with some of the most dominant personalities in the Los Angeles rabbinate. He considered himself an Orthodox rabbi among the Reform and a Reform rabbi among the Orthodox. Nussbaum said, “He represented the totality of our Jewish heritage at its best.”

[Michael Berenbaum (2nd ed.)]

SONDHEIM, STEPHEN (Joshua) (1930–), U.S. composer and lyricist born in New York. His meeting with his neighbor Oscar *Hammerstein II in Pennsylvania (where he moved with his mother) led him to write lyrics for stage shows. Winning the Hutchinson Prize for music at Williams College enabled him to study privately with Milton *Babbitt. Sondheim leapt to the forefront of Broadway lyricists while still in his twenties when he coauthored the songs (with Leonard *Bernstein) for *West Side Story* (1957). He followed this hugely successful musical with another lyrical triumph, Jule Styne’s *Gypsy* (1959), and then wrote both the music and lyrics for *A Funny Thing Happened on the Way to the Forum* (1962). *Company*

(1970) revolutionized the art form, and *Follies* (1971) marked the start of Sondheim's collaboration with Hal Prince. *A Little Night Music* (1973) contained his most popular song "Send in the Clowns," while *Pacific Overtures* (1976) broke new ground with its use of Japanese *kabuki* theater techniques. *Sweeney Todd* (1979) is his biggest work. In *Sunday in the Park with George* (1984), Sondheim, inspired by a painting by Seurat, conveyed his images of the pointillist style through use of musical minimalism. His later works include *Into the Woods* (1987), *Assassins* (1991), and *Passion* (1994), his most symphonic score. He also wrote film scores. Sondheim's musical language, in which melody and harmony are closely argued, retains strong affinities with Ravel and Copland, while making sophisticated use of jazz and dance idioms; it is intensely personal. His use of counterpoint is the anchor which separates him from most of today's theatrical composers. Sondheim is on the Council of the Dramatist Guild, having served as its president from 1973 to 1981. In 1983 he was elected to the American Academy of Arts and Letters. He was appointed the first Visiting Professor of Contemporary Theatre at Oxford University (1990) and was a recipient of the Kennedy Center Honors (1993), a National Medal of Arts Award (1997), and the Praemium Imperiale, Japan's highest honor, for a lifetime of artistic achievement (2000). In 2002 he received the ASCAP Richard Rodgers Award. Most of his scores have won Tony and New York Drama Critics' Circle Awards. "Sooner or Later" from *Dick Tracy* won an Academy Award, and *Sunday in the Park with George* was awarded the 1985 Pulitzer Prize for Drama. *The Sondheim Review* is a quarterly magazine dedicated to his works. Sondheim productions in translation have also spread to Spain, Germany, the Netherlands, and elsewhere.

SONDHEIMER, FRANZ (1926–1981) organic chemist. Born in Stuttgart, Germany, he was educated at Highgate School, London (1940–43) before gaining his Ph.D. from Imperial College, London. He was a research fellow at Harvard University (1949–52) and associate director of research at Syntex s.A. in Mexico City (1952–56) before becoming head of the organic chemistry department of the Weizmann Institute (1956–64) and also Rebecca and Israel Sieff Professor of Organic Chemistry (1960–64). During this period he retained his association with Syntex as vice president of research (1961–63). He returned to England as Royal Society Research Professor of Organic Chemistry, first at Cambridge University (1964–67), where he was also a Fellow of Churchill College, and from 1967 at University College, London. Sondheimer's research concerned the total synthesis of many natural products and in particular steroid hormones and their analogues and novel macrocyclic compounds. His many awards included the Israel Prize in exact sciences (1960), election to the Royal Society of

London (1967), and the American Chemical Society's Sigma Award for creative work in synthetic organic chemistry (1976). His other main interest was classical music.

[Michael Denman (2nd ed.)]

SONG, ANGELIC. The song of praise which the angels sing to God is a common theme in the Jewish and Christian apocalyptic and mystic literature. In his vision Isaiah heard the *seraphim* uttering (Isa. 6:3) what later became known as the **Kedushah* (in Greek *Trishagion*). The idea of the angels singing in the heavenly spheres is very likely an old one; it is the counterpart of the song which the levites sing in the Temple (e.g., 1 Chron. 6:16–17). In the apocalyptic literature the seer translated to heaven sees, among other things, the throne of God surrounded by angels singing their perpetual song to God (11 En. 39–40). This part of the vision may be called the mystical core of the apocalyptic experience. The angelic song in the apocalyptic literature is generally a development of Isaiah 6:3 and Ezekiel 3:12. The song of the angels is mentioned often in 11 Enoch, where it is revealed to the seer (Version 11 23:2; cf. also Test. Patr., Levi 3:8). Particularly rich in its angelic doxologies, or songs of praise, is the Jewish-Christian Book of Revelation. The Qumran sect had a highly developed angelic liturgy (see Strugnell, in: vT, Supplement, 7 (1959), 318–45).

The *heikhalot* literature of the Jewish mystics of the talmudic period is replete with angelic songs. Even the throne of God sings a special song to God (*Heikhalot Rabbati*, 24–26). The angelic songs which the mystic hears are not short doxologies as in the apocalyptic writings, but long lyrical expressions of the divine holiness, appropriately called "numinous hymns" (R. Otto, *The Idea of the Holy* (1923), 34). There are several references to the angelic song in talmudic and midrashic literature. The two main ideas expressed there are:

(a) the angels do not repeat their song (which is always that of Isa. 6:3 and Ezek. 3:12); when they have finished singing it, they disappear;

(b) there is a special order according to which the angels divide the song among themselves.

There are also differences of opinion as to when the angels sing their song: during the day only (Lam. R. 3:23; Hul. 91b); during the night, when Israel does not pray (Hag. 12b; Av. Zar. 3b); or during both day and night (SER 7:34).

SONG OF SONGS (Heb. שִׁיר הַשִּׁירִים), the book of the Hebrew Bible which normally follows Job in the Hagiographa and precedes the Book of Ruth. It thus stands first among the Five Scrolls. In Protestant and Roman Catholic Bibles, the book follows Proverbs and Ecclesiastes, in accord with Jewish (then later Christian) tradition that Solomon was the author of all

three, for the arrangement of the books in the Septuagint has continued to exert its influence on the Christian canon into modern times (see *Bible, Canon). The title is derived from the superscription, *shir ha-shirim asher li-shelomo*, usually understood as “the best of Solomon’s songs,” although Hebrew normally does not form superlatives this way. (Comparisons with “king of kings,” or “slave of slaves,” are irrelevant because these are superlative by function: a king who rules other kings (= emperor); a slave owned by another slave; see Tur-Sinai, 354–55.) The book is also called the Song of Solomon or Canticles, the latter name being derived from the Latin translation of the Hebrew title. Fragments of the Song were found at Qumran.

The Character of the Song of Songs

The Song of Songs is composed entirely of a series of lyric (Septuagint: *asma*) love songs which vary in length, often consisting of brief stanzas, in which two lovers express to one another, and occasionally to others, the delights and anguish of their mutual love. Bold imagery and striking hyperbole characterize the songs, producing extravagant expressions and incongruous comparisons:

I have compared thee, O my love,
To a mare in Pharaoh’s chariots.
Thy cheeks are comely with circlets,
Thy neck with beads (1:9–10; on the mare see M.H. Pope, in BASOR, 200 (1970), 56–61).
My beloved is unto me as a cluster of henna
In the vineyards of En-Gedi (1:14).
I am a rose of Sharon,
A lily of the valleys (2:1).

Several songs in chapters 4–7 exhibit qualities that distinguish them somewhat from the other poems in the book, for they lavishly praise the physical features of the two young lovers:

The roundings of thy thighs are like the links of a chain,
The work of the hands of a skilled workman.
Thy navel is like a round goblet,
Wherein no mingled wine is wanting;
Thy belly is like a heap of wheat
Set about with lilies.
Thy two breasts are like two fawns
That are twins of a gazelle (7:2b–4).

Because such poems belong to the same literary genre as a similar type of Arabic love poetry, they are called *wasfs*, after the Arabic technical term meaning “description.” Such lyrical imagery and forthright expression are admittedly sensual and suggestive, but the poems are never coarse or vulgar. (Similar seductive language is employed by the married seductress of Prov. 7:16–17, but there it leads to a bitter end.) The composer has employed vivid imagery to set a mood and create an aura of emotion, which invites the hearers to participate and share his joy and delight. Such poetic finesse in part accounts for the timeless appeal and lasting popularity of these songs. The flickering flames of love that rise and fall throughout the book leap to a final crescendo in 8:6–7:

Set me as the seal upon thy heart,
As the seal upon thine arm;
For love is strong as death,
Jealousy is cruel as the grave;
The flashes thereof are flashes of fire;
A very flame of the Lord [or “mighty flame”],
Many waters cannot quench love,
Neither can the floods drown it.

The Bible, because of its primary concern with religious themes, contains poetry which deals principally with sacred topics in hymns, laments, songs of praise and thanksgiving, etc. There are also a number of songs with a secular flavor and dealing with the more mundane affairs of life scattered through its pages, but the Song of Songs is unique in the Bible, for nowhere else within it can be found such a sustained paean to the warmth of love between man and woman. It is completely occupied with that one theme. No morals are drawn; no prophetic preachments are made. Perhaps more than any other biblical book, the Song presents a picture of “gender mutuality” (Meyers). The female lover is given more lines to speak than the male, and the presence of the “daughters of Jerusalem” is most prominent. It is likely that several of the poems originated among women bards.

A remarkable feature of the book is that God receives no mention, and theological concerns are never discussed. While the Book of Esther also fails to mention God, an unmistakable spirit of nationalism permeates its pages; but the Song lacks even this theme. Another unique feature of the book is the extended description of the woman’s dreams (3:1–5; 5:1–6:3). These are the only biblical examples of dreams not followed by interpretation.

While the Song of Songs appears unique in the Bible, it is quite at home in the literature of the Ancient Near East. Numerous texts recovered from both Egypt and Mesopotamia have brought to light the long history of love poetry in the ancient world. Even the earliest civilization of ancient Mesopotamia, that of Sumer, produced passionate love songs that reflect a remarkable similarity of expressions, implications, situations, and allusions to parts of the Song of Songs, even though the latter are “far superior to their stilted, repetitive, and relatively unemotional Sumerian forerunners” (S.N. Kramer, in *Expedition*, 5 (1962), 31; Cooper, 1970). Fox has demonstrated close parallels in Egyptian love songs, and Held has called attention to a dialogue between lovers in an Akkadian work of the Old Babylonian period. Still others have compared Greek love lyrics. Upon reflection it is only natural to expect that such songs existed in the culture of ancient Israel. Song, music, and dance, both sacred and secular, have been vehicles for expressing the deepest human emotions from time immemorial, and it is doubtful that the line dividing the one from the other was as clear to the ancients as it appears to moderns.

The Song of Songs consists of only eight chapters numbering 117 verses, yet in it occur 49 words peculiar to itself and an additional number of unusual words. The syntax of the Song is also marked by oddities. The *vav* consecutive of

biblical Hebrew is completely lacking; frequent incongruities exist, with masculine forms of verbs, pronouns and suffixes often appearing rather than the expected feminine forms; the personal pronoun is used pleonastically with finite verbs with no apparent emphatic connotations; the infinite absolute is never used and the infinitive construct only rarely; and what appears to be an Aramaic construction occurs at 3:7 (*mittato she-li-Shelomo*, literally, “his bed, Solomon’s”).

The Song exhibits characteristic features of Hebrew *poetry – parallelism, meter based on stress, repetitive patterns of structure, the use of chiasmus and ballast variants, assonance, and occasionally paranomasia. A variety of repetitive patterns may be found including a number with archaic features.

The diverse features of the Song, which support the view that the work is a collection, are somewhat muted by the uniformity of language, representing a late stage of biblical Hebrew along with features that are regular in Aramaic and in later Mishnaic Hebrew. This uniformity is apparently the result of linguistic leveling which was arrested by the final redaction of the book, leaving it essentially as it now exists in the Masoretic Text.

The Interpretation of the Song of Songs

Despite its brevity, the Song of Songs has been the inspiration for more literature about itself than any other book of its size in the Bible. It holds a magnetic attraction for those who feel compelled to explain its inclusion in the Bible, its meaning, and the linguistic peculiarities in it. Near the close of the first century C.E., when the book had long been a part of the Jewish national literature, arguments against its inclusion among the books that were to be considered canonical were suppressed by no less an eminent and vociferous advocate than R. Akiva. The rabbis and the early Church Fathers quoted, paraphrased, and sermonized from it. In medieval Europe, Bernard of Clairvaux produced 86 sermons extracted from its imagery. Still, despite the voluminous writings of Jewish and Christian exegetes, in the 17th century the Westminster Assembly’s annotations on the Song of Songs state, “It is not unknown to the learned, what the obscurity and darkness of this Book hath ever been accounted, and what great variety of Interpreters, and Interpretations have indeavoured to clear it, but with so ill successe many times, that they have rather increased, then removed the cloud” (*Annotations upon all the Books of the Old and New Testament* (1951²)). Advances in biblical scholarship have been made since then, but scholars are still divided on such important matters as the unity of the book, its origin, its divisions, its purpose, the number and identity of its characters, and its date.

The Song as an Allegory

The history of the interpretation of the Song of Songs necessarily begins with its interpretation as an allegory in which the love of God for His people was expressed. By this means a mystical message of comfort and hope could be derived from the text. The lover in the songs, operating under the guise of Solomon and the shepherd youth, was now recognized as the

Lord God of Israel, and His beloved was the people Israel. Thus a literary product which seemed devoid of any apparent religious connotations was transformed into a vehicle for expressing the very deepest kind of spiritual relationship existing between God and His people. (The development of Jewish allegorization is generally traced to Greek influence. Though the term allegory is Greek in origin, the assumption of borrowing the method is gratuitous, however, for the germinal concepts and interpretative tendencies possessing the potential for allegorization existed in Jewish schools of thought and in the Bible. Noteworthy in this respect are for example the marital images found in Hos. 2; Jer. 2:2; and Isa. 50:4–7.) The allegorical view of the book had gained widespread currency among the rabbis by the first century C.E., and it was doubtless the predominant view of the populace as well; there is evidence in the Mishnah, however, that the allegorical interpretation was not universally accepted. The Tosefta (Sanh. 12:10) records the famous admonition of R. Akiva: “He who trills his voice in the chanting of the Song of Songs in the banquet-halls and makes it a secular song has no share in the world to come.”

It is difficult to determine with any degree of accuracy when the allegorization of the Song of Songs began, but the disturbing conditions imposed by Rome upon Jewish life in the first century C.E. were advantageous to its expansion. In light of this and of the unusual features of the work, there can be little wonder that arguments arose among the rabbis over the retention of the Song among the books that “defile the hands,” that is, that were considered canonical. At the Council of Jabneh, c. 90 C.E., the matter was discussed, but we know little of the details. In any event, current scholarly opinion does not attribute authoritative canonization of biblical books to the Jabneh council. It is clear that the songs had an innate popular appeal, and they had been ascribed to King Solomon because of the several occurrences of his name in the text and the association of the references to a king with him. A generation after Jabneh, R. Akiva denied that there had ever been any controversy about the sacred character of the Song: “God forbid that it should be otherwise! No one in Israel ever disputed that the Song of Songs defiles the hands. For all the world is not worthy as the day on which the Song of Songs was given to Israel, for all the Writings are holy, but the Song of Songs is the Holy of Holies” (Yad 3:5; cf. Eduy. 5:3; Tosef., Yad 2:14). R. Akiva’s defense of the work was most certainly based on the mystical allegorical interpretation, and it is significant that he had attained a certain fame as a mystic (Tosef., Hag. (ed. Lieberman), 2:3–4). According to another tradition the Song along with Proverbs and Ecclesiastes, the other “Solomonic” works, though holy, had at first been kept out of the public curriculum (*genuzim*) but were made accessible to the public thanks to the exegesis of the men of the Great Assembly (ADRN (ed. Schechter), 2; Zakovitch, 31).

The mystical emphasis was in time displaced by historical and eschatological allegories. The Targum interpreted the Song as an allegory of the history of Israel from the Exodus

to the age of the Messiah and the building of the Third Temple. Allegory was an extension of a general interpretative tendency which sought to discover the supposed deeper meaning of the sacred texts with a consequent de-emphasis of the literal meaning. This permitted every generation to find consolation, solace, and hope appropriate to its own time and circumstances. Later Jewish exegetes such as Saadiah Gaon, Rashi, Samuel b. Meir, and Abraham ibn Ezra found in the symbolism of the Song words of consolation and strength for their contemporaries. A particularly interesting interpretation advocated by a few medieval and later commentators was the view that the bride represented wisdom.

When the Christian Church included the Hebrew Bible as a part of its canon, the allegorical interpretation of the Song of Songs was taken over with it, but the allegory was modified so that it conformed to the doctrinal needs of the Church. The Song was now understood as a portrayal of the love of Christ for his church and as speaking of his dealings with it. Modern scholarship has largely abandoned the allegorical interpretation.

The Song as a Drama

The popularity in scholarly circles of the allegorical interpretation began to decline during the late 18th century, thereby giving rise to other interpretative views. An early contender was the view that the Song of Songs was best explained as a drama, complete with characters, a plot, and a moral to be drawn. The two-character version identified Solomon and the Shulammitte of 7:1 as the leading dramatis personae. The king is attracted to the beautiful country girl, and he takes her from her rustic surroundings to his capital for his bride. Through a series of romantic interludes, however, she enables him to rise above mere sensual infatuation and attain a higher and nobler form of love. This version lacked drama and any convincing moral purpose; the three-character version, however, finds Solomon vying with a youthful shepherd for the love of the maiden. Despite the concerted efforts of the king to win her affections (which included carrying her off to his harem in Jerusalem), she adamantly rejects his amorous endeavors. Her constant longing for her shepherd lover ultimately dampens the king's ardor. In the end he graciously allows her to return to her home and a happy reunion with her true love. The obvious moral of virtue triumphant, unfortunately, demeans Solomon.

The conception of the Song as a drama was not a new invention of 18th-century scholars. As early as the third century C.E. the Christian scholar, Origen, had described the book as a nuptial poem in dramatic form, and two important manuscripts of the fourth and fifth centuries, Codex Sinaiticus and Codex Alexandrinus, indicate in their margins the identity and order of speakers. The popularity of the theory could not be sustained, because of its inherent weaknesses. When approached without bias, the Song of Songs obviously lacks the elements of a drama. The identification of the speakers, stage directions, appropriate divisions into acts or scenes, a

plot – all these must be imposed upon the text to sustain the dramatic theory. A further drawback to the theory is the figure of Solomon, for while he is made central in the drama he does not appear so in the text itself, and he is actually absent in the supposed climax (8:11 ff.).

The Song as a Cultic Liturgy

Early in the 20th century a new theory was suggested in which the Song of Songs was understood as a Jewish liturgy which was derived ultimately from the pagan rituals of the Tammuz (Adonis) cult. This cult, mentioned specifically in the Bible only in Ezekiel 8:14 and alluded to elsewhere (some compare Isa. 17:10–11), reenacted annually the myth of Tammuz, the god of fertility. The lover of the Song is seen as the dying-rising god, and the maiden is the goddess who laments him until his return, whereupon a sacred marriage (see Klein) ensues. It is suggested that much of the poetic material in the Bible came from cultic backgrounds, and that the liturgy that underlies the Song of Songs came into Israelite traditions through the celebration of a ritual marriage at the annual New Year's festival. The old Tammuz liturgy was revised in order to make it acceptable to the monotheistic ideas of Israel, or the liturgy may simply have been reduced to folk poetry. Proponents of the theory call attention to the reading of the Song of Songs during Passover to bolster their case, but the practice was not regularly followed until the medieval period.

As intriguing as the theory appears at first glance, it cannot explain the wholly secular character of the existing Song. The Song may very well contain mythological allusions, but it is unlikely that these would have been known outside of a small circle of bookish savants.

The Literal Interpretations

Two interpretations of the Song of Songs existed in the first century C.E. – the allegorical and the literal. The rabbis suppressed the latter while the allegorical view in its manifold variations dominated the interpretation of the Song for centuries. The literal view was never completely suppressed, however, for the discussions on canonization were retained and transmitted through the Mishnah, and the natural view of the Song subtly surfaced in a later rabbinic discussion on the order in which Solomon wrote Proverbs, Ecclesiastes, and the Song of Songs. R. Jonathan argued on the basis of human behavior: "When a man is young, he sings songs. When he becomes an adult, he utters practical proverbs. When he becomes old, he speaks of the vanity of things" (Song R. 1:1, no. 10). The literal interpretation, however, was advocated only rarely until the late 18th century when J.G. Herder interpreted the book on the basis of the plain meaning of the words, understanding it as a collection of love songs.

A variation of the literal view was initiated when in 1873 J.G. Wetzstein drew attention to the wedding customs of the peasants of Syria. The bride and groom are treated as king and queen during a seven-day round of festivities which include songs sung by the guests, praising the physical beauty of both bride and groom, and a "sword dance" performed

by the bride before the groom. In 1893 the proposal was advanced by K. Budde that the book is actually a collection of Palestinian wedding songs. This fascinating theory held the attention of scholars for a generation thereafter, but it left disturbing problems unresolved. Not all the songs could so easily be identified with nuptial ceremonies, nor even with marital love. The division of the Song into seven sections for the seven feast days proved unconvincing. It was also illusory to assume that marriage customs of modern Syrian peasants who are composed of mixed ethnic origins could be realistically projected back over two millennia and imposed on a Jewish milieu, particularly when it was uncertain that the Syrian wedding customs described in the theory actually obtained even in modern Palestine.

The predominant trend of modern scholarship is to take the Song of Songs literally, as a collection of lyric love songs. The anthology includes songs appropriate for use at wedding feasts and others that simply celebrate the joys of youthful love. The redeeming value of this view, if one is needed, is that love in all its manifestations is the work of the Creator who made all things and pronounced them good.

Authorship, Date, and Origin

Tradition ascribed the Song of Songs to Solomon, but Solomonic authorship has been rejected for the most part by modern scholars. The diverse poems and variety of poetic elements preclude, too, the unity which the traditional view assumes. The language of the book indicates a relatively late date. The shape of the verb, *naṭar* (Song 1:6, 8:11, 12) replacing earlier *nāzar*, “guard,” for example, shows that it was borrowed from Aramaic after the internal Aramaic sound shift from the phoneme preserved in Arabic as [Ṭ], to [ṭ] sometime in the seventh century B.C.E. The Persian loanword *pardes*, “orchard” (4:13) is well post-Solomonic as is the hapaxlegomenon *egoz*, “walnut” (6:11). The *aperion*, “palanquin,” in 3:9 may be of Greek origin. There are sufficient archaic elements in the book (Albright), however, to suggest that some of the songs are pre-Exilic.

The mention of Tirzah in 6:4 has been used to support a date for 6:4–7 before Omri moved the capital of the Northern Kingdom to Samaria (c. 800 B.C.E.). The geographical horizons of the Song include North Israel, Syria, Transjordan, and Judah, with northern places predominant so that several of the songs may have originated in that area. The destruction of the Kingdom of Israel in 722 B.C.E. did not necessarily mean the loss of that literary heritage. Ample opportunity existed for the preservation in Judah of the literary and oral traditions of the north when the Kingdom of Judah stood alone. It may be assumed that older songs, carried into Exile with the people, were brought together with later compositions and were edited, probably during the fifth century B.C.E. Older parts of the Song may have undergone minor changes in vocabulary through the replacement of older words with those more familiar before a final editing.

The discovery since 1929 of the Ugaritic texts has provided an important new research tool for biblical scholars.

Through comparative linguistic studies several grammatical and syntactical problems in the Song of Songs have been partially clarified, and a number of archaic features have been identified in its text (Avishur). The direct value of the Ugaritic texts for the study of the Song of Songs is limited, however, because no work of a comparable theme has yet been discovered at Ugarit.

[Keith N. Schoville / S. David Sperling (2nd ed.)]

In the Liturgy

The Song of Songs is included in the liturgy of Passover. It is read on the Intermediate Sabbath where there is one; when the first day of Passover falls on Sabbath it is read in Israel on the first day and in the Diaspora on the eighth. Under kabbalistic influence it was instituted as a voluntary reading before the Friday evening service, being observed by Sephardi Jews, particularly during the Sabbaths between Passover and Shavuot.

In the Arts

Like the Book of Psalms, the Song of Songs has been a major influence in literature, art, and music – largely as a result of its mystical interpretation in Jewish and, even more, in Christian tradition. In early medieval times there were notable translations by Notker Labeo and Williram in Old High German; others appeared during the Renaissance era in various languages, including one in Spanish (c. 1561) by the New Christian humanist Luis de *León which may have been based on the original Hebrew; and, in more recent times, there were translations by Moses *Mendelssohn, *Goethe, and *Herder (in German), and by *Bossuet and *Renan (in French). In poetry, drama, and fiction the Song of Songs figures mainly in works of the 19th and 20th centuries. The French poet Victor Hugo, who first skirted the theme in his “Salomon” (*La légende des siècles*, 1877), developed it more fully in his “Cantique de Bethphagé,” a poem contained in his posthumous collection, *La Fin de Satan* (1886). Treatments of the theme by Jewish writers include Heinrich *Heine’s poem “Salomo” (in *Romanzero*, 1851), inspired by Song 3:7ff.; Abraham *Goldfaden’s Yiddish operetta, *Shulamit* (1880); Julius *Zeyer’s Czech drama, *Sulamit* (1883); and *Die Weisheit Salomos*, a German drama by Paul *Heyse, which S.L. *Gordon published in Hebrew as *Shulamit; o Hokhmat Shelomo* (1896).

The Song of Songs has continued to appeal to many writers of the 20th century, as well. In Russia, for example, Alexander Ivanovich Kuprin published the romance, *Sulamif* (1908; Eng. trans. 1923); in Argentina, Arturo Capdevila was the author of *La Sulamita* (1916), a play about the Song of Songs; and the French dramatist Jean Giraudoux wrote *Cantique des cantiques* (1938). A number of modern Jewish authors have also turned to the subject, including the Russian Samuel *Marshak, whose poem on the theme dates from his early, pre-Soviet, “Jewish” period, and the Romanian poet Marcel Breslașu (*Cintarea Cintarilor*, 1938).

In art the subject was chiefly popular in the Middle Ages, when it was given a symbolic interpretation. Thus, in Byzantine

tine miniatures, illustrations to “Behold, it is the litter of Solomon; Threescore mighty men are about it, Of the Mighty men of Israel” (3:7) sometimes show Jesus in place of Solomon, the “mighty men” being depicted as angels with lances. The subject appears in 12th-century Byzantine miniatures such as the *Homilies of the Monk James* (Vatican Library, Bibliothèque Nationale, Paris) and in the 12th-century *Hortus Deliciarum*. The Shulamite or Beloved symbolized the Church (i.e., the bride of Jesus), and hence the virgin Mary (the Church is representative). In the *Hortus Deliciarum* the Beloved is shown as the virgin flanked by monks and laity with the daughters of Zion at her feet, and the Beloved is also shown as Mary in the 16th century *Story of the Virgin* tapestry in Rheims Cathedral. Figures of the madonna from medieval France and Spain sometimes have blackened heads. These “black madonnas” have been thought to derive from the description of the Beloved who is “black, but comely” (1:5). The metaphors for the Beloved, such as the “rose of Sharon” (2:1), the “garden shut up” (4:12) and the “fountain of gardens” (4:15) became attributes of the virgin.

Two representations of the 19th century are “The Shulamite,” by the English painter Albert Joseph Moore (1841–1893; Walker Art Gallery, Liverpool), and “The Song of Solomon” (1868), a drawing by the English pre-Raphaelite artist Simeon *Solomon (1840–1905; Municipal Gallery of Modern Art, Dublin). Modern Jewish works include a series of paintings by Marc *Chagall, illuminations (1923) by Ze’ev Rabban (1890–1970), illustrations by the Israel artist Shraga Weill (1918), and engravings by the Canadian David Silverberg (1961).

In the music of the 15th, and more frequently of the 16th, century settings of the (Vulgate text of the) Song of Songs were generally composed for liturgical purposes, since the verses and sections form part of many Marian celebrations. Early examples are *Quam pulchra es* by John Dunstable and by King Henry VIII of England. Sixteenth-century composers of motets and motet-cycles on the text include most of the great “Netherlanders” and their Italian successors. In the 17th century, the functions and forms of the settings became more diverse. Monteverdi’s choral *Nigra sum* and *Pulchra es* were still in use as Marian praises, while his *Ego flos campi* and *Ego dormio* had already been composed as songs for alto voice and continuo. Among Schuetz’s many settings in both Latin and German, *Ich beschwoere euch* (1641) is a *dialogo* approaching the dramatic form. The German Protestant settings were mostly intended as wedding songs; with the rise of Pietism they once more assumed a religio-allegorical function. *Meine Freundin du bist schoen* by Johann Christoph Bach, another wedding piece, practically concludes a period in the musical history of the Song of Songs. The 18th century did not favor the text, although one rare exception was William Boyce’s *Solomon, a Sereneta... taken from the Canticles* (1743), with dialogues between “He” and “She,” and choirs. In the 19th and 20th centuries the dramatic, or at least dialogic potential of the text again appealed to composers. The 19th-

century works include *Tota pulchra es* by Bruckner; Chabrier’s cantata, *La Sulamite*; Leopold *Damrosch’s oratorio, *Sulamith*; and the oratorios titled *Canticum canticorum* by Enrico Bossi and Italo Montemezzi. Twentieth-century composers include Ralph Vaughan Williams (*Flos campi*, for viola solo, wordless voices, and small orchestra); Virgil Thompson (*Five phrases from the Song of Solomon*, for soprano and percussion); Jacobo Ficher (*Sulamita*, symphonic poem); Rudolf Wagner-Régeny (*Schir haschirim*, for choir; German text by Manfred Sturmann); Lukas *Foss (*Song of Songs*, for soprano and orchestra); Jean Martinon (*Le Lis de Saron*, oratorio); Stanislaw Skrowaczewski (*Cantique des cantiques*, for soprano and 23 instruments); Arthur Honegger (*Le Cantique des Cantiques*, ballet); Natanaël Berg (*Das Hohelied*, for choir); and Mario *Castelnuovo-Tedesco (*The Songs of Songs*, scenic oratorio; also settings of “Set me as a seal upon thine heart,” etc., for Reform Jewish wedding ceremonies).

Among settings by Israel *composers the best known are the oratorio *Shir ha-Shirim* by Marc *Lavry, and the solo song *Hinakh Yafah* by Alexander Uriah *Boscovich (the latter based on the traditional Ashkenazi intonation of the text). Several choral settings have also been composed for the introductory parts of the Kibbutz **seder* ceremonies, which traditionally open with the celebration of Spring. The folk-style settings of single verses and combinations of verses (often out of their original sequence) are especially numerous. Their role was particularly important in the formative years of the Israel folk-dance movement (during the late 1940s). The need for lyrical couple-dances – as against prevailing communal dances such as the *Horah and those derived from it and the “jolly” couple-dances taken over from Europe – led to an ideological conflict which was resolved by basing the new, more tender dances on the “historical” precedent of the Song of Songs.

The Song scarcely appears in traditional Jewish folk music outside its liturgical function – no doubt because of the rabbinic prohibition against singing it “like a folksong” (Sanh. 101a; see The Five *Scrolls, musical rendition).

SONG OF SONGS RABBAH, aggadic Midrash on the Song of *Songs, the product of Palestinian *amoraim*. In geonic and medieval rabbinic literature *Song of Songs Rabbah* is also referred to as *Midrash Hazita* or *Aggadot Hazita*, the name deriving from its opening passage: “This is what Scripture states in the words of Solomon (Prov. 22:29): ‘Seest thou (*hazita*) a man diligent in his business? He shall stand before kings.’” In the *editio princeps* of the work, it is called *Shir ha-Shirim Rabbati* and *Midrash Shir ha-Shirim*. (For the name *Song of Songs Rabbah*, see **Ruth Rabbah*.)

It is an exegetical Midrash which expounds the *Song of Songs consecutively, chapter by chapter, verse by verse, and sometimes even word by word. In the *editio princeps* the work is divided into two sections, the first an exposition of Song of Songs 1:1–2:7; the second of 2:8 to the end. Later editions, however, are further subdivided into eight chapters corresponding to those of the biblical book. The Midrash begins with five proems characteristic of amoraic Midrashim, starting with an extraneous introductory verse which is subsequently connected with the opening verse of the biblical book expounded by the Midrash. Here the proems, most of which are anonymous, are introduced by verses from the Hagiographa (three from Proverbs and one from Ecclesiastes, both ascribed, as is the Song of Songs, to Solomon).

The language of the Midrash is mishnaic Hebrew with an admixture of Galilean Aramaic and with a liberal representation of Greek words.

Song of Songs Rabbah drew from tannaitic literature, the Jerusalem Talmud, *Genesis Rabbah*, and *Leviticus Rabbah*, as well as **Pesikta de-Rav Kahana* in a recension somewhat different from its present form. There is no evidence, however, to support the suggestion that it also made use of *Lamentations Rabbah*, the greater likelihood being that both of these drew upon a common source. Conversely, *Song of Songs Rabbah*, even though in a recension other than that extant, served as a source for **Pesikta Rabbati*. It is employed in the *piyyutim* of Meshullam b. Kalonymus and is referred to in *Teshuvot ha-Ge'onim* (ed. A. Harkavy (1887) 36). This Midrash contains much original tannaitic and amoraic material. It interprets Song of Songs as an allegory of the relationship between God and Israel. It also contains many *aggadot* dealing with the messianic redemption, as well as polemical expositions against Christianity. The work was apparently redacted in Erez Israel about the middle of the sixth century C.E.

There are several later additions in the Midrash, some of them the work of copyists. On Song of Songs 1:2, for example, a copyist added an entreaty that his nephew might acquire a knowledge of the Torah.

Editions

Songs of Songs Rabbah was first published in Pesaro in 1519 together with the *midrashim* on the four other scrolls (although entirely unrelated to them) and has often been reprinted on the basis of this edition. There are several extant manuscripts of the Midrash, the earliest being the Parma manuscript, dated 1270, in which *Song of Songs Rabbah* occurs in the middle of *Pesikta Rabbati* between sections 18 and 19, associated with the festival of Passover, when the Song of Songs is customarily read. An English translation by Maurice Simon appeared in the Soncino Midrash (1939).

[Moshe David Herr]

SONG OF THE THREE CHILDREN AND THE PRAYER OF AZARIAH, an apocryphal addition to the ancient versions (Greek, Latin, Syriac, Coptic, Ethiopic, Armenian, Arabic) of the canonical text of the Book of Daniel, inserted between 3:23 and 3:24. The interpolation, which may have been composed in Hebrew in the second or first century B.C.E., is in three sections: (a) the Prayer of Azariah (1–22), praising God, confessing Israel's sins, and imploring divine deliverance; (b) details concerning the heating of the fiery furnace (23–27); and (c) the Song of the Three Children (28–68). The last is in two parts: the opening liturgy addressed to God (29–34) and a series of exhortations addressed to all creatures, animate and inanimate, to praise the Lord (35–68). The unknown author of the addition derived much of his inspiration from the antiphonal liturgies in Psalms 136 and 148.

SONNABEND, YOLANDA (1934–), stage designer and painter. Yolanda Sonnabend was born in Rhodesia, but studied at the Académie des Beaux-Arts, Geneva, at Rome University, and at the Slade School of Fine Art, London. She was a resident of London from 1964. A well-known stage designer and painter, she collaborated on productions at Sadler's Wells and the Royal Opera House, London, at the Old Vic, the Stuttgart Staatsoper, and the Aldeburgh Festival. These productions included the *Oresteia* trilogy by Aeschylus, Monteverdi's *Orfeo*, *The Maids* by Genet, Shakespeare's *The Tempest*, *Othello*, *Henry IV*, and Benjamin Britten's opera, *The Turn of the Screw*. Her work was noted for intensity of vision and an extremely personal use of color and decoration. Among her finest efforts have been the plays of Genet, which require fantastic settings. She held exhibitions of stage designs in London, New York, and Italy, and her paintings appeared in numerous mixed exhibitions. She is represented in the collections of the Victoria and Albert Museum, London, and the Arts Council of Great Britain.

[Charles Samuel Spencer]

SONNE, ISAIAH (1887–1960), scholar, historian, and bibliographer. Born in Galicia, Sonne studied at Swiss and Italian universities and at the Collegio Rabbinico in Florence, where he later became a lecturer in Talmud, philosophy, and Jewish history after having taught at the Hebrew high school in Lodz. In Florence he also taught German in a state high school and worked in the libraries and archives of the Jewish communities in Italy. From 1936 to 1939 he headed the rabbinical seminary in Rhodes, and in 1940 became lecturer and librarian at Hebrew Union College, Cincinnati.

Sonne's scholarly interests extended to history, particularly that of Italian Jewry; biography (Judah Abrabanel, Uriel d'Acosta, Leone Modena); philosophy (Spinoza, Pascal); Hebrew literature (Immanuel of Rome); bibliography; and Jewish art. He was a scholar of penetrating insights, able to extract underlying historical theories from seemingly trivial details, e.g., his article in the *Alexander Marx Jubilee Volume* (1950, Hebrew section, 209–32). Sonne discovered a number of hitherto unknown works and documents, his main work consisting of articles that he published in learned periodicals and Festschriften. His books include *Avnei Binyan le-Toledot ha-Yehudim be-Italyah* ("Documents in the History of the Jews in Italy," 1938–40) and *Mi-Paulus ha-Revi'i ad Pius ha-Hamishi* "From Paul IV to Pius V," 1954); among his bibliographical studies is his "Expurgation of Hebrew Books; the work of Jewish Scholars" (in: *Bulletin of the New York Public Library*, 46 (1942), 975–1013). Of a polemical bent, Sonne was involved in a number of scholarly controversies. He bequeathed his collection of books and manuscripts to the Ben-Zvi Institute, Jerusalem, which published a memorial volume in his name in 1961.

[Jerucham Tolkes]

SONNEBORN, RUDOLF GOLDSCHMIDT (1898–1986), U.S. businessman and Zionist leader. Sonneborn was born in Baltimore, Maryland. He served as a navy pilot during World War I. In 1920 he joined his family's oil and chemical firm, L. Sonneborn and Sons of New York City, with which he remained associated. He was a director of the Commercial State Bank and Trust Company of New York, and president of the American Financial and Development Corporation for Israel and the Israel American Petroleum Corporation. Sonneborn was first attracted to Zionism during his student years. In 1919, when he was 21, he served on the *Zionist Commission to Palestine and journeyed alone to Damascus to confer with Emir Feisal. His wide connections in the American-Jewish community well equipped him as leader of a small group of prominent American Jews, called the Sonneborn Institute, who worked secretly with the Haganah in the years after World War II to provide the Palestine *yishuv* with desperately needed arms, ships (including the famous *Exodus*), and supplies. After the establishment of the State of Israel,

the group continued its activities as Materials for Israel, of which Sonneborn was president until 1955. In addition to his business activities on behalf of the Jewish State, Sonneborn served in executive capacities with the United Jewish Appeal, the United Israel Appeal, and the Zionist Organization of America. He married Dorothy *Schiff, owner and publisher of the *New York Post*.

SONNEMANN, LEOPOLD (1831–1909), German banker, newspaper publisher, politician; founder and owner of the *Frankfurter Zeitung*. He was born in the town of Hochberg, Bavaria, to a traditional Jewish family. Following the death of his father in 1853, Sonnemann successfully turned the family's cloth-trade business into an international banking house. In 1856, at the age of 25, he joined forces with another Frankfurt banker, H.B. Rosenthal, in establishing a liberal financial paper, *Frankfurter Geschäftsbericht*, later renamed *Frankfurter Handelsblatt*. In 1859, the paper was transformed into the *Neue Frankfurter Zeitung* and, in 1866, into the *Frankfurter Zeitung* (FZ), by then published in Sonnemann's Frankfurt Societaets-Druckerei. In 1867, he became sole proprietor and editor. Under his direction, the FZ soon developed into one of the leading liberal dailies in Germany. Deeply impressed as a boy by the revolutionary events in 1848/49, Sonnemann was one of the founders of the *Volkswirtschaftlicher Kongress* (German Economic Congress), to which he reported on banking and stock exchange systems until 1885. From 1871 to 1876 and from 1878 to 1884, he was a member of the Reichstag, representing the *Deutsche Volkspartei* (Southern German Democratic Party). He was also a member of the Frankfurt city council. In his will, he asked that the *Frankfurter Zeitung* remain a liberal voice, and so it continued until it was closed on the personal instructions of Hitler in 1943.

SONNENFELD, BARRY (1953–), U.S. director-producer. Born in New York City, Sonnenfeld grew up in Washington Heights and attended the High School of Music and Art in Manhattan. He majored in political science at New York University, but completed his senior year at Hampshire College in Amherst, Massachusetts. Following a cross-country trip, Sonnenfeld decided to enroll in NYU's Graduate Institute of Film and Television. He earned money making industrial films, directing commercials, music videos, and X-rated movies. In 1982, Sonnenfeld worked as a cinematographer on the doc-

umentary *In Our Water*, which earned an Academy Award nomination. After he met fellow NYU film student Joel *Coen at a party, the two became friends. Sonnenfeld helped Coen raise money for the noir thriller *Blood Simple* (1984), for which he was the cinematographer. In 1985, he won an Emmy Award for his work on an ABC television special, *Out of Step*. He was the cinematographer for several feature films, including the Coen brothers' *Raising Arizona* (1987) and *Miller's Crossing* (1990) and Rob *Reiner's *When Harry Met Sally...* (1989) and *Misery* (1990). Sonnenfeld directed *The Addams Family* (1991), a big-screen adaptation of the 1960s sitcom inspired by Charles Addams' cartoons, which earned more than \$110 million, and the sequel, *Addams Family Values* (1993). He turned down the opportunity to direct *Forrest Gump* (1994), preferring instead to adapt the Elmore Leonard novel *Get Shorty* (1995), which earned actor John Travolta a Golden Globe. After directing the quirky sci-fi comedy hit *Men in Black* (1997), Sonnenfeld began moving into production with two Elmore Leonard projects, television's *Maximum Bob* (1998) and the Steven *Soderbergh-directed feature *Out of Sight* (1998). After directing *Wild Wild West* (1999), a big-budget flop, Sonnenfeld returned to his crime roots directing the Dave Barry comedy *Big Trouble* (2002) and the sequel to his 1997 hit *Men in Black II* (2002). He delved further into Leonard's lead character from *Out of Sight* with the short-lived television show *Karen Sisco* (2003). In 2004, he produced the Coen brothers' remake of *The Ladykillers* and Lemony Snicket's *A Series of Unfortunate Events*.

[Adam Wills (2nd ed.)]

SONNENFELD, JOSEPH ḤAYYIM BEN ABRAHAM SOLOMON (1849–1932), first rabbi of the separatist Orthodox community in Jerusalem. Born in Verbó (Slovakia), Sonnenfeld was orphaned at the age of four. As a child he studied both in a *talmud torah* and in a general school, but in his youth he decided to devote himself entirely to rabbinic study. After pursuing his studies in the yeshivah of his native town, in 1865 he went to Pressburg, where he lived in great poverty while studying in the yeshivah of Abraham Samuel Benjamin Sofer. In 1870 he received the title of honor *Morenu* from his teacher in a letter full of laudatory references to his great learning. The same year he went to Kobersdorf (Burgenland), where he became a pupil of A. Shag, who thought highly of him. In 1873 Sonnenfeld accompanied his teacher to Erez Israel and settled in the Old City of Jerusalem, and until the end of his life meticulously refrained from remaining outside the walls of the Old City for more than 30 days. He formed a close association with M.J.L. *Diskin and was his right hand in his communal activities, such as the founding of the large orphanage and schools and the struggle against the secular schools. Sonnenfeld was one of the most active and influential personalities in the community centered in the Old City. He headed the Hungarian *kolel* Shomerei ha-Ḥomot (“the guardians of the walls”), founded the Battei Ungarn quarter, and helped in the establishment of other quarters in Jerusalem. In 1919 he

was one of a group of rabbis headed by A.I. Kook which visited the newly established settlements in order to influence them with regard to the observance of Judaism.

Sonnenfeld stood for complete separation between the Orthodox and the non-Orthodox; he strongly opposed the bringing of the institutions of the old *yishuv* under the control of the Zionist bodies and the participation of the Orthodox in the official community, Keneset Yisrael, and fought for the statutory right of every individual to opt out of it. When the Jewish Battalions were founded in World War I he opposed enlistment of Orthodox Jews in the battalions. He was one of the founders of the Va'ad ha-Ir le-Kehillat ha-Ashkenazim (“City Council for the Ashkenazi Community”), as well as of its *bet din*, in opposition to the official Jerusalem rabbinate. He was also a founder of *Agudat Israel in Erez Israel.

As a result of his adherence to the doctrine of separation, Sonnenfeld was one of the chief opponents of A.I. Kook, and led the opposition to his appointment as rabbi of Jerusalem, and later as chief rabbi of Erez Israel, even though on the personal level their relationship was one of friendship and esteem. In 1920 Sonnenfeld was elected rabbi of a separate Orthodox community. In his struggle for the emergence of the separatist community he was especially aided by the Dutch publicist Jacob Israel de *Haan, who took care that eminent non-Jewish visitors would meet Sonnenfeld, and they were duly impressed by his personality. He was a member of the separatist Orthodox delegation that appeared, on de Haan's initiative, before Hussein, king of the Hedjaz, when the latter visited Transjordan. He appeared before the U.S. King-Crane Commission (see: *Palestine, Inquiry Commissions); he also instructed his followers to meet Lord Northcliffe on his visit to Erez Israel. On all these occasions Sonnenfeld expressed a positive attitude to the Jewish resettlement of Erez Israel and the return to Zion, and in the census declared Hebrew as his language. He generally preached loyalty toward the government. He also inclined to moderation toward the Arabs of Erez Israel and strove to establish peace between them and the Jewish population.

His published works include glosses to the *Aguddah* on *Bava Kamma* (Jerusalem, 1874) and on all of *Nezikin* (1899), a pamphlet, *Seder ha-Purim ha-Meshullash* (1898ff.); *Salmat Ḥayyim*, responsa to Shulḥan Arukh *Oraḥ Ḥayyim* and *Yoreh De'ah* (193842).

[Zvi Kaplan]

SONNENFELD, SIGISMUND (1847–1929), journalist, philanthropist, and communal leader, born in Vagujhely (then in Hungary). After graduating in philosophy, Sonnenfeld joined the staff of *Pester Lloyd* in Budapest. In 1890 he settled in Paris

where he became director of the philanthropic institutions of Baron de *Hirsch; as such he took part in planning relief for East European Jewry. From 1891 to 1911 he was a director of ICA (*Jewish Colonization Association), undertaking several study tours in Russia, Romania, and Argentina. He also was a member of the central committee of the *Alliance Israélite Universelle.

SONNENFELDT, HELMUT (1926–), political adviser and scholar. Born in Berlin, Sonnenfeldt fled Nazi Germany with his family, settling in the United States in 1944. He was educated at Johns Hopkins University, earning his bachelor's degree in 1950 and his master's degree in 1951.

Sonnenfeldt joined the U.S. Department of State in 1952, becoming director of the Office of Research on the Soviet Union and Eastern Europe, a position he held until 1969. That year he was appointed as a National Security Council aide on Soviet affairs, working under Henry Kissinger, who was President Richard Nixon's national security adviser. Sonnenfeldt's close relationship with Kissinger, as well as their agreement in foreign policy matters, led to his inclusion in Kissinger's wide-ranging diplomatic ventures, including the early initiatives toward normalization of relations with China and the extensive negotiations leading to the Strategic Arms Limitation Talks.

Following Kissinger's appointment as secretary of state in 1973, Sonnenfeldt returned to the State Department, holding the position of counselor from 1974 to 1977. An expert political analyst, Sonnenfeldt also had a reputation as an anti-Communist. His departure from the department in 1977 was purportedly driven by a misunderstanding over remarks about the Soviet Union.

Sonnenfeldt continued his career as a consultant and political analyst, writing and lecturing on international issues. He became a visiting scholar at the School of Advanced International Studies at Johns Hopkins University. In 1978 he was named a guest scholar at the Brookings Institution, a position he still held in 2006. In 1988 and 1989 he served as a member of the executive committee of the International Institute of Strategic Studies. He wrote and lectured extensively on Asian-Pacific affairs, national security, U.S.-European relations, and executive and congressional relations. His works include *Soviet Politics in the 1980s* (1985), *Soviet Perspectives on Security* (with William Hyland, 1979), and *Soviet Style in International Politics* (1985). He contributed numerous articles to academic journals.

Sonnenfeldt serves as a trustee of Johns Hopkins University and was a member of the Executive Panel of the Chief of Naval Operations. He was director of the Atlantic Council of the United States and was a member of the advisory council of numerous organizations, including the Balkan Action Committee, the Defense Policy Board Advisory Committee, and the World Affairs Council.

[Dorothy Bauhoff (2nd ed.)]

SONNENFELS, ALOYS VON (**Hayyim Lipmann Perlin; Aloys Wiener**; d. c. 1775–80), apostate Hebrew interpreter in Vienna. Son of a Brandenburg rabbi, Sonnenfels went to *Mikulov (Nikolsburg), Moravia, as an agent of the local noblemen. He adopted the Roman Catholic faith between 1735 and 1741 and had his two sons baptized. His wife, however, remained in the Jewish faith. Moving to Vienna, he became teacher of Oriental languages at the university there and court interpreter to *Maria Theresa. He was knighted in 1746. A year earlier he had published *Or Nogah, Splendor lucis*, a "physico-kabbalistic" exposition in Hebrew and German of the problem of the philosopher's stone. In 1753 he translated the *Shai Takkanot* (see *Moravia) for the compilation of the *Polizey-ordnung* of 1754. That same year he wrote to R. Isaac Landau of Cracow offering to go to Poland to assist in the struggle against the Frankist blood libel (see Jacob *Frank and the Frankists), publishing *Juedischer Blut-Eckel* in Latin and German against the blood libel (1753). In it he argued that such false, superstitious accusations prevented Jews from recognizing the truth of Christianity. When Jacob Selek, the representative of Polish Jewry, went to ask for the renewal of the papal *bulls in refutation of the blood libel, Sonnenfels submitted an Italian translation of his book. He published a christological apology, *Controversiae cum Judaeis* ("Controversies with the Jews"), in Latin in 1758. When proposing, in 1760, that he should write a book in defense of the Talmud, which was then under attack at the court of Pope Clement XIII, he requested financial support for this project from the Italian communities. The book, which was also to include proof that the Gospels could be explained by the Talmud, did not materialize.

His son JOSEPH (1732–1817) became the chief representative of the ideology of enlightened despotism, and as adviser to Maria Theresa, *Joseph II, and Leopold II, one of the most influential men in the Hapsburg Empire in the second half of the 18th century. Born in Mikulov and baptized at the age of three, he never mentioned his Jewish origin. After graduating from the philosophy faculty of Vienna University, he joined the army in 1749. On his discharge (1754) he studied law, becoming a professor of political science in 1763. As he was proficient in nine languages, Hebrew among them, he succeeded his father as court interpreter.

Joseph von Sonnenfels published more than 150 books and pamphlets and his textbooks on national economy, particularly mercantilism, were influential for decades (*Grundsätze der Polizey-Handlung und Finanzwissenschaft*, 3 vols., 1765–67, 1819–22). Sonnenfels opposed excessive urbanization and held that it was the responsibility of the state to guarantee all who were willing to work the minimum means of subsistence. In his *Ueber die Liebe des Vaterlandes* (1771) he introduced the concept of the "fatherland" into Hapsburg lands. He favored indirect taxation and opposed revenue farming. Sonnenfels had literary ambitions, aspiring to be the first Austrian author to attain international fame. He founded the periodical *Der Mann ohne Vorurteil* (1765–75). He eliminated the *Hanswurst*

(“buffoon”) from the popular Viennese stage and was involved in a controversy with Gotthold Ephraim *Lessing. In Austria he was remembered mainly for the part he played in the abolition of torture in judicial procedure (*Ueber die Abschaffung der Tortur*, 1775, 1782²). He also fostered educational reform.

Sonnenfels drafted the *Toleranzpatent of Joseph II, which shows the imprint of his theories. In 1782 he published in Berlin a pamphlet titled *Das Forschen nach Licht und Recht* in which he requested Moses *Mendelssohn to become a Christian. Mendelssohn's reaction to this was published in his *Jerusalem* (1783). In 1784 Sonnenfels made Mendelssohn a member of his Deutsche Gesellschaft (German scientific society) and of the Vienna Academy of Sciences. Although highly honored during his lifetime (becoming *Wirklicher Geheimrat*, Real Aulic councillor in 1779, twice rector of Vienna University, head of the Academy of Sciences in 1810), Sonnenfels was known in Vienna as “the Nikolsburg Jew.” A statue of him was erected in front of Vienna city hall when the antisemite Karl *Lueger was mayor; it was removed under Nazi rule (1938) and restored in 1945.

[Meir Lamed]

SONNENSCHNEIN (née Jassol), ROSA (1847–1932), early American Zionist and editor. Sonnenschein was born in Hungary but immigrated to America where she soon became prominent in literary circles, serving as special correspondent for several St. Louis and Chicago newspapers while attending the Paris Exposition.

At the Columbian Exposition held in Chicago in 1893 she read a paper on the need for a literary journal for women, which was followed by her founding the first independent English-language Jewish women's journal in the United States, *The American Jewess*, which appeared from 1895 to 1899, when it was discontinued for financial reasons, despite the fact that it was supported by the National Council of Women and had many well-known contributors, including Israel *Zangwill, Max *Nordau and Isaac Meyer *Wise.

During her numerous trips abroad, she met Theodor *Herzl and became an ardent Zionist and was a delegate to the First Zionist Congress held in Basle in 1897.

In 1864, she married Rabbi Solomon Hirsch Sonnenschein who was a rabbi in Prague and subsequently in New

York, St. Louis, and Des Moines, Iowa. They were divorced however in the 1890s.

SONNENTHAL, ADOLF RITTER VON (Neckwadel; 1834–1909), Austrian actor and theatrical director. Apprenticed to a tailor, Sonnenthal decided to become an actor on seeing a performance by Bogumil *Dawison. For several years he acted in theaters in Temesvar, Hermannstadt, and Graz, until he was invited by Heinrich Laube to join the Burgtheater in Vienna in 1856. After an indifferent debut, he triumphed in Don Carlos and was given a contract that kept him at the Burgtheater for life. Though not handsome, he nevertheless excelled in drawing-room comedy, but he gained his great reputation in Shakespeare, Goethe, Schiller, Ibsen. Among his most impressive roles were Romeo, Hamlet, Macbeth, Wallenstein, Faust, King Lear, Nathan the Wise, and Uriel Acosta. He became Oberregisseur of the Burgtheater in 1884 and its provisional general manager in 1887–88 and 1889–90. Sonnenthal was a practicing Jew and resisted attempts to convert him. More than once he was a target of antisemitic attacks. The emperor made him a nobleman in 1881. He made guest appearances in Russia and the U.S.

SONNINO, (Giorgio) SIDNEY (1847–1922), Italian statesman and economist who twice became prime minister of Italy. The son of a wealthy Jewish merchant from Pisa and a Protestant mother whose faith he adopted, Sonnino graduated from the University of Pisa and was variously occupied as a journalist, lawyer, and diplomat. In 1880 he entered parliament where he rapidly established himself as an authority on financial policy. In 1893 he became undersecretary of the treasury and was made minister of finance in 1896 when, together with Luigi *Luzzatti, he helped reduce the Italian budget deficit.

Sonnino served two short periods as prime minister (in 1906 and 1909–10) and was foreign minister during World War I, signing the Treaty of London in 1915 by which Italy sided with the Allies. He remained foreign minister after the war and headed the Italian delegation at the Versailles Peace Conference in 1919. Sonnino retired in 1920 and was made a senator for life. He left two books dealing with his political life: *Discorsi per la Guerra* (1922) and *Discorsi parlamentari* (3 vol., 1925).

SONNTAG, JACOB (1905–1984), Ukrainian-born editor and author. The son of a bookbinder, Sonntag was educated in Vienna and elsewhere in Central Europe, fleeing to England in 1938. He devoted himself to Anglo-Jewish cultural affairs and made repeated attempts to found a periodical for Jewish writers and artists. Sonntag finally succeeded with *The Jewish Quarterly*, which he founded in 1953. Edited almost single-handedly, it provided the main periodical venue in England for intelligent discussion of Jewish issues and published the early works of a range of distinguished Anglo-Jewish writers, including Dannie *Abse, Jon *Silkin, and Arnold *Wesker. It continued to be published after Sonntag's death. He also edited the anthology *Caravan* (1962).

SON OF MAN (Heb. בֶּן אָדָם; pl. בְּנֵי אָדָם, Aram. בְּרֵי אַנְשָׁא).

In the Bible

In the Bible the phrase "son of man," or "sons of man" (*adam*), is used as a synonym for a member of the human race, i.e., descendants of Adam. It occurs frequently in Psalms in the plural, and the most cogent examples of its meaning are Psalms 90:3, "Thou turnest man to contrition, and sayest, return, ye sons of man"; 115:16, "the heavens are the heavens of the Lord, but the earth hath He given to the sons of man"; and repeatedly in Psalm 107. In Psalm 49:3 a distinction is made between "the sons of *Adam* and the sons of *Ish*, rich and poor together," and it would appear that insofar as the two are distinct, the former refers to the common man, while *Ish* refers to the upper strata (cf. Isa. 2:9 and 11). The phrase "son of man" is merely the singular of *benei adam*, and in the Bible has no theological or mystical connotation. It is most frequently used by Ezekiel, mostly as the form of address to him by God, where it occurs 79 times, and it seems, as is clear from chapter 33, that he wishes thereby to emphasize that he is possessed of no special qualities or powers different from those of any other person, except that he has been selected as the "watchman" of his people.

[Louis Isaac Rabinowitz]

Post-Biblical Concept

The eschatological figure commonly identified with the Messiah occurs in chapter 7 of the Book of Daniel in a vision which is explained by the angel in a collective way as the holy ones of the most high, i.e., Israel or the pious among them. The author of Daniel based himself upon a more ancient tradition according to which the title son of man was a designation of a special eschatological figure. This idea existed possibly by the third century B.C.E.; the designation "man" for messiah

already occurs in the Greek translation of the Pentateuch (see *Messiah) of this period.

The son of man is named "man" also in 1v Ezra, and in Hebrew "son of man" and "man" is identical. In the whole literature in which it is mentioned, the son of man is always portrayed with the same economy of line. The son of man has a superhuman, heavenly sublimity. He is the cosmic judge at the end of time; seated upon the throne of God, he will judge the whole human race with the aid of the heavenly hosts, consigning the just to blessedness and sinners to the pit of hell; and he will execute the sentence he passes. Frequently he is identified with the Messiah, as in the Book of Enoch, chapters 37–71, and in 1v Ezra. According to a later part of the Book of Enoch (ch. 71) the son of man is identified with Enoch himself as the heavenly scribe. According to the apocryphal Testament of Abraham the son of man is literally Adam's son Abel who was killed by the wicked Cain, for God desired that every man be judged by a man (the identification is based upon a verbal understanding that son of man in Hebrew is *ben-Adam*). Though in the Dead Sea Scrolls there were also other messianic concepts, the concept of son of man is also reflected in them. The eschatological figure occurring in the Thanksgiving Scroll (3, 5–18) resembles or is identical with the son of man of other Jewish literature. In one of the fragments from the Dead Sea Scrolls Melchizedek figures as the judge at the end of time. In company with angels from on High he will judge man and the wicked spirits of Belia'al. Thus the son of man could be even identified with the biblical Melchizedek according to a mythical understanding.

The idea of son of man originated possibly from a midrashic interpretation of Ezekiel 1:26, "... and the likeness as the appearance of a man above upon it." In the Book of Enoch (46: 1, 2) the son of man is presented with similar words "with Him was another being whose countenance had the appearance of a man... And I asked the angel who went with me and showed me all the hidden things, concerning that son of man, who he was..."

Thus it seems that the concept preceded the final identification of the son of man with the Messiah, which became common at the end of the Second Temple period. It was so applied in the time of Jesus, who used to speak of the son of man as the heavenly judge, and it seems that finally he identified himself with this sublime figure.

[David Flusser]

BIBLIOGRAPHY: POST-BIBLICAL CONCEPT: D. Flusser, in: *Christian News from Israel* (1966), 23–29; S. Mowinckel, *He That Cometh* (1956); E. Sjöberg, *Der Menschensohn in dem aethiopischen Henochbuch* (1946).

SONS OF LIGHT (Heb. בְּנֵי אוֹר, *benei or*), phrase used specially in the *Dead Sea Scrolls denoting the godly, by contrast with the phrase "sons of darkness" (Heb. בְּנֵי חֹשֶׁךְ, *benei hoshekh*) denoting the ungodly. It is so used, notably in the **War Scroll*, where "the sons of light put forth their hands

to make a beginning against the lot of the sons of darkness" (1QM 1:1). The "sons of light" are here particularized as "the sons of Levi, the sons of Judah, the sons of Benjamin, the dispersion of the wilderness"; the "sons of darkness" as the hosts of Edom, Moab, the Ammonites, Philistia, and the Kittim, aided by those who transgress the covenant. In the event described, the sons of light annihilate the sons of darkness. From the viewpoint of the Qumran community, the sons of light are members of the community and their sympathizers. On entry into membership the candidate swears "to love all the sons of light, each according to his lot in the council of God, and to hate the sons of darkness, each according to his guilt in the vengeance of God" (1QS 1:9–11). The apostate is to be "cut off from the midst of the sons of light" (1QS 2:16). The sons of light are so chosen through God's predestinating decree. When God created man, He appointed two spirits to govern him: "dominion over all the sons of righteousness is in the hand of the Prince of Lights, and they walk in the ways of light; all dominion over the sons of perversity is in the hand of the Angel of Darkness, and they walk in the ways of darkness" (1QS 3:20 ff.). The Angel of Darkness, indeed, makes even the sons of light go astray, but they can count on the aid of "the God of Israel and the angel of His truth" (1QS 3:24 ff.). The designation "sons of light" is one of the links between the Qumran texts and the New Testament; in the latter it is found on the lips of Jesus (Luke 16:8, where it is opposed to the "sons of this age", John 12:36) and in the Pauline writings (Eph. 5:8; I Thess. 5:5). In both bodies of literature the ultimate background is the separation made by God in the beginning when He called light into being as the first of His creative works and separated it from the darkness (Gen. 1:3 ff.).

SONTAG, SUSAN (1933–2004), U.S. critic and author. Born in New York City, Susan Sontag taught philosophy and aesthetics at the City College of New York, Sarah Lawrence College, and from 1961 to 1965 at Columbia University.

Her first novel, *The Benefactor*, was published in 1963, but her reputation grew largely from her literary criticism, which appeared throughout the 1960s in a number of journals and was collected in *Against Interpretation* (1966) and *Styles of Radical Will* (1969). Consciously avant-gardist, it argued for a purely formalistic approach to literary values, while at the same time seeking to reconcile this position with her left-wing political views. A second novel, *Death Kit* (1967), was concerned, like her first, with the relation between illusion and reality. She also wrote and directed a movie, *Duet for Cannibals* (1969). Later works include plays, among them *Alice in Bed: A Play in Eight Scenes* (1993). In addition to stories and essays, Sontag has written books that include the 1992 novel *The Volcano Lover: A Romance*. A selection of her writings was collected in the 1982 *A Susan Sontag Reader*. In her capacity as literary critic she has edited *Antonin Artaud:*

Selected Writings (1988) and *A Barthes Reader* (1982). Her reflection on the relationships amongst photography, history, and perception, *On Photography*, appeared in 1977. Her own battle with cancer led her to write *Illness as Metaphor* (1978), followed in 1989 with a complementary study, *Aids and Its Metaphors*. In 2000, her sweeping novel of late 19th century America, and the fortunes of Maryna Zalezowska, was published with the title *In America: A Novel*. It received the National Book Award. *Conversations with Susan Sontag*, edited by Leland Pogue, appeared in 1995.

A member of the American Academy of Arts and Sciences and the American Academy of Arts and Letters, Sontag has been the recipient of many awards including the 1978 American National Book Critics prize. She was created Officier de l'Ordre des Artes et des Lettres in France in 1984.

[Rohan Saxena and Lewis Fried (2nd ed.)]

SOPRON (Ger. **Oedenburg**), city in W. Hungary on the Austrian border, within proximity of the "Seven Communities" of *Burgenland. Jews were living there during the 14th century, according to the prevailing custom in a "Jewish street." Their residence in Sopron was guaranteed by King Charles Robert in 1324. The land registry records of 1379 show that 27 houses were owned by Jews. After King Louis the Great expelled the Jews in 1360, those who lived in the town left for nearby *Wiener Neustadt in Austria, where some of them made their fortune and became well-known financiers. When Louis authorized their return in 1365, their houses were transferred to Christian ownership. During their absence the debts owed to them were canceled by Rudolf, prince of Austria, upon the request of the citizens of Sopron. Upon their return the Jews demanded that the validity of their promissory notes be recognized, but the townsmen succeeded in revoking them.

Their situation did not improve until the reign of Matthias Corvinus, when the office of *Praefectus Judaeorum was established. From 1495 a special tax was imposed on the Jews by the governor of the town until in 1523 the king took them under his protection. The Jews then numbered 400. Rabbis of Sopron at the close of the 14th century were R. Meir (mentioned in *Sefer ha-Minhagim*) and R. Judah (mentioned in the *Shalshet ha-Kabbalah* as a distinguished scholar in the Germanic countries). Fifteen codices recently discovered attest the erudition of the Jewish scholars of Sopron.

When the whole of Hungary was conquered by the Turks in 1526, the Jews were expelled from the town "forever." They infiltrated back into Sopron in the 18th century but its gates remained closed to them until freedom of residence was authorized by law in 1840. In 1855, 180 Jews were living there. New settlers came mainly from the "Seven Communities" of Burgenland where they had lived under the protection of the Eszterházy family from the 16th century. The municipal

council of Sopron again attempted to oppose them, and in 1858 anti-Jewish riots broke out in the town; these were suppressed by the central authorities. In 1857 the Jews were authorized to organize themselves as a community but they did not possess a cemetery or synagogue. In 1862 the municipal council prevented the community from purchasing land for a cemetery and the Jews were compelled to acquire an estate for this purpose (1869). A synagogue was erected in 1876, and in 1884 a school was built. The community remained *status quo ante* after the schism in Hungarian Jewry of 1868–69 (see *Hungary). In 1868 L. Alt was appointed rabbi of Sopron but he was dismissed in 1872. It was only 20 years later that M. *Pollak was appointed as the first, and also the last, rabbi of the *status quo ante* community (1894–1944). An Orthodox community was organized in 1872; its rabbi was Menahem Gruenwald (1872–1930). A *talmud torah* was established in 1874, and a *yeshivah* was founded in 1917 by S. Posen, the rabbi of the town (1930–44), who later settled in the United States.

The Jewish population numbered 1,152 in 1881; 1,632 in 1891; 2,255 in 1910; 2,483 in 1920; and 1,885 in 1930. They were mainly occupied as merchants, and included industrialists and contractors, as well as a number of craftsmen and members of the liberal professions. The anti-Jewish tradition in the town continued and its German inhabitants rapidly adopted the theory of racism.

Holocaust and Contemporary Periods

During World War II, after the German occupation (March 19, 1944), the Jews, numbering 1,861 in 1941, were confined in a ghetto. On July 5, around 3,000, including Jews from the surrounding area, were deported to the death camp at Auschwitz. Only a few returned. Even after the deportation, the inhabitants of Sopron did not help to alleviate the suffering of the thousands of Jews from the forced labor camps who passed through the town on their last halt before being sent to the death camps in Germany.

After World War II, only 274 Jews remained in Sopron (1946), and only 47 in 1970.

[Baruch Yaron]

SORAUER, PAUL KARL MORITZ (1839–1916), German plant pathologist. Sorauer was born in Breslau, the son of a cabinet maker, and after studying horticulture went to Berlin for further training in plant physiology. In 1872 he was appointed director of an experimental station for plant physiology at Proskau. He was given the rank of professor in 1892, but was obliged to relinquish his post the following year because of a long-standing eye ailment. He moved to Berlin and lectured for a time at the Humboldt Academy. At the age of 63 he was made a *Privatdozent* at the University of Berlin.

Sorauer was the author of many publications on plant diseases, which bear the stamp of his unique amalgam of practical knowledge and physiological science. He was the founder of the *Zeitschrift fuer Pflanzenkrankheiten*, established in 1891. A major work was his *Handbuch der Pflanzenkrankheiten*, first published in 1874, which went through three editions. Sorauer was an influential teacher, and trained a large number of European plant pathologists.

BIBLIOGRAPHY: *Zeitschrift fuer Pflanzenkrankheiten*, 26 (1916), 6–17.

[Mordecai L. Gabriel]

SORCERY. First and foremost among the “abhorrent practices of the nations” mentioned in the Bible are the various forms of sorcery: “let no one be found among you who... is an augur, a soothsayer, a diviner, a sorcerer, one who casts spells, one who consults ghosts or familiar spirits, or one who inquires of the dead. For anyone who does such things is abhorrent to the Lord” (Deut. 18:9–14). *Divination and soothsaying (Lev. 19:26) and the turning to ghosts and spirits (Lev. 19:31 and 20:27) had been proscribed separately before, and witchcraft in general is outlawed with the lapidary “Thou shalt not suffer a witch to live” (Ex. 22:17). It was to be the characteristic of Judaism that nothing would be achieved by *magic, but everything by the will and spirit of God: hence the confrontations of Joseph and the magicians of Egypt (Gen. 41), of Moses and Aaron and Egyptian sorcerers (Ex. 7), of Daniel and the Babylonian astrologers (Dan. 2), etc., and hence also the classification of crimes of sorcery as tantamount to idolatrous crimes of human sacrifices (Deut. 18:10) and to idolatrous sacrifices in general (Ex. 22:19) and its visitation, just as idolatry itself, with death by stoning (Lev. 20:27; see *Capital Punishment). In a God-fearing Israel, there is no room for augury and sorcery (Num. 23:23; Isa. 8:19), and the presence of astrologers (Isa. 47:13) and fortune-tellers is an indication of godlessness (Nah. 3:4; Ezek. 13:20–23; et al.). Nonetheless, magic practices remained widespread throughout, and not only with idolaters (see, e.g., I Sam. 28:4–20; II Kings 18:4; Chron. 33:6).

Talmudic law differentiated between capital and non-capital sorcery, retaining the death penalty only for those species for which the Bible expressly enjoined it, namely witchcraft (*kishuf*; Ex. 22:17) and conjuring a death (*ov* and *yidoni*; Lev. 20:27; Sanh. 7:4). *Kishuf* is nowhere exactly defined, but a distinction is drawn between actual witchcraft, committed by some overt and consummate act which resulted in mischief, and then punishable, and the mere pretense at witchcraft which, however unlawful and prohibited, is not punishable (Sanh. 7:11 and 67b). Witchcraft appears to have been widespread among women (cf. Avot 2:7), and Simeon b. Shetaḥ is reported to have ordered the execution of 80 witches in Ashkelon on a single day as an emergency measure (Sanh. 6:4 and Maimonides in his commentary thereto). It is witchcraft that makes for the devastation of the world (Sot. 9:13). All other species of sorcery are painstakingly defined in talmudic sources, apparently upon patterns of contemporary pagan us-

age. Thus, *ov* conjures the dead to speak through his armpit, while *yidoni* makes them speak through his mouth (Sanh. 7:7), both using bones of the dead in the process (Sanh. 65b). The aggravating circumstance, deserving of capital punishment, obviously is the use of human remains for purposes of sorcery, for he who simply communicates with the dead (in cemeteries or elsewhere) and serves as their mouthpiece (*doresh el ha-metim*) is punishable with flogging only (Yad, Avodat Kokhavim 11:13) – and this would, presumably, apply also to modern spiritualism (*Da'at Kohen*, no. 69). Other offenses punishable with flogging (both for committing and soliciting them) are *niḥush*, defined as superstitions based on certain happenings or circumstances (Sanh. 65b; Yad, Avodat Kokhavim 11:4); *kesem*, being fortune-telling from sands, stones, and the like (Maim., loc. cit. 11:6); *onanut* (done by the *me'onen*), being astrological forecasts of fortunes (R. Akiva in Sanh. 65b; Maim. loc. cit. 11:8); and *hever*, the incantation of magic and unintelligible formulae for purposes of healing or of casting spells (Maim. loc. cit. 11:10). It is presumably because these practices were so widespread that it was postulated that judges must have a thorough knowledge of magic and astrology (Sanh. 17a; Maim. Yad, Sanhedrin 2:1; and see **bet din*).

While there is no information about the measure of law enforcement in this field in talmudic and pre-talmudic times, it seems certain that this branch of the law fell into disuse in the Middle Ages. Superstitions of all kinds not only flourished and were tolerated, but found their way even into the positive law (see YD 179, *passim*, for at least eight instances). What became known as “practical Kabbalah” is, legally speaking, sorcery at its worst. The penal provisions relating to sorcery are a living illustration of the unenforceability of criminal law (whether divine or human) which is out of tune with the practices and concepts of the people. In modern Israeli law, witchcraft and related practices are instances of unlawful false pretenses for obtaining money or credit (Penal Law Amendment (Deceit, Blackmail, and Extortion), Law, 5723 – 1963).

[Haim Hermann Cohn]

SOREK, VALLEY OF (Heb. נַחַל שׁוֹרֵק, Naḥal Sorek; from the root שׁוֹרֵק, “red grapes”), valley on the border of Philistia and the territory of the tribe of Dan. The only biblical reference

to it places the meeting of Samson and Delilah there (Judg. 16:4). It is generally identified with Wadi al-Ṣarār, present-day Naḥal Sorek, near which are the ruins of Byzantine Chaparso-rech (Eusebius, *Onom.* 160:2), now Khirbat Surayk. The Sorek Valley was one of the main approaches into the mountains of Judah and several important cities, such as Ekron (Khirbat Mukannaʿ) and Beth-Shemesh, were situated along it. At present, the Jerusalem–Tel Aviv railway runs in the valley.

[Michael Avi-Yonah]

SORGHUM, the summer plant *Sorghum cernicum*, called in Arabic *durra* or *doḥ'n*. The Arabs of Israel sow it extensively, both for fodder and for flour, from which they make *pittah* (“flat bread”). It is thought to have been introduced into Erez Israel only during the time of the Second Temple. According to Pliny (*Natural History* 18:55), a plant resembling *Millium* (“*millet”), which has large kernels, was brought to Rome from India during his time, and the reference seems to be to sorghum. It is possible that the plant reached Babylon at an earlier date, for it would appear to be identical with the *doḥan* from which Ezekiel made the mixed bread he ate for a period of 390 days (Ezek. 4:9). Some think that *Panicum* (“millet”) is meant here, but millet is the *peragim* of the Mishnah. In rabbinic literature *doḥan* is mentioned with **rice* and *peragim* as a summer crop (Shev. 2:7, et al.) from which bread was sometimes made, but since these are not included in the **five species of grain* they are not treated as bread with respect to the laws of **ḥallah*, blessings, and leaven on Passover (Ḥal. 1:4; Ber. 37a). Bread made of sorghum was regarded as less tasty than that made from rice (Er. 81a). Today the red-seeded sorghum brought from California is cultivated by Jews in Israel. Some species of sorghum grow wild there.

[Jehuda Feliks]

SORIA, city in Old Castile, N. central **Spain*. The Jewish community of Soria was a major cultural and religious center in Castile. Nothing is known about the beginnings of the Jewish settlement in Soria. During the 12th century the Jews there benefited from a number of rights which were mentioned in several articles of the town *fuero* (“charter”). This also included regulations concerning jurisdiction over, and protection of, the merchants who came to trade in Soria. At first, the Jewish quarter was situated in a fortress, where about 50 families lived during the middle of the 13th century and throughout the 14th. (At that time there were 700 families in the town.) In the 13th century the community was very well organized. Jews continued to live there until the expulsion. During the second half of the 13th century, Soria was renowned for its kabbalists. According to tradition, **Jacob ha-Kohen* was born there. Toward the close of the 13th and early 14th century, Shem Tov b. Abraham **Ibn Gaon* lived in Soria; there was also a school of

Jewish illuminators who were members of this family and illuminated the famous Kennicott II and Sassoon 82 bibles, both in the Bodleian Library in Oxford. It was in Soria that Moses Narboni completed his commentary on the *Guide of the Perplexed*. Joseph *Albo, originally from Daroca in Aragon, lived there for many years and died there.

The 39,895 maravedis levy imposed on the Soria community in 1290 is an indication of its economic strength. According to an estimate of F. Cantera, there were over 1,000 Jews living in the town at the close of the 13th century. Their occupations included trade, the cultivation of vineyards, and crafts. During the civil war (c. 1366–69) between the brothers Pedro the Cruel and Henry of Trastámara, one of the tax farmers of Soria, Samuel ibn Shoshan, joined Pedro's camp and was compelled to flee from the kingdom after Henry's victory.

Although devastated by the persecutions of 1391 (see *Spain), the community appears to have recovered gradually, and in 1397 they were granted certain rights in respect of their quarter in the fortress by Henry III. A leader in the rehabilitation of the community was Don Abraham *Benveniste, who organized a convention of the delegates of the communities of Castile in Valladolid in 1432. In the 15th century, Soria was among the most important communities in Castile. Around 300 Jewish families lived in the city, constituting around 20% of the population. They were merchants, moneylenders, and artisans. Several of the inhabitants of Soria were important tax farmers. In 1465, Henry IV exempted the Jews of Soria from some taxes in appreciation of their services to the crown. Since the tax imposition in 1474 was 5,000 maravedis, it would appear that the community no longer ranked among the largest and wealthiest. In 1490, however, it paid 80,915 maravedis. The anti-Jewish policy adopted by the crown from the 1470s was felt in Soria by the restriction of the Jews to a special quarter and by the actions and attitude of the municipal council vis-à-vis the local Jews. In 1485, a levy of 308,000 maravedis was imposed on ten Jews of Soria to cover the expenses of the war against Granada. During the same year Ferdinand and Isabella authorized the Jews to maintain workshops and shops in various quarters of the town on the condition that they did not work on the Christian festivals and did not eat or sleep in these quarters. At the time of the expulsion of the Jews from Castile (1492) some Jews of Soria left for the kingdom of Navarre and most of them for Portugal. The crown ordered that debts still owed to Don Isaac *Abrabanel and other Jews in Soria be collected for them.

From the very beginning, and until the expulsion, the Jews of Soria lived in the fortress. The fortress has disappeared and on its grounds there is a park.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

SORKIN, AARON (1961–), U.S. writer-producer. Born in Manhattan and raised in Scarsdale, New York, Sorkin began acting in the eighth grade and in high school he joined the school drama club. He studied theater at Syracuse University, graduating with a bachelor's degree in 1983. While trying to break into acting in New York, Sorkin began writing plays. His first, *Removing Doubt*, was unsuccessful, but *Hidden in This Picture* (1988) was staged at the West Bank Cafe Downstairs Theater Bar in New York. His next play, *A Few Good Men* (1992), was inspired by his sister, who had gone to the U.S. Marine base at Guantanamo Bay in Cuba to arbitrate a murder case. The play appeared on Broadway, and Sorkin was hired to write the screenplay for the motion picture starring Jack Nicholson and Tom Cruise. In 1993, he helped write the screenplay for *Malice*, and was invited by Stephen *Spielberg to help polish the script for *Schindler's List*. He took two years to write the screenplay for *The American President* (1995), which earned him a Golden Globe nomination. During this time Sorkin admitted to a cocaine problem, for which he sought treatment at the Hazelden Institute in Minnesota. Sorkin took inspiration from ESPN's *Sportscenter* for his first foray into television, ABC's *Sports Night* (1998–2000), which was favorably reviewed by critics but never found its audience. In 1999, he debuted his Emmy Award-winning show about the White House, NBC's *The West Wing*, which featured Sorkin's trademark rapid-fire dialogue. Tensions over budgets and production delays grew between Sorkin and Warner Brothers, which produced *West Wing*, leading to Sorkin's departure from the show after the season finale in 2003.

[Adam Wills (2nd ed.)]

SORKIN, MICHAEL (1948–), U.S. urbanist and architectural critic. Sorkin received his training at Harvard and MIT. For seven years he wrote for the *Village Voice*, a New York newspaper, and later became director of the Graduate Urban Design Program at the City College of New York. From 1993 to 2000 he was professor of urbanism and director of the Institute of Urbanism at the Academy of Fine Arts in Vienna. He taught at numerous schools, including Cooper Union, Columbia, Yale (holding both the Davenport and Bishop Chairs), Harvard, Cornell (Gensler Chair), Nebraska (Hyde Chair), Illinois, Pennsylvania, Texas, and Minnesota. Sorkin is the principal of the Michael Sorkin Studio in New York City. This small firm specializes in urban designs both practical and theoretical and does not wait for clients to come with their requests but takes the lead in tackling projects that are sometimes visionary, such as planning for a Palestinian capital in East Jerusalem. This project was an outgrowth of a conference he organized "to bring Palestinian, Israeli, and other architects and urbanists together to discuss the future of the city in physical terms, via the medium of a design proposal. The assumption was that

there were certain issues – the environment, neighborhood development, transportation, sprawl – that could be discussed outside the discourse of politics.” Quickly, after the World Trade disaster in New York City, Sorkin, together with Sharon Zukin and 17 of New York’s best urbanists studied the attack and its aftermath. They dealt with the history of neighborhood conflicts in New York and predicted many of the struggles between various interests that have rendered the rebuilding of the site problematic. In 2002 he edited *Variations on a Theme Park, The Next Jerusalem: Sharing the Divided City*, and *After The World Trade Center: Rethinking New York City*.

[Betty R. Rubenstein (2nd ed.)]

SOROKI (Rom. Soroca), city in N. Moldova, in the region of Bessarabia. The first mention of Jewish settlement in Soroki is in 1657. However, information concerning an organized community there only dates from the beginning of the 18th century. In 1817 there were 157 Jewish families. In the early 19th century, R. David Solomon Eibenschutz served as rabbi and encouraged the study of Torah in the city. The community grew in the 19th century with the Jewish immigration to Bessarabia, and at the end of the century, also with the frequent expulsions of Jews from the neighboring border area and from the villages. In 1864, 4,135 Jews were registered in Soroki and in 1897 there were 8,783 Jews (57.2% of the total population). In 1863 a government Jewish school was opened. At the end of the century among the teachers in Soroki were the writers Noah Rosenblum, and Kadish-Isaac Abramowich-Ginzburg, who laid the foundations of a new system of Jewish education and culture among the Jews of the town on a secular and national basis. Many of the Jews of Soroki engaged in agriculture, primarily in the growing of tobacco, grapes, and other fruit. In 1900 the Jewish Colonization *Association established a training farm near Soroki. From the 1880s the economic situation of the Jews deteriorated and a wave of immigration to the United States began. In 1930 there were 5,462 Jews (36.3% of the entire population). Before World War II several educational and social institutions existed in Soroki, including Hebrew elementary and secondary schools, a hospital (founded in 1885), and an old-age home. The community was destroyed with the entry of the Germans and Romanians into Bessarabia in July 1941. The Jewish life of Soroki is described by Shelomo Hillels in the novel, *Har ha-Keramim* (1930). In the late 1960s the Jewish population was estimated at about 1,000. The only synagogue was closed down by the authorities in 1961. In April 1966 the matzah bakery was closed down by the authorities, the bakers were arrested, and the baking of matzah was discontinued. Use of the cemetery and ritual poultry slaughtering were still permitted in 1970.

BIBLIOGRAPHY: S. Hillels, in: *Pirkei Bessarabiyah*, 1 (1952), 94–120; E. Feldman, *Toledot ha-Yehudim be-Bessarabiyah* (1963), includes summary in English.

[Eliyahu Feldman]

SOROS, GEORGE (1931–), financier and philanthropist. Born in Hungary, Soros spent a year as a child in hiding dur-

ing the Holocaust. In 1947 after the communist takeover, he moved with his family to Britain. He studied at the London School of Economics, subsequently moving to New York. There he worked as a Wall Street trader but in 1969 established the Quantum Fund, that eventually would invest billions of dollars in various parts of the world. The Soros Foundation, described as the world’s largest philanthropy, distributes more than \$300 million annually in over 60 countries.

On September 16, 1992 (subsequently referred to as “Black Wednesday”), Soros, as a currency speculator, “broke the Bank of England” by placing a hedge bet that the UK would devalue the pound sterling. This audacious act earned him one billion dollars in a single day.

Much of Soros’ activities are directed to Eastern Europe, where in 1992 he founded and funded the Central European University, with branches in Budapest and Prague. In 1993 and 1994 he provided one-third of Russia’s scientific research budget. In 1993 he set up the Quantum Emerging Growth Fund to invest in Third World countries. In 1993 he also created the Open Society Institute (OSI), of which he was chairman. A private operating and grant-making foundation, the OSI works to support the Soros foundations worldwide and strives to shape public policy to promote democratic governance, human rights, and economic, legal, and social reform.

Soros is the author of *Alchemy of Finance* (1987); *Opening the Soviet System* (1990); *Underwriting Democracy* (1991); *Soros on Soros: Staying Ahead of the Curve* (1995); *The Crisis of Global Capitalism* (1998); *Open Society* (2000); *George Soros on Globalization* (2002); and *The Bubble of American Supremacy: The Cost of Bush’s War in Iraq* (2004).

[Ruth Beloff (2nd ed.)]

SOROTZKIN, ZALMAN BEN BEN-ZION (1881–1966), Lithuanian rabbi and communal leader. Sorotzkin was born in Zakhrina, Russia, where his father was rabbi. After studying under his father, he proceeded to the yeshivot of *Slobodka and *Volozhin. His renown as a brilliant student came to the attention of Eliezer *Gordon, the head of the yeshivah of Telz, whose daughter he married. After his marriage he studied for several years in Volozhin. On returning to Telz he undertook the administration of the yeshivah, displaying great organizational ability. The yeshivah building was destroyed by a conflagration, and he succeeded in rebuilding it within a short time. In 1911, after the death of his father-in-law, he was invited to serve as rabbi in the small town of Voronovo (Werenow), near Vilna, where he founded a yeshivah for young students. After some years he was appointed rabbi of Zittel in Lithuania, where he also developed extensive communal activities, particularly in founding an educational network. After the outbreak of World War I, he was forced to wander with his family into Russia and arrived in Minsk. There he devoted

himself to public activity and vigorously opposed the false charges and discriminatory decrees against the Jews, which were constantly being issued by the czarist government. After the war he returned to Zittel, but shortly afterward was appointed rabbi of Lutsk, capital of Volhynia (then in Poland), which had a Jewish community of 30,000, and he remained there until the outbreak of World War II. During his rabbinate in Lutsk he became renowned as one of the outstanding Polish rabbis and was one of the leaders of Agudat Israel and of Orthodox Jewry generally. When Lutsk was occupied by the Russians after the outbreak of World War II, they threatened to imprison him if he continued his activities. He was compelled to flee with his family to Vilna, where Ḥayyim Ozer Grodzinski, rabbi of Vilna, charged him with reorganizing the many yeshivot, most of whose students had escaped to Lithuania. He remained in Vilna until the entry of the Russian army, when he left, and after many vicissitudes finally arrived in Erez Israel.

There he threw himself into communal work. He established the Váad ha-Yeshivot charged with the care of the yeshivot in Israel on the model of the Vilna Váad ha-Yeshivot (of which he had been one of the founders), and he headed it until his death. He was elected vice chairman of the Mōēzet Gedolei ha-Torah of Agudat Israel, and after the death of Isser Zalman *Meltzer served as its chairman, a position he held until his death. He also headed the independent educational network (Ḥinnukh Azma'i) set up by Agudat Israel. Sorotzkin was an outstanding preacher, and many of his homilies appear in his work *Ha-De'ah ve-ha-Dibbur* (1937), on the Pentateuch. Toward the close of his life he published *Oznayim la-Torah* (1951–60), a commentary on the Pentateuch, and *Moznayim la-Mishpat* (1955), a collection of responsa in two parts. Some of his responsa are still in manuscript. His commentary *Ha-Shir ve-ha-Shevaḥ* on the Passover *Haggadah* (1971) was published posthumously.

[Itzhak Goldshlag]

SOSIS, ISRAEL (1878–after 1936), Russian historian. Sosis, born in Balta, southern Russia, joined the *Bund, and took part in the Russian Revolution of 1905. He contributed to the party's publications and was imprisoned several times for revolutionary activities. During World War I Sosis was active in *УЕКОРО. He published articles on the history of social classes in Russian Jewry in *Yevreyskaya Starina* (1914–16). With the left wing of the Bund, he joined the Communist Party after the 1917 Revolution. From 1924 he lectured on Jewish history at the Institute for White-Russian Culture in Minsk, and published articles on the history of Lithuanian and White-Russian Jews in Russian-Jewish periodicals. Sosis' main work, "The History of Jewish Social Trends in Russia in the 19th Century" (1919), though Marxist in outlook and method, did not slavishly follow the official Soviet historiographical line, and showed some objectivity and national Jewish feeling. The "deviations" led to his transfer, in 1930, to the Institute for Jewish-Proletarian

Culture in Kiev. When the institute was closed in 1936, Sosis was arrested and his fate remains unknown.

[Yehuda Slutsky]

°SOSIUS, GAIUS, Roman general, governor of Syria, and conqueror of Jerusalem in 37 B.C.E. After the Parthian conquest of Judea and the consequent appointment of *Antigonos the Hasmonean to the throne in Jerusalem (40 B.C.E.), Herod made his way to Rome and was recognized by Antony and the senate as king of Judea. He returned to Palestine at the head of a considerable force but was eventually forced to turn to Antony for assistance in subduing the country. After his conquest of Samosata, Antony appointed Sosius governor of Syria, with orders to support Herod. Sosius immediately sent two legions and himself followed with the remainder of his army. He joined forces with Herod. The two laid siege to Jerusalem in the spring of 37 (although certain discrepancies exist regarding the precise date of the siege and fall of Jerusalem; cf. *Jos., Ant.*, 14:475 n. a, p. 694; A. Schalit, *Hordos ha-Melekh* (1964), 509–11). The ensuing battle appears to have been fierce, and Josephus stresses that Jerusalem fell – as in the conquest by Pompey – "on the day of the fast." Scholars have interpreted this to mean either the Day of Atonement or the Sabbath (according to Dio Cassius, 49:22), but it is also possible that the reference is to a special fast declared at the time of the siege to arouse divine intercession (cf. Schalit, *op. cit.*, 510). On the fall of the city Antigonos came before Sosius and begged for mercy, only to be jeered at for his tragic change of fortune by the Roman general who, after calling the Jewish leader "Antigone," had him put in chains and eventually put to death. Sosius furthermore explicitly instructed his soldiers to plunder the city, and after perpetrating a terrible massacre they were finally restrained only by Herod, who promised to distribute to them rewards from his own funds.

[Isaiah Gafni]

SOSKICE, SIR FRANK, BARON STOW HILL (1902–1979), British politician. Soskice was born in Geneva, the son of DAVID VLADIMIROVICH SOSKICE (1866–1941), a Jewish lawyer and journalist from the Ukraine who was an important liberal activist against the czarist regime and was briefly an official of the Kerensky government. He lived in England for most of the period after 1898. Frank Soskice's mother was a gentile, the niece of the Pre-Raphaelite painter Ford Maddox Brown. Soskice was educated at St. Paul's School and Oxford. He became a barrister in 1926, the same year he became a naturalized British subject. In 1945 he was appointed a KC and was also elected to Parliament as a Labour member, serving until 1966, although briefly losing his seat in 1950 and 1955–56. Upon entering Parliament he was immediately appointed so-

licitor-general, with a knighthood, and was regarded as an able holder of this post. When Labour returned to power in 1965, Harold *Wilson appointed him to the senior post of home secretary. Soskice, in poor health, was not successful in this position and was moved to the office of Lord Privy Seal, but still with a seat in the cabinet, in 1965. He retired in 1966 and was given a life peerage.

SOSKIN, SELIG EUGEN (1873–1959), pioneer agronomist and politician. Soskin was born in Churubash in the Crimea, Russia, but settled in Palestine (1896) where he served as plantation expert for Hovevei Zion. Together with Aaron *Aaronsohn, he explored the country and conducted agricultural experiments. He was a member of the Zionist Inquiry Commission on the *El-Arish project (1903) and he served as agricultural adviser in German South West Africa (1906–15). He was director of the settlement department in the central office of the Jewish National Fund, then in The Hague (1918–23). Soskin advocated intensive farming on small irrigated plots, as opposed to the “mixed” farming on larger units practiced by the Zionist Organization. In 1934 he founded Nahariyyah, where he established an experimental intensive farm. Soskin advocated growing plants in water (hydroponics) or in saturated soil, and in 1945 he founded an experimental station in hydroponics in Ramat Gan.

In 1926 Soskin joined the Revisionist movement and became its spokesman on agricultural settlement. From 1927 he acted as political representative of the Union of Zionist Revisionists to the League of Nations in Geneva. After the split in the Revisionist movement (1933), he joined the Jewish State party. He held controversial views on the importance of land exchange to enable the Jewish state to build up its holding of national land under the proposals of the Peel Commission. He published many studies on his work in Africa and Palestine including *Small Holding and Irrigation* (1920), *Intensive Cultivation and Close Settlement* (1926), *The Escape from the Impasse* (1927), and *Land settlement in Palestine* (1929).

[Joseph Ben-Shlomo / Michael Denman (2nd ed.)]

SOSNOWIEC (Rus. **Sosnovets**), city in Katowice province, S. Poland. There were 2,600 Jews living in Sosnowiec around 1890 (29.8% of the total population), who earned their livelihood mainly in the clothing, food, building, and machine industries, and bookkeeping. A Jewish cemetery was opened in 1896, a *linat zedek* (“paupers’ hostel”) was founded in 1907, a *talmud torah* in 1908, and a *mikveh* in 1913. The city’s growth in the 20th century, especially after the Russian retreat in World War I, was accompanied by an increase in the Jewish population which reached 13,646 (16% of the total) in 1921. Approximately one-third engaged in light and medium industry, crafts and trade, including clothing and shoe manufacture, coal mining, and manufacture of coke. About 2,000 Jews were employed as laborers or clerks in industry or busi-

ness; a considerable number engaged in the professions. In the early 20th century a Jewish labor movement was organized through the *Bund and *Po’alei Zion. The Jewish workers of Sosnowiec took part in revolutionary activities in 1905–06, and 30 were imprisoned and exiled to the Russian interior. Through the efficient workers’ organization the Jewish mine owners were able to compete with large industrial concerns. The mine owned by H. Priwer produced 25,000 tons of coal in 1920, and that of B. Meyer 32,000 in 1922.

The Jewish population continued to grow in the interwar period, from 20,805 in 1931 to 28,000 in 1939 (22% of the total). New arrivals came mainly from Kielce province attracted to Sosnowiec by more favorable work opportunities. The communal organization expanded; in addition to a Jewish hospital, secondary schools for girls and boys were established, and associations of artisans, merchants, and industrialists were formed.

[Arthur Cygielman]

Holocaust Period

The German army entered Sosnowiec on Sept. 4, 1939. On the same day it organized an attack on the Jewish population, and 13 Jews were killed. On September 9 the Great Synagogue on Dekert Street was set on fire. In 1942, Jews were deported to *Auschwitz death camp in three groups: 1,500 on May 10–12; 2,000 in June; and over 8,000 on August 12–18. After the last deportation the Germans established a ghetto in the suburb of Srodula. On March 10, 1943, the ghetto was sealed off. On August 16, 1943, all the inhabitants, with the exception of about 1,000 people, were deported to Auschwitz where they perished. The last 1,000 Jews in Sosnowiec were murdered in December 1943 and January 1944. Previously there had been considerable underground activity among the Jews, mostly organized by the youth organizations Ha-No’ar ha-Ziyyoni, Gordonia, and Ha-Shomer ha-Za’ir, whose main leader was Zevi Dunski.

After the war about 700 Jews resettled in Sosnowiec, but almost all of them emigrated shortly afterward.

SOTAH (Heb. סוֹטָה; “Errant Wife”), the fifth tractate in the current edition of the Mishnah order of *Nashim*, with *Tosefta* and *Gemara* in the Babylonian and Jerusalem Talmuds. Dealing mainly with the laws concerning a woman suspected of adultery (Num. 5:11–31), the tractate also discusses incidentally extraneous matters like the rite of the *eglah *arufah* and the rules of exemption from military service (Deut. 20:1–9;

24:5). In some manuscripts it is put sixth in the sequence of tractates in *Nashim*.

The contents of the nine chapters of this tractate are as follows: Chapter 1 discusses the form in which the husband has to manifest his jealousy and how the Sanhedrin urges the woman to admit her guilt rather than undergo the ordeal; the first stages of the ordeal are also discussed. The last passages of this chapter are of aggadic nature, debating the principle of measure for measure in divine justice. Chapters 2–3 deal with the “meal-offering of jealousy” and the writing of the “scroll of curses.” Incidentally, the question of whether daughters should be taught Torah is considered, and information is given on the differences between men and women in respect of various *halakhot*. The “bitter water” is discussed in chapter 4, mainly those cases exempted from this ordeal. Chapter 5 is dedicated to the *halakhot* which were taught *bo va-yom* (“on the very same day”), i.e., when Rabban Gamaliel was deposed and R. Eleazar b. Azariah was made *nasi*. Only the first Mishnah in this chapter deals with *sotah*.

Chapter 6 is concerned with the question of the “minimum evidence” necessary to decide the woman’s guilt without her having to undergo the ordeal. Since it is laid down that the declarations with regard to the *sotah* may be made in any language, chapter 7 lists other biblical passages to which this applies and then enumerates passages which must be read in Hebrew. In connection with this it is related how King Agrippa, who was partly of Edomite descent, wept when he read the sentence “thou mayest not put a foreigner over thee,” but the people encouraged him, exclaiming: “Thou art our brother!” Chapter 8 speaks first of the priest anointed for war, since his address to the army (Deut. 20:3–4) has to be in Hebrew, and then deals in detail with the whole passage, including the grounds for exemption from military service. Of particular interest is the concluding paragraph, stating that the exemption applied only to optional wars of conquest like those of King David but not to obligatory wars, like those of Joshua’s conquest of the Holy Land, or to defensive wars at any time. The second half of chapter 9, which deals with *eglah arufah*, is of a general aggadic nature, which is introduced by the observation that with the great increase in murders (the reference is to a time of civil disorder preceding the destruction of the Temple) the rite of breaking the heifer’s neck was discontinued, and with the increase of immorality the ordeal of bitter water was abolished. The chapter goes on to describe how at various times, especially at the time of the destruction of the Temple, other laws and customs were abolished or fell into disuse and how scholarship and piety declined after the death of the great sages, such as Ben Azzai and Ben Zoma. Many other profound aggadic passages are also found in the Babylonian and Jerusalem *Gemara* and in the Tosefta. The Babylonian Talmud (22b) lists seven types of hypocrites and in connection with this cites Alexander Yannai’s well-known observation that neither sincere Pharisees nor sincere Sadducees should be feared, only the hypocrites. In 49b there is a description of the struggle between Aristobulus and Hyrcanus;

an interesting distinction is made in this context between the Greek language and Greek wisdom.

The Mishnah of *Sotah* was taught at the end of the Temple era. The main early portions of the Mishnah belonging to this period are 1:2 and 4–6; 2:2; 3:1–4; and 7:1–9:15. The account of Agrippa and the reading of “the chapter of the king” described in 7:8 almost certainly refers to Agrippa *II and the incident which took place in 62 C.E., since the Tosefta says of this Mishnah: “On that same day R. *Tarfon saw a lame man standing and sounding the *shofar*.” Mishnah 9:9 is by Johanan b. Zakkai, who testifies about something which occurred in his time, as is also clear from a comparison with Tosefta 14:1. Basing himself on this, Epstein believes that the main part of chapters 8 and 9 is from the Mishnah of Johanan b. Zakkai. The order of procedure in dealing with the *sotah* differs in several details from those given in the Bible, and this is already discussed in the sources themselves (Sot. 3a; TJ 1:5, 17a). Since the Mishnah was taught in Temple times, it obviously gives the procedure customary during this period. Other differences are reflected in various books of Philo, and some of them are alluded to in early *beraitot* and fragments of them (see Epstein in bibliography). The Babylonian Talmud to *Sotah* has a distinctive style: it contains passages in Hebrew (39b); it does not use the phrase “there is a lacuna” (*hassurei mehassera*); and it usually gives the final decision (*mistavra keman de-amar*). This tractate was translated into English and published by the Soncino Press (1936).

SOUL.

In the Bible

The personality was considered as a whole in the biblical period. Thus the soul was not sharply distinguished from the body. In biblical Hebrew the words *neshamah* and *ru'ah* both mean “breath” and *nefesh* refers to the person or even the body (cf. Num. 6:6). For ways of expressing mind see *Heart.

Rabbinic Doctrine

For the rabbinic view of the soul see *Body and Soul.

In Medieval Jewish Philosophy

The soul in medieval Jewish philosophy is often depicted as the king and ruler of the body, its principle of life, organization, and perception. It is likened, in similes which go back to antiquity, to the rider of a steed, the captain of a ship, and the governor of a state. Yet, paradoxically, the soul is also often considered as a stranger on earth, an alien yearning for its supernal home. Philosophers view this latter characteristic, indicative of the soul’s ability to survive the death of the body, as a function of its intellectual as well as moral perfection. Intellectual perfection was understood to comprise a true understanding of the nature of all being, both physical and metaphysical, including the nature of the soul. Descriptions

of the soul followed Platonic and Aristotelian views, with later Greek thought supplying the models by which man's soul was related to heavenly substances. *Saadia Gaon had a partial familiarity, derived from Pseudo-Plutarch's *De placitis philosophorum*, with these and many other systems of thought, none of which consistently appealed to his primarily theological perspective. He declared that each soul is created from nothing by God – the sole eternal being – at the moment of the completion of the formation of the body, and that body and soul form a unit bound together in this life and, eventually, in the hereafter. The soul requires the good acts of the body to perfect its peculiarly immaterial, celestial-like substance, even as the body needs the faculties of sensation and reason which the soul provides. Saadia believed, with Plato (see *Republic* 4:435b; *Timaeus* 69c), that the soul has intellectual, spiritual, and passionate expressions; however, following Aristotle, he maintained that these were faculties of a single soul, located in the heart (*Book of Beliefs and Opinions*, Treatise 6).

Man's soul was believed by most of the philosophers to have affinities with the souls of plants and animals, on the one hand, and with either the World Soul of the Neoplatonists or, in the Aristotelian system, the souls of the celestial bodies – the soul of a celestial body being a kind of rational principle separate from and responsible for the movement, if not life, of the sphere – on the other. In the Neoplatonic cosmology accepted by Isaac *Israeli, Solomon ibn *Gabirol, Joseph ibn *Zaddik, and Pseudo-*Bahya, the World Soul emanates from the Universal Intellect and therefore has intellectual powers, which it transmits, together with the subsequently emanated physical qualities of Nature, to the individual soul. Man's soul, a substance or form independent of the body, thus contains "natural" or vegetative, animal, and rational aspects, and as such reflects the World Soul. These faculties are usually treated as separate, distinct souls, located respectively in the liver, heart, and brain.

From Israeli on, the vegetative soul is generally held responsible for nourishment, growth, and generation; the animal soul, for a type of instinctive intelligence known as estimation, as well as for locomotion and sensory perception; and the rational soul, for discursive knowledge, both practical and theoretical. Israeli, following the Arab philosopher al-*Kindi, also introduced into Jewish philosophy the Proclean stages of purification and illumination of the soul, substituting an ultimate stage of "spiritualization," i.e., a union with the First Form, the Supernal Wisdom or Intellect, for Proclus' divine union. The ascent of the soul, the upward way, is facilitated by withdrawal from the soul's passions and appetites, an ascetic direction particularly emphasized by Bahya ibn Paquda (*Duties of the Heart*, ch. 10). Paradise is, for Israeli, union with the supernal light of wisdom, and hell the failure to attain this stage, the soul being weighed down by its corporeal aspects (see A. Altmann and S.M. Stern, *Isaac Israeli* (1958), 165–70, 185–94).

Aristotle's *De anima*, seen through the eyes of such Greek commentators as *Alexander of Aphrodisias and *Themistius,

and such Arab scholars as al-*Fārābī and *Avicenna, serves as the main inspiration for Abraham *Ibn Daud, Moses *Maimonides, and most subsequent philosophers. They view the soul as the form of the body, a single substance comprised (in addition to the earlier tripartite division) of nutritive, sensitive, imaginative, appetitive, and rational faculties. Descriptions of the functional anatomy of these faculties mostly follow Galen as well as Aristotle, with the emotions of the appetitive faculty particularly responsible for ethical behavior, and the imagination and intellect considered as the organs of prophecy. The Aristotelians, like the Neoplatonists, teach that the good is the mean between psychic extremes (see Maimonides, *Shemonah Perakim*, 1 and 4). The ideal of most philosophers is an extremely intellectual as well as virtuous person, whose intellect has reached a stage of completely immaterial, actual perfection. In this state the individual "acquired" intellect, which is comprised of universal intelligibles, may conjoin with the Active Intellect. It is this conjunction with the Active Intellect that constitutes immortality (Maimonides, *Guide*, 1:70, 72; 3:27; 54).

This impersonal and incorporeal approach to immortality was heightened by the view of Averroes as propounded, for example, by *Moses of Narbonne, in which the individual intellect is understood to be essentially related to the Active Intellect from its very beginning as a potential intellect. Against such denials of personal immortality, *Levi b. *Gershom contended that the "acquired" intellect became an independent eternal substance (*Milhamot Adonai*, 1:12); while Ḥasdai *Crescas, in a general critique of his predecessors' views, claimed the same status for the soul itself, using the term "soul" as more than a euphemism for the intellect. Crescas believed that the perfection of the soul was achieved more through love than through knowledge of God (*Or Adonai*, 2:6, 1). His attack upon Aristotelianism calls to mind that of *Judah Halevi, who mentions in passing the Aristotelian view of the soul (*Kuzari*, 5:12, 14, 21). Judah Halevi's own contribution to the subject was to posit a divine yet "natural" endowment (*ha-inyan ha-Elohi*) which, apparently related to the Jewish soul, made the Jew a superior being (*Kuzari*, 1:95; 2:14). A somewhat similar view was advanced by Judah Halevi's 12th-century contemporary, *Abraham bar Ḥiyya, who believed that the rational soul in all its purity was to be found among the elect of Israel alone. Such national feelings have little place in Crescas' more rigorously argued philosophy, and even less in the 16th-century *Dialoghi di Amore* of Judah *Abrabanel. Judah Abrabanel believed that love was a universal expression of both the animated structure of the universe, and of its yearning for unity with God. Through intellection and conjunction with the Active Intellect – which, following Alexander of Aphrodisias, Abrabanel identified with God – man could enter into a direct relationship with the Divine (*Dialoghi*, 3). This mixture of love and intellect is pronounced in the synthesis of Aristotelian and Cartesian ideas effected by *Spinoza, in which the influence of medieval Jewish philosophy is marked. Spinoza advocated the im-

personal approach to immortality, consistent with his denial of independent substantial existents of any kind. He believed that all things are ensouled, or endowed with a psychic dimension of intelligibility that is ultimately part of God. The emotions, he felt, could be controlled through an analysis of their causes, allowing for an intellectual love of God which follows the mind's knowledge of its inherent oneness with God/Nature. The man who reaches this degree of knowledge is blessed with the thought that his mind, as part of God, is eternal (*Ethics*, 5).

SOUL, IMMORTALITY OF.

In the Bible

Unlike the gods of Mesopotamia and Canaan, e.g., Apsu, Tiamat, Baal, and Mot, who, while they could not die a natural death, could incur a violent one, the God of Israel is the living God (Hos. 2:1; Ps. 18:47). His lordship extends from heaven to Sheol (Ps. 139:8; Job 26:6); He puts to death and brings to life (1 Sam. 2:6; 1 Kings 17:17–22; 11 Kings 4:18–37); and He can preserve His faithful from Sheol (Ps. 16:10).

Among the peoples of the Ancient Near East, the Egyptians were very optimistic about the afterlife. They believed that the dead lived a life almost identical with that in this world (cf. *The Book of the Dead*, 110). The Babylonians, on the other hand, were pessimistic about life after death. The average human being had no means of escaping his fate: one day he would die and descend to the netherworld, which was governed by a god and goddess of death. There were, however, special cases in which man could attain immortality. Theoretically, man could become immortal, or at least rejuvenated, by means of a mysterious food or drink (cf. *Adapa*, frag. B; Pritchard, Texts, 101–2; *Gilgamesh*, Tablet 11, lines 265–90, Pritchard, Texts, 96). Immortality could be acquired by a special favor of the gods in their assembly (see *Gilgamesh*, Tablet 11, lines 190–8). A god could also resurrect the dead: Ishtar threatens the gatekeeper of the netherworld, saying: “I will raise up the dead ... so that the dead will outnumber the living” (*Descent of Ishtar*, line 20; Pritchard, Texts, 107).

In the Bible two persons are said to have left this world in a special way: Enoch “was taken by God” (Gen. 5:24) and Elijah “was taken up to heaven in a whirlwind” (11 Kings 2; cf. Ps. 49:16). The exact implication of these traditions is not clear.

The crucial passage of Proverbs 12:28 has been translated differently through the centuries. Saadiah Gaon already understood it as immortality, as did F. Delitzsch many centuries later. M. Dahood (in: *Biblica*, 41 (1960), 176–81) related the Hebrew אֵל מַוֶּט *al mawet*) in this verse to the Ugaritic *blmt*, “not dying.”

It is also possible that the Masoretic Text of Proverbs 14:3 contains the hope of a better life than that in Sheol (cf. Ps. 16:9–11; 73:24; A.W. van der Weiden, in: VT, 20 (1970), 339–50). However in Daniel 12:2 the resurrection to eternal life for some is unequivocally predicted. Only in the post-biblical period did a clear and firm belief in the immortality of the soul take hold (e.g., Wisd. 3) and become one of the cornerstones of the Jewish and Christian faiths. See *Death; *Resurrection.

In the Talmud

The rabbis of the Talmud believed in the continued existence of the soul after death, but differed with regard to the nature of this existence. On the one hand, the view was widespread that the righteous person immediately after his death enters the Garden of Eden, where he is vouchsafed to be in a special section of the garden (Shab. 152b; BM 83b), while the wicked go to *Gehinnom (Ḥag. 15a; Ber. 28b; Er. 19a; whether in corporeal form or not is not mentioned). On the other hand, the view is expressed that the soul of man – at death – is severed from any connection with the body and its pleasures, ascends upward, and is gathered into “the treasury” beneath “the throne of glory” (Shab. 152b), where it had its pre-existent origin in the upper heaven called “*Aravot*”; “where are right and judgment and righteousness, the treasures of life, the treasures of peace, the treasures of blessings, the souls of the righteous, the spirits and souls yet to be born, and the dew wherewith the Holy One will eventually revive the dead” (Ḥag. 12b); while the souls of the wicked “continue to be imprisoned” (Shab. 152b), are “cast about on the earth” (Eccles. R. 3:21; ARN¹ 12:50), and are cast from the slings of destructive angels (Shab. 152b).

Alongside the belief in the heavenly “treasury” to which the soul returns after death, the ancient belief was widespread in the talmudic era (and later) that the soul of man after death continues with the body in the netherworld, either for a brief or for an extended period. In one passage (TJ, MK 3:5, 82b; TJ, Yev. 16:1, 15c) R. Levi says that the soul hovers over the body for three days, hoping that it will return to it, and departing only when the hope is belied (a belief found also in Zoroastrianism). Elsewhere it states that “a man’s soul mourns for him all the seven days of mourning” (Shab. 152a), and also that “for full 12 months the body continues to exist and the soul ascends and descends” and only after this period, when the body is decomposed, “the soul ascends nevermore to descend” (Shab. 152b). Similarly, there is neither uniformity nor consistency concerning the extent of the consciousness retained by the dead. In one passage it is stated that the dead hear everything spoken in their presence until the grave is sealed (*ibid.*), while elsewhere it is stated that the dead are aware (apparently eternally) of their own pain (“worms are as painful to the dead as a needle in the flesh of the living,” Shab. 13b) and shame. For this reason it was forbidden to walk in a cemetery wearing *tefillin or reading from a *Sefer Torah*, since it seemed like a mockery of the dead (Ber. 18a). It is related that R. Hiyya and R. Jonathan were walking in a cem-

etry, and Ḥiyya told Jonathan to gather up his *zizit so that the dead should not say: “Tomorrow they are coming to join us and now they insult us” (*ibid.*).

The dead even have contact with the living and direct them in worldly affairs: the father of Samuel appeared to him, on returning from “the heavenly yeshivah,” and revealed to him where the money of orphans, which had been deposited with him, was to be found (Ber. 18b); and similarly a woman innkeeper informed Zeiri after her death where the money he deposited with her was lying (*ibid.*). The dead also hold conversations with the living: Some men digging in the field of R. Naḥman heard the sound of the deep breathing of a corpse, and when Naḥman came he conversed with him (Shab. 152b). Deceased women adorn themselves in their clothes and ornaments. The innkeeper who came into contact with Zeiri requested that her mother send her a comb and cosmetics through a woman about to die. Another complained to her neighbor that she was unable to rise and wander about the upper worlds because she was buried in a matting of reeds (Ber. 18b). The dead wander about and hear “from behind the curtain” what was decreed upon the living (*ibid.*). The sages spoke especially highly of the power of the righteous after their death. According to Simeon b. Lakish, the sole difference between the living righteous and the dead is the faculty of speech (TJ, Av. Zar. 3:1). Likewise they said that “if a statement is said in a person’s name in this world, after his death his lips move in the grave” (Sanh. 90b). It is also related of Judah ha-Nasi that after his death he used to visit his house every eve of the Sabbath, and only ceased to do so out of respect for the scholars (Ket. 103a). All these views, however, did not prevent others from saying that “if one makes remarks about the dead, it is like making remarks about a stone” (Ber. 19a) and that at the most the dead know their own pain (Ber. 18b) but not what transpires in the world.

[Yehoshua M. Grintz]

In Medieval Jewish Philosophy

The doctrine of the immortality of the soul, as it appears in the writings of *Philo as well as in the works of some later Jewish philosophers, shows strong influences of Platonism (see Plato and *Platonism), which saw a complete separation between body and *soul.

PHILO. Philo’s statements that the human soul is mortal are usually ambiguous, but he often refers to the various ranks which the souls achieve after death. According to Philo, Abraham achieved the rank of the angels, which are incorporeal, Isaac ranks higher, and Moses achieved a yet higher rank, since he is close to God.

SAADIAH. Saadiah Gaon held the opinion – apparently according to views of the Muslim *Kalām, which reflected a non-Platonic Greek philosophical tradition – that the soul is “a more pure, transparent and simple substance than are the spheres,” i.e., that the soul is a fine body. At the time of death, the soul separates from the body of man, and “during the first period after its separation from the body, however, the soul

exists for a while without a fixed abode until the body has decomposed; that is to say, until its parts have disintegrated. It consequently experiences during this period much misery, occasioned by the knowledge of the worms and the vermin and the like that pass through the body, just as a person would be pained by the knowledge that a house in which he used to live is in ruins and that thorns and thistles grow in it” (*Book of Beliefs and Opinions*, 6:7). Saadiah had no clear conception of the condition of the soul during the transition period from the time of death until the resurrection of the dead, which was characteristic of many medieval Jewish thinkers, and illustrates their difficulties in reconciling the notion of the immortality of the soul with a belief in resurrection. According to Saadiah, the soul is reunited with its body at the time of resurrection and this combined state continues thereafter.

ISAAC ISRAELI. Unlike Saadiah, his older contemporary, Isaac *Israeli, was deep within the Platonic tradition. According to him, the soul is an incorporeal substance. Man’s soul does not die with the death of his body: “he becomes spiritual, and will be joined in union to the light which is created, without mediator, by the power of God, and will become one that exalts and praises the Creator for ever and in all eternity. This then will be his paradise and the goodness of his reward, and the bliss of his rest, his perfect rank and unsullied beauty” (*Book of Definitions*, see A. Altmann and S.M. Stern, *Isaac Israeli* (1958), 25–26). While the upper souls are above the heavens, the lower ones are beneath them and are tortured by fire, according to a belief which was also held in Greco-Roman paganism.

SOLOMON IBN GABIROL. A similar Platonic spirit pervades the writings of Solomon ibn *Gabirol in his book *Mekor Ḥayyim*. He does not express a clear opinion in this book with regard to the immortality of the soul, but he does mention the idea of Platonic recollection (see S. Pines, in: *Tarbiz*, 27 (1958), 231). One section of *Mekor Ḥayyim*, which is cited by Moses ibn *Ezra, attests more clearly than does the Latin translation to the central role played by Platonic recollection in the thought of Ibn Gabirol.

This idea, if accepted simply, presupposes a belief in the existence of the soul prior to its conjunction with the body, since it assumes that it is this conjunction which caused the soul to forget its previous knowledge, which it may again recollect. In contrast to this view, in his poem *Keter Malkhut* Ibn Gabirol expresses a traditional Jewish outlook when he states that the souls of the righteous rest beneath the throne of glory.

JOSEPH IBN ZADDIK. Joseph ibn *Zaddik was influenced by both Ibn Gabirol and Israeli. According to him, the soul is incorporeal, existed before its conjunction with the body, and continues to exist after the passing of the body. If the soul attained the necessary level of knowledge, it returns after death to its place of origin, i.e., to the world of the intelligibles; but if it remained ignorant, it is pulled by the motion of the celes-

tial sphere and tortured by fire. It is then likened to a traveler who cannot find the way back to his homeland.

ABRAHAM BAR HIYYA. Abraham bar Ḥiyya describes the intelligible soul by the term “form” (*Meditation of the Sad Soul* (1969), 46 ff.) which continues to exist even after its separation from the body. Abraham b. Ḥiyya has a multiple account of what happens to the soul after death. If the man was wise and righteous, his soul ascends to the upper world “and attaches itself to the pure high form, enters into it and never separates from it.” If he was wise and wicked, his soul arrives after death at the world of the spheres “and it revolves under the circles of the sun, whose heat appears to it as an image of a perpetually scorching fire, and it has neither the right nor the power to remove itself from the heavenly sphere in order to attach itself to the supernal light.” If the man was ignorant and righteous, his soul returns “a second and third time” to bodies until it acquires wisdom and is able “to separate from the air of the lower world and to ascend above it; and its righteousness or wickedness at that particular time will determine the order of its ascent and its ultimate rank.” If the man was ignorant and wicked, his soul too will die “a death of a beast and an animal.”

JUDAH HALEVI. According to Judah Ḥalevi (*Kuzari*, 1:103), Judaism is “the religion which insures the immortality of the soul after the demise of the body.” It is nonetheless clear that the character of the Jewish scholar in the work (who expresses Judah Halevi’s thought) wants to broaden and crystallize this idea. Thus, his interlocutor, the king of the Khazars, is able to point out, with certain justification: “The anticipations of other religions are grosser and more sensuous than yours” (*ibid.*, 1:104).

It appears that Judah Halevi realized the difficulty with which his successors were to contend, namely, that Scripture does not express clearly the notion of the immortality of the soul. In answer, Judah Halevi was able to state that the nature of the Jewish prophets and godly men approaches, even in their lifetime, the condition of souls in their immortality (*ibid.*, 1:109).

ABRAHAM IBN DAUD. Abraham ibn Ḥadad is considered – with certain justification – as the first Spanish Jewish Aristotelian. It appears, however, that because of Ḥavicenna’s influence on him, he was not an orthodox Aristotelian. Like Avicenna, Ibn Daud maintains that the individual human soul continues to exist after the death of the body (*Emunah Ramah*, ed. by S. Weil (1852, ch. 7, 34–39). Contrary to Avicenna, however, he speaks at great length about the condition of the souls after death.

MAIMONIDES. The great majority of the Spanish Aristotelians, both Jewish and Muslim, did not follow Avicenna and did not believe in the immortality of the individual soul. Nothing remains of man after death, they held, except his intellect, which bears no trace of individuality and the exact nature of which was a source of controversy among them (see ḤIntel-

lect). Judah Halevi had already established – possibly on the basis of the views of his Muslim contemporary, ḤAvempace, which were known to him – that the philosophers do not affirm the immortality of the individual soul. It may be thought that even ḤMaimonides, to the extent that he was a philosopher, believed in the immortality of the intellect rather than of the soul. It is possible to find traces, and even clear statements, of this idea in his *Guide of the Perplexed*.

In his *Mishneh Torah*, which essentially deals not with philosophic ideas but rather with *halakhah* and principles of faith, Maimonides states that in the *Ḥolam ha-ba* there are no bodies, but only the souls of the righteous, without body, serving as the angels of God. Since there are no bodies in the world to come, there are in it neither eating, nor drinking, nor any of the things which human bodies need in this world. Neither do the souls perform any of the actions of the body, such as sitting and standing, sleeping and dying, weeping and laughing. It is obvious that there is no body since there is no eating and drinking (Yad, Teshuvah, 8:2). It becomes manifest, however, that these things refer not to the soul, as it was conceived by the Aristotelians, but to the intellect, which can be deduced from Maimonides’ statements that the soul referred to in this connection is not the soul which is needed for the body, but is rather the form of the soul which is the knowledge it derives from God according to its ability. This is the form which is called “soul” in this reference (*ibid.*, 8:3). This rejection of individual immortality, which is in accordance with the teachings of Averroes, caused a furor among Jews as well as among the 13th-century Christian scholastics and gave rise to bitter dispute. Echoes of the Christian notions, which reject the opinion of Averroes, can be seen in the *Tagmulei ha-Nefesh* of Hillel of ḤVerona, who argued for individual immortality.

ISAAC ALBALAG AND HASDAI CRESCAS. Isaac ḤAlbalag also affirms the immortality of the individual soul, but it is doubtful that this was his true opinion (see G. Vajda, *Isaac Albalag* (1960), 239–49). On the other hand, the position of ḤHasdai ḤCrescas on this matter is entirely clear. He directs harsh criticism against the views of the Aristotelians regarding the intellect and states that, since man is a spiritual being, his soul remains immortal after its separation from the body (*Or Adonai*, 2:6). According to his view, which rejected Aristotelian intellectualism and saw love and not knowledge as the highest good, the love between man and God is what determines the immortality of the soul. The souls of the righteous after death enjoy the splendor of the ḤShekhinah, i.e., they attach themselves to God to an extent which was denied them while they were in the body, and their union with God is constantly being strengthened. When the soul is unable to reach this union (because of its sins), it suffers great sorrow, which is so complete in some souls that it leads to their total destruction (*ibid.*, 3:3).

JOSEPH ALBO. Joseph ḤAlbo devoted a large section of his *Sefer ha-Ikkarim* (fourth treatise) to the question of the immortality of the soul. Unlike the Aristotelians, he maintains

that the soul is a spiritual being, which has an independent existence, is not intellectual in nature, but is capable of attaining knowledge (4:29).

[Shlomo Pines]

In Modern Philosophy

MOSES MENDELSSOHN. Outstanding among 18th-century works on the immortality of the soul is Moses *Mendelssohn's *Phaedon oder ueber die Unsterblichkeit der Seele* ("Phaedon or On the Immortality of the Soul," 1767). In its methodology, this work follows Plato's *Phaedo*, but its content is based on modern philosophy. In it, Mendelssohn attempts to answer the question: How would Socrates prove to himself and his friends the idea of the soul's immortality if he lived in modern times?

Mendelssohn rejects the theory that the soul, after its separation from the body, enters a state similar to sleep or fainting. All rational beings, he states, are destined to increase their perfection. The whole world was created for the sake of the existence of rational beings who progressively increase their perfection, and herein lies their bliss. It is not possible that these beings, who struggle for their perfection in this world, should be frustrated in these efforts in the world to come. This would be a contradiction of the order of the universe. It was not in vain that the Creator instilled in man a desire for eternal bliss. It is both possible and necessary that this desire should be fulfilled, despite all the setbacks and obstacles. In the same way that certain disorders in the physical world, such as storms, earthquakes, diseases, etc. are negated within the infinite totality of the cosmos, so in the realm of morality all the temporary disorders lead toward the eternal perfection. Even suffering reinforces a person's powers, without which he cannot attain moral bliss. It is impossible to know God's design. In order to understand the life of even one man, it would be necessary to view all life in its totality, and then we would not complain but would rather revere the creator's mercy and wisdom, which are revealed in the life of each intelligible being, when viewed in its totality.

MORITZ LAZARUS. In the 19th century, with a general change in the intellectual climate, the question of the immortality of the soul lessened in importance. Several Jewish thinkers attempted to show that Judaism is not concerned with the immortality of the individual after death.

Moritz *Lazarus deals with this question in his *Ethik des Judentums* (1898, para. 137ff.). In his opinion, the attitude of Judaism was summarized in two sayings of R. Jacob in *Pirkei Avot* (4:16, 17). One states: "This world is like a vestibule before the world to come: prepare thyself in the vestibule that thou mayest enter into the banqueting hall." Lazarus sees this saying's "weak side" in that it speaks only of the individual, while in the realm of ethics it is the society which plays the major role. This saying is based only on the philosophy of the "I," while true knowledge of man's fate can only be attained by a philosophy of "we." Thus Lazarus rejects completely the notion of individual immortality or, at least, he is not concerned with

this notion. This attitude emerges even more clearly in Lazarus' treatment of R. Jacob's second saying, which is inverted by Lazarus to read as follows: "Better is one hour of bliss in the world to come than the whole life of this world; [but] better is one hour of repentance and good works in this world than the whole life of the world to come." Lazarus does not hesitate to change the saying in order to make it conform to his own emphasis on this world rather than the next.

HERMANN COHEN. Hermann *Cohen also holds that Judaism views the soul's immortality as applying to the people as a whole rather than to the individual (*Religion der Vernunft* (1918), ch. 15). The people never dies, he states, but rather has an eternal continuing history. The individual soul is perpetuated by means of this history and is real only within the context of the continuity of the people. This concept of immortality is taught by the Bible, while the place of individual immortality is in the realm of mythology. Individual immortality only means that the individual is constantly required to strive for his moral perfection. True immortality of the soul is its spirit, i.e., the possibility and the obligation to effect the principles of truth and morality in this world. The soul is spirit – beyond this there is no need to think about man's fate after death.

AḤAD HA-AM. *Aḥad Ha-Am regards belief in immortality of the soul solely as a sign of weakness. Many people, he says, lack the courage to face death and, in old age, fall back on a belief in immortality to give the "I" back its "future," a future in which they will compensate for what was lacking in the past. Thus Aḥad Ha-Am ridicules a belief in the world to come and in the immortality of the soul (see his article *Avar ve-Atid*). In his article *Heshbon ha-Nefesh*, Aḥad Ha-Am characterizes the belief in an afterlife as a "sickness of the spirit." He attributes the manifestation of this belief to the desire to escape from life during times of depression. This belief, he states, does nothing to encourage positive activity in life, since it teaches that man's fate on earth depends on his continued fate after death.

RABBI KOOK. In dealing with the question of death and immortality, A.I. *Kook holds that death is a defect in creation. The Jewish people is called upon to remove this taint from the world and to save nature from death. Death is wholly imaginary, but it is difficult for man to free himself from this image. Original sin, which led man to a distorted world view, brought about death and fear of death, but repentance will overcome both. R. Kook saw indications of the retreat of death in modern times in the increase of life expectancy. The modern Hebrew poet Aaron Zeitlin gave a striking expression to this idea of the delusionary nature of death by coining the word לְחַמָּה-מָּ, formed from the initial letters of the Hebrew sentence, *Lo hayah mavet me-olam* ("death has never existed").

In Kabbalah

In contrast with speculations in medieval Jewish philosophy, in Kabbalah immortality of the soul is not a matter requir-

ing justification and defense in the face of doubts and arguments. To the kabbalists, immortality of the soul was an incontrovertible fact based on the primary doctrine of the soul common to all, that the soul and all its parts are a spiritual entity (or spiritual entities), whose origin (or origins) is in the supernal worlds and from the divine emanation, and that it evolved downward and entered the body only in order to fulfill a specific task or purpose. Its special spiritual essence guarantees its immortality after death. The forms visualized for this immortality differ widely and are connected with the respective views of the kabbalists regarding reward and punishment. The reward is included in the many-staged ascent to the primal dwelling place of the soul. This ascent begins with the entrance of the soul into the earthly Paradise. From there it ascends to the heavenly Paradise, and from there into even higher spiritual worlds, until it reaches its original anchorage both in the world of creation and in the world of emanation – two of the four worlds acknowledged by most kabbalists after the *Zohar. The absorption of the soul or of its upper parts, such as the spirit (and in the Lurianic Kabbalah, also the life, *hayyah*, and the entity, *yehidah*) into the world of the *Sefirot* apparently does not cancel its personal individuality – in any case, not in the period preceding the universal resurrection of the dead. Afterward a more basic absorption is possible, to the extent of the abolition of the separate existence of the soul and its complete adherence to its divine source.

The punishment awaiting sinners, which is also connected with the immortality of the soul, takes on two forms: hell and reincarnation. In these two, the quality of justice which befits the soul exists according to the particular circumstances of its deeds. There is no general agreement in the kabbalistic systems on the details of reward and punishment, and there are many variations in the details, but these do not affect the principle of immortality of the soul, its designation for eternal life, and the rectification of its defects by different means. Only the question of the punishment of *karet*, which the Torah designates for several sins, presented the kabbalists with the problem that in special cases the existence of the soul may be completely abolished, and it would have no chance of immortality. For the most part the kabbalists gave the punishment of *karet* the interpretation which sees in it a special type of the punishment of reincarnation. The soul was indeed cut off from its supernal roots and lost its predetermined group. Despite this, its existence was not completely abolished; it only passed to other fields of existence of lower value than its source of origin. In the Lurianic Kabbalah the problem of immortality of the soul became complex, because, according to this doctrine, there are five different sources for the five principal elements of which the soul is composed – *nefesh*, *ru'ah*, *neshamah*, *hayyah*, *yehidah*. Life, spirit, and soul are the three lower souls; the two higher elements can be attained only by elects. In addition, the soul also has sparks (*nizozot*) of other souls close to it, in accord with its essence. There is no one vision of what will happen to the different parts of the soul after their separation from the body, because each one under-

goes individual refinements and purifications and ascends to a different place in the supernal worlds. Only with the resurrection of the dead do all the parts return and become unified, and from that time they remain connected to the total spiritual unity.

SOULTZ (Ger. **Sulz**), town in the department of Haut-Rhin, E. France (not to be confused with the place of the same name in lower Alsace, where the settlement of the Jews was of a later date). The presence of Jews in Soultz is confirmed from 1308. In 1338 some fell victim to the *Armleder excesses; in the *Black Death persecutions of 1349 the community was destroyed. From 1371 onward a number of Jews returned to Soultz. During the 17th century Jews were engaged as money-lenders, physicians, wine merchants, and livestock merchants. After reunion with France the number of Jews increased, rising from 102 in 1784 to 231 in 1808. After 1918 the community declined and by the outbreak of World War II had ceased to exist. E. *Carmoly, the chief rabbi of Belgium (1802–1875), was a native of Soultz.

SOURASKY, Mexican family of industrialists, bankers, philanthropists, community leaders, and active Zionists, originally from Bialystok, Poland, from where the family emigrated in 1909. In 1917 the brothers LEÓN (1889–1966), JAIME (1894–1962), and ELÍAS (1899–1986) settled in Mexico. Each of them acted independently in many areas of general and Jewish community life in Mexico: assistance to the needy, institutional organization, Zionist activity, promotion of excellence in scientific research and education, promotion of Jewish and Hebrew education, defense against antisemitic attacks. They were also very active in the political and material support of the Zionist idea, and the establishment of the national Jewish homeland in Erez Israel, the establishment of the State of Israel during the War of Independence and its strengthening afterwards. Many general and Jewish institutions in Mexico and Israel were supported by them and subsequently named after them. They also instituted many prestigious prizes in Israel and Mexico. In 1968 Elías Sourasky received from the

Mexican government the “Águila Azteca,” the highest decoration Mexico awards foreigners.

SOUS, largest province in *Morocco, including the southern slopes of the Grand Atlas, the valley of the Oued Sous, the Anti-Atlas, the Noun (to the Atlantic Ocean), and the southern Darʿa. Early legends mention the existence of two pre-Islamic Jewish kingdoms in the Sous: one in *Ofran (Ifrane) and the other in the Darʿa. The Jews always lived dispersed in the Sous; in some of its regions they found secure, if remote, shelter. The larger urban centers did not attract great numbers of Jews, not even the ancient capital, Taroudant; however, the small community of this town, although relegated to quarters outside the city walls, for many centuries imposed its own *takkanot* and *minhagim* upon the numerous Jewish centers and communities of the Sous.

There were many wars and political upheavals over the centuries, and towns such as Tiyout and Tidsi, seats of prosperous Jewish communities, passed out of existence; in many localities ancient cemeteries remain as the only sign of Jewish life. The Marabout movement of the 15th and 16th centuries severely damaged the Jewish community. Forced conversions eliminated all aspects of Jewish life from territories where the Jews had formerly been numerous, with traces remaining only in names such as Aït-Mzal and Aït-Baha, and in the land of the Ammeln, where some of the present-day tribes are still called by names such as Aït-Aouday (“Tribe of the Jews”). In the Aït-Jerrar, Ida-ou-Milk, Chtouka, Aït-Ba Amran, and other places there are parts of *Berber tribes which may well have once been Judaized, or even Jews. In about 1510 the survivors of the persecutions joined together in Tahala, where they remained until 1957 when they left en masse for Israel, as well as in other centers of the Anti-Atlas where they met with different fates. By the 17th century the Jews of the important center of Illigh had become an influential community; 100 years later the Jewish populations suffered during a series of rebellions and upheavals, and their synagogues, like those of *Agadir, were destroyed around 1740. About 1792 Bou-Hallais gave the Jews of Ofran the choice of conversion or death. In the 19th century the occupation of the Sous by the central government offered the opportunity to pillage and massacre the Jewish population. In 1840 the Jewish village of Tatelt was destroyed, and 40 years later Tillin suffered the same fate; in 1882 the Jewish quarter of Goulimine was pillaged, and in 1900 the soldiers of the Makhzen razed the quarter of Oujjane. In some instances the Jews resisted fiercely and succeeded in saving many of their settlements and in some cases they even went on the offensive.

In the high mountains, in often inaccessible localities, far from the troubled life of the plains, the Jews of regions such as Ounein, Tifnout, and Azilal – considered by modern ethnologists and ethnographers as the remnants of very ancient migrations – were probably Berber tribes that had become Jewish in pre-Islamic times. In these forbidding regions the

Jews lived as autochthonous populations, detached from all outside influences. As in the case of many of their brethren in the Marrakesh Atlas, their common language was Berber, not Arabic. At the southwestern end of the Sous, the region of Noun, whose ancient center of Tagaost was destroyed and replaced by Goulimine, was the foremost supplier of ostrich feathers; from ancient times it was also one of the market outlets for numerous Sahara caravans, which until the end of the 19th century carried the continent’s basic raw materials, such as slaves, ivory, ebony, pelts, and gold, from the heart of Africa. Some of the richest Jews controlled a vast part of this trade. In the 15th and 16th centuries their trade with the neighboring Canary Islands was of great importance. Moreover, from 1505 to 1540 a number of Marranos who had found shelter in those islands came to the Sous region and returned to Judaism. After 1880 almost every Jew became a retailer or a small artisan. Only after 1936 did the economic situation change somewhat for the better.

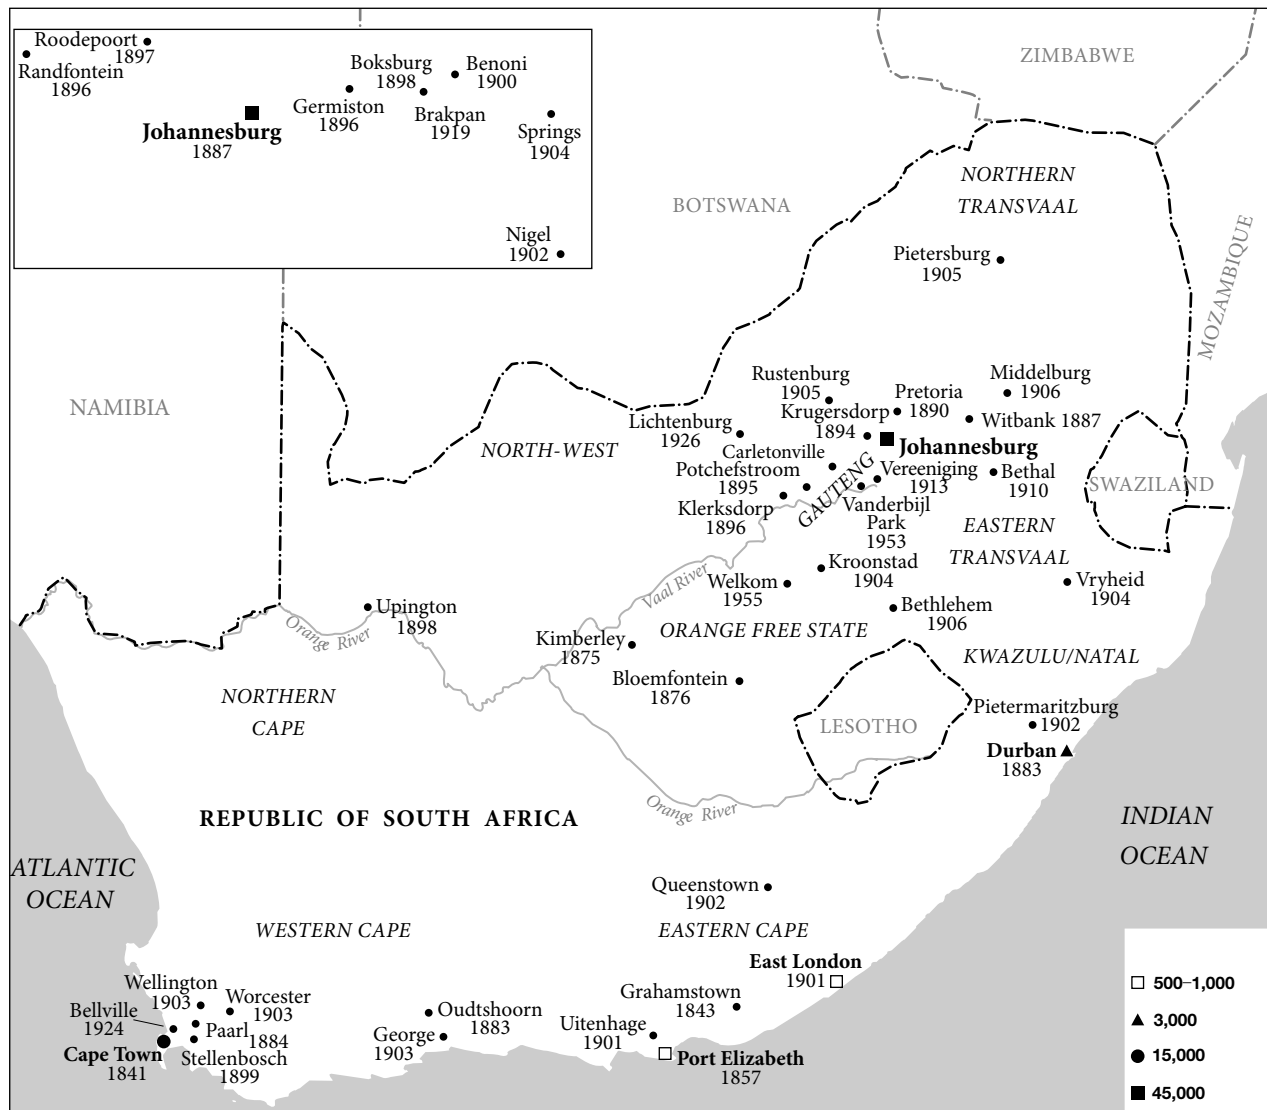

The surplus Jewish population of the Sous was regularly sent to the urban centers of Morocco, especially to Marrakesh and *Mogador where they contributed to the overcrowding of the local mellahs. It is estimated that up to the 18th century the Jewish communities of the Sous formed 20% of the total Jewish population of Morocco. Droughts and epidemics of plague and cholera in 1799, 1805, 1818, and 1878 decimated the local population, and in 1884 Charles de Foucault estimated that there were about 7,000 persons. Adding some Jewish communities not included in his studies to his figure, the number of about 8,500 is arrived at. In 1951 A. de la Porte des Vaux – whose calculations are the most detailed and reliable among available statistics – estimated that there were 6,420. After 1955 the Jewish population literally evacuated the Sous en masse, the great majority immigrating to Israel.

[David Corcos]

SOUTH AFRICA, republic comprising nine provinces – Western Cape, Eastern Cape, Northern Cape, North West, Gauteng, Limpopo, Mpumalanga, Free State, and KwaZulu-Natal. Prior to 1994, when multiracial democracy was introduced, there were four provinces, viz. Cape, Natal, Orange Free State, and Transvaal.

The first European settlement in southern Africa was founded in *Cape Town, today capital of the Western Cape, in 1652 by the Dutch. It became a British colony in 1806; Natal was a British colony from 1843; the Free State and the Transvaal, founded by Dutch (Afrikaner or Boer) emigrants from the Cape, were republics until annexed by Britain in 1902 after the Boer War. In 1910 the colonies were merged

Historical Jewish communities of South Africa with dates of establishment. Main 21st century communities in bold face with population figures based on 2004 census. (Discrepancies in dates in the records may be partially due to varied definitions of what constitutes the establishment of a congregation.)

as the Union of South Africa under the British flag. In 1961 the Union became a republic outside the British Commonwealth. Until 1994, South Africa was ruled by the white minority. Black majority rule was ushered in by the country's first democratic, non-racial elections, held on April 27 of that year.

Settlement

Jewish associations with South Africa date back a long way. Jewish scientists and cartographers in Portugal contributed to the success of Vasco da Gama's voyage which led to the discovery of the Cape of Good Hope in 1497. Jewish merchants in Holland were associated with the Dutch East India Company, which established the white settlement at the Cape in 1652, and Jewish names appear in the early records of the settlement. These were probably converts to Christianity who

had come to Holland from Central and Eastern Europe. The company required all its servants and settlers to be professing Protestants. Identifiably Jewish settlement began only after the introduction of complete religious tolerance under the Batavian Republic in 1804 and its confirmation by the British who took over the Cape in 1806. Enterprising Jewish individuals then began to arrive, mainly from Germany and the British Isles. Some made their way from Cape Town (where the first congregation was founded in 1841) deep into the interior and played pioneering roles in the development of what was then a backward country with a thinly scattered white population. Prominent individuals were Nathaniel *Isaacs, Benjamin *Norden, Jonas *Bergtheil, the *Mosenthal brothers, the *Solomon family, and Joel *Rabinowitz.

By the end of the 1860s, when the Jews in the Cape numbered a few hundred families in a white population of some-

thing over two hundred thousand, there were two main centers of Jewish settlement in the colony, the older in Cape Town and environs, and the other in the eastern region, mainly in Grahamstown, *Port Elizabeth and district, and Graaff Reinet. Individuals – itinerant traders and storekeepers, with a few professional men – had also penetrated into the more remote inland areas. Though small in number, they made a significant contribution to the economic advancement of the country and to its social and civic life.

The opening up of the diamond fields in Griqualand West (*Kimberley) in 1869 and of the gold mines of the Witwatersrand in 1886, marked a turning point in the economic and political history of South Africa. From being predominantly pastoral, it developed rapidly into a modern industrial society. The new economic opportunities attracted Jews among the emigrants from Britain, Germany, and elsewhere on the continent of Europe, as well as from America and Australia, and other countries. They were the forerunners of the mainstream of Jewish immigrants who began to arrive from Eastern Europe in the 1880s, a tributary of the vast outflow escaping czarist oppression and economic deprivation and seeking freedom and new opportunity, of whom the majority found their way to North America. Many of these immigrants settled in Cape Town and nearby towns, but later spread to more distant rural areas, and also found their way to the goldfields in the Witwatersrand. Few villages in the Cape, the Orange Free State, and later in the Transvaal, were without their Jewish peddlers or storekeepers, who were usually joined in time by their families and kinsmen from overseas. They formed small communities, and in some cases (as in the ostrich feather center *Oudtshoorn) larger Jewish settlements. The mainstream of Jewish migration, however, flowed to *Johannesburg and other towns on the Witwatersrand, which soon after the Boer War (1899–1902) – during which there was an exodus of war “refugees” – became the nucleus of the largest concentration of Jews in South Africa. There was also a smaller movement into Natal, particularly to *Durban.

The steady extension of Jewish settlement to the new areas was reflected in the dates when the first congregations were established: Kimberley – 1875; Oudtshoorn – 1883; Durban – 1883; Johannesburg – 1887; *Pretoria – 1890; *Bloemfontein – 1876.

Immigration

Official statistics on immigration became available only after the Boer War (1899–1902), but it can be conjectured that the Jewish population in 1880 was about 4,000. Ten years later it had grown to about 10,000. Around 1900 it was in the vicinity of 25,000, and in the 1904 official census it had reached a total of some 38,000. These figures reflect clearly how the Jewish population was growing through the addition of newcomers from abroad. Between 1880 and 1910, some 40,000 Jewish immigrants entered the country. Thereafter, for various reasons, the numbers decreased, with the exception of the years 1924 to 1930. In all, in the half-century from 1910

to 1960, it is estimated that there were perhaps 30,000 Jewish immigrants.

Until about 1890, the majority of Jewish immigrants came from Britain, and in lesser numbers from Germany. Thereafter, the influx of “Russian” Jews (as the East European Jews were officially designated) increased and within a couple of decades the “greeners” outnumbered the older elements. They came predominantly (approximately 70%) from Lithuania and the other territories on the eastern shores of the Baltic (South African Jewry came to be described as “a colony of Lithuania”) and also from Latvia, Poland, Belorussia, and further afield. In their escape from oppression and poverty in Eastern Europe the Jews who went to South Africa were encouraged by success stories of individuals, reports of the sympathetic attitude of the Boers (Afrikaners) to Jews as the “Chosen People,” the helping hand stretched out by older settlers, and inflated stories of the fortunes made from the gold mines. Most of the East Europeans at first encountered great hardships and difficulties economically before achieving prosperity. South Africa’s attitude to Jewish immigration was influenced by various factors, among them conservative official policies in regard to immigration generally, partly due to the internal struggle between the rival English-speaking and Afrikaner sections of the population. The changing political and economic situation in the country, and at times, the relatively high proportion of Jews among immigrants from alien (non-British) countries, also played their part.

Although, in an overall historical perspective, and by comparison with other countries, South Africa’s attitude was not an unfavorable one, Jewish leaders frequently felt the need for vigilance against discrimination, and at certain periods Jewish immigration became a subject of intensive political agitation (see below, legal and social status). In 1902, Jewish immigrants faced a crisis because a new literacy test at the Cape (designed to exclude Asiatics) called for the ability to read and write “in the characters of a European language.” There were moves to deny this status to Yiddish because it was written in Hebrew characters, but the language was officially accorded recognition in the Cape Immigration Law of 1906. This provision was also incorporated after Union in the basic Immigration Act of 1913. In the early 1920s Jewish communal leaders were engaged in a lengthy dispute with the government on the interpretation of the immigration laws, which had resulted in severe restrictions on economic grounds. These restrictions were removed in 1924, but the increased Jewish immigration which followed led in 1930 to the enactment of a law generally referred to as the “Quota Act.” This did not restrict Jewish immigration per se but by imposing numerical limitation upon all immigration from specified countries of Eastern and southern Europe, it substantially reduced the admission of Jewish immigrants. Soon afterward the influx of Jewish refugees, from Nazi Germany – and especially the dramatic arrival in 1936 of a chartered boat, the *Stuttgart*, with 537 German Jewish refugees on board – resulted in a major

Jews in South Africa

Year	Total
1904	38,101
1911	46,919
1918	58,741
1921	62,103
1926	71,816
1936	90,645
1946	104,156
1951	108,498
1960	114,762
1970	118,200
1980	117,963
1991	91,925
2001	71,800

agitation and precipitated the enactment of the “Aliens Act” of 1937. This law gave plenary powers to an Immigrants Selection Board, which was required, among other considerations, to apply the criterion of “assimilability.” The number of Jewish refugees from Germany then dropped considerably, the total between 1933 and 1940 being approximately 5,500.

During World War II, Jewish immigration virtually ceased and in the immediate postwar period was largely limited to aged parents and children of persons already living in South Africa and to other specified categories. Following the virtual destruction, in the Holocaust, of the communities from which South Africa had drawn its Jewish immigrants, as well as the movement toward the State of Israel, the overall figure of Jewish immigration to South Africa dropped to a few hundred annually.

DEMOGRAPHIC ASPECTS. The growth of the South African Jewish population through both immigration and natural increase is shown in the Table; figures are based on official census returns:

Until 1936, when the proportion of Jews in the population reached its peak of 4.52%, the annual Jewish increase was proportionately higher than that of the white population generally. In the succeeding 25 years (1936–1960), however, it was only 1.77% compared with 2.26% for the white population as a whole, and in the decade 1950 to 1960, it was only one-half of the general figure. The relative decline of the Jewish percentage was due to the restrictive immigration laws; the lower birth rate of Jews compared with that of the general white population; a certain amount of emigration; and the higher number of Jews in the older age groups.

In the early years, the high masculinity in sex distribution was similar to that of all typical immigrant communities, but later it dropped sharply. In 1904, there were 25,864 males and 12,237 females, while by 1960, males numbered 57,198 and females 57,563. The proportion of foreign-born to local-born Jews had also radically changed. Whereas in 1936, 46.69% were South African-born (for females the figure was 50%), the large majority are now South African-born.

In 1970, according to the official census of that year, the Jewish population reached an all-time high of 118,200. This figure remained static during the next decade, with losses to emigration being partially offset by immigration from Rhodesia (today *Zimbabwe), other African countries, and Israel. The Jewish population declined precipitously during the 1980s as a result of social, economic, and political unrest. The adjusted 1991 census, when adjusted upwards based on the national percentage of those who omitted the “religion” question on the census form, gave the Jewish population as 91,925, comprising 1.8% of the white population and 0.3% of the total population.

According to the 2001 census, this figure had declined still further. A total of 61,670 whites gave their religion as Jewish, suggesting a total of between 72,000 and 75,000 when the proportion of those who omitted the religion question was taken into account. These were overwhelmingly concentrated in the three provinces of Gauteng (47,700, more than 90% of whom lived in Johannesburg), Western Cape (18,360, mainly in Cape Town), KwaZulu-Natal (3,470, mainly in Durban) and Eastern Cape (1,390, mainly Port Elizabeth and East London), while the combined total of the remaining five provinces was estimated at about 1,500. Once a substantial proportion of the total, the number of Jews still living in rural districts had declined to a few hundred, mainly elderly people. Despite the steep decline in the Jewish population, there were signs early in the new century that Jewish emigration was leveling off and that a modest influx of new immigrants, as well as some returning emigrants, was beginning to swell its ranks once more.

Legal and Social Status

As an integral part of the white population, Jews have full equality and participate in all aspects of South Africa’s national, political, civic, economic, and cultural life. During the white minority rule years, although the usual forms of anti-Jewish prejudice in gentile societies were occasionally encountered, both of the main white population groups – the English-speaking and the Afrikaans-speaking – remained faithful, generally speaking, to the traditions of religious tolerance which characterized the homelands – England and the Netherlands – from which their forefathers came. In the post-1994 era, there has been little evidence of anti-Jewish sentiment in the majority black population, with antisemitism being primarily confined to elements within the Muslim community.

There have nevertheless been periods in South Africa’s history when Jews faced special problems which arose, in particular, from the complex racial and political tensions of the country. There were exceptional periods when the status of Jews was challenged. While the Cape was under the control of the Dutch East India Company prior to 1795 (see above), and all in the Company’s service had to profess the Christian Reformed religion, there could be no professing Jews in the country until a liberal religious policy was introduced. Thereafter, however, whether in the British or the Afrikaner territories,

Jews enjoyed religious tolerance and freedom of conscience. Indeed, a notably sympathetic attitude was shown by the Boers toward the early Jewish immigrants from Eastern Europe.

The situation in the Afrikaner Transvaal Republic, however, differed from that in the Orange Free State, where full equality was enjoyed by the Jews. The Grondwet (constitution) of the Transvaal Republic (1864; reaffirmed in 1896) stipulated that membership in the Volksraad (parliament) and also the holding of official positions in the state service, were to be restricted to Christian Protestants. Catholics, and also Jews, were consequently debarred from military posts and from the offices of the presidency, state secretary, and Landdrost, nor could they become members of the first or second Volksraad or superintendents of the natives or of mines. These disabilities applied even to individuals who had become burghers of the republic. There were also educational disabilities: as education had to be based on a strictly Christian Protestant religious foundation, Catholic and Jewish children were debarred from attending government schools and their parochial schools were denied state aid. These disabilities did not arise from expressly anti-Jewish motives, but flowed from the rather harsh Calvinist constitution of the republic. In the last years of the republic, Jewish deputations to the government sought to have them removed, but without success. Eventually in 1899, President Kruger tried unsuccessfully to persuade the Volksraad to replace the requirement of the Grondwet that all members of the Raad must be Protestant by a provision that they must “believe in the revelation of God through His Word in the Bible.” The Jews in the Transvaal reacted variously to these disabilities which were also somewhat obscured by the fact that the Jews were in most cases foreigners (*uitlanders*) with their own far-reaching grievances. Such limitations also did not weigh much upon the relatively recent arrivals from Eastern Europe, who appreciated their situation in the Boer republic, so markedly in contrast to the oppressive conditions of czarist Russia. All the disabilities disappeared when the Transvaal republic came under British rule in 1902. Thereafter, whether under the colonial regimes in the Transvaal and in the rest of the country prior to Union in 1910 or subsequently, Jewish citizens living in South Africa enjoyed legal equality in all respects.

However, further immigration of Jews, more particularly from Eastern Europe, did periodically become a public issue. In the 1930s the influx of refugees from Nazi Germany led to active agitation for the complete prohibition of Jewish immigration. In the result, while no specific anti-Jewish provisions were written into the immigration laws, restrictions were introduced which were expressly designed to cut down the flow of Jewish immigrants. The supporters of these restrictive policies were not confined to one political party only, and many disclaimed an anti-Jewish prejudice, asserting that the measures were necessary to prevent the growth of antisemitism by maintaining the existing balance between the various elements of the white population. (South Africa never favored an open-door immigration policy, the Afrikaans-speaking section, in particular, often contending that the aliens were a

threat to the economic and political status of the established population).

South Africa became the scene of open antisemitic agitation among certain sections of the population – not shared by the majority of the citizens – from the time of the accession of the Nazis in Germany in 1933 until the end of World War II. Organized antisemitic movements arose, among them the “shirt” movements like the Greyshirts, Blackshirts, and South African Fascists, and semi-political bodies like the Ossewa Brandwag and the New Order, with fully-fledged National Socialist programs. These developments eventually had their impact upon the official opposition party, the National Party, which in 1937 included a plank on the “Jewish question” in its official program. Its demands included the total prohibition of further Jewish immigration, stronger control over naturalization, and the introduction of a “quota” system for Jews in various branches of economic life. In Transvaal province, too (but not in the other provinces), Jews were banned from membership in the National Party. When the United Party government, headed by Jan Christiaan Smuts, declared war against Germany in 1939, the National Party formally proclaimed its neutrality.

The anti-Jewish agitation grew more subdued as World War II moved to its climax and sharp ideological differences emerged within the National Party. The moderate elements finally gained the upper hand, and in his political manifesto prior to the general election in May 1948, the Nationalist Party leader, Daniel François Malan, later prime minister, announced a new policy. Denying that the party’s attitude on immigration was motivated by anti-Jewish feelings, he affirmed positively that his party did not support discriminatory measures between Jew and non-Jew who were already resident in the country. Consistently with that declaration, when the National Party won the election and became the government, Malan announced his goal to be the removal of the “Jewish question” from the life and politics of South Africa. The reestablishment of confidence was not effected without difficulty. Jews generally tended to hold aloof from the National Party. However it fulfilled its pledge not to countenance antisemitism in public life. Successive National Party prime ministers reaffirmed government policy to be one of equality and non-discrimination between all sections of the white population.

Apart from the 1930s and early 1940s, antisemitism has never manifested as a serious problem in South Africa and Jews continue to participate fully in all aspects of national life on the basis of equality. Levels of recorded antisemitic incidents have been dramatically lower than those of other major Diaspora communities, consistently averaging around 30 annually. During the apartheid years, most antisemitic activity emanated from the white extreme right. During the 1980s and 1990s, the community became increasingly perturbed by the growing prevalence of organized neo-Nazi movements and other antisemitic organizations. Among these were the Afrikaanse Weerstand Beweging (Afrikaner Resistance Movement), Boerenasie, and the Blanke Bevrydingsbe-

weging (White Liberation Movement). These organizations largely ceased to operate following the transition to majority rule in 1994.

In recent years, most antisemitism has emanated from radical elements within South Africa's large Muslim minority, numbering around 800,000 in 2001 (about 2% of the population). The post-1994 ethos in the country, however, is strongly anti-racist, with numerous laws – including a comprehensive Bill of Rights in the Constitution – proscribing any form of abuse, discrimination, or hate speech based on race, color, creed, or ethnicity.

Communal Organization and Structure

HISTORICAL SURVEY. The earliest pattern of communal organization was established by Jews of German, English, and Dutch extraction. Their congregations provided elementary facilities for worship, classes for Hebrew and religious instruction of the young, and philanthropic aid, and also attended to the rites for the dead. The authority of the chief rabbi of England was accepted in ecclesiastical matters. Joel Rabinowitz (officiated 1859–82), Abraham Frederick *Ornstein, and Alfred P. *Bender (1895–1937), all of whom administered to the Cape Town Congregation, and Samuel I. Rapaport (1872–95), the minister in Port Elizabeth, all emigrated from England.

By the end of the 19th century or soon after, the “greener” East Europeans had broken away from the “English” synagogues in most communities to form their own congregations. Their parochial loyalties were reflected in the many separate associations for religious worship and talmudic study and the numerous *Landsmannschaften (fraternal associations) of persons who had come from the same town or village in Lithuania or Poland. Leading rabbinical personalities in this formative period were: in Johannesburg, Judah Loeb *Landau (officiated 1903–42), from Galicia; the more “Westernized” Joseph Herman *Hertz (1898–1911) who arrived via the United States (he later became chief rabbi of the British Empire); Moshal Friedman (beginning in 1891), from Lithuania; Chief Rabbis L.I. *Rabinowitz (1945–61); B.M. Caspar (1963–1988) and C.K. Harris (1988–2004) and in the Cape, M.Ch. Mirvish (d. 1947), also from Lithuania and I. *Abrahams (1937–68). In lay matters, Jews of English and German origin usually took the lead, but East Europeans also began to assert their influence.

The communal structure gradually underwent change in response to the new social forces – the slowing down of immigration, increasing acculturation and growing homogeneity. Splinter congregations rejoined the older synagogues or new amalgamations took place. By the 1940s most of the Landsmannschaften had disappeared or continued to survive on nostalgic memories. Emerging social and cultural needs called forth a variety of new institutions, such as the lodges of the Hebrew Order of David, the Zionist and Young Israel Societies, the branches of the Union of Jewish Women, the *B'nai B'rith Lodges, the Ex-Servicemen's organizations, the *Reform movement in religious life, Jewish social and sports

clubs and, since the early 1990s, communal security organizations. Important work in social outreach and upliftment in the non-Jewish community is carried out by such organizations as MaAfrika Tikun, the Union of Jewish Women, the United Sisterhood and ORT-South Africa, amongst others. Increased communal cohesion began to be reflected in the organizational structure of education, congregational affairs and philanthropy, and overall communal representation. However, older forms of organization, inherited or adapted from the East European tradition, yielded slowly to change. The most striking exceptions were in the Hebrew educational sphere and in the proliferation of Jewish sports clubs.

The main concentration of Jewish communities is now in two areas: the Johannesburg-Pretoria complex in the north, and the Cape Peninsula in the south, where 66% and 25% respectively of the Jewish population now live. Because of the geographic distance and differences of outlook, the regional bodies in the south until fairly recently maintained virtually autonomous religious and educational organizations parallel to the national bodies up north. However, since the mid-1980s the trend has been toward greater coordination and unity, as shown, inter alia, by the establishment of a national Union of Orthodox Synagogues and Bet Din in 1987. All the major national Jewish bodies have their headquarters in Johannesburg, which has now become the focal point of Jewish life.

RELIGIOUS INSTITUTIONS. The great majority of Hebrew congregations in South Africa, about 85% of the total, are Orthodox, with most of the remainder being Reform (Progressive). The Conservative movement as known in America virtually does not exist in South Africa, apart from the small Shalom Masorti Independent Congregation in Johannesburg, formed after one of the Reform congregations broke away from the Progressive movement in 1992.

In 1966, there were 29 Orthodox congregations and four Reform temples in Johannesburg and 12 Orthodox congregations and two Reform temples in Cape Town. In 2004, the number of Orthodox congregations in Johannesburg had grown to 51 while the Reform temples had declined to three. In Cape Town, the number of Orthodox congregations had increased to 18 and Reform Temples to three. There is at least one Orthodox and one Reform congregation each in Durban, Port Elizabeth, and East London. Outside of the main urban centers, virtually all of the smaller country synagogues had closed, with those remaining functioning only with great difficulty.

The Union of Orthodox Synagogues of South Africa (UOS) is the umbrella body for Orthodox congregations throughout South Africa and has affiliated to it most Orthodox congregations countrywide. It consists of just under 100 synagogues (including many *shtiebels*) and claims a membership enrollment of approximately 20,000 families. The UOS appoints and maintains the office of the chief rabbi and the Bet Din (ecclesiastical court). At the end of 2004, Scottish-born Rabbi Cyril Harris, who had served as a rabbi in London

before coming to South Africa, retired after seventeen years as chief rabbi and was replaced by Rabbi Dr. Warren Goldstein, the first locally born rabbi to have been appointed to the position.

There is a single national Bet Din, based in Johannesburg with an office in Cape Town. This deals with conversions to the Jewish faith, the issuance of divorces, supervision of *kashrut*, and similar matters. Although the UOS established and maintains the Bet Din, and also appoints the *dayyanim*, the Bet Din is an independent body, exercising supreme plenary authority in Orthodox religious matters. The UOS publishes a quarterly magazine, *Jewish Tradition*. There is an Orthodox Rabbinical Association of South Africa, its members being drawn from the clergy of all parts of the country.

The period after 1970 saw young people becoming progressively more involved in religious life, in part because of more religion-focused Jewish day schools such as Yeshiva College and also because of the advent of dynamic outreach movements such as the Kollel Yad Shaul, Chabad (Lubavitch), Ohr Somayach, and Aish HaTorah. Johannesburg in particular is today widely regarded as a model *ba'al teshuvah* (return to Orthodoxy) community, while Cape Town and Pretoria were also experiencing an upsurge in religiosity by the turn of the century. The impressive growth of the *ba'al teshuvah* movement was shown by the proliferation of *shtiebls* (small synagogues, characterized by a high level of observance amongst its members) in Johannesburg, which numbered over 30 in 2004.

The Progressive movement was started in South Africa in 1933 by Rabbi Moses Cyrus Weiler (1907–2000) and was later led by Rabbi Arthur Saul Super (1908–1979) in the teeth of strong Orthodox opposition. The Reform movement became established in all the larger communities, at its height claiming support from about 20% of the whole Jewish population. This had declined to between 10 and 15% by the end of the century. In South Africa Reform has been relatively conservative in its religious approach, avoiding some of the radical manifestations of the American movement, and it has always been strongly pro-Zionist. In contrast to the Orthodox synagogues, which confined their activities largely within the Jewish community, Reform congregations broke new ground by adopting programs for Christian-Jewish goodwill and by fostering social welfare projects among non-whites, particularly for children. Several Orthodox congregations, notably the prestigious Oxford shul in Johannesburg, subsequently also became involved in social outreach and upliftment projects in the general community.

The Progressive congregations are associated together in the South African Union for Progressive Judaism, religious issues being handled by a central ecclesiastical board. The latter consists of rabbis and a few laymen, with a rabbi elected annually as its chairman. The ladies guilds in Orthodox synagogues are affiliated to the Federation of Synagogues' Ladies Guilds, and the Reform sisterhoods to the National Union of Temple Sisterhoods.

Both Orthodox and Reform congregations for many years had difficulties in finding rabbis and ministers. The sources in Europe which provided them with trained and experienced ministers no longer existed. By the closing years of the 20th century, however, an increasing number of the community's Orthodox rabbis were emerging from locally established rabbinical training institutions, most notably the Yeshiva Gedolah. Many products of the religious day schools, moreover, were returning to South Africa after gaining *semikhah* overseas, and serving the community both from the pulpit and as teachers within the burgeoning Jewish day school system.

SOUTH AFRICAN JEWISH BOARD OF DEPUTIES. A single representative organization, the South African Jewish Board of Deputies, is recognized by Jews and non-Jews alike as the authorized spokesman for the community. It is charged with safeguarding the equal rights and status of Jews as citizens and generally protecting Jewish interests. A Board for the Transvaal was formed in 1903, on the initiative of Max *Langerman and Rabbi Joseph Hertz, with the encouragement of the High Commissioner, Lord *Milner, and was named after its prototype in England. At first it encountered opposition from the Zionists. Among its early leaders were Bernard *Alexander, Manfred *Nathan, and Siegfried Raphaely. An independent Board for the Cape was formed in 1904 through the efforts of Morris *Alexander and David Goldblatt, despite opposition from the Rev. Alfred P. Bender and his congregation.

Following the unification of the four provinces in 1910, the two bodies were unified in the South African Board of Deputies (1912). Its main concern was to prevent discrimination against Jews in respect of immigration and naturalization and to rebut defamatory attacks on Jews. It led the community's efforts in rendering relief to Jews in Europe after World War I, and later was active also on behalf of German Jewry and the displaced persons of World War II through the instrumentality of the South African Jewish Appeal (1942). A relatively small and weak body, the Board underwent reorganization in the early 1930s to meet the challenge of Nazism and antisemitism. While Johannesburg remained the headquarters, provincial committees were set up in Cape Town – the seat of Parliament – Durban, Port Elizabeth, East London, Pretoria, and Bloemfontein. The position of chairman of the executive council was held by Cecil Lyons (1935–40); Gerald N. Lazarus (1940–45); Simon M. Kuper (1945–49); Israel A. *Maisels (1949–51); Edell J. Horwitz (1951–55); Nannie Philips (1955–60); Teddy Schneider (1960–65); Maurice Porter (1965–70); David Mann (1970–74), Julius Rosettenstein (1974–78), Israel Abramowitz (1979–83), Michael Katz (1983–87), Gerald Leissner (1987–91), Mervyn Smith (1991–95), Marlene Bethlehem (1995–99), Russell Gaddin (1999–2003), and Michael Bagraim (from 2003). Its secretary and later general secretary for many years was Gustav Saron. Aleck Goldberg held this position for most of the 1980s while Seymour Kopolowitz did so for most of the next decade. As new needs

had to be met, the Board became a functional agency in various fields. Today, it publishes a quarterly journal, *Jewish Affairs*, runs a Country Communities Department to cater to the needs of Jews still living in isolated country areas, maintains in Johannesburg an important library of Jewish information and archives relating to South African Jewry, and publishes information on the community through its website and communal directories. In 1993 it also took the lead in founding, and subsequently in running, the *African Jewish Congress, a representative and coordinating body for the Jewish communities in Sub-Saharan Africa. There is frequent consultation and cooperation between the Board and the Zionist Federation. In 1949 the Board launched the United Communal Fund (UCF) for South African Jewry, which provides the budgets – in whole or in part – of the Board itself, and of a number of other important communal organizations, including the Office of the Chief Rabbi, Community Security Organisation, Union of Jewish Women (UJW) and S.A. Board of Jewish Education. The UCF combined with the Israel United Appeal in 1984 to form the IUA-UCF. In line with important rationalization initiatives introduced during the late 1990s, the Board, Zionist Federation, IUA-UCF, UJW, S.A. Union of Jewish Students, and a number of other, smaller, Zionist and Jewish communal organizations today share single premises in all the major Jewish centers country-wide.

PHILANTHROPY. Institutions to assist the poor and needy early became an established feature of communal organization. In the wake more particularly of the East European immigration, there was a proliferation of many kinds of philanthropic institutions or fraternal bodies having philanthropic objects, such as Landsmannschaften, free-loan societies, societies to visit the sick, and especially for the provision of financial and material help to those in need. Many of these institutions bore the hallmark and followed the methods of East European traditions of *zedakah*. Today, for instance, the largest welfare body in Johannesburg, the *Chevra Kaddisha* combines extensive philanthropic work with the activities of a burial society. The organizational structure and also the underlying principles of Jewish social welfare subsequently underwent changes under the impact of changing social conditions. In recent years, the *Chevra Kaddisha* has incorporated a number of other important welfare institutions under its umbrella, amongst them the two Jewish aged homes Sandringham Gardens and Our Parents Home, Jewish Community Services, the Jewish Women's Benevolent Society, and the Arcadia Jewish Orphanage. Other important welfare institutions include the free-loan societies, the Witwatersrand Hebrew Benevolent Association (founded 1893) and the more recent Rambam Trust, the Selwyn Segal Home for Jewish Handicapped (1959), Yad Aharon, Hatzollah (medical rescue), Kadimah Occupational Centre, B'nai B'rith, and Nechama (bereavement counseling).

Leading bodies in the Cape include the Astra Centre (incorporating Jewish Sheltered Employment), B'nai B'rith, Cape

Jewish Welfare Council, Glendale Home for the Intellectually Disabled, Hebrew Helping Hand Association, Highlands House (Jewish Aged Home), and Jewish Community Services (incorporating Jewish Board of Guardians, founded 1859, and the Jewish Sick Relief Society). The Jewish community has assumed financial responsibility for all its welfare needs, the large budgets being met by fees, membership dues, contributions, and bequests. Some advantage has been taken of government grants for specific welfare projects.

FRATERNAL ORGANIZATIONS. In the first decades of the 20th century many of the communal organizations provided some form of philanthropic and fraternal services to assist the integration of the immigrant generation. As late as 1929, of the 68 Jewish institutions in Johannesburg then affiliated to the Board of Deputies, 38 were either wholly or partly philanthropic. An indigenous South African institution of this type, the Hebrew Order of David, founded successive lodges after 1904 and, as members began to be recruited among the South African-born generation, added social, cultural, and communal objectives. The Grand Lodge has its headquarters in Johannesburg.

UNION OF JEWISH WOMEN. In the women's sphere the Union of Jewish Women of South Africa plays a major role. The first branch was formed in Johannesburg in 1931 and a national body in 1936. In 1969 the Union had 64 branches throughout the republic with a total membership of between 9,000 and 10,000 women, its national headquarters being in Johannesburg. The subsequent concentration of most Jews in the main urban centers, with the resultant closure of most rural and small town branches, saw the number of branches shrinking to 10 by 2004, with a total membership of about 7,500 women. The Union maintains a wide range of activities and acts as a coordinating body for Jewish women's organizations. A distinctive aspect of its program is its nondenominational work, educational and philanthropic, serving all sections of the population. Some branches run creches and feeding depots for indigent colored and African children and adults. Branches of the Union have established Hebrew nursery schools, friendship clubs, services for the aged, youth projects, and a wide program of adult education. In recent years, the UJW has become extensively involved in HIV/AIDS relief work.

EDUCATION. There are a plethora of Jewish day schools in Johannesburg and Cape Town, all of which provide a complete secular education, with Jewish studies integrated into the general curriculum, up to matriculation standard. The mainstream schools in Johannesburg are the three King David schools, located in Linksfield, Victory Park, and Sandton. The first two provide Jewish education from pre-school to matriculation level while the third goes up to primary school level. King David's counterparts in Cape Town are the Herzlia schools, while there is also a small Jewish day school in Port Elizabeth, Theodor Herzl.

The ideological basis of the King David, Herzlia, and Theodor Herzl schools is officially described as "broadly na-

tional traditional,” a formula intended to indicate both the religious and the Zionist character of the education. Pupils receive a full education following a state syllabus and a Jewish studies program, including religion, history, literature, and Hebrew language. The mainstream Jewish day schools accept children of mixed marriages and Reform converts. However, many demanded more intensive religious instruction and greater religious observance. Protagonists of this type of education, together with Bnei Akiva religious youth movement, created in 1958 Yeshiva College, originally established as the Bnei Akiva Yeshiva seven years previously. This developed into a full-time day school from nursery school up to matriculation and steadily grew from an initial few dozen pupils to well over 800 by the turn of the century. In 1995, the school received the Jerusalem Prize for Jewish Education in the Diaspora. Yeshiva College could be regarded as centrist Orthodox in its approach. More right-wing Orthodox schools that subsequently were established include Torah Academy and Cape Town’s Hebrew Academy (both under Chabad’s auspices), Yeshivas Toras Emes, Shaarei Torah, Bais Yaakov, Hirsch Lyons, and Yeshiva Maharsha.

The Progressive movement also maintains a network of supplementary Hebrew and religious classes at its temples. These schools are affiliated with the Union for Progressive Jewish Education.

Overall supervision of the King David schools is undertaken by the South African Board of Jewish Education (SABJE), established in 1928, which operates from headquarters in Johannesburg. Affiliates include Yeshiva College and Torah Academy in Johannesburg, Theodor Herzl in Port Elizabeth, and the Herzlia schools in Cape Town. The SABJE has direct responsibility, both financial and administrative, for the Jewish day schools in Johannesburg. It also involves itself with Jewish children who attend state schools and whose main access to Jewish education is through the *Cheder* program and by means of religious instruction booklets sent into the schools. It administers a network of Hebrew nursery schools according to the standards laid down by the Nursery School Association of South Africa. The Cape Council of the South African Jewish Board of Education has its own religious instruction program for Jewish pupils who attend the state schools in the Western Cape Province.

In 2003, over 80% of school-going Jewish children in Johannesburg, Cape Town, and Port Elizabeth (whose Theodor Herzl School by then had a mainly non-Jewish enrollment) were attending one of the Jewish day schools. Those still in government schools had their Jewish educational requirements catered to by the United Hebrew Schools (under the SABJE) in Johannesburg and the Religious Instruction Department of the SAJBE in Cape Town. Jewish pupils in Pretoria and Durban received Jewish education through a special department at the Crawford College branches. This arrangement came about following the take-over of the Carmel College Jewish day schools in those cities by Crawford during the 1990s. The total pupil enrollment in the day schools in

2004 was about 8,000, substantially more than the 1969 figure of 6,000 even though the overall Jewish community had by then declined by more than a third. Government policy precludes financial support to new private schools, of whatever denomination, and financing of Jewish education remains a problem.

At the tertiary level, university students are able to take Jewish studies through the Semitics Department of the University of South Africa (UNISA); the Department of Hebrew and Jewish Studies of Natal University; and the Department of Hebrew and Jewish Studies (including the Isaac and Jessie Kaplan Centre for Jewish Studies and Research) at the University of Cape Town.

Programs of adult education continue to be provided by the SABJE, the South African Zionist Federation and the various affiliates, including most particularly the Union of Jewish Women, the Women’s Zionist Council and the South African Zionist Youth Council. Other bodies, which have significantly contributed to the general cultural life of South African Jewry, include the Histadrut Ivrit, Yiddish Cultural Federation and the South African National Yad Vashem Foundation. Courses of Jewish study are offered at the University of Natal in Durban, and the University of South Africa.

Social Life

INFLUENCE OF IMMIGRATION STREAMS. Following the congregational beginnings in Cape Town in 1841, loss of identity through assimilation was gradually arrested, although the immigrants became quickly integrated into the general economic and cultural life. In secular matters, as also in religious, they maintained ties with Anglo-Jewry, and this tradition was followed also by the immigrants from Germany. The latter, socially influential, often assumed the leadership, but do not appear to have made a specifically German-Jewish cultural contribution.

The growing numbers of East Europeans led in time to social, religious, and cultural ferment. Social distance, and even open friction and conflict, developed between the “greeners” and the older sections, due to differences in ritual tradition, in intensity of religious observance, or in attitudes to Jewish education and Zionism. Nonetheless, many aspects of the Anglo-Jewish pattern persisted, although it underwent changes in spirit and content.

Elements of the legacy of Lithuanian Jewry may be identified in certain characteristics of South African Jewry: generous support for all philanthropic endeavors, respect for Jewish scholarship and learning, exemplified in the status accorded to the rabbinate and concern for Jewish education; and a conservative outlook toward religious observance (at least in externals). However, as the community became largely South African-born and homogeneous, the barriers that formerly separated the various immigrant groups all but disappeared. The Yiddish language, the only vernacular used by the East European immigrants, became confined to a small minority. (In the 1936 census, 17,861 persons declared Yiddish as their

home language; by 1946 the figure was 14,044, and in 1951, it had fallen to 9,970. In 1960, of the large Jewish population in Johannesburg, only 2,786 declared Yiddish to be their home language). By 2004, only a handful remained.

FORCES STRENGTHENING GROUP IDENTITY. The normal trends of acculturation and integration – linguistic, cultural, and economic – were accelerated by the rapid rise in the material condition of many Jews. South African Jewry has thus far escaped large-scale manifestations of assimilation and maintains a vigorous group life. A major community survey jointly conducted in 1998 by the Institute for Jewish Policy Research (U.K.) and Kaplan Centre for Jewish Studies and Research (Cape Town) showed remarkably high levels of Jewish identification, both in the religious and Zionist sphere, and an intermarriage rate of less than 10%. Various factors have contributed to this. During the apartheid years, the country's cultural and political climate, which emphasizes the distinctiveness of the various linguistic, cultural, and ethnic groups of the population, and especially the coexistence of the English and Afrikaans language and culture, was favorable to the preservation of a separate Jewish group life. There was no pressure upon the Jew to drop his identity or to become an “unhyphenated” South African. This has continued into the post-1994 era, where the right of ethnic and religious communities to express their identity within the greater multicultural society is constitutionally protected, and indeed encouraged. The advent of democracy has therefore scarcely impinged, if at all, on Jewish identity, which has in fact been considerably strengthened by the strong upsurge in religiosity, particularly in Johannesburg.

THE ZIONIST MOVEMENT. The greatest influence, however – itself part of the Lithuanian heritage – has been exerted by the Zionist movement in the evolution of South African Jewry. Lithuanian Jewry's support of *Hibbat Zion was continued by the emigrants to South Africa. There was at first lukewarmness, and even active opposition, from some of the older anglicized groups, some right-wing Orthodox ministers, and also a small group of *Bund members and socialists. In time, however, the Zionist outlook achieved an unchallenged position.

Even before the first Basle Congress in 1897, there were a few Hovevei Zion societies in the country. An association of Zionist societies in the Transvaal, formed in 1898, convened a countrywide conference which led to the creation of the South African Zionist Federation, the first all-national Jewish body. The first all-South African Zionist conference was held in 1905. Although the fortunes of the Zionist movement fluctuated in the post-Herzl era, its strength was revealed during World War I, when the first South African Jewish Congress was held in Johannesburg, in April 1916, convened jointly by the Zionist Federation and the Board of Deputies in order to mobilize public opinion for the Jewish claim to Palestine. Zionist activity expanded greatly in the post-*Balfour Declaration period, owing much to its effective leaders, among them, Samuel Goldreich, Jacob *Gitlin, Idel Schwartz, A.M. Abra-

hams, Rabbi J.H. Hertz, Rabbi J.L. Landau, Benzion Hersch, Isaac Goldberg, Joseph Janower, Lazar Braudo, Katie Gluckman, Nicolai Kirschner, Bernard Gerling, Simon M. *Kuper, Joseph *Herbstein, Leopold *Greenberg, Ediel J. Horwitz, and Israel A. Maisels. Its most influential officials included Jack Alexander, Zvi Infeld, and Sidney Berg. The Zionist Movement acted as a counterforce to weakening religious observance, and also unified the widely scattered communities. During the 1960s and 1970s, contributions per capita to Zionist funds were believed to have been higher in South Africa than elsewhere, even though the country's laws did not allow tax reductions for such donations. These contributions have been significantly reduced in the modern era, partly due to the decline of the South African currency relative to other currencies and because of government restrictions.

The South African Zionist Federation has been held up as a model of an all-embracing territorial Zionist organization. It takes the lead in, and coordinates, a many-faceted program. Its activities range from fundraising, the promotion of *aliyah*, tourism, and other forms of assistance to Israel, to youth work, adult education, and the fostering of Jewish culture generally. With its national headquarters situated in Johannesburg, it has officials in the main provincial centers and also an office in Tel Aviv, which carries out many varied functions in Israel itself. The strength of the Zionist movement lies particularly in its women's and youth sections. Organizations affiliated to the Zionist Federation include the Women's Zionist Organization of South Africa, whose fundraising projects are directed mainly toward the needs in Israel of women and children and land reclamation. The South African Maccabi Association, which promotes sport with Israel and is responsible for South Africa's participation in the *Maccabi Games. In 2004, there were four Zionist youth movements nationally, the largest being Bnei Akiva, followed by Habonim-Dror, Betar, and Netzer (representing the Reform movement). These conduct cultural programs, organize youth activities, and run summer camps. University youth have their representative organization – the South African Union of Jewish Students (SAUJS) affiliated to both the SAJBD and SAZF. In addition, many Zionist Societies and numerous synagogues are affiliated to the Federation. Fundraising is conducted through various channels, mainly through the Israel United Appeal campaign. Additional funds are raised for the Jewish National Fund, the Magen David Adom, South African Friends of various Israeli universities and educational institutions including the Hebrew, Bar-Ilan, Ben-Gurion and Haifa universities and the Technion, amongst other causes. The executive council of the Zionist Federation, elected by a biennial conference, includes representatives of the Women Zionists, Youth, Maccabi, and Medical Councils, and of other bodies within the Zionist movement.

South African Zionism has been noteworthy for its practical character, and the many projects which it has sponsored in Israel, among them the South African Palestine Enterprise (Binyan Corporation Ltd.) 1922, which granted mortgage loans at low interest rates; the African Palestine Investments,

which participated in the Palestine Cold Storage and Supply Co.; and the Palestine Shippers Ltd. The South African Jewish Appeal promoted an important housing project and the building of the garden village in *Ashkelon. The Women's Zionist Council erected and maintains the WIZO Mothercraft Center. The Union of Jewish Women endowed the first dormitory for women students at the Hebrew University and is responsible for the maintenance of the Parasitology Laboratory. Significant endowments made by individuals to the Hebrew University include the Bialik Chair of Hebrew, the Ruth Ochberg Chair of Agriculture, the Cootcher Museum of Antiquities, the Joffe Marks wing of the Jewish National and University Library, the Silas S. Perry Endowment for Biblical Research, and the Percy A. Leon building in the geology complex.

Comparatively large numbers of South African Jews settled in Israel. By 1948 they numbered about 200, and by the beginning of 2004 the figure was estimated at around 18,000. Former South Africans who achieved high distinction in the state are Abba Eban, Michael Comay, Louis (Aryeh) Pincus, Arthur Lourie, and Jack Geri (who for a time was minister of commerce). In periods of crisis many volunteers from South Africa spontaneously left for Israel. In the 1948 War of Liberation, men and women who had served in the South African forces during World War II went to the defense of the Jewish state. A few thousand volunteered, but only 800 were sent and of these, approximately one-quarter remained permanently in the country. A stream of volunteers again left for Israel in the 1956 Sinai crisis, at the time of the Six-Day War in June 1967, and in the 1973 Yom Kippur War. An increasing number of students continued their studies at various seats of higher learning in Israel. The Jewish day schools send large groups of pupils to Israel for extended courses, and great numbers of tourists visit Israel regularly. Increasing contacts between South African Jewry and Israel have enriched the content of Jewish life and strengthened Jewish consciousness in South Africa.

Political Attitudes and Involvement

Apart from a few exceptional situations, opportunities to participate in all aspects of civic and political life have been open to Jews at all levels – national, provincial and local. An impressive number of Jews regularly participated in local government as elected councilors, both in the large cities and in the rural villages (until the exodus to the cities). Many were elected to the position of mayor (including 22 in Johannesburg and 13 in Cape Town). The provincial councils and Parliament also have always included Jewish representatives, with these after 1948 largely belonging to opposition parties. Four Jews, Henry *Gluckman, Louis Shill, Joe *Slovo, and Ronnie Kasrils have to date attained cabinet rank, while Gill Marcus, as well as Kasrils, have served terms as deputy ministers. In 1999, Tony Leon became the country's first Jewish Leader of the Opposition when his party, the Democratic Alliance, became the second largest party in Parliament following the general election of that year.

Throughout the 20th century, relations between the white and non-white sections of the population formed the warp and woof of party politics in South Africa, and there was likewise no collective Jewish attitude in regard to these. Because of the great diversity of opinions among individuals, and the complexity of the racial and political tensions within the country, the Jewish community found it impossible to advocate any specific group policy. The majority espoused moderate policies. Some Jews were among the foremost protagonists of the non-white sections of the population. One of the best-known was Helen *Suzman, the sole representative of the Progressive Party in the South African Parliament from 1961 to 1974. Within the ranks of the anti-apartheid liberation movements, Jews were likewise disproportionately involved, whether as academics, trade unionists, political organizers, or within the armed wings of the liberation groups. Many of these were jailed, including Denis Goldberg, who was convicted alongside Nelson Mandela and other leading black opposition figures at the famous Rivonia Trial in 1964. Many more were compelled to go into exile, where they continued to be active in anti-apartheid activities in places like London and Lusaka in Zambia. Some returned after the unbanning of the various liberation movements in 1990 and several of these, amongst them Joe Slovo, Ronnie Kasrils, Ben Turok, and Gill Marcus, played an important role in the subsequent process of transition to multiracial democracy.

During the apartheid years of white minority rule, the activities of individual Jews or of the Jewish community as such led to occasional controversy, often revealing the impact of the political, ideological, and racial tensions in South Africa upon attitudes toward Jews. The fact that so high a proportion of Jews were engaged in anti-apartheid activities, often as members of the banned Communist Party, led to the loyalties of the Jewish community as a whole being called into question. The mainstream Jewish leadership, represented by the SAJBD, found it necessary from time to time to emphasize that there was no collective Jewish viewpoint in regard to the racial policies advocated by the respective political parties, and that Jewish citizens act in such matters not as members of a group, but as individuals. As opposition to apartheid intensified, both locally and internationally, the mainstream communal leadership became increasingly torn between its traditional mission of safeguarding the Jewish community and the need to condemn the injustices of the apartheid policy in accordance with Jewish moral values and historical experience.

By the mid-1980s, the SAJBD was speaking out more forthrightly against the apartheid policy. At its national conference of 1985, and again in 1987, the Board explicitly rejected apartheid. It also released statements condemning evictions of black leaders and pass-law arrests, detention without trial, a university quota system for blacks, and the treatment of black squatters near Cape Town. The ruling National Party's move away from pure apartheid attracted some Jewish support although the majority of Jews continued to support the

liberal opposition Progressive Federal Party, later transformed into the Democratic Party and thereafter the Democratic Alliance. A substantial number of Jews were engaged in social action and welfare activities. Jews were prominent in various activist organizations including Lawyers for Human Rights, the Legal Resources Centre, and the End Conscription Campaign (which sought changes to laws regarding compulsory military service for whites). Two specifically Jewish activist organizations were founded in the mid-1980s: Jews for Social Justice in Johannesburg and Jews for Justice in Cape Town. In 1987 Jews for Social Justice participated in the founding of the Five Freedoms Forum, a broad grouping of 25 white organizations opposed to apartheid. The SAJBD fully endorsed the moves away from apartheid by President De Klerk after 1989, and devoted much of its efforts during the following decade to preparing the Jewish community for the transition to black majority rule. In 1992, it threw its weight behind a “yes” vote during an all-white referendum on whether or not the reform process should be continued.

The majority of Jews tended to vote for opposition parties during the 1948–94 period, and in the elections of 1999 and 2004 overwhelmingly supported the Democratic Alliance. Nevertheless the Jewish community collectively – as distinct from individual Jewish citizens – has played no part in politics (except in exceptional situations, such as during the 1930s, where Jews felt that their status as full and equal citizens was being threatened).

Economic Life and Social Structure

That Jews have played a significant role in the economic development of the country is generally acknowledged. They were able to make a distinctive contribution because of the specific economic situation prevailing in the country at various periods, which required and gave scope for their particular talents and enterprise.

In the early part of the 19th century, before the discovery of the diamond fields, the economy was largely pastoral and agricultural. Economic prospects of the Cape were revived, however, by the increased trade and shipping around the southern route between Europe and the East. Furthermore, the aftermath of the English industrial revolution had encouraged some emigration to South Africa; and included the group known as the 1820 Settlers from Britain, which settled along the eastern frontier of the Cape (see *Norden family). During the 1830s, the interior was further opened up by the Boer voortrekkers. The relatively small number of Jewish immigrants from England and Germany brought with them an aptitude for and experience in trade and finance, and filled a special niche in the economically undeveloped society. They were merchants and small traders, with a sprinkling of professional men and craftsmen. Through their knowledge of foreign markets they helped to develop the export of such products as wool, hides, skins, and wine. They also contributed to the improvement of the Cape wool and mohair industries, the foundation of South Africa’s future development as one

of the world’s producers. The Mosenthals from Germany, in particular, left a permanent mark on the economy through their initiative and diversity of interests. From bases in Cape Town and Port Elizabeth they set up a chain of trading stations in the interior of the Cape, usually manned by Jewish immigrants whom they had brought out from Germany. They helped to stabilize the rural economy by providing long-term credits to storekeepers and, through them, to farmers, particularly in bad seasons. Before the advent of commercial banking, the firm’s banknotes were widely accepted in the development of banking, the financing of diamond and gold mining, and the establishment of secondary industries in the Cape and Transvaal. The *De Pass brothers, who came from Britain in the 1840s, developed shipping, fishing, and coastal trading enterprises in the southwestern Cape. They had interests in the newly discovered diamond fields in South-West Africa, then a German possession. Daniel De Pass was one of the pioneers of the sugar industry in Natal. The itinerant Jewish traders and peddlers (locally known as “smouses”) traveled on foot or used animal-drawn transport to penetrate long distances, often amidst great hazards and hardships, to scattered hamlets and the extensive farms. They sold their wares and also provided a channel through which the products of the land could reach the ports and world markets. Many settled in the villages and at wayside stations as shopkeepers, so that eventually there was hardly a small town without one or more Jewish stores. These Jewish middlemen had a recognized place in the economy of the Cape and subsequently in the northerly territories.

Then came the revolution which transformed South Africa’s economic structure: the discovery of diamonds at Kimberley (1870) and the opening of the Transvaal gold mines (1886; see *Johannesburg). The exploitation of mineral wealth called for enterprise, technical and managerial initiative, ability and great capital resources. There was a demand for commercial techniques, and the way was opened for the later development of secondary industries to supply the new communities which sprung up. The majority of Afrikaners, still largely a rural community, were not ready for the challenges of this new economic era, and the lead was taken by the English-speaking elements and foreigners of various nationalities, who flocked to the country. Among them Jews, mainly from Western Europe, became leaders of the mining industry (see B.I. *Barnato, the *Joels, Lionel *Phillips, George *Albu and David *Harris). With Cecil John Rhodes, Barnato founded De Beers Consolidated Mines which controlled the production and marketing of diamonds (see also *Diamond Industry and Trade). On the discovery of gold the same men, using the wealth and skill they had acquired in the diamond fields, took the lead in developing the gold mines. In later years, Ernest *Oppenheimer and his son Harry were at the head of De Beers and established widespread interests in the goldfields of the Transvaal and the newer goldfields of the Orange Free State, in the production of base minerals and uranium, and in the development of manufacturing industries. Many of the early

Jewish magnates had only flimsy associations with the Jewish community, and some actually abandoned Judaism. Later, other Jewish mining magnates, financiers, and executives also became leading figures in the mining industry, though in relatively small numbers.

The next major movement forward – a latecomer in South Africa – was the development of secondary industry, which occurred after World War I and was greatly intensified during and after World War II. Jews, many of them from Eastern Europe, contributed greatly to this development through their pioneering spirit and readiness to take risks. Often starting from humble beginnings as peddlers, storekeepers, and handicraftsmen (tailors, shoemakers, cabinetmakers, bricklayers, and so on), they produced some of the most enterprising industrialists. Among the pioneers were Samuel Marks, who immigrated to South Africa in the 1860s, and his partner Isaac Lewis, who, with the help of state concessions established a number of industries in the Pretoria area, from the production of dynamite for the mines to a distillery and glass works. The steel plant which they established in Vereeniging was the forerunner of the South African state-controlled iron and steel industry. Assisted by protective tariffs and by wartime conditions, industries for manufacturing food, clothing, textiles, furniture, leather articles, and others were established by Jewish enterprise. Clothing and textile factories, in particular, were developed into one of the most important sectors of South African industry, and Jews remained leaders in that field. In the 1930s, the refugees who arrived from Germany also introduced many new industries. The younger generation of South African-born Jews later diversified into other spheres like electronics, engineering, the chemical industries, and large-scale building construction. Jewish town planners, property developers, and builders were largely responsible for the modernization of Johannesburg and other cities to meet the needs of an increasingly urbanized population. Entrepreneurs, notably I.W. Schlesinger, were among the leading figures in the tertiary industries (insurance, mass entertainment, hotel keeping, catering, and advertising). Jews were among the first in South Africa to introduce modern distribution techniques in the retail trade, such as the department store, the supermarket and the discount house. The largest chain stores were founded by Jews, most of whom started from small beginnings. Although few Jews took up agriculture, Jewish farmers, especially in the maize industry, fruit growing, dairy farming and viticulture, set examples of successful scientific farming. Schlesinger's citrus undertaking in the Transvaal became one of the largest of its kind in the world. Ostrich farming and marketing, until the decline of the industry after 1914, was developed by Jews in the Oudtshoorn area of the Cape, notable among them being the Rose brothers, Max and Albert.

The South African-born generation of Jews turned in increasing numbers to the professions, to medicine, law, pharmacy, and later to accountancy, engineering, architecture, and pure and applied science, often achieving positions of eminence. A high proportion of young people regularly study at

the universities. There have been distinguished Jewish lawyers in the past, Simeon Jacobs, Manfred Nathan, Leopold Greenberg, Philip Millin, J. Herbstein, H.M. Bloch, Percy Yutar, Simon Kuper, Cecil Margo, Isie Maisels, Richard Goldstone, Sydney Kentridge, Albie Sachs, and Arthur Chaskalson, many of these going on to serve with distinction on the bench. In 2001, Arthur Chaskalson was appointed chief justice. Many Jews have distinguished themselves in medicine, medical research, and the development of health and hospital services.

Jews in the Armed Forces

Jewish service as volunteers in the armed forces of the nation dates back to the Anglo-Boer War of 1899–1902, when Jews fought on both sides. Jewish participation in army service has been in greater numbers, proportionally, than the rest of the white population. Thus in World War I, there were some 3,000 Jewish volunteers representing about 6% of the entire Jewish population of that time. In World War II over 10,000, above 10% of the Jewish population, were listed in the records kept by the South African Jewish Board of Deputies of Jews serving in the Union Defense Forces and with other Allied forces. Of these 357 were killed, 327 were wounded or injured, 143 were mentioned in dispatches, and 94 received various awards for distinguished service. Compulsory military conscription for white males was introduced in the early 1970s, which began at six months and eventually was extended to two years plus two further years of military camps. Shortly thereafter, in 1976, South Africa became embroiled in a war against South West African liberation fighters and Cuban forces on the Angola-South West Africa border. The war continued until 1989, when South West Africa, now called Namibia, gained its independence from South Africa. A number of Jewish conscripts, perhaps a dozen in all, were amongst those who lost their lives in the conflict.

During the years of compulsory military conscription, chaplaincy services to Jewish men in the armed forces were provided by a Chaplaincy Committee, composed of representatives of the Board of Deputies, the Federation of Synagogues (later the UOs), the Union of Progressive Judaism, the Jewish Ex-Servicemen's organization, the Union of Jewish Women, and the Rabbinical Association. The chaplains were usually ministers or rabbis serving communities in the areas where military camps were located. Most of the administrative work of the Chaplaincy Committee was carried out by the Board of Deputies. There were 30 Jewish chaplains serving in the field in World War II. Chaplaincy services were discontinued in 1994.

Cultural Life

Jews have participated actively in all aspects of the cultural and artistic life of the country. Their work is recognized as part of South African culture. That they are Jews may not be irrelevant to their work, but does not determine the nature of their contributions. In the literary field, they have produced an imposing list of writers and artists, some of the first rank, including South Africa's foremost novelist, Sarah Gertrude Millin. Also

from South Africa are the Jewish novelists Dan Jacobson and Nadine Gordimer. Since for the most part Jews have been living in the cities where English is the dominant language, it is not surprising that they have had a greater share in English culture than in Afrikaans, although several have made worthy contributions to Afrikaans literature and more and more Jews are becoming fluent in both Afrikaans and English (see *South African Literature). One of the founders of the *Rand Daily Mail* and both founders of the *Mail & Guardian* were Jews, and Jews figure prominently in journalism. As patrons of art, music, and literature, they have provided stimulus in many aspects of the cultural life of the country, notably, perhaps, in musical and dramatic enterprise. Jewish painters include Irma Stern and John Henry Amsheiwitz, and among sculptors of notable standing is Moses Kottler. South African playwrights, composers, musicians, producers, and actors have contributed largely to the cultural scene. While Yiddish was still in vogue among substantial numbers of the community, several South African writers made worthy literary contributions in that medium. There has also been literary creativity in Hebrew.

Relations with Israel

South Africa's official relations with Israel were founded, significantly, in a month decisive for the destinies of both people, May 1948. Chaim Weizmann, describing May 15, the day after the establishment of the State of Israel, wrote: "I bethought myself of one surviving author of the Balfour Declaration and addressed a cable to General Smuts. This was closely followed by South African recognition (of Israel)" (*Trial and Error*, p. 585). In the same month, however, Smuts and his United Party were defeated in the South African elections and succeeded by Malan's Nationalist Party. Smuts had had a long-standing familiarity with Zionism, whereas the new government was less involved with the story of Zionism and the cause of Jewish statehood. The Smuts administration had steadfastly supported the Zionist cause in international forums and was among the governments which had voted in the United Nations for the partition of Palestine on Nov. 29, 1947. Under the Nationalists, South Africa continued to support Israel, voted for its admission to the United Nations in 1949, and backed it on a number of subsequent issues in that forum. South Africa's recognition of Israel was followed by the establishment of an Israel consulate-general in Johannesburg and an Israel legation in Pretoria. Out of consideration for its economic interests and ties with the Arab States, however, South Africa was for long reluctant to establish any diplomatic mission in Israel. Nevertheless, Prime Minister Malan made a personal visit to Israel in 1952.

During the 1960s, attitudes to Israel underwent a change, because of the statements and votes by Israel representatives at the United Nations, which were critical of South Africa's racial policies. The reactions at times caused considerable tension between the South African government and the Jewish community. When the Israel-Arab war broke out in 1967, however,

public sympathy was strongly on Israel's side. Following the 1973 Yom Kippur War, ties between Israel and South Africa, particularly in the military sphere, were steadily strengthened, a factor that contributed significantly to anti-Israel sentiment within the majority black population.

The establishment of these links between Israel and South Africa brought increasing and severe international criticism. Chaim Herzog, then Israel ambassador at the UN, revealed the hypocrisy of these allegations by his disclosure of details concerning large-scale secret trade between Arab, Asian and African nations and South Africa. On numerous occasions it was made plain by Israel that it had reservations about South African internal policies, but that it believed that it was essential to continue to foster cooperation between the countries despite differences of opinion on internal policies.

South Africa consolidated warm relations with Israel through the 1980s. However, as Western pressure against South Africa intensified, Israel was forced into reassessing this relationship. The United States threatened to cut military assistance to countries engaged in military trade with South Africa. In 1987 Israel agreed "to refrain from new undertakings between Israel and South Africa in the realm of defense." In line with its general opposition to sanctions as a policy, the South African Jewish leadership urged Israel not to take that step. Notwithstanding Israeli policy, the South African government continued to accept "approved enterprise to certain categories of investment" in Israel, among them residential housing, subject to certain conditions.

During the 1980s, left-wing and Islamist groups, such as the PAC, the Azanian Peoples' Organization (AZAPO), Call of Islam, and Qibla (a Muslim fundamentalist movement) pursued a vigorous anti-Zionist line. Their support was built upon black disappointment at close ties between South Africa and Israel and suspected military cooperation. Anti-Zionist sentiment was already evident at the time of the Lebanon War (1982) and consolidated during the first *intifada*. In particular the Muslim population of over 500,000 pursued a vigorous stance against Israel. This was very evident during the First Gulf War, intensifying during the years of the Oslo peace process and reaching unprecedented heights following the outbreak of the second *intifada* in September 2000. Notwithstanding sympathy for the Palestinian people, black leaders made a clear distinction between anti-Zionism and antisemitism. Nonetheless, there were indications of substantial "social distance" between blacks and Jews, including anti-Jewish attitudes among blacks.

The advent of black majority rule in 1994, which resulted in an overwhelming victory for the strongly pro-Palestinian African National Congress (ANC), saw a radical change in the government's attitude towards Israel. The relationship remained reasonably cordial during the years of the Oslo peace process but deteriorated sharply with the outbreak of the second *intifada*. While often critical of Israeli policy, however, the ANC (which was returned to office with increased majorities in the elections of 1999 and 2004) remains committed to di-

alogue and strengthening already strong trade ties between the two countries.

SOUTH AFRICAN LITERATURE.

Biblical Influences

The Afrikaans-speaking people of South Africa are mainly descended from Dutch Calvinist and French Huguenot immigrants of the 17th century. The Bible has been an important factor in their life and thinking. The Afrikaans language (a variant of Dutch) took shape in the late 19th century, and biblical influences were reflected in it and in the early literature. Scriptural themes were common in the Afrikaans novel, and some Afrikaans verse was influenced in its subject matter and style, notably by Psalms and Ecclesiastes.

In South African English literature, with its natural affinities to the literature of England, biblical influences were less pronounced. They were to be seen chiefly in style and language in the works of the non-Jewish Olive Schreiner (1855–1920), Pauline Smith (1884–1959), and Alan Paton (1903–1988), and the Jewish writer Sarah Gertrude *Millin (1889–1968). Dan *Jacobson (b. 1929) wrote *The Rape of Tamar* (1970), which is an imaginative reworking of a biblical subject.

The Figure of the Jew

While the Hebrews of the Bible were esteemed by the Afrikaners, the Jews of modern times were generally less favorably dealt with by Afrikaans writers, who tended to portray a traditional stereotype of the “bad Jew,” shrewd, grasping, and ruthless in his dealings with the simple Afrikaner. However, there were some instances of the “good Jew” as well. Jewish characters were frequently represented as speaking a heavily accented Afrikaans. D.F. Malherbe, Jochem van Bruggen, C.M. Van den Heever, and Abraham Jonker, who focus on the changeover that took place in the 1920s and 1930s from an agricultural to a capitalist mode of production, create Jewish characters with a mixture of grudging admiration and condemnation. J. van Melle and C.J. Langenhoven’s characterizations are more sympathetic. Abraham Jonker’s non-fic-

tional *Israel die Sondebok* (1940) (translated as *The Scapegoat of History*, 1941), vigorously condemned antisemitism. Etienne Leroux (1922–1989) wrote several novels. In *Sewe Dae by die Silbersteins* (*Seven Days at the Silbersteins*, 1962) Jewish characters are more fully developed. *Een vir Azazel* (1964) contains biblical motifs. *Onse Hymie* (1982) deals sympathetically with a *smous* (itinerant peddler). Generally, in later Afrikaans literature, Jews seldom appear.

After the advent of the State of Israel, a number of descriptive and historical accounts of the Holy Land by Afrikaans writers usually exhibited a sympathetic approach. B. Gemser, who in 1937 had published a collection of Afrikaans translations of Hebrew short stories, issued a Hebrew-Afrikaans grammar in 1953.

In South Africa’s English-language literature, in the work of non-Jewish writers, both white and black, Jewish characters invariably appear in three distinct stereotypes, of which the unscrupulous Jewish shopkeeper or businessman is the most common. The wandering Jew appears as the itinerant peddler, a typical occupation for newly arrived Jews from the end of the 19th century. A philo-semitic approach is rarer. Alan Paton’s *Too Late the Phalarope* (1953) and the work of the colored (mixed-race) Peter Abrahams, are examples of portrayals of sympathetic Jews. Some writers were viciously antisemitic. A.A. Murray’s *Anybody’s Spring*, (1959) is a striking example. In later English fiction Jews often appear as leftists, involved in the struggle of the black people for freedom, a perception which reflects the prominent presence of Jews in the struggle for a democracy.

The Jewish Contribution

Jews did not reach South Africa in significant numbers until the second half of the 19th century. Most settled in towns, and Jewish writers mainly used Yiddish and, increasingly, English. The Jewish contribution to the emergent Afrikaans literature came later and was smaller, though not negligible.

Writers in English

FICTION. Among the major figures in South African English fiction a number are Jewish. However, not all identify as being Jewish, nor does their writing always reflect Jewish themes. Except for some specifically Jewish social, political, and communal concerns, Jewish writers, following the general trend, concern themselves with general South African topics, not least with the issue of race and color, understandably so for a people with a history of persecution. The family saga, particularly immigration from eastern Europe and, more latterly, emigration from South Africa, is another recurrent theme. However, there is no “Jewish” school, and it is noteworthy that some Jewish writers display evidence of Jewish self-rejection. Overall, the Jewish contribution to South African literature has been contemporary in setting, realistic in mode, and liberal in political outlook. Jewish characters occur more frequently in the fiction of Jewish writers than in that of gentiles, where the Jew more often than not appears in a minor, and stereotyped, role. Perhaps because of concern with the

overshadowing white-black racism, antisemitism is a theme that seldom becomes a central issue.

Louis Cohen, a half-Jewish immigrant from England, was a journalist in Kimberley during the 1870s and wrote scurrilous sketches concerning Jews. Sarah Gertrude Millin, one of the most prolific of South African writers, published 18 novels. For many years she was the outstanding personality in South African creative writing and her works were translated into many languages. Her novel *God's Stepchildren* (1924) was the first major South African work of fiction to deal with miscegenation and the plight of the colored people. *The Coming of the Lord* (1928) deals with the problems of minority groups, including the Jews. In later years her writings tended to reflect more conventional South African views on color.

Nadine Gordimer's work and Dan Jacobson's early writing revealed an intense awareness of the currents of social and race conflict in South Africa. Gordimer's international standing culminated in the award of the Nobel Prize for literature in 1991. Her 13 novels and many books of short stories are among the finest of South African writing. Apart from in her early work, references to Jews are few, and some, such as in *A Sport of Nature* (1987), are depicted in stereotypical fashion. Dan Jacobson, who immigrated to London, wrote an important novel, *The Beginners* (1966), portraying on a broad canvas the fortunes of a Jewish immigrant family, their adjustment to South African conditions, and emigration. *The Price of Diamonds* (1957) and several masterly short stories, including "The Zulu and the Zeide" (1958), satirize Jewish assumptions about race and morality and interrogate the Jewish stereotypes. His non-fictional writing includes *Heshel's Kingdom* (1999), which deals with a retrieval of Lithuanian roots.

The works of Arthur Markowitz (*Facing North*, 1949; *Market Street*, 1959) and Arthur Segal (*Johannesburg Friday*, 1954) also treat Jewish South African life, as do the sketches in *Millionaires and Tatterdemalions* (1952) by Victor Barwin.

Lewis Sowden in *The Crooked Bluegum* (1955) and Gerald Gordon (1909–1998) in *Let the Day Perish* (1952) deal with social and racial themes. Harry Bloom's *Episode* (1956) is considered a classic on the subject. A pioneer in a related field was Herzl J. Schlosberg who, under the pen name Henry John May, was co-author with J. Grenfell Williams of *I Am Black* (1936), the first South African novel to view life from the black African's standpoint. Wolfe Miller published *Man in the Background* (1958).

Lionel Abrahams (1928–2004), who wrote *The Celibacy of Felix Greenspan* (1977) and *The White Life of Felix Greenspan* (2002), was one of South Africa's most eminent writers, editors, teachers, and critics, having worked with distinction in almost all genres. His great contribution to South African letters was recognized by the award of two honorary doctorates. Among lesser-known figures the following authors are those who have published at least one novel or novella. Only one reference is given in each case. Ronald Segal (*The Tokolosh*), Rhona Stern (*Cactus Land*), Phyllis Altman (*The Law of the Vultures*), Bertha Goudvis (*Little Eden*), Maurice Florin

(*Heralds of the East Wind*), Myrna Blumberg (*White Madam*), Sylvester Stein (*Second Class Taxi*), Olga Levinson (*Call Me Master*), Rose Moss (*The Family Reunion*), Rose Zwi (*Another Year in Africa*), Shirley Eskapa (*The Secret Keeper*), Dennis Hirson (*The House Next Door to Africa*), Lynne Freed (*Home Ground*), Eddie Lurie (*The Beginning Is Endless*), Gillian Slovo (*Ties of Blood*), Maja Kriel (*Rings in a Tree*), David Cohen (*People Who Have Stolen from Me*), Tony Eprile (*The Persistence of Memory*), Patricia Schonstein (*The Alchemist*), Mona Berman (*Email from a Jewish Mother*), Johnny Steinberg (*Midlands*), Diane Awerbuck (*Gardening at Night*), and Ken Barris (*Summer Grammar*). The renowned actor Antony Sher, who moved to England, imaginatively and even grotesquely dealt with the subject of immigration in *Middlepost* (1988).

Collections of short stories have come from Bertha Goudvis, Barney Simon (*Jo'burg Sis!*), David Medalie (*The Killing of the Christmas Cows*), Maureen Isaacson, Shirley Eskapa, Maja Kriel, Sandra Braude, Marc Glaser, and Ken Barris. Lilian Simon, Pnina Fenster, and Marcia Leveson are among the numerous others whose stories have appeared in South African literary journals. Humorous fiction was written by, among others, D. Dainow, M. Davidson, S. Levin, and Barbara Ludman.

POETRY. Jews have made substantial contributions to South African poetry. Phillip Stein published *Awakening* (1946) and Victor Barwin's *Europa and Other Poems* appeared in 1947. Lewis Sowden published three volumes of verse, notably *Poems from the Bible* (1960), and Florence Louie Friedman produced original verse and translations from the French and Zulu.

Among the most important voices in South African English poetry were those of Sydney Clouts (1926–1982) (*One Life*) and Ruth Miller (1919–1969) (*The Floating Island*). Jewish aspects were not reflected in their poetry. These do appear, however, in the work of many of South Africa's other Jewish poets. Jacob Stern's *Proverbs* is one such volume. Lionel Abrahams published several volumes of poetry on philosophical and political issues, love, and his home city, Johannesburg. Helen Segal (*Footprint of a Fish*) wrestles with moral, aesthetic, and religious issues. Bernard Levinson in *From Breakfast to Madness* and elsewhere draws on his experience as a psychiatrist. Sinclair Beiles (*Ashes of Experience*) and Roy Joseph Cotton (*Ag Man*) employ surrealism. Riva Rubin (*The Poet-Killers*) writes among other things on biblical themes, and her experiences of Israel where she settled in 1963. Chaim Lewis, an Anglo-Jewish author, wrote poetry on South African and Jewish themes during his long stay in the country. Experience of Israel is also apparent in the work of Jeremy Gordin (*With My Tongue in My Hand*). Among the many others whose work has appeared in their own anthologies or in journals are Robert Berold (*The Door to the River*), David Friedland (*After Image*), Lola Watter (*Images from Africa*), Edgar Bernstein, Elias Pater (Jacob Friedman), Jean Lipkin, Elaine Unterhalter, Mannie Hirsch, Dennis Diamond, Dennis Hirson, Allan Kolski

Horwitz, Rose Friedman, Sheila Basden, Sandra Braude, Roy Blumenthal, Debra Aarons, Marc Glaser, Peter and Mike Kantey, Karen Press, Keith Gottshalk, Steve Shapiro, Terry Sussman, Adam Schwartzman, Barry Feinberg, Ken Barris, Gail Dendy, Cyril Edelstein, Jessie Prisman, and Freda Freeman. Gloria Sandak-Lewin's poetry contains many Jewish themes. Israel Ben Yosef, in collaboration with Douglas Reid Skinner, published *Approximations* (1989), translations into English of contemporary Hebrew poetry.

DRAMA. The Jewish contribution to the performing arts has been highly significant in South Africa. *The Verdict* (1911), written by T.J. Holzberg in collaboration with I.K. Sampson (a non-Jew), was probably the first South African play by a Jew. One of Lewis Sowden's plays, *The Kimberley Train* (1958), brought the color question onto the South African stage, and ran for more than 100 performances. Bertha Goudvis wrote several plays on Jewish themes, *A Husband for Rachel* (1926) being the best known. Sarah Gertrude Millin's novel *Mary Glenn* (1925) was dramatized and staged abroad, as were two adaptations of works by Dan Jacobson, notably his short story "The Zulu and the Zeide," which was staged as a musical on Broadway. The first internationally successful South African musical, *King Kong*, which premiered in Johannesburg in 1959, was, except for the music, a largely Jewish production with African actors, with the book by Harry Bloom, orchestration by Stanley Glasser, set design by Arthur Goldreich, and direction by Leon Gluckman (all of whom subsequently emigrated).

Internationally acclaimed Leonard *Schach was involved in every stage of the development of theater in South Africa between 1925 and 1994. He was the inspiration behind Cape Town's Cockpit Theater, and until his death, divided his time as a director between South Africa and Israel. He published his memoirs in 1996. Other influential directors in the post-war years were Celia Sonnenberg and Rene Ahrenson, who founded "Shakespeare in the Park" at Maynardville in Cape Town and, later, the "Company of Four." Leon Gluckman, one of the country's most creative directors, was particularly interested in fostering black theater. Moira Fine, a major supporter of the Space Theater in Cape Town, also ran Volute Productions. For a lengthy period the doyenne of South African theater actor-directors and managers was Taubie Kushlick. The Johannesburg Children's Theater was the work of Joyce Levinsohn. A co-founder and artistic director of the famous Market Theater, the home of political protest theater in South Africa, was Barney Simon, who was a leading director and facilitator-playwright, stimulating his actors into creative improvisations. One of the most successful of these was the internationally acclaimed *Woza, Albert!* A significant book, tracing the first decade of the existence of this theater, was written by the Johannesburg journalist Pat Schwartz in 1988. The Junction Avenue Theater Company, under the leadership of Malcolm Purkey, applied workshop methods to create *The Fantastical History of a Useless Man* and other important plays, including *Sophiatown*, a recreation of a black

township destroyed by government edict. Purkey became artistic director of the Market Theater. Among other Jewish playwrights whose work has been staged in South Africa are Bernard Sachs, Geraldine Aron, Sinclair Beiles, Michael Picardie, David Peemer, Gary Friedman, and Henry Rootenberg. Shawn Slovo produced a film, *A World Apart*, based on the experiences in political detention of her mother, Ruth First. William Kentridge, renowned artist, collaborated with the Handspring Theater Company to produce such innovative works as *Faustus in Africa!* which had worldwide success. In the field of satire and social commentary, Adam Leslie was for many years a household name, as are the half-Jewish and half-Afrikaans Pieter-Dirk Uys and David Kramer.

For over 50 years, one of South Africa's most influential theater and film critics was Percy Baneshik. Percy Tucker wrote his memoirs as the creator of a theater-booking agency. Among promoters of the arts in general in South Africa is Phillip Stein, who was director of the Vita Awards made annually for distinguished work in the performing, literary and visual arts.

AUTOBIOGRAPHY, BIOGRAPHY AND MEMOIRS. Jewish writers have been greatly concerned with the recreation of the past – the general South African past, their own life-stories, and the history of immigrant families. In this field Sarah Gertrude Millin was prominent. She wrote the lives of *Rhodes* (1933), *General Smuts* (1936), and two autobiographical volumes, *The Night is Long* (1941) and *The Measure of My Days* (1955). Nathan Levi, a Dutch-Jewish journalist in Pretoria, produced the first biography of General Smuts in English (1917). The memoirs of Lionel Phillips, *Randlord*, first appeared in 1924. Henry Raymond, Richard Lewinsohn and S. Joel each chose Barney *Barnato as a subject (1897, 1937 and 1958), and Felix Gross wrote *Rhodes of Africa* (1956). Manfred *Nathan wrote a standard biography of the Boer leader, Paul Kruger (1941). The memoirs of Sir David *Harris, South African pioneer, soldier, and politician, appeared in 1930. The explorer Nathaniel *Isaacs was also a literary pioneer with his *Travels and Adventures in Eastern Africa...* with a Sketch of Natal (1836; reissued 1935–36). Sir Harry Graumann published a review of the gold industry in 1936. Enid Alexander wrote the life of her husband, Morris *Alexander (1953), and Morris Kentridge's published reminiscences of his public career. The historian, Phyllis Lewsen, produced an authoritative edition of the letters of the South African statesman John Xavier Merriman (4 vols. 1960–69). Her own memoir is titled *Reverberations* (1996). Bernard Friedman wrote a biography of J.C. Smuts. Bertha *Solomon's memoirs, *Time Remembered*, appeared in 1968. Martin Rubin wrote on Sarah Gertrude Millin. The mercantile Mosenthal family was researched by D. Fleischer and A. Caccia. Isie Maisels, a leading advocate in human rights cases, wrote his memoirs. Eric Rosenthal recaptures the spirit of South Africa in the 20th century. Lola Water evokes the literary and artistic life, particularly of Johannesburg. In *Strange Odyssey* (1952) Betty Misheiker wrote of

an immigrant group, and Geoff Sifrin's *To Gershn* (1995) is a recreation of his widely spread family from their days in eastern Europe. Richard Mendelsohn wrote on *Sammy Marks: The Uncrowned King of the Transvaal* (1991). Phyllis Jowell documented the life of her father-in-law, a key figure in Namaqualand, in *Joe Jowell of Namaqualand* (1994) and, with Adrienne Folb a pictorial history of the Jews of Namaqualand. In 2000 Chief Rabbi Cyril Harris recorded highlights of his ministry. Others in the autobiographical field include Lyndall Gordon, eminent scholar and biographer who immigrated to England and wrote a memoir of life in Cape Town during the 1950s titled *Shared Lives* (1992). Helen *Suzman, long-time sole representative in parliament of the Progressive Party under the Apartheid government, wrote memoirs, as did Jack Penn, Ali Bacher, David Susman, Pauline Podbrey, Hilda Bernstein, Harold and AnnMarie Wolpe, Ben Turok, Benjamin Pogrund, Norma Kitson, Ronald Segal, Lionel (Rusty) Bernstein, Baruch Hirson, Joel Joffe, Rudy Frankel, Ronnie Kasrils, and Alfred Honikman, former mayor of Cape Town. Benjamin Pogrund also wrote on activist Robert Sobukwe and Paul Clingman on the Hon. A.E. Abrahamson. Ruth First and Albie Sachs wrote of their experiences in an apartheid prison. Joe *Slovo, the renowned South African communist, recorded his life; and Mendel Kaplan, industrialist, former chairperson of the Board of Governors of the Jewish Agency, and later chairman of the World Jewish Congress produced several books chronicling Jewish immigration and the Jewish contribution to the economic development of the country. Julian Roup, in *Boerejood* (2004), contributed a different slant with the point of view of the sometimes intermarried community of Afrikaner-Jews.

Included in the memoirs of survivors of the Holocaust are those of Levi Shalit, *Beyond Dachau* (1980), Henia Brazg, *Passport to Life* (1981), Maja Abramowitch's *To Forgive... But Not Forget* (2002), and Madeleine Heitner's *Breaking through Buttonholes* (2004). Gwynne Schrire edited a selection of the memories of Cape Town Holocaust survivors, *In Sacred Memory* (1995).

OTHER FIELDS. In belles lettres, Jewish writers included Joseph Sachs (*Beauty and the Jews*, 1937; *The Jewish Genius*, 1939); Wulf Sachs (*Black Hamlet*, 1937; later published as *Black Anger*); George Sacks (*The Intelligent Man's Guide to Jew-baiting*, 1935); and Adèle Lezard (*Gold Blast*, 1936). Bernard Sachs wrote a miscellaneous collection of essays on *Personalities and Places* (2 vols., 1959–65). Contributions to literary criticism were also made by Edward Davis, Phillip Segal, and many others not collected in volume form.

NON-FICTION. Non-fictional literary prose of a very high order, in the form of scholarly, journalistic, historiographical, biographical, and polemical works, has been produced by many distinguished Jewish South Africans. Not only have books and studies appeared, but there have been innumerable contributions to newspapers and journals and important editorships, not only in the Jewish field but also in the general world of scholarship and letters. For Jewish scholarship and historiog-

raphy, the influential *Jewish Affairs* (started in 1941 under the editorship of Edgar Bernstein, and for 16 years under the editorship of Amelia Levy, once secretary of the Society of Jews and Christians) is crucial. The Isaac and Jessie Kaplan Center for Jewish Studies and Research at the University of Cape Town currently produces outstanding work in this field.

Sidney Mendelssohn compiled a monumental *South African Bibliography* (1910) and wrote *Jewish Pioneers of South Africa* (1912). Bernard Sachs published several volumes of autobiographical, political, and other essays, as well as a study of H.C. Bosman, writer of Afrikaans extraction connected with the South African Jewish community in the 1930s and 1940s. He has been the subject of a biography by Valerie Rosenberg, *Sunflower to the Sun*. Rosenberg and Lionel Abrahams edited several volumes of his writing, which, until recent scholarly updating, have been authoritative. Edgar Bernstein published a collection of essays titled *My Judaism, My Jews*, while Neil Hirschson has published some polemical work on Jew-hatred and Shakespeare. Michael Wade and Steven Clingman published major studies of the novels of Nadine Gordimer. *The Cape Town Intellectuals – Ruth Schechter and her Circle, 1907–1934* (2001) was written by Baruch Hirson, a political activist who immigrated to England. Reuben Musiker has published six books and 150 articles in the field of South African bibliography. Among the many Jewish scholars directly engaged in academic work on South African Jewish historiography and writing are Louis Herrman, who wrote *A History of the Jews in South Africa from the Earliest Times to 1895* (1935), and Gustav Saron and Louis Hotz, who were the editors of the influential *The Jews in South Africa: A History* (1955). Marcus Arkin edited *South African Jewry: A Contemporary Survey* in 1984. Among several other surveys of the South African Jewish community are those of L. Feldberg, N. Berger, N.D. Hoffman, D.L. Sowden, M. Konvisser, T. Hoffman, and A. Fischer. Marcia Gitlin's *The Vision Amazing* (1950) and the work of the prominent scholar now living in Israel, Gideon Shimoni (*Jews and Zionism*, 1980), analyze the strong bonds between the South African community and Israel. R. Musiker and J. Sherman edited *Waters out of the Well*, a collection of articles and essays on Jewish themes. *Memories, Realities and Dreams*, with international as well as local contributions, edited by Milton Shain and Richard Mendelsohn, is an important documentation of more recent thinking responses to and construction of a new identity in the light of political change in South Africa. In recent years a team of volunteers working for the South African Friends of Beth Hatefutsoth has been producing handsome illustrated books as part of its ongoing record of the dwindling Jewish country communities. Joseph Sherman made available in translation much of the neglected Yiddish writing from South African authors in *From a Land Far Off* (1987). Milton Shain produced a great deal of ongoing research on the South African Jewish community and a seminal work, *The Roots of Anti-semitism in South Africa* (1994). Jocelyn Hellig, who wrote *The Holocaust and Anti-Semitism* (2003), lectured and published on issues such as antisemitism

and comparative religion. Marcia Leveson published on the image of the Jew, including *People of the Book: The Image of the Jew in South African Fiction 1880–1992* (1996). Immanuel Suttner's collection of interviews with South African Jewish activists, *Cutting through the Mountain* (1997), is an important repository of research material. A.A. Dubb, Shirley Kossick, John Simon, Gwynne Schrire, David Saks, Franz Auerbach, Rose Norwich, and a host of other scholars published original research into the many facets of the wide Jewish contribution to the development of South Africa. Claudia Braude published a collection of contemporary Jewish writing in 2001. Veronica Belling compiled a *Bibliography of South African Jewry* (1997).

In other fields, Martin Orkin published *Shakespeare against Apartheid* (1987) and Clive Chipkin *Johannesburg Style* (1993). Esme Berman, Steven Sack, Neville Dubow, and Mona Berman made significant contributions in the field of art and art history. Mona de Beer wrote on an aspect of Cape urban history, Joel Mervis on South African newspapers, Ellison Kahn on law, Rod Suskin and Alexandra Levin on esoteric matters, and Raymond Ackerman on his life and business. Arnold Benjamin was a long-serving journalist on *The Star* and produced a book on graffiti. Elaine Katz wrote on trade unions and disease in the South African gold mines. Adam Levin wrote on travel in Africa, and Matthew Krouse, assisted by Kim Berman, co-edited a book on gay and lesbian writing. Shirli Gilbert wrote on South African music and music in the Holocaust. Numerous handsome cookbooks have been published by Jewish writers, and Geraldine Mitton and Linda Friedland publish on health issues. *The Jewish Report* has since 1998 been a popular national Jewish weekly newspaper, and several well-known Jewish journalists are active in the media world.

Writers in Afrikaans

A significant contribution to Afrikaans literature was made in the early 19th century by a Dutch Jewish convert to Christianity, Joseph Suasso de Lima (1791–1858). In 1844 he wrote the first booklet of its kind on the subject, in which he championed the developing Afrikaans language. He also wrote (in Dutch) the first history of the Cape of Good Hope (1823) and a number of other works. Another convert to Christianity, Jan Lion Cachet (d. 1912), who came from Holland in 1861, published *Sewe Duiwels en wat hulle gedoen het* ("Seven Devils and What They Did"). Written in serial form, it appeared in one volume in 1907. There are several Jewish characters, chiefly unsympathetically drawn. Cachet ranks as one of the founders of literary Afrikaans. Sarah Goldblatt (d. 1975), a writer of Afrikaans children's books and short stories, was the literary executrix of C.J. Langenhoven (1873–1932), a foremost Afrikaans writer. Another Jewish pioneer of Afrikaans literature, best known for his stories and sketches of animal life, was J.M. Friedenthal (1886–1959).

In later years, South African-born Olga Kirsch, who settled in Israel in 1948, published highly acclaimed collections

of Afrikaans verse, including *Die Soeklig* ("The Searchlight," 1944), dealing with racial issues, *Geil Gebied* (Fertile Territory 1976) and four other collections which dealt with general Jewish and Israeli themes. Peter Blum, an immigrant, won an Afrikaans literary prize for his first collection of poems (1955).

In Judaic studies, links between Hebrew and Afrikaans were established by Rabbi Moses Romm, in his translations of the Jewish prayer book and the *Ethics of the Fathers*; and by Roman B. Egert, who published an Afrikaans version of the *Haggadah* (1943). Israel ben Yosef wrote *Nofim Rehokim*. ("Verre Landskappe"), translations of Afrikaans poems into Hebrew, in collaboration with S.J. Pretorius (1985), and *Olyfwoestyn. Poësie uit Verre Lande*. ("Poems from Far-off Lands," 1987), Hebrew poems translated into Afrikaans in collaboration with Johan Steyn. The Yiddish writer Jacob Mordecai Sherman was extremely interested in Afrikaans, publishing several essays on its literature.

Writers in Yiddish

From 1881 onward, the influx of Yiddish-speaking Jewish immigrants enormously increased the size of the existing South African Jewish population. And of these many laid the foundations for the development of an indigenous South African Yiddish literature.

YIDDISH NEWSPAPERS AND JOURNALS. The pioneer of Yiddish journalism in South Africa was the professional belletrist, Nehemiah Dov Ber Hoffmann (1860–1928), who in 1889 brought the first Hebrew-Yiddish typeface to the land. Moving from the Cape to the Transvaal in 1890, he founded South Africa's first Yiddish weekly, *Der Afrikaner Israelit*, which lasted six months. Returning to the Cape, Hoffmann started a second weekly – Cape Town's first – titled *Ha-Or*, which lasted from April 1895 to July 1897. David Goldblatt's weekly, *Der Yiddisher Advokat*, which appeared regularly from 1904 until 1924, was recognized by the government as an official newspaper. Hoffmann's volume of memoirs, *Sefer Ha-zikhroynes* (1916) was the first full-length Yiddish book to be printed in South Africa. It describes the author's experiences in Europe, America (in Hebrew), and Africa. He was the first writer to record the eastern European immigrant response to life in South Africa. His account of the hardships experienced by the traveling Jewish *smous* was the first appearance in South African Yiddish literature of what was to become one of its major themes. His *Yearbook* of 1920 contains important information about country communities.

Yiddish weekly newspapers before World War II were short-lived. In Johannesburg between 1920 and 1948, six books of short stories and essays and four volumes of poetry were published. Solomon Fogelson founded a Yiddish weekly, *Der Afrikaner*, in Johannesburg in 1911, and at least three Yiddish periodicals were being published at the same time. Fogelson's newspaper survived for over 20 years until it was amalgamated with the *Afrikaner Idische Tsaytung* in 1933, directed by Boris Gershman. After his death in 1953, the newspaper was bought by Levi Shalit in partnership with Shmarya Levin; it

closed in 1983. At its peak, it had a weekly readership of 3,000 and carried regular contributions from distinguished overseas writers. Shalit exerted a powerful influence on local Yiddish writing through his finely wrought prose.

There were many short-lived journals, the most robust of which came from socialist groups. Between 1912 and 1939 organizations such as the *Gezerd* [*Gezelschaft far Erdarbet*], *Poalei Zion*, and the *Yiddisher Arbeter Klub* produced several periodicals. The literary journal that did most to stimulate local creative writing at this time was *Dorem Afrike*, the organ of the *Yiddisher Literarisher Farayn*, which appeared first in nine issues between 1922 and 1923 and reappeared as a monthly from July 1928 to January 1931.

At a national conference called in Johannesburg in May 1947, Di Dorem Afrikaner Yiddishe Kultur Federatzie was established, and its monthly organ, a new *Dorem Afrike*, the first issue of which appeared in September 1948, was edited by Melekh Bakalczuk-Felin. In 1954 the editorship passed to David Wolpe, who ran the journal until 1970 and was succeeded by a committee chaired by Zalman Levy. It closed in 1991.

In 1949, Pacific Press and its ancillary, Kayor Publishers, were founded by Nathan Berger and Joseph Borwein. Between them, Kayor and the *Kultur Federatzie* inaugurated the most productive era in local Yiddish publishing. South Africa became an important center of Yiddish creativity. From 1949 to 1962, Kayor, in association with the *Kultur Federatzie*, published six collections of essays and short stories, six volumes of poetry and one novel, together with all the journalism and most of the Yiddish and Hebrew occasional publications in South Africa.

The horrors of the Holocaust were movingly chronicled by two survivors, Levi Shalit (b. 1916) and A. Peretz, who lived in South Africa before they emigrated to Israel.

THEMES AND AUTHORS IN SOUTH AFRICAN YIDDISH PROSE. A normative figure in early South African Jewish life was the old bachelor, who stayed single because he could not afford to bring over a bride from the Old Home. For some, brides were sent out from Lithuania. Married men often could not afford to bring their families to join them. There was also considerable intermarriage with Afrikaans, black, and colored women in country districts. Sensitively treated, all these matrimonial complexities, common in the immigrant experience, became recurring subject matter. Many immigrant Jews went to work in the exploitative stores-cum-eating-houses which the mining companies granted by concession to entrepreneurs, mostly Jewish themselves. There they lived solitary lives, working long hours in unhygienic conditions. To describe these places and those who worked in them, Yiddish speakers created two neologisms which entered the language as unique South Africanisms: *kaffireater*, the place, from the pejorative English title “kaffir eating-house”; and *kaffireatnik*, which became one of the stock figures of South African Yiddish literature. The problem of adaptation and the ensuing

conflict between traditional ways of Jewish life and the demands of accommodation are understandably another chief focus of the writing. The love-hate relationship between Afrikaners and Jews recurs in different forms, but the alienating and bitter gulf between black and white most profoundly touches sensitive observers.

The earliest, most important figures in South African Yiddish literature were Hyman Polsky (1871–1944), Morris Hoffman (1885–1940), and Jacob Mordecai Sherman (1885–1958). Polsky, a journalist on Fogelson’s Yiddish weekly, assumed its editorship in 1933 and remained its chief contributor. A selection of his best stories was published in Warsaw under the title *In Afrike* in 1939, republished in 1952. Morris Hoffman spent most of his life as a shopkeeper in the Little Karoo and published a major anthology of poetry, *Woglungsklangen* (“Songs of a Wanderer”), in Warsaw in 1935. After his death, his widow published a selection of his stories titled *Unter Afrikaner Zun* (“Under the African Sun”) in 1951. Apart from contributing extensively to all the country’s Yiddish publications and editing several periodicals himself, Sherman worked in almost all literary genres and produced South Africa’s first Yiddish novel, *Land fun Gold un Zunshayn* (“Land of Gold and Sunshine”). His fiction, which was often autobiographical, depicted the relationships in farming communities between Afrikaner and Jew and between black and white. He also concentrated on the problem of marriages outside the faith.

Black-white relations, and the hardships of black people, were powerfully drawn by Richard Feldman (1917–1968), prominent in Transvaal labor movements. His volume of short stories, *Shvarts un Vays*, was published in South Africa in 1934, and republished in America 20 years later.

Der Regn hot Farshpetigt (“The Rains Came Late”), short stories by Nehemiah Levinsky (1901–1957), showed insight and compassion concerning the interrelationships between Jews, blacks and coloreds, and a deep understanding of African tribal customs. The most prolific Yiddish humorist was Hersh Shisler (1903–1978). Hyman Ehrlich published a book of satirical sketches in 1950, titled *Ot Azoy* (“That’s the Way”), and a book of childhood reminiscences, *Dankere*, in 1956. A gifted short-story writer was Samuel Leibowitz (1912–1976), a regular contributor to all the local Yiddish periodicals. Other talented writers were Leibl Yudaken (1904–1989); Wolf Rybko (1896–1955), who wrote in Hebrew and Yiddish; and Chaim Sacks, who published in 1969 a series of vignettes of life in his father’s rabbinical household in Poland titled *S’Iz Geven a Mol* (“Once Upon a Time”).

Mendel Tabatznik (1894–1976) produced South Africa’s second Yiddish novel, *Kalman Bulan*, a family saga which shows a realistic appreciation of the inexorable processes of assimilation. His stories, one-act plays, two volumes of memoirs and two volumes of poems sensitively examine all aspects of Jewish life in South Africa. Memoirs have always been a chief feature of all Yiddish literature, and 15 volumes have appeared in South Africa. Some writers never really adjusted to life in the African environment and looked back with sadness

to the world left behind in eastern Europe, forever obliterated by the Holocaust.

Foremost among the writers of non-fiction was the polemicist and researcher, Leibl Feldman (1896–1975), a passionately committed Yiddishist with strong historicist leanings, who became the earliest chronicler of South African Jewish life. He published five books of history, providing indispensable documentation of early Jewish settlement in South Africa, particularly in Oudtshoorn and Johannesburg. He was also interested in the history of the Indians in South Africa and wrote a controversial essay of impressions after visits to Israel. David Wolpe (b. 1908) produced two volumes of literary criticism and a substantial book of short stories, and in 1997 and 2002 two volumes of his autobiography. Published in Argentina under the series title *Musterwerk fun der Yidisher Literatur* (“An Outline of Yiddish Literature”), volume 50 was dedicated to South African Yiddish Literature: *Dorem-afrikanish – fragmentn fun forsharbrtn tzu der kharakteristik un zikhrones* (“South African – Fragments of Research Works, Literature and Memoirs,” 1971).

SOUTH AFRICAN YIDDISH POETRY. Yiddish in South Africa found its most profound expression in poetry. Here women made an impressive contribution. Anthologies came from Chaya Fedler (d. 1953), Rachiel Levin-Brainin (d. 1980), and Leah Benson-Rink. Sarah Eisen (d. 1981) wrote poetry in both Yiddish and Hebrew. Her subjects ranged from memories of eastern Europe to impressions of Israel and pictures of African life. Hyman Ehrlich (1908–1981) wrote children’s verses before moving to more somber lyrics of two later volumes.

Outstanding among the introspective lyricists were Michael Ben Moshe (1911–1983) and David Fram (1903–1988). While Ben Moshe explored the anguish of personal pain in anthologies like *Opris*, Fram changed his style from the lyrics that had established his reputation in Lithuania to incorporate some of the vibrancy of tribal Africa. Fram’s epics, published in 1947–1948, were *Efsher* (“Perhaps”) and *Dos Letste Kapittel* (“The Last Chapter”). His last anthology, *A Shwalb Oifn Dakh* (“A Swallow on the Roof”), appeared in 1983. South African Yiddish verse continued to achieve international distinction in the work of David Wolpe, whose substantial modernist anthology, *A Wolkn un a Weg* (“A Cloud and a Way,” 1978), was awarded the Itzik Manger Prize for Yiddish Literature in Jerusalem in 1983. Among other volumes *Krikveg, lider – poemes* (“The Way Back – Poems”) appeared in 1991 and *Iber meine vegn, lider, poemes, dertzaylungen* (“Above My Ways, Poems and Stories”) in 2002.

YIDDISH DRAMA IN SOUTH AFRICA. Yiddish plays, mainly written by overseas playwrights, were staged in South Africa from 1895. Most of the local work produced between 1916 and 1954 was light entertainment, performed from typescript, sometimes appearing in ephemeral local journals. Only Hirsch Brill (1891–1925) attempted to deal with serious dramatic themes and published two collections. Steadily declining com-

munal interest and commercial competition slowly forced all Yiddish theater from South Africa’s boards.

There is growing interest in Yiddish literature and in keeping Yiddish alive as a spoken language in South Africa. In 1983 the University of the Witwatersrand established a Yiddish library.

Hebrew

The most remarkable South African achievement in Hebrew came from Judah Leib *Landau, who arrived to assume a rabbinical position in South Africa in 1903. Between 1884 and 1923, he published overseas eight five-act epic dramas on mainly historical themes. Two were staged in Johannesburg. Only one dealt with African issues, the rest were concerned with the problems of westernization and assimilation, which he treated in the many essays he contributed on South African Jews during the period when he was chief rabbi of Johannesburg. A volume of his poetry was published in Warsaw. N. Levinsky and Z.A. Lison published in Israel fiction concerning South African life.

S. Aisen, M. Hoffman, and I. Idelson also published poetry in Israel. B. Beikenstadt published an anthology of translations from the Hebrew and Yiddish in 1930. I. Ben Yosef’s *Links of Silence* was translated by Rachele Mann and appeared in Tel Aviv in 1983. Azila Talit Reisenberger published poetry in both English and Hebrew. Her volume *Mahazor Ahavah* (“Cycles of Love,” 2002) appeared in Israel, as did her volume of short stories, *Mi-Po ad Kaf ha-Tikvah ha-Tovah* (“From Here until the Cape of Good Hope,” 2004). As well she wrote plays and published on Jewish identity in South Africa.

In the 1930s Jack Rubik founded a monthly Hebrew newspaper, *Barkai*, and produced it regularly until his death in 1978. The newspaper died with him. A monthly Hebrew supplement, the *Musaf Ivrit*, to the weekly *Zionist Record* ran from the 1960s and closed in 1987.

[Louis Hotz, Dora Leah Sowden, and Joseph Sherman / Marcia Leveson (2nd ed.)]

SOUTHAMPTON, major port in S. England. Its small medieval community was expelled in 1236 (Runceval, a house owned by the Jewish financier, Benedict of Winchester, was excavated in the 1960s). During the 16th century, Marrano agents boarded ships docking at Southampton to inform Marrano refugees from Portugal whether it was safe for them to pro-

ceed to their destination in Flanders. The modern community dates from 1833, though individual Jews lived in Southhampton in the late 18th century and some were navy agents during the Napoleonic Wars. A split in the early congregation was settled soon after the appointment of Nathan Marcus *Adler as chief rabbi of Anglo-Jewry in 1844. Later Southhampton was the port largely used by Jews traveling to and from South Africa. In 1969 the Jewish population numbered 150, out of a general population of 210,000. In the mid-1990s the Jewish population numbered approximately 105. According to the 2001 British census, there were 293 declared Jews in Southhampton. It had an Orthodox synagogue. The University of Southhampton has emerged as one of the major academic centers of Jewish history in Britain and contains the Parkes Library, which holds a number of important collections of Anglo-Jewish material.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

SOUTH CAROLINA, southeastern state of the United States, bordering the Atlantic Ocean and the states of North Carolina and Georgia. Jews arrived in the British colony of Carolina in the early days of European settlement. A new outpost in the mercantile traffic of the Atlantic basin, Carolina offered economic opportunities and a degree of religious tolerance remarkable for the time. The colony's Fundamental Constitutions of 1669, drafted by philosopher and physician John Locke, who was secretary to one of the eight Lords Proprietors, granted freedom of worship to "Jews, Heathens, and other Dissenters from the purity of the Christian Religion." Although the colonial assembly never endorsed the provision, British *Charleston became known as a place where people of all faiths – except Catholics – could do business and practice their religion without interference. In 1696, Jews in Charleston allied with French Protestants to safeguard their rights to trade, and the next year to secure citizenship.

Most of Carolina's first Jewish settlers traced their roots to Spain or Portugal. Expelled during the Inquisition at the end of the 15th century, the Sephardim dispersed around the globe and established themselves in capitals and port cities in northern Europe, the Mediterranean, and the West Indies. In 1749, Charleston's Jewish community chartered Kahal Kadosh Beth Elohim – one of the first five Jewish congregations in America. Like her sister synagogues in New York, Newport, Savannah, and Philadelphia, Beth Elohim was Sephardi in ritual and practice. Charleston's congregation remained so for two generations after the Revolutionary War, though by then the majority of South Carolina Jews were Ashkenazi, hailing from central or eastern Europe.

Following the Revolutionary War, South Carolina's Jewish population surged. When Columbia became the state capital in 1786, seven Jewish men from Charleston were among the first to buy town lots. Jews in Georgetown, Beaufort, and Camden belonged to the business and civic elites. By 1800, Charleston was home to the largest, wealthiest, and most cul-

Jewish communities in South Carolina. Population figures for 2001.

tured Jewish community in North America – upwards of five hundred individuals, or one-fifth of all Jews in the nation.

Carolina's Jews pursued the same goals as their white neighbors. Those who could afford it owned slaves. The affluent lived in finely furnished houses and traveled abroad. Many Ashkenazim adopted traditional Sephardi practices and assumed an aristocratic view of themselves as "earliest to arrive."

Charleston's highly acculturated Jewish community produced the first movement to reform Judaism in America. In 1824, a group of young Jewish men, mostly American-born, petitioned the governing body of Kahal Kadosh Beth Elohim for shorter services, a sermon preached on the Sabbath, and prayers in English. Rebuffed in their efforts, the dissidents drafted a constitution and established the Reformed Society of Israelites. For eight years the reformers worshiped separately, then returned to the traditional congregation. But in 1840 the reform faction prevailed. With the blessing of Beth Elohim's popular minister, Gustavus Poznanski, a proposal to install an organ in the new synagogue – a Greek revival temple that replaced the original structure, which had burned in the great fire of 1838 – was adopted by a narrow margin. The traditionalists seceded and formed Shearit Israel (Remnant of Israel), with its own burying ground adjacent to Beth Elohim's Coming Street cemetery. A brick wall separated the dead of the two congregations.

While schism in Beth Elohim divided traditionalists and reformers, a new group of immigrants introduced another brand of orthodoxy to Charleston. People of modest means – peddlers, artisans, metalworkers, bakers – the newcomers gave the city's Jewish population a more foreign appearance than before. As early as 1852, these eastern European Jews began meeting under the leadership of Rabbi Hirsch Zvi Levine, re-

cently arrived from Poland. In 1855, they formally organized as Berith Shalome (now Brith Sholom) or “Covenant of Peace,” the first Ashkenazi congregation in South Carolina and one of the first in the South.

As the southern states began seceding from the Union in 1860 and 1861, Jews rallied to the Confederate cause. Thousands of Jewish men served in the southern armies, while Jewish women, in accord with their gentile sisters, threw themselves into the war effort, sewing uniforms, knitting socks, rolling bandages, preparing boxes of clothes and provisions, and working in hospitals to care for the sick and wounded.

After the war, during the period of Reconstruction, some South Carolinians of Jewish descent, including the notorious “scalawag” governor, Franklin J. Moses, Jr., supported the Radical Republicans’ drive to build a new society. However, most backed the Redeemers’ crusade to restore white rule. Jewish women such as Octavia Harby Moses and Phoebe Yates Levy Pember were prominent in memorializing the “Lost Cause.” In the shared experience of defeat, Jewish Confederates demonstrated their fierce sense of belonging.

Beginning in the 1880s, East European migration to America brought about a dramatic increase in the nation’s Jewish population. Charleston’s Jewish population, which had remained flat for decades at around 700, doubled between 1905 and 1912. The neighborhood where the “greenhorns” settled was called “Little Jerusalem.” Immigrant men commonly started out as peddlers, then established small businesses. At one time some 40 stores on upper King Street were closed on Saturday, in observance of the Jewish Sabbath. The men held prayer services above stores. The women kept kosher homes. They trained their African American help to make potato *kugel* and *gefilte* fish, and they learned, in turn, to fix fried chicken and okra gumbo.

By World War I, Jewish communities in the midlands and upcountry had grown large enough to support synagogues. Meanwhile, some country clubs, fraternities, and sororities barred Jews, who responded by forming their own social groups and athletic teams modeled on the ones that kept them out. These organizations helped unify Jews around an ethnic identity without regard to place of birth, date of arrival in America, and degree of observance.

The revival of the Ku Klux Klan disturbed southern Jews’ sense of well-being. In the heyday of Jim Crow, however, the primary targets of discrimination were blacks. Jews generally found themselves on the safe side of the racial divide. They demonstrated their loyalty to country and region in patriotic parades and party politics. When the United States entered World War II, Jewish southerners joined in the mobilization to fight the Japanese and Nazi foes.

As a result of the Holocaust in Europe, America’s place in world Jewry changed radically. Now more than half of all Jewish people were living in the United States. In many ways, South Carolina was a microcosm of the nation. The class of Jewish merchants had begat a generation of lawyers, doctors,

accountants, and college teachers, who shifted the Jewish economic niche away from retail business. With the rest of the white American mainstream, urban Jews abandoned the old neighborhoods and moved to the suburbs – a migration that coincided with the first stirrings of the civil rights movement and the rise of Conservative Judaism.

By the end of 20th century, Jewish populations in most small towns across the South had dwindled, while suburban and resort congregations were continuing to grow. South Carolina’s Jews remained prominent in political life. Solomon Blatt, of Barnwell, served for 30 years in the state legislature, ending his final term as Speaker of the House in 1970. Numerous other Jewish lawmakers have filled seats in both houses, and, since World War II, more than a dozen Jews have been elected as mayors of South Carolina towns and cities.

South Carolina mirrors the nation in the drift toward more traditional observance – a trend in all divisions of Judaism. The Addlestone Hebrew Academy in Charleston and Lubavitcher Chabads in Myrtle Beach and Columbia teach Hebrew and religious studies in day schools to an increasingly diverse student population that includes newcomers from other parts of America, and from Russia and the Middle East as well.

[Dale Rosengarten (2nd ed.)]

SOUTH DAKOTA, state in the upper Midwest sector of the United States; general population 756,000 (2001) with approximately 300 Jews. As a result of the gold rush, Jews settled in the Dakota territory as early as 1876. Two utopian agricultural communities, Cremieux and Bethlehem Yehudah, were founded in 1882 by the *Am Olam. They were defunct by 1885. Other Jewish homesteaders, particularly in the western part of the state stayed on the land longer. Movement to towns and to commercial activity was common.

There were once congregations in Deadwood, Lead, Sioux Falls, Aberdeen, and at Ellsworth Air Force Base in Rapid City. Today there are two: Mt. Zion in Sioux Falls and the newer Synagogue of the Hills in Rapid City, both

• 50–195

Jewish communities in South Dakota. Population figures for 2001.

served by student rabbis. Blanche Colman, a native of Deadwood, became the first woman to practice law in the state and worked as legal counsel for the Homestake Mining Company. She is buried, along with her family and other Jewish gold seekers, in the “Hebrew Hill” section of the communal Mt. Moriah Cemetery, where Wild Bill Hickock and Calamity Jane are also interred. Other noteworthy South Dakota Jews include agronomist Sam Bober, who in the 1920s and 1930s developed rust resistant strains of wheat and the Adelstein family of Rapid City whose Northwestern Engineering Company is one of the largest private civil engineering firms in America.

[Linda M. Schloff (2nd ed.)]

SOUTH WEST AFRICA (Namibia). Jewish connections with the territory were established even before its conquest by the Germans when it became a German colony. During the middle of the 19th century the *De Pass brothers, Jewish merchants from Cape Town, established trading posts on the Namaqualand coast, and in 1861 started the Pomona Copper Company. German Jews were allowed much more scope in the territory after its establishment as a colony. Carl *Fuerstenberg, a German Jewish banker, was responsible, as head of the Berliner Handellgesellschaft, for the development of the diamond industry, and he also organized the construction of the railway line from Luderitz Bay to Kubub. Emil *Rathenau created the German South West African Mining Syndicate and established a research company in 1907 for the study of irrigation problems. Walther *Rathenau was one of the two experts sent by Kaiser Wilhelm II to report on administrative reforms. The number of Jews in South West Africa under German rule was no more than about 100, most of them in Swakopmund. During the campaign of 1915, which ended in the conquest of the territory by South African forces, the men were interned and their families sent to Windhoek. After South Africa was granted a mandate over it by the League of Nations after World War I, however, the Jewish population increased, and in 1965 there were 400–500 Jews in a total white population of about 68,000, of whom the overwhelming majority lived in Windhoek, which has a Hebrew congregation (dating from 1917), a synagogue (completed in 1925), a *talmud torah*, a communal hall, named after Simon (Sam) *Cohen, the most prominent Jew and benefactor of the community, an active Zionist movement supported by generous contributions, and the only

Jewish minister in the territory. The only other community, at Keetmanshoop, which had about 12 families, a congregation (founded in 1910), and a synagogue, ceased to exist when the number of Jewish families was reduced to five and their *si-frei torah* were sent to Windhoek. In addition, there are a few families in Swakopmund and Walvis Bay. L. Kerby served as town clerk of Windhoek for many years, and was responsible for the layout and upkeep of the beautiful cemetery which is one of the showpieces of Windhoek.

Jack Louis Levinson, the husband of Olga *Levinson, who has been a member of the municipal council for 25 years, was mayor from 1963 to 1965 and was succeeded by Sam Davis. Mr. George May was another Jewish councilor.

In November 1980 Windhoek became a twin city with Kiryat Telshe Stone, a settlement outside Jerusalem.

The political developments including the cancellation of the League of Nations mandate by the United Nations and the proclamation of the establishment of an independent republic, called Namibia, has brought about a considerable dwindling of the Jewish population.

[Lewis Sowden]

SOUTHWOOD, JULIUS SALTER ELIAS, FIRST VISCOUNT (1873–1946), British newspaper owner. The son of Polish immigrants who settled in Birmingham, England, and then moved to London, Southwood started his career in London as an office boy and became one of the leaders of the newspaper industry. At the age of 21 he joined the jobbing printers firm of Odhams Brothers. Four years later he was appointed a director and became managing director in 1920. From 1906 Odhams published Horatio Bottomley’s populist and scurrilous weekly, *John Bull*, which at its peak sold two million copies. After Bottomley was jailed for fraud, Southwood rebuilt the firm, adding more newspapers and magazines with vast circulations. Among them were the Labor paper *Daily Herald*, which reached a circulation of 2,000,000, and the weekly, *The People*, with 3,000,000. Other papers Odhams controlled were *John Bull*, *Illustrated*, *Sporting Life*, *Woman*, and *News Review*. Southwood was the only one of Britain’s leading “presslords” to support the Labour Party, serving as deputy leader of the Labour Party in the House of Lords. Southwood associated himself with many charities and was chairman of funds in aid of hospitals, boys’ clubs, children, and the blind. He was made a baron in 1937, taking the title of Lord Southwood, and a viscount in 1946. He was buried as an Anglican; his biography, *Viscount Southwood*, published in 1954 by R.J. Minney, makes no mention of the fact that he was Jewish.

SOUTINE, CHAIM (1893–1943), Russian-French painter. Soutine was born at Smilovitchi in Lithuania, the tenth of eleven children of a poor tailor. Chaim was interested in nothing but drawing, and at the age of fourteen he ran away, first

to Minsk, then to Vilna, where he enrolled at the School of Fine Arts. Attending school during the day, Soutine worked at night. In 1913, a physician who appreciated his talent provided him with money to go to Paris. There he met Amedeo Modigliani, nine years his senior, who tried to help him. At one time, he and Modigliani shared a garret in Montmartre that contained only one cot, on which they took turns sleeping. To make a living, Soutine copied old masters at the Louvre, worked as a porter at a railroad station, or as a ditch digger. Overcome by despair, he once tried to commit suicide. His situation improved after the dying Modigliani recommended him to his art dealer. Thanks to the dealer's efforts, the American art collector, Albert C. Barnes, visited Soutine's studio and bought more than fifty of his paintings (they are now all at the Barnes Foundation at Merion, near Philadelphia, Pa.). After this meeting in 1922, Soutine produced many oils, and his reputation spread to England and the United States. When World War II broke out, he refused opportunities to go to the United States. After the Nazi invasion of France he was forced to hide in a small village in Touraine. The constant threat of being discovered made him ill with ulcers. In August 1943 a friend rushed him to a hospital in Paris where, after an operation, he died at the age of 50. Soutine never drew subject matters from memories of his early life in the ghetto. Instead, he portrayed the people, places, and scenes around him. He was an expressionist who rendered in violent color all the agony that he felt in his subject matter. He used paint in heavy impasto, and his colors, even more than his technique, betrayed his troubled mind. His canvases often remind one of bleeding, tortured flesh. Everything is broken, twisted, distorted. Even in his landscapes, there is a continuous cataclysmic movement. The body of his work consists of about six hundred oil paintings, many of which were acquired by museums all over the world.

[Alfred Werner]

SOVERN, MICHAEL IRA (1931–), U.S. legal scholar and arbitrator. Sovern, who was born in New York City, received his law degree from Columbia Law School in 1955. He taught at the University of Minnesota Law School in 1955–58, then at Columbia Law School, becoming a full professor in 1960, the youngest modern Columbia faculty member to achieve this rank. As a legal scholar Sovern's main interest was labor relations and employment discrimination. He published *Legal Restraints on Racial Discrimination in Employment* (1966) and was co-author of the text *Cases and Materials on Law and Poverty* (1969). He served as special counsel on the New York State Joint Legislative Committee on Industrial and Labor Conditions. Working for effective legal services for the poor, Sovern helped found the Legal Services Unit of Mobilization for Youth. He supervised legal education for civil rights lawyers and chaired the committee on labor and industry of the

American Civil Liberties Union. Sovern devoted effort to advancing public understanding of the U.S. legal system through his television series *Due Process for the Accused*.

As a labor arbitrator in public and private disputes, he arbitrated disputes in the New York City public schools, Pan American World Airways, and the New York Telephone Company, among others. Active in mediation during the 1968 disorders at Columbia, he presided over the faculty executive committee, which examined the causes of the disruption and made recommendations for their alleviation, which were adopted. In 1970 he was appointed dean of Columbia Law School, the first Jew to hold this post. He emphasized that skill in conciliation, as well as in adversary proceedings, should be a task of law school education. In 1979 he was named executive vice president for academic affairs and provost of the university. He assumed the role of university president in 1980, serving in that capacity until 1993. During his tenure as president he effected such achievements as creating the university's intellectual property policy, which began to bring in an annual revenue of \$100 million; opening Columbia College to co-education without compromising Columbia's affiliate, Barnard College for women; increasing student scholarships and expanding the enrollment of minority students; and negotiating the sale of Columbia's land under Rockefeller Center to the Rockefeller family for \$400 million, which enabled the university to improve its facilities and increase salaries. In 1993 he was named president emeritus and returned to teaching at the university's law school.

Sovern wrote *Legal Restraints on Racial Discrimination in Employment* (1966) and *Of Boundless Domains* (1994).

[Ruth Beloff (2nd ed.)]

SOVETISH HEYMLAND ("Soviet Homeland"), the only Yiddish literary journal in the post-Stalinist Soviet Union, published as an organ of the Soviet Writers' Union. *Sovetish Heymland* made its appearance in July–August 1961, originally as a bi-monthly and, from January 1965, as a monthly. Apart from a few books in Yiddish that began to be published in Moscow in 1959, this magazine was a partial response of the Soviet authorities to the continued and forceful demands, mostly external, made upon them to reverse the process inaugurated at the end of 1948 of completely obliterating all manifestations of Jewish cultural life. This process had led to the execution of important Yiddish writers in the Soviet Union on August 12, 1952.

The editorial board, headed by Aaron Vergelis, was composed of the few surviving Yiddish writers and changed significantly in the 1970s and 1980s, when some members died, immigrated to Israel, or quarreled with Vergelis. Like other periodicals of its kind appearing in the USSR, *Sovetish Heymland* devoted about two-thirds of its space to belles lettres and the remainder to literary criticism, research papers, ideological articles, memoirs, an account of Jewish cultural events in the Soviet Union and abroad, regular columns (such as the one on old Jewish books), polemical sections, etc. Most of the

contributors were Yiddish authors living in the Soviet Union. The magazine also frequently presented translations of Soviet authors and, from time to time, contributions by Yiddish and Hebrew writers living outside the Soviet Union, provided, as a rule, that they were sympathizers of the communist movement. The magazine was illustrated and well edited and earned the reputation of being one of the most attractive Yiddish journals published at the time.

The material published by *Sovetish Heymland* fully reflected the ideology of Soviet patriotism prevailing in the publications in other languages in the USSR. Thus, compared to Soviet magazines that followed a “liberal” line in literature, such as *Novy Mir*, *Sovetish Heymland* displayed much greater circumspection. The literary standard was often lower than that of Soviet Yiddish literature before the liquidation of 1948, although every issue contained interesting and appealing items. Most of the contributors were the disciples of the liquidated writers. Their Jewish aspect was expressed primarily by works dealing with the Holocaust and World War II and by attempts to portray Soviet Jewish life; initially the liquidation of Yiddish literature was only hinted at, but from 1988 it became one of the main topics. Until 1970 the journal exercised great restraint over any topic related to Israel and did not contain the vicious attacks on the state found in other Soviet publications, especially after the Six-Day War (1967). On the other hand it sharply refuted reports on the situation of Soviet Jewry published in the West. *Sovetish Heymland* fulfilled a positive role in domestic Jewish life by providing Yiddish material to a considerable readership and serving as a symbol of Jewish identity in a country that had so few opportunities for Jewish expression.

From 1970, when the journal became a forum for virulent anti-Zionist propaganda, it lost many readers and friends in the country and, especially, abroad. In the 1980s the editorial office trained a group of younger writers, such as Boris Sandler (1950–) and Velvl Chenin (1958–). Following the collapse of the Soviet state-sponsored publishing system, the journal was saved by foreign sponsors and appeared sporadically in 1993–97 under the name of *Di Yidische Gas* (“Jewish Street”).

[Chone Shmeruk / Gennady Estraiikh (2nd ed.)]

SOYER, MOSES (1899–1974), U.S. painter. Born into a cultured family, Moses Soyer, his twin brother Raphael Soyer, and younger brother Isaac Soyer all became well-known artists associated with the Social Realist style of painting. The family was forced out of czarist Russia in 1912, at which time

they immigrated to the United States, ultimately settling in the Bronx. Soyer took free art classes at the Cooper Union and the National Academy of Design in the late 1910s; met the Ashcan artist Robert Henri at the Ferrar Art School, whose uncompromising representations of city life greatly influenced him; and studied at the Educational Alliance, where he formed friendships with Peter Blume and Chaim Gross. In 1923 Soyer began teaching at the Educational Alliance, where he continued to work intermittently throughout his life.

Soyer spent a year in Europe after winning a travel scholarship from the Educational Alliance (1926). After enjoying his first one-person exhibition at J.B. Neumann’s Art Circle Gallery in 1929, Soyer showed his work regularly.

As a Works Progress Administration artist, Soyer painted ten portable murals addressing the life of the child, which were installed at children’s hospitals and libraries throughout New York, and jointly designed a mural for the Kingsessing Station post office in Philadelphia with Raphael. During the Great Depression he also painted images of the unemployed and homeless in a representational fashion.

Inspired by the work of Edgar Degas, one of his favorite artists, and his dancer-wife, beginning in the 1940s Soyer made canvases of dancers rehearsing and at rest with a gestural, loose brushstroke. Throughout his life Soyer remained a figurative painter, frequently imaging studio nudes naturalistically. Indeed, Soyer’s models are often shown at introspective, even troubled moments, and those who sat for portraits with the painter, notably many of the artist’s friends, were never unnecessarily flattered. As Soyer accurately observed: “Most of my paintings reflect an interest in the casual moments in the life of plain people, the gestures and natural attitudes they fall into when they perform habitual tasks, when they are in thought, and when they are not observed by other people.” Soyer’s work was shown at a posthumous retrospective at the Whitney Museum of American Art in 1985.

[Samantha Baskind (2nd ed.)]

SOYER, RAPHAEL (1899–1987), U.S. painter and printmaker. Born in Borisoglebsk, Russia, Raphael Soyer was one of three of the six Soyer children – along with his twin brother Moses Soyer and younger brother Isaac Soyer – who became artists. In 1912, when the family was forced to leave Russia because their “Right to Live” permit was revoked, they immigrated to the United States, settling in the Bronx.

After taking drawing classes at the Cooper Union (1914–17), Soyer studied at the National Academy of Design (1918–22) and the Art Students League, where he attended classes intermittently from 1920 until 1926. Soyer enjoyed his first one-man show at New York’s Daniel Gallery in 1929. It was there that his painting *Dancing Lesson* (1926, Collection Renee and Chaim Gross, New York), often understood as the exemplar of Jewish American art, was first exhibited publicly.

Throughout his career, Soyer was interested in Social Realist themes, which he both painted and showed in prints. During the Great Depression he often created dark-hued, compassionate renderings of the down-and-out in works such as *In the City Park* (1934, private collection, New York).

Soyer retreated into his studio in the 1940s and 1950s. Indeed, self-portraits at his easel and studio scenes of female nudes comprise Soyer's artistic interests at this time, as did portraits of his artist-friends and artists he admired. At a 1941 one-man show at the Associated American Artists Gallery, 23 of Soyer's artist-portraits were exhibited in a section entitled "My Contemporaries and Elders." Among the paintings displayed were portraits of Phillip Evergood and Abraham *Walkowitz. In the late 1950s Soyer started to paint outdoor scenes again, most of which were figurative canvases, such as *Farewell to Lincoln Square* (1959, Hirshhorn Museum and Sculpture Garden, Washington, D.C.). Inspired by Soyer's eviction from the Lincoln Arcade Building, where he kept a studio for 14 years, the large, colorful painting includes a self-portrait of the artist.

Remaining a representational artist in an abstract art scene, Soyer founded the periodical *Reality: A Journal of Artists' Opinions*, published annually from 1953 to 1955 to declare the importance of imaging "man and his world."

After meeting Isaac *Bashevis Singer in the elevator of his New York apartment building, Soyer worked on several projects with the Yiddish writer. Soyer illustrated a Limited Editions Club publication of two Singer stories, "The Gentleman from Cracow" and "The Mirror" (1979), and the second and third volumes of Singer's memoirs, *A Young Man in Search of Love* (1978) and *Lost in America* (1981). Soyer chronicled aspects of his life in four autobiographies.

SPACE AND PLACE (in Jewish Philosophy).

Philo

The term "place" has three meanings for *Philo, one physical and two theological: (1) the space taken up by a body, (2) the divine *logos, and (3) God Himself (Som. 1:11, 62–64). The first definition is probably derived from Stoic philosophy and is, in fact, similar to Aristotle's definition. In contrast to the latter, however, Philo's conception is based on the existence of three-dimensional space, which is itself independent of the bodies which fill it. The second definition does not relate to physical space; the place identified with the divine logos is said to be wholly filled by God Himself. On the other hand, it is characteristic of Philo's thought to ascribe a spatial relationship to the place of the third definition: "God Himself is called a place, by reason of His containing things, and being contained by nothing whatever... for He is that which He Himself has oc-

cupied, and naught encloses Him but Himself. I, mark you, am not a place, but in a place; and each thing likewise that exists... and the Deity, being contained by nothing, is of necessity Itself Its own place."

Philo's third definition relates to Jewish tradition. Jewish sources often refer to God as "Place" (*Makom*); a usage which was prevalent before Philo's time. Several Greek writers who preceded Philo, in referring to the God of the Jews, used the term *makkif* ("containing"), which appears in Philo's third definition. Later midrashic texts (e.g., Gen. R. 8:10) state explicitly that God is "the place of the world and His world is not His place."

In the Muslim world the first Karaite thinkers accepted the atomistic theories of the Mu'tazilites (see *Kalām), according to which not only bodies composed of atoms are inseparable, but there also exist equal and indivisible units of space, of time, of motion, and of the different qualities. Within a unit of motion, the atom passes from one unit of space to an adjoining unit. The existence of void space may be assumed, because (according to the notion also held by Greek atomists) the atoms could not move from place to place in a world which has no void.

Saadiah Gaon

Saadiah's definition of space is "the meeting of two contiguous bodies... each one of them becomes the place of the other. Thus one part of the earth, as it revolves, serves as the locale for the other" (*Beliefs and Opinions*, 1:4). This definition is probably based on an incorrect reading of Aristotle's conception, and the conclusions which Saadiah derives appear contradictory: at times he uses Aristotle's view as a proof that God, being incorporeal, cannot be in a particular place; at other times he seems to be saying that God is everywhere. In his commentary to *Sefer Yezirah*, Saadiah speaks of two kinds of air which are found everywhere:

(1) tangible air, and

(2) the fine air, which he identifies with the biblical "glory of God" (see *Shekhinah).

Jewish Aristotelianism

Ibn Abī Sa'īd, the first Jewish Aristotelian, appears to have accepted, in general, Aristotle's definition of place as "the limit of the encompassing body." This conception, which was commonplace in Muslim and Jewish philosophy, was totally rejected by Abu al-Barakat Ḥibat Allah (Nethanel) *al-Baghdadi, a Jewish philosopher who converted to Islam in his old age. He held the notion that space is a three-dimensional extension, which can be seen as both void and filled with bodies. The human intellect, according to him, has an image of void space before having an image of filled space. Contrary to Aristotle, whose views he criticizes at length, he believes that space is infinite.

Solomon ibn Gabirol

According to Solomon ibn Gabirol (in his *Mekor Hayyim*), there is a hierarchy of different kinds of place, some of which

are spiritual (when the spiritual being is the place of spiritual form, and “will” is the place of both matter and form), and others physical. He refers to the existence of various other types of bodies as the “known place.” God (the first agent) is the infinite place (or space).

Abraham ibn Daud

Abraham ibn *Daud attempts (in his *Emunah Ramah*) to establish the derivation of the three dimensions from prime matter, “which God created in the beginning,” and which in itself is apparently non-spatial. The first form which it takes on, the corporeal form, is identified with continuity. This form affords something a certain measure of solidity and allows the three dimensions to come into existence.

Maimonides

*Maimonides accepts the Aristotelian view of physical place. He distinguishes between “particular” and “general” place (*Guide of the Perplexed*, 1:8): the particular place is the place of every individual body, which is the body referred to in Aristotle’s definition; the general place, which contains all bodies, encompasses within its area the upper sphere, and the two are identical since, like Aristotle, Maimonides sees the world as finite. The term “place,” when used to refer to God, designates His greatness.

Nahmanides

*Nahmanides recounts the midrashic notion that God is “the place of the world.” The sages, in his opinion, meant by this dictum that God is the form of the world, since form is the realization (the entelechy) of the perfection of what is contained in the world, and is also its limit since it prevents the spreading out of the world’s dimensions beyond its form.

Hasdai Crescas

A basic criticism of the Aristotelian conception of space and place is found in Hasdai *Crescas’ *Or Adonai*, whose point of view and opinions are sometimes similar to those of Hībat Allah. It appears that Crescas was influenced in this critical attitude by the anti-Aristotelian physical theories of 14th- and 15th-century Christian scholastics. Crescas substitutes for the Aristotelian conception of two-dimensional place the conception of three-dimensional space (using the term *makom* (“place”) to designate both place and space). This three-dimensional space is found within the limits of the world which is full of bodies. Crescas’ notion that the world is infinite, however, leads him to reject the assumption that the existence of a void is impossible. It is his opinion that infinite void can exist outside the limits of the world, and even within the world itself. Crescas also assumes the possibility of the existence of more than one world. He maintains, however, that the human intellect is incapable of arriving at well-founded conclusions in regard to this matter. Like Nahmanides, Crescas holds that referring to God as “the place of the world” means that God is the form of the world.

Apparently under Crescas’ influence his disciple, Joseph *Albo, substituted the three-dimensional conception of

space for the Aristotelian conception (*Sefer ha-Ikkarim*, 2:17).

[Shlomo Pines]

SPAIN (in Hebrew at first אַסְפַּמִּיָּא then סַפְרַד), country in S.W. Europe. The use of the word “Spain” to denote “Sepharad” has caused some confusion in research. Spain came into being long after the Jews had been expelled from the Crowns of Castile and Aragon, which were jointly ruled by the Catholic Monarchs, Isabella of Castile and Ferdinand of Aragon, at the time of the expulsion. When Spain emerged, incorporating also the Kingdom of Navarre, there were no Jews officially living in the Iberian Peninsula. Sepharad was used in the Middle Ages to indicate the entire peninsula and the Jews who lived there whose culture emerged as result of the encounter of Judaism with Greco-Arabic culture that developed in Al-Andalus. Many major works devoted to Jewish history and culture treated as one unit the Jews of all the Hispanic kingdoms that subsequently constituted Spain, leaving out Portugal. Baer’s monumental history does exactly that and he is followed by many scholars.

According to various legends, there were Jews living in Spain in biblical times, but no proof exists in support of such stories. Most probably, the first group of Jews settled there under the Roman Empire and the communities grew rapidly. A tombstone inscription attests the presence of Jews in Adra (the ancient Abdera) in the third century C.E. They thus witnessed the conversion of the inhabitants of the Peninsula to Christianity, which is probably why the Council of *Elvira (305) attempted to effect or maintain a separation between the members of the two faiths by forbidding Christians to live in the houses of Jews, or to eat in their company, or to bless the produce of their fields.

Under Visigothic Rule

The weakening of the empire and the arrival of the Visigoths changed the face of Spain. From their court in Toledo they attempted to restore the shattered Hispanic unity, initially on the religious plane, through the conversion of their king Recared, originally an Arian, to Catholicism (587). Subsequently, in the political sphere, King Sisebut (612–21) broke down the last Byzantine stronghold in Spain. It is therefore hardly surprising that the Church councils of *Toledo, which were as much political as religious assemblies, should have played so important a role in the Visigothic state, and thus in the determination of its policy toward the Jews. As in the case of all other subjects, the policy was to have them adopt Catholicism, which had by then become the state religion. Recared approved the decision of the third Council of Toledo (589) laying down that the children of a mixed Jewish-Christian mar-

riage should be baptized by force. Going even further, Sisebut inaugurated a policy of forcible conversion of all the Jews in the kingdom. From 613 they were ordered to be baptized or leave the kingdom. Thousands of Jews then left Spain, while others were converted. Most of the latter, however, took the opportunity of returning to Judaism under the rule of his more tolerant successor Swintila (621–31). They were joined at this time by a number of exiles returning to Spain. At that period the official Church doctrine on conversion was formulated: Jews must not be baptized by force, and the fourth Council of Toledo (633) accepted this. King Sisenand (631–36) supported this attitude but, like the council, insisted that those Jews who had been converted by Sisebut and reverted to Judaism under Swintila must return to Christianity.

However, this relatively moderate attitude was revoked again under King Chintila (636–39) who compelled the sixth Council of Toledo (638) to adopt a resolution proclaiming that only Catholics might reside in the kingdom of Spain; he even anathematized those of his successors who did not hold to his decrees against the Jews. Numerous Jews accepted baptism and signed a declaration that they would respect Christian rites; others chose exile. Under Chintila's successor, Chindaswinth (641–49), the application of these laws had been neglected to such an extent that his successor, Receswinth (649–72) complained to the eighth Council of Toledo (653) about the presence of Jews in the kingdom. Probably some of the exiles had come back and some of the converts had returned to Judaism. The king commanded that they be brought back within the fold of Christianity, by force if necessary. Those who had relapsed had to sign a new declaration, promising to be good Catholics, to reject all Jewish rites, and to execute themselves those of their erring brethren who backslid into Judaism. However, they were permitted to abstain from eating pork, which they abhorred. The king decided not to drive the unconverted Jews to the font but to make it impossible for them to practice Judaism by prohibiting circumcision and forbidding them to celebrate the Sabbath and the festivals. However, these ordinances were honored more in the breach than in the observance and, thanks to various allies, even among the clergy, the Jews were able to survive in Spain; so much so that the tenth Council of Toledo had to remind Christians that they were obliged to observe the laws relating to the Jews.

The next king, Wamba (672–80), expelled the Jews from Narbonne and probably also from Septimania (then part of Spain), but they did not all leave the Visigothic kingdom. They were there when Erwig (680–87) convoked the 12th Council of Toledo to obtain in spite of the traditional ruling of the Church, the forced baptism of the Jews. Within a year every Jew had to forswear Judaism, accept baptism for himself and his family, and pledge his fidelity to the Christian faith. Those who refused were to be penalized by having their belongings seized, by corporal punishment, and finally by exile. Similar penalties were to be imposed on those who, baptized or not, observed Jewish rites. The priests were to gather all the

Jews in the churches to read out to them the text of the law so that none could claim he was unaware of it. Any noble who helped the Jews to evade these laws was to lose his rights over the Jews and pay a heavy fine. The execution of the laws was the task of the clergy, the king reserving several penalties for them if they were lax in carrying out his orders. Yet the Jews continued to Judaize and even to attack Christianity on some occasions for the king could not count on the assistance of his people in carrying out the whole of his anti-Jewish policy. His successor, Egica (687–702), reversed his attitude, restating once more the prescription on forced baptism and suppressing those disqualifications which oppressed converted Jews, while at the same time increasing the benefits to be gained from becoming Christian. He passed several measures tending to impoverish the Jews and make it impossible for them to buy protection from powerful nobles. They were forced to sell, at a price fixed by the king, all slaves, buildings, lands, and vineyards which they had acquired from Christians. On pain of perpetual servitude and confiscation of their goods, they were forbidden to conduct commercial transactions with Christians or overseas. At the same time their taxes were considerably increased. In spite of its ratification by the 16th Council of Toledo (693), this policy was unsuccessful. Soon it was rumored that the persecuted Jews were thinking of appealing to the Muslim invaders, who had shown themselves to be decidedly more tolerant than the Visigoths. Alarmed, Egica convened a 17th council on Nov. 9, 694, accusing the Jews of treason and demanding that the severest measures be taken against them. Declared as slaves and their possessions confiscated, all the Jews of Spain were given into the hands of Christian masters in various provinces. Their masters were charged to see that they did not practice Jewish rites and to take their children to be brought up from the age of seven by Christian tutors and later married to Christians. Those Jews who were able to, escaped; the rest were taken into servitude.

[Simon R. Schwarzfuchs]

Muslim Spain

When Tarik b. Ziyad in 711 crossed the Straits of Gibraltar, and overran the Visigothic Kingdom, there were no communities of openly professing Jews in Spain. But there remained in the country many secret Jews who welcomed the Muslims as their saviors from long oppression and flocked to join them. According to reliable Arabic sources the Muslim invaders made it their custom to call together the Jews wherever they found them and to hand towns which they had conquered over to them to garrison. They mention that this happened at Córdoba, Granada, Toledo, and Seville. Since the number of Muslim soldiers was relatively small, there can be no doubt that they appreciated the military help of the Jews who enabled them to continue their campaigns without having to leave behind them sizable units. So the situation of the Crypto-Jews changed abruptly and they occupied the enviable position of a group allied with the new rulers of the peninsula. Probably their economic situation changed too, since most

of the Visigothic nobles had fled and they could appropriate abandoned estates. The immediate sequel of the conquest of Spain by the Arabs was apparently that many Jews who had left Spain at the time of the religious persecutions by the Visigothic kings or their descendants returned from North Africa where they had found shelter. But soon the Jews began to suffer from the exactions of the new rulers who imposed on them (as on the Christians) heavy taxes. Even the party strife and civil wars which flared up among the Arabs brought down many calamities upon them.

UMAYYAD RULE. The *Umayyad kingdom in Spain was established by 'Abd al-Raḥmān I in 755 with its capital at Córdoba in Andalusia. There was relative economic prosperity throughout Umayyad rule and Jews were represented in many occupations, including medicine, agriculture, commerce, and crafts. Jews continued to work in these fields after the fall of the Umayyad regime. The tolerance of the Umayyad regime rendered Muslim Spain a refuge for the Jews and their numbers increased within the country. In 839 the Frank bishop *Bodo converted to Judaism in *Saragossa, married a Spanish Jewess, and wrote a tract against Christianity to which Alvaros of Córdoba replied.

Jewish scholarship and culture flourished alongside its Arab counterpart and was influenced by it. The Babylonian *geonim* corresponded with rabbis and scholars in the centers of *Lucena and *Barcelona. R. *Amram Gaon sent his prayer book to Spanish scholars. The academy at Lucena flourished into the 12th century and is mentioned in responsa as early as the ninth. Later Arab geographers cited Lucena, Granada, and *Tarragona as "Jewish cities." The real Jewish cultural revival began in the tenth century under 'Abd al-Raḥmān III (912–961), who assumed the title of caliph in 929 in Córdoba. At that time Córdoba was a center of both Arab and Jewish culture. This was the time of the political rise of the court physician *Ḥisdai ibn Shaprut, who attained the position of chief of customs and foreign trade. Ḥisdai was also a diplomat who negotiated with Christian rulers on behalf of the caliphate. In addition, he was a patron of the two leading Hebrew philologists, *Dunash b. Labrat and *Menahem b. Saruk. The Jewish literati acquired a sense of aesthetics and an appreciation of physical beauty from the artistic accomplishment of the Arabs in Spain. This sensitivity took root in the mid-tenth century and found expression in the Hebrew poetry of medieval Spain almost right up to the general expulsion in 1492.

As head of Spanish Jewry, Ḥisdai appointed *Moses b. Ḥanokh, who came from Italy, chief rabbi and head of a yeshivah at Córdoba. Thus, Spanish Jewry's reliance on the Babylonian *geonim* in halakhic matters decreased. Ḥisdai is the first example of the many-faceted Jewish statesman, communal leader, and intellectual who was characteristic of the community in Muslim Spain. After his death the post of rabbi of the Córdoba community was disputed by Joseph b. Isaac *Ibn Abitur, supported by the wealthy silk merchant *Ibn Jau, and R. *Ḥanokh b. Moses. The latter emerged victorious and

his appointment was sanctioned by Caliph al-Ḥakam II, the patron of the Jewish geographer Ibrahim b. Ya'qūb. During the reign of al-*Manṣūr (d. 1002) the great Hebrew philologist *Ḥayyuj (Abu Zakariyyā Yaḥyā b. Da'ud), who established the principle of the triliteral root, lived in Córdoba.

THE PETTY PRINCIPALITIES. With the decline of Umayyad rule after al-Manṣūr's death, the *Berber conquest of Córdoba (1013), and the demise of the dynasty in the 1030s, Córdoba lost its former prominence and the capitals of the various Berber and Arab principalities became cultural and commercial centers. Jewish taxfarmers, advisers, and physicians served at the different courts. The relatively tolerant rulers welcomed and esteemed Jewish financiers, advisers in matters economic and political, gifted writers, scholars, and scientists. The ethos of this Jewish upper class was distinguished by several features: the desire for and attainment of political power, the harmony of religion and secular culture, the study of the Talmud along with poetry and philosophy, equal proficiency in Arabic and Hebrew. The epitome of the fulfillment of this ideal was the poet and halakhist *Samuel ha-Nagid, a refugee from Córdoba who served as vizier and commander of the army of Granada from about 1030 to his death in 1056; he was also head of the Jewish community. His remarkable career and military exploits are recorded in both Hebrew and Arabic sources, including his own poetry. Samuel was succeeded by his son *Joseph ha-Nagid, whose pride and ambition aroused the enmity of certain Muslims, who assassinated him in 1066. Inspired by fanatics, Muslims then attacked Granada Jewry and many survivors moved to other towns, particularly Lucena. The Granada massacre marked the first persecution of Jews in Muslim Spain.

Prominent communities in the middle to late 11th century also included Seville, then ruled by the *Abbasid dynasty. (See Map: Muslim Spain.) Jewish courtiers included Abraham b. Meir ibn *Muhajir, to whom Moses *Ibn Ezra dedicated his *Sefer ha-Tarshish* (*Sefer ha-Anka*). Under al-Mu'tamid, Isaac ibn *Albalia served as court astrologer and as chief rabbi of Seville, and the scholar Joseph *Ibn Migash was sent on diplomatic missions. Lucena remained an important center of learning. Its academy was led by the great talmudist Isaac *Alfasi. His successors were Isaac *Ibn Ghayyat and Joseph ibn Migash. During Samuel ha-Nagid's term of office, the Jew *Jekuthiel, who was later murdered by political rivals, served as vizier in Saragossa. A dynamic cultural center, Saragossa was the home of the philologist and grammarian *Ibn Janāh, the controversial Bible commentator Moses ha-Kohen ibn *Gikatilla, the important neoplatonic philosopher and poet Solomon ibn *Gabirol, and the ethical writer *Baḥya ibn Pakuda. The latter's major work, *Farā'id al-Qulūb* (Heb. *Ḥovot ha-Levavot*, "The Duties of the Hearts"), shows the influence of Muslim ascetic ideals. Other important communities were *Denia, a major port in eastern Spain and the residence of the talmudist R. *Isaac b. Reuben al-Bargeloni, *Tudela, *Almeria, and *Huesca. Eleventh-century Toledo, capital of a Berber king-

Map 1. Jewish communities in Muslim Spain in the 11th century. Shaded area indicates the extent of Christian expansion by 1030.

dom, had a Jewish population of 4,000 and a *Karaité community as well. It was taken by the Christians in 1085.

THE ALMORAVIDS. The advance of the reconquest prompted al-Muʿamid of Seville to request the aid of Yūsuf ibn Tāshfīn of North Africa, the leader of the fanatic *Almoravid sect. In 1086 the latter led the Muslim armies to victory at Zallaka against the Castilians commanded by Alfonso VI. Yūsuf attempted to force Lucena Jewry to convert to *Islam, but payment of a large sum of money caused him to rescind his decree. Under his son, Ali (1106–43), Abu Ayyūb Sulaymān ibn Muʿallim served as court physician and Abu al-Ḥasan Abraham b. Meir ibn Kamaniel was sent on diplomatic missions. During Ali's reign the poets Abu Sulaymān ibn Muhājir and Abu al-Fath Eleazar ibn Azhar lived in Seville. Córdoba continued to prosper and was a cultural center and the residence of the gifted poet Joseph b. Jacob *Ibn Sahl (d. 1123) and the philosopher Joseph ibn *Zaddik.

THE ALMOHADS. In 1146 the *Almohads, an even more fanatic Berber dynasty of *Morocco, led by ʿAbd al-Muʿmin, began their conquest of Muslim Spain, which put an end to the

flourishing Jewish communities of Andalusia. The practice of the Jewish religion was forbidden by the authorities. Synagogues and yeshivot were closed and Jews were compelled to embrace Islam. Many emigrated to Christian Spain; others outwardly professed Islam but secretly observed Judaism, an ominous portent of the Conversos in Christian Spain a century later. R. Abraham *Ibn Ezra composed a moving elegy on the demise of the Andalusian communities. In 1162 these secret Jews were active in a revolt against the Almohads, particularly in deposing them in Granada. Almohad rule in Spain lasted longer than a century.

In the mid-13th century the Castilians conquered a great part of Andalusia. The Muslims retained only the kingdom of Granada in southeastern Spain. This kingdom, which was ruled by the Arab dynasty of Banū al-Aḥmar and existed for nearly 250 years, contained the important communities of Granada, *Málaga, and Almería. Although there were periods when the rulers of Granada inclined toward religious fanaticism, they employed Jewish counselors and court physicians. Jews from Christian Spain immigrated to Granada as their situation deteriorated. The poet, historian, and talmud-

ist Saadiah b. Maimon *Ibn Danan was rabbi of Granada in the late 15th century. At that time Isaac *Hamon was court physician and very influential in government circles. When Granada surrendered to Ferdinand and Isabella in 1492, the last Muslim king stipulated that Jews enjoy the same rights as other subjects, i.e., judicial autonomy, freedom to practice their religion, and permission to emigrate. According to this treaty, Conversos who had come from Christian Spain could leave within a month. The Catholic monarchs, however, did not keep their word and proclaimed the edict of the expulsion of the Jews in Granada.

[Eliyahu Ashtor]

The Reconquest Period

For many years the history of the Jews in Christian Spain became an element in the struggle for the reconquest. In the early stages of this the Jews suffered alongside the Muslims from the violence of the newly-founded Christian state in Oviedo, which regarded itself as the successor of the Visigoths and felt bound to punish the so-called treason of the Jews. However, in many Christian principalities the influence of the Carolingian Empire was paramount and the Jews were treated more moderately.

Little is known about the Catalan Jewish communities during this period; their presence is attested by a few tombstones. More records are available on the communities in the county of León. In this province a problem arose which perplexed the Christian kings of the reconquest for many years: how to settle, colonize, and develop regions won back from the Muslim invaders. It is fairly clear that this preoccupation prompted a change in their attitude toward the Jews so that gradually they began to consider them a useful and even essential section of the population. Relations with the Christian population changed, and this period saw the emergence of organized communities, influential in trade and industry, in northwest Spain. In the new capital, León, from the tenth century the Jews controlled the commerce in textiles and precious stones. They also owned many estates in the kingdom. In the young state of Castile the judicial status of the Jews was almost equal to that of the Christians. In the meantime the Jewish population in the small Christian states was insignificant.

At the beginning of the 11th century, assisted by the decline of the caliphate, the Christian hold in Spain increased through the initiative of Alfonso V of León (999–1027), who set himself out to attract settlers to his lands by granting them privileges and freedom. Among these new settlers were numerous Jews, who shared the same advantages as the Christians. It is difficult to establish their origins: did they come from France or from Muslim Spain, where their situation was now less secure than before? At any rate it is highly likely that at the beginning of the 11th century, especially with the onset of the Berber invasions, many Jews from the Muslim region made their way to the Christian kingdom, attracted by the advantages offered to new settlers, to join earlier Jewish arrivals. The face of Spanish Jewry was transformed; for the first time the influence of Oriental Jewry penetrated a Christian land,

dislodging the influence of Franco-German Jewry from its monopolistic position.

In spite of the internal reverses and setbacks disturbing the countries of Christian Spain, which also had an effect on the Jews, Jewish communities were organized and securely established. Their status was clearly defined: whether they lived on territory belonging to nobles, monastic orders, or elsewhere, the Jews belonged to the king, who protected them and to whom they owed fealty. For some time this principle was interpreted literally – as the blood money due on the killing of a Jew had to be paid directly to the king. The abortive Crusade of 1063 did not affect the development of the Jewish communities. According to legend, the great national hero El Cid employed Jews as treasurers, financial agents, lawyers, and administrators. Alfonso VI certainly employed as his physician and financier the Jew Joseph ha-Nasi *Ferrizuel, called Cidelus or little Cid, who did a great deal to help his coreligionists. It appears that Alfonso was the Spanish king who inaugurated a tradition that lasted as long as Spanish Jewry itself: that of the Jewish courtiers who, while still remaining faithful to their religion, exercised considerable authority over the inhabitants of the kingdom. During Alfonso's reign the reconquest suffered a setback with the defeat of Zallaker in 1086; no doubt there were some who cast aspersions on the Jews of the king who had refused to fight.

In the meantime in *Barcelona the Jews continued to be important landowners. According to some estimates, in the 11th and 12th centuries they owned around one-third of the estates in the county, which explains why the second Council of Gerona demanded that they continue to pay the tithes due to the Church on land that they had purchased from Christians. In 1079 there were at least 60 Jewish heads of families in Barcelona. This was the milieu which produced the first great figures of Spanish Jewish culture: the rabbi Isaac b. Reuben al-Bargeloni ("from Barcelona") the many-faceted *Abraham b. Hiyya ha-Nasi, and the rabbi *Judah b. Barzillai al-Bargeloni. Writing in a Christian land, these three authors belonged to a totally different cultural environment from their contemporary, Rashi, and attest the originality of Spanish Jewish thought which, from the end of the 11th century, gained in importance and impact.

The Golden Age in Spain

When Toledo fell to Alfonso I of Castile in 1085 the Jewish inhabitants, unlike the Muslims, did not flee the town, and it seems that they continued to live in their old quarter, joined there by newcomers from old Castile and León and refugees from Muslim lands. On the death of the king in 1109, the security of the Jews was revealed as illusory since it was based solely on royal favor, which more tardily was again extended by Alfonso's successor. In the meantime Christianity gained ground in Spain. *Tudela fell to King Alfonso I of Aragon in 1115. Jews and Muslims alike were granted full religious freedom, but while the Muslims were ordered to leave the town itself the Jews were granted permission to remain in their own

quarter, which lay within the city walls. Thus, preferred to the Muslims, they were no longer an object of fear to the Christians. The Jews of *Saragossa, conquered in 1118, enjoyed the same privileges and this precedent was followed in almost all towns on the way of the triumphant Christian advance.

The county of Barcelona, united with the kingdom of Aragon in the time of Count Ramón Berenguer IV (1131–62), had also taken part in the reconquest. In 1148 *Tortosa fell to the count who, having given important possessions to the Jews there, promised supplementary freedoms to any of their coreligionists who wished to settle in the town. When *Lérida was conquered in 1149, the Jews were once more asked to stay and preferred to the Muslims. Nevertheless they were not always protected from the maneuverings of the Christian lords, who cared more for immediate gain than for future settlement. At this time the focal point of Spanish Jewry had shifted from the Muslim south to the Christian north, where the Jewish population had increased considerably. However, the internal structure of the communities changed little and the rule of the notables remained firmly established. The court Jews still occupied all important positions, which scarcely troubled newcomers, who were above all concerned with establishing themselves and finding a means of livelihood. They tended to settle in the towns more than in the countryside. Occasionally the Christian kings gave them the citadel of a conquered town and there they established themselves, assuring at the same time their internal communal autonomy and external security. Engaged largely in commerce and industry and in the administration of the possessions of the nobles, the Jews were barely concerned with moneylending.

The Jews were serfs of the king, property of the royal treasury alone, but in times of stability this meant no more than an obligation to pay taxes; the king took no interest in the internal structure of the communities, which remained autonomous organizations. Known as **aljama* (the Arabic name being retained), the Jewish communities were each independent political entities paying taxes directly to the royal treasury, with full administrative and judicial autonomy, under the very general supervision of a royal functionary. In the case of suits with Christians, the Jews had to take a special **oath more judaico* and were forbidden to engage in judicial duels. From the end of the 12th century, however, municipal legislation weighed more heavily on the Jews: the municipalities were desirous of curbing the power of rich Jewish businessmen. But in spite of their efforts they did not succeed in supplanting the king as the supreme authority over the Jews. Meanwhile in Barcelona, Toledo, and Saragossa the Jewish courtiers, an aristocracy in their own right, acquired even greater importance. They were tax farmers and undertook diplomatic missions and were frequently looked upon askance by the communities too, whose authority they sometimes tried to avoid. It is therefore hardly surprising that from the early 13th century the first signs of a democratic reaction were apparent, the poorer demanding a voice in the communal councils alongside the rich. In this

period the **Maimonidean controversy* split Spanish Jewry. Beginning in Provence, it spread through the Midi, developing into a dispute on the very validity of philosophy within Judaism. It was the first sign of self-examination by the communities and of the renunciation of ideas absorbed from the Muslim and then from the Christian background. This tendency was expressed in the condemnation of the writings of Maimonides, several of them being suppressed. The controversy simmered down, only to break out with renewed ferocity some time later.

In the meantime the reconquest proceeded apace. James I of Aragon (1213–76) took the Balearic Islands (1229–35) and Valencia (1238). Ferdinand III of Castile (1217–52) captured *Córdoba (1236), *Murcia (1243), and *Seville (1248). Alfonso X (1252–84) extended the conquest so far that only the kingdom of Granada remained in Muslim hands. All these kings had employed Jews in their armies and all had requested them to settle in towns evacuated by Muslims. Everywhere the Jews who had lived under Muslim rule were permitted to remain in their old quarter, were preferred to Muslims, and their previous privileges were confirmed. Their ownership of land expanded, for the kings frequently granted them lands and other possessions in order to attract them to settle. More Jewish shops opened in the towns, arousing the opposition of the municipalities, who wished to limit their commerce. Around the middle of the 13th century King *Alfonso X prepared a code of laws covering all the inhabitants of his kingdom. This code, known as *Las Siete Partidas*, was formulated around 1263, but was only very gradually applied, especially from 1348. It defined with great precision the principles of royal policy toward the Jews and in this respect was extremely influential. The Jews were accorded complete religious liberty, on condition that they did not attack the Christian faith; measures were taken to prevent the possibility of **blood libels*; and they were forbidden to leave their homes during Easter. They were also prohibited from holding positions of authority over Christians. The number and size of synagogues were strictly limited, but it was forbidden to disturb the Jews on the Sabbath, even for legal reasons. No force was to be used to induce them to adopt Christianity, while those who had converted were not to be taunted with insults about their origins, nor to lose their rights of succession to the property of their former coreligionists. By contrast, any Christian who converted to Judaism was to be put to death and his property declared forfeit. Jews and Christians were not to occupy the same house, and Jews could not own Christian slaves. They were also to carry a special badge which identified them as Jews. Thus the policy of the Church triumphed. The *aljamas*, turned more in on themselves, reinforced their autonomy. Under the direction of their **muqaddamin* (or **adelantados*) they established their own courts of law, but maintained the right of appeal before the royal court. At this period the king appointed a functionary, known as the *rab de la corte*, to supervise the affairs of the Jewish communities. It appears that his nomination by the king did not give rise to any special problems, for

he generally did not interfere with the internal organization of the communities.

Jewish courtiers, largely in Castile, rose to the highest positions. Therefore their fall was usually attended by the most brutal consequences for the communities to which they belonged, and thus the latter could not consider them as *shtadlanim*, but rather as high functionaries and financiers whose influence depended more on their talents than on any representative status. The Castilian monarchs seem to have been well satisfied by their services. As Jews they could not aim for political power nor could they ally themselves with the nobility or the clergy. Thus there developed in the Christian lands the custom, long widespread in the Orient, of employing Jews in the highest administrative and financial positions. The nobles imitated the kings in employing Jewish experts. Some of these Jewish courtiers, while still holding to the Jewish faith, were influenced by the Christian environment; wishing to live as nobles, they competed for royal favor. Veritable dynasties of courtiers emerged: the powerful families wielded considerable importance in their communities. Don Solomon *Ibn Zadok of Toledo, known as Don Çulema, was ambassador and *almoxarife major*. His son and successor, Don Isaac ibn Zadok, known as Don Çag de la Maleha, played an important role in reestablishing the finances of Alfonso x, who granted him and his associates authority to farm taxes owing on the previous 20 years in return for payment of the enormous sum of 80,000 gold maravedis for the years 1276 and 1277. This kind of contract could be very remunerative although the king frequently went back on his word. It sometimes happened that, as in the case of Don Çag, a Jewish courtier fell from royal favor and, as a result, lost his life. The very financial success of the courtiers tempted the kings to impose enormous taxes on the Jewish communities, which were impoverished by their efforts to pay them. The Church, the Cortes, and the nobility frequently cast a jaundiced eye on the rise of the Jewish courtiers, who competed with them for royal favor and gave too powerful a hand to the strengthening of the monarchy. Thus they frequently put pressure on the king to dislodge his Jewish courtiers. In spite of all efforts, however, the institution of the Jewish courtier increased in influence in Castile, rather than the contrary.

In Aragon Jewish courtiers were to be found at the court of James I, who used them as interpreters in his survey of the Arab lands he had reconquered. The king also invited the Jews to settle in his newly acquired lands; they were to receive their share of the conquered territory on the sole condition that they settled on it. There too they were preferred to Muslims, for the problem of resettling the former Arab lands was ever present. Thus Jews from the north of Aragon spread gradually southward, establishing new communities. By the edict of Valencia, March 6, 1239, the king confirmed the authority of the *bet din* in suits between Jews, except in cases of murder. He also recognized the need for witnesses of each religion in cases involving Christians and Jews. The validity of the *oath more judaico* was reaffirmed. Any Jew who was arrested had

to be freed between midday on Friday and Monday morning. The king took the Jews and their property under his protection and forbade anyone to harass them except for a debt or crime which could be firmly established. This charter often served as the model for similar charters in towns throughout Aragon. James I also undertook to protect the Jews of newly conquered Majorca. As these measures proved insufficient to populate the new communities, on June 11, 1247, James promised safe conduct and citizenship to any Jew coming by land or sea to settle in Majorca, Catalonia, or Valencia. As far as the internal life of the communities was concerned, he confirmed and extended their autonomy. By the privilege granted to the community of *Calatayud on April 22, 1229, he authorized the community to appoint a rabbi and four directors (*adenanti*) to control their affairs, and to dismiss these officials if they deemed it necessary. They were also authorized to arrest and even sentence to death any malefactors in their midst. The community did not have to account for any death sentences it passed but had to pay the king 1,000 solidos for every one of these. The four *adenanti* directing the community could, with the agreement of the *aljama*, pronounce excommunication. Thus the elected heads of the community exercised considerable power, especially the authority to impose the death sentence, which in fact was only pronounced against informers. The king rarely attempted to interfere with this autonomy, leaving the communities to direct their own affairs.

Beginning of the Christian Reaction

However, early in the 13th century, a Christian reaction made itself felt, under the influence of *Raymond de Peñaforte, Dominican confessor to the king. From Barcelona he attempted to limit the influence of the Jews by fixing the interest rate on moneylending at 20%, by limiting the effectiveness of the Jewish oath, and restating the prohibition on Jews holding public office or employing Christian servants (Dec. 22, 1228). The Council of Tarragona (1235) restated these clauses and forbade Muslims to convert to Judaism or vice versa. The Cortes increased their attempts to suppress Jewish moneylending.

Thus the climate had changed. Following the example of France, the kingdom of Aragon initiated a large-scale campaign to convert the Jews through exposing the "Jewish error." From 1250 the first blood libel was launched in Saragossa. Soon the example of Louis IX found Spanish imitators: James I found himself obliged to cancel debts to Jews (1259). Soon after, an apostate Jew carried over to Spain the work of Nicholas *Donin of France, provoking a disputation between Pablo *Christiani and the most famous rabbi of the day, *Nahmanides. Held before the king, the bishops, and Raymond de Peñaforte, the disputation took place in Barcelona on July 20, 27, 30, and 31, 1263 (see *Barcelona, Disputation of). Central to the disputation were the problem of the advent of the Messiah and the truth of Christianity; probably for the last time in the Middle Ages, the Jewish representative secured permission to speak with complete freedom. After a somewhat brusque disputation, each side claimed the victory. This

constituted no check to Christian missionary efforts; forced conversion remained prohibited but the Jews were compelled to attend conversionist sermons and to censor all references to Jesus or Mary in their literature. Naḥmanides, brought to trial because of his frankness, was acquitted (1265), but he had to leave Spain and in 1267 settled in Jerusalem. By his bull *Turbato corde*, proclaimed at this time, Pope Clement IV gave the Inquisition virtual freedom to interfere in Jewish affairs by allowing the inquisitors to pursue converted Jews who had reverted to their old religion, Christians who converted to Judaism, and Jews accused of exercising undue influence over Christians and their converted brethren. It was becoming apparent that the Jews had outlived their usefulness as colonizers, except in southern Aragon. The old hostility toward Judaism reappeared, but for the time being was content with efforts to convince the Jews of the truth of Christianity. At this period Raymond *Martini, one of the opponents of Naḥmanides, published his *Pugio Fidei*, a work which served as the basis for anti-Jewish campaigns for many years. But the economic usefulness of the Jews was still considerable: in 1294 revenue from the Jews amounted to 22% of the total revenue in Castile. In spite of mounting hostility on the part of the burghers, the state was very reluctant to part with such a valuable source of income.

The very existence of the Jewish communities posed problems for the burgher class. The *aljama* was a neighbor of the Christian municipality but was free from its authority because of its special relationship with the king. The *juderia* thus often seemed to be a town within a town. The *aljama* itself in this period reinforced its authority and closed its ranks, limiting the influence of the courtiers, who were increasingly becoming a dominant class with no real share in the spiritual life of the people. The different communities in Aragon had developed on parallel lines without any centralized organization. At times their leaders met to discuss the apportionment of taxes, but this had never led to the development of a national organization. Within the communities the struggle continued between the strong families who wielded power and the masses. In general the oligarchy succeeded in dominating the communal council with the assistance of the *dayyanim* who, since they were not always scholars, had to consult the rabbinical authorities before passing judgment according to Jewish law. Around the end of the 13th century the *dayyanim* began to be elected annually, the first step toward greater control by the masses. Soon after, these masses managed to secure a rotation of the members of the council, but nevertheless these were nearly always chosen from among the powerful families.

Such a climate of social tension, aggravated by the anxiety caused by the insecure state of the Jews, proved fruitful for the reception of kabbalistic teachings, transplanted at the beginning of the 13th century from Provence to Gerona. Mainly due to the works of Naḥmanides, the kabbalistic movement developed widely (see *Kabbalah). Between 1280 and 1290 the Zohar appeared and was enthusiastically received. Philosophy appeared to be in retreat before this new trend. At this very

moment the Maimonidean controversy broke out once more, beginning in Provence where the study of philosophy had received a new impetus through the translations of works from Arabic by the Ibn *Tibbon and *Kimḥi families. The quarrel reached such dimensions that the most celebrated rabbi of the day, Solomon b. Abraham *Adret, rabbi of Barcelona, was obliged to intervene. A double *herem* was proclaimed on those who studied Greek philosophy before the age of 25 and on those who were too prone to explain the biblical stories allegorically. Exceptions were made on works of medicine, astronomy, and the works of Maimonides. This ban was probably another sign of the decline of the Jewish community of Aragon and its increasing tendency to withdraw into itself. During the same period Jewish courtiers lost their influence and left the political arena.

In Castile, on the other hand, Jewish courtiers continued to play an important role in spite of the efforts of other courtiers to be rid of them and of the Church to condemn them as usurers. Apostates were at the fore in this struggle, especially *Abner of Burgos who, becoming a Christian in 1321 and, taking the name Alfonso of Valladolid, tried to remain in close contact with the Jewish community, the better to influence it. Around the same period, Gonzalo *Martínez de Oviedo, majordomo to the king, obtained the temporary dismissal of Jewish courtiers and planned the eventual expulsion of all the Jews of the kingdom. Soon himself accused of treason, he was put to death (1340) and his plan fell into abeyance. At the beginning of the 14th century *Asher b. Jehiel became rabbi of Toledo, the principal community in the kingdom, holding this office from 1305 to 1327. After the imprisonment of his master, *Meir b. Baruch of Rothenburg, he had been the leading rabbinic authority in Germany, a country he fled from in 1303. Practically as soon as he arrived in Spain he was involved in the philosophic controversy and signed the ban proclaimed by Solomon b. Abraham Adret. On the latter's death he became the leading rabbinic scholar in Spain, where he disseminated the methods of the tosafists and the ideals of the *Ḥasidei Ashkenaz. The attitude of the Catholic monarchy toward the Jews continued to vacillate. Alfonso XI resolved to root out Jewish usury but to permit the Jews to remain (1348). The *Black Death, which reached Spain at this period, did not give rise to persecutions like those which swept central Europe. Alfonso's successor, Pedro the Cruel (1350–69) brought Jewish courtiers back into his employment and allowed Don Samuel b. Meir ha-Levi *Abulafia, his chief treasurer, to build a magnificent synagogue in Toledo in 1357 (it was later turned into a church and subsequently into a museum). Despite the fall of Don Samuel, who died in prison, other Jewish courtiers retained their positions and influence. During the civil war between Pedro and his bastard half-brother, Henry of Trastámara, the Jews sided with the king, who, therefore, was even called the king of the Jews. When Burgos was taken by the pretender (1366), the Jewish community was reduced to selling the synagogue appurtenances to pay its ransom. Some of its members were even sold into slavery. Henry's victory,

augmented by the capture of Toledo (in which many Jews fell victim), reduced the local community to destitution: the king had seized at least 1,000,000 gold maravedis. However, this did not prevent the king from appointing Don Joseph *Picho as tax farmer and other Jews from filling important positions. Incited by the Cortes, he imposed the Jewish badge and forbade Jews to take Christian names, but he did not dismiss his Jewish courtiers. Meanwhile the condition of the Jews in the kingdom deteriorated. In 1380 the Cortes, as a result of the secret execution of Don Joseph Picho as an informer on the orders of the rabbinical tribunal, forbade the Jewish communities to exercise criminal jurisdiction and to impose the death penalty or banishment. In Castile the first part of the 14th century was dominated by the personality of *Jacob b. Asher, third son of Asher b. Jehiel, who was *dayyan* in Toledo. Around 1340 he published his *Arba'ah Turim*, a codification of the law combining the Spanish and the Ashkenazi traditions, which was widely distributed. His brother *Judah b. Asher succeeded his father in Toledo and became in effect the chief rabbi of Castile.

The situation in Aragon was generally both less brilliant and less disquieting. There the influence of the Jews at court had practically disappeared with the dismissal of the Jewish courtiers. The Jews were tolerated and had the right to royal protection within the limits of Church doctrine on the matter. The taxes raised from the Jews were an important source of revenue and so they were allowed to pursue their commercial ventures and direct their own internal affairs. Under the reign of James II (1291–1327) the Inquisition had begun to show an interest in the Jews but the king declared that their presence was an affair of state and not a religious concern, an attitude characteristic of the monarchy for many years. James gave no assistance to the efforts to convert the Jews. When the *Pastoureaux arrived in Aragon, the king resisted them vigorously in his efforts to spare the Jews from this menace. During his rule (1306) Jews expelled from France were permitted to settle in Spain. Unlike in Castile, in Aragon the Black Death gave rise to anti-Jewish excesses. In Saragossa only 50 Jews survived and in Barcelona and other Catalan cities the Jews were massacred. So shattered were the communities by these riots that their leaders convened in Barcelona in 1354 to decide on common measures to reestablish themselves. They resolved to establish a central body to appeal to the papal curia to defend them against allegations of spreading the plague and to secure for them some alleviation in their situation. A delegation sent to Pope Clement VI in Avignon succeeded in having a bull promulgated which condemned such accusations.

It would seem that the attempt to create a central organization did not succeed, but the Aragon communities had nevertheless reorganized. From 1327 the Barcelona community succeeded in abolishing all communal offices which were acquired by royal favor. Authority and power within the community were henceforth vested in the Council of 30, elected by the community notables. The 30 were trustworthy men, judges or administrators of charities, who were empowered to issue

takkanot and apportion taxes. They were elected for three-year terms and could serve more than one term; however, close relatives could not sit on the same council. Although in effect the aristocracy remained in power, they were no longer all-powerful. The presence in Barcelona of eminent masters of the law counterbalanced the ambition of the powerful families. Nissim b. Reuben *Gerondi (d. c. 1375), *av bet din* in Barcelona, exercised great influence over all Spanish Jewry, as attested by his many responsa (the majority of which are unfortunately no longer extant). Ḥasdai *Crescas, born in Barcelona around 1340, who seems to have been close to court circles, became the most venerated authority in Spanish Jewry. *Isaac b. Sheshet Perfet, also born in Barcelona (1326), rapidly became known as a leading rabbinic authority. A merchant by trade, he later served as rabbi in various communities. On April 2, 1386, Pedro IV approved a new constitution for the Barcelona community which constituted slight progress toward democratization. The community was divided into three classes, almost certainly according to their tax contribution. Each class was empowered to nominate a secretary and elect ten members of the council. With the secretaries, the 30 elected members made up the grand council of the community. Five representatives of each class and the secretaries constituted the smaller council. The secretaries served for one year only and could only be renominated after two years had expired. One-third of the 30 members had to be renewed each year. The council had limited powers only, being unable to establish tax allocations without the approval of the 30. Tax assessors had to be chosen from among the three classes. The influence of the powerful families was thus curbed, extending only over the class of the community of which they were members.

The smaller communities, of course, established a less complex system of administration. Councils were not appointed there until the second half of the 14th century. In many places the local oligarchy seems to have maintained its power. In Majorca, essentially a mercantile community, this oligarchy was composed of merchants who prevented any democratization of the administration. The royal administration recognized the existence of *judios francos*, descendants of courtly Jewish families who paid no taxes to the community and took no part in communal life. They married among themselves and generally remained true to their faith. The communities were also concerned with the moral life of their members. An institution almost unique to Spain in the Middle Ages was the **berurei averah*, notables who watched over the religious life of their communities. The latter also exercised authority over *informers, punishing them with loss of a limb or death, with the approval of the king. The death sentence was generally carried out immediately, which to some seemed dangerous or arbitrary. To avoid the possibility of abuse, in 1388 Ḥasdai Crescas was appointed judge over all informers in the kingdom.

The Persecutions of 1391

Soon the face of Spanish Jewry was brutally altered. In 1378 the archdeacon of Ecija, Ferrant *Martinez, launched a campaign

of violent sermons against the Jews, demanding the destruction of 23 local synagogues. On the death of the archbishop in 1390, he became virtual ruler of the diocese, using this situation to intensify his anti-Jewish campaign and declaring that even the monarchy would not oppose attacks on the Jews. After unsuccessful interventions by the communities, the death of King John I of Castile (1390) left the crown in the hands of a minor who did not attempt to check the redoubtable preacher. On the first of Tammuz 5151 (June 4, 1391) riots broke out in Seville. The gates of the *judería* were set on fire and many died. Apostasy was common and Jewish women and children were even sold into slavery with the Muslims. Synagogues were converted into churches and the Jewish quarters filled with Christian settlers. Disorder spread to Andalusia, where Old and New Castile Jewish communities were decimated by murder and apostasy. In Toledo, on June 20, Judah, grandson of Asher b. Jehiel, refused to submit and was martyred. Attacks were made in *Madrid, *Cuenca, Burgos, and Córdoba, the monarchy making no efforts to protect the Jews. So many people had been involved in the riot that it proved impossible to arrest the leaders. In July violence broke out in Aragon; the Valencia community was destroyed on July 9 and more than 250 Jews were massacred. Others, including Isaac b. Sheshet Perfet, managed to escape. The tardy measures taken by the royal authorities were useless. Many small communities were converted en masse. In the Balearic Islands the protection of the governor was to no avail: on July 10 more than 300 Jews were massacred. Others took refuge in the fortress, where pressure was put on them to compel them to convert. A few finally escaped to North Africa. In Barcelona more than 400 Jews were killed on August 5. During the attack on the Jewish quarter of Gerona on August 10 the victims were numerous. The Jews of *Tortosa were forcibly converted. Practically all the Aragon communities were destroyed in bloody outbreaks when the poorer classes, trying to relieve their misery by burning their debts to the Jews, seized Jewish goods. Yet the motive behind the attacks was primarily religious, for, once conversion was affected, they were brought to an end.

Although he did not encourage the outbreaks, John I of Aragon did nothing to prevent or stop them, contenting himself with intervening once the worst was over. Above all he was concerned to conserve royal resources and on Sept. 22, 1391 ordered an enquiry into the whereabouts of the assets of the ruined communities and dead Jews, especially those who had left no heirs. All that could be found he impounded. At this point Ḥasdai Crescas became in effect the savior of the remnants of Aragonese Jewry, gathering together the funds necessary to persuade the king to come to their defense, appealing to the pope, and offering assistance to his brethren. The assassins were barely punished, but when a fresh outbreak seemed imminent early in 1392 the king swiftly suppressed it. Subsequently he took various measures to assist Ḥasdai Crescas in his efforts to reorganize the communities and reunite the dispersed members. Meanwhile, in Barcelona and Valencia, the burghers, freed from their rivals, seemed op-

posed to the reconstitution of the shattered Jewish communities. A small community was reestablished in Majorca. In the countryside the communities could reorganize more easily; there the Jews were indispensable and less a target of the jealousy of the Christian burghers.

The Conversos

In this period the problem of Jews who had converted by force became acute. Illegal though forced conversion was, in the eyes of the Church a Converso was a true Christian and thus forbidden to return to Judaism. There were indeed a number of Jews who took their conversion to heart and, filled with the zeal of neophytes, reproached their former coreligionists for their "errors" and launched a campaign to bring them to the font. Chief among these was Solomon ha-Levi of Burgos who became *Pablo de Santa Maria in 1391 and later bishop of Burgos. In their desperate state, the Jews could hardly respond energetically. The Christian missionary spirit did not rest content with the successes achieved. The notorious friar Vicente *Ferrer preached in the towns of Castile in 1411–12. Although opposed to forced conversion, he was ready to compel Jews to listen to him and was unconcerned by the anti-Jewish violence which was consequent on his sermons. Following on his activity the government of Castile proclaimed on Jan. 2, 1412, new regulations concerning Jews. Henceforth, in towns and in villages, they were to inhabit separate quarters and, to distinguish them from Christians, had to grow their hair and beards, and could no longer be addressed by the honorific, "Don." They were forbidden to take employment as tax farmers or fill any other public office, nor could their physicians treat Christians; lending on interest was also prohibited. All professions were closed to them and all commerce by which they might ameliorate their miserable existence forbidden. For a time even their internal autonomy and freedom of movement were in question.

In Aragon the situation was more favorable. The community of Saragossa, spared because of the presence of the king in the town, was able to play an important role in the reconstitution of the Aragonese communities. The action of the king gave a semblance of stability to the new Jewish groups. In 1399 the *aljama* of Saragossa, where Ḥasdai Crescas was rabbi, obtained a new statute from Queen Violante defining its power and organization. In June 1412 Ferdinand I became new king of Aragon, thanks to the assistance and support of Vicente Ferrer, who seized the opportunity to extend his activities against the Jews of Aragon. At that moment Joshua *Lorki, who had previously disputed with Pablo de Santa Maria, decided to accept baptism under the name of Geronimo de Santa Fé. In August of the same year he sent a pamphlet to the antipope Benedict XIII which served as the basis for the public disputation soon to be held in Tortosa. The pope invited the Aragonese communities to send representatives to a public disputation to be held in Tortosa on Jan. 15, 1413; it actually took place the following February (see *Tortosa, Disputation of). Probably the antipope wished to achieve a

great religious success at the moment the split Church was attempting to reunite at the Council of Constance. The Jewish delegates presented themselves without great enthusiasm for the issue of the disputation was in no doubt and freedom of expression had been virtually refused. The leading Jewish delegates were *Zerahiah b. Isaac ha-Levi from Saragossa and the philosopher Joseph Albo; as was to be expected Christianity triumphed and the defeat of the Jews resulted in a wave of conversion. The rabbis were given no real opportunity to defend themselves. The major topics of the disputation were the messianic problem and the veracity of the Talmud, and the Jewish delegates, despairing of being truly heard, wished to end the disputation. Only Zerahiah b. Isaac ha-Levi and Joseph Albo defended Judaism against all attack but they failed to convince their colleagues that there was any point in replying. The disputation finally ended in December 1414 and the Jewish delegates returned home.

Acting on a bull promulgated by Benedict XIII on May 11, Ferdinand I ordered on July 23, 1415 the Jews to submit their copies of the Talmud so that all passages deemed anti-Christian might be censored. The Jews were also forbidden to

read the **Toledot Yeshu*. Any attack on the Church was prohibited. Jewish judges lost their authority over criminal cases, even those involving informers. They were also forbidden to extend their synagogues. Christians could no longer employ Jewish agents and the Jews were confined to a special quarter. Apostates could inherit from their Jewish parents. With this even heavier burden to bear, many Aragonese communities were destroyed and conversions were numerous, especially among the higher classes. Aragon Judaism was close to the abyss when Benedict XIII was dismissed from the papacy (1416). On the death of Ferdinand in the same year they acquired a temporary respite.

John II, the new king of Castile (1406–54), and his contemporary, Alfonso V of Aragon (1416–58), had little taste for the religious fervor of their predecessors. The new pope was similarly disinclined to reopen this particular battle. Almost all anti-Jewish measures were therefore abrogated (1419–22). Copies of the Talmud and synagogue buildings were restored to the Jews. In the meantime the Aragonese communities were greatly reduced; those of Valencia and Barcelona had disappeared altogether. In Majorca, the Jews who remained were

dispersed by a blood libel in 1432. Only the rural settlements in the province of Aragon had escaped persecution. At the moment of the expulsion there was an estimated 6,000 Jewish families in Aragon, a meager percentage indeed of the country's total population.

In Castile there were around 30,000 Jewish families, aside from innumerable Conversos, many of whom were in fact Jews. The large communities, Seville, Toledo, and Burgos, had lost their former influence as a result of the apostasy of many members of the ruling class. Henceforward the decisive weight in the Jewish life of the kingdom was maintained by the small rural communities whose numbers rarely exceeded 50 families. The Jews were merchants, shopkeepers, or artisans, with a number of physicians. Some Jewish courtiers managed to retrieve their positions at court; Abraham *Benveniste de Soria was the treasurer of John II, who also appointed him *rab de la corte*, chief rabbi of the kingdom. Abraham Benveniste used his position to undertake the reorganization of Castilian Jewry, convoking in 1432 a convention of representatives of Spanish communities in Valladolid to formulate and adopt new regulations. Their primary concern was to reorganize systems of instruction, to be effected through a tax imposed on slaughter, on wine, on marriages, and on circumcisions. Any community of 15 families or more was to support one primary school teacher, and a community of 40 families must employ a rabbi. It was also laid down that a community consisting of ten families must maintain a place of prayer. Various measures were formulated to regulate the election of judges, who had to act in accord with the rabbi and notables. It was also possible to appeal to the *rab de la corte*. The former laws covering informers and slanderers were abrogated; in future the *rab de la corte* could, under certain conditions, sentence informers to death. Forced betrothals and marriages were strictly forbidden. The *rab de la corte* also had to approve the appointment of any Jew to royal commissions. No Jew was allowed to obtain from the king exemption from payment of the communal taxes. Other decisions of the convention concerned sumptuary laws. Through this strict centralization the Castilian communities found a solution to their problems. It is difficult to ascertain if the regulations of *Valladolid were strictly applied, but they were an answer to the plight of communities greatly reduced in numbers and wealth.

Yet the most pressing problem of Spanish Jewry no longer concerned the communities, for the question of the Conversos became progressively more acute. Showing their awareness and suspicion of the true nature of the mass conversions, Spanish Christians were in the habit of referring to "New" and "Old" Christians and effecting a veritable racial distinction between them. It is undoubtedly true that many Conversos were Christians in name only, acquiring their new status through force alone, and many others had accepted baptism as a means of breaking down social, economic, and political barriers. In pursuit of these aims they had begun to marry into the great Toledan families. Yet they too became concerned when in 1449 the rebels of Toledo issued a statute proclaiming that all New

Christians – regardless of the fervor of their faith – were infamous and unfit for all offices and benefices, public and private, in Toledo and all its dependencies. They could be neither witnesses nor public notaries. The king and pope condemned this proclamation, more through the desire to hasten the conversion of the Jews, which it rendered henceforth impossible, than through any sense of justice. Great harm was done by this proclamation, giving rise to a widespread policy of eradication of real or suspected Jewish influence. Subsequently all religious and political agitation tended to this end.

Steps Toward the Expulsion

The marriage of Isabella, heiress to the throne of Castile, and Ferdinand, heir to the throne of Aragon, in 1469 had disastrous consequences for Spanish Jewry. The two kingdoms were united in 1479. At first they took no heed of the Jewish communities as such, but they considered the Conversos a danger to national unity. The Catholic monarchs continued to employ Jewish functionaries – such as Don Abraham *Seneor, chief rabbi of Castile and tax controller for the whole kingdom, and Isaac *Abrabanel, tax farmer for part of Castile – and a number of Conversos as well. However, in 1476 the right of criminal jurisdiction was taken from the Jewish communities. Soon the Catholic monarchs launched a direct attack on the Conversos, inviting the *Inquisition to extend its activities to the kingdom, which their predecessors had always refused to countenance, fearing the great power of this institution. On Sept. 27, 1480, two Dominicans were named inquisitors of the kingdom of Castile, and they began their activities in Seville in January 1481. Soon after, the first Conversos condemned as Judaizers were sent to their deaths. According to the chronicler Andres Bernaldez, more than 700 Conversos were burned at the stake between 1481 and 1488 and more than 5,000 reconciled to the Church after enduring various punishments. Inquisitors were appointed in 1481 for Aragon, where the papal Inquisition, which had been in existence for some time, was considered insufficiently effective. From 1483 the Jews were expelled from Andalusia, no doubt because it appeared to the inquisitors to be impossible to root out Jewish heresies from among the Conversos while practicing Jews still lived in their midst.

Tomás de *Torquemada, confessor to the queen, was appointed inquisitor-general in the autumn of 1483, providing the Inquisition with a new impetus and stricter organization. His activities stretched from town to town throughout the whole kingdom, bringing terror to Jewish communities everywhere since they were inevitably linked with the Conversos. In less than 12 years the Inquisition condemned no less than 13,000 Conversos, men and women, who had continued to practice Judaism in secret. Yet these were no more than a fraction of the mass of Conversos. When the last bastion of Muslim power in Spain fell with the triumphant entry of the Catholic monarchs into Granada on Jan. 2, 1492, the urge toward complete religious unity of the kingdom was reinforced. The scandal of the Conversos who had remained true to Ju-

daism had shown that segregation of the Jews and limitation of their rights did not suffice to suppress their influence. They must be totally removed from the face of Spain. Thus on March 31, 1492 the edict of expulsion was signed in Granada, although it was not promulgated until between April 29 and May 1. All Jews who were willing to accept Christianity were, of course, to be permitted to stay.

In May the exodus began, the majority of the exiles – around 100,000 people – finding temporary refuge in Portugal (from where the Jews were expelled in 1496–97), the rest making for North Africa and Turkey, the only major country which opened its doors to them. A few found provisional homes in the little kingdom of Navarre, where there was still an ancient Jewish community in existence, but there too their stay was brief, for the Jews were expelled in 1498. Considerable numbers of Spanish Jews, including the chief rabbi Abraham Seneor and most of the members of the influential families, preferred baptism to exile, adding their number to the thousands of Conversos who had chosen this road at an earlier date. On July 31 (the 7th of Av), 1492, the last Jew left Spain. Yet Spanish (or Sephardi) Jewry had by no means disappeared, for almost everywhere the refugees reconstituted their communities, clinging to their former language and culture. In most areas, especially in North Africa, they met with descendants of refugees from the 1391 persecutions. In Erez Israel they had been preceded by several groups of Spanish Jews who had gone there as a result of the various messianic movements which had shaken Spanish Jewry. Officially, no Jews were left in Spain. All that were left were the Conversos, a great number of whom remained true to their original faith. Some later fell victim to the Inquisition; others managed to flee from Spain and return openly to Judaism in the Sephardi communities of the Orient and Europe.

Cultural Life

From the beginning, the cultural life of Spanish Jewry under the Christian reconquest followed on the style set under Muslim rule. Eastern influence lost none of its force even though a frontier henceforward separated the communities of the north from those of the south. In fact, the contrary was the case, since the Jews of Christian Spain often appeared to be indispensable agents in the diffusion of the Eastern cultural tradition. Consequently, many of them were translators of Arabic; some, like the *Kimḥis and the Ibn *Tibbons, even carried their work as translators to the north, to Provence. In Christian Spain the Jews continued to study the sciences, medicine in particular, and the Christian kings employed numbers of Jewish physicians. They were also well versed in astronomy and shortly before the expulsion Abraham *Zacuto prepared the astronomical tables that Christopher Columbus used on his voyage. The Jewish “nobility” had frequently received the same education as their Christian counterparts, reaching a cultural integration rarely equaled in Jewish history. Of course

this process only affected the families of Jewish courtiers, but this type of assimilation goes a long way toward explaining both the phenomena of Marranism – entailing the need to lead a double life – and the ability to abandon the Jewish heritage without regret and join the Christian fold. Yet the majority of people still looked to their traditional Jewish cultural heritage, which remained central to their lives. The relation of the journey of *Benjamin of Tudela to the communities of Europe and Asia, and the work of the historian Abraham *Ibn Daud in his account of the continuity of Jewish tradition are well worthy of mention. The main stress, however, lay on the study of the Hebrew language and of the Bible and Talmud, and on the development of a style of Hebrew poetry which took the profane as well as the sacred for its subject matter. In all fields there was no real break with the Judeo-Arab milieu. For many years the Babylonian academies continued to be a major influence, but rabbinical scholarship in Spanish Jewry came to maturity in the 11th century with the work of Isaac b. Jacob ha-Kohen *Alfasi. The latter, assisted by his pupils, especially Joseph b. Meir ha-Levi *Ibn Migash, created a Spanish Jewish talmudic academy which proceeded to develop its own methods. The theories of the grammarians in Muslim Spain were already known in the north and were accepted there. Poets flourished in the retinue of Jews who were wealthy or well placed at court. Poetry often remained a profession. Along with many of his contemporaries, *Judah Halevi left Muslim Spain for the Christian part of the country without finding success there. His poems were torn between the two worlds and Judah Halevi finally left for the Holy Land. Along with Judah Halevi and Moses *Ibn Ezra, Solomon ibn *Gabirol brought Hebrew poetry to a peak of perfection. Their religious poems, the main body of their work, permanently enriched the liturgy. At the same time they gave a new dimension to Hebrew poetry by extending it beyond its liturgical framework to cover every variety of a benevolent patron. The interest in poetry also gave rise to liturgical and biblical studies; biblical Hebrew once more predominated over rabbinical Hebrew. Following in the path of Menahem b. Saruk and *Dunash b. Labrat were such grammarians as Judah b. David *Ḥayyuj, Jonah *Ibn Janaḥ, Moses ha-Kohen ibn *Gikatilla, and above all Abraham *Ibn Ezra, who produced their grammatical treatises in Hebrew and so enabled the Jewish grammarians of France and Germany to become aware of and adopt the theories of their Spanish counterparts. The same writers often produced biblical commentaries: Joseph b. Isaac *Ibn Abitur on Psalms, Moses ha-Kohen ibn Gikatilla on Isaiah, the Latter Prophets, Psalms, and Job, and Abraham ibn Ezra on the entire Bible (although some portions of his commentary are no longer extant). In this period the **maqāma* – an Arabic verse form – made its debut in Jewish literature with the *Taḥkemoni* of Judah *Al-Ḥarizi. Yet the golden age of Hebrew poetry in Spain was already drawing to a close.

During the 11th century talmudic studies took root in Spain with the arrival of Isaac b. Jacob *Alfasi and continued to be greatly influenced by his work. With the aim of summing

up the discussions of the sages and pointing out the correct *halakhah*, he prepared a resumé of the Talmud. In this work, he stressed practical observance, an attitude which was characteristic of the great Spanish talmudists. His main pupil, Joseph b. Meir ha-Levi ibn Migash, followed in his footsteps and, like his teacher, wrote a number of responsa clarifying points of the law. The greatest stimulus to talmudic studies was the work of Maimonides, who spent his formative years in Spain and can be considered a Spanish scholar. He, too, produced works of *codification of the law, the *Mishneh Torah* and *Sefer ha-Mitzvot*, and wrote numerous responsa. Like other Spanish rabbis, he did not hesitate to bring out his works in Arabic so that they could be understood by all. This bilinguality in Hebrew and Arabic was a mark of the first era of Spanish Jewry. Another equally important characteristic was its enthusiasm for philosophical debates. Spanish Jewry's integration into the contemporary Arab culture obliged it to face the same problems, though generally with an avowedly polemic intent. Writers were largely concerned with demonstrating that revelation and philosophy were not necessarily contradictory and that in any case Judaism represented the superior truth. Although Ibn Gabirol's philosophical work *Fons Vitae* has no specifically Jewish character, Judah Halevi devoted himself to a vigorous apology for Judaism. *Bahya ibn Paquda, a moralist, attempted to show the superiority of ethical conduct over the ceremonial law, which becomes falsified if the "duties of the heart" are neglected. However, the greatest representative of the philosophic trend was Maimonides, who followed it to formulate his classic definition of the dogmas of Judaism. Nevertheless, from the beginning of the 13th century the supremacy of philosophy was challenged in the controversy over Maimonides' works (see *Maimonidean Controversy), especially in the north of Spain, which had then reverted to Christian rule. The change in attitude was influenced by disillusionment arising from the changed conditions of Jewish life, by the renewed interest in talmudic studies due to the work of the Franco-German tosafists, and by the new trends in Jewish mysticism which first appeared in Provence before reaching Spain. At the beginning of the 14th century the Franco-German talmudic tradition came face to face with the Spanish through the arrival of *Asher b. Jehiel, resulting in the preservation of unity in the field of Jewish law. Warmly received by the greatest Spanish scholar of the day, Solomon b. Abraham *Adret, Asher b. Jehiel cooperated with him in restoring peace: the study of philosophy was permitted, but under clearly defined conditions. Time, too, had done its work and the controversy was soon stilled. In the meantime the Kabbalah became increasingly important, especially in the group at Gerona. The celebrated talmudist Nahmanides became one of its leading advocates. The appearance of the *Zohar, the largest part of which was produced by *Moses b. Shem Tov de León between 1280 and 1286, gave a powerful impulse to the development of the kabbalistic trend which became predominant in Spain. Talmudic studies too gained a new impetus through the commentaries, novellae, and responsa of Nahmanides, Solomon

b. Abraham Adret, Asher b. Jehiel, and Nissim b. Reuben *Gerondi. *Jacob b. Asher, son of Asher b. Jehiel, produced his codification of the law, the *Arba'ah Turim*, which remains to this day the archetype of the rabbinic code and was one of the bases of the Shulḥan Arukh. Another code, *Sefer Abudarham*, was compiled by David b. Joseph *Abudarham of Seville. Following in the same path, *Menahem b. Aaron ibn Zerah of Navarre composed his *Zeidah la-Derekh*. *Yom Tov b. Abraham Ishbili was especially noted for his many novellae; Isaac b. Sheshet Perfet, who had to leave Spain in 1391, wrote many responsa. Biblical commentaries (frequently showing kabbalistic influences) also came to the fore once more with the works of Nahmanides, Bahya b. Asher, and Jacob b. Asher, although the latter resolutely avoided kabbalistic speculation. Nevertheless the persecutions had grave consequences for scholarship too. The Judeo-Arab heritage began to disappear. Those conditions which had drawn Spanish Jews toward the study of science, medicine, and astrology in particular ceased to exist. This decay became more marked in the 15th century. Apart from the philosophic works of Ḥasdai Crescas and Joseph Albo, whose *Sefer ha-Ikkarim* was a new attempt to define the dogmas of Judaism, the creative period had passed. The messianic upheaval, exacerbated by persecution, only prolonged it slightly; the spirit of this period is best expressed in the works of Isaac b. Judah Abrabanel, who in 1492 preferred exile to apostasy. Probably stimulated by fear for the future, interest in kabbalistic speculation continued unabated. The expulsion itself did not mark a final end of the development of this specific type of culture. Abraham Zacuto finished his rabbinical history on the way to exile. The intellectual activity of Spanish Jewry was transferred to Eastern and European centers. Even the use of the Spanish language continued unchanged (see *Ladino; *Sephardim). Such was the vitality of this outlook that it remained seminal in Jewish life for many centuries

[Simon R. Schwarzfuchs]

Modern Period

Though the edict of expulsion of 1492 was not formally repealed until December 1968 and was consequently, on the Spanish statute book until that date, Jews had been allowed to live in Spain as individuals, though not as an organized community, from the late 19th century. The Republican Constitution of 1868 introduced for the first time in modern Spain the principle of religious tolerance. This was maintained in subsequent legislation and transformed into the more enlightened formula of religious freedom by the amendment to the *Fuero de los Españoles*, adopted by the referendum of December 1966. The new statute guaranteed the right of non-Catholics to maintain their organized institutions, public worship, and religious education. Jews, as such, were not specifically mentioned in any legal enactment but, as non-Catholics, they enjoyed equal rights with their Catholic fellow citizens. The only instance of "Jewish legislation" is a decree of December 1924 which granted to Sephardi Jews living abroad the right to claim Spanish nationality and settle in Spain, if they wished.

This decree, although initially referring only to the Sephardi groups of *Salonika and *Alexandria, afforded the legal basis for extending the protection of the Spanish authorities to many Jews in Nazi-occupied countries during World War II.

[Jeonathan Prato]

Holocaust Period

From 1933 until the Civil War, Spain became a haven for about 3,000 Jewish refugees. The Civil War caused most of them to leave, and after the nationalist victory, when all non-Catholic communities had to close their institutions, Jewish public and religious life was destroyed. After the fall of France, Spain served for tens of thousands of refugees as a landbridge to the high seas, which were dominated by the Allies. By the summer of 1942, over 20,000 Jewish refugees had passed through Spain, 10,500 of whom were assisted by the *HICEM office in Lisbon. Less than 1,000 were unable to continue the journey, however, and were imprisoned with other refugees in jails or in the *Miranda de Ebro concentration camp. Some refugees who crossed the border illegally were sent back to France. In the summer of 1942, when the “Final Solution” was initiated by Germany, a new wave of Jewish refugees reached Spain, and their numbers grew after the occupation of southern France. Initially there was no change in Spain’s policy: refugees were accepted and arrested, and some were deported. In December 1942, however, when the Allies wanted French deserters to cross the Spanish border, Spain had to agree to stop deporting refugees and allow them to leave for North Africa and Portugal. In April 1943, Spain permitted the establishment in Madrid of the Representation of American Relief Organizations, most of whose budget came from the American Jewish *Joint Distribution Committee (AJDC). About 5,600 Jews survived by fleeing to Spain during the second half of the war. In 1943, Spain was faced with an additional rescue problem. Four thousand Jews – of whom 3,000 were in France and the rest in the Balkans as well as a number of Jews from Spanish Morocco who were living in French Morocco, possessed partial or full Spanish citizenship. Most of the Spanish consuls protected these Jews, even when they were instructed to act only when Spanish sovereignty was affected. On Jan. 28, 1943, *Eichmann and his associates presented Spain with the alternative of either recalling these Jewish subjects within a specified time or abandoning them to slaughter. On March 18, 1943 Spain decided that only those who could prove their Spanish citizenship would be permitted to enter the country. They would have to live in specified towns and would remain in Spain until they could be removed elsewhere. As long as there was one group of these “repatriates” in Spain, the next group could not enter the country. This policy was strictly adhered to. Since the Allies delayed for a year and a quarter the establishment of a refugee center in North Africa, which they had agreed upon at the *Bermuda Conference, the AJDC could not remove the “expatriation” by Spanish consuls without having recourse to repatriation; the rest died or saved themselves. In the last stages of the Holocaust, Spain joined the rescue operation in

Hungary by giving protection certificates to 2,750 Jews who were not Spanish citizens.

[Haim Avni]

After World War II

The improving economic, social, and general conditions prevailing in Spain after World War II attracted an increasing number of Jews. According to an unofficial estimate some 8,000 Jews lived in Spain in 1968, distributed as follows: 3,000 in Barcelona, 2,500 in Madrid, 1,400 in Melilla, 600 in Ceuta, 300 in Malaga, and 50 in Seville. Individual Jews were scattered in many other cities. Until 1945 the bulk of the community was constituted of families originating from East Mediterranean, Balkan, and East and Central European countries. Since then a considerable number of Jews from former Spanish and French Morocco settled in the Peninsula: about 85% were of Sephardi origin. Until 1967 a Jewish community could not obtain legal recognition as a religious body (the community of Madrid was registered as a corporation under the law of private associations). Nevertheless they maintained an almost complete range of religious activities and services. In Barcelona a community center housed the synagogue, a rabbinical office, and a cultural center. In Madrid a new synagogue was officially inaugurated in December 1968 in the presence of government and ecclesiastical authorities. To mark the importance of the event, the Spanish government issued a formal repeal of the edict of expulsion. An increasing effort was made to provide Jewish education to the new generation. In Madrid a primary school had some 80 children in 1968. Hebrew lessons were given to pupils attending private schools. Two summer camps in Madrid and Barcelona were attended by 200 youngsters. A Maccabi movement, functioning in Madrid and Barcelona, afforded a framework for an increasing number of young people. The Council of Jewish Communities of Spain, established in 1963 for the coordination and study of common activities and problems, issued a monthly bulletin in Spanish, *Ha-Kesher* (1963–), dealing with local and general Jewish affairs.

In the 1960s, Spain saw a revival of studies of general and Hispanic Jewish culture. The universities of Madrid, Barcelona, and Granada had chairs of Hebrew language, Jewish history, and Jewish literature. In 1940 the Arias Montano Institute of Jewish and Near Eastern Studies was established in Madrid under the guidance of distinguished Hebrew scholars; its quarterly publication *Sefarad* acquired a reputation in the field of Sephardi culture. The Spanish Council of Scientific Research, in conjunction with the World Sephardi Federation, organized an Institute of Sephardi Studies in Madrid for the study of all aspects of Sephardi culture since the expulsion, throughout the world. In 1964 a Sephardi Center was created in Toledo by a decree of the head of state: its board included the president of the Jewish Community of Madrid and a professor of Jewish history of The Hebrew University of Jerusalem, both *ex officio*, a representative of the World Sephardi Federation, and three outstanding personalities of the Sephardi world. The new climate created in the Catholic world as a result of Vati-

can Council II made possible the organization of the Amistad Judeo-Christiana with the approval of the Church hierarchy in Madrid and Barcelona. This organization revised school textbooks, eliminating from them passages offensive to the Jewish people and religion.

In the post-Franco era (from 1975) the position of the Jews in Spain improved to a considerable extent, mostly as a result of the radical social changes which took place in the country. During the 1970s the number of Jews in Spain grew to about 12,000, the majority (90%) of Moroccan, Algerian and Tunisian origin, and the remainder from Eastern Europe, France, Turkey and the Balkan countries.

At the end of 1978 a major change in the constitution of Spain took place when, following a national referendum, the Catholic Church was disestablished as the state religion, as a result of which Jews were given equality with all the other religious denominations, such as the Protestant Church. Organized communities existed in Madrid, Barcelona, and Malaga. Madrid's impressive new synagogue, built in 1968, served as a center for social activities. Both Madrid and Barcelona had rabbis. Educational and social activities in Barcelona took place in the spacious communal hall attached to the synagogue and courses for youth were conducted by emissaries from Israel. There was no rabbi in Malaga, with communal affairs in the hands of a lay committee. Kosher meat was imported from Morocco.

In 1992, in a symbolic gesture, King Juan Carlos repealed the 1492 expulsion order. The two major Jewish centers remained Madrid (with about 3,000 Jews in the early 21st century) and Barcelona (also with about 3,000), followed by Malaga and with smaller communities in Alicante, Benidorm, Cadiz, Granada, Marbella, Majorca, Torremolinos, and Valencia. The total Jewish population in the early 21st century was around 12,000. The majority of Jews were Sephardi. In Spanish North Africa there were communities in Ceuta and Melilla. The 1970s and 1980s saw immigration from Latin America. The Latin Americans took the initiative in forming groups that brought Jews together for cultural and intellectual events. The communities were united in the Federacion de Comunidades Israelitas de Espana. Jewish day schools operated in Barcelona, Madrid, and Malaga.

In the absence of laws restricting hate propagation or Holocaust denial, Spain served as a publishing and distribution center for neo-Nazis and other extreme rightists.

RELATIONS WITH ISRAEL. Though no diplomatic relations existed between Spain and Israel until 1986, Spain nevertheless maintained a Consulate General in Jerusalem, which had existed prior to the establishment of the State of Israel. There was no parallel Israel representation, however, in Spain. In the Israel-Arab conflict, Spain adopted a markedly pro-Arab line, seeing itself as a bridge between Western Europe and the Arab world. However, sympathy for Israel was not negligible. Trade, tourist, and shipping relations between Israel and Spain developed substantially. Exports from Israel to Spain increased

from \$500,000 in 1960 to \$616 million in 2004, imports from \$100,000 to \$652 million. In 2004, 21,400 Spanish tourists arrived in Israel, up from 7,800 in 1980.

SPANDAU, city in Germany; since 1920 part of the metropolitan area of *Berlin. Jews settled in Spandau as early as the 13th century. Although a source dated 1307 gave Jews permission to maintain a communal slaughterhouse, meat selling was limited to those who maintained a house in the city. Jews were engaged mostly in moneylending, having been given permission to do so providing they charged a reasonable rate of interest and refrained from debasing the coinage. In part, the granting of the privilege was intended to help provide the funds for the building of the city walls. As an additional stimulus to Jewish settlement, Duke Rudolph submitted to the city council (1324) a plan for exempting Jews from all taxes for a period of two years. A cemetery was noted in 1324 and a synagogue in 1342. (In 1955–56, 19 Jewish gravestones which dated from 1284 to 1947 were unearthed in Spandau.) The Jews of Berlin buried their dead in Spandau until the 15th century. While some Jews reached high levels of governmental administration in the financial service of Duke Louis, the Jewish community itself went through a period of considerable unrest at the time of the *Black Death persecutions. In 1496 there were 50 Jews in the city. In 1510, however, Jews were accused of desecrating the *Host and were driven from the city. Their cemetery and synagogue were confiscated. No Jews lived in Spandau until the 18th century. In 1782 there were eight Jews in the city, and in 1812 there were 52. Religious services were held in a private home, and a religious school was established in 1854. The Jews of Spandau joined with those of Nauen and Kremmen as a single community until 1894. After that time the Jews of Spandau again maintained a separate community, building a synagogue in 1895. Expanded commercial activity brought additional Jews to the city. By 1880 there were 165 Jews in Spandau; 316 in 1910; 514 in 1925; 725 in 1933. In 1937 there were 381. On the eve of the Nazi accession to power, the community maintained a religious school and three philanthropic organizations. Its fate during the Holocaust was part of that of the Jews of all Berlin. In 1989 a memorial was consecrated to the former synagogue that was destroyed in 1938.

SPANEL, ABRAM NATHANIEL (1901–1985), U.S. industrialist, inventor, philanthropist. Spanel was the founder of one of the biggest corset and brassiere companies in the U.S. and an inventor who held more than 2,000 patents. He was probably best known, however, for the editorials he wrote as paid advertisements in scores of newspapers all over the country for more than 40 years. In them, he offered his opinions on world affairs, with particular emphasis on matters affecting the State of Israel, whose cause he championed.

Born in Odessa, Russia, the son of a tailor and a laundress, he was taken to Paris by his family at an early age, and then to Rochester, N.Y., when he was 10. He was a student at the University of Rochester for three years, then invented a garment bag that could be aired and moth-proofed with a vacuum cleaner. He made his first million dollars with his first business, the Vacuumizer Manufacturing Company. In 1932 he founded the International Latex Corporation, which later became the International Playtex Corporation. Playtex was the first company to make a bra with elastic, the first to package intimate apparel and sell it as a brand, and the first to advertise it on television. It was also the first to use live women modeling bras in TV commercials. Spanel retired as chairman of International Playtex in 1975, but remained active as head of the Spanel Foundation and Spanel International Ltd., a business he started in 1976 to manufacture some of his inventions. Spanel was awarded patents on an eclectic range of products, including a hair-cutting device to be used in the home and a pneumatic stretcher for transporting military personnel wounded in combat. His philanthropic interests focused on medical research, especially child care. He established the Spanel Foundation for Cancer Research in New York City and the Playtex Park Research Institute at his company's headquarters in Dover, Delaware. His employees were provided with free Vitamin C tablets and were among the first workers to have air-conditioning, paid health and life insurance, and a profit-sharing plan. During World War II, Spanel contributed more than \$1.5 million to the war effort, the profits he had made on war contracts. A staunch advocate of Franco-American relations, he was made a Commander of the Legion of Honor by France.

SPANIER, ARTHUR (1889–1944), German scholar and librarian. Spanier, who was born in Magdeburg, studied classical languages at the University of Berlin and Hebrew at the Lehranstalt fuer die Wissenschaft des Judentums (1908–13). In 1914–15 he worked as a school teacher in Berlin, and then served in the German army. After the war he resumed teaching, first in Berlin, and then in Koenigsberg. He was appointed

a research fellow at the newly founded *Akademie fuer die Wissenschaft des Judentums in 1919–20. He received his Ph.D. in Freiburg/Breisgau in 1920. In 1921 he entered the service of the Prussian State Library, becoming head of the Hebraica and Judaica division in 1926, specializing also in the Armenian language. As a “non-Aryan” he was pensioned off in 1935. From 1937 he lectured at the *Hochschule fuer die Wissenschaft des Judentums. In 1938 he was taken to the Sachsenhausen concentration camp, but was released, whereupon he immigrated to the Netherlands in 1939. He perished at *Bergen-Belsen.

Spanier’s main scholarly interests and works were in Talmudics. He wrote *Die Toseftaperiode in der Tannaitischen Literatur* (1922), in which he suggested that Tosefta had its origin in marginal notes to the Mishnah; *Die Massoretischen Akzente* (1927); *Das Berliner Baraita Fragment* (1931); *Zur Frage des Literarischen Verhaeltnisses zwischen Mischnah und Tosefta* (1931).

SPANISH AND PORTUGUESE LITERATURE.

Biblical and Hebraic Influences

One result of the Christian struggle against Muslim invaders of the Iberian peninsula from the eighth century onward was the blending of national and religious aspirations, which revealed itself in Spanish literature. Jews and Christians cooperated in translating the Bible into the vernacular, and the Old Testament version was taken direct from the Hebrew in renderings that antedate 1250. Thus, although Juan I of Aragon prohibited such activities in 1233, *Alfonso the Wise (Alfonso X of Castile, 1221–1284) enthusiastically encouraged the translation of the Bible into Spanish. Indeed, Alfonso himself, in his *General e grande Estoria*, linked the history of the world as known in his time with the Hebraic history of the Bible. In the 15th century further biblical projects were promoted by Jews or Conversos. The version by Moses *Arragel (1422) was followed by that published by Abraham *Usque, whose Ferrara Bible (1553) appeared in two slightly differing editions. Usque’s Bible inspired Jewish translations into Judeo-Spanish or *Ladino, the dialect of Spanish which Jewish exiles took with them after the Expulsion of 1492. With the official Catholic ban on Spanish versions of the Bible a century later, these became a Jewish monopoly, and after 1600 Spain ceased to be a Bible-reading country until the Spanish hierarchy changed its policy at the end of the 18th century.

During the Renaissance, however, the Bible was a significant influence in Spanish and Portuguese literature, though more especially among writers of Jewish or *Marrano origin, whether in the Iberian peninsula or abroad. Luis de *León (1527–1591), a humanist scholar and poet whose New Christian descent was responsible for his spending five years in the

cells of the Inquisition, is said to have translated the Song of Songs from the Hebrew, and biblical themes and metaphors greatly influenced his original verse. Much the same may be said of the mystical poets of the Spanish Renaissance, notably Saint John of the Cross (1542–1591). Biblical echoes can even be found in the works of a completely secular writer such as Garcilaso de la Vega (1503–1536). Diego Sánchez (c. 1530) composed a *Farsa de Salomón* and other plays on Abraham, Moses, and David; Micael de Carvajal (c. 1575) wrote a drama about Joseph; and the 96 biblical *autos* of the Madrid Codex (1550–75) include 26 on Old Testament subjects. Solomón *Usque (c. 1530–c. 1596), a professing Jew of Marrano origin, wrote a Spanish Purim play, *Ester*, first staged in the Venice ghetto in 1558.

BIBLICAL DRAMA. Biblical drama and poetry really became prominent, however, from the 17th century. In Spain the prolific Tirso de Molina (Gabriel Téllez, c. 1584–1648) composed *La mejor espigadera* (1634), based on the story of Ruth; and *La venganza de Tamar* (1634), a drama about Absalom. The Old Testament played an even more important part in the writings of Pedro Calderón de la Barca (1600–1681), who made use of the biblical themes of the Babylonian captivity (in *La cena de Baltasar*), the Ark of the Covenant, David, Solomon, and Job for his *autos sacramentales* (religious plays). The *auto* of Spain’s Golden Age had been anticipated to a great extent by the religious plays and moralities of Gil Vicente (c. 1465–c. 1536), a Portuguese court dramatist, many of whose works were written in Spanish. Writers of Jewish origin inspired by the Bible include Felipe *Godínez (c. 1588–c. 1639), a Seville dramatist and preacher, who wrote plays about Isaac, David, Haman and Mordecai, Job, and Judith. Others who left the peninsula to take refuge abroad were Francisco (Joseph) de *Caceres, whose *Los siete Días de la Semana* (1612) was an adaptation of a Creation epic, *La Semaine*, by the French Protestant *Du Bartas; David *Abenatar Melo, a Marrano revert to Judaism, who published a Spanish verse rendering of the Psalms (1626); and Antonio Enríquez *Gómez, an immensely popular writer, whose works include the biblical epic, *El Sansón Nazareno* (1656) and *La Torre de Babilonia* (1647). Two Portuguese Marrano poets who found inspiration in the Bible were João (Mose) *Pinto Delgado (d. 1653), a leader of the Crypto-Jewish community in Rouen, who dedicated to Cardinal Richelieu his *Poema de la Reyna Ester, Lamentaciones del Profeta Jeremías*, and *Historia de Rut* (Rouen, 1687); and Miguel de *Silveyra, whose baroque masterpiece, *El Macabeo* (Naples, 1638), was written in Spanish. The early 18th-century author Isaac Cohen de *Lara wrote a graceful *Comedia famosa de Amán y Mordochay* (Amsterdam, 1699), based on the Book of Esther and the related midrashic traditions, and a ballad about Jacob which was printed in the same volume. The works of Abraham de *Bargas, a refugee Marrano author and physician, included ethical discourses on the Bible, *Pensamientos sagrados y educaciones morales* (Leghorn, 1749).

During the 18th and 19th centuries biblical and other Hebraic themes became less common in Spanish and Portuguese literature, perhaps as a result of political and social conservatism and the disappearance of the Jews. Even in the 20th century, interest in these subjects has been largely restricted. A remarkable exception was the eminent Spanish novelist and critic Rafael Cansinos-Assens (1883–1964) of Marrano descent. Reverting to Judaism, he studied Hebrew and wrote a series of works on Jewish themes. These include *Psalmos. El candelabro de los siete brazos* (1914), love poems in “biblical” style; *Las bellezas del Talmud* (1919), translated selections; *Salomé en la literatura* (1919); *Cuentos judíos* (1922); *Las luminarias de Hanukah*; *Un episodio de la historia de Israel en España* (1924), a novel; and *El amor en el Cantar de los Cantares* (1930), with texts in Hebrew and Spanish.

The Image of the Jew in Spanish Literature

Jews have generally been portrayed in Spanish literature in an unfavorable guise. Their earliest appearance is in the epic *Poems del Cid* (or *Cantar de Mio Cid* (c. 1140)) in which two moneylenders, Raquel and Vidas, are cheated by El Cid, the national hero, giving him 600 marks on the security of a richly decorated chest filled with sand. The episode has been variously interpreted, but it must have appealed to the antisemitism of the audiences listening to a troubadour telling the story. In his *Milagros de Nuestra Señora*, the poet Gonzalo de Berceo (c. 1195–c. 1265) repeats several miracles involving Jews, tales which enjoyed a European vogue: the Jews who are converted are saved, the others are portrayed as diabolical figures deserving the punishments of Hell. The 13th-century *Disputa entre un cristiano y un judío*, typical of the disputation literature written by Christians, Muslims, and Jews in Spain, is remarkable only for its coarseness and for the Christian's prurient interest in the Jewish rite of circumcision. Perhaps the most favorable medieval Spanish treatment of the Jew is found in the works of the infante Don Juan Manuel (1282–1348). In his *Libro de los castigos* Juan Manuel wrote with great sympathy of his doctor, Don Salamón, and recommended him in glowing terms to his son. In the 14th century, the poet and historian Pedro Lopez de Ayala (1332–1407) castigated the powerful court Jews in his *Rimado de Palacio*, a work satirizing all the contemporary ills of the nation as he saw them, and not specifically antisemitic. In the same century, the archpriest of Hita (Juan Ruiz, c. 1283–c. 1350) composed songs for Moorish and Jewish dancing girls, as well as for Christians. The late 14th- or early 15th-century *Danza de la muerte* (Dance of Death) hispanicizes a widespread European type of satire in that it includes a Moorish *alfaquí* and a rabbi among those whom Death invites to dance, treating them no better and no worse than the other victims.

Conversos and Marranos

Not surprisingly, the literature of the 15th century, reflecting the mounting tensions and hatreds of the period, is full of antisemitic references. Both Jews and Conversos (especially the latter) are objects of scorn, and are depicted as cowardly, sly,

and mercenary. Juan Alfonso de *Baena's *Cancionero* (1445), an anthology of the 14th- and 15th-century verse, contains several attacks on Jews and Conversos, as well as one or two contributions by Jews. The somewhat later *Coplas del Provincial*, a vicious libel on the highest nobility of the country, accuses the *hidalgos* mainly of sexual deviation and Judaizing. The Converso poet Rodrigo de *Cota de Maguaque (c. 1460), who alluded to Jewish customs of his time, was outspokenly hostile to both Jews and Marranos. For this he was vigorously attacked by another Converso poet, Antón de *Montoro, who also engaged in a poetic feud with a third New Christian writer, Juan (Poeta) de *Valladolid.

The post-expulsion literature of the 16th and, even more, of the 17th centuries – Spain's Golden Age of letters – had its share of anti-Jewish attacks and plays on words and concepts. Ecclesiastical censorship limited the range of satire, but the Conversos were one of the acceptable targets. To call a man a “Jew” was a serious insult, and even the slightest reflection on his **limpieza de sangre* (“purity of blood”) was considered grossly offensive. Satirical references were made to the supposed physical imperfections of the Jew, to his desire for social position, and to his beliefs and practices. Names suggestive of Jewish identity were ridiculed, and the allegation that a person had an aversion to pork was a stock-in-trade insult. Even the verb *esperar* (to wait) became a cliché, referring to the patience of the Jews awaiting the Messiah. The satirist Quevedo (Francisco Gómez de Quevedo y Villegas, 1580–1645) attacked his literary rival, Luis de Góngora (1561–1627), with allusions to his nose – it was commonly believed that the nose revealed a man's Jewish origin – and threatened to anoint his own poems with bacon so that Góngora would be deterred from stealing them. Quevedo's writings were probably the most insistently anti-Jewish of the period, except for specifically anti-Jewish literature, such as sermons at **autos-da-fé*, which were printed and widely read. By contrast, the Navarrese physician and writer Juan *Huarte de San Juan displayed marked sympathy for the Jews in his *Examen de ingenios para las ciencias* (1575), where he even suggested that Jews were especially suited to the practice of medicine. The great novelist Miguel de *Cervantes Saavedra who (like Huarte de San Juan) has been claimed as a Marrano, occasionally indulged in anti-Jewish poems, but derided the doctrine of *limpieza*. Two of his plays barely disguise his admiration for the Jew's religious tenacity and national vitality.

Other writers who used conventional attacks and jokes at Jewish expense were Tirso de Molina, Lope de Vega, Alonso Castillo Solórzano (1854–c. 1648), and Calderón. A more vicious accusation (found in Tirso's *La Prudencia en la mujer*, 1634) was that Converso doctors murdered their Christian patients. Lope de Vega's play, *El niño inocente de la Guardia* (1617), repeated the charge that the Marranos committed ritual murder (see **Blood Libel*). Such an accusation was rare after 1492, when New Christians often occupied positions of power and could be formidable enemies. The story of the **Jewess of Toledo*, the mistress of Alfonso VIII, provided the theme for

comedias by Lope de Vega (*Las paces de los reyes y judía de Toledo*, 1617), Antonio Mira de Amescua (c. 1574–1644), and Juan Bautista Diamante (1625–1687) whose *La judía de Toledo* (1673) endows the Jews with noble characters. The best work of the 18th-century neoclassical theater in Spain is *La Raquel* (1778), a tragedy on the same theme by Vicente García de la Huerta (1734–87).

Modern Spanish Writers

Jewish characters are relatively unimportant in modern Spanish literature. The 19th-century romantics, Bécquer, Larra, and Zorrilla, occasionally wrote of exotic Jewish types, but displayed little sympathy for them. Among novelists, Benito Pérez Galdós (1843–1920) in *Misericordia* (1897) created the delightful character of Almudena, who is described as a Moor but whose patois is based on some linguistic elements of *Ladino speech. In *Fortunata y Jacinta* (1886–87) Galdós shows that in the late 19th century Marranos were still thought to dominate Madrid business circles. Pío Baroja y Nessi (1872–1956), who was opposed to almost everything, also displayed literary antisemitism. In the 20th century, Vicente Blasco Ibáñez (1867–1928), a revolutionary writer who claimed Jewish descent, dealt with the problem of Majorca's *Chuetas in his novel, *Los Muertos mandan* (1909; "The Dead Command," 1919). Another liberal writer, Salvador de Madariaga (1886–1978), recreated in his novel *El corazón de piedra verde* (1943; "The Heart of Jade," 1944) the violent and romantic world of the 16th-century half-Jewish *conquistador* Sebastiano Garcilaso (d. 1559), father of the Peruvian historian, Garcilaso de la Vega ("El Inca," c. 1540–1616). A monumental work is the three-volume *Judíos en la España moderna y contemporánea* (1962) of Julio Caro Baroja. Among works by R. Cansinos Asséns in the same field are *España y los judíos españoles...* (1917) and *Los judíos en la literatura Española en Sefard; episodios y símbolos* (1950).

The Image of the Jew in Portuguese Literature

In general, the attitude toward Jews in Portuguese literature parallels that of Spanish writers. Portuguese literature is of somewhat later origin than Castilian, and medieval references are rare. There are occasional anti-Jewish remarks in the *Cantigas d'escarnho e maldizer* (13th–14th century), and it is worth recording that Alfonso X of Castile wrote his *Cantigas de Santa María* in Galician, a dialect of Portuguese. Fifteen of the miracles described here deal with Jews, who are portrayed as child-murderers, cheats, and agents of the devil. The *Cancioneiro Geral* (1516) of García de Resende (1470–1536) contains many satirical references to Jews, and Anrique da Mota pokes fun at the misfortunes of a Jewish tailor in his *Farsa do Alfaiate*. Jewish characters appear in several works by the versatile dramatist Gil Vicente who wrote in both Portuguese and Spanish and who witnessed the expulsion and forced conversion of the Jews in Portugal. In his religious *Autos de Moralidade das Barcas* and the *Diálogo sobre a Ressurreição*, he presented the stereotyped arguments about the Jews as deicides, iden-

tified with the devil, but elsewhere he portrayed Jews more realistically. In the farces *Inês Pereira* (1523) and *Juiz da Beira* (1525), Vicente's Jewish characters and customs are based on personal observation, and if there is in them an element of caricature, this is also true of his other characters. In the first part of the *Auto da Lusitânia* (1532) the main characters are a Jewish tailor, D. Juda, and his wife and daughter, who are treated with remarkable delicacy and respect. In other works Vicente discreetly protested against the forced conversion of Jews and brutal attacks on New Christians.

After the expulsion of 1497, Portuguese Conversos and their descendants were subjected to literary attacks. In his *Apólogos Dialogaes* (1721) Francisco Manuel de Melo (1608–1666) wrote satirically of the converts in business, as did Manoel Monteiro, in *Academia nos montes* (1642). During the 16th and 17th centuries there were also many anti-Jewish doctrinal works, some by baptized Jews such as João Baptista de Este, but these were not of a literary nature.

In the 19th century the theme of love between a Christian youth and a beautiful Jewess was used by the Visconde de Almeida Garrett (1799–1854) in his *Romanceiro e Cancioneiro Geral* (3 vols., 1843–51) and by the Brazilian romantic poet Antônio de Castro Alves (1847–71). The same theme is the basis of the much-recited romantic poem "A Judía" of Tomás Ribeiro (1831–1901). A defense of the Jews was put forward by Alexandre Herculano de Carvalho e Araújo (1810–1877) in his classical *História da origem e estabelecimento da Inquisição em Portugal* (3 vols., 1854–59). Other writers who championed the Jews were the novelists Camilo Castelo Branco (1825–1890), himself of Jewish descent, and José Maria de Eça de Queirós (1846–1900), who wrote a scathing denunciation of German antisemitism and Bismarck's anti-Jewish policy in the sixth of his *Cartas de Inglaterra* (1903) and gave a remarkably vivid picture of life in Jerusalem at the time of Jesus in his novel *A Relíquia*. The martyred 18th-century playwright Antônio José da *Silva, was the central character of several works, including Castelo Branco's novel, *O Judeu* (2 vols., 1866), and the romantic drama, *Antônio José – o Poeta e a Inquisição*, by the Brazilian Domingos José Gonçalves de Magalhães (1811–1882).

The Jewish Contribution to Spanish Literature

The contribution of the Sephardim to Spanish literature was from the 12th to the 17th centuries, but a distinction must be made between the literary role of professing Jews and that of Conversos or New Christians, who were merely of Jewish origin. Spanish literature's earliest monuments, whose importance was discovered only in the 20th century, are intimately related to the two Semitic peoples living in Andalusia. These are the *jarchas* – short poetic endings, in colloquial Arabic or Mozarabic transcribed into Arabic or Hebrew characters, to longer compositions in classical Arabic or Hebrew, known as *muwashshat*. Of the more than 50 *jarchas* that are known, at least 20 form the endings to Hebrew *muwashshat*. The earliest was part of a *muwashshat* ("girdle poem") written by Joseph the Scribe and dedicated to Ismail ibn Nagrela (i.e., *Samuel

ha-Nagid) and his brother Isaac. Believed to have been written before 1042, it constitutes the oldest known lyric poetry in any language of western Europe, antedating even the earliest Provençal poems. *Jarchas* are to be found in *muwashshat* of the great Hebrew poets of Spain, Moses *Ibn Ezra, *Judah Halevi, and Meir ben Todros ha-Levi *Abulafia.

TRANSLATORS AND POETS. The Jews of medieval Spain also distinguished themselves as translators, forming an important bridge between Oriental, scientific, and ethical knowledge and the nascent European culture (see *Translations). Possessing a knowledge of Arabic, Hebrew, and one or another of the Romance languages, they were invaluable collaborators. The task of imparting Arabic learning to the western world was not limited to any one center, but of them all the most important was Toledo. In the 12th century Archbishop Raimundo (d. 1152) gathered Jews, Christians, and Moors there to translate Arabic scientific and philosophical texts. The prologue to the Latin version of *Avicenna's *De Anima* tells how the work was done. Juan Hispano, a Converso, translated orally from Arabic into Romance, which Dominicus Gundisalvi in turn translated into Latin. The Latin was written down by a scribe. In the 13th century Toledo was again a center of cultural activity, but now works were translated from Arabic into Castilian, reflecting the wish of Alfonso X to make the spoken language of his country that of government and culture. Alfonso's Jewish translators were Isaac ibn Cid, Don Abraham, and R. Judah ben Moses ha-Kohen (Judah Mosca). Judah (Jafuda) *Bonse-nyor of Barcelona (d. 1331) compiled for James II of Aragon a volume of maxims in Catalan, mainly derived from Arabic and Jewish sources, titled *Libre de Paraules e dits de Savis e Filososfs* (c. 1300). Another Jewish savant was Isaac al-Carsoni, whose Hebrew astronomical tables, compiled for Pedro IV (1336–1387), were later translated into Latin and Catalan.

An early and famous Jewish composer of Spanish verse was Shem Tov b. Isaac Arduziel, known to Spaniards as *Santob de Carrión and Don Santo. His *Proverbios morales*, written probably between 1355 and 1360, are the first examples of aphoristic verse in Spanish. Moses de Zaragoza *Acan (c. 1300) rivals Santob as a Jewish literary pioneer in Spain. His Catalan verse treatise on chess was translated into Spanish in 1350. Jews also contributed to medieval Spanish culture through the *literatura aljamiada*, the name given to works in Spanish written in Arabic or Hebrew characters. An example of the latter is to be found in one of the four manuscripts in the Cambridge University Library of Santob's *Proverbios* (ed. by Ig. Gonzalez Wubera, 1947). This also contains a poetic treatment of the biblical story of Joseph, called *Coplas de Yoçef*, which was influenced by *Josephus and the Midrash, and later became important in Ladino literature.

JEWISH AND CONVERSO WRITERS. The writers active in Spain from the 15th century onward were invariably Marranos or Conversos, rather than professing Jews. The massacres that began in 1391, mass conversions, and the expulsion of 1492

combined to bring to an end Spanish Jewry's Golden Age and the open practice of Judaism in Spain. There were, of course, Converso writers before 1492, such as the moralist *Petrus Alfonsi in the 12th century (*Disciplina clericalis*, 1120), or the Christian apologist Alfonso de Valladolid (*Abner of Burgos) in the 14th. But the 15th century saw a completely new internal situation in Spain: a whole class of "New Christians" came into being, and at the same time popular antisemitism made a sharp cleavage between peoples and religions that had previously at least coexisted. The intellectual élite was composed largely of Conversos, and many of the writers and humanists who set the tone of the century were New Christians. They also rose to fame in the Church and at court. Ferdinand and Isabella, who signed the decree of expulsion, were not averse to having their deeds recorded by Conversos. Diego de Valera (c. 1412–88), who wrote the *Crónica de los Reyes Católicos*, was the son of Alonso *Chirino (d. 1430?), the baptized physician of Juan II of Castile and author of some curious works on medicine. The official chronicler of the Catholic monarchs and secretary to the queen was Hernando del Pulgar (1436–1493), also thought to have been a Converso.

New Christians were among the poets active in the reign of Juan II (1458–79), and later in the century several writers of minor stature testified to the psychological state of the converts. As members of a minority group scorned and upbraided by the majority, they often took refuge in satire directed against each other – or even against themselves. In literary polemics of the era, the accusation of being a Marrano (Crypto-Jew) was frequently leveled, whether or not with justification. Among Spanish writers of real or imagined New Christian extraction were Juan *Ávarez Gato, Rodrigo de Cota de Maguaque, Juan (Poeta) de Valladolid, Juan de España, el Viejo, Juan de Mena (1411–1456), Antón de Montoro, and Alfonso de la *Torre. Beneath the badinage and cynical laughter, however, one feels the bitterness of the outcast. Two famous prose works written in the reign of Isabella of Castile were by New Christians: the *Cárcel de Amor* (1492) of Diego de San Pedro and *La Celestina* (1499), written either entirely or in large part by Fernando de *Rojas. Both works are the products of the sadness and suffering of the Conversos.

The Later Conversos

While New Christians undoubtedly played an important part in Spanish cultural life throughout the 16th and 17th centuries, it is not easy to determine their contribution with any precision, since they found it advisable to conceal their origin. As a result of the statutes on purity of blood (see *limpieza de sangre*), known Conversos found their opportunities for ecclesiastical, social, and political advancement severely limited, and even the most orthodox Catholics were affected. The grandfather of Spain's greatest saint and mystic, Santa Teresa of Avila, had been penanced by the Inquisition for Judaizing, and there is evidence that the father of the great 16th-century humanist, Juan Luis *Vives, was burned as a Judaizer, and that he himself attended a secret synagogue as a child.

Conversos also distinguished themselves as innovators in Spanish prose. The first pastoral novel written in Spanish was *Diana* (1559?) by Jorge de Montemayor (c. 1520–1561), a writer of Portuguese origin who was taunted with Jewish ancestry by one of his contemporaries. The picaresque novel, considered a peculiarly Spanish invention, owes much to Converso writers. The anonymous author of the first such work, *La vida de Lazarillo de Tormes* (1554), may have been a New Christian, as a brief passage at the beginning of the work is a veiled satire on racial prejudice. No picaresque novels appeared during the reign of Philip II (1556–98), but the year following his death saw the publication of the first part of *Guzmán de Alfarache* (1599) by Mateo *Aleján. Luis Vélez de Guevara (1579–1644) contributed to the genre with *El diablo Cojuelo* (1641), as did Antonio Enriquez Gómez (see above), with *El siglo pitagórico y Vida de don Gregorio Guadaña* (1644). No Converso appeared in the first rank of dramatists during Spain's Golden Age, but several had their works produced on the Madrid stage. Apart from Enriquez Gómez, they include the prolific Juan Pérez de Montalván (1602–1638), the son of a New Christian bookseller and publisher, who nevertheless was appointed a notary of the Holy Office and who became a friend and follower of Lope de Vega; and Felipe Godínez (see above). From the 18th century onward, there were undoubtedly many Spanish writers of Jewish descent, but by then the question had become less important. In the 19th century, José *Taronji y Cortés, a Spanish priest and Catalan poet of Marrano origin, testified to the prejudice besetting the *Chuetas* of Majorca. So far as Spanish literature is concerned, however, *marranismo* was unimportant after the 17th century.

REFUGEE WRITERS. In the Marrano diaspora, on the other hand, professing Jews – refugees or their descendants – made an important contribution to Spanish letters throughout the 17th and 18th centuries. Refugees active in Amsterdam in the latter half of the 17th century were Joseph Semah (Zemah) *Arias, a former Spanish army captain; Francisco (Joseph) de Caceres; two poetesses, Isabel (Rebecca) de *Correa and Isabel *Enríquez; Isaac *Gómez de Sossa, whose father had been physician to the infante Fernando of Spain; Isaac Cohen de Lara; and Nicolás (Daniel Judah) de *Oliver y Fullana, a former Spanish colonel. Miguel (Daniel Levi) de *Barrios was one of the most eminent of these exiles. His travels took him to the West Indies and to the Low Countries, where he led a double life as a Spanish army captain in Brussels and as a Jew in Amsterdam.

The Jewish Contribution to Portuguese Literature

In medieval Portugal there were Jewish, as well as Moorish, troubadours, one of whom was called “O Judeu de Elvas” (the Jew of Elvas). Most Portuguese writers of Jewish descent were Marranos, and many fled their native land in the 16th and 17th centuries. Samuel *Usque's *Consolaçam ás Tribulaçoens de Israel*, though published abroad (Ferrara, 1553), is considered a classic of Portuguese literature. The novelist and poet Bernardim *Ribeiro, known as the father of Portuguese bu-

colic literature (*Hystoria de Menina y Moça*, Ferrara, 1554), was probably a Marrano. Manoel *Fernandes Villereal was one of the many 17th-century Portuguese authors who wrote mainly in Spanish. Perhaps the most famous victim of the Portuguese Inquisition was Antônio José da Silva (“O Judeu,” 1705–1739), who was born in Rio de Janeiro, Brazil. Da Silva was one of the few important Portuguese dramatists of the 18th century, and although his career was cut short at the age of 34, his works continued to be performed and published, albeit anonymously, long after his death. Although many Portuguese writers from the 19th century onward proudly claimed Jewish ancestry, specifically Jewish contributions to the literature of Portugal effectively came to an end by 1700.

[Kenneth R. Scholberg]

The Jewish Contribution to Latin-American Literature

During the 16th and 17th centuries many writers of Marrano origin left Spain and Portugal for the New World, in the hope of finding greater freedom there. Marranos were among the most cultivated members of the new American society. In Mexico, the martyred Luis de Carvajal El Mozo (1566–1596; see *Carvajal family), nephew of the governor of New Leon, was a competent poet; in Peru, Antonio de León Pinelo (1591–1658) was one of the first American bibliographers. Two eminent Marrano writers denounced to the Brazilian Inquisition were Ambrósio Fernandes *Brandão, author of the *Diálogos das Grandezas do Brasil* (c. 1618), and Bento *Teixeira Pinto, author of the epic *Prosopopéia* (1601²), the first literary work written in Brazil.

By the 19th century, Marrano culture had disappeared, and only a few Latin Americans were still conscious of their Jewish descent. In Venezuela, Abigail Lozano (1821–1866) and Salomón López Fonseca (1853–1935) were noted poets. Two other writers were Abraham López-Penha, a Dominican writer, and Efraim Cardozo, a Paraguayan historian. The Colombian novelist, Jorge *Isaacs, author of the classic, *María* (1867), was not of Sephardi origin, being the son of a converted English Jew. In time more liberal ideas promoted a somewhat romantic reassessment of the Crypto-Jews of Latin America, exemplified by *La hija del judío*, a story by Justo Sierra (1814–1861), and the novel *Moisén* (1924) by Julio Jiménez Rueda, both Mexican non-Jews. *Moisén* is notable for its bizarre presentation of the Marranos and their secret religion. Exotic Jewish characters frequently appear in the short stories of Jorge Luis Borges (1899–1986), one of the outstanding Argentine writers of the 20th century. Borges, who was partly of Marrano descent, used kabbalistic and other Jewish elements to heighten the suspense in his tales of mystery, some of which were collected in *El Aleph* (1949; *The Aleph and Other Stories* 1933–1969, 1970). His admiration for the Jewish State prompted two poems about Israel written in June 1967 at the time of the Six-Day War. Four years later, in April 1971, Borges was awarded the Jerusalem Prize for his contribution to the freedom of the individual at the Fifth International Book Fair held in Israel's capital.

Contemporary Jewish Writers

Toward the end of the 19th century, Ashkenazi Jewish communities grew steadily, especially in Argentina, where the *Jewish Colonization Association (ICA) resettled thousands of Jews from Russia. Two of Argentina's foremost Jewish writers, Alberto *Gerchunoff, author of *Los Gauchos Judíos* (1908–10), and Samuel *Eichelbaum were raised in the Argentine Jewish colonies. Carlos Moises Gruenberg (1903–1968), a prominent lawyer and poet, was known for his *Mester de Judería* (1940); a keen Zionist, he translated Hebrew poetry into Spanish, and he was considered a masterly stylist. Salomón Resnick (1895–1946), an essayist and translator, who edited the weekly *Mundo Israelita* and the literary periodical *Judaica*, made Yiddish literature known to the Spanish-speaking reader. Lázaro *Liacho (1897–1969), a journalist and poet, and his father, Jacob Simon Liachovitzky (1874–1937), a journalist and a leading Zionist, both wrote on Jewish themes. Enrique Espinoza (Samuel Glusberg, 1898–1987) wrote tales of Jewish life in Buenos Aires and edited *Babel*, a literary magazine, first in Buenos Aires and later in Santiago, Chile. César *Tiempo (Israel Zeitlin, 1905–1980), a leading poet and playwright, played a prominent part in the fight against Argentine antisemitism. Bernardo Verbitzky (1902–1979), a journalist and novelist, portrayed Jewish life and the fate of the poor. Some other Argentine writers were the novelist Max Dickmann (1897–1991), Máximo José Kahn (1897–1953), and Marcelo Menasché (1913–). Literary essayists and historians included Albert Palcos (1894–1965), León *Dujovne, and Antonio Portnoy (1903–1958).

Max *Aub (1903–1972), who settled in Mexico, was a staunchly anti-Fascist poet, playwright, and novelist. His tragedy, *San Juan* (1943), dealt with the fate of Jewish refugees on a doomed ship in the Mediterranean. Jewish writers in Brazil included Fernando Levisky (1910–1982), author of *Israel no Brasil* (1936); the poet Idel Becker; the playwright Pedro Bloch; the novelist Clarice Lispector; Kurt Loewenstamm; and Henrique Iussim (who wrote under the name Zvi Yotam after emigrating to Israel).

Despite their strong Zionist sympathies, Latin America's Jewish writers rarely dealt with Erez Israel in their works. One exception was Samuel Eichelbaum, whose short story, *Una buena Cosecha*, is set in Rosh Pinnah. A non-Jewish Venezuelan poet, Vicente Gerbasi (1913–1992), who was his country's ambassador to Israel (1960–68), included poems on Jerusalem and its Jewish inhabitants in his verse collection, *Poesía de viajes* (1968).

[Paul Link]

Younger Judeo-Argentinian writers continued to explore the process and problems of acculturation and assimilation which appear in the works of earlier writers like Gerchunoff. Germán Rozenmacher (1936–1971) presented an intergenerational conflict between an immigrant cantor and his Argentinian-born son in his play *Requiem para unviernes a la noche* (1964). Mario Szichman (b. 1945) in his novels, *Crónica falsa* (1969) and *A las 20:35 la señora entró a la inmortalidad* (1981), depicted the odyssey of a Jewish family against the background

of the Peronist era. David Vinas (b. 1929), Marcos Aguinis (b. 1935), Gerardo Mario Goloboff (b. 1939), Alicia Steimberg (b. 1933), and Marion Satz (b. 1944) were other writers of this new generation of Jewish intellectuals.

Although Argentina, because of the size of the community and the vigor of the cultural milieu, contained the largest nucleus of Jewish authors, there were a number of writers in other Latin American countries, such as the Peruvian novelist Isaac Goldemberg (b. 1945), who told the story of an eastern European Jewish immigrant in *The Fragmented Life of Don Jacobo Lerner* (1976). In Venezuela Isaac Chocrón (b. 1932), one of the country's most prominent playwrights, examined his Sephardi background in a novel, *Rómpase en caso de incendio* (1975).

Despite maintaining strong Zionist sympathies, Latin America's writers only occasionally set their works in Israel. In *El caramelo descompuesto* (1980), a novel by Ricardo Feierstein, a young Argentinian narrator looks critically at life on a kibbutz.

A non-Jewish Venezuelan poet, Vicente Gerbasi (1913–1992), who was his country's ambassador to Israel (1960–68), included poems on Jerusalem and its Jewish inhabitants in his verse collection *Poesías de viaje* (1968).

The Palestinian-Israeli conflict from a pro-Arab point of view was dealt with by the well known Mexican novelist, Carlos Fuentes, in his *La cabeza de la hidra* (1978; "The Hydra Head," 1978).

[Edna Aizenberg]

Latin American Jewish literature developed specifically in the 1970s and 1980s, and can be defined as the treatment of Jewish values in two languages – Spanish and Portuguese, as conceived and spoken in Latin America; and more particularly, as the way in which these languages have left their mark on Latin American Jewry, through those authors who use them as their vehicle.

In other words, the Jewish literature of Latin America exploits the possibilities of expression offered by the Portuguese and Spanish languages to translate, both at the personal and the collective level, the way in which basic Jewish values are experienced and interpreted in the framework of living conditions in this part of the world. In the words of literary critic Saul Sonowski, "Jewish literature in Latin America is not built exclusively on the basis of motifs which can easily be identified as Jewish, but as a function of the relationship of these motifs to concrete realities which are in a process of development and transformation: the realities of the Latin American societies in which they must evolve." What he means basically is that the Latin American Jewish writers are an inseparable part of their respective national literatures. Their acknowledgment of their Jewishness resides in their perception of themselves as Uruguayan, Brazilian, Mexican, Venezuelan, Chilean, or Argentine writers whose works and thought integrally include a Jewish thematic variation, which may be more or less frequent, more or less intense, and can be formulated and reelaborated in an infinite variety of ways. The Jewish variation cannot be

isolated from the totality which gives it meaning, nor placed in a hierarchy to the detriment of the totality. Nevertheless, Latin American Jewish writers, in order to consolidate their respective identities as Latin American writers, also have to take their positions as Jews. In their work, Jewish and Latin American themes, far from constituting an irreconcilable antithesis, as is often alleged by explicitly antisemitic and implicitly discriminatory theses, have become strongly complementary and inseparable.

For many years, in the Latin American cultural arena, the need for an alternative was solicited equally zealously by both the nationalist right and the Marxist-Leninist left: strictly specific characteristics, such as those implicit to the Jewish condition, were to be merged into the national identity (right) or the international proletariat identity (left). Considered “foreign” by the former and “reactionary” by the latter until well into the 1970s, Judaism seemed to have no future as a variation in the composite profile of the Latin American writer. However, the situation began to change in the 1970s. Government terrorism, which raged in every corner of the continent, but with an especially bloody genocide in the southern tip of Latin America, gave rise to a new phenomenon in the region – a diaspora. This bitter experience strongly paralleled Jewish memories.

Discrimination, censorship, persecution, torture, imprisonment, and death were practiced with systematic tenacity by the successive dictatorships, especially against anyone daring to challenge the regime in force; fearing for their lives, many fled their country or even the continent. Jewish writers naturally drew parallels between past and present. At the same time, the seeds of today’s Communist crisis were already present. Against this background, the meaning of Judaism, as a constituent element of the personal and historic identity of so many writers, underwent an intense process of redefinition, inspired not only by the suffering but also by its dialectic complement – the spirit of struggle, the capacity to confront adversity. Judaism was beginning to be seen as a determined demand for pluralism, for democratic ideals, for a thirst for dialogue, in open opposition to dogmatism and contempt for differentness. Beyond its possible adherence to theological arguments and religious options of one kind or another, Judaism was conceived, by contemporary Latin American writers, as a moving metaphor of their own experience, and was thus ultimately acknowledged as an inalienable part of an individual identity.

“In the countries of Latin America, which have experienced a repression unprecedented in their history, survival – perhaps the basic motif of all Jewish literature – has obviously played a major role” (Saul Sosnowski). And “it is under identical circumstances that some Jewish motifs have become precision instruments in interpreting a reality that centuries of persecution and exile have imprinted in the cultural tradition of the historic Jew” (Saul Sosnowski).

In addition to the decisive theme of survival, other fundamental themes began to appear in poetry, fiction, and

drama. Man’s dialogue with God, with its innumerable variations, the sufferings imposed by prejudice and intolerance, the intensity of nostalgia, exile and its indelible shadow, the meaning of death, the value of memory, mysticism, the warmth of family life, the immigrant origin, the Jewish holidays and history, the unexpected recording of one’s own life as an “immigrant,” and the presence and ethical and even esthetic weight of tradition, all to a great extent shape the repertory of themes which, in numerous forms, run through Latin American Jewish literature. And just as European or North American Jewish literature, for instance, have distinctive traits, specific only to a country or a continent, so Latin American Jewish literature has its own, unique characteristics. Its treatment of proverbially Jewish questions has an unmistakably Latin American emphasis, in that the Jewish models are presented through the subjective, social, and historic experience of the countries of Latin America, with their specific conflicts, resources, and conditions. The Jewish statement is made through the Spanish and Portuguese languages, with their own cultural imprint, and thereby receives a specific bias – accorded by the distinctive intonation of the language in every country and region where it is spoken. This intonation is not only that of the language’s rhythm, its euphony, but also that of its semantic weave, which, in each locality, and in each consciousness, links the repertoire of resources offered by the language to its users, giving birth to that fertile “hybrid” condition noted by writer Ricardo Feierstein; and to the theme which, among so many other nationalities, both incorporates the Jewish element in, and separates it from, the Bolivian, Peruvian, Colombian, or Cuban element and elegantly frames a Jewish individuality which, while obviously related to others, is not one of them. This “hybridism” is simply the permanent interweaving of two originally separate traditions – the Jewish and Latin American, which, through the meeting of circumstances, ultimately shaped a new expression. The value and quality of this possibility of expression characterizes Latin American Jewish literature.

In other words, Spanish and Portuguese are not the languages into which the universal nature of Judaism is translated, but the means through which it is constituted and conceived in Latin America. Based in these languages, Jewish poetry, fiction, and drama, as well as essays and critical reviews, are seen as the highest grade of conceptual elaboration which Jewish experience has attained in Latin America. While Latin American Jews do not have to be aware of this in order to be what they are, it is no less true that this knowledge constitutes for them a privileged resource for a greater and better understanding of their identity.

Since the reestablishment of democratic institutions in the 1980s, in particular, Latin American Jewry has encountered a fertile terrain in which to shape itself, demonstrating that a complete manifestation of the universality of Jewish values is possible only when inspired by a concrete historic circumstance. It is in the light of their experience as Latin

Americans that the validity of the meaning of Jewishness can be projected in the contemporary world. Every literary work, beyond its value as a comparative model, expresses that moment of luminous encounter between past and present which imbues the experience it describes, the statement it makes, with both an individual, specific, and even regional nuance, and an archetypal, metaphoric, and revealing dimension whose symbolic stature is universal. In this way the yesterday of previous generations who sustained, enjoyed, and suffered the Jewish condition, becomes the today shaped by our circumstances, which are no less worrying or fascinating than those of the past. Through looking at the past one learns to see those who observe from the present; observations of the present bring to the acknowledgment of the validity of this millennia-old message. Latin American Jewish literature proves this eloquently. It is one of the basic indications of Latin American Jewry's intense desire to attain self-understanding. Indeed, to a very great extent literary activity in the 1980s evidenced the resolute initiative and great persistency of this community in examining its condition. Among the events demonstrating this orientation should be noted: two encounters of Latin American Jewish writers held in Buenos Aires in 1986 and in 1988; the proliferation of poetry, fiction, and essays, which join together with remarkable elegance the double source of personal identity – Jewish and Latin American; the appearance of *Noaj*, the first Jewish literary review in Spanish and Portuguese edited in Israel; the creation, also in Israel, of a Jewish writers' association in both languages. All these proved decisive acts and showed the extent of Latin American Jewry's eagerness for self-exploration and self-expression. Certainly it is not by chance that all these developments were taking place at a time when the values of political democracy were being progressively restored. Democracy is the most propitious condition for the institution of pluralism; and Judaism, freed from the oppressive yoke placed upon it by totalitarian thinking, finds itself with an auspicious opportunity to say and affirm what it is, and to begin once again to question its own meaning.

SPARROW (Heb. צִפּוֹר דְּרוֹר, *zippor deror* or דְּרוֹר, *deror*, but sometimes the word *zippor* “bird” refers to the sparrow), the *Passer domesticus biblicus*, the house sparrow, which is the most common bird in Israel during all seasons of the years. It “dwells in the house as in the field” and its name *zippor deror* (“free bird”) is explained by the fact that “it does not submit to authority” (Bezah 24a); and, despite the fact that it lives in populated areas, it cannot be domesticated. It nests in the interstices of rooftops and stone walls. It is referred to as nesting between the stones of the Temple (Ps. 84:4), and to this day some make their nests between the stones of the *Western Wall. It possesses the characteristics of a *kasher* bird (see *Dietary Laws) and there are Jewish communities which permit it for food. “Two *zipporim*” were used for the purification ceremony of the leper (Lev. 14:4) and for the house cleansed from leprosy (*ibid.*, 14:49); according to the Mishnah (Neg. 14:1) *zipporei deror*, i.e., house sparrows, are meant. Some would identify the *deror* with the swallow, but the descriptions of the *deror* in rabbinical literature leave no doubt that it refers to the sparrow.

SPARTA, city in Greece; ancient city-state in the Peloponnese, called Mistra in Crusader times. The earliest information on the relations between Sparta and the Jews is the letter said to have been sent by Areus, king of Sparta (309–265 B.C.E.), to the high priest *Onias I (1 Macc. 12:20–23). In this letter Areus sends his greetings to the Jews and proposes a full alliance in the words, “your cattle and goods are ours, and ours yours.” It also refers to a written tradition that the two peoples are of the stock of Abraham (cf. Jos., Ant., 14:255; see *Pergamum). This was apparently included in one of those books dealing with the genealogy of the various nations, which were widespread in the Hellenistic era, or it may have been based on the well-known work of *Hecateus of Abdera. It is possible that the contemporary political situation, the relations between the *Ptolemies and Sparta on the one hand and the Jews on the other (*idem*, 109) forms the background to this alliance, as well as perhaps some sympathy of ideas (cf. Y. Baer, in: *Zion* 17 (1952), 35). Josephus, who quotes the text of the letter (Ant. 12:22–26), adds some details which do not appear in 1 Maccabees. 1 Maccabees (12:6–18) also quotes a letter of Jonathan the Hasmonean to the Spartans and (14:20–23) a letter of the Spartans to Simeon the Hasmonean. Some scholars regard these letters as either wholly or in part fictitious (see F.M. Abel, *Les Livres des Maccabées* (1949), 231–3). Corroborating evidence for these relations is to be found in 11 Maccabees (5:9) which describes the flight of the high priest Jason to Sparta because its people were close to his. The inhabitants of Sparta are also mentioned in 1 Maccabees (15:23), but it is doubtful whether the existence of a Jewish settlement can be

inferred from there, as some scholars have attempted to do. There is no explicit mention of a Jewish settlement in Sparta, though Jews were living in the Peloponnesus during the first century C.E. (Philo, *Legatio and Gaium*, 281).

[Uriel Rappaport]

During the tenth century there were Jews in Sparta; they were engaged in commerce. When a plague broke out in Sparta, the monk Nikon (10th century) refused to come to the village's aid as long as the Jews, who were an obstacle in the spreading of Christianity, were not expelled. His incitement was without effect. The presence of Jews is mentioned during the reigns of the Palaeologi emperors (1261–1453). When Sigismondo Malatesta conquered Mistra in 1465, he burnt down the Jewish quarter. There is evidence of the presence of Jews again during the 16th and 17th centuries. They were engaged in the silk industry and in commerce. The French author Chateaubriand, who visited Greece in 1806, mentions the Jewish quarter of Sparta. During the Greek Revolution (1821–1829), the Albanians, who invaded Peloponnesus, destroyed the Jewish community.

SPÄTH, JOHANN PETER (Moses Germanus; 1642/45–1701), German Christian Hebraist who converted to Judaism. Späth was born either in Augsburg or in Vienna between 1642 and 1645 to a Roman Catholic family. He became a teacher in a Protestant family and this contact made him question his own faith. Influenced by the Protestant theologian Philipp Jacob Spener (1635–1705), Späth converted to the Lutheran church and he became a follower of Spener. His religious doubts, however, did not weaken. On the contrary, he became disappointed because of the controversy among the Lutherans, and this made him decide in 1681 to return to the Roman Catholic Church. However, he continued to have doubts. Several years later Späth appeared to be living in Amsterdam, where he met people from various religious movements such as the Mennonites, the Collegiants, and the Socians. During that period, he converted once again to become a Quaker. Thus he came into contact with the Christian Hebraist and Kabbalah scholar Francis Mercury of Helmont (1614–1699). At that time, Späth moved to Sulzbach to help with a Latin translation and the publication of a large corpus of Kabbalistic texts.

The chronological records of the subsequent years are not very clear, but in 1696 we find Späth in Amsterdam once again, where he officially converted to Judaism. From then on he was known as Moses Germanus. A year later he was circumcised and was accepted into the Portuguese-Jewish community in Amsterdam. He had previously married a Jewish woman, and was appointed as a teacher. Späth died in Amsterdam on April 27, 1701.

His conversion to Judaism caused the customary scandal in those days. Many of his contemporary Christian scholars expressed their disapproval of the facts. The most complete record of his life and his conversion written at that time is to be found in the work of Johann Jacob Schudt (1664–1722) entitled *Jüdische Merckwürdigkeiten* (= Jewish curiosities) in which he also talks about the dismay of the Christian scholars. Späth defended his conversion in a number of letters addressed to scholars in his area.

A great deal of that correspondence has been preserved, such as several letters to Johannes Leusden (1624–1699) dating from the period in which Späth converted, addressed by Leusden to Moses Germanus Judäus.

SPECTER, ARLEN (1930–), U.S. senator, chairman of the Judiciary Committee. Spector was born in Kansas, the son of Russian immigrants. His family moved to Russell, Kansas, the home town of another United States senator, Robert Dole. Spector was educated at the University of Oklahoma, and transferred to the University of Pennsylvania, where he received his B.A. (1951). He was in the Air Force from 1951 to 1953 during the Korean War. He returned to attend Yale Law School, where he edited the law journal and graduated in 1956.

He served as assistant district attorney in Philadelphia as a Democrat from 1959 to 1963 and then went to Washington, where he was assistant counsel to the Warren Commission investigating the assassination of President John F. *Kennedy. He devised the single bullet theory, contending that one bullet hit the president and Texas Governor John Connally, who was riding in the limousine and was also wounded. He sought the Democratic nomination for district attorney but was rebuffed by the Democratic machine so he ran as a Republican reform candidate and won an upset victory. He narrowly lost the race for mayor of Philadelphia the next year. He served for eight years as district attorney and then suffered a series of political losses that ordinarily doom a political candidate. Spector lost a race for district attorney in 1973; he lost for the U.S. Senate in 1976 and lost for governor in 1978. He won the 1980 race in the Reagan landslide and then proceeded to vote against the Reagan Administration more often than any other Republican senator.

He played a major role during the Iran–Contra hearing, where his talent as a cross examiner came into play again. He concluded that the intelligence system was in need of an overhaul and proposed the creation of an inspector general of the CIA. His role on the Senate Judiciary Committee was controversial vis-à-vis his Republican colleagues. He voted against Robert Bork for the Supreme Court. He was an ardent defender of Judge Clarence Thomas' nomination to the Supreme Court and an intense interrogator of Anita Hill, whom he accused of perjury. His performance did not endear him to women. In 1996 he was a candidate for president, but withdrew before the first primary as it was clear that the Republican Party was not going to nominate a pro-choice Republican moderate. After Orrin Hatch completed his six years as chairman, Spector was in line to become chairman of the Judiciary Committee, a move opposed by some Republican colleagues, who were fearful of his moderation and his support of abortion. He further enraged his colleagues by warning the administration not to appoint someone who was going to overturn *Roe v. Wade*. He was forced to clarify – some say disavow – his statement. Surrounded by his Republican Judiciary Committee colleagues, he said: "I have no reason to believe that I will be unable to support any individual President Bush finds worthy." In addition to tackling the major legislative business before the Senate in 2005, Spector also engaged in a personal battle with Stage IV B Hodgkin's lymphoma cancer. He underwent nearly five months of chemotherapy but still maintained all of his senatorial duties, including chairing hearings, voting, and brokering important legislative initiatives. On July 22, 2005, Spector received his last chemotherapy treatment and subsequently received a clean bill of health.

In 2005 and early 2006 his leadership was tested in the nomination of John Roberts to be chief justice of the Supreme Court, the nomination and withdrawal of nomination of Harriet Miers, and finally the nomination of Samuel Alito as associate justice. His wife, Joan, is a former City Council member in Philadelphia.

SPECTOR, JOHANNA (1920–), U.S. ethno-musicologist, filmmaker, and educator. Johanna Spector was born and grew up in Latvia where her husband, Robert Spector, was killed by the Nazis in 1941. She spent the war years in concentration camps. She immigrated to the U.S. in 1947. She received her doctorate in Hebrew Letters from the Hebrew Union College (Cincinnati, 1950) and obtained a master's degree in anthropology from Columbia University in 1960. She was a research fellow at the Hebrew University, Jerusalem (1951–53) and until 1957 she spent half the year in Israel, undertaking fieldwork on the Yemenite, Kurdish, and Samaritan communities. In 1954 she joined the Jewish Theological Seminary, New York, and founded its department of ethno-musicology in 1962, be-

coming associate professor in 1966 and full professor in 1970. In the course of her research in Jewish music, she made an extensive collection of recordings. Her personal archive of 11,000 tape recordings includes Arabic, Persian, Turkish, Samaritan, Yemenite, and Indian (Cochin and Bombay) music of Jewish communities. They are accompanied by thousands of photographs, and later films from which she made documentaries, particularly on the Yemenites and Samaritans; she published several studies on them. A large part of her collection is at the National Archives of the Hebrew University. She helped to found the Society for the Preservation of Samaritan Culture and the Friends of the Samaritan Museum in 1968, with the object of establishing a museum at Shechem (Nablus).

[Amnon Shiloah (2nd ed.)]

SPECTOR, MORDECAI (1858–1925), Yiddish novelist and editor. Born in Uman, Ukraine, of a hasidic family, he came under the influence of Haskalah literature and began to write realistic sketches based on his personal experiences and observations of ordinary people in workshops and marketplaces. A. *Zederbaum, editor of the St. Petersburg *Yidishes Folksblat*, published Spector's first novel in weekly installments under the title *Roman On a Nomen* ("Novel without a Title," 1883). Spector later became assistant editor of this paper. His second novel, *Der Yidisher Muzhik* ("The Jewish Farmer," 1884), aroused great interest since it advocated the return of Jews to productive labor on their ancestral soil, a doctrine then propagated by the Ḥovevei Zion. Spector also influenced *Shalom Aleichem to set his literary sights on the provinces and on *shtetl* life, then a neglected area in Yiddish literature. In 1887, he settled in Warsaw, where, during the following decade, he reached the height of his fame, writing feuilletons, travel sketches, short stories, and novels, and editing a series of anthologies, *Der Hoyzfraynd* ("The Family Friend"), a landmark in the development of modern Yiddish literature. In 1894, together with I.L. *Peretz and D. *Pinski, he launched the *Yontev Bletlekh* ("Holiday Leaflets"), another literary landmark. Other literary ventures followed during the ensuing two decades. After the Communist Revolution, he experienced hardships in Odessa. He escaped in 1920, and arrived in the U.S. in 1921. Living in New York, he completed a volume of memoirs, *Mayn Lebn* ("My Life," 1927), which has great literary, historical, and cultural value. Spector was a writer for the masses, whom he tried to entertain, educate, and uplift. Though neither an original thinker nor a subtle psychologist, he was an excellent observer of reality, faithfully reproducing the colloquial speech of Jewish men and women in their homes, shops, and alleys. He was a pioneer of Yiddish folklore and of Yiddish writing for children, and was one of the first Yiddish writers to take a positive attitude toward Ḥasidism. His collected works appeared in 10 volumes (1927–29). His stories have been translated into eight languages, including English (cf. I. Howe and E. Greenberg, ed. *A Treasury of Yiddish Stories* (1953), 250–5).

BIBLIOGRAPHY: *Spektor-Bukh* (1929), incl. bibl.; Rejzen, Leksikon, 2 (1927), 691–708; LNYL, 6 (1965), 518–27; *Dertseyers un Romanistn* (1946), 11–129; S. Niger, *Bleter Geshikhte fun der Yidisher Literatur* (1959), 382–403; Y. Yeshurin, in: M. Spektor, *Der Yidisher Muzhik* (1963), 264–8. **ADD. BIBLIOGRAPHY:** D. Roskies, *A Bridge of Longing* (1995), 170–2.

[Moshe Starkman]

SPECTOR, NORMAN (1949–), Canadian diplomat, public servant, and media commentator. Spector was born and raised in Montreal, where he attended Talmud Torah and Herzliah day schools, worked part time as a packer for Steinberg's grocery chain, and graduated from McGill University. After obtaining his doctorate in political science from Columbia and a master's degree in communications from Syracuse, he taught for a year at the University of Ottawa in 1974–75 before taking a position in the Ontario Ministry of Communications.

Spector moved to British Columbia, where he served as deputy minister to Social Credit Premier Bill Bennett from 1982 to 1986. He was heavily involved in the government's battle with labor unions. His talents and fluency in French drew him to employment in the federal government, and he became secretary to the cabinet for federal-provincial relations in 1986, then chief of staff to Prime Minister Brian Mulroney in 1990. Spector became one in a series of Jews who held very senior positions with Canadian prime ministers of different political stripe. These include Mel Cappe, Eddie Goldenberg, Stanley Hartt, Chaviva Hosek, Hugh Segal, and David Zussman. In Ottawa Spector played a major role in negotiating the unsuccessful 1987 Meech Lake Accord, which would have had Quebec accept the Canadian Constitution passed by the Trudeau Liberals in 1982. In 1992 Spector became Canadian ambassador to Israel and the Palestinian Authority. As Canada's first Jewish ambassador to Israel, and as someone not from the ranks of the diplomatic corps, his appointment caused some opposition within the established foreign service community. Spector proved evenhanded and studied Arabic to go along with his fluency in Hebrew.

Returning to Canada in 1995, Spector became president of the Atlantic Canada Opportunity Agency and an executive with Imperial Tobacco. He returned to Israel briefly in 1997 as publisher of *The Jerusalem Post*. Following his tenure at *The Jerusalem Post* he settled in Victoria, British Columbia. He remains a frequent columnist for *The Globe and Mail* and commentator on Canadian television news, often on Middle East affairs. In 2003 he published *Chronicle of a War Foretold: How Mideast Peace Became America's Fight*, based on his articles in the Middle East.

[Morton Weinfeld (2nd ed.)]

SPECTOR, PHIL (Harvey Philip; 1940–), vastly influential rock music producer, who produced, arranged, and co-wrote some of rock & roll's earliest classic tunes in the late 1950s and early 1960s; member of the Rock and Roll Hall of Fame. Spector was born in the Bronx to Bertha and Benjamin,

a Russian Jewish immigrant who committed suicide in 1949. Spector, his mother, and sister, Shirley, moved to Los Angeles in 1953, where Spector quickly proved proficient on numerous instruments and became acquainted with L.A. rhythm and blues musicians, including songwriters Jerry *Leiber and Mike *Stoller, with whom he would later collaborate on the No. 1 hit "Spanish Harlem." By 1958, having secured a small recording contract, Spector wrote and performed what became his first No. 1 hit, "To Know Him Is To Love Him," inspired by words written on his father's gravestone. In 1960, having apprenticed himself to Los Angeles music veterans, including Lee Hazlewood, Spector began producing numerous pop singles for journeyman singers. Two years later, having become a millionaire from "Spanish Harlem" and other early hits, Spector developed his own, innovative production method. Later known as the "Wall of Sound," Spector massed Los Angeles musicians and instruments into elaborate arrangements that produced pop classics of undisputed emotional and sonic impact. The lyrics for Spector's songs were often produced by the mainly Jewish songwriting teams Carole *King and Gerry Goffin, Ellie Greenwich and Jeff Barry, and Barry Mann and Cynthia Weil. His hits included "Be My Baby," by the Ronettes, and "Da Doo Ron Ron," by the Crystals, both "girl groups," a genre Spector is credited with having defined. The Ronettes were led by Veronica "Ronnie" Bennett, later one of Spector's three wives. In 1965, "You've Lost That Loving Feeling" by the Righteous Brothers reached No. 1, despite being nearly four minutes long – one-third longer than the accepted standard. Spector got around that rule by deliberately misprinting the song's time on the record's label. Spector's rule of the charts faded after that, and he went into self-imposed exile. He repeated his success in the early 1970s with individual members of the Beatles, producing memorable albums for George Harrison (*All Things Must Pass*) and John Lennon (*Plastic Ono Band*), but Spector earned the longstanding enmity of Beatle Paul McCartney for adding strings, horns, and chorus to the uncompleted tapes of the Beatles' *Let It Be* album. He was named to the Rock and Roll Hall of Fame in 1989. Spector's litigious and eccentric behavior tarnished his reputation, and he was accused of pulling weapons on several of his artists, including Leonard *Cohen, with whom he worked in the 1970s. In 2003, an actress was found shot dead in Spector's Los Angeles home, and he was slated to stand trial for murder in 2006.

[Alan D. Abbey (2nd ed.)]

SPEISER, EPHRAIM AVIGDOR (1902–1965), U.S. Orientalist and archaeologist. Born in Skalat, Galicia, Speiser emigrated to the United States (1920). In 1926–27 he surveyed northern Iraq, discovering Tepe Gawra, whose excavation, along with that of the adjacent Tell Billa, he directed during 1930–32 and 1936–37. In 1927 Speiser taught comparative Semitics at the Hebrew University of Jerusalem. From 1928 to the end of his life he lectured in Semitic languages and literatures at the University of Pennsylvania. During World War II,

Speiser served as the chief of the Near East section of the Research and Analysis Branch of the Office of Strategic Services. From 1955 he was a key member of the translation committee of the Jewish Publication Society of America that produced a new English version of the Torah (1962).

Speiser was one of the pioneers in the discovery of the *Hurrians and their culture. He clarified the scope and significance of the Hurrian component in Western Asia during the second millennium B.C.E. and investigated the structure of their language in the still standard *Introduction to Hurrian* (1941). In *The United States and the Near East* (1947, 1950²) he illuminated the modern problems of the region by his expert knowledge of its long history. Speiser's philological and synthetic studies in Mesopotamian civilization displayed its values, with emphasis upon the centrality of law and the influence of Mesopotamian legal conceptions on peripheral peoples, including Israel. During the last decade of his life he devoted much time to the origin of Israel's history and faith. He regarded these as both a reflex of, and a critical reaction to, the Egyptian and Mesopotamian cultures from which Israel emerged. His biblical research culminated in the volume on Genesis in the *Anchor Bible* (1964).

Speiser's scholarly, humanistic, and professional distinction was nationally recognized. He was a president of the American Oriental Society, a member of the American Philosophical Society, and a fellow of the American Academy for Jewish Research.

[Moshe Greenberg]

SPEKTOR, ISAAC ELHANAN (1817–1896), Lithuanian rabbi. Spektor was born in the province of Grodno, Russia, and one of his teachers was Benjamin Diskin. After serving as rabbi in various towns, Spektor went to Kovno, where he officiated until his death. In Kovno he attained eminence as a rabbinic authority and established a yeshivah (*kolel avrekhim*) for the training of outstanding rabbis. He was unsuccessful in his struggle to obtain official recognition for rabbis who were not government appointees. On the other hand he struggled successfully against a law requiring an official examination in Russian from Jewish teachers and also secured the withdrawal of a government decree prohibiting Jewish instruction in the *heder*. At Spektor's instigation Samson Raphael *Hirsch wrote his book on the relationship of the Talmud to Judaism, which was submitted to the Russian government. He supported Isaac *Dembo of Petersburg in his successful campaign against the ban on *shehitah* in Russia. He frequently organized aid for stricken communities in Russia, Lithuania, and other countries. Individuals and communities in distress, from all areas of Jewish settlement, turned to him. He sought government permission for the provision of *kasher* food to Jewish soldiers, and maintained a soup kitchen in Kovno until his death. He

was the only rabbi invited to the conference of Jewish leaders held in St. Petersburg (Leningrad) in 1881–82 to discuss the deteriorating position of the Jews. He later dispatched a manifesto to David *Asher, secretary of the chief rabbi of London, which resulted in protest meetings being held in England, France, Italy, and the U.S. These meetings, whose resolutions were submitted to the Russian government, attracted much publicity and led to the establishment of welfare funds. In later years he made similar pleas and participated in subsequent conferences of Jewish leaders, maintaining confidential contact with influential Jewish circles.

With the increasing Jewish emigration from Russia, he supported the efforts of the Hovevei Zion movement, thereby adding greatly to the movement's prestige. The preparatory meetings for the appointment of representatives to the *Kattowitz conference were held in his home, two delegates being appointed, though he refused to accept nomination as honorary trustee at the Hovevei Zion conference held in Druskininkai in 1887. After the movement was given official recognition, he publicly proclaimed the religious duty of settling in Erez Israel, signing an appeal for the collection of funds for this purpose in synagogues on the eve of the Day of Atonement. On the question of agricultural labor in Erez Israel in a *shemittah* ("sabbatical") year, he favored its permission by the nominal sale of land to a non-Jew, a measure which is employed to the present day. His ban on Corfu *etrogim* enabled the Palestinian variety to enter the market. He also concerned himself with the amelioration of the spiritual and religious needs of Jewish settlers in Argentina and the U.S. Spektor won universal admiration for his broad-mindedness and peace-loving disposition. In 1889 he was elected an honorary member of the *Society for the Promotion of Culture among the Jews of Russia. He was frequently requested to serve as arbitrator. In a dispute over *shehitah*, referred to him from London in 1891, he supported the chief rabbi against the ultra-Orthodox element.

His works are *Be'er Yizhak* (1858; 1948²); *Naḥal Yizhak* (2 pts., 1872–84); *Ein Yizhak* (2 pts., 1889–95); *Ez Peri* (1881; 1903); *Devar ha-Shemittah* (1889). His letters have been printed in various collections. His works contain commentaries and novellae to the Shulḥan Arukh, particularly responsa to questions submitted to him from the various Jewish communities in which he was regarded as the leading authority of his generation. Spektor exercised leniency, particularly in relieving the burden of many **agunot*. His 158 responsa on this subject reveal only three cases where he could not find a basis for permitting the woman to remarry. Many Torah institutions, including the Rabbi Isaac Elchanan Theological Seminary in New York, were named after him.

[Geulah Bat Yehuda (Raphael)]

SPELLING, AARON (1923–2006). U.S. television producer, writer, and actor. Born in Dallas, Texas, Spelling enlisted in the U.S. Army Air Force in 1942 and served in Europe during World War II. He briefly worked as a reporter for the Army's newspaper, *Stars and Stripes*, and produced theatrical events for the Army's special services branch. After attending the University of Paris for one year, Spelling returned to Texas in 1946 to study drama at Southern Methodist University under the GI Bill. There he wrote several plays, two of which took Eugene O'Neill Awards. After graduating in 1950, he directed local theater and then moved to Los Angeles, where he began acting in television programs. He returned to writing and in 1956 sold a script, *Unrelenting Sky*, to *Zane Grey Theater*. Spelling continued writing for the program and in 1960 was named producer of the series. He continued creating and producing shows, including *The Lloyd Bridges Show* (1962–63) and *Burke's Law* (1963–66). In 1968, Spelling hit it big with the action series *The Mod Squad* (1968–73), kicking off similar shows, such as *The Rookies* (1972–76), *S.W.A.T.* (1975–77), *Starsky and Hutch* (1975–79), and *Charlie's Angels* (1976–81). In 1976, Spelling and Mike Nichols took a chance with *Family* (1976–80), but the Emmy-nominated series about a middle-class family that was a win with critics failed to find its audience. Spelling also sought to balance his lighter fare with socially responsible television movies, such as *The Boy in the Plastic Bubble* (1976) and *The Best Little Girl in the World* (1981). Riding high from his success with *Charlie's Angels*, Spelling introduced shows that blended action with glitz, such as *Love Boat* (1977–84), *Fantasy Island* (1978–84), *Vegas* (1978–81), and *Hart to Hart* (1979–84). In 1981, Spelling further refined his formula for commercial success by focusing on the trials and tribulations of the wealthy with *Hotel* (1983–88), *Dynasty* (1981–89), and its spin-off *The Colbys* (1985–87). His first feature film was the hit family comedy, *Mr. Mom* (1983). Just as the late 1980s saw a decline in Spelling's appeal, the launch of the Fox network helped reinvigorate his empire with more youth-oriented shows, such as *Beverly Hills, 90210* (1990–2000) and *Melrose Place* (1992–9). In 1993, Spelling produced HBO's *And the Band Played On*, an expose of the social, political, and personal realities of AIDS. After producing more than 200 television shows, Spelling said he had found personal satisfaction in the success of *7th Heaven* (1996–2006), a television series about a functional religious family.

[Adam Wills (2nd ed.)]

SPELLMAN, FRANK (1922–), weightlifter, Olympic and Maccabiah medalist, member of the U.S. Weightlifting Hall of

Fame and the Helms Hall of Fame. Born in Malvern, Pennsylvania, Spellman was orphaned at the age of seven and raised in a Jewish orphanage in Philadelphia. Originally trained in track and gymnastics, in his late teens Spellman came under the tutelage of weightlifter Dan Leone, and in 1942 he won the U.S. junior middleweight title. In December of that year he was drafted into the Army Air Corps, where he served until his honorable discharge in December 1945. Spellman, who had maintained his training, returned to Pennsylvania and was accepted to the well-known York Barbell team. At the 1946 U.S. Amateur Athletic Union (AAU) competition, he took first place in the middleweight division, and later that year finished 3rd at the World Championships in Paris, while helping the American weightlifters win the world team title. In 1947, Spellman moved down a notch to second place at the AAU Nationals, but moved up to second place at the World Championships in Philadelphia. Now at the peak of his form, in 1948 for the second time in his young career he won the AAU middleweight national title. Then, as the No. 1 middleweight lifter for the U.S. Olympic team, Spellman won the gold medal at the 1948 London games. After 1948, Spellman remained a force in weightlifting, finishing in second place in the AAU Nationals four times between 1949 and 1954. In addition, he won a gold medal at the 1950 Maccabiah games. Spellman did not compete in the national or world championships after 1954, though he did compete in the California State Championships, taking first place in 1954, 1957, and 1958. At the age of 38 and after a two-year hiatus from participation in any competitions, Spellman decided to close out his career by making one final appearance at the 1961 AAU National Championships, in Santa Monica, California. To the surprise of many weightlifting enthusiasts, Spellman overcame the odds to win the middleweight division for his third U.S. title. Besides his championship titles and two gold medals over the course of his 16-year career, Spellman set four American records and two Olympic world records. From 1957 to 1961, Spellman was the coach and mentor of Carl Miller, who became a highly-acclaimed weightlifting and strength trainer. Spellman eventually settled in Florida, and was still lifting into his eighties and acting as an unofficial coach of aspiring weightlifters.

[Robert B. Klein (2nd ed.)]

°SPENCER, JOHN (1630–1693), English theologian and Hebraist. Spencer was master of Corpus Christi College, Cambridge, from 1667 onward and in 1677 became dean of Ely. He published a *Dissertatio de Urim et Thummim* (1669), a kind of prologue to his more famous work, *De legibus Hebraeorum Ritualibus et earum Rationibus* (1685), which laid the foundations of the science of comparative religion. In this work Spencer maintained that many Jewish laws and customs could be linked with those of other Semitic peoples, producing examples from sacrificial rites, the Temple and its appurtenances, and the institution of the scapegoat.

In the second work (2 vols., 1727), which only appeared years after his death, he expanded his thesis to include rabbinic

institutions (e.g., *tefillin*), basing much of his speculation on *Maimonides' *Guide of the Perplexed*. A third edition of the work, also in two volumes, was published at Tuebingen in 1732. Some of Spencer's writings appeared in Blasio Ugolino's *The-saurus Antiquitatum Sacrarum* (Venice, 1744–69).

SPERBER, DAN (1942–), French social and cognitive scientist. His father was the Galician-born novelist and essayist Manès Sperber. Born in France, Dan Sperber was educated at the Sorbonne, where he earned a Licence ès Lettres in 1962, and at Oxford, where he received a B.Litt. in 1968. The director of research at the Centre National de Recherches Scientifiques (CNRS) in Paris, Sperber was well known for his work in developing what he terms an “epidemiology of representations” in his naturalistic theory of culture.

Sperber's early research focused on the anthropology of religion from the perspective of innate mental structures; he argues that these structures have played an important role in the development of religious beliefs and in the way that beliefs “fixate” in the human mind and are “extraordinarily catching.” His studies of linguistics, experimental psychology, the philosophy of science, and evolutionary biology led to his further exploration of cultural theory, using a naturalistic approach linked to evolution. His works include *Rethinking Symbolism* (1975); *On Anthropological Knowledge* (1985); and *Explaining Culture: A Naturalistic Approach* (1996). His “epidemiology of representations,” which may be conceived as a “contagion” of ideas, concerns the processes of replication and transformation of cultural beliefs, which Sperber likens to models of the transmission of disease.

Sperber also developed, with British linguist Deirdre Wilson, a cognitive approach to communication that has become known as “relevance theory.” Their 1986 work, *Relevance: Communication and Cognition*, has received much attention; their theory, though influential, has also generated controversy, as has Sperber's “epidemiology of representations.” In *Relevance*, the authors argue that human cognition relies on perceived relevance: that humans pay attention only to information that seems relevant. The work also approaches the study of reasoning by considering the role of contextual information, and questions contemporary views on the nature of verbal comprehension.

Sperber was a visiting lecturer at several institutions, including Cambridge University, the British Academy, the London School of Economics, the Van Leer Institute in Jerusalem, the University of Michigan, the University of Bologna, the University of Hong Kong, and the Institute for Advanced Study at Princeton University.

[Dorothy Bauhoff (2nd ed.)]

SPERBER, DANIEL (1940–), historian and Talmud scholar. Born in Wales in 1940, he moved to Israel after high school and

studied at the Kol Torah and Hebron yeshivot. In the 1960s he studied the history of art at England's Courtauld Institute. In 1978 he became a full professor of Talmud at Bar-Ilan University. He has written on economic history, as in *Roman Palestine, 200–400: Money and Prices* and in *Roman Palestine, 200–400: The Land* and on Jewish art and history, *Minhagei Israel* (1998), *Why Jews Do What They Do* (1999), and the *City in Roman Palestine* (2001), among other topics. From 1985 he was a member of the Academy of the Hebrew Language. In 1992 he received the Israel Prize for Jewish Studies.

SPERBER, MANÈS (1905–1984), French author and editor. Born in Zablotov, Eastern Galicia, Sperber spent much of his youth in Vienna, where he was prominent in the *Ha-Shomer ha-Za'ir Zionist youth movement. He was assistant to the psychologist Alfred *Adler, whose life and work Sperber discussed in a study published in 1926. From 1927 to 1933 he taught psychology in Berlin and founded a psychological review. For some years he was an active communist, but finally left the party in 1937. After the Nazis came to power in Germany, he escaped to France. Later he became a director of the important French publishing house of Calmann-Lévy and turned to literature, first writing in German and later in French.

His main works were *Et le Buisson Devint Cendre* (1944; *The Burned Bramble*, 1951); *Plus Profond que l'abîme* (1949; *The Abyss*, 1952); *La Baie Perdue* (1952; *Journey Without End*, 1954), an epic of the underground; the essay *Le Talon d'Achille* (1957; *The Achilles Heel*, 1959); and *Man and His Deeds* (1970), an alternative to the politics of the present. Like Arthur *Koestler, he depicts the moral collapse of the revolutionary edifice and the disillusionment of its architects. He parts company with Koestler when he propounds a positive attitude to Jewishness and is deeply immersed in Jewish culture. This is particularly noticeable in the story “*Qu'une larme dans l'océan*,” which forms part of *La Baie Perdue*. Here the novelist sets forth the eternal spiritual resistance of the Jews. In his preface to the book, André Malraux (d. 1976) eulogized it as “one of the Jewish people's greatest stories.”

BIBLIOGRAPHY: C. Lehrmann, *L'Élément Juif dans la Littérature Française*, 2 (1961), 178–83; G.L. Mosse, in: *New York Times* (Nov. 11, 1970).

[Arnold Mandel]

SPERO, NANCY (1926–), U.S. painter. Cleveland-born, feminist artist Nancy Spero studied at the Art Institute of Chicago (1945–49) and at the Atelier André l'Hôte and the Ecole des Beaux-Arts (1949–50) in Paris. While at the Art Institute, she met the artist Leon *Golub, whom she married in 1951.

Conceived while Spero and Golub were living in Paris from 1959 until 1964, her early *Black Paintings* show figures materializing from a dark background. Several of these canvases portray women segregated into stereotypical roles, such as a mother or a prostitute. In Paris, Spero had her first solo exhibition at the Galerie Breteau (1962). Following the couple's move to New York in 1964, Spero initiated *The War Series*

(1966–70), a group of gouache drawings on paper that often show the effects of bombing by utilizing iconography that equates the male phallus with annihilation. From 1969–72, Spero worked on the *Codex Artaud*, her first scroll and a format she would explore for many years. Based on the writings of Antonin Artaud, Spero juxtaposes typed excerpts from Artaud's poems with painted imagery arranged in a collage-like fashion on strips of paper. For Spero, Artaud's prose, which describes his alienation and anguish, metaphorically articulated the position of women in a patriarchal world.

Spero began designing museum installations in the late 1980s. After reading Bertolt Brecht's poem about Marie Sanders, a woman who slept with a Jew and was subsequently murdered for her perceived transgression, Spero made several installations about her, including *Ballad of Marie Sanders*, *The Jew's Whore* at Smith College Museum of Art, Northampton, Massachusetts (1990) and *The Ballad of Marie Sanders/Voices: Jewish Women in Time* at the Jewish Museum (1993). The latter installation reproduced photographs showing victimized women in the Warsaw Ghetto, concentration camps, and other Nazi-related brutalities, as well as women in a more powerful position, such as female Israeli soldiers and female Israeli and Palestinian peace activists. Spero also depicted Sanders in a paper print and a scroll.

From 1969 Spero was a member of Women Artists in Revolution (WAR), a group dedicated to female equality in the arts. She co-founded the Artists in Residence Gallery, an art gallery for women based in New York City, in 1972.

[Samantha Baskind (2nd ed.)]

SPERO, SHUBERT (1923–), U.S. rabbi. Born in New York City, Spero received his rabbinic ordination at Yeshiva and Mesifita Torah VaDaath in 1947. After serving as rabbi at the Young Israel of Brookline, Mass. (1947–50) he assumed the same position at Young Israel of Cleveland (1950–83). He holds a B.S.S. from the CCNY, an M.A. from Case Western Reserve University, and a Ph.D. from Case Western Reserve University (1971). His thesis was on the subject, "The Justification and Significance of Religious Belief." He also served as the secretary of the Orthodox Rabbinical Council of Cleveland and lecturer in philosophy at the Cleveland Institute of Art. After making *aliyah* to Israel in 1983, he has served as Irving Stone Professor of Basic Jewish Thought at Bar-Ilan University.

For over 40 years Spero made contributions to Jewish thought in areas of moral philosophy, aesthetics, religious Zionism, and the accommodation between traditional Judaism and modern life. His published works include *Faith in the Night (A Bedside Companion for the Sick)* (1957); a compilation of Maimonides' writings, *The Faith of a Jew* (1949); and *Story of Chasam Sofer* (1946). His book *God in All Seasons* (1967) discusses Jewish festivals as an integral force in the life of the

observant Jew. His major philosophical work *Morality, Halakha and the Jewish Tradition* (1982) is an attempt to present a comprehensive study of the morality of Judaism. In this work he argues that the ultimate creative task of man is to create himself as a moral personality.

After many years of research he published his second major work, *Holocaust and Return to Zion* (2000). In this book he analyzes the idea of history from both a Jewish and a philosophical perspective. He presents a novel interpretation of exile in Jewish history, in which it has the special function of bringing about the slow, progressive development of certain key factors in Jewish and world history that make a renewed Jewish sovereign polity possible.

These key factors are from the Jewish side: the presence of a sizable number of Jews, identifiable as Biblical Israel, in Europe by the middle of the 19th century, in possession of a Torah which had been elaborated into a viable philosophic worldview and a comprehensive way of life, and from the side of the larger society, the spread of liberal democracy, the doctrine of human rights, the growth of science and technology, and the serious efforts to establish institutions working toward an international order. As he understands it, the improbable conjunction of these key factors made possible the reestablishment of the Jewish state within the historic boundaries in 1948 – a return that had been promised by the Hebrew prophets.

Spero suffered a great personal tragedy in the 2003 suicide bombing at Café Hillel in Jerusalem. Both his son-in-law, physician Dr. David Appelbaum, and his granddaughter, Nava, who was to be married the next day, were killed in the blast. Spero and his family in the following years dedicated themselves to establishing humanitarian and religious projects in memory of his son-in-law and granddaughter.

[Shalom Freedman (2nd ed.)]

SPERTUS INSTITUTE OF JEWISH STUDIES (formerly the College of Jewish Studies), Chicago educational institute organized in 1924 by the Board of Jewish Education of Chicago to provide opportunities for systematic Jewish studies and for training teachers. The College opened under the leadership of Alexander Dushkin, the executive director of the Board of Jewish Education, with five students, who met in rented quarters in different parts of the city. Dushkin later established the Department of Education at The Hebrew University. In 1935 Leo Honor, the college's administrator, succeeded Dushkin as director of the Board of Jewish Education with Samuel M. Blumenfeld serving as registrar and, later, dean of the college. Under the leadership of Dr. Leo Honor and Rabbi Samuel Blumenfeld, the identity of the college as a distinct institution began to emerge. In 1942, it was authorized to grant degrees by the Illinois Department of Education. As a result of the steady growth of the college, the Board of Jewish Education recommended that it become a separate corporation with its own board of governors. In 1945 the college was incorporated as a Not-for-Profit Illinois Corporation. In its charter, issued

that year, the institutional mission was defined as “Maintaining and operating a College in which youths and adults may receive an education on a college and post graduate level in... any subject relating to Jews and Judaism.” This represented an expansion of the college’s original mission of being primarily a teachers’ training institution. In 1946 it moved into its own building and expanded its program to include studies leading to the Bachelor of Hebrew Literature degree and teachers’ diplomas. With the addition to the faculty of distinguished scholars from Europe and Israel, the college initiated graduate studies. Spertus College now offers eight post-graduate degrees, and through distance learning options serves students in 36 U.S. states and six foreign countries. The Spertus Center for Nonprofit Management provides working professionals with tools to succeed in the nonprofit and public service sectors, through its master’s program and continuing education opportunities.

From the 1940s until the 1960s, the college served as the central institution in Chicago and in the American Midwest for the training of Jewish educators and as the central institution in Chicago for Hebrew culture, thereby expressing the ideology of Cultural Zionism that characterized its early history, programs, and curricula. By 1948, a department of graduate studies offering bachelor’s, master’s, and doctoral degrees had been initiated. During the late 1950s and early 1960s, cantors and choir directors were trained for synagogues through its Institute for Jewish Music. From 1965 the college has served other colleges and universities as a department of Judaic studies, in which students may pursue a major or minor curriculum as well as elective courses. From the 1940s until the mid-1960s, the college operated a summer camp, Camp Sharon, and initiated and substantially expanded continuing education programs in Chicago and surrounding suburbs. Many renowned refugee scholars who migrated to America to escape Hitler served on the Spertus faculty during these years.

In 1968, Maurice Spertus donated his impressive collection of Jewish ceremonial objects to the college, thus beginning the Spertus Museum. In 1970, the College of Jewish Studies honored the outstanding and ongoing support of the families of Maurice and his brother Herman Spertus by changing its name to the Spertus College of Judaica. In 1974, Spertus moved to its present Michigan Avenue location. That same year, Norman and Helen Asher, recognizing the importance of a first class library, endowed what is now the Norman and Helen Asher Library, which contains more than 100,000 books. The Asher Library also includes the Targ Center for Jewish Music and the Chicago Jewish Archives.

In 1968, the College of Jewish Studies was officially separated from the Board of Jewish Education. Among the distinguished scholars who served on the faculty were Simon Halkin, Simon Rawidowicz, Meyer Waxman, Samuel Feigen, Moses Shulvass, Judah Rosenthal, and Byron Sherwin. Samuel B. Blumenfield was its first president, followed in 1954 by Abraham Duker, and in 1962, by David Weinstein. In

1984, Dr. Howard A. Sulkin became the organization’s seventh president.

In 1971, Spertus College started the first college level course in the Midwest in Holocaust Studies, and in 1975 Spertus Museum created the Bernard and Rochelle Zell Holocaust Memorial, the first permanent Holocaust exhibition in North America, the centerpiece of the Bernard and Rochelle Zell Center for Holocaust Studies.

In 1987, Spertus College established The Joseph Cardinal Bernardin Center for the Study of Eastern European Jewry. Jointly sponsored with the Archdiocese of Chicago, the center is dedicated to promoting interfaith dialogue and increased understanding between eastern European and Jewish communities.

In 1993, the Spertus College of Judaica officially became the Spertus Institute of Jewish Studies, reflecting its multidisciplinary identity. Along with the name change, reflecting its multifaceted approach to the study of Jewish culture, came a renewed declaration of institutional goals and new long term strategies on how to implement them.

[Samuel M. Blumenfield]

SPEWACK, BELLA (1899?–1990), U.S. journalist, screenwriter, and playwright. Born in Transylvania, Bella Cohen emigrated with her mother to the Lower East Side of New York in 1903. After graduating from Washington Irving High School, she began writing for the socialist newspaper *The Call* and also worked as a press agent for various organizations. Among them was the Girl Scouts, where she is reputed to have invented the idea for the Girl Scout cookie. In 1922, Bella Cohen married Samuel Spewack, a newspaperman for the *New York World*, and they traveled together to Berlin and Moscow as foreign correspondents. While in Berlin in 1922, Spewack penned her posthumously-published memoir, *Streets: A Memoir of the Lower East Side* (1995) and also began writing short stories. “The Laugh,” published in *Best Short Stories of 1925*, was one of more than 40 short stories she wrote in her twenties. Developing their talent in association, Bella and Sam Spewack wrote a number of successful comedies for stage and screen, including the plays *Boy Meets Girl* (1935), a satire on Hollywood which ran on Broadway for 669 performances; *Clear All Wires* (1932), a farcical newspaper melodrama; *My Three Angels* (1953); and *The Festival* (1955); and films such as *My Favorite Wife* (1940), starring Cary Grant; and *Weekend at the Waldorf* (1945), starring Ginger Rogers. Perhaps their best known works are the books they wrote for two highly successful Cole Porter musicals, *Leave It To Me!* (1938), and *Kiss Me Kate* (1948), which won the Tony Award that year. Spewack was deeply involved in the theatrical and intellectual world of mid-twentieth century New York City. Her papers, in the Samuel and Bella Spewack Collection in the Rare Book and Manuscript Library of Columbia University, include correspondence with George and Ira Gershwin, George S. Kaufman, Thornton Wilder, Mary Martin, Lillian Hellman, Eleanor Roosevelt, and many others. In 1953 the Spe-

wacks founded a sports club in Ramat Gan, Israel, for child victims of poliomyelitis.

SPEYER (Fr. **Spire**; Eng. sometimes **Spires**), city in the Rhenish Palatinate, Germany. Although local traditions, largely legendary, speak of Jewish settlement in Speyer in Roman times, Jews probably first came to the city in the early 11th century. Documentary evidence for a Jewish settlement in the city dates only from 1084, when Bishop Ruediger settled Jews in the village of Altspeyer, which he incorporated into Speyer “to increase the honor of the town a thousand fold.” At that time Jews fled from *Mainz for fear of persecution because of a fire they were accused of having caused. The bishop allotted them a special residential quarter and gave them a plot from Church lands to be used as a cemetery. They were also allowed to build a protective wall around their quarter. In a privilege, dated Sept. 13, 1084, Bishop Ruediger granted them unrestricted freedom of trade and considerable autonomy. The **archisynagogos*, later also called “bishop of the Jews” (*Judaeorum episcopi*), was the spiritual head of the community; in lawsuits between Jews he was permitted to give rulings in accordance with Jewish law. The Jews were also expressly allowed to sell to Christians meat which was ritually unclean for Jews, and they did not have to pay any duties or tolls when entering or leaving the city. They also had the right to engage Christian servants. The privilege granted by Bishop Ruediger was confirmed by Emperor Henry IV on Feb. 19, 1090, to *Judah b. Kalonymus, David b. Meshullam, and Moses b. Jekuthiel of Speyer; in addition to renewing the privileges granted by Bishop Ruediger, the emperor guaranteed the Jews freedom of trade in his empire as well as his protection. Henry’s privilege document is of more than passing interest to the historian, since city privileges were at the time a new category of constitutional documents in Germany. By 1096 a synagogue had been built. The *mikveh*, first mentioned in 1125, was in the vicinity.

The Jewish community of Speyer was one of the first Rhine communities to suffer during the First *Crusade. On a Sabbath, the eighth of Iyyar (May 3, 1096), a mob of crusaders surrounded the synagogue intent upon attacking the community while all were gathered in one spot. Forewarned, the Jews had concluded their service early and fled to their homes. Nevertheless, 10 Jews were caught outside their homes and killed. One woman committed suicide rather than submit to baptism, an act that was to be repeated frequently during the period. When Bishop John heard of what occurred, he came to the defense of the Jews with his militia, prevented further bloodshed, and punished some of the murderers. As an added precaution, he hid some of the Jews in villages surrounding Speyer, where they stayed until the danger had passed. The Jews returned to their homes, still fearful of attacks against them. Jews living in Altspeyer (the upper part of the city) did

not attend the synagogue located in the lower portion of the city because of such fears. Instead, they held services at the *bet midrash* of R. Judah b. Kalonymus until a new synagogue was erected in Altspeyer in 1104.

The community grew and prospered during the 12th century; its economic position was excellent and it established itself as a center of Torah. Among the scholars of Speyer in this period were Eliakim b. Meshullam ha-Levi, a student of *Isaac b. Judah of Mainz; Kalonymus b. Isaac, known as a mystic as well as a talmudist; *Isaac b. Asher ha-Levi; Jacob b. Isaac ha-Levi, a German tosfist and author of a dirge on the Crusade period; *Samuel b. Kalonymus he-Ḥasid; Shemariah b. Mordecai, a correspondent of R. Jacob *Tam and a great talmudic authority; Meir b. Kalonymus, the author of a commentary to the *Sifra*, *Sifrei*, and *Mekhilta*; and Judah b. Kalonymus b. Meir, the author of a talmudic lexicon, *Yihusei Tanna'im ve-Amora'im*. In 1195, after severe persecutions following a *blood libel, Emperor Henry VI demanded that the Jews be compensated for damages and that the burned synagogue and ruined houses be rebuilt. Under the guidance of R. Ḥezekiah ha-Nagid, the Jews rebuilt their community. Early in its history the community developed a close relationship with the other Rhine communities and particularly with the closely allied cities of Mainz and Worms (see *Shum). In a series of synods beginning in 1196 they promulgated a series of communal decrees known as *takkanot Shum*, later to be of decisive influence on all Ashkenazi communities. The synod of 1223 took place in Speyer; among the most important scholars participating in the synods was R. *Simḥah b. Samuel of Speyer, although Speyer had then lost the dominant position it had held as a Torah center.

A flourishing community continued to exist in Speyer until the middle of the 14th century, although the Jews were drawn into a conflict between the bishop and the burghers in 1265, and in 1282 a blood libel brought suffering upon the community. In 1286 many Jews of Speyer and the neighboring communities of Worms, Mainz, and *Oppenheim were involved in the ill-fated attempt at immigration to Erez Israel led by *Meir b. Baruch of Rothenburg. In December 1339 both the bishop and the municipality promised their protection to the Jewish community for a period of ten years. The city possessed a *Judengasse* but Christians lived on it as well, and Jews owned houses elsewhere in the city. The community had a high degree of autonomy, administered by a “*Judenbischof*” together with a Jewish municipal council. In this period the community maintained not only a synagogue and a cemetery but also a communal wedding hall, a hospital for the indigent poor (**hekdes*), and a *matzah* bakery. The community suffered somewhat during a blood libel in 1342; it was, however, to meet its destruction during the *Black Death persecutions. In January 1349 a mob gathered and stormed the Jewish quarter. Some Jews locked themselves into their houses and set fire to them; others were killed by the mob, while a small number allowed themselves to be baptized in order to save their lives. Among the martyrs was the scholarly R. Eliakim, treasurer of

the community's hospital. The loss of life was very great; out of fear of contamination, the burghers packed Jewish corpses in wine barrels and threw them into the Rhine. A small number were able to flee to neighboring communities such as *Heidelberg and Sinzheim. All Jewish property was confiscated or destroyed by the mob in an attempt to find hidden gold in Jewish homes. Tombstones were dragged away and utilized in the building of towers and walls, while the graveyard was plowed and sown with corn. All debts owed to the Jews were annulled. Emperor Charles IV absolved the city's inhabitants of any wrongdoing and allowed the city to retain confiscated Jewish properties. Although their houses in Altspeyer remained in Christian hands, Jewish autonomy was restored in 1354 and part of the cemetery returned, together with the right to rebuild communal institutions.

With much difficulty the community was rebuilt, but without any of its prior standing as a center of learning. Emperor *Wenceslaus issued a new letter of protection (see **Schutzjuden*) to the Jews of Speyer in 1394. Nevertheless, in 1405 they were expelled from the city and allowed to return only in 1421. In 1430 they were again expelled, returning again in 1434, only to be driven out once more a year later. After an interval of 30 years they were again domiciled in Speyer. In 1467 the city granted the Jews their protection for a period of ten years. Yet in 1468 and 1472 Bishop Matthias von Rammung issued anti-Jewish decrees, including a ban on charging interest and practicing usury; forbidding Jews to appear publicly on Christian feast days; forcing Jews to wear distinctive clothing; forbidding the building of a school or synagogue without the bishop's permission; and an edict confining Speyer Jews to a ghetto. By that time, however, the number of Jews in Speyer was very small. In fact, from the 16th to the 18th centuries, only individual Jews lived in the city. Those who fled from Speyer settled in neighboring places such as *Bruchsal, Berghausen, Harthausen, Dudenhofen, Otterstadt, and *Landau.

In the 19th century the community was renewed; by 1828 it was flourishing once more. A new *talmud torah* was opened, employing a permanent teacher. In 1829 the statutes of the community, which determined the synagogue regulations in particular, were published. In 1831 a Jewish elementary school was dedicated and in 1837 a synagogue, with an adjoining *mikveh*; the synagogue was enlarged in 1866. A new Jewish cemetery was consecrated in 1888. There were several societies for social self-help, which united in 1910 to aid the needy. The board of the community consisted of five members in 1920. At the beginning of the 20th century Dr. Adolf Wolf *Salvendi and Dr. Steckelmacher were rabbis of Speyer.

Holocaust Period

In 1933 there were 269 Jews in Speyer, since many had previously moved to other German cities. That same year all the community's cultural associations as well as the Jewish youth societies were banned. The Speyer municipal government investigated the proprietors of firms and placed orders only with "Aryan" firms. In May 1934 the community initiated courses

for the study of Hebrew; in 1935 a conference of Jewish youth took place in Speyer. In subsequent years, up to the outbreak of the war, many emigrated because of increasing antisemitic excesses. Almost all young Jews left the city. In 1939 there were still 77 Jews there; in 1940 there were 60. Of these, 51 were deported on Oct. 22, 1940, to the *Gurs concentration camp in France and almost all the rest to camps in Eastern Europe, where they perished. No new community was established in Speyer after the war. The synagogue that had been built in 1836 was destroyed in 1938, but the cemetery still existed in 1971. Remains of the old Jews' court and Jewish public baths were preserved in the Palatinate Historical Museum in Speyer, along with a number of Jewish tombstones from the 12th and 15th centuries and Jewish ritual objects from the former community.

The medieval synagogue in Speyer, dating back to 1104, is the oldest Jewish religious structure preserved in Germany. Archaeological excavations in 2001 brought new findings about the history of the building, the interior, and the early history of the Jews in the episcopal city. In 2004–2005 the Palatinate Historical Museum in Speyer held the exhibition "The Jews of Europe in the Middle Ages," which included a computer-based reconstruction of the synagogue. Near the site of the synagogue, a plaque (inaugurated in 1978) commemorates the building that was destroyed in 1938. Another memorial to the former Jewish community was consecrated in 1992, bearing the names of all the Speyer Jews who perished during the Nazi era.

After 1990 Jews from the former Soviet Union settled in Speyer. They are partially affiliated with the Jewish community of Rhine Palatinate in Neustadt. In 2005 there were about 50 members. The Neustadt community planned to open a new community center with a synagogue in 2006. Besides Jewish immigrants from the former Soviet Union, a Jewish community was founded in Speyer in 1996. There were 100 members in 2005.

[B. Mordechai Ansbacher / Larissa Daemmig (2nd ed.)]

SPEYER, German and American family of international bankers and philanthropists. Progenitor of the family was MICHAEL ISAAC SPEYER (d. 1692) who, on his marriage in 1644, established residence in the Frankfurt ghetto and became community head. His great-grandson ISAAC MICHAEL SPEYER (d. 1807) was an Imperial Court Jew. The latter's nephew JOSEPH LAZARUS SPEYER (1783–1846) married into the Frankfurt banking family Ellissen, and his son LAZARUS JOSEPH SPEYER (1810–1876) carried on business from 1836 under the hyphenated name Lazard Speyer-Ellissen. The latter's partner, PHILIPP SPEYER (1815–1876), moved to New York in 1837. Together with his brother GUSTAV (1825–1883) he established the bank Philipp Speyer & Co. in 1845, later Speyer & Co. Together with its Frankfurt affiliate, it placed the first North American Civil War loan in Germany. Gustav's American-born sons, JAMES (1861–1941) and EDGAR (1862–1932) piloted the family concern to its height. While remaining partners of the Frankfurt house, whose last head was their brother-in-law EDUARD BEIT VON SPEYER (1860–1933), James conducted the American business and Edgar took charge of Speyer Brothers, London. Edgar was made a baronet, but, suffering defamation during World War I, returned to New York. Speyer & Co. alone, and sometimes jointly with *Kuhn, Loeb & Co. and National City Bank, led syndicates which raised European capital for investment in American industry. This movement was reversed after World War I, when a subsidiary, New York & Foreign Investing Corporation, mobilized American capital for investment, mainly through the Frankfurt branch, in German and other Central European issues. Absorbing a Berlin private bank in 1927, the Frankfurt branch became temporarily prominent in the international expansion of the German rayon industry. However, the worldwide crisis after 1929 stopped the trans-atlantic flow of capital, and the German and American houses were liquidated in the 1930s. Institutions benefiting from the family's philanthropic interests included Frankfurt University; Museum of the City of New York; and Mount Sinai Hospital, New York.

SPEYER, BENJAMIN (18th century), communal leader and *shtadlan*, merchant in Mogilev-Podolski, and purveyor to the

Russian government. In 1768 Speyer acted with Baruch Yovon (Yavan) to foil Jacob *Frank's appeal to the Russian government for protection. In 1770 Speyer successfully obtained the suspension of a decree expelling Jews from Courland and Riga. When the Frankists sent the "red letters" to the Jews of Russia in 1800, Speyer translated them for Governor-General Gudovich of Kamenets-Podolski, signing himself with the title "court councillor." In 1804 he proposed to the government council in charge of legislation for Jews that they eliminate unfair taxation.

SPEYER, SIR EDGAR (1862–1932), British railway financier. Edgar Speyer, a member of the famous German banking family, was born in Frankfurt and came to England in 1887 as a director of Speyer Brothers, the family bank, engaged in currency exchange and railway finance. He was naturalized in 1892. From the mid-1890s he was one of the most important figures in procuring the finance and development of London's "tubes," its electric-powered subways, usually in conjunction with the American railway builder C.T. Yerkes. London's Underground system owes much to Speyer. He was made a baronet (a hereditary knight) in 1906 and was made a member of the Privy Council in 1909. During World War I, Speyer was the victim of a concerted, highly unpleasant campaign against him as an alleged pro-German. In 1915 he offered to resign as a privy councillor, but the offer was declined by the prime minister; at nearly the same time, a lawsuit was brought against him and Sir Ernest *Cassel, another German-born member, requiring them to justify their continued membership. As a result of these pressures, Speyer moved permanently to New York. According to historians, however, there seems no doubt that Speyer was, in some sense, pro-German and was in regular touch with his Frankfurt business. In 1921 he was struck off the list of privy councillors and was accused, in a government white paper, of "trading with the enemy" in wartime. He continued to live in New York but died after an operation in Germany, ironically less than a year before Hitler came to power.

[William D. Rubinstein (2nd ed.)]

SPICES. The Bible has no special word for spice. In the talmudic and midrashic literature the term *tavlin* is used, from the verb *tavel* (תבל), which is apparently connected with the root *balol* ("to mix"). This term was employed metaphorically by R. Joshua b. Hananiah in his reply to questions by "the emperor" (probably Hadrian): "Why has the Sabbath dish such a fragrant odor?" To this R. Joshua replied: "We have a certain spice (*tavlin*) called the Sabbath, which we put into it [the Sabbath dish] and which gives it a fragrant odor" (Shab. 119a). Spiced foods were very popular among the Jews of Erez Israel and Babylonia, even as they are today among Jews from Oriental

countries who know several dozen varieties of spices, special favorites being the pungent-tasting ones, principally pepper, that stimulate the appetite. Such spices apparently also have some disinfectant action under the inferior conditions of food hygiene prevalent in the East. The general name for spices is *מִשְׁבִּיחֵי אוֹכְלִין* (*mashbihei okhelin*, “food improvers”; Sif. Deut. 107, where seven kinds of spices are mentioned). Another term used is *צִיקֵי קֶדְרָה* (*zikei kederah*; Yoma 75a; Hul. 77b; et al.).

Among the “food-improving” spices may also be included pungent-tasting vegetables, such as *garlic, the *leek, the *onion, etc. Some aromatic plants (*incenses and perfumes), such as *cinnamon and *saffron, were also used as spices. In addition to these aromatic plants and vegetables, the Bible mentions four kinds of spices, *hyssop, *caper, *cumin, and *fennel-flower, while talmudic literature refers to dozens of varieties, the most important of which are the following.

AMOMUM. The word *hamam* mentioned in the Mishnah (Uk. 3:5; et al.) refers, according to Asaph ha-Rofe, to the seed of the pungent-tasting, aromatic plants of the genus *Amomum* of the Zingiberaceae – ginger family – such as *Amomum cardamomum*. Called *hel* in Arabic, it is popular among Oriental communities as an additive to coffee. Some hold that the “principal spices” (Ex. 30:23) refer to these plants.

ASAFETIDA. The *hiltit* of the Mishnah is the plant *Ferula asafetida*, the congener of *galbanum*, and, like it, has an unpleasant aroma but flavors a dish, and is still used in Iran. Mentioned together with asafetida is a spice named *ti'ah* (Uk. 3:5), held by some to be the root of the same plant.

CAPER. The fruit, *avijyonah*, and the flower buds, *zalat*, of the caper plant were eaten pickled either in salt or in vinegar.

CARAWAY. The *karbos* of the Mishnah (Kil. 2:5 – this is the correct reading), which is identified in the Jerusalem Talmud (MS Rome, *ibid.* 2:5, 27d) refers to *Carum carvi*, the seed of which was used as a spice and the thick root as a vegetable.

COSTUS. The *kosht*, which is mentioned among the “food improvers” (Sif. Deut. 107; cf. Uk. 3:5) and among the ingredients of the incense used in the Temple (Ker. 6a), has been identified with the aromatic spice *Costus*, which was extracted from species of plants belonging to the ginger family. According to another view, the *Costus* of the ancients is to be identified with *Aucklandia costus* (= *Aplotaxihappa*), a fragrant plant which is a member of the Compositae family.

CUMIN. The seed of the *kammon* of the Bible and the literature of the sages was used as a spice on bread during baking.

DILL. Called *shevet* in the Mishnah, dill is the plant *Anethum graveolens* used today mainly as a spice in pickled cucumbers. In mishnaic times its foliage, stems, and seed were used as a spice (Ma'as. 4:5), and it was sown for this purpose (Pe'ah 3:2). It is an umbelliferous plant with yellow flowers, which grows wild in the Negev (it is popularly but erroneously called *shamir*).

DODDER. This plant is identified with plants of the genus *Cuscuta* of which there are many species that are parasitic on cultivated and wild plants in Israel. Dodder is called in the Mishnah *keshut*, the meaning of which is “hair,” since these plants are leafless and have the appearance of entwined hair. The seed sprouts on the ground, and the plant winds itself around the stem of another plant, extracting its sap by putting forth suckers into it. The fruit of the dodder was used as a spice, mainly in wine (Pliny, *Historia naturalis* 13:46). In the Talmud it is mentioned that the dodder is a parasitic plant, its life depending on the plant to which it is attached (Er. 28b).

FENNEL. The umbelliferous plant *Foeniculum vulgare*, leaves of which are used as a spice similar to dill, fennel is called *gufnan* in the Mishnah (Dem. 1:1) and *shumar* in the Talmud. The Jerusalem Talmud (Dem. 1:1, 21d) states that the Galileans did not consider it a spice, but it was regarded as such in Judah.

FENNEL-FLOWER. Known as *kezah* in the Bible and the literature of the sages, the seed of the fennel-flower was used as a spice on bread.

GINGER. The Indian plant *Zingibar officinale*, from the rootstock of which an aromatic spice was made, ginger is called *zangevila* in the Talmud and was sold both dried and fresh (Ber. 36b; Yoma 81b). In the Talmud (*ibid.*) it is also called “the *himalta* which comes from India.”

HYSSOP. The plant *Majorana syriaca* is called *ezov* in the Bible and in the literature of the sages; its leaves were used as a spice. Of the allied genera, reference is made to the spice plants (*ezov koheli*), which is *Hyssopus officinalis* (Neg. 14, 6, where *ezov romi* is also mentioned), *evreta*, *maru-hiyiyura*, and *shumshuk* (Shab. 109b), species that belong to the genera *Majorana* or *Origanum*.

LAVENDER. The plant *Lavandula officinalis* (*spica*) is known as *ezovyon*, and its leaves are used as a perfume and as a medicine (Shab. 14:3).

MINT. The plant *Menta piperita*, the leaves of which are used as a spice and yield an ethereal oil, is called *minta* in the Mishnah (Uk. 1:2) and *na'ana* (which is also its Arabic name) in the Jerusalem Talmud (Shab. 7, 10a). Four species of mint grow wild in Israel.

MUSTARD. Known as *hardal* in the literature of the sages, *mustard is extracted from the seed of species of *Sinapis* and *Brassica*.

PEPPER. The most important and popular spice, black *pepper is known as *pilpel*, and *Piper longum* as *pilpela arikhta*.

RUE. The small shrub *Ruta graveolens*, whose leaves have a pungent aroma (regarded by some as unpleasant), is popular among Oriental communities. In the Mishnah (Uk. 1:2; et al.), it is called *pigam*, and in Arabic *fijn* or *rudah* (= *Ruta*). The Mishnah (Shev. 9:1) also mentions a rue that grows wild, the reference being to *Ruta bracteosa*, which grows in the woods

in Israel. To the family of rue – *Rutaceae* – belong species of the *Citrus*.

SAFFLOWER. The prickly plant *Carthamus tinctorius* has reddish-yellow leaves, *ḥallot ḥari'a* (Uk. 3:5), which were used as a spice, and its seed, *benot ḥari'a* (Tosef. Ma'as. Sh. 1:13), as food as well as a spice. In the Talmud *kozah*, *kurtama*, and *morika* are used as synonyms for safflower. Today the safflower is grown largely for the oil extracted from its seed. The petals of the flower's corolla were formerly used as a dye (see *Dye Plants).

SAFFRON. Known as *karkom* in the Bible and the literature of the sages, the stigmas of its flower were used as a spice and a dye.

SAVORY. Called *si'ah* in the Mishnah, savory is mentioned there, together with hyssop and thyme, among plants which were grown as spices; it also grew wild (Shev. 8:1; Ma'as. 3, 9). According to the Jerusalem Talmud (Shev. 7:2, 37b), *si'ah* is identified with *zatrach*, which is *Satureia tymbra* Savory, an aromatic dwarf shrub of the family *Labiatae*, that grows wild on mountains. The Arabs call these three species *z'ar*.

SESAME. The summer plant *Sesamum orientalis* (*indicum*), sesame was used in the preparation of delicacies and as a spice in various kinds of pastry (Shev. 2:7; TY 1:5). Its seed consists of 50% oil, which was used as a food and in lamps (Ned. 6:9; Shab. 2:2).

SUMAC. The *og* of the Mishnah, the fruit of the sumac tree was used as a spice.

THYME. Called *koranit* in the Mishnah, thyme is a diminutive dwarf shrub which grows extensively in Israel on the kurkar hills near the coast and on mountains. Its tiny, pungently aromatic leaves were used as a spice, like hyssop and savory, together with which it is mentioned (Ma'as. 3:9).

The above are the most probable identifications, others having been suggested by commentators for these plants, as well as for kinds of spices common in their day. Among these, mention should be made of the poppy, the plant *Papaver somniferum*. Its seed is used as a spice and also in various kinds of pastry. In modern Hebrew the poppy is called *parag* or *pereg*, on the basis of the identification given in the *Arukh* and by other commentators for פרג in the Mishnah, which are, however, none other than *millet. Although several species of *Papaver* grow wild in Israel, it is impossible to determine whether the cultivated poppy was grown. The only reference to *ofyon* (opium is extracted, as is known, from poppy) occurs in the Jerusalem Talmud (Av. Zar. 2:2, 40d). It was considered dangerous to buy *ofyon* from heathens (see *Havdalah).

[Jehuda Feliks]

SPICE TRADE. In their original settlements in the East Mediterranean and Near East, Jewish merchants traded in luxury goods, including *spices. This latter trade became more evident in the Diaspora era, when Jews, along with Greeks and Syrians, appeared as traders in Western Europe. Because of their relationship with the Orient, they were able to supply these products, which were grown mainly in the countries from southern Arabia to the Moluccas and were used for medicinal purposes, in the preparation of food and beverages, and in perfumes. At first the Syrians led this trade, losing their position to the Jews only after the conquest of the Syrian coast by the Arabs. Writing on the trade routes in the years between 854 and 874, Ibn Kordabbeh, postmaster of the caliph of Baghdad, mentioned that Radhanites traded in musk, aloes, camphor, cinnamon, and other commodities between France and China. From the tenth century the northern route through the Slav countries became increasingly important to Jewish traders as they were displaced in the Mediterranean by Italian merchants. When visiting Mainz around 978, Ibrahim Tartuschi, an Arab from the Iberian Peninsula, was astonished to find the markets filled with large quantities of spices which could only be found in the Far East; it was generally believed that these were brought by Jewish merchants from the Orient by way of Kiev. The activities of Jewish traders on the Mediterranean and Indian Ocean trade routes and ports are revealed in 11th- to 13th-century *genizah* documents and responsa. The disuse of the Eastern routes with the expansion of Tatar and Turkish conquest added to the increased Christian participation in overseas trade and the restriction of Jewish commercial activities, and caused the Jews to lose their position as intermediaries with the Orient, being replaced by the Italians and especially the Venetians.

Jewish merchants once more played a part in the spice trade with the opening of the direct route to East India by the Portuguese. Prominent among these merchants was the New Christian *Mendes family, probably descendants of the Spanish *Benveniste family. Rui Mendes (de Brito) sent a ship to East India with Vasco da Gama's second voyage in 1502, and in 1505, in association with the German Lucas Rem, armed three ships for East India. He was probably a close relative of the brothers Francisco and Diogo *Mendes who, the former in Lisbon and the latter in Antwerp, controlled a major part of the commerce in pepper and other spices in northern Europe, the largest market at that time. After the death of Diogo Mendes (1542 or 1543), Francisco's widow, Beatrice de Luna, carried on the Antwerp branch of the enterprise. As J.A. Goris has shown (see bibl.), about 12 other New Christians in Antwerp were engaged in the spice trade, on the basis of annual contracts made with the king of Portugal. For some time the Perez family and other Spanish merchants, who were probably also New Christians, were the representatives of these *contractadores*. When Philip II succeeded to the throne of Portugal, he tried to renew the system of contracts, which had been in the hands of the German Konrad Rott during the last years of Portuguese independence. After Rott's bankruptcy, the Lisbon and Antwerp branches of the Ximenes and D'Évora families partici-

pated in the European contract. From 1592 to 1596 the Indian contract was in the hands of a consortium of New Christians: Tomáz and André Ximenes, Duarte Furtado de Mendoza, Luis Gomes d'Elvas, Heitor Mendes, and Jorge Rodriguez Solis. Attacks on Portuguese ships by English pirates, the revival of the Levantine spice trade from Alexandria and Syria to the Mediterranean ports, and the opening of East Indian navigation by the Dutch and English, all contributed to the decline of the Portuguese monopoly and thus of the activities of the New Christian groups. However, their participation in the spice trade in Hamburg and Amsterdam remained prominent. Among the 16 spice importers in Amsterdam in 1612, 11 were "Portuguese," i.e., Sephardim. According to Bloom (see bibl.), in the first part of the 18th century the spice trade still represented a considerable proportion of the commercial activities of the Sephardi community in Amsterdam.

[Hermann Kellenbenz]

SPIDER (Heb. עֲרַבִּישׁ, *akkavish*). Isaiah (59:5–6) compares the evil designs of those who plot against the righteous to the webs which the spider spins to trap insects, while Job (8:14–15) compares the house of the wicked to the spider's fragile web. There are hundreds of species of spider in Israel, all having poisonous glands in their maxillaries. The poison in most spiders is a mild one, but there are species capable of killing a bird or a mouse. It would appear that the *akhshuv* (Ps. 140:4) which is mentioned together with the snake as a poisonous animal is merely the *akkavish* with the letters transposed. The Tosefta (Par. 9:6) enumerates it among the species of spiders. Some erroneously identify the spider with the *semamit* (Prov. 30:28) which is the *gecko.

[Jehuda Feliks]

SPIEGEL, DORA (1879–1948), third president of the National *Women's League of the United Synagogue of Amer-

ica. Spiegel led the organization through the difficult years of the Depression and World War II. Born in Ungvar, Hungary, to Pepi Josephine (Fullman) and Rabbi Daniel Rosenberg, Dora Rosenberg arrived in the United States with her parents in 1882. Although Dora and Dr. Samuel Spiegel (a New York physician, whom she married in 1900) had no children of their own, she dedicated her energy to serving Jewish children and their mothers. Spiegel attended Teachers College of Columbia University, receiving a B.S. degree in 1916 and an M.A. in 1920, with a special diploma as Advisor to Women. In New York she taught at the Educational Alliance, training immigrants in "Americanization."

A close friend and supporter of Mathilde *Schechter, Spiegel was a founder and president (1918–28) of the New York Metropolitan branch of the Women's League of the United Synagogue of America, and served as national president from 1928 to 1944, when poor health forced her to step down before the conclusion of her term. During World War II, Spiegel's "President's Chats" columns in the League's magazine *Outlook* encouraged members to help with war-relief efforts. Women responded by giving blood, selling bonds, serving in canteens, and taking and teaching first-aid classes. During her presidency, Spiegel also led the League to begin the Torah Fund Campaign to establish a Seminary dormitory and a scholarship fund, which would allow rabbinical students to study full-time. She also encouraged the creation of two additional scholarship funds (the Mathilde Schechter Scholarship Fund and the Cyrus Adler Scholarship Fund). In addition, the plan for building a dormitory for female students developed during her tenure as president. She also helped found the Women's Institute of Jewish Studies at the Jewish Theological Seminary of America.

[Aleisa Fishman (2nd ed.)]

SPIEGEL, ISAIAH (Yeshayohu Spiegel; 1906–1990), Yiddish poet, fiction writer and essayist. Born in Balut, a poor suburb of Lodz, Poland, Spiegel was encouraged by I. *Katzenelson and M. *Broderzon, and was one of the group of young Yiddish poets active in Lodz in the 1920s. From 1926 to 1933 he taught in Yiddish schools and wrote for Yiddish journals in Poland and abroad. Spiegel was one of the few Yiddish writers of distinction to survive the Holocaust. For almost five years he lived in the Lodz ghetto; upon its destruction he was sent to Auschwitz and later to a labor camp in Saxony. He returned to Lodz after the liberation (1945) and from 1946 to 1948 taught in its Jewish school; there, he dug up a manuscript he had buried. From 1951 he lived in Israel. He published two volumes of verse and an autobiographical novel, but his most important work is his Holocaust fiction, especially his short stories: *Malkhes Geto* ("Ghetto Kingdom," 1947), *Shtern Ibern Geto* ("Stars Over the Ghetto," 1948), *Mentshn in Thom* ("Peo-

ple in an Abyss,” 1949), *Likht Funem Opgrunt* (“Light from the Precipice,” 1952), and *Vint un Vortslen* (“Wind and Roots,” 1955). With restraint and perception, Spiegel records the fate of multitudes of ordinary men and women in his stories. Most of his stories originally written during the Holocaust were considerably revised, the documenting witness giving way to the memorializing artist.

Kerbel (ed.), *Jewish Writers of the Twentieth Century* (2003), 533–4.

[Leonard Prager]

SPIEGEL, LUDWIG (1864–1926), Czech educator and politician. Spiegel, who was professor of constitutional law at the German University of Prague, was one of the leaders of the German Democratic Party and a member of the Senate (upper chamber of deputies; 1920–25). In 1926 he was elected rector of the university in spite of his being a Jew (see also Samuel *Steinherz), but died before assuming office. His works include *Die Geschichtliche Entwicklung des Oesterreichischen Staatsrechts* (1905), *Die Verwaltungsrechtswissenschaft* (1909), *Gesetz und Recht* (1913), and *Die Entstehung des Tschechoslowakischen Staats* (1921).

[Chaim Yahil]

SPIEGEL, NATHAN (1905–1995), scholar of Jewish studies. Born in New York, Spiegel grew up in Galicia, Moravia, and the Ukraine. He received his doctorate in 1931 from the University of Lvov in classical studies and ancient philosophy. After World War II he was a high school teacher in Poland and from 1952 the rector of a Warsaw institute of education. He immigrated to Israel in 1957 where he was director of a special library at the Hebrew University of Jerusalem. In 1965 he began to teach at Ben-Gurion University and served as head of the department of general studies. Among his works are books on leading figures of the Greek and Hellenic world, such as Socrates, Aristotle, Homer, and Seneca, as well as on trends and schools of thought in the Greek world. Spiegel received the 1990 Israel Prize for Jewish Studies.

[Fern Lee Seckbach]

SPIEGEL, PAUL (1937–2006), German-Jewish journalist and politician. Born in Warendorf (Westphalia), Spiegel fled with his family to Holland after the outbreak of World War II. He wrote as a journalist for German-Jewish newspapers, and between 1965 and 1972 was editor of the *Juedische Pressedienst* and assistant to the general secretary of the Zentralrat der Juden in Deutschland. Between 1974 and 1986 he directed the office of public affairs at the Rheinische Sparkassen und Giroverband. In 1986 he founded an international Kuenstler-agentur. In 1984 Spiegel was elected president of the Dueseldorf Jewish community, in 1989 president of the Zentral-

wohlfahrtsstelle der Juden in Deutschland. After the death of Ignatz *Bubis, Spiegel was elected president of the Zentralrat der Juden in Deutschland in January, 2000. He was an active promoter of German-Jewish understanding, an author on Jewish matters, and a prominent figure in German public life.

SPIEGEL, SAMUEL P. (1901–1985), U.S. motion picture producer. Born in Jaroslau, Austria, Spiegel came to the United States in 1939. Ultimately becoming one of the top producers of his time, Spiegel’s films include *Tales of Manhattan* (1942), *The Stranger* (1945), *We Were Strangers* (1949), *The African Queen* (1951), *On the Waterfront* (Academy Award for Best Picture, 1954), *The Bridge on the River Kwai* (Academy Award for Best Picture, 1957), *Suddenly Last Summer* (1950), *Lawrence of Arabia* (Academy Award for Best Picture, 1962), *The Night of the Generals* (1966), *The Happening* (1967), *Nicholas and Alexandra* (Oscar nomination for Best Picture, 1971), *The Last Tycoon* (1976), and *Betrayal* (1983). Spiegel, who was also known for a time as S.P. Eagle, was the only person to win the Best Picture Oscar three times as a sole producer within eight years. He was the brother of Shalom *Spiegel.

In 1964 he received the Irving G. Thalberg Memorial Award, given to a creative producer who has been responsible for a consistently high quality of motion picture production.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

SPIEGEL, SHALOM (1899–1984), scholar, writer, and educator. Born in Romania and educated in Vienna, Spiegel was for a number of years a leader of Jewish youth who were preparing to live in collectives in Israel as members of Ha-Shomer ha-Za’ir. He taught in Erez Israel 1923–29, then went to New York, and was professor of medieval Hebrew literature at the Jewish Theological Seminary (1944–84). Trained in art and aesthetics, among other areas, he brought the appreciation of the sensitive critic to what he taught, studied, or wrote. His *Hebrew Reborn* (1930, repr. 1962), a series of chapters on Jewish men of letters in modern times, is a lucid, cultural analysis of the works of the authors it surveys. He also gave attention to the biblical and the medieval periods of Jewish cultural history. He published studies on Hosea, Amos, Jeremiah, Ezekiel, and Job. These exhibit both his erudition and thoroughness and also his style and finesse. Spiegel prepared a definitive edition of the liturgical compositions of Eleazar *Kallir. He also prepared a volume of what remains of the religious poetry by Kallir’s predecessors and contemporaries. His discussion of the sacrifice of Isaac (**Akedah*) in the Hebrew liturgy of the 12th and 13th centuries is a notable example of his penetrating approach (*The Last Trial*, translated from the Hebrew by J. Goldin, 1967).

In 1996 the Jewish Theological Seminary established the Shalom Spiegel Institute for Medieval Hebrew Literature. The

Institute provides fellowships to graduate students in the field, fosters international research projects, and provides access to Spiegel's copious collection of research materials.

He was the brother of film producer Samuel P. *Spiegel.

[Abraham Solomon Halkin / Ruth Beloff (2nd ed.)]

SPIEGEL-ADOLF, MONA (**Anna Simona**; 1893–1983), colloid chemist. Spiegel-Adolf studied medicine in her native Vienna and worked there on medical colloid chemistry until 1931, when she became professor of colloid chemistry at the medical school of Temple University, Philadelphia. Her research covered physical chemistry of proteins and lipids, cancer, amaurotic family idiocy, etc. She wrote *Die Globuline* (1930) and co-authored *X-ray Diffraction Studies in Biology and Medicine* (1947).

SPIEGELBERG, HERBERT (1904–1990), philosopher. Of Jewish origin, Spiegelberg was raised as a Christian. Born in Strasbourg, he received his Ph.D. from the University of Munich. He went to the U.S. in 1938 and taught at Swarthmore College in Pennsylvania (1938–41) and Lawrence College in Wisconsin (1941–63). In 1963 he was appointed to the philosophy department of Washington University in St. Louis, Missouri, where he stood out as a phenomenologist and historian of phenomenology. He retired as professor emeritus in 1971.

Spiegelberg belonged more to the “Older Phenomenological Movement” than to the Freiburg School, influenced by Alexander Pfaender’s approach. He was very influential in developing interest in phenomenological thought in the Anglo-American world through his lectures and writings. His *Phenomenological Movement* has provided a historical study and interpretation to this philosophy from Brentano to the present.

His major writings include *Anti-relativismus* (1935), *Ge-setz und Sittengesetz* (1935), *The Phenomenological Movement* (2 vols., 1960, 1965²), *Alexander Pfaender’s Phaenomenologie* (1963), the translation of Pfaender’s *Phenomenology of Willing and Motivation* (1967), *Phenomenology in Psychology and Psychiatry* (1972), *Doing Phenomenology* (1975), *The Content of the Phenomenological Movement* (1981), and *Steppingstones toward an Ethics for Fellow Existents* (1986).

BIBLIOGRAPHY: *H. Spiegelberg, Phenomenological Perspectives: Historical and Systematic Essays in Honor of Herbert Spiegelberg* (1975).

[Richard H. Popkin / Ruth Beloff (2nd ed.)]

SPIEGELMAN, ART (1948–), U.S. cartoonist. Born in Stockholm, Sweden, to parents who survived the Holocaust, Spiegelman grew up in Queens, N.Y. In 1968, while attending Harpur College in Binghamton, N.Y., he had a nervous breakdown, but he recovered. Shortly after, his mother, a survivor of Auschwitz, committed suicide. Spiegelman later included the tragic and traumatic event in his groundbreaking comic books, *Maus I* and *Maus II*, which tell the story of his parents’ wartime ordeal and paint an indelible portrait of the wid-

owed father in old age, an insufferable, maddening survivor, noble despite himself. The first book, *Maus: A Survivor’s Tale*, also known as *Maus: My Father Bleeds History*, won a special Pulitzer Prize in 1992. It had the distinction of appearing on *The New York Times* bestseller list as a work of fiction, but after Spiegelman’s dignified objection, as nonfiction. The second volume, *Maus: And Here My Troubles Began*, followed in 1991. *Maus*, depicting Jews as mice, Nazis as cats and Poles as pigs, attracted an unprecedented amount of critical attention for a work in the form of comics, including an exhibition at the Museum of Modern Art. Before gaining widespread attention with *Maus*, Spiegelman had illustrated many of the Wacky Packages and Garbage Pail Kids stickers and cards. He founded two significant comics anthology publications, *Arcade* and *RAW*, the latter with his wife, Francoise Mouly, who later became art editor of *The New Yorker*. Spiegelman worked for *The New Yorker* for ten years, producing memorable work, but resigned a few months after the terrorist attacks of September 11, 2001. Spiegelman’s post-September 11 cover for the magazine, inspired by Ad Reinhardt’s black-on-black paintings, at first appears to be totally black, but upon close examination reveals the silhouettes of the World Trade Center towers in a slightly darker shade of black. The attack had a profound effect on Spiegelman, who witnessed the victims’ frantic last minutes as he left his apartment not far from the site. Spiegelman said his resignation from the magazine was a protest against “the widespread conformism of the mass media in the Bush era.” In 2004 he published *In the Shadow of No Towers*, an attempt to capture the essence of the morning when the terrorists struck. It features a series of ten large-format comic strips that ran in the course of a year in eight weekly publications around the world. It was printed on thick cardboard and had to be held sideways to read each two-page spread. In the back, Spiegelman added reprints of some early comic strips, from Crazy Kat to Little Nemo in Slumberland, that he said gave him comfort after the attacks. Spiegelman was a tireless advocate for the medium of comics. He was quoted as saying that “comic books are to art what Yiddish is to language – a vulgar tongue that incorporates other languages into its mix, a vital and expressive language that talks with its hands. It’s a form that’s even laid out like a Talmudic text, a form that avoids the injunction against graven images by turning pictures into words, or at least into word-pictures.”

[Stewart Kampel (2nd ed.)]

SPIEGELMAN, SOL (1914–1983) U.S. research microbiologist. He was born in New York City, where his interest in biology began in childhood. He gained his B.S. in mathematics and physics at the College of the City of New York (1933–39), a course lengthened by switching from biology and a research period at Crown Heights Hospital, Brooklyn (1936–37). He earned his Ph.D. in cellular physiology and mathematics from Washington University, St Louis (1944), after an initial period at Columbia University (1940–42). He worked successively in the bacteriology department of Washington Uni-

versity School of Medicine (1945–48), as a U.S. Public Health Service Fellow at the University of Minnesota, Minneapolis (1948), and at the University of Illinois, Urbana (1948–69), where he became professor of microbiology. He returned to New York (1969) as director of Columbia University's Institute of Cancer Research and professor of human genetics and development in the University's College of Physicians and Surgeons (1975). Spiegelman's research profoundly influenced our understanding of the control of normal cell growth and its disruption in cancer cells. His work has also had important implications for understanding the origins of life in self-replicating nucleic acid sequences. His experiments were based on the novel hypothesis that unregulated activation or deactivation of genes controlling enzyme production is followed by uncontrolled cell growth. Progress in his studies and in molecular biology in general was revolutionized by his technical innovation, RNA/DNA hybridization, which made it possible to detect and characterize specific RNA sequences. Spiegelman and his colleagues first showed that only one strand of DNA's double helix transmits the genetic information for protein synthesis. They also identified and purified the first viral nucleic acid polymerase that could detect specific viral RNA in the RNA of infected cells. In his later work his laboratory concentrated on methods for screening human cancer tissue and the blood of cancer patients for specific viral RNA or DNA sequences or the RNA viral enzyme, "reverse transcriptase," and for antigens found in cancer cells but not normal cells. This, however, has proved to be a difficult and complex field. His many honors include the Lasker Award for Basic Medical Research (1974) and the Feltrinelli Prize, awarded by the Italian National Academy of Sciences (1981). Spiegelman was also greatly respected for his early recognition of scientists' social responsibilities and for his self-deprecation over the fame brought by scientific discovery.

[Michael Denman (2nd ed.)]

SPIELBERG, STEVEN (1946–), film director, writer, producer. Born in Cincinnati, Ohio, Spielberg began his career early in his youth, directing home movies. At age 13 he entered and won his first contest with a 40-minute war film. While attending California State College, he directed five films and made his professional debut with a 24-minute short, *Amblin*, which was shown at the 1969 Atlanta Film Festival. Its success led to a contract with Universal Studios that soon found Spielberg directing movies for television such as *Duel* (1971) and *Something Evil* (1972). His debut as a feature film director was *Sugarland Express* (1974). Spielberg followed this with a series of some of the most successful motion pictures in cinema history, including *Jaws* (1975), *Close Encounters of the Third Kind* (Oscar nomination for Best Director, 1977), *Raiders of the Lost Ark* (Oscar nomination for Best Director, 1981), *E.T.* (Oscar nominations for Best Director and Best Picture, 1982), *Indiana Jones and the Temple of Doom* (1984), *Indiana Jones and the Last Crusade* (1989), *Always* (1989), and *Jurassic Park* (1993). Spielberg also attempted more serious cinematic fare with *The*

Color Purple (Oscar nomination for Best Picture, 1985) and *Empire of the Sun* (1987), but neither of these films prepared the movie-going public for *Schindler's List* (1993), a brilliant and devastating portrait of Oskar *Schindler, an Austrian industrialist who saved more than 1,000 Polish Jews during the Holocaust. *Schindler's List* won the 1993 Academy Award for Best Picture as well as delivered an Oscar to Spielberg for Best Director. In 1990 the Academy of the Motion Pictures, Arts and Sciences presented Spielberg with the Irving Thalberg Memorial Award for his ongoing contribution to the Excellence of Cinema. Spielberg's subsequent directorial efforts include *Amistad* (1997), *Saving Private Ryan* (Oscar winner for Best Director and nomination for Best Picture, 1998), *The Unfinished Journey* (1999), *Artificial Intelligence: AI* (2001), *Minority Report* (2002), *Catch Me If You Can* (2002), *The Terminal* (2004), and *War of the Worlds* (2005).

Spielberg, who also wears a producer's hat, has released more than 100 films and television features since 1978. In 1995 he co-founded the production company DreamWorks SKG with Jeffrey Katzenberg and David Geffen. In addition to producing many of the films he directed, Spielberg was the producer of such films as *I Wanna Hold Your Hand* (1978), *Continental Divide* (1981), *Poltergeist* (1982), *Twilight Zone: The Movie* (1983), *Gremlins* (1984), *Back to the Future* (1985), *The Money Pit* (1986), *Who Framed Roger Rabbit?* (1988), *The Flintstones* (1994), *Men in Black* (1997), *The Mask of Zorro* (1998), the TV series *Band of Brothers* (Emmy Award for Outstanding Mini-series 2001) and *Taken* (Emmy for Outstanding Mini-series, 2002), and *Memoirs of a Geisha* (2005).

Spielberg was married to actress Amy *Irving from 1985 to 1989. Since 1991 he has been married to actress Kate Capshaw.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

SPIELMAN(N), English family that contributed extensively to Jewish and English communal and cultural literature. The family was descended from ADAM SPIELMAN (1812–1869), a banker, who married the sister of Samuel *Montagu. Adam's three best-known sons were SIR ISIDOR SPIELMAN (1854–1925), who was the founder and director of the art exhibitions branch of the Board of Trade and represented Britain at numerous international exhibitions from 1897 onward. He organized the Anglo-Jewish Historical Exhibition of 1887 and was president of the Jewish Historical Society, 1902–04. When Russian anti-Jewish excesses were at their height, he edited *Darkest Russia*, a supplement to the *Jewish Chronicle* (1890–92). He was knighted in 1905. MARION HARRY ALEXANDER SPIELMAN (1858–1948), art critic, was editor of the *Magazine of Art*, for 17 years. He wrote on art for the *Pall Mall Gazette* and the *Westminster Gazette*, and wrote a history of the first 50 years of the London satirical weekly, *Punch* (1895).

An authority on portraiture, he wrote *The Portraits of Geoffrey Chaucer* for the Chaucer Society (1901), *The Portraits of Shakespeare* for the Stratford Town Edition of Shakespeare's works (1907), and *British Portrait Painting*, 2 vols., 1910. His *Iconography of Andreas Vesalius*, commissioned by the Belgian government, was published in 1925. SIR MEYER ADAM SPIELMAN (1856–1936), the third son, was an educator and an inspector of Home Office Schools. He engaged in child welfare work, and was knighted in 1928 for his work on the prevention of juvenile delinquency. He was a founder and chairman of managers of a reformatory school established in 1921 for Jewish boys (converted to general use in the 1960s because Jewish child delinquency had almost disappeared). Sir Meyer held office in several Jewish charitable societies. His wife, LADY (GERTRUDE) EMILY SPIELMAN, the daughter of the banker George Raphael, was also prominent in social welfare and in 1919 was the first woman to be elected to the Board of Deputies of British Jews. Their daughter EVA MARIAN HUBBACK (1886–1949), educated at Cambridge, was a well-known social reformer and educator. She was the principal of Morley College in south London, which was noted for employing leading musicians, and was the author of *The Population of Britain* (1947). PERCY EDWIN SPIELMANN (1881–1964), a son of Marion Spielman, was a chemist who became a leading expert on coal tar, petroleum, and road making.

[John M. Shaftesley / William D. Rubinstein (2nd ed.)]

SPIELMANN, RUDOLF (1883–1942), Austrian chess master. Spielmann was regarded as the most successful of attacking chess players. He defeated *Nimzovich, *Tartakover (twice), *Réti, Stahlberg, Lundin, Eliskases, Bogoljubow, and Stolz in match play and won first prizes in 18 master tournaments between 1910 and 1935.

[Ed.]

SPIELVOGEL, CARL (1928–), U.S. businessman, diplomat. Born in Brooklyn, N.Y., Spielvogel graduated from the City College of New York and joined *The New York Times* as a copyboy while an undergraduate. He became a reporter for the business section in 1955, and three years later he was named the newspaper's first advertising columnist. He left the paper in 1960 to join the advertising firm McCann-Erickson, where he rose to executive vice president and general manager before joining McCann's parent, the Interpublic Group of Companies, in 1972. There he eventually became chairman of the executive committee. He left Interpublic in 1979 to form Backer & Spielvogel, one of the leading advertising agencies of the early 1980s. Mergers created Backer Spielvogel Bates Worldwide, where he was chairman until 1994. At his departure, Bates Worldwide was one of the world's leading marketing

and advertising communications companies, with 185 offices in 65 countries. As an entrepreneur, Spielvogel was chairman and chief executive officer of United Auto Group, the nation's largest publicly owned automobile dealership group, from 1994 to 1997. In 1995 Spielvogel was appointed by President Bill Clinton to the U.S. Broadcasting Board of Governors, which was responsible for the Voice of America, Radio Free Europe, and other governmental broadcasting ventures. In 1997 he was named chairman of the international board of advisors of *The Financial Times* of London. In 2000, Clinton named him ambassador to the Slovak Republic, where he sought to promote trade. He served until 2001. Spielvogel was on the board of a number of cultural organizations in New York City, including the Metropolitan Museum of Art, Lincoln Center for the Performing Arts, and the Asia Society. He served for more than 20 years as a trustee of Mount Sinai Medical Center and aided Eureka Communities, which works to rebuild inner cities. His wife, Barbara Diamonstein-Spielvogel, is the author of 18 books on art, architecture, and public policy.

[Stewart Kampel (2nd ed.)]

SPIELVOGEL, NATHAN (1874–1956), Australian author. The son of a Galician immigrant who became a goldminer and storekeeper, Spielvogel was born in the gold-rush town of Ballarat, Victoria. He was raised in a warm, religious atmosphere and, despite the remoteness and isolation of his environment, always remained closely attached to Jewish tradition. Spielvogel gained distinction as one of the only Australian Jewish writers of the era. His first published work, a short story entitled "Mike Hardy's Folly," appeared in the *Ballarat Courier* (Dec. 22, 1894) and for the next sixty years he contributed to practically every Australian literary periodical and to the Jewish press. As a country schoolteacher, he traveled widely in the eastern Australian outback and also made a journey to London.

His recorded experiences were first serialized and then published in book form. Spielvogel's *A Gumsucker on the Tramp* (1906) was an early Australian best seller, some 20,000 copies appearing in several editions. Much of what he wrote about early Australian bush life is of historical interest and importance and in some instances is the only source of information. This is also the case with his descriptions of Jewish immigrant types arriving from England and Europe. Spielvogel portrayed their manner of work and trade and their synagogue, communal, and youth activities at the turn of the century. A limited edition of his prose and verse, *Selected Short Stories of Nathan Spielvogel*, was published in 1956. He was a close friend of many noted Melbourne artists and writers of his time, including Norman Lindsay. Spielvogel lived in Ballarat from 1924, serving as a school principal. He was a major influence in fostering a Jewish cultural presence in Australia at a time when the community was very small.

SPIER, LESLIE (1893–1961), U.S. anthropologist. Born in New York City, he became a student of Franz *Boas, later serving as assistant anthropologist at the American Museum of Natural History. From 1939 he taught at the University of New Mexico where he established a department of anthropology. Influenced also by R.H. *Lowie and C. Wissler, he did his field work on various North American Indian tribes, principally among the Zuñi and Yumans.

In North American ethnology Spier studied cultural traits over a continuous geographical area to achieve a historical reconstruction of human history. Such a paper as “Sun Dance of the Plains Indians” represents a significant contribution to cultural historical analysis by mapping the distribution of different elements in a cultural complex. He also studied the ghost dance and nativistic movement in the Northern Plains in 1890. Spier worked among the Indians of the Northern plains to salvage the vestiges of dying cultures.

All of Spier’s work is characterized by methodological restraint and sobriety. He founded and edited anthropological journals and helped to establish American anthropology as an academic discipline.

[Ephraim Fischhoff]

SPIKENARD (**Nard**; Heb. נָרְדָּ, *nerd*), spice mentioned three times in the Song of Songs. It grew in the imaginary spice garden to which the loved one is compared (Song 4:12–14) and she perfumed herself with it while waiting for her beloved (1:12). According to an ancient *baraita*, spikenard was one of the 11 spices from which the Temple incense was prepared (Ker. 6a; see *Incense and Perfumes and *Pittum ha-Ketoret*). It is called spikenard (*Nardostachys*) because of its appearance, which is similar to that of an ear of corn. It was extracted from the plants *Nardostachys jatamansi* and *N. grandiflora* that grow in the Himalayas. The name *nard* is derived from the Sanskrit *nalada* which means “spreading fragrance.” This highly valued perfume was extracted both from the stalk (Lat. *spicatum*) which is the spikenard and from the leaves (Lat. *foliatum*). The Tosefta mentions *polyaton* oil among the luxuries whose use according to one view was forbidden after the destruction of the Temple as a sign of mourning (Tosef., Sot. 15:9).

[Jehuda Feliks]

SPINA, GERI (Schreiber; 1896–1944), Romanian journalist. Born in *Jassy, Spina contributed to Romanian papers and magazines, including the Jewish periodicals *Hatikva* and

Adam. With Isaac *Ludo he edited the magazine *Absolutio* from 1913, and in 1914 published poems, *Senzații inutile* (“Vain Sensations”). In 1934 he published *Evreii în Literatura lui Ionel Teodoreanu*, a study of Jews in the writings of the Romanian author Teodoreanu. In 1944 he fought for the exposure of Nazi war criminals in Romania, was arrested, and died in prison.

SPINGARN, two U.S. brothers of wide intellectual interests, both devoted to the development of the National Association for the Advancement of Colored People. JOEL ELIAS SPINGARN (1875–1939) was a literary scholar and champion of African-American integration. The son of an immigrant Austrian merchant, Spingarn was born in New York. His doctoral thesis, *A History of Literary Criticism in the Renaissance* (1899), was widely acclaimed by scholars, and he thereafter had a successful academic career at Columbia University, becoming professor of comparative literature at the age of 24. With *Critical Essays of the Seventeenth Century*, a three-volume work which he edited in 1908, he established himself as a recognized exponent of the “New Criticism,” which judged art on its own terms. However, a clash with Columbia’s president, N.M. Butler, led to his dismissal in 1910. The correspondence between the two men was published a year later as *A Question of Academic Freedom*. Although he continued to publish literary criticism, Spingarn never returned to academic work. He wrote *The New Criticism* (1911) and *Creative Criticism* (1917). In 1919, on his return from war service in France, he helped to found the publishing firm of Harcourt, Brace and Howe, whose editorial consultant he remained until 1932. He edited *Scholarship and Criticism in the United States* (1922), wrote *Poems* (1924), and then retired to his home in Amenia, New York, where he became an authority on flower cultivation and issued the *Troutbeck Leaflets* (1924–31), occasional literary papers. One of the founders of the NAACP and its chairman from 1913 through to 1919, Spingarn was president of the association at the time of his death. In the association, he served as a bridge between the integrationists and the Black nationalists, led by W.E.B. Du Bois, editor of the NAACP’s magazine *Crisis*. Although ideologically Spingarn was an integrationist, his friendship with and admiration for Du Bois allowed him to work with the editor until Du Bois resigned in 1934.

ARTHUR BARNETT SPINGARN (1878–1971) was a prominent lawyer active in the New York City Bar Association. His interest in questions of the black man led him to begin an extensive collection of Black literature, which he gave to Howard University. Resigning his position in the Bar Association in 1966, Spingarn, as honorary president of the NAACP, continued to support the organization and the cause for which he and his brother had worked.

Du-Bois* (1960); *Crisis*, passim; *New York Times* (July 27, 1939, July 14, 1958, Jan. 3, 1966). **ADD. BIBLIOGRAPHY:** M. Van Deusen, *J.E. Spingarn* (1971).

[Richard Cohen]

SPINKA, JOSEPH MEIR WEISS OF (1838–1909), *zaddik*, founder of a ḥasidic dynasty. The son of Samuel Zevi of Mukachevo (Munkacs), Joseph Meir was the disciple of Shalom of *Belz, Mendel of *Vizhnitsa, Isaac Eizik of *Zhidachov, and Hayyim *Halberstam of Zanz. On many occasions he visited Isaac of Zhidachov and regarded himself as his successor. Renowned for his ecstatic prayers, he also practiced extreme self-mortification. From 1876 he was revered as a *zaddik* by thousands of followers.

His works are *Imrei Yosef* (1910–27), a commentary on the Pentateuch in four volumes; *Imrei Yosef* (1931), sermons on the festivals and their customs; *Hakdamat Likkutei Torah ve-ha-Shas* (1911), sermons and an anthology of ḥasidic teachings; *Perush la-Haggadah shel Pesah* (1964); and *Tefillot u-Minhagim* (1912).

His son, ISAAC EIZIK (1875–1944), was murdered by the Nazis. He was an outstanding authority on *halakhah* and famous as a cantor. From 1909 he too was a *zaddik* in Spinka. After the outbreak of World War I, he took his family and his retinue to Mukachevo, where he established his *bet midrash* and yeshivah. There he remained for a few years and, as in Spinka, his *bet midrash* became a center of learning and Ḥasidism. After the war he moved to Selishche, where he also established a large *bet midrash* that continued for 14 years. Isaac is the author of *Ḥakal Yizḥak*. His grandson JACOB JOSEPH WEISS, who was regarded as the most prominent leader of Spinka Ḥasidism after the Holocaust, maintained a yeshivah in Jerusalem. There were two additional *zaddikim* of Spinka Ḥasidism in Israel, grandsons of Joseph Meir of Spinka.

[Esther (Zweig) Liebes]

SPINOZA, BARUCH (Bento, Benedictus) DE (1632–1677), philosopher born in Amsterdam of Portuguese background, who became one of the most important representatives of the rationalist movement in the early modern period.

Introduction

In the Jewish and National Library in Jerusalem, Spinoza's writings, unlike those of Jewish philosophers such as Philo of Alexandria or Maimonides, are not in the Judaica reading room, but in the general reading room, between the writings of Descartes and Leibniz. The decision of the library reflects a broad consensus in the way his work is perceived: Spinoza is not considered a Jewish thinker but one who belongs to the general history of philosophy. To be sure, Spinoza was excommunicated from Amsterdam's Jewish community for things he apparently said and did as a young man, and he went on to become the most radical and arguably the most interesting thinker of the early modern period. From the end of the 17th century onward his work played a central role in a variety of intellectual contexts: from the Enlightenment and German

Idealism to the “higher criticism” of the Bible. Today Spinoza's ideas are debated not only in philosophical circles of both analytical and continental orientation, but also among scientists such as the neurologist Antonio Damasio, who claims that his research confirms how Spinoza conceived the relationship between body, mind, and affects of human beings. And yet, Spinoza's relationship to Judaism, and in particular to Jewish philosophy, is complicated: it is marked by continuity and criticism that sometimes remain in unresolved tension. Much of his philosophical project is, in fact, best understood in light of the Jewish background. In Spinoza's thought ideas from many sources come together, ranging from Plato to the Kabbalah. But of particular importance are, on the one hand, various traditions of Jewish thought and, on the other, the writings of Descartes and Hobbes which were at the center of philosophical discussions in the Netherlands of Spinoza's time. His first commitment, of course, was not to this or that intellectual current, but to the truth: “I do not claim to have found the best philosophy, but I know that I understand the true one [*sed veram me intelligere scio*]” (*Letter 76*).

Life and Works

Spinoza's father, Michael (d. 1654), fled from Portugal to the relatively tolerant Dutch republic where, he became a member of Amsterdam's Sephardi community and a successful merchant. Spinoza studied Hebrew, the Bible, and rabbinic literature at the local *talmud torah* school. The community's most renowned scholars, Isaac Aboab, Menasseh ben Israel, and Saul Levi Morteira, were presumably among his teachers and influenced him directly or indirectly. Aboab translated Abraham Cohen Herrera's kabbalistic treatise *Puerta del Cielo* (The Gate of Heaven), with which Spinoza seems to have been familiar, from Spanish into Hebrew. Morteira, who inclined to a rationalist interpretation of religion, could have introduced him to medieval Jewish philosophy. Menasseh ben Israel edited in 1628 the *Sefer Elim* by the Galilei student Joseph Delmedigo, of which Spinoza had a copy, and that may have introduced him into post-Copernican cosmology. Through Menasseh, Spinoza may also have made his first acquaintance with Christian thought, as well as with the ideas of Isaac La Peyrère, against whose treatise, *Prae-Adamitae*, Menasseh wrote a refutation. Spinoza later used the book for his critique of Scripture; among others, La Peyrère claims that Moses was not the only author of the Pentateuch and that human beings existed before Adam and Eve. When his half-brother, Isaac, died in 1649 Spinoza's help was required in the family's importing business. Although an outstanding student, he could thus not complete the higher level of the educational curriculum which would have prepared him for a career as a rabbi. The process that led to Spinoza's alienation from traditional Judaism, culminating in his excommunication (*herem*) in 1656, cannot be precisely reconstructed from the available sources. A significant role must presumably be assigned to heterodox Jewish thinkers in Amsterdam such as Uriel da Costa, who had been excommunicated twice a gen-

eration earlier and whose writings Spinoza certainly knew, and Juan de Prado, who was excommunicated at the same time as Spinoza. Despite the unusual harshness of the *herem*, it does not make explicit the content of the accusations, mentioning only “abominable heresies” and “monstrous deeds.” But from various indirect sources Spinoza’s views that were perceived as heretical can be established with reasonable certainty: they seem to have included the denial that the Torah is of divine origin, the denial that the immortality of the soul is a biblical doctrine, and a “philosophical” concept of God incompatible with that of popular tradition. All three issues show a certain affinity to doctrines of Da Costa and appear to have been endorsed in one way or another by De Prado as well. Spinoza probably explained and defended his views in a treatise now lost, but whose Spanish title is preserved in later sources: *Apologia para justificarse de su abdicacion de la sinagoga* (“Defense to justify his departure from the synagogue”). There are good reasons for assuming that some of the material contained in the *Apologia* was later incorporated into the first part of the *Tractatus Theologico-Politicus* (*TTP*; “Theological-Political Treatise”).

The encounter with the former Jesuit and freethinker, Franciscus van den Enden, played an important role in Spinoza’s intellectual development. In van den Enden’s school, which he already started to frequent before his excommunication, Spinoza learned not only Latin, but was also introduced into ancient literature and philosophy, as well as into contemporary debates, in particular those provoked by the writings of Descartes and Hobbes. Descartes presumably also occupied an important place in his studies at the University of Leiden, at the time a center of Dutch Cartesianism. That Spinoza had mastered Descartes’ philosophy is clear from his *Principia Philosophiae Cartesianae* (“Principles of Cartesian Philosophy”), an exposition of Descartes’ *Principia Philosophiae* in the “the geometric manner,” published in 1663 together with an appendix, *Cogitata Metaphysica* (“Metaphysical Thoughts”), that reflects both medieval Jewish and Scholastic sources. Neither presents Spinoza’s own views, as he instructed his friend and doctor, Lodewijk Meyer, to emphasize in a preface introducing the two works. On the contrary: the treatises originate in notes that Spinoza used for teaching his student Caesarius, concerning whom he urges his friends “not to communicate my views to him until he has reached greater maturity” (*Letter 9*). Indeed, even earlier Spinoza had made no secret of his disagreement with Descartes on fundamental issues such as “the first cause and origin of all things” (*Letter 2*).

But whereas the scope of Descartes’ influence on Spinoza and its relation to the influence of Jewish philosophers remain an object of controversy among scholars, it is uncontroversial that already in his earliest writings devoted to the exposition of his own philosophy Spinoza appears as a highly original thinker. Between the end of the 1650s and the beginning of the 1660s he was working on two treatises: the *Tractatus de Intellectus Emendatione* (“Treatise on the Emendation of the Intellect”), which remained incomplete and was published

only in the *Opera Posthuma*, and a first outline of his metaphysics, anthropology, epistemology, and ethics which was intended for circulation only among his friends, apparently because he feared that “the theologians of our time” would attack him with “their usual hatred” (*Letter 6*). Already the work’s title, *Korte Verhandeling van God, de Mensch en des zelfs Welstand* (“Short Treatise on God, Man, and His Wellbeing”), names the constitutive themes of Spinoza’s philosophical project. From 1661 to 1675, he systematically reworked the ideas sketched in the *Korte Verhandeling* into his main philosophical work, the *Ethica Ordine Geometrico Demonstrata* (“Ethics Demonstrated According to the Geometrical Method”). In 1665 Spinoza interrupted his work on the *Ethica* for several years to set forth his critique of religion and his political philosophy in the *Tractatus Theologico-Politicus* (“Theological-Political Treatise”), published anonymously in 1670. His goal was to contribute to defending the freedom of thought and religious tolerance, which had been secured in the Dutch republic governed by Jan de Witt, but now seemed threatened by the alliance of monarchists and Calvinist orthodoxy. Since the critique of religion is grounded on a critique of Scripture, and the correct understanding of Scripture requires a thorough understanding of Hebrew (*TTP 7*), Spinoza’s *Compendium Grammatices Linguae Hebraeae* (“Compendium of the Grammar of the Hebrew Language”) can be seen as a tool for carrying out the critical theological-political project. But the striking parallel between the account of nouns, adjectives, and participles in the Hebrew Grammar and the account of substance, attributes, and modes in the *Ethica* also suggests an interesting (if unclear) connection to Spinoza’s metaphysics. The scandal triggered by the critique of religion in the *TTP* led to the book’s prohibition in 1674. Under these circumstances Spinoza did not even attempt to publish the *Ethica*. Like the *Tractatus Politicus* (“Political Treatise”) that he was not able to complete and the equally unfinished Hebrew Grammar, it appeared only in 1677 in the *Opera Posthuma*. Finally, Spinoza’s extant correspondence must be mentioned which contributes significantly to clarifying specific issues in his work.

Philosophy

OUTLINE OF THE PHILOSOPHICAL PROJECT. The *Tractatus de Intellectus Emendatione* (*TIE*) begins with a description, stylized as autobiographical, of the author’s conversion to the philosophical life. An examination in the Socratic sense leads to the decision to turn away from “what men consider to be the highest good [*summum bonum*],” i.e., “wealth, honor, and sensual pleasure,” in order to seek the “true good” that provides the “highest joy [*summa laetitia*] eternally.” The passage, whose immediate source is a treatise by the Jewish Renaissance Platonist Leone Ebreo, takes up the foundational concern of ancient ethics: the quest for the good life. Since the *TIE* was originally conceived as a methodological introduction to Spinoza’s philosophical system, this opening passage in a sense provides the point of departure for his philosophical project as a whole. Indeed, choosing a life devoted to the pursuit of

knowledge would surely be a mistake if it were not the best life. The *Ethica*, as before the *Korte Verhandeling*, can be seen as the guide to that goal which Spinoza describes as “happiness [*beatitudo*]” and as “salvation [*salus*]” (*Ethica* v, Prop. 36, Schol.). The true good for Spinoza is God. What leads to this good is “understanding” culminating in “knowledge of God [*Dei cognitio*]” (*Ethica* IV, Prop. 27 and 28). Since knowledge of God and of things “insofar as we conceive them to be contained in God and to follow from the necessity of the divine nature” (*Ethica* v, Prop. 29, Schol.) is accompanied by “joy [*laetitia*]”, it gives rise to the “intellectual love of God [*Amor Dei intellectualis*]” (*Ethica* v, Prop. 32, Cor.). Spinoza speaks in this context of knowledge “under the aspect of eternity [*sub specie aeternitatis*]” (*Ethica* v, Prop. 29) because both God and things conceived as necessarily following from God are eternal and immutable. From knowledge of eternal things Spinoza draws a conclusion that continues to puzzle scholars: that the part of the mind which loves God intellectually becomes itself eternal, i.e., is in some way preserved after the destruction of the body (*Ethica* v, Prop. 22 and Prop. 23). It seems, therefore, that “salvation” for Spinoza is a form of intellectual immortality. But the *Ethica* not only intends to instruct the reader how to reach happiness and salvation; in a way it also puts these instructions into practice. The geometric form of the argument, which deduces philosophical propositions from definitions and axioms, entails a claim to definitive validity. From the first part, that demonstrates God’s existence and characteristics, to the fifth part, that shows how human freedom consists in the activity of intellectually loving God, the *Ethica* can be seen as part of the knowledge *sub specie aeternitatis*. In this sense it contributes to bringing the quest for the “true good” to conclusion that was the point of departure of the *TIE*. At the end of the “road [*via*]” set out in the *Ethica* the seeker is prepared to turn into a “wise man [*sapiens*]” who “suffers scarcely any disturbance of spirit, but being conscious, by virtue of a certain eternal necessity, of himself, of God and of things, never ceases to be, but always possesses true spiritual contentment [*animi acquiescentia*]” (*Ethica* v, Prop. 42, Schol.). Many of the arguments on which Spinoza’s project of the good life relies – from those for the intellectual love of God to those for the immortality of the mind – were articulated in similar ways by Jewish rationalists such as Abraham Ibn Ezra, Maimonides, Gersonides, and Leone Ebreo. It is presumably in their writings that Spinoza encountered them for the first time.

METAPHYSICS. In order to show of what the good life consists, it is necessary to understand the nature of human beings and their place in the order of existents. This in turn requires understanding the nature and order of existents themselves. The first part of the *Ethica* is thus devoted to ontology. Since for Spinoza ontology and philosophical theology coincide, it is titled *De Deo* (About God). By identifying God with reality as a whole, Spinoza radically breaks with the concept of divine transcendence. God neither is located outside the natural order, nor does he lack what Spinoza takes to be the es-

sential attribute of the physical world: extension. In light of this it is not surprising that he can speak of “God or Nature [*Deus sive Natura*]” (*Ethica* IV, Praef.). God is defined as “an absolutely infinite being [*ens absolute infinitum*], i.e., a substance consisting of infinite attributes, each of which expresses eternal and infinite essence” (*Ethica* I, Def. 6). According to this definition, God encompasses all logically possible kinds of being, each of which is infinite in its kind. But only two kinds can be apprehended by human beings: “thought [*cogitatio*]” and “extension [*extensio*]”, i.e., the essential attributes of the two realms of reality accessible to us. God, therefore, is both “thinking thing” and “extended thing,” but also an infinite number of other things that lie beyond human cognition (*Ethica* II, Prop. 1 and 2 and *Letter* 64). That God exists follows from the fact that the concept of a substance with infinite attributes is not contradictory (*Ethica* I, Prop. 10, Schol.) and that the essence of a substance entails its existence (*Ethica* I, Prop. 11). Since the existence of two substances with the same attribute is impossible (*Ethica* I, Prop. 5), and since God has all attributes, Spinoza’s substance monism follows: “Except for God no substance can be or be conceived” (*Ethica* I, Prop. 14). This God is not static, but has an “active essence [*essentia actuosa*]” (*Ethica* II, Prop. 3, Schol.) and produces as “immanent cause [*causa immanens*]” (*Ethica* I, Prop. 18) “infinite many things in infinite many ways” (*Ethica* I, Prop. 16) in himself “with the same necessity by which he apprehends himself [*seipsum intelligat*]” (*Ethica* II, Prop. 3, Schol.). Spinoza here takes up and modifies the doctrine of God found in the writings of medieval Jewish Aristotelians who conceived God as the activity of a pure intellect apprehending itself (*Ethica* II, Prop. 7, Schol.). The difference is that Spinoza’s God is not only intellectual activity but also extending activity and an infinite number of other activities. Spinoza holds, moreover, that increasing God’s ontological scope does not conflict with God’s unity, for “the thinking substance and the extended substance are one and the same substance, comprehended now under this now under that attribute” (*ibid.*). Since Jewish rationalists before Spinoza took God to be incorporeal, the attribution of extension to God appears to be a fundamental departure from their premises. But also this step had been prepared by the Jewish critic of Aristotelianism, Hasdai Crescas, who argued for the existence of an infinitely extended empty space which he describes as a “metaphor [*dimayon*]” for God. Moreover, Spinoza uses arguments drawn from Crescas in *Ethica* I, Prop. 15, Schol. for defending God’s extension. It would thus be inaccurate to say that Spinoza substitutes a philosophical God for a religious God. His move beyond medieval philosophy is better characterized as an attempt to solve specific ontological problems arising from the causal relation, which his predecessors had to posit between an incorporeal God and a corporeal world. As absolutely infinite activity that produces all logically possible kinds of being, Spinoza’s God is all-powerful (*Ethica* I, Prop. 35). Although he is not free to choose what he does, he is free in the sense that his activity is determined only by the necessity of his own nature (*Ethica* I, Prop. 17, Cor. 2). Since

the same necessity governs the order of things that God creates in himself, this order is completely determined (*Ethica* I, Prop. 29). In this context the distinction between creator and creation is replaced through that between *natura naturans* and *natura naturata* (ibid., Schol.) of which the former refers to substance insofar as it is an active cause and the latter to the infinite number of modifications produced under each of its attributes. Like substance, the series of modes is one; it consists in ideas when considered under the attribute of thought, in extended things when considered under the attribute of extension, and in an infinite number of other things when considered under the attributes unknown to us (*Ethica* II, Prop. 7, Schol.). There are two kinds of modes: those of the first kind are eternal and infinite and subdivided into modes following immediately from one of God's attributes and modes that are mediated through a mode following immediately from one of God's attributes. Modes of the second kind, by contrast, are transitory and finite. Since an eternal and infinite thing cannot be the cause of a transitory and finite thing, it is unclear how the modes of the second kind are supposed to be caused by God. Although Spinoza does not address the problem, a possible solution is to take finite modes to be dependent on God not individually, but as an eternal and infinite chain of causes and effects. Spinoza also makes little effort to explain the first kind of modes. The "infinite intellect" is the mode immediately following from the attribute of thought, "motion and rest" the mode immediately following from the attribute of extension, and the "face of the whole universe [*facies totius universi*]" a mediate eternal and infinite mode of extension (Letter 64). The notion of "motion and rest" suggests that Spinoza has the fundamental laws of nature in mind. The "face of the whole universe" appears to refer to the stable order of nature, since Spinoza links the notion to *Ethica* II, Lemma 7, Schol., where "the whole of nature" is described as an infinite individual that remains unchanged, while its constituents vary in infinite ways.

In an appendix to the first part of the *Ethica*, Spinoza explains the devastating consequences of his philosophical theology for popular views of God. A providential God, who interferes in the course of nature according to his free will, rewards and punishes, and performs miracles, is nothing but the "refuge of ignorance [*asylum ignorantiae*]" of the superstitious.

EPISTEMOLOGY, PSYCHOLOGY, AND ETHICS. From the subsequent parts of the *Ethica* it is clear that Spinoza is not interested in a general account of the order of modes, but in the structure of one particular mode: the human being, consisting of "mind and body [*mens et corpus*]" (*Ethica* II, Prop. 13, Cor.) which – as in the case of substance and all other modes – are one and the same thing considered under the attribute of thought and under the attribute of extension. While Spinoza thus avoids the problems involved in dualistic accounts of mind and body, the unity he assumes is not without obscurities of its own. He describes the mind as the idea of the body

(*Ethica* II, Prop. 13) and its cognitive power as corresponding to the body's complexity and hence ability to interact with its environment (ibid., Schol. and Prop. 14). Of particular importance for Spinoza's epistemology are the three kinds of knowledge that he distinguishes in Prop. 40, Schol. 2: "imagination [*imaginatio*]" which draws on random sense-perceptions and their arbitrary association; "reason [*ratio*]" which draws on common notions and adequate ideas of the properties of things; finally "intuitive knowledge [*scientia intuitiva*]" which infers the essence of things from the essence of God's attributes. Whereas the first kind of knowledge is fallible, the other two kinds are necessarily true (*Ethica* II, Prop. 41). Although a true idea must correspond to its object (*Ethica* I, Ax. 6), this is not the criterion of truth for Spinoza. What is decisive is if the idea is "adequate" or not, whereby an "adequate" idea is one that has the "intrinsic characteristics of a true idea" (*Ethica* II, Def. 4). As a consequence, "he who has a true idea knows at the same time that he has a true idea, and cannot doubt its truth" (*Ethica* II, Prop. 43). Truth thus becomes "the standard both of itself and of falsehood [*norma sui et falsi*]" (ibid., Schol.).

The third part of the *Ethica* contains Spinoza's psychology in form of a theory of human affects. Crucial for understanding the affects is the striving "to persist in one's being" (*Ethica* III, Prop. 6) which Spinoza calls *conatus* and takes to be the essence of all things. Only God has absolutely unlimited power in himself to attain the goal of the *conatus*. The power of the modes, on the other hand, depends on God and is limited to varying degrees within the order of nature, which necessarily follows from God's essence, and in which the modes are determined by God to act on one another. In human beings the *conatus* takes on the form of "desire [*appetitus* or *cupiditas*]" which gives rise to two further basic affects: "joy [*laetitia*]" and "sadness [*tristitia*]." The former is caused by an object that increases a person's power and whose possession is, therefore, desired. The latter is caused by an object that decreases a person's power and which he or she will thus attempt to avoid (*Ethica* III, *Definition of the Affects* 1–3). Fundamental, moreover, is the distinction between active affects, of which human beings are the "adequate cause," and passive affects that are caused by external objects. With this, Spinoza has set up the conceptual framework for a detailed account and explanation of human affects "in the geometric manner" (*Ethica* III, Praef.), as well as for the ethical discussion of the fourth and fifth part of the *Ethica*.

Spinoza's ethics is clearly egoistic: to act virtuously means "to preserve one's own being [...] under the guidance of reason," which in turn means to act with a view to "one's own advantage [*proprium utile*]" (*Ethica* IV, Prop. 24). As a consequence, goodness or badness are not inherent properties of things or actions but depend on their utility or lack of utility for attaining the objects of desire (*Ethica* IV, Def. 1 and 2). Since intellectual perfection is the highest level of power accessible to human beings, they – insofar as they are rational – desire nothing but "understanding [*intelligere*]" (*Ethica*

iv, Prop. 26) which, as already indicated, has the “knowledge of God” as its ultimate goal. This, therefore, is “the highest good” and the “highest virtue” of the mind (*Ethica* iv, Prop. 27 and 28). The power derived from understanding is manifold: it liberates human beings at least to some extent from the “bondage [*servitus*]” to passive affects, since next to the highest good, external things that are good or bad, but beyond their control, become less important. Moreover, their affective reaction to what happens to them will diminish and their tranquility increase through the knowledge that all things are predetermined and that human beings are “part of the whole of nature” (Appendix). By means of the better rational control over their affects, human beings become less vulnerable to external causes that toss them back and forth “like the waves of the sea when driven by contrary winds” (*Ethica* III, Prop. 59, Schol.). At the same time, intellectual activity is an active affect and entirely under our control. It thus represents the highest form of freedom in the sense of self-determination accessible to human beings. Since knowledge *sub specie aeternitatis*, according to Spinoza, allows the mind to participate in God’s eternity, it constitutes the goal of the striving to “persist in one’s being.” Finally, the increase in power gained through understanding is a source of constant joy, leading to the “intellectual love of God.”

It is important to note that Spinoza takes his ethical egoism to be perfectly compatible with the wish to give to one’s fellow human beings every possible assistance to attain the same degree of perfection that one desires for oneself. For “no individual thing in nature is more advantageous to man than a man who lives by the guidance of reason” (*Ethica* iv, Prop. 35, Cor. 1). Moreover, in contrast to material goods, “the greatest good,” i.e., knowledge of God, “can be enjoyed by all equally” (*Ethica* iv, Prop. 36). Solidarity and mutual help are thus good for purely utilitarian reasons.

CRITIQUE OF RELIGION. The *Tractatus Theologico-Politicus* also fits into Spinoza’s project of the good life. Its goal may be described as creating the conditions for the project’s implementation. After all, a philosophical life cannot be led by someone who does not have the “freedom to philosophize [*libertas philosophandi*],” or whom the “prejudices of theologians” prevent from “devoting [*applicare*]” his life to philosophy. These, according to Spinoza, were the main reasons for working out his critique of religion in the *TTP* (Letter 30). The chief purpose of this critique is to show that Scripture can make no legitimate claim to truth. This will take away both the fear felt by the potential philosopher when a demonstrated proposition conflicts with a theological doctrine and the authority of the theologian to persecute a person for holding views that disagree with the teachings of Scripture. Of crucial importance for attaining this purpose are the first two chapters of the *TTP*, which deal with “prophecy or revelation [*prophetia sive revelatio*]” and with the biblical prophets. Spinoza recurs to a distinction between intellect and imagination that was common in the Aristotelian tradition and that

Maimonides had already used for explaining prophecy. According to Maimonides, the prophet has both a highly developed intellect and a highly developed imagination, whereby the latter allows him to translate his intellectual insights into a simple and vivid language that can be understood by his uneducated audience. According to Spinoza, on the other hand, the prophet does not excel through his “more perfect intellect,” but only through his “more lively imagination [*potentia vividius imaginandi*]” (*TTP* 2). Prophetic discourse, therefore, has no true cognitive content; it is only persuasive through images and symbols which are adjusted to the audience’s limited capacity for understanding and help securing obedience to the law. Moreover, Spinoza intends to show through a detailed examination of the meaning of biblical terms that when the Bible describes the prophets as being filled with “the spirit of God or the holy spirit,” it only intends to highlight their “exceptional virtue.” This is an implicit attempt to refute the doctrine of the Calvinist Church which grounds the authority of Scripture on its super-rational inspiration by the holy spirit (*TTP* 1). Prophecy thus understood is neither specifically Jewish, nor can a claim to “election [*vocatio*]” be derived from it. For Spinoza Israel’s election refers only to the political success of the ancient Hebrew state based on Moses’ legislation. The election ended with the state’s disintegration. That the Jewish people nonetheless continues to exist he explains through its insistence to keep up “external rituals” such as the “sign of circumcision [*signum circumcisionis*]” through which it sets itself apart from other nations and provokes their hatred (*TTP* 3). Moses’ legislation, in particular the “ceremonial law [*ceremoniae*]” (*TTP* 5), is exclusively political in nature. As a “human law [*lex humana*]” (*TTP* 4) it aims only at “preserving life and the commonwealth,” promising no more than “worldly happiness [*temporanea foelicitas*]” to those who observe it (*TTP* 5). By contrast, the “divine law [*lex divina*]” aims at the “highest good, i.e., the true knowledge and love of God,” thus leading to “man’s highest happiness [*summa hominis foelicitas*]” (*TTP* 4). Also the distinction between human and divine law Spinoza took over from Maimonides, at the same time turning it against its original intention. Whereas Maimonides identified the Torah with the divine law and presented Moses as a philosopher and lawgiver in the Platonic sense, Spinoza demotes Moses to a simple lawgiver whose legislation became obsolete after the downfall of the Hebrew state. This reversal of the Maimonidean model is a good example for the influence of Uriel da Costa and other Jewish heterodox thinkers on Spinoza. Their denial that the immortality of the soul is a biblical doctrine presumably underlies his claim that the Mosaic Law only promises “worldly happiness,” and not eternal happiness which is the reward of “the true knowledge and love of God.”

Also the miracles related in Scripture cannot be used as testimony for the authority of revelation, since miracles in the sense of God suspending the laws of nature are impossible in the order of nature, which is eternally and necessarily determined through God’s essence. The reason for the belief

in miracles, according to Spinoza, is the ignorance of causal connections (*TTP* 6).

The demolition of the traditional notion of revelation allows Spinoza to refute the premises of the exegesis promoted by Maimonides which attempts to harmonize philosophy and Scripture. In Spinoza's view this amounts to the "distorting and explaining away of Scripture" (*TTP* 7) with the goal to "extract" from it "Aristotelian nonsense [*nugas Aristotelicas*]" (*TTP* 1). It allows him likewise to refute the central claim underlying the hermeneutics of the Calvinist Church: that the understanding of Scripture requires the super-rational illumination by the holy spirit. Against these approaches Spinoza calls for the unconditional acceptance of Scripture's literal sense based on the methodological principle that "the knowledge of all the contents of Scripture must be sought from Scripture alone." The focus is no longer the "truth [*veritas*]" of a proposition in Scripture but its "meaning [*sensus*]" (*TTP* 7). In order to determine the meaning, the Bible scholar proceeds in an analogous way to the scientist whose aim is to explain nature. Both work out a "history [*historia*]," i.e., a methodological account, of the object of their study (*ibid.*). For the Bible scholar this means collecting and ordering the data contained in Scripture and then interpreting them in light of the relevant historical and socio-cultural contexts, as well as the psychological peculiarities of the prophets, insofar as these can be reconstructed from the available sources. In much of his discussion in the preceding chapters Spinoza follows the methodological rules laid out in *TTP* 7 and shows that from a philosophical point of view almost every statement in Scripture is false.

In *TTP* 8–10 he goes on to examine the composition and transmission of the biblical books. Taking a number of cryptic remarks in Abraham Ibn Ezra's commentary on the Bible as his point of departure, Spinoza arrives at the conclusion that much of the Pentateuch cannot have been written by Moses. He likewise questions the traditional attribution of several other books of the Bible. The comprehensive rejection of the claim to truth of revelation leads to the goal of the theological part of the *TTP*: the strict separation of philosophy and religion. The authority to determine truth and falsehood belongs only to philosophers who rely on rational insight. The task of theologians, relying on revelation, is to assure "obedience [*obedientia*]" to the law by teaching – like the prophets led by their imagination – "pious dogmas" whose truth is not important. Philosophy and theology thus become two independent disciplines: "the goal of philosophy is nothing but the truth, the goal of faith is nothing but obedience" (*TTP* 14). Consequently "reason" cannot be "the handmaid of theology [*ancilla theologiae*]" nor theology the handmaid of reason [*ancilla rationis*]." Spinoza calls the former position "skepticism," for it "denies the certainty of reason," and exemplifies it through Judah Alfakhar, one of the leaders of the opposition to philosophy in medieval Judaism. Alfakhar is a stand-in for the position of the Calvinist Church, which Spinoza refrained from attacking openly. The latter position he calls "dogmatism" and illustrates it by means of Maimonides' philosophical exegesis which re-

interprets every biblical passage that contradicts a doctrine established by reason (*TTP* 15). From this point of view the *TTP* marks the end of classical Jewish philosophy, whose fundamental premise was the agreement of revelation with all propositions demonstrated by reason. More importantly: it destroys the traditional notion of religion as a whole insofar as it is grounded on the truth of revelation. In this lies one of Spinoza's most momentous contributions to modernity.

RELIGION AS A REPLACEMENT OF PHILOSOPHY. Nevertheless, Spinoza's attitude to religion is considerably more complicated. For despite the radical critique of religion, there are a significant number of passages throughout his work – from the *Cogitata Metaphysica* to the *Tractatus Politicus* and the late correspondence with Henry Oldenburg – in which he attributes a true core to Scripture, often presented as its allegorical content. This striking inconsistency seems to stem from a two-fold commitment that Spinoza was ultimately unable to reconcile: he not only wants to criticize religion in order to defend the freedom to philosophize; he also wants to use religion as a replacement of philosophy for non-philosophers. The concept of religion as a replacement of philosophy which guides non-philosophers to virtue is precisely the "dogmatic" view of Maimonides (and, in fact, the standard view of medieval Islamic and Jewish philosophers) that Spinoza rejects in the *TTP*. The main idea is that the positive content of religion – biblical narratives, laws, rituals and so forth – is a pedagogical-political program designed by philosophers to guide non-philosophers. The allegorical content of religion, on the other hand, corresponds to the doctrines demonstrated in philosophy. Religion's authority thus depends on the assumption that the teachings of religion are true on the allegorical level. Before Spinoza started working on the *TTP* in 1665, he consistently endorsed the dogmatic position whenever he discussed the character of Scripture (*Cogitata Metaphysica* II, 8 and the correspondence with W. van Blyenbergh between 1664 and 1665). But different versions of it reappear also in his later writings. They include the attribution of true moral convictions to the biblical prophets (*TTP* 1 and 2), the attribution of true metaphysical doctrines such as God being *causa immanens* to "all ancient Hebrews" (*Letter* 73), the presentation of Christ as an accomplished philosopher instructing non-philosophers by means of allegories (*TTP* 4; cf. E IV, Prop. 68, Schol.), and the claim that the "uncorrupted" core of Scripture corresponds to the "universal religion" described in the *TTP* (12–14). None of these can be justified through the exegetical method that Spinoza claims to have adopted in the *TTP*: "to neither affirm anything of [Scripture] nor to admit anything as its teaching which I did not most clearly derive from it" (*TTP* Preface). The textual evidence gives rise to a number of questions: why did Spinoza adopt the medieval position in his early writings, why did he refute it in the *TTP*, and why did he continue to make use of it even after having refuted it? For one thing, Spinoza clearly shares the view of Maimonides and many other medieval philosophers that the good life based on knowledge (i.e.,

the life he himself chose according to the opening passage of the *TEI* and for which the *Ethica* serves as a guide) is accessible only to a small group of philosophers: “only a few in proportion to the whole of humanity acquire a virtuous disposition under the guidance of reason alone” (*TTP* 15; cf. *Ethica* v, Prop. 42, Schol.). This leads to the question how guidance can be provided to non-philosophers. The evidence of Spinoza’s early writings shows that he in principle agrees with the medieval solution which takes the positive content of religion to be a pedagogical-political program designed to lead non-philosophers to virtue. A second reason for adopting the medieval position is that the perception of philosophy as coinciding with the allegorical content of religion facilitates its acceptance in a religious society. Finally, the medieval position, which has philosophy determine the true core of religion, neither seems to interfere with Spinoza’s philosophical project in the *Ethica* nor with the freedom to philosophize that he sets out to defend in the *TTP*. But if this is the case, why did he refute it at all? It is clear that Spinoza’s main opponent in the *TTP* is not the “dogmatic” position represented by Maimonides, but the “skeptical” position of the Calvinist Church, in particular the view that the authority of Scripture overrides the authority of reason. This he takes to be the chief threat to the freedom to philosophize (*TTP* Preface). The only efficient way to refute this position, in Spinoza’s view, is to show that Scripture contains no truth. But although the medieval position and the position of the Reformed Church are in a sense opposed to each other, both depend in different ways on the premise that Scripture is true. Thus the refutation of the one entails the refutation of the other. While his target is the Reformed Church, Spinoza has no choice but to give up the medieval position as well. At the same time he has no new solution for the problem of non-philosophers. This explains why, despite its refutation, he continues to use the dogmatic position in various contexts in his later writings.

POLITICAL PHILOSOPHY. In the *Ethica* Spinoza argues that the essence of human beings is the *conatus*, i.e., the striving “to persist in one’s being.” In the political part of the *TTP* and in the *Tractatus Politicus*, following Thomas Hobbes, he equates the power to do so with a person’s natural right in the state of nature, and explains the social contract as the decision to submit to a sovereign power in exchange for peace and safety (*TTP* 16). But, against Hobbes, Spinoza maintains that the natural right is not given up under the social contract: “the supreme power in a state has no more right over a subject than is proportionate to the power by which it is superior to the subject” (*Letter* 50).

Besides Hobbes, Spinoza was also influenced by ancient political thought, in part mediated through medieval Jewish sources. Indeed, the fear of being harmed through the power of others is not the only motive for forming a political community. Since, on their own, human beings are not self-sufficient, they must collaborate with one another. Hence the Aristotelian definition “which makes man a social animal,

has been quite pleasing to most.” Spinoza in any case is certain that “we derive from the society of our fellow men many more advantages than disadvantages” (*Ethica* iv, Prop. 35, Schol.). Moreover, according to Spinoza, social harmony is weakened when the actions of the citizens are guided by the idiosyncratic goals of their passions, whereas it is strengthened when their actions are guided by reason which prescribes the same goal to all (*idem*, *Dem.*). It follows that the “end [*finis*],” for which the state is established, is not simply peace in the sense of “the absence of war [*privatio belli*],” its positive aim is to enhance the rationality of the citizens, i.e., their virtue, for “reason” is the “true virtue and life of the mind” (*Tractatus Politicus* 5, IV – VI). Since Spinoza equates virtue and knowledge, culminating in the intellectual love of God, and since he takes the “uncorrupted” true core of Scripture to be the call “to love God above all and one’s neighbor as oneself” (*TTP* 12), the fundamental convergence of the purpose of his philosophical, religious, and political project becomes apparent: to foster a community based on solidarity and on freedom of thought, whose members assist one another in attaining the best life, i.e., a life devoted to the love of God.

INFLUENCE. Although during the first century after his death Spinoza was less famous than infamous, reviled as a notorious atheist, his influence was nonetheless considerable: not only on philosophers such as Leibniz, but, most importantly, on the different currents of the unfolding Enlightenment. Indeed, some scholars argue that the Enlightenment of the 18th century was no more than a *post-scriptum* to the dynamic of the radical Enlightenment set off by Spinoza’s writings. He determined the intellectual agenda not only of those who agreed with him, but also of those who attempted to refute him and of those who adopted intermediate positions (cf. J. Israel). The most fruitful reception of his philosophy took place in Germany in the second half of the 18th century. The event which put Spinoza’s work at the very center of the thriving German intellectual culture of the time was the so-called “*Pantheismusstreit*.” This quarrel broke out when F.H. Jacobi accused Lessing after his death of being a crypto-Spinozist, in a public exchange of letters with Moses Mendelssohn that was widely debated in Germany’s literary and philosophical circles and stirred up renewed interest in Spinoza’s thought. A typical response to Jacobi’s identification of Spinozism with atheism was that of the great Romantic poet Novalis, who described Spinoza as a “God-intoxicated man.” Spinoza also significantly contributed to shaping Goethe’s worldview, as well as that of many other central figures of Germany’s literary scene. In a dedication that J.G. Herder wrote into a copy of Spinoza’s *Opera Posthuma*, given to Goethe as a Christmas gift in 1784, he expresses his wish that the “holy Spinoza” may always remain their “holy Christ.” In philosophy, Spinoza’s ontological monism influenced the systems of German idealists probably as much as Kant’s criticism. According to Hegel, Spinoza’s thought is the “essential beginning of all philosophizing [*wesentliche Anfang alles Philosophierens*].” Nietzsche arrived at the conclusion

that his own philosophical project agreed with Spinoza's on most fundamental issues. As mentioned in the introduction, Spinoza today continues to be debated by philosophers of a wide range of intellectual affiliations. Turning to his critique of religion, Spinoza may be said to have laid the foundation for the scientific study of the Bible. He also had a considerable impact on Jewish thinkers, beginning with David Nieto in the 17th century. In Jewish Haskalah circles of the 18th century, Mendelssohn's cautious Spinoza-reception stands next to Salomon Maimon's enthusiastic encounter with Spinoza's system that he relates in his *Autobiography*. Maimon's metaphysics, which takes up and combines ideas derived from Maimonides and Spinoza, was the first to make the transition from Kant to an idealist position. Spinoza also left his imprint on 19th-century *maskilim*. Moreover, he became an important source of the secular worldview of prominent Zionists, among them David Ben-Gurion who proposed to revoke the *herem* against him. Albert Einstein wrote a poem "On Spinoza's Ethics." His "God who does not throw dice" clearly has Spinozistic features, as does his notion of a "cosmic religion."

[Carlos Fraenkel (2nd ed.)]

As a Bible Scholar

Spinoza's biblical criticism in part follows earlier attempts, but integrates them for the first time into a rational system, laying the groundwork for all later critical works on the Bible up to the present. His biblical criticism is closely connected to his philosophical system and political project. Based on the knowledge of the Bible that he acquired in his childhood, and after long years of reflection, his critical views of the Bible were expressed in the *Tractatus Theologico-Politicus*, as well as in a few letters and conversations. In opposition to the many misuses of the Bible that he observed in Judaism and Christianity, Spinoza developed what he took to be the true method of biblical exegesis. Every person has the right to engage in biblical interpretation; it does not require supernatural illumination or special authority. Spinoza's supreme principle is that the Bible must be interpreted on its own terms. The method of the interpretation of the Bible is the same as the method of the interpretation of nature. "For, as the method of interpreting nature consists essentially in putting together a history [i.e., a methodical account] of nature, from which, as from sure data, we deduce the definitions of natural phenomena, so it is necessary for the interpretation of Scripture to work out a true history of Scripture, and from it, as from sure data and principles, to deduce through legitimate inference, the intention of the authors of Scripture" (*TTP* 7). The history of Scripture should comprise three components: (1) an analysis of the Hebrew language; (2) the compilation and classification of the expressions [*sententiae*] of each of the books of the Bible; (3) research into the original contexts of the biblical writings, as far as they still can be ascertained, i.e., into "the life, the conduct, and the pursuits of the author of each book, who he was, what was the occasion and the epoch of his writing, whom did he write for, and in what language.

Further it should inquire into the fate of each book: how it was first received, into whose hands it fell, how many different versions there were of it, by whose advice was it received into the Canon, and lastly, how all the books now universally accepted as sacred were united into a single whole" (*ibid.*). In accordance with this program, Spinoza analyzed the biblical writings in an attempt to determine their authors (*TTP* 8–10). He spelled out, and substantially expanded on, the considerations that led the medieval commentator Abraham Ibn Ezra to allude to the possibility that the Pentateuch did not derive in its entirety from Moses. Although some of the Pentateuch did originate with Moses (The Book of the Wars of God, the Book of the Covenant, the Book of the Law of God), it was only many centuries after Moses that the Pentateuch as a whole appeared. The Pentateuch, together with the books of Joshua, Judges, Samuel, and Kings, forms a single larger historical work, whose author, Spinoza conjectures, was Ezra. Ezra was prevented by his premature death, or perhaps some other reason, from revising these books. They contain numerous repetitions and contradictions, e.g., of a chronological nature, that lead to the conclusion that the wealth of material was compiled from works of different authors, without being arranged and harmonized. I and II Chronicles were written long after Ezra, perhaps even after the restoration of the Temple by Judah Maccabee. The Psalms were collected and divided into five books in the Second Temple period; Proverbs is from the same period or, at the earliest, from the time of Josiah. The Prophetic books contain only fragments assembled from other books, but not in an order established by the prophets. Spinoza adopts Ibn Ezra's hypothesis concerning Job, according to which Job was translated from a gentile language; if this were the case it would entail that the gentiles also had holy books. Daniel is authentic only from chapter 8 on; the previous chapters, presumably taken from Chaldean chronicles, are in any case an indication that books can be holy even though they are not written in Hebrew. The Book of Daniel forms with the books of Ezra, Esther, and Nehemiah a work by a historian who wrote long after the restoration of the Temple by Judah Maccabee, using the official annals of the Second Temple in his work. These theories lead to the conclusion that the canon could have originated only in the time of the Hasmoneans. It is a work of the Pharisees, not Ezra, in whose time the Great Assembly did not yet exist. Spinoza criticizes various decisions of the Pharisees, such as the inclusion of Chronicles in the canon and the rejection of the Wisdom of Solomon and Tobit, and he regrets "that holy and highest things should depend upon the choice of those people." Spinoza discovers in the Prophets numerous contradictions in their conceptions of natural and spiritual phenomena. He concludes that God adapted his revelation in these matters to the limited intellectual power of the prophets, and that philosophical knowledge is not to be found in their works. The purpose of the revelation to the prophets is rather to teach the right way of life to an uneducated audience (*TTP* 1–2). The example of Balaam indicates that there were prophets not only among the Hebrews.

The election of the Hebrews should not be understood as an indication that they excelled over other nations with respect to intellect and virtue; their election refers only to their political kingdom and ended with the latter's downfall (*TTP* 3). The ceremonies prescribed in the Bible, in fact the entire Mosaic law, were applicable only as long as the kingdom lasted; after it ended they no longer contributed to happiness and blessedness (*TTP* 4–5). According to Spinoza, stories in the Bible are not to be believed literally; they are intended to instruct the members of the community, who could not comprehend philosophical arguments in which propositions are deduced from definitions and axioms (*TTP* 5). Spinoza is aware of the difficulties that stand in the way of a conclusive understanding of the Bible on the basis of his method, for example our incomplete knowledge of Hebrew and of the circumstances of the composition of the biblical books, some of which (in particular those of the New Testament) are not extant in the language in which they were composed (*TTP* 7).

SPIRA (Spiro), NATHAN NATA BEN SOLOMON (c. 1585–1633), Polish kabbalist. Spira, who was born in Cracow, maintained a well-known yeshivah. During the last years of his life he apparently served as head of the rabbinic court. One of the first protagonists in Poland of pseudo-Lurianic Kabbalah, particularly in the version disseminated by Israel *Sarug, he was interested mainly in the mysticism of numbers rather than in systematic speculation. His *Megalleh Amukkot*, published by his son after his early death (Cracow, 1637), became one of the classics of Ashkenazi Kabbalah and was reprinted several times. It offered 252 interpretations of one single passage, Moses' prayer in Deuteronomy 3:23ff. The author was "intoxicated" with numbers; he was concerned less with using the qualities of numbers in order to elucidate matters of Kabbalah and *halakhah* than in employing the Kabbalah as material for showing his great power with different numerical combinations, and there is no doubt that he had an extraordinary mathematical mind. Where other people think in words, he thought in numbers. His way of thinking and interpreting was frequently imitated by kindred spirits in the next 200 years. Spira mentions a similar book of his in which he had interpreted the letter *alef* in the word *Va-Yikra* in Leviticus 1:1 (which is written in a particularly small form) in 1,000 different ways. His commentary on the whole Pentateuch was not published until much later (Lvov, 1785), under the same title. The rabbinical approbations of an elaborate commentary on Spira's classic by David b. Moses from Zuelz were published in Dyhernfurth in 1707, but the work itself never appeared.

[Gershom Scholem]

SPIRE, ANDRÉ (1868–1966), French poet and Zionist leader. Born in Nancy, Spire was descended from an old established family of Lorraine and the son of a rich industrialist. After studying law, he became a member of the Conseil d'État in 1894, specialized in employment problems at the French Ministry of Labor (1898–1902), and was inspector general in the Ministry of Agriculture from 1902 to 1926 when he retired. Spire was roused from his assimilationist lethargy by the *Dreyfus Affair, in which he played an active role. He fought a duel with the antisemite *Drumont, and struggled to gain a revision of the trial. Much to the dismay of assimilated French

Jewry, Spiro speedily became a militant advocate of Jewish national revival, first supporting the Russo-Jewish self-defense organizations during the pogroms, then organizing the Association des Jeunes Juifs in order to organize the recent Jewish immigrants to France. Writing from Basle where he was attending a Zionist Congress in 1911, Spiro declared: "The most despicable Jews are those who deny their own identity... They were cursed by the Prophets and will be banished from the New Jerusalem... Assimilation is death. Zionism is life." After the Balfour Declaration, Spiro founded in 1918 the Ligue des Amis du Sionisme, and a year later represented the French Zionists at the Paris Peace Conference; in 1920 he joined a delegation to Erez Israel. Following a rift with Weizmann, Spiro withdrew from active participation in official Zionism. During World War II he took refuge in the U.S., where he taught and lectured on French culture and poetry. He worked for refugees during the Nazi period, and supported Hillel Kook's activist "Hebrew National Liberation Movement" on the eve of the birth of the State of Israel.

Spiro is best remembered as the leader of the Jewish revival movement in 20th-century French literature, and also as a literary theorist and innovator. His verse, which overflows with passion and humor, defends freedom and justice, and chastises the cowardly and the rich. Spiro's main verse collection, *Poèmes Juifs* (1919, 1959³), lashes the assimilated and calls for a Jewish revolt. In *Samaël* (1921) Spiro develops a dramatic vision of good and evil, man's destiny and happiness. His inexhaustible verve also expressed itself in tales such as the fanciful "Le Rabbin et la Sirène" (in *Mercure de France*, Aug. 15, 1931; "The Rabbi and the Siren," in J. Leftwich, *Yisroel*, 1933, rev. 1963); his critical judgment and insight appears in the essays *Quelques Juifs* (1913), enlarged in a second edition as *Quelques Juifs et demi-Juifs* (2 vols., 1928). He was a rare combination of a Frenchman attached to his country and steeped in its culture, and of a Jew, fully identified with the spiritual and national aspirations of his people.

[Moshe Catane]

SPIRO, EUGEN (1874–1972), U.S. painter, illustrator, print-maker. Son of Abraham Beer Spiro, chief cantor of the Storch Synagogue, Breslau, Spiro studied in Breslau, Munich, and France. He studied with Franz van Stuck at the Munich Academy of Art. After visiting Paris from 1906 to 1914, he traveled to Berlin, where he taught at the Staatlichen Kunstschule and chaired the Berlin Secession. He immigrated to Paris in 1935 after the Nazis stripped him of his position and qualifications and denounced his portraits as "degenerate." He was imprisoned at the French concentration camp of Gurs; however, in

1941 Spiro and his family successfully escaped Nazi-occupied France, fleeing to New York via Marseilles and Portugal, in part through the support of Alfred H. Barr, the director of the Museum of Modern Art. Spiro was active as a painter of landscapes, which reflected his study of Cezanne, van Gogh, and the Impressionists. He also made still lifes, self-portraits, and interiors, and was well known for his portraits, including those of Leni Riefenstahl (1924), Albert Einstein, Thomas Mann, and the artist Balthus in 1947. The latter artist was his nephew, and Spiro also painted a portrait of his sister Elisabeth Dorothea Spiro, Balthus' mother, as a strict schoolteacher in 1902. Spiro made numerous simple but descriptive drypoint etchings of North African subjects, including soldiers, snake charmers, and the Alhambra, all of which seek to invoke the images with exoticism. He taught at the Wayman Adam School in Elizabethtown, New Jersey. His work is in the collections of the Fine Arts Museum, San Francisco. He exhibited at the Museum of Modern Art and the St. Etienne Galerie, New York. The Galerie von Abercorn in Cologne mounted a retrospective of his work in 1978. A catalogue raisonné of his art, edited by Wilko von Abercron, was published in 1990.

Rewald, "Balthus Lessons: Five Controversial Works by the French Artist," in: *Art in America* (Sept. 1977); W. Schwab and J. Weiner, *Jewish Artists: the Ben Uri Collection: Paintings, Drawings, Prints, and Sculpture* (1987).

[Nancy Buchwald (2nd ed.)]

SPIRO, GYÖRGY (1946–), Hungarian novelist, poet, and literary historian. His volume of essays *A közep-kelet-europai dráma* ("The Drama in Central-East-Europe," 1986) analyzes the political era. He dealt mainly with historical and Slavonic subjects.

[Eva Kondor]

SPIRO, KARL (1867–1932), German physiological chemist. Born in Berlin, he worked at the University of Strasbourg from 1894 until 1918, when it became difficult there for Germans, and he went to Switzerland. From 1921 he was professor of physiological chemistry at the University of Basle. He was one of the first to apply concepts of physical chemistry to biology, such as pH buffering, and chemical kinetics to enzyme actions. He discovered some of the building blocks of proteins, such as pyrrolidinecarboxylic acid and phenylethylamine.

SPIRO, MELFORD ELLIOT (1920–), U.S. anthropologist. Born in Cleveland, Ohio, Spiro received his Ph.D. from Northwestern University in 1950. He taught at Connecticut University from 1952 to 1957; from 1957 to 1964 he was professor at Washington University, and from 1965 to 1967 at the University of Chicago. In 1968 he became a founding member of the Department of Anthropology at the University of California, San Diego. After retiring from teaching, he was named professor emeritus of anthropology at UCSD.

Spiro's primary research interest is the comparative analysis of social systems, especially problems of cultural motivation and control, and the interrelation of personality, culture, and society. In a theoretical chapter in *Studying Personality Cross-Culturally* (ed. B. Kaplan, 1961), he discussed culture and personality study in relation to the central issue in the social sciences – the explanation of social cohesion and functioning. He saw personality and culture as systems of motivational tendencies. Among his studies were *Kibbutz: Venture in Utopia* (1956) and *Children of the Kibbutz: A Study in Child Training and Personality* (1958), based on his research in the kibbutz as a participant observer. He analyzed the child-rearing methods on the collective settlements and the outcome in the personality of the kibbutz child. He also conducted fieldwork in Micronesia and Burma. In 1991 he received the Distinguished Contribution Award from the Society for Psychological Anthropology.

Spiro's publications include *Burmese Supernaturalism* (1967), *Buddhism and Society* (1970), *Gender and Culture: Kibbutz Women Revisited* (1979), *Oedipus in the Trobriands* (1982), *Culture and Human Nature* (1987), and *Gender Ideology and Psychological Reality* (1997). He also edited *Context and Meaning in Cultural Anthropology* (1965).

[Ephraim Fischhoff / Ruth Beloff (2nd ed.)]

SPITZ, MARK ANDREW (1950–), U.S. swimmer, holder of the record for most gold medals won in a single Olympics with seven, and tied for most gold medals overall with nine; member of the International Swimming Hall of Fame and U.S. Olympic Hall of Fame. Born in Modesto, California, the eldest of three children to Lenore and Arnold, a steel executive, Spitz began swimming at age two, when his family moved to Honolulu and Spitz would swim at Waikiki Beach every day. The family returned to California four years later, and Spitz received his first competitive training at six at the Sacramento YMCA. By the time he was 10, he held 17 national age-group records and one world record, the 50-yard butterfly, which he completed in 31 seconds, and was named “the world's best 10-and-under swimmer.” The family moved to Santa Clara when Spitz was 14, so he could train at the famed Santa Clara Swim Club. In 1965 at age 15, he swam at the Maccabiah games in his first international competition, winning four gold medals. At age 16 he won the 100-meter butterfly at the 1966 National AAU Championships, the first of his 24 AAU titles. The next year he won five gold medals at the Pan-American Games in Winnipeg, and laid claim to ten world records. By the time Spitz was 18, he had won 26 national and international titles, and broken 10 world and 28 U.S. records. At the 1968 Olympic Games in Mexico City, where much was expected of him, Spitz came away disappointed after predicting he would win six gold medals. He won two gold medals, in the 4 × 100 m and 4 × 200 m freestyle relays, a silver medal in the 100m butterfly, and bronze in the 100m freestyle. Spitz spent the next four years at Indiana University, winning almost every conceivable award and setting almost every world record in existence, as

he prepared for the 1972 Olympics in Munich. He returned to Israel for the 1969 Maccabiah Games, winning another six gold medals. By the spring of 1972, Spitz had set 23 world records and 35 U.S. records. Driven by ambition and sheer single-mindedness, Spitz won seven Olympic gold medals in 1972 at the Munich Games – a feat unequaled by any Olympic athlete – with a world record in each of the seven events (the 100 m freestyle, 200 m freestyle, 100 m butterfly, 200 m butterfly, 4 × 100 m and 4 × 200 m freestyle, and the 4 × 100 m medley). The next week he was on the September 11, 1972, cover of *Time* magazine. Spitz's 11 total medals in the two Olympics are tied for the most medals ever won by a U.S. Olympian. Hours after he won his last medal, Palestinian terrorism claimed the lives of 11 Israeli sportsmen, and security personnel whisked Spitz out of Munich. Over his career, Spitz set 26 individual world records in the freestyle and butterfly, contributing to another seven relay world records; 38 American records; 24 National AAU championships; and eight NCAA titles. He was named “World Swimmer of the Year” in 1967, 1971, and 1972 and became the first Jewish recipient of the James E. Sullivan Award in 1971, given annually to the Amateur Athlete of the Year. Spitz attempted a comeback at age 41 in an attempt to qualify for the 1992 Barcelona Olympics, after filmmaker Bud *Greenspan offered to pay him a million dollars if he succeeded in qualifying. Filmed by Greenspan's cameras, Spitz failed to beat the qualifying limit – his best time was 58:03, but he needed 55:59. Spitz was named a member of the International Swimming Hall of Fame in 1977 and the U.S. Olympic Hall of Fame in 1983. He wrote *The Mark Spitz Complete Book of Swimming* (1976) and his autobiography, *Seven Golds: Mark Spitz Own Story* (1981).

[Elli Wohlgeleerter (2nd ed.)]

SPITZ, RENE A. (1887–1974), child psychiatrist and psychoanalyst. Born in Vienna, Spitz worked in Hungary, Austria, and France before he immigrated to the United States at the end of the 1930s. From 1940 to 1957 he was on the faculty of the New York Psychoanalytic Institute, where he became a research consultant in pediatrics and psychiatry. During part of this time he was an adjunct psychiatrist at the Mount Sinai Hospital, New York City (1940–43). As visiting clinical professor of psychiatry at the University of Colorado's school of medicine from 1957, he was active in the fields of psychoanalysis, psychiatry, and normal and disturbed infant development. He was vice president of the New York Psychoanalytic Society (1950–52). In 1959 he published *Genetic Field Theory of Ego Formation*. After his retirement, he went to live in Geneva, Switzerland, where he continued to teach and write.

Spitz earned international fame for his pioneering research in infant development. In order to clarify psychoanalytic theories that had previously been based in the retrospective analysis of adults, he carried out direct observation and photographic documentation of infant behavior. His observation of children in hospitals led to one of his most important contributions to psychoanalytic theory – the concept of ana-

clitic depression, a severe disturbance of infant development resulting from separation from a maternal object and leading to malnutrition and sometimes death. This condition was regarded by subsequent analysts as an attachment disorder. The books Spitz wrote in his later years, *No and Yes* (1957) and *The First Year of Life* (1965) provide rich documentary evidence on the early development of infant communication, perceptual development, relation to objects, and development of the mother-child relationship. In them, Spitz tried to conceptualize early development and to correlate the psychological theory of Jean Piaget (1896–1980) with psychoanalytic theory.

[Joseph Marcus]

SPITZER, ELIOT (1959–), New York State attorney general. Born in the Bronx in New York City, Spitzer graduated from Princeton University in 1981 and received his J.D. degree from Harvard Law School, where he was an editor of the *Harvard Law Review* in 1984. He clerked for U.S. District Court Judge Robert W. Sweet in New York, then entered private practice at the firm of Paul, Weiss, Rifkind, Wharton, and Garrison.

From 1986 Spitzer worked as an assistant district attorney in Manhattan, under District Attorney Robert Morgenthau. He pursued investigations into organized crime, eventually becoming chief of the Labor Racketeering Unit. In 1992, in perhaps his most famous case, Spitzer led the investigation into the Gambino family's control of trucking in Manhattan's garment industry. That same year he left the District Attorney's office and joined the firm of Skadden, Arps, Slate, Meagher, and Flom, and he was later a partner at Constantine and Partners.

In 1994 Spitzer made his first bid for the office of New York State Attorney General. He failed to win the Democratic nomination, and Democratic candidate Karen Burstein lost the general election to Dennis Vacco. Spitzer again sought the nomination in 1998, this time successfully, and defeated Vacco in the general elections. In 2002 he was reelected with a large margin.

As attorney general, Spitzer was credited with redefining the role of the office, taking on cases that formerly had been deferred to federal prosecution. His office investigated securities fraud, insurance practices, occupational safety, marketing fraud, and violations of environmental protection. *Time* magazine named him "Crusader of the Year" in 2002. That year Spitzer sued several investment banks for inflating stock prices by, among other practices, using affiliated firms to offer biased advice. He negotiated a settlement of these lawsuits for \$1.4 billion in compensation and fines, and new rules were imposed for analysis of the market. Also in 2002, he filed suits to address violations of the Clean Air Act.

In 2004 Spitzer's office investigated the music industry, uncovering \$50 million in unpaid royalties to musicians. Numerous other cases addressed commissions in the insur-

ance industry, disclosure policies regarding clinical trials in the pharmaceutical industry, and fraud in the marketplace.

Spitzer announced in 2004 that he would seek the Democratic nomination for governor of New York in 2006. Senator Charles Schumer, who had been favored in the polls, had announced that he would not run but would remain in his Senate seat. Governor George Pataki announced in 2005 that he would not seek reelection, and Spitzer was considered a strong candidate for not only the Democratic nomination but in a run against possible Republican contenders.

[Dorothy Bauhoff (2nd ed.)]

SPITZER, FREDERIC (Samuel; 1814–1890), Hungarian-born collector and dealer in paintings, armor, and objets d'art. Spitzer, son of a cemetery guard, began by selling a Durer painting he bought cheaply in Italy while serving with the Austrian army in 1848. He later dealt in old weapons and armor. He settled in Paris and built up a magnificent collection which the French state offered to buy. Spitzer rejected this offer and the collection was sold after his death for ten million francs. The armor was purchased by King Edward VII.

SPITZER, HUGO (1854–1937), Austrian philosopher and scientist. Spitzer, who was born in Einoede, Carinthia, was professor of philosophy and natural science at Graz from 1903 to 1924. He was an ardent supporter of Darwin and wrote *Beitraege zur Deszendenztheorie und zur Methodologie der Naturwissenschaft* (1886). In common with Haeckel, Spitzer claimed that consciousness could be derived from matter (in his *Ueber Ursprung und Bedeutung des Hylozoismus* (1881)). Spitzer also wrote *Kritische Studien zur Aesthetik der Gegenwart* (1897), and *Untersuchungen zur Theorie und Geschichte der Aesthetik* (1923²), in which he tried to clarify the relationship between aesthetics and the philosophy of art.

[Richard H. Popkin]

ŠPITZER, JURAJ (1919–1995), Slovak writer, literary critic, scriptwriter. Špitzer was born in Krupina, Slovakia. In 1944 he participated in the Slovak National Uprising against the Germans. From 1951 to 1970 he worked at the Institute of Slovak Literature of the Slovak Academy of Sciences. In 1970 he lost his job (punishment for his activities in 1968). Špitzer wrote several movie scripts and a number of stories, such as *Patrím k vám* ("I Belong to You," 1964) about the political trials of the 1950s and *Letná neděľa* ("The Summer Sunday," 1991). The narrative *Nechcel som byť Žid* ("I Did Not Want to Be a Jew," 1995) is based on a factual "Report on Nováky," which describes the Jewish concentration camp in central Slovakia between 1942 and 1944. After Špitzer's death, a collection of essays and memoirs appeared entitled *Svitá, až keď je celkom tma* ("It Is Getting

Light, until the Darkness Is Coming,” 1996). The main topic was the so-called “Jewish question” and the Holocaust.

[Milos Pojar (2nd ed.)]

SPITZER, KARL HEINRICH (1830–1848), first Jewish victim of the March 1848 revolution in Vienna. He was born in Bzenec (Bisenz), Moravia, where the family had settled after the expulsion of the Jews from Vienna in 1670. From the age of 10 he lived in Vienna, where he was educated, and was influenced by the French Enlightenment, and the writings of Ludwig *Boerne. Dissatisfied with political conditions under the Hapsburgs and tending to radicalism, he intended to emigrate to the United States. In the 1848 revolution in Vienna, Spitzer was among the first five fighters at the barricades to be shot outside the building of the Lower Austrian Estates (*Landhaus*) on March 13. Spitzer was glorified as a martyr of the revolution by the Jews of the Hapsburg Empire. His father, Leopold, is reported to have said that he praised God because his son had helped to free the fatherland and gave new life to millions by his death. On the initiative of the Roman Catholic chaplain of the students organization the Jewish victims, Spitzer and Bernard Herschmann, were buried in a common grave with Christians who also lost their lives at this time. I.N. *Mannheimer eulogized them in a celebrated sermon. This unique procedure was not repeated for the Jews shot in Vienna in October 1848.

[Meir Lamed / Albert Lichtblau (2nd ed.)]

SPITZER, LEO (1939–), scholar and author. Born in Bolivia to Austrian Jewish parents fleeing Nazi persecution, Spitzer moved to the United States with his family in 1950. He was educated at Brandeis University, where he received a B.A. in Spanish literature (1961), and at the University of Wisconsin, where he earned a master’s degree in Latin American history (1963) and a Ph.D. in African history (1969). He joined the faculty of Dartmouth College in 1967 as an instructor, becoming an assistant professor in 1969 and an associate professor in 1974. He became the Kathe Tappe Vernon Professor of History at Dartmouth.

A multilingual scholar who speaks Spanish, German, Portuguese, and Krio, and reads French and Xhosa, Spitzer published widely on African culture and responses to colonialism and racism. From 1963 to 1965 he was the recipient of a Ford Foundation Foreign Area Training Fellowship for research in England and Sierra Leone, and in 1972 he received a Social Science Research Council fellowship for a comparative study of the intellectual reactions to Western culture of Afro-Brazilian freedmen and the Sierra Leone Creoles. In 1974

and 1975 he was awarded grants from the comparative world history program of the University of Wisconsin. His works include *The Creoles of Sierra Leone: Responses to Colonialism* (1974); *Lives in Between: Assimilation and Marginality in Austria, Brazil, West Africa, 1780–1945* (1989); and *Acts of Memory: Cultural Recall in the Present* (as editor, with Mieke Bal and Jonathan Crewe, 1999).

Spitzer perhaps received the most attention for his 1998 work, *Hotel Bolivia: The Culture of Memory in a Refuge from Nazism*, which was widely and favorably reviewed as a significant contribution to Holocaust studies. The work is part memoir, part ethnographic study of the Jews who fled to “Hotel Bolivia,” as they called the country that most regarded as a temporary haven. It includes letters, family photographs, and interviews with surviving refugees, and the work explores the issues of displacement, grief, and nostalgia for an obliterated past.

Spitzer has been the recipient of several honors. He was the Lucius Littauer Fellow at the National Humanities Center in 1992 and 1993. From 1996 to 1998 he was a National Humanities Center Distinguished Lecturer. His latest work is a collaboration with Marianne Hirsch on a study of Jewish families from Czernowitz before, during, and after the Holocaust.

[Dorothy Bauhoff (2nd ed.)]

SPITZER, MOSHE (1900–1982), Israeli publisher and typographer. Moshe Spitzer was born in Boskovice, Moravia, studied at the University of Vienna, and then earned his Ph.D. at the University of Kiel in Indian Studies. In the late 1920s he served as Martin Buber’s secretary, assisting the philosopher in his German translation of the Bible, and from 1933 he worked for the Schocken Publishing Company in Berlin. In 1939, Spitzer went to Palestine, where in 1940 he established Tarshish Books. Over the years he published over 100 editions of Hebrew literature (Samuel Beckett, Nelly Sachs) and the classics (Dante, Shakespeare). In 1942 he opened a composing (typesetting) shop for his own books and for other publishers. As a partner in the Jerusalem Type Foundry (1950–1960), he revived neglected Hebrew typefaces and initiated the casting on new ones: *Romema*, *Rahat*, and *Hatzvi*. Because of his unceasing demands on compositors and printers, his innate good taste, and his familiarity with European fine printing, he succeeded in raising the level of book production in Israel from the mediocre to the best possible with the materials then available in the country. He commissioned leading Israeli artists to illustrate many of his editions. His publications included *The Birds’ Head Haggadah* (1965–67), the facsimile of a manuscript in the Israel Museum. Spitzer designed books for Schocken, established and managed the Jewish Agency’s publishing department from 1945, and directed publishing at the Bialik Institute. He wrote articles on the history of the Hebrew letter. In 1981 he was elected to the Double Crown Club of England for his contribution to fine printing, and he was honorary chairman of Yedidei ha-Sefer, the Israel Bibliophiles. His own publications were exhibited in the Israel Museum (1970) and at the Jewish National and University Library (1981).

Goldberg, "The Work of Dr. Moshe Spitzer: Leader in Modern Hebrew Printing and Publishing," Master's thesis, Hebrew University of Jerusalem, School of Library and Archive Studies (1982); Israel Museum, *From the Collection of Dr. Moshe Spitzer, Jerusalem*, (1982; Cat. No. 172); idem, *The Typographical Work of Moshe Spitzer* (1970; Cat. No. 73); H.J. Katzenstein, *Dr. Moshe Spitzer: Books, Typography, Design* (1980); I. Soifer, "The Pioneer Work of Dr. Moshe Spitzer, in: *Penrose Annual*, 63 (1970), 127–47."

[Leila Avrin]

SPITZER, SAMUEL (1839–1896), Hungarian rabbi and scholar. Spitzer, who was born in Keszthely, Hungary, studied with S.J. *Rapoport in Prague. In 1856 he became rabbi in Eszek (now Osijek, Croatia), where he engaged in the study of the history of Jewish and general culture.

His published works include *Das Heer und Wehrgesetz der alten Israeliten, Griechen und Roemer* (1869); *Das Mahl bet den alten Voelkern* (1878); *Urheimisch in Slavischen Laendern* (1880); *Das Jubilaeum in Woertlicher und Historischer Beleuchtung* (1882); and *Ueber Sitte und Sitten der alten Voelker* (1886).

[Baruch Yaron]

SPITZER, SOLOMON (Benjamin Solomon Zalman; 1826–1893), known as Reb Zalman Spitzer; rabbi and leader of Austrian Orthodox Jewry. Born in Ofen (Budapest), he studied under R. Moses Schick, in St. Jur, R. Meir Ash *Eisenstaedter in Ungvar, and R. Abraham Samuel Benjamin *Sofer in Pressburg. In 1849 he married the daughter of R. Moses *Sofer (Schreiber). On the suggestion of Ignaz *Deutsch, in 1853 he was appointed rabbi of Vienna's Pressburger *Shool*, a small community of Orthodox Jews mainly from Pressburg and from Hungarian provincial communities. Under Spitzer's leadership the community soon outgrew the small premises they occupied and by 1864 a new synagogue, Adass Yisroel, was built in Grosse Schiffgasse and known as the Schiff *Shool*. In conjunction with the synagogue he founded the Schiff *Shool bet ha-midrash*. In 1858 he was appointed assistant rabbi to Eliezer Horowitz. On the latter's death in 1868 Spitzer was offered the post of chief rabbi, on condition that he modify his strictly traditional standards, but he refused. In 1871 Adolf Jellinek, aided by Simon *Szanto, the influential editor of the *Neuzeit*, and Ignaz *Kuranda, the new president of the Kultusgemeinde, wished to introduce some radical reforms into the order of the service, including the elimination of all mention of an ultimate return to Zion and Jerusalem, and the exclusion from the prayer books of all references to the reinstatement of sacrifices and to a belief in the Messiah. Although the government openly sympathized with the reformers, the Orthodox community opposed the proposals. Spitzer called a protest meeting attended by some 500 people – approximately one quarter of the whole of Vienna's synagogue membership. A compromise was found: the reforms were called modifications, the organ was not introduced into any Vienna synagogue, and the controversial prayers were to be recited in silence by the congregation.

Spitzer resigned from the rabbinate of the Kultusgemeinde and devoted his energies entirely to the affairs of the Schiff *Shool* and to its flourishing subsidiary institutions. It was his lifelong desire to settle in Jerusalem and in preparation he sent his library on ahead with a son-in-law who migrated there. However, Spitzer's teacher, Moses Schick, prevailed upon him not to leave Vienna, saying "a conscientious general does not leave his soldiers to fight on by themselves." He died in Vienna and, in accordance with his last wish, was buried in Pressburg.

A large number of responsa in his teacher's work, the "Responsa of Maharam Schick," are addressed to Spitzer, as are a number of responsa in the *Ketav Sofer* by Abraham Samuel Benjamin Sofer, the *Shevet Sofer* of Simḥah Bunim Sofer, and the Responsa of Akiva *Eger. The only original work published by Spitzer is the *Tikkun Shelomo* (1892), consisting of 100 sermons and eight funeral orations, together with *Simlat Binyamin*, talmudic discourses. He also published the speech he made at the protest meeting in Vienna (1871).

[Alexander Scheiber]

SPIVACK, HAROLD (1904–1977), U.S. music librarian and musicologist. Born in New York, Spivack studied at New York University and the University of Berlin, where he received his Ph.D. in 1933. He also studied privately with d'Albert and Hugo *Leichtentritt. He was assistant chief of the music division of the Library of Congress from 1934 to 1937 and chief from 1937 until his retirement. The music division was greatly developed under his administration. Spivack was also a member of various directive and advisory bodies in American and international musicological organizations and president of the Music Library Association from 1951 to 1953; he held offices in the National Music Council and the American Musicological Society. He published *Paganiniana* (1945) and various articles.

[Amnon Shiloah (2nd ed.)]

SPIVAK, ELYE (1890–1950), Yiddish linguist and pedagogue. Born in the Ukraine, Spivak was renowned as a Yiddish teacher before the Revolution. The author of scores of Yiddish primers and literary anthologies for schoolchildren, he trained Yiddish teachers at several institutes. After Nahum Shtif's death in 1933, Spivak was appointed director of the linguistic section of the Institute for Jewish Proletarian Culture at the Ukrainian Academy of Sciences in Kiev and editor of its journal, *Afn Shprakhfront*. In 1937, after the dissolution of the Institute, which had supported more than a hundred workers, a small Office for the Study of Yiddish Literature, Language, and Folklore was established, with Spivak continuing as director. The office was evacuated to the East dur-

ing World War II and closed in 1949, when Spivak, a member of the *Jewish Anti-Fascist Committee, was arrested under charges of Jewish nationalism. He died in prison in 1950. The main administrator of Soviet Yiddish research in the 1930s and 1940s, Spivak was the authority on the lexicon and terminology. His crowning work was *Naye Vortshafung* ("Creating Neologisms," 1939), which demonstrated impressive expertise in Yiddish morphology, etymology, and language history and structure. The short-lived policy of dehebraization of Yiddish suggested by Shtif and I. Zaretski was, from 1931–1939, consistently opposed by Spivak, who argued for the componential integrity of the language.

[Rakhmiel Peltz (2nd ed.)]

SPIVAK, NISSAN (known as "Nissi Belzer"; 1824–1906). Lithuanian cantor and composer. Spivak sang in the choir of Yeruham *Blindman, whose cousin he married, and became cantor in Belz, where he acquired his additional name. Later he was cantor in Kishinev and, from 1877 until his death, in Berdichev. He was largely self-taught, and although his voice was impaired by an accident in childhood, he became widely known because of his talents as a composer and choral conductor. His vocal limitation actually led him to develop a new style of synagogue music. Instead of using the choir merely for accompaniment and responses, he assigned to them long ensembles with solos and duets and reduced the role of the cantor to a minimum. He also took his choir on visits to other towns and the courts of ḥasidic rabbis. Successful as a teacher, he attracted many young cantors to study with him at Berdichev. His own compositions were preserved by his pupils. Two of them were published in Idelsohn's *Hebraeisch-orientalischer Melodienschatz* (bibl.).

[Joshua Leib Ne'eman]

SPIVAKOVSKY, TOSSY (1906/7–1998), Russian-American violinist. Spivakovsky was born in Odessa. He studied with the Italian violinist Arrigo Serato and with Willy Hess in Berlin, where he made his concert debut at the age of ten. Spivakovsky became leader of the Berlin Philharmonic Orchestra in 1926. He then toured Europe (1920–33) and Australia (1933–39), where he taught at the Melbourne Conservatorium (1934–39).

In 1940 he settled in the United States and made his debut at New York's Town Hall. Playing with the Cleveland Orchestra in 1943, Spivakovsky introduced Bartok's *Violin Con-*

certo to the United States. He subsequently appeared with the most important American orchestras. In addition to an active performing career, Spivakovsky taught violin and chamber music at the Juilliard School from 1974 to 1989. His repertoire ranged from the classics to contemporary works. A brilliant virtuoso, he had an exceptionally fast vibrato and advocated new bowing techniques which proved controversial. He was capable of frequently expressive playing with a highly volatile temperament. He published violin transcriptions and "Polyphony in Bach's Works for Solo Violin," in *The Music Review*, 28:4 (Nov. 1967), 277–88.

ADD. BIBLIOGRAPHY: *Baker's Biographical Dictionary of Musicians* (1997); "Tossy Spivakovsky Dies" (obituary), in: *The Strad*, 109 (Oct. 1998), 1041; J. Gottlieb, "The Juilliard School Library and Its Special Collections," in: *Notes*, 56 (Sept. 1999), 11–26.

[Max Loppert / Naama Ramot (2nd ed.)]

SPLIT (also **Spliet**; It. **Spalato**; in Jewish sources אִישְׁפֶּלֶטָא), Adriatic port in Croatia. A Jewish community with a cemetery existed in nearby Salona (now Solin) in the third century C.E. When Salona was destroyed by the Avars in 641, the Jews seem to have fled to Diocletian's fortified palace which later became the town of Split. The register of the Church's properties in 1397 mentions a building that served as a synagogue. The first Jewish tombstones on the Marjan hill date, however, from 1573.

In the 16th century there were two groups of Sephardi Jews in Split; the Ponentine ("western") and the Levantine ("eastern") Jews. The first group came from Italy or from Spain via Italy, Split being a Venetian possession, and the second from the Ottoman territories in the Balkans. Both groups later merged into one Sephardi congregation whose notable families were Pardo, Macchiero, Misrai (Mizraḥi), Penso (Finzi), Jesurun (Yeshurun). There were also some Ashkenazi Jews, e.g., the Morpurgo family from Maribor.

The Jews of Split were mainly merchants, physicians, and tailors. The Venetian authorities protected them from the Inquisition and favored them in the interest of the trade with the Ottoman Empire. In 1592 the Jew Daniel Rodriguez succeeded, with the authorization of the Senate of Venice, in establishing a free port in Split. Jewish merchants from the Ottoman Empire wanting to settle in Split were exempted from paying the residence tax; and immunity of person and capital was guaranteed to Jewish merchants traveling to Venice via Split. The free port prospered. Some Jews became wealthy from traveling to the Ottoman territories in the Balkans and exporting the wares brought to Venice; later they had agents in major cities. In the 17th century Joseph Penso, consul of the Jews, became instrumental in expanding the free port's activities. The increasing wealth of Split's Jews brought a prohibition on real estate ownership except by special license, to prevent gentiles from pledging houses and land to Jews.

During the Turkish attack in 1657 the Jews were assigned the defense of a tower which later became known as the Jewish position [*posto degl' Ebrei*].

In the beginning of the 18th century there were several abortive attempts to exclude Jews from the food trade (1719, 1748), and from tailoring (1724, 1758). The law of 1738, regulating Jewish rights and duties in Venetian possessions, was applied in Split. It included the wearing of a yellow hat cover by Levantine, and of a red one by other Jews; confinement to the ghetto between midnight and sunrise; not leaving it at all Thursday and Friday of holy week; closing the shops in the ghetto on Christian holidays; and an interdiction to employ Christians.

The general decadence of Venice in the late 18th century and the anti-Jewish measures of 1779 caused many Jewish families to leave. In 1796 there were 173 Jews left in Split. The ghetto was abolished by the Napoleonic regime. When Split passed to Austria in 1814, the Jewish laws valid in Austria were applied there, and full emancipation was granted only in 1873. Many families left for Italy during the 19th century, and with the influx of Jews from Croatia and Bosnia, the community became increasingly Croatian-speaking.

Holocaust Period

When on April 6, 1941, the Italian Army occupied the town, there were 400 Jews living there, some being refugees from Austria, Czechoslovakia etc. Although Dalmatia nominally belonged to *Pavelić's quisling Croatian state, the Italian army prevented his regime from persecuting the Jews, and some 3,000 refugees from Poland, Austria, and Czechoslovakia had passed through Split by 1943.

In June 1942 a mob devastated the synagogue, community offices, shops, and private houses. Under German pressure refugees were interned in Italian camps on the Dalmatian islands. When Italy capitulated in September 1943, and before the Germans entered the town, several hundred Jews crossed the Adriatic in small boats to Italy and to partisan-held islands, while others joined the partisan forces on the mainland. All remaining male Jews were made to register with the German authorities, and on October 13 were arrested and sent to the Sajmište camp near *Belgrade where most of them perished. Around 150 Jews from Split died in the Holocaust.

Contemporary Period

In 1947 there were 163 Jews in Split, and in 1970 some 120; there was no rabbi and very little communal activity. The new military hospital inaugurated in 1965 bears the name of Dr. Isidore Perera-Molić, the founder of the Yugoslav Army Medical Corps. During reconstruction work in the Diocletian Palace engravings of *menorot* were discovered, confirming earlier allusions regarding a Jewish presence there in the 2nd or 3rd centuries. The nearby camp at Pirovac, which was formerly a summer resort for Jewish youth from all parts of the country, served as an absorption center during the 1992 evacuation of the Jews of Bosnia and Herzegovina (mainly from *Sarajevo and Mostar). The successful rescue operation was a joint venture of the Federation of Jewish Communities in Belgrade, the Jewish community of Sarajevo, the Jewish Agency, and the respective civil and military authorities of the Bosnian Moslems,

Croats, and Serbs. A number of Jews were evacuated by air to *Belgrade; others through Herzegovina to Dalmatia (Split) by land across several zones held by the three warring parties. About 100 Jews lived in Split in 2004.

[Daniel Furman / Zvi Loker (2nd ed.)]

SPOEHR, ALEXANDER (1913–1992), U.S. anthropologist. Born in Tucson, Arizona, Spoehr specialized in American Indian and Pacific ethnology and archaeology. In 1940 he worked as assistant curator of American ethnology and archaeology at the Field Museum in Chicago. During World War II, he was commissioned as a lieutenant in the Naval Reserve, where he served in air combat intelligence and air-sea rescue operations in the western sea frontier and central Pacific area, which included the Marshall (Majuro), Gilbert, and Caroline islands. When he returned to the Field Museum in 1946, he worked for eight years as curator of Oceanic ethnology, supervising the reorganization of the museum's massive collection of artifacts from Oceania. In 1953 he was appointed professor of anthropology at Yale University. He moved to Hawaii later that year to assume the directorship of the Bernice Pauhi Bishop Museum in Honolulu. In 1961 he became chancellor of the East-West Center at the University of Hawaii. In 1964 he was appointed professor of anthropology at the University of Pittsburgh, where he remained until his retirement. He served as chairman of the Pacific Science Board of the National Academy of Sciences (1958–61) and was president of the American Anthropological Association (1965). In 1972 he was elected to the National Academy of Sciences.

When Spoehr retired from teaching in 1978 he returned to Honolulu, where he did a study of the tool-using techniques of Japanese-American carpenters. He also did research on the history of the Hudson's Bay Company in 19th-century Hawaii.

Spoehr wrote several books on his fieldwork, which was mainly among the American Indians and the peoples of the Pacific islands. He is best remembered for defining the prehistoric ceramic culture known as Lapita, a community of hunter-gatherers that lived in Oceania from 1500 B.C.E. to 500 B.C.E. and whose handiwork included elaborately decorated pottery and a wide variety of tools made from shells.

His major works include *Camp, Clan and Kin among the Cow Creek Seminole of Florida* (1941), *Majuro, a Village in the Marshall Islands* (1949), *Acculturation and Material Culture* (with G. Quimby, 1951), *Saipan, the Ethnology of a War-Devastated Island* (1954), *Zamboanga and Sulu: An Archaeological Approach to Ethnic Diversity* (1973), *Protein from the Sea* (1980), and *Maritime Adaptations* (1980).

[Ephraim Fischhoff / Ruth Beloff (2nd ed.)]

SPOLETO, town in central Italy. A Jewish community possibly existed in Spoleto before 1298 when the distinguished Roman family De *Pomis settled there after the head of the family, Elijah, was condemned to death by the Holy Office. In the 15th century the principal activity of the Jewish community in Spoleto was moneylending. The notable Spoleto Jews included the physicians David De' Pomis (1525–88) and Moses *Alatino (1529–1605). The Jews were expelled from Spoleto and the rest of the Papal States by Pius v in 1569. Some returned for a brief period under Sixtus v (1587). There is still in Spoleto the Church of S. Gregorio della Sinagoga.

[Ariel Toaff]

SPORKIN, STANLEY (1932–), U.S. federal judge. Born in Philadelphia, Sporkin received his bachelor's degree from Pennsylvania State University in 1953 and graduated from Yale Law School in 1957. After a clerkship with a presiding justice in the U.S. District Court, Sporkin entered private practice in 1960. In 1961 he began a 20-year career with the Securities and Exchange Commission, first as a staff attorney; he became chief attorney for the SEC Enforcement Bureau in 1963. In 1968 he became an associate director and from 1973 to 1981 served as the director of the SEC Division of Enforcement. He taught as an adjunct professor at Antioch Law School from 1974 to 1981 and at Howard University in 1981.

Sporkin became general counsel for the Central Intelligence Agency in 1981, serving under Director William Casey during the Iran Contra era. In 1985 President Ronald Reagan appointed him as a federal judge in the U.S. District Court for the District of Columbia. Judge Sporkin ruled in several notable cases, including an early settlement between the Justice Department's Antitrust Division and Microsoft Corporation. In 1995 he rejected a proposed settlement between the parties as too narrow and potentially ineffective in reducing Microsoft's monopolistic practices. His ruling was overturned by a panel of three federal appeals judges. Sporkin served on the bench until his retirement in 2000, when he joined the firm of Weil, Gotshal, and Genges as partner and counseled parties in corporate governance and litigation matters, acted as an arbitrator, and provided mediation services. He contributed numerous articles to professional journals.

In his long career of public service, Sporkin received numerous awards and honors. In 1976 he received the National Civil Service League's Special Achievement Award and in 1978 the Rockefeller Award for Public Service from the Woodrow Wilson School of Public and International Affairs at Princeton University. In 1979 he was the recipient of the President's Award for Distinguished Federal Civilian Service, the highest honor that can be granted to a member of the federal service.

In 1994 Sporkin received the William O. Douglas Award for Lifetime Achievement from the Association of Securities and Exchange Commission Alumni, and in 1996 he was pre-

sented the H. Carl Moultrie Award for Judicial Excellence by the Trial Lawyers of Washington, D.C. In 2000 he received the Federal Bar Association's Tom C. Clark Award. That same year he received the Judicial Excellence Award from Judicial Watch.

[Dorothy Bauhoff (2nd ed.)]

SPORN, PHILIP (1896–1978), U.S. electrical engineer. Sporn was born in Galicia, and taken to the United States in 1907. He joined the staff of the American Electric Power Company in 1920 and held many positions in this company, including chief engineer, executive vice president, and chairman of development. He was also president of the Electric Power Service Corporation, the Indiana-Kentucky and Ohio Valley Electric Corporations, and the Nuclear Power Group.

Sporn served in various consultative capacities with numerous studies and projects on nuclear power production under the aegis of the U.S. government, the Atomic Energy Commission, the National Research Council, and large companies. He was vice president of the American Nuclear Society. Sporn was chairman of the Seawater Conversion Commission of the government of Israel. As well as papers on the generation and distribution of electric power, he wrote (with Ambrose and Baumeister) *Heat Pumps* (1947) and *Integrated Power System as the Basic Mechanism for Power Supply* (1950). He received many awards.

[Samuel Aaron Miller]

SPORTS. There is no evidence of sports among the Jews during the obscure period between the close of the Bible and the Maccabean periods. At the beginning of this latter period, in the second century B.C.E., circumstances conspired to make sporting activities as such, i.e., sport not as associated with the need for physical exercise or as an aspect of military training but competitive sport “for the sake of the game,” repugnant to the Jews as the very antithesis of Jewish ideals, and this approach remained characteristic of Judaism until the dawn of the modern period.

A number of circumstances contributed to the negative and antipathetic attitude toward sport. The first was that, with the conquest of Alexander the Great in the fourth century B.C.E., hellenistic culture began to infiltrate into Erez Israel, and the attempt of Antiochus *Epiphanes to forcibly hellenize Judea led to the outbreak of the Maccabean War. One of the overt signs of this process was the establishment of a gymnasium in Jerusalem by *Jason in 174 B.C.E., where the participants engaged in their sporting activities in the nude. The antithesis between the gymnasium as an expression of *Hellenism and Judaism was dramatically and almost symbolically highlighted by the fact that some of the Jewish participants, according to the Book of I Maccabees (1:15), actually underwent operations for the purpose of concealing the fact that they were circumcised. Sport thus became associated with the alien and dangerous hellenistic culture. An additional factor was that the Olympic games were connected with an idolatrous cult, particularly of the Greek deity of Hercules, and it

is significant that during the period of hellenization, when a Jewish contingent went to the games held at Tyre concurrently with the 152nd Olympic games in Greece, they refused to bring the customary gifts, which were dedicated to Hercules, unless they were devoted to a non-idolatrous cause.

Nevertheless, there is some evidence that in countries under Greek influence, sports were indulged in by Jews. Claudius warned the Jews of Alexandria that they “should not strive in gymnasiarchic and cosmetic games” (Philo, *Legatio ad Gaium*), and one interpretation of a second- or third-century inscription in Hypaepa, Asia Minor, has it refer to a sports association of young Jews.

This opposition to sport became even more intensified when, following the intervening period of independence, Roman overlordship was substituted for Greek, and theaters and *circuses were linked together as the very antithesis of “synagogue and school.” To the considerations which applied to the gymnasia were the added factors of cruelty associated with Roman sport, which was not confined to the characteristic aspect of gladiatorial contests, and also the fact that at the theaters the Jews were made the butt of satire, parody, and mockery (cf. Lam. R. intro. 17). The first sentence of the Book of Psalms, “Happy is the man... who sat not in the seat of the scorers” was made to apply to those who refrained from attending “theaters and circuses and did not attend gladiatorial combats” (Pes. 148b), and the humane aspect of the opposition finds expression in the ruling that “one is permitted to go to stadiums if by his shouting he may save the victim” (Av. Zar. 18b). At one period of his life the famous *amora* Simeon b. Lakish (Resh Lakish) was a professional gladiator (Git. 47a), but he justified this on the grounds of grim necessity. The very vehemence of the denunciation of the rabbis would seem to point to the fact that participation in, or at least attendance at, those sports by Jews was widespread.

The first Jewish ruler to encourage sports was Herod. Between 37 and 4 B.C.E. he erected sports stadia in Caesarea, Sebaste, Tiberias, Jericho, and other cities, and also introduced a Palestinian Olympiad with sports competition every five years. He brought athletes from all parts of the world to compete in gladiatorial games and contests of boxing, racing, archery, and other sports, and also contributed large sums to the Olympic games in Greece. His extensive activities in this sphere were, however, part of his program of the “romanization” of the realm.

Middle Ages

There are a few references to organized sport during the Middle Ages. According to *Shevet Yehudah* (ch. 8), Jews in Spain distinguished themselves in the art of fencing. An examination of all the data given in I. Abrahams' *Jewish Life in the Middle Ages* (1932², repr. 1960, 397–411) reveals that, almost without exception, the instances which purport to prove that the Jews indulged in sport belong either to recreations like strolling, self-defense, dancing, and intellectual pastimes, such as chess and riddles, or to children's games. There is a reference by

Jerome in the fourth century to Jewish boys in Syria lifting heavy stones “to train their muscular strength” (to Zech. 12:4) and in the 13th century it was the custom to hold tournaments and jousts as part of marriage celebrations. Isaac Or Zaru'a refers to “young men who go out on horseback to greet the bridegroom, and indulge in combats with one another, and tear one another's garments or cause injury to the horse” (Hil. Sukkot ve-Lulav no. 315). He ruled that the injured party had no claim for damages since he had been partaking in a joyous occasion. In Provence the Jews trained falcons and engaged in hawking on horseback. On the other hand, in the 15th century Israel *Bruna, in answer to a question whether it was permitted to even attend non-Jewish horse-racing competitions, gave guarded permission only because one could thereby judge the quality of the horses and learn to ride “in order to escape from one's enemies.” “Nevertheless,” he added, “I doubt whether it is permitted to go and see such races as are intended merely as jousting tournaments for pleasure” (Resp. 71).

The most popular sports in the Middle Ages appear to have been ball games. Although the Midrash (Lam. R. 2:4) gives as one of the reasons for the destruction of the Temple that “in Tur Malka they played ball games on the Sabbath.” Moses Isserles, disagreeing with Joseph Caro, permitted ball playing on the Sabbath and festivals and stated that in his time (16th century) it was customary to do so (Sh. Ar., OH 308:45), and on festivals (when there is no prohibition against carrying) it is permitted “even in a public domain and even for pure sport” (*ibid.* 518:2). He based himself upon Tosafot (to Bezaḥ 12a), which states explicitly that “we find that they play with the ball called *pelota*” (cf. the modern Basque game called by the same name). No details are given; according to one authority, however, “it was very like handball but, instead of being struck by the hand, the ball was caught in a long narrow scoop-like basket attached firmly to the wrist and thrown against the wall” (JQR, 26 (1935/36), 4).

In 1386 there were Jewish tourneys in Wiesenfeld, Germany. In the 15th century, competitions were held in Augsburg, Germany, in running, jumping, throwing, and bowling, in which Jews also participated. *Immanuel of Rome mentions “boys who trained in stone throwing” (in his *Mahḥbarot* 22, no. 42). In this same century, at the popular festivals initiated in Rome, sports competitions were also included: Monday was for youth, Tuesday for Jews (under 20 years of age), Wednesday for older boys, and so on. The Jews were obliged to provide precious carpets as prizes. It is known that Jews distinguished themselves in these games in 1487, 1502, and 1595. There is even a song about Jewish runners, composed in 1513. These games and festivals continued for some 200 years despite the fact that during these years the mob interfered with the Jewish runners, who participated half naked. In 1443 there was a registration of a Jew who knew “wrestling without shedding blood.”

In the 16th century there was a famous Austrian converted Jew by the name of Ott who was outstanding at the Augsburg games and was even invited to the court of the Austrian prince in order to train the courtiers. He wrote a book in

which wrestling was separated from fencing for the first time and was known as “Ottish Wrestling.” There was also a book on fencing published by Andres Jud, who, together with his brother Jacob Lignitzer, took special care of fencing. The decrees of Rudolph II show how important fencing was for the Jews in Germany. Among these decrees was one which forbade Christian fencing teachers to train Jews and, later on, also forbade competitions between Jews and Christians. There is little information about sport in the 17th and 18th centuries.

Despite the examples given, there is no doubt that S.W. Baron is correct in stating that during the Middle Ages sporadic voices in favor of recreational pauses were as ineffective as those which advocated physical exercises. Northern Jewry especially had little use for physical education and paid little heed even to the injunction of a talmudic sage that a father give his son instruction in swimming as a “life-saving precaution.” It is only in the modern period that sports became popular and widespread among Jews.

Modern Era

Though most Jews in the 19th century lived in conditions unfavorable to athletic pursuits, a number of them in England, Germany, Hungary, Canada, France, Austria, and the United States did well in a variety of sports. In 1896, six Jewish athletes won 13 medals at the first modern Olympic games in Athens.

In a speech before the Second Zionist Congress in 1898, Max *Nordau asked the Jewish people to renew their interest in sports and physical fitness. Nordau’s call for “muscular Judaism” was answered by the *Maccabi movement, which spread first to the countries of Europe and Palestine and then around the world. Over 100 Maccabi clubs were in existence in Europe by the beginning of World War I. The largest of these clubs – Ha-Koah of Vienna, Bar Kochba of Berlin, and Ha-Gibor of Prague – became famous for their outstanding teams. It was Hungary, however, that produced the most successful Jewish athletes in Europe. Hungarian Jews won numerous Olympic medals in various sports.

Early in the 20th century immigrant Jewish children in Great Britain and the United States learned to play the games of their new countries in youth clubs, settlement houses, and YM-YWHAS. Living in crowded urban areas, they became proficient in sports which required little space and equipment, such as boxing, handball, table tennis, basketball, gymnastics, and wrestling. Professional sports, particularly boxing and basketball, attracted many Jews, who used athletic scholarships to gain admission to some U.S. colleges.

The sports picture changed radically for Jews following World War II. In the affluent communities of North and South America and in Western Europe, the emphasis shifted to social sports, such as tennis, golf, polo, yachting, and squash. Most Jews attending colleges in the United States could afford to pay tuition fees and participate in university sports for recreation. When Jews were excluded from established yacht and country clubs they organized their own.

Jews were active in formulating sports programs in the Soviet Union during the 1920s, and after World War II they contributed to that nation’s successful entry into international competition. Many Soviet Jews have been accorded the title “Honored Master of Sport.”

[Jesse Harold Silver]

In Israel before 1948

Physical education was first introduced into Jewish schools in Erez Israel toward the end of the 19th century by Yeshayahu *Press and Heinrich Eliakum *Loewe. The first Jewish sports clubs in the country, the Rishon le-Zion Club in Jaffa and the Bar Giora Club in Jerusalem, were established in 1906 by Leo Cohen and Aviezer *Yellin, respectively, and shortly afterward the first qualified club leaders were appointed. In 1908, the first national sports competition – the Rehovot Festival – was organized under the leadership of Zevi Nishri (d. 1973) and was held annually until the outbreak of World War I. Sports outside the framework of the schools were organized by voluntary organizations associated in varying degrees with social or political movements.

MACCABI. Maccabi started as an apolitical sports organization, but was favored by the General Zionists. The first Maccabi club was established in Jerusalem in 1911 and soon had 300 members. A second club was formed in Petaḥ Tikvah, and the two clubs, together with the Rishon le-Zion Club in Jaffa, formed the countrywide Maccabi Organization in 1912. Maccabi did not confine its activities to sports. It was active in cultural affairs and fought for the recognition and dissemination of the Hebrew language, the employment of Jewish labor, and Jewish self-defense. On the eve of World War I, it had about 1,000 members in 15 clubs. With the participation of Maccabi and the *Ha-Shomer movement in the Rehovot Festival in 1913, a genuine national Jewish sports movement seemed to have emerged.

Even before the outbreak of World War I, however, the first signs of the dissolution of this movement were visible. Maccabi boycotted the Rehovot Festival of 1914 because Arab guards and Arab workers were employed in the village. On the other hand, the Jewish workers alleged that the Maccabi clubs had fallen under the control of the landowners and employers. It therefore came as no surprise when the Rehovot Festival was not revived after the war and Maccabi organized its own festival, the first Maccabi games, in 1920.

DEVELOPMENT OF PHYSICAL EDUCATION. Physical education in Palestine was given a new lease by the arrival of several experienced Jewish athletes as part of the wave of Jewish immigration that followed the end of World War I. The newcomers included David Almagor, gymnast and wrestler from Cairo, Yehoshua Alouf, one of the best gymnasts in Maccabi-Warsaw, and Dr. Emanuel Simon, one of the best track and field men in the Bar-Kochba Club in Berlin, who all contributed to the expansion and improvement of physical education in the schools and the Maccabi clubs.

ESTABLISHMENT OF HA-POEL. The workers, for their part, began to organize their sports clubs in 1924, and in 1926 they founded a countrywide workers' sports organization under the name of "Ha-Poel as an affiliate of the *Histadrut. A year later Ha-Poel joined the International Workers' Sports Federation. Initially, the main objective of Ha-Poel was to cater to the masses, rather than to breed champion athletes. In 1935 there were 10,000 participants in its fourth festival. These festivals are still held once every five years. Maccabi, by contrast, laid greater emphasis on competitive sports and devoted its energies to organizing them on a national basis, as well as introducing Palestine to the international sports arena.

SOCCER INTRODUCED. The establishment of the British Mandatory regime in Palestine after World War I had a marked effect on local sports. Whereas prior to the war, gymnastics had been the dominant sport, under Eastern and Central European influence, it was now supplanted by soccer due to the influence of the British army teams which competed with the Maccabi teams. In 1925 the Organization of Jewish Soccer Clubs was founded. In 1928 the Palestine Football Association – the first national sports federation – was established. It comprised British, Jewish, and Arab teams and was the only body in which Maccabi and Ha-Poel cooperated until after the establishment of the State of Israel. Through the association, Palestine – and later Israel – has been represented in the World Cup Championships regularly since 1936.

THE MACCABIAH: ENTRY INTO INTERNATIONAL SPORTS. Maccabi initiated the establishment of the Palestine Amateur Sports Federation in 1931 in order to take part in international competitions, and was accepted by most federations. Two years later, the Palestine Olympic Committee was set up. Maccabi's greatest achievement prior to World War II was the organization of the international *Maccabiah Games in 1932, in which 500 Jewish athletes from 23 countries participated and 1,500 in a gymnastic display. At the second Maccabiah, in 1935, there were 1,700 participants from 27 countries. As many of the athletes, accompanying personnel, and tourists remained in the country after the contest was over, the Maccabiah became not only a means of stimulating sports, but also an important lever for the promotion of *aliyah*. The Second Maccabiah was even more of an "Aliyah Maccabiah," since most of the participants and their escorts remained in Palestine, in view of the wave of antisemitism sweeping Europe after the Nazi accession to power in Germany. Y. Alouf was the chief organizer of the first five Maccabiah Games.

Maccabi was also the first body to send a delegation to an official event in Asia (the West Asian Games in New Delhi in 1934) and to an international event for women (the London Games in 1934). In the same period, Ha-Poel athletes twice represented Palestine in Workers' Olympics, in Vienna (1931) and Antwerp (1937). An invitation to participate in the Berlin Olympics in 1936 under the Nazi regime was rejected for obvious reasons and, as a result, the appearance of Palestin-

ian or Israel athletes in the Olympics was delayed for 16 years. (The Games were not held in 1940 and 1944. In 1948 the Palestine Olympic Committee no longer existed, the Israel Olympic Committee had not yet been recognized, and Israel was fighting for survival.)

Between 1924 and 1939 young Jews from Palestine studied physical education in Denmark, and the number of qualified physical education teachers in the schools increased. In 1938, Yehoshua Alouf was appointed the first supervisor of physical education. One of his achievements was the organization of the first countrywide inter-school competitions. In 1939 the Va'ad Le'ummi set up a department of physical education, which was to become the government body responsible for sports on the establishment of the State of Israel (since 1961 it has been known as the Sports Authority). The department, as it was then, introduced a course for physical education teachers that was later expanded into a permanent college for physical education teachers. The department also published books on physical education.

In the State of Israel

PHYSICAL EDUCATION. With the establishment of the State of Israel, the number of schools increased enormously, and sports facilities improved. Physical education is taught twice weekly in schools throughout Israel. Some 70,000 pupils participate in annual sports competitions, which include track and field, basketball, volleyball, handball, swimming, and soccer. About 70,000 pupils participate annually in the "Sports Badge" trials, and outstanding pupils are invited for advanced training lasting from three to twelve days.

In addition to supervising sports and physical education in the schools, the authority encourages sports throughout the country and gives financial assistance to the Wingate Institute for Physical Education, which comprises a three-year college for physical education teachers run by the Ministry of Education and Culture, a three-year school for physiotherapists, a one-year course for coaches, and a school for physical training instructors of the Israel Defense Forces.

The Sports Authority lays special emphasis on popular sports, such as marching, running, swimming, etc. It provides financial assistance for the provision of sports facilities and the publication of sports literature. In addition to the one at the Wingate Institute, there are three other colleges of physical education in the country: one in Tel Aviv, at a seminar run by the kibbutz movements; one in Beersheba; and a third, a religious college, at Givat Washington.

ORGANIZATION OF SPORT IN ISRAEL. World War II took a heavy toll of Jewish athletes, and it was only with great reservations that the Third Maccabiah was organized in 1950. On this occasion, Israel's team for the first time included athletes from Maccabi and Ha-Poel, and this made a major contribution to the unification of Israeli sports one year later. The Maccabiah was held again in 1953 and then 1957 and was a quadrennial event thereafter. In 1951, Maccabi and Ha-Poel agreed to cooperate on the Israel Olympic Committee and the Israel Sports

Federation. The two associations were already represented on the Israel Football Association.

In 1970, over 40,000 athletes participated in organized competitive athletics in Israel. Fifteen thousand came under the jurisdiction of the Israel Sports Federation, which controls 14 sports; 13,000 belonged to the Israel Football Association; 9,000 to the Israel Basketball Association; and the rest to smaller associations controlling tennis, judo, and other sports. All sports are amateur, and a much greater number of people are active in noncompetitive sports. The major sports organizations are: Ha-Poel, with 300 branches and 85,000 members; Maccabi, with 75 branches and 18,000 members; Elitzur (founded 1939) for religious youth, with 80 branches and 10,000 members; Betar (founded in 1924), affiliated to Herut, with 74 branches and 5,000 members; Academic Sports Association (1953) with nine branches in the institutes of higher education and 5,000 members.

IN INTERNATIONAL SPORTS. Israel participated in the Olympic Games for the first time in Helsinki in 1952 and thereafter at all subsequent games. Since 1954 it has also competed at the Asian Games (with the exception of the Jakarta Games in 1962, which were canceled due to a boycott of Israel by Indonesia). Israel has made endeavors to integrate into Asian sport, except in basketball and volleyball, where it belongs to the zone covering Europe and the Mediterranean countries. The efforts of Arab countries to boycott Israel have generally been frustrated by international sports bodies. Israel's achievements in international sports have been modest. The Israel national soccer team reached the World Cup Championships in Mexico in 1970, after defeating Australia in the eliminating round, and acquitted itself creditably. The small Israel team at the 1970 Asian games at Bangkok won six gold medals, six silver, and five bronze, finishing in sixth place. Israel tennis players have competed at Wimbledon and in Davis Cup matches, and since 1962 a youth team has competed at Miami Beach. Gliding has been practiced in Israel for over 30 years, and free-fall parachuting has recently been introduced. Israel won the Asian Football Championships once, the Asian Youth Championships four times, and the Asian Champions' Cup twice. Up to June 1969, Israel's basketball team had won 62 out of 126 official international games.

In recent years, dinghy sailing has become popular, and in 1969 Zefania Carmel and Lydia Lazarov won the world championships in the 420 class in Sweden. In the following year the championships were held in Israel off Tel Aviv.

NONCOMPETITIVE SPORTS. The most popular noncompetitive sports event in Israel are the annual Three-Day March to Jerusalem, organized by the Israel Defense Forces, the swim across Lake Kinneret (Sea of Galilee, started by Ha-Poel), and the cross-country race around Mount Tabor. The Three-Day (originally Four-Day) March is in a category of its own. It is not the same as hiking, which may be motivated by the wish to "get away from it all"; nor is it comparable with the walking race, for it is not a race at all. It has been most aptly

described as Israel's folk "happening," although the idea was taken from a similar Dutch event. Thousands of people of all ages – organized in clubs or in family groups, coming from offices, factories, banks, or hospitals, and some individuals – go out tramping over the hills around Jerusalem together with contingents of soldiers in training. Visitors from overseas also participate. The army builds camps and lays on entertainment facilities for the participants, and the event culminates in a march through the streets of Jerusalem. One-day marches are also held in other parts of the country organized by Maccabi and Ha-Poel, and an Israel Defense Forces contingent participates every year at the annual Four-Day March in Holland. Ha-Poel has organized sports activities in factories and offices. Cross-country running also has a special Israel character: the route, and sometimes the date of the event, is usually related to some event in the Bible or Jewish history. On *Hanukkah, for instance, relays of runners from Maccabi carry torches from Modi'in, birthplace of the Maccabees, to the presidential residence in Jerusalem, as well as to various other parts of the country. There is also the annual run around Mount Tabor. The annual swim across Lake Kinneret, from Ein Gev to Tiberias; the Haifa Bay swim; and the "crossing of the Red Sea" at Eilat, are mass events with a competitive element. As in the annual marches, all participants who complete the course are awarded certificates and, for some events, medallions.

[Yehoshua Alouf and Uriel Simri]

1968–2005. The third decade of the existence of the State of Israel was marked by a significant improvement of its representative sports and by the intervention of politics into the activities of Israel sports on the international scene. At the beginning of the decade the improvement was modest. Thus at the Olympic Games of Mexico (1968), Israel had only a fifth place in soccer to show. Two years later, however, the soccer team of Israel was to return to Mexico as one of the 16 teams participating in the World Cup (for professionals and amateurs).

The year 1969 saw Israeli athletes gain their first world championship, when Zefanya Carmel and Lydia Lazarov became world champions in sailing in the (non-Olympic) 420 class. Since then Israel has gained six more world championships in this event, the recipients being Joel Sela, Yoram Kedar, Mordechai Amberam, Eitan Friedlander, Shimshon Brockman, and Amnon Samgura.

In 1970 Israel was represented by 27 athletes in the Asian Games at Bangkok, and they returned with 6 gold, 6 silver and 5 bronze medals. Four years later the Israeli delegation (61 athletes) was to return with 7 gold, 4 silver and 8 bronze medals from the Asian Games in Teheran. The appearance at the games in Teheran may have been Israel's last major appearance on the scene of Asian sports which, under Arab influence, has increasingly brought politics into the sphere of sports, with the result that Israel was excluded from the Asian Games of 1978, under the pretext of "security reasons" and it was prevented from participating in many other Asian events.

Arab terrorism played havoc on Israeli sports, and 11 Israeli coaches and athletes paid with their lives during an Arab attack on the Olympic Village at Munich on September 5, 1972. This attack, however, did not prevent Israel from appearing on the international sport scene. In fact, it returned with a bigger and stronger delegation to the Olympic Games in Montreal (1976), gaining a fifth (Edouard Weitz in weightlifting), a sixth (Esther Rot in hurdling), a seventh (Rami Meron in wrestling), and a twelfth place (Micha Kaufmann in shooting) in individual events, while the national soccer team reached the last eight in the Olympic tournament. Esther Rot can definitely be considered Israel's top athlete of this decade, having been elected five times (1970, 1971, 1974, 1975, 1976) athlete of the year in Israel.

Tennis has come to the fore as a popular sport, with 14 centers having opened in various parts of Israel. The most outstanding Israeli tennis player is Shlomo Glickstein (b. 1958), who first entered the national Israeli youth championship competition at the age of 10 and won the title for his age group. He went on to compete in international events, and by the end of 1981 was seeded 30 in the rankings of the Association of Tennis Professionals.

Basketball continued to be Israel's best representative sport during this period. Major achievements were: Asian Games championships (1970, 1974), the European Cup for nations (1976) and the victory of Maccabi Tel Aviv in the European Cup for champions in 1977 and 1981. Furthermore, basketball became the first sport in which an Israel national team defeated a national team of the U.S.S.R. when Israel won its game in the European junior championship in 1972. Israel also placed sixth in the Intercontinental Cup of 1977 and fifth in the European championship of that year. A striking victory in this sphere of sport was the defeat of the Washington Bullets, the champions of the U.S. National Basketball Association by Maccabi Tel Aviv in September 1978 by the narrow margin of 98–97. The major sport events in Israel during this period were again the Maccabiah Games (the eighth in 1969, the ninth in 1973, the tenth in 1977, the eleventh in 1981), and the International Hapoel Games (the ninth in 1971 and the tenth in 1975). Other major events held in Israel include: The Olympic Games for the Disabled (1968); the International Spring Cup in volleyball (1970, 1976); the world championship in sailing in the 420 class (1970); the Eight Nations' Cup in swimming (1971, 1978); and the European junior championship in judo (1974).

At the end of the 1970s Israel was attempting to enter the European sport scene, as a result of its rejection by Asian sport organizations. Up to date Israel has been accepted into the European region of seven sports and is continuing its efforts to be accepted in more European federations.

In January 1979, the praesidium of the Israel Olympic committee issued a statement breaking off all sporting relations with South Africa, apparently in order to remove any objection to Israel's participation in the Olympic Games scheduled to be held in Moscow the following year. At a plenary

meeting of the IOC held a few days later, however, it rejected the statement. Ultimately Israel did not participate in the 1980 Moscow Olympics.

[Uriel Simri]

The following years were noted in Israel's sports for two major breakthroughs – one in the political domain, the other in the athletic arena.

The political breakthrough began in 1989, when the Soviet Union, under President Gorbachev, relented in its opposition to the acceptance of Israel into the European zone of the various international sport federations. Thus Israel, which had been without a continental affiliation since its expulsion from Asian sports in the mid-1970s, was able to enter the European federations and their regular activities. By 1992 this procedure had been completed for all practical purposes, the European Soccer Federation (UEFA) being one of the last federations that had not granted Israel full membership status. At the same time, from 1987 UEFA invited Israel's youth teams to participate in its championships and in 1992 invited the national champion as well as the cup-holder to participate in the annual competitions organized by it.

The major breakthrough in athletics occurred during the Olympic Games in Barcelona in the summer of 1992, when two Judokas succeeded in bringing to Israel for the first time Olympic medals – Yael Arad returning with the silver medal in women's 61 kg. class and Oren Smadja with the bronze medal in the men's 71 kg. class.

Israel had, in fact, been very close to gaining its first Olympic medals already at Seoul in 1988. However, Joel Sela and Eldad Amir had to be satisfied with a fourth place in the Flying Dutchman class of the Olympic yachting competitions, after forfeiting one race because it was held on Yom Kippur. The same couple was placed eighth in the 1984 Olympics at Los Angeles. Similar placings, which were the best during those Olympics, were achieved by the yachtsmen Shimshon Brockman and Eitan Friedlander in the 470 class, as well as by the marksman Yitzchak Yonassi.

In Israel's representation at the Barcelona Olympics, 11 out of the 31 representatives were newcomers to the State of Israel, primarily from the former Soviet Union. The top achievements of those newcomers were the sixth place of weightlifter Andre Danisov in the 100 kg. class and the eighth place of Yevgeni Krasnov in the pole vault.

The significant improvement of the standard of the top athletes can further be seen from a list of achievements in recent years in other sports. In July 1992 Johar Abu-Lashin, a Christian Arab from Nazareth, became the first Israeli professional athlete to gain a world champion's title, when he became lightweight champion of the World Boxing Federation. The same year windsurfer Amit Inbar was placed second in the world championship (and a disappointing eighth in the Olympics), after having ranked first in the previous year. Another newcomer from the Soviet Union, the wrestler Max Geller, succeeded in winning the silver medal at the European championships in freestyle wrestling in 1991.

On the other hand basketball, which had been the outstanding sport in Israel for its quality for a long time, had its ups and downs. Whereas the men's national team was placed second in the European championship in 1979, sixth in 1981, and fifth in 1983, it receded to ninth place in 1985, to eleventh in 1987, and thereafter did not qualify for the final stages of the championship (until 1993). However, in 1986 the team succeeded for the second time in history (after 1954) to qualify for the final stages of the world championship, where it came seventh.

The Maccabi Tel Aviv basketball team also did not succeed in repeating its earlier successes (wins in 1977 and 1981) in the European Champions' Cup games. Although the team reached the finals three years in a row (1987–1989), it was beaten at that stage by teams from Italy and Yugoslavia. The women's national team in basketball succeeded in 1990 to reach the "final eight" in the continental championship, but this turned out to be a one-time achievement.

Israel's tennis managed to be in the limelight from 1986 until 1989, when the men's team held its place among the top 16 nations in the world within the framework of the Davis Cup games. As of 1990 attempts to return to the top have not been successful. The above achievement was mainly due to Israel's no. 1 player, Amos Mansdorf, who at the peak of his career (in 1987) ranked no. 18 in the world. In the following years Mansdorf had a ranking around no. 30.

While soccer remained Israel's most popular sport, the Football Association had very little to show as far as achievements on the international scene were concerned. In 1989, Israel came closest to repeating its appearance in the final stages of the World Cup (the first and only time was in 1970), but drew with Colombia in Ramat Gan, after losing by a single goal in the away game. Israel reached this stage after winning the zone of Oceania, to which it was removed by FIFA as a result of the Asian boycott and UEFA's refusal, up to that time, to let Israel participate in the European zone.

In 1988 the Knesset passed the "Sports Law," after tabling it for 13 years. Its major provisions called for mandatory certification of coaches and instructors; mandatory health and loss of income insurance of athletes participating in competitive sports; mandatory periodical medical examinations for participants in competitive sports; and prohibition of the use of any doping materials. The Minister of Education and Culture was given a number of regulatory powers within the framework of the law.

The Knesset also approved, early in 1991, the appointment of a deputy minister in the Ministry of Education and Culture to be in charge of sports. When the Labor Party returned to power in 1992, it too appointed a deputy minister.

The quadrennial Maccabiah and the Hapoel Games continued to be the major sports events in the country. While the participation in the Maccabiah Games expanded – in 1989 athletes from the former Communist bloc participated for the first time – the athletic standard of the Games left much to be desired. The Hapoel Games, on the other hand, developed in

scope and in standard up to 1987, but were greatly reduced in 1991 as a result of a serious financial deficit.

Israeli team sports in the 1990s and early 2000s were dominated by the Maccabi Tel Aviv basketball team, which continued to sweep local league play and won three European championships under Coach Pini *Gershon (2001, 2003, 2004) after a long drought in international competition. Local basketball also developed a number of superstars, most playing for Maccabi but some also for European teams. Among them were Doron Jamche, Doron Shefer, Gur Shelef, Tal Burstein, and Oded Katash, who led Greece's Panathinaikos to a championship win over Maccabi, his former team, in 2000. In women's basketball, Elitzur Holon built a parallel dynasty, taking 18 Israeli cups and 20 Israeli league championships between 1977 and 1996. Israeli Shay Doron was an All-American guard at Maryland and led the Terrapins to an NCAA Championship in 2006.

Women's tennis also made great strides, with two standouts on the WTA tour. Anna Smashnova finished the 2002 and 2003 seasons with a No. 16 world ranking and through 2005 had taken 11 titles (in 11 finals), chalking up over \$2 million in winnings. Nineteen-year-old Shahar Peer climbed to No. 23 in June 2006. In 2002 Alex Averbach took the gold medal in the pole vault at the European championships, a first for an Israeli athlete, and in 2004 Gal Fridman won Israel's first Olympic gold medal, taking it in windsurfing.

JEWISH ATHLETES

Association Football (Soccer)

Shortly after 1900, the Bohr brothers, Neils Henrik David (1885–1962) and Harald August (1887–1951), of Denmark, became famous soccer players in Scandinavia. In 1908 Harald won a silver medal in the first Olympic soccer competition. Other *Olympic medalists included Sandor Geller (Hungary) in 1952 (gold); Boris Razinsky (1933–) (U.S.S.R.) in 1956 (gold), and Arpad Orban (1938–) (Hungary) in 1964 (gold). In the 1920s, Austria's Hakoah-Vienna All-Stars, an outstanding all-Jewish team, played a series of matches in Palestine and the United States. In New York City in 1926 Hakoah-Vienna set a U.S. single-game attendance record (46,000) that was not broken for over 40 years. Many of the teammates of Hakoah-Vienna left Austria in the 1930s and continued their soccer careers in Palestine and the United States. Bela Guttmann (1900–1981), a Hungarian who also played for Budapest's MTK Club, became one of the world's top soccer coaches in the 1950s and 1960s.

The Meisel brothers, Hugo (1895–1968) and Willy (1897–1967), were Austrian soccer personalities. Willy, who became one of Europe's most respected sportswriters, was a goalkeeper for the Austrian national team; Hugo founded the International or World Cup competition in 1927 and was head of the Austrian Football Association in the 1930s. Hungary produced many outstanding Jewish players, coaches, and administrators, beginning with a member of the first national team, Olympic swimmer and medalist Alfred Hajos (Arnold Guttmann)

(1878–1955), the first modern Olympic swimming champion, and his brother, Henrik. Mark Lazarus (1938–) was a British soccer player. In the Soviet Union, Mikhail Romm was one of the organizers of soccer in the 1920s, and Mikhail Loshinsky played on the national team before World War II.

The Israel Football Federation was founded in Palestine in 1928 and its first international match was played in 1934. The first side representing the State of Israel played in New York City in 1948. Israel reached the quarterfinal round in the 1968 Olympic Games and the final round of 16 in the World Cup competition in 1970. The star of the team was the captain, Mordechai (“Mottele”) Spiegler.

American soccer pioneer Nathan Agar (1887–1978) introduced soccer in the New York City area in 1904 and helped found the United States Football Association in 1913. In 1929 the all-Jewish Hakoah All-Stars of New York City won the National Challenge Cup.

Johan Neeskens (1951–) played for Ajax of Amsterdam, which won the European Cup in 1971–73, and for World Cup finalist Netherlands in 1974 and 1978. As a player for the New York Cosmos, he was named to the North American Soccer League All-Star team in 1979.

Goalie Shep *Messing (1949–) was a member of the 1972 United States Olympic team and the 1977 North American League champion New York Cosmos. Goalkeeper Arnold Mausser (1954–) of the Tampa Bay Rowdies was named American Player of the Year in the North American Soccer League in 1976, and goalie Alan Mayer was accorded the same honor in 1978. Mayer played for the San Diego Sockers.

The Maccabee Club of Los Angeles, which included a number of Israeli students, won the United States National Challenge Cup in 1973, 1975, and 1977–78.

Alan Rothenberg, a lawyer, was elected president of the U.S. Soccer Federation in 1990. Rothenberg served as commissioner of soccer in the 1984 Olympic Games. In 1990 Henry Kissinger, former U.S. secretary of state, was named vice chairman of the U.S. World Cup '94 organizing committee.

Yair Allnut was a member of the 1992 U.S. Olympic Games team and a gold medalist in the 1991 Pan American Games. Jeff Agoos (1968–) had 134 international appearances with the national team, played with the U.S. Under-15, Under-17, Under-20, World University and Indoor National Teams, and was a member of five championship teams during his MLS career. Debbi Belkin played with the U.S. gold medal team in the inaugural Women's World Championships in China in 1991. Arcady Gaydamak (Ari Barlev, 1952–), a Russian-Israeli billionaire, bought the Betar Jerusalem soccer team in August 2005. He is also owner of the Hapoel Jerusalem basketball team. His son, Alexandre “Sasha” Gaydamak, bought a 50 percent share of the Portsmouth FC soccer team in January 2006.

Automobile Racing

Britain's Woolf Barnato (1895–1948), a director of Bentley Motors and son of Barney *Barnato of South African diamond

fame, won three consecutive Le Mans 24-hour Grand Prix of Endurance races in 1928–30. In a 14-year career, Rene Dreyfus (1905–1993) of France triumphed in 36 races and gained the Grand Prix of Monaco (1930) and the Grand Prix of Belgium (1934). After winning the national driving championship in 1936, Mauri *Rose (1906–1981) of the United States drove to three victories (1941, 1947, and 1948) in the Indianapolis 500-mile classic. Sheila Van Damm (1922–1987) of Great Britain was the European women's driving champion in 1954–55. Robert Grossman (1923–) of the United States placed among the top ten finishers in six consecutive Le Mans races (1959–64). Peter Revson (1939–1974) of the United States won the World Challenge Cup in 1968, the 1973 British and Canadian Grand Prix events and was runner-up at the 1971 Indianapolis 500, but was killed during a practice run in 1974. American Steve Krisiloff placed fourth in the 1978 Indianapolis 500. Jody *Scheckter (1950–) of South Africa placed third in the world driving championships in 1974 and was runner-up in 1977. His Grand Prix victories included Swedish (1974 and 1976); British (1974); South African (1975) and Argentinean, Monegasque and Canadian in 1977. In 1979 Scheckter won the Belgian, Monegasque and Italian Grand Prix events and became South Africa's first world driving champion. He retired from international racing competition after the 1980 season. Kenny Bernstein (1944–) won a record-tying four consecutive U.S. National Hot Rod Association Funny Car Championships in 1985–88. He switched to the Top Fuel class in 1990 and the following year had a record six victories in a season. In 1992 Bernstein recorded four wins and became the first drag racer to cover a quarter mile at more than 300 miles per hour.

Baseball

Jews early developed an interest in baseball, which had its origins in the 1840s. Lipman E. (Lip) *Pike became baseball's first professional in 1866 when he played third base for the Philadelphia Athletics at a salary of \$20 per week. In 1882 Louis Kramer (1849–1922) helped organize the major league American Association, and was its president in 1891. Aaron S. Stern (1853–1920), a clothing merchant, was a co-founder of the American Association and owner of the Cincinnati Reds in 1882–90. The Reds won the first American Association championship in 1882. Other officials of the Cincinnati club included Edgar Mayer Johnson (1836–?), secretary, 1877–80, and Nathan Menderson (1820–1904), president, 1880. Jacob C. (Jake) Morse (1860–1937), who became a noted sportswriter, was manager of the Boston team in the Union League in 1884. Barney *Dreyfuss, president of the Louisville Colonels in 1899 and owner of the Pittsburgh Pirates from 1900 to 1932, founded the World Series in 1903. One of the game's most controversial owners, Andrew Freedman (1860–1915), a lawyer and a power behind New York City's Tammany Hall, was president of the New York Giants in 1894–1902. Louis W. Heilbroner (1861–1933) managed the St. Louis Cardinals in 1900, and nine years later founded baseball's first statistical bureau. Harry (Judge) Goldman (1857–1941) was an or-

ganizer of the American League in 1900, and with the Frank brothers, Moses and Sydney, served as an official of the Baltimore club in the new league in 1901–2. Besides Pike, the outstanding players prior to 1900 were William M. (Billy) Nash (1865–1929), a third baseman who played in the major leagues for 15 years, a member of pennant-winning teams in 1890 (Boston, Players League) and 1891–93 (Boston, National League), and manager of Philadelphia in 1896; James John (Chief) Roseman (1856–1938), an outfielder with the New York team that won the American Association pennant in 1884, and player/manager of the St. Louis club in the same league in 1890; and Daniel E. Stearns (1861–1944), first baseman on the Cincinnati team that won the first American Association championship in 1882.

Players who gained success in the major leagues after 1900 included Hank *Greenberg (1911–1986), the first Jewish member of the Baseball Hall of Fame; pitching great Sandy *Koufax (1935–), first Jewish pitcher and youngest player ever elected to the Baseball Hall of Fame; and Lou *Boudreau (1917–2001), a member of the Hall of Fame whose mother was from an Orthodox Jewish family. Al *Rosen (1924–), third baseman, American League home run champion in 1950 and 1953, voted the league's Most Valuable Player in 1953; Erskine Mayer (1891–1957), a pitcher who won 21 games for the Philadelphia Phillies in 1914 and 1915; Charles Solomon (Buddy) Myer (1904–1974), an infielder with Washington and Boston for 17 years who played in the 1925 and 1933 World Series, won the League batting title of 1935, and compiled the lifetime batting mark of .303; Larry *Sherry (1935–), pitching hero of the Los Angeles Dodgers in the 1959 World Series; Art *Shamsky (1941–), an outfielder who hit four home runs in four consecutive at bats and batted .300 for the 1969 World Champion New York Mets; and Kenny Holtzman (1945–), who had the most number of wins for a Jewish pitcher and who pitched no-hitters in 1969 and 1972.

Also George R. Stone (1876–1945), an outfielder for the St. Louis Browns who won the American League batting title in 1906; Barney Peltz (1880–1939), pitcher, compiled a 2.62 earned run average in a ten-year (1903–12) American League career with the St. Louis Browns and Washington Senators; Benjamin M. (Benny) Kauff (1890–1961), outfielder, was the batting champion of the Federal League in 1914 and 1915, and a member of the National League champion New York Giants in 1917; Sid *Gordon (1917–1975), 1941–43, 1946–55; Harry Danning (1911–2004), 1933–42; Saul Rogovin (1922–1995), 1949–53, 1955–57; Samuel A. (Sammy) Bohne (Cohen) (1896–1977); Andrew (Andy) Cohen (1904–1988), 1926, 1928–29; Calvin (Cal) *Abrams (1924–1997), 1949–56; Morris (Morrie) Arnovich (1910–1959), 1936–41, 1946; Harry Eisenstat (1915–2003), 1935–42; Harry Feldman (1919–1962), 1941–46; Myron (Joe) Ginsberg (1926–), 1948, 1950–54, 1956–62; Moe *Berg (1902–1974), an outstanding linguist as well as baseball player and a member of the U.S. Intelligence who undertook espionage in Japan and Germany, and worked for the Office of Strategic Services (OSS) dur-

ing World War II, 1923, 1926–39; Barry Latman (1936–), 1957–67; James (Jim) Levey (1906–1970), 1930–33; Jimmy *Reese (1904–1994), 1930–32; Jacob (Jake) Atz (1879–1945), 1902, 1907–09; Goodwin (Goody) Rosen (1912–1994), a Canadian, 1937–39, 1944–45; Philip (Mickey) Weintraub (1907–1986), 1933–35, 37–38, 1944–45; Norman (Norm) Miller (1946–), 1965– ; Michael P. (Mike) Epstein (1943–), 1966– ; Steve *Stone (1947–), 1971–81, won the Cy Young Award in 1980; Ross Baumgarten (1955–), 1978–82; Ron Blomberg (1948–), 1969, 1971–76; Jeff Newman (1948–), 1976–84; Steve Yeager (1948–), 1972–86; Larry Rothschild (1954–), 1981–82; Scott Radinsky (1968–), 1990–93, 1995–2001; Jesse Levis (1968–), 1992–99; Alan Levine, (1968–), 1996, 1998– ; Brad Ausmus (1969–), 1993– ; Shawn *Green, (1972–), 1993– ; Mike Lieberthal, (1972–), 1994– ; Scott Schoeneweis (1973–) 1999– ; Gabe Kapler, (1975–), 1998– ; Jason Marquis, (1978–), 2000– ; Kevin Youkilis (1979–), 2004– ; Justin Wayne (1979–), 2002–2004, Adam Stern (1980–), 2005– ; and Adam Greenberg (1981–), who was hit in the head by the first pitch he saw in the Major Leagues on July 9, 2005, and was out for the remainder of the season.

Jacob A. (Jake) Pitler (1894–1968) was an infielder for the Pittsburgh Pirates (1917–18) and a popular coach for the Brooklyn Dodgers (1948–57), and Al *Schacht (1892–1984) pitched for the Washington Senators (1919–21), was a coach for the Senators and Boston Red Sox and became known as the “Clown Prince of Baseball.” He was followed by Max *Patkin (1920–1999), who was also known as the “Clown Prince of Baseball” for his goofy antics as a rubber-necked, double-jointed comic genius. Dolly *Stark (1897–1968) and Al Forman (1928–) were National League umpires.

Baseball executives of the modern era included Judge Emil E. Fuchs (1879–1961), owner and manager (1929) of the National League Boston club in 1923–35; Leo J. Bondy (1883–1944), vice president of the New York Giants, 1934–44; Sidney Weil (1891–1966), owner of the Cincinnati Reds, 1930–33; William Benswanger (1892–1972), son-in-law of Barney Dreyfuss, president of the Pittsburgh Pirates, 1932–46; Harry M. Grabiner (1890–1948), vice president of the Chicago White Sox, 1939–45, and part-owner and vice president of the Cleveland Indians, 1946–48; Hank Greenberg, vice president and general manager, Cleveland Indians, Chicago White Sox, 1948 to 1963; Gabe *Paul (1910–1998), was vice president and general manager of the Cincinnati Reds (1951–1960), president and general manager of the Cleveland Indians (1961–1973), president of the New York Yankees (1974–1977), and president of the Indians (1978–1984). Jerold C. Hoffberger (1919–1999) helped return major league baseball to Baltimore in 1953, became principal owner of the Orioles in 1965, and sold the team in 1979; Marvin Milkes, general manager of the Seattle (1969) and Milwaukee (1970) teams of the American League; Charles R. Bronfman was chairman and principal owner of the Montreal Expos from 1968 to 1990. Fred Wilpon (1936–) is owner of the New York Mets; Walter Haas Jr. (1916–1995) was owner of the Oakland Athletics from 1980–1995; Lewis

Wolff, U.S., owner of the Oakland Athletics; Jerry *Reinsdorf (1936–) has been owner of the Chicago White Sox since 1981 (and the Chicago Bulls since 1985). Jeffrey Loria bought the Florida Marlins in 2002; the president is David Samson, the vice chairman is Joel Mael, and the general manager is Larry Beinfest. Stuart Sternberg became principal owner of the Tampa Bay Devil Rays in October 2005.

Al Rosen served as president of the New York Yankees (1978–79), Houston Astros (1980–1985) and San Francisco Giants (1985–1992). Bob Lurie was owner of the San Francisco Giants (1976–1992). Theo N. Epstein (1973–), son of novelist Leslie *Epstein (1938–) and grandson of Oscar-winning screenwriter Philip G. *Epstein (1909–1952), is general manager of the Boston Red Sox (2002–). Andrew Friedman is executive vice president of the Tampa Bay Devil Rays.

Harold (Lefty) Phillips (1969–71) and Norman *Sherry (1976–77) managed the American League California Angels; Larry Rothschild managed the Tampa Bay Devil Rays from 1998–2001, and was pitching coach for the Cincinnati Reds (1992–1993), Florida Marlins (1995–1997) and Chicago Cubs (2001–present).

Hank Greenberg's son, Steve, served as the deputy commissioner of baseball from 1989–93. Bud *Selig (1934–), former owner of the Milwaukee Brewers, was named chairman of baseball's executive council in 1992 and given the authority to act as commissioner.

Marvin *Miller (1917–) served as the executive director of the Major League Baseball Players Association from 1966 to 1984.

Basketball

Invented in 1891 in the United States, the game was ideally suited to the crowded urban areas where most of the nation's Jewish population lived. Jewish settlement houses on New York's East Side and Chicago's West Side gave Jewish youth their first opportunity to play the game and set many players on their way to stardom. Jews played basketball in the 1890s, and in 1900 the first Jewish professional player, Paul ("Twister") Steinberg (1880–1964), began his career at Little Falls, New York. Later he coached at Cornell University (1910–12), and for many years acted as referee at college games. Frank Basloe (1887–1966), professional player and coach of the Herkimer, New York, team, organized a squad that toured the country in 1903–23. Basloe was president of the New York State League in 1937–48. Harry Baum (1882–1959), a New York City settlement worker and professor of electrical engineering at the City College of New York, developed a style of play that made outstanding professional players of Barney *Sedran, Louis Sugarman (1890–1951), Jake Fuller (Furstman), and Max (Marty) Friedman (1889–1986). Friedman captained the World War I American Expeditionary Force team that won the Inter-Allied Games basketball tournament and introduced the sport to Europe. Other outstanding professionals of the 1910–25 era were William Cone and Emanuel (Doc) Newman

(1890–?). Henry Hart Elias (1882–1941) was the first Jewish college player. He played on the initial Columbia University team in 1901; was the team's captain in 1903, and the school's first basketball coach in 1904–05. The first Jewish player to win collegiate honors, Samuel Melitzer (1888–1970), an All-East selection in 1907, and an All-American in 1909, was also from Columbia. William Laub, 1926; Louis Bender (1910–?), 1930, 1932, and David Newmark (1946–), 1966, also received All-America recognition at Columbia. From 1909 to 1950 the City College of New York produced teams that were among the best in the nation and were nearly all-Jewish. With the exception of Ira Streusand (1890–1964), 1908, professional star Nat *Holman trained all the other Jewish players from CCNY who were selected as All-Americans, namely Louis Farer, 1922; Pincus (Pinky) Match (1904–1944), 1925; Moe Spahn, 1932; Mo Goldman (1913–?), 1934; Bernard Fliegel, 1938; William (Red) *Holzman (1920–1998), 1942, and Irwin Dambrot (1950). All-America selections from other New York City schools (New York University, Long Island University, and St. John's) were Maclyn (Mac) Baker (1898–1985), 1920–21; Milton Schulman, 1936; Robert Lewis, 1939; Jerome (Jerry) Fleishman (1922–), 1943; Sid *Tannenbaum (1925–1988), 1946–47; Dolph *Schayes (1928–), 1948; Donald Forman (1926–), 1948; Barry Kramer (1942–), 1963–64; Ben Kramer (1913–1999), 1936; Jules Bender (1914–1982), 1937; John Bromberg, 1939; Daniel Kaplowitz, 1939; Irving Torgoff, 1938–39; Oscar (Ossie) Schectman, (1919–), 1941; Jackie Goldsmith (1921–1968), 1946; Max (Mac) Kinsbrunner (1909–1972), 1930; Max (Mac) Posnack, 1931; Nathan Lazar, 1933; Jack (Dutch) Garfinkel (1920–), 1939; Harry Boykoff (1922–1978), 1943, 1946; Hyman (Hy) Gotkin, 1944–45; and Allan Seiden, 1958–59. In 1928–31 Kinsbrunner, Posnack, Albert (Allie) Schuckman and Jack (Rip) Gerson were members of the "Wonder Five," one of college basketball's most famous teams.

Other All-America players included Cyril Haas, Princeton, 1916–17; Leon (Bob) Marcus, 1918–19; Samuel Pite, Yale, 1923; Emanuel (Menchy) Goldblatt (1904–1994), Pennsylvania, 1925–26; Carl M. Loeb Jr., Princeton, 1926; Edward Wineapple, Providence, 1929; Louis Hayman, Syracuse, 1931; Jerry Nemer (1912–1980), Southern California, 1933; Herbert Bonn, Duquesne, 1936; William Fleishman, Western Reserve, 1936; Marvin Colen, Loyola of Chicago, 1937; Meyer (Mike) Bloom, Temple, 1938; Bernard Oppen (1915–2000), Kentucky, 1939; Louis Possner, DePaul, 1940; Morris (Moe) Becker (1917–1996), Duquesne, 1941; Irving Bemoras (1930–), Illinois, 1953; Len Rosenbluth (1933–), North Carolina, 1955–57, college player of the year in 1957; Lawrence Friend (1935–1998), California, 1957; Donald Goldstein, Louisville, 1959; Jeff Cohen, William and Mary, 1960–61; Arthur Heyman (1941–), Duke, 1961–63, college player of the year in 1963; Howard Carl, DePaul, 1961; Robert I. (Rick) Kaminsky (1942–), Yale, 1964; Talbot (Tal) *Brody (1943–), Illinois, 1965, and subsequently a star in Israel; Neal Walk (1948–), Florida, 1968–69; and Dave Kufeld, Yeshiva U. 1977–1980, and a 10th-round draft pick of the NBA's Portland Trailblazers.

College coaches included Leonard Palmer (1882–?), first CCNY coach, 1909–16; Edard Siskind (1886–1955), Fordham, 1910; Samuel Melitzer, NYU, 1911; Michael Saxe, Villanova, 1921–26; Louis Sugarman, Princeton, 1921; David Tobey (1898–1988), Savage School of Physical Education, 1924–42 and Cooper Union, 1947–60, an outstanding referee from 1918 to 1945 and the author of the first book on basketball officiating (1943), and a member of the Basketball Hall of Fame; Leonard D. Sachs (1897–1942), Loyola or Chicago, 1924–42, had a 224–129 record; Emil S. Gollubier (1890–1969), Chicago Hebrew Institute, 1918–62; Dolly Stark (1897–1968), Dartmouth, 1929–36, 1945–46; Bernard (Red) *Sarachek (1912–2005), Yeshiva, 1943, 1946–69; Harry Stein (1916–1959), Brandeis, 1949–58; Samuel Cozen, Drexel Tech, 1952–68, had a 213–94 record; David Polansky, CCNY, 1953–54, 1957–58, 1960–68, 1970–71; Roy Rubin, Long Island University, 1961–, in 1968 LIU was the small college national champion; Harold (Hal) Blitman, Cheyney State, 1962–69; Jules Rivlin, Marshall, 1956–62; Irving Olin (1917–1970), Brandeis, 1964; and Harry *Litwack (1907–1999), Temple, at the Philadelphia school beginning in 1925 as a player and coach. He became head coach in 1953 and his teams won over 300 games, including the 1969 National Invitational Tournament in New York City.

The majority of the players who made All-America in college went on to play professional basketball. Other Jewish players who excelled as professionals were David (Pretzel) Banks (1901–1952), the Original Celtics; George (Red) Wolfe (1905–1970), Shikey Gotthoffer and Inky Lautman of the Philadelphia Sphas; Louis Spindell and Phil Rabin (Rabinowitz) of the American League; National Basketball Association players Leo Gottlieb, Sidney (Sonny) Hertzberg, Max *Zaslofsky (1925–1985), all-NBA guard in 1947–50, who led the league in scoring in 1948, and Danny Schayes, son of Dolph.

Coaches, managers, and owners of professional teams included Jack (Nibs) Neiman, manager of the Rochester, New York, Centrals, 1902; Eddie *Gottlieb (1900–1979), organized, played for, and coached the South Philadelphia Hebrew Association (Sphas) team in 1918–45. In 1946 he helped found the Basketball Association of America (which became the National Basketball Association) and from 1947 to 1968 was a coach and owner of the Philadelphia Warriors; Abe *Saperstein (1902–1966), founder, owner, and coach of the Harlem Globetrotters; Barney *Sedran (1891–1964), a coach and promoter in 1932–46; Les *Harrison (1904–1997), coach and owner of the Rochester Royals of the NBA, 1949–1958; Benjamin (Ben) Kerner (1917–), owner of the Tri-Cities/Milwaukee/St. Louis Hawks in the National Basketball League and the National Basketball Association, 1946–68; Max Winter, owner of the Minneapolis Lakers in the 1950s; Mark *Cuban (1958–), owner of the Dallas Mavericks; Jerry Reinsdorf (1936–), owner of the Chicago Bulls; Leslie Alexander, Houston Rockets; Micky Arison, Miami Heat; William Davidson, Detroit Pistons; Abe *Pollin (1923–) Washington Wizards; Donald Sterling, Los Angeles Clippers; Herb Kohl, Milwaukee Bucks; and Howard Schultz, Seattle Supersonics.

Arnold (Red) *Auerbach (1917–), was Boston Celtics coach and general manager; Red Holzman played for the Rochester Royals in 1946–54, and led the New York Knicks to the NBA championship in 1970 and 1973. Maurice *Podoloff (1890–1985) was elected president of the Basketball Association of America in 1946 and served as the first commissioner of the National Basketball Association until 1963. Marty *Glickman (1917–2001) was a radio broadcaster and founding father of basketball on radio, and is a member of the Basketball Hall of Fame. Leo Fischer (1897–1970), an outstanding sportswriter, was president of the National Basketball League in 1940–44, and Harry Rudolph (1907–1973), president of the Eastern League. Larry *Fleisher (1930–1989) was head of the NBA players union from 1962–1988, and a member of the NBA Hall of Fame as contributor.

Referees who gained prominence were Sam Schoenfeld (1907–1956), who starred at Columbia University in 1928–30 and later founded and was first president of the Collegiate Basketball Officials Association; Mendy *Rudolph (1928–1979), who became an NBA official in 1953 and in 1969 became the league's chief of referees; and Norman Drucker, who after 15 years with the NBA became supervisor of ABA officials in 1969. Jews coached and won medals at the Olympic *Games. Julius Goldman, an American, coached Canada to an Olympic medal in 1936, and Alexander Gomelsky did the same for the Soviet Union in 1964 and 1968. Canadian Olympic coaches include Men Abromowitz (1948) and Ruben Richman (1934–). Harry D. *Henshel served as chairman of the United States Olympic Basketball Committee in 1956, and Harold Fischer coached United States gold medal teams at the 1951 and 1967 Pan-American Games. Tanhum (Tanny) Cohen-Mintz of Israel was named to the European All-Star team in 1964 and 1965. Members of the Basketball Hall of Fame are Leonard D. Sachs, David Tobey, Barney Sedran, Nat Holman, Red Auerbach, and Abe Saperstein.

Ernie *Grunfeld won gold medals as a member of the American men's teams at the 1975 Pan-American Games and the 1976 Olympic Games, and Nancy *Lieberman (1958–) was a member of the American women's teams which gained Pan-American Games gold and Olympic Games silver medals. Lieberman was named outstanding college player twice, winning the Wade Trophy following the 1978–79 and 1979–80 seasons, when her school Old Dominion won the women's championship. In 1979 she helped the United States win the FIBA World Championship and a silver medal in the Pan-American Games.

Larry *Brown (1940–) was named Coach of the Year in the American Basketball Association in 1973 and 1975. In 1979 Brown moved to the college ranks to coach at UCLA. His team reached the finals of the national collegiate (NCAA) championship in his first season. Brown, basketball's traveling man, then went to the NBA New Jersey Nets (1981–1983), and then to the University of Kansas, which won the NCAA championship in 1988. He returned to the NBA in 1988 with the Antonio Spurs, which went from a 21–61 record in Brown's first year to 56–26

the following year – the 35-game swing from one season to the next an NBA record. In 1992 he moved from San Antonio to the Los Angeles Clippers, then to the Indianapolis Pacers (1993–1997), Philadelphia 76ers (1997–2002), Detroit Pistons (2003–2004), and New York Knicks (2005–2006). His brother Herb (1936–) is also a veteran coach.

Alexander Gomelsky (1928–2005) returned to coach the U.S.S.R. national team in 1977. His team won an Olympic bronze medal in Moscow.

Players Dolph Schayes (1972) and Max (Marty) Friedman (1971); coach Harry Litwack (1976); and contributors Edward Gottlieb (1971) and Maurice Podoloff (1973) were elected to the Basketball Hall of Fame.

David Stern became the commissioner of the National Basketball Association in 1983 and in 1992 was named the most powerful person in sports by a national sports publication. *The Sporting News* said of him, “As a direct result of David Stern’s progressive leadership, the NBA now has the greatest universal appeal of any professional sport.”

Mickey *Berkowitz (1954–) is considered the greatest basketball player in Israel’s history.

Senda Abbott *Berenson was the “Mother of Women’s Basketball” and was inducted into the International Basketball Hall of Fame in 1985.

Billiards

John M. Brunswick (1819–1886), who was born in Bengarten, Switzerland, and settled in Cincinnati, Ohio, was one of the earliest manufacturers of billiard equipment in the United States. He built the country’s first perfect billiard table in 1845. Moses Bensinger (1839–1904), Brunswick’s son-in-law, invented the balkline game in billiards in 1883, and in 1890 became president of his father-in-law’s firm, which had been moved to Chicago. Outstanding American professional billiard players were Leon Magnus, winner of the first world three-cushion championship in 1878; Harry P. Cline, world three-cushion (1907) and 18.2 balkline (1910) champion, and Arthur Rubin (1905–?), world professional three-cushion champion (1961 and 1964); Sydney Lee (1903–?), the British amateur champion in 1931–34 and winner of the world amateur billiard championship in 1933, American amateurs Max Shimon, winner of the national three-cushion championship in 1929 and 1930, and Simon (“Cy”) Yellin, national pocket billiard champion in 1929.

Bowling (Tenpin)

The Brunswick Company entered the bowling business in 1888 and helped establish the tenpin game around the world. Bowling pioneers Samuel Karpf (1866–1923) and Dutch-born Louis B. Stein (1858–1949) helped organize the American Bowling Congress in 1895. One of the first to write about bowling in the United States, Karpf served in 1896–1907 as the first secretary of the American Bowling Congress. Stein, an outstanding bowler, established 300 as the score in tenpin bowling and determined that the weight of the ball should be 16 pounds. The Bowling Hall of Fame includes charter member Mortimer

(“Mort”) Lindsey (1888–1959); Phil Wolf, American Bowling Congress champion (1928); and Sylvia Wene Martin (1928–), women bowler of the year in 1955 and 1960.

Mark *Roth (1951–), Bowler of the Year in 1977, 1978, 1979, and 1984, is a member of Pro Bowlers Association (PBA) Hall of Fame. Roth, Barry Asher (1972–73), and Marshall Holman (1977–78) gained All-America selections. Holman was player of the year in 1987. Roth and Holman were voted into the U.S. Professional Bowlers Association’s Hall of Fame in 1987 and 1990, respectively. Veteran Barry Asher joined the PBA Hall of Fame in 1988, and the American Bowling Congress’ Hall of Fame added Norman Meyers in 1983 and Al Cohn in 1985.

Boxing

The most active years of Jewish participation in professional boxing were in the latter part of the 18th and the first quarter of the 19th centuries in England, and in the first half of the 20th century in the United States. The best boxers of the early era were Daniel *Mendoza (1764–1836), champion of England in 1792–95, and Samuel (“Dutch Sam”) Elias (1776–1816), credited with the invention of the uppercut. Other English Jews who fought in the ring during this period were Barney Aaron (“the Star of the East”; 1800–1850); Henry Abrahams; the Belasco brothers – Abraham (“Aby”) (1797–?), Israel (1800–?), Samuel, and John; Isaac Bittoon (1778–1838); Elisha Crabbe (d. 1809); Abraham da Costa; Barnard Levy; Keely Lyons; Daniel Martin; Isaac Mousha; Abraham Robes; Solomon Soddicky; and the cousins of Daniel Mendoza, Angel Hyams and Aaron Mendoza.

A number of English fighters bridged the gap between the early and modern eras. Barney (“Young Barney”) Aaron (1836–1907), son of Barney Aaron, Asher Moss, nephew of Daniel Mendoza and Israel (“Izzy”) Lazarus (1812–1867); and his sons Harry (1839–1865) and Johnny, who emigrated to the United States in the 1850s and 1860s and helped build interest in boxing by giving lessons and putting on exhibitions around the country. “Young Barney” Aaron won the light-weight championship of the United States in 1857.

The first Jewish boxer to win a world championship under Marquis of Queensberry rules was Harry (“The Human Hairpin”) Harris (1880–1959), bantamweight, 1901–02.

Other American world professional champions were light heavyweight Battling *Levinsky (Barney Lebrowitz; 1891–1949) in 1916–20; Maxie (“Slapsie”) *Rosenbloom (1904–1976) in 1930–1934; and Bob Olin (1908–1956) in 1934–35; middleweights Al McCoy (Albert Rudolph; 1894–1966) in 1914–17; Ben Jeby (Morris Jebaltowsky; 1907–1985), 1932–33; and Solly Krieger (1909–1964), 1938–39; welterweights Jackie *Fields (Jacob Finkelstein; 1907–1987) in 1929–30, 1932–33; and Barney *Ross; lightweights Benny *Leonard; Al (“The Bronx Beauty”) Singer (1907–1961) in 1930; and Barney *Ross; featherweights Abe *Attell (1884–1970) in 1901–12; Louis (“Kid”) Kaplan (1902–1970) in 1925–27; and Benny Bass (1904–1975) in 1927–28; bantamweights Abe Goldstein (1898–1907) in 1924;

Charley (“Phil”) Rosenberg (Green; 1902–1976) in 1925–27; and flyweight Izzy (“Corporal”) Schwartz (1900–1988) in 1927–29. Other world champions were Ted (“Kid”) *Lewis, Great Britain; Victor (“Young”) Perez (1911–1942), France (Tunisia), flyweight 1931–32; Robert Cohen (1930–), France (Algeria), bantamweight 1954–56; and Alphonse Halimi (1932–), France (Algeria), bantamweight 1957–59. World junior champions were Mushy Callahan (Vincent Morris Sheer; 1905–1986), welterweight 1926–30; Jack Bernstein (John Dodick; 1899–1945), lightweight 1923; and Jackie (“Kid”) *Berg (Judah Bergman; 1909–1991), Great Britain, welterweight 1930–31. Other noted American boxers were Monte Attell (1885–1960), Abe’s brother; Jacob (“Soldier”) Bartfield (1892–1970); Joe Bernstein (1877–1931); Harry Blitman (1908–1972); Phil (“Ring Gorilla”) Bloom (1894–?); “Newsboy” Brown (Dave Montrose; 1904–1977); Joe Choynski (1869–1943); Leach Cross (Louis Wallach; 1886–1957); Charley Goldman (1887–1968), who was also a successful trainer; Ruby (“The Jewel of the Ghetto”) *Goldstein (1907–1984), both a boxer and referee; Willie Jackson (Oscar Tobler; 1897–1961); Danny Kramer (1900–1971); Harry Lewis (Besterman; 1886–1956); Ray Miller (1908–1987); Young Montreal (Morris Billinghoff; 1897–1978); Young Otto (Arthur Susskind; 1886–1967); Dave Rosenberg (1901–1979); Johnny (“Young”) Rosner (1895–1974); Lew Tendler (1898–1970); Sid (“Ghost of the Ghetto”) Terris (1904–1974); Al “Bummy” *Davis (Albert (Avraham) Davidoff; 1920–1945), welterweight boxer; Abe (“The Newsboy”) *Hollander-sky (1887–1966, who engaged in more professional bouts (1,309) than any other fighter in boxing history; and Mike Rossman, who won the World Boxing Association light heavyweight championship in 1978 at age 21, the youngest claimant of the light heavyweight title. He lost the championship in 1979.

Champions of Europe included British boxers Anshel (“Young”) Joseph, welterweight, in 1910; Matt Wells (1886–1953), lightweight in 1911–12; Harry Mason, lightweight, in 1923; Johnny Brown (d. 1975), bantamweight, in 1923 and Al Phillips, featherweight, in 1947; and also Albert Yvel, France, light heavyweight, in 1950–51. Winners of national professional titles were Jack Bloomfield in 1922, Joe Fox (1892–1965), in 1921; and Harry Mizler (d. 1990) in 1934 of Great Britain; Al Foreman, Curly Wilshur (Barney Eisenberg), Sammy Luftspring and Maxie Berger of Canada; Tiger Burns (Dan Levine), Al James, and David Katzen of South Africa; and Waldemar Holberg of Denmark. In 1971, Henry Nissen of Australia (1948–) won the British Commonwealth flyweight title.

Jews have been involved in all other activities connected with the boxing business as managers, trainers, and promoters. Promoters included Mike *Jacobs (1880–1953), Joe *Jacobs (“Yussel the Muscle”; 1896–1940), Harry Markson, Herman Taylor, Lew Raymond, Johnny Attell, Sam Becker, Larry Atkins, Goldie Ahearn, Archie Litman, Irving Schoenwald, Willie Gilzenberg, Bonnie Geigerman, and Jack Begun of the United States; Bella Burge, Jack *Solomons, Nathan Shaw, Mickey Duff, Esther Goldstein, and Harry Levene of Great

Britain; Ludwig Japhet of South Africa; Gilbert Benaim of France; and Paul Damski of Germany. Ray *Arcel (1899–1994) is considered the greatest trainer in the sport. Whitey (Morris) *Bimstein (1897–1969) was another outstanding boxing trainer. Teddy *Brenner (1917–2000), considered the greatest matchmaker in boxing history, is a member of the International Boxing Hall of Fame. Lou *Stillman (Louis Ingber; 1887–1969) was owner of Stillman’s Gym.

The Boxing Hall of Fame, founded by ring historian Nat *Fleischer, has enshrined charter members Daniel Mendoza, Benny Leonard, Abe Attell, Barney Ross, Joe Choynski, Lew Tendler, Ted (“Kid”) Lewis, Battling Levinsky, Barney (“Young”) Aaron, and Max *Baer.

Gilbert Cohen of France won the light middleweight championship of Europe in 1978.

Australian Henry Nissen was the Commonwealth flyweight champion in 1971–74. Victor Zilberman of Romania won a bronze medal in welterweight division, and Rollie Schwartz served as manager of the very successful American team at the 1976 Olympic Games.

American Saoul Mamby won the World Boxing Council’s version of the world junior welterweight championship in 1980. Shamil Sabyrov of the USSR won a 1980 Olympic gold medal in the light-flyweight division. Dmitry *Salita, a religious Jew who does not box on Shabbat, won the NABA junior welterweight championship in August 2005.

French boxers Gilles Elbilbia and Fabrice Benichou enjoyed ring successes in the 1980s and 1990s. Elbilbia won the French and European welterweight titles in 1982 and 1983 while Benichou won the World and European featherweight championships in 1989 and 1991.

Scotland’s Gary (Kid) Jacobs defeated an Australian opponent and won the British Commonwealth welterweight championship in 1988. He lost the title the following year. In 1992 he became the British welterweight champion.

Bullfighting

Jewish bullfighters include Sidney *Franklin of the United States and Randy Sasson (*El Andaluz*) of Colombia.

Canoeing

The sport began in 1865 and four years later Montagu Mayer competed in canoe races in England. In 1880 Arthur *Brentano and Adolph Lowenthal were among the 25 canoeists who founded the American Canoe Association. Leo Friede (1887–1959) of the United States won canoe sailing’s oldest trophy, the International Sailing Challenge Cup, in 1913 and 1914. Olympic medalists include Leon Rottman (Romania) two gold (1956) and one bronze (1960); Imre Farkas (Hungary), two bronze (1956, 1960); Laszlo Fabian (Hungary), gold (1956); Klara Fried (Hungary), bronze (1960), and Naum Prokupets (U.S.S.R.), bronze (1968).

The two-man whitewater team of Joe Jacobi and his partner won a Olympic Games gold medal in 1992. It was only the fifth canoeing or kayaking gold medal won by the U.S. in Olympic Games history.

Cricket

The first Jewish cricket players of note played at Oxford and Cambridge. D.L.A. Jephson represented Cambridge University in 1891 and 1892 and John E. Raphael played for Oxford from 1903 to 1905. Both later represented Surrey County. International cricket players included the South Africans Manfred J. Susskind, Norman (“Mobil”) Gordon, Dennis Gamsy and Aron (“Ali”) Bacher. The last, a physician who devoted his early years of medical practice to nonwhites, achieved widespread distinction as a cricketer in the South African victory over Australia in 1966. He was appointed captain of the South African team for the 1970 test matches against England, the first Jew to reach such a position. Though an outspoken advocate of multiracial cricket, he was to have led his all-white team in the Commonwealth Matches at Edinburgh in 1970, but violent opposition in England to South African apartheid in sport caused cancellation of his team’s participation.

Prue Hyman of Great Britain was captain of the women’s team at Oxford and represented her country in international competition. Patrons of the game were Sir Julian Cahn of Great Britain, Wilfred Isaacs of South Africa, and John I. Marder (d. 1975), president of the United States Cricket Association. Cricket has been played in Israel since the Mandate period and later gained popularity with tours of Israel by Maccabi teams and still later by teams from England. Dr. Aron (Ali) Bacher of South Africa served as the first Jewish captain of a national cricket side in 1970–74. In 1979 Julian Wiener became the first Jewish cricketer to play for Australia’s full international Test side.

Cycling

Louis Gompertz of Great Britain perfected the gear rope, or bicycle chain, in 1821. Felix Schmal of Austria won one gold and two bronze medals at the first Olympic Games in 1896.

Equestrian

American Neal Shapiro won an Olympic silver and bronze medal in 1972 in show jumping, and his countrywoman Edith Master gained a 1976 Olympic bronze medal in dressage. Mark Laskin, Canada’s top rider in 1978 and 1979, helped his country win the gold medal at the “alternate Olympics” in Rotterdam, the Netherlands, in 1980. Margie Goldstein was named the 1989 and 1991 American Grand Prix Rider of the Year. In 1991 she became the first show jumper to win eight Grand Prix events in one season. Serious injuries cost her an Olympic Games opportunity in 1992.

Fencing

Between 1896 and 1976, 38 Jewish fencers won 76 medals (39 gold, 22 silver, and 15 bronze) in Olympic competition. Over the years they won numerous world, national, European, British Empire, Commonwealth, and Pan-American games (see *Olympic Games). Olympic medalists include Eduard Vinokurov (silver, 1972 and gold, 1976), Mark Rakita (silver, 1972) and Grigori *Kriss (bronze, 1972), all of U.S.S.R., and Ildiko Uslaky-Rejtoe (silver, 1972), Hungary. Kriss won the

world epee title in 1971. Albert (Albie) *Axelrod (1921–2004) was one of the greatest American fencers in history, competing in five consecutive Olympics from 1952 to 1968 and winning a bronze in 1960. Allan *Jay (1931–) was a British fencer and a silver medalist in Individual and Team Epee at the 1960 Olympic. In 1975 Martin Lang of the United States won a Pan-American Games gold medal. Americans Yuri Rabinovich of Wayne State and Paul Friedberg of Pennsylvania won the sabre event in the national collegiate championships in 1979 and 1980. Leonid Dervbinsky was national epee champion in 1980 and Peter Schifrin (gold) and Edgar House (silver) won Pan-American Games medals in 1979. American medalists in the Pan American Games were Elaine Chervis, Paul Friedberg, and Jeff Bukantz in 1987 and Nick Bravin, John Friedberg, Chris O’Loughlin, and Joseph Socolof in 1991. Israel’s Udi Carmi placed fourth in the foil competition in the 1987 World Championships.

Field Hockey

A women’s Olympic Games gold medalist in 1984, and a bronze medal winner in 1988, Carina Benninga carried the Netherlands flag at the Olympic Games opening ceremony in 1992.

Football (American and Canadian)

In 1870, a year after college football began in the United States, Moses Henry Epstein represented Columbia University against Rutgers in the third game ever played. The following year, Emil G. *Hirsch, a future Reform rabbi, appeared in the initial football game at Pennsylvania University. In 1874, Henry Joseph, a Canadian, played for McGill University against Harvard in an important series of contests. Lucius Littauer, future “Glove King of America” and congressman from New York State, played for Harvard in 1875 and 1877. Littauer returned to his alma mater in 1881 and became college football’s first coach. Phil King of Princeton University, one of early football’s greatest players, was an All-American selection in 1890–93 and a member of the College Football Hall of Fame. He later coached at his alma mater and at Wisconsin University. Sam Jacobson, a member of the Syracuse Athletic Association, helped organize the first football team at Syracuse University in 1889.

Those who followed King as All-American selections were Sigmund (“Sig”) Harris (1883–1969), Minnesota, 1903–04; Israel (“Izzy”) Levene (1885–1930), Pennsylvania, 1905–06; Joseph Magidsohn (1888–1969), Michigan, 1909–10; Arthur (“Bluey”) Bluethenthal (1891–1918), Princeton, 1911–12; Leonard Frank (1889–1967), Minnesota, 1911; A. Harry Kallet (1887–1965), Syracuse, 1911; Victor H. Frank (1900–), Pennsylvania, 1918; Joseph Alexander (1898–1975), Syracuse, 1918–20; Ralph Horween (1896–1997), Harvard, 1916; his brother Arnold Horween, (1898–1985), Harvard 1920; Max Kadesky (1901–1970), Iowa, 1922; George Abramson (1903–1985), Minnesota, 1924; Milton (“Irish”) Levy, 1925; Benny *Friedman (1905–1982), Michigan, 1925, and a member of the College and Professional Football Hall of Fame; Ray

Baer (1905–1968), Michigan, 1927; Benny Lom, California, 1927–29; Lou Gordon (1908–1976), Illinois, 1927; Fred Sington (1910–1998), Alabama, 1929–30; and Mike Alexander, a member of the College Football Hall of Fame; Gabriel Bromberg, Dartmouth, 1930; Aaron Rosenberg (1912–1979), Southern California, 1932–33, and a member of the College Football Hall of Fame; Harry “Doc” Newman (1909–2000), Michigan, 1932; Franklin Meadow (1912–1989), Brown, 1932; David Smukler (1914–1971), Temple, 1934; Isadore (“Izzy”) Weinstock (1913–1997), Pittsburgh, 1934; Marshall *Goldberg (1917–), Pittsburgh 1937–39, and a member of the College Football Hall of Fame; Sid *Luckman (1916–1998), Columbia, 1937–38, and a member of the College Football Hall of Fame; Leroy Monsky (1916–1981), Alabama, 1937; A. Sidney Roth (1916–2001), Cornell, 1938; Mervin Pregulman (1922–), Michigan, 1943; Dan Dworsky (1927–), Michigan, 1947; Bernard Lemonick, Pennsylvania, 1950; Al Goldstein (1936–1991), North Carolina, 1958; Ron *Mix (1938–), Southern California, 1959; Rich Stotter (1945–), Houston, 1967; Bob Stein (1948–), Minnesota, 1967–68; Michael Andrew Seidman (1981–), Carolina Panthers; and Igor Olshansky (1982–), San Diego Chargers.

Among other leading football coaches were Israel Levine (1885–1930), an All-American selection, who played for Pennsylvania and later coached at the University of Tennessee and at his alma mater; Fred Lowenthal (1879–1931), who starred at the University of Illinois and later coached its team; Edward Siskind (1886–1955), who played and coached at Fordham University; Frank Glick (1893–1979) of Princeton University, who coached at his university and at Lehigh; Arnold Horween, All-American at Harvard and coach of the team in 1926–30. Others were Benny *Friedman, Joe Alexander, Louis Oshins (1902–1975), Marv *Levy (1926–), and Maurice (“Mush”) Dubofsky (1910–1970), captain of the Georgetown University team.

Although professional football began officially in 1895, the Syracuse, N.Y., Athletic Association played the game for money before that date. Jewish members of the team included the manager and coach, Samuel Jacobson; the Freeman brothers, David and Chuck (1882–?), and an outstanding running back, Paul (Twister) Steinberg (1880–1964). Steinberg was also a member of the champion Philadelphia Athletics in 1902, and the famous Canton Bulldogs in 1905–06. In 1898, Barney *Dreyfuss of baseball fame was co-owner and manager of the Pittsburgh Athletic Club, the champions of professional football. Other professional players included John Barsha (Abraham Barshofsky) (1898–1976), 1919–20; Leonard Sachs (1897–1942), 1920–26; the Horween brothers, Arnold, 1921–24, head coach of the Chicago Cardinals in 1923–24, and Ralph (1896–1997), 1921–23; Joseph Alexander, 1921–22, 1925–27, head coach of the NY Giants in 1926; Jack Sack (Jacob Bernard Sacklowsky) (1902–1980), 1923, 1925–26; Samuel Stein (1906–1966), 1926, 1929–32; Saul Mielziner (1905–1985), 1929–34; Ollie (Bernard Oliver) Satenstein (1906–1959), 1929–33; Benny *Friedman, 1927–34, head coach of the Brooklyn Dodgers in 1932; Philip (Motsy) Handler (1908–1968), 1930–36, head coach

of the Chicago Cardinals in 1943–45, 1949; Louis Gordon, 1930–38; Harry “Doc” Newman (1909–2000), 1933–37, in 1933 he led the National Football League in passing for the N.Y. Giants; Charles (Buckets) *Goldenberg (1911–1986), 1933–45; Edwin Kahn (1911–1945), 1935–37; David Smukler, 1936–39, 1944; Marshall “Biggie” Goldberg (1917–), 1939–43, 1946–48; Sidney *Luckman (1916–1998) 1939–50, a member of the Professional Football Hall of Fame; Alexander (Allie) *Sherman (1923–), 1943–47, head coach of the N.Y. Giants, 1961–68; Herbert Rich, 1950–56, an all-league selection in 1952; Sidney Youngelman, 1955–63; Michael Sommer, 1958–63; and Ron Mix, 1960–69, a member of the all-time American Football League team. Sid *Gillman (1911–2003) served as head coach of the Los Angeles Rams in 1955–59 and Los Angeles and San Diego Chargers in 1960–69. Al *Davis (1929–) was head coach and is now owner of the Oakland Raiders, and was commissioner of the American Football League in 1966. Benjamin F. Lindheimer (1896–1960) was commissioner of the All-America Conference in 1946–47; and Art *Modell (1925–), owner of the Cleveland Browns which became the Baltimore Ravens, and president of the National Football League in 1967–70. Referees of note were Norman (“Bobie”) Cahn (1892–1965), Joseph J. Lipp (1889–1958), Joseph Magidsohn (1888–1969), and Samuel A. *Weiss (1902–1977).

Canadian professional football executives included Louis Hayman, Harry Sonshine, Neville Winograd, David Loeb, Samuel Berger, and G. Sydney Halter, the first commissioner of the Canadian Football League. Halter and Abe Eliowitz (1910–1981), a U.S. player, are members of the Canadian Football Hall of Fame.

Gary Wichard, quarterback, C.W. Post (1971), Randy Grossman (1952–), end, Temple (1973) and David Jacobs (1957–), kicker, Syracuse (1978) won All-America honors. Grossman played professionally with the Pittsburgh Steelers.

Ron Mix (1938–), offensive tackle with the San Diego Chargers, retired in 1973 after a 13-year career. He was named to the Professional Football Hall of Fame in 1979. Harry Newman, an All-America quarterback at Michigan in 1932, was named to the College Football Hall of Fame in 1975.

In 1972 Carroll *Rosenbloom (1907–1979) exchanged ownership of the Baltimore Colts for the same position with the Los Angeles Rams of the NFL. Zygmunt Wilf, a child of Holocaust survivors, became owner of the Minnesota Vikings in 2005. Other owners include Al Lerner (1933–2002), Cleveland Browns; Arthur Blank (1942–), Atlanta Falcons; Robert *Kraft (1942–), New England Patriots; Daniel Snyder, Washington Redskins; Malcom Glazer (1928–), Tampa Bay Buccaneers (and majority owner of Manchester United), Jeffrey Lurie (1951–), Philadelphia Eagles; and Robert *Tisch (1926–2005), co-owner of the New York Giants.

Players who performed on Super Bowl teams were Lyle Alzado (1949–1992), Los Angeles Raiders, 1984; Ed Newman (1951–), Miami Dolphins, 1985 and John Frank (1962–) and Harris Barton (1964–), San Francisco 49ers, 1989 and 1990.

Alzado, Newman, Barton, and Brad Edelman of the New Orleans Saints were named to All-Pro teams during this period. Barton, an offensive tackle, was an All-Pro in 1990 and 1992.

Coach Marv Levy, the Phi Beta Kappa scholar who was hired by the Buffalo Bills in 1986, led the Bills to four consecutive Super Bowl appearances (1991–1994). Coach Sid Gillman and Al Davis were voted into the Professional Football Hall of Fame in 1983 and 1992. In 1989 Gillman was also named to the College Football Hall of Fame. Beginning in 1960, Davis served as a personnel assistant and scout, head coach, general manager, league commissioner, principal team owner, and chief executive officer. Davis was a Gillman assistant in 1960.

Golf

The development of outstanding Jewish golfers was slow as most established golf clubs barred Jews from membership. Elaine V. Rosenthal (1896–?) of the United States was one of the first successful golfers. She won a number of tournaments after placing second in the national amateur championship in 1914. Herman Barron (1909–1978) was a leading player on the United States professional tour in the late 1940s, a member of the United States Ryder Cup team in 1947, and world professional senior champion in 1963. Sidney Brews (1899–1972) of South Africa had a long career as a professional golfer. Beginning in 1925, he won 30 Open championships in six countries. South African national amateur champions and international players included Brews' brother-in-law, Mickey Janks, South African national champion of 1948; Betty Bental Peltz; Florrie Josselson; Rita Levitan; Isabel Blumberg; and Judy Angel. Martin (Marty) Fleckman of the United States won the national collegiate title in 1965 and two years later became the first golfer in history to win the first tournament he entered as a professional. In 1968, Bruce Fleisher (1948–) won the United States amateur championship, and, with Richard Siderowf, was a member of the winning U.S. team at the world amateur championships in Australia. Fleckman, Fleisher, Siderowf, and Arnold Blum were all members of winning U.S. teams in Walker Cup competition. Douglas Silverberg of Canada and Roberto Halpern of Mexico were also international golfers. Jane Weiller Selz, an American, won the women's national amateur championship of Mexico in 1960. In 1960–61, Lord (Lionel) Cohen of Great Britain served as captain of the famous Royal and Ancient Golf Club of St. Andrews, Scotland. Israel opened its first golf course at Caesarea in 1961.

American Amy *Alcott (1956–) had 29 career wins, including five majors, and was inducted into World Golf Hall of Fame in 1999. Richard Siderowf, an American, won the Canadian Amateur in 1971 and the British Amateur in 1973 and 1976.

After 13 years as a club professional, Bruce Fleischer returned to the tour and won his first Professional Golf Association tournament in 1991. In 1992, Monte Scheinblum won the National Long Drive championship. Entertainer Dinah

Shore was the 1985 recipient of the Patty Berg Award for outstanding contributions to women's golf.

Gymnastics

Germany's Flatow cousins, Alfred (1869–1942) and Gustav Felix (1875–1945), won six medals (five gold) in gymnastic competition at the first modern Olympic Games in 1896. Other Olympic medalists included Imre Gellert (Hungary), silver, in 1912; George Gulack (1905–1986; United States), gold, in 1932; Philip Erenberg (1909–1992; United States), silver, in 1932; Agnes *Keleti (1921– ; Hungary), 11 medals, including five gold, in 1948–52, and 1956; Alice Kertesz (Hungary) gold and silver, in 1956; Mikhail Perelman (U.S.S.R.), gold, in 1952; and Vladimir Portnoi (U.S.S.R.), silver and bronze, in 1960. Abie *Grossfeld (1934–) and Mark Cohn (1943–) of the United States won gold medals in the Pan-American Games, and Daniel Millman (1946–) of the United States became the first world trampoline champion in 1964. Joseph Salzman was co-coach of the United States Women's Olympic team in 1948. Harvey Berkman, who was physical education director of Chicago's Jewish People's Institute from 1908 to 1922, was responsible for the training of some of America's best gymnasts.

Abie *Grossfeld coached the United States men's team at the 1972 Olympic Games. Marshall Avenor was a 1972 Olympian and a 1975 Pan-American Games gold medalist. Sharon Shapiro of UCLA won all four individual events and the all-around title at the United States women's college championships in 1980.

Olympic medalists included Mitch *Gaylord (1961–) of the U.S., who won a gold, silver, and two bronze medals in 1984; Valeri Belenki of Azerbaijan, a gold and bronze winner in 1992; and Kerri *Strug (1977–) of the U.S., who won a gold medal at the 1996 Games.

Soviet gymnast Maria *Gorokhovskaya (1921–) won seven medals at the 1952 Olympics. Americans Lucy Wener and Brian Ginsberg won Pan American Games gold medals in 1983 and 1987.

Handball

This is a very popular sport with American Jews. During the 1960s, the membership of the United States Handball Association was 35 percent Jewish. The game has had numerous Jewish national champions including Vic *Hershkowitz (1918–), handball's greatest all-round player, and Jimmy *Jacobs (1931–1988), the best player of the 1960s. Hershkowitz won a record 40 national titles in one-wall, three-wall, and four-wall play between 1942 and 1968. Jacobs' victories were gained in three-wall and four-wall competitions.

Handball held its first national championship in 1919, and the following year Max Gold won the title. Other players who gained national singles titles were George Nelson, Ken Schneider, Paul Haber, Simon ("Stuff") Singer, Martin Decatur, Ken Davidoff, Steve Sandler, Michael Schmookler, Irving Jacobs, Harry Goldstein, Jack Londin, David Margolis, Joseph Garber, Arthur Wolfe, the Alexander brothers Seymour and Morton, and Sheila Maroschick. Members of the Helms Hand-

ball Hall of Fame include players Hershkowitz and Schneider and Hyman Goldstein and Judge Joseph Shane, both national commissioners of the United States Handball Association.

Paul Haber (1970–71) and Fred Lewis (1972, 1974–76, 1978) won United States Handball Association singles titles.

Horse Racing

An English Jew named Lamego was engaged in this sport as early as the 18th century. Active in English racing during this period were Baron Maurice de *Hirsch, who gave all his racing winnings to charity, and Sir Ernest *Cassel. Philip Levi (1821–1898) was an early patron of the sport in Australia. In the United States, Ben Cohen was an officer of the Maryland Jockey Club in 1830, and six years later a horse owned by Aaron Philip Hart won the first running of the King's Plate in Canada.

America's leading jockey before the Civil War was Jacob Pincus (1838–1918) who began to ride in 1852. Pincus became a trainer and in 1881 he saddled the first American-bred horse to win England's Epsom Derby. One of those who employed Pincus as a trainer was August *Belmont, who had entered the sport in 1866 as a founder of Jerome Park and was the first president of the American Jockey Club. This club included many Jewish horse owners. Other prominent American owners and trainers in the 19th century were David Gideon (1846–1929), Charles Fleischmann (1834–1897), Moses Goldblatt (1869–1941), and Julius (Jake) Cahn (1864–1941), owner and trainer of the 1897 Kentucky Derby winner, Typhoon II.

Georges Stern (1882–1928) of France earned the title "King of the Jockeys" during a career that ran from 1899 to 1926. During that time Stern won almost every major European event, including the 1911 Epsom Derby. America's Walter Miller (1890–1959), another successful jockey of the same era, is a member of the national Jockeys Hall of Fame. He had ridden in the United States (1904–09) and Europe before weight problems forced his retirement. Miller was the American riding champion in 1906–07 and had ridden 388 winners in 1906, a record that lasted until 1952. Other outstanding American jockeys were Lewis Morris; the Renick brothers, Joseph (1910–?) and Sam (1912–1999); Robert Merritt (1912–); Willie *Harmatz (1931–); and Walter ("Mousy") *Blum (1934–), who rode over 3,000 winners from 1953 and was national riding champion in 1963–64. Harry ("Cocky") Feldman (1915–1950) was the national riding champion of South Africa seven times during an 18-year career. He was killed in a riding accident, as was Britain's Reginald Sassoon (1893–1933), an amateur steeplechase rider. Nikolai Nasibov was the Soviet Union's leading jockey in the 1960s.

The most noted American trainers, who were also owners and breeders, were Hirsch *Jacobs (1904–1970) who saddled more winners (3,596) than any other trainer in history; his brothers Eugene and Sidney; the Byer brothers, Nathaniel, Frank, and Jacob; Mose Shapoff; the Lowenstein brothers, Jake (1889–1971) and Mose; Philip Bieber, founder and first president of the Horsemen's Benevolent and Protective As-

sociation; Kentucky Derby winners Sol Rutchick and Jacob ("Jack") Price; Arnold Winick; Howard ("Buddy") Jacobson (1931–1989), the national training champion in 1963–65; and Yevgeni Gottlieb of the U.S.S.R.

Prominent owners and breeders included Sir Ellice V. Sassoon (1881–1961), who had four Epsom Derby winners; the Joel brothers, Jack (1862–1940) and Solomon ("Solly"; 1866–1931); Nat Cohen (d. 1988), winner of the 1962 Grand National Steeplechase at Aintree; Stuart Levy (1908–1966); Heinrich Loebstein; Michael Sobell; Sir Henry *d'Avigdor-Goldsmid; and Evelyn *Rothschild, Great Britain; Jean Stern (1874–1962), who won the Grand Steeplechase of Paris four times; Georges *Wildenstein (1893–1964) and his son Daniel; Alec Weisweiler; Barons Edouard (1868–1949), James (1878–1957), Maurice (1891–1957) and Guy de Rothschild, France; Sir Adolph Basser (1887–1964), Australia, winner of the Melbourne Cup in 1951; Abe Bloomberg and G.M. Jaffee, South Africa; and the Americans Benjamin Block (1873–1950) and John D. Hertz (1879–1961; Hertz and his wife Frances (1881–1963) won the Triple Crown in the United States in 1943 with Count Fleet; Herbert M. Woolf (1880–1964), J.J. (Jack) Amiel, Harry F. *Guggenheim, and Isaac Blumberg were all Kentucky Derby winners; Bernard M. *Baruch, William Littauer (1865–1953); Harry M. *Warner (1881–1958); Alvin Untermeyer (1882–1963); Louis B. *Mayer; Albert Sabbath (1889–1969) whose horse Alsab cost him \$700, earned \$350,000 from him and sired winners who earned \$4,000,000. There were also Nelson I. Asiel (1886–1965); Robert Lehman, Arlene Erlanger (1895–1969); Louis K. Shapiro (1897–1970); Irving Gushen (1899–1963), president of the Horsemen's Benevolent and Protective Association in 1953–63; Stanley Sagner (1908–1964); John M. *Schiff; Jacob Sher (1889–1972); Louis E. Wolfson; Isador (Colonel) Bieber (1887–1974); Maxwell H. Gluck (1896–1984); Jack Dreyfus Jr. (1914–?), chairman of the Board of Trustees of the New York Racing Association in 1969–70; and David J. Davis, whose Australian thoroughbred, Phar Lap, was considered by many to have been the greatest racehorse of all time.

American racing executives included Louis Smith (1888–1968), Benjamin F. Lindheimer (1890–1960), Leonard Florsheim (1880–1964), Joseph Schenck (1878–1961), Morris Shapiro (1883–1969) and his son John D., the originator of the Washington, D.C., International Classic and president of the Thoroughbred Racing Association; Mervyn *Leroy (1900–1987); J.J. ("Jake") Isaacson (1896–?); David Haber; Nat Herzfeld; Joseph Cohen; Joseph Gottstein (1891–1971); the Cohen brothers, Herman and Ben, who controlled Maryland's famous racetrack, Pimlico; Dr. Leon Levy (1895–?) and his son Robert; Hyman N. Glickstein, Saul Silberman (1896–1971), Philip H. Iselin, and J. Samuel Perlman (1900–), a Canadian, who was publisher and editor of the *Daily Racing Form* and *Morning Telegraph*.

Harness racing became a major sport in the United States in 1940 when George Morton Levy (1889–1977) introduced night racing at Roosevelt Raceway in New York. Levy also

encouraged and backed the invention of the mobile starting gate. He is a member of the Hall of Fame of the Trotter. Even before 1940, track-owner Louis Smith modernized the sport by eliminating the use of heats to determine winners; he built and owned New England's first modern racetrack, Rockingham. Sacher ("Satch") Werner (1898–?), was the outstanding American trainer and driver; before turning professional he was an amateur champion of Vienna, Austria. Amateur drivers included Nathan S. *Straus (1848–1931), who gave up racing and yachting to devote himself to philanthropies which helped lay the foundations of the State of Israel; and Neal Shapiro, won an Olympic silver and bronze medal in 1972 in show jumping.

American jockey Walter Blum (1934–) retired after the 1975 season, after a 22-year riding career with 4,383 winners. Maxwell Gluck (1977) and Louis Wolfson (1978) were named the outstanding American thoroughbred owner-breeders of the year. Wolfson's horse Affirmed won the 1978 Triple Crown (Kentucky Derby, Preakness, and Belmont Stakes) and was named Horse of the Year in 1978 and 1979. Sir Michael Sobel and Sir Arnold Weinstock's Troy won the 200th running of the English Derby and Harry Meyerhoff's Spectacular Bid won the Kentucky Derby.

Jockeys Walter Blum and Jacob Pincus were enshrined in the U.S. Thoroughbred Racing Hall of Fame in 1987 and 1988. Blum rode 4,382 winners in a 22-year career (1953–1975), and Pincus, a leading 19th-century jockey, was also an outstanding trainer. Another Hall of Fame entry in 1990 was owner Sam Rubin's John Henry, a two-time American Horse of the Year.

In 1983, with 2,500 victories to his credit, South African jockey Stanley Amos retired, the same year another South African jockey, Basil Barcus, recorded his 1,000th win.

Ice Hockey

Defense man Yuri Lyapkin of the U.S.S.R. won an Olympic gold medal in 1976.

Mathieu *Schneider (1969–) is a two-time NHL All-Star and was a member of the U.S. Olympic team and Team U.S.A.

Gary *Bettman (1952–) has been commissioner of the National Hockey League since 1993. Edward and Peter Bronfman, owners of the Montreal Canadiens since 1971, sold the team in 1978. Steve Ellman is owner of the Phoenix Coyotes, and Ed Snider owns the Philadelphia Flyers. Stan *Fischler (1932–) is an author, broadcaster, and leading authority on ice hockey.

Ice Skating (Figure and Speed)

American Scott Cramer won the men's professional figure skating gold medal at the world championships in 1980. Dr. Alain Calmat, an Olympic silver medalist in figure skating in 1964, became France's Minister of Youth and Sports in 1984. American Judy Blumberg and her partner won bronze medals in ice dancing in the World Figure Skating Championships in 1983–85. They placed fourth in the 1984 Olympic Games.

In speed skating, American Andrew Gabel (1964–) is

a four-time Olympian (1988, 1992, 1994, 1998) and holds a silver medal as a member of the 1994 5,000 m Short Track relay team. In figure skating, Sasha *Cohen (1984–), Sarah *Hughes (1985–), and Irina *Slutskaya (1979–) all skated in the Olympics and have won numerous medals.

Jai Alai

Richard I. Berenson (1893–1967) was responsible for the success of jai alai in the United States. He was president and general manager of the Miami Fronton from 1929 until his death. He was succeeded by his son, L. Stanley ("Buddy") Berenson. Among Americans who played professional jai alai were Martin Perfit and Howard Wechsler.

American Joey Cornblit, a professional for 20 years, won the Tournament of Champions (a meeting of the sport's top players) in 1992, when he also won his ninth Florida singles championship.

Judo

In 1964, when this sport was added to the Olympic program for the first time, James Bregman (1941–) of the United States won a bronze medal in the middleweight division. Other internationalists included Gabriel Goldschmied, Mexico, a bronze medalist in the 1967 Pan-American Games; Ronald Hoffman (1944–), Bernard Lepkofer (1933–), and Irwin Cohen of the United States; Ivan Silver of Great Britain; Salvadore Goldschmied of Mexico, and Jorge Gleser (1947–) of Argentina and the United States.

Irwin Cohen (1971–72, 1974, 1976–78), Steve Cohen (1974–75, 1977) and David Pruzansky (1973) won United States national titles. Jesse Goldstein won a 1979 Pan-American Games silver medal for the United States in the heavyweight division. Amy Kublin won American women's titles in 1976–78, 1980.

After 40 years, Israel won its first Olympic medals in 1992. Yael *Arad gained a silver medal in women's competition and Shay Oren Smadga took a bronze in the men's events. Other Olympic medalists were American Robert Berland, silver, and Canadian Mark Berger, bronze, in 1984.

Pan American Games medalists in 1983 and 1987 included Berland, Berger and also American Damon Keeve.

Karate

Between 1986 and 1988, Kathy Jones won two silver and four bronze medals in World Cup and World Championship competition. Danny Hakim of Australia won a silver medal in the 1988 World Championships.

Lacrosse

Early internationalists were Henry Joseph of Canada, who in 1876 played in a game before Queen Victoria in London, and Lionel Moses of the United States, the first known Jewish captain of an intercollegiate sports team. Like Joseph, Moses was a member of teams that toured Great Britain before 1900. Bernard M. Baruch played the game at the City College of New York in the late 1880s. Another early American player was Clarence M. Guggenheimer, who played for Johns Hopkins and later for Harvard. Milton Erlanger (1888–1969), also of

Johns Hopkins, served as president of the Intercollegiate Lacrosse Association and was later elected to the Lacrosse Hall of Fame. Other members of the Lacrosse Hall of Fame include Henry S. Frank, captain of the 1909 Johns Hopkins team, and Victor K. Ross, who starred at Syracuse University and led his team to victory over Oxford-Cambridge in 1922.

Lawn Bowling

This is a very popular game with the Jews of South Africa. In the 1960s, when Jews represented 1% of the total population, 25% of all lawn bowlers in the country were Jewish. South African bowlers and administrators included Alfred ("Alf") Blumberg, who in 1950 became his country's first Jewish lawn bowling internationalist and winner of an Empire Games' gold medal in Auckland, New Zealand, that year; Abraham (Pinky) Danilowitz, 1958 Empire Games gold medalist in singles, and Leon Kessel who represented South Africa in the first world lawn bowling championship in 1966. Harry Hart of Rhodesia was awarded the MBE for his services as player and administrator in 1964. David Magnus was one of Australia's star players.

Luge (Toboggan)

American Gordy Sheer won gold medals in the North American Championships doubles in 1990 and 1991. Sheer also participated in the 1992 Olympic Games.

Motorboat Racing

In 1905, two years after the sport began, America's Jacob Siegel won the inboard hydroplane National Championship Trophy. The following year, Britain's Lionel de *Rothschild was co-owner of the winning boat at the Harmsworth Trophy event in Ireland. Bernard M. Baruch and his brother Hartwig won the National Championship Trophy in 1906–09. Herbert Mendelsohn was victorious in the 1937 Gold Cup race, and S. Mortimer Auerbach (1901–) won the National Sweepstakes in 1939. Donald Aronow of the United States, a boatbuilder, designer, and driver, won the world title in ocean racing in 1967 and 1969. In the latter year, the Union of International Motorboating awarded him its Gold Medal of Honor. Other American ocean drivers were Jerry Langer (1966 national outboard champion), Peter Rothschild (1966 national inboard champion), and William Wishnick (1924– ; 1970 national inboard champion). In 1967, Milton Horwitz of the United States won the national title in predicted-log competition. Horwitz, Aronow, Langer, and Rothschild are members of the Gulf Marine Hall of Fame. Other international drivers included Arnie Levy and his son Derrick, South Africa; and Alan Bernstein, Rhodesia.

American William Wishnick won the 1971 world ocean racing title and Dr. Robert Magoon (1971–73) and Joel Halpern (1976–77) United States national ocean racing championships.

Don Aronow, American boat designer and two-time world offshore powerboat champion (1967 and 1969), died in 1987.

Motorcycling

In 1936 Australia's Lionel Maurice Van Praag (1908–?) won the world's first speedway championship in Wembley, England, and Benjamin Kaufman (1911–), of the United States, gained national speedway titles in 1936–37.

Olympic Games

Israel joined the United States and a number of other nations in the 1980 boycott of the Moscow Olympic Games as a protest against the U.S.S.R. invasion of Afghanistan. See *Olympic Games for list of Jewish medal winners.

Polo

A favorite sport of the Rothschild banking family since the 1890s, they helped popularize polo in Austria and France. Leading Rothschild players were Baron Louis (1882–1954), Austria; Barons Edouard Alphonse James (1869–1949), Robert (1880–1946), and Elie (1917–), France and Evelyn (1931–), Great Britain. American players included William Littauer (1865–1953); the *Fleischmann brothers, Julius (1872–1925) and Max (1877–1951); Robert Lehman (1891–1969); Adam Gimbel (1893–1969); Samuel Cohen (1896–1965); and John M. Schiff (1904–1987).

Roller Skating

American Scott Cohen, who won the world free skating championships in 1985, 1986, 1989, and 1990, became the first singles skater to win the title four times. Cohen also won a Pan American Games silver medal in 1987.

Rowing

In 1858, Britain's Sir Archibald Levin Smith (1836–1901) rowed in the Cambridge University crew that defeated Oxford and triumphed in the Henley Royal Regatta. During the 1870s Henry Altman (1854–1911), Isaac N. *Seligman (1856–1917), and Lucius *Littauer were engaged in collegiate rowing in the United States. Seligman rowed at Columbia, Littauer at Harvard, and Altman helped to establish the sport at Cornell University. The Lone Star Boat Club of New York City, America's first Jewish rowing group, was organized in 1887. Samuel G. Sterne was its president.

In Olympic competition, Allen P. Rosenberg (1931–) coached the 1964 American rowing team to a pair of victories. As a coxswain, Rosenberg won a gold medal in the 1955 Pan-American Games. Between 1963 and 1966 Donald Spero (1939–) of the United States won seven national, two Canadian, and the 1966 world championship, in single-sculls. He was an Olympic finalist in 1964 and winner of the Diamond Sculls in Britain's Henley Royal Regatta in 1965. Spero and Rosenberg are members of the Helms Rowing Hall of Fame. Frederic Lane stroked the University of Pennsylvania to victory in the Grand Challenge Cup of England's Royal Henley Regatta in 1955, to defeat a Soviet crew. George Hermann, Herbert Senoff James Kreis, Jerry Winkelstein, James Fuhrman (1943–), and Lawrence Gluckman (1946–) were Pan-American Games gold medalists.

Allen Rosenberg coached and David Weinberg was coxswain of the American crew that won the 1974 eight-oared heavyweight race at the World Championships.

Seth Bauer won an Olympic Games bronze medal in 1988. Other American participants in the 1988 Olympic Games were Sherri Cassuto and Jon Fish. Bauer, Fish, and Cassuto won Pan American Games and World Championships medals between 1985 and 1991.

Pablo Bulgach of Argentina and Betsy Kimmel, U.S., won Pan American Games gold medals in 1987 and 1991.

Rugby

John E. Raphael (1882–1917) represented England nine times in international rugby competitions in 1902–06, and Bethel Solomons (1885–1965), later a leading gynecologist, played for Ireland ten times in 1908–10. Aaron (“Okey”) Geffin of S. Africa was the hero of the 1949 test series victory over New Zealand. Samuel Goodman was the manager of the United States Olympic gold medal teams in 1920 and 1924. Australia’s Albert A. Rosenfeld (1885–) and Britain’s Lewis Harris were outstanding Rugby League players. Rosenfeld appeared in the first test series between England and Australia in 1909, and during the 1913–14 season he scored a record 80 tries for Huddersfield in the Northern Rugby Football League. Harris was a member of the Hull Kingston Rovers when they won the Challenge Cup in 1925 and were Northern Rugby Football League champions in 1921 and 1923.

Shooting

In 1868, Philo Jacoby (1837–1922) won the Berlin shooting championship as the representative of the American Sharpshooters Association of New York. During the next 30 years Jacoby made many trips to Europe, where he triumphed in numerous shooting tournaments. In 1876 he captained the California team that won the world shooting championship at the Centennial Exposition in Philadelphia. For many years he was editor and publisher of *The Hebrew*, one of the first Jewish newspapers in San Francisco. Among outstanding U.S.S.R. modern shooters were Olympic medalists Lev Vainshtein, 1952; Allan Erdman, 1956; world champion Mikhail Itkis, 1958; and Larissa Gurvich, 1967. Gurvich won the European and World skeet championships in 1975. Joelle Fefer of Canada won three Pan American Games medals in 1983 and 1987. Thomas Bernstein, a member of the Norwegian national team, won the U.S. national collegiate (NCAA) rifle championship in 1988.

Squash Racquets & Racquetball

Victor Niederhoffer won United States squash racquets championships in 1972–75, and the Canadian and North American Open titles in 1975. In 1977 Selwyn Machet won the South African amateur championship. American Stuart Goldstein won the World professional title in 1978.

In racquetball Martin Hogen won the United States championship in 1978, and his second and third national professional racquetball titles in 1979 and 1980. Kathy May

Teacher won the United States women’s national paddle tennis championship in 1980.

Surfing

South African Shaun Tomson won the 1975 American Championship Cup and the World professional title in 1977; he remained among the world’s best surfers in 1985. After a decade of competition Tomson had recorded the most victories in the Association of Surfing Professionals world tour.

Swimming and Water Polo

Jews were active in competitive swimming from the time the sport began in the 19th century. Marquis Bibbero of England participated in swimming races in the 1860s and G. Cohen set an American record for the 440-yards in 1878. In 1896, Jews triumphed in all three swimming events at the first modern Olympic Games. They were Alfred Hajos (Guttman; 1878–1955), of Hungary and Paul Neumann (1875–), of Austria (see *Olympic Games). Hajos, an architect, built Budapest’s main swimming pool and in 1924 won a silver medal in the Olympic Art competition. Otto Wahle (1880–1963), an Austrian Olympian, immigrated to the United States, where he became a coach and helped influence the course of American swimming and coached the American Olympic teams in 1912 and 1920. His Olympic successor was William (Bach) Bachrach (1879–1959), who coached the Illinois Athletic Club swimming team in 1912–54. Bachrach trained many national and Olympic champions, including the great Johnny Weissmuller, and headed the Olympic swimming teams in 1924 and 1928. During the same period, Charlotte Epstein (1885–1938) established swimming as a sport for women in the United States. She founded the Women’s Swimming Association in 1917 and was responsible for women’s swimming being included in the 1920 Olympic Games. Miss Epstein was manager of the women’s Olympic swimming teams in 1920, 1924, and 1932, and served as chair of the United States Olympic Women’s Swimming Committee. She was also chair of the United States Maccabiah Games Swimming Committee in 1935. Leo Donath of Hungary headed the International Swimming Federation in the 1930s. Mark *Spitz (1950–), who won four medals in the 1968 Olympic Games, set records in the butterfly stroke. In 1967, when he was named “world swimmer of the year,” Spitz won five gold medals in the Pan-American Games. In 1972, the year after he became the first Jewish sportsman to win the Sullivan Award as the outstanding American amateur athlete, Spitz won an unprecedented seven gold medals and set seven world records at the Olympic Games. In 1983, Spitz was one of the first 20 Olympians named to the U.S. Olympic Hall of Fame and Museum. Chosen by the National Association of Sportscasters and Sportswriters, Spitz received the second highest number of votes cast; only Track and Field great Jesse Owens received more. Other swimming Olympic medalists were Eva *Szekely (1927–) Hungarian-born swimmer who set ten world records, five Olympic records, and over 100 Hungarian national records while winning two Olympic medals, ten

World University Championships and 68 Hungarian National Championships over her 19-year career. She is a member of the International Swimming Hall of Fame. Other winners are Andrea Gyarmati, Hungary (silver and bronze), 1972, Wendy Weinberg, United States (bronze), 1976; and Lenny *Krayzelburg (1975–), who won four Olympic gold medals.

Israel's star swimmers and divers in the 1960s were Yoav Raanan, Yvonna Toviss, Abraham Melamed, Gershon Sheffa, Moshe Gartel, and Yoram Schneider.

Jews were prominent too in water polo at the Olympics (see *Olympics). Bela Komjadi (1892–1933), coach of the Hungarian national team in the late 1920s and early 1930s, established Hungary as an Olympic power in water polo. American Peter Asch won a 1972 Olympic bronze medal in water polo. Australia's Russell Basser and American Charles Harris represented their countries in the 1984 and 1992 Olympic Games. Harris was a silver medalist in the 1991 Pan American Games.

In 1980, Helen Plaschinski of Mexico won the Latin Cup 100 meter freestyle gold medal in Madrid, Spain. Barbara Weinstein won the United States indoor platform diving title in 1979 and the outdoor event the following year. She also won the 1979 Pan-American Games gold medal in platform competition.

Dara Torres won her second gold and third Olympic medal in 1992. She gained her first gold in 1984 and received a Olympic bronze medal in 1988. Other American medalists in major international competition were John Witchel, 1987, Pan American Games, two golds, and Cheryl Kriegsmann, Dan Kutler, and Dan Kanner in the World University Games in 1987 and 1991.

Olympic finalists in 1988 and 1992 were Vadim Alekseev, U.S.S.R., and Tomas Deutsch, Hungary. Alekseev, who is now an Israeli, won a Goodwill Games silver medal in 1990.

In Synchronized Swimming, Americans Tracy Long and Ann Miller won Pan American Games gold medals in 1987 and 1991.

Al Schoenfeld, publisher and editor of swimming publications, and Dr. Paul Neumann, Austria, 1896 Olympic gold medalist, were named to the International Swimming Hall of Fame in 1985 and 1986.

In water polo, American Peter Asch won a 1972 Olympic bronze medal. Australia's Russell Basser and American Charles Harris represented their countries in the 1984 and 1992 Olympic Games. Harris was a silver medalist in the 1991 Pan American Games.

Table Tennis

Table tennis was organized as a modern sport in the 1920s. It proved a very popular game with Jews and several became world champions. The Honorable Ivor Montagu (1904–1984) served as president of the English or International Table Tennis Federation from 1922 to 1967. His mother, Lady Swaythling (1879–1965), was also president of the English Table Tennis Federation and in 1926 donated the men's world team

cup which bears her name. M. Cohen of Great Britain won the second English open championship in 1922, and Marcus Schussheim of the United States was the first American champion in 1931. Dr. Roland Jacobi of Hungary triumphed in men's singles at the initial world championship in 1927. Other world champions in singles, doubles, and mixed doubles were Hungary's Zoltan Mechlovitz; Gyozo Viktor *Barna (1911–1972), who won 22 world titles including five singles championships; Richard *Bergmann (1919–1970), an Austrian who won four singles titles; Alfred Liebster, Austria, and Angelica *Adelstein-Rozeanu (1921–), Romania; the sisters Thelma Thall and Leah Thall Neuberger, United States; and Svetlana Grinberg, U.S.S.R.

Ivor Montagu of Great Britain, who became the first chairman of the Table Tennis International Federation and held the post for over 40 years, died in 1984.

Tennis and Squash

As most tennis facilities were located in private clubs that barred Jewish membership, progress in this sport was slow. Conditions improved after World War II, as did the rankings of Jewish players. The first Jewish player officially ranked in the United States was Dr. William Rosenbaum (1882–1951) in 1908, and the first to gain the top-ten was Julius Seligson (1909–1987) in 1929. In Europe, Mikhail Stern represented Romania in the 1922 Davis Cup competition, and in 1928–30 Baron Hubert de Morpurgo (1897–?) of Italy received world ranking. Other players who achieved world ranking included Daniel Prenn (1905–), 1929 Germany, and 1932 Great Britain, 1934 (doubles); Ladislav Hecht (1910–), Czechoslovakia, 1934 (doubles), who defeated Britain's Davis Cup player Bunny Austin; Angela *Buxton (1934–) Great Britain, who was a Wimbledon doubles title winner in 1956. Outstanding tennis players also included Abraham Segal (1931–), South Africa, winner of South African singles championship in 1967; Pierre *Darmon (1934–) France, 1958, 1963–64; Tom ("the Flying Dutchman") Okker (1944–), Netherlands, Dutch national champion who won the Italian national singles title in 1968; Dick *Savitt (1927–) an American who was Wimbledon champion in 1951 and came out of retirement to win both the singles and doubles championships at the 1961 Maccabiah Games; Herbert *Flam (1928–), who won more top world rankings than any other Jewish tennis player and represented the U.S. Davis Cup team in 1951 and 1952; Americans Barbara Breit, 1955, 1957; Anita Kanter, 1952; and Julie M. Heldman (1945–), who as a girl of 12 won her first national title, the Canadian Junior Championship, and later won the Italian National Women's singles title in 1968; and Pete *Sampras (1971–), whose father is Jewish and who is considered by many tennis analysts to be the greatest tennis player of all time. Among Israel players of note was Eleazar Davidman.

Americans Julie Heldman (1974), Harold *Solomon (1975–77, 1979), Brian Gottfried (1977–79), and Eliot Telscher (1980) were ranked among the world's top ten players. Heldman played in Federation and Wrightman Cup competition

and Solomon and Gottfried in Davis Cup play. Solomon was South African Open champion in 1975 and 1976, and Gottfried won the French (1975 and 1977), World (1975) and Wimbledon (1976) doubles championships. Brian Gottfried and Harold Solomon, retired from the professional tour in 1984.

In 1976 Ilana Kloss of South Africa won the French mixed doubles and the United States women's doubles titles. American Bruce Manson won a 1975 Pan-American Games gold medal, and Dana Gilbert the 1978 United States women's Clay Court championship.

American Dick Savitt, 1951 Wimbledon winner, was included in the International Tennis Hall of Fame in 1976.

Other Americans Eliot Telscher, Brad *Gilbert (1961–), Aaron Krickstein, and Jay Berger and Israel's Amos Mansdorf and Argentina's Martin Jaite joined the world's tennis elite in the 1980s. These players and Shlomo Glickstein, Shahar Perkiss, and Gilad Bloom of Israel and Andrew Sznajder of Canada played in Davis Cup competition. Elise Burgin represented the U.S. in Federation Cup play.

American Jim Grabb was a member of the men's doubles combination that won the U.S. Open championship in 1992, and Brad Gilbert won a men's singles bronze medal in the 1988 Olympic Games.

Joseph Cullman III, who helped launch the women's pro tour, was inducted into the International Tennis Hall of Fame in 1992. Anna Smashnova was ranked No. 16 on the woman's tour in 2002 and 2003.

National champions in American squash racquets and squash tennis were Victor Niederhoffer, Victor Elmaleh, Abraham M. Sonnabend (1897–1964), Milton Baron, and James Prigoff. Prigoff served as president of the National Squash Tennis Association, and Roger Sonnabend held the same position with the National Squash Racquets Association. Cecil Kaplan, David Duchen, and Jeffery Maisels were South African national champions and internationalists.

Track and Field

Modern track and field had its beginnings in England in the 1850s and 1860s. An early American runner was Lipman *Pike, a professional baseball player. Pike ran 100-yards against a Canadian Indian on the Capitoline Grounds in Brooklyn, New York, in 1869 and four years later became the Maryland State 100-yard champion. Daniel Stern (1849–1923) began to race-walk in 1873 and three years later won the one-and three-mile events at the first American track-and-field championships. He was an early member and officer of the New York Athletic Club and served on the committee charged with building the first cinder track in the United States. In 1875, Philo Jacoby (1837–1922) participated in the San Francisco Olympic Club's first outdoor athletic games. Victor E. Schifferstein (1863–?) represented the same California club when he won the national long-jump championship in 1888. Earlier that year, Schifferstein ran 100 yards in ten seconds to equal the world record of the time. The greatest American runner of the 19th century was Lawrence ("Lon") *Myers. He set world

records in the 440- and 880-yard runs, and won American, Canadian, and British national championships in 1879–85. In 1900, Myer Prinstein (1880–1925) of the United States became the first Jewish medalist in Olympic track-and-field competition. He won the triple jump and placed second in the long jump. Earlier that year Prinstein had established a new world mark of 24 feet, 7.25 inches in the long jump. He repeated his Olympic triple-jump victory in 1904 and added a gold medal in the long jump. In 1906, Prinstein won another gold medal in Athens in the long jump, in what was then considered the Olympic Games, but some 50 years later the 1906 competition was ruled not to have been an Olympiad. Michael Spring (d. 1970) won the Boston marathon race in 1904. Abel Kiviat (1892–1991) won a silver medal at the 1912 Olympics, and set a world 1,500 m record that year. England's most famous track star was Harold *Abrahams who won the 100 meters race at the 1924 Olympic games; and his brother Sir Sydney *Abrahams also represented Britain at the Olympic Games. Harold Abrahams in 1969 became chairman of the British Amateur Athletic Board. Fanny ("Bobbie") Rosenfeld (1905–1969) in addition to starring in ice hockey, basketball, and softball, tied the women's world record for the 100-yard dash in 1925, excelled at the Olympics in 1928, and was hailed by the Canadian press as her country's "outstanding woman athlete of the half-century." Lillian *Copeland (1904–1964) was an Olympic gold and silver medallist, and member of U.S. Track & Field Hall of Fame. Deena Kastor (1973–) won a bronze medal in the women's marathon at the 2004 Olympics. Marty *Glickman (1917–2001) was a U.S. sprinter and a track star who was pulled from the 1936 Berlin Olympics because he was Jewish.

Jews were also medalists in European, British Commonwealth and Empire, Pan-American, and Asian Games.

Irena *Kirszenstein-Szewinska (1946–) of Poland won seven Olympic medals and ten European Championship medals, and is a member of the International Women's Sports Hall of Fame. Faina Melnik-Velva of the U.S.S.R. won an Olympic gold medal in the discus throw in 1972.

Abigail (Abby) Hoffman of Canada won a Pan-American Games gold medal in the 800-meter run in 1971 and silver and bronze medals in the 1975 Pan-American Games. In 1974 Y.C. Yohanna of India won the long jump event and set an Asian record in the Asian Games.

Israeli-born Boris (Dov) Djerassi won the United States national hammer throw in 1975 and 1978, and Ron Wayne won the U.S. national marathon championship in 1974.

Svyetlana Krachevskya of the U.S.S.R. won a 1979 bronze medal in the World Cup and a silver medal in the 1980 Olympic Games in the shot-put.

American Pincus (Pinky) Sober (1905–1980), was chairman of the International Amateur Federation's technical committee and longtime Madison Square Garden track announcer.

In 1992 Mel Rosen served as the U.S. men's Olympic coach, and Yevgeniy Krasnov of Israel placed eighth in the Olympic pole vault competition.

American Ken Flax won medals in the World University Games in 1989 and 1991 (gold) and was named the ninth ranked hammer thrower in the world in 1991.

In 2002, Russian-born Israeli Alex Averbach took the gold medal in the pole vault at the European championships.

Fred Lebow (Ephraim Fishl Lebowitz, 1932–1994) was president of the New York Road Runners Club and founder and director of the New York Marathon and the Fifth Avenue Mile.

Volleyball

Jews have also had a prominent part in volleyball. Sid Nachlas' (1920–) achievements brought him election to the Helms Volleyball Hall of Fame. Harlan Cohen (1934–) coached the American women's Olympic team in 1968. Eugene Selznick (1930–) is a member of the Volleyball Hall of Fame. Doug Beal and Israel's Arie Selinger coached the U.S. Olympic men's and women's teams to gold and silver medals in 1984. These were the first medals ever won by American teams in Olympic competition.

In 1992, Selinger coached the Netherlands men to an Olympic silver medal. Selinger's son Arbutal was a member of the Dutch team. Other Olympic Games medalists were Bernard Rajzman, Brazil, silver, 1984; and Dan Greenbaum, U.S., bronze, 1992.

Water Skiing

David Nations pioneered this sport in Great Britain. He founded the British Water Ski Federation in 1951 and was the national overall champion in 1955–56.

Weightlifting

Britain's Edward Lawrence Levy (1851–1932) was among the first to engage in amateur weightlifting in the 19th century. He won the first English and international competitions in 1891, and five years later served as a weightlifting judge at the first modern Olympic Games. There have been many Olympic weightlifting medalists (see *Olympics). Jews also engaged in the European, Commonwealth, Empire, and Pan-American Games. Oscar State (1911–1984), OBE, of Great Britain organized the weightlifting competitions at the Olympic Games in 1948 and 1956, and officiated at nine Olympic Games, 21 Regional meets such as the Pan-Am, Maccabiah, Asian and Commonwealth Games, two World Games, 24 World Weightlifting Championships, 27 World Bodybuilding Championships, nine Mr. Olympias, 51 international bodybuilding contests and 101 international weightlifting contests, served as secretary of the International Weightlifting Federation, and is a member of the International Federation of Bodybuilding & Fitness Hall of Fame. David A. Matlin, a weightlifting official, served as the 33rd president of the Amateur Athletic Union of the United States in 1967–68. Isaac ("Ike") Berger (1936–), U.S. Olympic weightlifter, winner of gold and two silver Olympic medals, and a member of U.S. Weightlifters Hall of Fame.

David Rigert of the U.S.S.R. won a 1976 Olympic gold medal in the 198-pound division. Commonwealth Games medalists were Terrance (Terry) Perdue, England (bronze), 1974, and Ivan Katz, Australia (silver), 1978.

Grigory Novak, U.S.S.R. world champion in 1946 and 1952 Olympic silver medalist, died in 1980.

David Lowenstein of Australia won a Commonwealth Games silver medal in 1986, and Giselle Shepatin and Rachel Silverman won silver medals for the U.S. in the Women's International Weightlifting Tournaments in 1985 and 1987. Allon Kirschner of Israel won a gold medal in the World Powerlifting Championships in 1989.

Windsurfing

Gal *Fridman (1975–) was the first Israeli ever to win an Olympic Gold medal (2004), and the first Israeli to win two Olympic medals.

Winter Sports

In 1900–20, Cecil *Hart (1883–1940) pioneered amateur ice hockey in Canada. He entered the professional game in 1921 and became a successful coach with the Montreal Canadians. Samuel E. Lichtenhein (1871–1936) owned the Montreal Wanderers hockey team (National Hockey Association) in 1911–18. Americans who owned teams in the National Hockey League included Sidney Solomon Jr. and Sidney Solomon III of the St. Louis Blues and Edward M. Snider of the Philadelphia Flyers. In 1964 the all-Jewish Ha-Koah-Melbourne team won the Australian ice hockey championship.

Louis Rubenstein of Canada introduced figure skating into North America in the late 1870s. He won many titles, including the 1890 world championship in Russia. One of the organizers of the 1890 world competition was Baron Wolff of the St. Petersburg Skating Club. Rubenstein's brothers and sisters, Moses, Abraham, and Rachel, were all champion skaters. Lily Kronberger of Hungary was world figure skating champion in 1908–11. Joel Liberman (1883–1955) of the United States was founder of the New York Skating Club and an Olympic judge in 1928 and 1932. Benjamin Bagdade (1902–) served as president of the American Skating Union in 1947–51 and was manager of the U.S. team at the 1948 Olympic Games. Irving *Jaffee (1906–1981) is a member of the Speed Skating Hall of Fame. France's Alain Calmat, world figure skating champion (1965), was awarded the Legion d'Honneur by President de Gaulle.

Alice Damrosch Wolf Kiaer (1893–1967), a daughter of conductor Walter *Damrosch, organized the first United States women's ski team in 1935 and the following year served as manager of the Olympic team. Richard Rubitscek of Austria won a gold medal in skiing in the 1933 European Maccabiah games and was a founder of the Arlberg ski method. American Hayley Wolff won a grand prix mogul gold medal in 1983 and a silver medal in the first world freestyle championship in 1986. Baron Robert de Rothschild (1880–1946) was the 1936 bobsledding champion of France, and in 1888 E. Cohen of the United States won the Grand National of Tobogganing

at St. Moritz, Switzerland. The Montreal Curling Club numbered Canadian Jews among its members in the early 1800s. In 1965, Terry Braunstein skipped the Manitoba rink to the Canadian curling title.

Wrestling

There were a large number of medalists in wrestling at the Olympics. Jews also won medals for wrestling in European, Commonwealth, Empire, and Pan-American Games. Alfred Brull (1876–1944) of Hungary was president of the World Wrestling League.

David Pruzansky of the United States (1971) and Howard Stupp of Canada (1975, 1979) won Pan-American Games gold medals. Keith Peache of England won a Commonwealth Games gold medal in 1974, and Victor Zilberman of the U.S.S.R. was a silver medalist at the European championship. Zilberman later competed for Canada.

Pan American Games medalists included Canada's Gary Kallos, sambo wrestling, gold, 1983; Andrew Borodow, free and Greco-Roman wrestling, two silvers, 1991; and also American Andrew Seras, Greco-Roman wrestling, gold, 1991. Seras and Borodow competed in the Olympic Games in 1988 and 1992.

Ralph (Ruffy) Silverstein (1914–1980) was United States national collegiate champion in 1935 and Maccabiah Games coach in 1965.

Yachting

In 1969, Israel won its first world title in any sport when Zefania Carmel and Lydia Lazarov sailed to victory in the 420 class championship. In the United States, Emil ("Bus") Mosbacher, *Jr. (1922–1997), triumphed in American Cup races in 1962 and 1967, and his brother Robert Mosbacher (1927–) won the world title in the Dragon Class in 1969. Olympic medalists in yachting were Robert ("Buck") Halperin (1908–?), United States, in 1960; and Valentin Mankin, U.S.S.R. in 1968 (gold). The Levinson brothers, Alan and Harry, won a silver medal for the United States in the 1967 Pan-American Games. Other yachtsmen included Baron Phillipe de Rothschild (1902–1988) and Baron Edmund de Rothschild (1845–1934), France; and August *Belmont (1816–1890), Mortimer L. Schiff, and Walter N. *Rothschild (1892–1960), United States.

In Olympic Games competition, Valentin Mankin of the U.S.S.R. won gold (1972, 1980) and silver (1976) medals, and Daniel Cohan of the United States was a bronze medal winner in 1972.

American helmsman Larry Klein won four world's championships between 1983 and 1991. He was named U.S. Yachtsman of the Year in 1989.

SPRACHMAN, ABRAHAM (1896–1971) and **MANDEL** (1925–2002), Canadian theatrical and institutional architects. Abraham Sprachman was born in Honczarow, near the Carpathian mountains between Lvov and Chernovitz. His family settled in Toronto when Abe was a youngster. While he was studying bookkeeping in secondary school, a school inspector noticed his artistic talents and transferred him to a program in architecture. In about 1919 he opened his first architectural office in his bedroom. When a degree in architecture became required in 1935, he was retroactively made a member of the Ontario Association of Architects and the Royal Architectural Institute of Canada. Sprachman lived and worked in an almost exclusively Yiddish world, and most of his clients were Jews. With architectural opportunities for Jews limited in Canada, he first designed homes for Jewish clients referred to him by a friend building an accounting firm. Just as the Depression began, one of these clients gave him his first theatrical commission, the Circle Theatre. Theater architecture was something of an architectural extension of the largely Jewish movie business in which Jewish producers in Hollywood created the films that Jewish entrepreneurs exhibited in small neighborhood theaters, affectionately known as the "Nabes." Sprachman and a partner, Harold Kaplan, built many substantial neighborhood movie houses in Canada for the Famous Players, Loew's, 20th Century, and Premier Operating chains. Their most significant theaters were in the Art Deco style: the Vogue in Vancouver (1941) and the Eglinton in Toronto (1936), which was honored with the Governor General's medal. As his list of theater designs grew, American architects came to Toronto to study Sprachman's work.

Although theaters were their most prominent contribution to the Canadian streetscape, Kaplan and Sprachman also designed a number of Jewish community buildings including Jewish community centers in Toronto and Hamilton, the Toronto Mt. Sinai Hospital, the Baycrest Home for the Aged in Toronto, and several synagogues in Toronto and across western Canada.

Abe's son, Mandel, also became an architect known for his theater designs, albeit in a much changed Canada. Mandel was a child of the movies. He had spent his childhood in his father's movie theaters and at building sites doodling at the drawing board. In 1951 he translated his love of theater and screenwriting into a degree in architecture from the University of Toronto. After graduating, Mandel worked in Sweden, then in his father's office before opening his own firm in 1958. Like his father, Mandel designed movie houses that reflected the tastes of his times. Among his innovations were the first multiplexes, incorporating several screening rooms in one building and using televisions in the lobbies to promote the films.

Mandel was a striking man, known for his bowties and lapel pansies. Like his father, Mandel designed a number of striking synagogues in Ontario. His crowning achievement was his successful struggle to restore the 1913 Elgin Wintergarden Theatre in Toronto. One of the few remaining "double-decker" or stacked Edwardian theaters in the world, the Elgin

Wintergarden had been the flagship of the Loew's chain of vaudeville theaters. Under Mandel's direction, it was painstakingly restored with added backstage and lobby areas. It reopened in 1989 and was soon a Toronto landmark.

[Paula Draper (2nd ed.)]

°**SPRINGER, AXEL CAESAR** (1912–1985), German publisher. Born in Altona/Hamburg. As he was unfit for war services, he did not fight as a soldier in the German Wehrmacht during World War II. Until 1941 Springer was editor in his father's newspaper *Altonaer Nachrichten*, whose publication was stopped due to a Nazi order. After the war he first started as a book publisher, but soon after that he founded many popular German magazines and newspapers. With the daily newspaper *Bild* Springer reached his greatest success, though critics complained about the one-sided conservative political opinions spread by this tabloid and a lack of serious journalism. In 1967, Springer postulated as the four main goals to which every editor of the Springer Press had to subscribe: The engagement for the German re-unification in freedom and in a united Europe, the reconciliation between Germans and Jews as well as the defense of the rights of the Israeli people, the rejection of political totalitarianism, and the defense of the free social market economy. In addition, the Springer Press always demonstrated sympathy and solidarity for American politics, particularly during the Vietnam War. As a non-Jew, Springer was a known friend of the Jewish People and Israel. This fact irritated many left-wing critics, who viewed in the conservative Springer Press their main enemy. During the student protests in the 1960s, *Bild* condemned the protesters and many critics accused *Bild* of "heating-up" the atmosphere. In 1972 the Springer Publishing House in Berlin was the target of a bomb attack carried out by leftist extremists.

Springer gave substantial donations to Israel and Jewish organizations, e.g., for the library of the Israel Museum in Jerusalem (1966) and the Leo Baeck Institute in New York (1963). In 1968, Springer endowed \$250,000 for the establishment of the Ottilie Springer Chair at Brandeis University. As a result of his social and political engagement Springer was honored with numerous awards, such as the Leo Baeck Medal (1978), and honorary doctorates from Temple University in Philadelphia (1971), Bar-Ilan University in Ramat Gan (1974), and the Hebrew University of Jerusalem (1976). In 1983, Springer was awarded the title "*ne'eman Yerushalayim*" (preserver of Jerusalem). In 1984, he received the gold medal of the Israeli Association of Daily Paper Publishers and in 1985 the gold medal of the B'nai B'rith League. Moreover, Springer was an honorary member of the Weizmann Institute of Sciences in Rehovot, Israel.

In 1972, Springer published a collection of his speeches and essays: *Von Berlin aus gesehen. Zeugnisse eines engagierten Deutschen*.

[Monika Halbring (2nd ed.)]

SPRINGFIELD, city in Massachusetts. As of 2005, Springfield and its suburbs had a total population of 251,000, including an estimated 10,000 Jews, a figure largely unchanged in the past quarter-century. Jews did not begin to settle in Springfield in large numbers until the East European immigration of the 1880s, though individual Jews were recorded in the city previously, among them Leopold Karpeles (1838–1909), a Congressional Medal of Honor winner in the Civil War who lived in Springfield before the war. The first synagogues – B'nai Jacob and Beth Israel – were organized in 1891–92, and within a decade five other Orthodox congregations were established to serve the rapidly growing community, whose numbers increased from about 300 to 3,000 between 1901 and 1907 alone. YMHA was organized in 1905 and a Jewish Home for the Aged in 1912. One of the first local Jews to attain prominence in these years was the Lithuanian-born Henry Lasker (1878–1953), the first local Jew to be admitted to the bar and who between 1908 and 1916 was first elected alderman and then president of the city council. Lasker was a leader of B'nai B'rith and many other Jewish and civic organizations. Two other prominent Jews were the Russian immigrants Moses Ehrlich, who had a successful scrap-iron business and Raphael Sagalyn (1881–1949), a successful wholesale dry goods and real estate businessman. Ehrlich was a prime initiator and first president of Congregation Kodimoh; Sagalyn was founder of the United Hebrew Schools and president of its board of directors.

Following the restrictive immigration laws of the 1920s, the Jewish population of Springfield ceased its rapid growth but institutional life continued to develop. In 1921, the first Conservative synagogue, Congregation Beth El, was founded, and in 1932 a Reform congregation, Sinai Temple. The Jewish Community Council (predecessor to the Jewish Federation of Greater Springfield) was established in 1925, and the Jewish Social Service Bureau was established in 1927. In 1966, eight synagogues and temples were in existence in Greater Springfield, five Orthodox, two Conservative, and one Reform. The initial settlement took place in the city's older residential areas, primarily the North End area. After World War II, both the newer urban areas and the suburb of Longmeadow became increasingly popular. By 1966, only 5% of Greater Springfield's Jews still lived in the older area of settlement, while 60% lived in the newer urban areas. Of the 35% who resided in the suburbs, all but 3% were in Longmeadow, which adjoins the largest of the newer urban areas within Springfield proper, Forest Park. Accordingly, three of the largest Jewish institutions in the city, Temple Sinai, Congregation Beth El, and the Jewish Community Center, are all located near each other on the Longmeadow – Forest Park line, with two other synagogues remaining in Forest Park.

High educational achievement and occupational affiliation characterized the Jewish community in the late 1960s. Among adults, 40% had had at least some college education. One-fourth were engaged in professional work and 40% were managers or proprietors. An additional 27% were employed as clerical or sales workers; only 8% of the Jews were blue collar workers. Almost 80% of the Jews of Springfield were affiliated with a congregation; slightly more persons were members of Orthodox synagogues (41%) than of Conservative congregations (39%), and 20% belonged to the Reform Temple. Part-time religious schools were affiliated with the various synagogues, and there were the community-wide United Hebrew School and two day schools, the Heritage Academy and the Lubavitcher Yeshiva Academy. Two-thirds of all children between 5 and 14 years of age were enrolled in some program of Jewish education.

At the turn of the twenty-first century, a different picture has emerged, consistent with demographic trends throughout the country. Springfield's Jewish affiliation rate is now approximately the same as the national average of just above 40%. Although Springfield's Jewish community remains highly educated, much of the population is engaged in the professions (medicine, law, etc.), with very few proprietors and entrepreneurs. The Jewish population is increasingly older, with a small number of young families continuing to move to the area. In 2005, Springfield/Longmeadow had two day schools (Heritage Academy, Lubavitcher Yeshiva Academy) and six synagogues: three Orthodox (Congregation Kodimoh, Kesser Israel, and Beth Israel), two Conservative (Beth El and B'nai Jacob), and one Reform (Sinai Temple).

The Jewish community has grown significantly in the area just north of Springfield to the Vermont border. The communities of Northampton and Amherst, in particular, have witnessed significant Jewish growth, with approximately 5,000 Jews in these communities. Home to the University of Massachusetts, Amherst College, Smith College and others, the area attracts many academics, artists, and young professionals from larger cities. In 2005, the Upper Pioneer Valley boasted four synagogues, two of them with several hundred families. There are two Conservative synagogues (B'nai Israel, Northampton; Temple Israel, Greenfield), one Reform (Beit Ahavah, Northampton), and one Reconstructionist (Jewish Community of Amherst). Founded in the 1990s, the Solomon Schechter School of the Pioneer Valley has opened its doors to 100 students.

A variety of organizations and services continue to cater to the needs of the community. The Springfield Jewish Community Center traces its origins to the YMHA. The Jewish community supports a wide range of Zionist and fraternal organizations, with a strong Federation and an active Hadassah chapter, as well as many groups under temple auspices. The community is also the home of the Harold Grinspoon Foundation. Among notable members of the Springfield Jewish community are Frank Freedman, mayor, elected in 1967; Alan Sisitsky, state representative, elected in 1968; Paul Akerman,

city councilman; Joel Levitt, president of the Springfield Jewish Federation (founded in 1938) and president of the Springfield Sugar Company; Irving Geisser, executive director of the federation and a member of the executive committee of the National Jewish Community Relations Advisory Council; Charles Nirenberg, Founder of Dairy Mart; and Harold Grinspoon, nationally recognized philanthropist and founder of Aspen Square Management.

[Sidney Goldstein / Harold Berman (2nd ed.)]

SPRINZAK, JOSEPH (1885–1959), Israeli labor leader and first speaker of the Knesset, member of the First to Third Knessets. Sprinzak was born in Moscow. His father, a manufacturer, was a member of Hovevei Zion and was active in Jewish community affairs. In 1891, when the Jews were expelled from Moscow, Sprinzak's family moved to Kishinev and then to Warsaw. Their home was a center for young Hebrew writers and active Zionists. In 1903, Sprinzak took part in organizing the Zionist group Ha-Teḥiyah, led by Yitzhak *Gruenbaum. In Warsaw he worked for a while in the Hebrew publishing house Ahi'asaf, and wrote for Hebrew and Yiddish newspapers. In 1905 he returned to Kishinev, where he was a cofounder of the *Ze'irei Zion movement in Southern Russia, and in 1906 he participated as its delegate at the *Helsingfors Conference of Russian Zionists, after having formulated the Ze'irei Zion program together with Haim *Greenberg.

In 1908, after spending several months in Constantinople, where he was in touch with various Zionist leaders, including David *Wolffsohn, Menahem *Ussishkin, Nahum *Sokolow, and Vladimir *Jabotinsky, in an attempt to influence the new regime of the Young Turks, Sprinzak went to study medicine at the American University in Beirut. However, in 1910 he was asked by Ha-Po'el ha-Za'ir to discontinue his studies, and become the party's secretary in Palestine. Inter alia, he was active in the absorption of the immigrants from Yemen. At the 11th Zionist Congress in Vienna in 1913, Sprinzak organized a faction of 41 delegates, consisting of members of Ha-Po'el ha-Za'ir and Ze'irei Zion. During World War I he remained in Palestine and was instrumental in organizing help for the *yishuv* in general and the Jewish workers in particular. After the war he took part in creating the framework of the world movement *Hitaḥadut, which encompassed Ha-Po'el ha-Za'ir and Ze'irei Zion. At its founding conference in Prague in 1920, together with Aharon David *Gordon, Hugo Bergmann, and Eli'ezer *Kaplan, he was the moving spirit of the Ha-Po'el ha-Za'ir delegation from Palestine. Chairing the conference's meetings, he summed up its deliberations. At the 11th Zionist Congress in Carlsbad in 1921, he was the first representative of the labor movement in Erez Israel to be elected to the Zionist Executive. For seven years he served on the Executive as head of the Labor Department and later of the Aliyah Department as well. In the 1920s, Sprinzak was a co-founder and leading member of the *Histadrut, a member of the Tel Aviv municipality, and played an active role in the establishment of Asefat ha-Nivḥarim and the Va'ad Le'ummi, and in the formation of

*Mapai through the merger of *Aḥdut ha-Avodah and Ha-Po'el ha-Za'ir. In 1942–59, he served as chairman of the presidium of the Zionist Executive, and in 1944–49 served as the secretary general of the Histadrut.

After the establishment of the State of Israel in 1948, he was elected to chair the Provisional State Council. He was elected to the three first Knessets on behalf of Mapai, and served as Knesset speaker from 1949 until his death in 1959. As the Knesset's first speaker, he played a major role in molding the written and unwritten rules of Israel's parliamentary life. Sprinzak oversaw the competition for the planning of the new Knesset building at Givat Ram, but its construction began only after his death. His friendly, warm, and moderate character endeared him to both Israeli citizens and Jews abroad. His sense of humor and sensitivity enabled him to overcome conflicts. He favored a form of humanist, social-democratic Zionism, which regarded the process of national regeneration as an evolutionary one in which the workers were to play a major role in both urban and rural settlements.

Sprinzak's son Ya'ir was a scientist who worked at the Weizmann Institute, and was a member of the 12th Knesset on behalf of Moledet.

Among his writings are *Bein ha-Teimanim* ("Among the Yemenites," 1918); *Bi-Khetav u-be-al Peh*, a collection of articles and speeches (1952); and Yosef Shapira (ed.), *Iggerot Yosef Sprinzak*, a collection of letters (1965–69).

[Susan Hattis Rolef (2nd ed.)]

SQUADRON, HOWARD MAURICE (1926–2002), American Jewish communal leader. Squadron was born in New York City and graduated in law from Columbia University, where he was an editor of the *Columbia Law Review*. After teaching at the University of Chicago, he practiced law in New York, and after spending two years as staff counsel for the American Jewish Congress, he reentered private practice in 1954. He ultimately became the senior partner at Squadron, Ellenoff, Plesen & Sheinfeld.

Active in the American Jewish Congress for 25 years, and serving as its senior vice president, chairman of the National Governing Council, chairman of the national Commission on Law and Social Action, and chairman of the Congress's New York Metropolitan Council, he was elected president in 1978, retaining the position until 1984. In that capacity, he helped spearhead an assembly of mayors from around the world held annually in Jerusalem. At the 1999 conclave, Squadron was awarded the Guardian of the City of Jerusalem Medal. Squadron was an active participant in the America-Israel "Dialogue," an annual symposium conducted by the American Jewish Congress in Jerusalem. From 1980 to 1982 he served as chairman of the Conference of Presidents of Major American Jewish Organizations.

Active in the cultural life of New York City, Squadron was chairman of the executive committee of the Foundation for Joffrey Ballet, Inc., as well as of the Fifty-fifth Street Dance Theater Foundation.

SQUILL (Heb. **בִּזְבִּי**, *ḥazav* (mish.) or **חֲזִיב**, *ḥazuv*), the *Urginea maritima*, a plant with a very large bulb that grows wild in almost every district of Israel. It lies dormant in the summer, its leaves withering, but later a stalk with a large inflorescence bearing hundreds of flowers bursts out of the bulb. The roots are very long and descend vertically into the earth as if digging into it, and some connect its name (*ḥazav*; "to dig") with this characteristic. Because of this the squill was sometimes used for demarcating fields (cf. BB 55a). According to tradition Joshua marked out with it the boundaries of Israel and of the tribes (TJ, Pe'ah 2:1, 16d). It was said that "the squill cripples the wicked" (Bezah 25b), because it prevents them from removing the boundaries. The rind of its bulb is juicy and was used by some for implanting fig shoots (Kil. 1:8; so too Theophrastus, *Historia Plantarum*, 2:5, 5). Its leaves and bulb contain poisonous matter and few animals eat it. According to the *baraita* (Shab. 128a) it was eaten by gazelles and Noah prepared "squills for the gazelles" (Gen. R. 31:14) in the ark.

SRAFFA, PIERO (1898–1983), British economist. Sraffa was born in Turin, Italy, the son of a professor of law. He became a professor of economics at the University of Cagliari, Sardinia, at the age of 28 but was forced to flee to Britain the following year after his writings offended Mussolini. Sraffa spent the rest of his life at Cambridge University, where he served as Marshall Librarian, fellow of Trinity College, and reader in economics. Sraffa developed a legendary reputation as one of the great theoretical innovators in 20th-century economics, originating the theory of imperfect competition and making significant and influential contributions to the orthodox theory of value. He wrote little, but some of his ideas appeared in his *Production of Commodities by Means of Commodities* (1960). He is equally well known for his co-editing of 11 volumes of the correspondence of David *Ricardo, published in 1951–73, regarded as one of the great works in the history of economics. Sraffa also exerted a strong influence on many of the leading intellectual figures of his time and is credited with helping Ludwig *Wittgenstein move away from his earlier logical positivism to his later orientation towards linguistic analysis.

SREM (Ger. **Schrimm**; Pol. **Szrem**; Yid. **Strim**), town in Poznan province, W. Poland. Jews settled in Srem in the late 16th century and engaged in commerce, weaving, and goldsmithery. In 1656, during the war between Poland and Sweden, the Polish general S. Czarniecki persecuted the Jews of Srem, and those who survived left the town. In the 1670s Jews resettled in Srem and a community was organized. In 1683 a meeting of the council of the *galil* (province) of Poznan (see

*Council of the Lands) took place there. In the 18th century Srem Jews engaged in the trade of agricultural products, tailoring, shoemaking, and liquor production. In 1765 the Jewish community numbered 327. In the mid-18th century Samuel b. Azriel of Landsburg was the rabbi of Srem. From 1815, under Prussian rule, the Jewish population increased, numbering 924 (27% of the total) in 1840 and 1,127 (19%) in 1871. The Jews were engaged mostly in the building trade, tailoring, transportation, and shopkeeping. In the late 1870s many Jews left for Poznan and other cities in central Germany. In 1895 only 607 Jews were left (11%), and this number decreased to 318 (4.5%) by 1910. In the early 20th century the Srem community maintained charitable institutions and an association for Jewish historical and literary research. In 1921, in independent Poland, there were 103 Jews (1.5%) there.

[Arthur Cygielman]

Holocaust Period

Before World War II there were 26 Jews in Srem. Under German occupation, it belonged to the Regierungsbezirk Posen of the Warthegau. In October 1939 the Jews were deported to a transit camp in Poznan, from where they were probably sent to the General Government or to a larger town in Warthegau.

SS AND SD (ss – **Schutzstaffeln**, “Protection Squad”; SD – **Sicherheitsdienst des Reichsfuehrers ss**, “Security Service of the Reichsfuehrer ss”), Nazi order that executed the “*Final Solution” (see also *Holocaust: General Survey) and other acts of mass and individual terror committed by the Nazis in Europe. The organization from its inception was connected with the idea of the “security” of the leader, and grew up as a racial elite formation around the myth of *Hitler the Fuehrer and his “mission.”

The ss was originally a select group of bodyguards charged with protecting Hitler and the Nazi elite. It was set apart from other Nazi organizations by its distinctive black shirts, and eventually adopted the insignia of the death’s-head. Its first leader was Jules Schreck, a personal body guard and chauffeur to Hitler. Other local party groups established similar means of protection, which were used not only defensively but offensively. The ss participated in the 1923 Munich Putsch and was outlawed together with the Nazi Party for a short time afterward.

In 1929, Heinrich *Himmler was appointed Reichsfuehrer-ss (RFSS), and as the party expanded he transformed the ss into a racial elite formation. From several hundred members in 1929, it expanded to some 50,000 by 1932 before Hitler came to power. In 1931, two years before the Nazis came to power, Himmler set up an intelligence service exclusively

for the ss, headed by Reinhard *Heydrich: the Sicherheitsdienst (SD). The SD assisted in keeping an eye on deviators in the party, but at the time the Nazis rose to power it was still only a skeleton organization. He also established the Race and Settlement Office (RSHA) to protect the racial purity of the ss. Special emphasis was placed on loyalty and disciplined appearance in uniforms, and racial criteria were established for membership, including an Aryan appearance and a registry of ancestors, including those of wives. The ss attracted and recruited people of a higher social class than the SA (storm troops). The ss was divided along military lines model into platoons, companies, and regiments. Its distinctive black uniform was first used in 1932.

When Hitler took power, Himmler began to attain control over all the internal security organs of Germany. Within a year the ss increased fourfold and Himmler consolidated his power. Beginning as the commander of the Bavarian political police, he soon took over the political police of other German states, and in 1934 the *Gestapo, the secret political police of Prussia. In 1934, the ss led the assault against Ernst Rohm and the SA and destroyed it decisively. In July 1934 after the assault, the ss became independent of the SD within the party. Afterwards there were no potential rivals to its power and its status rose.

The ss, the political police, and the concentration camps acted as a three-fold system devised to shadow the enemies of the regime and intern or destroy them politically or physically. Of particular importance was the vesting of the authority over concentration camps in the ss system and not subordinated to government authority, thus constituting what became known as the ss-state. In the process of differentiation of special tasks of the ss, special units were established, such as ss Totenkopfverbaende (Death’s Head Units) to guard the concentration camps and ss Verfuegungstruppe, which served as a nucleus of the armed (Waffen) ss.

In 1936, Himmler became head of the entire German police, as the Reichsfuehrer ss and Chef der Deutschen Polizei im Ministerium des Innern. Himmler created a series of homes for wives of the ss men and single mothers to breed the master race – Lebensborn, the Well of Life. The Ancestral Heritage Society tried to document the superiority of the master race. The ss was envisioned by Himmler as the paradigm of the master race, the core of its future development.

Until World War II

By the time World War II broke out (1939), the ss numbered hundreds of thousands of members and millions of helpers. The duplication and competitiveness of the departments in the complicated, vast ss administration were intentional. To control the administration of both state and party functions, Himmler set up a field organization of ss and higher police leaders (Hoehere ss – und Polizeifuehrer – HSSPF). A nucleus of ss men engaged in work abroad, including intelligence work against future victims of Germany, and, last but not least, the “mobile killing units” (the Einsatzgruppen), which followed

along with the Wehrmacht to the occupied countries to deal with “internal security matters.”

Some ambitious younger men, including Adolf Eichmann, Dieter Wisliceny, and Herbert Hagen, became experts in the Jewish question. Section II/112 of the SD began dealing with classifying world Jewry and its institutions according to the German organizational tables, studied Jewish literature and newspapers, and spied on Jewish leaders and organizations, in the full belief that the Jews had a worldwide intelligence service. The SD also began pressing to speed up Jewish emigration by all means and sought to work out practical ways to do so. One suggestion was to incite and organize riots such as the **Kristallnacht*, carried out two years later. The annexation of Austria in March 1938 permitted the SD executive initiative to establish (through Eichmann) the **Zentralstelle fuer juedische Auswanderung* in Vienna, the first compulsory Jewish emigration center. Eichmann personally supervised the registration of Jews and expropriation of their property prior to their emigration. This first initiative led to the establishment of similar offices in the Protectorate of Bohemia–Moravia and in Germany itself. Eichmann headed the centers, and the director of the Gestapo, Heinrich Mueller, acted as the chief supervisor. Thus the SD became an executive arm alongside the Gestapo, and finally the two authorities, the SD and the Gestapo, were united under the SS reorganization scheme in November 1939.

The SS organization now split up into main offices (Hauptaemter), among which the most important were the **RSHA* – Reich Security Main Office (Reichssicherheitshauptamt); *wVHA* – Main Office for Economy and Administration (Wirtschafts-und Verwaltungshauptamt); and *ruSHA* – Main Office for Race and Settlement (Rasseund Siedlungshauptamt). The *RSHA*, which was essentially a combination of the security police and the SD, was given charge over internal security, the liquidation of enemies in the first stages of conquest by the Germans, and the dispatch of prisoners to camps. The prisoners were subordinate to the *wVHA*, on a combined ideological and “economic” base. The *wVHA* exploited the prisoners in the giant SS enterprises and in private German enterprises, while life in the camps and the work itself were functionally organized to bring about the physical “neutralization” or decimation of many of them. The *wVHA* also carried out pseudo-medical experiments on human beings on orders given by “scientific and research” institutes of the SS and by Himmler, who wished to establish proofs for his racial concepts.

With the German invasion of Poland in September 1939, the SS attained almost sole responsibility for the Jews of Poland. The security police and SD, together with the regular police, interned the Jews in ghettos, deprived them of all their means, and starved them. To reduce all the Jews to the same level in the uniform repression scheme, **Judenraete* were set up to assume direct and personal collective responsibility for the Jews, with the German authorities in charge. In the *RSHA*, several suggestions for a radical “Solution of the Jewish Question” were made during 1940, including the concentration of

Jews in a “reservation” in Poland or their dispatch to Madagascar (see **Madagascar Plan*). Historians have come to view local initiatives to deal with the local problem of Jews as an essential component of what later developed into the “Final Solution.” Many emphasize the functionalist approach, with the destruction of Jews being a priority in solving a local problem, the apparatus of destruction evolving locally before being centralized and implemented throughout the German-controlled areas. Meanwhile, the invasion of Soviet Russia was in the offing. It commenced on June 22, 1941. Hitler decided that in the final stage of the “struggle for the vast Lebensraum in the East,” the Jews of Russia and the Baltic states along with gypsies and Soviet commissars should be murdered by SS Einsatzgruppen with the cooperation of the army and the civil occupying administration. The Einsatzgruppen were divided into Einsatzkommandos (assault commando units) and Sonderkommandos (special commando units).

The “Final Solution.”

The killing of Jews evolved in stages. First the mobile killing units, the Einsatzgruppen, went into towns and villages captured by the Wehrmacht and alone or together with local gendarmeries, and native antisemites assembled the Jews, confiscated their possessions, and murdered them one by one, town by town, village by village. After the murder of several hundred thousand Jews in the East by execution, gas vans were developed by the SS personnel on the ground, using retrofitted trucks. Many of these initiatives were taken locally, but this process proved to be too public, disquieting for inhabitants of conquered territories, and psychologically difficult for the killers. Thus a new mode of achieving the “Final Solution” (a camouflage term – see **Nazi-Deutsch*) of the “Jewish Question” in all of Europe was initiated. The *RSHA*, with Eichmann as its Jewish expert and Mueller as the chief executor, was in charge of the dispatch of Jews to the death camps. The extermination centers differed from the older concentration camps as the former were constructed to deal with the immediate mass murder of the arrivals under the direction of the *wVHA*. A gigantic network was organized for the mass-scale plundering of property and possessions of the murdered, and for exploiting the victims’ clothing, hair, and gold teeth. Not infrequently, concentration camps were set up alongside the death camps for exploiting the condemned for slave labor until the inmates, suffering from starvation and maltreatment, were “selected” for the gas chambers for automatized murder run by the SS technicians. Through its various agents, of which the SS was chief, the German occupiers compelled the various *Judenraete* in the ghettos to supply them with batches of victims for the death chambers and, until the ghettos’ liquidation, with slave laborers for German industry. Throughout, the goal of utilizing Jewish labor by economic arms of the SS was at odds with the overriding goal of the “Final Solution” – the killing of the Jews. Dead Jews could not work. The ghettos were steadily reduced, until the final liquidation of all their inhabitants at the end of 1943 (with Lodz, the most notable exception). The use

of camouflaged language and the dispatch of Jews in varying stages and by different bodies – sometimes by the RSHA and sometimes by the security police commanders (all of which were part of the SS and served one aim) – helped to keep in check any possible revolt or resistance by the Jews. In the Western countries and satellite states of the Reich, the SS maintained experts whose task was to dispatch the Jews.

The organizational principles that aided Himmler in his first steps turned the SS finally into a monster organization with millions of officials and soldiers with thousands of multiple and duplicate functions. In 1943 Himmler, the Reichsfuehrer SS, also became minister of the interior of the Reich, and in 1944 he drafted many foreigners to the legions of the Waffen-SS, including members of those considered by Nazi ideology to be of “inferior races.” The attempts in 1939–41 of the SS to solve by mass extermination such problems as the existence of mentally ill and retarded children in German society, or its war against the churches, failed largely due to protests among the German public. But the murder of Jews, gypsies, Soviet prisoners of war, and members of “inferior peoples” was carried out without inhibition and virtually without protest. At the end of 1944, Himmler, as commander of the reserves and battlefield, retreated from the “Final Solution.” He apparently still believed that the Jews under his control could be used as a bargaining chip to divide the Allies and forge a separate peace with the United States and Great Britain against the Soviet Union. He presumed that the Allies would accept his SS organization as an instrument of order and security in Germany. However, the Allies condemned the SS at the Nuremberg trials as a criminal organization and sentenced some of its heads to death. Many others were sentenced to severe punishments, but received amnesty. From the 1960s, the German judiciary dealt with the subsidiary organizations of the SS in a series of trials.

[Shlomo Aronson / Michael Berenbaum (2nd ed.)]

STACHEL, JACOB (Jack; 1900–1966), U.S. Communist leader. Stachel, born in Galicia, was taken by his family to New York City in 1911. He became active in the Socialist Party Youth and in 1924 joined the Communist Party. By 1927 Stachel headed the party's national organizational secretariat, and in 1933 he became director of its Trade Union Educational League. His main geographical area of responsibility in the 1930s was Michigan, where he staged a demonstration of 100,000 unemployed workers in Detroit in 1930 and pressed for Communist Party support of the Congress of Industrial Organizations (CIO) when it was founded in 1936. In 1939 Sta-

chel was made executive secretary of the party's central executive committee, giving him much power behind the scenes until his indictment under the Smith Act in 1950, along with ten other party leaders, for advocating the violent overthrow of the United States government. After serving a five-year term in a federal penitentiary Stachel remained active in the party until his death.

STADTHAGEN, JOSEPH (d. 1715), German rabbi. One of a venerable line of rabbis, he was born in Metz and was *Landesrabbiner* of Schaumburg-Lippe for many years, taking his name from his home in Stadthagen. An acknowledged rabbinical authority (author of *Divrei Zikkaron*, Amsterdam, 1705), with a thorough knowledge of the New Testament and apologetic works, he participated in several religious disputations. In July 1704 he was called upon by Leffman *Behrend, the powerful Hanoverian *Court Jew, to accept the challenge of an apostate, who had been making the rounds of Jewish communities, challenging the scholars to disputations and blackmailing them into paying him to desist. The disputation was held in the presence of the elector of Hanover, the future George I of England, and his court. Stadthagen deftly refuted the stock charges of the apostate, gained the sympathy of the tolerant court, and established his intellectual and moral superiority. He made a vivid impression on the electress Sophie who parted from him with the words, “We all have but one God.” The debate was transcribed by Stadthagen in Hebrew and Yiddish in his *Minhat Zikkaron*, which was edited, translated, and published by A. Berliner, *Religionsgespraeche* (1914).

STAHL, FRIEDRICH JULIUS (1802–1861), German conservative politician and political thinker. Born Julius Jolson in Wuerzburg, Bavaria, he grew up in an Orthodox Jewish family, but converted to Lutheranism in 1819, seemingly more out of inner conviction than in order to obtain a government post in a Catholic country. Stahl studied law at various Bavarian universities and was prominent in the Burschenschaften movement (see *Student Fraternities, German). After his doctorate and a first position in Munich, he became a professor of law in Erlangen and Wuerzburg. During this time, he completed his two main works *Die Philosophie des Rechts nach Geschichtlicher Ansicht* (2 vols., 1830–37), a historical view of the philosophy of law based on Christian theology, and *Die Kirchenverfassung nach Lehre und Recht der Protestanten* (1840), an important contribution to the debate about the structure of the Protestant church.

In 1840 Stahl succeeded Edward *Gans as professor of law at the University of Berlin where his lectures attracted widespread attention. He expounded his conservative opinions on contemporary politics in his lectures and published a series of pamphlets calling for the mobilization of the Chris-

tian state against liberalism and republicanism. Following the suppression of the 1848 revolution, he was made a member of the Prussian Upper House and gained considerable political influence at the court of Friedrich Wilhelm IV. While his political ideas have frequently been described as extreme and reactionary, it is now evident how important Stahl's contribution was for the modernization of German conservative thought, including the acceptance of constitutionalism.

Stahl rejected the full emancipation of the Jews and especially defended the exclusion of non-Christians from state functions. As a zealous and rhetorically gifted defender of traditional rights, justice and order, his views were approved of by *Bismarck and *Treitschke who were, nevertheless, troubled, as were his contemporaries, by the figure of a former Jew from Catholic Bavaria, forging the ideology of Prussian Lutheran conservatism. Stahl's philosophy was later repudiated by the Nazis as an expression of Jewish theocracy.

Heinrichs (ed.), *Deutsche Juristen Jüdischer Herkunft* (1993), 59–83; J.B. Mueller, in: H.C. Kraus (ed.), *Konservative Politiker in Deutschland* (1995), 69–88.

[Uffa Jensen (2nd ed.)]

STAHL, HEINRICH (1868–1942), president of the Jewish community of *Berlin under the Nazi regime. A prominent insurance executive, Stahl was a liberal Jew who attached great value to Jewish tradition. He became president of the Berlin community in May 1933, when its executive consisted of seven liberals (Reform), three Zionists, and one Orthodox representative. He was influential in the establishment of the Reichsvertretung der Deutschen Juden, and signed its first proclamation. In November 1935, the Nazi authorities demanded the reduction of the executive to seven members, and the Zionists put in their claim for 50% of the seats. Stahl saved the situation by reducing the number of his own liberal faction from seven to three. He attempted to retain a special status for the Berlin community vis-à-vis the *Reichsvertretung. He did not succeed, though it was agreed that its headquarters would remain in Berlin. Stahl, the patrician businessman, did not see eye to eye with the scholarly rabbi, Leo *Baeck. Deported to *Theresienstadt in 1942, in the month preceding his death he became deputy chairman of the camp's *Judenrat under Jacob *Edelstein.

[Kurt Jakob Ball-Kaduri]

°STALIN (Dzhughashvili), JOSEPH VISSARIONOVICH (1879–1953), Bolshevik revolutionary, ruler of the Soviet Union, and leader of world *Communism. Through his entire career, Stalin had to deal with the “Jewish question,” and as the autocratic ruler of the Soviet Union his policy had a profound influence on the fate of the Jewish people. At the early stages of the factional strife in the Russian Social Democratic

Party, during which Stalin unreservedly joined *Lenin and the Bolsheviks, he became involved in the Jewish problem through their bitter dispute with the *Bund. In 1913, with Lenin's approval, he published an essay titled “Social Democracy and the National Question” (later renamed “Marxism and the National Question”), in which the Jews figured prominently as the subject of a theoretical analysis of ethnicity and nationhood. In this essay Stalin denied the existence of one national Jewish entity throughout the world, stressing the differences between the Jewish communities in East and West. He conceded that certain ethnic characteristics exist in each Jewish community separately, but denied the Jews any national status and adhered to Lenin's concept of the unavoidable progressive assimilation and disappearance of the Jews under advanced capitalism (e.g., in Western Europe and in America) and certainly under Socialism.

In contrast to this view, Stalin, as commissar of nationalities in the first Soviet government (1917–23), was responsible for the policy of fostering Yiddish cultural and educational activity, Jewish administrative institutions, and agricultural settlement, and it was he who gave the formal permit to the young Hebrew theater *Habimah in Moscow. In his controversy and blood feud with L. *Trotsky, G. Zinovyev, L. *Kamenev, K. *Radek, and other members of Lenin's old guard, hardly any anti-Jewish allusions were discernible. He did not refrain, however, from accusing his prominent Jewish victims of being agents of the Nazis and the *Gestapo. Although there were Jews among the executors of the bloody purges, the upheaval of the party and government structure caused by these purges resulted in a reduction of Jewish personnel in many branches of the bureaucracy.

At the same time a marked change occurred in Stalin's policy toward Jewish cultural activity and to the evolution of Jewish settlement and territorial autonomy, which had culminated in the *Birobidzhan project. Stalin's trend, concurrent with the great purges, was to liquidate the Yiddish school system, Yiddish publications, research institutes, theaters, etc., so that at the end of the 1930s only token vestiges of them remained (as, e.g., the State Jewish Theater in Moscow). During his rapprochement with Nazi Germany (1939–41) he suppressed in the Soviet press and radio all mention of Nazi antisemitism and anti-Jewish atrocities, but himself refrained from using anti-Jewish allusions while attacking the Western “imperialist” powers. He extradited to the Nazi regime German communists who had fled to the Soviet Union, many of them Jews. The German attack on the Soviet Union (June 22, 1941) and his adherence to the anti-Nazi alliance induced Stalin to establish the Jewish *Anti-Fascist Committee, which, for the enlistment of Western Jewish support for the Soviet war effort, was allowed to exploit the sentiments of world Jewish solidarity and “brotherhood” and even use Jewish historical and nationalist rhetoric, in full contradiction to his original ideological concept of Jewish identity. Immediately after the war, when he was presented with a plan to allow returning Jewish evacuees to settle in the Crimea, Stalin opposed it on

the grounds that in the event of war a “Jewish Crimea” would constitute a security risk for the Soviet Union.

An exceptional episode in Stalin’s attitude to Jewish nationhood was his resolute and energetic support in 1947–48 for the establishment of a Jewish state in Palestine, a policy clearly directed against Britain’s position in the Middle East and largely reversed during the explicitly antisemitic (and “anti-Zionist”) stance of his last years (1948–53), which coincided with the Cold War. An ominous prelude to these “black years” was the camouflaged assassination of the de facto head of Soviet Jewry Solomon *Mikhoels, the chairman of the Jewish Anti-Fascist Committee, on Jan. 13, 1948, a crime to which Stalin was at least a passive accomplice.

From the end of 1948 until his death, Stalin displayed an extremely hostile attitude toward everything Jewish (mostly labeled “Zionist”). He embarked on a course of complete liquidation of the last Jewish institutions and personalities who engaged in Yiddish literature and culture. The Jewish Anti-Fascist Committee and the publishing house Der Emes were closed down. Mass arrests of leading Jewish writers and artists followed. Jewish intellectuals and professionals active in various fields were also arrested. Among the arrested was Molotov’s Jewish wife, whom Stalin believed to be sent by Zionists to spy on her husband. These purges were accompanied by a vituperous campaign of the Soviet press against Western-oriented “Cosmopolitans” in which Jews were the obvious target. In mid-1952 a closed trial was held against members of the Anti-Fascist Committee and other leading personalities in Jewish cultural life, 26 of whom were secretly executed on August 12 of that year. They were accused of Jewish nationalism, of having maintained contact with Western espionage, and of having planned to detach the Crimea from the Soviet Union. Jews were assigned a prominent role in the Slánský *Trials, staged in Czechoslovakia on Stalin’s orders, and based mainly on an alleged link between Jews, Zionism, and U.S. espionage. This trial indicated Stalin’s intentions to use antisemitism not only in the Soviet Union, but also in the satellite countries of Eastern Europe. The “Doctors’ Plot,” staged under Stalin’s supervision in 1952 and published on January 13, 1953, represented his fears and suspicions of the Jews. It is generally believed that Stalin’s death on March 5 of that year prevented a major disaster to Soviet Jews.

Personal Anti-Jewish Bias

Stalin’s ruthlessness and secretive nature make it impossible to prove conclusively when and to what extent a personal anti-Jewish bias played its role in his policy toward individual Jews and the Jewish people. Jews were known to him from his childhood and adolescence, since both Georgian towns – Gori, his birthplace, and the capital Tbilisi, where he received his Greek-Orthodox education – had a sizable Jewish population. A jest to which he referred in an article in 1907, in which the Bolsheviks’ rivals, the Mensheviks, were portrayed as a “Jewish” faction of the Social-Democratic Party, and the humorous allusion made to the fact that it would not have been a bad idea

if the Bolsheviks staged an intraparty “pogrom” seemed to indicate a certain train of thought. On the other hand, on Jan. 12, 1931, in an interview with a representative of the Jewish Telegraphic Agency, Stalin made one of the sharpest statements ever made against antisemitism, describing it as “the most dangerous vestige of cannibalism,” and in 1936 he allowed this statement to be published in the Soviet Union (*Pravda*, Nov. 30). However, there is a series of indications of a personal anti-Jewish bias, as, e. g., a remark made to General Sikorski, the head of the Polish government in exile, in 1941 (“the Jews are rotten soldiers”), and various hints and remarks he uttered in 1948 to the Yugoslav Communist Milovan Djilas, or, in his family life, his disapproval of his son Yakov’s marriage to a Jewess, his highly emotional irritation over his daughter’s romance with the Jewish film director Kapler (having him arrested and sent to a labor camp) and avoiding meeting his Jewish son-in-law. The enthusiastic response of Soviet Jews to the establishment of the State of Israel in 1948 seemed to have reinforced his antagonism. He said to his daughter, Svetlana, that the entire older generation of Soviet Jews was contaminated with Zionism and that they were teaching it to their young people. Thus it seems evident that, while consciously exploiting deep-rooted anti-Jewish suspicions of the populace for his political ends – through the anti-“Cosmopolitan” campaign, the Slánský Trials, and the Doctors’ Plot, which highlighted his nationalist, anti-Western Cold War policy – Stalin himself became more and more paranoid and disturbed in his attitude to Jews and the Jewish people.

STAMFORD, town in Lincolnshire in northeastern England. In 1190 the local Jews were attacked by the crusaders assembled there at the Lent fair and those unable to find shelter in the royal castle were massacred. The community later reestablished itself and in the 13th century there was an **archa*. In 1222 members of the community were arrested on a charge of mocking Christianity, possibly the result of a misunderstanding of a Purim masquerade. No Jewish community has been established in modern times.

[Cecil Roth]

STAMFORD, corporate and finance center in Connecticut; population (2004) 111,000; Jewish population (2004) est. 14,000. The earliest Jewish merchants were Nehemiah Marks (1720), and Jacob Hart (1728), who by 1738 was the fifth highest taxpayer in town. He owned property also in Greenwich and Darien but as a Jew was not eligible to vote or serve on the grand jury. Hart’s children were the first of the Jewish faith

born in Stamford. Jewish families came from New York during the American Revolution, among them were Isaac Pinto who translated the first English High Holy Day prayer book in America (1761) and the daily English prayer book in 1766 but did not remain afterwards. Sporadic Jewish settlers continued to come until 1856 when Wolff Cohen advertised his clothing store in *The Advocate*. In 1868 there were five Jewish-owned businesses but no community or congregation. Through the 1870s Jewish owned saloons as well as clothing and fancy and dry goods establishments. The first Jewish marriage with a full *minyān* was held in 1805, but it was not until 1871, when Rabbi Henry Vidaver of New York married Henry Bernhard and Rachel Cohen, that a description of the ceremony and reception were printed in full detail in *The Advocate*. Samuel H. Cohen, Stamford's first Jewish attorney, was appointed probate judge in 1876. In 1881 Jacob Rosenblum arrived in Stamford; he is considered the first Eastern-European Jew from Lithuania to reach there, coming via Sharon, Pennsylvania. Young, single peddlers, Isadore Alexander and Solomon Osmansky, followed. The first worship services were held in an attic on Cedar St. In 1887 David Cohen, a new arrival, reports that the first High Holy Day services were held in Stamford in Jacob Rosenblum's tenement flat on Stillwater Ave. The same year Pacific St. began to develop as the retail hub for the new arrivals who opened a variety of retail stores and small manufacturing. By World War I, this street had become Stamford's version of New York's Lower East Side. Mainstream Jewish stores were also on Main St. and Atlantic Street. In 1889 a congregation was chartered as Agudath Sholom with 22 signers. In 1891 a cemetery association was chartered with the name of Agoodat Solima and purchased land on West Hill Rd. The congregation during this decade was dormant and by 1901, it was simply reported as "The Hebrew Society" with no building of its own. In 1904 a second charter for a Cong. Agudath Sholom was issued and ground was broken for the first synagogue, completed 1908. There were secular Jewish organizational chapters, such as L'Maan Zion that began in 1902, and the Independent Lodge started in 1903, which also established its own cemetery on Hoyt St. in Darien in 1904. B'nai B'rith was chartered in 1910, and the National Council for Jewish Women in 1911; a Stamford Hebrew Political & Social Club was chartered in 1907. Of all the aforementioned groups, only the Independent Lodge survives. In 1911 attorney Alfred Phillips was elected to the state legislature, and in 1913 he became the first Jewish secretary of state in Connecticut. In 1916 The Hebrew Institute was founded as the meeting place for social and later also some worship activities of the community. It dissolved in 1927 and was succeeded by The Stamford Jewish Community Center which dedicated its building on Prospect St. in 1930. Roosevelt Lodge of the Masonic Order was founded 1922, because Jews were refused membership in Stamford's Union Lodge F.&A.M. The JCC moved to its present location on Newfield Avenue in 1982. Temple Beth El, a Conservative congregation, was founded in 1920 and met in the Hebrew Institute until 1927, when its first synagogue was dedicated on Prospect St. The congregation moved to its newer structure

on Roxbury Rd. in 1974. Temple Sinai, a Reform congregation founded in 1954, has a synagogue complex on Lakeside Drive. The Orthodox Congregation Agudath Sholom has worshiped since 1965 in its current building, which also has a *mikveh*, on Colonial Road. Young Israel is an Orthodox congregation with a synagogue on Oaklawn Avenue. Chabad is constructing a school complex on High Ridge Rd., and The Fellowship of Jewish Learning, founded 1973, is a liberal congregation sharing a meeting house on Roxbury Rd. All congregations have religious schools. The Bi-Cultural Day School founded in 1956 is renowned for its full curriculum from kindergarten through grade eight. Jewish Family Services has offices to serve all in need of assistance. Offices of The United Jewish Federation, and The Jewish Endowment are located in the JCC. The Jewish Historical Society of Lower Fairfield County was founded in 1983 in Stamford. Julius Wilensky was elected and served as the first and only mayor of the Jewish faith of The City of Stamford, 1969–73. Stamford is the birthplace and boyhood home of United States Senator Joseph Lieberman who was the first candidate of the Jewish faith to be nominated and run for vice president of the United States.

[Irwin Miller (2nd ed.)]

STAMPFER, JEHOShUA (1852–1908), a founder of *Petaḥ Tikvah. Born in Szombathely, western Hungary, Stampfer attended Azriel *Hildesheimer's yeshivah at Eisenstadt. The obtainment of national independence by Hungary in 1867 aroused in Stampfer a desire to go to Erez Israel to ensure the survival of the Jewish people and the Torah. Leaving home in 1869 and completing his journey to Jerusalem on foot, he joined a group of young people who were trying to establish an agricultural settlement in the country. In 1878 he and his companions settled on land that belonged to the village of Mulabbis, near the Yarkon River, and founded the first Jewish agricultural settlement, *Petaḥ Tikvah. For many years Stampfer was chairman of the Petaḥ Tikvah local council, which sent him abroad to collect funds from philanthropists and also encourage settlement in Erez Israel. In 1903 he attended the *Zikhron Ya'akov assembly, which was convened to form the organizational framework of the *yishuv*; he was the representative of the conservative faction, which had as one of its aims the abolition of women's right to vote. He administered the affairs of Petaḥ Tikvah in an ultra-Orthodox spirit and accepted the first pioneers of the Second Aliyah with mixed feelings: he was pleased by the influx of new blood to the country and tried to help the newcomers integrate and learn farming, but, on the other hand, he bitterly opposed their detached attitude toward religion and feared their influence on the settlers and their children. Stampfer's son, SOLOMON ISAAC STAMPFER (1877–1961), became the first mayor of Petaḥ Tikvah in 1934.

BIBLIOGRAPHY: Y. Yaari-Poleskin, *Holemim ve-Loḥamim* (1946²), 38–46; idem (ed.), *Sefer ha-Yovel le-Petaḥ Tikvah* (1929), 107–22; M. Smilansky, *Mishpāḥat ha-Adamah*, 1 (1944), 65–68.

[Yehuda Slutsky]

STAMPFER, JOSHUA (1921–), U.S. Conservative rabbi, historian. Stampfer was born in the Jewish Quarter in the Old City of Jerusalem and was brought at the age of two to the United States, where he grew up in Akron, Ohio. He earned his B.S. from the University of Chicago in 1943 and his M.S. from the University of Akron in 1945. He returned to Jerusalem to study at the Hebrew University and volunteered to fight with the *Haganah in Israel's War of Independence. He was ordained at the *Jewish Theological Seminary in 1949 and received a D.H.L. from the *University of Judaism in 1972. In 1987, he was awarded an honorary Ph.D. from Pacific University. He served as rabbi of Congregation Tifereth Israel in Lincoln, Nebraska (1949–53) before becoming rabbi of Congregation Neveh Shalom in Portland, Oregon (emeritus since 1993). Under his leadership, Neveh Shalom grew to more than 1,000 families, to become one of the leading Conservative synagogues in the Pacific Northwest. Influenced by his teacher Mordecai *Kaplan, Stampfer initiated egalitarian changes, encouraging women to read the Torah and counting them in the *minyan* long before it became more commonplace within the movement.

A past president of both the Oregon Board of Rabbis and the Pacific Northwest Region of the *Rabbinical Assembly, Stampfer brought dynamism to the greater Oregon Jewish community as well. In addition to developing innovative educational programs at his own synagogue, Stampfer was instrumental in founding the first Jewish day school in the city, Hillel Academy (now the Portland Jewish Academy). He established and chaired the Oregon Jewish Historical Society, the Oregon Holocaust Resource Center, the Oregon Jewish Museum, and the Oregon Israel Jubilee Committee. In 1983, he founded the Institute for Judaic Studies, sponsoring symposia and conferences (in conjunction with the University of Oregon and Portland State University, where he serves on the faculty) that bring Jewish scholars to an area of the country considered remote. Remembering the influence of Shlomo *Bardin's Brandeis Camp on his own life, Stampfer founded and directed Camp Solomon *Schechter, the only Conservative Jewish summer camp in the Pacific Northwest.

Stampfer created and nurtured organizations beyond the boundaries of Oregon as well. His travels and contacts with the remnants of the ancient Jewish community of Kaifeng, China, and the Converso families of Belmonte, Portugal, led him to become the founding president of the Society for Crypto-Judaic Studies, to support research on the vanishing traces of the *Diaspora. He was also an organizer and the first vice president of the Sino-Judaic Institute.

Stampfer has maintained close personal and professional ties with Israel. He spent his sabbaticals working for and teaching at the fledgling Center for Conservative Judaism in Jerusalem. He encouraged support for Israel at home and led more than a dozen community and clergy tours to Israel. He was a co-founder of Oregonians for Peace Now and a member of the national board of Americans for Peace Now.

Stampfer was a long-standing appointee to the Oregon Government Ethics Commission and was actively involved in interfaith dialogue with Muslim and Christian leaders. He was the author of *Pioneer Rabbi of the West: The Life and Times of Julius Eckman* (1984), and a volume on ancient history, *Cradle of Civilization in the Middle East* (n.d.). In addition, Stampfer edited six books: *Prayer and Politics: The Twin Poles of A.J. Heschel* (1985); *Dialogue, the Essence of Buber* (1986); *The Sephardim: A Cultural Journey from Spain to the Pacific Coast* (1987); *All Its Paths Are Peace* (1987); *Islam and Judaism, 1400 Years of Shared Values* (1988); and *The Last Crypto Jews of Portugal* (1990). A biography of Stampfer's life, *To Learn and to Teach* (by David Michael Smith) appeared in 2003.

[Bezalel Gordon (2nd ed.)]

STAMPS. The first post offices in the Holy Land were established by the European great powers, by arrangement with the Sublime Porte, in the mid-19th century (see *Israel: Postal Services for further details).

The following post offices were established by the European powers:

(a) French Post Offices. There were three French post offices in Erez Israel. The office in Jaffa was opened in June 1852, while those in Jerusalem and Haifa were opened in 1900 and 1906, respectively. The postage stamps of France were in use until 1885, when they were replaced by stamps specially issued for the French post offices in the Levant.

(b) Austrian Post Offices. The post offices in Jaffa and Haifa were opened in 1854 and that in Jerusalem in 1859. Postage stamps were introduced in 1863 with the issues of Lombardo-Venetia, followed in 1867 by the first stamps for the Austrian post offices in the Levant.

(c) Russian Post Offices. The Russian post offices in Erez Israel were in Jaffa, Jerusalem, Acre, and Haifa.

(d) The Italian Post Office. This was the only postal service to issue stamps specially overprinted with the name of the city "Gerusalemme."

The period of the Turkish post offices ended with the conquest of Erez Israel by General Allenby (1917–18). The British then opened post offices, staffed by army personnel, in the principal towns and cities. At that time there were no postal facilities for the civilian population, and the inhabitants of Erez Israel were unable to communicate with their relatives and friends abroad. Cut off from the outside world for a long time, the people of Erez Israel eagerly awaited the resumption of postal services. On Dec. 9, 1917, approval was given by the military authorities for printing the first stamp under the British occupation. This stamp, first issued on Feb. 10, 1918, bears the initials EEF ("Egyptian Expeditionary Forces") and cost one piaster. A total of 338,881 of these stamps were printed on ungummed paper, and they remained in use until July 1, 1920. In addition, 20 separate stamps of various monetary denominations, all appearing with the same basic design, were issued. The Civil Administration replaced the Military Administration on July 1, 1920, when the letters OET (or OETAEEF), the

abbreviation for “Occupied Enemy Territory Administration, Egyptian Expeditionary Force,” were removed from the obliterations used in all post offices. It was decided by the government to issue stamps bearing inscriptions in the then official languages of the country: English, Hebrew, and Arabic. The inscription on these stamps, issued in September 1920 in the official languages, read “Palestine”; the Hebrew inscription having the additional letters ״א (the abbreviation for Erez Israel) added after the word “Palestine” (פְּלֶשְׁתִּינָה א״א). These stamps were used in various overprints, until the appearance in 1927 of the only pictorial set to be issued by the British government, and which continued in use until the State of Israel was established in 1948. This pictorial issue had four basic designs: Rachel’s Tomb near Bethlehem for the 2, 3, and 10 mil values; the Dome of the Rock in the Old City of Jerusalem for the 4, 6, 8, 13, and 15 mil values; the Tower of David near Jerusalem’s Jaffa Gate for the 5, 7, and 20 mil values; and Tiberias and the Sea of Galilee for the 50, 90, 100, 200, 250, 500 mil, and £ P1 values. Three sets of postage due stamps were also issued; these stamps were normally used to collect charges on taxed letters or letters with insufficient postage.

On the departure of the British in April–May 1948, many of the post offices were taken over by the Minhelet ha-Am, and, from May 15, 1948, by the Government of Israel. During the War of Independence communications were extremely difficult, and from time to time the supply of postage stamps ran out. In order to overcome this shortage and to continue a regular postal service until the Government of Israel could supply the new stamps, many issues of a local and provisional nature appeared. Noteworthy among these, and eagerly sought by philatelists, are the Jewish National Fund labels overprinted with the word *Do’ar* (“Post”) and the local issues of Safed, Rishon le-Zion, and Petaḥ Tikvah. On May 9, 1948, while Jerusalem was under siege, the first set of local Jerusalem stamps were issued. These were JNF stamps showing the map of Erez Israel with the frontiers of the Jewish State and the “International” city of Jerusalem as proposed by the United Nations in its decision of Nov. 29, 1947. Overprinted with the word *Do’ar* and their value in mils in Hebrew lettering, the stamps were in use until June 20, 1948, when the stamps of the State of Israel became available.

The first stamps issued by the State of Israel were printed on a small letter-press machine under strict secrecy. On May 16, 1948, the *Do’ar Ivri* (“Hebrew Post”) stamps bearing pictures of ancient Jewish coins were put on sale throughout Israel. Since the name of the new state was not known until the Proclamation of Independence on May 15, the designation *Do’ar Ivri* was used. The nine values of this first set are today a highly prized collector’s item. From 1948 to the end of 2005 Israel produced a total of 1,827 stamps, including souvenir sheets and special issues. Their attractive and colorful designs have won them international recognition. The definitive series of ancient coins, the twelve tribes, the signs of the zodiac, and emblems of the towns and cities of Israel; airmail issues of birds, landscapes, and exports of Israel; annual Jewish

New Year and Independence Day commemoratives; and many other fascinating subjects have introduced Israel to philatelists throughout the world. Many philatelic clubs, both in Israel and abroad, are devoted to the study of the postal history of Erez Israel. Collections of Erez Israel stamps are regularly displayed at philatelic shows such as at the Philymphia exhibition in London, where a number of exhibitors of Erez Israel stamps were awarded medals. Israel stamps are much in demand, and the early issues, for example, sell for high prices. They have also been a considerable source of revenue to the state.

[Moshe Hesky / Alan Karpas]

Jews and Judaica on Stamps

Over the years philatelists the world over have increasingly devoted their collections to a single theme, subject, or country. One such thematic category is “Judaica” and “Jews on Stamps.” These stamps, issued by Israel and many other countries, depict religious symbols and objects, synagogues, portraits of famous Jews in all walks of life, sites of significance in Jewish history, Bibles, statues of and by Jews, and almost every aspect of life connected with Judaism and Jews. There are a number of enthusiasts all over the world who devote themselves to this aspect of stamp collecting, and who have united themselves into societies. One of these publishes the *Judaica Historical Philatelic Journal* in the U.S.

Among the subjects in the Judaica collection are the following:

Nobel Prize Winners: Niels Bohr, Paul Ehrlich, Fritz Haber, and Albert Einstein.

Statesmen: Benjamin Disraeli, Walther Rathenau, Paul Hymans, and President Zalman Shazar (on a Brazilian stamp issued in honor of his visit to that country in 1966).

Scientists and Scholars: Heinrich Hertz, Armin Vámbéry, David Schwarz, Robert von Lieben, Ferdinand Widal, Walemar Haffkine, Otto Lilienthal.

Philosophers: Henri Bergson, Maimonides.

Musicians: Anton Rubinstein, Henri Wieniawski, Karl Goldmark, Felix Mendelssohn-Bartholdy, Gustav Mahler, Paul Dukas.

Artists: Isaac Levitan, Amadeo Modigliani, Marc Chagall, Mark Antokolsky.

Actors: Rachel, Sarah Bernhardt.

Poets and Writers: Heinrich Heine, Shalom Aleichem, H.N. Bialik.

Revolutionaries and Resistance Fighters: Rosa Luxemburg, Karl Marx, Jacob Sverdlov, Mátyás Rákosi.

Other subjects include the Bible; Hebrew letters (on the stamps of the UN, Russia, Denmark, and Jordan); and synagogues of Prague, Surinam, Cochin, Panama, and the Netherlands Antilles. A field of special interest to collectors of Judaica is the period of the Holocaust, including antisemitic issues, and the Ghetto stamps.

STAND, ADOLF (1870–1919), Zionist leader in Galicia and one of the leaders of world Zionism. Born in Lemberg, Stand became a Zionist in the 1880s. He was very active in the organization of Zionist societies and was the editor of the fortnightly Polish-language paper *Przyszłość* (“Future”) and later of the important Zionist annual in Polish *Rocznik Żydowski* (“Jewish Yearbook”). He joined Theodor *Herzl and always regarded himself as his disciple. A period of great activity ensued for Stand as, traveling through Galicia, he won over audiences with his Zionist speeches and established various Zionist groups. He was considered one of the finest speakers of his generation. In addition to his Jewish education, he had mastered German and Polish cultures, and put them to good use in his speeches.

He largely built up the Zionist movement in Galicia. In 1907 he was elected to the Austrian parliament for the district of Brody-Zloczow in eastern Galicia, and was among the founders of the Club of Jewish Members of Parliament, the first of its kind in Jewish parliamentary history. Despite his great admiration for Herzl, he opposed the *Uganda Scheme. In opposition to Herzl, Stand favored practical settlement activity in Erez Israel. On the outbreak of World War I, Stand fled to Vienna together with other Jewish refugees from the areas of Galicia conquered by the Russian army but was unable to adapt himself to his new circumstances, although he joined the Austrian Zionist leadership, and with the end of hostilities was appointed chairman of the East Galician National Council Mission in Vienna. In fact, his position as the leader of Galician Jewry had come to an end in 1914. After World War II, letters from Herzl to Stand were discovered and transferred to the Zionist Archives in Jerusalem. A Hebrew selection of his writings, *Kitvei Stand*, was published in Tel Aviv in 1942.

[Aryeh Tartakower]

STANDE, STANISLAW RYSZARD (1897–1939), Polish poet and translator. Stande's numerous verse collections were political salvoes for communism and range from *Młoty* (“Hammers,” 1921) to *Nasz krok* (“Our Step,” 1937). From 1931 he was an exile in the USSR, where he joined the editorial board of the monthly *Internatsionalnaya Literatura*. During the Stalinist purges of the late 1930s Stande died in prison.

STANISLAV (Pol. **Stanislawow**; now called **Ivanov Frankovsk**), city in Ukraine; under Poland-Lithuania until

1793; under Austria until 1918; and in Poland until 1939. A few months after the town was founded on his estates by Hetman Jędrzej Potocki (1662), he granted the Jews the right to settle there, extending to them other rights as well. The Jewish population consisted of leaseholders, innkeepers, craftsmen, and merchants, the last in competition with the Armenians living in the town. As a result of a succession of epidemics in the first 20 years of the 18th century, the number of Jews declined considerably, but within a dozen years or so this situation changed for the town's squires tried to attract Jews to the town. Around 1720 Józef Potocki confirmed the rights granted to the Jews in 1662. In 1745 the bishop of Lvov gave Stanislaw Jews permission to erect a new synagogue but it was never built. Permission was obtained once more, with certain limitations, in 1761. In the fire of 1868 a large part of the town, including the synagogue and many Jewish houses, was burnt down.

The Jewish population grew from 404 families (about 45% of the total population) in 1793 to 2,237 persons (41.5%) in 1801; 6,000 (55%) in 1849; 10,023 (53%) in 1880; 15,860 (30.7%) in 1921; and 24,823 (41.3%) in 1931. From 1784 until the Holocaust, members of the *Horowitz family were rabbis in Stanislaw. In the first half of the 19th century, influenced by the center in *Tysmenitsa, the Haskalah movement spread there. By the mid-19th century the rich merchants and the intelligentsia, who had assimilationist tendencies, dominated the community, but in 1880 Zionist influence became predominant in these groups. A regional Zionist committee was founded in Stanislaw in 1898, and the Bar Kochba Students' Association at the beginning of the 20th century. Markus (Mordecai Ze'ev) *Braude played an important role in the development of Zionism and in the social and cultural life of the Jews of Stanislaw. The Yiddish weekly, *Stanislaver Nakhrikhten*, edited by B. Hausmann, was published from 1902 to 1912. Other Yiddish weeklies were *Der Yidisher Veker* (1905–07) and *Stanislaver Gloke* (1909–14). A Hebrew literary monthly, *Ha-Yarden* (1906–09), was edited by Eleazar *Rokach.

During World War I Stanislaw was twice occupied and destroyed by the Russian army; the synagogue was burnt down, and a large number of Jews escaped to Bohemia and Vienna. In 1918 the town was the temporary seat of the authorities of the West Ukrainian Republic; the Jewish National Council for East Galicia also had its seat there. During this period, in spite of the Ukrainian nationalist repressions, the social and cultural life of the Jews flourished; they organized a Jewish militia for *self-defense which included demobilized soldiers. In May 1919 the units of Jeff Haller (see Haller's *Army) entered the town, instigating pogroms and looting Jewish property.

[Jacob Goldberg]

In Independent Poland

In June 1919 the Polish authorities, influenced by the *Endecja party, dismissed the heads of the Jewish community of Stanislaw, as well as all Jewish officials in the municipality, the post office, and railroad. Jewish teachers were not allowed to teach at public or private schools. By the end of August 1919 the situ-

ation improved somewhat after the visit of Henry Morgenthau (see Morgenthau *Commission). At the end of the year the Zionist leader Karl Halpern was appointed head of the community. At the 1922 elections to the Polish *Sejm, three Jewish delegates were elected from Stanislav and the province. In 1923, 13 Jews were elected to the 36-member municipal council. In order to minimize the importance of the Jewish community in the municipality, the Polish authorities incorporated several surrounding villages into Stanislav, thereby decreasing the percentage of Jews in the total population. At the 1927 municipal elections the Zionist leader Alexander Rittermann was elected deputy mayor, and out of eight town councilors three were Jews. The Jewish hospital was reopened in 1922. From 1922 the economic situation of Stanislav Jews considerably improved. In addition to wholesale and retail trade, they were occupied in the developing tanning industry, wood processing, and the production of alcoholic beverages and industrial alcohol. In 1924 the local yeshivah reopened. A Jewish secondary school was opened in 1924/25 and had 300 pupils a year later. There was also a Hebrew school, Safah Berurah. Vocational training institutes for boys, girls, and adults were established in the 1920s. A Yiddish weekly, *Dos Yidische Vort*, close to Po'alei *Zion, appeared in 1918–19, and *Shtegen*, a Yiddish literary monthly edited by Max Tabak, was published from 1932 to 1935. Between the two world wars there were 55 synagogues and prayerhouses in Stanislav (including one of the Sadagura Ḥasidim).

[Arthur Cygielman]

Holocaust Period

The number of Jews in Stanislav had increased to approximately 30,000 in 1939. The Soviets occupied Stanislav on Sept. 18, 1939, and immediately prohibited the activities of the various Jewish organizations. However, for a while, Zionist youth organizations continued to function underground. Public trials against Jewish merchants were staged, and Zionist and other leaders were imprisoned.

When the German-Soviet War broke out in June 1941, the town was occupied by the Hungarian army, and soon the Ukrainians carried out acts of murder, robbery, and degradation against the local Jews. At the same time over 1,000 Hungarian Jews were brought into the city. When the town came under direct German administration (July 26, 1941), a Judenrat was appointed, headed by Israel Zeiwald. The first victims of the German extermination policy were 1,000 Jews of the local intelligentsia who were massacred in a nearby forest. In the largest and most ruthless *Aktion*, on Oct. 12, 1941, over 10,000 Jews were put to death at the local Jewish cemetery. Two months later the ghetto was established. Starvation and epidemics claimed further victims. On March 31, 1942, all the refugees from Hungary as well as 5,000 local Jews were dispatched to *Belzec extermination camp. On the basis of a rumor spread in August 1942 that a young Jew had struck a Ukrainian policeman, the Germans asked Mordecai Goldstein, then chairman of the Judenrat, to deliver 1,000 Jews to the Nazis. When he refused, he was hanged together with all

the other members of the Judenrat; and over 1,000 Jews were murdered. On the first day of Rosh Ha-Shanah 1942, German soldiers broke into the ghetto, rounded up some 5,000 Jews, and sent them to Belzec. Many others were killed on the spot. There were further round-ups and in one of them the Germans shot about 1,000 Jews caught without labor permits (Jan. 26, 1943). The murder of the remainder of the community took place on Feb. 22, 1943, at the local Jewish cemetery. During the last stages of the liquidation of the Jewish community of Stanislav, several groups of young Jews organized themselves into partisan units. One group was headed by Oskar Friedlander of Buchach, and in another, a young woman engineer, Anda Luft, was known for outstanding partisan activities.

Some 1,500 Jews from Stanislav, some of whom had escaped prior to the Nazi occupation, survived in various parts of the world. In the city itself the Jewish community was not reestablished after the war. Organizations of Jews from Stanislav function in Israel and in the United States.

In later years, the renewed Jewish community in Ivanov-Frankovsk established a synagogue, a Jewish day school, and a community center. In 2003 the Jewish community opened an exhibition entitled "Jewish Stanislav." Dedicated to the history and development of the Jewish community in Stanislav, the exhibition depicts the history of the local community and synagogue. A new Holocaust memorial was erected near the city.

STANISLAVSKY, SIMON JUDAH (1849–1921), author and scholar. Born in Nikopol, S. Russia, Stanislavsky received a traditional education, and influenced by I. *Orshanski, entered a Russian gymnasium at the age of 23.

His first contribution to the Hebrew press dealt with problems of education, especially for girls. Later he wrote studies on the history of Russian Jewry as well as monographs on Isaac Erter, Abraham Abba Glusk, the Maggid of Dubno (Jacob *Kranz), Mendel *Lefin, Israel *Zamosc, and others. Most of his works were published in the Russian-Jewish press, mainly in *Yevreyskaya Biblioteka* and *Voskhod*. He also contributed to Hebrew periodicals, such as *Ha-Shilo'ah* and *Reshumot*. Stanislavsky was one of the first *maskilim* in Yekaterinoslav (*Dnepropetrovsk) where he resided, contributing many reports on the activities of his community to the Hebrew and Russian-Jewish press.

[Yehuda Slutsky]

STAR, DARREN (1961–), U.S. television writer and producer. Star was born in the Washington, D.C., suburb of Potomac, Md., the eldest son of an orthodontist father and freelance-writer mother. As a child, he was obsessed with Hollywood. By age 15, he had a subscription to the trade publication *Variety*, and, while in high school, he took screenwriting classes at American University. After graduating college from UCLA, Star worked odd jobs to support his writing career, and at age 24 sold his first screenplay, *Doin' Time on Planet Earth*, a sci-fi movie for teens (starring Adam West of TV's *Batman*). In 1990, Fox paired Star with famed TV producer Aaron *Spelling (*Charlie's Angels*, *Dynasty*) to write the pilot for a dramatic series set in high school, and *Beverly Hills, 90201* (1990–2000) was born. It was an enormous hit, which spawned another Fox series, *Melrose Place* (1992–99), based on an apartment complex in Los Angeles where Star once lived. Star's first solo venture, *Central Park West* (1995), lasted only 17 episodes. However he followed this with the HBO cable hit, *Sex & the City* (1998–2004), a racy comedy about a New York sex columnist (Sarah Jessica *Parker) and her three best friends (Cynthia Nixon, Kim Cattrall, and Kristen Davis), which was groundbreaking in its depiction of stylish contemporary women and their relationships. It was a critical hit with many nominations and awards, including winning Golden Globes for Best Comedy Series (2000, 2001, 2002) and the Emmy for Outstanding Comedy Series (2001). Star continued to create new shows, including *Miss Match* (2003) starring Alicia Silverstone, and *Kitchen Confidential* (2005).

[Amy Handelsman (2nd ed.)]

STARA ZAGORA, city in central Bulgaria. It seems that refugees from Spain established a community in Stara (Old) Zagora. In 1858 there is a mention of the Jewish quarter. The Russians, who conquered the town in 1877, looted the houses of the Jews and the synagogues; some of the Jews lost their lives. In 1884 an Alliance Israélite Universelle school was opened. In 1885 there were 332 Jews in the town and in 1893, 480. The Jews engaged in the export of grain. In 1943 there were 560 Jews in the city. After the establishment of the State of Israel, most of the Jews of Stara Zagora immigrated there together with other Bulgarian Jews. In 2004 there were 110 Jews in the city, affiliated to the local branch of the nationwide Shalom organization. For further information on the Holocaust Period, see *Bulgaria.

[Simon Marcus / Emil Kalo (2nd ed.)]

STARER, ROBERT (1924–2001), U.S. composer of Austrian birth. Starer was born in Vienna, where he studied from the age of 13 at the State Academy of Music. After the *Anschluss* he settled in Jerusalem and continued his studies at the conservatory with Josef *Tal, Solomon *Rosowsky, and Oedon *Partos. After serving with the British Royal Air Force from 1943 to 1946, he went in 1947 to the U.S. on a Juilliard School

of Music postgraduate scholarship, studied with Aaron *Copland in Tanglewood in 1948, and joined Juilliard's faculty in 1949, teaching there until 1974. In 1957 he received American citizenship. In 1966 he was appointed professor of music at Brooklyn College and at the Graduate Center of the City University of New York, where he taught until 1991 and was named a Distinguished Professor (1986). Starer was elected a member of the American Academy of Arts and Letters (1994) and awarded the Medal of Honor for Science and Art by the president of Austria (1995). He received an honorary doctorate from the State University of New York in 1996.

Starer is the author of *Rhythmic Training* (1969), *Basic Rhythmic Training* (1986), and an autobiography, *Continuo: A Life in Music* (1987).

Starer wrote a great deal of ballet music, including *The Story of Esther* for Anna *Sokolow (first performed 1960), *The Dybbuk* for Herbert *Ross (Berlin Festival, 1960), *Samson Agonistes* (1961) and *Phaedra* (1962) for Martha Graham. His operas include *The Intruder* (1956) and *Pantagleize* (1973). He also wrote *Kohelet* (1952); *Sabbath Eve Service* (1967) *Psalms of Woe and Joy* (1975); *Anna Margarita's Will*, (1979); *Letter to a Composer*, (1994), two symphonies (1950, 1951); three piano concertos (1947, 1953, 1972); violin concerto, 1979/80; viola concerto, 1986; cello concerto, 1988; *Nishmat Adam* for narrator, choir and orchestra (1990); concerto for two pianos (1996).

Starer was a composer of eloquent style in a post-Bergian atonal idiom. His works reflect his encounter in Palestine with Arabic scales and rhythms, and his affinity to jazz he learned in the U.S. He absorbed some influences of the 1960s avant-garde and turned them into vehicles of his penchant for dramatic processes.

[Yuval Shaked (2nd ed.)]

STARK, ALBERT ("Dolly"; 1897–1968), U.S. baseball umpire, radio announcer, and college basketball and baseball coach. Stark was born on the Lower East Side. His father died when he was a youngster, and his mother became blind, leading to a poverty-stricken childhood and forcing Stark to earn money as a pushcart peddler. Stark played for Jersey City and Newark in the International League, before failing in his tryout with the Washington Nationals for his lack of hitting. Stark umpired college baseball for a few years and then began officiating in the Eastern League in 1927. On February 3, 1928, he was appointed an umpire in the National League. He became one of the most celebrated and popular umpires in baseball from 1927 until 1940, so much so that on August 24, 1935, Stark was given a "day" at the Polo Grounds and presented with an automobile before the scheduled game, an event virtually unheard of for umpires. In 1934 and 1935 he was voted the most popular umpire in a player's poll. In 1936 Stark became the first umpire in history to hold out for more money, sitting out the season and working as a radio announcer in Philadelphia. He returned the following year, retired in 1939, came back in 1942, and then retired for good. In the off-seasons Stark coached basketball

at Dartmouth College, as head coach of the freshman team from 1925 to 1928 and coach of the varsity from 1929 to 1936 and 1945–46, finishing with a 102–59 record. After his career, Stark became a successful designer of women's clothes, known for the originality of his "Dolly Stark" dress.

[Elli Wohlgelernter (2nd ed.)]

STARK, EDWARD (1863–1918), U.S. *hazzan* and composer. Stark was the son of a *hazzan* and became *hazzan* of Temple Emanu-El in San Francisco in 1893 and remained there for 20 years. He was one of the most influential musicians in the service of the American Reform Synagogue. His compositions evince the influence of *Sulzer and *Lewandowski and the style of the classical oratorio, but are based for the most part on traditional Jewish thematic material. He insisted on the use of the *hazzan* as soloist, thus reversing previous trends in the Reform synagogue. Under the title *Anim Zemiroth*, he published compositions for the Sabbath and the High Holidays (1909–13). In *Day of God* (1898) he arranged the **Kol Nidrei* melody for soprano solo, choir, and small orchestra.

STARK, LOUIS (1888–1954), U.S. journalist. Stark, a leading labor reporter for almost 20 years, worked on *The New York Times* from 1917 until his death. He wrote firsthand accounts of fights in the Kentucky coalfields, sit-down strikes, and lockouts, and among the awards he won for his reporting was the Pulitzer Prize (1942). From 1931 to 1951 Stark was in Washington covering the White House. He then returned to New York to join the *Times* editorial board.

STARKENSTEIN, EMIL (1884–1942), pharmacologist. Born in *Poběžovice, Bohemia, Starkenstein was professor of pharmacology at the Prague German University from 1920 until 1938. Initially he studied purines, inosite, and metabolism of purines. Later he investigated the metabolism of inorganic substances and the effect of compound drugs in the treatment of pain. His study of seasickness led him to develop an effective counteracting drug. Starkenstein endeavored to further collaboration between the Czech and the German universities of Prague. He resigned at the time of the Sudeten crisis (1938) and moved to the Netherlands in 1939, where he concentrated on research into quinine. He was arrested after the Nazi occupation and killed in the concentration camp of Mauthausen. Starkenstein had a keen interest in the history of pharmacology and of Bohemian Jewry, and published articles on the history of his family (he was a descendant of Eleazar *Loew) and on his native community (see bibliography there). Starkenstein took a leading part in the activities of the territorial lodge of *B'nai B'rith in Czechoslovakia.

He published more than 300 articles. His books include *Der Einfluss experimentell-pharmakologischer Forschung auf Erkennung und Verhuetung pharmakotherapeutischer Irrtuerer* (1923); *Pharmakologie der Entzuendung* (1929); and in collaboration with J. Pohl and E.E. Rost: *Lehrbuch der Toxikologie* (1929).

[Suessmann Muntner]

°STARKEY, JOHN LLEWELYN (1895–1938), British archaeologist. After World War I, he excavated with *Petrie at Qau and Badari. From 1924 to 1926 he was field director of the University of Michigan expedition to Kom Washim. In 1926 he joined Petrie's expedition to Palestine, working at Tell Jamma (1926), Tell Sharuhen (1927), and Tell al-'Ajjül (1929–31). He directed the Wellcome-Marston expedition to Tell *Lachish from 1932 to 1938. Starkey was a successful field director with efficient methods. During the 1936–39 riots he was assassinated by Arabs while on his way to Jerusalem for the opening of the Palestine Archaeological Museum.

[Michael Avi-Yonah]

STAROBINSKI, JEAN (1920–), Swiss literary critic and author. The son of a physician, Starobinski was born and educated in Geneva, where he obtained doctorates in both literature and medicine. He lectured on French literature at Johns Hopkins University from 1953 to 1956 and then returned to Geneva University, where he became professor of French literature in 1964. He published articles and books on a vast range of subjects – medicine (*Histoire de la Médecine*, 1963; *A History of Medicine*, 1964); psychoanalysis, psychiatry (*L'Invention de la Mélancolie*, 1960); architecture and art (*L'Invention de la Liberté*, 1964; *The Invention of Liberty*, 1964); sociology, linguistics, and above all literature, especially that of the 18th century. Two works in this last field were *Montesquieu par lui-même* (1953) and *Jean-Jacques Rousseau: la Transparence et l'Obstacle* (1957). In *L'Invention de la Liberté* Starobinski traced the birth of the concept of freedom in the plastic arts, and in *L'Oeil Vivant* (1961) dealt with phenomena such as literary creation and a comprehensive vision of the world. Starobinski was also a leading exponent of the "structuralist" school of criticism, which considered a work of art in terms of a "significant structure" (i.e., the psyche of the creator, or the creative psyche of a social class), and the written word as a sign embodying the precarious balance between the *signifié* and the *signifiant* (i.e., content and expression). Raised in a staunchly Jewish and Zionist home, Starobinski was greatly interested in the Jewish aspects of modern literature, particularly the works of *Kafka, to whom he devoted several analytical studies, the first in 1943. His continued preoccupation with Jewish and Israel cultural affairs found expression in his preface to Claude *Vigée's French translation of David *Rokeah's verse collection, *Les Yeux dans le rocher*, 1968. He is married to Prof. Esther Starobinski, née Safran, the daughter of the chief rabbi of Geneva. She taught Jewish philosophy at its university.

[Claude Gandelman]

STARODUB, city in Bryansk oblast, Russian SFSR. Jewish settlement in Starodub is first mentioned in connection with the *Chmielnicki massacres of 1648–49, when the Cossacks conquered the town and murdered its Jewish inhabitants. Later, Jews once more inhabited Starodub, but during the Northern War, when the town was occupied by the Swedish army (1708), soldiers again killed about 50 Jews. In 1847 the number of Jews registered in the community was 2,558, and in 1897 there were 5,109 Jews (42.5% of the total population). The community was largely influenced by *Habad Hasidism, which during the middle of the 19th century established a large yeshivah. This was closed down by the authorities, however, in 1881 as a result of a denunciation by one of the town's *maskilim* who accused the Hasidim of evading military service and of being involved in forgery and fraud. In October 1905 pogroms took the lives of several Jews in Starodub. Under the Soviet regime the community and its institutions were dissolved. In 1926 there were 3,317 Jews (26.6% of the total population). Under the German occupation (1941) all Jews who did not manage to escape were killed.

[Yehuda Slutsky]

STARO-KONSTANTINOV (referred to by the Jews as Old Konstantin), city in Kamenets-Podolski oblast, Ukraine. Under Polish rule Staro-Konstantinov was an important commercial center renowned for its fairs. Jews lived there from the end of the 16th century; in 1629 there were 130 Jewish families (about 25% of the total population) and the community was the second largest in Volhynia. During the *Chmielnicki massacres (1648–49), Jews from the whole of the surrounding region sought refuge within the fortified city. The Cossacks broke into the city on the Ninth of Av, however, and massacred all the Jews. Staro-Konstantinov was also destroyed several times during the *Haidamack persecutions of the early 18th century. Jews continued to settle in the city, however, and by 1765, 1,801 Jews were counted as paying the poll tax in Staro-Konstantinov and its vicinity. Under Russian rule Staro-Konstantinov became a district city of the region of Volhynia. In 1802 Jews numbered 2,053. Riots broke out in Staro-Konstantinov in 1827 when the order of Czar Nicholas I on the mobilization of Jews into the Russian army was published. By 1847, there were 6,611 Jews in the community, and in 1897 the number had increased to 9,212 (60.7% of the total population). Most of the local Jews were Hasidim and followers of the *zaddikim* of the Chernobyl and Sadagora dynasties. With the establishment of the Soviet regime in Volhynia in 1920 Jewish community life was dissolved. This period also marked the economic collapse of the city proper and the departure of many of its inhabitants. By 1926 there were again 6,934 Jews (41.3% of the population) in Staro-Konstantinov supporting a large Yiddish secondary school. At the end of 1931 there were 4,837 Jews (about 33% of the population) in the city, of whom over a quarter were deprived of voting rights (“Lishentsy”).

During World War II when the Nazis invaded the city those Jews who did not succeed in escaping were exterminated. In 1959 there remained only 800 Jews among the city's 20,000 inhabitants. Staro-Konstantinov was the birthplace of A.B. *Gottlobor and A. *Goldfaden.

[Yehuda Slutsky]

STARR, JOSHUA (1907–1949), U.S. Jewish historian and communal worker. Starr, born in New York, studied at the Teachers' Seminary of the Jewish Theological Seminary, at the Universities of New York and Chicago, and at Columbia University. During 1933–35 he was a research student at the American School of Oriental Research in Jerusalem. Starr served on the staff of the American Jewish Congress and the American Jewish Joint Distribution Committee. During 1947–49 he was secretary of the Commission for European Jewish Cultural Reconstruction, on whose behalf he was instrumental in recovering part of the religious and cultural treasures looted by the Nazis. Starr's main scholarly interest was in Byzantine and post-Byzantine Jewish history, on which he published: *The Jews in the Byzantine Empire, 641–1204* (1939); *Life in Crete Under the Rule of Venice* (PAAJR, 12 (1942), 59–114); and *Romania; the Jewries of the Levant after the Fourth Crusade* (1949). He also wrote on the New Testament and on Christian sects. In the field of contemporary Jewish history he took part in the publication of the *Jewish Population Studies* (1943) on behalf of the Conference on Jewish Relations, and edited *Jewish Social Studies*. Starr contributed numerous articles to learned publications, as well as pamphlets and articles for the World and American Jewish Congresses. A *Joshua Starr Memorial Volume* was published in 1953, containing a biography (by Abraham G. Duker) and a bibliography (9–15).

[David Jacoby]

STASZOW (Pol. *Staszów*; Rus. *Stashev*), town in Kielce province, central Poland. The Jewish settlement there developed from the beginning of the 18th century. In 1765 there were 609 Jews paying the poll tax in Staszow and 169 in the surrounding villages. Jews in this period were occupied in tailoring, hatmaking, goldsmithery, glazery, and soap manufacture. Between 1823 and 1862 Jewish settlement in the town was restricted by the authorities of Congress Poland. The Jewish population numbered 2,062 (52% of the total) in 1827; 3,246 (64%) in 1857; and 4,885 (62%) in 1897. In the second half of the 19th century Jews in Staszow established tanneries and factories for shoes and clothing, and engaged in small-scale trading. Owing to the residence there of the *zaddik* R. Israel (1763–1831), son of R. Meir ha-Levi Hurwitz of Apta, the influence of Hasidism within the community was strong. There were 4,704 Jews living in Staszow (56% of the population) in

1921. In 1932 antisemites perpetrated a pogrom against the Jews of the town. The community's institutions included *bat-tei midrash*, two yeshivot, schools, two hospitals, and libraries. The celebrated *hazzan* Joseph (Yossele) *Rosenblatt was born in Staszow.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II there were about 5,000 Jews in Staszow. The Germans entered the town at the end of June 1941. A ghetto was established in June 1942, in which 5,000 Jews from Staszow and 2,000 from its vicinity were concentrated. The Jewish community was liquidated on Nov. 8, 1942, when hundreds of Jews were murdered and the remainder deported to *Belzec death camp. During these deportations many Jews fled to the nearby forests and succeeded in hiding there. After the war the Jewish community of Staszow was not reconstituted. Organizations of former residents of Staszow are active in Israel, the United States, Argentina, Brazil, and Uruguay.

STATISTICS.

Official Statistics

Prior to the 19th century, statistical data on Jews were obtained irregularly, either from mere estimates, or as a by-product from administrative records specifically relating to Jews. As modern official statistics developed in Europe and American countries during the 19th century, they began to provide some statistical information on Jewish inhabitants. But enumeration of the number of Jews in some European countries, before the latter part of the 19th century, is considered to be incomplete. The growth of official statistics in general, and statistics on Jews in particular, was a gradual process. During the 20th century, official statistics on the number of Jews in the general population have been compiled in some Asian and African countries. The most favorable conditions for statistical information on Jews from official sources prevailed in the first decades of the 20th century until World War II. The majority of Jews were then living in countries – especially in Eastern and Central Europe – that rather regularly collected and published vital and migratory statistics, in addition to census data on Jews as a distinct group within the general population. These data not only supplied the overall numbers of the Jewish populations but also reflected their composition and demographic patterns. The Jews were distinguished in three ways: by religion, by ethnic group (termed “nationality” in Eastern Europe), and by language, i.e., according to the use of Yiddish or Ladino. Sometimes all three criteria were used concurrently by the same country. During the Nazi ascendancy, some countries made counts of persons of “Jewish descent.” The wide-ranging changes in the period after World War II also affected the quantity and quality of statistics on Jews. On

the one hand, the State of Israel has provided competent and detailed statistics on both its Jewish and non-Jewish inhabitants, and on the other hand, there has been a great reduction in the volume of official statistics on Diaspora Jewries. The Holocaust and subsequent migrations diminished the numerical importance of the Jews in Eastern and Central Europe. In addition, the policy of the new Communist regimes in that part of the world was to discontinue religious and, in some countries, ethnic, classification in official statistics. In the West, when religious information is not collected, this is attributed to “separation of church and state.” Nevertheless, some liberal and democratic Western countries have developed a tradition of either distinguishing or not distinguishing religious groups in their official statistics (e.g., Canada, the Netherlands, Switzerland differentiate; the U.S., Belgium, and France do not). A new circumstance which, in recent decades, has complicated the collection of data on Jews, is the increased number of “marginal” Jews who are apt to conceal their Jewish identity and indicate on statistical returns that they are “without religion.” At present about 70% of Diaspora Jewry, i.e., more than 50% of world Jewry, live in countries without regular official statistics on Jews. Even where such inquiries are made in Diaspora countries, the information published on the composition of the Jewish population is usually meager, often no more than a geographical breakdown cross-classified by sex. The situation in the major countries of Jewish residence in the Diaspora is as follows: the U.S., which has the largest Jewish population of any country, does not distinguish Jews in its decennial population census. Some figures on the number and residential distribution of the Jews were obtained by a “census of religious bodies,” but this was last taken in 1936. The separate classification of Jews in U.S. immigration statistics was discontinued in 1943. There are no official vital statistics on religious groups in the U.S. (except for marriage and divorce data collected in two states).

After World War II the U.S.S.R., another major center of Jewish population, had two population censuses, in 1959 and 1970. The published results distinguished Jews as well as the many other ethnic groups in the Soviet Union. The number of Jews in the U.S.S.R. recorded by the censuses was contested by Jewish circles as being too low. However, it should be remembered that there were conceptual and practical problems of identification of Jews in the U.S.S.R. In any case, no reliable means exist for making alternative estimates because there is no statistical information on the manifold changes in the Jewish population which took place during and since the Holocaust on the territory of the U.S.S.R. (which was enlarged after World War II). In France and Great Britain there are virtually no official statistics on Jews, and those in Argentina are scanty.

Of the Diaspora countries with several hundred thousand Jews after World War II, Canada has had the most detailed official statistics on Jews. But even in this case, conceptual difficulties affected the results of the 1951 and 1961 censuses, relevant vital statistics on Jews no longer extend to

all provinces, and the separate designation of Jews was recently omitted from the immigration statistics.

Jewish institutions in several countries made successful efforts to use, as they became available, the electronically processed material of official statistics for preparing special tabulations on Jews in response to Jewish initiatives.

Jewish-Sponsored Data Collection

In countries where there are no official statistics on the Jewish population, the only practical way to obtain any numerical information about it is through Jewish-sponsored data collection. The customary method, local community surveys, has been used sporadically over the last few decades, especially in the U.S. In the case of large Jewish groups, these surveys are necessarily sample studies. Many improvements have been incorporated in the technique of some Jewish surveys to make them more sophisticated. However, isolated community surveys have essential shortcomings, e.g., the local focus, the differences in content and method between the various studies, and the fact that they are conducted at different times even within the same country. Hence their usefulness for countrywide or larger statistical syntheses is very limited. "Marginal" Jews who have little desire to identify themselves as Jews and who have few or no organizational ties with the Jewish community are now not few in number in many Diaspora countries. While official statistics may not adequately identify individuals in the general population as Jews, Jewish-sponsored surveys have difficulty in reaching the total number of Jews in a community. In the collection of demographic data the concept "Jewish" should be construed in the widest sense. But in the tabulations various categories within the Jewish population should be distinguished according to attachment to Jewish practices, mixed marriages, etc. At any rate, the customary "master list," i.e., the combined information on Jews from various institutional and organizational records, is often insufficient as the sole source for surveying a Jewish population.

Another field of Jewish-sponsored statistical activity is the collection of vital statistics. These, however, often reflect only those activities which take place under the auspices of Jewish religious institutions, e.g., synagogue marriages, circumcisions, and burials with religious ceremonies. But the marriages, births, and deaths of Jews which are not accompanied by religious ceremonies are unrecorded in the statistics of Jewish institutions. The increasing assimilation and secularization of Diaspora Jews, and the consequent absence of "marginal" Jews from the data collected by Jewish institutions, are apt to vitiate the data's demographic value. In some Diaspora countries, interested organizations make counts of Jewish immigrants who have received assistance as well as estimates of the total number of Jewish immigrants. Sociological and socio-psychological investigations which supply data on Jews have only limited demographic value because their subjects are often unrepresentative of the entire Jewish population or their figures are too small. In a few European countries where

the Jewish communities are recognized by public law, permanent population registers are kept by the community.

From the 1960s, the Institute of Contemporary Jewry of The Hebrew University, Jerusalem, designed a new and more efficient type of Jewish-sponsored population survey. These surveys inquired into demographic, economic, and social characteristics as well as aspects of Jewish identity, and permitted many cross-tabulations of population characteristics. They were preferably on a countrywide basis, with improvements in sampling technique and especially designed to include "marginal" Jews. The first survey of this type was taken in Italy in 1965. Better information on Jewish vital statistics is also partially obtainable from population surveys. Jewish-sponsored surveys are not only substitutes for nonexistent governmental statistics on Jews but are, in fact, the only means of investigating aspects of Jewish identity. Jewish-sponsored data collection on topics other than population statistics usually relates to the working of Jewish institutions and organizations, international, national, and local. In general, the data are collected within the framework of the respective agencies themselves.

Research Activities

The copious statistical material on Jews which accumulated before World War II encouraged scholars and others to compile comparative statistics of various countries, and to analyze the available data in detail. Among the major contributors to the field of Jewish demographic research have been A. *Nossig and J. *Jacobs, toward the end of the 19th century; and in the 20th century, A. *Ruppin, J. *Thon, B. *Blau, J. Segall, F. Theilhaber, I. Koralnik, L. *Hersch, J. *Lestschinsky, H.S. Linfield, A. *Tartakower, and R. *Bachi. Important centers for demographic and statistical research on the Jews were the Bureau fuer Statistik der Juden (Berlin) and *YIVO. Periodicals of importance in this field were *Zeitschrift fuer Demographie und Statistik der Juden*; *Bleter far Yidishe Demografye, Statistik un Ekonomik*; and *Shriftn far Ekonomik un Statistik*.

The period after World War II has seen not only the diminution of official data on Jews, but also the passing of the previous generation of scholars in Jewish statistics. The present scholarly emphasis in Jewish population statistics has partially shifted, of necessity, from the analysis and comparison of available data to the methodology and promotion of data collection. Several Jewish research institutions have been engaged primarily in statistical and demographic work on a local and national level: the Bureau of Social and Economic Research of the Canadian Jewish Congress, Montreal; the Statistical and Demographic Research Unit of the Board of Deputies of British Jews, London; and Instituto de Investigaciones Sociales of the Asociacion Mutual Israelita Argentina (AMIA), Buenos Aires. Some permanent institutions for social and historical research on the Jews which have given part of their attention to statistical and demographic matters are: Centre National des Hautes Etudes Juives, Brussels; Communauté, Paris; Oficina Latinoamericana of the American Jewish

Committee and Centro de Estudios Sociales of the Delegación de Asociaciones Israelitas Argentinas (DAIA), Buenos Aires; and the Jewish Museum of the Czech State, Prague.

In some cases, scholars have carried out ad hoc demographic and social surveys of local Jewish populations at the invitation of the community leadership. There are many such instances in the U.S., the most notable through to the mid-1960s being the surveys taken in Washington (1956), Los Angeles (1959 and 1965), Providence (1963), Camden Area (1964), Boston (1965), and Springfield (1966). Elsewhere, local surveys were taken in recent years in São Paulo (Brazil); Melbourne (Australia); Leeds and Edgware (England); Brussels (Belgium); and Wrocław (Poland). For Dutch Jewry, a survey based on records only, without home visits, was made in 1954; a similar survey of Dutch Jewry took place in 1966. Counts based on community population registers are available for the Jews in Vienna, Austria, in the German Federal Republic, and to some extent in Italy and the Netherlands. Additional countrywide sample surveys of Jewish populations were planned for the U.S., France, and other countries (in the U.S. under the auspices of the Council of Jewish Federations and Welfare Funds).

Israel has a very active Central Bureau of Statistics (headed by R. Bachi until 1972), whose work also illuminates important aspects of Jewish demography in the Diaspora. On the international level, the Division of Jewish Demography and Statistics in the Institute of Contemporary Jewry of The Hebrew University, Jerusalem, also headed by R. Bachi, has advanced the study of Jewish demography throughout the world by encouraging and coordinating data collection and research, refining methodology, developing technical services (world bibliography, documentation center), and training specialists. It is also the seat of the Association for Jewish Demography and Statistics, which serves as the international organization for interested scholars and laymen. Other international Jewish research bodies whose activities include some statistical work are: The Institute of Jewish Affairs (in London since 1966), YIVO, and *Yad Vashem.

[Usiel Oscar Schmelz]

Sources

The amount and quality of documentation on Jewish population size and characteristics is far from satisfactory. Reviewing the sources since 1990, however, one finds that important new data and estimates have become available for several countries through official population censuses and Jewish-sponsored sociodemographic surveys. National censuses yielded results on Jewish populations in Ireland, the Czech Republic, and India (1991); Romania and Bulgaria (1992); the Russian Republic and Macedonia (1994), Israel (1995), Canada, South Africa, Australia, and New Zealand (1996 and 2001); Belarus, Azerbaijan, Kazakhstan, and Kyrgyzstan (1999); Brazil, Mexico, Switzerland, Estonia, Latvia, and Tajikistan (2000); the United Kingdom, Hungary, Croatia, Lithuania, and Ukraine (2001); the Russian Republic, and Georgia (2002). Perma-

nent national population registers, including information on the Jewish religious, ethnic or national group, exist in several European countries (Switzerland, Norway, Finland, Estonia, Latvia, and Lithuania), and in Israel.

In addition, independent sociodemographic studies have provided most valuable information on Jewish demography and socioeconomic stratification as well as on Jewish identification. Surveys were conducted over the last several years in South Africa (1991 and 1998); Mexico (1991 and 2000); Lithuania (1993); the United Kingdom and Chile (1995); Venezuela (1998–99); Israel, Hungary, the Netherlands, and Guatemala (1999); Moldova and Sweden (2000); France and Turkey (2002); Argentina (2003 and 2004). In the United States, important new insights were provided by two large surveys, the National Jewish Population Survey (NJPS, 2000–01) and the American Jewish Identity Survey (AJIS, 2001). Several further Jewish population studies were separately conducted in major cities in the United States (notably in New York City in 2002) and in other countries. Additional evidence on Jewish population trends can be obtained from the systematic monitoring of membership registers, vital statistics, and migration records available from Jewish communities and other Jewish organizations in many countries or cities, notably in the United Kingdom, Germany, Italy, Buenos Aires, and São Paulo. Detailed data on Jewish immigration routinely collected in Israel helps in the assessment of changing Jewish population sizes in other countries. Some of this ongoing research is part of a coordinated effort aimed at updating the profile of world Jewry.

Following an International Conference on Jewish Population Problems held in Jerusalem in 1987, initiated by the late Roberto Bachi of the Hebrew University and sponsored by major Jewish organizations worldwide, an International Scientific Advisory Committee (ISAC) was established, chaired by Sidney Goldstein of Brown University. An Initiative on Jewish Demography, sponsored by the Jewish Agency under the chairmanship of Sallai Meridor, led to an international conference held in Jerusalem in 2002 and to an effort of data collection and analysis implemented over the years 2003–2005. The Jewish People Policy Planning Institute (JPPPI), chaired by Ambassador Dennis Ross, provides a framework for policy analyses and suggestions, including Jewish population issues.

Definitions

A major problem with Jewish population estimates periodically circulated by individual scholars or Jewish organizations is a lack of coherence and uniformity in the definitional criteria followed – when the issue of defining the Jewish population is addressed at all. Simply put, the quantitative study of Jewish populations can rely only on operational, not normative, definitional criteria. Three major concepts must be considered in order to put the study of Jewish demography on serious comparative ground.

In most countries outside of Israel, the *core Jewish population* includes all those who, when asked, identify themselves

as Jews; or, if the respondent is a different person in the same household, are identified by him/her as Jews. This is an intentionally comprehensive and pragmatic approach reflecting the nature of most available sources of data on Jewish population. In countries other than Israel, such data often derive from population censuses or social surveys, where interviewees have the option to decide how to answer relevant questions on religious or ethnic preferences. Such a definition of a person as a Jew, reflecting *subjective* feelings, broadly overlaps but does not necessarily coincide with *halakhah* (rabbinic law) or other normatively binding definitions. Inclusion does *not* depend on any measure of that person's Jewish commitment or behavior in terms of religiosity, beliefs, knowledge, communal affiliation, or otherwise. The *core* Jewish population includes all converts to Judaism by any procedure as well as other people who declare they are Jewish. Also included are persons of Jewish parentage who claim no current religious or ethnic identity. Persons of Jewish parentage who adopted another religion are excluded, as are other individuals who in censuses or surveys explicitly identify with a non-Jewish group without having converted out. In the State of Israel, personal status is subject to the rulings of the Ministry of the Interior, which relies on criteria established by rabbinical authorities. In Israel, therefore, the *core* Jewish population does not simply express subjective identification but reflects definite legal rules, those of *halakhah*. Documentation to prove a person's Jewish status may include non-Jewish sources.

The question whether Jewish identification according to this *core* definition can or should be mutually exclusive with other religious corporate identities emerged on a major scale in the course of the 2000–01 NJPS. The solution chosen – admittedly after much debate – was to allow for Jews with multiple religious identities to be included under certain circumstances in the standard definition of Jewish population. In the latter survey, at least in the version initially processed and circulated by UJC, “a Jew is defined as a person whose religion is Judaism, OR whose religion is Jewish and something else, OR who has no religion and has at least one Jewish parent or a Jewish upbringing, OR who has a non-monotheistic religion and has at least one Jewish parent or a Jewish upbringing.” A category of Persons of Jewish Background (PJBS) was introduced: some of these were included in the Jewish population count and others were not. By the same token, Jews with multiple ethnic identities were included in the standard Jewish population count in Canada. The adoption of such extended criteria by the research community tends to stretch Jewish population definitions further than had usually been done in the past and beyond the above-mentioned typical *core* definition. These procedures tend to limit actual comparability of the same Jewish population over time and of different Jewish populations at the same time.

The *enlarged Jewish population* includes the sum of (a) the *core* Jewish population; (b) all other persons of Jewish parentage who – by *core* Jewish population criteria – are *not* Jewish currently (or at the time of investigation); and (c) all

of the respective further non-Jewish household members (spouses, children, etc.). Non-Jews with Jewish background, as far as they can be ascertained, include: (a) persons who have themselves adopted another religion, even though they may also claim to be Jewish by ethnicity or religion – with the caveat just mentioned for recent U.S. and Canadian data; and (b) other persons with Jewish parentage who disclaim being Jews. As noted, some PJBS who do not pertain to the *core* Jewish population naturally belong under the *enlarged* definition. It is customary in sociodemographic surveys to consider the religio-ethnic identification of parents. Some censuses, however, do ask about more distant ancestry. For both conceptual and practical reasons, the *enlarged* definition does not include other non-Jewish relatives who lack a Jewish background and live in exclusively non-Jewish households.

The *Law of Return, Israel's distinctive legal framework for the acceptance and absorption of new immigrants, awards Jewish new immigrants immediate citizenship and other civil rights. According to the current, amended version of the Law of Return, a Jew is any person born to a Jewish mother or converted to Judaism (regardless of denomination – Orthodox, Conservative, or Reform), who does not have another religious identity. By ruling of Israel's Supreme Court, conversion from Judaism, as in the case of some ethnic Jews who currently identify with another religion, entails loss of eligibility for Law of Return purposes. The law as such does not affect a person's Jewish status – which, as noted, is adjudicated by Israel's Ministry of the Interior and rabbinical authorities – but only the specific benefits available under the Law of Return. The law extends its provisions to all current Jews, their children, and grandchildren, as well as to the respective Jewish or non-Jewish spouses. As a result of its three-generation and lateral extension, the Law of Return applies to a large population, one of significantly wider scope than the *core* and *enlarged* Jewish populations defined above. It is actually quite difficult to estimate what the total size of the Law of Return population could be. These higher estimates in some of the major countries reach values double or three times as high as those for the *core* Jewish population.

The significant involvement of major Jewish organizations in Israel and in the U.S. – such as the Jewish Agency, the American Joint Distribution Committee, HIAS or UJC – in sponsoring data collection tends to complicate research issues. Organizations are motivated by the needs of their constituencies more than by neutral analytic criteria. In turn, the understandable interest of organizations to continue functioning and securing budgetary resources tends to bring them to take care of Jewish populations increasingly closer to the *enlarged* than to the *core* definition.

For further developments see *Population; Vital Statistics.

°**STATIUS, PUBLIUS PAPINIUS** (c. 45–96), Roman poet. He referred to the fall of Jerusalem and of Judea (which he calls Idyme, i.e., Idumea) at the hands of Titus and Vespasian (*Silvae* 5:2, 138) and the triumphs celebrated by them in 71 C.E. (*Silvae* 3:3, 138–42). He also praised the date groves of the country and the balsam which he described as “Hebrew juices.”

STATUS QUO ANTE, term applied to those communities in Hungary which after the schism that occurred at the Hungarian General Jewish Congress of 1868–69 (see *Hungary) did not join the *Neologist organization or the Orthodox communities (1871) but retained their former pre-Congress status. As they did not have a central representation, they conducted their affairs on a separate basis, while their relations with the government were maintained through the local authorities. It was only in 1927 that they organized themselves into a national organization – the Status Quo Ante Communities of Hungary – recognized by the government in 1928.

During the time of the schism in 1868–69, a number of communities, including some of the larger and more important ones, sought to maintain their traditional character. Thus for example, Abraham S. Sofer (Schreiber), rabbi of Pressburg (Bratislava), asked M. Perls to continue his rabbinical position at the head of the united community. Only a small number of them, however, succeeded in their objectives because the separate organization of the Orthodox claimed that the united communities were no longer faithful. The status quo ante communities were ostracized by the Orthodox, with their rabbis and *shohatim*. The communities which did not join the Neologists or Orthodox were thus completely isolated. According to the census of 1930, the membership of the status quo

ante communities was 17,440, compared with 292,159 for the Neologists, and 134,972 for the Orthodox.

The most important status quo ante communities were those of *Debrecen, *Eger, Gyöngyös, and *Nyiregyhaza, and outside Hungary, between the two world wars, Nagyszombat (Trnava) in Czechoslovakia, and Nagykaroly (*Carei Mare) in Romania. When the Jewish communities were united by a governmental order of 1950, the status quo ante organization was also closed down.

STAUB, HERMANN (1856–1904), German jurist. Born in Nicolai, Upper Silesia, Staub practiced as a lawyer in Berlin and achieved considerable fame through his work *Kommentar zum Deutschen Handelsgesetzbuch* (1891–93; 1921–32¹²), a commentary on the new German commercial code. Here he explained the commercial code section by section and it became the leading work on the subject running into a number of editions. Many of Staub's interpretations were specifically approved by the German Supreme Court and his book was also considered an authoritative work in Austria. He wrote works on the law of contracts, company law, and the stock exchange and was a founder and editor of the legal magazine *Deutsche Juristenzeitung*. A proud Jew, Staub refused to convert to Christianity and used his influence to prevent a numerus clausus in the legal profession in Germany.

STAVI (Stawsky), MOSES (1884–1964), Yiddish and Hebrew writer. He was born in Antopol, Belorussia. Stavi for many years wrote in Yiddish; it was only in Erez Israel, where he settled in 1911, that he gradually began to write in Hebrew. His early stories were translated into Hebrew, among them his best-known work, *Lavan ha-Arami* (1910), which in its Hebrew version went through many editions and remained popular for a long period. His first stories deal with the world of nature; in Erez Israel his subjects also came to include the Arab village and the life of the working man.

Comprehensive collections of his stories appeared under the titles of *Ha-Boker Or* (1930), *Sefer ha-Behemot* (2 vols., 1930), *Ba-Derekh le-Erez ha-Osher* (1954, stories and legends for old and young), and *Ha-Zore'im be-Dimah* (1960, village stories). In his latter years, Stavi's interest in rural life and in labor led him to research of the language of terminology used in Hebrew literature in these two fields, which resulted in two books: *Pirkei Teva ve-Lashon* (1958), and *Geluyyot u-Setumot ba-Lashon* (1961). In *Ha-Kefar ha-Arvi* (1946) he describes life and work in Arab villages. A list of his works translated into English appears in Goell, *Bibliography*, 2524–29.

STEEL, DANIELLE (1947–), U.S. author. Danielle Fernande Schuelein-Steel, one of the bestselling authors in American history, was born in New York to a German-Jewish father and a Portuguese mother. Steel, who studied at the Parsons School of Design in New York, New York University, and in Europe, had sold more than 500 million copies of the romance novels for which she is best known by 2005. From her first published book, *Going Home* (1973), to *The House*, one or more of her 67 novels were on *The New York Times* bestseller list for almost 400 consecutive weeks, and 21 of them were adapted for television. Her books, which explore subjects like kidnapping, incest, illness, death, divorce, adoption, marriage, loss, cancer, war, and suicide, appear in 47 countries and in 28 languages. Her historical themes sometimes shed new light on familiar events.

After she completed her education, Steel worked in public relations in New York and then in advertising in San Francisco. In addition to her novels for adults, Steel wrote the “Max and Martha” series of books for young readers. They comprise 10 illustrated storybooks written to comfort youngsters as they face such problems as a new stepfather, new baby, new school, loss of a grandparent, or other crucial problems. She also wrote four “Freddie” books about real-life situations in children’s lives, like a visit to the doctor and the first night away from home. She published a book of poetry and two nonfiction books, *Having a Baby* and *His Bright Light*, about the life and death by suicide of her son Nicholas Traina. As a result of her own dysfunctional family – she was married five times, twice to convicts – Steel was said to have maintained a strong interest in children’s well-being. She raised nine children, seven of them her own. In 2002 she was decorated by the French government as a chevalier of the Order of Arts and Letters for her lifetime contribution to world culture. She founded and ran two foundations, one named for her late son, which finances organizations involved in mental illness and child abuse. The second was established to assist the homeless. In 2003 she opened an art gallery in San Francisco to show emerging artists.

[Stewart Kampel (2nd ed.)]

°STEFAN, METROPOLITAN (Stoyan Popgueorguiev; 1878–1957), head of the Bulgarian Orthodox Church in World War II and Righteous Among the Nations. Starting from January 1940, the government of Bulgaria was headed by a Fascist regime which favored a pro-German alignment, with the consent of King Boris III and most members of the Parliament (Subranie). There were somewhat over 50,000 Jews in the country. To please the Germans, Bulgaria promulgated the Law for the Protection of the Nation at the end of 1940 (ratified in early 1941), with the intent to seriously limit the rights of Jews in the life of the country. The Bulgarian Orthodox

Church, headed by Metropolitan Stefan, took a strong stand against the Law. In a statement on November 15, 1940, the Holy Synod of the Bulgarian Orthodox Church denounced the Law, the intent of which was to repress the rights of the Jewish population without regard whether Jews had committed any offense against the State. On the eve of the Law’s promulgation, in January 1941, Stefan convened the Holy Synod and reiterated its denunciation, since “the principle of racism which encourages persecution, in this case of the Jewish race, has no justification.... One cannot turn the Law for the Protection of the Nation into a means of oppression and persecution of the Jewish minority in the land.” The Law was nevertheless ratified by Parliament, on January 23, 1941. In the following years, the Law served as the basis for further restricting the rights of Jews. In September 1942, in a sermon, Metropolitan Stefan emphasized that no one has the right to treat the Jews cruelly and persecute them. He asked that the rights of Jews as well as converts to Christianity be respected. According to Abraham Alfasi, a leader of the Jewish community in Sofia, when, in March 1943, it became known that the Bulgarian government was about to acquiesce to German demands to deport Bulgarian Jews, Metropolitan Stefan told the king that in that event he would give instructions to open the gates of the churches and monasteries to shelter the Jews. Stefan then called a plenary session of the Holy Synod, which protested the increased persecution of Jews, underlining that “God’s law, which transcends all human laws, unequivocally obliges us not to be indifferent in the face of the sufferings of innocent people, of whatever race.... The Bulgarian Orthodox Church is of the opinion that she cannot deny help and protection to the persecuted and oppressed. If she were to refuse such help, she would be unfaithful to herself.” When the government decided to expel the Jewish population in Sofia to small outlying locales, a step which many interpreted as a prelude to their delivery to the Germans, Metropolitan Stefan again decided to intervene. In a telephone conversation between Stefan and King Boris, on May 25, 1943, Stefan spoke out boldly: “Boris, my son, I am not at all satisfied about you. One hears lately of many things done to our Israelite brethren. Think very hard; it is unworthy of you and of the Bulgarian people.... Things have come to my knowledge which I would rather not believe. They are a disgrace and shame to you and to the Bulgarian people. I cannot explain them to you by telephone. If you wish, come to me, or I shall come to you at once.” The king declined. The following day, Stefan was again on the phone with the king and pontificated to him on the anti-Jewish measures: “Boris, you forgot yourself. You elude me and hide.... You know that one time I saved your father’s head and your throne. But it is doubtful whether I, after these acts of yours, shall be able to save your head. Give the matter serious thought and uproot this demonic influence from your heart.” He then sent the king a telegram reading: “Do not persecute, so that you may not be persecuted. With what measure ye mete, it shall be measured to you again. I know, Boris, that from heaven God will keep watch over your actions.” Stefan was then subjected to police

searches which impounded documents of hasty conversions of Jews, carried out in order to exempt them from the government's anti-Jewish measures. Metropolitan Stefan's constant intervention on behalf of Bulgarian Jews, with the backing of the Bulgarian Orthodox Church, as well as the outcry by other public figures, caused the government to postpone the delivery of the Jews to the Germans, and eventually led to the cancellation of this plan, and the more than 50,000 Jews of Bulgaria proper (with the exception of Jews in the annexed territories of Macedonia and Thrace) were saved.

STEFANESTI (Ștefănești), town in Botoșani province, Moldavia, N.E. Romania. The first Jews settled in Stefanesti at the beginning of the 17th century. After the neighboring province of Bessarabia passed to Russia in 1812, Stefanesti became a border town and consequently began to develop. In 1814 the ruler of Moldavia authorized the settlement of additional Jews. In 1883, however, when the municipality bought land to sell to the inhabitants, the Romanian parliament prohibited the Jews from acquiring any property. The Jewish population numbered 628 in 1838, and 3,886 (76.5% of the total population) in 1886. The first synagogue was erected at the beginning of the 18th century; it was rebuilt in 1854. There were eight organized congregations, two formed by tailors; a *mikveh* built in 1854; and a primary school. Stefanesti was well known among Romanian Jewry for the ḥasidic "court" established there by the Friedman family, descended from the *Ruzhin dynasty. Abraham Mattathias Friedman acted as ḥasidic *zaddik* in the town for 70 years (1863-1933). After World War I, when Romania regained Bessarabia and the town was no longer on the border, its commercial importance diminished. The number of Jews decreased in 1930 to 2,361 (26.5% of the total).

In World War II the Jews of Stefanesti were deported to Botosani. From there they were sent to forced labor camps. A few returned after the war, numbering 870 in 1947 and 600 in 1950. In 1969 about 12 Jewish families remained in Stefanesti.

[Theodor Lavi]

STEG, ADOLPHE (Ady) (1925-), French surgeon and Jewish community leader. Steg was born in Verecky, Czechoslovakia, and taken to France in 1932. After completing his medical studies, Steg became a surgeon in Paris and professor of urological surgery at the faculty of medicine in Paris (1976). From World War II, Steg has been prominent in many Jewish organizations. Initially he was active in student circles and was president of the Union of Jewish Students in Paris (1948) and vice president of the World Union of Jewish Students (1949).

He was a leading member of the Fonds Social Juif Unifié, the Consistoire, and the Alliance Israélite Universelle. He took part in the creation of the Coordinating Committee of Jewish Institutions in May 1967 on the eve of the Six-Day War. Steg was the founder of the French Association of the Friends of the Hebrew University which he headed from 1965 to 1986. He served as the president of the Conseil Représentatif des Juifs de France (CRIF) from 1969 to 1974 and from 1985 as president of the Alliance Israélite Universelle, and he was a member of the Fondation pour la Mémoire de la Shoah. Steg was a member of the Académie de Chirurgie and of the Académie Nationale de Médecine. From 1984 he was secretary general of the European Urological Association and from 1986 president of the French Urology Association. He was a Grand Officier of the Legion of Honor, a Commandeur of the Ouissam Alaoui, and a Grand Croix dans l'Ordre National du Mérite. He received an honorary doctorate from the Hebrew University of Jerusalem. He was a member of the Economic and Social Council of France from 1979.

[Michael Denman (2nd ed.)]

STEIG, WILLIAM (1907-2003), U.S. cartoonist and author. Born in Brooklyn, N.Y., to immigrant parents, Steig was reared in the Bronx. He graduated from high school at 15, studied for two years at the City College of New York, three years at the National Academy of Design, and five days at the Yale School of Fine Arts. When his father could not find a job during the Depression, Steig began selling his drawings. In his first year, he earned \$4,500, which was enough to support the entire family. For more than six decades Steig created many of the *New Yorker* magazine's best covers and cartoons and also wrote some of the most beloved of children's books, including *Shrek!* and the award-winning *Sylvester and the Magic Pebble*. In all, Steig created more than 100 *New Yorker* covers, starting with the one that appeared on May 7, 1932, depicting a father glaring at his son's report card as the child timidly glances up at him. Steig had a cartoon gallery of street-tough kids, satyrs, damsels, dogs, and drunks; and he wrote more than 25 children's books about brave pigs, donkeys, and other creatures. *Shrek!* was made into a movie in 2001 and won an Academy Award as the best animated feature film. A sequel followed in 2004. From his first *New Yorker* cartoon in 1930, a picture of a prison inmate telling another, "My son's incorrigible, I can't do a thing with him," Steig produced more than 1,600 drawings for the magazine and 117 covers, many of which were later published in books of collected drawings. In 1936 Steig ended his career as a traditional gag cartoonist, and he married Elizabeth Mead, the sister of the anthropologist Margaret Mead. Soon after he began whittling figures out of stacking wood. Three years later he had his first one-man show, an exhibition of his carvings. Also in 1936 Steig started making his "symbolic drawings" of people enduring shame, embarrassment, and other emotional problems. He published these in *About People* (1939), *The Lonely Ones* (1942), and *All Embarrassed* (1944). In the 1940s Steig discovered Wilhelm

Reich, who became a psychological mentor. Steig saw Reich for therapy 40 times and credited him with saving his life as well as his mother's. He also bought an orgone box, a booth made of cardboard, steel wire, and metal that is supposed to collect the world's orgone, or orgasmic energy. Steig sat in his energy accumulator every day. What Steig got from Reich was a confirmation of his belief that people should be emancipated from the inhibitions that society and government impose on children and adults. It was in 1968 that Stein began writing for children, and his *CDB!*, a book that uses letters to stand for words, became a minor classic. *CDB*, in other words, is See the Bee! Steig also helped changed the nature of the greeting-card industry. His symbolic drawings were licensed to appear on cocktail napkins, glasses, and cards. In addition to the classic *Shrek!*, the story of an ogre who marries a princess, Steig's books in the 1990s included *Grown-Ups Get to Do All the Driving*, *The Toy Brother*, *Zeke Pippin*, *Doctor De Soto Goes to Africa*, and *Spinky Sulks*.

[Stewart Kampel (2nd ed.)]

STEIGER TRIAL, trial held in 1924–25 in Lvov against the Jew Stanislaw Steiger on the trumped-up charge that he had conspired to assassinate the Polish president. As a result of the tension among the Ukrainians in Galicia in the wake of international recognition of Polish rule over this region, an unsuccessful attempt was made to assassinate President S. Wojciechowski when he officially opened the "Fair of the East" in the town. It was clear to all that this was an act perpetrated by a clandestine Ukrainian organization which sought to undermine the Polish rule. The real conspirator, Teofil Olszański, succeeded in escaping across the border and found refuge in Berlin, while the police arrested a Jewish student on the spot as a suspect. In order to substantiate the accusations against Steiger, the prosecution produced a lengthy series of dubious testimonies serving Polish political interests, which attempted to minimize Ukrainian agitation in the region and divert public attention to the alleged crime of the Jew.

The manifestations of hysteria which accompanied the giving of evidence set off storms of mass antisemitism in the streets. Distinguished Jewish advocates, such as Nathan *Loewenstein (von Opoka) and Leib Landau, took part in the defense. As a result of the tension, Jewish public leaders were imprisoned and the life of Steiger was endangered. Israel *Waldman, who maintained friendly relations with Ukrainian statesmen in Vienna, endeavored to convince the responsible leaders publicly to admit their role in the act. Once his efforts had failed, he revealed all the details of his negotiations in Vienna and Berlin on this subject when he testified before the tribunal in Lvov. Nathan Rand, who had previously been in the service of the Ukrainian government-in-exile, followed his example. The impact of these revelations brought about Steiger's acquittal on Dec. 20, 1925.

STEIMAN, BEYNUSH (1897–1919), Yiddish poet and playwright. Born in Kreslavka, Latgale, Latvia, Steiman began writing poetry when he was 13. After being trained as a chemist's assistant, he spent two years in Vilna working in a pharmacy. Then he established a Yiddish elementary school in his home town, as well as a dramatic club to finance the school. During that period, in addition to writing poetry, he wrote dramas and dramatical poems. At the end of August 1919 he enrolled at the Kultur-Lige's teachers' seminary in Kiev, but was recruited for defense work in which he was killed. Steiman's works were not published during his lifetime. His first drama *Baym Toyer* ("Near the Gate") appeared posthumously in the Kiev literary periodical *Oyfgang* (1919). The dramatic poem *Meshiekh ben Yoysef* ("Messiah, Son of Joseph") was published in *Eyngs* (vol. 2, Kiev 1920) and was also printed in book form. In 1926 it was produced in New York and in 1927 a Hebrew translation appeared in Jerusalem. *Dos Royte Kind* ("The Red Child"), his third and last extant work, is included in the volume *Dramen* ("Dramas," Warsaw, 1921) and was also printed in the first issue of *Shtrom* (1922). He also completed a translation of Oscar Wilde's *Salome* (published in 1924). Steiman's plays, which deal primarily with social reform, have religious intensity and motifs. The fundamental and persistent prophetic quality of his writing is manifested in his repeated use of the theme of redemption (the figure of the Messiah appears in all three plays), which is here, however, not drawn from traditional Jewish sources, but rather is a collective character representing the spirit of the people which is given the leading role.

[Yechiel Szeintuch]

STEIMBERG, ALICIA (1933–), Argentinean author. Born in Buenos Aires, Steimberg was trained as an English teacher and translator. Her works earned her some of the most prestigious awards in Argentinean letters, including the Premio Planeta in 1992.

Steimberg's first novel, *Músicos y relojeros* (1971), is a somewhat autobiographical narrative of Jewish life in Buenos Aires as seen through the eyes of the young narrator growing up in a family of immigrants. It has been translated into English as *Musicians and Watchmakers* (1998). The author's characteristic use of humor is evident in the novel and remains a constant in most of her subsequent works. To a certain extent her next novel, *Su espíritu inocente* (1981), continues where the first left off. Again the narrator is a young girl struggling to find her own identity and come to terms with the difficulties of being Jewish in a mostly Catholic country.

Her other novels also use humor to examine Argentinean social reality. This is the case of *La loca 101* (1973), a rather chaotic tale that casts a critical eye on social mores and politics, and *El árbol del placer* (1986), a satirical portrayal of the world of psychoanalysis that is so prevalent in Buenos Aires. Her

erotic novel *Amatista* (1989) was a finalist for the celebrated La Sonrisa Vertical literary prize. In *Cuando digo Magdalena* (1992), Steimberg returned, at least in part, to a more specifically Jewish context. This novel was also translated into English as *Call Me Magdalena* (1992). Finally, the novel *La selva* (2000) narrates the story of an older Jewish woman who unexpectedly falls in love with a man while on vacation in Brazil. Simultaneously, it tells the story of her struggle with a drug-addicted son. Steimberg is also the author of the short-story collections *Como todas las mañanas* (1983) and *Vidas y vueltas* (1999). Steimberg earned a well-deserved reputation as one of Argentina's best contemporary writers.

[Darrell B. Lockhart (2nd ed.)]

STEIMER, MOLLY (1897–1980), anarchist and advocate on behalf of political prisoners; the only person ever to have been deported from both the United States and the Soviet Union. Born in Dunaevtsy, Russia, Steimer immigrated to New York with her parents and siblings at the age of 15. She soon became involved with *Frayheyt* (Liberty), a Jewish anarchist group that secretly published and distributed materials in both Yiddish and English supporting the Russian Revolution and opposing World War I.

These activities led to the arrests of Steimer and six other *Frayheyt* members in August 1918 for conspiring to violate the Sedition Act, an emergency war measure that made it a crime to criticize either the United States government or the Constitution. Their two-week trial, which took place in October 1918, became a *cause célèbre*. The mistreatment of the defendants, one of whom died from injuries sustained upon arrest, as well as the harsh sentences handed down, 15 years for Steimer and 20 for three of the other co-defendants, led to outrage in liberal circles. When the Supreme Court upheld the convictions, attorney Harry Weinberg, a well-known defender of political radicals, rallied leading lawyers and intellectuals on the anarchists' behalf. Despite Steimer's objections, Weinberg negotiated a solution through which Steimer and her colleagues were deported to the Soviet Union and granted full pardons, with the stipulation that they never return to the United States. Soon after her arrival in the Soviet Union in 1921, Steimer met and fell in love with fellow anarchist Senya Fleshin, a Russian Jew who had immigrated to the United States and returned after the Revolution. The two remained life-long companions.

Steimer did not fare well in the hands of the Soviet authorities, who, like the American government, felt threatened by the anarchist movement. Steimer and Fleshin were expelled from the Soviet Union in 1923 and spent the next 15 years helping political prisoners and anarchist exiles, taking part in radical political debates of the day, and running a photographic studio in Berlin. They were living in Paris at the outbreak of World War II, and after a brief period in a French internment camp, both were able to flee to Mexico City. There, they joined a growing group of political exiles and opened another photographic studio. Steimer maintained strong con-

nections with fellow radicals throughout her years in Mexico and had become a much admired veteran of the international anarchist movement when she died in 1980 in Cuernavaca, Mexico.

[Nadia Malinovich (2nd ed.)]

STEIN, ARTHUR (1871–1950), Austrian historian. Stein was born in Vienna. His first book, *Untersuchungen zur Geschichte und Verwaltung Aegyptens unter Roemischer Herrschaft* (1915), earned him the post of lecturer at the German University of Prague, where he became a full professor in 1923. Under the German occupation of Czechoslovakia he was deprived of his professorship, and confined to the Theresienstadt concentration camp until 1945.

Stein was interested primarily in the history of the Roman Empire, which he elucidated through the study of its administration and prosopography. He and Edmund Groag were entrusted by the Berlin Academy with the preparation of a new edition of the *Prosopographia Imperii Romani saeculorum I. II. III.* (1933–). He was primarily responsible for the biographies in the *Prosopographia* of members of the equestrian class. His other studies include *Roemische Reichsbeamte der Provinz Thracia* (1920); *Der roemische Ritterstand, ein Beitrag zur Social- und Personengeschichte des roemischen Reiches* (1927); *Die Legaten von Moesien* (1940); *Die Reichsbeamten von Dazien* (1944); and *Die Praefekten von Aegypten in der roemischen Kaiserzeit* (1950).

[Irwin L. Merker]

STEIN, AUGUST (1854–1937), Czech-Jewish communal leader. Son of a rabbi in a small town in southern Bohemia, Czechoslovakia, Stein studied law at Prague University. As a student he joined the Czech national movement as represented by the "Old Czech Party" and became influenced by Siegfried *Kapper, the spiritual father of the Czecho-Jewish assimilationist movement (see Svaz *Čechů-Židů). In 1881 he became the first editor of the Czecho-Jewish almanac. He joined the municipal administration of Prague and headed the "sanitation" program for the old Jewish quarter. In 1922 he was elected president of the Prague Jewish community. During the first years of his administration there were many conflicts between his assimilationist movement and the Zionists, but in later years some reconciliation was achieved. In 1930 the Czecho-Jews were defeated in the elections to the community council and the presidency passed to Stein's Zionist opponent Ludvik *Singer. When the Supreme Council of the Federations of Jewish Religious Congregations of Bohemia, Moravia, and Silesia was constituted in 1926, Stein became its first chairman and served in that capacity until 1931, when he was replaced by Joseph *Popper. He devoted much energy to the translation of the Pentateuch and of the *siddur* into Czech.

His widow and four children perished in concentration camps during the Holocaust.

[Chaim Yahil]

STEIN, SIR AUREL (Mark; 1862–1943), British archaeologist. Stein was born in Budapest, the son of a prosperous merchant. His family, although Jewish on both sides, were advocates of assimilation and Stein was baptized as a Lutheran and educated at Christian schools. He attended three universities in Central Europe, and went to India in 1888 to take up the positions of principal of Oriental College in Lahore and registrar of Punjab University. From 1889, when he entered the Indian Education Service, he was constantly engaged in journeys of archaeological exploration. He traveled in Central Asia, West China, Persia, Iraq, and Transjordan. His work can be classified as follows: expeditions to Central Asia (1900–01; 1906–08; 1913–16, and 1930); expeditions to Baluchistan and Iran between 1927 and 1936 (to examine the traces of the Mesopotamian and Indus Valley civilizations); journeys to establish the marching routes and battlefields of Alexander the Great; a reexamination of the Roman-Parthian frontier to fix the western terminus of the silk trade. As a result of the Hungarian Geological Survey of Tun-huang in 1897, Stein made his greatest discoveries there of ancient Chinese art of the fourth century: *Cave Shrines of the Thousand Buddhas* (1907). There he brought to light beautiful Chinese murals and paintings and some Chinese manuscripts from the fifth to tenth centuries as well as the oldest specimen of a printed book (dated 868 C.E.). Stein also explored the Graeco-Buddhist monuments of Northwest India and intended to explore Afghanistan, but died a few days after his arrival. From 1884, Stein spent much of his time in London and became a naturalized British subject in 1904.

Stein was knighted in 1912 and given honorary degrees by Oxford and Cambridge universities. His work threw much light on the history of ancient civilizations.

Among his books are *Rins of Khotan* (1903), *Ancient Khotan* (1907), *Serindia* (1921), *Innermost Asia* (1928), *The Thousand Buddhas* (1921), *An Archaeological Tour in Gedrosia* (1931), *Archaeological Reconnaissances in Northwestern India and Southeastern Iran* (1937), *On Old Routes of Western Iran* (1940), and *On Ancient Central-Asian Tracks* (1964) with a biography by J. Mirsky. Stein was one of the most famous explorers and archaeologists of his time.

STEIN, EDITH (1891–1942), German philosopher. Born in Breslau, of an Orthodox Jewish family, Edith Stein studied philosophy under Edmund *Husserl at Goettingen and then

became his first assistant at Freiburg University. Her dissertation, *Zum Problem der Einfuehlung* (1917; *On the Problem of Empathy*, 1964), played an important role in the phenomenological movement. She also prepared some of Husserl's works for publication. In 1922, after reading the autobiography of St. Theresa of Avila, she converted to Catholicism, gave up her university post, and went to teach at a Dominican girls' school in Speyer. Here she studied Catholic philosophy, especially that of Thomas Aquinas, and translated his treatise *Quaestiones disputatae de Veritate* (*Untersuchungen ueber die Wahrheit*, 1931). Her study in the *Husserl-Festschrift*, "Husserls Phaenomenologie und die Philosophie des heiligen Thomas von Aquino" (1929) attempted to show the points of contrast between phenomenology and Thomism. In 1932, Edith Stein was appointed lecturer at the Institute for Pedagogy at Muenster, but in 1933, with the advent of the Nazi regime, she had to give up this position, and entered a Carmelite convent in Cologne as Sister Teresa Benedicta of the Cross. Here she completed her large work *Endliches und ewiges Sein* (*Werke*, vol. 2, 1950), relating Thomism and contemporary phenomenological and existentialist thought. In 1938, to escape Nazi persecution, she was taken to a monastery at Echt in Holland, where she wrote *Kreuzeswissenschaft* (*Werke*, vol. 1, 1950; *The Science of the Cross*, 1960), on the life and teaching of St. John of the Cross. Shortly after finishing the work she, along with other priests and nuns of Jewish origin, was arrested by the Gestapo as a reprisal for the condemnation by the Dutch bishops of Nazi antisemitism. She died in the Auschwitz gas chambers. In 1998 she was canonized by the Catholic Church.

[Richard H. Popkin]

STEIN, EDMUND MENAHEM (1895–1943), Polish scholar and writer. Born in Dobromil, Galicia, from 1929 he was a professor at the Institute of Judaistic Sciences (Instytut Nauk Judaistycznych) in Warsaw, teaching the history of the Jews during the Hellenistic period, Jewish philosophy in the Middle Ages, and Midrash. In 1935 he was elected rector.

Among his numerous works in Polish, Hebrew, German, and Latin was his famous polemical work *Judaizm i Hellenizm* (1929) in which he subjected Tadeusz Zieliński's *Hellenizm i Judaizm* (2 vols., 1927) to devastating criticism. Zieliński belittled the influence of Judaism on Christian civilization and condemned what influence there was as negative and even destructive. Among Stein's other major works are *Pilon Alexandroni* ("Philo of Alexandria," 1937); *Dat ve-Da'at* ("Faith and Wisdom," 1939); and Hebrew translations from the Latin of Josephus' autobiography, with an introduction (1933); of

the works of Philo (1937), and of the popular philosophical works of Cicero (1937).

Stein was elected chairman of the Union of Hebrew Writers in Warsaw. An ardent Zionist, he visited Palestine in 1935. During the German occupation of Poland he was in Warsaw, where he suffered together with all the Jews in his community. In spite of this he managed to be active in cultural endeavors like the society Tekumah, where he lectured on Philo and the great Greek philosophers. In 1940 he organized courses on Judaica, where he taught the subject of his specialty. At the same time he translated into Hebrew the works of Anacreon, Plato, and other Greek thinkers and writers. In 1943 his wife and son Gabriel were deported to Treblinka, where they were killed by the Germans. The same year he was deported to Trawniki, near Lublin, where he was killed.

[Hillel Seidman]

STEIN, ELIEZER LIPMAN (c. 1778–1851), Hungarian talmudist and preacher. Stein corresponded on *halakhah* with Moses *Sofer (Responsa *Hatam Sofer*, pt. 6, no. 48), with Meir *Eisenstadt and with his teacher Judah Aszo, author of the responsa *Mahari Aszo*. Stein served as *av bet din* of the community of Gyöngyös. During his period of office there, a quarrel arose between him and the community because he disqualified a *shoḥet*. The community referred the dispute to a non-Jewish judge who ruled that the *shoḥet* was capable of carrying out his duties. As a result of this ruling, the community deducted from the rabbi's salary the payment that they were accustomed to receive from the slaughter of animals, because this had decreased as a result of the ban. He resolved to resign his office and was accepted as rabbi in the community of Mór, but in the end the community yielded and became reconciled with him, and he remained there until 1837 when he went as rabbi and *av bet din* to Nagyszöllös (Vinoogradov). Shortly thereafter, at the age of 60, he decided to immigrate to Erez Israel. With this in mind he went to Pressburg and obtained from Moses Sofer a letter of recommendation to the philanthropists of Hungary. In the letter Sofer describes Stein's greatness as a talmudist and asks the Jewish philanthropists to appoint him to offices that would enable him to support himself in Erez Israel and also that they pay the expenses of the journey. During Stein's visits from town to town to make the necessary arrangements he went to Dunaszerdahely and was appointed to the then vacant office of rabbi and *av bet din*. He abandoned his previous plan and remained there until his death.

He was the author of several works on contemporary problems, including *Hishanot ha-Bimah* (1943), against siting the **bimah* in the synagogue in front of the ark. He also wrote *Evel Moshe* (1840), a eulogy on Moses Sofer, and *Ir Shushan* (1849), homilies and responsa.

[Samuel Weingarten-Hakohen]

STEIN, ERWIN (1885–1958), conductor, music critic, and editor. Born in Vienna, Stein studied composition with Arnold *Schoenberg. For a time he was engaged as an opera conductor in Germany and from 1924 until 1934 was an editor at the music-publishing firm of Universal Edition in Vienna. At the time of the *Anschluss* he left Vienna for London, where he settled, joining the firm of Boosey and Hawkes. He wrote for many music magazines, edited numerous modern music scores, and published a collection of essays, *Orpheus in New Guises* (London, 1953). He was a particular champion of Schoenberg's music at the time of its greatest rejection by critics and the public. He also gave much support, in print and as a publisher, to the music of Benjamin Britten.

[Max Loppert (2nd ed.)]

STEIN, GERTRUDE (1874–1946), U.S. author, critic, and patron of modern art and literature. Born in Allegheny, Pennsylvania, into a wealthy German Jewish family, Gertrude Stein spent her childhood in Vienna and Paris and was fluent as a child in various languages including German and French. In 1879, the family moved to Oakland, California. Stein studied psychology at Radcliffe College under William James and started but never completed a medical course at Johns Hopkins University, Baltimore. In 1902, she joined her brother Leo in Europe. Eventually she and Leo settled in Paris, where Stein immersed herself in the bohemian life of the literary and artistic avant-garde. Stein studied the art of the new painters and collected the as yet unknown works of Picasso, Braque, and Matisse. Picasso's portrait of her is one of his best-known early works. Her apartment, at 27 rue de Fleurus, which she first shared with Leo and later with her lifetime companion, Alice B. Toklas, was covered from floor to ceiling with paintings by the "new moderns." Stein also began to write, attempting to accomplish a linguistic and stylistic revolution akin to the visual revolution attempted by her artist friends. By the 1920s her apartment had become a center of artistic life and a place of pilgrimage for the aspiring expatriate American writers she dubbed "the Lost Generation," including F. Scott Fitzgerald and Ernest Hemingway.

Stein's first original work, *Three Lives* (1909), the story of three working-class women, included "Melanctha," a study of the consciousness of an American mulatto girl involved in an unhappy affair with a black doctor. "Melanctha" made a great impression on the practitioners of the "new writing," with its use of vernacular black English and stylistic experimentation, attracting many to her salon. Her later works moved toward ever greater experimentation, with Stein rejecting realistic,

linear narratives for linguistic free play, playing with words both for their sound and rhythm and for their subconscious associations. At first she had to pay for the publication of her work, yet she could also write lucidly and engagingly, and her reputation grew. Even at its height, attitudes toward her swung between adulation and scorn; nonetheless, her own circle regarded her as a great writer, and she had a powerful impact on later modernist and postmodern writers. In *Tender Buttons* (1914), a series of “portraits” of inanimate objects, she tried to establish a type of abstract writing which some critics called “cubist,” others “primitivistic.” It was terse, sometimes child-like, and often repetitive. Her most quoted line, “A rose is a rose is a rose is a rose” (*Geography and Plays*, 1922), is indicative of the absurd linguistic play at the heart of much of her work. While many of her most experimental books were not appreciated in her lifetime, including her 1,000 page semi-autobiographical *The Making of Americans* (1925), a plot-less exploration of the assimilation of American immigrants, her most conventional work, *The Autobiography of Alice B. Toklas* (1933), was widely read. This autobiographical work, ostensibly written by her secretary and companion, told the history of her salon and of her relationship with the new literature and art.

Her later work included experimental plays, poems, novels, and criticism. She made sweeping generalizations about the character of nations and peoples, and the relationship of American and European cultures (*The Geographical History of America: the Relation of Human Nature to the Human Mind*, 1936). She used orthodox prose effectively and even nostalgically in *Paris, France* (1940); but *Four Saints in Three Acts*, produced as an “opera” with music by Virgil Thomson in 1934, proved amusing but largely unintelligible. Her World War II experiences in Belignin, in the south of France, where she remained in safety and comparative seclusion, were described in two entertaining books, *Wars I Have Seen* (1945) and *Brewsie and Willie* (1946). On the liberation of Paris, she returned there and continued her sponsorship of new writing.

Many of Gertrude Stein’s unpublished manuscripts were deposited in the Yale Library. Among those published after her death are *Four in America* (1947), *Two: Gertrude Stein and Her Brother*, and *Other Early Portraits, 1908–12* (1951), and *Mrs. Reynolds* (1952), an experimental novel. Gertrude Stein’s brother LEO STEIN (1872–1947) was a painter and art critic, who made Cézanne his chief interest in life. He wrote *Appreciation: Painting, Poetry and Prose* (1947) and his letters and papers, edited by Edmund Fuller, appeared as *Journey into the Self* in 1950.

[Frederick J. Hoffman / Craig Svonkin (2nd ed.)]

STEIN, HENRI (1862–1940), French bibliographer and historian. Stein, who was born in Pierry, Marne, became archivist

at the Archives Nationales in 1885. Here his access to the rich documentary sources enabled him to produce an enormous number of works in many different areas. After his retirement in 1923 from the chief curatorship of the ancient section, he taught the history, use, and conservation of documents at the Ecole des Chartres until 1933. Stein was not a specialist in one area or period, but was, rather, a universal scholar: bibliographer, archivist, archaeologist, general historian, local historian, art historian, and topographer. His work in French history was particularly important.

He founded and directed the periodical *La Bibliographie Moderne*, and created the Société Française de Bibliographie. Among his many books are *Les Archives de l’Histoire de France* (with C.V. Langlois, 3 vols., 1891), *Manuel de Bibliographie Générale* (1897), *Répertoire Numérique des Archives du Châtelet de Paris* (1898), *Bibliographie Générale des Cartulaires Français ou Relatifs à l’Histoire de France* (1907), *Les Architectes des Cathédrales Gothiques* (1911), *Charles de France* (1919), and *Répertoire Bibliographique de l’Histoire de France, 1920–1931* (with P. Caron, 1931).

[Irwin L. Merker]

STEIN, HERBERT (1916–1999), U.S. economist. Stein was born in Detroit, Michigan. After graduating from Williams College in 1935, he obtained his doctorate from the University of Chicago. For 22 years he was on the staff of the Committee for Economic Development (known as CED), an influential, privately sponsored research and policy-formulating organization. Subsequently, he joined the Brookings Institution and was appointed to the President’s Council of Economic Advisers by President Nixon soon after his election (1969–71). In 1972, Stein became the Council’s chairman, serving until 1974, after which he taught at the University of Virginia. He was appointed a member of the Advisory Committee of National Growth Policy Processes in 1976 and adjunct scholar of the American Enterprise Institute, and scholar in 1977. Stein, who had long opposed government intervention in private price and wage decisions, played a major role in the first attempt by a peacetime administration to enforce price and wage controls, although he was not optimistic about the program’s success. Stein is credited with developing the concept of the “full employment budget” during the 1940s. This concept establishes government expenditures on the basis not of actually expected government income, but of income that would be received in a fully prosperous economy. Along the same lines is the view, represented in the early post-World War II years by the CED, that budgetary deficits are not always bad.

Stein was a senior fellow at the American Enterprise Institute and the A. Willis Robertson Professor of Economics Emeritus at the University of Virginia.

In 2000 the National Association for Business Economics created the Herbert Stein Public Service Award, which is presented to a policy adviser or policymaker in the U.S. or abroad with an outstanding record of public service. The first award was presented to Stein posthumously in September 2000.

Stein's publications include *The Fiscal Revolution in America* (1969), the novel *On the Brink* (with B. Stein, 1977), *Moneypower* (with B. Stein, 1979), *Presidential Economics* (1984), *Washington Bedtime Stories* (1986), *The New Illustrated Guide to the American Economy* (with M. Foss, 1995), *On the Other Hand* (1995), and *What I Think* (1998).

His son Ben Stein is a noted writer, scholar, and humorist.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

STEIN, HERMAN D. (1917–), U.S. social work educator. Born in New York, Stein taught social work research at the New York School of Social Work, Columbia University, from 1945 to 1947. He then worked for three years with the *American Jewish Joint Distribution Committee (director of welfare department, 1948–50), and returned to the New York School of Social Work, where from 1958 to 1964 he was a professor. From 1959 to 1964 he also directed its research center. In 1964 he became professor and dean of the School of Applied Social Services, Case Western Reserve University, Cleveland, and in 1967 provost for Social and Behavioral Sciences, Case Western Reserve University. The many national and international committees on which Stein served include the National Institute of Mental Health (chairman, social work committee, 1958–62); the Council of Social Work Education (president, 1966–69); and the International Association of Schools of Social Work (president, elected 1968). He was an expert adviser for UNESCO and UNICEF.

In 1998 the CWRU's Mandel School of Applied Social Sciences initiated the annual Herman D. Stein Lectureship in International Social Welfare to honor Stein's "extraordinary lifework and accomplishments in building international social services."

A book of Stein's selected papers, *Challenge and Change in Social Work Education*, was published in 2003. Among the books Stein edited are *Social Perspectives on Behavior* (with R.A. Cloward, 1958) and *Social Theory and Social Invention* (1968), a collection of essays; and *The Crisis in Welfare in Cleveland* (1969). His many articles included studies of Jewish social work in the United States.

[Joseph Neipris / Ruth Beloff (2nd ed.)]

STEIN, ISAAC (d. 1495), rabbi, *rosh yeshivah*, and halakhic authority. Stein probably came from the village of that name near Nuremberg, a district in Bavaria (i.e., Stein bei Nuernberg). He studied under Israel *Isserlein, to whom he invariably refers as "the *Gaon*," basing himself upon the halakhic rulings he heard from him, as well as upon the customs he saw practiced in his home in Wiener Neustadt. He resided in Regensburg and often refers to rulings he gave in that city. Stein was regarded in his day as one of the greatest halakhic authorities, Joseph *Colon referring to him and his brother, Aaron Pappenheim, during their lifetime, as "two distinguished scholars" (lit. "golden pipes") and numbering them among "the four leaders" who were the outstanding scholars

of the time. While in Nuremberg he debated with "the *lom-edim*" (the local scholars) on the question of the date of the compilation of the Talmud and when it was committed to writing, and at their request wrote a comprehensive essay on the subject, revealing an original approach and a power of critical analysis.

Stein's main reputation, however, rests upon his commentary and novellae to the *Sefer Mitzvot Gadol* ("Semag") of *Moses b. Jacob of Coucy. He mentions many *halakhot* and emendations of the "Semag" which he received from Tevele of Nuremberg and suggestions given him by a certain Rabbi Samuel. The "Semag" was highly regarded both as a popular, practical, and readily accessible reference work of *halakhah* and as an authoritative source. As a result, many copies of the work were in circulation. Two editions published in Rome (1480) and Soncino (1488) are included in the list of Hebrew *incunabula. Many manuscripts of the work came into Stein's possession, but he found in them "obscure matters and passages that seemed labored." As a result he came to the conclusion that it was necessary to compose a new edition, including his own explanations as well as giving emendations, noting sources, and adding complementary material. To ensure that the work would be of practical use in his time, he added some of the customs and traditions of the Jews of Germany. While in Regensburg he assembled a considerable amount of material, noting variant readings. According to his son, he collected the material for his book over a period of many years, noting down customs of which he had heard or had actually seen, copying glosses from the margins of the books of early scholars, collecting anonymous responsa, and investigating and comparing different versions, both from the Talmud and the works of the *posekim*, to determine the correct reading.

He adopted a method original for his time. He wrote down his notes on hundreds of separate pieces of paper, like index cards, and then placed each piece in its relevant place between the pages of the "Semag." Since he "did not hide his copy of the *Semag* from the eyes of men," some people secretly copied these pieces of paper before the author had examined and emended any mistakes which crept into them. When the author became aware of this, "he was displeased and in order to prevent any harm arising," assembled a number of authoritative scholars in *halakhah* in the city of Gunzenhausen, and together with them, worked on the "Semag" for a number of years until the expulsion of the Jews from the city in 1495. Each note was subjected to a thorough discussion until the final version was decided upon by majority vote. He put his pen through the pieces of paper that were rejected, but preserved them inside the "Semag" "like the broken tablets which were preserved in the Ark." He began to write his book from the corrected notes shortly before his death, but only reached the middle of precept 65 (on the laws of the Sabbath).

He died in Regensburg. He bequeathed the copy of the "Semag" upon which he was working, together with the portion arranged in his own handwriting, and the corrected and rejected pieces of paper, to his son, Aviezri. At first the son hes-

itated to undertake the completion of the work and only ten years later (in 1506), began sorting the material and methodically arranging it. In his introduction, the son warns against “those who possess unamended copies.” Fifty-two years after the author’s death, the work, sometimes called “the *Nimmukim* [“reasons”] of Isaac Stein” appeared as an appendix of the *Sefer Mitzvot Gadol* (Venice, 1547), without mentioning that it was only an uncorrected part of the whole work. *Nimmukim* contains valuable material for the study of the folklore of German Jewry and the linguistic usages of those days. Interesting too are the author’s observations on Jewish social life, such as the attitude to Hebrew as a spoken language, neighborly relations with gentiles, divination, the flogging of transgressors, and public confession. It serves as a source of great value because of its halakhic summaries and because of its fund of quotations from the works of early scholars. Many incomplete copies of Stein’s work are extant. One in Oxford is said to be in the handwriting of the author’s son, but this claim has still to be confirmed.

[Yehuda Leib Bialer]

STEIN, JANICE GROSS (1943–), Canadian scholar, Middle East expert. Stein was born in Montreal and received an M.A. from Yale and a Ph.D. from McGill, becoming Belzberg Professor of Conflict Management and Negotiation and Director of the Munk Centre for International Studies at the University of Toronto. She wrote widely on negotiation theory, foreign policy decision-making, and international conflict and conflict management. She authored over 80 books, book chapters, and articles.

As a Middle East specialist, Stein addressed a range of important theoretical problems in political science and psychology. Her first book, *Rational Decision Making: Israel’s Security Choices, 1967* (1980), used the 1967 war as a case study to test three contrasting models of decision-making. It won the Edgar Furniss Award of the Mershon Centre for outstanding contribution to the study of national security and civilian military education. Other works on Jewish or Middle East subjects include *Powder Keg in the Middle East: The Struggle for Gulf Security* (1995), *Peacemaking in the Middle East* (1985), and *Contemporary Antisemitism* (2005).

Stein was a member of international advisory panels, including the Committee on International Conflict Resolution of the National Academy of Sciences in Washington, the American Association for the Advancement of Science, and the United States Institute for Peace. In Canada, Stein was chair of the Research Advisory Board to the Minister of Foreign Affairs and chair of the Advisory Board to the Canadian Centre for Foreign Policy Development as well as member of the Middle East Advisory Group in the Ministry of Foreign Affairs. She is a fellow of the Royal Society of Canada and a

Trudeau Fellow. She provided regular commentary on Middle East and other international issues for Canadian television.

[Judith E. Szapor (2nd ed.)]

STEIN, JOSEPH (1912–), U.S. dramatist. Born in New York City, Stein grew up in the Bronx. His father, a Polish immigrant, read him the stories of *Shalom Aleichem, and Stein would later remember them when he developed the musical *Fiddler on the Roof*. Earlier, Stein graduated from the City College of New York and earned a master of social work degree from Columbia University. He spent the next six years as a psychiatric social worker. In 1946 Stein began writing for radio, and two years later he and a writing partner, Will Glickman, began contributing sketches to Broadway revues. Stein was also a writer for the comedian Sid *Caesar’s television shows. One of his first works for Broadway was the musical *Plain and Fancy* (1955), about the adventures of a pair of sophisticated New Yorkers living among the Amish in Pennsylvania. Then came *Mr. Wonderful* (1956), a vehicle for Sammy *Davis Jr., and, with Sheldon Harnick, the musical *Body Beautiful* (1958). In 1959 it was *Take Me Along*, an original musical, and in 1963, *Enter Laughing*, a comedy. Stein then produced the book (and Harnick and *Jerry Bock the music) for *Fiddler* (1964), the story of Tevye the milkman and his five daughters that played on Broadway, first with Zero *Mostel in the starring role, until 1972. It was revived on Broadway four times in the next 32 years, was made into a movie starring Chaim *Topol, the Israeli star, and spawned productions all over the world, including such unlikely venues as Japan. Audiences devoured the music (“If I Were a Rich Man,” “Sunrise, Sunset”) and related to the universal truths espoused by a poor Jew in the fictional shtetl of Anatevka, where the Jews’ lives were as shaky as that of a fiddler on a roof. Stein won the Tony Award and Drama Critics Circle Award for *Fiddler*. His other musicals included *Zorba* (1968), for which he received a Tony nomination; *Rags* (1986), another Tony nomination; and *The Baker’s Wife*, which won the Laurence Olivier award in London. He also wrote the screenplays for *Enter Laughing* and for *Fiddler on the Roof*.

[Stewart Kampel (2nd ed.)]

STEIN, JULES CEASAR (1896–1981), U.S. entertainment executive; ophthalmologist. Stein was born in South Bend, Indiana, to Orthodox retailer M. Louis and Rose (nee Cohen) Stein. Stein’s mother was an invalid, and the resulting financial drain for her medical care forced Stein to work at age 12, playing the violin and saxophone. He had established his own band and was booking musical acts by 1910 and graduated high school early two years later at age 16. Stein went on to attend the University of West Virginia (1912–13), the University of Chicago (1915), University of Chicago’s Rush Medical College (1921) and the University of Vienna (1921). Following a residency in ophthalmology at Cook County Hospital in Chicago, Stein set up a private practice in 1923. He continued to book bands on the side, and, with William Goodheart, in

1924 Stein co-founded the Music Corporation of America, an agency that excelled at setting up exclusive contracts and perfected packaging, which would provide venues for an entire season of bookings and net the agency a separate fee. In 1938, he sent employee Lew Wasserman to Hollywood to open an MCA film division. As the agency gained momentum in southern California, Stein moved his family to Beverly Hills. In 1946, he turned the presidency of MCA over to Wasserman, but remained chairman. MCA was active in breaking the standard seven-year studio contract, and in 1952 Screen Actors Guild President Ronald Reagan helped secure a deal that would allow MCA to represent and hire actors for the agency's television production company Revue Productions. In 1959 the agency's name was officially changed to MCA and went public. MCA also purchased Decca Records in 1959 and started acquiring other businesses, including a consolidated Universal Pictures, Spencer Gifts, and book publisher G.P. Putnam's Sons. In 1962, the Justice Department forced MCA to give up its agency, leaving the company to focus on television and film production. Stein began promoting vision research in 1960, founding Research to Prevent Blindness, Inc., which helped pave the way for corrective surgical procedures. The University of California at Los Angeles dedicated the Jules Stein Eye Institute in 1966, and two years later Stein pushed for Congress to establish the National Eye Institute under the umbrella of the National Institutes of Health. In 1973, after undergoing surgery a few years earlier for an intestinal disorder, Stein turned over chairmanship of MCA to Wasserman, but remained primary shareholder of the company. Upon his death from a heart attack, Stein left behind an estate worth \$150 million.

°STEIN, BARON KARL VOM UND ZUM (1757–1831), German statesman and patriot. Stein opposed the political emancipation granted to Jews during and after the French Revolution, even though his own ordinance of Prussian municipal government of 1808 had granted them municipal citizenship. Numerous antisemitic statements of his have been recorded, especially those he made against the patrician banking families of Berlin. When Frankfurt on the Main was freed from French rule in 1813, Stein, plenipotentiary for all conquered territories, refused to intervene on behalf of the Jewish community which was in danger of losing its rights. Under his sponsorship the Westphalian estates of 1827 proposed a series of restrictive measures against the "harmful" Jewish population.

BIBLIOGRAPHY: I. Freund, *Die Emanzipation der Juden in Preussen*, 1 (1912), 104ff.; M.J. Kohler, *Jewish Rights at the Congresses of Vienna and Aix-La-Chapelle* (1918), 6, 36–38; S. Baron, *Die Judenfrage auf dem Wiener Kongress* (1920), 33f., 185.

STEIN, LEONARD (Jacques; 1887–1973), barrister, author, and Zionist historian. Born in London, the son of a merchant, Stein was educated at St. Pauls and Oxford, where he was the first Jewish president of the Oxford Union, and was called to the bar in 1912. He was a captain in the British Army in World War I, after which he served as a political officer in the military administration in Palestine and as military governor of Safed. In 1920 Chaim *Weizmann appointed him political secretary and legal adviser of the Zionist Organization, a position which he held from 1920 until 1929, when he left over a disagreement on the official policy of the Zionist leadership. In 1932 he returned to practicing law and achieved a reputation as a foremost expert on taxation. He continued to advise the Jewish Agency and drafted the Zionist case before the Palestine Royal Commission (1936) and the Woodhead Commission (1938; see *Palestine, Inquiry Commissions). Stein's testimony before the Shaw Commission, which investigated the causes of the 1929 riots, was described by Weizmann as "the crowning glory of Stein's outstanding services to Zionism." He was president of the Anglo-Jewish Association (1939–49) and exerted considerable influence on this body which had not been favorably disposed toward political Zionism, although Zionist circles felt that in the 1945–48 period his representations to the British government on behalf of the Anglo-Jewish associations were not always helpful to Zionist policy.

Stein wrote extensively on Zionist history and compiled an anthology of official documents pertaining to Zionism and Israel, *Promises and Afterthoughts*, and, together with Leon Simon, edited *Awakening Palestine* (1923). His most outstanding book is the *Balfour Declaration* (1961), the most authoritative, documented, and detailed work on the subject, which revealed many facts previously unpublished. He also edited and published (together with Gedalia Yogew) *The Letters and Papers of Chaim Weizmann* (vol. 1, 1889–1902). Stein wrote a number of standard works on revenue law. He was a director of the *Jewish Chronicle* newspaper for 36 years; it established a lectureship in Medieval Hebrew at Oxford to mark his 80th birthday in 1967.

[Getzel Kressel]

STEIN, LUDWIG (1859–1930), philosopher. Born in Erdöbénye, Hungary, he studied philosophy at Berlin under Zeller, at Halle, and at the Jewish Theological Seminary of Berlin, where he became a rabbi and functioned in that capacity for a couple of years. He taught at Zurich (1886–91) and then was professor at Berne. Stein edited the *Archiv fuer Geschichte der Philosophie, Archiv fuer Systematische Philosophie und Soziologie, Berner Studien zu Philosophie und ihrer Geschichte, Bibliothek fuer Philosophie*, and *Nord und Sued*. During World War I he was involved politically with the moderate Gustav Stresemann. Stein wrote extensively on philosophy and sociology. He was a cultural and political optimist of religious tendencies, opposing the pessimism of Nietzsche and Spengler, a Humean in epistemology, and interested in biology. Stein's writings deal

with the history of philosophy, Jewish thought, social questions, sociology, and optimistic philosophy.

His chief works include *Die Willensfreiheit und ihr Verhaeltnis zur Goettlichen Praescienz und Providenz bei den Juedischen Philosophen des Mittelalters* (1882); *Freidrich Neitzsches Weltanschauung und ihre Gefahren* (1893); *Die soziale Frage im Lichte der Philosophie* (1897, 1923⁴); *Wesen und Aufgabe der Soziologie* (1898); *Der Sinn des Daseins* (1904); *Der soziale Optimismus* (1905); *Philosophische Stroemungen der Gegenwart* (1908), on neo-Kantiansim; *Gegen Spengler* (1925); and *Evolution and Optimism* (lectures in America; 1926).

[Richard H. Popkin]

STEIN, RICHARD (1898–), Israeli ophthalmologist. Stein was born in Bohemia, the son of a farmer. After serving as an officer in the Austrian army during World War I, in which he was taken prisoner by the Italians, he studied medicine at the University of Prague and worked at the eye clinic of the university until the Nazi invasion of Czechoslovakia in 1938. During World War II, he was incarcerated in the Theresienstadt concentration camp and was put in charge of health services there. After the war he founded an ophthalmological department in a hospital in Prague but in 1949 immigrated to Israel, having been invited to treat soldiers who had suffered eye injuries in the War of Independence. He established the ophthalmological department of Tel ha-Shomer (now Chaim Sheba) Hospital and was the first to perform retinal transplants in Israel. He was appointed professor of ophthalmology at Tel Aviv University in 1966. Stein was president of the Israel Ophthalmological Association for six years and a member of the International Ophthalmological Association. He was awarded the Israel Prize in 1973.

STEIN, WILLIAM HOWARD (1911–1980), U.S. biochemist. Born in New York City, Stein studied at Harvard and Columbia, receiving his doctorate in 1938 and joining the staff of Rockefeller University, where he was appointed professor in 1952. In 1960 he was elected to the National Academy of Sciences and made a fellow of the American Academy of Arts and Sciences. He served as chairman of the editorial committee of the American Society of Biological Chemists (1958–61) and chairman of the *Journal of Biological Chemistry* (1968–71). He was a member of the medical advisory board of the Hebrew University-Hadassah Medical School in Israel and a trustee of the Montefiore Hospital. Stein was stricken with polyneuritis in 1969 and was confined to a wheelchair until his death in 1980. In 1972 he was awarded the Nobel Prize for chemistry jointly with Dr. Stanford Moore, also of Rockefeller University, for research in proteins, peptides, and amino acids, in which he had been engaged for over 30 years.

STEIN, YEHEZKIEL (1926–), Israeli physician and medical research scientist. Born in Cracow, Poland, he graduated as

an M.D. from the Hebrew University of Jerusalem-Hadassah Medical School (1953) and after graduation joined the department of medicine at Hadassah where he received postgraduate training in biochemistry (1955–56). He was a visiting research scientist at Yale University and the Rockefeller University, New York (1959–61) on a Magnes Fellowship. After returning to Hadassah, he was appointed director of the Lipid Research Laboratory (1965–94), professor of medicine since 1969, and chairman of the department of medicine (1969–94). Stein's research centers on the contribution of high levels of lipoproteins rich in cholesterol (LDL) to atherosclerosis, a common disease of blood vessels including coronary artery disease. He also studied the lipoprotein HDL which removes cholesterol from the circulation. He used experimental tissue culture systems, human biochemical investigations, epidemiological surveys especially in the Jerusalem region, and clinical trials in broad and imaginative combination to elucidate the mechanisms underlying the development of atherosclerotic disease. His findings have helped to identify risk factors for developing atherosclerosis such as genetic predisposition, obesity, diet, and smoking. He has also investigated the intriguing observation that religious orthodoxy reduces the risk of myocardial infarction ("heart attacks"). Most of his more than 350 research publications were co-authored by his wife, Olga Stein, professor of experimental medicine, who also obtained her M.D. from Hadassah (1953). He participated in many international epidemiological surveys and was visiting professor at many leading U.S. university departments with shared research interests. He played a leading part in national and international committees concerned with atherosclerosis research and with education and research in medical science in general. Stein's achievements and international reputation in this field have been recognized by many honors and awards. These include the Heinrich Wieland Prize with O. Stein (1978), election to the Israel Academy of Sciences and Humanities (1980), honorary membership in the American Association of Physicians (1987), the Humboldt Research Award with O. Stein (1993), and the Israel Prize for medicine (1996).

[Michael Denman (2nd ed.)]

STEINACH, EUGEN (1861–1944), physiologist and biologist. He was born in Hohenems (in the Tyrol) and became professor of physiology at the German University of Prague, where he established a laboratory for general and comparative physiology, particularly of the sexual organs. In 1912 he was appointed director of the department of experimental biology at the Vienna Academy of Science. Steinach also contributed to the study of the physiology of elastic tissue, of the sense organs and nervous system. He coined the name "puberty gland." Steinach devised an operation for rejuvenation which consisted in the ligation of the vas deferens to produce atrophy of the spermatogenic apparatus of the testes and consequently, as he supposed, proliferation of the interstitial tissue and increased production of the hormone testosterone. In 1920 he published a book on the subject entitled *Verjuengung*

durch experimentelle Neubelebung der alternden Pubertaetsdruese. He died in Montreux.

[Suessmann Muntner]

STEINBACH, ALEXANDER ALAN (1894–1978), U.S. rabbi and author. Steinbach, born in Baltimore, Maryland, was ordained a rabbi by Hebrew Union College. From 1921 to 1934 he filled several pulpits before becoming rabbi of Temple Ahavath Sholom in Brooklyn, New York. Rabbi Steinbach served as president of the New York Board of Rabbis, the Brooklyn Board of Rabbis, and the Jewish Book Council of America, and was active on the boards of charitable, cultural, and civic agencies both in the Jewish and the general community.

As an author, Rabbi Steinbach wrote volumes ranging from notes to the tractate Bava Mezia (1927), sermons, and textbooks to volumes of original essays *Musings and Meditations* (1941), *Faith and Love* (1959), and prize-winning poetry, *When Dreamers Build* (1939). He was editor of the *Jewish Book Annual* from 1954 and of *In Jewish Bookland* (*Nat'l JWB*) from 1960.

[Gladys Rosen]

STEINBACH, EMIL (1846–1907), Austrian lawyer and politician who became minister of finance. Born in Vienna, Steinbach practiced and taught law until 1874 when he was appointed an official in the Ministry of Justice under Julius *Glaser. Following his baptism in 1886 he was made a department head in the Ministry of Justice and pioneered legislation in social reform and workers' insurance. On becoming minister of finance in 1891 Steinbach introduced tax reforms and a new currency, the crown in place of the florin, basing it on the gold standard. After the fall of the government following the defeat of his electoral reform bill, Steinbach became a supreme court judge. He was president of the Supreme Court from 1904 until his death. His publications include *Die Moral als Schranke des Rechtserwerbs und der Rechtsausuebung* (1898); *Zur Friedensbewegung* (1899), *Der Staat und die modernen Privatmonopole* (1903).

[Josef J. Lador-Lederer]

STEINBARG, ELIEZER (Shtaynbarg; 1880–1932), Yiddish educator, cultural activist, and author. Born in Lipkany, Moldava (former Bessarabia), Steinbarg received extensive Jewish instruction from kabbalist Yosele Dayen, and was self-taught in Russian and German literature. Like his older cousin, Hebrew writer Judah *Steinberg, he was a teacher, and, for many years, director of a Hebrew-Yiddish school in Lipkany. In 1911, Steinbarg met with H.N. *Bialik and Y.H.*Rawnitzki in Odessa; their plan to publish Steinbarg's fables was abandoned with the outbreak of World War I. From 1919 until his death,

Steinbarg lived with his wife, Rivke, in Czernowitz, where Jewish national consciousness was finding increasing expression. A keen Hebraist, Steinbarg was also a proponent of Yiddish phonetic orthography. He published an illustrated Yiddish primer (*Alef-Beys*, 1921) and a Yiddish-language method for learning Hebrew (*Alfon*, 1921), intertwining the pedagogy of *taytsh* with the aesthetic pleasure of whimsy. From 1920 to 1928, he was the animating force behind Yiddish-language children's theater and summer camps. He was director of a Sholem Aleichem school in Rio de Janeiro (1928–30), before returning to Czernowitz, where he resumed the leadership of Yiddishist cultural activities. The 20th anniversary of the Czernowitz Language Conference saw the publication of *Durkh di Briln* ("Through My Eyeglasses"), a limited edition of 12 of Steinbarg's rhymed fables, and was the occasion for the "discovery" of literary Yiddish Romania, then at its apogee, whose towering figures were two "neo-folk poets," Steinbarg and Itsik *Manger. While public performances of Steinbarg's fables had long been popular locally, it was through Herz Grossbart's artistic recitals that these Yiddish tales gained international renown. When Steinbarg died in March 1932, his collection *Mesholim*, was in galley proofs. Published a few months later, the book became a bestseller; the texts have been widely translated and anthologized. *Mayselekh* ("Short Stories") was published in Czernowitz (1936), and a supplementary volume of fables, *Mesholim II*, in Tel Aviv (1956). The revised, standard edition of *Mesholim* (with 150 fables) was issued in 1969. Rivke Steinbarg died in Israel in 1968. In 1972, Eliezer Steinbarg's archives were donated to the National and University Library (Jerusalem) by her brother, Yehudah Heilprin, and Eliezer Steinbarg's siblings, Shemuel and Rivke. Steinbarg is the outstanding master of the Yiddish fable both in content and form. An admixture of mordant wit, trenchant analysis, and deep humanism, the fables are largely indeterminate and rarely offer a clear moral. Each protagonist is depicted through characteristic syntax and discourse; the speaking subjects include lyric figures, animals, and inanimate objects, notably exploring power relations. Fables of alphabetic characters (*oy-syes*) are particularly innovative. Steinbarg combines motifs from traditional Hebrew study with modern literary language informed by conversational folk sources. He also enriched Yiddish culture with new idioms and reshaped proverbs.

Niger, *Yidishe Shrayber fun Tsvantsikstn Yorhundert* (1973), 211–28; D. Leibel, in E. Steinbarg, *Mesholim* (1969), 323–34; *Afn Shvel*, 306 (April-June 1997) (special Steinbarg issue).

[Nikki Halpern (2nd ed.)]

STEINBERG, Canadian family. Montreal's Steinberg family history exemplifies the classic model of poor immigrants from humble origins who succeeded in business and amassed a large fortune. The family immigrated to Montreal from Hungary in 1911. They eked out a living largely through the efforts of IDA ROTH STEINBERG, who opened in 1917 a small grocery

store on St. Lawrence Boulevard in the heart of the immigrant area. IDA and WILLIAM STEINBERG (Sternberg in Hungary) had six children, of whom SAM STEINBERG (1905–1978) was the second eldest and ultimately the most prominent. All six children worked in the family store but Sam proved to be especially bright, talented, and innovative. He was also highly motivated and had a remarkable entrepreneurial sense. As a young man, he became the dominant figure in the family enterprise and guided the firm as it became a main grocery chain serving the Quebec consumer and an integral part of the Quebec scene. Under Sam's leadership the Steinberg's supermarket chain also expanded beyond Quebec into Ontario and had major interests in the United States. Known for quality products, innovation, top customer service, and high ethical business standards, through the second half of the 20th century the Steinberg's chain was recognized as one of the most successful Jewish-owned companies closely associated with the growth of the Montreal Jewish community.

Sam Steinberg controlled the company until his death in 1978. While he was alive, the company also remained very much a family business, employing many family members, though this ultimately proved to be a weakness. Of the other Steinberg siblings, NATHAN played a key role as a senior vice president and Sam's right-hand man. In the next generation, Sam's son-in-law, MEL DOBRIN, became president of the firm and Nathan's son ARNOLD STEINBERG was executive vice president. By the 1970s, however, the family enterprise encountered difficulties adapting to the changing business conditions. The situation became more acute after Sam died with no clear succession plan in place. Deteriorating relationships between the family and the firm's professional management and among several family members led to discord, much of which became public, and ultimately resulted in the sale of the company in 1989.

Sam Steinberg's two obsessions were the business and his family. He had little time for community activities and was often at odds with Sam *Bronfman, the titular leader of the Montreal Jewish community during Sam Steinberg's active years. Nevertheless Steinberg did head the organizing committee for the Pavilion of Judaism at Expo '67, Montreal's world fair. He also served as president of the Montreal Jewish General Hospital and was active in the Canadian Council of Christians and Jews.

Most of the Steinberg clan, nearly 100 descendants of Sam Steinberg and his five siblings, remain in Montreal, where several have played significant roles in and provided financial support to Jewish and large community activities. Despite the healing of some of the family rifts that developed before the sale of the family business, the family no longer acts as a coherent unit.

[Harold M. Waller (2nd ed.)]

STEINBERG, AARON (1891–1975), author and philosopher. Steinberg, a brother of Isaac Nahman *Steinberg, was born in Dvinsk, and studied in Russia and Germany. During World

War I he was interned in a German village. After the war Steinberg helped to found an institute of learning in Leningrad where the intellectual leaders of Russian Jewry came together to sponsor and create new cultural values. Here and at the university, Steinberg lectured on the history of Jewish philosophy. He was a close friend of Simon Dubnow, with whom he collaborated. The climate, however, soon became unfriendly for Jewish scholars and in 1922 he moved to Berlin, where he helped to establish the Gesellschaft für Juedische Wissenschaft, as well as the Yiddish Scientific Institute, *YIVO. He published a book on Dostoevsky's *Philosophy of Freedom* and was co-editor of the Yiddish *Algemeyne Entsiklopedye*, which after many years was continued in London under the title *Jewish People, Past and Present*. It was Steinberg's translation of Dubnow's ten-volume *World History of the Jewish People* that made Dubnow well known in German-speaking countries. Together with Dubnow, he wrote a three-volume *History of the Jewish People* published shortly before World War II. He also edited a memorial volume to mark Dubnow's centenary in 1960, *Simon Dubnow: The Man and His Work (1860–1960)* (1963). Steinberg wrote fluently in Hebrew, English, Yiddish, French and German and his scholarly articles were published in various journals. He settled in England in 1934 and headed the Cultural Department of the World Jewish Congress until 1971. He was Honorary President of the Association of Jewish Journalists and Authors.

[Josef Fraenkel]

STEINBERG, AVRAHAM (1947–), Israeli physician and ethicist. Born in Germany, Steinberg immigrated with his parents as an infant to Israel (1949). After graduating high school Steinberg studied at Yeshivat Merkaz ha-Rav Kook in Jerusalem (1965–66). He then studied medicine at the Medical School of Hebrew University-Hadassah in Jerusalem and graduated in 1972. After serving in the army as a medical officer in the Air Force (1973–76), Steinberg trained in pediatrics at the Shaare Zedek Medical Center in Jerusalem, and in pediatric neurology at the Albert Einstein College of Medicine and at Montefiore Hospital Medical Center in the Bronx, New York (1976–82). Steinberg has worked as a senior pediatric neurologist at Shaare Zedek and Bikkur Cholim Hospitals in Jerusalem, as well as in the various health maintenance organizations in Jerusalem. Between 1986 and 1999 Steinberg served as secretary and treasurer of the Israel Society of Pediatric Neurology. From 1969 Steinberg researched and published extensively in the fields of general and Jewish medical ethics, history of medicine and medicine and law. He wrote many papers in Israeli and international journals, and he lectured in medical ethics at the Hebrew University Medical School as well as in many national and international forums. Steinberg chaired several national committees on medical-ethical issues, including the National Israeli Committee for Evaluation of Living Organ Donors, the National Advisory Committee to the Minister of Health for Enacting a Law Concerning the Terminally Ill, the National Advisory Committee

for Amendments of the Anatomy and Pathology Law, and the National Forum Concerning Organ Donations in Israel. In 1999 Steinberg received the Israel Prize for his monumental work *Encyclopedia of Jewish Medical Ethics* (1988–98, 2,740 pp.). Steinberg was the director of the Medical Ethics Unit and senior pediatric neurologist, Shaare Zedek Medical Center, Jerusalem, Israel.

[Bracha Rager (2nd ed.)]

STEINBERG, ISAAC NAHMAN (1888–1957), Russian revolutionary, jurist, writer, and leader of the *Territorialist movement. He was born in Dvinsk (Daugavpils, Latvia) into a family in which Jewish tradition and Haskalah coexisted. His father was a well-established merchant and his mother was the sister of the Yiddish literary critic *Baal-Makhshoves. Steinberg received a traditional Jewish education, which had a marked influence on him until the end of his life. He studied law at Moscow University, from which he was expelled because of revolutionary activities. In 1910 he completed his legal studies at Heidelberg University, receiving the title of Doctor of Laws for his dissertation *Die Lehre vom Verbrechen im Talmud* (1910; "Penal Law in the Talmud"), published as a book. For a few years before the outbreak of World War I he practiced as a lawyer in Moscow.

Steinberg had begun his revolutionary activity in 1906, when as a student he joined the Social Revolutionary Party. He was arrested, imprisoned, and exiled abroad. In 1910 he returned to Russia. After the February 1917 Revolution, when the Social Revolutionary Party split up, Steinberg joined its left-wing faction. When the faction joined the first Soviet government headed by Lenin, Steinberg represented his party in it serving as commissar for law (minister of justice) from December 1917 to March 1918. After the split between the left-wing Social Revolutionaries and the Bolsheviks Steinberg was arrested several times. He left Russia, and from 1923 lived in Berlin. There he acted as representative abroad for his party, and went on lecture tours on its behalf. From 1933 to 1939 Steinberg lived in London, and in 1943 settled in New York. There, among other activities, he was a member of the board of directors of *YIVO, on whose behalf he made several journeys to South Africa and South America.

Steinberg began his literary activity by contributing to legal and general periodicals in Russia. Subsequently he continued as one of the editors of party organs in Moscow and Berlin. He also contributed to the general socialist press, and to the Yiddish *Zukunft* in New York. From 1926 to 1937 Steinberg published and edited the series in Yiddish *Fraye Shriftn farn Yidishen Sotsialistishn Gedank* in which he attempted to formulate his ideas in the spirit of ethical socialism, which combined Jewish ethics with the ideal of universal justice and human solidarity. From 1943 to 1956 he edited the monthly *Oyfn Shvel* of the Freeland League, founded by Ben *Adir. Apart from numerous articles of literary and political interest, Steinberg published a series of books in Russian, Yiddish, and German on the Russian Revolution, which were trans-

lated into English and other languages. He also wrote a social drama in German, *Der Dornenweg* ("The Thorny Path," 1927; Yid. trans. 1928), which was produced in Germany. His best-known book is his comprehensive work on the Russian revolutionary Maria Spiridonova (Eng., 1935; Yid., 1936; Heb., 1936). His socialist credo is expressed in his *Der Moralisher Ponim fun der Revolutsiye* ("The Moral Aspect of the Revolution," Yid., 1925; Rus., 1925); *Gewalt und Terror in der Revolution* (Ger., 1931); *In the Workshop of the Revolution* (1953; 1955). He wrote on his brief experience as minister of justice in Russia in *Als ich Volkskommissar war* (Ger., 1929; *Memoirs of a People's Commissar*, Eng., 1931; Yid., 1931).

His activity in the Territorialist movement forms a special chapter in Steinberg's life. Hitler's rise to power in Germany, and subsequently the outbreak of World War II, led him to advocate the idea of Territorialism. He argued that the safety of European Jews could not await a change in the British policy in Palestine, and accordingly founded the territorialistic Freeland League which advocated Jewish colonization in other countries. In pursuit of this aim Steinberg went to Australia and proposed the creation of an autonomous Jewish colony in the northwestern Kimberley. His efforts failed, however, the Australian government being prepared to accept Jewish refugees but not to tolerate a separate national unit on its territory. After the failure of the Australian project, Steinberg promoted a similar plan, though on a more limited scale, in Surinam, which also ended in failure. He wrote on his ideas on Territorialism and attempts to put them into practice in *Geleblt un Gekholemt in Australie* (Yid., 1945; *Australia – The Unpromised Land*, Eng., 1948), and to some extent also in *Mit Eyn Fus in Amerike* (1951), on personalities, events, and ideas.

Steinberg's was an unusual personality, in which varying and seemingly conflicting elements combined. While an extreme left-wing revolutionary, and among the leaders of the party which relied on the Russian peasant, Steinberg was an observant Orthodox Jew, with Jewish national ideas, and active in Jewish politics. He was a prolific writer, with a lucid style, as well as an accomplished speaker and controversialist.

BIBLIOGRAPHY: Reizen, *Leksikon*, 4 (1930), 604–8; *Yizhak Nahman Steinberg Gedenk-Bukh* (1961); M. Enav, *Be-Sa'arat ha-Hayyim* (1967).

[Simha Katz]

STEINBERG, JACOB (1887–1947), Hebrew poet, short story writer, and essayist; born in Belaya Tserkov in the Ukraine. Little is known of his early life, except what may be gathered from his short stories and novelettes. These, with their portrayal of poverty, family squabbles, the vagaries of self-education, revolt against tradition, and flight to the city suggest the usual background of a Hebrew writer in Eastern Europe prior to World War I. At 14 Steinberg ran away to Odessa where he met H.N. Bialik, who encouraged him, and Z. Shneour, who became his close friend. In 1903 he moved to Warsaw where he published his first Hebrew poem and contributed to Hebrew and Yiddish

periodicals, winning literary acclaim in both languages. At the outbreak of World War I he immigrated to Palestine and, except for the years 1923 to 1925 spent in Berlin, lived out his life there. In Palestine he ceased writing Yiddish and contributed regularly in Hebrew to *Ha-Po'el ha-Za'ir*, *Moledet*, and *Davar*. From 1942 he was one of the editors of *Moznayim*, the literary periodical of the Hebrew Writers' Association. His Hebrew writings were republished in 1957 as part of the Dvir Classical Library. The collected works appeared in 1964.

Poetry and Poetics

Steinberg's work is highly original, notwithstanding that he was not an innovator. Though he never acknowledged any influence, that of Bialik is clearly discernible in his earlier poems and short stories. But his insight into the work of Baudelaire and Verlaine and the lesson derived from the Russian realists are equally evident in what may be described as his "spiritual realism."

In his quest for flawless form, in his pained introspection, and in his objection to the excesses of didacticism, he is thus reminiscent of Baudelaire. The recurrent mood of ennui with its accompanying motifs of decay, poison, tombs, and riddles also recalls the French poet and the later symbolists. From Baudelaire and his disciples he apparently derived the doctrine of enigmatic affinities, also sharing their predilection for analogy and oxymorons.

Like the symbolists, Steinberg distrusts descriptive verse; the poet, he maintains, should neither initiate nor analyze but uncover the essential correspondences between things. Analogy alone reveals that things are not haphazard, opaque, or fragmentary. It alone can ensure the conception of a unified world which is the sum total of all its analogies brought together by poetic imagination. The poet is thus capable of reconciling opposites without diminishing their polar tension, the latter being the key to and the manifestation of the mystery of life.

Steinberg's style, essentially biblical, deliberately archaic, with a manifest contempt for "the lightsome present," is nevertheless exact and specific. He is perhaps the only modern Hebrew poet who succeeded in forging a biblical style into an adequate tool for the expression of a basically modern sensibility, without recourse to pastiche or a technique of fragmentation. Despite its insistence on the discovery of new relationships, his poetry is not given to modernistic analogies that "make it new" by their sheer incongruity. On the contrary, he often resorts to a conventional imagery which comes alive by dint of a single word or expression. The main strength of his idiom lies in the endowment of abstract spiritual entities with almost sculptural concreteness. His phrases and word formations, ostensibly biblical but intrinsically his own, cannot be paraphrased and would greatly lose in translation. They epitomize fully realized moments drawn from intense personal experience yet emanating, as it were, from the wisdom of the ages. These "moments," enigmatic "documents of life," as he calls them, are not susceptible to logical reduction but they are

equally hostile to the spirit of generalizing abstractions and are not satisfied with mere "musical" vagueness – qualities Steinberg disliked in poetry as in life. Hence his predilection for the powerful realism in the narrative books of the Bible.

Steinberg's emphasis on such pregnant moments is reinforced by a theoretical preoccupation with the smallest structural and semantic unit – the verse line and the single word, provided it contains what he calls "an epic of life." He saw the history of Hebrew literature as a gradual estrangement from the life-engendering verse line and as an immersion in rhetorical garrulity, inattentive to life or inimical to it. The very indifference of the Jew to aesthetic perception is symptomatic of the malaise of an uprooted people. Whoever envisages a future for Jewish poetry, he argues, envisages a future for the Jewish nation. The return of Hebrew poetry to the "line" implies the return of the Jew to normal life.

More than any of his contemporaries, Steinberg thus pointed out the major weakness of contemporary Hebrew literature of his day, though his own poetry was not always untainted by the very things he abhorred. His condemnation of a cliché-ridden rhetoric constituted a reaction against a tradition which had exhausted itself, and, in the eyes of its modern opponents, had adulterated the language of poetry. Like the imagists, Steinberg sought to return to the hard core of poetry, which he too calls image. His assertion that at the dawn of a new epoch the image-analogy is first to awaken to a new life, is the essence of the imagist credo. As prototype of his image, Steinberg points to the ambiguous word-entity fashioned by biblical realism. The ancient Hebrews, he argues, were unskilled in the arts of building and sculpture but excelled in sculpting abstract notions into word monuments. In this resides the strength of the Hebrew language itself whose words are "chiseled, solid stones, not formless sand as in Slavic and Germanic tongues." This insistence on hardness and meaningful directness is evinced in Steinberg's late lyrics and in his accomplished love poems in which he evokes the experience with unsparing truthfulness and almost scientific detachment. On the whole his poetry marks one of the most impressive achievements of modern Hebrew literature.

Stories

Steinberg wrote some 20 stories whose themes and landscapes are taken mainly from the life of the Jewish communities in the small towns of the Ukraine. These depict a lowly world of frustration, unhappy love affairs, the squalor of an existence under constant persecution – a world stirred by the echoes of far-off change and revolution. Most of them resolve in death, defeat, suicide, the waste of strong passions doomed to slow extinction and transformed into forces of destruction.

Out of this gallery of uprooted, washed-out, withered souls – portrayed with restraint, with close attention to the pregnant minor detail, and without a trace of melodrama – rises a specter of the writer's own early incurable afflictions.

But beyond autobiography, the stories are a psychological study of the rootless Jew in the midst of a hostile world. Here

Steinberg allies himself with J.H. Brenner, S.Y. Abramovitch (Mendele Mokher Seforim), and a long succession of Jewish writers in a blunt scrutiny of what he considers the only race of man forced out of the orbit of nature and living for the sake of death in the absence of any earthly purpose to devote itself to. The condemnation of the *galut* is absolute, but even when describing the Diaspora Jew as “a freakish specter,” Steinberg remains the observer rather than the preacher. The sense of a common lot and the echoes of pogroms turn this predicament, too, into an occasion of self-revelation. This is where the stories and the poems touch.

Essays

His essays, ostensibly written about “occasional” subjects, are set in the realities of Erez Israel. Whether he writes about the *hamsin*, the atmosphere of the café, or the plethora of languages in the city of his day, he constantly reverts to the subject that haunts him: the impoverished spiritual life of a small and arid community of immigrants, as opposed to the glory that was Judah. These essays, halfway between the conventional essay form and the prose poem, do not register fleeting moods or impressionistic intimacies, but adhere to the lesson Steinberg learned from the Bible (one of the few masterpieces, he maintains, in which a whole nation revealed its soul) and from the nature of the Hebrew language as he interpreted it.

Despite their affinity to Zionist ideology, his ideas, couched like his poems in biblical language, are concerned with and addressed to the select few. Indeed, the strengthening of the individual is seen by Steinberg as the main task of Hebrew renaissance.

The essays won a wider acclaim than the poems. Only after the War of Independence, with the advent of a new generation of Hebrew writers inveighing against the rhetorical excesses of their predecessors, were his works more closely read and revalued.

[Natan Zach]

STEINBERG, JOSHUA (1825–1908), Hebrew writer, linguist, and teacher, son-in-law of A.B. Lebensohn (Adam ha-Kohen). A graduate of the Vilna Government Rabbinical Seminary, Steinberg served as a government-appointed rabbi in Bialystok and Vilna (1860–66), and was active in the establishment

of governmental Russian-Jewish schools. In 1867 he was appointed lecturer in Hebrew and Aramaic at the Vilna Rabbinical Seminary and was censor of Hebrew books from 1883 to 1905. From time to time Steinberg wrote articles in which he preached the ideas of the Haskalah. The body of his work was connected with the study of Hebrew and its grammar. He wrote textbooks in Russian for the study of Hebrew and Aramaic; translated the Pentateuch and several books of the Prophets into Russian with Hebrew and Russian commentary; compiled a Russian-Hebrew dictionary (1880), and a frequently reprinted Russian-Hebrew pocket dictionary. In his book of grammar, *Ma'arekhei Leshon Ever* (1884), he employed his own method, whose main principle was the acceptance of the Ashkenazi pronunciation of vowels and the use of two- and three-letter roots. His biblical dictionary, *Mishpat ha-Urim* (1891; revised edition, *Millon ha-Tanakh*, 1940), has retained its value. Steinberg was a scrupulous purist who wrote only in the biblical idiom. Aḥad Ha-Am, who printed his article “*Toledot ha-Safah ve-Torat Darwin*” (“History of Language and Darwin’s Theory,” in: *Ha-Shilo'ah* (2 (1897), 24–37)), referred to his writings as examples of the inability of biblical style to express modern scientific thought. Steinberg greatly influenced the methods of teaching Hebrew language and grammar.

His works also include: translation of M.J. Lebensohn’s poems into German, *Gesaenge Zions* (Vilna, 1859); epigrams and proverbs, *Or la-Yesharim* (1865); and three chapters of *Sybilline Oracles* translated into Hebrew in *Ha-Me'assef* (Warsaw, 1886).

[Yehuda Slutsky]

STEINBERG, JUDAH (1863–1908), writer and Hebrew educator. Born into a ḥasidic family in Lipkany (Bessarabia), Steinberg became attracted to Haskalah and taught himself Russian, science, and mathematics. His first book, *Niv Sefatayim* (1893), a writing manual, was unsuccessful, and Steinberg himself burned many copies of the book. His book of proverbs, *Ba-Ir u-va-Ya'ar* (1923²), was warmly received as was *Sihot Yeladim* (1899), a children’s story book. In 1897 Steinberg became a teacher in Leovo. His failing health forced him to give up teaching and in 1905 he went to Odessa and there served briefly as the correspondent of the New York Yiddish daily *Di Warheit*.

Steinberg wrote many stories, which he published in Hebrew and Yiddish journals, and several textbooks. His children’s stories were drawn from contemporary society and written in a simple style which combined biblical, mishnaic, and midrashic Hebrew. His heroes are Jews of all types depicted in romantic fashion with all their faults and virtues. Many of his stories deal with the Hebrew teachers of his time and their attitude toward their students. His attempts to write longer stories, “*Av u-Veno*” and “*Dr. Orlov*,” were unsuccessful.

Steinberg's ḥasidic stories reflect the positive romantic attitude of Hebrew writers to Ḥasidism which in his day began to replace the critical view held by earlier modern Hebrew authors. He does not write about the great figures of Ḥasidism or about the movement's central problems, but concentrates on the simple, humble ḥasid, in all his innocence and optimism (*Gedalyahu ha-Tam*). Perhaps his most popular work is *Ba-Yamim ha-Hem* (1906), a moving, long short story depicting the suffering of a young *cantorist. After his death, his works were published by the Odessa literary circle, in six volumes (two of them, stories for young readers); several collections of his Yiddish stories were also published. A list of English translations of his works appears in Goell, *Bibliography*, 79, 96, 97.

[Yehuda Slutsky]

STEINBERG, MARTIN R. (1904–1983), U.S. medical administrator. Born in Russia and educated in the U.S., he was appointed assistant professor of otolaryngology at the graduate school of the University of Pennsylvania in 1935. In 1948 he became director of New York City's Mount Sinai Hospital and in 1964 he was also appointed professor and chairman of the department of administrative medicine of the Mount Sinai School of Medicine. He was president of the Greater New York Hospital Association and of the Hospital Association of New York State.

STEINBERG, MAXIMILIAN OSSEJEVICH (1883–1946), composer and teacher. Born in Vilna, Steinberg graduated from St. Petersburg University (1907, natural sciences faculty) and St. Petersburg Conservatory (1908, composition). Being the student and son-in-law of Rimsky-Korsakov, Steinberg followed his tradition and edited many of his scores and books (including *Foundations of Orchestration* (2 vols., 1913)). His career developed from teaching composition and orchestration at the St. Petersburg Conservatory from 1908 until the end of his life. There he was dean of the faculty from 1917 to 1931 and vice rector from 1934 to 1939. Steinberg's compositions were influenced by his master, and by his interest in Asiatic music. He wrote five symphonies and other orchestral works, ballets, and chamber and piano music. Many prominent Soviet composers were Steinberg's pupils, including Dmitri Shostakovich, Vladimir Shcherbachev, and Yuri Shaporin.

[Marina Rizarev (2nd ed.)]

STEINBERG, MILTON (1903–1950), U.S. Conservative rabbi. Steinberg was born in Rochester, New York, and ordained a rabbi by the Jewish Theological Seminary (1928). His first congregation was in Indianapolis, Indiana, and in 1933 he moved to the Park Avenue Synagogue in New York, an institution that was still part of the Reform movement and lived in the shadow of the larger and more prestigious institutions that were nearby, Kehillath Jeshurun with Rabbi Joseph *Lookstein as its leader and Temple Emmau-El and Central Synagogue. Steinberg brought the synagogue into the Conservative movement. He attracted new members and built up the congregation. He was a fine preacher. An ardent Zionist, he worked with the Zionist Organization of America and also with Hadassah. Park Avenue Synagogue is now among the most prestigious in the Conservative Movement. A student of Morris Raphael *Cohen, Steinberg was concerned with a philosophical approach to Judaism. He dealt with issues such as the nature of God, His relation to humanity and history, the problem of evil, the confrontation of faith and reason, and so forth. While at the seminary, the most profound influence on Steinberg was Mordecai M. *Kaplan. Steinberg was early identified with Kaplan's Reconstructionist movement and was one of the founders of its publication. For a year he was managing editor of *The Reconstructionist* (1937), and in the 1940s helped edit the *Reconstructionist Sabbath Prayer Book* (1945) that was widely criticized in traditional circles for its abandonment of the chosen people concept and the sacrificial order. Steinberg later expressed criticism of the movement. His main points were that while Reconstructionism was a sound ideology, it lacked a philosophic concern and was deficient in poetry. Steinberg's novel, *As a Driven Leaf* (1939), was considered one of the best novels written with the talmudic period as a background. The work deals with the heretic *Elisha ben Avuyah and the conflict of religion and philosophy which his life represents. Elisha eventually realizes that one is not superior to the other but both are based upon the acceptance on faith of undemonstrated basic premises. This realization prevents Elisha from denouncing religion as inferior. The work is still read more than 65 years after its writing and is still a fine orientation to the time of Rabbinic Judaism. *The Making of the Modern Jew* (1934) was Steinberg's attempt to sort out the history of the Jew and the meaning of that history for a Jew in the 20th century. The book did not actually deal with the 20th century, and Steinberg published *A Partisan Guide to the Jewish Problem* (1945) which, although not a sequel, gave indication of the type of modern Jew that he believed would emerge from this interplay of past and present. His work *Basic Judaism* (1947) enjoyed wide popularity as an attempt to set down the basics of the Jewish religion. It, too, is still widely read, especially by those who are becoming Jews by choice. In addition, Steinberg was active in Zionist circles and devoted much time to furthering the Zionist cause in the U.S. A number of volumes of essays were published posthumously: *A Believing Jew* (1951); *From the Sermons of Milton Steinberg* (1954); and *Anatomy of Faith* (1960).

[Michael Berenbaum (2nd ed.)]

STEINBERG, PAUL (1926–2005), U.S. Reform rabbi, psychologist, academician. Steinberg was born in New York City and attended the College of the City of New York, where he earned a B.S. (1946) and M.S. (1948) and served as a fellow in the Department of Education (1946–48). During those years leading up to the creation of the State of Israel, he worked for Americans for *Haganah, an organization that smuggled arms to Jewish fighters in mandatory Palestine. A disciple of Stephen S. *Wise, he was ordained at the *Jewish Institute of Religion in 1949 and received an Ed.D. from Teachers College, Columbia University in 1961. In 1985, he was awarded an honorary D.H.L. by Baltimore Hebrew University. The recipient of a Guggenheim Fellowship for Research and Travel in Israel, he served as a visiting lecturer in the School of Social Welfare and the Department of Education at the *Hebrew University in Jerusalem (1949–50). Returning to the United States, he became director of the *B'nai B'rith Hillel Foundation at the University of California in Berkeley (1950–52) before entering the pulpit rabbinate at Temple Israel of Northern Westchester, Croton-on Hudson, N.Y. (1952–57). He also served as chaplain of the Franklin D. Roosevelt Veterans Administration Hospital in Montrose, N.Y. (1952–57) and lectured at the New York University School of Education (1956).

In 1958, Steinberg accepted a full-time appointment as associate professor at the New York campus of the Hebrew Union College-Jewish Institute of Religion, where he had been a part-time instructor for the two preceding years. In 1961, he was elevated to professor of human relations and education and dean, a position he retained until 1985. In addition to being responsible for all the departments at the school that train rabbis, cantors and educators, he served as executive dean of the HUC Biblical and Archaeological School in Jerusalem (1963–70), as well as director of the American Office of the HUC-JIR Jerusalem School and director of the Summer Programs in Israel, including archaeological excavations. Steinberg is credited with inaugurating the New York institution's Year-in-Israel Program for its students (1971) and establishing an Israel Rabbinical Program in the 1980s to strengthen Progressive Judaism in Israel. He also helped develop a music degree program and set up satellite schools in the suburbs offering certification in Jewish education.

A New York State Department of Education Research Fellow in Israel (1967) and Eleanor Sinsheimer Distinguished Service Professor in Jewish Religious Education and Human Relations (1970), Steinberg was a member of the board of directors of the Council of Higher Educational Institutions of the City of New York (1957–1973). In 1985, he was named HUC-JIR's vice president for communal affairs and dean of faculty, serving in that post for 20 years. He was HUC-JIR's longest serving dean when he succumbed to illness at the age of 79.

A certified psychologist, Steinberg combined his academic career with a professional one outside the halls of academe: he was a consultant to industry and management at Richardson, Bellows & Henry (1958–60) and a professional associate at BFS Psychological Associates of New York. He was also an expert examiner for the New York State Civil Service Commission and a speaker at executive development seminars conducted by the Department of Defense and the American Management Association. In addition, he was a member of the Boards of Trustees of the Albright Institute of Archaeological Research – American Schools of Oriental Research (Jerusalem, Israel) and of the Jewish Braille Institute of America as well as a Fellow of the American Association for the Advancement of Science.

[Bezalel Gordon (2nd ed.)]

STEINBERG, SAUL (1914–1999), U.S. artist and cartoonist. Born near Bucharest, Romania, Steinberg studied sociology and psychology at the University of Bucharest but moved to Italy and received a doctoral degree in architecture from the Reggio Politecnico in Milan in 1940. There, he began his career as an artist, founding a magazine with Giovanni Guareschi, an Italian novelist, and began publishing his drawings. His visual language was a thin sharp line that was always remarking on its own existence. Often his drawings poked fun at the art of drawing, the artist growing out of his own pen and winding up as a square, or becoming entangled in his own fancies, or unable to break out of a never-ending spiral. His art also played on the theme of emigration and the bureaucratic guises of identity: fingerprints, passports, signatures. As a foreign Jew living in Milan under a Fascist regime that was growing more antisemitic, he was awarded his diploma by Victor Emmanuel III, King of Italy, King of Albania, and Emperor of Ethiopia, identified as “of the Jewish race.” In 1941, he fled to the United States using what he described as a “slightly fake” passport, one he stamped with his own rubber stamp. It got him to neutral Portugal and then to Ellis Island, from where he was deported to Santo Domingo, Dominican Republic, because the tiny quota of Romanians was already filled. He sent some cartoons to *The New Yorker*, hoping the magazine would support his entry into the United States. His first *New Yorker* drawing appeared on October 25, 1941, an artist's playful rendition of a reverse centaur, one with a man's rear end and a horse's head. Steinberg arrived in the United States the following year. In 1943 Steinberg had his first American one-man show. On the same day that he became a United States citizen, he was given an ensign's commission in the Navy. He was assigned to teach Chinese guerillas how to blow up bridges, and for a year flew the mountainous route known as the Hump from China to India, making sure the explosives reached their destinations. He was then sent to North Africa to draw cartoons that would inspire anti-Nazi resistance inside Germany. *The New Yorker* published Steinberg's visual reports

from Asia, North Africa, and Europe, and satiric drawings of Nazis. In one, “Benito and Adolf – Aryan Dancers,” Mussolini and Hitler are wrestling half naked. His wartime work was published in *All in Line* (1945), the first of many collections of his drawings. In 1946, the year Steinberg was discharged from the Navy, he won his first recognition as a serious artist, when his work was included in “Fourteen Americans” at the Museum of Modern Art in New York. After the war his style changed, becoming more abstract, philosophic, and symbolic. In the 1950s he devised a roster of characters: cats, sphinxes, and empty-looking men and women, then crocodiles, his emblem for primitive political society, horses, and knights. By the 1960s his work was filled with geometrical forms, baroque comic-strip balloons, letters of the alphabet, numbers, and punctuation marks. In the late 1960s and 1970s he did architectural fantasies, watercolor landscapes, and savage pictures of New York street life that indicated a pessimism about urban life. His art was shown at several important venues: Galerie Maeght in Paris (1953) and the Sidney Janis Gallery (1973) in New York, and he had a retrospective at the Whitney Museum of American Art (1978). For *The New Yorker*, he produced 85 covers and 642 drawings. But none was more famous than the *New Yorker*’s conception of the world, which appeared on March 29, 1976, and shows a shortsighted view of the rest of the world, in which everything in the landscape recedes according to its cultural distance from Manhattan. The idea was copied in knockoffs made for London, Paris, Rome, Venice, and just about every other city. Steinberg, as he lamented late in life, was known as “the man who did that poster.” More than once Steinberg was photographed with one of his paper-bag masks over his face. That, he once said, is what people do in America, “manufacture a mask of happiness for themselves.”

[Stewart Kampel (2nd ed.)]

STEINBERG, WILLIAM (1899–1978), conductor. Born in Cologne, Steinberg became assistant to Otto *Klemperer and later first conductor at the Cologne opera. He was director at the Frankfurt opera (1929–33), and made it into one of the centers of progressive music. From 1933 to 1936 Steinberg was active as conductor in the *Juedischer Kulturbund, and in 1936 went to Palestine upon the invitation of Bronislaw *Huberman to organize the Palestine (later Israel Philharmonic) Orchestra for its premiere under Toscanini. In 1937 he became assistant conductor of the NBC Symphony Orchestra in New York, and subsequently conductor of the Buffalo Philharmonic, the Pittsburgh Symphony, and part-time conductor of the London Philharmonic orchestras. Steinberg was chief conductor of the Boston Symphony Orchestra from 1969 to 1972, when he resigned on account of ill health, but continued as musical director of the Pittsburgh Symphony Orchestra.

STEINBERGER, JACK (1921–), physicist, Nobel laureate. Steinberger was born in Bad Kissingen, Germany, and immigrated to the United States in 1935. He studied at the Univer-

sity of Chicago, from which he received his B.Sc. in chemistry in 1942 and his Ph.D. in physics in 1948. He was a professor at Columbia University from 1950 to 1971, with the title of Higgins Professor from 1967 to 1971.

He was affiliated with the European Center for Nuclear Research (CERN) from 1968, serving as its director from 1969 to 1972. In the early 1960s Steinberger and two colleagues, Melvin *Schwartz and Leon M. *Lederman, using the proton accelerator at Brookhaven National Laboratory near New York, developed a method to detect neutrinos, subatomic particles, with spin of one-half, no electric charge, very small mass, and therefore velocities very close to the speed of light, and very weak interactions, which make them elusive, difficult to detect, but also very useful in the study of the structure of the nucleon. In an experiment performed in 1962 they found a second variety of neutrinos in addition to the neutrino which was known to be emitted by some radioactive nuclei. This was an important step towards the present understanding that elementary particles are grouped in families. For this discovery they were awarded the Nobel Prize in physics in 1988.

STEINBRUCH, AARÃO (1915–1992), Brazilian journalist, lawyer, and politician. The son of a *shoḥet*, Steinbruch was born in Porto Alegre. He was elected as a labor deputy to the Federal Chamber of Deputies in 1950 (serving until 1962) and initiated the law known as “The Thirteenth Salary,” which was designed to discourage absenteeism in factories. In 1963 he became the first Jewish federal senator in Brazil representing the Movimento Democrático Brasileiro party (Laborist; serving until 1969), and in 1964 he was elected president of his party. Steinbruch presided over the Federação Israelita do Estado de Rio de Janeiro (Federation of Jewish Societies of the state of Rio de Janeiro) from 1958 to 1962 and visited Israel on several occasions. He was also editor of three journals, *Revista de Justiça*, *Revista do Trabalho*, and *Tres Poderes*. His wife, JULIA VAENA (1933–), was also a member of the Federal Chamber of Deputies.

[Paul Link]

STEINEM, GLORIA (1934–), U.S. feminist, writer, speaker, co-founder and contributor to *Ms. Magazine*, which became the most prominent mass-circulation feminist journal published and edited by women, from its inception in 1972 until it was sold in the 1980s. Born in Toledo, Ohio, of a Jewish father and a non-Jewish mother, Steinem was baptized in a Congregational church. Educated at home by her mother, she did not attend school regularly until she was 10, when her mostly absent father left the family permanently. Steinem came to link her mother’s depression and other psychological ailments to the fact that she had given up her career for marriage, a realization that reinforced Steinem’s dedication to the women’s movement.

Steinem graduated with highest honors from Smith College in 1956, where she had majored in government. Her 1956

engagement to a Jewish fiancé ended in 1958 after Stein spent two years in India, following an abortion in England. Her abortion experience fueled her later “conversion” to feminism, which she attributed to an abortion rights rally in New York City in 1969. Steinem began her career as a magazine and television writer and became a founding editor of *New York Magazine* in 1968.

A widely sought public speaker and campaigner for women's rights in employment, politics, and social life, Steinem was often characterized as a Jewish feminist. She became a participant in the first feminist women's *seders* which started in 1976 and supported women's and minority rights in other walks of life. Her six books include *Outrageous Acts and Everyday Rebellions* (1983), a bestseller that was translated into 11 languages; *Moving Beyond Words* (1986); *Revolution from Within: A Book of Self-Esteem* (1992); and *Feminist Family Values* (1996). Her numerous essays made a deep impact on the feminist movement and beyond.

Steinem helped found the National Women's Political Caucus in 1971, to encourage women to seek political office and to work for women's rights legislation; co-founded the Women's Action Alliance, to fight discrimination against women; helped found Ms. Foundation for Women in 1972, to assist underprivileged girls and women; and was a founding member of the Coalition of Labor Union Women in 1974. She planned and attended the first of its kind National Women's Conference in Houston, Texas, 1977. Steinem was honored as *McCall's Magazine's* Woman of the Year, 1972, and was inducted into the National Women's Hall of Fame in Seneca Falls, New York, 1993.

[Harriet Hartman (2nd ed.)]

STEINER, GEORGE (1929–), literary critic. Born in Paris, Steiner moved to the United States with his family in 1940 and was educated at American and French universities and at Oxford and Cambridge. From 1961 Steiner lived in England, where he was a fellow of Churchill College, Cambridge, and, later, Weidenfeld Professor of Comparative Literature at Oxford. He also held a wide range of visiting positions at universities in America and Europe. His early works include *The Death of Tragedy* (1961); *Anno Domini*, three short novels (1964); and *Language and Silence*, a volume of essays (1964). Steiner was appointed president of the English Association in 1975 and was a fellow of the Institute for Advanced Study, Princeton. His distinguished career was recognized by the universities of East Anglia and Louvain, which both awarded him honorary doctorates.

Steiner's later publications include *Extraterritorial: Papers on Literature and the Language Revolution* (1971) and *In Bluebeard's Castle: Some Notes Towards the Re-definition of*

Culture (1971), which contains his most comprehensive theory of modern antisemitism. *After Babel* was published in 1975 and he also published *Martin Heidegger* (1980) and a collection of essays, *On Difficulty and Other Essays* (1978). His reputation as one of the world's leading literary critics was confirmed with the publication in 1984 of the anthology *George Steiner: A Reader*.

Steiner's literary criticism, in later years, was complemented by two works of fiction, *The Portage to San Cristobal of A.H.* (1979) and *Antigones* (1984). Both works won critical acclaim and the 1982 stage version of *The Portage to San Cristobal of A.H.* excited a prolonged exchange of letters and articles on the meaning of the Holocaust and modern antisemitism. Steiner exhibited both an astonishing range as a literary critic and incomparable understanding of Central European Jewish culture. His autobiography, *Errata: An Examined Life*, was published in 1997. He is one of the best-known public intellectuals in contemporary Britain. His wife, Zara Steiner, is also a well-known historian.

[Bryan Cheyette]

STEINER, HANNAH (1894–1944), Czech leader of women Zionists and social worker. She was born in Ceska Lipa. While studying in London before World War I, Hannah Steiner (née Dub), joined the Zionist movement. After her marriage in 1920 to Ludwig Steiner, a secondary school teacher, she settled in Prague. She was one of the founders of the WIZO in Czechoslovakia and its president from its foundation, as well as a member of the executive of world WIZO. From 1927 she edited, with Miriam Scheuer, the *Blaetter Fuer die Juedische Frau*, a women's supplement in **Selbstwehr*, the central Zionist weekly which appeared in Prague. As a result of her influence and leadership, the Czechoslovak WIZO played a central role in the pioneer training of young women, Hebrew education, and in caring for the impoverished Jews of *Sub-Carpathian Ruthenia, the eastern part of Czechoslovakia. Hannah Steiner also was active in general Zionist work, at first within the Radical Party and later within the General Zionists, and in fundraising. When thousands of Jewish refugees fled from Germany to Czechoslovakia in 1933, she and Marie *Schmolka became leaders of the relief committee for refugees (Juedisches Hilfskomité), which later became the Czechoslovak branch of HICEM.

On March 16, 1939, the day after the Nazi occupation of Prague, Hannah Steiner was arrested, but was released a few weeks later. While arranging the *aliyah* of their son and daughter she and her husband chose to remain with their oppressed coreligionists. They were interned in the ghetto of *Theresienstadt, where she was in charge of the relief service for women (*Frauenhilfsdienst*). In 1944 she and her husband were deported to *Auschwitz, where she died in the gas chambers.

[Chaim Yahil]

STEINER-PRAG, HUGO (1880–1945), Czech painter, etcher, and designer. Steiner-Prag hyphenated his name with that of his native city, Prague, where he was educated. In 1907 he was appointed professor at the State Academy in Leipzig. Dismissed by the Nazis in 1933, he founded a school for applied art in Prague. After 1939, he fled to New York. Steiner-Prag contributed notably to the improvement of book production-typography, binding, jacket, and was known for his illustrations to the classics. In 1936 he designed a *Mahzor* (a prayer book for the holidays). This proved to be his crowning achievement.

STEINFELD, J.J. (1946–), Canadian playwright, novelist, and short story writer. An only child, Steinfeld was born of Jewish survivors of the Holocaust, Esther (Biezunska) and Leon Steinfeld, in a displaced persons' camp in Munich, Germany. The family migrated to the U.S. in 1947. Steinfeld earned a B.A. from Case Western Reserve University in 1968, moved to Canada in 1972, and earned an M.A. from Trent University (Peterborough, Ontario) in 1978. After being enrolled for a Ph.D. at the University of Ottawa, Steinfeld left after completing his comprehensive exams and moved to Charlottetown, Prince Edward Island, to be a full-time writer. He continued to reside there.

Steinfeld published a novel, *Our Hero in the Cradle of Confederation* (1987) and nine short story collections: *The Apostate's Tattoo* (1983), *Forms of Captivity and Escape* (1988), *Unmapped Dreams: The Charlottetown Stories of J.J. Steinfeld* (1989), *The Miraculous Hand and Other Stories* (1991), *Dancing at the Club Holocaust: Stories New and Selected* (1993), *Disturbing Identities* (1997), *Should the Word Hell Be Capitalized?* (1999), *Anton Chekhov Was Never in Charlottetown* (2000), and *Would You Hide Me?* (2003).

Although his work does not always feature Jewish themes, many of the harrowed protagonists of Steinfeld's Kafkaesque fiction are members of the Second Generation (the children of Jewish survivors of the Holocaust), often artist figures. For these characters, Jewish identity, as refracted through their parents' experience and consciousness as Shoah survivors, threatens both sanity and life. Exploring the nuances of Jewish survival, displacement, memory, and meaning in a post-Shoah world, Steinfeld juxtaposes the horrors of his protagonists' inherited memories and knowledge of genocide with the more mundane reality of a mostly complacent and apathetic Canadian society – often to jarringly powerful effect. "Courtroom Dramas," a story in his latest collection (*Would You Hide Me?*), extends the legacy of the Shoah to the Third Generation. The unnamed protagonist has so fully identified himself with his beloved grandmother and her survival of the death camps that he, in an act of revenge, pushes a man he perceives to be a Nazi (he is wearing a swastika-armband) down an escalator at a Toronto shopping mall, killing him. The story is the poignant account of the protagonist's trial for murder.

Steinfeld won numerous literary awards for his

plays (most unpublished) and his fiction, including the Norma Epstein Award for Creative Writing in 1979, the Okanagan Short Story Award in 1984, and the Creative Writing Award from the Toronto Jewish Book Committee in 1990.

[Alexander Hart (2nd ed.)]

STEINGUT, family of U.S. politicians who were leaders of the Brooklyn (New York) Democratic Party. **IRWIN** (1893–1952), born in New York, combined his law career and real estate and insurance business with diligent work for the Brooklyn Democratic Party, led by John H. McCooey, whom Steingut succeeded in 1934. Entering the state assembly in 1922, he became minority leader in 1930 and speaker in 1935. He was a sponsor of the Unemployment Act of 1935 and the State Social Security Bill (enacted in 1937). Both governors F.D. *Roosevelt and H.H. *Lehman found Steingut valuable in putting through reform legislation they sponsored, including greater state aid for municipalities, rent control measures and more state aid for education, and the establishment of a state university with a medical college. He was also true to his party in opposing many of the *La Guardia reforms of New York City's government. Steingut served as director of the Brooklyn Federation of Jewish Charities and as a trustee of the Hebrew Orphan Asylum. After his death, his son **STANLEY** (1920–1990) assumed the legislative position and political power of his father in Brooklyn politics, where he maintained the conservative structure and policies of the traditional Democratic machine (from 1953). In 1969 he was made minority leader of the state assembly. At that time he retired from the Democratic leadership of Brooklyn. Subsequently he instituted a statewide campaign against the legislature's cuts in support of education, health, and welfare, favoring tax reforms (specifically, the closing of loopholes) to supply the necessary funds. He served as speaker of the New York State Assembly from 1975 to 1978.

[Judith S. Stein]

STEINHARDT, JAKOB (1887–1968), painter and printmaker. Born in Zerkow, Germany, he left home in 1906 to study in Berlin, first at the Museum of Arts and Crafts. Thanks to stipends he received from the Jewish community of Posen, he learned engraving under Hermann Struck. From 1909 he studied in Paris under Laurens and Matisse. He returned to Berlin in 1912 and, together with Ludwig Meidner and Richard Janthur, founded the *Pathetiker* Group, with whom he exhibited. Steinhardt was an early disciple of German expressionism, and his early subject matter was almost exclusively religious and social. He served as a soldier in Lithuania and Macedonia during World War I, and his on-the-spot drawings were exhibited in Berlin in 1917. During the war he had

been exposed to the misery of Jewish life in the traditional little towns of Lithuania. This traumatic confrontation with the difficulties encountered by Jews was later significant to the content of his art. In 1933 Steinhardt immigrated to Erez-Israel, choosing to live in Jerusalem. In 1949 he was appointed head of the graphics department of the Bezalel School of Art, of which he was director between 1954 and 1957. Awarded many international prizes for his outstanding woodcuts, in 1955 he received the first international prize in graphic arts at the SCO Paulo Biennale, and in 1960 the Arta Liturgica Prize at the Venice Biennale.

Steinhardt's art was recognized by his unique woodcut technique. This technique was adapted and developed in a very "primitive" way by the German Expressionists who influenced his art. Direct carving with sharp edges and forms, as well as strong contrasts of black and white, were part of his method (*Haggadah*, 1921). The romantic themes of death and suffering that appeared in Steinhardt's art were also a reflection of his Expressionist attitude. In 1925 colors were added to the woodcuts. Steinhardt chose a dark tonality instead of the bright sunlight colors he used in his oil paintings. In Jerusalem, during the 1930s and the early 1940s, the woodcuts expressed his depressed mood caused by the horrible information about the Jews in Europe, while they also were concerned with the shtetl atmosphere of the Old City of Jerusalem. Later he articulated his anger against God for allowing the Holocaust to happen, mostly by dealing with biblical themes.

The political situation in Israel became part of Steinhardt's content. A perusal of his art over the years reveals a complicated attitude toward the Arab figures. Hagar, Rachel, Jacob, and Esau expressed the suffering on both sides and the desire for peace. Studies by Prof. Ziva Amishai-Maisels have confirmed this complex process. His later work concentrated on rhythm and color was often introduced, as exemplified in his Ḥasidic scenes.

[Yona Fischer / Ronit Steinberg (2nd ed.)]

STEINHARDT, JOSEPH BEN MENAHEM (1720–1776), German rabbi and *posek*, Steinhardt studied at the yeshiva of Jacob b. Benjamin ha-Kohen *Poppers, in Frankfurt. In 1746 he lived in Schwabach, Bavaria. He later served as rabbi of Alsace, with his seat at Rixheim. In 1755 he was appointed chief rabbi of Niederenheim in Lower Alsace, and from 1763 until his death served as rabbi of Fuerth. Among his pupils were Mordecai *Banet of Mikulov, Moses Tobiah Sondheimer of Hanau, and Benjamin Z'ev Wolf *Heidenheim. His fame as a halakhic authority was such that problems were addressed to him from Hungary (his: *Zikhron Yosef* 4c, et al.), Italy (5c, 48a, 87b), Amsterdam (84c), and Switzerland (58b). He maintained a regular correspondence with his brother-in-law, Isa-

iah b. Judah Leib *Berlin, with whom he communicated on various problems. In his work Steinhardt quotes comments and novellae by his learned wife, Kreindel, Isaiah Berlin's sister; Kreindel also urged her husband to publish his work. He was the author of: *Zikhron Yosef* (Fuerth, 1773), responsa and rulings on the four divisions of the Shulḥan Arukh, with an appendix of his novellae and sermons: *Mashbir Bar* (1828), commentaries on the Pentateuch; and *Ko'ah Shor*, novellae to *Bava Batra*. The last two works were published by his grandson, Akiva Steinhardt, the rabbi of Kubin, Hungary. He declined to give a ruling on his own authority in difficult problems, emphasizing that he was one of "those apprehensive of giving rulings," and suggested that the concurrence of authoritative rabbis be sought (*Zikhron Yosef* 39a–b, 65b, 77b, et al.). He took a firm stand on fundamental issues that were likely to undermine morality and religion. He was especially opposed to mixed dancing, and stressed in his responsum that "any rabbi and instructor is obligated to protest and to abolish any type of mixed dancing that is planned for his city during a festival." In the course of his responsa, he describes how he canceled a dance arranged in Niederenheim, even after the Jewish community had obtained permission from the secular authorities (22d no. 17). In the introduction to his responsa he inveighs against the Shabbateans, and particularly against the *Ḥasidim. Because of his inimical attitude toward them, the Ḥasidim took steps to have those sections of his introduction directed at them removed, and in many editions the whole of the introduction is indeed missing.

Steinhardt mentions that he was "greatly punished by the death of children and grandchildren ... and few of many remained to him." His son MOSES (d. 1799) was the author of a Judeo-German commentary to the *Sha'ar ha-Yihud* of Baḥya's *Ḥovot ha-Levavot* (Fuerth, 1765).

[Yehoshua Horowitz]

STEINHARDT, LAURENCE ADOLF (1892–1950), U.S. attorney and diplomat. Steinhardt was born in New York City. After his admission to the bar in 1916 he entered the U.S. Army in 1917, moving up from private to a commission and service on the provost marshal general's staff. He was active for a time in the Federation of American Zionists and the American Zion Commonwealth. From 1920 to 1933 he practiced law in his uncle Samuel *Untermeyer's firm, Guggenheimer, Untermeyer, and Marshall, and wrote articles on medical jurisprudence, labor unions, and economics. One piece attacking President Herbert Hoover's budgetary and financial policies brought him to Franklin D. Roosevelt's attention, and Steinhardt worked for Roosevelt's election in 1932. Roosevelt appointed him minister to Sweden in 1933, the beginning of Steinhardt's 17 years in six diplomatic posts, all but the last of them requiring great resources of judgment in a series of delicate situations. He served in Sweden (1933–37),

when the economic effects of the Depression and the political and military problems posed by the rise of Hitler were predominant; as ambassador in Peru (1937–39), when Roosevelt was seeking to solidify a policy of collective security for Latin America; and in the USSR (1939–41), from the time of the nonaggression pact to the German invasion of the Soviet Union. Steinhardt served in Turkey (1942–45), when that country's neutrality was pivotal to the Allied war effort. During his service in Russia Steinhardt lent his influence to the stringent U.S. immigration laws, which from 1940 operated virtually to exclude Jewish refugees. However, as U.S. ambassador in Turkey he vigorously cooperated with the U.S. War Refugee Board, the Jewish Agency, and Ira Hirschmann by persuading that government to permit the entry and passage of European Jews in ever-increasing numbers. The lives of tens of thousands were thus saved through his efforts. He also served in Czechoslovakia (1945–48), when communist pressure built up to the 1948 coup. Steinhardt's last ambassadorial post was in Canada, where he served from 1948 until his death in an airplane crash.

BIBLIOGRAPHY: *New York Times* (March 29–31, April 1, 1950); H.L. Feingold, *The Politics of Rescue* (1970), 285–9.

STEINHARDT, MENAHEM MENDEL BEN SIMEON (1768–1825), rabbi and author. Steinhardt, a nephew of Joseph *Steinhardt, was born in Fuerth. He published his responsa, *Divrei Menaḥem* (Offenbach, 1804), while he served as rabbi in Minden, and in the same year he was appointed rabbi of Hildesheim. When the consistory of the kingdom of Westphalia was set up in Cassel by Israel *Jacobson, Steinhardt was appointed one of its members, together with Leib Meir Berlin and Simeon Isaac Kalkar. They were requested by the government to adopt and formulate the constitution and theology of Judaism on the pattern of the French *Sanhedrin established on the initiative of Napoleon. Steinhardt, like the other members of the consistory, aspired to a moderate form of Judaism, an aspiration well reflected in *Divrei Menaḥem* and in *Divrei Iggeret* (Roedelheim, 1812). The latter work was published by his friend Binyamin Ze'ev *Heidenheim, who added notes and glosses to the book. Steinhardt was the first German rabbi to omit portions from the liturgy. One of his well-known lenient rulings – permitting the use of legumes on Passover – aroused the vehement opposition of the Orthodox rabbis. He was one of the first rabbis to deliver sermons in German. In 1810 he taught Talmud at the Teachers' Training Seminary in Cassel. In 1813 he was appointed rabbi of Warburg, and in 1815 became rabbi of Paderborn, where he spent the rest of his life.

[Abraham David]

STEINHARDT, MICHAEL H. (1940–), U.S. financier. Steinhardt, who was born in Brooklyn, N.Y., became interested

in the stock market when his father gave him 200 shares of Penn Dixie Cement and Columbia Gas System stock as a bar mitzvah present. At 13 he began studying brokers' reports. At 16 he enrolled in college, graduating from the University of Pennsylvania's Wharton School of Finance in three years. He began his Wall Street career as a research associate, staff writer, and securities analyst before starting his own company, Steinhardt Partners, where he made a fortune in the risky field of hedge-fund management. In 1995 Steinhardt dissolved four hedge funds managed by the Steinhardt Management Company. From 1967 to 1995, as the manager of nearly \$5 billion, the average annual return of his investors was 31 percent, before fees. But in his final years he and his partners paid more than \$70 million in fines to settle charges of collusion in a Treasury note-trading scandal. In the early years of the 21st century, his liquid assets of more than \$300 million were managed by more than 30 other money managers spread among an array of investments.

A professed atheist, Steinhardt, who grew up in a Jewish household, is especially interested in finding a way to perpetuate what he calls the philosophy of Jewish culture for the next generation of American Jews without relying on theology. He spent millions of dollars financing Jewish day schools, Hillel activities at colleges, trips to Israel for young people, and a drop-in center for young adults in Manhattan. He also became involved with an assortment of higher education institutions. He joined the board of Brandeis University, was chairman of the board of Tel Aviv University, and gave \$10 million to the School of Education at New York University, where he was a trustee. The gift, the largest in the school's history, was used to create an endowment to support faculty development, doctoral fellowships, and research. A portion was allocated to support fellowships in a newly established doctoral program in education and Jewish studies offered by the school in collaboration with the Skirball Department of Hebrew and Judaic Studies. The school was renamed the Steinhardt School of Education in 2001.

One of his passions was art. He collected in five areas: ancient art, Judaica, 20th-century works on paper, Peruvian feathered textiles, and Chinese art. A gallery of sixth-century Greek art at the Metropolitan Museum of Art was named after him and his wife, Judy. Horticulture and wildlife were also deep interests, flowing from his love of his estate in Bedford, New York, which he filled with 120 varieties of fruit trees and a large array of wildlife creatures.

[Stewart Kampel (2nd ed.)]

STEINHAUS, HUGO DYONIZY (1887–1972), Polish mathematician. Steinhaus was one of the founders of the so-called Lvov school in mathematics; with S. Banach he founded its organ, *Studia Mathematica*, which he continued to edit. From 1920 to 1941 he was professor at the University of Lvov, and in 1945 became professor at Wrocław. In 1961–62 he taught at the University of Sussex, England. Apart from serious mathematical works such as *Theorie der Orthogonalreihen*

("Theory of Orthogonal Rows," with S. Kaczmarz, 1935), *Sur la localisation d'objets au moyen des rayons* (1938), and *Sur les fonctions indépendantes* (1948), Steinhaus popularized his subject in books such as *Kalejdoskop matematyczny* (1938; *Mathematical Snapshots*, 1960²) and *Orzel czy rzeszka* ("Heads or Tails," 1961), and also wrote on the subject of establishing paternity, as in *Dochodzenie ojcowstwa i alimentów* (1958; *Remarks ... on the Establishment of Paternity and Maintenance Rights*, 1958).

STEINHEIM, SALOMON LUDWIG (1789–1866), physician, poet, and theologian. Born near Hamburg-Altona, he studied at the University of Berlin and received his medical degree at the University of Kiel. He practiced medicine in Altona from 1813 to 1845 and was active in the struggle for Jewish emancipation in Germany, collaborating in political activity with Gabriel *Riesser (1806–63), and publishing essays in Riesser's literary journal *Der Jude*.

He spent the last 20 years of his life in Rome as a Jewish scholar. There he completed his magnum opus on revelation in Judaism, *Die Offenbarung nach dem Lehrbegriffe der Synagoge*, ("Revelation According to the Doctrine of Judaism"; 4 vols., 1835–65). Steinheim undertook this work to stem the tide of assimilation and conversion to Christianity by Jews emerging from the ghettos in the post-Napoleonic era to become integrated in a more open society. He aimed to demonstrate the truths of Judaism's revealed religion as superior to the metaphysics of contemporary philosophies and Christian theology. He rejected the attempts of Jewish thinkers to reformulate the revealed doctrines of Judaism in terms or concepts of the philosophic systems of Schelling, Hegel, and other contemporary German philosophers.

The key to Steinheim's work is his contention that reason is deficient in its comprehension of reality. Reason's view of reality is bound by the law of causality. God is "necessarily" existent as the first cause initiating the chain of cause and effect which produced the world, life, and human beings. Reason is bound by another "necessary" principle, *ex nihilo nihil fit*, out of nothing comes nothing. The physical world could not have emerged out of nothing.

Reason is, therefore, compelled to assume the eternity of physical matter, an assumption that clashes with the law of causality, which demands some initiating cause, a beginning in time, contrary to the eternity of physical matter. There is no escape from this contradiction in which reason stumbles over itself except through the revealed doctrine of God as Creator who made the world out of nothing. The idea of God acting in absolute freedom, creating something out of nothing, and, derivatively, the idea of man's freedom of will, independent of the law of causality, cannot be rationally conceived. Such knowledge can come to us only through revelation.

Steinheim recognized as revelation only doctrines, ideas, principles. Formulations of civil and cultic laws (*Halakhah*) are in Steinheim's view derivative, conditioned by time and place and secondary in importance.

Among his most original thoughts are his criteria for the validation of revelation. One of these is that revelation must have the character of novelty; it must be new truth not previously known, better yet, it must contradict previously held knowledge; it should not coincide with rational awareness since the supreme spirit would not solemnly announce to us truths which we already know or can determine for ourselves.

Another criterion of revelation is its historical appearance in time and place. Natural religion develops out of human consciousness in the course of generations. Divine revelation suddenly bursts upon the scene. It is an unprecedented illumination. Yehezkel *Kaufmann and Leo *Baeck also stressed the mystery of monotheism's sudden appearance as a radical departure from a pagan environment of polytheism.

Also cited as validation of revelation is the historical uniqueness of the Jewish people. The unparalleled survival of the Jews testifies to a supernatural element received through revelation.

Steinheim was not an anti-rationalist as charged by his critics, but a supra-rationalist. He used rational arguments with rigorous logic to demonstrate the superiority of revelation over *speculative* reason as a source of ultimate truths. At the same time, he recognized *critical* reason as an indispensable tool with which to detect misunderstandings of revelation and validate its truths. Nevertheless, the charge of anti-rationalism stuck and doomed his work to a century of neglect and obscurity.

Steinheim's isolation was further accentuated by his rejection of both Reform and neo-Orthodoxy. Reform, in his view, had embraced a shallow rationalism and degenerated into a "blind reforming mania." Neo-Orthodoxy was vainly trying to puff up Jewish tradition with zeal for ceremonial observance. Neither side addressed itself to the core of beliefs which is the essence of Judaism.

The revival of Jewish theological thought in the 20th and 21st centuries, initiated by Franz *Rosenzweig, and, in the wake of the Holocaust, disenchantment with the power of reason which had been so tragically overestimated, may make Steinheim's supra-rationalism more acceptable, and he may at last receive the recognition due him as a major Jewish thinker in keeping with Heinrich Graetz's judgment that "no one of his time or earlier, understood the foundations of Judaism as profoundly as did he."

Jahrhunderts*": *Studien zu Salomon Ludwig Steinheim* (1993).

[Joshua O. Haberman (2nd ed.)]

STEINHERZ, SAMUEL (1859–1944), Prague medievalist. Born in Grassing (Burgenland), Steinherz taught history at the

Prague German University from 1901, and specialized in papal diplomacy, on which he published four volumes (between 1898 and 1914). When Steinerz was elected rector in 1922 he did not follow the custom of Jewish professors of declining the honor but declared that he felt and acted as a German. Antisemitic students' organizations asked for his resignation, organized a strike, occupied the buildings, and prevented Jewish students from entering them demanding the imposition of the **numerus clausus*. The riots spread to German universities all over Europe, mainly in Austria. In February 1923, becoming aware of obstruction by his colleagues, Steinerz submitted his resignation, which the Czechoslovak minister of education, Rudolf *Bechyně, a Czech Social Democrat, refused to accept. Finally Steinerz went on leave. The "Steinerz affair" caused a crisis in Jewish circles in Czechoslovakia advocating assimilation into German culture, and influenced Steinerz himself. He turned to research in Jewish history, mainly the epoch of the Crusades. He edited *Die Juden in Prag* (1927) and was among the founders of the Society for History of the Jews in the Czechoslovak Republic in 1928. That year he retired from the university and became head of the society and editor of its yearbook (JGGČ) throughout its existence, from 1929 until 1938. In 1942, nearly blind, Steinerz was deported to *Theresienstadt. In the camp he lectured on the history of the Jews in Bohemia. He died in Theresienstadt on his 85th birthday.

STEINITZ, WILHELM (1836–1900), chess master. Born and educated in Prague, he went to London in the early 1860s and took an active part in the chess life of the city. Soon after his arrival he defeated Blackburne in a match and in 1866 challenged Anderssen for the unofficial championship of the world. Steinitz won, and is often regarded as having been world chess champion for 28 years, until he was defeated by Emanuel *Lasker in 1894. Formally, however, Steinitz became world champion only in 1886, when he defeated *Zukertort in the first official championship match. From 1866 until 1894 Steinitz won all the matches he played (some for title, some informally) against the greatest players including Blackburne, Zukertort (twice), Tchigorin (twice), Gunsberg, and Schiffers. In 1894 he lost the title to Emanuel *Lasker and failed to regain it. He was the first to be aware of the strategic elements in the great tactical performances of players such as Morphy, Anderssen, Blackburne, and Zukertort. On the basis of this analysis he developed the Steinitzian technique which is now a basic principle accepted by all chess players. Steinitz stressed in his teaching the importance (in the opening moves) of the center, the desirability of accumulating small advantages, and

above all, the value of a well-integrated defense system, the main components of the so-called classical school of chess strategy. These teachings appear in his book *The Modern Chess Instructor* (2 vols., 1889–95), in the columns of the *London Field*, a journal in which he was the chess editor, and in *The Chess Monthly* which he edited. The latter years of his life were spent in New York, where he died in poverty.

[Gerald Abrahams / William D. Rubinstein (2nd ed.)]

STEINMAN, ELIEZER (1892–1970), Hebrew writer. Born in Obodovka, Steinman was ordained a rabbi, and began to write at an early age, but it took some time before his first stories appeared in print. Steinman pursued literary work (provided by D. *Frischmann) and was also a part-time Hebrew teacher in Odessa. He contributed regularly to *Ha-Zefirah* and worked on translations, which were not published until a later date. During this period, he began to publish long stories ("Bi-Ymei ha-Besht," in: *Ha-Zefirah*), as well as essays and articles. In 1920 he left Russia. During those unsettled times, having been mistaken for the Yiddish writer Baynush Steinman, a rumor was spread of his death, and he was eulogized in the Hebrew daily press and in literary periodicals, as well as in foreign-language publications. Steinman published "Teshuvah le-Maspidai" ("Reply to my Eulogists"), in *Ha-Zefirah*.

Settling in Warsaw, he continued his regular contributions of stories, essays, and articles to *Ha-Zefirah* and wrote for *Der Moment*. Steinman founded the monthly, *Kolot*, which provided a forum for young writers. It was also the first attempt (later expanded in *Ketuvim*) to compare the thought of R. *Naḥman of Bratslav and Aaron Samuel *Tamares (*Aḥad ha-Rabbanim ha-Margishim*; "one of the sensitive rabbis") with those of St. Francis of Assisi, Ibsen, and others. (Eleven numbers of *Kolot* were published in the period 1923–24.) During his Warsaw period he published a collection of stories (*Sippurim*, 1923), a novel (*Ester Hayyot*, 1922), a collection of articles (*Sefer ha-Ma'amarim*, 1924), and two Yiddish books of essays and stories on the pogroms against Ukrainian Jews.

In 1924, Steinman settled in Tel Aviv. He wrote for *Haaretz* and *Ha-Olam* and, together with other young writers, became active in the Writers' Union. On behalf of the Union he edited its literary collection *Mesibbah* (1926) and, afterward, its organ *Ketuvim* (1926–33). Here he continued his attempts to find a synthesis between ancient and modern Jewish literature and culture, and world literature. He published stories and novels, including *Zugot* (1930) and *Duda'im* (1931), and collections of essays: *Ha-Yesod ba-Ḥinnukh* (1930), *Meshihyyut* (1930), *Be-Mizreh ha-Zeman* (1931), and *Sha'ar ha-Vikku'ah* (1933). When

Ketuvim closed, he became a columnist for *Davar*, also contributing regularly to literary periodicals and collections in Israel and abroad.

Steinman claims that the primary function of a critical essay is to improve man's view on life and art, and that therefore it is permissible and desirable to apply present-day views in studying works of the past. His memoirs contain a great deal of literary gossip. In his reconstruction of the "conversations," Steinman aims at giving a very subjective account of the conversants' views rather than a stenographic recording of their actual remarks.

Steinman was the most prolific Hebrew writer of his generation. While the essays published (in *Davar* and in the book form, *Perudot* (1965)), comprise a large part of his total output, works still in manuscript would fill dozens of volumes of fiction, memoirs, and autobiography. His books included *Sodot* (2 vols., 1938); *Sefer Me'ah Shanah* (with J.J. Trivaks and Y. Yaari-Poliskin, from 1938 onward), on the heroes and pioneers of Erez Israel for the past 100 years and more; *Bi-Netivot ha-Emunah* (1943); *Be-Ma'agal ha-Dorot* (1944); *Koh Amar Frischmann* (1950), conversations and memoirs of Frischmann; *Kitvei Eliezer Steinman*: vol. 1, *Gan-Eden shel Anshei Shelomenu Sippur ha-Sippurim* (1956); vol. 2, *Ha-Behirah be-Erez ha-Behirah* (1956); vol. 3, *Zeman Hayyeinu* (1956); vol. 4, *Alim me-Ez ha-Hayyim* (1958); *Perudot* (1965); *Ha-Har ha-Yarok* (1965), stories; *Barekhi Nafshi* (1965), essays; *Sippurim Kezarim* (1966); *Ha-Yahid ve-ha-Olam* (1966), short essays; *Ayin Lo Ra'atah* (1967), stories; *Ha-Melech Ayef* (1968), a story on Saul and David, and *Le-Kol he-Halil* (1968), essays.

In later years he also undertook a massive project designed to make the resources of Jewish culture more readily available by rendering the texts in his own version and adding his own introductory notes and essays. The first book, *Be'er ha-Hasidut* (1951), was followed by a series of nine books on Hasidism (1958–62) and a collection of hasidic stories, *Kankan ha-Kesef* (4 vols., 1969). He also wrote *Be'er ha-Talmud* (4 vols., 1963–65), on the Talmud.

[Getzel Kressel]

STEINSALTZ (Even Yisrael), ADIN (1937–), Israeli rabbi and author. Born in Jerusalem, Steinsaltz acquired a background in Jewish studies, as well as chemistry, mathematics, and physics, at The Hebrew University of Jerusalem. He was also ordained as a rabbi. After working in education for 13 years in the Negev, he returned to Jerusalem where he taught, did research, and wrote for various periodicals. In 1988 he received the Israel Prize in Jewish Studies.

In 1965 he founded the Israel Institute for Talmudic Publications which undertook the production of a vocalized Babylonian Talmud, accompanied by Hebrew translation and commentary; over 30 volumes of a projected 42 had appeared by the early 2000s. An English translation of the series was begun by Random House, and volumes have appeared in French, Russian, and Spanish. Rabbi Steinsaltz founded the "Mekor Hayyim" yeshivah in 1984, an institute which has as one of its aims the bridging of the gap between religious and non-religious Jews. In February 1989 he initiated the founding of a yeshivah in Moscow, called the Center for the Study of Judaism.

Each year Rabbi Steinsaltz lectures widely outside of Israel, and his books, a number of which have been translated into English, such as *The Essential Talmud* (1976), *The Thirteen-Petalled Rose* (1980), and *Guide to Jewish Prayer* (2000), reach readers the world over. He has published works on Talmud, biblical figures, repentance, stories of Rabbi Naḥman of Bratslav, and other topics. He has also published over 600 papers on Jewish and scientific subjects.

STEINSCHNEIDER, MORITZ (1816–1907), father of modern Jewish *bibliography, among the founders of the "Science of Judaism" (*Wissenschaft des Judentums). Born the son of the Talmud scholar Jacob Steinschneider (1781–1856) and Hani Zadek-Weizenkorn (1792–1859) in Prossnitz, Moravia, Steinschneider received his early education in his native town, where he was influenced by his uncle Gideon *Brecher. He also attended a Christian school and studied music, an interest he maintained throughout his life. At age 13, he entered the yeshivah of R. Nehemiah *Trebitch and in 1833 he left for Prague to take up secular studies. By that time, Steinschneider had already acquired a thorough knowledge of French and Italian from private tutors. He became a tutor in these languages, and in 1836 received a teacher's diploma for Hebrew in the Hebraische Lehranstalt in Prague. That same year he left for Vienna, where he began to study Semitic languages; there he made the acquaintance of Leopold *Dukes, who aroused his interest in the study of medieval literature, Hebrew manuscripts, and Jewish bibliography.

In 1839 Steinschneider went to Leipzig. Though he stayed only half a year, this short stay proved crucial for his career as he both studied and formed close relationships with Heinrich L. *Fleischer and Franz *Delitzsch. After six months Steinschneider went on to the university in Berlin, where he also made the acquaintance of Leopold *Zunz and Abraham *Geiger; Zunz especially encouraged the young scholar and provided other forms of assistance. Returning to Prague in 1841, Steinschneider earned a living for three years as a private tutor and teacher in a Jewish girls' school. In 1843 he received a formal rabbinical diploma from the rabbi of his native town, Hirsch B. Fassel, and also a very warm recommendation from Salomon L. *Rapoport. While in Prague, Steinschneider unsuccessfully applied for a number of positions, including censor of Jewish books. After his friend Michael *Sachs left Prague

upon accepting an invitation to Berlin, Steinschneider soon followed in 1845. Later, the friendship with Sachs cooled due to his disapproval of Sachs' Orthodox religious tendencies. In Berlin Steinschneider gave private lessons, preached sermons, officiated at weddings, and engaged in occasional work as a translator and author of textbooks for the elementary study of Hebrew. In 1848 he received Prussian citizenship.

In 1859, he received his first regular appointment as lecturer at the Veitel-Heine-Ephraimsche Lehranstalt, where he taught for 48 years. Many of his students later became prominent Jewish scholars, including I. *Goldziher, Solomon *Schechter, Ḥayyim *Brody, Judah L. *Magnes, H. *Malter, A. *Marx, George A. *Kohut. From 1860 to 1869, he was in charge of administering the **oath more judaico*, the Jewish oath. Another regular appointment came in 1869, when Steinschneider became assistant at the Berlin Royal Library, a position he held until his death. In the same year, he also became the head of the girls' school of the Jewish community, a position from which he retired in 1890. In appreciation of his scholarly contributions, the Prussian government made him an honorary professor in 1894. Steinschneider also received several other honors from various universities and academies, including Columbia University in New York (1887). On the occasion of his 80th birthday, a *Festschrift* was published in his honor. Steinschneider was buried as an honorary member of the Berlin Jewish community at the Weissensee cemetery.

Steinschneider's literary output was tremendous; his bibliography contains more than 1,400 items. His main lifelong interest was the study of the relationship between Jewish and general cultures, especially during medieval times. Upon his early realization that the preliminary requirement for carrying out such studies was a thorough and scientific bibliographical record of all available printed and manuscript materials, Steinschneider devoted himself to the preparation of library catalogs and subject bibliographies. In addition to catalogs and bibliographies, he also provided general introductions to Jewish literary history and Jewish booklore. In collecting and organizing the materials for his studies on the role of the Jews in medieval culture, his research led him also to the study of the history of medieval philosophy, especially medieval medicine, the sciences, and mathematics. His works are not only a contribution to Jewish learning, but also to Arabic literature and to general medieval cultural history. Steinschneider regarded his bibliographical, philological, and Oriental studies in Jewish literature as a contribution to general cultural history, which in his opinion was the original object of world history and of all intellectual effort. With this scholarly program, he stood in the tradition of his fatherly friend Zunz.

The following works are of particular note: *Die hebraeischen Uebersetzungen des Mittelalters und die Juden als Dolmetscher* (1893), his magnum opus containing a wealth of information based on manuscripts and printed sources in many languages about the transmission of philosophy and the sciences throughout the Middle Ages. It also shows how classical Greek knowledge reached Europe and Western cul-

ture through the intervention of Arabic and Hebrew writers. *Die arabischen Uebersetzungen aus dem Griechischen* (1897) and *Die europaeischen Uebersetzungen aus dem Arabischen* (1904–05) supplemented this work and carried its subject far beyond purely Jewish interests. These three works together provided a pioneering contribution to the understanding of Western civilization's dependence on classical sources and the contribution of Muslim and Jewish civilizations to them.

Another of Steinschneider's major works, *Die Arabische Literatur der Juden* (1902), lists all of the Jewish authors who wrote in Arabic and includes detailed biographies and bibliographies. His lectures on the same subject appeared in English in the *Jewish Quarterly Review* (1897–1901). A further work dealing with the relationships between Jews, Arabs, and Christians is his *Polemische und apologetische Literatur in arabischer Sprache zwischen Muslimen, Christen und Juden* (1877). Not only is the typical full bibliographical and biographical apparatus provided in this work, but it also classifies and enumerates the main areas of religious controversy. Steinschneider's unbelievable industry and erudition also manifested itself in a series of catalogs and bibliographies, among which the most important is his *Catalogus Librorum Hebraeorum in Bibliotheca Bodleiana* (1852–60). Upon the request of the chief librarian of the Bodleian Library at Oxford University, Steinschneider prepared a catalog of all the printed books up to 1732 in that great library over a period of many years, during which time the library was also dynamically enriching its Hebrew collections through the acquisition of important private libraries. Over the course of five summers in Oxford, Steinschneider described all the Hebrew items there, at which time he also made generous use of all the Hebrew manuscript materials. The catalog is arranged according to the name of the authors (with the exception of anonymous works), gives all the available information on their lives, and is followed by a list of their works and all the references to them in the secondary literature available at that time. At the end follows a list of all printers, patrons, etc., who were associated with the publication of the works, as well as a geographical index providing the Hebrew forms of many geographical names. With this book, Steinschneider raised Hebrew bibliography to a scholarly level and corrected misinformation. Steinschneider also published classic catalogs of the Hebrew manuscript collections of the following libraries: Leiden (1858), Munich (1875; 2nd ed. enlarged, 1896), Hamburg (1878, reprint with new introduction, Hellmut Braun, 1969), and Berlin (1878–97). In all of these he identified many hitherto unknown writings and historical research.

Some aspects of his detailed, painstaking research were organized into more general presentations. For the *Ersch und Gruber Allgemeine Encyclopaedie*, he wrote a systematic survey of Jewish literature (1850) which was translated into English (*Jewish Literature from the 8th to the 18th Century*, 1857) and later into Hebrew by Henry *Malter, one of his pupils (*Sifrut Yisrael*, 1897–99). For the same encyclopedia, he co-wrote, together with David *Cassel, *Juedische Typographie und Juedischer Buchhandel* (1851), a still-valuable general survey of

Jewish printing and book trade. But both scholars failed to publish a planned *Real-Encyclopaedie des Judentums* (1843) for unknown reasons despite several years of intensive preparation. Another work of Steinschneider's which still remains the most systematic and broadest treatment of the subject, is *Vorlesungen ueber die Kunde Hebraeischer Handschriften* (1897; Hebrew translations, with additions by A.M. Habermann *Harza'ot al Kitvei Yad Ivriyyim*, 1965; also printed in *Aresheth*, 84 (1966)). Also significant are his contributions to the history of the study of the Hebrew language and his work on Jewish writers of history and historiography (*Die Geschichtsliteratur der Juden*, 1905). Finally, he published the journal *Ha-Mazkir* (*Hebraeische Bibliographie. Blaetter fuer neuere und aeltere Literatur des Judentums*, 1858–65, 1869–81) to which he contributed more than 500 articles concerning bibliography, library history, booklore, philology and cultural history.

Steinschneider's major works were reprinted several times in their original form in the 1930s, 1960s, 1970s, and 1980s; the last reprinting of his Bodleian Catalog dates from 1998. Unfortunately, the author's own numerous additions and corrections to his works, as preserved in the copies of his works at the Jewish Theological Seminary in New York, as well as other new materials, were not incorporated into these reprints. In the early 2000s, a web-based translation and revision of the *Hebraeische Uebersetzungen des Mittelalters* was in preparation by Charles H. Manekin (University of Maryland) in collaboration with Y. Tzvi Langermann (Bar-Ilan University), and Hans Heinrich Biesterfeld (Bochum University).

Steinschneider spent most of his life in the pursuit of his great scholarly projects, but he also wrote some lighter belletristic and journalistic works. He also commented – though rarely – on the major contemporary events of his day and for a while was actively involved in a society founded by his friend Abraham *Benisch, the aim of which was the promotion of Jewish resettlement in Erez Israel. He withdrew from the group in the early 1840s and later assumed a very negative attitude toward political Zionism. However, he welcomed the 1848 Revolution in Germany, and even helped to build barricades in Berlin, but shied away from radicals. Steinschneider published some letters by Hirsch B. Fassel, dealing with Samson R. *Hirsch's religious views (*Hereb Zion*, 1839); for this edition he wrote under the pen name of M.S. Charbona, adding some of his own remarks that revealed his position toward the Reform movement, about which he maintained a rather conservative view, particularly in his advocacy of the Hebrew language in the synagogue and in Jewish scholarly literature. In this publication, he formulated his views on the tasks and methods of Jewish scholarship, aiming for objective truth and impartial research as well as the creation of the scholarly foundations of Jewish learning. He vehemently rejected superficial attempts at popularization and the replacement of original research by empty phrases. He also opposed, like Zunz, *rabbinical seminaries as centers of scholarly research, fearing the introduction of theological considerations into what he considered to be pure, objective scholarship.

[Menahem Schmelzer / Gregor Pelger (2nd ed.)]

STEINTHAL, HERMANN HEYMANN (1823–1899), German philologist and philosopher. He studied in Berlin and Paris (where he spent three years in the study of Chinese language and literature), was appointed lecturer in philology and mythology at Berlin University in 1850 and in 1855 associate professor of general philology. In 1872 he was appointed to the chair of biblical studies and philosophy of religion at the Hochschule fuer die Wissenschaft des Judentums. Steintal and his brother-in-law, Moritz *Lazarus, founded the science of racial psychology (*Voelkerpsychologie*) and the *Zeitschrift fuer Voelkerpsychologie und Sprachwissenschaft* (from 1860). Having studied under Wilhelm von Humboldt, he edited the latter's *Sprachwissenschaftliche Werke* (1884) and wrote extensively in this field, e.g., *Die Sprachwissenschaft Wilhelm von Humboldts und die Hegelsche Philosophie* (1848), *Die Klassifikation der Sprachen* (1850), *Der Ursprung der Sprache im Zusammenhang mit den letzten Fragen alles Wissens* (1851), *Die Entwicklung der Schrift* (1852), *Geschichte der Sprachwissenschaft bei den Griechen und Roemern* (1863), *Abriss der Sprachwissenschaft* (1871–78), *Gesammelte kleine Schriften* (1880), and *Allgemeine Ethik* (1885). Steintal also retained a lifelong interest in, and devotion to, Judaism and Jewish life. Serving as a director of the *Deutsch-Israelitischer Gemeindebund he frequently lectured and wrote newspaper articles in his capacity as a Jewish spokesman. His essays *Zu Bibel und Religionsphilosophie* (1890, 1895) reflect his ethical and aesthetic (rather than higher critical) approach to the Bible. In his collection of essays and addresses, *Ueber Juden und Judentum* (1906), he showed his pride in his Jewish roots. Steintal polem-

cized against Bruno *Bauer and others who showed Christian prejudice in their treatment of Judaism and he defended both Jews and Judaism against antisemitic attacks. He saw in prophetism the distinguishing mark of ancient Israel, setting it apart from other peoples, even as for him both Germanism and Judaism were inspirations for moral action.

[Jakob J. Petuchowski]

STEKEL, WILHELM (1868–1940), Austrian psychoanalyst. Born in Vienna, Stekel was one of the small group of physicians who gathered around Freud from 1902 onward to learn the practice of analysis. In 1895, before having heard of Freud, Stekel had already written a paper on sexual activity in childhood. In about 1901 he was treated successfully by Freud for a neurotic complaint. He wrote a defense of Freud's theory of dreams and in 1903 began the practice of psychoanalysis. It was on Stekel's suggestion that the first psychoanalytic group met at Freud's home. In 1909 Stekel published *Dichtung und Neurose* and in 1911 his extensive *Sprache des Traumes*. E. Jones says it contained many "bright ideas but also many confused ones." Freud found it "mortifying." Stekel wrote prolifically in many fields, publishing papers on a wide range of subjects extending from the psychology of everyday errors to the psychological treatment of epilepsy. His books include *Der Wille zum Schlaf* (1915), *Der Wille zum Leben* (1920), and *Stoerungen des Trieb- und Affektlebens* (9 vols., 1924–27).

E. Jones wrote that Stekel had very little interest in theory, was very practical, and had a ready access to the unconscious. He was a naturally gifted psychologist, contributing greatly to our knowledge of symbolism, a field in which he had greater intuitive genius than Freud. Unfortunately, according to Jones, these talents went with an unusual incapacity for judgment, and his intuition and speculations were not to be depended on. When Freud founded the monthly *Zentralblatt fuer Psychoanalyse und Psychotherapie*, Stekel became its joint editor, but he resigned his membership from the Vienna society in 1912, and, Freud's group having withdrawn their subscriptions from the periodical, it ceased publication a year later. In 1933 Stekel wrote *Der Seelenarzt* and in 1938 moved to London where he wrote his last book, *Technik der analytischen Psychotherapie* (1938). In his preface to the latter book Stekel criticized the cult of orthodoxy in psychoanalysis, and the length and expense of its treatment, and foresaw the collapse of orthodox analysis if its practitioners could not adapt themselves. He considered medical training indispensable to the psychoanalyst, "since the boundaries between psychic and somatic determination can never be easy to establish."

Segal (eds.), *Freud in Exile* (1988), 163–74; E. Timms, in: C. Brinson et al. (eds.), "England? Aber wo liegt es?"... (1996), 47–58.

[Louis Miller]

STEKELIS, MOSHE (1898–1967), Israel archaeologist, born in Kamenets-Podolski in the Ukraine. He studied at Odessa, also serving as the deputy director of the Archaeological Museum and the director of the Archaeological Library there (1921–24). As a result of his Zionist activities, he was exiled to Siberia. In 1928 he settled in Palestine and was appointed lecturer (later professor) in prehistoric archaeology at the Hebrew University in 1948. He directed various archaeological expeditions to prehistoric sites: Bethlehem; Jebel al-Qafza (with R. Neville); Abu 'Uşba (Mt. Carmel); the megaliths in Transjordan; the Yarmukian site of Sha'ar ha-Golan; the Kabbāra cave and Naḥal Oren on Mt. Carmel; and al-'Ubaydiyya in the Jordan Valley. Stekelis was the founder of a prehistory library in Jerusalem and a museum in Haifa.

[Michael Avi-Yonah]

STEMATSKY, AVIGDOR (1908–1989), Israel painter. He was born in Odessa, Russia, and was brought in 1920 to Palestine. He studied at the Bezalel Academy of Art and Design, Jerusalem, and in Paris. In 1947/48, he was one of the founders of the "New Horizons" group. He taught painting at the Avni Institute of Painting and Sculpture in Tel Aviv for several years. He was for many years a landscapist, but about 1948 began to work in an abstract style, using color contrasts, and constantly suggesting a link with nature. His watercolors are subtle, whereas his oils are violent and dramatic.

[Yona Fischer]

STENCL, ABRAHAM NAHUM (Avrom-Nokhem Shtentsl; 1897–1983), Yiddish poet and editor. Born in Czeladź, Poland, his father was ḥasidic *dayyan* of Czestochowa and his brother head of the local yeshivah. To avoid military conscription, he fled to Holland in 1919, later living in Germany. Wrestling with secular culture, he came early to the vocation of poet and chose to write in Yiddish. Arriving in London in 1936, he lived the rest of his life in a council flat in Whitechapel, organizing the Friends of Yiddish and editing its journal, *Loshn un Lebn*. His poems and essays printed in Germany include *Un Du Bist Got* ("And You Are God," 1924) and *Fisherdorf* ("Fishing Village," 1933). His London writings appeared in his *Heflekh* and *Loshn un Lebn* and in such collections as *Vaytshepl Lebt* ("Whitechapel Lives," 1951) and *Vaytshepl Shtetl Debritn* ("Whitechapel, A Shtetl of Britain," 1961). His papers are at the School of Oriental and African Studies, London.

[Leonard Prager (2nd ed.)]

STENDAL, city in Brandenburg, Germany. A Jewish community existed around the middle of the 13th century. The Jews of Stendal held a key position among those of Brandenburg and adjacent territories, and the tax problems and customs of

the community had crystallized by the latter part of the century. In 1297 its members were granted the privilege of acquiring property, for which they had to pay a low rent; only Jews owning ten silver marks were to be admitted as burghers. The community's total tax of ten marks was to be divided between the margraves and the city. On its part the city had to protect the Jews against any interference by ducal officers. Jewish law was to be respected, but the Jewish oath in front of the synagogue had to be taken in German. This privilege was upheld by the Magdeburg court in 1331. The community continued to develop, the Jews' Street being first mentioned in 1327. About 1350 the Jews suffered persecution, either in consequence of the civil war or in connection with the Black Death. The burghers, however, were granted amnesty for the misdeeds committed against the Jews, as well as permission to readmit Jews under the previous conditions. In 1446 all the local Jews were imprisoned and subsequently expelled from Stendal (presumably on papal and royal orders), but in 1453–54 they were readmitted. In 1490, too, a few new Jewish settlers were admitted; but in 1520 all Jews were banished from Brandenburg, including Stendal.

However, Elector Joachim II (1535–71) favored settlement of Jews in Stendal. Therefore, by 1564 nine Jewish families had settled in the city, but they were expelled after his death. Only after 1847 did Jews resettle there. By 1849, there were 38 Jews living in Stendal; 49 in 1871; 104 in 1892; 85 in 1903; and 93 in 1905. They formed a small community that had a cantor-teacher. Their number declined to 60 by 1913 (0.22% of the total population) and to 34 in 1925 (0.11%). In 1933 there were 61 Jews; 23 in 1939; and three in 1942. No Jews lived in Stendal after 1945. In 1995 a commemorative plaque was consecrated to the former synagogue, which is now privately owned. The Jewish cemetery is preserved.

[Toni Oelsner]

STENGEL, ERWIN (1902–1973), psychiatrist. Stengel was born in Vienna, of East European parentage and was educated at Vienna University, where he received his M.D. in 1926. He studied with Sigmund Freud and, before 1929, had worked together with Paul Schilder and Heinz Hartmann. In 1937, he became senior lecturer in psychiatry and neurology at Vienna University, where he worked with Wagner, V. Jauregy, and Poetzel and did research into the relation of frontal brain pathology to obsessional problems. In 1938, he left Austria for Britain as a refugee from Nazism, and after working with Mayer-Gross in Creighton (1942) he was appointed

a research fellow in psychiatry at Edinburgh and, in 1949, became reader in psychiatry at London University, also serving as consultant to the Bethlehem Royal and Maudsley hospitals. In 1957, he was appointed to the newly established chair of psychiatry at the University of Sheffield, and on his retirement in 1967 was granted the title of emeritus professor. He served as president of the Royal Medico-Psychological Association in 1966, and was president of the International Association for Suicide Prevention.

In his earliest publications (with Hartmann), *Studien zur Psychologie des Induzierten Irreseins* (Arch. Psychia. Nervenkrank. (95), 1931) he maintained that certain paranoiacs have a specific motivation to establish a following, and his subsequent works were concerned with the examination of anxiety and compulsive wandering. In 1950, however, he began his researches on suicide, on which he became a world authority.

In 1958, he published a monograph (with N.G. Cook) on attempted suicide. His definitive work in the field, published in the Pelican series, appeared in 1964 as *Suicide and Attempted Suicide*. In 1969, Stengel addressed the opening session of the 11th Congress of the Israel Neuro-Psychiatric Society in Haifa, his subject being “recent progress in suicide research and prevention.” He was active in the promotion of suicide prevention centers and techniques.

[Louis Miller]

STENN, REBECCA, U.S. modern dancer and choreographer. She was born in Ohio and spent her childhood in Canada studying with Deanne Shorten; she later studied at the Juilliard School. As a member of Momix Dance Theater from 1989 to 1995, she toured extensively throughout Europe, the Far East, and the Americas and appeared as a feature performer in films for Italian, Spanish, and French television. She assisted in the choreography and performed in the Emmy award winning film *Pictures at an Exhibition*. In 1996 Stenn formed The Perks Dance Music Theater, a company performing with a live band on stage, integrating the musicians and their instruments. The Perks' repertoire includes over 30 works using original music ranging from funk/rock to ethnic and to the classically inspired; its *Left of Fall* (2003) is a contemporary choreographic and musical interpretation of the 1913 ballet *The Rite of Spring*. Improvisation has always been a strong force in her work. In 1990 she established the first improvisational group for Lincoln Center Institute. She collaborated with Moses Pendleton in the making of *Passion* to the music of Peter Gabriel, and assisted him in the choreography of Lina Wertmuller's *Carmen* at the Munich State Opera, also performing as a principal dancer. She also collaborated on a multimedia piece for the Copenhagen Festival 96, with Japanese and Danish musicians and dancers. Stenn was a contributing editor of *Dance* magazine and wrote for the *International Journal of Dance*.

[Amnon Shiloah (2nd ed.)]

STENT, GUNTHER SIEGMUND (1924–), U.S. molecular biologist. He was born Guenter Stensch in Berlin. He immigrated to the U.S. where he was educated at Hyde Park School, Chicago, and gained his Ph.D. in physical chemistry at the University of Illinois (1948). He worked on the synthetic rubber research program of the U.S. War Production Board (1944–48), apart from a period as a document analyst for the Field Intelligence Agency in Occupied Germany (1946–47). After post-doctoral fellowships at the California Institute of Technology, Pasadena (1948–50), the University of Copenhagen and the Pasteur Institute, Paris (1950–52), he returned to the faculty of the University of California at Berkeley (1952–94). He became professor of molecular biology from 1959, director of the virus laboratory (1980–86), and founding chairman of the department of molecular and cell biology (1987–92). From 1994 he was professor emeritus of neurobiology at Berkeley. Stent was an extraordinary polymath who achieved universal recognition in three fields of endeavor. His initial research in phage genetics (bacteria infecting viruses) made early contributions to the rapidly developing field of molecular biology. The significance of this research is summarized in the highly influential book *Phage and the Origins of Molecular Biology* (1966) he wrote with James D. Watson and John Cairns. His research on developmental neurobiology is based on the leech and dates from a sabbatical visit to Harvard University (1972). He is also distinguished for his writings on the history and philosophy of science. His many highly regarded books in this field include *Morality as a Biological Phenomenon* (1978) and his autobiography, *Nazis, Women and Molecular Biology* (1998). Stent made major contributions to the organization of biological research at the University of California at Berkeley. He was a visiting professor at many leading universities in the U.S., Europe, and Japan. He was a member of the U.S. National Academy of Sciences and the American Philosophical Society.

[Michael Denman (2nd ed.)]

STERLING, SIR JEFFREY, BARON STERLING OF PLAISTOW (1934–), British businessman. Sterling was educated at Reigate Grammar School and the Guildhall School of Music but became a stockbroker and established an investment house, the Sterling Guarantee Trust Company. He became a director of P. & O., one of Britain's oldest and most famous shipping lines, in 1980, and its chairman from 1983. He was instrumental in developing its cruise ship business and spearheaded the revival of sea cruises from the last few decades of the 20th century through P. & O. Cruises, which he headed. Sterling was chairman of the Queen Elizabeth Golden Jubilee Weekend Trust, responsible for the celebrations marking the British monarch's 50th year on the throne in 2002. He has been active in Jewish affairs and was chairman of World ORT in 1969–73. He was knighted in 1985 and received a life peerage in 1991.

[William D. Rubinstein (2nd ed.)]

STERN, family of English merchant bankers and philanthropists. Originally, several brothers born in Frankfurt established banks in different European countries. **DAVID DE STERN** (1807–1877) and his brother **HERMANN DE STERN** (1815–1887) founded the firm of Stern Brothers in London, a bank which was highly successful in handling loans for various governments. In 1869 the king of Portugal made David Stern a hereditary viscount (as “Viscount De Stern”) and Hermann Stern a baron (as “Baron De Stern”) in gratitude for such services and they added the prefix “de” to their names. David de Stern became a director of the Imperial Bank and the family bought Strawberry Hill, Horace Walpole's famous Gothic mansion near London. Although they were related by marriage to such “Cousinhood” families as the Rothschilds and Goldsmids, they were never fully accepted as part of the financial aristocracy and were certainly not household names. Nevertheless, they were among the most successful English merchant bankers of their day. Hermann de Stern left an estate of £3.5 million, one of the very largest Victorian fortunes. **SYDNEY JAMES STERN, FIRST BARON WANDSWORTH** (1845–1912), elder son of David de Stern, joined the family firm, but retired early. After several unsuccessful attempts he was elected a member of Parliament for Stowmarket in 1891 and was elevated to the peerage in 1895. Stern Brothers lost its previous prominence in later years. Hermann's son **HERBERT STERN, FIRST BARON MICHELHAM** (1851–1919) also became a partner in the family bank and was also made a peer, in 1905, but without having served in the House of Commons. **SIR EDWARD STERN** (1854–1933), younger son of David, held a number of Jewish communal offices, including the presidency of the Jewish Deaf and Dumb Home. He was knighted in 1904 and received a baronetcy in 1924. By the 1920s, Stern Brothers had sadly declined as a major City merchant bank and, indeed, became something of a byword for generational decline. **HERMANN DE STERN**, brother of David de Stern, was a generous benefactor of Jewish charities and also held several communal offices. He was a director of the Imperial Bank, the London and San Francisco Bank, the Bank of Roumania, and the East London Waterworks Co. **LAURA JULIA DE STERN** (d. 1935), a daughter of Hermann, took part in communal work and married the inventor Sir David Lionel *Salomons. Her cousin, **SIR ALBERT GERALD STERN** (1878–1966), who was educated at Eton and Oxford, was a pioneer of tank warfare in World War I.

[John M. Shaftesley / William D. Rubinstein (2nd ed.)]

STERN, ABRAHAM JACOB (1762–1842), Polish *maskil* and mathematician. Stern was born in Hrubieszów (Lublin province) and then moved to Warsaw, where he was able to widen the scope of his education. While developing his interest in mathematics, he also acquired profound talmudic erudition. He revealed his technical talents in his improvements in the mechanism of the watch and his invention of a threshing machine and a calculating machine (1812). The senator N.

Norosiltsev introduced him to Czar Alexander I in 1815 and obtained an annual pension for him from the state treasury. Stern also wrote ethical and occasional poems of some linguistic originality. When the Committee for Jewish Affairs was established in 1825, Stern was a member of its consultative council. Submitting the project of the proposed rabbinical seminary to be established in Warsaw, he stressed its role in the campaign against Ḥasidism. In 1826, however, when he was offered the position of principal of this institution, he politely refused since he felt that it would produce rabbis who were not truly devoted to their religion and would be more active in Polonization than in propagating culture among the Jewish masses.

Remaining strictly Orthodox, Stern was opposed to assimilation, maintaining that rather than breaking with the past it was important to enrich general culture with the values of Judaism. He was one of the few *maskilim* who did not cut himself off from Jewish nationalism and because of his individuality was a popular figure in Warsaw. During his travels he visited various countries, especially Germany, and acquired a knowledge of foreign languages. The Poles and Russians respected his great erudition. He was the only Jew to be honored with membership in the Royal Society of the Friends of Science, where he demonstrated the operation of his calculating machine. Together with Jacob *Tugendhold he also acted as censor of Hebrew. Stern was the father-in-law of Ḥayyim Zelig *Slonimski, whom he influenced in the spheres of his interests and work.

[Moshe Landau]

STERN, ADOLPHE (1848–1931), Romanian lawyer and political leader. Born in Bucharest, Stern studied law, and in 1891 became the secretary of Benjamin *Peixotto, the first consul of the United States in *Romania. In 1873 he was elected secretary of the Zion Brotherhood in Bucharest. In 1886 Stern became president of the B'nai B'rith lodge in Romania and in 1889 he headed the central board of all the lodges in Romania.

Stern took the initiative in creating the first political representation for Romanian Jews, the Union of Native Jews, in 1909, and served as its president until 1923. During World War I he made contact with G. Clemenceau and other political personalities informing them of the situation of Romanian Jews and asking for intervention in recognizing their rights of Romanian citizenship. From 1922 to 1926 he was a member of the Romanian parliament and chairman of the Jewish Club where he urged the inclusion in the constitution of provisions in the Paris peace treaty concerning naturalization for Jews in Romania. He published a series of judicial works, and translated into Romanian several plays of Shakespeare. The three volumes of his memoirs, *Inseamnă din viața mea* (vol. 1, 1915;

vol. 2, 1921; and vol. 3 fragmentarily in the paper *Renășterea Noastră* ("Our Revival"), are an important source for the political history of Romanian Jews of his time.

[Theodor Lavi]

STERN, ALFRED (1846–1936), historian. Born in Goettingen, Stern immigrated to Switzerland where he was professor of history first at the University of Bern (1874–87) and thereafter (until 1928) at the Polytechnikum, renamed in 1911 Eidgenössische Technische Hochschule of Zurich. His books involved the origins and development of European liberalism. Among them were a study of the Peasants' Revolt of 1525 (1869); a work on Milton (*Milton und seine Zeit*, 2 vols., 1877–79), which was followed by a history of England's mid-17th century revolution (*Geschichte der Revolution in England*, 1881). His major work was a ten-volume history of 19th-century Europe, *Geschichte Europas seit den Verträgen von 1815 bis zum Frankfurter Frieden von 1871* (1894–1924), a politically oriented, fully documented, and dispassionate account in the tradition of Leopold von Ranke. Other works included a biography of Mirabeau (*Das Leben Mirabeaus*, 2 vols., 1889; *Viede Mirabeau*, 2 vols., 1895) and books on Swiss and Prussian history. Stern aided the Jewish community of Bern in a lawsuit involving the *Protocols of the *Elders of Zion*, and financially assisted numerous young Jewish scholars. He also treated Jewish historical topics such as the state of the Jews in Prussia. He contributed to the German *Encyclopaedia Judaica*.

[Walter L. Arnstein]

STERN, ANATOL (1899–1968), Polish poet, author, and translator. Born in Warsaw, Stern was a political radical and a leading member of the futurist school, playing an important part in Polish literary life between the world wars. He was especially well known as a representative of Poland's new writing with strongly defined social tendencies. Stern's works include the verse collections *Futuryzje* (1919); *Anielski cham* ("Angelic Lout," 1924); *Ziemia na lewo* ("Earth to the Left," 1924), written in collaboration with Bruno *Jasienski; *Bieg do bieguny* ("Race to the Pole," 1927); *Europa* (1929); and *Rozmowa z Apollinem* ("Conversation with Apollo," 1938). He also published the novel *Namiętny pielgrzym* ("The Passionate Pilgrim," 1933) and the play *Szkoła genjuszów* ("School for Geniuses," 1933), which was staged in Warsaw. After the outbreak of World War II, Stern fled to the USSR, where he was promptly arrested and sentenced to a year's imprisonment. In 1942 he was transferred to the Middle East as a soldier in the Free Polish army and remained in Palestine until 1948, when he returned to Poland.

His later works include the novel *Ludzie i syrena* ("People and the Siren," 1955) and two volumes of verse: *Wiersze i poematy* (1956) and *Poezje* (1918–1968) (1969). Stern also pub-

lished translations from French and Russian literature. A volume of his recollections and essays, *Poezja zbuntowana* ("Poetry of Revolt"), appeared in 1964; and *Legendy naszych dni* ("Legends of Our Time"), a collection of sketches, in 1969.

BIBLIOGRAPHY: *Słownik współczesnych pisarzy polskich*, 3 (1964), 214–20.

[Stanislaw Wygodzki]

STERN, ARTHUR C. (1909–1992), U.S. public health engineer. Born in Petersburg, Virginia, Stern became director of New York City air pollution survey (1935–38); chief industrial hygiene engineer, New York State (1942–54); and chief of the engineering laboratory of the U.S. Public Health Service Sanitary Engineering Center (1955–1962). From 1962 he was assistant director of the National Center for Air Pollution Control in Washington. He edited *Air Pollution*, 3 vols. (1962, second edition 1968–69). In 1968 Stern accepted an appointment as professor of air hygiene in the Department of Environmental Sciences and Engineering at the University of North Carolina in Chapel Hill. Although he retired from the position in 1978, he remained active until the day of his death.

Stern received many honors. These included chairmanship of the Electric Power Research Institute Advisory Committee and of the U.S. Environmental Protection Agency's National Air Quality Criteria Advisory Committee, and presidency of the International Unions of Air Pollution Prevention Associations. In 1976 he was elected to the National Academy of Engineering Societies.

STERN, AVRAHAM (underground name, **Ya'ir**; 1907–1942), leading underground fighter in Palestine, founder of the organization later called *Loḥamei Ḥerut Israel (Leḥi). Born in Sувалки (then Russian Poland), Stern studied at the Hebrew high school there. In 1925 he went to Palestine and continued his studies at the Hebrew University in Jerusalem. Active in the *Irgun Ṣeva'i Le'ummi (IṢL) from its formation in 1931, he collaborated with David *Raziel in compiling a Hebrew manual on the use of the revolver and wrote underground poetry, including *Ḥayyalim Almonim* ("Anonymous Soldiers," 1933), which became the anthem of IṢL and later of Leḥi. When IṢL split in 1937, he did not join the *Haganah, but became a member of the IṢL command. He went to Europe to acquire arms and to establish contact with the Polish authorities for the organization of courses for IṢL instructors in Poland. In August 1939 he was arrested together with the other members of the IṢL command and was imprisoned until June 1940. While in prison, his opposition to a suspension of the anti-British attacks for the duration of World War II caused a new split in IṢL and the formation of a separate group, which, after his death, called itself Loḥamei Ḥerut Israel (and which was also known as the Stern Group). He composed a manifesto for the new organization entitled *Ikkarei ha-Teḥiyyah* ("The Principles of Revival"). Early in 1942, the authorities offered a reward for his capture, and on February 12 the Palestine Police traced him, forced an entry into the house in Tel Aviv in which he was

hiding, and killed him outright. The house now contains an archive in his memory established by ex-Leḥi members.

Stern was notable for his fanaticism in the armed struggle for Jewish independence, which, he contended, could succeed only if conducted by an underground force independent of all "legal" bodies (even that of *Jabotinsky and his movement). Because of his doubts that the Allies would win World War II, he tried to establish contact with the Italians and the Germans and to persuade the Axis to adopt a pro-Jewish policy in Palestine.

The final work by Moshe *Shamir was *Ya'ir* (2001), a biographical novel.

[David Niv]

STERN, BERNHARD JOSEPH (1894–1956), U.S. sociologist. Born in Chicago, Stern was educated at universities in the U.S. and England and was also ordained as a rabbi at Hebrew Union College in Cincinnati. He taught at the City College in New York, the University of Washington, the New School for Social Research, and Columbia University, but failed to receive a permanent appointment because of his membership in the Communist Party. He was, however, secretary for many years of the Eastern Sociological Society and received research assignments. Stern was editor of *Science and Society*, a Marxist-oriented social science journal. Contrary to other Marxist social scientists in the United States, he was always outspoken about his adherence to the principles of historical materialism and his abhorrence of exploitation in any shape or form. Bearing in mind this background, his contribution to medical sociology and to the sociology of minorities is remarkable.

His major books were *Social Factors in Medical Progress* (1927), *The Family, Past and Present* (1938), and *Society and Medical Progress* (1941). He co-edited *When Peoples Meet* (1942, 1946²) and *Outline of Anthropology* (1948). His selected papers, *Historical Sociology*, were published posthumously in 1959.

BIBLIOGRAPHY: *Science and Society*, 21 (1957), 1–9, 28–29, includes bibliography of his writings.

[Werner J. Cahnman]

STERN, BERTHA GLADYS (1890–1973), English novelist who wrote under the name "G.B. Stern" and also used the name "Bronwen Gladys Stern." Born in London, G.B. Stern became a writer and journalist after abandoning hopes of a stage career. A prolific author, she published over 50 books, beginning with *Pantomime* (1914). Her own home background and her travels in Germany and Italy provided color for many of her works, not least those on Jewish themes. Her *Matriarch Chronicles* (1936) was really the culmination of a series of nov-

els about the Rakonitz family and the pre-Hitler world of assimilated, middle-class European Jewry, and on these works G.B. Stern's once-considerable reputation was based. They include *Children of No Man's Land* (1923), *Tents of Israel* (1924), *Mosaic* (1930), and *Shining and Free* (1935). The Jewish element is superficial, however, since the novelist's characters – whether they live in Vienna, London, or New York – jealously retain their family loyalties, but not their Judaism. *Tents of Israel* was published in the U.S. as *The Matriarch* (1925), and this was the title given to the book's successful stage adaptation (1929), a sequel being *The Young Matriarch* (1942).

G.B. Stern's other works, which range from novels to autobiography, include *Debonair* (1928), *Little Red Horses* (1932), *Ten Days of Christmas* (1950), and *Promise Not to Tell* (1964). Like several of her fictional heroines, G.B. Stern married a non-Jew and abandoned Judaism. *All in Good Time* (1954) dealt with her conversion to Catholicism.

STERN, BEZALEL (1798–1853), educator and pioneer of the *Haskalah in southern Russia. Stern, who was born in Tarnopol, Galicia, was educated in the school of Josef *Perl, where he later taught for ten years. During the late 1820s he was invited by the community of Odessa, which was headed by natives of Galicia (the “Brodyists”), to become director of the Jewish school which had been founded in 1826 by a group of moderate *maskilim* led by Simḥah *Pinsker and Isaac Hurwitz. Under Stern's direction, the institution expanded, the number of its classes was increased from four to six, sections for boys and girls were opened, and the number of pupils rose to 400. Stern instituted changes in the curriculum by expanding instruction in the sciences and languages (German and Russian) at the expense of Jewish studies. He rapidly won the approval of the Russian *maskilim*, who corresponded with him on the subject of changes and reforms in the life of the Jews of the country. The Orthodox elements of the community were opposed to these changes, but Stern relied on the support which he received from the municipal authorities, particularly from Governor-General Vorontsov.

In 1837 Nicholas I visited the school and expressed his satisfaction with the institution's course of studies. In spite of this, when the government decided to establish a network of governmental schools for the Jews, Max *Lilienthal, a newcomer to Russia, was appointed to supervise the project. This aroused the anger of Stern, who refused to collaborate with Lilienthal. In 1843 Stern was appointed member of the commission which was to ratify the curriculum of the Jewish governmental schools. The other members of the commission were R. Isaac b. Ḥayyim*Volozhiner, head of the yeshivah of Volozhin, R. Menahem Mendel *Schneersohn, the leader of Ḥabad Ḥasidism, and Israel Heilperin, an Orthodox banker of Berdichev. Stern represented the *maskilim* but his influence was equivalent to that of all his colleagues because he enjoyed

the support of the government. In 1852 Stern was dismissed from his position as director of the Jewish school and its administration was assumed by Christian inspectors.

In addition to his educational activities, Stern also took an interest in Jewish history and archaeology. He maintained relations with Abraham *Firkovich. He also occupied himself with the problems of the Jewish community, as shown by his memorandum on the collection of the meat tax (**korobka*) in Odessa.

[Yehuda Slutsky]

STERN, BILL (1907–1971), U.S. sports broadcaster, member of the Radio Hall of Fame, National Sportscasters and Sportswriters Hall of Fame, and American Sportscasters Hall of Fame. Stern began broadcasting in 1925, when he was hired to cover football games for WHAM in his hometown of Rochester, New York. His dramatic flair as an announcer was bolstered by his experience in theater and vaudeville, most notably his appointment as Radio City Music Hall's first stage director when it opened its doors in 1932. In 1937, Stern was hired by NBC and was given his own nationally syndicated, 15-minute radio show, *Bill Stern Review*. The show, which featured Stern rifling off sports scores, telling stories of amazing coincidences and heroism (some true, some concocted), and interviewing famous entertainers, became a fixture of the radio. From 1939 to 1951, he hosted *The Colgate Sports Newsreel*, and until 1956, *Bill Stern Sports*. Stern's voice was also made famous by his calling Friday night fights for NBC, as well as narrating MGM's *News of the Day* newsreels shown in movie theaters from 1938 to 1952. Stern also played himself in the 1942 movie classic *Pride of the Yankees*. At the height of his popularity, Stern was selected for 13 consecutive years (1940–52) as the top sports commentator by a poll of American radio editors. Stern broadcast the first-ever televised sports event – Princeton vs. Columbia in baseball – on May 17, 1939, as well as the first televised football game between Waynesburg and Fordham on September 30, 1939. After a health-related hiatus in the late 1950s, Stern returned to finish his broadcasting career as sports director for the Mutual Broadcasting System throughout the 1960s. He wrote *Bill Stern's Favorite Sports Stories* (1946), *Bill Stern's Favorite Football Stories* (1948), *Bill Stern's Favorite Boxing Stories* (1948), *Bill Stern's Favorite Baseball Stories* (1949), *Bill Stern's Sports Quiz Book* (1950), and an autobiography, *The Taste of Ashes: A Famous Broadcaster's Comeback from Addiction and Disaster* (1959).

[Robert B. Klein (2nd ed.)]

STERN, CHAIM (1930–2001) U.S., Reform rabbi, liturgist. Stern, acknowledged as the foremost liturgist of Reform Judaism, was born in Brooklyn, New York. He studied in Orthodox yeshivot as a child, but the Holocaust caused him to become

far more secular than his family. He received a B.A. from City College (1952) and attended Harvard Law School, but left Harvard after a year to enroll in *Hebrew Union College, where he was ordained in 1958. In 1983, HUC-JIR awarded him an honorary D.D. While serving as rabbi of Temple Sholom in River Edge, New Jersey (1958–62), he taught at the HUC-JIR School of Sacred Music. An outspoken political activist, he traveled to Mississippi to fight for civil rights as a Freedom Rider in 1961. In 1962, he became rabbi of the Liberal Jewish Synagogue in London, England, returning in 1965 to assume the pulpit at Congregation Emanu-El B'ne Jeshurun in Milwaukee, Wisconsin. He spent the year 1967–8 back in London, lecturing at Leo Baeck College and serving as rabbi of Westminster Synagogue. From 1968 to 2000, he was the senior rabbi at Temple Beth El of Northern Westchester in Chappaqua, New York, where he also served as president of the Northern Westchester and Putnam Rabbinic Council and the Chappaqua Interfaith Council as well as on the regional board of the Anti-Defamation League. He was serving as senior rabbi of Temple Israel in Miami, Florida, at the time of his death.

In 1971, as a result of Stern's having co-edited two new prayer books for the Liberal Movement of England – *On the Doorposts of Your House* and *Gates of Joy* – he was appointed by the *Central Conference of American Rabbis to edit the new liturgy of the Reform movement. Over the course of three decades, he compiled the entire *Gates* series of prayer books: *Gates of Prayer*, published in 1975, became the official year-round *siddur of Reform Judaism's 800 congregations, while his *mahzor *Gates of Repentance*, which appeared three years later, played the same role for the High Holy Days. (U.S. President Bill Clinton publicly quoted a passage on contrition from *Gates of Repentance* when he discussed atoning for the Lewinsky sex scandal.) The series also comprises *Gates of the House* (1977), containing prayers related to ritual observances in the home; *Gates of Heaven: Services for Children and Their Parents on the Days of Awe* (1979); *Gates of Forgiveness* (1980), a companion volume to *Gates of Repentance* focusing on the *selihot service recited in the weeks preceding Rosh Ha-Shanah and the Day of Atonement; and *Gates of Freedom*, a popular *Passover *Haggadah.

Stern translated many of the prayers from the original Hebrew, wrote passages himself and incorporated words of wisdom ranging from ancient Jewish texts to such eclectic modern voices as Martin *Buber, e.e. cummings, and Norman *Mailer. The old-fashioned “thee” and “thou” were rendered as “you,” while references to “our fathers” in traditional prayers, considered sexist, became “our ancestors.” All references to God as King were changed to Sovereign.

Stern also wrote *Pirke Avot: Wisdom of the Jewish Sages* (1992) and **Isaac: The Link in the Chain* (1977). In addition, he co-authored (with Gunther *Plaut) *The Book of Genesis*, a translation and commentary of the first book of the Bible (1974), and *The Haftarah Commentary* (1996). He co-edited (with Lisa Pemstein) *Day by Day: Reflections on the Themes of the Torah From Literature, Philosophy, and Religious Thought*,

a collection of meditations to accompany the cycle of the Jewish year, and (with Rossel and Chanover) *When a Jew Seeks Wisdom: The Sayings of the Fathers* (1975). He adapted several of his works for special occasions, including *Gates of Prayer for Weekdays and a House of Mourning* (1992). His final work, *Paths of Faith: The New Jewish Prayer Book for Synagogue and Home* – containing devotions for weekdays, *the Sabbath and festivals – appeared in 2003.

[Bezalel Gordon (2nd ed.)]

STERN, DAVID (1942–), U.S. basketball executive, fourth commissioner of the NBA. Born and raised in the Chelsea section of Manhattan, Stern worked his way through school at his father's deli, near Madison Square Garden, which was open six days a week and closed only on the Jewish High Holidays. Stern was a passionate sports fan and developed his love for basketball and the skills and ease of dealing with the public while serving the diverse deli customers. After studying at Rutgers University and Columbia Law School, Stern noted: “Others talk about working as clerks for Supreme Court justices or federal judges, but I enjoy saying that my first clerkship was at Stern's Delicatessen.” From the time he joined the legal firm of Proskauer and Associates in 1966 to his appointment as NBA legal counsel in 1978, Stern dedicated almost all his professional activities to NBA work. As an NBA executive, Stern was determined to radically renovate the league's image tainted by public perceptions of drug abuse, lazy work ethics, and astronomical salaries. Stern played a major role in changing popular perceptions in the early 1980s via two milestone agreements with the NBA Player's Association: drug testing, and instituting team salary caps. His tenure as commissioner, starting in 1984, reflects the unprecedented success of the NBA. In particular, the league's appeal to a young audience increased not only in the U.S. but also worldwide. The pinnacle achievement of this international enthusiasm was the unprecedented decision to include NBA players on the U.S. basketball “Dream Team” at the Barcelona Olympics in 1992. Highlighting the skills of stars such as Larry Bird, Magic Johnson, and Michael Jordan helped the NBA achieve not only equality with other American professional sports, but even seemingly to surpass them. NBA players were now the most famous athletes in the world, appealing to an international audience and starring in commercials all over the globe. Additional achievements by Stern include the expansion of the NBA to 30 teams (2005); the opening of international offices; the creation of the Women's National Basketball Association in 1997; and the 1999 launch of NBA.com TV, a 24-hour digital network. Stern also serves on the boards of numerous public institutions including Columbia University, Beth Israel Medical Center, and the NAACP, and is a contributor to various charities, including the United Jewish Appeal.

[Yitzchak Mais (2nd ed.)]

STERN, ELIZABETH GERTRUDE LEVIN (1889–1954), social worker and author of 13 books that received much popular and critical attention. Details of Stern's birth remain uncertain. Although she consistently maintained that she was born in Königsberg, Prussia, and came to the United States in 1892 with her parents, Sarah Leah (Rubenstein) and Aaron Kleine Levin, a cantor and rabbinical assistant, her oldest son later revealed that while raised by the Levins, his mother actually had been born out of wedlock in Pittsburgh to Lillian Morgan and Christian Limburg, a store owner and merchant.

After graduating from the University of Pittsburgh in 1910, Stern moved to New York City and enrolled in the New York School of Philanthropy (later renamed the New York School of Social Work) where she met, and in 1911 married, fellow student Leon Stern. From 1912 to 1913, they lived in Galveston, Texas, assisting Jacob Schiff's efforts to reroute American Jewish immigration from New York to the Southwest. A decade later, they co-authored *My Friend at Court* (1923), a "casebook" of a female probation officer based on cases with which they were familiar. The mother of two sons, Stern was an active professional and a writer. Her social work achievements were recognized with an honorary master's degree from the University of Pittsburgh in 1918.

Stern, who began writing for local newspapers as early as 1908, began to publish feature articles in *The New York Times* in 1914. By 1926, she was writing for the *New York Evening World* and the *Philadelphia Public Ledger*, for which she assumed the pen name Eleanor Morton. In 1926, she adopted the pseudonym Leah Morton for the popular and critically acclaimed *I am a Woman – and a Jew* (rep. 1986, with a new introduction by E.M. Umansky). This book purports to be the autobiography of an Eastern European Jewish immigrant who comes to America as a child and spends her youth in the Jewish section of a small city along the Ohio River. The focus is on the author's struggle to meet familial and professional demands while she struggles to come to terms with her Jewish identity. Contemporary reviewers assumed the book was Morton/Stern's personal story. However, Leah's struggle to establish a career despite her husband's objections and the conflicts created by marrying a non-Jew were fictional. Still, like Stern's earlier autobiographical novel, *My Mother and I* (1917), this book illuminated the spiritual journey and generational tensions experienced by many modern Jews, especially women.

Stern's religious attachment to Judaism remains unclear. By 1928 she had joined the Philadelphia Ethical Society, a branch of Ethical Culture, and she later became a member of the Religious Society of Friends, devoting much of her time and energy to Quaker organizations.

[Ellen M. Umansky (2nd ed.)]

STERN, EPHRAIM (1934–), Israeli archaeologist, expert on the Land of Israel during the Iron and Persian periods. Born in Haifa in 1934, he studied at the Reali High School and was a member of the local branch of scouts known as "the Carmel Wanderers." His military service was undertaken from 1952 and eventually he reached the rank of officer. In 1955 he began his studies at the Hebrew University in Jerusalem, taking courses in archaeology and the history of Israel, and finally receiving his Ph.D. in 1968 for "The Material Culture of the Land of the Bible in the Persian Period," supervised by Prof. Benjamin Mazar. His ground-breaking research on the Persian period is regarded as a milestone in the archaeology of Israel. He began teaching archaeology at Tel Aviv University in 1964, but in 1971 he returned to the Hebrew University and began teaching at the newly founded Institute of Archaeology at the request of his mentor, Yigael Yadin. He was appointed full professor there in 1984, eventually holding the Bernard M. Lauterman Chair in Biblical Archaeology, and continued teaching until his retirement in 2002. Stern was director of the Yad Ben-Zvi Institute in Jerusalem between 1993 and 1996. As a student Stern participated in numerous excavations in Israel, notably at Masada, Hazor, Beersheba, and En Gedi. He subsequently conducted his own excavations at a number of sites, including Gil'am, Tel Kadesh, and Tel Mevorakh, but most of his scientific energy was directed towards 20 years of digging at Tel Dor (Tanturah). Stern served as editor of the Hebrew archaeological journal *Qadmoniot* (published by the Israel Exploration Society), as well as editor of the distinguished *New Encyclopedia of Archaeological Excavations in the Holy Land* (1988–93). Stern published numerous research papers, excavations reports, and books, including *Dor – Ruler of the Seas: Ten Years of Excavating a Phoenician Israelite Harbour Town on the Carmel Coast* (1994); *Archaeology of the Land of the Bible*, vol. II. *The Assyrian, Babylonian, and Persian Periods* (732–332 B.C.E.) (2001). He was the recipient of many awards and prizes, including the Ben-Zvi Prize (1979), the Biblical Archaeology Society Publication Award (1984), the P. Schimmel Prize (1994), two Irene Levi-Sala Book Prizes (1995, 2002), and the Emet Prize on behalf of the Prime Minister of Israel for Distinguished Scholarly Achievements (2005).

[Shimon Gibson (2nd ed.)]

STERN, ERICH (1889–1959), psychologist, physician, and educator. Born in Berlin, Stern was an associate professor at the University of Giessen from 1924 to 1928, when he went to Mainz to lecture at the Institute of Pedagogy and direct the Mainz Institute of Psychology. In 1933 he migrated to Paris, where he was active in the children's neuropsychiatry clinic of the University of Paris medical school. During the Nazi occupation of France he worked with the underground, and after the war, engaged in the rehabilitation of Jewish children. From 1950, he was in charge of research in the National Center of Scientific Research in Paris.

Stern was active with *OSE, and wrote some studies on the psychology of immigrants. His books include *Ein-*

leitung in die Paedagogik (1922), *Jugendpsychologie* (1923, 1951⁵), and *Gesundheitliche Erziehung* (1928). He also published the *Jahrbuch der Erziehungswissenschaft und Jugendkunde*.

[William W. Brickman]

STERN, ERNEST (1876–1954), stage designer. Stern was born in Bucharest, going to Munich at the age of 19 to study under Franz van Stuck. He worked as a caricaturist for *Jugend* and *Simplizissimus* and began to contribute to political cabarets. He moved to Berlin in 1905 as illustrator on the *Lustigen Blatter* and in the same year began his historic collaboration with Max Reinhardt, with the famous production of Shakespeare's *Midsummer Night's Dream*. The following year he was taken on by Reinhardt as artistic director, a position he held for 16 years. There followed a series of remarkable productions which made both men world famous: works by Shakespeare, the pantomime *Samurun* (1910), *Faust* (1911), the remarkable *Miracle* (1914), *Danton's Death* (1916), *John Gabriel Borkman* (1917). Between 1919 and 1929 Stern also worked for the German cinema, including films by Ernst *Lubitsch. Before the advent of Nazism Stern was already famous on the London stage, designing Noel Coward's *Bitter Sweet* in 1929, followed by a series of spectacular musicals including Offenbach's *La Belle Héléne* and *White Horse Inn*. In 1934 he settled in London where he lived for the rest of his life. He continued to design the plays of Shakespeare, especially for the actor Donald Wolfit, and popular musical plays. An artist of deep historical knowledge and remarkable imagination, Ernest Stern had a profound effect on 20th-century stage design. He was regarded as one of the outstanding stage designers of the century.

[Charles Samuel Spencer]

STERN, SIR FREDERICK CLAUDE (1884–1967), British banker. Stern was a partner in the London banking house of *Stern Brothers. His father, James Stern, and his older brother, Sir Albert Stern, devoted their energies during World War I to the construction of the newly invented tank, while Frederick had a distinguished career on active service, mainly on the Turkish front. During World War I he came into contact with Lloyd George and served temporarily as his secretary during the Versailles Peace Conference. He was knighted in 1956. Outside his professional life he was widely known as a skillful and enthusiastic gardener, particularly as a breeder of lilies and daffodils. At his country mansion, Highdown House, near Worthing, West Sussex, Stern created a famous garden which has been the subject of several books. After his death, his widow left the house and grounds to the Worthing Council. He wrote extensively on botanic subjects and was prominent in the Linnean Society and the Royal Horticultural Society and was master of the Drapers' Co., one of London's ancient guilds. Among his writings are *Study of Genus Paeonia* (1946) and *Snowdrops and Snowflakes* (1956), a study of the general *Galanthus* and *Leucorum*.

BIBLIOGRAPHY: *Royal Horticultural Society Journal*, 92 (Sept. 1967), 379–81.

[Joachim O. Ronall]

STERN, FRITZ RICHARD (1926–), U.S. historian of German-Jewish background. Stern grew up in then German Breslau (Wroclaw) as the son of parents of Jewish background. He was brought up as a Protestant, his godfather being the Nobel Prize-winning chemist Fritz *Haber. His family had to leave Germany, and he settled in the United States in 1938. He received his Ph.D. in history at Columbia University, having studied with another German emigrant, Hajo Holborn. Stern spent most of his teaching career at Columbia University, first as Seth Low Professor, later as University Professor. He retired in 1997. He was a permanent visiting professor at the University of Konstanz and taught at numerous European universities. The main focus in his publications is the prehistory of the rise of National Socialism in Germany, which he analyzed mainly through illiberal tendencies in central European thought. His celebrated book *Gold and Iron* (1977) centered on the relationship between German Chancellor Bismarck and his Jewish banker Gerson von Bleichroeder. Stern was active in political debates and his voice was heard far beyond the scholarly realm. In Germany, he gave a public speech in the parliament, the Bundestag, in 1987 as the first non-German citizen at the anniversary of the failed East German revolt of 1953. He received numerous prizes, such as the Lionel Trilling Award and the Peace Prize of the German Book Trade (1999), Germany's most renowned literary award. He also served as assistant to Ambassador Richard Holbrooke during the latter's tenure in Germany in 1993/94. Stern always tried to understand the causes of the German catastrophe in the 20th century and draw lessons for a peaceful future for Europe. He was eager to build bridges between Germans and Jews, Europe and the United States.

[Michael Brenner (2nd ed.)]

STERN, GERSHON (1861–1936), Transylvanian rabbi and author. Stern was a pupil of Moses Schick and Abraham Judah ha-Kohen Schwartz. He served as rabbi of Marosludas from 1885. In 1881 he published in the *Ha-Tor* of Abraham Guenzler (fourth year, no. 6) an attractive article on the need to revive the Hebrew language and the joy that filled him on the appearance of Hebrew papers. He visited Erez Israel and then wrote his small work, *Masei Benei Yisrael* (1910), in German with Hebrew script. In "*Hatimat ha-Sefer*" ("conclusion") of the *Yalkut ha-Gershuni*, *Hilkhot Terefot* (1907), he wrote in ornate language of his love and yearnings for Erez Israel.

He also wrote of his ties with Erez Israel in his testament (*Yalkut ha-Gershuni*, *al Aggadot ha-Shas*, pt. 1 (1922), 41a). He was very concerned about the yeshivot in his province and wished to raise their standards both economically and

spiritually. To this end he published many articles in the *Allgemeine Juedische Zeitung*, and then issued them in a special pamphlet *Marbeh Yeshivah* (1902). His *Yalkut ha-Gershuni* is in 13 parts: three parts contain novellae and expositions of themes in the Talmud and *posekim*, arranged in alphabetical order (1894–96); two parts are on the Bible (1899–1900); four parts are on the Shulḥan Arukh (1901–08); three parts are on talmudic *aggadot* (1922–27); and one part is on *Avot* (1906). He also frequently published talmudic novellae in the *Tel Talpiyyot*. His *Masei Benei Yisrael* was translated into Hebrew by N. Ben-Menahem (*Mi-Sifrut Yisrael be-Ungaryah* (1958), 9–49), which gives a detailed bibliography of his writings (317–26).

[Naphtali Ben-Menahem]

STERN, GRIGORI (d. 1940), Soviet army officer. Stern was chief adviser to the Republican army in Spain from 1936 to 1937 when he was sent to the Far East as chief of staff of the Soviet Far Eastern forces. He defeated the Japanese at the battle of Lake Khasan and was promoted to colonel general and given command of the Soviet forces. In the following year he defeated the Japanese at the battle of Khalkhin-Gol and drove them out of Soviet Mongolia. Stern died during the Finnish campaign.

STERN, HANS (1922–), Brazilian jeweler. Born in Essen, Germany, Stern immigrated to Brazil in 1939 with his family and settled in Rio de Janeiro. In 1940 he found work with a firm that exported Brazilian semiprecious stones such as tourmaline, topaz, and aquamarine, and he soon rose to the position of manager. In 1945 he sold his accordion for \$200 and used the money to start his own jewelry business, H. Stern Comercio e Industria, to buy, polish, set, and sell such stones in original designs. Aided by his flair for aggressive and imaginative promotion, the company developed within a few years into Brazil's largest undertaking in the field. It had an annual volume of many millions of dollars and more than 200 stores in principal cities all over the world, earning Stern the title of “the king of colored gems.” The company is owned today in equal shares by his sons: Roberto, Ronaldo, Ricardo, and Rafael.

BIBLIOGRAPHY: S. and K. Seegers, in: *Reader's Digest* (Jan. 1968), 203–8.

STERN, HARRY JOSHUA (1897–1984), Canadian Reform rabbi. Stern was born in Eragoly, just outside Kovno, Lithuania. One of eight children, Stern describes in his memoir growing up in a traditional family and studying at his local *heder*. After his mother died, Stern's father remarried and had four more children. Between 1906 and 1908 the family moved, in stages, to Steubenville, Ohio, from where Stern applied to study at Hebrew Union College. Unlike most of his fellow students, Stern was fluent in Yiddish and, like his role model, Stephen *Wise, became a Zionist, even though Zionism was treated with disdain by most HUC faculty. Stern

earned a bachelor of Hebrew literature from HUC in 1919, a B.A. from the University of Cincinnati in 1920, and was ordained in 1922.

Stern assumed his first pulpit in 1922, in Uniontown, Pennsylvania. He developed a reputation for oratory, interfaith work, Zionist activism, and social welfare. In 1927 he moved to Montreal's Temple Emanu-el, where he remained until his retirement in 1972. Stern preached the principles of Reform Judaism with an emphasis on the social responsibility. During the Depression he chastised factory owners, including some of his own congregants, for firing employees in order to hire cheaper labor in the rural areas. Stern also supported adult education, establishing the College for Jewish Studies the year after his arrival. Stern hired Jews of various stripes, including avowed socialist David *Lewis, to teach both adults and children. Stern also exchanged pulpits with Protestant ministers. Even more remarkably, Stern had regular contact with French Catholics. His first meeting did not occur in Quebec but rather on a ship where Stern, traveling with some students to Palestine in 1929, met the Quebec Jesuit Joseph Paré, who was also traveling with students to Rome. The two continued their contact and on several occasions in the 1930s tried to turn the Quebec Church hierarchy against antisemitism. Because of these contacts, the Canadian Jewish Congress assigned Stern a prominent role in its Joint Public Relations Committee. If little headway was made during the 1930s, it was hardly for lack of effort. Stern also championed the end of discrimination at McGill University and in housing.

In the postwar years, Stern continued to work for better Jewish-Christian relations, calling on Jews to recognize the prophetic quality of some of the teachings of Jesus the Jew, and on Christians to abandon their negative attitudes to the Jewish faith. A number of volumes of Stern's sermons have appeared in print. Biographical details are contained in K.I. Cleator and H.J. Stern, *Harry Joshua Stern: A Rabbi's Journey* (1981). Stern received numerous awards for his work in Jewish-Christian relations.

[Richard Menkis (2nd ed.)]

STERN, HORACE (1879–1969), U.S. jurist. Born in Philadelphia, Stern graduated from the University of Pennsylvania Law School, where he went on to lecture in real estate law for ten years. In 1903 he formed a law partnership with Morris Wolf. He served in the U.S. army during World War I, rising to the rank of major. In 1930 he was appointed a judge of the Common Pleas Court of Philadelphia. The following year he was elected to a full ten-year term. In 1935 he was elected to the Pennsylvania Supreme Court, on which he served as chief justice from 1952 until his retirement in 1957. Generally liberal in outlook, his judicial opinions were characterized by their independence of mind and careful adherence to sound legal principles.

Besides acting as a trustee of the University of Pennsylvania, Stern belonged to numerous civic organizations and was highly active in Jewish affairs. He was director for many years of the Philadelphia Federation of Jewish Charities, served briefly as president of Dropsie College, and was vice president of the Jewish Publication Society of America from 1914 to 1965, when he was declared honorary president. A collection of his articles and addresses was published in 1953 as *The Spiritual Values of Life*.

STERN, HOWARD (1954–), U.S. broadcasting personality. Born in Jackson Heights, Queens, Stern was raised in nearby Long Island. He graduated from Boston University, where he produced bawdy comedy like the *King Schmaltz Bagel Hour* on the campus radio station. (Stern was first introduced to radio by his father, Ben Stern, a radio engineer.) Stern started at a tiny radio station in Briarcliff Manor, a New York City suburb, for \$4 an hour and moved to stations in Hartford, Conn., and Detroit, Michigan, before landing a choice spot on a Washington, D.C., station, where his unadulterated, scrappy on-air personality was honed. Stern was fired but landed in New York City in 1982 in the coveted afternoon drive home slot on *WNBC-AM*. His outrageous humor on *WNBC* was terminated after two years, and he joined *WXRK* on the *FM* band in New York in 1985. There he produced one more outrageous program after another. Stern's audience grew as his show went into syndication, beginning in Philadelphia in 1985. Stern's conduct cost his employer Infinity Broadcasting \$600,000 in fines for indecency. He was forced to apologize when he said that he prayed for the death of the chairman of the Federal Communications Commission. In 1990 Stern started a television version of his show, essentially a visual version of his radio show, although nudity was obscured. Nevertheless his popularity grew and the radio and television shows got high ratings in such cities as Los Angeles, New Orleans, Cleveland, Las Vegas, and Baltimore. In 1994 Stern ran for governor of New York on the Libertarian Party ticket on a platform that included bringing back the death penalty and eliminating daytime traffic construction. Stern abandoned the race but the newly elected governor signed the Howard Stern Bill, which restricted construction to nighttime on state roads on Long Island and in New York City. Stern wrote an autobiography, *Private Parts*, which became the basis for a movie of the same name in 1997. Another book, *Miss America*, was published, concentrating on the inner workings of the show. Both books reached the top of the bestseller list. After the World Trade Center attacks of September 11, 2001, Stern continued live broadcasts in a subdued tone and won praise from many listeners. In February 2004, Stern was indefinitely suspended by Clear Channel Communications, his syndicator, in six markets, supposedly because of his sex-charged conversation with an on-air guest. Fed up with constantly butting heads with the FCC and feeling unsupported by his corporate parent, Stern signed a five-year, \$500-million deal with Sirius Satellite Radio, with broadcasts beginning in January 2006. The arrange-

ment, in which Stern can be as uninhibited as he wants because he is not using public airways, relied on the potential for Stern to increase the Sirius subscribers from 1 million to 8 million. Sirius devoted two round-the-clock channels for Stern's show and other material he developed.

[Stewart Kampel (2nd ed.)]

STERN, IRMA (1894–1966), South African painter. Irma Stern was born of a German family in Schweizer-Renecke, Transvaal, but was taken to Europe as a girl. She studied in Vienna and Berlin. Back in South Africa after World War I, she shocked the public with her bold palette and expressionist method, which were regarded as aggressively modern. Within a few years, however, she came to be recognized for the vital qualities of her work and her paintings were bought for many public and private collections. She used exuberant harmonies and heavy draftsmanship. Sometimes her still lifes and flower pieces tended to grossness, but more often her compositions were relieved by a vein of tenderness and, especially in her watercolors, by poetry and simplicity of approach. She portrayed colored, Malay, and Indian types, and traveled to the Congo and Zanzibar, bringing back many African and Arab studies. She exhibited in Johannesburg and Cape Town and in Europe. In 1971 the University of Cape Town established an Irma Stern Museum to exhibit her work.

[Lewis Sowden]

STERN, ISAAC (1920–2001), U.S. violinist. Born in Kremenchuk, Ukraine, the following year he was taken to San Francisco, where his mother worked as pianist and teacher. He took up the violin at the age of eight. Following his recital debut (1935) Stern was soloist with the San Francisco Orchestra under Pierre *Monteux (1936). During the years 1943–4 he played for Allied troops. In America he acquired a reputation, which became worldwide after World War II. Stern made his European debut in 1948 under Munch and thereafter he toured Europe regularly (except Germany, where he consistently refused to appear). His work with the cellist Pablo Casals at the Prades Festivals was important in his development. During the Cold War he toured the USSR. Stern had very strong ties with the State of Israel. He appeared frequently with the Israel Philharmonic Orchestra, most memorably in the concerts on Mount Scopus with Bernstein after the Six-Day War in 1967, and in the 1991 Gulf War, during which he continued his performance while sirens wailed to signal an Iraqi Scud missile attack. Stern founded the Jerusalem Music Center and became president of the America-Israel Cultural Foundation and a sponsor of Israeli artists, such as *Perلمان, *Zukerman, *Fried, and *Mintz. In keeping with his long-standing commitment to working with young musicians, Stern

held a number of chamber music workshops in Israel and at Carnegie Hall over the years. He was always active in chamber music with his piano partner Alexander Zakin and in a trio with *Istomin and *Rose (1961–1984); he performed regularly with Emanuel *Ax, Jaime Laredo and Yo Yo Ma and Yefim *Bronfman. For more than 60 years Stern appeared on the world's most prestigious concert stages. Recognized as one of the great violinists of his generation, he was particularly noted for his warm, rich tone in a repertoire that ranged from the Baroque to the modern. He premiered violin works by Bernstein, Penderecki, *Rochberg, Schuman, and Dutilleux and gave first American performances of works by Bartok and Hindemith. Stern is one of the most recorded musical artists of our time; he recorded all the great concertos, numerous chamber music recitals, and soundtracks for films (such as *Fiddler on the Roof*, 1971). He appeared frequently on television and documentaries. The film of his trip to China, *From Mao to Mozart*, received an Academy Award in 1981. Active in wider fields, he took part in the movement which saved Carnegie Hall in New York from demolition and became president of the Carnegie Hall Corporation. He was also a co-founder of the National Endowment for the Arts in 1964. Stern received many of the nation's and the world's highest honors, among them honors from the U.S., Japanese, Danish and French governments; the Albert Schweitzer Music Award for a life dedicated to music and devoted to humanity; a Fellow of Jerusalem (1986); Israel's Wolf Prize (1987); and the Presidential Medal of Freedom (1992). He received honorary degrees from many institutions, such as Columbia, Harvard, New York University, Oxford, the Hebrew University of Jerusalem, the Juilliard School, and Tel Aviv University. His biography, with Chaim Potok, entitled *My First 79 Years*, was published in 1999.

[Uri (Erich) Toeplitz / Rohan Saxena and Naama Ramot (2nd ed.)]

STERN, JACK (1926–), U.S. Reform rabbi. Stern was born in Cincinnati, Ohio, and received a B.A. at the University of Cincinnati in 1948. In 1952, he was ordained at *Hebrew Union College, which awarded him an honorary D.D. in 1977. After ordination, he became assistant rabbi at Temple Beth El in Great Neck, N.Y. (1952–55), where his then soon-to-be father in law, Jacob *Rudin, was senior rabbi. Next he served as rabbi of Temple Emanu-El in Westfield, N.J. (1955–62), until he was appointed rabbi of Westchester Reform Temple in Scarsdale, N.Y. (1962–91, when he became emeritus). He also lectured in Modern Jewish Thought at the College of New Rochelle, New York, as part of the Jewish Chatauqua Society Lecture-ship program.

Stern was a social activist in both the Jewish and general communities, as a trustee of the Federation of Jewish Philanthropies of Greater New York, president of the Westchester

Board of Rabbis, co-chairman of the Scarsdale Committee for Senior Housing, and a member of the Human Relations Advisory Council in Scarsdale. As a member of the board of the Scarsdale Family Counseling Service, he had a special interest in mental health and participated in a National Institute of Mental Health pilot project on "Religion and Mental Health." He extended his charitable efforts beyond Scarsdale by establishing an ongoing relationship with the poor Jewish elderly in the Bronx, finding clothing and jobs for refugee Vietnamese families, and participating in countrywide interfaith efforts to feed the hungry and shelter the homeless. He ventured forth from the suburbs in the service of his own congregants as well, as one of the pioneering rabbis to bring religious study to them at their places of business (on Wall Street, for example).

In the Reform movement, Stern was chairman of the Task Force on Jewish Ethics of the *Union of American Hebrew Congregations and chaired the *Central Conference of American Rabbis' Committee on Ethics. He also chaired the CCAR Committee on Youth and served on both the Joint CCAR-UAHC Commission on Social Action and the CCAR's executive board. In 1982, he was elected vice president of the CCAR; in 1984, he succeeded Gunther *Plaut as CCAR president. During his tenure in office, Stern worked at what he called "setting up dialogues" – with the goal of bringing together Christians and Jews in order to share Jewish values in interfaith settings, but primarily with his Conservative and Orthodox counterparts at the *Rabbinical Assembly and *Rabbinical Council of America, respectively. While defending Reform Judaism's position on patrilineal descent against vehement opposition from both the Conservative and Orthodox camps, Stern managed to hammer out with his colleagues a historic "Statement of Unity" that was read aloud in congregations affiliated with all three denominations on *Shabbat ha-Gadol. This step forward for the benefit of *Kelal Yisrael* was made possible by drawing a distinction between the "Covenant of Fate" – that all Jews share – and the "Covenant of Faith," about which the movements agreed to disagree.

Also during his presidency, Stern tackled the issue of intermarriage from two new perspectives: he called on the institutions of Reform Judaism to create an environment in which young Jews would consider dating outside the faith unacceptable *a priori*, thus adopting a proactive rather than reactive stance against serious interfaith relationships. Secondly, he prevailed on the *Union of American Hebrew Congregations to issue a statement asking its synagogues not to discriminate against rabbinic candidates who refused to officiate at interfaith weddings as a matter of principle.

Following his term of office, Stern served on the board of governors of HUC-JIR and was alumnus-in-residence at HUC-JIR in Cincinnati. In 1996, he was asked by the CCAR to chair the Committee on Sexual Abuse by Clergy, which recommended procedures and sanctions that were adopted by all the institutions of the Reform movement. He also served as a trustee of Mazon, a Jewish response to hunger.

[Bezalel Gordon (2nd ed.)]

STERN, JACQUES (1881–1949), French politician. Born in Paris, Stern became private secretary to Leon Bourgeois when the latter was minister of foreign affairs and was elected to the National Assembly in 1914. He established himself as an authority on financial affairs and devised a plan for a supranational organization to solve the problem of reparations and inter-allied debts after World War I. His scheme was frustrated largely because of the frequent change of government in France. Stern held office in several French governments as minister for the merchant marine (1930 and 1933) and minister for the colonies (1935–39). He immigrated to the United States in 1942 where he published *Les Colonies françaises, passé et avenir* (1943). He later committed suicide.

[Shulamith Catane]

STERN, JOSEPH (1803–1858), Hungarian rabbi. Stern was the son-in-law of Menahem *Stern. He studied with Ḥayyim of Kosov in the home of his father Menahem Mendel of Kosov. Stern claimed that he had studied the Shulḥan Arukh, *Yoreh De'ah*, 140 times and the other sections of the Shulḥan Arukh 111 times. He was ordained rabbi by the scholars Abraham David Wahrmann, rabbi of Buchach, and Nathan Nata Mueler, rabbi of Podgaytsy, and was first appointed *rosh bet din* (“head of the *bet din*”) and then *av bet din* of Sighet. A bitter quarrel broke out in Sighet, as some of the community wanted to appoint in his stead Eleazar Nissin Teitelbaum, son of Moses Teitelbaum. Stern, who hated contention and strife, wanted to divide the rabbinic post, with Teitelbaum as rabbi and himself as head of the *bet din*. Nevertheless, this did not stop the dispute. Troublemakers accused Stern of attacking the government in his sermons, and he was imprisoned. Nearly all the inhabitants of the town condemned this step, and the government authorities were also convinced of his complete innocence. On the third day of his imprisonment the district officer, together with high government officials, entered the prison and asked forgiveness of the rabbi for the unpleasantness caused him and assured him that the transgressors would be severely punished. After six years of dissension and quarreling Teitelbaum left the town. The only one who supported Stern during difficult times was Jekuthiel Asher Zalman Ansel Zusmir, rabbi of Styria. Of Stern’s writings only his introduction to his father-in-law’s *Derekh Emunah* (vol. 1, 1856) and one responsum (no. 50) in the *She’elot u-Teshuvot* (1882, 48a–49a) of Zusmir are known.

[Naphtali Ben-Menahem]

STERN, JOSEPH ZECHARIAH (1831–1903), Lithuanian rabbi and talmudist. Stern was born in Neustadt-Shirwint

(Woldislovava) in the Suwalki district of Russia to a family which had produced many generations of rabbis. He married the daughter of Mordecai Gimpel *Jaffe and at the age of 20 was appointed rabbi of Jasenovko, Grodno district, where he remained for ten years. He was subsequently appointed rabbi of Shavli, Lithuania, which post he retained until his death. With his phenomenal memory, he mastered ancient and modern Hebrew literature and also interested himself in various branches of Jewish and general knowledge. He published articles on *halakhah* and topical matters (mainly in *Ha-Levanon*), some of them polemics against Moses Leib *Lilienblum who advocated religious reform (1869–70). The poet Judah Leib *Gordon, during his stay in Shavli as a teacher, came to know Stern and regarded him as a symbol of religious fanaticism and inflexibility, portraying him in his poem *Kozo shel Yod* (in the character Vafsi Hakuzari – a name made by a transposition of the letters of Joseph Zechariah) as a fanatical rabbi with “the soul of a Tatar.” This assessment of Stern was severely criticized by those who knew him. Many claimed that he was indeed one of the lenient rabbis, even though he was of a resolute mind and a nonconformist. He displayed a positive attitude toward the Ḥibbat Zion movement and settlement in Erez Israel, but it was expressed only in his letters and writings, and not in actual activity. He wrote responsa and corresponded on halakhic topics with rabbis in many countries.

He was the author of *Zekher Yehosef* (1860), novellae on the Talmud; *Zekher Yehosef* (1899–1902), responsa on the Shulḥan Arukh in four parts; commentaries on the five scrolls (Song of Songs, 1875; Ruth, Lamentations, Ecclesiastes, and Esther, 1876); the Passover *Haggadah* (1898); and *Tahalukhot ha-Aggadot* (1902), on the *aggadah* (appended to *Zekher Yehosef*, pt. 4).

[Benjamin Jaffe]

STERN, JULIUS (1820–1883), conductor and teacher. Born in Breslau, Stern founded the Stern’scher Gesangverein in 1847, and conducted it until 1874. The choir’s performance of Mendelssohn’s *Elijah* in 1847 established his reputation as a conductor. In 1850 he founded with Adolf Bernhard *Marx and Theodor Kullak the Berlin Conservatory, and was its sole director from 1856. It became one of the main centers of musical education in Germany. In 1869, he conducted the Berlin Symphony Orchestra and in 1873–75 he led the Reichshalle concerts. Stern composed an opera and works for voice, piano, and strings.

STERN, JULIUS DAVID (1886–1971), U.S. newspaper publisher. Stern, who was born in Philadelphia, worked as a reporter on several newspapers during 1908–10, and in 1911–12 was general manager of the Providence *News*. Stern purchased the New Brunswick, New Jersey, *Times* in 1912 and acted as its

president until 1914; he then bought the Springfield, Illinois, *News and Record* and served as publisher of both from 1915 to 1919, when he bought the Camden, New Jersey, *Evening Courier*. His fast-paced, honest *Memoirs of a Maverick Publisher* (1962) begins with his purchase of the Camden *Morning Post* in 1926, to which he added the Philadelphia *Record* in 1928. Purchasing the New York *Post* in 1933, when it was losing \$4,000 a day, Stern determined to make it the most liberal New York newspaper. He installed Ernest Gruening as its editor, and then Henry Saylor, a long-time associate. Using puzzle competitions and low-priced book offers as well as more conventional features, he restored the paper's circulation before selling it in 1939. An advocate of crusading liberal journalism throughout his newspaper career, Stern supported Franklin D. Roosevelt before Roosevelt's first Democratic presidential nomination in 1932, and in 1940 and 1944 he produced a newspaper for the Democratic National Committee. Stern served as general chairman of the Publishers and Advertisers Division of the United Palestine Appeal in 1936, which raised \$1,500,000. In his novel *Eidolon: A Philosophical Phantasy Built on a Syllogism* (1952), Stern pursued the theme of the compatibility of science and religion as paths to truth.

STERN, KURT GUNTER (1904–1956), U.S. biochemist. Born in Tilsit, Germany, Stern worked at the Rockefeller Institute, New York, at the Virchow Hospital, Berlin, and at the Courtauld Institute of Biochemistry, London, finally immigrating to the U.S. in 1935. He was at Yale University School of Medicine (1935–42), and from 1944 professor of biochemistry at the Brooklyn Polytechnic Institute. He also served with the Marine Biological Laboratory of Woods Hole from 1938. His research fields included the structure of genes, techniques of ultracentrifugation, and electrophoresis. He co-authored *Allgemeine Chemie der Enzyme* (1932) and *Biological Oxidation* (1939). He was chairman of the chemists' division of the United Jewish Appeal.

[Samuel Aaron Miller]

STERN, LEONARD (1938–), U.S. entrepreneur. Born in New York City, Stern graduated from New York University. His initial wealth was inherited from his father, Max Stern, vice chairman of the board of trustees of Yeshiva University, for whom its Stern College for Women was named. Max had emigrated from Weimar Germany to the United States in the 1920s, where he developed the family business, Hartz Mountain, the pet food supplier. After Leonard graduated from college in 1957, he bought out his brother's and sister's share of the family business. By the early 1960s he exercised absolute control of Hartz Mountain. Using questionable techniques that were later the subject of antitrust lawsuits, Hartz captured the pet supply market that catered to dog, cat, and bird owners. Stern broadened Hartz's distribution channels from

variety stores into more than 30,000 supermarkets and mass merchandisers. Under his leadership, the Hartz trademark became the most widely known pet supply brand in the United States. By 1984 Hartz controlled 75 to 90 percent of the U.S. market for most U.S. pet supply goods. Its pet supply business was estimated to be worth \$400 million and was earning \$40 million in annual profits. But there were image problems. Over 20 years Hartz Mountain was the subject of more than a dozen antitrust suits and of investigation by the Federal Trade Commission and the Justice Department. Officials of the company pleaded guilty in March 1984 to a variety of white-collar crimes. In 1979 Hartz Mountain agreed to pay \$42 million to A.H. Robins Company, which had accused Hartz Mountain of bribery, perjury, and antitrust violations such as strong-arming distributors and offering stores special deals to sell only Hartz Mountain products.

In 1966 Stern began a major diversification of his business interests by going into active real estate development. By the early years of the 21st century it had become one of the largest privately held real estate companies in the United States. Stern started the real estate operations by purchasing land in New Jersey's Meadowlands near New York City for \$20,000 an acre. By 1987 Meadowlands real estate was selling for \$500,000 an acre. The value of Stern's property there jumped from \$10 million to over \$1 billion by the late 1980s. Among the companies that moved their corporate offices from Manhattan to his Meadowlands commercial properties were Equitable Life Assurance Society, Paine Webber, Panasonic, and ITT. He completed a 24-story luxury office tower in Manhattan in 1987 and located the corporate offices there.

From 1986 through 1999, Stern successfully built Stern Publishing into the leading publisher of alternative weekly newspapers, with a total circulation of more than 900,000. Stern published *The Village Voice* in New York, *L.A. Weekly*, the *Seattle Weekly*, the *Cleveland Free Press*, and *City Pages* in Minneapolis. He sold his publishing interests in March 2000.

Over the years Stern built and sold numerous other businesses, including SM/Cork, the largest nonfoods service distributor in the United Kingdom, Harmon Homes, which published 180 free circulation local *Homes* magazines, and the Carpet Magic Company, which manufactured and serviced carpet cleaning machine rental centers in 20,000 retail stores.

In December 2000, in order to concentrate on the management of his growing real estate and financial interests, Stern sold the Hartz Mountain Pet Company, thus ending the family's 76 years of ownership. In recognition of a \$30 million donation and his many years as a university trustee, NYU renamed its graduate and undergraduate schools of business the Leonard N. Stern School of Business.

[Stewart Kampel (2nd ed.)]

STERN, LINA SOLOMONOVNA (1878–1968), Russian physiologist and biologist. Born in Lithuania, Lina Stern

qualified in Geneva and was later appointed professor of biochemistry at that university. In 1925 she was appointed professor of physiology at the Second Medical Institute of Moscow University and later chief professor and director at the Physiological Scientific Research Institute. In 1932 she was elected a member of the German Academy of Natural Sciences and in 1939 became the first woman to be admitted to the USSR Academy of Sciences. She was the recipient of the Stalin Prize and several Orders of Merit. During the 1948–49 purges in the Soviet Union she was accused of “rootless cosmopolitanism” and removed from her positions, but after the death of Stalin in 1953 was rehabilitated, with all her previous honors restored. Lina Stern made significant contributions to the study of the physiology of the central nervous system, the problems of sleep, the endocrine system, catalase, oxidation ferments, and related subjects. She investigated the hemato-encephalic barrier, described the role of the carotid plexus in the brain, the exchange of blood in the plexus and the liquid of the rachis. She published papers in German and Russian, among them “*Die Katalase*” (with F. Battelli, 1910); “*Ueber den Mechanismus der Oxydationsvorgaenge im Tierorganismus*” (1944); and others.

[Suessmann Muntner]

STERN, LOUIS (1904–1972), U.S. businessman and communal leader. Stern, born in Newark, New Jersey, was a partner in the New York stock brokerage firm of Stern and Byck. He was active in the Jewish community of South Orange, New Jersey. On a national level he was president of the *Council of Jewish Federations and Welfare Funds (CJFWF, 1962–64) and the Jewish Community Council of Essex County (1952–55), becoming president of the *National Jewish Welfare Board (JWB) in 1965 and chairman of the CJFWF Overseas Services Committee in 1971. Vice president of the Bureau for Careers in Jewish Service, he was a member of the Board of Governors of the American Jewish Committee and chairman of its Task Force on the Future of the Jewish Community. He was also a member of the Rockefeller Foundation Commission to Study Voluntary Health and Welfare Agencies.

STERN, MALCOLM HENRY (1915–1984), U.S. Reform rabbi, historian, genealogist. Stern, who has been called “the father of Jewish genealogy in America,” was born in Philadelphia, Pennsylvania. He received his B.A. from the University of Pennsylvania in 1935, and was ordained at *Hebrew Union College in 1941. In 1957, he earned his D.H.L. from HUC-JIR, which also awarded him an honorary D.D. in 1966. He began his rabbinic career as assistant rabbi at Reform Congregation Keneseth Israel in Philadelphia (1941–47), interrupted by three years of service as a chaplain in the U.S. Army Air Corps during World War II (1943–46), including more than a year in hospital recovering from a near fatal plane crash in North Africa. In 1947, Stern was appointed rabbi of Congregation Ohev Sholom in Norfolk, Virginia, where he remained for 17 years.

His activity on behalf of civil rights and the Jewish community earned him the 1964 *B’nai B’rith Man of the Year Award in Norfolk. In 1964, he became the unanimous choice of his colleagues in the *Central Conference of American Rabbis to create their placement office and served as the first director of rabbinic placement for Reform Judaism, a position he held until his retirement in 1980. He also chaired CCAR committees that published three hymnals for Reform Judaism: *Union Songster* (1960); *Songs and Hymns for Gates of Prayer* (1977) and *Shaarei Shirah: Gates of Song* (1987).

In 1981, Stern joined the faculty of the New York campus of Hebrew Union College-Jewish Institute of Religion, initially as counselor for student field work and subsequently as adjunct professor of American Jewish History. There he continued his research, begun in 1950, as genealogist for the American Jewish Archives and the American Historical Society. He was a founding member and president emeritus of the Jewish Genealogist Society, the first organization of its kind. He was also the first and only Jewish member elected a Fellow of the American Society of Genealogists, eventually rising to become that organization’s president as well. In addition, he was a Fellow of the National Genealogical Society, and a board member and vice president of the Federation of Genealogical Societies. In 1978, he was appointed Genealogical Representative on the U.S. National Archives Advisory Council, where he served until the year of his death. In 1980, he organized the Genealogical Coordinating Committee, comprising the nation’s major genealogical organizations; under their auspices, he established the National Archives Gift Fund, seeking \$1.00 per year per genealogist to create finding aids for genealogical research at the National Archives and its regional branches. He was also president of the Jewish Historical Society of New York, and served on the Board of Trustees of the American Jewish Historical Society.

Stern compiled the pioneering volume *American Families of Jewish Descent* (1960), an eight-pound tome containing 26,000 names researched over the course of 10 years of labor. It was the first genealogical survey of Jewish families who settled in the United States between 1654 and 1840, and was lauded as an invaluable research tool in the fields of American and Jewish history. Many American Protestants and Catholics first learned of Jewish roots and branches in their family trees from Stern’s data, which served as an important source for Stephen Birmingham’s best-selling novel, *The Grandee*. For the United States Bicentennial, the American Archives and American Jewish Historical Society published a revised and enlarged edition, entitled *First American Jewish Families: 600 Genealogies, 1654–1977*. The latest updated third edition, *First American Jewish Families* (1991), contains 50,000 family trees of every Jewish family established in North America by 1840, traced to the present. Stern became such a popular lecturer at genealogical conferences that his speaking engagements were booked as far as 12 years in advance.

In addition to the three celebrated editions of his magnum opus, Stern contributed numerous articles to academic

journals and co-authored two books: *American Airlines' Guide to Jewish History in the Caribbean* (with Bernard Postal) and *Life Begins at 40* (1980).

[Bezalel Gordon (2nd ed.)]

STERN, MAX (1898–1982), U.S. businessman and philanthropist. Stern, who was born in Fulda, Germany, went to the U.S. in 1926. In 1932 he became president of the Hartz Mountain Products Corporation, which subsequently became one of the largest pet food suppliers in the U.S. Extremely active in Jewish affairs and a major supporter of Orthodox institutions, Stern endowed the Stern College for Women of Yeshiva University (1954), was vice chairman of Yeshiva University, and was a founder and member of the board of governors of the University's Albert Einstein College of Medicine. He was president of the Jewish Center in New York and chairman of the International Committee of Shaarei Zedek Hospital. He was also a member of the board of directors of the American Fund for Israel Institutions, and chairman of the board of directors of the Union of Orthodox Congregations of America.

STERN, MAX EMANUEL (Mendel; 1811–1873), Hebrew publisher and writer. Born in Pressburg, he studied in a yeshivah and began teaching at the age of 14. In 1833 he went to Vienna and worked as a proofreader at a printing press; from 1838 he was director of its Hebrew division. He was editor and publisher of *Kokhevei Yizhak* (36 vols., 1845–69), a Hebrew periodical which included poetry, prose, scholarly articles, and translations. He also issued old Hebrew texts with German translations.

[Getzel Kressel]

STERN, MENAHEM (d. 1834), Hungarian rabbi. Stern was born in a small village near Sziget (Sighet). Among his teachers were Moses Leib of Sasov, the *Maggid* of Kuzhnitz (Kozienice), and Menahem Mendel of Kosov, and he was ordained rabbi by Meshullam Igra of Tismanitz. Stern served as rabbi of Kalush, Galicia, and then, from 1802, as rabbi and *rosh bet din* ("head of the *bet din*") of Sziget. On the death of Judah ha-Kohen *Heller, author of the *Kunteres ha-Sefekot*, he was appointed *av bet din* of Sziget in 1819, a post in which he served until his death. He was most concerned at the lack of religious knowledge and observance in the Maramures region, and he traveled about the outlying villages and saw simple Jews, farm workers who had forgotten the Torah and were becoming indistinguishable from their Walachian and Ruthenian neighbors. He visited the villages once or twice a month, gathering the inhabitants together and giving them instruction. He established synagogues and ritual baths and arranged **eruvim* in every village of Maramures. He used to say: "Maramures is my garden; I planted it." Stern was the author of *Derekh Emunah* (1856–60), on the Torah and the festivals. He also wrote a book

on the four parts of the Shulhan Arukh, as well as one on the Psalms, but these were apparently lost in the Holocaust.

[Naphtali Ben-Menahem]

STERN, MENAHEM (1925–1989), historian. Born in Poland, Stern immigrated to Israel in 1938. Stern's specialization was the period of the Second Commonwealth, and Greek and Roman texts dealing with Jews and Judaism. His main publications are *Greek and Latin Authors on Judaism and Jews from Herodotus to Plutarch*, (3 vols. 1974–1984); *Studies in Jewish History. The Second Temple Period* (Hebrew), ed. by M. Amit, I. Gafni, and M.D. Herr (1991); *Hasmonean Judaea in the Hellenistic World: Chapters in Political History* (Hebrew), ed. by D.R. Schwartz (1995) (published posthumously). Stern was awarded the Israel Prize in 1977 for the history of Erez Israel and the Jewish people. While walking on his way to the National Library in Jerusalem, he was murdered by a terrorist on June 22, 1989.

[Emmanuelle Main (2nd ed.)]

STERN, MORITZ (1864–1939), German rabbi and historian. Stern, who was born in Steinbach, Germany, was rabbi at Kiel (1891–98), head of the Jewish secondary school in Fuerth (Bavaria) until 1899, and of a religious school in Berlin until 1905, when he was appointed librarian of the *Berlin Jewish Community Library. Under him, this library developed into one of the most important institutions of its kind in Europe with over 70,000 volumes. Stern also acted as curator of the art collection of the Berlin community from its inception in 1917 until 1930, and organized in 1929 the Moses Mendelssohn bicentenary exhibition.

Stern's main interests in scholarship were his researches into the history of German Jews in the Middle Ages, the blood libel, and communal, family, and individual histories. He compiled the "Bibliographie der Schriften A. Geigers," in Ludwig Geiger's *Abraham Geiger* (1910).

BIBLIOGRAPHY: Shunami, *Bibl.*, nos. 2271–72, 3549.

STERN, MOSHE (1935–). Born in Budapest, the son of Israel Stern, who was chief cantor, Stern immigrated to Israel in 1950. In 1955 he was appointed *hazzan* to the chief synagogue in Rehovot, and in 1958 to the *Hechal Shlomo Synagogue in Jerusalem. From 1963 to 1968 he was chief cantor of the Great Synagogue in Johannesburg, and from 1968 to 1977 of Beth-El Synagogue in Boro Park, New York. In 1977 he returned to Israel. Subsequently the High Holidays saw Stern *daven* for more than a decade at Club Hebraica in Sao Paulo, Brazil, while the rest of the holidays would often find him presiding at the pulpit of the Great Synagogue on Allenby Street in Tel Aviv. Stern was regarded as one of the greatest cantors and extemporizers of our time and was constantly touring the Jewish world giving concerts of Jewish liturgical music.

He made many recordings, often of his own compositions, which though traditional in nature are always memorable and showstoppers.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

STERN, NOAH (1912–1960), Hebrew poet. Born in Jonava, Lithuania, he moved to the U.S. when he was 17. In 1935 he settled in Palestine where he worked as a news translator for **Davar* and as a teacher in a Tel Aviv high school. During World War II he served for four years in the Jewish Brigade. A growing mental depression, which was aggravated by the Holocaust, appears to have prevented him from striking roots in postwar Israel. His few poems, published in various periodicals, aroused little attention, though his translation of T.S. Eliot's *The Waste Land* (*Erez ha-Shemamah*, 1940), was lauded by many critics. He served a prison term for attempted manslaughter, and in 1960 he committed suicide. His poems, *Bein Arfillim* ("In the Haze," Tel Aviv, 1966), a sheaf of prose sketches, and literary reviews were published posthumously. In his early verse, along with his attempts at more immediate and more intense expression, much is awkward, obsolescent, and graceless. In the poems written under the impact of his war experiences, sensitivity gives way to solemn rhetoric verging on the banal. The more personal imagery – recurring metaphors of decay and disease – sometimes appears as conventional trappings rather than a genuine expression of an immediate experience. But it would be unfair to measure Stern's poetry solely by the poem as a whole. The single phrase, the concise cluster of images that flare suddenly from the half-extinguished ashes are his most effective skills. It is here that the strange, unexpected epithet – at times, undoubtedly, a corollary of his unwieldy language – evokes a vital, highly suggestive presence. Perhaps his most impressive poems are those which, like *Mikhtav Beinayim* ("An Interim Letter," 1942), take to task the realities of Erez Israel as they existed for the immigrant of the 1930s, with a keener awareness of conflict and contradiction and in a manner more outspoken and unadorned than that of many of his confreres who enjoyed wider popularity at the time. Here his poetic shortcomings are more than offset by the balance between the pungent statement and the resonant image. With the publication in 1966 of his collected work, interest in Stern greatly revived. A collection of poems, *Egrof ha-Goral*, appeared in 2002.

[Natan Zach]

STERN, OTTO (1888–1969), physicist and Nobel prizewinner. Born in Sorau, Stern worked with *Einstein in Prague and Zurich. From 1915 to 1921 he lectured in theoretical physics at the universities of Frankfurt and Rostock, and in 1923 was

appointed professor of physical chemistry at Hamburg. This was his most fruitful period. Stern succeeded in making the molecular beam method a sufficiently sensitive tool for measuring nuclear magnetic moments. He provided proof that the movements of atoms and molecules could be represented by the propagation of de Broglie waves. His work confirmed Planck's quantum theory and the dual nature of matter. In 1933, at the first sign of Nazi interference in the affairs of his department, Stern left Germany for the U.S., and the Buhl Foundation built him a laboratory at the Carnegie Institute of Technology in Pittsburgh, Pennsylvania. There, with I. Estermann, a former colleague expelled by the Nazis, he carried on research in molecular physics. In 1943 Stern was awarded the Nobel Prize for his research in the development of the molecular beam method of detecting the magnetic moment of protons. From 1945 he lived in Berkeley, California.

BIBLIOGRAPHY: *Mc-Graw-Hill Modern Men of Science* (1966), 446–8.

STERN, PHILIP COHEN (1847–1933), Jamaican lawyer and politician. Stern was born in Kingston and educated at University College, London, becoming a barrister in London in 1869 and in Jamaica in 1870. He was also admitted as a solicitor in Jamaica, where he lived until 1878 and after 1893. In 1883 he founded and edited *Pump Court*, the Temple newspaper and review. Ill health forced him to leave England soon afterward and he returned to Jamaica where he rapidly established a reputation as an outstanding lawyer and was involved in most of the famous legal cases in Jamaica during the next few decades. Stern sat in the Legislative Council from 1895 to 1908. On his retirement from the council he was appointed its clerk (1908–24) and served as registrar of the Supreme Court (1909–10). He was three times mayor of Kingston.

[Bernard Hooker]

STERN, ROBERT A.M. (1939–), U.S. architect. Stern was born in New York City and received his bachelor's degree from Columbia University. He was appointed dean of Yale School of Architecture in 1999. In achieving this position, he returned to the school where he graduated in 1965 with a master's degree. He worked first with architects Richard Meier and John S. Hagemann. From the time of his graduation, Stern emerged as a world-class architect as well as a prolific author of analytical books on earlier forms of architecture, especially the architectural development of New York City, and a fellow of the American Institute of Architects. His commentaries on New York's architecture also include extensive analysis of architectural designs of Manhattan synagogues. Stern suggested, for example, that the classical design of Congregation Shearith Israel on West 19th Street in New York marked a sign of assimilation and dissociation of the local Jewish community from the Moorish style in synagogue design. Stern suggests that Congregation Emanu-El on Fifth Avenue, which uses more of an Italian style, was designed to compete with major cathedrals in the city. In addition to analytical writing, Stern also hosted,

in 1986, a multi-part public television series on architecture entitled "Pride of Place: Building the American Dream."

As with many architects who were schooled in this period, Stern was influenced strongly by Frank Lloyd Wright and the Bauhaus, particularly Le Corbusier. Wright's influence is most striking in the Jewish Center at Princeton University (1993), which echoes aspects of Wright's style as well as the Prairie School of architecture. In 1975, Stern wrote a biography of Philadelphia architect George Howe, famous for his design of the Philadelphia Savings Fund Society Building (1929–32), heralded as the first American skyscraper in the International Style, as well as his association with Louis Kahn and Oscar Stonorov.

Stern has suggested the need for architects to create what he calls "a compelling sense of place." His architectural achievements include the Center for Jewish Life at Princeton University, public libraries in Nashville, Bangor, Miami Beach, Jacksonville, and Columbus, Ga.; he has designed many country houses in his "Shingle-style" which harkened back to early 20th-century houses, American homes with a rambling character. In the mid-1980s, Stern developed an association with the Walt Disney Company, embarking on many projects including the planned community of Celebration in Orlando, Fla. Other educationally oriented buildings include the Brooklyn Law School Building, Darden School of Business at the University of Virginia, the Ohrstrom Library at St. Paul's School in Concord, N.H., and the American Revolution Center at Valley Forge, Penn. In 2004, Stern won the Palladio Award for the John L. Vogelstein '52 Dormitory at the Taft School in Watertown, Conn.

Stern's work has been exhibited extensively in American museums and he was also selected on three occasions (1976, 1980 and 1996) to be included in the Venice Biennale.

[Stephen Feinstein (2nd ed.)]

STERN, SAMUEL MIKLÓS (1920–1969), Orientalist. Stern belonged to the great tradition of Hungarian Jewish Orientalist scholarship. After studies at the Hebrew University and in Oxford, he was employed on the new edition of the *Encyclopaedia of Islam* and in the coin room in the Ashmolean Museum in Oxford before becoming, in 1957, a fellow of All Souls College, Oxford, where he remained for the rest of his life.

Stern's large scholarly output encompassed many areas of Jewish and Islamic scholarship. He wrote on Islamic numismatics and history, on *Fatimid documents, on the so-called *Epistles of the Brethren of Purity*, and on early Islamic philosophy, as well as editing an English translation of Ignaz *Goldziher's *Muhammedanische Studien*, one of the foundation stones of modern Orientalist scholarship. But his prime achievement, accomplished at a very early stage in his career, was the recognition that the mysterious *kharjas*, or endings, to the *muwashshahāt*, a genre of strophic poetry in Arabic (or

in Hebrew) produced in medieval al-Andalus, Islamic *Spain, were occasionally not in Arabic (or Hebrew), but in a form of early Spanish transliterated into Arabic letters. These were in fact among the very earliest witnesses to the character of early Spanish. His interpretation of the very difficult material aroused much controversy (some of it colored by antisemitism), and discussion of details in it continues, but its overall correctness is undisputed. The material contributes greatly to our understanding of medieval Iberian social relations, linguistic behavior, and much else.

Among Stern's other contributions to Jewish scholarship was a study (with A. Altmann) of *Isaac Israeli, a Neoplatonic Philosopher of the Early Tenth Century* (1958).

Kramer (ed.), *The Jewish Discovery of Islam* (1999), 261–71; Bibliography of Stern's writings by J.D. Latham and H.W. Mitchell, in: L.P. Harvey (ed.), S.M. Stern, *Hispano-Arabic Strophic Poetry* (1974), 231–45.

[David J. Wasserstein (2nd ed.)]

STERN, SIGISMUND (1812–1867), German teacher and leader of the Berlin Reform movement. After studying philology in Berlin, in 1835 Stern succeeded I.M. *Jost as headmaster of the Berlin Jewish boys' school. In 1845 he gave a series of lectures on the tasks of Judaism which aroused wide interest and controversy. He wished to bring about a revival of religious life, waking it from its then current lethargy, which he felt was caused by the contradictions and frustrations faced by Jews in the modern world. Following his proposal calling for the erection of a "German-Jewish church," leading classes of Berlin Jewry responded by forming an "Association for Reform in Judaism," in which Stern played a central role. Contending that Judaism must free itself from its national heritage, he initiated radical reforms and the separate organization of the reformers in Berlin. In 1848, after standing unsuccessfully as candidate for that year's National Assembly, Stern accepted the directorship of the Frankfurt on the Main Philanthropic Jewish school. He enlarged the institution, raised its academic standards, and introduced pedagogic (but not religious) innovations, which made him an acknowledged leader of the German methods.

BIBLIOGRAPHY: A. Galliner, *Sigismund Stern* (1930); idem, in: YLBI, 3 (1958), 177–81; W.G. Plaut, *Rise of Reform Judaism* (1963), 288. **ADD. BIBLIOGRAPHY:** M.A. Meyer, *Response to Modernity: A History of the Reform Movement in Judaism* (1988), 125–29.

STERN, STEVE (1947–), U.S. novelist and short-story writer. Stern was born in Memphis and educated at Rhodes College, where he received his B.A., and at the University of Arkansas at Fayetteville, where he received an M.F.A. in creative writing. Among the most gifted writers of his generation, Stern brought an unusual locale to American-Jewish writing: the "Pinch," the once-vibrant East European Jewish community of Memphis. He had become acquainted with the Pinch while working at the Center for Southern Folklore, making

transcriptions of oral histories. He became the director of the “Lox and Grits” project, one that involved preserving the recollections of those who lived in the Pinch.

It was only when he began to write in his mid-twenties that he discerned the echoes of the literature that became important to him. Among the influences on his work are Kafka and Peretz: he calls them “palate-cleansers.” Babel and Malamud are what he terms “compasses” that he refers to when his work “goes awry.”

His work keeps alive the grand traditions of mythographic narrative. In his fiction, Jewish characters find themselves confronting angels, the figure of death, and tales within tales that ensnare the teller and the listener. His writing can be placed in the long tradition of Yiddish folktales and *aggadah* that see our daily life as carried out within a culture’s embroidered rendition of the sacred. His works can also be placed alongside Jewish writers who separated a strict realism from the poetics of the imagination: a choice between how the world empirically appears, as opposed to the possibilities we imagine the world to contain. Among his works are *Isaac and the Undertaker’s Daughter* (1983); *The Moon and Ruben Shein: A Novel* (1984); *Lazar Malkin Enters Heaven: Stories* (1986); *Harry Kaplan’s Adventures Underground* (1991); *A Plague of Dreamers: Three Novellas* (1994), *The Wedding Jester* (1999; National Jewish Book Award Winner), and *The Angel of Forgetfulness* (2005).

[Lewis Fried (2nd ed.)]

STERN, WILLIAM (Louis; 1871–1938), German philosopher and psychologist; grandson of Sigismund *Stern. Stern, who was born and educated in Berlin, was the founder of personalistic psychology and a pioneer in many other fields of psychology. He taught philosophy and psychology at Breslau (1897–1915), before becoming professor of psychology and philosophy at the University of Hamburg and head of the Institute of Psychology (1916). Stern co-edited *Zeitschrift fuer angewandte Psychologie* (1907–33). Expelled by the Nazis, he fled to Holland (1933) and from there went to the U.S. In 1934 he became professor of psychology at Duke University (North Carolina), where he remained until his death. At Breslau, Stern invented an instrument, the Tonvariator, to effect changes in pitch, and studied the perception of change in many sense modalities. His approach foreshadowed the methods of Gestalt psychology. Its importance lay in its opposition to the “constancy hypothesis,” the notion that there has to be a simple one-to-one relationship between stimulus and response. Stern was also interested in the psychology of the courtroom and of the witness stand. Child psychology engaged his attention throughout his life, and formed a basis for his studies in IQ and personalistic psychology. He and his wife, Clara, studied their own and other children by making use of questionnaires and the direct observation technique. This work led to a study of intelligence, and it was in this connection that he improved the method of Binet by introducing the ratio of mental age to chronological age (IQ), as an age-

independent index of intelligence (1912). Stern found that a wealth of influences arrayed themselves in a unified pattern in the developing individual. He called it a *unitas multiplex* (“a whole of many parts”). His convergence theory stressed the convergence of character traits with the totality of environmental influences. His studies of Helen Keller (1910) were an attempt to validate his theories.

Stern divided his energies between the applied work of his institute, famous for its early identification of gifted children, and his studies of the individual as a living, unique whole, capable of goal-directed behavior and experience, a concept intended to weld the multiplicity of psychological functions into a complex unity. It was in connection with this personalistic theory that he rejected his early formulation of the IQ as too narrow, although he defended its heuristic value. Although his ideas were not readily accepted in American psychology and he gained few disciples, his point of view foreshadowed many of the trends which later gained prominence in formulations of psychological theory.

His works include *Die Analogie im volkstuemlichen Denken* (1893); *Psychologie der Veraenderungsauffassung* (1898); *Psychologie der individuellen Differenzen* (1900); *Zur Psychologie der Aussage* (1902); “Helen Kellers Persoenliche Eindruecke” in *Zeitschrift fuer angewandte Psychologie*, 3 (1910), 321–33; *Die psychologischen Methoden der Intelligenzpruefung und deren Anwendung an Schulkindern* (1912); *Person und Sache* (3 vols., 1906, 1918, 1924); *Psychologie der fruehen Kindheit bis zum sechsten Lebensjahre* (1914) transl. as *Psychology of Early Childhood up to the Sixth Year* (1930); *Allgemeine Psychologie auf personalistischer Grundlage* (1935), transl. by H.D. Spoerl as *General Psychology, from the Personalistic Standpoint* (1938). In collaboration with Clara Stern he wrote *Die Kindersprache* (1907) and *Erinnerung, Aussage und Luege in der ersten Kindheit* (1908).

[Helmut E. Adler]

Stern’s wife, CLARA JOSEEPHY (1878–1945), was a child psychologist. She collaborated with her husband on research projects involving the growth and development of their three children. This joint effort resulted in two monographs on the mental and spiritual development of the child from birth through the primary school years. The first, *Die Kindersprache* (1907, 1922³), an investigation from the psychological and linguistic standpoints, traced the development in children from the ability to articulate the first word to that of composing sentences. As source materials, Clara Stern used the diaries recording observations of her own children as well as available scientific literature. The second monograph, *Erinnerung, Aussage und Luege in der ersten Kindheit* (1908, 1931⁴), interpreted children’s statements in psychological and personal terms. Her diaries were the basis of her husband’s *Psychology of Early Childhood up to the Sixth Year* (1928).

STERNBERG, ERICH-WALTER (1898–1974), composer. Sternberg was born in Berlin, where he studied law and also music (with Hugo Leichtentritt and Adolf Aber). His first compositions already incorporated material from East European Jewish folklore (the finale of the First String Quartet was based on Eliakum *Zunser's *Der Parom*, "The Ferry"). After a visit to Erez Israel in 1924, he settled there permanently in 1932 with the first wave of composers trained in Western Europe.

Many of his works had biblical themes: *Joseph and his Brethren*, a suite for string orchestra (1938); *The Twelve Tribes of Israel*, variations for orchestra (1942); *David and Goliath*, a cantata for bass-baritone and chamber orchestra (text by Mathias Claudius, transl. by J. Aḥai); and *Noah's Ark*, a symphony. Others are connected by their themes or texts with liturgical traditions: *Yishtabbah*, for choir, baritone solo, and speaker, to words by Judah Halevi (1945), and *Shema Yisrael*, a symphonic poem. Settings of texts from European literature are more frequent in Sternberg's work than in that of other Jewish composers: a major work is *The Raven* (based on Edgar Allan Poe's poem in the translation by Vladimir Jabotinsky), for baritone and orchestra. Other works of note are a children's opera *Dr. Dolittle* (1932); a suite for his stage music to the Habimah production of Shalom Aleichem's *Amkha* (1935); *The Resurrection of Israel*, for baritone and orchestra; and various vocal, choral, chamber, and orchestral works.

[Bathja Bayer]

STERNBERG, JACOB (1890–1973), Yiddish editor, poet, and dramatist. Born in Lipkany, Moldova (former Bessarabia), Sternberg attended a Russian secondary school in Kamenets-Podolski. In 1908 he began publishing poetry and short stories in the Yiddish press, and in 1911 the Odessa daily *Gut Morgn* printed his translation of H.N. *Bialik's popular poem "Hakh-nisini Tahat Kenafekh" ("Take Me under Your Wings"). In 1914 he settled in Romania and wrote and produced nine short plays and satiric dramatic revues for the Yiddish theater in Bucharest in collaboration with Jacob *Botoshansky (1917–18). He directed the Vilna Troupe during its extended stay there (1924–26), staging plays by I.L. *Peretz, *Sholem Aleichem, Osip *Dymov, and Gogol. Between 1920 and 1930 he also edited several short-lived Yiddish periodicals. In 1935 he collected his lyrics and grotesques in the volume *Shtot in Profil* ("City in Outline"). In 1940 Sternberg moved to Bessarabia but soon fled from the Nazis to Uzbekistan. In 1945 he returned to direct the Yiddish theater of Kishinev, capital of the Soviet Moldavian Republic. Sternberg was a member of the *Jewish Anti-Fascist Committee in Moscow, and was thus arrested in

1948 and spent five years in a Siberian labor camp. His reputation was rehabilitated after the death of Stalin, and a collection of his poems was published in 1959 in Russian translation. After 1961 his Yiddish essays and critical articles were frequently printed in *Sovetish Heymland*, of whose editorial board he was a member. A volume of his collected poetry *In Krayz fun Yorn* ("In the Circle of the Years") appeared in Bucharest (1970), and his collected essays in Tel Aviv (1987); a selection of his lyrics in Hebrew translation appeared in 1967.

[Sol Liptzin]

STERNBERG, JOSEF VON (1894–1969), film director. Von Sternberg, born in Vienna (though the "von" was a Hollywood addition), was one of the best-known film directors of the 1920s and 1930s. He used the camera as it had not been used before, capturing the play of light and the symbolism of shadow. Out of his struggle against the commercialism of the major studios came films of distinction and influence. He first drew attention with *The Salvation Hunters* (1925), a realistic presentation of the lower depths of American life. For Paramount studios he made the first gangster film, *Underworld*, in 1927. In 1930 he went to Germany to direct the Ufa company's first talking picture, *The Blue Angel*. He cast the unknown Marlene Dietrich in the leading role and the film became a part of cinema history. There followed six more films with Dietrich in Hollywood. During World War II, he made films for the Office of War Information. Von Sternberg amassed a noteworthy collection of 20th-century art. He published his autobiography, *Fun in a Chinese Laundry*, in 1965.

BIBLIOGRAPHY: H.G. Weinberg, *Josef von Sternberg* (Eng., 1967); G. Castello, in: *Encyclopedia Dello Spettacolo*, 9 (1962), 356–60, incl. bibl.

[Stewart Kampel]

STERNBERG, KURT (1885–1942), German philosopher. He was born in Berlin and taught there at the Lessing Hochschule. A rigorous neo-Kantian advocating a faithful return to Kant, he was involved in the neo-Kantian discussions over the relationship between *Naturwissenschaften* and *Kulturwissenschaften* and wrote on the nature of historical studies, *Zur Logik der Geschichtswissenschaft* (1914). He criticized Spengler's pessimism in his *Idealismus und Kultur* (1923). Other writings deal with Hauptmann, Heine, and Rathenau. His last books treat philosophical problems in the Bible. Among his main works are *Beitraege zur Interpretation der kritischen Ethik* (1912), *Neukantische Aufgaben* (1931), and *Die Geburt des Etwas aus dem Nichts* (1932). He was murdered in Auschwitz.

[Richard H. Popkin]

STERNBERG, LEV YAKOVLEVICH (1861–1927), Russian anthropologist, born in Zhitomir. He was sentenced in 1886

to ten years' exile in Sakhalin as a member of the Narodnaya Volya (Populist Party). Like his friends V.G. *Bogoraz and V. *Jochelson, Sternberg studied ethnography and resolved to devote himself to this subject. He became an authority on the culture of the Gilyaks of northeast Siberia, and later he and his two friends participated in the great Jessup North Pacific Expedition headed by Franz *Boas, in which he was responsible for investigation of the Gilyak culture. After his return from exile (1897), Sternberg was appointed ethnographer at the St. Petersburg Museum of Anthropology and Ethnography and wrote a number of papers on the customs and languages of the east Siberian peoples. After the Russian Revolution Sternberg was appointed professor of ethnography at the University of Leningrad and of anthropology at the Geographical Institute, and with Bogoraz helped to develop these academic disciplines in the USSR. An energetic Marxist, he carried forward certain doctrines in that tradition, for example, primitive communism, and its familial correlate, group marriage, according to the theory of Engels; he polemicized on behalf of these views against the doctrines of Schmidt, *Freud, and *Lévy-Bruhl. Yet his ethnological theory was eclectic and "idealistic," stressing the creativity of the human spirit. As a result, his Marxist orthodoxy was impugned but he was permitted to continue his teaching. He was a member of the Academy of Science in St. Petersburg (later Leningrad), and with Bogoraz assisted in the cultural development of the Siberian peoples, utilizing his ethnological knowledge to foster the political modernization of indigenous peoples in transition. Sternberg took an active part in Jewish social and cultural life. He was one of the founders of the "Popular Jewish Group" (the *Vinawer-*Sliosberg group) and edited its periodicals, participated in the Jewish Historical Ethnological Society, and contributed to Jewish periodicals, such as *Yevreyskaya Starina*, which he edited and where he published papers on the anthropology and social psychology of Jews. Sternberg was one of the group of Jewish scholars in Leningrad who endeavored to continue research on Jewish subjects under the Soviet regime.

[Ephraim Fischhoff]

STERNBERG, SARAH FRANKEL (1838–1937), daughter of ḥasidic rabbi Joshua Heschel Teomim Frankel and wife of the *zaddik* Hayyim Samuel Sternberg of Chenciny, a disciple of the famed Seer of Lublin. Sternberg was one of the few women who attained any stature in the ḥasidic courts of the 19th century. After her husband's death, Sarah Sternberg functioned successfully as a *rebbe* in Chenciny and was highly regarded for her piety and asceticism. She fasted regularly and avoided meat, except on the Sabbath. She also became well-known for her wise parables, and other famous rabbis consulted her and

requested her blessing. As a charismatic leader, Sternberg was most famous for her apparently miraculous powers. Many women made pilgrimages to see her and left *kvittlach* (written petitionary prayers), a common practice among ḥasidim, who believed that the intervention of a *rebbe* would assure that their request to God was granted. One of Sarah's original letters of blessing has been preserved in a late 20th-century authorized history of the Chencin-Ozherov ḥasidic dynasty; it is affirmed with her personal seal, evidence that suggests she was considered a legitimate *rebbe*. Sarah had many children and a number of her sons and grandsons were well-known *rebbes* and respected scholars. At least one of her daughters, Hannah Brakhah, also participated in the ḥasidic court, along with her husband Elimelekh of Grodzinsk. Hannah remains one of the few ḥasidic women who were active while married. Sarah Frankel Sternberg lived to the age of 99 and was survived by more than 250 grandchildren and great-grandchildren. According to contemporary reports 10,000 people attended her funeral.

Tallan, *The JPS Guide to Jewish Women: 600 B.C.E.–1900 C.E.* (2003).

[Emily Taitz (2nd ed.)]

STERNBERG, SIR SIGMUND (1921–), British businessman, interfaith activist, and patron of Reform Judaism. Born in Budapest, Hungary, Sternberg came to England in 1939 when antisemitic laws made it difficult to receive a higher education in Hungary. After the war he became a leading metal recycler and smelter and was later president of the Metal Trades Industry Association. He also served as chairman, for 15 years, of ISYS Ltd., the computer firm. Sternberg is best known, however, for his remarkable activities on behalf of interfaith work in Britain. He was chairman of the executive of the International Council of Christians and Jews and was one of the founders of the Three Faiths Forum, which includes representatives of Islam. In 1988 Sternberg was awarded the Templeton Prize in Religion for having "advanced the public understanding of God and spirituality." He received numerous international honors and in 1985 became one of the few Jews to be made a papal knight. He was also one of the most important leaders of Reform Jewry in Britain, in 1981 endowing the Sternberg Centre for Judaism, the headquarters of Reform Judaism in the country, and he was president of the Reform Synagogues of Great Britain. He was knighted in 1976.

[William D. Rubinstein (2nd ed.)]

STERNE, HEDDA (1916–), U.S. painter, printmaker, educator. Born Hedda Lindenberg in Bucharest, Romania. Between 1932 and 1934 she studied art history and philosophy at Bucharest University, and then in Vienna and Paris. She affiliated herself with the Surrealists, especially Victor Brauner,

and exhibited in the Paris Salon of Surrealist Independents in 1938. Sterne arrived in the U.S. in 1941. She exhibited at Peggy Guggenheim's Art of This Century Gallery that same year. The artist had her first solo exhibition at the Betty Parsons Gallery in 1943, a show consisting of assemblages recalling totems. Also in 1943, Sterne married cartoonist Saul Steinberg. She is probably most familiar to students of art history as the only woman featured in the famous photograph of the Abstract Expressionists, "The Irascibles" by Nina Leen, published in the January 15, 1951, issue of *Life* magazine. She often signed her work "H. Sterne" to mask her identity as a woman, a strategy necessary when the work of female artists in 1950s New York encountered the risk of being dismissed as "delicate." Sterne adopted many different styles throughout her career, often at the same time: While a painting like *Birds* (1944–45) recalled the simple, evocative shapes of Adolph Gottlieb, a composition titled *Fixtures* of the same year depicts a stylized, but definitively representational interior, complete with radiator. As late as 1997, Sterne returned to a motif she had established in the 1940s, that of a cruciform in *U.S.A.* Sterne also painted portraits throughout her career. She received a Fulbright Fellowship to study in Venice in 1973. Her work has been exhibited at the Art Institute of Chicago, the Corcoran Gallery, the Museum of Modern Art, and the Whitney Museum. A retrospective at the Krannert Art Museum, University of Illinois is scheduled for 2006. Her art is in the collections of the Art Institute, the Carnegie Museum, the National Museum of Women in the Art, and the Whitney Museum, among other institutions. She lives in New York.

[Nancy Buchwald (2nd ed.)]

STERNE, MAURICE (1877–1957), U.S. painter, educator, printmaker, and sculptor. Born in Libau, Latvia, his family moved to Moscow; at the age of 10, the artist immigrated to the United States. In America, he first studied map engraving, then painting and drawing at the National Academy of Design (1894–99) under the tutelage of Thomas Eakins. He also studied at Cooper Union in New York City. After receiving a Mooney Traveling Scholarship from the National Academy, he traveled widely in Europe and Asia from 1904 to 1915, although maintaining a base in New York City. In fact, Sterne became an American citizen in 1904. He first traveled to Paris, absorbing the lessons of Degas, Renoir, and Cezanne, then to Italy, where he studied Mantegna and Piero della Francesca. Sterne next lived in Greece, studying 4th- and 5th-century statuary. In 1916, he traveled to Taos, New Mexico, where he and his wife Mabel Dodge devoted themselves to the study and preservation of American Indian culture. Sterne's images from this time include sensitive portraits of Indians, with great attention to details of dress. Two years later, he returned to Italy. By 1910, he was in Germany, where he ex-

ecuted many commissioned paintings. From 1910 to 1914, he visited Bali, Java, Burma, and India. Work from this time, characterized by a movement away from the lessons of academic painting to a more decorative and spontaneous use of line and form, and brighter palette, reflected Sterne's enchantment with the people and places he encountered here. He was elected president of the Society of American Painters in 1929. In this same year, Sterne won a competition to create a public sculpture in Worcester, Massachusetts. Made of limestone, the Rogers-Kennedy memorial depicts a couple pulling a plow atop a base featuring an array of bas-reliefs which illustrate events in the life of an agricultural community. In 1933 he had a retrospective show at the Museum of Modern Art, the first for an American artist. The critic Lewis Mumford praised Sterne's Balinese paintings as the highlight of the exhibition. Sterne worked in a variety of media: paint, charcoal, etching, and marble, among others. Sterne's subjects included portraits, still-lives, genre-scenes, seascapes, as well as themes borrowed from the Impressionists. The latter include dancehall scenes such as *Entrance of the Ballet*, which appropriates the subject matter, and the economy of light and form characteristic of Degas and Toulouse-Lautrec. Sterne's talents as an artist emerge most forcefully in his depictions of women, whether the quietly luminous marble *Sitting Figure* (1932) or the water, crayon, and charcoal *Study of My Wife*, which captures a figure in a few emotive and economical strokes. Sterne's style underwent a radical change after an illness suffered in 1945, becoming looser, freer, and more colorful. Sterne taught at the California School of Fine Arts (1935–36) and the Art Students League in New York. He divided his time between New York and Provincetown. His work is in the collections of the Metropolitan Museum of Art, the Museum of Fine Arts, Boston, the National Gallery of Art, the Pennsylvania Academy of Fine Art, the San Francisco Museum of Modern Art, the Smithsonian American Art Museum, and the Whitney Museum.

[Nancy Buchwald (2nd ed.)]

STERNE, SIMON (1839–1901), U.S. lawyer and reformer. Sterne, who was born in Philadelphia, was admitted to the bar in Pennsylvania (1859) and New York (1860). He practiced law in New York and concurrently pursued the study and teaching of political economy, which he called the "science of liberty," and helped to introduce a number of practical reforms. On a visit to England in 1865, he encountered some of the leading personalities in social reforms, including John Stuart Mill, John Bright, and Thomas Hare, who were proponents of proportional representation. They encouraged Sterne's energetic espousal of a number of causes, including free trade, proportional representation, improvement in the drafting of legislation, democratizing political party methods and standards, and improving the accountability of railroads to the public,

all of which he supported in his speeches, articles, and organizational activities.

Sterne was most widely known for the achievement of two successful reforms: demolition of the Tweed ring's hold on New York City politics and the regulation of railroads in the public interest through the creation of the Interstate Commerce Commission (ICC), the first U.S. regulatory commission. As the secretary of the Committee of Seventy, which for several years pursued New York City's boss Tweed and the "corrupt judges, venal legislators, and complacent lawyers" who had cooperated to put and retain him in power, Sterne was instrumental in obtaining Tweed's conviction in 1873 for forgery and larceny. Sterne's role in the creation of the ICC began with his drafting a state railroad regulation bill in 1874. He conducted the investigations of the New York State Hepburn Commission into railroad administrative abuses (1879–80), and in 1882 the legislature passed a railroad commission act along the lines of Sterne's draft.

The legislative commission's report became a model for local and national government investigation and regulation of railroads. When the U.S. Senate began preparing legislation for national regulation, Sterne was consulted. He drafted some of the provisions of what was to be the law establishing the Interstate Commerce Commission, and was retained as counsel in some of the commission's most important lawsuits. In his private law practice Sterne was counsel for a number of corporations, railroad companies, and businesses.

STERNHARZ, NATHAN (1780–1845), disciple and companion of Naḥman of *Bratslav, organizer of Bratslav Ḥasidism, and its leader after Naḥman's death. Nathan was born in Neirov and was known as a scholar and talented writer even in his youth. In 1793 he married the daughter of David Zevi, rabbi of Shargorod and a *Mitnagged*. Nathan was drawn to Ḥasidism and visited some of the great Ḥasidim. The decisive event of his life was a meeting with Naḥman of Bratslav in 1802, when the two formed a deep and unique friendship that lasted until Naḥman's death. Nathan soon became Naḥman's most devoted disciple. He spread knowledge about his teacher and expounded his teaching. In fact, Naḥman's personal charisma became integral to the thought and habits of his followers through Nathan's devotion and efforts. Although Nathan became the actual leader of Bratslav Ḥasidim on Naḥman's death in 1810, he refused to assume the official title of ḥasidic rabbi, a gesture which established the special character of Bratslav Ḥasidim who acknowledged Naḥman as their only rabbi. Nathan worked arduously to spread Naḥman's teachings. He guided and extended the movement of Naḥman's followers. He often visited the Bratslav Ḥasidim and sent them numerous letters, thus spreading the rabbi's teaching and encouraging the Ḥasidim who suffered persecutions that culminated in their excommunication in 1835 by Moses Zevi of *Savran. With charm and moderation he refuted the calumnies against the

movement and, at the same time, encouraged the Ḥasidim in their firm belief in the greatness of Naḥman and in the truth of his teachings. Despite violent personal persecution (including denunciation to the authorities and arrest), Nathan not only succeeded in establishing the basic patterns and direction of the movement (e.g., visiting Naḥman's tomb in Uman) but also succeeded in maintaining and even increasing the number of its followers. Nathan transcribed and edited Naḥman's teachings, everyday talks, and stories.

He published, on his own initiative, Naḥman's principal books, *Likkutei Moharan* (Ostrog, 1808), *Sefer ha-Middot* (Mogilev, 1811), and *Sippurei Ma'asiyyot* (Berdichev, 1895). His own literary activity was prolific and varied. He wrote, for example, *Hayyei Moharan* (1875), *Siḥot ha-Ran* (1864), and *Shivḥei ha-Ran* (1864), depicting his teacher's life and greatness. Fulfilling Naḥman's request "to turn his teaching into prayers," he wrote also *Likkutei Tefillah* (Bratslav, 1824–27), a poetic work based on *Likkutei Moharan*. He continued to expound and develop Naḥman's teaching in his great work, *Likkutei Halakhot* (1847–48). Nathan died in Bratslav and was buried in Uman beside his teacher.

[Adin Steinzalts]

STERNHEIM, CARL (1878–1942), German playwright. The son of a banker, Sternheim was born in Leipzig and, after university studies, lived in several German cities. His early writing showed little originality, bearing the imprint of Hauptmann, Wedekind, Wagner, Nietzsche, and George. His creative breakthrough occurred in *Die Hose* (1911), the first in a series of witty and abusively anti-bourgeois comedies, later grouped together in the cycle *Aus dem buergerlichen Heldenleben* with plays such as *Buerger Schippel* (1913) and *Der Snob* (1914). Sternheim admired the feudal aristocracy but showed a distaste for the upper middle class. In attacking the bourgeoisie he was attacking the bourgeois in himself, just as his often vitriolic antisemitic outbursts were a form of self-abuse, as in his essays *Berlin oder Juste Milieu* (1920) and *Tasso oder Die Kunst des Juste Milieu* (1921). Sternheim thus unwittingly played into the hands of Hitler. His comedies are nevertheless remarkable for their immaculate construction and for the terseness of their diction. In his short stories, mostly collected in *Chronik des zwanzigsten Jahrhunderts* (2 vols., 1918), Sternheim allowed linguistic experimentation to get out of hand; this has made his only novel, *Europa* (1920), unreadable. A document of strange interest is Sternheim's autobiography, *Vorkriegseuropa im Gleichnis meines Lebens* (1936). He suffered from a nervous disorder and died in Brussels.

[Wolfgang Paulsen]

STERNSCHUSS, MOSHE (1903–1992), Israeli sculptor and winner of the Dizengoff and Jerusalem prizes for sculpture. Born in Poland, Sternschuss immigrated to Palestine in 1926. He studied at the Bezalel Academy of Art and Design in Jerusalem, and developed as a sculptor. He began as a realist but later evolved towards a semi-abstract stylization of the human form.

STERNSTEIN, JOSEPH PHILIP (1925–), Conservative rabbi and Zionist leader. Sternstein graduated Brooklyn College (1944) and received his law degree from St. John's University and his rabbinic ordination from the Jewish Theological Seminary (1948) and a D.H.L. in 1961.

After serving as a rabbi in Glen Cove, Long Island (1948–50), Dayton, Ohio (1950–61), and New York City (Temple Anshe Chesed, 1964–69), he was appointed rabbi of Temple Beth Sholom of Roslyn Heights, New York. A prominent Zionist, he became a member of the executive of the World Union of General Zionists, and was president of the Zionist Organization of America (ZOA) (1974–78). He was president of the American Zionist Federation and served on the presidium of the World Zionist Council. He was also a national president of the Jewish National Fund. Sternstein wrote extensively on modern Jewish and Zionist affairs and is the author of *Diagnosis and Prognosis* (1956), a study of American Zionism. He also wrote on *The Theology of the Sfat Emet of Rabbi Yehudah Aryeh Leib of Ger (1847–1905)* (1961).

[Mordecai S. Chertoff / Michael Berenbaum (2nd ed.)]

STERN-TAEUBLER, SELMA (1890–1981), German historian. Selma Stern-Taeubler, born in Kippenheim (Baden), was the first girl to attend the Gymnasium in Baden-Baden. She then studied history and languages at the universities of Heidelberg and Munich, graduating in 1913. She specialized at first in general German history, but became interested in the history of German Jewry. In 1919 she was appointed a research fellow at the Akademie fuer die Wissenschaft des Judentums in Berlin at the invitation of its founder and director, the historian Eugen *Taeubler, whom she married in 1927. Her special field was compiling source material on the relationship between the Prussian state and its Jews from 1648 to 1812. Her scholarly publications were based on the premise that Judaism had to be studied in the context of the political and cultural environment.

The first two volumes of her chief work, *Der preussische Staat und die Juden*, were published in 1925, and a third volume followed in 1938, but almost the entire edition was destroyed by the Nazis. *Jud Suess. Ein Beitrag zur deutschen und zur juedischen Geschichte* was published in 1929 (repr. 1973), and many scholarly articles appeared in magazines. In 1934 the Akademie was closed by the Nazis, and in 1941 Selma Stern-Taeubler and her husband immigrated to the United States, settling in Cincinnati. In 1947 she became the first archivist of the American Jewish Archives (at the Hebrew Union College, Cincinnati), a post she held until her retirement in 1957.

In 1960 Selma Stern-Taeubler moved to Basle, Switzerland, where, between 1970 and 1975, she completed the following four volumes of *Der preussische Staat und die Juden*.

During and after her stay in the United States she continued to write important scholarly works, including *The Court Jew; A Contribution to the History of the Period of Absolutism in Central Europe* (1950; repr. 1985) and *Josel von Rosheim, Befehlshaber der Judenschaft im Heiligen Roemischen Reich Deutscher Nation* (1959; Eng. 1965). Her historical novel, *The Spirit Returneth...* (1946; Ger. 1972: *Ihr seid meine Zeugen*), deals with the persecution of the Jews during the time of the Black Death and helped the author to understand the persecutions of her own time.

[Frederick R. Lachman / Archiv Bibliographia Judaica (2nd ed.)]

STETTIN (Szczecin), city in Pomerania, N.W. Poland. Jews are first mentioned there in 1261 in a charter granted by Duke Barnim I which extended *Magdeburg law to the city. In all probability, however, they had been living there for some time. The charter was renewed in 1371 by dukes Casimir IV and Swantibor III. All Jews were expelled from *Pomerania in 1492/93 and they did not return until the 17th century. Jews were occasionally employed at the Prussian mint in Stettin; in 1753 the medalist Jacob Abraham of Strelitz worked there as a die cutter, while at the same time Moses Isaak and Daniel *Itzig supplied the mint with silver. Permanent residence was denied to the Jews throughout the 18th century. The modern community grew up from 1812. In 1818 it numbered 18, including the Hebrew grammarian Hayyim b. Naphtali Coeslin (J.H. Borchard), and by 1840 had increased to 381. The first synagogue was built in 1834/35. The community grew through emigration from Posen (Poznan) and West Prussia, reaching 1,823 in 1871; in 1875 a new synagogue was dedicated; an organ was introduced in 1910. From 1867 the community also had an Orthodox prayer room. During the course of the 19th century, Jewish books were printed in the city. The community maintained a religious school from 1850; the cemetery was opened in 1821. The Jewish population increased to 2,757 in 1910, then declined to 2,703 in 1930 and 2,365 in 1933. The following rabbis officiated in Stettin: W.A. Meisel (1843–59); Abraham Treuenfels (1860–79); Heinemann *Vogelstein (1880–1911); Max *Wiener (1912–26); Max Elk (1926–35); K. Richter (1936–38); and H. Finkelscherer, who served from 1938 until the deportation in 1940; he perished with the other deportees. On the eve of the Nazi accession to power, the community maintained an orphanage and an old-age home, as well as numerous charitable organizations.

During the night of Feb. 11/12, 1940, the Jews of Stettin were deported together with other Pomeranian Jews to Belzyce, Glusk, and Piaski. After the so-called population transfers of a few Jews, the remainder were murdered in Belzyce

on Oct. 28, 1942. Only a very few survived. Following the departure of the last “non-Aryans” (partners of mixed marriages) after World War II, Jews from Poland settled in Stettin, which had become part of Poland. A new community was organized, numbering 1,050 in 1959. In 1962 two Jewish producers’ cooperatives were active, and the community maintained a school and a synagogue. The majority of Jews left after the Six-Day War.

[Bernhard Brillig]

STEUERMAN, ADOLF RODION (1872–1918), Romanian poet and journalist. Born in *Jassy, Steuerman became a physician there, but devoted himself mainly to literature and journalism. He became chief editor of the local newspaper, *Opinia*, and for three years also of *Răsăritul*, a Zionist weekly published in the city. He contributed to many Romanian journals and reviews as well as to almost all the Romanian Jewish periodicals of his day. He became known as one of the wittiest and most ironical social critics in his attacks on the tyrannical regime and his struggle for democracy. As a poet, Steuerman was noted especially for his collections: *Sărăcie* (“Poverty”) and *O toamnă la Paris* (“An Autumn in Paris”), both published in 1897, and *Lirice* (“Lyrics”). Many of these poems deal with the theme of Jewish homelessness in an antisemitic society. In 1915 he collected all his poems on Jewish themes into a volume entitled *Spini* (“Thorns”). As a translator, he was often drawn to Jewish themes, publishing Romanian versions of poems by writers such as *Heine and Judah *Halevi. In World War I, Steuerman served as a medical officer. His experiences and reflections in those years are expressed in the sonnets published posthumously by his friend, the writer Eugen *Relgis, under the title *Frontul roșu* (“The Red Front”, 1920). *Cartea băiatului meu* (“My Son’s Book”, 1924), another product of Steuerman’s war experiences, contains autobiographical notes meant for his son; it contains much interesting material on Jewish life in Jassy during his early years. After his return from the front, Steuerman became increasingly depressed and committed suicide.

[Abraham Feller]

STEUERMANN, EDWARD (1892–1964), pianist and teacher. Born in Lemberg, Poland, Steuermann studied piano with Busoni and theory with Arnold *Schoenberg in Berlin. Later he taught at the Jewish Conservatory in Cracow, Poland. In 1936 he settled in the United States where he taught

at the Philadelphia Conservatory and at the Juilliard School of Music. Steuermann devoted himself to the dissemination of modern music, particularly that of Schoenberg. He gave the first performances of all of Schoenberg’s piano works and chamber works with piano accompaniment, and transcribed his orchestral works for piano.

°**STEUERNAGEL, CARL** (1869–1958), Protestant German Bible critic. Born in Hardegsen, Steuernagel taught Bible at the University of Halle. In 1914 he was appointed professor at Breslau. A prolific writer, he wrote the commentaries on Deuteronomy (1899; 1923²) and Joshua (1899; 1923²) for the *Handkommentar zum Alten Testament* in addition to a general introduction to the Hexateuch (1900), and the volumes of Job (1923), Proverbs (1923), and Esther (1923) for *Die Heilige Schrift des Alten Testaments*. His *Der Rahmen des Deuteronomiums* (1894) and *Die Entstehung des deuteronomischen Gesetzes* (1895, 1901²) are attempts to explain the composition of Deuteronomy as a composite redaction of a number of Deuteronomic strands which are characterized by forms of address and the usages of singular and plural elements of speech. He maintained that Isaiah 40–55 was written at the same time by the same hand, immediately before the Return (538 B.C.E.); that “the Servant of the *Lord” is a personification of the people Israel, a view which later influenced R. Kittel, L. Gautier, T.H. Robinson, O. Eissfeldt, and others; and that Hosea 3 is an account by the prophet of the incident reported in chapter 1 by people from his environment. In the *K. Marti Festschrift* (in: BZAW, 41 (1925), 266–73), he pleaded for the importance of biblical theology as a historical discipline in its own right which complements the historical study of the Hebrew religion.

From 1903 he edited the *Zeitschrift des deutschen Palaestina-Vereins*, and he wrote an introduction to the study of the Bible, Apocrypha, and Pseudepigrapha (*Lehrbuch der Einleitung in das Alte Testament, mit einem Anhang ueber die Apokryphen und Pseudepigraphen*, 1912) which stressed archaeological and textual insight. Besides numerous articles, he produced the following works: *Die Einwanderung der israelitischen Staemme in Kanaan* (1901); *Hebraeische Grammatik* (1903; 1948¹¹); *Methodische Einleitung zum hebraeischen Sprachunterricht* (1905); and *Neue Beitrage zu Colonia Agripinensis* (1916, with R. Schultze).

[Zev Garber]

STEUSS, DAVID (d. 1387 or 1388), head of a family of bankers in Austria. The Steuss were the most important financiers of their time, serving Austrian and foreign rulers, ecclesiastical lords, and noblemen. The grandfather of David, banker of the first Hapsburgs in Austria, moved from Klosterneuburg to Vienna in 1241. David, son of Hendlin, was the banker of Duke Albert II and archdukes Rudolf IV and Albert III, financing their campaigns and the construction of St. Stephen’s

in Vienna. Among other business ventures he lent a considerable sum to the city of Bruenn. Steuss had business relationships with the city of Vienna, heads of the Church, and government officials far from the borders of Austria. He was exempt from all jurisdiction excepting that of the archduke himself. He collected and allocated the contributions levied on the Jews and was able to amass great wealth, but was finally imprisoned in 1382 by Albert III in order to extort an exorbitant sum of money. The business records of the Steuss family with Hebrew marginals have been preserved, and the names of David, his sons Jonah, Jacob, and Hendlin, and other relatives appear frequently in debt registers. David's son-in-law was the celebrated Vienna rabbi *Meir b. Baruch ha-Levi. The archduke's treasurer Bishop John of Brixen characterized David as an honest and wise man. At one time in 1364 he lent money to Bishop John who designated his cathedral as collateral. David's son Jonah died a victim of the Vienna persecutions of 1420 (**Wiener Gesera*) when the Steuss properties were confiscated by the archduke.

[Hugo Knoepfmacher]

STIEGLITZ (18th century), Russian bankers from Waldeck, Germany, where BERNHARD (HIRSCH) became court agent to the Prince of Waldeck in 1767. His sons NICOLAI (1772–1821) and LUDWIG (1778–1843) were baptized and immigrated to St. Petersburg, Russia. There they formed a successful banking house which acquired a virtual monopoly in Russian banking and the *Rothschilds transacted their Russian business through Stieglitz. In 1826 Ludwig Stieglitz, the head of the house, was made a baron. His son, ALEXANDER (d. 1884), was instrumental in establishing the Russian State Bank and served as its first president (1860–66). In 1863 he liquidated his father's bank. A great philanthropist, he founded the School of Arts in St. Petersburg. Members of the Stieglitz family married into the Baltic and Russian nobility, and their St. Petersburg house was a famous social and artistic center.

[Joachim O. Ronall]

STIEGLITZ, ALFRED (1864–1946), U.S. photographer. Stieglitz, who was born in Hoboken, New Jersey, led the way to the emergence of photography as an art form. His contributions to photography were closely matched with his efforts on behalf of modernist painters in their struggle for recognition. In the dual role of craftsman and prophet, Stieglitz took pictures thought to be impossible and gave a rising generation of modernist painters a place to show their work. His photography was hung in nearly every major museum, the first pho-

tographer to be so honored. After Stieglitz's family moved to New York in 1871, he enrolled at the City College of New York at 17 to study engineering. In 1881 he went to Berlin, but soon terminated his engineering studies after he bought his first camera there. He became the first amateur photographer in Germany, and he soon defied tradition. Instead of pictures by daylight, Stieglitz took them at night. He was the first to use a camera in snow or rain, the first to photograph skyscrapers, clouds, and airplanes and was a pioneer in the use of color. He left Europe in 1890 and returned to the United States with a large camera, a tripod, and a small box with a ground glass and bellows and a shutter that cost 50 cents. He made some of his greatest images with this unpretentious equipment. His first major collection traced the development of New York. Two of his most popular pictures were taken in 1892: a horsecar lumbering up Fifth Avenue in a raging blizzard and a driver watering his steaming horses at an old rail terminal. "Winter – Fifth Avenue" and "The Terminal – Street Car Horses" became internationally known. Stieglitz then turned to nature studies of clouds, trees, grass, and woods and branched out to things made by man: houses, barns, autos, planes. He allowed no retouching and no eccentric angle shots. Also, he took no money for his photographs, and later found himself living in poverty. His best photographic work ended in the 1920s.

Stieglitz also ran an art gallery, known as 291, where he showed the works of Cezanne, Matisse, Picasso, Braque, Brancusi, John Marin, and Marsden Hartley. He also launched the careers of Charles Demuth, Arthur Dove, Max Weber, and Georgia O'Keeffe, whom he married in 1924. Under Stieglitz, O'Keeffe's paintings of flowers and simple landscapes, many done at his retreat in Lake George, N.Y., found their way into American collections. A simple photograph of O'Keeffe's hands became a classic. Inside the gallery, Stieglitz took a number of portraits that rhymed the faces of his sitters with the shapes on the walls. His portrait of his daughter, Kitty, with a fuzzy hat on, rhymes with Picasso's "Head of a Woman" just behind her. The gallery was closed in 1917, but in 1929 Stieglitz opened An American Place, which also became an influential gallery. In 1934 *Equivalents* allowed celebrated poets, writers, artists, and leading photographers to contribute their interpretation of Stieglitz both as artist and personality. His brother was the chemist Julius Oscar *Stieglitz.

[Stewart Kampel (2nd ed.)]

STIEGLITZ, JULIUS OSCAR (1867–1937), U.S. organic chemist. Born in Hoboken, New Jersey, Stieglitz was from 1892 professor at the University of Chicago, and from 1915 chairman of its chemistry department. He was attached to the U.S. Public Health Service 1918–31. He published papers on molecular rearrangements, catalysis, the theory of color production, and the application of the electronic theory of valency and wrote *The Elements of Qualitative Chemical Analysis* (2 vols.,

1911) and *Chemistry and Recent Progress in Medicine* (1926), and edited *Chemistry in Medicine* (1928). He was president of the American Chemical Society and of the Institute of Medicine of Chicago.

STIGLITZ, JOSEPH E. (1943–), U.S. economist, professor; joint winner of the 2001 Nobel Prize for economics. Born in Gary, Indiana, to parents Nathaniel and Charlotte, he received a B.A. from Amherst College, and a Ph.D. from Massachusetts Institute of Technology (MIT). Stiglitz began his academic career teaching at such prestigious institutions as Yale, Stanford, Oxford, and Princeton. Stiglitz was an economic adviser to President Clinton from 1992 to 1997, and then spent three years (from 1997 to 2000) as a chief economist and senior vice president at the World Bank. He then taught economics and international and public affairs at Columbia University in New York in the Columbia Business School, the Graduate School of Arts and Sciences department of economics, and the School of International and Public Affairs. In 2000, Stiglitz founded the Initiative for Policy Dialog (IPG), based out of Columbia University. Along with teaching and work with the IPG, Stiglitz was a prolific writer, with a number of books and articles on world and national economics.

Growing up in a middle-class family in industrial Gary, Stiglitz took note of the struggling steel town where plants were laying off hundreds of employees, or closing outright. He writes in his autobiography for the Nobel Prize that “the poverty, the discrimination, the episodic unemployment could not but strike an inquiring youngster: why did these exist, and what could we do about them.” As to the Gary of Stiglitz’s youth, he goes on to describe that he had “the good fortune of having dedicated teachers, who in spite of relatively large classes, provided a high level of individual attention.” First physics, and then economics, were his interests at Amherst, where he felt he could marry his passion for history, writing, and applying mathematics to social issues. At MIT, Stiglitz had at least four Nobel Prize winners as professors, no doubt catalysts for his later becoming a Nobel Prize winner as well.

As chief economist at the World Bank, Stiglitz’s outspoken criticism of policies undertaken by the World Bank’s sister organization, the International Monetary Fund (IMF), caused a stir that led to his resignation in 2000. His issues with the IMF are discussed in some of his writings, including *Globalization and Its Discontents*.

Stiglitz founded the Initiative for Policy Dialogue (IPD) in July 2000 at Columbia University. A global network of economists, political scientists, policymakers and others, the IPD was created as a think tank for solutions to global economic policy-making. The IPD analyzes economic policies and alternatives, and helps countries solve growth and globalization problems through task forces, dialogues, workshops, and research.

The Royal Swedish Academy of Sciences awarded the Bank of Sweden Prize in Economic Sciences in Memory of

Alfred Nobel (known as the Nobel Prize) to Stiglitz and two others (George A. Akerlof and A. Michael Spence) in 2001, based on their individual contributions to the field of research in markets known as “asymmetric information.” Stiglitz’s contributions were in the form of clarifying the opposite type of market adjustment, showing that asymmetric information offers keys to understanding market phenomena such as unemployment and credit rationing. Stiglitz’s other recognitions include the American Economic Association’s John Bates Clark Award (1979). He was also a fellow to the National Academy of Sciences, the American Academy of Arts and Sciences, the Econometric Society, the American Philosophical Society, and the British Academy.

Among Stiglitz’s body of written work is *The Roaring Nineties* (2004); *Globalization and Its Discontents* (2002); *Whither Socialism?* (1994); and others, including titles edited by Stiglitz, and a variety of articles published in journals and magazines.

[Lisa DeShantz Cook (2nd ed.)]

***STILES, EZRA** (1727–1795), U.S. scholar and theologian, and president of Yale. Stiles, born in North Haven, Connecticut, was ordained in 1749, and, after teaching at Yale College (1749–55), served as a minister in Newport, Rhode Island, until the Revolution of 1776. His early missionary urge led him to seek descendants of the *Ten Lost Tribes of Israel in the American Indians and clouded his attitude toward the Jews, but he soon entered into a close and friendly relationship with the Newport Jewish community, attending the dedication of the Touro Synagogue in 1763. From 1769 Stiles kept a *Literary Diary* (published in 3 vols., 1901) which contained a detailed account of Newport Jewry, its leading members (such as the merchant Aaron *Lopez, whom he greatly admired), and its synagogue, where he often attended services. One of the outstanding American scholars of his age, Stiles made his lifelong aim the pursuit of knowledge, studying Hebrew from 1767 and mastering the Bible commentators, some Talmud, the Zohar, Syriac, and Arabic within the next five years. When the Erez Israel emissary Raphael Hanyim Isaac *Carigal visited Newport in 1773 and preached in the synagogue, Stiles, greatly impressed by the former’s scholarship and personality, sought his company and maintained a correspondence with him for several years. From 1778 until his death Stiles was president of Yale – a post in which he had been preceded by an earlier American Hebraist, Timothy Cutler (1694–1765) – and was also professor of ecclesiastical history and divinity. He made the study of Hebrew compulsory for all freshmen at Yale, and at the commencement exercises of 1781 delivered an oration in Hebrew. To the end of his life Yale’s president was devoted to the Hebrew language and culture, which he thought essential to a liberal education and sound grasp of the Bible.

STILLER, BEN (1965–), U.S. writer, director, actor. Born in New York, N.Y., to comedy duo Jerry Stiller and Ann Meara, Stiller attended college at UCLA for just nine months, but made his acting debut in New York in John Guare's *The House of Blue Leaves* (1984). He followed this with his film debut in *Fresh Horses* (1986). In 1989, he went to work for *Saturday Night Live*, but lasted only five weeks, describing the backstage atmosphere as "very negative." Stiller returned to Los Angeles, creating a half-hour sketch comedy show, *The Ben Stiller Show*, which aired on MTV before being picked up by Fox. Although the show was canceled after 12 episodes, it won great critical acclaim, winning a 1993 Emmy for Outstanding Writing in a Variety or Music Program. Stiller next directed and acted in *Reality Bites* (1994) (also starring Winona Ryder, Ethan Hawke, and Janeane Garofalo). He then played a young father searching for his birth parents in the comedy *Flirting with Disaster*, directed by David O. Russell. The film was both a commercial and critical hit. Two comedies followed: *The Cable Guy* (starring Jim Carrey and Matthew Broderick), which Stiller directed; and *There's Something about Mary*, a mega-hit, gross-out comedy in which Stiller starred with Cameron Diaz. Since 2000, Stiller has been incredibly prolific, starring in cult comedies such as *Zoolander* (2001), flops such as *Duplex* (2003) and *Envy* (2004), giant commercial successes such as *Meet the Parents* (2000) and its sequel *Meet the Fockers* (2004), as well as being the animated voice of Alex in *Madagascar* (2005).

[Amy Handelsman (2nd ed.)]

STILLING, BENEDICT (1810–1879), German pioneer in surgery and anatomy. Stilling, who was born in Kirchlain, Hesse, studied at Marburg, and in 1833 was appointed district surgeon in Cassel, where from 1840 he concentrated on his private practice. He was the first German surgeon to perform ovariectomy by the extraperitoneal method. However, this method did not immediately attract the attention of his colleagues and was "rediscovered" ten years later by the British surgeon Doffin. Stilling was the first to transplant a section of the cornea from the eye of one rabbit to that of another, and preserve the transparency. He coined the term "vasomotoric nerves" and was the first to prove the vasomotor function of the sympathetic nervous system. Stilling also studied the anatomy and physiology of the central nervous system and wrote numerous books on various aspects of the structure of the spinal cord. He introduced the sliding microtome and serial section into microscopic technique. His son JACOB BENEDICT STILLING (1842–1915) was born in Cassel. In 1884 he was appointed professor of ophthalmology at the University of Strasbourg. He first described pseudo-isochromatic tables and made significant contributions to the study of color sense, color blindness, and perimetry. His numerous publications deal mainly with the subjects of color sense and myopia.

STILLMAN, LOUIS ("Lou" Ingber; 1887–1969), U.S. boxing gym manager and owner. In 1921, Stillman was hired by businessman Alpheus Geer to manage his Marshall Stillman Movement gym, despite Stillman's knowing nothing about the sport of boxing. Shortly after his appointment, an antisemitic incident at a nearby gym led to a mass transfer of the disaffected Jewish clientele, amongst them a number of quality fighters. Now calling himself Lou Stillman to simplify things, he started charging admission not only to those who trained, but also to those who wanted to watch. The scheme led to a cycle of increasing numbers of attention-hungry fighters and trainers, followed by more spectators willing to pay the famous 15-cent entrance fee. In 1931, Stillman purchased the gym outright from Geer and moved it to 919 8th Avenue in Manhattan, where it became a magnet for America's greatest boxers. Located two blocks from the old Madison Square Garden, "the University of 8th Avenue" boasted the likes of Joe Louis, Jack Dempsey, Gene Tunney, Sugar Ray Robinson, and Rocky Graziano. The attraction of Stillman's Gym was magnified by the regular presence of entertainment stars such as Frank Sinatra, Dean Martin, Jerry Lewis, Buddy Hackett, and Tony Bennett, who were all boxing enthusiasts. When asked to portray Rocky Graziano, Paul Newman spent many hours studying Stillman's Gym, and in the resulting film, *Somebody Up There Likes Me*, Matt Crowley played the role of Lou Stillman. Those who remember the gym in its heyday were struck not only by the quality of the fighters and constant stream of VIPs, but equally by the physical dilapidation and filth of the gym that Stillman relished as the perfect environment for grooming the next generation of toughened prize fighters. Stillman himself was remembered as a colorful if irascible character who always wore a .38 pistol at his side and who treated everyone with equal contempt, but who also enjoyed hosting unskilled boxers if their banter was particularly humorous. When Stillman finally sold his gym in 1959, over 35,000 boxers had trained in its legendary confines.

[Robert B. Klein (2nd ed.)]

STILLMAN, NORMAN ARTHUR (1945–), U.S. historian. Born in New York, Stillman was educated at the University of Pennsylvania (B.A. 1967, Ph.D. 1970), with postgraduate work at the Jewish Theological Seminary (1970–71). Stillman taught at New York University, 1970–73, the State University of New York at Binghamton, 1973–95, and from 1995 at the University of Oklahoma, where he was the Schusterman/Josey Professor of Judaic History. He was a visiting professor at Haifa University, 1979–80, and lectured at many universities. He was a fellow of the National Endowment for the Humanities, a Bronfman Fellow, and a Littauer Fellow. He was a member of the Middle East Studies Association of North America, the American Oriental Society, the Association for Jewish Studies, the Conference on Jewish Social Studies, the Society for Judeo-Arabic Studies, the Israel Historical Society, and the Societe de l'histoire du Maroc.

Stillman was a student of S.D. *Goitein, whom he considered his mentor, and his work carried on in the field of

studies established by Goitein's work on Jewish life and culture in Islamic societies. He is a recognized authority on the history of the Islamic world and of Sephardi and Middle Eastern Jewish culture as well as an advocate of Israel and Zionism. While his account of Sephardi and Middle Eastern Jewish history is sympathetic, it has attracted some criticism from non-Ashkenazi Israeli Jews, who feel that he sees their history through a European Zionist framework that distorts it and minimizes the hardships and disabilities they experience in Israeli society.

Stillman has been quoted as having said that he affiliated himself with academic Jewish studies rather than Middle East studies because of "barely veiled antisemitism" in Middle East studies departments. His principal published works are *The Jews of Arab Lands: A History and Source Book* (1979), *Studies in Judaism and Islam* (edited with Shelomo Morag and Issachar Ben-Ami, 1981), *The Language and Culture of the Jews of Sefrou* (1985), *The Jews of Arab Lands in Modern Times* (1991), *Sephardi Religious Responses to Modernity* (1995), and *From Iberia to Diaspora: Studies in Sephardic History and Culture* (edited with Yedida K. Stillman, 1999). With his late wife Yedida Kalfon Stillman, a Moroccan-Israeli scholar, he published a translation of *Travail in an Arab Land* by Samuel Romanelli (1989), and he edited her posthumous work *Arab Dress: A Short History* (2000). He has also published numerous scholarly articles and reviews. For his publications in Hebrew, he writes under the name Noam Stillman.

[Drew Silver (2nd ed.)]

STINE, R.L. (1943–), U.S. author. Born in Columbus, Ohio, Robert Lawrence Stine graduated from Ohio State University, where he was renowned locally by the name Stine, the editor of the campus humor magazine, *The Sundial*. Upon graduation he moved to New York City, where he became head writer of the Nickelodeon series *Eureka's Castle*, and for 10 years was editor in chief of *Bananas*, a humor magazine for children. During that time, Stine wrote dozens of joke books and humor books for children under the name Jovial Bob Stine. Under the name Hammering Hank, Stine wrote a number of humor books for young readers, some of which are "instructional manuals" like *How to Be Funny: An Extremely Silly Guide* (1978) and *Don't Stand in the Soup* (1982). In the 1990s Stine was catapulted to fame with the bestselling *Goosebumps* series, which sold more than 220 million copies. The *Goosebumps* books feature spooky tales for ages 8–11 and became a popular live-action children's television show on the Fox network. They were translated into 16 languages in 31 countries. The plots of his books usually involve naïve teenagers or preteens who fall into situations having to do with the supernatural or the occult. His other major series, *Fear Street*, for ages 9–14, got more gory. The *Fear Street* books sold more than 80 million copies. This was considered the first horror series for teenagers. Stine's first hardcover collection of terrifying tales for children, *Nightmare Hour*, was published in 1999, and featured illustrations by well-known artists like Bernie Wright-

son and Ed Koren. Stine published an autobiography, *It Came From Ohio! My Life as a Writer* (1997).

[Stewart Kampel (2nd ed.)]

ST. LOUIS, VOYAGE OF THE. In 1938 and 1939, the Nazi regime intensified its efforts to force Germany's Jews to emigrate by using terror, discriminatory legislation, and the expropriation of property. Tens of thousands of Jews lined up at foreign consulates to obtain visas and immigration papers, and in the space of some ten months, more than 115,000 Jews had left Germany.

In April 1939, Germany's Hamburg-America Line announced the upcoming departure of the passenger liner, the *MS St. Louis*, for Cuba. Within weeks all the tickets were purchased, mostly by Jews anxious to flee Germany. The shipping line calculated that more than 95 percent of the passengers were Jewish. On May 13, the *St. Louis* set sail from Hamburg, carrying 937 passengers, for a two-week trip to Cuba. The vast majority of the Jewish passengers had applied for U.S. visas, and had planned only to remain temporarily in Cuba until their quota numbers for the United States were called.

Unbeknown to those on board the ship, the political situation in Cuba was ominous. Some eight days before the *St. Louis* departed Hamburg, the Cuban president, Laredo Bru, had invalidated the landing permits which most of the passengers carried and required that henceforth only visas authorized by the Cuban Secretaries of State and Labor and the posting of a \$500 bond were acceptable. Although the German government and the Hamburg–America Line had been informed of the new decree, the ship left port with the understanding that permits purchased prior to the decree would be accepted.

By May 1939, the political climate in economically depressed Cuba had turned against the increased influx of refugees. On May 8, the single largest antisemitic demonstration took place in Havana, attended by some 40,000 persons. News of the *St. Louis's* pending arrival further fanned the flames of hatred and focused more public and official attention on the sale of landing permits by the Director-General of Cuba's immigration office, Manuel Benitez Gonzalez. Such certificates were to be given out *gratis* to tourists who were awaiting visas for the United States or other countries, but they were routinely sold for \$150 or more to desperate refugees seeking haven from Nazi persecution. American officials in Havana estimated that Benitez Gonzalez had accrued a personal fortune of \$500,000 to \$1,000,000 through the sale of landing permits.

When the *St. Louis* docked in Havana harbor on May 27, 1939, Cuban officials allowed only 28 passengers holding proper visas to enter the country. The remaining passengers, all carrying landing permits signed by Benitez Gonzalez, were denied admittance. The following day, the American Jewish *Joint Distribution Committee dispatched Lawrence Berenson, an attorney with extensive business and political connections, to Cuba, to negotiate on behalf of the passengers.

Newspapers from around the world soon began printing stories about the plight of the passengers on board the ill-fated ship. Without breaking off the talks, Bru ordered the ship to leave Cuban waters. Several days later, after failing to reach agreement on the appropriate bond for each passenger, the Cuban president ended the negotiations.

In the hopes of gaining admission to the United States, the ship's captain, Gustav Schroeder, sailed close to the Florida coast, where the passengers could see the lights of Miami. The United States Coast Guard thereupon signaled the *St. Louis* to remain outside the country's territorial waters. Urgent appeals by the ship's passengers to the State Department and President Franklin Delano Roosevelt went unanswered. Concerned Americans, including Hollywood celebrities, such as Edward G. Robinson, Carl Laemmle, Melvyn Douglas, Sylvia Sidney, Luise Rainer, and writer Dashiell Hammett, also requested aid for the refugees. The State Department, however, was ordered by the White House not to officially intervene with Cuban authorities, only to stress the humanitarian aspects of the situation, and not to permit the ship to land in the United States. Its standard response to requests to grant the passengers haven was that they "must await their turns on the waiting list and then qualify for and obtain immigration visas before they may be admissible into the United States." American public opinion, though sympathetic to the plight of the refugees and increasingly antagonistic toward Nazi Germany, still supported immigration restrictions, and few politicians, including the president, were willing to challenge the prevailing mood of the nation.

With little hope of refuge in the New World, and supplies running short, the *St. Louis* was forced to head back to Europe on June 6. The passengers, fearing a return to Nazi Germany, continued their international appeals. Working with Jewish and other organizations in Europe, the American Jewish Joint Distribution Committee negotiated with the governments of Great Britain, France, the Netherlands, and Belgium to arrange for temporary haven for the passengers in those countries. By June 14, agreement had been reached on the number of refugees for each country: Great Britain would accept 287, France, 224, Belgium, 214, and the Netherlands 181. (During the voyage to Cuba, one passenger died and another attempted suicide in the Havana harbor but was later transported to England.) The *St. Louis* docked in Antwerp on June 17, after being at sea for over a month, and the refugees were dispersed to their new homes.

At the time, European and American newspapers, Jewish organizations, and the passengers themselves viewed the ship's landing in Belgium as a major success story. A few months later, the plight of the passengers once again turned tragic. With the German attack on Poland in September 1939, and particularly after the May 1940 invasion of Western Europe, many of the former passengers found themselves declared "enemy aliens" because most still carried German passports. Dozens of them, even perhaps a few hundred, were interned by Belgian, British, and French authorities. Those detained in

French camps often remained there after the country's surrender to Germany, awaiting permission to leave for the United States or elsewhere.

Like other Jews in German-controlled Europe, they were subjected to discriminatory legislation and deportation. Of the 908 passengers who returned to Europe, only those who were admitted to Great Britain were relatively safe. Although the outbreak of war severely restricted trans-Atlantic passages, a number of these refugees reached the United States when their numbers on the immigration quota came up.

The chances for survival on the European mainland were slim after the mass deportations from Western Europe to the Nazi extermination camps began in 1942. Some of the *St. Louis* passengers were hidden by non-Jews in France, Belgium, and the Netherlands, while a few managed to emigrate abroad. Those who could not find refuge were deported to the Theresienstadt ghetto and the Auschwitz and Sobibór killing centers. More than 250 of the former passengers died during the Holocaust.

[Steven Luckert (2nd ed.)]

STOBBE, OTTO (1831–1887), German legal historian. Stobbe was a professor at the universities of Königsberg, Breslau, and Leipzig. His book on the legal, social, and economic conditions of medieval German Jewry, *Die Juden in Deutschland während des Mittelalters in politischer, sozialer und rechtlicher Beziehung* (1886, repr. 1902, 1923), republished in 1969, prefaced by Guido Kisch, is considered both a pioneer work and a classic. It received unanimous acclaim among Jewish scholars, who accepted its authority unquestioningly, as did nearly all contemporary legal and economic historians and latter-day sociologists. His influence can be discerned particularly in Max Weber. Stobbe influenced the historiography of medieval German Jewry to a very large extent. The importance of his work is in its definition of the status of Jewish serfdom as comparable to that of *ministerialis* and vassals and in his utilization of the records of medieval civic court proceedings and other archival material concerning Jews. In many respects Stobbe, nevertheless, transmitted the bias inherent in semi-scholarly general and historical works on the Jews of the 18th and early 19th centuries and gave it new currency. Many earlier errors were reintroduced. In depicting the Jews as the only merchants before the Crusades, Stobbe strengthened the image of the Jews as a commercial people. Proceeding from a misunderstanding of the canonic usury prohibition as prohibiting all credit dealings and ignoring the history of credit dealings among Christians, he vastly exaggerated the role of the Jews as moneylenders, while ignoring or minimizing evidence on landed properties held by them.

After Stobbe's work, many collections of medieval sources published by German regional commissions and individual cities, as well as improved texts of lawbooks, along with progress in solid Jewish scholarship on the history of medieval German Jewry, have helped to correct and supersede Stobbe's views. While a professor at Breslau University (1859–71), Sto-

bbe was in close contact with H. *Graetz. In 1886 he joined the Commission on Research on the History of German Jewry and contributed an article on the privileges granted the Jews of Speyer and Worms (1084 and 1090) by the Holy Roman Emperor Henry IV, for the first volume of the commission's journal, *Zeitschrift fuer die Geschichte der Juden in Deutschland* (1887). His other works were in the field of general legal history.

STOCKADE AND WATCHTOWER (Heb. חֹמָה וּמִגְדָּל, *Homah u-Migdal*), type of settlement established in Palestine between 1936 and 1947 in planned surprise operations to provide immediate security against Arab attacks. The *Jewish National Fund had acquired large tracts of land in areas distant from Jewish population centers, where de facto possession was in jeopardy unless the land was settled and ordinary methods could not be used because of Arab antagonism. Convoys carrying hundreds of helpers, prefabricated huts, and fortifications set out at daybreak, protected by Jewish Settlement Police. By nightfall they completed the erection of the settlement, surrounded by a double wall of planks with a filling of earth and stones, dominated by a central tower equipped with a searchlight and electric generator to enable the countryside to be scanned for signs of hostility. The 118 settlements established in this way included Tirat Zevi, Nir David, and Sedeh Nahum in the Beth-Shean Valley, Massadah and Sha'ar ha-Golan in the Jordan Valley, and Ḥanitah in Upper Galilee.

[Misha Louvish]

STOCK EXCHANGES. Jews came to the stock exchange by way of their medieval occupation of *moneylending and their activity in the modern period as *Court Jews and in *banking. Soon after the founding of the first European international exchange at Antwerp (1536), **anusim* arrived there and for a short time played a prominent role in it until their expulsion by *Charles v. Many of them then moved to Amsterdam, the economic capital of Europe in the 17th and early 18th centuries. By 1674, 13% of the total number of investments on the stock exchange was in “Portuguese” Jewish hands, though the size of their individual investments was not great. A contemporary noted that many brokers refrained from visiting the stock exchange on Saturday, when the Jews were absent. The first book to describe the practices of the Amsterdam stock exchange was published in Spanish by Joseph *Penso de la Vega in 1688.

Jews were excluded from most of the commodity exchanges in Germany. Benjamin and Abraham *Goldsmid were prominent on the Royal Exchange in London at the end of the 18th and the beginning of the 19th centuries, and after the Napoleonic Wars they were eclipsed by N.M. Rothschild who was the dominant figure on the London Exchange.

In the United States Ephraim *Hart was among the 22 founders of the first board of stockbrokers in New York in 1792. August *Belmont was the representative of the Rothschilds in the 19th century. In the mid- and late 19th century a number of German-Jewish underwriting firms were prominent on the board: J. and W. Seligman and Co., run by the eight *Seligman brothers and led by Joseph Seligman, and Kuhn, Loeb, and Co., which was raised to international repute by Jacob *Schiff, Otto *Kahn, and Paul M. *Warburg. The battle between Hill-Morgan and Harriman-Schiff for control of the Northern Pacific railway stocks resulted in the stock exchange crash known as “Black Thursday.”

Even at the height of their activity, Jews were never the largest nor the most prominent group on the exchanges in England and the United States; by the mid-20th century their number and proportion had declined considerably. In Continental Europe Jews were more prominent on the stock exchange (see Isaac *Pinto). Jews attended the exchanges of Lyons and Paris as early as the 18th century but it was only with the rise of the house of Rothschild in the post-Napoleonic era that they became prominent there; the initiative of this house in floating railroad stocks was followed by the *Fould house and others. The *Pereire brothers founded the *Crédit Mobilier*, the first joint-stock bank. In the aftermath of the Panama Canal stock scandal (1892–93), in which Baron Jacques Reinach was incriminated, antisemitic attacks were made on Jewish activity on the exchanges.

Jews were not allowed into the Frankfurt stock exchange, the most important in Germany at the time, until 1811, but from then until the Nazi regime they played a dominant and later a leading role, partly attributable to the activity of the house of Rothschild and other Jewish financial magnates. The stock exchange of Berlin was a relative latecomer. The patrician Jewish families of Berlin – *Gomperz, *Veit, *Ephraim, Riess, and Wulff, who had amassed wealth as court jewelers, army contractors, and mint purveyors – played a predominant part from its foundation. The statutes of the bourse corporation of 1805 found it necessary to lay down that two of the four chairmen must be Christians. In 1807, 159 of the 174 member firms were Jewish. Such marked preponderance of Jewish firms continued for a short period only. As in banking, the role of the Jews on the stock exchanges declined rapidly with the founding of public banks. In 1882 there were 2,908 Jews in Prussia engaged in stocks and banking, 22% of the total; by 1925 the absolute number of Jews in these fields had increased to 5,620 but their percentage of the total was only 3.84%, although many of this small ratio were in key positions. The economic recession of 1873–76 was blamed on stock speculators, some of whom were Jews, and this was one of the fac-

tors behind the antisemitic movement led by A. *Stoecker. In Vienna H. *Todesco and other leading Jewish financiers were prominent from the foundation of the exchange, on which a Rothschild soon came to play a leading role. The number of Jewish stockbrokers was also high. In the stock exchanges of Budapest, Prague, and Bucharest, Jews filled important positions in the 19th and early 20th centuries. The Jewish role decreased as a result of antisemitic economic nationalism.

It was not only in times of economic crisis and financial speculation that the activity of Jews on the stock exchange was seized on as a pretext for antisemitic outbursts; anti-Jewish agitators magnified their influence out of all proportion, creating an anti-Jewish stereotype out of “Jewish mastery” over the stock exchange. In this they were aided by the theories of men like Werner *Sombart, who ascribed the creation and workings of the stock exchange to the “capitalist Jewish spirit.”

For stock exchange in modern Israel, see Israel, State of: Economic *Affairs.

[Henry Wasserman]

STOCKHOLM, capital of *Sweden. The first Jew to settle in Stockholm was the gem-carver and seal-engraver, Aaron Isaac, who arrived in 1774. A year later the Jewish community was founded when the right of residence in the Swedish capital was granted to him, his brother, his business partner, and their families. By 1778–79 there was already a community of 40 families. Land for a cemetery, which was named Aronsberg after Aaron Isaac, had been acquired in 1776. In 1780 the first rabbi, Levin Hirsch Levi, arrived in Stockholm from Strelitz, *Mecklenburg. Three years later, at his request, he was awarded the title of chief rabbi of Sweden, which was subsequently held by all the rabbis of the Stockholm community. Until 1838 the community was organized on the usual pattern of German communities of the time. It was at first headed by a committee of three laymen, which in 1807 was enlarged to five. In 1838, the year which marked the beginning of emancipation in Sweden, the authorities laid down new rules for the organization of the community, which were drafted in consultation with Aaron Levi Lamm, then president of the community. As in many other European places, equal rights were granted at the price of abrogation of autonomy. From then on communal records were kept in Swedish instead of in Yiddish, and sermons in the synagogue had to be delivered in Swedish,

Danish, German, or French. The independent activity of the community was restricted to charity and Jewish education; the latter was steadily declining.

In 1832 a rabbi with an academic degree (Loeb Seligman) was appointed in Stockholm for the first time. He introduced innovations from the *Reform movement into the prayers and customs, but the movement did not gain strength in the community until the 1860s. A powerful trend toward assimilation, however, was evident even before then, and in 1843 between 80 and 90 men and women out of the 400 members of the community converted to Christianity. It was only toward the close of the century, after the achievement of complete emancipation in 1870, that the patriarchal structure of the Mosaic Congregation of Stockholm was replaced by a more democratic system of electing members to the communal board. From 1882 membership of the community was conditional on Swedish nationality. The rabbis of Sweden were always invited from abroad. The liberal Gottlieb *Klein (1882–1914), a scholar born in Hungary, was succeeded by the Zionist Marcus *Ehrenpreis (1914–48), formerly chief rabbi of Bulgaria. His successor, Kurt *Wilhelm (1948–65), was born in Germany and took up his post in Stockholm after living in Jerusalem. In addition to the Great Synagogue in Stockholm, which was inaugurated in 1870, there are two smaller Orthodox synagogues which are supported by the community.

The character of the Stockholm Jewish community changed between the late 19th century and the post-World War II period, due to the influx of immigrants and refugees fleeing the effects of persecution and war. In 1900 there were 1,631 members in the community (41% of all the Jews in Sweden), and in 1920 that number had risen to 2,747. Of these 1,353 were born in Sweden and 1,394 abroad. Until the rise of Hitler the situation remained unchanged. The principal activities on behalf of the refugees and negotiations with the authorities were necessarily concentrated in Stockholm. The community played a role in organizational activity and fundraising. In the most critical period, however – before 1939 and the first phase of the war – its success was very limited. Thousands of requests for entry permits remained unanswered and the community itself was compelled to give negative replies. This situation changed with the arrival of refugees from Norway in 1942, and in particular with the escape of Jews from Denmark in October 1943. At the end of the war, a significant stream of refugees arrived from the concentration camps. Between 1933 and 1950 Stockholm spent a total of 17,500,000 Swedish kronor (7 kronor = 1 u.s. dollar) in relief, the community providing slightly over 5,000,000 kronor from taxes and appeals, while the remainder was paid by international Jewish organizations (about 8,000,000 kronor) and the Swedish Ministry of Social Affairs. After the war the Jewish community of Stockholm numbered 7,000 (including children). With the assistance of the *Claims Conference a community center was erected, and on the initiative of Zionist circles, whose influence increased after the establishment of the State of Israel, a Jewish elementary school was established and recognized

by the Ministry of Education. The importance of the Jews of Stockholm was apparent in commerce, science, the arts, the press, and in publishing (the famous publishing company of Bonniers was founded in 1831, and by the close of the century it had attained the important position which it continued to hold in the literary life of Sweden). A quarterly review, *För-samlingsblad*, founded by the Stockholm community in 1940 and edited by David Köpniwsky, contained news of communal life and from time to time published articles on the history of Swedish Jewry.

In 2005 the Jewish community of Stockholm numbered just over 5,000 members, with estimates of at least another 3,000–5,000 Jews living in Stockholm who are not affiliated.

Paideia

One recent addition to the Stockholm Jewish community scene is the Paideia Institute, a pan-European initiative to revitalize Jewish knowledge and interest in Jewish culture. It came about through cooperation between European governments, Jewish organizations, and the business community towards the end of the 1990s, with the aim of examining and counterbalancing the consequences of the Holocaust and of reviving Jewish knowledge, culture, and traditions that were largely wiped out by the ravages of the Holocaust.

The Paideia Institute is a pan-European Jewish educational institution that has the recognition of the Swedish parliament and generous support from the World Jewish Congress and the Jewish Central Committee of Sweden, among others. In the first three years of its existence, it attracted 57 students from 17 countries – including Israel – who have returned to their home countries and helped nurture a flourishing revival of Jewish studies and Jewish-interest programs.

°**STOECKER, ADOLF** (1835–1909), German antisemitic preacher politician. Stoecker became a renowned figure in the 1870s as an influential and popular Protestant theologian and as an advocate for a conservative social reform movement. He founded the Christian Social Workers' Party in 1878 (renamed Christian Social Party in 1881), originally intended as an instrument against the Social Democratic Party, whose following he failed to attract. During the first year of its existence, the powerful, modern-style demagogue increasingly used the party to promote anti-liberal and antisemitic ideas. He was thereby able to create a right-wing mass movement of discontented artisans and small shop owners, who were later joined by members of the conservative educated classes, civil servants, officers, and students. In mass rallies Stoecker used stereotype slogans in attacking the Jews as the moneyed power in Germany and as a group which dominated Ger-

man cultural life, and castigated the liberal press, in which he believed Jews to be prominent. Blending the religious issue with an extreme nationalism that stigmatized Jews as aliens, he advocated the limitation of Jewish civil rights, their exclusion from public office and from the staffs of public schools, and a *numerus clausus in high schools and universities, as well as the limiting of Jewish immigration. His inflammatory demagoguery paved the way for the rampant antisemitic movement in Berlin in the early 1880s which spread to provincial cities and the countryside.

Imperial court chaplain from 1874, Stoecker was a member of the Prussian Diet from 1879 to 1898. In 1881 he was elected to the Reichstag for a Westphalian district which he represented (except for the years 1893–98) until 1908. After Stoecker had been invited to the Luther Festival in London in 1883, the lord mayor revoked his permission to speak at Mansion House; he thus suffered his first public defeat. Two libel suits in the following years brought him further adverse publicity. Public opinion began turning against anti-Jewish attacks and his influence declined from 1885. In 1889 he had to curtail his political activities, and in 1891 was forced to resign from his position as court chaplain. However, he continued to stir up antisemitic issues in the Reichstag. Stoecker's mass movement provided fertile soil for the more radical antisemitic parties which followed in the mid-1880s.

[Toni Oelsner / Uffa Jensen (2nd ed.)]

STOICISM, one of the influential post-Socratic philosophies of antiquity, founded by the Hellenized Phoenician Zeno (335–263 B.C.E.). It was popular with Roman jurists and became a major ingredient in Greco-Roman rhetorical culture. As such it met Judaism, probably even before the Hasmonean revolt. The extent and nature of this meeting are still under debate. Stoicism lent itself to an explanation of how the bridging of the chasm between God and man, actualized in creation, revelation, and history, was accomplished in detail (mediation). The Stoic theory of the Logos (“Word,” “Reason”) became therefore central in Philo and after him in the Gospel according to St. John, and traces of it are found in the Midrash. The metabolism of elements, the World Soul, and Providence appear in the Wisdom of Solomon, shades of the quasi-material Spirit and of epyrosis (successive conflagrations of the world) in the Midrash. Less obvious is the possibility that the large-scale midrashic attempt to see latent “ethical” situations everywhere in cosmos and history may have been furthered by the panlogistic mood of Stoicism and its doctrine of cosmic “sympathy.” Rabbinism, however, insisted on *hashgahah peratit* (“individual providence”) and rejected the impersonal Stoic concept (Greek *pronoia*). Stoicism in all

these adaptations has sometimes been regarded as an aid to the clarification of earlier Jewish beliefs. Occasionally, Jewish sources such as Josephus and the talmudic dialogues about *Antoninus Pius try to outdo the Stoicism of the Stoics (1V Macc.) or to portray Pharisaic Judaism as an up-to-date Stoicism. The Jewish and Hellenistic bureaucrat-scholar classes, i.e., the rhetorician-philosophers, Philo, and the rabbis, were compelled to reinterpret sacred writ in an age of change. Stoic allegory came to their aid. Both were involved in legal exegesis, and Stoic techniques of expounding and expanding law were useful. Some rabbinic hermeneutical rules have thus been regarded as having a Stoic-rhetorical coloring, at least in their terminology. Stoic casuistry was known to the rabbis, and the prevailing sense of “etiquette” is reflected in rules for table and toilet in Cicero and the Talmud alike.

Perhaps the Stoic mood is most strongly in evidence in rabbinic ethics, part of which could thus be considered as an intercultural ideology of a bureaucrat-scholar class elevating the ideal Sage. Here values and problems emerge that were not found (or not stressed) in the Bible: health, the simple life, self-improvement, fortitude, the ethos of work, *imitatio dei*, generosity, theory versus practice, the good versus the merely valuable, new interpretations of suffering etc. The biblical roots *amal* (“to labor”) and *za’ar* (“to take pains”) acquire positive connotations. Beyond these, however, the native ethos prevailed: empathy, repentance, hope, and rule over the emotions, not their extirpation. Strong, too, is the acceptance of Stoic-rhetorical literary forms in rabbinism, such as catalogs of virtues and vices, sorites, consolation formulae (life as a deposit), eristic dialogues, diatribic sequences, and certain similes (athletics, household, civic life). The *Letter of Aristeas* is an example of Stoic instructions for kings. The immediate source for rabbinism (and early Christianity) must have been Greco-Roman rhetoric rather than the ubiquitous Posidonius of earlier research. Yet, “what is received is received according to the way of the receiver,” i.e., selectively, and is synthesized with the unaffected transcendental and humanitarian tradition of Judaism.

[Henry Albert Fischel]

Medieval Jewish Philosophy

Stoic influence on Jewish religious philosophy in the medieval period was mainly indirect, that is, through the Neoplatonic philosophers (see *Neoplatonism) and commentators on Aristotle who had undergone Stoic influence. The Stoic ideal of the cosmopolis, a state covering the whole of mankind, may have had some influence on the political ideas of al-Fārābī and through him on *Maimonides in his conception of the Law of Moses as the constitution of the ideal state and in his vision of the Messianic age (Yad, Melakhim, end). It is possible that Isaac *Abrabanel was influenced by Stoic views in his criticisms of luxurious living and its consequences for human life. In *Spinoza, one finds a material conception of God which is analogous to the Stoic conception, and Spinoza’s ideal of the free man corresponds to that of the Stoic sage.

STOKES (Wieslander), ROSE PASTOR (1879–1933), U.S. socialist writer and lecturer. Born in Augustow, Poland, her impoverished family emigrated to London in 1882 and then settled in Cleveland, Ohio, when she was 12 years old. She educated herself while working as a cigar maker, and in 1903 moved to New York to work at the *Jewish Daily News*, which had earlier published some of her poems. Through an assignment to interview the prominent railway president, J.G. Phelps Stokes, she became active in the latter’s social projects in the University Settlement on the Lower East Side, and she married Stokes in 1905. Both became socialists, but while her husband left the Socialist Party in 1917, Rose joined the left wing and was later one of the founders of the Communist Party. Rose Stokes toured the U.S., lecturing and writing articles expounding her radical views. She was a prominent figure in the hotel and restaurant workers’ strike and in the shirt-waist workers’ strike and was one of the leaders of the birth control movement. She divorced Stokes in 1925 and shortly afterward married Isaac Romaine, a language instructor with similar political views. She died in Frankfurt. Her works include a three-act play, *The Woman Who Wouldn’t* (1916), and a translation of Morris Rosenfeld’s *Arbeter-Lider as Songs of Labor* (1914).

[Edward L. Greenstein]

STOLBTSY (Pol. **Stolpce**; Yid. **Stoybts, Shtoptsi**), town in Minsk district, Belarus; until 1793 and between the two world wars within Poland. Jews settled there from the end of the 16th century. In 1632 the Minsk community, among others, assisted the Jews in Stolbtsy in combating a blood *libel. Jewish merchants of Stolbtsy are referred to in legal archives of Minsk (1678) and of the supreme tribunal of Lithuania (1704), as traders in salt and salted fish. During the 18th century Jews there engaged in the export of agricultural products, flax, and lumber (floated down the Niemen River) to Königsberg in East Prussia, and the import of salt, spices, and cloths. The Jewish population numbered 259 in 1811; 1,315 in 1847; and 2,409 (64% of the total) in 1897. In the second half of the 19th century Jews developed the timber trade – from tree felling to sawing and other by-products – and in the 20th century founded sawmills which employed some Jewish workers. A Ḥovevei Zion society was established as early as 1885 and Zionist activity began from the beginning of the 20th century. A *Bund group was organized in Stolbtsy in 1905–06, and a branch of the Po’alei *Zion in which Zalman Rubashov (*Shazar) was active. In the same period Jewish youth and workers in Stolbtsy orga-

nized *self-defense against pogroms by the population of the neighboring villages.

During World War I about half of the Jews of Stolbtsy left the city. Those remaining suffered severely during the civil war in 1919–20 from the struggle for control of the area between the Red Army and those who opposed it. In 1921 Stolbtsy was incorporated within Poland as a border town. There were then 1,428 Jewish inhabitants (48% of the total). The Jewish economy was severely affected as a result of the city being cut off from its previous markets, and particularly as a result of the hostile attitude of the antisemitic government, as well as by the organized Polish competition. In the interwar period all Jewish parties were active in Stolbtsy and a *hakhsharah* farm of *He-Ḥalutz was organized. Jewish educational institutions were developed, and included a *Tarbut school and two Orthodox schools, “Horev” for boys, and a Beth Jacob for girls.

[Dov Rubin]

Holocaust Period

After the outbreak of World War II, during the period of Soviet rule in Stolbtsy (1939–41), the Jewish community institutions were disbanded and all Jewish political activities were prohibited. In the spring of 1941 Jewish youth were mobilized in the Soviet army, and later fought against Germany. After the outbreak of war between Germany and the Soviet Union (June 22, 1941), groups of Jewish youth attempted to reach the Soviet interior, but were prevented by the Soviets. At the beginning of the German occupation there were more than 3,000 Jews in the town. As early as July 1941 about 80 of them were executed. A ghetto was established at the end of 1941. In February 1942 hundreds of Jews were murdered at the local Jewish cemetery. In the spring of 1942 an underground resistance group was organized in the ghetto, and attempts were made to acquire arms. On May 15, 1942, the first group left the ghetto for the forests to make contact with the partisans. In September 1942 most of the Jewish population was killed, about 500 skilled workers remaining in the ghetto. Some were sent to the camps at Baranovichi and Minsk. A few Jewish groups escaped to the forests, joined the partisans, and carried out important combat operations against the Germans and their collaborators.

STOLIN, city in Pinsk district, W. Belarus. Jews are assumed to have settled in Stolin in the 17th century. They acquired land from the owner of the estate, Stachowski, who had divided the area into building plots. They built houses and contributed toward the development of Stolin. At the end of World War I,

the Jews suffered at the hands of armies passing through the town, such as the gangs of *Petlyura, the Germans, the Russians, and finally the Poles who took the town. The Jews earned their livelihood from minor trade and crafts. The economic occupations of Jews, however, hardly provided for their needs, and many were compelled to emigrate. During Poland's independence the hardships of Jews increased because of the government's Polonization policy which aimed to support and strengthen merchants and craftsmen. Social and cultural activity among the Jews was highly developed. During the 19th century Ḥasidism wielded much influence and a court of the Stolin-*Karlin dynasty was active. At the beginning of the 20th century Zionism influence was intensified. The last rabbis of the town were Israel Perlow (d. 1922) and his son Moses Perlow. In 1921 there were 2,966 Jews (62.4% of the population).

[Shimon Leib Kirshenboim]

Holocaust Period

Soviet authorities took over in Stolin in September 1939. When Germany attacked the USSR on June 22, 1941, the Soviet army retreated and Ukrainian nationalists took over the local government and began organizing pogroms against the Jews. The Jewish community, to ensure its safety, set up a committee (including Rabbis Moses Perlow, Aaron Dorczin, and Solomon Polak) which prevented the impending attacks. On August 22 the district German authorities arrived from Rovno, and imposed a fine of 1,000,000 rubles on the Jewish community. The Judenrat, headed by Nathan Bergner (a refugee from Lodz), used every means at its disposal, including personal contacts and bribes, in an attempt to aid the Jewish population. In the fall of 1941 all the Jews from the towns and villages in the vicinity were sent to Stolin but the Ukrainian authorities prevented their admission into the city. The Judenrat intervened with the authorities to allow the entrance of 1,500 refugees. Public kitchens were set up for them. The ghetto, containing 7,000 persons, was established on the eve of Shavuot 1942. On September 10 the Judenrat members were executed and the following day the Germans and their Ukrainian collaborators rounded up all the inmates in the market square. The sick and elderly were shot in their beds. All the Jews of Stolin and the vicinity were led off in groups of 500 and killed in the forest near Dolin. Some Jewish groups tried to reach the forests. Moses Glazer and Asher Shapira, who sought contact with the partisans, were turned over by Ukrainian peasants to the Germans and hanged. The few survivors made their way to partisan units in the vicinity. After the war the Jewish community of Stolin was not rebuilt. A society of former residents of Stolin functions in Israel.

By 2005, a Jewish community center had been established in Stolin.

STOLLER, SAMUEL (1898–1977), agronomist. Stoller was born in Moscow and after studying philology and history at

the local university studied agriculture and science at the University of Simferopol. He immigrated to Erez Israel in 1920, joining kibbutz Kinneret. He was one of the first agricultural settlers to do research on progressive farming methods. When banana planting was begun in Erez Israel in 1922 he devoted his research to it, visiting the Canary Islands for this purpose; he also did pioneering research in conjunction with the first plantation of table grapes in Kinneret in 1925 and the date palm in 1933, and was largely responsible for the development of all three. From 1934 he applied himself to agricultural problems in the Jordan Valley and from 1947 headed the Ruppin Agricultural High School in Bet Yerah in the Jordan Valley. A collection of his research papers appeared in 1960. He was awarded the Israel Prize for agriculture in 1965.

STOLYARSKI, PETER SOLOMONOVICH (1871–1944), violin pedagogue. Born in Lipovtsy, Ukraine, Stolyarski came from a family of *klezmerim* (see *Music). As a child he played with a band at Jewish wedding ceremonies and attracted the attention of the Polish violinist Barcewicz, upon whose advice he went to study at the music school in Odessa. After his graduation in 1900 he devoted himself to teaching talented children, often as young as four years old; he developed special teaching methods which gained recognition. In 1920 he became professor at the Odessa Conservatory. In 1933 he founded a music school for youths, which consisted of a ten-year course combining music studies with general instruction. His system was widely adopted in the USSR, and similar institutions, mainly at high school level, now exist in many countries. His most celebrated pupils, David *Oistrakh and Nathan *Milstein, exemplified and continued Stolyarski's tradition of purity and flawless technique in violin playing.

[Michael Goldstein]

STOLZ, JOSEPH (1861–1941), U.S. rabbi. Born in Syracuse, he went to public schools and then to the University of Cincinnati, where he received his B.L. in 1883. A year later he was ordained in the second class of Hebrew Union College. In 1880 he received a D.D., writing on the "Funeral Agenda," and a half century later an honorary D.H.L. Upon ordination he was appointed rabbi in Little Rock, Arkansas, at B'nai Israel Temple and then in 1887 he moved to Chicago as assistant to Bernard Felsenthal at Zion Temple. After eight years, he moved to the South Side of Chicago, at a time when Jews were moving to that part of Chicago from the West Side, and formed a new congregation with his migrating members. Under his leadership they formed Temple Isaiah, meeting in the Oakland Club Hall in 1896. Two years later, they had built and dedicated a building. He remained there for the rest of his career. He was active in the affairs of his community, serving as a member of the Chicago Board of Education for six years (1899–1905), appointed by the mayor, Carter Harrison, and as a member of the Chicago Criminal Commission. He was president of

the Chicago Rabbinical Association from 1920 to 1925 and of the Chicago Federation of Synagogues. On a national level, he was also active in the CCAR and was its president from 1905 to 1907. In 1921 he led the merger efforts of Temple Israel and Isaiah Temple.

His wife, **BLANCHE A. STOLZ** (née Rauth), brought the Union to Reform Judaism. A young man came to her husband in preparation for his marriage to a young woman coming from Germany. In the ensuing months he had to make all the wedding arrangements as well as assure his future in-laws that he could provide a simple home for their daughter. Rabbi and Mrs. Stolz took an interest in the young man and took him under their wing. Mrs. Stolz found it interesting that many messages of good wishes came for the bride and groom from Germany in identical envelopes. Later on, Rabbi and Mrs. Stolz learned from the bride that the Jewish girls' club she belonged to in Germany used a special message blank to raise funds for their charities. Some years later, after she became a delegate to the founding convention of the National Federation of Temple Sisterhoods (now Women of Reform Judaism), Mrs. Stolz recalled the messages sent to this couple and became convinced that identical message blanks could be used by sisterhoods and their members.

STONE, DEWEY D. (1900–1977), U.S. business executive and communal leader. Stone was born in Brockton, Massachusetts. He went into business in his native state and rose to become president of the Harodite Finishing Company as well as a board member of various corporations. A personal friend of Chaim Weizmann, he was long active in Zionism. From 1955 to 1963 he served as national chairman of the United Jewish Appeal. He was also chairman of the United Israel Appeal and the Jewish Agency, and active in numerous cultural and economic enterprises for Israel. His main interest was the Weizmann Institute of Science in Rehovot, of which he was chairman of the board of governors from the institution's establishment in 1944, as well as chairman of the board of directors of its American Committee.

ADD. BIBLIOGRAPHY: N. Kaganoff, *Solidarity and Kinship: Essays on American Zionism in Memory of Dewey Stone* (1980).

[Hillel Halkin]

STONE, I.F. (Isidore Feinstein; 1907–1989), U.S. journalist, born in Philadelphia. Stone edited the liberal weekly *The Nation*, 1940–46. From 1952 until 1971 he published *I.F. Stone's Weekly* written by himself and noted for its criticism of American society and policy. Regarded as one of the most influential liberal journalists of the postwar period, Stone has been quoted as saying, "If you want to know about governments, all you have to know is two words: governments lie." Origi-

nally pro-Israel, he reported the 1948–49 War of Liberation but became hostile after the Six-Day War.

Stone was the author of *Business as Usual* (1941); *Underground to Palestine* (1946); *This Is Israel* (with R. Capa, 1948); *The Hidden History of the Korean War* (1952); *The Truman Era* (1953); *The Haunted Fifties* (1963); *In a Time of Torment, 1961–67* (1967), a collection of pieces from his weekly; *Polemics and Prophecies, 1967–1970* (1970); *The Killings at Kent State* (1971); *The I.F. Stone's Weekly Reader* (1973); *The War Years 1939–1945* (1988); and *The Trial of Socrates* (1988).

[Ruth Beloff (2nd ed.)]

STONE, IRVING (1903–1989), biographer and novelist. After he had written a number of plays, Stone interested himself in biography and produced a number of very successful works, including *Lust for Life* (1934), on Vincent Van Gogh; *The Agony and the Ecstasy* (1961) as well as other books about Michelangelo; *Lincoln, A Contemporary Portrait* (1962); and *The Passions of the Mind* (1971), about Freud. His other well-known works include *They Also Ran* (1943), *Clarence Darrow for the Defense* (1941), *Earl Warren* (1948), and *Those Who Love* (1965). He also edited *Dear Theo: The Autobiography of Vincent Van Gogh* (1937).

STONE, JULIUS (1907–1985), jurist and international lawyer. Born in Leeds, England, Stone studied in England and at Harvard, where he was assistant professor of law 1933–36. From 1938 to 1942 he was dean of the Faculty of Law at the University of New Zealand and in 1942 was appointed professor of international law and jurisprudence at the University of Sydney. His appointment to the Sydney chair was marked by controversy. Stone was attacked as a judicial radical by conservatives; these attacks often had antisemitic overtones. Stone was awarded the O.B.E. in the New Year's Honors of 1973. Stone's many books include *International Guarantees of Minority Rights* (1932), *International Court and World Crisis* (1962), *The Province and Function of Law* (1961⁴), *Legal Controls of International Conflict* (1954), and *Aggression and World Order* (1958). His greatest contribution to the study of law is his trilogy, *Human Law and Human Justice* (1965), *Legal Systems and Lawyers Reasoning* (1966); and *Social Dimensions of Law and Justice* (1967), regarded as a milestone in the history of jurisprudence, which attempts to assess law in terms of logic, justice, and society, corresponding to analytical, ethical, and sociological jurisprudence.

An active figure in Jewish affairs in Australia, Stone published in 1944 a booklet, *Stand Up and be Counted*, in which he challenged the anti-Zionist views of Sir Isaac *Isaacs and called upon Australian Jewry to rally behind the Zionist cause. From 1968 to 1970 he was academic director and head of the Truman Center for the Advancement of Peace at the Hebrew University of Jerusalem. He remained a staunch supporter of Israel in the Australian public sphere until his death. A *Festschrift*, *Legal Change: Essays in Honour of Julius Stone*, edited by A.R. Blackshield, appeared in 1983. Leonie

Star's *Julius Stone: An Intellectual Life* (1992) is a comprehensive biography.

[Isidor Solomon]

STONE, OLIVER (1946–), U.S. film director. Born in New York, Stone spent two years in Vietnam (1967–68) as a U.S. Infantry Specialist 4th class and received both the Purple Heart and a Bronze Star with Oak Leaf Cluster honors. Stone began his feature film career at the highest level, writing the screenplay of Alan Parker's *Midnight Express* (1978), for which he received an Oscar. Stone then wrote the script for *Scarface* (1983) and then directed his first feature, *Salvador* (1986), which he also co-scripted and co-produced. Stone's next writing and directorial effort was the hugely successful *Platoon* (1986), which received the Academy Award for Best Picture of the year and an Oscar for Stone for Best Director. Stone then directed *Wall Street* (1987) and *Talk Radio* (1988), both of which he also co-scripted. His next film, *Born on the Fourth of July* (1989), won him his second Academy Award for Best Director. Stone then directed *The Doors* (1990); the highly controversial *J.F.K.* (Oscar nominations for Stone as writer, director, and producer, 1991); *Heaven & Earth* (1993); the even more controversial *Natural Born Killers* (1994); *Nixon* (Oscar nomination, 1995); *U Turn* (1997); *Any Given Sunday* (1999); *Comandante* (2003); *Persona Non Grata* (2003); the TV movie *Looking for Fidel* (2004); and *Alexander* (2004). In addition to writing the screenplays for many of his films that he directed, Stone also wrote the screenplay for *Conan the Barbarian* (1982); *Year of the Dragon* (1985); *8 Million Ways to Die* (1986); and *Evita* (1996).

Stone's published works include *A Child's Night Dream* (1997) and *Oliver Stone's U.S.A.* (2000).

ADD. BIBLIOGRAPHY: F. Beaver, *Oliver Stone: Wakeup Cinema* (1994); J. Riordan, *Stone: The Controversies, Excesses and Exploits of a Radical Filmmaker* (1996); C. Salewicz, *Oliver Stone: Close Up* (1998); N. Kagan, *The Cinema of Oliver Stone* (2000); C. Silet (ed), *Oliver Stone: Interviews* (2001); E. Hamburg, *JFK, Nixon, Oliver Stone and Me* (2002).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

STONE, PETER (1930–2003), U.S. movie and theater writer. Born in Los Angeles, Stone went to Bard College in New York State and earned a master's degree from the Yale School of Drama. After a stint in journalism, he turned to writing for television. In 1956 he wrote an episode for the highly regarded *Studio One* series. He earned an Emmy award for a 1962 episode of *The Defenders*, a series about a father-son team of lawyers who often delved into social issues. In the early 1960s he wrote a movie script that was rejected all over Hollywood until he turned it into a novel. Hollywood beckoned, so he turned it back into a screenplay that became the 1963 movie *Charade*, starring Cary Grant and Audrey Hepburn. He won an Oscar the following year for his reprise with Grant, *Father Goose*. Subsequent film thrillers, *Mirage* (1965) and *Arabesque* (1966), were not so successful. Stone became known for his adaptations. In 1969 he adapted for the screen

the Broadway musical *Sweet Charity*. For NBC television he adapted George Bernard Shaw's *Androcles and the Lion* (1967), and Billy Wilder's *Some Like It Hot* for Broadway as the musical *Sugar* (1972), as well as the novel *The Taking of Pelham One, Two, Three* for the screen (1974). Stone had been asked years earlier to write a Broadway musical about the Founding Fathers. By the late 1960s, he decided Americans could use a history lesson wrapped in a different package. The result was *1776*, an unlikely hit that told of the days leading up to the signing of the Declaration of Independence, which won him one of his three Tony awards. He was nominated six times for Tonys and won three, scoring on Broadway with the Lauren Bacall musical *Woman of the Year* (1981) and *Titanic* (1997). He later worked sporadically in film, with his credits including *Who Is Killing the Great Chefs of Europe?* (1978), adapted from a novel. A much-respected craftsman, show doctor, and wit, Stone had legions of friends in Hollywood and New York and was the uncredited collaborator on dozens of major film and theatrical productions.

[Stewart Kampel (2nd ed.)]

STONE, RICHARD BERNARD (1928–), U.S. politician. Born in New York, Stone graduated from Harvard in 1949 and from Columbia University Law School in 1954. He was admitted to the Florida bar in 1955. He was city attorney of Miami 1966–67 and was elected to the Florida State Senate in his first try for office, serving 1967–70. He was then elected Florida secretary of state, serving from 1971 until he resigned to run for the U.S. Senate on the Democratic ticket in 1974. He was elected the first Jewish senator to serve Florida since 1845 but was defeated in the 1980 elections. Stone was active in Jewish and Zionist affairs.

In July 1975, he was named to the Presidential Committee on U.S. Participation in the Olympics by President Gerald R. Ford. Stone served as ambassador at large and special envoy to Central America (1983–84) and as U.S. ambassador to Denmark (1992–93).

STONE, STEVEN MICHAEL (Steve; 1947–), U.S. baseball player and sportscaster, 1980 Cy Young Award winner. Born in Euclid, Ohio, Stone was an all-around athlete as a child, shooting a hole in one at golf at age 11 and winning the Cleveland junior tennis title at age 13. In 1965, Stone graduated Bush High School in Cleveland, where he won All-State honors in baseball as a junior and captained the team as a senior, and was the winning pitcher in a state high school All-Star game. Stone attended Kent State University, and signed with the San Francisco Giants on February 15, 1969, before graduating. After three years in the minor leagues, Stone made his Major League debut on April 8, 1971. He played for the San Francisco Giants (1971–72), Chicago White Sox (1973), Chicago Cubs (1974–76), Chicago White Sox (1977–78), and Baltimore Orioles (1979–81). Stone had never won more than 15 games until he dazzled the baseball world in 1980 with a 25–7, 3.23 ERA season to win the Cy Young Award, and was named

American League Pitcher of the Year by *The Sporting News*. He also started and pitched three perfect innings in the All-Star game, and in one stretch won 14 games in a row, two shy of the AL record. Tendonitis curtailed his season in 1981, and in June 1982 Stone announced that he was retiring from baseball. Stone finished with a 107–93 record, and an ERA of 3.96 in 1,789 innings, and 1,065 strikeouts. He is 3rd on the all-time list of wins and strikeouts by a Jewish pitcher, behind Ken Holtzman and Sandy Koufax, and fourth in games. Stone was the rare pitcher who called his own pitches from the mound, giving signs to the catcher on what he would throw. After retiring, Stone worked for the Cubs as a broadcaster from 1983 to 2000 and in 2003–4, when he left amid a controversy involving Cubs players who felt he was being overly critical of their performance. Stone was hired the next year by Chicago radio station WSCR to host a weekly talk show, and by ESPN to work some of the network's baseball telecasts.

[Elli Wohlgeleenter (2nd ed.)]

STOPNICA, small town near Busko, in Kielce province, central Poland. Jews settled there in the 17th century. They owned 12 houses in the town in 1663. The Jews of Stopnica had certain trading rights in this period and were exempt from services to the governor (*starosta*). They were granted a royal privilege in 1752 authorizing their communal autonomy and rights to engage in trade and crafts, the latter being regulated by an agreement concluded in 1773 between the leaders of the community and the municipal authorities. The representatives of the province (*galil*) of Sandomierz, within the framework of the Councils of Lands, convened in Stopnica in 1754 and 1759. There were 375 Jews paying the poll tax in Stopnica and 188 in the surrounding villages in 1765. Between 1823 and 1862 the authorities of Congress Poland placed difficulties in the way of Jewish settlement in Stopnica because of its proximity to the Austrian border. In 1869 Stopnica lost its status as a city. During the 19th century Hasidism gained influence within the community.

The Jewish population numbered 1,014 (49% of the total) in 1827; 1,461 (69%) in 1857; 3,134 (71%) in 1897; and 3,328 (76%) in 1921. They were mainly occupied in small-scale trade and crafts, including tailoring, shoemaking, and carpentry, and in carting.

[Shimshon Leib Kirshenboim]

Holocaust Period

During the German occupation Stopnica belonged to the General Government, Radom District, in Busko County. At the outbreak of World War II there were about 2,600 Jews in Stopnica. In the course of the fighting the town center – mainly inhabited by Jews – was burnt down. After the Germans entered, shooting Jews on the streets became a common phenomenon. The Jews were compelled to pay a high “contribution” (fine) and in order to ensure payment the Germans took as hostage leading Jewish personalities, some of whom were killed. On the eve of Passover 1940, 13 Jews were dragged

from their homes and shot. An “open” ghetto was set up but the Jews were forbidden under penalty of death to leave it. Tailoring workshops were established, providing the craftsmen with some employment and small wages. The number of Jews grew gradually with the influx of deportees and refugees from *Plock, *Gabin, Radom, *Lodz, and *Cracow, and in 1942 from the surrounding villages. By November 1940 there were 3,200 Jews in Stopnica; in May 1941, 4,600; in April 1942, 5,300; and in June 1942, 4,990. On the eve of Passover 1942, the police shot the president of the Judenrat and his son.

On Nov. 5–6, 1942, the liquidation of the ghetto took place. The German police and Ukrainian formations, with the help of the Polish police and the fire-brigade, shot 400 elderly and children at the Jewish cemetery, sent 1,500 young men to labor camps in *Skarzysko-Kamienna, and drove the remainder, about 3,000, on foot to the train station in Szczuczyn (Shchuchin). On the way many were killed. Jews caught in hiding in the ghetto were shot or included in the transport. The victims were sent by train to *Treblinka. In Stopnica itself about 200 young Jewish men and women remained alive, employed in workshops and on road building. This group was sent in January 1943 to labor camps in Sandomierz and Poniatow.

STORA (Satorra), Algerian family. ABRAHAM (15th century) spent time in several Algerian cities and eventually settled in Bougie, where he was a merchant and community leader. REUBEN (16th century) served as an interpreter for the Spanish forces during their conquest of *Oran in 1509. In 1512, he was given a house by the Spanish in the old Jewish quarter. His grandson succeeded him but was put to death in the mid-16th century for unknown reasons. The post was then given to Jacob Cansino. The Storas remained loyal to the Spanish during the Moorish invasions of Oran in the 17th century, despite Spanish injustices to the Jews. PAUL (20th century) was president of the consistoire of Algiers. During World War II, when offered the position of president-general of the Union of Algerian Jewry, which was organized by the Vichy government for collaborationist purposes, he courageously refused.

STORAX (Gr. *στούραξ*), a sap with medicinal properties. According to Pliny (*Natural History* 12:81) and Dioscorides (*De materia medica* 1:79) it was extracted from trees growing wild in Syria and the vicinity. Some identify it with the “balm” enumerated among the “choice fruits of the land” that Jacob sent to Egypt (Gen. 43:11), and among the wares brought “from Judah and the land of Israel” (Ezek. 27:17) to Tyre. Balm of Gilead is mentioned (Gen. 37:25; Jer. 8:22, 46:11), and is praised

by Jeremiah as a remedy for wounds (46:11; 51:8). Linnaeus, who determined the scientific names of plants, thought that storax was extracted from the tree called in modern Hebrew *livneh refu'i* which he termed *Styrax officinalis*. However in the light of tests made in Israel it is very doubtful if a sap with medicinal or aromatic qualities can be extracted from this tree. The storax of the ancients was probably extracted from a different tree, seemingly from the *Liquidambar orientalis* which grows wild in northern Syria and may even have been grown in Israel; from it is extracted an aromatic sap with healing qualities called *storax liquidis*. This may possibly be the biblical balm, though other sources led to the conclusion that *zori* (“balm”), *nataf*, and *ketaf* are synonyms for *balsam.

The *Styrax officinalis* is widespread in the forests of Israel, and Hosea (4:13) mentions “*alon, livneh, and elah*” (*oaks, *livneh*, and *terebinths) among the shady trees used as sites for idol worship. The reference seems to be to the tree called in Arabic *avhar* and also *livnah* or *luvnah*, a name connected with the silvery white color of the underside of its leaves (for the *livneh* of Gen. 30:37 see *Poplar). The flowers of this tree are sweet smelling and similar in shape to citrus blossom. The poisonous fruit is used for trapping fish. Arabs do not fell this tree because of the legend that “demons recline beneath it.”

[Jehuda Feliks]

STORK (Heb. *הַטְּוֹף*, *hasidah*). The stork, the *Ciconia ciconia*, has been identified with the *hasidah*, enumerated among birds forbidden as food (Deut. 14:18). According to the Talmud it derives its name (“the kindly”) from the fact that it shows kindness to its fellows (Hul. 63a), a reference to the harmony of a flight of storks. These flights pass over Israel in the autumn and spring during their migrations to and from northern and southern countries. Jeremiah (8:7) notes that the bird has fixed times of migration. Small flights of the young birds remain in Israel during the summer, but the stork does not hatch its eggs in Israel and the verse “as for the stork the juniper trees [Heb. *beroshim*] are its house” (Ps. 104:17) refers to the stork’s hatching its eggs on the *juniper trees in Lebanon. Although this identification of the *hasidah* can be taken as certain, it should be noted that some commentators took it to refer to a different bird, with the result that in certain localities in Spain the stork was mistakenly permitted by Jews as food. Generally however, the stork is regarded as an unclean bird (*Beit Yosef* to Tur, YD 92).

[Jehuda Feliks]

STOROZHINETS (Rom. *Storojineț*; Ger. *Storozynetz*), city in Chernovtsy district, Ukraine, in the historic region of Bu-

kovina; until World War I, within Austria, and between the two world wars within Romania. Jews settled there at the close of the 18th century, but severe restrictions imposed by the Austrian authorities hindered the expansion of the Jewish settlement. The number of Jews nevertheless increased, mainly as a result of immigration from Galicia and Russia. In 1865, a Jew of Galician origin, who had established himself in the town in 1828, received a royal authorization, the first of this category to be granted there, to acquire real estate and trade without restriction. The Jewish population numbered 1,601 (32.9% of the total) in 1880, and 4,832 (48.3%) in 1910. The local Jews mainly engaged in commerce and industry connected with the products of the forest in the vicinity, and in timber processing, as well as in crafts and the liberal professions. At the beginning of the 20th century, 99% of the tailors, shoemakers, and carpenters of the town were Jews. Communal institutions were organized as the Jews became established. From 1890, the community was reorganized in accordance with the Austrian law concerning the communities which then came into force. A large main synagogue was erected at the beginning of the 20th century. There were also many ḥasidic and other houses of prayer. The members of the community, most of whom were Ḥasidim, belonged to various trends of Ḥasidism, principally *Vizhnitsa and Sadagora. The community also had *ḥadarim* and yeshivot, but from 1871 many Jewish children also attended the general schools. In 1909 the community established a private Jewish secondary school for boys and girls that functioned, with a few interruptions, until 1938. In World War I, many Jews left the town during the fighting in the area. After the war, under Romanian rule, community life again flourished despite the antisemitic and oppressive regime. Zionist organizations were active there between the two world wars. Jews took part in municipal life.

Holocaust and Contemporary Periods

In 1940, Storozhinets was occupied by the Red Army. Many Jews lost their property as a result of nationalization, and relations between the local Jewish Communists and the other members of the community became strained. In 1941, the town was restored to the Romanian authorities, then collaborating with the Germans. During that year, most of the 2,482 Jews in the town were deported to the death camps in *Transnistria.

After World War II, at the commencement of the Soviet regime, a small number of Jews still remained in the town but this number subsequently declined.

[Yehouda Marton]

°**STORRS, SIR RONALD** (1881–1955), British military governor (1917–20) and district commissioner (1920–26) of *Jerusalem. Storrs, who came from a distinguished English family, was a brilliant classics student at Cambridge University. In 1904 he joined the Egyptian service, became Oriental secretary, and during World War I was a member of the Arab Bureau at British military headquarters in *Cairo. After political

service in Mesopotamia, he was appointed military governor of Jerusalem. There Storrs, who had a great sense of the historical occasion, was in his element. More of a diplomat than an administrator, he did a great deal for the city, founding the Pro-Jerusalem Society, with financial support from influential friends in Britain and elsewhere, to preserve and restore the Old City and revive its indigenous crafts. In 1926 he became governor of Cyprus and later of Northern Rhodesia.

His memoirs, *Orientalisms* (1937), and his work *Lawrence of Arabia: Zionism and Palestine* (1940) contain reservations about Zionism and the activities of the Zionist Commission, headed by Chaim *Weizmann. During the Arab riots of 1920 and 1921 the leaders of the *yishuv* and the Hebrew press accused Storrs of deliberate leniency toward the Arab rioters. Jewish leaders' demands for his resignation in 1921 were rejected by the high commissioner, Sir Herbert *Samuel.

[Edwin Samuel, Second Viscount Samuel]

°**STRABO** (first century C.E.), Greek historian and geographer. Born in Pontus, he traveled widely, and received the conventional education of his day. He wrote a comprehensive history in 47 books. Of this work only a few extracts have been preserved, most of them in *Josephus' *Antiquities*. It is not surprising that the bulk of these extracts deal with matters relating to the history of the Jews, Josephus having used Strabo as a source for his history of the Hasmonean state. To what extent Josephus was further indebted to Strabo it is impossible to gauge. In any event, the history of Strabo, who was free from the pro-Herodian tendencies and the Syrian-Greek viewpoint of *Nicholas of Damascus, provided to some extent a counterbalance to the latter's writings. In his history Strabo frequently quoted the literary sources to which he had recourse; thanks to this the few extracts from him in *Antiquities* have preserved the evidence of other historians who wrote about the Jews (Timagenes, *Hypsicrates of Amisus).

The earliest event in Jewish history known to have been mentioned by Strabo was *Antiochus Epiphanes' attack on the Temple in Jerusalem (Jos., Apion, 2:84). His comments on the penetration of Jews throughout the entire inhabited world, on their status in Cyrene, and on the organization of the Jewish settlement in Egypt (Jos., Ant., 14: 115 ff.) are particularly interesting. On the authority of Timagenes, Strabo depicts *Aristobulus I in a favorable light (*ibid.* 13:319), contrary to Josephus' previous assessment of him, which was based on Nicholas. The final quotation from Strabo's history deals with the execution of *Antigonos, and from it the affection of the Jewish people for Herod's rival can be gauged.

Strabo's other great work, his *Geographica* in 17 books, has survived in its entirety. It is a comprehensive geography in which Erez Israel is described in the 16th book. Here, Strabo states that the most acceptable view about the origin of the Jews is that which regards them as descended from the Egyptians. According to him, the Jewish religion and nation originated with an Egyptian priest called Moses, who came to

realize that the Egyptians were misguided in depicting their gods in the form of animals. The same applied to the Greeks, with their anthropomorphic conception of the gods. Moses held that God embraces all things, the earth and the sea, that He is in reality “what we call heaven, the universe, and the nature of things.” Having succeeded in persuading intelligent men of this, Moses led them to the place now known as Jerusalem, where he established a just regime which his direct heirs maintained for a certain time. Later, however, they had priests who were superstitious and subsequently even tyrannical. These changes led to acts of brigandage, as a result of which Judea and the neighboring countries suffered. Strabo briefly mentions the kingdom of *Alexander Yannai and the conquest of *Pompey (Jos., Ant., 14:34–6). Generally he displays great respect for Moses and the ancient Jewish regime but rejects its later development. The last event in the political history of Judea quoted in Strabo’s geography is the banishment of *Archelaus in 6 C.E. In his geographical survey, Strabo describes at some length the region of Jericho and the Dead Sea, which he confuses with the Sirbonian Lake. His knowledge of the geography of Erez Israel is poor, and he apparently did not really know the country.

[Menahem Stern]

***STRACK, HERMANN LEBERECHEIT** (1848–1922), German Orientalist and theologian. Strack was born in *Berlin, where he became professor of Oriental languages and director-founder of the university’s Institutum Judaicum. He was recognized as a leading non-Jewish scholar in the field of Bible and Talmud, Hebrew and Aramaic linguistics, Masorah, etc. Serving as an expert in German courts on a number of cases with antisemitic overtones, Strack took a firm line in defense of Judaism, and at the same time was active in the Protestant missionary movement (he edited *Jahrbuch der evangelischen Judenmission* and *Zeitschrift fuer die Arbeit der evangelischen Kirche in Israel*).

In the field of linguistics his main publications were *Grammatik des Biblisch-Aramaeischen* (1921⁶); *Hebraeische Grammatik* (1952¹²; also in English (1886)); *Juedisches Woerterbuch* (1916), a Yiddish dictionary; and *Lehrbuch der neuhebraeischen Sprache und Litteratur* (1884). Of importance for the study of Masorah was his *Dikduke ha-Te’amim des Ahron ben Moscheh ben Ascher* (1879), edited in cooperation with S. *Baer; *Catalog der hebraeischen Bibelhandschriften der... Bibliothek in St. Petersburg* (with A.E. Harkavy, 1875); and *Prophetarum posteriorum Codex babilonicus Petropolitanus* (1876). He also took part in the controversy surrounding the *Firkovich forgeries (*A. Firkowitsch und seine Entdeckungen*; 1876). Strack wrote *Einleitung in das Alte Testament* (1906⁶)

and edited, together with O. Zoeckler, a short Bible commentary (1891–1905²), to which he contributed several biblical books; he also published a translation of and commentary on Ben Sira (1903). He wrote, with P. Billerbeck, a commentary to the New Testament which was based on Talmud and Midrash (4 vols., 1922–28) and demonstrated the Jewish rabbinic origin of most of Jesus’ sayings. He also issued annotated translations of several Mishnah tractates with Billerbeck, including *Avot* (1915⁴), together with a vocalized text. Strack’s *Einleitung in Talmud und Midrash* (1921⁵) became a standard reference work, the English edition, *Introduction to the Talmud and Midrash* (1931), which is based on the last but revised German one, being sponsored by the Central Conference of American Rabbis.

In fighting the malicious accusations against Judaism, Strack wrote *Das Blut im Glauben und Aberglauben der Menschheit* (1911⁸), which was translated into English by H. Blanchamp as *The Jew and Human Sacrifice... (1909)*. Works in the same vein include: *Sind die Juden Verbrecher von Religionswegen?* (1900); *Juedische Geheimgesetze?* (1925⁹); *Herr Adolf Stoecker christliche Liebe und Wahrhaftigkeit* (1886²); and *Die Aufhebung der Juden-Emanzipation und ihre rechtliche Begrueundung* (1895; cf. also his *Das Wesen des Judentums*; 1906). Strack’s courageous stand against growing German antisemitism brought him bitter denunciation by antisemitic writers such as K. Erbsreich and Th. *Fritsch; on the other hand his missionary activities came under attack from Jewish writers (P. Meyer, *Woelfe im Schafsfell*, 1893).

STRAKOSCH, MAURICE (1825–1887), pianist and impresario. Born in Gross-Seelowitz, Moravia, Strakosch toured Europe as a pianist and immigrated to the U.S. in 1848. From 1856 he worked chiefly as an operatic impresario, managed the concerts of his sister-in-law, the celebrated soprano Adeline Patti, and toured with his company in the U.S. and Europe. Strakosch composed one opera *Giovanni di Napoli*, and pieces for piano, and wrote *Ten Commandments of Music for the Perfection of the Voice* (posthumous, 1896), and *Souvenirs d’un Impresario* (1887).

STRAND, PAUL (1890–1976), U.S. photographer. The son of immigrants from Bohemia, Strand was born in New York City and given his first camera at the age of 12 by his well-to-do father. He was sent to the Ethical Culture School in 1904 for an education that gave equal weight to individual creativity and social engagement. There his teacher was Lewis Hine, who at the time was photographing immigrants arriving at Ellis Island. Hine introduced him to Alfred *Stieglitz, and in 1916 Strand had his first one-man exhibition at Stieglitz’s famed “291” gallery. The last two issues of Stieglitz’s *Camera Work* in 1917 were devoted to Strand’s photography, whose principal early subjects were Manhattan life and 20th-century machinery. Several of his images from that period, including “Wall Street” (1915), “The White Fence” (1916) and “Blind” (1916), are considered revolutionary in their starkness and use of light

and shadow. Strand's street photos of 1916, taken with a special camera designed to capture his subjects unawares, emulated Hines' engaged stance. He focused on the city's rich cultural mix (two Orthodox Jewish men deep in conversation; an elderly woman with a time-creased face in Washington Square Park), but he also portrayed the city's dispossessed, including a picture of a disheveled woman yawning and a man with dazed eyes in an Irish slum.

After service in the Army Medical Corps, where he was introduced to X-ray and other medical camera procedures, Strand collaborated with Charles Sheeler on the film *Manhattan*, released as *New York the Magnificent* in 1921. Strand made his exquisitely composed landscape and nature photographs in the 1920s. With the onset of the Depression, Strand became active in politics. A socialist, he worked with the Group Theater, which had been formed in New York by Harold Clurman, Cheryl Crawford, and Lee Strasberg in 1931. The Group was an attempt to create a theater collective with a company of trained players dedicated to presenting works by contemporary writers. Members of the group tended to hold left-wing political views and wanted to produce plays that dealt with important social issues. In 1935 Strand visited the Soviet Union and met the radical film director Sergei Eisenstein. When Strand returned to the United States, he began to produce socially significant documentary films, including *The Plow That Broke the Plains* in 1936, his film on trade unions in the Deep South, *People of the Cumberland* the following year, and *Native Land* in 1942. The latter evolved from a Congressional hearing on anti-labor activities. When it was released on the eve of World War II, its message was considered politically divisive.

In 1936 Strand joined with Berenice Abbott to establish the Photo League in New York, whose initial purpose was to provide the radical press with photographs of trade-union activities and political protests. The Museum of Modern Art in New York held a full-scale retrospective of Strand's work in 1945. Later in that decade, the Photo League was investigated by the House Un-American Activities Committee. Several members were blacklisted and Strand decided to leave the United States and live in France. There he produced *A Profile of France* with Claude Roy in 1952, *A Village* with Cesare Zavattini in 1955, and *Tir a'Mhurain*, about the Hebrides, with Basil Davidson in 1968.

[Stewart Kampel (2nd ed.)]

STRANGERS AND GENTILES. Ancient Israel was acquainted with two classes of strangers, resident aliens and foreigners who considered their sojourn in the land more or less temporary. The latter were referred to as *zarim* (זָרִים) or *nokhrim* (נֹכְרִים), terms generally applied to anyone outside the circle the writer had in view (e.g., Ex. 21:8; 29:33). They retained their ties to their original home and sought to maintain their former political or social status. On occasion they came as invaders (11 Sam. 22:45–46; Obad. 11). More often they entered the land in the pursuit of trade and other commercial

ventures. The usual laws were not applicable to them, and they were protected by folk traditions concerning the proper treatment of strangers (cf. Job 31:32) and by special conventions resulting from contractual arrangements between the Israelites and their neighbors (cf. 1 Kings 20:34). In the legislation of Deuteronomy, an Israelite may charge a foreigner usury though he may not do so to a fellow Israelite (Deut. 23:21), and the septennial remission of debts does not apply to the debts of foreigners (Deut. 15:3). On the other hand, barred from the cult (Ex. 12:43), the foreigner was also not bound by the ritual laws, and it was permissible to sell him animals that had died a natural death (Deut. 14:21). The fact that Deuteronomy includes a special prohibition against foreigners' ascending the throne (Deut. 17:15) and that Solomon specifically requested that God listen to their prayers (1 Kings 8:41) may indicate the important position some foreigners occupied during the age of the monarchy.

In contrast with the foreigner, the *ger* (גֵר), the resident alien, lived more or less permanently in his adopted community. Like the Arabic *jār*, he was "the protected stranger," who was totally dependent on his patrons for his well-being. As W.R. Smith noted, his status was an extension of that of the guest, whose person was inviolable, though he could not enjoy all the privileges of the native. He, in turn, was expected to be loyal to his protectors (Gen. 21:23) and to be bound by their laws (Num. 15:15–16).

Prior to the Exodus, resident aliens as a class were unknown in Israel. On the contrary, the Israelites themselves were *gerim* (Ex. 22:20) as were their ancestors (Gen. 15:13; cf. 23:4; Ex. 2:22). Aliens were apparently attracted to their ranks when they left Egypt (Ex. 12:38, 48), and their numbers were further augmented during the time of the conquest of Canaan (Josh. 9:3ff.). By far the greatest number of *gerim* consisted of the earlier inhabitants of Canaan, many of whom were neither slain as Deuteronomy commands (cf. e.g., 7:2) nor reduced to total slavery (cf. 1 Kings 5:29; 11 Chron. 2:16–17). Immigrants also were numbered among them – foreigners who sought refuge in times of drought and famine (cf. Ruth 1:1) and refugees who fled before invading armies.

Since all of the landed property belonged to Israelites (cf. Lev. 25:23–24), the *gerim* were largely day laborers and artisans (Deut. 24: 14–15; cf. 29:10). Both the Book of the Covenant which classed them among those who were dependent (Ex. 23:12) and the Decalogue which referred to them as "your stranger" (*gerkha*; Ex. 20:10; cf. Deut. 5:14) attest their inferior position in Israelite society. While a few acquired wealth (cf. Lev. 25:47), most of them were poor and were treated as the impoverished natives. Thus, they were permitted to share in the fallen fruit in the vineyard (Lev. 19:10), the edges of the field, and the gleanings of the harvest (Lev. 23:22; see also Poor, Provisions *for). Like the other poor folk they were also granted a share in the tithe of the third year (Deut. 14:29) and the produce of the Sabbatical Year (Lev. 25:6).

Since the foreigners' defenselessness made them vulnerable, the Israelites were frequently reminded of God's spe-

cial concern for the weak (Ex. 22:21–22; cf. Deut. 10:17–19) and were enjoined not to molest them (Ex. 22:20; cf. Jer. 7:6). They were not to be abused (Deut. 24:14) and were to receive equal treatment before the law (Deut. 1:16; cf. 24:17; 27:19). In case of accidental homicide, the cities of refuge were open to them as well (Num. 35:15), for there was to be “one standard for stranger and citizen alike” (Lev. 24:22). Moreover, the Israelites were enjoined to be especially solicitous of the welfare of the *ger* and to befriend him as one of their own, since they could recall the sufferings of their own people in the land of Egypt (Lev. 19:34; cf. Deut. 10:19).

With the passage of time, the *gerim* were assimilated culturally and religiously. Doeg the Edomite, for instance, was a worshiper of YHWH by the time of Saul (1 Sam. 21:8), as was Uriah the Hittite in the reign of David (11 Sam. 11:11). Hence, the *ger*, in contrast to the *nokhri*, was required in many cases to conform to the ritual practices of the native Israelite. Thus, *gerim* were subject to laws dealing with ritual purification (Num. 19:2–10), incest (Lev. 18:26) and some of the food taboos (Lev. 17:10–16; but cf. Deut. 14:21). They were expected to observe the Sabbath (Ex. 20:10; Deut. 5:14), participate in the religious festivals (Deut. 16:11, 14), and fast on the Day of Atonement (Lev. 16:29). They were permitted to offer up burnt offerings (Lev. 17:8; 22:18; Num. 15:14 ff.) and, if circumcised, even to sacrifice the paschal lamb (Ex. 12:48–49; Num. 9:14). Indeed, they, no less than the Israelites, were expected to be loyal to YHWH (Lev. 20:2; cf. Ezek. 14:5–8).

However, social differences did remain, and some *gerim* were better received than others. While third generation offspring of Edomites and Egyptians might “be admitted into the congregation of the Lord” (Deut. 23:8–9), Ammonites and Moabites were not to be admitted “even in the tenth generation” (23:4). Furthermore, even while the Holiness Code admonished Israelites not to subject their fellows to slavery (Lev. 25:39), they were specifically permitted to do so to the children of resident aliens (25:45–46). A Hebrew slave belonging to a *ger* could be redeemed immediately, and if not redeemed served until the Jubilee Year (25:47 ff.), but one belonging to an Israelite served until the *Jubilee (25:39 ff.). Correspondingly, a Hebrew could serve as a hired or bound laborer (25:40) of an Israelite, but only as a hired laborer of an alien (25:50). Indeed, the humble position of the *ger* generally was emphasized by the usage of the term in the Holiness Code: e.g., “The land is Mine; you are but strangers resident with Me” (25:23; cf. 25:35, but see *Proselyte).

In practice, of course, there were Israelites who became propertyless and destitute and had to support themselves as day laborers (Deut. 24:14; cf. Lev. 19:13), and no doubt there were also *gerim* who became prosperous and acquired land. This narrowed the gap between the two classes and resulted in frequent intermingling. Marriages between the two groups did take place, only marriages between Israelites and the aboriginal inhabitants of Palestine being prohibited in Deuteronomy 7:3–4. On close examination it appears that even in the theory (and it was hardly more) of the author of Ezra-Nehe-

miah only marital alliances with the non-Israelites of Palestine were illegitimate, because the laws of Deuteronomy 7:3–4 and 23:3–9 applied to them. The absorption of converts from other nations is reported with equanimity – Ezra 2:59–60 (= Neh. 7:61–62); Ezra 6:21; Nehemiah 10:29 (“and everyone who withdrew from the uncleanness of the peoples of the lands [note the plural] to the teaching of God”). The phenomenon of such conversions is alluded to in Isaiah 56:3 and Zechariah 2:15; 8:20 ff., and the predictions of the conversion of the gentiles in Isaiah and Jeremiah are well known. In late Second Temple times, the term *ger* had become virtually synonymous with “proselyte,” and strangers were admitted to the religious fellowship of Israel (Jos., Apion, 2:28).

[David L. Lieber]

Whereas, as stated, the word *ger* in the Bible was taken to refer to the proselyte, the *ger toshav*, the “resident stranger,” was regarded as belonging to a different and special character. He was a non-Jew who accepted some, but not all of the commandments of the Torah, as a result of which he was permitted to reside in the land of Israel and enjoy many of the privileges of citizenship. Various views are expressed by the rabbis as to the qualifications which entitle the resident gentile to be accepted as a *ger toshav*, ranging from the renunciation of idolatry to one who accepts the whole of the discipline of the Torah with the exception of the dietary laws (Av. Zar. 64b). The *halakhah* was decided that it applies to the person accepting the seven “Noachide Laws” (Maim. Yad, Issurei Bi’ah 14:7; Sh. Ar., YD 124:1). The laws, privileges, and restrictions of the *ger toshav* are exhaustively dealt with in the Talmud. As, however, it was laid down that the acceptance of a *ger toshav* was permitted only during the period that the Jubilee was in force, and that law was no longer in power in talmudic times, the discussion was purely academic.

For a full discussion of the post-biblical period see *Gentile.

STRÁNSKÝ, JAROSLAV (1884–1973), Czech politician. Stránský was born in Brno, the son of Adolf Stránský (1855–1931), one of the leading Jews in the National Democratic Party, who was a member of the Austro-Hungarian Parliament before World War I and became the first minister of commerce in Czechoslovakia when it became an independent state in 1918. He had abandoned Judaism, however, and his son was raised as a Christian. Jaroslav Stránský played a leading role in the Czech National Socialist Party (founded before, and having no connection with, the National Socialist Party of Hitler) and, on the outbreak of World War II, went into exile in England with the president of Czechoslovakia, Edvard Beneš. He served in the cabinet of the Czechoslo-

vak government-in-exile in London and was deputy prime minister, minister of education, and minister of justice in the postwar government of the country. In 1948, he returned to Great Britain, and later settled in the United States, but again returned to England, where he died. Stránský was conscious of his Jewish origin. In 1922, he took over the ownership of the Czech-language daily *Lidové Noviny* in Brno, which had been founded by his father, and transformed it into a liberal daily of international standard. It was one of the few Czech newspapers to support Jewish aims in Erez Israel under the Mandate and to defend Jews against antisemitism both in the pre-Hitler era and the period preceding the Nazi occupation of Czechoslovakia after the Munich agreement.

STRANSKY, JOSEF (1872–1936), conductor and composer. Born in Humpolec, Bohemia, Stransky studied medicine (receiving his M.D. in Prague, 1896), and music in Leipzig and then in Vienna with Dvořák and Bruckner. Stransky conducted a student orchestra in Prague, and in 1898 had his first professional engagement at the Neues Deutsches Theater there. In 1903 he moved to the Hamburg Opera as principal conductor and in 1910 worked with the Bluethner Orchestra in Berlin. In 1911 he succeeded Mahler as conductor of the New York Philharmonic Society (to the distress of Strauss, who thought Stransky would give German conducting a bad name abroad). A large bequest (by Joseph Pulitzer) enabled him to carry out successfully the sweeping reforms instituted by Mahler. He pleased his New York audience with his uncontroversial but not altogether unspiced programs. He conducted the première (1922) at the Philharmonic of Schoenberg's Bach chorale-prelude transcriptions, despite having received a sulphurous letter from Schoenberg. In 1923, he became conductor of the newly formed New York State Symphony Orchestra, but gave up conducting in 1925 to work as an art dealer. Stransky published the book *Modern Paintings by German and Austrian Masters* (1916); composed an operetta, *Der General*; songs; orchestral and other instrumental music. His editions include an adaptation of Berlioz's *Béatrice et Bénédicte*, which he felt needed reorchestration for modern taste.

[Naama Ramot (2nd ed.)]

STRASBERG, LEE (1901–1982), U.S. theatrical director and teacher. Born in Budanov (then Austria-Hungary), his family moved in 1909 to New York, where Strasberg became entranced with the theater, largely through the influence of the Chrystie Street Settlement House. In 1923, after seeing a performance of the Moscow Art Theater then touring under the direction of Stanislavsky, he enrolled in the American Laboratory Theater, which followed Stanislavsky's realistic principles. He began his professional career in 1924 with the

Theater Guild, first as assistant stage manager and then as an actor. In 1931 Strasberg, Cheryl Crawford, and Harold Clurman founded the Group Theater, which came to exercise a profound influence on the American stage. He directed several plays, of which *Men in White* (1933) won a Pulitzer Prize, but resigned in 1937 after a policy dispute. In 1947, he joined the Actors Studio and became its artistic director in 1948. The Studio was largely shaped by him and became famous for its "Method" approach to acting. Its pupils won acclaim for an intense personal style. Strasberg has said, "Acting is to live on a stage. This means an actor must be able to react to an imaginary stimulus just as hard as he would to a real stimulus." Strasberg maintained close ties with Jewish theater and directed several productions for Habimah, the National Theater of Israel.

He made his film debut at age 73, portraying a Jewish mobster in *The Godfather, Part II* (1974), which garnered him an Oscar nomination for Best Supporting Actor. Subsequent films include *The Cassandra Crossing* (1976); the TV movie *The Last Tenant* (1976); *And Justice for All* (1979); *Boardwalk* (1979); *Going in Style* (1979); and the TV movie *Skokie* (1981).

His book *A Dream of Passion: The Development of the Method* was published in 1987.

His daughter, SUSAN (1938–1999), a film and stage actress, was best known for her performance on Broadway in the title role of *The Diary of Anne Frank* (1955), which earned her a Tony nomination for Best Actress. A close friend of Marilyn Monroe's, she wrote *Marilyn and Me* (1992), as well as *Bittersweet* (1990).

[Raphael Rothstein / Ruth Beloff (2nd ed.)]

STRASBOURG (Ger. **Strassburg**), capital of the department of Bas-Rhin, Alsace, E. France. The earliest conclusive evidence on the presence of Jews in Strasbourg dates from 1188. During the anti-Jewish persecutions connected with the Third Crusade, the Jews fled from the town and a number of other towns, but they appear to have returned after a short while. The statutes of the town (from about 1200) mention the Jews, who were by then living in a special quarter. At the beginning of the 13th century at the latest, they already owned a cemetery; the oldest remaining epitaph belongs to the year 1213. The synagogue is not mentioned until 1292. The size of the Jewish community, as well as its economic power, is reflected in the fact that in 1242 it paid the highest tax of all the Jewish communities of the empire. Until about 1260, the Jews of Strasbourg were subjected to the authority of the bishop. From the first half of the 13th century, some Christians bore the surname of "Jew" (*Jude*), which probably attests to their Jewish origin. In spite of demographic losses due to conversions, the number of Jews in Strasbourg was constantly on the rise

as a result of immigration from other Alsatian localities, as well as other Germanic localities, so that in 1306, with additional arrivals from France, the Jewish population numbered about 300. *Moneylending appears to have been their sole economic activity, their customers including Christian religious institutions and noblemen. Loans ran as high as 6,000 livres.

In his account of the massacre of the Jews of Strasbourg after they had been accused of propagating the *Black Death, a local chronicler points out that the real poison by which the Jews of Strasbourg had perished was usury. In addition, the Jews also suffered as a result of the battle for municipal power between the patricians and the master craftsmen. The patrician municipality sought to protect the Jews, and at the end of 1348, when rumors spread that the Jews were poisoning the wells in order to spread the plague, it preferred to refrain from any action until an inquiry had been conducted in the localities where similar accusations had been voiced (including *Lausanne, *Chillon, *Berne, *Colmar, *Cologne, and *Freiburg in Breisgau). Although the guilt of the Jews was taken for granted almost universally, the council of Strasbourg remained convinced of their innocence and even took up their defense. On Feb. 9, 1349, however, Mayor Peter Swarber and two counselors were compelled by the craftsmen to resign. On February 13, the new council decided to burn the Jews. According to tradition, the decision was enforced on Saturday, February 14, when 2,000 Jews perished. The only ones spared were those who accepted baptism; however, a number of those converts were the victims of a new persecution in the summer of 1349, when the plague actually reached the town and took a heavy toll of lives. On Sept. 12, 1349, Emperor Charles IV officially pardoned the town for the massacre of the Jews and the plunder of their possessions. Until the French Revolution, two calls upon a horn, played nightly, perpetuated the memory of the supposed treason of the Jews.

In spite of the town's decision to prohibit the settlement of Jews for a period of 100 years, a number of Jews were authorized to reside there from 1369 onward, though against the payment of extremely high fees. They numbered at least 25 families when they were again expelled from Strasbourg at the end of 1388, on this occasion "forever." Those banished established themselves in surrounding villages, from where they continued to maintain commercial relations with the inhabitants of Strasbourg. Magistrates frequently intervened (e.g., in 1570) to prohibit these relations completely or reduce them to a minimum. From at least 1512, and probably much earlier, the Jews who wished to enter the town were required to pay an expensive toll. In time, this admission fee was increased by an additional payment to the municipal servant who accompanied each Jew in all his movements and supervised the lawfulness of his activities. When the exceptional Jew was authorized to spend the night in Strasbourg – normally at the Corbeau Inn or at the Ours-Noir Hotel – he had to pay a double toll, that is, the fee which he would have paid had he returned the next day. On certain occasions, such as

in 1639, this supervision was accompanied by an interrogation and a search at the gates of the town to determine the goods which the Jews brought and the persons with whom they intended to establish contact. The Jews endeavored to circumvent both the payment of toll rates and humiliating treatment by concluding their transactions outside the town. The municipality, in order to protect its handsome income, would then intervene against such practices. In 1648, for example, it prohibited the sale of horses at any site other than the horse market of the town.

Relations between the Jews and the Council of Strasbourg were not always hostile. Joseph Joselmann b. Gershom of Rosheim, in particular, succeeded through his diplomatic talents in obtaining the council's support. In 1537 he obtained a letter of recommendation to the prince-electors of Saxony, and in 1541 called the attention of the council to the anti-Jewish pamphlet of the Strasbourg preacher M. *Bucer, and in 1543 to the writings of M. *Luther, "Concerning the Jews and Their Lies" and "Concerning the Shem ha-Meforash" (Tetragrammaton). He thereby succeeded in obtaining an order against new publications of these writings.

Once the town came under French sovereignty (1681), the severity of the anti-Jewish measures was eased or they were even temporarily suspended, such as in time of war to enable the Jews of the surrounding area to take refuge in the town. The minister R.L. de Voyer Marquis d'Argenson, however, was compelled to intercede in favor of Moses Blim, a purveyor of the army, and his Jewish partners to enable them to reside in Strasbourg until 1748. Again, the intervention of the royal authorities was required in 1767 to permit *Cerbbeer, also an army purveyor, to reside in Strasbourg during the winter and, from 1771, during the entire year. The numerous members of Cerbbeer's family and the persons engaged in his service also benefited from this personal authorization, so that in 1785 he occupied three or four houses with 60–70 people. In the letters patent of 1785, which abolished the "corporal toll," a special mention was made of Strasbourg, where "the Jews are subjected to a corporal tax which reduces them to the level of animals... a levy which appears to debase humanity." In spite of the king's commitment to indemnify the town for the loss of income, Strasbourg was reluctant to apply this edict.

A few years later there was almost unanimous opposition to granting the rights of citizenship to the Jews. Immediately after the National Assembly had done so, however, many Jews established themselves in Strasbourg. In the revolutionary year II, it was especially the Jews who became the target of the antireligious campaign. A contradictory situation resulted: it was the Republic which revived medieval practices by seizing, together with religious objects, all the Jewish books, particularly those of the Talmud, to be burned in an immense auto-da-fé. In 1806 seven delegates represented the 1,500 Jews of Strasbourg at the *Assembly of Notables. Immediately after the constitution of the Consistories, Joseph David *Sinzheim, until then chief rabbi of Strasbourg, became chief rabbi of the Central Consistory. The community, which was constantly

growing, soon developed exemplary institutions. In addition to the synagogues, it supported a vocational school from 1825, an old age home called "Elisa" from 1853, and a rabbinical seminary for a short while from 1885. The German annexation of 1871 was responsible for the departure of a number of Jews for France. There was a particularly rapid numerical growth between the two world wars. Immigration from abroad was much lower than in other towns. In 1931, of almost 8,500 Jews living in Strasbourg, over 60% were born in France.

[Bernhard Blumenkranz]

Hebrew printing

In 1504 Johann Grueninger published in Strasbourg G. Reysch's *Margarita Philosophica*, which included a Hebrew grammar by Pelican, a Hebrew alphabet, and other Hebrew texts, all printed by woodblocks. In 1541 Paul *Fagius was appointed professor of Hebrew at Strasbourg University, and this led to the production of Hebrew textbooks for his students by the press of Johann Knobloch (or his successors). Fagius' own edition of parts of *Targum Onkelos* appeared in these texts in 1546, probably together with reprints of other texts, which he and Elijah Levita had published at Isny and Konstanz in the preceding years. In 1589 Elias Schadaeus set up a Hebrew press for which he himself prepared the Hebrew type, and in 1591 printed an edition of Proverbs, Ecclesiastes, and Song of Songs.

It was only toward the end of the 18th century that Hebrew printing resumed in Strasbourg, with the publication of Bezalel Ashkenazi's *Shitah Mekubetzet* on *Ketubbot* and Solomon Algazi's *Lehem Setarim*, by Jonah Lorenz in 1777. This printing venture was inspired and financed by Cerfbeer and his brother-in-law, David Sinzheim. The auxiliary personnel were experienced typesetters, correctors, etc. from other printing centers, such as Hanau.

Holocaust Period

With the outbreak of World War II in September 1939, the entire population of Strasbourg was evacuated to the southwest of France. After the French capitulation (June 1940), the Jewish community succeeded in making basic provisional arrangements in southwestern France – setting up a synagogue and a welfare bureau in Périgueux and a synagogue in Limoges. As a result, a large number of Jews from Strasbourg were able to survive the war. Chief Rabbi René *Hirschler, mobilized in 1939, continued in his post as an itinerant rabbi after the defeat and Nazi occupation, and visited the Strasbourg Jewish community dispersed in more than 50 localities south of the Loire. In Strasbourg proper, the Nazis set fire to the Quai Kléber synagogue erected in 1898 and systematically destroyed all traces of the structure. Strasbourg Jews played a major role in educational work, welfare, sanitation, and in armed resistance. They set up agricultural schools and helped to direct them in the framework of the Jewish French scouting movement (Eclaireurs Israélites de France). Under the auspices of *OSE, they helped open clinics and children's homes. They also organized flight to Switzerland or to Palestine (via Spain)

for infants and older children and joined in the armed resistance. As a result of their participation in these activities, Rabbis Hirschler, Robert Brunschwig and Elie Cyper, along with youth leader Léo Cohn, were arrested and deported to death camps. Rabbis Samy Klein and Aron Wolf were also killed in the course of their resistance work.

Contemporary Period

About 10,000 Jews lived in Strasbourg on the eve of World War II. Eight thousand came back after the liberation, 1,000 died in concentration camps, and another 1,000 decided to settle elsewhere. In 1965 there were 12,000 Jews in Strasbourg (4.5% of the total population). This increase was the result of natural growth (300), immigration from smaller Alsatian centers (1,200), immigration from Central Europe (500), and settling of refugees from North Africa (2,000). The Jewish population had been diminishing since 1955; however, in the late 1960s the birthrate was 7.5% and the mortality rate 12%; the number of mixed marriages increased by 40% between 1960 and 1965. Nevertheless, the community was strengthened by the absorption of an independent Polish-rite group in 1948 and North African Jews, for whom oratories were built or arranged in several neighborhoods. By the turn of the century the Jewish population had increased to around 15,000. Strasbourg Jewry was one of the most active communities on the continent of Europe after World War II. Institutions created since 1945 stress Jewish education, contrary to the trend prevalent before. They included a kindergarten, a full-time school, two boarding houses for high school and university students, two yeshivot, a monthly bulletin, and a weekly radio program. The University of Strasbourg had a chair of Jewish studies held by André *Neher. The Synagogue of Peace was inaugurated in 1958. It includes a large community center, which has often been the site of national and international Jewish congresses. The latent antisemitism of the Alsatian population was expressed by the establishment of organizations to prevent the return of Jewish property (confiscated in 1940) to the owners, and later to prevent the erection of a synagogue on city land.

STRASBURGER, EDUARD (1844–1912), German botanist and one of the founders of modern plant cytology. Strasburger, born in Warsaw, was made director of the Botanical Institute

at Jena in 1869, and two years later, when only 27 years of age, was appointed full professor there. In 1880 he became professor at Bonn, where he worked until his death. Under his direction, the botanical institute became a world center for research in botany and especially in the newly emerging science of cell biology.

Strasburger's early research dealt with the embryology of liverworts, ferns, and conifers. He recognized the homology of the archegonium of the fern with the embryo sac of conifers. This discovery helped lay the basis for one of the fundamental generalizations of plant evolution: the essential correspondence of the life cycles of higher and lower plants. Among Strasburger's pioneer contributions to cell biology were his description of mitotic cell division in plants and his observation of the longitudinal splitting of the chromosomes in the process. Strasburger arrived at the conclusion that the cell division process was the same in plants and animals and set forth the generalization that nuclei arise only from preexisting nuclei. His observation of the union of male and female nuclei in the reproduction of plants was of the utmost significance in establishing the universal character of the phenomenon of fertilization and the role of the nucleus as the vehicle of heredity. Strasburger was the author of the important book *Ueber Zellbildung und Zelltheilung* (1875), and an influential *Lehrbuch der Botanik fuer Hochschulen* (1894, 1967²⁹; *Textbook of Botany*, 1898, 1965⁷).

[Mordecai L. Gabriel]

STRASHUN, MATHIAS (Mattityahu; 1819–1885), talmudic scholar, founder of the Strashun Library. Mathias, the son of Samuel *Strashun, was born in Vilna. His family was well-to-do and at the age of 13 he married the eldest daughter of the wealthy Joseph Elijah Eliasberg and was financially independent during his whole life. According to his own testimony (*Ha-Maggid*, 3 (1859), 158), in his youth he already began to make marginal notes on every book he read and acquired a profound mastery of every branch of Jewish scholarship. He knew Greek and Latin, as well as Russian, Polish, and German, and had an extensive knowledge of philosophy, history, and astronomy. When H.M. *Pineles and H.S. *Slonimski had a difference of opinion on an astronomical-calendrical point, they agreed to submit the dispute to Strashun for his final decision (*ibid.*, 12 (1868), 149). He was approached to accept the position of rabbi of Berlin but refused. Besides his scholarly activities, he was a prominent communal leader, the head of the *Zedakah Gedolah* (which in effect was the official organization of the community of Vilna) of the *hevra kaddisha*, and was responsible for the collection of funds for Erez Israel. He was one of the heads of the *Mekize Nirdamim society. Independent, he adopted a firm attitude and showed considerable initiative. Strashun was held in esteem by the government authorities; he was appointed to the city

council of Vilna and was a member of the Vilna branch of the Russian Imperial Bank in 1869, and was decorated by the government.

Only one work by Strashun has been published, the *Mattat Yah* (1892), a commentary on, and annotation to, the *Midrash Rabbah*, edited by his friend Shalom Pludermacher, who included it in a bibliographical list of Strashun's 316 periodical publications. It was in those publications, including *Pirhei Zafon*, *Kerem Hemed*, *Ha-Maggid*, and *Ha-Levanon*, that, generally under the title *Minḥah Belulah ba-Shemen*, Strashun published his researches, but mostly not under his own name, using a wide variety of noms de plume, either initials, or such names as Ani Ve-Hu, Ve-Hu Ve-Hu, etc. They also appeared in the *Israelitische Literaturblatt* (1883) and his annotations to the Midrash were published in A. *Wuensche's German translation of the *Midrash Rabbah*. His selected writings appeared in Hebrew in 1969.

[Shillem Warhaftig]

Strashun was a devoted bibliophile and book collector and his extensive library, bequeathed to the Vilna community, contained over 5,700 volumes, many personally annotated by him. The library was opened to the public in 1892, and in 1901 it was transferred to a house specially erected for the purpose in the courtyard of the synagogue. The first director of the library, Samuel Strashun, edited and published a catalog of the library in his *Likkutei Shoshanim* (1889). After his death, the library was headed by his son Isaac Strashun. The librarian Khaykel Lunski, who supervised the reading room, became one of the most popular figures in Vilna. Over the years, many books were added to the library, mainly from the contributions and estates of authors and rabbis of Vilna. From 1928 the University of Vilna sent a copy of every book published in Poland in Hebrew or Yiddish to the library. By the late 1930s, there were over 35,000 books in the library, the overwhelming majority of them dealing with Hebraica and Judaica. There were also 150 manuscripts and five incunabula. The library served the vast number of students, teachers, journalists, and authors of Vilna. Various scientific circles convened in the library building. Zalman *Shneur described it in his poem "Vilna." When the Nazis occupied the town in the summer of 1941, they destroyed some of the books and transferred others to Frankfurt. Several thousand books were found after World War II and distributed among the YIVO Library in New York and the National Library and other libraries in Erez Israel.

STRASHUN (Zaskovitzer), SAMUEL BEN JOSEPH (1794–1872), Lithuanian merchant and talmudic scholar. Originally called Zaskovitzer, after the place of his birth, Zaskovitz, Strashun adopted the surname of his father-in-law, David Strashun. David Strashun acquired a business in Vilna, and also opened a *Klaus* named after him. Samuel, relieved by his father-in-law of all material cares, devoted himself to study there. His teacher was R. Abraham *Danzig, who refers to him in his *Binat Adam* and *Hokhmat Adam* under his original name. Even after his father-in-law's death in 1843, he was able to continue his studies while his wife and brothers ran a department store in Vilna. Strashun was also one of the leaders of the Vilna community. He refused to accept an appointment as rabbi of Suwalki, devoting himself entirely to study and teaching.

Strashun's fame rests upon his extensive annotations and glosses on almost every tractate of the Talmud and of the Mishnah. He followed the example of Elijah Gaon of Vilna, eschewing, as he himself testifies (in a letter to R. Heshel Levin), the method of *pilpul*, confining himself to giving sources, establishing the correct text, commenting, and giving original interpretations. He dealt with individual words and even letters, often pointing out how a mistake in explaining initials had distorted the text. He did not hesitate to suggest new halakhic rulings, not all of which were accepted. His annotations on the Talmud take up about 100 folio pages. In addition he annotated the *Midrash Rabbah*, adopting the same method. Strashun's commentary reveals his wide knowledge of Hebrew grammar and his acquaintance with history, geography, and foreign languages. In addition to the above commentaries, which are included in the Romm (Vilna) editions of the Talmud and Midrash, he wrote novellae to Maimonides' *Mishneh Torah*, to the Shulhan Arukh *Orah Hayyim*, and to the *Sifrei*. He also composed glosses to the *Ma'aseh Ray*, on the customs of Elijah Gaon of Vilna (1887).

Of his children the best known was Mathias *Strashun.

[Shillem Warhaftig]

STRASSFELD, MICHAEL (1950–), U.S. rabbi and educator. Born to a rabbinic family, his father Meyer Strassfeld was an Orthodox rabbi in Dorchester, Massachusetts, who moved to a Conservative synagogue in Marblehead. A graduate of Brandeis University (B.A. 1971, M.A. 1972), Strassfeld was influenced by American anti-establishment "counterculture" in the late 1960s. He was active in the *havurah* (Jewish religious fellowship) movement as part of a Jewish counterculture, cultivating personal involvement and knowledge as alternatives to the passivity and superficiality of Judaism as practiced in

the conventional American middle-class synagogue. Between 1973 and 1980, while a member of *havurot* in Boston and New York, he co-edited the three volumes of the highly popular *The Jewish Catalog*, a do-it-yourself guide to Jewish living designed to make Jewish knowledge and *havurah*-style practice accessible to Jews disaffected with the conventional synagogue. Between 1979 and 1982 he served as chairperson of the National *Havurah* Committee, the coordinating body of independent *havurot* in North America.

In 1982 Strassfeld assumed the first of a series of positions in Congregation *Anshe Chesed* in New York City, a run-down synagogue amenable to experimenting with innovative practices in order to survive. He opened the synagogue as a venue for several *havurah*-inspired *minyanim* (prayer quorums) accommodating different prayer styles, and applied insights derived from the Jewish counterculture to the congregational setting.

His realization that the synagogue as the central institution of American Jewry could be a venue for innovation in Jewish life led him to pursue rabbinical studies. In 1991 he was ordained by the Reconstructionist movement, which had cultivated *havurot* and a participatory spirit of innovation since its inception as a distinct denomination in the early 1960s. From 1991 to 2001 Strassfeld served as rabbi of Congregation *Anshe Chesed*. In 2001 he became rabbi of the Society for the Advancement of Judaism in New York, a congregation known for its creative approach to Judaism since its establishment by Mordecai M. Kaplan in 1922.

Strassfeld has been active in infusing elements of the ecstatic worship and intimate community associated with *Hasidism* into American Jewish life. The resulting synthesis, known as "neo-*Hasidism*," draws from the egalitarianism of the *havurah* while recognizing a role for the "rebbe," or charismatic spiritual leader. Neo-*Hasidism* originated in the late 1960s as a motif differentiating the Jewish counterculture from "establishment" Judaism of that time. In his books and teaching, and especially by assuming the rabbinate of an urban congregation, Strassfeld has embodied the principle of introducing neo-*Hasidism* into the mainstream of contemporary American Judaism.

His major publications include *A Book of Life* (2002); *A Night of Questions: A Passover Haggadah*, co-editor J. Levitt. (2000); *The Jewish Holidays* (1985); *A Shabbat Haggadah*, editor (1981); *The Third Jewish Catalog*, co-editor S. Strassfeld (1980); *A Passover Haggadah*, editor (1979); *The Second Jewish Catalog*, co-editor S. Strassfeld (1975); *The Jewish Catalog*, co-editors R. Siegel and S. Strassfeld (1973). He has also contributed articles to Jewish periodicals, notably *Response*, *Shma*, and *Tikkun*.

[Peter Margolis (2nd ed.)]

STRASSFELD, SHARON (1950–), U.S. Jewish educator, feminist, and community organizer. Educated at the Providence Hebrew Day School in Rhode Island and the University of Massachusetts (B.A. 1971), Strassfeld participated in

the Jewish “counterculture” through the *havurah* movement as a member of “Havurat Shalom” in suburban Boston from 1971 to 1975. Drawing from this experience, she co-edited the three volumes of *The Jewish Catalog*, (1973, 1975, and 1980), inspired by the countercultural *Whole Earth Catalog* which had appeared several years earlier. Strassfeld was instrumental in establishing the annual Havurah Summer Institute, a week-long educational and cultural retreat first held in 1979, and an innovative Jewish day school, the Abraham Joshua Heschel School in New York, which opened in 1983.

Strassfeld is also noted for introducing women’s sensitivities into the Jewish counterculture, which despite its purported egalitarianism had initially been male-dominated. Following the birth of her daughter, she (with then-husband Michael Strassfeld) pioneered the *simhat bat* ceremony in the 1970s as the girls’ equivalent of the male *brit milah*. Through her writing and educational activities she has become a proponent in the Jewish mainstream for the equality of women in Judaism that she originally voiced in the Jewish counterculture.

Strassfeld applied her business acumen to effect a synthesis between conventional financial activities and Jewish countercultural values of *tikkun olam* (repairing the world). As a businesswoman, her real estate and construction activities have generated resources that enabled her to support creative programs such as Ohel Ayalah (free High Holiday services for non-affiliated Jews in New York) and the Jewish Appleseed Foundation (outreach to isolated Jewish communities). She has headed Strassfeld Consulting, providing real estate services for non-profit organizations, and is a principal of the Soul Support Foundation, a philanthropic fund.

Her major publications include *Everything I Know: Life Lessons from a Jewish Mother* (1998); *The Jewish Family Book*, co-edited with K. Green (1983); *The Third Jewish Catalog*, co-edited with M. Strassfeld (1980); *Behold a Great Image*, co-edited with B. Aron (1980); *The Second Jewish Catalog*, co-edited with M. Strassfeld (1975); *The Jewish Catalog*, co-edited with R. Siegel and M. Strassfeld (1973). She also contributed articles to Jewish periodicals, notably *Response* and *Shma*, and wrote a weekly column syndicated in the Jewish press titled “Dear Molly.”

[Peter Margolis (2nd ed.)]

STRAUBING, city in Bavaria, Germany. A Jewish community existed there by the 13th century. A tosfist, Solomon of Straubing, lived in the town. The tombstone of R. Azariah b. Hosea, with a Hebrew inscription of 1328, was located beside a house in the former Jews’ street. In the privilege granted the town by Duke Stephen I of Bavaria in 1307, the Jews along with the Christians were designated as “free inhabitants.” They were called upon to build or repair fortifications. In 1338, following a rumor of *Host desecration, the Jews in Straubing were massacred. The duke pardoned the burghers and awarded them the property of the victims. A new community came into being before 1400. In 1439 the Jews were expelled from the newly created duchy of Straubing-Bavaria. The *oath *more Judaico*

is contained in the Straubing Town Book, or Red Book, compiled between 1472 and 1482 from older sources dating back to the 14th century. Straubing Jews are mentioned in Regensburg in 1466. After the emancipation in Bavaria (1872), Jews again moved to Straubing and the adjoining region. By 1890, 253 of them lived in the town and neighboring localities. In 1897 they formed the Lower Bavarian Jewish community. A synagogue and community center was consecrated in Straubing in 1907, and a cemetery was acquired in 1923. The community numbered 141 in 1913 (0.64% of the total population) and 115 in 1925–33 (0.5%), with approximately 110 in the affiliated localities. More than half subsequently emigrated. The synagogue was burned down in 1938. Fifty Jews from Straubing and 41 from the affiliated localities perished in the Nazi deportations. After the end of World War II approximately 700 Jews who had arrived in Straubing on their forced march from concentration camps stayed there; 100 of them remained until 1948. The community was reestablished and in 1968 numbered 112 persons and 119 in 1970. In 1964 a memorial plaque for the Holocaust victims was dedicated in the rebuilt synagogue. In 1988 a commemorative plaque was consecrated by the city of Straubing in memory of the Jewish victims of the Nazi era. The synagogue was restored in 1988–89. The Jewish community numbered 141 in 1989 and 1,729 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union.

[Toni Oelsner / Larissa Daemmig (2nd ed.)]

STRAUS, U.S. family of department store merchants, industrialists, public servants and philanthropists. Its founder, LAZARUS STRAUS (1809–1898), went to the U.S. in 1852 and settled in Talbotton, Georgia. Straus’s three sons, all of whom were born in Otterberg, Rhenish Palatinate, and his wife joined him in 1854. Moving his family to New York City in 1865, Straus became a crockery importer there.

His eldest son, ISIDOR (1845–1912), was a merchant, congressman, and philanthropist. During the Civil War he worked as (aide to) a London-based Confederate agent and as a Confederate bond salesman there and in Amsterdam. After returning to the U.S. in 1865, Isidor entered the family business in New York. He and his brother Nathan became partners in the R.H. Macy Department Store in 1874, and the store’s sole

owners in 1887. Isidor subsequently became a partner in Abraham and Straus (1893). He was elected to Congress to fill an unexpired term (1894–95), served as a member of the New York and New Jersey Bridge Commission, and was a founder of the Reform Club of New York. Active in Jewish affairs, he was president of the Educational Alliance, a member of the American Jewish Committee, and a founder of an endowment fund for the Jewish Theological Seminary. He died in the sinking of the *Titanic*.

Lazarus's second son, NATHAN (1848–1931), was a merchant and philanthropist. He served as New York park commissioner (1889–93), health commissioner, and as a member of the New York Forest Preserve Board. Nathan's lifelong interest in public health manifested itself in his establishment in New York City of a milk pasteurization laboratory and milk distribution stations (1892, 1894, 1897); an emergency relief system for the distribution of coal and food to the poor (winter of 1892–93); and a chain of boarding houses which supplied a bed and breakfast to the poor for five cents (winter of 1893–94). During the severe winter of 1914–15 Straus served one-cent meals in the milk stations he had established earlier. He also established the Pasteur Institute in Palestine, and endowed Hadassah's Nathan Straus child health welfare stations and the Nathan and Lina Straus health centers in Jerusalem and Tel Aviv. It was estimated that Straus gave two-thirds of his fortune to various projects in Palestine; in recognition, *Netanyah was named for him.

The youngest brother, OSCAR SOLOMON (1850–1926), was a diplomat, author, public servant, and jurist. Oscar was educated at Columbia University (L.B. 1873). While his father and brothers were expanding their crockery store into a far-flung mercantile firm, he was drawn through his law practice into the circles of political reformers. A "mugwump" who worked for the election of Grover Cleveland in 1884, Straus was rewarded by the Democrats with the post of minister to Turkey. On that mission (1887–89) and during two subsequent missions (minister, 1898–1900; ambassador, 1909–10) he dealt with the problems of missionary rights, the protection of naturalized U.S. citizens, and the course of "dollar diplomacy."

In matters of foreign policy Oscar was usually the anti-imperialist and pacifist. Active in the organized peace movement, he labored continuously for the establishment of legal machinery for the amicable settlement of international disputes. During World War I and its aftermath he championed the idea of a league of nations. Theodore Roosevelt appointed Straus to the International Court of Arbitration at The Hague, an appointment which was renewed four times. In domestic affairs Straus stressed political reforms (e.g., direct primaries) as the best means to preserve the democratic system. A Cleveland Democrat who broke with the party when it backed free silver, he stood for sound money, low tariffs, liberal immigration policies, and civil service reform. He emphasized the interest of the public in the clashes between capital and labor, and, like Theodore Roosevelt, he advocated cooperation with business and regulation of trusts when he served as Roosevelt's

secretary of commerce and labor (1906–09). In 1912 he followed Roosevelt into the Progressive Party, and he ran as that party's candidate for governor of New York.

The first Jew to hold a cabinet post, Straus displayed a strong sense of responsibility toward the Jewish community. On numerous occasions he interceded with U.S. and foreign statesmen on behalf of the suffering Jews of Russia and Romania. In 1906 he helped found the *American Jewish Committee. Opposed to political Zionism, he nonetheless contributed to various projects for the physical rehabilitation of Palestine and he supported territorialist schemes for the settlement of persecuted Jews. As a founder and officer of the Baron de Hirsch Fund he also worked to ease the plight of the newly arrived immigrants to the United States. Straus, a Reform Jew, found ideological similarities between the missions of Judaism and Americanism. As first president of the American Jewish Historical Society, and in numerous writings, particularly *The Origin of the Republican Form of Government in the United States of America* (1887, 1925), he stressed the impact of Hebraic concepts upon U.S. culture. His other writings include: *Roger Williams, the Pioneer of Religious Liberty in the United States* (1896) and *Under Four Administrations* (1922), an autobiography.

JESSE ISIDOR (1872–1936), the son of Isidor Straus, graduated from Harvard in 1893. He went to work for Macy's in 1896, was subsequently elected firm president in 1919, and supervised its growth into the world's largest department store. Governor Franklin D. Roosevelt appointed Straus to serve first on the New York State Commission for the Revision of Tax Laws and then as head of the New York State Temporary Emergency Relief Administration (1931). In his latter position he was responsible for supervising the disbursement of \$20 million in unemployment funds. Straus, who organized the Roosevelt Business and Professional League to work for Roosevelt's election as president, was appointed ambassador to France by Roosevelt in 1933. As ambassador he urged the removal of trade barriers between the U.S. and France. He resigned in 1936 because of ill health. His son JACK ISIDOR (1900–1985) inherited the management of Macy's, of which he became director in 1928, vice president in 1939, president in 1940, and chairman of the board in 1956. A second son, ROBERT KENNETH (1905–1997), was active in New Deal politics in Washington, where he served as deputy administrator of the National Recovery Act before going into business.

NATHAN JR. (1889–1961), the son of Nathan Straus, was born in New York City and worked as a reporter for the New York *Globe* (1909–10). He resigned to devote himself to the family interests at R.H. Macy (1910–13), but soon resumed his editorial career. From 1913 to 1917 he was editor and publisher of the humorous magazine *Puck*. After World War I service as a navy ensign, Straus was assistant editor of the New York *Globe*. He resigned in 1920 in opposition to the paper's support for Harding and its anti-League of Nations stand. From 1920 to 1926 Straus served in the New York State Senate as a Democrat, where he became interested in public housing leg-

isolation. He subsequently served as state administrator for the National Recovery Administration (1934), was a member of the New York City Housing Authority (1936), and head of the U.S. Housing Authority (1937–42). He resigned from the latter position as a result of dissatisfaction among conservative congressmen over his leadership of the authority. As president of radio station WMCA, he steered the station into an increasingly liberal stance on public issues. Straus wrote *Seven Myths of Housing* (1944), and *Two-Thirds of a Nation – A Housing Program* (1952).

His son, R. PETER (1917–), took over the management of WMCA while purchasing additional radio stations to form the Straus Broadcasting Group. He also served as executive assistant to the director of the International Labor Organization in Geneva from 1950 to 1955 and director of the U.S. office from 1955 to 1958. In 1967 he was appointed by President Lyndon B. Johnson to be assistant director of the U.S. foreign aid program to Africa until 1969. Under President Jimmy Carter he served as director of the Voice of America (1977–79). After WMCA was sold in 1986, the company broadened into Straus Communications, a private chain that owns 11 radio stations and eight newspapers, of which Straus served as chairman. He was married to Ellen Sulzberger Straus for 45 years until her death in 1995. In 1998 he married writer Marcia Lewis, the mother of Monica Lewinsky. He wrote several books, including *Is the State Department Color Blind?* (1971); *The Buddy System in Foreign Affairs*; (1973); and *The Father of Anne Frank* (1975).

ROGER WILLIAMS (1893–1957), the son of Oscar Solomon Straus, graduated from Princeton in 1913. He married the daughter of Daniel *Guggenheim, and joined the American Smelting and Refining Company, owned by the Guggenheim family, becoming company president in 1941 and board chairman in 1947. Active in Republican Party politics, Straus was New York City manager for Thomas E. Dewey's 1948 presidential campaign and vice chairman of the Republican National Campaign Committee (1944). In 1954 he served as a member of the U.S. delegation to the UN General Assembly. Appointed in 1947 to the New York State Board of Regents, the supreme educational body in the state, Straus was named its chancellor in 1956. He was a founder of the National Conference of Christians and Jews (1928) and of the World Council of Christians and Jews (1947), and a member of the executive boards of the Union of American Hebrew Congregations, the American Jewish Committee, and the American Financial and Development Corporation for Israel. His son OSCAR II (1914–) served with the State Department in Washington from 1940 to 1945 before going into his father's business. In 1963 he became president of the Guggenheim Exploration Company. He was the first chairman of the Board of Trustees of the Rensselaerville Institute think tank and served for many years, after which he became honorary chairman. His younger brother, ROGER WILLIAMS JR. (1917–2004), went into publishing and in 1945 founded the prominent New York publishing house of Farrar, Straus, and Company in partnership with John C. Farrar.

Straus* (1969), includes bibl. **ADD. BIBLIOGRAPHY:** M. Harriman, *And the Price Is Right: The R.H. Macy Story* (1958); I. Marmash, *Macy's for Sale* (1989).

[Naomi W. Cohen and Hanns G. Reissner / Ruth Beloff (2nd ed.)]

STRAUS, OSCAR (1870–1954), composer. Born and educated in Vienna, Straus also studied in Berlin with Max Bruch. In 1901, after conducting various theater orchestras in Austria and Germany, he became conductor at the satirical cabaret “Ueberbrettl” in Berlin. There he began writing musical sketches and chansons, including *Die Musik kommt*, and quickly proceeded to full-scale operettas, joining the mainstream of the “silver age” of the operetta which had just begun to establish a vigorous school at Berlin that paralleled the Viennese productions. His first works, such as *Die lustigen Nibelungen* (1904), were Offenbach-like parodies of Wagnerian operas. In 1907 he composed the first of his international successes, *Ein Walzertraum* (“A Waltz Dream”), and in 1908 the second one, *Der tapfere Soldat*, based on G.B. Shaw's *Arms and the Man*; it was known in English as the *The Chocolate Soldier* (New York premiere in 1909). Further successes followed almost yearly. In 1927 Straus settled in Vienna. After his works were banned by the Nazi regime he lived in Switzerland and France, and stayed in the United States from 1940 to 1948, when he returned to Europe. His last work, *Božena* (premiere Munich, 1952), is a work in the style of a folk opera based on Slavic material; it emphasizes the use of ensembles and choral scenes. He also wrote some orchestral, chamber, and piano works, as well as music for films, of which the music to Max Ophuls' *La Ronde* (1950) yielded a perennial waltz favorite.

The original form of his name was Strauss, but the spelling was changed because of pressure from German nationalist elements who resented the possibility of linking the composer's name with the presumably Aryan Viennese Strauss family of composers. Ironically, the Viennese Strauss family were also discovered to have been of Jewish descent – a fact which the Nazi authorities hushed up by a manipulation of the documentary evidence after their takeover of Austria. Genealogical research has not, however, established any direct relationship between Oscar Straus and the Viennese Strausses.

[Bathja Bayer]

STRAUS, RAHEL GOITEIN (1880–1963), pioneering woman physician trained in Germany. Born and raised in an Orthodox family in Karlsruhe, Rahel Goitein was selected as valedictorian of the first graduating class of the first Girls' Gymnasium in Germany in 1899; she went on to become the first matriculated woman student at the University of Heidel-

berg. In order to complete her medical education, Rahel Goitein had to overcome many obstacles and much discrimination against her as a woman. Some faculty members, including the dean, tried to discourage her; she needed special permission to take courses and even to sit for her final exams. Nevertheless, she persevered; a month before her marriage to Eli Straus, a lawyer, in 1905, she passed her state medical boards and in 1908, she received her doctorate in medicine. For 25 years, Rahel Straus maintained a private medical practice in Munich, while at the same time running a model Jewish household and raising five children.

An ardent Zionist since her youth, Straus organized and led various women's Zionist groups in Munich, including the Association of Jewish Women to Support Cultural Work in Palestine before World War I and WIZO, the Women's International Zionist Organization, thereafter. She also served as vice president of the Jüdischer Frauenbund. She belonged to several radical feminist organizations, joining the German Association for Woman Suffrage in 1905 and the Women's International League for Peace and Freedom after the war.

Soon after the death of her husband in 1932, Straus emigrated to Palestine with her children. She set up a medical practice in Jerusalem, but, encountering difficulties adapting to a new language and environment, she retired in 1940, at the age of 60. Once again, she became involved in volunteer activities on behalf of women, establishing a homemaking school to train young immigrant girls, a service to collect, repair and distribute used clothing and furniture among the needy, and an occupational therapy workshop for handicapped women. She also established AKIM, a training institute for the rehabilitation of disabled children, which is still known as Beit Rahel Straus. In 1952, she helped found the Israeli branch of the Women's International League for Peace and Freedom and remained its honorary president until her death.

After retiring from medical practice, Rahel Straus wrote her memoirs, *Wir lebten in Deutschland: Erinnerungen einer deutschen Jüdin* (1961), discussing life in Germany before the Nazi era. She began to paint and to write poetry; she also became the author of a popular children's book of fairy tales in Hebrew. Her papers are found in the Leo Baeck Institute Archives at the Center for Jewish History in New York City.

Häntzschel & H. Bussmann (eds), *Bedrohlich gescheit: Ein Jahrhundert Frauen und Wissenschaft in Bayern* (1997), 236–41.

[Harriet Pass Freidenreich (2nd ed.)]

STRAUS, RALPH (1882–1950), English novelist and biographer. Born in Manchester and educated at Harrow and Cambridge, Straus is best known as the author of *Dickens, a Portrait in Pencil* (1928) and *Dickens, the Man and Book* (1936). He also wrote a mystical fantasy, *The Dust Which Is God* (1907); *The Unseemly Adventures* (1924); *Married Alive* (1925); and *Five Men Go to Prison* (1935).

STRAUS, ROGER, JR. (1917–2004), U.S. publisher. Roger Williams Straus, Jr., was born in New York City, the son of two prominent German Jewish families. His father was a member of the R.H. Straus family that owned Macy's department store, and his mother was Gladys Guggenheim of the mining company. His father was the president of the American Mining and Smelting Company and worked for his father-in-law, David Guggenheim, a copper mine owner and a philanthropist. Straus's paternal grandfather was Oscar S. Straus, U.S. ambassador to Turkey and secretary of commerce in President Theodore Roosevelt's administration. An indifferent student, young Straus left the boarding school St. George's because he felt uncomfortable there as a Jew, went to Hamilton College and left, and later graduated from the school of journalism at the University of Missouri. The next year he married a childhood friend, Dorothea Liebmann, granddaughter of the founder of the Rheingold brewery. With the security of two trust funds, Straus became a reporter for the *White Plains Daily Reporter*. During World War II he served in the U.S. Navy, doing public relations work and writing speeches. He rose to the rank of lieutenant.

Following the war, Straus and John Farrar founded a publishing company with additional funds from James Van Alen (who later invented the tiebreak in tennis). Van Alen's parents, though, did not want their son's name to appear as a partner because Straus was a Jew. Although the company achieved success with Gaylord Hauser's *Look Younger, Live Longer*, a nutritional manual, in 1950, Straus realized he did not have the capital to compete with more commercial publishers, so he decided to become a literary house, stressing quality writers. Straus went abroad and signed Carlo Levi and Alberto Moravia, which attracted Edmund Wilson, Shirley Jackson, and Marguerite Yourcenar. It acquired other companies and their well-known writers, including Marguerite Duras and Francois Mauriac. In 1964 the firm became Farrar, Straus & Giroux, and Robert Giroux brought more distinguished authors, including T.S. Eliot, Robert Lowell, Flannery O'Connor, and Bernard Malamud. New editors brought in Tom Wolfe, Joan Didion, Philip Roth, Arthur Miller, Maurice Sendak, and William Steig. Over the years his authors received the most important literary prizes. The Nobel Prize, Pulitzer Prize, and National Book Awards were won by Joseph Brodsky, Robert Lowell, John McPhee, Czeslaw Milosz, Isaac Bashevis Singer, Aleksandr I. Solzhenitsyn, Scott Turow, and Susan Sontag.

In 1994 when he recognized that his house could no longer compete financially as an independent in a world of conglomerates, he sold Farrar, Straus to one of the foreign media companies he so scorned, Georg von Holtzbrinck Publishing Group, in Stuttgart, Germany, although, as he insisted in the wake of the deal, which reportedly brought him more than \$30 million, the arrangement was such that for all practical purposes he remained in charge and the house remained virtually independent.

[Stewart Kampel (2nd ed.)]

STRAUSS, ARYEH LUDWIG (1892–1953), Hebrew and German poet, short story writer, and literary critic. Born in Aachen, Strauss first distinguished himself as the author of poems and stories in German, writing a volume of tales, *Der Mittler* (1916), and the verse collection *Wandlung und Verkuendigung* (1918). He became a Zionist and, after World War I, associated himself with the *Ha-Po'el ha-Za'ir movement, serving as editor of *Ha-Avodah*, its German language periodical. Following his first visit to Erez Israel in 1924, Strauss published the drama *Tiberius* (1924) and a story, “*Der Reiter*” (1929). During the years 1929 and 1933 he taught German literature at the University of Aachen and specialized in literary history. He paid a second visit to Palestine in 1934 and his impressions were recorded in a volume of German poems, *Land Israel* (1934), a Hebrew version of which appeared as *Sha'ot ve-Dor* (1951). Two other works of this period were the poem “*Nachtwache*” (1933) and *Die Zauberdrachenschmur* (1936), a collection of fairy tales. When the Nazis came to power, Strauss left Germany, settling in Erez Israel in 1935. He first joined kibbutz Ha-Zore'a and taught at Ben Shemen. Later he moved to Jerusalem, where he taught at the Hebrew University. He was one of the first German-Jewish immigrants to write poetry in Hebrew.

Strauss specialized in textual analysis, applying modern critical methods to the whole of Hebrew literature. His critical essays profoundly influenced contemporary literary criticism in Israel. His work also afforded new insights into the poetry of H.N. *Bialik, which he translated into German. His last works include the poem *Heimliche Gegenwart* (1952) and *Wintersaat* (1953), a book of aphorisms. His collected German works were published posthumously by Werner Kraft (1962). T. Ruebner published his essays and lectures on aesthetics and on Hebrew and general literature in *Be-Darkhei Sifrut* (1959). Tuvia Ruebner and Yedidya Peles translated Strauss's *Ha-Adam ve-ha-Shirah* (1985). Dan Pagis translated *Ha-Kad ha-Atik: Aggadot* (1961; 1986). There has been a growing interest in the writings of Strauss in Germany, with a number of publications of his own German works as well as books on his life and writing. Among these are B. Witte, *Ludwig Strauss, Dichter und Germanist* (1982) and Hans Otto Horch (ed.), *Ludwig Strauss: Beitrage zu seinem Leben und Werk* (1995).

[Getzel Kressel]

STRAUSS, BENNO (1873–1944), German inventor. Born in Fuerth, Bavaria, Strauss worked with the Krupp company at Essen, and from 1921 to 1934 was director of Friedrich Krupp A.G. In 1912 he was made a professor by the Prussian Ministry of Education. Strauss discovered the greater corrosion resistance of nickel-chromium steels, thus inventing stainless steel.

STRAUSS, EDUARD (1876–1950), German chemist, born in Kreuznach. Strauss worked as a nutritional chemist in Mu-

nich and in 1907 went to Frankfurt to the Biological Institute and the Georg Speyer Haus, working mainly on albumen and other nutritional factors. A communal leader and Zionist, Strauss did much to foster Jewish education in Frankfurt. He went to New York in 1939 and joined the Crown Heights Hospital in Brooklyn.

STRAUSS, GEORGE RUSSELL, BARON (1901–1993), British politician. The son of Arthur Strauss (1847–1920), who was a Conservative member of Parliament from 1910 to 1918, George Strauss was educated at Rugby and entered the family firm of tin merchants. He served as a Labour member of Parliament in 1929–31 and 1934–79. He was also a prominent figure in the London County Council, on which he served in 1926–31 and 1932–46. In 1945 he was made parliamentary secretary to the Ministry of Transport. Strauss became minister of supply in 1947, and was responsible for executing the nationalization of the steel industry in 1949. During the 1930s Strauss was on the left of the party, helping to fund the left-wing weekly *Tribune*. Later he moved to the party's center. In 1968 he helped secure the abolition of theater censorship. From 1974 to 1979 he was the “Father of the House,” the longest-serving Member of Parliament. He was made a life peer in 1979.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

STRAUSS, GUSTAVE LOUIS MAURICE (c. 1807–1887), English author. Born in Trois Rivières, Canada, Strauss settled in England after serving as a surgeon with the French Foreign Legion and being expelled from France for alleged revolutionary activities. His works include *Moslem and Frank* (1854), *Reminiscences of an Old Bohemian* (2 vols. 1882), *The Emperor William* (1887), and various translations. The *Athenaeum's* attacks on his novel, *The Old Ledger* (1865), led to two famous libel actions. Strauss was well known in bohemian circles in London and was one of the founders of the Savage Club. He claimed to be of “Italian, French, German, and Sarmatian [sic] blood,” and had no obvious connection with the Jewish community. He has an entry in *The Jewish Encyclopedia* of 1904, but did not receive an obituary in *The Jewish Chronicle*.

ADD. BIBLIOGRAPHY: ODNB online.

STRAUSS, JOHANN, JR. (Baptist; 1825–1899), composer, conductor, and violinist. He was the eldest son of the celebrated composer and violinist Johann Strauss (1804–49), known as the “Waltz King.” Strauss, Jr., who began composing when he was six, became an accomplished pianist. He wished to become a professional musician but his father intended him for a business career. His mother arranged for him to study secretly with the leader of his father's orchestra. He also studied harmony, counterpoint, and violin. In 1844 Strauss made his first public appearance as conductor of his own ensemble at Hietzing. In 1845 he was offered the honorary position of Bandmaster of the 2nd Vienna Citizens' Regiment and in 1847 begun his long and

fruitful association with the influential Wiener Maennergesang-Verein for which he wrote the waltz *An der schoenen blauen Donau* (1867). During the 1848 Vienna Revolution he supported revolutionary elements and then switched his allegiance and tried to ingratiate himself with Emperor Franz Joseph. He consolidated his initial success after his father's death (1849), when he united his father's band with his own. With his brother Josef, Johann held sway over Vienna's dance-music scene from the late 1850s. He also performed in Russia and the United States and won numerous medals and honors. He brought the waltz to a height of musical artistry, endowing it with new melodic, rhythmic, and orchestral richness. He wrote more than 400 waltzes and numerous quadrilles, polkas, polka-mazurkas, marches, and gallops. Strauss composed a number of operettas, including *Die Fledermaus* (1874) and *Der Zigeunerbaron* (1885), and cemented his position as the leading figure of "Silver Age" Viennese operetta. Strauss also championed the music of Liszt and Wagner. When the Nazis realized the Jewish ancestry of the family, they falsified the parish register at St. Stephen's Cathedral in 1939 to make the family racially pure.

[Naama Ramot (2nd ed.)]

STRAUSS, LEO (1899–1973), philosopher and political scientist. Born in Germany, Strauss began his association with the Academy of Jewish Research in Berlin in 1925, and ended it with Hitler's rise to power. On arriving in the U.S. he taught at the New School for Social Research, New York, from 1938 to 1949, and then joined the University of Chicago, where he was professor of political science until 1968.

Strauss's scholarship encompasses the tradition of Western political philosophy. Of particular interest is his work on the reception and adaptation of Greek philosophy by medieval Jewish and Muslim writers. He sees the most profound and intransigent confrontation as that between Athens and Jerusalem, between philosophic doubt and faith. In examining that conflict he studies ancient and modern texts with a presumption of their vitality, seriousness, and thoughtful composition. His wish to understand past authors as they understood themselves – explicit even in his earliest books, *Die Religionskritik Spinozas* (1930; *Spinoza's Critique of Religion*, 1965), and *Philosophie und Gesetz* (1935) – led him to investigate carefully those philosophers' manner of writing. Strauss revived the distinction (familiar from antiquity until the 19th century) between exoteric and esoteric speech – public orthodoxy, be it political or religious, and private heterodoxy. Through studies of Maimonides, Halevi, and Spinoza in *Persecution and the Art of Writing* (1952), he explicates the art of "writing between the lines" by illustrating the art of reading between the lines. In teaching and writing, Strauss has used these arts to restate for contemporaries the insights and relevance of classical political philosophy against prevailing modes of thought, and has

attempted to state a systematic political philosophy in defense of classical natural law. In doing so he has rendered problematic much that was noncontroversial, because unexamined, in modern political science.

The range of Strauss's general and Jewish scholarship is shown in his *On Tyranny* (1948, 1963); *Natural Right and History* (1953); *Thoughts on Machiavelli* (1958); *What Is Political Philosophy?* (1959); his introduction to Pines' translation of Maimonides' *Guide* (1963); *Liberalism: Ancient and Modern* (1968). His writings are listed in J. Cropsey, *Ancients and Moderns* (1964), 317–22.

BIBLIOGRAPHY: Momigliano, in: *Rivista Storica Italiana*, 79 (1967), 1164–72.

[Ralph Lerner]

STRAUSS, LEVI (1829–1902), U.S. garment manufacturer and philanthropist. A native of Bavaria, Germany, Strauss followed his two brothers to New York in 1848. In 1850, during the gold rush, he started a dry goods business in Sacramento, California, and three years later in San Francisco. He began to manufacture pants from blue denim, reinforced with copper rivets, which under the trademark "Levis" became popular with gold miners. They were taken up by Western farmers and, as the years went by, were sold to an ever-widening public. By the mid-20th century they were being marketed all over the world. Strauss, a bachelor, took first his brothers, then his brother-in-law, David Stern, and finally the latter's four sons into partnership in Levi Strauss & Co. A multimillionaire, he assumed directorship of a bank, an insurance company, wool mills, and the San Francisco Board of Trade. His charities included scholarships at the University of California, and he left large sums to Jewish, Protestant, and Catholic orphanages. He was a member of Congregation Emanu-El, San Francisco. In 1968, with WALTER A. HAAS, SR. (1889–1979), a grandnephew of Strauss's, as chairman of the board, and his sons WALTER A., JR. (1916–1995), president, and PETER E. (1918–), executive vice president, Levi Strauss & Co.'s sales topped \$200 million. The owners have participated in local and national public and charitable activities, both general and Jewish. In 1953 Walter and his wife established the Evelyn and Walter Haas Jr. Fund, dedicated to helping disadvantaged youths, families, and the elderly, reducing hunger and homelessness, and encouraging volunteerism and philanthropy. Peter was the director of the Levi Strauss Foundation and vice president of the Miriam and Peter Haas Fund. The Levi Strauss firm has been a leader in "equal opportunity" employment and actively encourages minority group enterprises in the ghettos. By 1995 the company had become the largest brand-name clothing manufacturer in the world, with 36,000 employees and an annual revenue of \$6.1 billion.

Goldish, *Levi Strauss: Blue Jean Tycoon* (1993); K. McDonough and L. Downey, *This Is a Pair of Levi's Jeans* (1995); C. Ford, *Levi Strauss: The Man behind Blue Jeans* (2004).

[Hanns G. Reissner / Ruth Beloff (2nd ed.)]

STRAUSS, LEWIS LICHTENSTEIN (1896–1974), U.S. governmental official, navy rear admiral, and banker. Strauss was born in Charleston, West Virginia, and grew up in Richmond. He became a traveling salesman for his family's wholesale shoe business. In 1917 he presented himself to Herbert Hoover, who was then organizing volunteers in the cause of Belgian relief. Strauss remained with the volunteers, and when Hoover became head of the Food Administration, Strauss became his secretary, later accompanying him on several European missions. Strauss caught the attention of Kuhn, Loeb & Co., which hired him in 1919. In 1923 he married Alice Hanauer, daughter of a partner in the firm, and in 1929 he himself became a partner. Avidly keeping abreast of technological developments, Strauss was an initial investor in Kodachrome. His interest in the atom was spurred by the deaths of his parents from cancer, and he funded the construction of a surge generator to produce isotopes for cancer treatment. From 1926 Strauss was in the Navy Reserve and was called to duty in 1941, becoming adviser to Navy Undersecretary Forrestal. He directed the development of the radar proximity fuse, conceived the Big "E" war production incentive program, and in 1945 was promoted to rear admiral by President Truman. In 1946 Truman appointed him to the Atomic Energy Commission (AEC) where he served through 1950. He was reappointed by President Eisenhower in 1953, this time as chairman. Strauss, who was then president of Temple Emanu-El, New York City, opened the first meeting under his chairmanship with a prayer, "that the fruits of our labor be peace and not war."

Strauss was thrust into public controversy twice during his tenure. In 1953 the White House suspended the security clearance of commissioner J. Robert Oppenheimer. Strauss eventually voted against Oppenheimer's reinstatement but sought to have him retained in the Princeton Institute for Advanced Study and other nuclear undertakings. The second controversy flared a year later, when the AEC engaged the Dixon-Yates combine to erect a power plant in West Memphis, Arkansas. Strauss, a deeply conservative Republican, was eager then to admit private industry into the atomic field. But liberals saw in the Dixon-Yates contract a threat to the Tennessee Valley Authority and public power. They attacked the contract so vigorously that in 1955 President Eisenhower canceled it. In 1959 Eisenhower nominated Strauss secretary of commerce, but the Senate refused to confirm him. Soon thereafter he returned to private life.

STRAUSS, ROBERT SCHWARZ (1919–), U.S. lawyer, businessman, Democratic political leader, member of the Cabinet, ambassador, statesman. Strauss was born in Lockhart, Texas, and raised in Stamford, a small town in West Texas where his immigrant father owned a small general store. His maternal great grandfather, Heinrich Schwarz, was the first ordained rabbi in the state of Texas (1873). The Strausses were the only Jewish family in Stamford, a town without a synagogue or

rabbi, and although the Strauss home was deeply culturally Jewish, Bob Strauss received no formal Jewish education.

Robert Strauss received his undergraduate and law degrees from the University of Texas in Austin. During law school, Strauss began a life-long friendship with John Connally, who later was elected governor of Texas. After law school, he served as a special agent in the FBI until the end of World War II. He then moved to Dallas where he established his own law firm. Akin, Gump, Strauss, Hauer and Feld has become one of the great law firms in the United States, and has branches in 15 cities around the world. It is considered one of the premier law-lobbying firms in the nation's capital.

Strauss has become an icon of American politics. After serving as Democratic National Committeeman from Texas and Treasurer of the DNC, Bob Strauss was elected Chairman of the Democratic Party in 1972 following the electoral debacle of the McGovern presidential campaign, the first Jew to serve as chairman of a national political party. In that role Strauss worked tirelessly and brilliantly to reunite a badly splintered party, patiently coaxing disparate and hostile factions to work together around common programmatic goals. His almost mystical powers of persuasion and leadership were manifest at the hugely successful Democratic National Convention in New York City in 1976 which nominated a moderate southern governor, Jimmy Carter, who went on to win the presidency of the United States in a campaign that Strauss managed.

President Carter appointed Strauss to the cabinet level post of US Special Trade Representative, where he masterfully completed the Tokyo Round of Multilateral Trade Negotiations. Impressed by Strauss' negotiating skills, Carter then appointed him as his Personal Representative to the Mideast Peace Negotiations.

Although an unparalleled Democratic Party political leader, Bob Strauss was no stranger to Republican presidents. Indeed he served as a friend and advisor not only to Lyndon Johnson, Jimmy Carter, and Bill Clinton, but also to Ronald Reagan, George Herbert Walker Bush, and George W. Bush. President George H.W. Bush appointed Strauss to serve as the United States ambassador to the Soviet Union, and after the breakup of the Soviet Union in 1990, Strauss was appointed by President Bush to serve as the first United States ambassador to Russia. For Strauss' quietly effective work on the Wallenberg Holocaust case while serving as ambassador to the Soviet Union and Russia, he was awarded the prestigious Raoul Wallenberg Award.

Strauss occupied the Lloyd Bentsen Chair at the Lyndon Baines Johnson School of Public Affairs at the University of Texas, and served on the Boards of major U.S. corporations, including Xerox and Archer Daniels Midland. He was the chairman of the U.S.-Russia Business Council, a member of the Council on Foreign Relations, and a Trustee of the Center for Strategic and International Studies.

Strauss is and will always be considered one of the true giants of American politics. Strauss – national party chairman, member of the Cabinet, ambassador, and statesman – who

served as mentor to a new generation of American politics and advised six American presidents, has written that, at the end of the day he owes whatever he has accomplished in life to the experience of growing up in the only Jewish family in a small town in West Texas.

[Mark Siegel (2nd ed.)]

STRAUSS-KAHN, DOMINIQUE (1949–), French economist. Strauss-Kahn graduated in law and then specialized in economics. From 1980 to 1990 he was professor at Paris' Nanterre University. From 1986 he was a deputy in the National Assembly, where he was president of the finance committee before being appointed minister of industry and foreign trade (1991–93), being regarded as one of the leading experts in the Socialist party on economic affairs. Among his many activities as minister were special efforts to strengthen trade relations between France and Israel. In 1995 Strauss-Kahn was elected mayor of Sarcelles and in 1997 was appointed minister of the economy, finance, and industry, leading France to a period of prosperity. Accused of receiving a bogus fee from an insurance company, he resigned in 1999, denying any guilt. He became a deputy again in 2001.

[Gideon Kouts]

°**STRECKFUSS, ADOLF FRIEDRICH KARL** (1779–1844), Prussian official and writer. In 1833 Streckfuss published a pamphlet, *Ueber das Verhaeltniss der Juden zu den christlichen Staaten*, in which he stated that the 1812 edict emancipating the Jews had been premature, as had been demonstrated by the unanimous opposition of the provincial estates to full emancipation. He claimed that the Jews had remained an unassimilable foreign body or “nation” within the state because of their special ritual and belief in the forthcoming Messiah. Nevertheless Streckfuss was prepared to grant conditional political rights to individuals of the thin upper layer of Jewish society. But, according to Streckfuss, the remaining mass of ignorant and superstitious peddlers and innkeepers had to remain without rights until they proved themselves worthy of citizenship. Because of Streckfuss's official position as *Geheimrat* (government counselor), the leading young intellectuals of German Jewry, such as G. *Riesser, felt obliged to refute him at length. Ten years later, after his retirement, Streckfuss published a work under the title *Zweite Schrift ueber das Verhaeltniss der Juden...*, this time proclaiming his sincere conversion to the cause of complete and immediate emancipation of the Jews.

[Uri Kaufmann (2nd ed.)]

°**STREICHER, JULIUS** (1885–1946), Nazi propagandist and antisemitic agitator, publisher of a crude antisemitic newspaper which characterized the Jews in quasi-pornographic fashion. Born in Fleinhausen, Swabia, Streicher was a teacher by profession. He was a founder of the German Socialist Party, which soon merged with the Nazi Party. Limited in his education, ambitious, and emotionally disturbed, he was enabled by the antisemitism of the Third Reich to give vent to his abnormal tendencies. In 1921 he founded the Nuremberg branch of the Nazi Party and participated in the attempt to remove Hitler from the party leadership. But he won Hitler's confidence by his participation in the Beer Hall Putsch (1923), which led to his arrest. In the same year Streicher founded *Der *Stuermer*, a weekly which achieved a circulation of 500,000 copies. He became its editor only in 1935 and was its owner. Hitler appointed him Gauleiter of Franconia (1928–40). He was elected to the Reichstag, made a general in the SA (storm troops) in 1932, and was charged with organizing the annual party convention, the Nuremberg Rally. Despite all his titles, Streicher had no real influence on policy making. Many of the party's leaders loathed him and plotted against him and his newspaper. In 1939 he was forbidden to make speeches and from 1940 was confined to his estate, Pleikershof. However, Streicher was esteemed by academic circles engaged in the “scientific” development of antisemitism. He achieved his fame and influence as a result of his fanatical incitement against the Jews. In hundreds of articles in *Der Stuermer* and in his speeches, in which he portrayed the Jews as the devil, the enemies of humanity, inferior beings, and dangerous germs, Streicher demanded their total extermination. He organized the economic boycott of the Jews (April 1, 1933), and his sadistic depictions of Jews in *Der Stuermer* as “defilers of the race” prepared the ground for the *Nuremberg Laws (1935). Even before **Kristallnacht* (1938), Streicher presided over the destruction of the Nuremberg synagogue, and on the morrow of the riots (Nov. 10, 1938) publicly justified it. Captured in 1945, after a period of hiding in disguise, he was brought before the Nazi war criminal court at Nuremberg and sentenced to death under the Crimes Against Humanity clause for his part in the preparation of German public opinion to accept the “*Final Solution.” He was hanged in October 1946.

[Nathan Feinberg / Michael Berenbaum (2nd ed.)]

STREICHMAN, YEḤEZKEL (1906–1993), painter. Born in Kovno, Lithuania, the son of Isaac, a wealthy timber merchant, and Hasia Streichman, YeḤezkel Streichman already received personal training in art at the Hebrew Gymnasium. In 1924 he immigrated to Erez Israel and studied at Bezalel in Jerusalem. From 1927 to 1931 Streichman continued his art training at the Brerra Academy in Florence, Italy. From Italy

he returned to Kovno, where he lived and worked until 1936, when he returned to Erez Israel. He lived most of his life in Tel Aviv with his wife, Tzilla, and was an art teacher in schools as well as at the Avni College. In 1945 he established The Studio atelier in Tel Aviv, together with *Stematzky, where many young artists received their art education. Together with other painters and sculptors, he founded the New Horizons group and participated in all its 11 exhibitions until 1964.

Streichman's art was sent to the Venice and the Sao Paulo Biennales more than once. In 1990 he was awarded the Israel Prize.

In his art Streichman enlarged the portrait genre. Most of his portraits described members of his family as well as friends. His wife, Tzilla, became a recurring subject for more than 30 years. Landscape was another theme appearing in Streichman's art.

While the paintings of his early years employed dark colors, using expressive brush movements, during the 1940s Streichman discovered the French painting style, which became one of the factors that led to the brightening of the tonal language and to the dominance of the contour line.

From the 1940s on, Streichman believed that modern art drew the artist's path toward the abstract, though he reached abstract style only around the 1960s. The starting point for his abstract work was the landscape, with the paintings' names being those of the painted places. Later he repeated the motif of the tree and the fenced windows (*Soaring Bird*, 1970, Israel Museum, Jerusalem). The reflections of local places expressed Streichman's belief in the existence of a unique Israeli painting. He described himself as an Israeli artist in that his style was open, bright, and happy. Zionist ideology had a powerful influence on his life, and he strongly believed that his painting style with its free vibrating and vital atmosphere was a part of the Zionist vision. All those tendencies found expression through the modernist language, the abstract.

Streichman's participation in the New Horizons group located him in the center of the Israeli art world. Streichman's power as an influential figure, however, was also forged thanks to his being an impressive, didactic figure. As a teacher, and later as an interlocutor, he influenced the young Israeli artists who were the next generation of the Israeli art world.

[Ronit Steinberg (2nd ed.)]

STREISAND, BARBRA (1942–), U.S. singer and actress. Born in Brooklyn, New York, Streisand worked as a switchboard operator and theater usher until she won a singing contest at a Greenwich Village bar. After some appearances on television, she made her first Broadway success in the musical *I Can Get It for You Wholesale* (1962). Streisand made a great hit in the Broadway show *Funny Girl* in 1964, playing the part of Fanny Brice, and won an Academy Award for her role in the film version in 1968. Her television show, *My Name Is Barbra*, received a Peabody Award and five Emmy Awards in 1965.

Her subsequent film roles include *Hello, Dolly!* (1969); *On a Clear Day You Can See Forever* (1970); *The Owl and the Pussycat* (1970); *Up the Sandbox* (1972); *What's Up, Doc?* (1972); *The Way We Were* (Oscar nomination for Best Actress, 1973); *For Pete's Sake* (1974); *Funny Lady* (a sequel to *Funny Girl*, 1975); *A Star Is Born* (produced, 1976. Oscar for Best Song, "Evergreen," making her the first female composer to win an Academy Award); *The Main Event* (produced, 1979); *All Night Long* (1981); *Yentl* (wrote, produced, and directed, 1983), based on a story by Isaac Bashevis Singer in which she played a yeshivah student in pre-War Poland; *Nuts* (produced, 1987); *The Prince of Tides* (produced and directed; Oscar nomination for Best Picture, 1991); *The Mirror Has Two Faces* (produced and directed; Oscar nomination for Best Song, "I Finally Found Someone," 1996); and *Meet the Fockers* (2004). She was the first woman to produce, direct, write, and star in a major motion picture (*Yentl*).

In 1979 Streisand established her own film production company, called Barwood Productions. In addition to serving as the vehicle for the films in which she starred, Barwood produced other films as well, such as the 1995 TV movie *Serving in Silence*, a film about the attitude toward homosexuality in the military; *Rescuers: Stories of Courage*, (1997–98), a series of six two-part dramas about non-Jews who heroically saved Jews in the Holocaust; and *The Long Island Incident* (1998) on the issue of gun control.

As a singer, Streisand's record albums achieved wide popularity. She went on to achieve legendary status in the American entertainment world, commanding huge sums for her rare live performances and earning several Grammy Awards. Through 2005 she recorded 60 albums, of which 49 were gold and 30 platinum; 18 of her albums achieved multi-platinum status in record sales, surpassing any other female singer. Streisand rates an all-time second in topping the charts, exceeded only by Elvis Presley. For her single recordings, she had nine gold and five platinum records.

Among her many awards and accolades, Streisand won two Academy Awards, ten Grammys, six Emmys, a Tony, two Peabody Awards, eleven Golden Globes, and a Lifetime Achievement Award from the American Film Institute.

Beyond the realm of arts and entertainment, Streisand established the Streisand Foundation in 1986. Contributing to a wide variety of causes and charitable organizations, the foundation's scope includes gaining women's equality; the protection of human rights and civil rights and liberties; the needs of children at risk in society; and the preservation of the environment.

Streisand was married to actor Elliot Gould from 1963 to 1971. She was married to actor James Brolin from 1998.

STREIT, SHALOM (1888–1946), Hebrew writer. Born in Tlumach (Galicia), Streit settled in Erez Israel in 1908 and was one of the founders of the village Ein-Hai (Kefar Malal), serving as its secretary for many years. Later he taught, mainly at the Aḥad Ha-Am High School in Petah Tikvah, which he founded in 1926. His house was a meeting place for Hebrew writers.

He began writing while still in Galicia, publishing articles on literature and feuilletons in *Ha-Mizpeh*. In Erez Israel, encouraged by *Brenner, he continued writing, especially literary reviews, although he also tried his hand at fiction. Streit's criticism is a blend of impressionistic comments and pedagogical remarks. A collection of his essays was published under the title *Ba-Alot ha-Shaḥar* (1927) and *Penei ha-Safrut* (2 vols., 1939).

STRELISK, URI BEN PHINEHAS OF (d. 1826), disciple of R. Solomon of *Karlin. Opposed to wonder-workers, Uri b. Phinehas required ethical perfection from his Ḥasidim. His ecstatic manner of praying brought him the name *Ha-Saraf* (the seraph). It was said of him that every day before saying his prayers he bade farewell to his wife and family for fear that he might die of ecstasy in the middle of his devotions. Once he said, "In the Torah there are 600,000 letters; and there are 600,000 souls among the People of Israel; and just as the Torah scroll is unfit for use if one letter is missing, so the *Shekhinah* [Divine Presence] does not rest upon the people if one soul is missing from Israel." His book is entitled *Imrei Kadosh* (1871). His son, R. Solomon, died several months after his father's death and Uri b. Phinehas's outstanding student, R. Judah Zevi *Stretyn, inherited Uri's post.

BIBLIOGRAPHY: Dubnow, *Ḥasidut*, index; L.I. Newman, *Ḥasidic Anthology* (1963), index; M. Buber, *Tales of the Ḥasidim*, 2 (1966³), 145–9.

[Zvi Meir Rabinowitz]

STRELISKER, MARCUS (1806–1857), Hebrew scholar and poet. Born in Brody, in his youth he was close to N. *Krochmal and I. *Erter and was greatly influenced by them. In the early 1850s he moved to Mihaileni, Romania, where he officiated as cantor and also engaged in commerce.

He contributed poems and research on the Bible and Talmud to many Hebrew periodicals, especially Galician publications. He published several collections of poetry; included among them were a number of occasional poems: *Ta'aniyyat Yeshurun* (1835), on the death of Franz I; *Zekher Olam* (1848), a dirge on his father, together with his biography; *Shirah le-Kohen* (1860); *Todah u-Verakhah* (1868); *Shenei ha-Me'orot ha-Gedolim* (1873).

[Getzel Kressel]

STRETYN, JUDAH ZEVI HIRSCH (Brandwein) OF (d. 1854), founder of a ḥasidic dynasty in eastern Galicia.

Judah Zevi Hirsch was a scion of a prominent family of rabbis and *zaddikim* and the outstanding disciple of Uri (*Ha-Saraf*) b. Phinehas of *Strelisk. After the death of his teacher, he left his work as a *shoḥet* and succeeded Uri as leader of the Strelisk Ḥasidim. Like his teacher, he emphasized the importance of ecstatic prayer. Judah Zevi Hirsch did not deliver many ḥasidic teachings, and only a few were collected later in *Degel Maḥaneh Yehudah*.

His name is included in a list of 12 leading *zaddikim* in Galicia appended to a detailed memorandum on the ḥasidic movement which the chief of police in Lemberg sent to the provincial authorities. As an example of the negative elements in the ḥasidic "cult of the *zaddik*" the chief of police forwarded a remedy formula (*segullah*) which had been found during a search in the house of a Ḥasid, which Judah Zevi had written for a follower whose wife was having difficulties in childbirth. His son ABRAHAM OF STRETYN (d. 1865) succeeded him. His other sons, ELIEZER OF OZOPOL and SAMUEL ZANVIL (d. 1887), also continued as *zaddikim*, and their descendants established a small ḥasidic community in Erez Israel. One of them was Yehudah Zevi *Brandwein, kabbalistic author and the "rabbi of the Histadrut." Their teachings and stories about them are found in Eliezer Brandwein's *Degel Maḥaneh Yehudah* (1912) and Israel Berger's *Eser Zaḥzahot* (1909).

STRICH, FRITZ (1882–1963), German literary historian. Born in Königsberg, East Prussia, Strich studied at the University of Munich, where he became a professor in 1915. He was elected to the chair of modern German literature at the University of Berne in 1929. Not until his encounter with the art historian Heinrich Wölfflin did Strich find the teacher he sought. In 1916 Strich published a pioneering essay, applying Wölfflin's method and insight to German literature of the 17th century, defining the style of literary baroque.

Strich broke new ground with *Deutsche Klassik und Romantik, oder Vollendung und Unendlichkeit: Ein Vergleich* (1922, 1928³). Whereas the history of literature had hitherto largely been a chronicle of works and writers, origins and influences, Strich clearly regarded it as an art with basic forms and possibilities of artistic expression, such as the "classical" search for perfection and permanence, or the "romantic" effort to capture the ever changing variety, impermanence, and infinitude of the world. For Strich these fundamental literary styles and categories always represent expressions of the human mind and soul; and the individual work of literature always exists in the larger context of historical time and of national and social culture. In an essay on *Kafka, Strich called on the Jewish writer to speak in the authentic voice of Jewish commitment. There could be no dissociation of art from life, a conviction clearly expressed in the titles of Strich's collected essays – *Dichtung und Zivilisation* (1928); *Der Dichter und die Zeit* (1947); and *Kunst und Leben* (1960). He also edited the works of *Heine, Schiller, and Wedekind.

[Ludwig W. Kahn]

STRICK, JOSEPH (1923–), U.S. film director and producer. Born in Pittsburgh, Pennsylvania, Strick started his career with documentaries and later applied documentary realism to feature films. He gained a reputation with such films as *Mus- cle Beach* (1948), *The Big Break* (produced, 1950), *The Savage Eye* (wrote and produced, 1960), and *The Balcony* (produced, 1963). The outstanding example of his method was *Ulysses* (wrote and produced, 1967), a version of the novel by James Joyce. He directed *Tropic of Cancer* (1970), *Interview with My Lai Veterans* (1971), *Road Movie* (1974), *A Portrait of the Artist as a Young Man* (1977), and *Criminals* (1996).

Strick also produced *The Legend of the Boy and the Ea- gle* (1967); *Ring of Bright Water* (1969), a film based on Gavin Maxwell's book on porpoises; *The Darwin Adventure* (1972); and *Never Cry Wolf* (1983). He co-produced the TV movie *Sur- vive the Savage Sea* (1992).

[Ruth Beloff (2nd ed.)]

STRICKER, ROBERT (1879–1944), Zionist leader and jour- nalist. Born in Bruenn (Brno), Stricker worked as an engineer for the state railways, rising to the position of chief surveyor. He was a member of the students' Zionist association, Veri- tas, and a contributor to the *Juedische Volksstimme* (Bruenn), founded by Max *Hickl. Stricker was a co-founder of Emu- nah, an association of Jewish shop assistants and clerks. Be- fore World War I he edited the Vienna *Juedische Zeitung*, the official organ of Austrian Zionists, and in 1915 he founded the Jewish War Archives, of which Nathan *Birnbaum was sec- retary. After the collapse of the Austrian monarchy, Stricker became president of the Jewish People's Party (Juedische Volks- partei), and in 1919 was elected to the Constituent National Assembly of the Federal Austrian Republic, to which he be- longed until 1920.

Stricker founded and edited the only German-language Jewish daily, the *Wiener Morgenzeitung* (1919–28), and from 1928 edited the lively Zionist weekly *Die Neue Welt*. In 1912 he was elected to the board of the Viennese Jewish community (Israelitische Kultusgemeinde) and in 1932 he became its vice president. He was a member of the Executive of the *World Jewish Congress and president of its Austrian section. At the 12th and 13th Zionist Congresses in Carlsbad (1921, 1923), he proposed that Chaim *Weizmann be elected president of the Zionist Organization, but in 1924 he opposed Weizmann's policy and resigned as vice president of the Zionist General Council. He was a co-founder of the Radical Zionist Faction. In 1931 he joined the *Union of Zionist Revisionists, and after it split in 1933 became one of the founders of the *Jewish State Party. After Austria was annexed to Nazi Germany (1938), he had the opportunity to leave the country, but refused, saying: "I cannot. I must stay with my constituents." He was arrested by the Nazis, and sent to Dachau, Buchenwald, and then to

Theresienstadt. Even in the concentration camp he preached hope, maintaining his belief in the defeat of Hitler and in the establishment of a Jewish state. In the autumn of 1944 he and his wife Paula were transported from Theresienstadt to the gas chambers of Auschwitz. A selection of his speeches and essays, *Wege der juedischen Politik*, was published in 1929.

[Josef Fraenkel]

STRIGLER, MORDECAI (Motl; 1918–1998). Yiddish and Hebrew writer and journalist. Born near Zamość, Poland, he attended a Musar yeshivah in that city and then studied in other yeshivot (e.g., Lutsk, and Kletsk under Rabbi Aaron *Kotler). In 1937 he settled in Warsaw and became a journal- ist, writer, and preacher in the Great Synagogue. Interned in 12 concentration camps, Strigler survived the Holocaust. In Buchenwald he worked in the Jewish cultural underground, which organized the education of 800 children. He edited the first periodical of Holocaust survivors (*Tkhiyas ha-Meysim*, May 4, 1945). He then settled in Paris (1945–52), where he was contributor to and editor of *Unzer Vort*. From 1953 he lived in New York, where he edited the Labor-Zionist *Yidisher Kem- fer* (at first with Baruch Zukerman, later as sole editor until 1995, published in collaboration with Jacob *Glatstein). From 1987 until his death he edited the Yiddish *Forverts*. Strigler was one of the most learned and prolific Jewish writers of the second half of the 20th century. His works dealt with Jewish life in Poland before World War II and reported on and inter- preted his experiences in the slave labor and death camps as well as the lives of Holocaust survivors in postwar Paris. His published books include *Tsu Aykh Shvester un Brider Bafrayte* ("To You Liberated Sisters and Brothers," 1945); *In a Fremdn Dor: Lider un Poemen* ("In an Alien Generation: Poems," 1947); *Maydanek* (1947); *In di Fabrikn Fun Toyt* ("In the Factories of Death," 1948); *Di Ershte Libe fun Kopl Matsh: Roman* ("The First Love of Kopl Matsh: A Novel," 1948); *Verk Tse* ("Factory 'c,'" 2 vols., 1950); *Goyroles* ("Destinies," 2 vols., 1952); *Geo- remt Mitn Vint: Historisher Roman fun Yidishn Lebn in Poyln* ("Arm in Arm With the Wind: A Historical Novel of Jewish Life in Poland," 1955); *Inzlen Oyf der Erd: Noveln* ("Islands on the Earth: Novellas," 1957); *Shmuesn Mit der Tsayt* ("Conversa- tions With Time," 2 vols. 1959–61). Several of his Yiddish and Hebrew novels, as well as over a thousand short stories and essays, and thousands of articles in scores of Yiddish and He- brew periodicals (under his name and more than 20 pseud- onyms), have not yet been published in book form.

STRISOWER, LEO (1857–1931), Austrian jurist. Born in Brody, Galicia, Strisower was appointed lecturer in interna-

tional law at the University of Vienna in 1908. He rose to become full professor in 1924 and was made president of the Institut de Droit International. He represented Austria in a number of international arbitrations. Strisower was an active supporter of Jewish student organizations in Vienna. At the time of his death he was engaged in preparing a critical analysis of the legality of the British White Paper on Palestine of 1931.

The author of several books and articles on international law, Strisower's publications include *Der Krieg und die Voelkerrechtsordnung* (1919), and "L'Exterritorialité et ses principales applications," in: Académie de Droit International de La Haye, *Recueil des Cours*, 1 (1923).

BIBLIOGRAPHY: J.L. Kunz, in: *Revue de Droit International*, 7 (1931), 419–28.

[Josef J. Lador-Lederer]

STRNAD, OSKAR (1879–1935), Austrian architect and interior decorator. Born in Vienna, Strnad was head of the department of architecture at the Wiener Kunstgewerbeschule, from 1914 until his death. He had received a classical training, and aspired to purity of form. One of his chief architectural works was the middle building in the Winarsky Hof, Vienna (1924–25). He was equally active designing interiors, furniture, and stage and cinema sets.

STROCHLITZ, SIGMUND (1916–), Holocaust survivor, businessman, and major figure in institutionalizing Holocaust commemoration. The eldest of three children, Strochlitz was raised in a Zionist home in Bendzin, Poland, and in 1936 graduated from the Furstenberg School, a Hebrew high school. He enrolled at the Jagiellonian University in Cracow, but his studies were interrupted by the war in 1939. During the partition of Poland, Strochlitz escaped into the Soviet zone but then secretly crossed back into the German zone to be with his family in Bendzin. In August 1943, he and his family were sent to Auschwitz-Birkenau. Strochlitz's parents, sisters, and wife were killed upon arrival. Strochlitz spent 15 months in Birkenau. He was then deported to the concentration camps at Stuthoff, Hailfingen, Dautmergen, and ultimately Bergen-Belsen, where he was liberated by the British army in April 1945.

After liberation, Strochlitz married Rose Grinberg (1913–2001), a Polish-born Holocaust survivor from the Radziner hasidic family. They emigrated to New York in 1951. In 1957, Strochlitz bought a Ford dealership in New London, Connecticut, naming it Whaling City Ford. He moved to New London, and the dealership became his principal business.

Strochlitz and the writer Elie Wiesel formed a close working relationship after the war, undertaking many Holocaust commemoration projects as well as other Jewish and humanitarian ventures. In 1978, when President Jimmy Carter created the President's Commission on the Holocaust, he appointed Wiesel as chairman and Strochlitz as a Commission member. The two continued in those roles on the United States Holocaust Memorial Council, which established and oversees the United States Holocaust Memorial Museum. Strochlitz

was the first chairman of the Commission's and later the Council's Days of Remembrance committee. He organized the first National Commemoration of the Holocaust, held in the Capitol Rotunda on Yom ha-Shoah. President Jimmy Carter, Vice President Walter Mondale, the speaker of the House, and the Senate majority leader participated in the first commemoration. It became the model of the annual ceremony held in Washington. Strochlitz persuaded state and federal officials to hold annual Holocaust commemorations in all 50 state capitals and in Washington, D.C. Strochlitz also led the international campaign in support of Wiesel's candidacy for the Nobel Peace Prize.

Among other distinctions, Strochlitz served as the president of the American Friends of Haifa University, a governor of Bar-Ilan University, a founding member of the American Society for Yad Vashem, a trustee of the American Jewish Congress, a member of the board of Lawrence & Memorial Hospital in New London, and, at the appointment of President George H.W. Bush, a member of the United States Commission on the Preservation of American Heritage Abroad. He endowed the Strochlitz Institute of Holocaust Studies at Haifa University and the Strochlitz Judaic Teaching Fellowship at Bar-Ilan.

[Richard Primus (2nd ed.)]

STROHEIM, ERICH VON (1885–1957), film actor and director. Born in Vienna, Austria, Von Stroheim, with his bullet-shaped head and his monocle, became famous for his Teutonic roles and was dubbed "the man you love to hate." He directed and acted in Hollywood, and his film *Greed* (1923) is still considered a masterpiece. Regarded as an indulgent, extravagant director, Von Stroheim directed such films as *Blind Husbands* (1919); *The Devil's Passkey* (1920); *Foolish Wives* (1922); *The Merry Widow* (1925); *The Honeymoon* (1928); *The Wedding March* (1928); *Queen Kelly* (1929); and *Hello Sister* (1933).

In 1937 he went to France to play in Jean Renoir's film *La Grande Illusion*. The son of a lower middle-class Jewish hat manufacturer, Von Stroheim had created his own "grand illusion" about himself in the film industry, fabricating the persona of a Prussian aristocrat and a decorated military officer. As his Jewish identity was not known, he was able to work in France after the Nazi occupation and appeared in some 30 films before going back to Hollywood to act in *Five Graves to Cairo* (1943); *The North Star* (1943); *The Lady and the Monster* (1944); *Storm over Lisbon* (1944); *The Great Flamarion* (1945); *Scotland Yard Investigator* (1945); *The Mask of Dijon* (1946); *Sunset Boulevard* (1950); and *Orient Express* (1954).

He was nominated for an Academy Award as Best Supporting Actor for his performance in *Sunset Boulevard*. In 1957 he was awarded the Legion of Honor in France.

[Ruth Beloff (2nd ed.)]

STROMINGER, JACK (1925–), U.S. biochemist. Born in New York, he graduated in psychology from Harvard University and received his M.D. from Yale University. After clinical training at Barnes Hospital (1948–49) and an American College of Physicians research fellowship in the department of pharmacology at Washington University School of Medicine, St. Louis (1949–51), he worked at the National Institutes of Health (NIH), Bethesda (1951–54). Next he visited the Carlsberg Laboratory, Copenhagen, and the Molteno Laboratory at Cambridge University, England, as a Commonwealth Fund Fellow (1954–55). He returned to Washington University School of Medicine (1958–64) where he was professor of pharmacology and microbiology from 1961. He moved to the University of Wisconsin Medical School, Madison, as professor of pharmacology and chemical microbiology and chairman of the department of pharmacology (1964–68). In 1968 he joined the staff of Harvard University as professor of biochemistry in the department of biochemistry and molecular biology (1968–83), where he was department chairman (1970–73), director of basic sciences in the Sidney Farber Cancer Center (1974–77), and head of the division of tumor virology from 1977. He became the Higgins Professor of Biochemistry. Strominger's early research clarified the mechanism by which penicillin kills bacteria by blocking the production of bacterial cell walls. His research interests then centered on immunology. With his colleague, the late Don Wiley, he investigated the structures on cell surfaces, called histocompatibility or "MHC" antigens, that largely distinguish one individual's tissues from another. Some of these antigens capture protein fragments derived from invading microorganisms. The immune system identifies and destroys these cells as a major defense mechanism against infection. MHC antigens are also central to the problems of organ transplant rejection and autoimmune diseases resulting from an immune attack against "self" antigens. Strominger and Wiley worked out the precise structure of the most important MHC antigens and the manner in which these combine with protein fragments to stimulate an immune response. Subsequently Strominger, who continued to work in his laboratory, and his colleagues investigated autoimmune diseases, especially multiple sclerosis, with the aim of using protein fragments to block harmful immune responses. He founded Peptimmune, a company that produces small proteins for therapeutic purposes. His administrative skills helped to establish Harvard's renowned department of molecular and cellular biology whose alumni have also had a major influence on teaching and research in other institutions. He has also contributed to the activities of WHO and other international organizations. His many honors include membership of the U.S. National Academy of Sciences, the Pasteur Medal (1990), the Lasker Award for Basic Medical Science (1995), and the Japan Prize (the last two prizes with Don Wiley).

[Michael Denman (2nd ed.)]

STROOCK, U.S. family of lawyers, philanthropists, and businessmen. **MARCUS STROOCK** immigrated to the U.S.

from Germany in the mid-19th century and founded a large woolen mill in Newburgh, New York. His eldest son, **LOUIS S.** (1855–1925), was active in S. Stroock & Co. for 50 years, and eventually became its president. He was president of the Board of Trustees of Congregation Bnai Jeshurun and a treasurer and trustee of Beth Israel Hospital. Stroock was a generous philanthropist, and a year before his death he gave 20 scholarships to graduates of preparatory schools who would not otherwise have been able to afford college. His brother **MARK** (1863–1926) was a director and officer of S. Stroock & Co. **MOSES J.** (1866–1931), another brother, was a lawyer. Stroock was admitted to the bar in 1888 and practiced law at first with Platzek and Stroock and later with his brother, Solomon Marcuse (see below), in Stroock & Stroock. He was especially involved in the area of higher education, as a trustee of City College in 1911 and chairman of the board of trustees in 1925, and as chairman of New York City's board of higher education from its establishment in 1926. Stroock was active in Jewish organizations, especially the Federation for the Support of Jewish Philanthropic Societies.

Another brother, **JOSEPH** (1869–1946), was president and chief executive officer of S. Stroock & Co. He was a close friend of Stephen S. *Wise and helped him financially in setting up the Free Synagogue and the institution which ultimately became the Jewish Institute of Religion, later a part of Hebrew Union College. His second wife, **REGINA** (1875–1948), was chairman of the women's division of the United New York Appeal for the Joint Distribution Committee. She was on the board of the Hebrew Orphan Asylum and of the Jewish Child Care Association. Mayor La Guardia appointed her to the board of the Children's Center of New York. Regina Stroock founded the Girls Home Club, a residence organization for working girls.

SOLOMON MARCUSE (1874–1945), another brother, was a lawyer. By 1907 he and his brother Moses were practicing law together. He specialized in constitutional law and appeared before the New York State Supreme Court. He was chairman of a number of legal committees, including the legal education committee (from 1933) of the Bar Association of the City of New York. Stroock served as president (1924–26) of the YMHA of New York and from 1925 to 1930 headed the Metropolitan League of Jewish Community Centers while acting as president of the Federation for the Jewish Philanthropic Societies in New York City. In 1934 he was made chairman of the executive committee of the American Jewish Committee and in the year of his death became president of that organization. He was among the founders of the Jewish Agency for Palestine and a member of the non-Zionist section of that organization. His wife, **HILDA** (1876–1945), born in New York City, sponsored a cardiac clinic for children at Montefiore Hospital, of which she was a trustee, and was vice chairman of the City Work and Relief Administration and a member of the board of directors of the State Conference on Social Work. Actively involved in the Federation for the Support of Jewish Philanthropic Societies, she sponsored the first women's conference on Jewish affairs in 1938.

Solomon and Hilda Stroock's son ALLAN (1907–1985) became a lawyer. From 1934 to 1936 he was a law clerk for Supreme Court Justice Benjamin *Cardozo. Following that he joined Stroock & Stroock, first as an associate (1936) and later as a partner (1939), until 1942, when he became a member of Stroock & Stroock & Lavan. While remaining active in legal organizations, Stroock, like his father, supported the Jewish Theological Seminary of America – becoming chairman of the board in 1947 and president of the corporation of the Seminary in 1963; the Federation of Jewish Philanthropies; and the American Jewish Committee. In 1960 he was made trustee at large of the Federation. He served as vice president of the American Jewish Committee from 1948 to 1951 and from 1955 to 1958; in 1958 he became chairman of its administrative committee. He was also a trustee of New York University.

The Alan and Katherine Stroock Fund supports many projects in education and the arts.

***STROOP, JUERGEN** (originally **Josef**; 1895–1951), ss general; the Nazi commander who destroyed the *Warsaw ghetto. Born in Detmold into a family of lower middle class Roman Catholic policemen, Strop was educated in a nationalist and militarist spirit. He served in World War I, where he was wounded twice and reached the rank of captain. By profession a surveyor, he joined the ss in 1932, and embarked upon a meteoric career after Hitler's advent to power. At the outbreak of World War II he was appointed chief of the Selbstschutz ("self-protection") of the Germans in the Posen area, where he organized the terror against the Polish population. In June 1941, Strop served first in the Waffen-ss. During 1942 and the beginning of 1943 he was ss and police chief for several towns of southern Russia. He hunted partisans and persecuted the local population. On Feb. 6, 1943, he was attached to the office of the police and ss in Galicia but not long afterward was dispatched to Warsaw to crush the ghetto revolt. Apparently, the commanders had little faith in Ferdinand Sammern-Frankenegg, the local commander. Strop suppressed the revolt by physically destroying the ghetto, setting it on fire, house by house, street by street, and killing the inhabitants. He wrote a meticulous report detailing the revolt and conducted the action as a military campaign, employing some 2,000 troops. He concluded his report with the words: "The Jewish Quarter of Warsaw is no longer." He marked his victory by blowing up a synagogue. Appointed ss and police chief in *Greece in September 1943, Strop ordered the registration of Jews and limited their freedom within the German zone (Oct. 3, 1943). In November 1943 *Himmler made him ss and police leader of Rheinland-Westmark, in which post he remained until the collapse of the Third Reich. In 1947 Strop was condemned to death by a U.S. military court for his atrocities in Greece and the murder of U.S. prisoners of war, but Poland requested his extradition. He was then extradited to Poland, where he was sentenced and hanged for his crimes in the Warsaw ghetto.

His illustrated report on the suppression of the Warsaw ghetto uprising was published as *The Strop Report: The Jew-*

ish Quarter of Warsaw Is No More (1979), and in Hebrew as *Mered Getto Varsha be-Einei ha-Oyev*, with introduction and notes by J. Kermish (1966).

STROUSBERG, BETHEL HENRY (**Baruch Hirsch Strausberg**; 1823–1884), German financier. Born in Neidenburg, East Prussia, he left Germany after his father's death, embraced Christianity, and went to England and the United States, where he worked as a journalist. He returned to Germany in 1855 and began his business career by forming railway companies on behalf of a group of English investors. The tracks eventually covered more than 1,500 miles (2,600 km.) through Prussia and Hungary. Strousberg undertook the construction of locomotive works, rolling mills, mines and collieries, sometimes using questionable business methods. At one time his concerns employed over 100,000 people and his speculations involved hundreds of millions of dollars, but when, in 1872, his public loan for railway construction in Romania was not granted, his empire collapsed overnight. Bankruptcy proceedings were begun against him in Germany, Austria, and Russia; his assets were sold at a fraction of their value, and he died impoverished in London, where he was earning a meager living as a journalist. The collapse had serious political and economic consequences. Public inquiries into the case showed that corruption connected with railway construction and financing had penetrated the highest and most respected circles in Germany; this contributed largely to the change in public opinion in favor of public control and ownership of railways.

Roth, in: *Jahrbuch fuer Antisemitismusforschung* 10 (2001) 86–111.

[Joachim O. Ronall]

STROUSE, MYER (**Meyer Strauss**; 1825–1878), U.S. congressman and lawyer. Born in Oberstrau, Bavaria, Strouse was taken by his father to Pottsville, Pennsylvania, in 1832. In 1848 he founded the *North American Farmer*, a Philadelphia newspaper, which he edited until 1852. After studying law, he was admitted to the bar in 1855. In 1862 and in 1864 Strouse was elected to the U.S. Congress as a Democrat from the 10th Pennsylvania Congressional district, serving on different committees: Roads and Canals; Territories; Expenses; and Mines and Mining. He returned to his law practice in 1867, and in 1876–77 defended the notorious miners' organization, the Molly Maguires.

[Max Vorspan]

STRUCK, HERMANN (1876–1944), graphic artist. Struck, born into an Orthodox Berlin family, studied at the Berlin Academy under Max Koner, where Hans Meyer introduced

him to the art of etching. Struck joined the Zionist movement at an early age. In 1903, after several study trips throughout Europe, he visited Palestine and, on his way back to Germany, stopped in Vienna and met Herzl. This meeting inspired the famous portrait etching of the Zionist leader. During World War I Struck served with the German army in Lithuania. There he came in contact with East European Jews and was deeply impressed by their way of life. *Skizzen aus Litauen, Weissrussland und Kurland* (1916) and *Das ostjuedische Antlitz* (1920) reflect this experience. In 1923 he moved to Palestine and settled in Haifa. Struck's favorite technique was copper etching and its related processes although he did lithographs as well. His early work, done in pure etching, was usually signed with his Hebrew name, Hayyim Aharon ben David. From 1902 he mixed etching with *verniss mou* and aquatint. A master of his craft and an excellent teacher, Struck taught graphic techniques to such fellow artists as Chagall, Liebermann, Israels, and Corinth. His book *Die Kunst des Radierens* (1923⁵), a popular guidebook for artists and connoisseurs, provides technical explanations and practical instruction. Struck excelled as a portraitist. Among his sitters were Ibsen, Nietzsche, Freud, and Einstein. He also did landscapes, Jewish types and scenes from Jewish life as well as many ex libris. Struck, who remained an Orthodox Jew, participated in Jewish public life and attended several Zionist congresses as one of the leaders of the Mizrachi Party. He was a member of the London Society of Painters, Etchers and Engravers.

[Elisheva Cohen]

STRUG, KERRI (1977–), U.S. gymnast, Olympic medal winner, member of the U.S. Gymnastics Hall of Fame, and 1996 U.S. Olympic Spirit Award recipient. Strug was a gifted child in gymnastics, and at the age of 13 her parents allowed her to leave her home in Tucson, Arizona, to study in Houston, Texas, with the world-renowned coach Bela Karolyi. Over the next five years, Strug helped lead the U.S. women's gymnastics team to a series of high finishes, including a silver medal at the 1991 World Gymnastics Championships, a bronze medal at the 1992 Olympics, a silver medal at the 1994 World Team Championships, and a bronze medal at the 1995 World Championships. Strug also showed great ability in individual all-around competitions, winning several American championships, and finishing in the top 15 in a number of international contests, including the 1992 Olympics. On March 2, 1996, she won her first major international competition, the American Cup. But Strug's defining moment came at the 1996 Summer Olympics in Atlanta. In the finals of the vault competition, Strug fell on her first attempt, severely twisting her left ankle. Karolyi calculated that Strug needed a score of at least 9.6 and encouraged her with his now-famous, "You can do it, Kerri, you can do it."

Having heard a popping noise, Strug knew that she was risking her chance to make a recovery in time for the all-around competition, but decided nevertheless to give her team a chance of ensuring the win. She limped back to the runway and then managed a near-perfect run, vault, and landing. Strug immediately lifted the injured leg and grimaced before collapsing to the canvas. She had torn two ligaments and now had a third-degree sprain. But Strug's score on the vault was 9.712, the U.S. had its gold, and Strug had won a place in Olympic lore. Reacting to people expressing surprise at her Jewishness, Strug wrote, "I think about the attributes that helped me reach that [medal] podium: perseverance when faced with pain, years of patience and hope in an uncertain future, and a belief and devotion to something greater than myself. It makes it hard for me to believe that I did not look Jewish up there on the podium. In my mind, those are attributes that have defined Jews throughout history." After retiring, Strug attended Stanford University. She is the author of *Heart of Gold* (1996) and *Landing on My Feet: A Diary of Dreams* (1997).

[Robert B. Klein (2nd ed.)]

STRUNSKY, SIMEON (1879–1948), U.S. journalist and author. Strunsky, Russian by birth, was an editorial writer for the *New York Evening Post* from 1906 to 1920 and editor until 1924. He then joined *The New York Times* and for 15 years wrote anonymously his urbane daily commentary on the news, *Topics of the Times*. His books include *The Patient Observer* (1911), *Belshazzar Court* (1914), *Professor Latimer's Progress* (1918), *The Living Tradition* (1939), *No Mean City* (1944), and *Two Came to Town* (1947).

STRY (Pol. **Stryj**), city in Lvov district, Ukraine. With the development of trade between eastern Poland and Hungary at the beginning of the 16th century, Jews were invited to settle in Stry by the governor, Jan Tarlowski, who wanted to counterbalance the number of Ruthenians (i.e., Ukrainians) in the city. In 1576 King Stephen Báthory (1575–86) issued the first legal confirmation of permanent Jewish settlement, granting the Jews the same terms as the other townsmen. The leaders of the city fought for almost 100 years against this privilege. In 1589 King Sigismund III Vasa confirmed the rights of the Jews, warning the townsmen not to harm them. Stry's Jews engaged in wholesale and retail trade, leasing of customs, brewing beer, and making and selling wine. At the end of the 17th and during the 18th century Jews imported wine and horses from Hungary, exported bulls, grain, and salt, leased estates and flour mills, bred cattle, and traded in cloth. A few of them were goldsmiths and tailors. The extent of their trade is reflected in the enterprise of Samuel Haymovich, who sold 18,000 barrels of salt annually between 1701 and 1704. The volume of their trade in Hungarian wines and horses is recorded in Ber of Bolechow's *The Memoirs of Ber of Bolechow 1723–1805* ((1922), index).

An organized Jewish community, subordinate to the district of *Przemysl, existed from the end of the 16th century.

In 1634 Stry's Jews were allowed to buy land for a synagogue (built in 1660) and a cemetery. There were 70 Jews (5% of the total population) living in the city in 1662. Between 1652 and 1670 Jews acquired 11 houses. The ruler of the city, John Sobieski (later king of Poland, 1674–96), ordered in 1663 that the municipal authorities include two representatives of the *kahal* in every consultation on the city's taxes. As king he ordered in 1676 that a second market day be held every Tuesday since the regular market day was on Saturday. Finally, in 1696, the city authorities reached a compromise with the Jews and transferred the market day from Saturday to Friday. The community was permitted to build a new wooden synagogue in 1689. Accusing them of stealing sacred objects from a church, Stry's Catholic priests brought certain Jews to trial in 1697; the case dragged on until 1708, when the charge was dropped. In 1714 the Jewish community paid a poll tax of 2,000 zlotys, and in 1756 there were 1,727 Jews in Stry and its district who paid this tax. The city became part of the Austrian Empire in 1772, remaining as such until 1918. In 1795 the community was composed of 444 Jewish families living in the city and nine in its suburbs. At the end of the 18th century Hasidism began to exert an influence in Stry. Notable rabbis of Stry were Aryeh Leib b. Joseph ha-Kohen *Heller (1788–1813) and Jacob *Lorberbaum (1830–32).

Since limitations were imposed on wine selling and leasing of estates in the 1820s, the number of Jewish families earning their living from tailoring, the fur trade, bakery, carpentry, and tinsmithing increased. In the 1870s Jewish entrepreneurs established a foundry, wood mills, a soap factory, and a match factory. In 1873 a Jewish hospital was built. In the mid-1880s the Hebrew author Isaac Aaron Bernfeld was a teacher of religion in the governmental secondary schools, which were attended by more than 400 Jewish students in 1910. In the same year a boarding school for 30 Jewish students from the area was opened. The nationalistic awakening among young educated Jews led to the foundation of the Admat Yisrael society (1891) to support Jewish settlement in Erez Israel. In 1893 the first Jewish workers' association in Stry (Briderlekhkeyt) was organized.

At the beginning of World War I the Jewish community suffered during the Russian invasion of Galicia. With the disintegration of the Hapsburg Empire in 1918, a Jewish *self-defense group with approximately 40 members was organized. In 1918–19, during the period of the Ukrainian independence, a Jewish National Assembly, headed by E. *Byk and M. Binenstock (1881–1923), and a Jewish militia were established, and a weekly newspaper, *Yidishe Folksstime*, was published in Stry. Between the two world wars, when Stry was part of Poland, all the Zionist parties and Agudat *Israel had branches there. A vocational school set up by the American Jewish Joint Distribution *Committee (Joint), a *Tarbut school, and a Safah Berurah school were founded during the 1920s. The historian and geographer Abraham Jacob *Brawer and the educator and poet Eisig *Silberschlag were born in Stry which was also the home of the Polish-Jewish author J. *Strykowski who describes Jewish life there prior to World

War II in many of his works. The Jewish population of the city was 10,988 (40% of the total) in 1921, 10,869 in 1931, and approximately 12,000 in 1939.

[Arthur Cygieman]

Holocaust Period

When the city was occupied by the Soviet Union after the outbreak of World War II, organized Jewish life came to a standstill. All charitable, religious, and cultural institutions were closed, and some of the leaders of the community were arrested and deported. In 1941, before the Germans entered Stry, even official Soviet Jewish leaders were arrested, including Beni Garfunkel and Benjamin Klein, and some others were executed. When the Germans occupied Stry, on July 2, 1941, hundreds of Jews were immediately killed by the Ukrainians aided by the Nazis. Oskar Hutrer was appointed head of the *Judenrat. At the first mass execution, in November 1941, 1,200 Jews were shot in the Holobotow Forest. The winter of 1941–42 was marked by frequent manhunts for young Jews, who were sent to labor camps, where many of them died. The second mass *Aktion* took place in May 1942. On Sept. 1, 1942 thousands of Jews were sent to the *Belzec extermination camp. This was followed by the deportation of 2,000 Jews to the same camp on Oct. 17–18, 1942. Before the local ghetto was established, on Dec. 1, 1942, small numbers of Jews managed to escape to Hungary via the Carpathian Mountains. Further *Aktionen* took place in February 1943, when 2,000 Jews were killed in the city itself, and on May 22, 1943, when 1,000 Jews were murdered in the local cemetery. The ghetto was finally liquidated at the beginning of June 1943, Jewish houses were systematically burned down, and any Jews hiding in the ruins were killed. In July the labor camps were also liquidated, so that by August 1943 Stry became *judenrein. In the following months Jews in hiding were caught and executed. When the Soviet army occupied Stry on Aug. 8, 1944, there were only a few Jewish survivors. No Jewish community was reestablished. Societies of Stry Jews were established in Israel and the United States.

STRYJKOWSKI, JULJAN (originally **Pesach Stark**; 1905–), Polish novelist. Born in Stryj, Galicia, Strykowski joined a Zionist youth movement as a boy, but later became a Communist. In 1939 he fled to the USSR, where he remained during World War II, returning to Poland in 1946. He was active in postwar Polish literary life and was a co-editor of the literary monthly *Twórczość*.

Strykowski's first major work was *Bieg do Fragala* ("Run to Fragala," 1951), which depicted the life of a poverty-stricken village in Calabria, Italy. A stage version was performed in

Wrocław (Breslau) by the Polish National Theater in 1953. This was followed by *Pożegnanie z Italji* ("Farewell to Italy," 1954); *Głosy w ciemności* ("Voices in the Dark," 1955), a novel about Jewish life in his native Stry before World War I; *Czarna Róża* ("The Black Rose" 1962); and the story *Imię własne* ("First Name," 1961). A later novel, *Austeria* (1966), portrayed the Jews of a town in eastern Galicia at the outbreak of World War I. Strykowski's works were translated into many languages and the writer himself translated works by the French author Louis-Ferdinand Céline and the Russian writer Leonid Maximovich Leonov.

STRYKOW (Pol. **Stryków**), town in the province of Łódź, central Poland. An organized Jewish community existed there from the early 18th century under the jurisdiction of the *Leczyca community. In 1765 there were 488 Jewish poll-tax payers in Strykow, and 137 (including nine persons in *Zgierz) in 21 surrounding villages. The Jews then owned 41 houses, including a synagogue and a hostel for the poor. In 1789 a Jewish merchant established a tannery. The Jewish population numbered 868 (70% of the total) in 1808, 1,394 (62%) in 1827, and 1,713 (65%) in 1857. They engaged in trade, and particularly in crafts, benefiting from the development of the town until the middle of the 19th century, when it declined as a result of the development of the industrial towns of *Łódź and Zgierz. In 1897 the community numbered 1,799 (58%). They were mainly engaged in tailoring, shoemaking, small trade, and transportation. During the 19th century Strykow became a center of Hasidism. At the beginning of the century the kabbalist Ephraim b. Isaac Fishel (d. 1825) lived in the town. The *zaddikim* Elimelech Menahem Mendel Landau (d. 1877) and Ze'ev Wolf Landau (d. 1891) had their "courts" in Strykow. In 1921 there were 1,998 Jews living in the town (48%). Between the two world wars there was a Jewish elementary school and a library.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II, Strykow underwent heavy bombardment. Many of the nearly 2,000 Jews there fled to the outlying villages and some became the first victims of the advancing German troops. In December 1939 nearly 1,600 Jews were deported to Głowno, situated in the General Government territory. The deportees were turned away by the mayor of Głowno and obliged to look for shelter on the periphery of the town. They stayed until the spring of 1940, when the Głowno authorities drove them back to Strykow. The mayor of Strykow refused them entry and the deportees had to return once more to Głowno, where they probably remained and shared the fate of the Jews there.

After the first deportation of Jews in December 1939, only 378 Jews remained behind in Strykow. In time a number of

refugees also arrived. In the years 1940–42 the Jews in Strykow were concentrated within a tiny ghetto. In April or May 1942 all the Jews were deported to Brzeziny (Loewenstadt) – the only other Jewish settlement still existing, besides Łódź, in the whole province. In the course of the liquidation of the Brzeziny ghetto and soon afterward, the 300 Jewish laborers from Strykow were sent with 3,000 "selected" Jews from Brzeziny to the Łódź ghetto.

STUDENTS' FRATERNITIES, GERMAN (Ger. **Burschenschaften**). Different types of German students' associations have existed since the establishment of universities. As part and forerunners of the German national movement the specific German students' fraternities called Burschenschaften were founded in Jena in June 1815. Fanned by the reaction against Napoleon, the Burschenschaften rapidly expanded to include almost all German universities. The movement's outlook was essentially romantic, imbued with Christian, patriotic, and radical sentiments. However, at the beginning the organization was not overtly anti-Jewish in tone and Jews even took part in the foundation of some local Burschenschaften, as in Freiburg in 1816, and as so-called Alte Herren (Old Boys) were active members of the alumni organizations. Later, though, antisemitic agitation – particularly of the *Stoecker brand – found eager supporters among the student generation. The Verein Deutscher Studenten (VDST) (Union of German Students) aligned itself with the antisemitic petition demanding from the government the suspension of the legal emancipation of the Jews. It was also distributed by and among German students and handed over to Bismarck in April 1881. As early as 1878 the Viennese fraternity, Libertas, had passed a motion excluding Jews on racial grounds. By 1890 fraternities declared themselves *judenrein*, both in Germany and in Austria. In 1896 the member-fraternities Waidhofener Verband "dishonored" Jewish students by refusing to give them satisfaction in duels. By 1908 alumni associations also joined in ostracizing Jews. In Austria *Schoenerer emulated Stoecker by setting himself up as an anti-Jewish mentor to the students. Jewish students reacted to the increasingly antisemitic climate from the late 1880s by forming separate organizations. The first to be established was the Viadrina in 1886 at Breslau University, later part of the *Kartell-Convent der Verbindungen Deutscher Studenten juedischen Glaubens (KC). From the start Jewish fraternities were socially excluded and repeatedly dissolved by university administrations.

From 1900 to 1914 there was a recess in general antisemitic agitation, but the war and its aftermath reactivated *Volk* and racist fanaticism. In 1920, at their general convention in Eisenach, German fraternities extended their racial ostracism

cism to all members who married Jewish or colored partners. Throughout the Weimar Republic German fraternities were predominantly right-wing, *voelkisch*, and antisemitic, as was the student corpus as a whole. After Hitler assumed power they widely embraced the new development, although they had to join in the National Socialist students' organization (Nationalsozialistischer Deutscher Studentenbund) and hence give up their own organizational framework. After World War II the student fraternities reestablished their pre-war organizations, the umbrella organization of the German fraternities, the Deutsche Burschenschaft (DB), became active again in 1950. They are still predominantly politically conservative but are no longer openly antisemitic. There are still different kinds of student associations in the sense of fraternities to be found on German campuses.

STUDENTS' MOVEMENTS, JEWISH. In Central Europe in the 19th and 20th centuries most gentile students' societies did not accept Jews (see *Students' Associations, German). This experience, which continued also after World War I, except in the less numerous left-wing student associations, was one of the powerful motivations which led Jewish students to adhere to prevalent ideologies, whether revolutionary-internationalist or Zionist.

In eastern Europe, and particularly in the Russian Empire with its **numerus clausus*, very few Jews could enter universities or even high schools. Many of them went to Swiss, German, or Austrian universities, and their associations and debating societies became nuclei of revolutionary and Zionist movements. In Poland between the two world wars Jewish students were often physically assailed by their antisemitic colleagues and sometimes even allotted segregated "ghetto" benches in the classrooms. As a result, many became either extreme revolutionaries (in practice, mostly members of illegal Communist cells), or Jewish nationalists, i.e., Zionists. Thus, Jewish students and students' societies played an important role at the inception of the Zionist movement, e.g., in Vienna (*Kadimah) and Prague (*Bar Kochba). Subsequently a number of other students' organizations and associations with cultural and literary aims played a significant part: in Berlin (e.g., the Russian Jewish Scientific Society), and in Russia and among Russian émigré students (e.g., *He-Ḥaver). In Germany the overall Jewish students' federation, *Kartell

Juedischer Verbindungen (KJV), became Zionist, partly under the impact of the hostile "Aryan" ideology of their gentile colleagues. In the Baltic countries of the 1920s and 1930s *Revisionist students organized themselves in German-style "corporations" (such as "Hasmonaea" in Riga), including wearing "colors," collective beer drinking, fencing, etc., whereas Zionist and Labor Zionist students formed groups without these trappings (as He-Ḥaver and Ha-Shaḥar). Religious Zionist students formed the Yavneh society. After World War II no Jewish student groups were allowed to exist in Communist eastern Europe, except, for a short time, a semi-legal group in Poland in 1967–68, named after the Russian Jewish writer Isaac *Babel.

In Great Britain

Although Jews were admitted to British universities from the mid-19th century, their numbers did not at first encourage the establishment of Jewish student societies, and these were mainly inaugurated from the second decade of the 20th century. Immediately after World War I, in 1919, the Inter-University Jewish Federation (IUJF) was set up to coordinate the activities of Jewish student societies that had begun to spring up independently in London, Oxford, Cambridge, and the major provincial cities, such as Birmingham, Glasgow, Leeds, Liverpool, and Manchester. The Federation's aim was to foster an interest among Jewish students in Judaism and Jewish history and culture, members being encouraged to involve themselves after graduation in the social and religious life of the Anglo-Jewish community. The University of London Jewish Union Society (ULJUS), an "umbrella" organization for the various student societies in the metropolitan area, was founded in 1922.

Student Zionist activity, which dates in Britain from the years immediately following the First Zionist Congress, met sufficient resistance in some Jewish students' societies to encourage the formation of separate Zionist associations and, from about 1924, the Universities' Zionist Federation (UZF) functioned alongside, and to some extent in competition with, the IUJF. During the 1930s the UZF amalgamated with the Association of Young Zionist Societies (mainly a non-student body), but organizational and other difficulties led to the old UZF's revival as the Universities' Zionist Council (UZC) shortly before the outbreak of World War II. Student Zionist activity intensified during the war years and the late 1940s. Both IUJF and UZC helped to organize cultural activities for their members. IUJF also published various periodicals, while UZC issued publications of its own. The two student organizations began to work in harmony after 1948, later operating together as IUJF-UZC, and finally merging in the 1960s when Zionism became part of the IUJF platform.

With the rapid increase in the number of Britain's "red-brick" universities after World War II, many more Jewish student societies were founded, in new areas. Major support was given to the Jewish students' organizations by the B'nai B'rith Hillel Foundation in London, which eventually set up Hillel

Houses in London, Birmingham, Leeds, Liverpool, Manchester, Sheffield, and other university towns. From the early 1960s a chaplaincy commission operated with varying degrees of success, mainly in Oxford, Cambridge, and the smaller university towns, where Jewish students felt themselves to be isolated from the main community.

A high proportion of Jews studying at British universities took no part in the activities of the organized Jewish student body. Semi-independent religious groups existed within the general Jewish student framework, such as Liberal and Reform associations and the Orthodox Yavneh movement. There were in 1971 over 10,000 Jewish students in the British Isles, some two-thirds of whom had no connection with IJF or any other Jewish student group. About 80 Jewish student societies and Israel societies were affiliated to IJF. Jewish students were prominent in protest movements such as CND (the Campaign for Nuclear Disarmament) in the 1960s and, later, in demonstrations on behalf of Soviet Jewry. They were active in the World Union of Jewish Students (see below). In recent decades the Union of Jewish Students has had to deal with venomous anti-Zionism at some British campuses, especially during the period in the 1980s when the militant left controlled much of student life. Since about 1990, British campuses have been more quiescent, although demands to boycott Israeli universities and goods surfaced again during the 2002–05 period. Many Jews have found the anti-Zionism of extreme left-wing groups on British campuses little different from right-wing antisemitism. The British Union of Jewish Students was affiliated with the European Union of Jewish Students.

[Godfrey Edmond Silverman / William D. Rubinstein (2nd ed.)]

In France

The Union of French Jewish Students (Union des Etudiants Juifs de France; UEJF) was founded in Paris in 1945 and is affiliated to the World Union of Jewish Students (WUJS). Before World War II there was no Jewish student movement in France. Organized Jewish life in France had mainly centered on religious or philanthropic activity, and entry to a university was thought of as a further step toward integration into French society. Only one institution provided a meeting place for Jewish students: this was the *kasher* canteen opened in Paris in 1921, intended for poor and Orthodox students. Pierre *Mendès-France, then a law student, was active in the establishment of this canteen, the Foyer israélite. The UEJF was formed by young Jewish resistance fighters, militants of the Eclaireurs israélites (see *Scouts), the Communist youth, and youth of Zionist organizations. It aimed to help needy students by offering scholarships, opening university canteens, and setting up a centralized employment bureau; to contribute to the revitalizing of Jewish life through the universities; and to develop an awareness of Jewish cultural values and Israel society through courses, publications, and trips to Israel. Branches were set up in various university cities: Paris, Lille, Nancy, Strasbourg, Lyons, Grenoble, Toulouse, Montpellier, Marseilles, etc. During the following ten years the Commu-

nists and Zionists struggled for the leadership in the administration of the UEJF. A measure of reawakening occurred between 1958 and 1962 due to political events associated with the war in Algeria. From 1967 the UEJF took an openly pro-Israel stand. The general student agitations in May 1968 stimulated its developments and confirmed it in its support for Israel.

The number of Jewish students attracted by the Jewish student movement never exceeded 10% of the total. The upheavals experienced in many French universities in 1969 and 1970 sometimes became confrontations between Jewish groups divided on the question of the Middle East conflict. Relations between the UEJF and communal institutions were often strained: the students complained that they were not allowed to participate in the direction of Jewish life and that they were not granted the funds necessary for the realization of their program. The communal leaders, on the other hand, suspected the Jewish youth movement of compromising with the Communist party and left-wing organizations. The achievements of the UEJF were modest. Private and communal initiative resulted in the establishment of residential buildings and university restaurants in Paris and Strasbourg, as well as a Jewish study center in the capital and clubs in a number of university cities. Although active in these institutions, the UEJF was not always associated with their foundation and direction. A periodical, *Kadimah*, was published sporadically by the UEJF and, in association with private publishers, it organized the printing and distribution of various works on Judaica. The UEJF continues to be active in such matters as Holocaust memorialization, antisemitism, and Israel.

[Lucien Lazare]

In the U.S.

The oldest Jewish student organization on a North American campus, Zeta Beta Tau (ZBT) fraternity, was founded in New York City in 1898 to encourage the study of Jewish life and culture among Jewish students. Soon afterward, however, it was converted into a Greek-letter fraternity. Additional Jewish student clubs emerged at the City College of New York (1902), Minnesota (1903), Harvard and Columbia (1905), Illinois and Texas (1907), Yale (1909), and California (1910). Most of these groups were gradually absorbed by the Intercollegiate Menorah Association, which was founded by Henry *Hurwitz at Harvard in 1906, and grew to 50 chapters by 1930. Designed to promote the academic study of Jewish culture in the university and to serve as a platform for the nonpartisan discussion of Jewish problems, the association sponsored a speakers' bureau, provided Judaica for several university libraries, tried unsuccessfully to stimulate university study of Jewish history and culture, and published the *Menorah Journal* (1915–62). No Menorah chapter remained in existence after World War II; the Menorah Association was dissolved in 1963.

Zionist societies sprang up at several major universities, independent of the Menorah Association. They formed the Collegiate Zionist League in 1905, which merged in 1915 with other Zionist student groups to become the Intercollegiate

Zionist Association. At its peak in 1919 it had a membership of 2,500 in 33 chapters, but it disbanded shortly after the Zionist Organization of America withdrew support in 1920. Five years later a successor organization, Avukah, was founded. It grew to 56 chapters in the United States and Canada by 1939 but was dissolved in 1942, largely as a result of the rapid turnover of student leadership and a persistent lack of funds.

Professional direction combined with organized program services and community support for Jewish collegiate activities were provided for the first time with the coming of the B'nai B'rith Hillel foundations to the American campus. Founded at the University of Illinois in 1923, and funded, since 1925, primarily by B'nai B'rith, with supplements from Jewish federations and welfare funds, Hillel maintained, in 1969, a network of 274 foundations (chapters with full-time professional staff) and counselorships (part-time staff). Of the total, 252 were in the United States and Canada and 22 were in Australia, Brazil, Great Britain, the Netherlands, Israel, South Africa, Switzerland, and Venezuela. Hillel also supported chairs of Judaic studies (Iowa, Missouri, Vanderbilt), and Hillel staff members taught accredited courses in Judaic studies at 40 additional institutions. Hillel's campus activities included lectures and classes in Jewish thought and life, the holding of religious services and holiday observances, the running and support of international, national, and regional student institutes, social service and social action projects, counseling services, student publications, and social programs. Hillel was governed by the B'nai B'rith Hillel Commission, and the international Hillel office in Washington, DC, provided resources and administrative guidance for the individual Hillel chapters.

In the 1970s and 1980s Hillel's effectiveness declined after a cutback in funding, but it revived in the late 1980s under the direction of Richard Joel. In the early 2000s it had approximately 250 affiliates in the U.S. and Canada serving college and university students on more than 500 campuses, an additional three dozen campus and community-based affiliates in other countries, and a global budget in excess of \$60 million. Hillel was viewed widely as one of the early 21st century's major success stories in Jewish organizational life. Thirty-four percent of Jewish undergraduate students in the U.S. participate in Hillel activities, according to a market research study conducted in 2005.

Similar student programs, with full-time professional staff but independent of Hillel, existed at Rutgers-Newark, Columbia (Counselorship for Jewish Students, established in 1929), New York University (Jewish Culture Foundation, established in 1937), and Long Island University in Brooklyn. Unaffiliated Jewish student groups without professional guidance existed at more than 120 colleges and universities in 1969.

As the number of Jewish students increased, additional student groups were organized, mainly along denominational or ideological lines, among them Atid, the college-age organization of the Conservative movement (founded in 1960); Yavneh, an organization of Orthodox Jewish students

(founded in 1960); and T'hiyah, a Reconstructionist university fellowship. The Reform movement maintained a college service department but no separate collegiate organization. In addition, the United Synagogue of America subsidized, and the National Council of Young Israel (Orthodox) sponsored or subsidized, student houses and kosher dining clubs.

Attempts were also made to reestablish an effective Zionist campus program. After Avukah's dissolution, the Intercollegiate Zionist Federation of America (IZFA) was founded in 1946 with the partial support of the American Zionist Youth Commission. During the period immediately preceding the founding of the State of Israel, IZFA's membership rose to 10,000, but it dropped after the state was established, and the organization was dissolved in 1953. A year later, it was succeeded by the Student Zionist Organization (SZO), which was sponsored and supported by the American Zionist Youth Foundation. SZO had about 2,500 members in 70 college chapters in the United States and Canada in 1963 but lost membership rapidly in the second half of the '60s and was replaced by American Students for Israel and similar, often radical, groups supported mainly by the American Zionist Youth Foundation.

Jewish participation in student activism became prominent from the middle 1960s on. Accurate statistics are not available, but several studies estimate that one-third to one-half of the committed identifiable radicals on the most activist campuses were Jewish. They were found to come largely from families which were urban, well-educated, professional, and affluent, with a high degree of permissiveness, a stress on democratic interpersonal relations and on values other than achievement – dominant characteristics of the urban middle-class Jewish group. Initially, Jewish students participated primarily in general activist or radical organizations. Many of them, unidentified with organized Jewish life, were motivated less by Jewish commitments than by their general social and political concerns. However, in the late 1960s Jewish students also began to form specific Jewish activist campus groups as a result of their rejection by the black movement, their disappointment with the growing anti-Israel stance of the New Left, and a growing self-awareness which turned them to the needs of the Jewish community as the arena for acting out their moral and social convictions. Their objectives included the establishment of accredited Jewish studies programs at universities, the development of "Free Jewish Universities" involving students and faculty in the study of Jewish thought and life, political action on behalf of Israel and Soviet Jewry, the stimulation of supportive action for peace and social justice by the Jewish community, and action countering the anti-Israel activities of the New Left and Arab students. In 1969–70 such groups were operating on about 80 campuses under various names – Jewish Student Bund, Concerned Jewish Students, Jewish Student Union, Jewish Activist League, Na'asseh. Many published campus newspapers; membership generally ranged from 10 to 50 in each branch.

Social and professional fraternities constituted still another facet of Jewish group life on the campus. ZBT, the first

Jewish fraternity, was followed by Sigma Epsilon Delta (1901) for dental students, Phi Delta Epsilon (1904) for medical students, and Iota Alpha Pi (1903), the first sorority. The number of social groups grew steadily with the increase in Jewish enrollment and the exclusion of Jews from the general fraternities and sororities. In 1941, 12 national social Jewish fraternities, five national sororities, and 17 professional fraternities had 540 local chapters and a membership of 85,000, in addition to several local organizations without national affiliation. Several national groups were nondenominational, but their membership was almost exclusively Jewish, and although most of them occasionally supported Jewish projects or programs, their chief purpose was social.

After World War II, in response to changing university policies and the growing public demand for the elimination of discriminatory restrictions, most Greek-letter societies began to accept members regardless of social, racial, or religious background. Deprived of one of their major reasons for existence, most Jewish groups experienced a significant drop in membership, leading to mergers of several national groups and the closing of local chapters by the late 1960s.

[Alfred Jospe]

In Israel

During the school year 1970–71 about 44,000 students (including Arabs, Druze, and Jews from abroad) were studying at ten universities and colleges. In 2004–5, 245,000 students were registered in eight universities, 23 colleges, and 26 teacher colleges. The Israel students' average age is higher than that of students in other countries because most of them serve in the army for three years prior to their university attendance. During their studies the students are frequently called to the army reserves. Many are married and most of them work to support themselves. All these are factors limiting political, social, and cultural activity. Social and political activity among students is often outside the framework of the students' organizations. About 15% of the students are active in student "cells" of the political parties, in local student unions, and in the National Union. A National Union of Students, to represent all the students, was first set up in the 1930s (local unions had begun to function in the 1920s). It is the roof organization of the local unions and is headed by a presidium composed of the chairmen of the local unions. Elections to the local unions and the National Union are held yearly. The National Union is the Israel branch of the World Union of Jewish Students and the chairman of the union is the vice chairman of WUJS.

WORLD UNION OF JEWISH STUDENTS. The World Union of Jewish Students (WUJS, or UMEJ in French and Spanish) was founded in 1924 by a number of European Jewish student unions and had among its early presidents and officers such personalities as Albert *Einstein, Chaim *Weizmann, Simon *Dubnow, Sigmund *Freud, Stephen S. *Wise, Hayyim Nahman *Bialik, and Sir Hersch *Lauterpacht. Most of the archives of the organization were destroyed during the Holocaust, and afterward the officers themselves discarded old

records. During its initial stages WUJS concerned itself with such problems as the numerus clausus in eastern European universities, the building of a student house at The Hebrew University campus on Mount Scopus in Jerusalem, etc. During World War II the center was transferred from Paris to Switzerland, and the most important activity of WUJS was to provide refuge for Jewish students, victims of Nazi persecution. After World War II, until 1948, WUJS had member organizations in Czechoslovakia, Bulgaria, Egypt, Iraq, Lebanon, Poland, and Romania, as well as official connections with the youth of the Jewish Anti-Fascist Committee of the U.S.S.R. In 1948, back in Paris, WUJS involved itself in the work of the World Student Relief, the International Student Service, and UNESCO. In the late 1950s, after some years of lethargy, the organization recovered and remained centered in Paris until 1968, when the secretariat was moved to London.

The core of WUJS's activities until 1967 was the furthering of Jewish identity, but following the *Six-Day War (1967) WUJS became openly pro-Zionist, supporting *aliyah* and other activities centered on Israel, and it affiliated to the World Zionist Organization in 1968. A process of political radicalization characterized the Union during 1967–70. However, the decrease of the impact of the New Left in the early 1970s led to a renewed interest in furthering Jewish education. In 1971 WUJS comprised 30 national union members and correspondent student organizations, as well as individual Jewish student affiliates from countries where the functioning of Jewish institutions is not permitted. The total membership was estimated at 100,000 to 110,000, of which approximately 50,000 were represented through the North American Jewish Students' network and 35,000 are members of the National Union of Israel Students. The supreme authority of the union is the WUJS Congress, where national Jewish student unions are represented proportionately to their membership (with a maximum of eight delegates). The Congress generally convenes in Israel every three years.

The main activities of WUJS fall into three categories: educational, political, and Israel-oriented or Zionist. WUJS published numerous pamphlets and journals on basic Judaism. Political activity is centered mainly on action to combat antisemitism and neo-Nazism with the cooperation of non-Jewish student organizations, and action in connection with the Israel-Arab conflict. There were also protests, demonstrations, picketing, and the coordination of activities all over the world on behalf of Jews in Arab countries (especially after the Baghdad executions) and in defense of Soviet Jewry. Contacts were maintained with general international organizations, particularly with the International Students' Organization. Many WUJS activities are oriented around and centered in Israel. In addition to various summer schemes in Israel, in 1967 WUJS established an International Graduate Institute at Arad, its program allowing participants to learn Hebrew, basic Judaism, and Israel studies.

WUJS provides an umbrella framework for nearly all different trends existing in the Jewish world. The weight of each

of its trends varies continuously, and it is therefore difficult to define the composition of its leadership. Student unions in Germany, France, Italy, and Belgium have usually provided an extreme-left Zionist approach. Unions in Switzerland, U.K., Ireland, South Africa, and Australia were strongly Zionist with a religious predominance. North America is mostly represented through the Radical Zionists. Latin America, constantly in a very isolated position, represents the “middle-way” Zionist.

[Edy Kaufman]

STUDENT STRUGGLE FOR SOVIET JEWRY (SSSJ), 1964–1991, the first American national movement to free Russian Jews. Its combination of imaginative demonstrations, Congressional lobbying, and information dissemination helped generate the wave of international public pressure which ultimately forced open the gates of the Kremlin to mass emigration and the release of refuseniks and Prisoners of Conscience. A grassroots effort, SSSJ became a unifying factor among the diverse streams of American Jewry, and continually challenged the Jewish Establishment to act with greater vigor on behalf of its Russian brethren.

SSSJ was founded at a meeting at Columbia University on April 27, 1964, initiated by Jacob Birnbaum, Glenn Richter, Arthur Green, and James Torczyner, all involved in the American civil rights movement, just months after the famed March on Washington and but two months before Mississippi Summer. Four days later, it staged a public demonstration of over 1,000 students at the Soviet Union’s Mission to the United Nations, which garnered a page 2 story in the *New York Times* the next morning. Within months, SSSJ drew political figures to its rallies. In 1965, noted Jewish singer Rabbi Shlomo Carlebach penned SSSJ’s marching tune “Am Yisrael Chai!” (the people of Israel live!) It became the signature song of the Soviet Jewry freedom movement, both without and within the U.S.S.R.

SSSJ saw four main pressure points: the Kremlin, the US government, public opinion, and the American Jewish community. From 1964 to 1971, much effort was spent sparking a slowly growing interest in the issue and pressuring Establishment Jewish organizations to allocate a budget and staff to deal with the crisis. After the notorious Leningrad Trials which began in December 1970 of Jews who sought to escape from the U.S.S.R., SSSJ initiated, along with its adult activist counterpart of the Union of Councils for Soviet Jews (UCSJ), widespread Congressional lobbying to first pass, then maintain, the Jackson-Vanik Amendment. The bill linked trade credits to the U.S.S.R. with freedom of emigration. Intense pressure was kept on Establishment Jewish bodies not to abandon the Amendment despite pressures from the Nixon Administration, which had been so supportive of Israel to do so.

SSSJ differed from many other Jewish groups in that its leadership consisted of activist young rabbis, such as Rabbis Shlomo Riskin, Yitz Greenberg, Charles Sheer, and Avi Weiss. They inspired many students, who were soon further motivated by books revealing American public political and Jewish

inaction during the Holocaust. This generation, raised in less self-conscious times, swore to be different. Israel’s spectacular victory during the Six-Day War spurred more visible young American Jewish identification, and SSSJ provided a suitable vehicle. SSSJ continually utilized overt Jewish symbols, such as the *shofar*, and biblical phrases, such as “Let my people go.”

By the early 1970s, SSSJ had developed methods to bring out from the USSR, an increasing stream of information about and appeals by refuseniks (Jews denied exit) and Prisoners of Conscience (Prisoners for Zion), which were widely disseminated. These efforts bypassed the control of the Israeli government, which attempted to keep a lid on this documentation. SSSJ’s method was to focus on individual stories to understand the plight of millions of Russian Jews. To that end, SSSJ encouraged both popular and legislative mail and phone communication with refusenik and prisoner families, despite widespread KGB interference, as well as missions into the USSR to visit these Jews.

The enthusiasm of SSSJ’s many volunteers far exceeded the movement’s meager budget, raised in part by sale of protest buttons, bumper stickers, stamps, Prisoner of Conscience and refusenik bracelets. The successful effort to rescue a fifth of world Jewry, so soon after the Shoah, became a transformative experience for many young American Jews. They learned advocacy skills that were soon put to use for Israel and other causes, and understood that in their hands could lie the seeds of Jewish redemption.

[Avi Weiss (2nd ed.)]

STUDY. The study of the Torah (*talmud Torah*) as a supreme religious duty is one of the most typical and far-reaching ideas of rabbinic Judaism. Talmudic literature is full of references to the *mitzvah* of Torah study, especially of the difficult halakhic portions which require the fullest application. C.G. Montefiore (*A Rabbinic Anthology* 1938, introd., 17), though more than a little unsympathetic to this side of rabbinism, observes: “For all these legal discussions, all this ‘study of the Law,’ all these elaborations and minutiae, were to the Rabbis the breath of their nostrils, their greatest joy and the finest portion of their lives.”

An early Mishnah (Peah 1:1), after describing such duties as honoring parents and performing acts of benevolence among the *mitzvot* for which there is reward both in this world and the next, concluded that the study of the Torah is “equal to them all.” A tannaitic treatise, *Baraita Kinyan Torah* (Avot 6), devoted to the ideal of Torah study, contains the advice (6:4): “This is the way of the Torah: a morsel of bread with salt to eat, water by measure to drink; thou shalt sleep on the ground, and live a life of hardship, whilst thou toilest in the Torah. If thou doest thus, happy shalt thou be, and it shall be well with thee; happy shalt thou be – in this world, and it shall be well with thee – in the world to come.” Quoting the verse, “This is the Law (Torah): when a man dieth in a tent” (Num. 19:14), the third-century teacher Resh Lakish taught: “The words of the Torah become firmly established only for

one who kills himself (in study) for it" (Ber. 63b). Dedicated students, "toiling in the Torah," were found to number in the thousands in the great Palestinian and Babylonian academies during the first five centuries of the present era. Only against such a background of unqualified devotion does the saying of the second-century R. Jacob become intelligible: "If a man was walking by the way and studying and he ceased his study to declare, 'How fine is this tree!' or 'How fine is this plowed field' Scripture reckons it to him as though he were guilty against his own soul" (Avot 3:7). Of Rava it was said (Shab. 88a) that he was once so engrossed in his studies that he was unaware that his fingers were spurting blood. It was taken for granted that a scholar would be incapable of diverting his mind from Torah study; hence it was ruled that a scholar is forbidden to remain in unclean alleyways where Torah should not be studied (Ber. 24b).

The ideal of Torah study had a twofold aim. First it was believed to lead to the practical observances, since without knowledge of what it is that the Torah enjoins full observance is impossible. "An empty-headed man cannot be a sin-fearing man, nor can an ignorant person be pious" (Avot 2:5). Secondly, Torah study was itself a religious duty of the highest order. This dual function of study is presumably given expression in the discussion said to have taken place in the early part of the second century: "R. Tarfon and the Elders were once reclining in the upper story of Nithza's house in Lydda, when this question was put to them: 'Which is greater, study or practice?' R. Tarfon replied: 'Practice is greater.' R. Akiva replied: 'Study is greater for it leads to practice.' Then they all answered and said: Study is greater, for it leads to practice" (Kid. 40b). Yet study without any intention of carrying out the precepts was seen as having no value. "Whoever says that he has only [an interest] in the study of the Torah, he does not even have [the study of] the Torah" (Yev. 109b). There is evidence of tension between the scholarly ideal and that of extraordinary piety without learning. The famous scholars were committed to Torah study as the highest pursuit, yet they were compelled to recognize the achievements of men of outstanding piety who were in no way renowned for their learning. The scholars yielded only grudgingly, as in the tale (Ber. 34b) of the miracle-working saint, R. Hanina b. Dosa, who prayed successfully for the recovery of R. Johanan b. Zakkai's son, whereas the prayers of R. Johanan would have accomplished nothing. When R. Johanan's wife asked him, "Is Hanina greater than you are?" he replied, "No; but he is like a servant of the king who can enter his presence at any time whereas I am like a nobleman who is allowed only to appear at fixed times."

The qualifications for study were carefully mapped out, 48 "excellences" by which the Torah is acquired being listed (perhaps for rehearsal by the prospective student):

By study, by the hearing of the ear, by the ordering of the lips, by the understanding of the heart, by the discernment of the heart, by awe, by reverence, by humility, by cheerfulness; by attendance on the Sages, by consorting with fellow-students, by close argument with disciples; by assiduity, by knowledge of

Scripture and Mishnah; by moderation in business, in worldly occupation, pleasure, sleep, conversation, and jesting; by long-suffering, by a good heart, by faith in the Sages, by submission to sorrows; by being one that recognizes his place and that rejoices in his lot and that makes a fence around his words and claims no merit for himself; by being one that is beloved, that loves God, that loves mankind, that loves well-doing, that loves rectitude, that loves reproof, that shuns honor and boasts not of his learning, and delights not in rendering decisions; that helps his fellow to bear his yoke, and that judges him favorably, and that establishes him in the truth and establishes him in peace; and that occupies himself assiduously in his study; by being one that asks and makes answer, that hearkens and adds thereto; that learns in order to teach and that learns in order to practice; that makes his teacher wiser; that retells exactly what he has heard, and reports a thing in the name of him that said it (Avot. 6:6).

The demands made on the student were thus both of intellect and of character. The successful student acquired in addition to factual knowledge the capacity for skill in debate. Of particularly brilliant scholars it was said that they were able to provide 24 answers to every problem (Shab. 33b; BM 84a). It was not unusual for teachers to encourage their disciples to cultivate alertness of mind by appearing on occasion to act contrary to the Law, to see whether the error would be spotted (Ber. 33b; Hul. 43b; Nid. 4b). The debators were compared to mighty warriors taking part in the "battles of the Torah" (Sanh. 111b). Another comparison was that to competent craftsmen. The "craftsmen and the smiths" (II Kings 24:14) were identified with the scholars and said to possess acute reasoning powers (Sif. Deut. 321). Of a text presenting severe problems of interpretation it was said that neither a carpenter nor his apprentice could provide the correct solution (AZ 50b). In similar vein keen scholars were compared to builders (Ber. 64a), to pearl divers capable of reaching great depths in pursuit of treasure (BK 91a), and to weavers (Ber. 24a). The purveyor of the difficult halakhic teachings was compared to a dealer in precious stones for the connoisseur, whereas the more popular but less profound aggadic teacher was compared to the retailer of cheap tinsel goods which all can afford to buy (Sot. 40a).

While the saying of R. Judah in the name of Rav, that a man should study the Torah even if his motives were not of the purest (*she-lo li-Shemah*), was generally accepted because the right motive would eventually emerge (Pes. 50b), the rabbinic ideal was that of Torah "for its own sake" (*li-Shemah*). R. Meir said: "Whoever labors in the Torah for its own sake merits many things; and not only that, but the whole world is indebted to him: he is called a friend, beloved, a lover of the All-present, a lover of mankind; it clothes him in meekness and reverence; it fits him to become just, pious, upright and faithful; it keeps him far from sin, and brings him near to virtue; through him the world enjoys counsel and sound knowledge, understanding and strength" (Avot 6:1). The *Sifrei* (Deut. 41 and 48) remarks: "Suppose you say, I am learning Torah that I may get rich, or that I may be called Rabbi, or that

I may gain reward (from God) – the teaching of Scripture is: ‘To love the Lord your God’ (Deut. 11:13).” “Suppose you say, I will learn Torah in order to be called learned, to have a seat in the academy, to have endless life in the world to come – the teaching is: ‘To love the Lord your God.’”

From the rabbinic period and onward great centers of Jewish learning were established. In Palestine there was the academy at the sea-coast village of Jabneh, which came into especial prominence after the destruction of the Temple; at Lydda under the guidance of R. Eliezer b. Hyrcanus and R. Tarfon; at Bene-Berak under R. Akiva; at Usha in Galilee; and there were also centers in Sepphoris, Tiberias, and Caesarea. R. Yose b. Kisma said: “I was once walking by the way, when a man met me and greeted me and I returned his greeting. He said to me, ‘Rabbi, from where are you?’ I said to him, ‘I come from a great city of sages and scribes.’ He said to me, ‘If you are willing to dwell with us in our place, I will give you a thousand golden dinars and precious stones and pearls.’ I said, ‘If you were to give me all the silver and gold and precious stones in the world, I would not dwell anywhere but in a home of the Torah’” (Avot 6:9). “Homes of the Torah” rose to a position of importance in third-century C.E. Babylonia. At the beginning of this century two Palestinian-trained scholars, Rav and Samuel, returned to their native Babylonia, the former to found the academy at Sura, the latter to revive the long-established academy at Nehardea. When Nehardea was destroyed during the Roman-Persian wars in the year 259 C.E., Samuel’s disciple, R. Judah b. Ezekiel, founded an academy at Pumbedita which existed as a sister and rival institution of Sura for over eight centuries. After the decline of Sura and Pumbedita in the 11th century, new schools sprang up in North Africa and Europe to take their place. The schools of Paris, Troyes, Narbonne, Metz, Worms, Speyer, Altona, Cordoba, Barcelona, and Toledo were renowned in the Middle Ages. From the 16th century, Poland, with its own academies, emerged as the Jewish intellectual center.

Yet it should not be imagined that the rabbinic ideal of Torah study was for the scholar alone. It was binding on every Jew as a *mitzvah*. R. Johanan said in the name of R. Simeon b. Yoḥai, “Even though a man reads no more than the *Shema* morning and evening he has thereby fulfilled the precept of ‘This book of the law shall not depart’” (Josh. 1:8). It is, however, forbidden to say this in the presence of the ignorant (who would draw the consequence that detailed Torah study is not important). But Rava said it is meritorious to say it in the presence of the ignorant (so that they should not despair of having no part in Torah study; Men. 99b). There is no doubt that the rabbinic ideal was devotion to Torah study on the part of every Jew. Maimonides follows his rabbinic mentors in ruling (Yad, Talmud Torah 1:8): “Every man in Israel is obliged to study the Torah, whether he is firm of body or a sufferer from ill-health, whether a young man or of advanced age with his strength abated. Even a poor man who is supported by charity and obliged to beg at doors, and even one with wife and children to support, is obliged to set aside a period for Torah

study by day and by night, as it is said: Thou shalt meditate therein day and night.”

The Laws of Study

Three benedictions are to be recited before studying the Torah (Singer, Prayer 5). Since the whole of the Jew’s waking life is a time for study these benedictions are recited at the beginning of each day and suffice for the whole day’s study. It is considered meritorious to set aside a fixed time each day for Torah study, preferably in the company of others. Each community is expected to have a special “house of study” (*bet ha-midrash*), the sanctity of which is greater than that of a synagogue. As evidence of this it is ruled that while it is not permitted to run from a *bet ha-midrash* to a synagogue it is proper to run from a synagogue to a *bet ha-midrash*. A person unable to study himself should assist in supporting students of the Torah, in whose learning he will then have a share (Sh. Ar., YD 246:1). The Psalmist (Ps. 19:19) speaks of the precepts as “rejoicing the heart.” Consequently, it is forbidden to study the Torah during the week of mourning for a close relative or on the Ninth of Av. The rabbis believed in the psychological value of verbal expression and therefore advised that Torah study should not be a purely mental exercise but the words of the text should be uttered aloud, customarily with a chant. Since the study of the Torah is equal to all the other precepts, a man should not interrupt his studies to do a good deed unless there is no one else to carry it out. At the completion of the study of a whole tractate of the Talmud it is customary to celebrate the occasion with a festive meal.

Scope of Study

“At five years the age is reached for the study of Scripture, at ten for the study of Mishnah, at thirteen for the fulfillment of the commandments, at fifteen for the study of Talmud” (Avot 5:21). This may reflect the actual ages when the young students were gradually introduced to the more complex subjects of study. Elsewhere (Kid. 30a) it is said that a man should divide his study time so that a third is devoted to Scripture, a third to Mishnah, and a third to Talmud. In the Middle Ages, especially in France and Germany, most of the students’ efforts were directed to the study of the Babylonian Talmud, in particular to its halakhic portion, with a certain neglect of other topics. Typical is the admission of Rabbenu Tam (Tos. Kid. 30a s.v. *lo*) that the rabbinic schools relied on the fact that the Babylonian Talmud is full of all matters, containing Scripture and Mishnah. This tendency toward a certain narrowing of studies to the virtual exclusion of all except *halakhah* became more and more the norm in Russia and Poland. The medieval thinkers, however, not only urged the study of their discipline but tended to identify philosophical investigation with the highest type of Torah study. Maimonides (Yad, Yesodei ha-Torah 4:13) identified the esoteric disciplines known as the “Work of Creation” and “Work of the Chariot” with Aristotelian physics and metaphysics, respectively, and ranked them higher in the Jewish scale of studies than talmudic debates. Similarly, the kabbalists zealously regarded their subject – the

“soul of the Torah” (Zohar III 152a) – as the highest pursuit. The kabbalist Ḥayyim Vital (*Sha'ar ha-Hakdamot*, introd.) recommended that a man should spend an hour or two each day on halakhic casuistry in order to remove the coarse “shell” which surrounds the “fruit,” but should devote the rest of his study time to the true science of the kabbalistic mysteries. In the 16th century R. Moses Isserles (YD 246:4) summed up the rabbinic attitude as follows: “A man should only study Scripture, Mishnah, and Gemara, and the Codes based on them. In this way he will acquire this world and the next. But he should not study other sciences. However, it is permitted to study other sciences occasionally, provided that this does not involve in the reading of heretical works. This is called by the Sages ‘strolling in Paradise.’ A man must not ‘stroll in Paradise’ until he has filled his stomach with meat and wine, namely, the knowledge of that which is forbidden and that which is permitted and the laws of the precepts.”

The rise of the ḥasidic movement in the 18th century presented a serious challenge to the ideal of Torah study as the supreme religious duty. The early ḥasidic masters accused the conventional scholars of engaging in Torah study for motives of fame, wealth, and prestige. Prayer, in the traditional scheme inferior to study, was frequently elevated by the Ḥasidim above study. In addition, the rabbinic ideal of *Torah li-Shemah* (“for its own sake”) was interpreted in early Ḥasidism to mean attachment to God (*deveikut*), while studying, especially in the sense of intense concentration on the letters of the text, was believed to reveal on earth the divine forces by means of which God governs the world (see J.G. Weiss in: *Essays Presented to... I. Brodie* (1966), Heb. sec. 151–69). The comparatively large number of classical talmudic scholars among the second and third generations of ḥasidic masters prevented, however, any radical departure from the older ideal. In a statement which combines the older ideal with the new ḥasidic emphasis on attachment to God while studying, R. Shneur Zalman of Lyady describes (*Tanya*, ch. 5, *Likkutei Amarim* (1912), 17–19) the religious significance of even the legalistic debates:

Behold, with regard to every kind of intellectual perception, when one understands and grasps an idea in one's mind, the mind seizes the idea and encompasses it in thought so that the idea is held, surrounded, and enclosed in the mind in which it is comprehended. Conversely, the mind is clothed by an idea it has grasped. For instance, when one understands fully a rule in the Mishnah or the Gemara, his mind seizes the rule and encompasses it and, at the same time, his mind is encompassed by the rule. Now, behold, this rule is the wisdom and will of the Holy One, blessed be He, for it rose in His will that, for instance, when A pleads thus and B thus the rule will be thus. And even if, in fact, a case of this kind will never come before the courts, nonetheless, seeing that it rose in the will and wisdom of the Holy One, blessed be He, that this is the rule, it follows that when a man knows and grasps this rule in his mind in accordance with the decision laid down in the Mishnah or the Gemara or the Codes he grasps, seizes hold of, and encompasses in his mind the will and wisdom of the Holy One, blessed be He, of whom no thought can conceive.

A less mystical approach is advocated in the famous broadside fired against the Ḥasidim by the disciple of the Gaon of Vilna, R. Ḥayyim of Volozhin (*Nefesh ha-Ḥayyim*). R. Ḥayyim reiterates the conventional view that Torah study even out of ulterior motives is not to be despised and that, moreover, Torah for its own sake does not mean that the student should have God in mind when he studies the texts (such an attempt, R. Ḥayyim argues, would interfere with the intense concentration required for the mastery of the difficult halakhic studies he favored above all else). The student should have a few moments of prayer and devout thoughts before his actual studies and then he should immerse himself in the texts. For R. Ḥayyim (*Nefesh ha-Ḥayyim* (1874), 4:9, 40a) the Torah student has little need for the moralistic and devotional literature (*Musar*) in order to become God-fearing. The Torah itself possesses the property of inducing the fear of God in the hearts of its diligent students. A work in similar vein, from the same school, singing the praises of traditional Torah study, is *Ma'alat ha-Torah* by Abraham, brother of the Gaon of Vilna. The book expresses the ideal taught in the yeshivah of Volozhin and in the Lithuanian yeshivot influenced by it in the 19th and 20th centuries, in which, however, *Musar* did eventually come to occupy a considerable place.

In Western Europe, from the beginning of the 19th century, more and more time had to be found for secular studies, frequently to the detriment of Torah study. Samson Raphael Hirsch adapted the rabbinic ideal of “Torah and *Derekh Erez*” (“worldly occupation”) so that the latter came to embrace Western learning and culture. Moreover, the critical investigation of the classical sources known as *Juedische Wissenschaft* posed problems of its own for the traditional ideal of Torah study. In a sense the objective, “scientific” scholarship that is the ideal of this school is opposed to that of study as a devotional exercise, if only because it is far more difficult to treat as sacred texts those that are critically examined, and, conversely, acknowledging the sanctity of a text tends to prejudice critical questions regarding its background and authorship. The achievements of *Juedische Wissenschaft* have shed new light on many obscure corners of Jewish thought and history, but critics such as G. Scholem (*Perakim be-Yahadut*, ed. by E. Spicehandler and J. Petuchowsky (n.d.), 312–327) have questioned whether the movement has ever had any real religious significance. There have undoubtedly emerged two vastly different worlds of Jewish studies: the world of the yeshivot indifferent or even hostile to critical scholarship, and the world of modern learning with no formal interest in study as an act of religious worship. To date there has been little meeting between these two worlds.

[Louis Jacobs]

Historical Aspects

The ideal of Torah study as a lifelong pursuit incumbent upon all Jews found ample concretization in the course of Jewish history. Indeed, *hevrot* (voluntary study groups) devoted to the regular study of one or another traditional text constitute a significant feature of Jewish social history. Although early

medieval sources do not specifically mention the existence of such associations, it is clear from the responsa literature of the period that householders were in the habit of engaging tutors – where required – to give them regular instruction in the sacred texts (see Neuman, Spain, 2 (1942), 293 n. 31, for references to the relevant responsa). The first such study circles, which date back to talmudic and geonic times, appear to have been devoted to the perusal of mystical texts. There is some evidence that the initial impulse toward the formation of organized study groups for laymen originated with the 16th-century Safed school of mystics, who regarded daily study of the Torah in groups as an essential part of their program of mystical exercise; and this hypothesis is confirmed by the fact that the first references to such study circles come from early 16th-century Palestine (see B. Dinur, *Be-Mifneh ha-Dorot* (1955), 162–63). A visiting Italian rabbi, Obadiah of Bertinoro, found the sight of such groups in Jerusalem sufficiently novel to warrant noting it in his travel diary. A letter from Palestine dating from the same period describes the local practice in these terms: “Even a hired laborer would not go out to his work or affairs in the morning after services, before studying Torah” (A. Yaari, *Iggerot Erez Yisrael* (1943), 208).

From Palestine the practice spread to Italy. Thus, the *ketav rabbanut* (rabbinic contract) of a Veronese rabbi of the first half of the 16th century specified that he conduct classes in Jewish studies for laymen. In the last quarter of the century Judah Loew b. Bezalel (the Maharal of Prague), inspired by the mystic significance which the Lurianic Kabbalah ascribed to the study of the Mishnah, organized groups for laymen to study Mishnah regularly. With the rapid spread of such circles, an early 17th-century author, Joseph Yuspa Hahn (*Yosef Omez*, Frankfurt, 1823, pt. 2, *Perek ha-Torah* (1928 ed.), 265 ff.), prescribes the regulations by which they should be governed. Shabbetai Sheftel Horowitz, the early 17th-century rabbi of Frankfurt, urged every householder to join one of the local circles so that he might devote at least one hour daily to study. At that time such groups included the entire adult male population of the community. In some communities – Prague for example – participation in a study group was an obligation imposed by communal regulation (1611). A similar ordinance adopted in Worms in 1667 made it mandatory for every adult male to devote at least one hour a day to study.

By the end of the 17th century study groups, usually meeting daily, were to be found in virtually every community of any size. Similar groups were established in Poznan (Poland) under the influence of Shabbetai Horowitz, who had moved there from Frankfurt, and their example was soon followed throughout Poland. The community there developed a novel feature in its zeal for learning. In the *bet ha-midrash*, professional students, supported by the local community, were organized in relays so they might study in turn around the clock. This practice of marathon study, recorded by Jacob Emden in connection with the Great Bet ha-Midrash of Vilna, was widespread in Poland; and in 1741 it was introduced into the Amsterdam community. The extent to which universal adult

study was a matter of communal concern is seen in the minute book of the Lithuanian Council (see *Councils of the Lands) which prescribed that every layman had a duty to study at least one chapter of the Mishnah every day (*Pinkas ha-Medina*, ed. by S. Dubnow (1925), pars. 590, 959). Study was not only carried on in societies specifically constituted for this purpose, but also in most voluntary associations, whatever their primary function. Thus, for example, the *Ḥevrat Bikur Ḥolim* in 17th-century Mantua required its members to gather for study on Sabbaths and festivals (see S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah*, 2 (1964) 405–7). A similar practice prevailed among the guilds of Jewish artisans in Poland (see M. Hendel, *Melakhah u-Va'alei Melakhah be-Am Yisrael* (1965), 7 ff.)

A curious sidelight on the universal preoccupation with study is afforded by the opposition to it evinced by leading rabbinic authorities of the 18th century. Jacob Emden based his opposition on the grounds that the study of the Talmud was intended for scholars and not for mere laymen who were certain to become skeptics when they read some of the more fantastic aggadic tales found there. He argued, moreover, that these laymen used their own study of the Talmud as a pretext for exempting themselves from the support of those who devoted their full time to it (see J. Emden, *Siddur Yavez Ammudei Shamayim Hilkhot Talmud Torah*). In a similar vein, Jonathan Eybeschuetz, a contemporary of Emden, exhorted laymen to study *Orah Ḥayyim* (the laws of daily religious life) and moralistic texts rather than the Talmud; and still others urged that Bahya ibn Paquda's pietistic-philosophic text *Ḥovot ha-Levavot* (“Duties of the Heart”) be read in place of the Talmud.

[Theodore Friedman]

Women and Torah Study

Most rabbinic texts presume that Jewish women are not obligated to engage in Torah study, just as they are exempt from other communal obligations such as public prayer at mandated times (Tosefta Sotah 7:6; Lieberman 7:9; similarly Ḥag. 3a), commenting on the commandment that the entire community must gather to hear divine teachings and so learn to observe them (Deut. 31:12), quotes R. Eleazar b. Azariah to the effect that the men come to learn Torah but women come only to hear. A frequently cited tannaitic Midrash claims that “And you shall teach them to your children (*binekhem*)” (Deut. 11:19) should be understood to mean, “Your sons, but not your daughters” (*Sifre Devarim* 46; similarly TJ, Eruv. 10:1, b. Ber. 20b; TB, Kid. 29b).

A central debate between the sages Ben Azzai and R. Eliezer over whether women should study Torah appears in Sotah 3:4, in reference to the ordeal of a woman accused of adultery. While the content of the debate has several ambiguities, the positions of the protagonists are clear. Ben Azzai says that a man is obligated to teach his daughter Torah while R. Eliezer disagrees, opining that “whoever teaches his daughter Torah teaches her *tiflut*” (obscenity or lasciviousness; sometimes translated as foolishness). And while it is possible to read

this passage narrowly, as limited to its particular context, later rabbinic tradition read it broadly, as a wholesale exclusion of women from Torah study. The Palestinian Talmud (Sot. 3:4, Hag. 1:1) contrasts Ben Azzai's positive view with the negative opinion of R. Eleazar b. Azariah, cited above. This passage goes on to relate a story about the depths of R. Eliezer's antipathy to women studying Torah, in which he refuses to answer a question posed by a wealthy matron, telling her, "A woman's wisdom is only in her spindle." When his son expresses concern that R. Eliezer may jeopardize the financial support this woman provides to him, he replies, "Better the words of Torah be burned than be given to a woman."

The Babylonian Talmud on *Sotah* 3:4 (Sot. 21a) takes it for granted that women are exempt from Torah study: a woman who studies voluntarily is said to be meritorious but she does not merit the larger reward of fulfilling a commandment. Ideally, women should garner merit in this area by arranging for their sons to learn Torah and by waiting patiently for their husbands to return from studying with the rabbis (similarly Ber. 17a).

The medieval legal tradition also exempted women from study. *Maimonides (Laws of Torah Study, 1:13) writes that women are not obligated to learn Torah and goes on to say that "the sages have commanded that a man not teach his daughter Torah, since most women's minds are not properly directed to being taught, but rather they turn the words of Torah into words of triviality (*tiflut*) ..." While distinguishing between different levels of Torah study, since it is the "Oral Torah" that a woman will especially fail to understand, Maimonides rules that a man should not even teach his daughter written Scripture. However, if he does so, he has not taught her *tiflut*. Maimonides goes on to say that a woman who studies Torah voluntarily receives merit, albeit less than a man who studies in order to fulfill the commandment. Joseph *Caro repeats Maimonides' rulings in the *Shulḥan Arukh* (YD 246:6); in his commentary for Ashkenazi Jewry, Moses *Isserles adds that a woman is, nevertheless, obligated to learn the laws that pertain to women's lives.

Some women did receive Torah education in both the rabbinic and medieval periods. For example, M. Nedarim 4:3 rules that if person A has vowed to receive no benefit from person B, person B may nonetheless "teach his (A's) sons and daughters Bible." Similarly, Kiddushin 4:13 discusses whether women may teach Bible to young children, which suggests that at least some women must have been sufficiently educated to do so. References to female Bible teachers also appear in the Cairo **Genizah* and in the responsa of Maimonides (Goitein, 64–65, 69–71). Tosefta *Berakhot* 2:12 includes menstruants and women who have recently given birth among those who may "read from the Torah, and study mishnah, midrash, and *halakhot*," despite being in a state of ritual impurity. The Babylonian Talmud includes several stories about the scholarly *Beruriah, whose accomplishments included learning "300 teachings in a day from 300 teachers" over three years (Pes. 62b).

Several medieval Ashkenazi sources rule that if a woman wishes to study Torah, she may do so and should say the appropriate blessing (*Maḥzor Vitry* 359; *Siddur Rashi* 267; Rashi, responsa 68). A Jewish school for girls is recorded in Rome in the 15th century. By the late Middle Ages, a literature of vernacular Bible translations, commentaries, and collections of ethical and aggadic materials, directed at a non-scholarly readership that included women, became popular in European communities, particularly following the invention of printing. There were also a few women throughout the medieval period who were noted for their advanced Jewish learning. The 12th-century Spanish traveler Petahiah of Regensburg (Ratisbon) reported that the daughter of Baghdad *gaon* Samuel ben Ali (d. 1194) taught Scripture and Talmud to men through a window (Goitein, 64). As in this case, such women were usually daughters, wives, and mothers of noted rabbinic scholars. It may be that it was precisely under such conditions that a woman could have access to advanced Jewish learning, or perhaps it is because of their connections to noted men that some such women were remembered to history.

It is in the modern period that most radical changes in women's relationship to Torah study have taken place. In the 19th and 20th centuries, particularly in Eastern Europe, opinions against teaching women any form of Torah knowledge were dominant. While boys and men could dedicate themselves to intense study of Jewish texts, girls received no formal Jewish education and sometimes attended secular schools. Concerned for the social effects this was having on girls' commitment to Jewish life and practice as they matured, Sarah *Schnirer founded a girls' school, *Beth Jacob, in Cracow in 1917. By 1924, there were 53 Beth Jacob schools in Poland; on the eve of World War II, nearly 40,000 girls across Europe and elsewhere were being educated in Beth Jacob schools.

Schnirer faced initial resistance from the religious establishment, but received support from a leading authority of the day, Rabbi *Israel Meir ha-Kohen (known as the *Ḥafetz Ḥayyim*). He wrote that Maimonides' ban on teaching women Torah could no longer hold in changing times: "It seems that this applies only in times before us, when everyone lived in the place of his ancestors and the tradition of the ancestors was very strong among all, to behave as their ancestors had behaved... and in such case one could say not to teach Torah [to a woman] and her behavior will rely on [the model of] her ancestors. But now, when our ancestors' tradition has become very weak... those women who are accustomed to learning foreign language and writing, certainly it is a great commandment to teach them Pentateuch, and the Prophetic books, and the Writings, and the ethical writings of the sages..." (*Sefer Likkutei Hilkhhot Sotah* 21a).

The mandate to teach women advocated by the *Ḥafetz Ḥayyim* was limited in scope and excluded advanced subjects such as Talmud or other rabbinic writings; it remains the case that Talmud is not taught in schools affiliated with the Beth Jacob system. A few strict ḥasidic and Orthodox communities continue to refuse to teach girls any Torah subject beyond the

necessary rules and customs of Jewish practice. In many other early 21st century Jewish communities, however, opportunities for Jewish girls and women to study Torah have continued to expand. In the Reform, Conservative, and Reconstructionist movements, it is generally expected that Jewish education will be egalitarian, up to and including rabbinic ordination. Similarly, a number of Orthodox Jewish day schools in the United States, Israel, and elsewhere teach Talmud and related subjects to girls as well as boys, either in separate or co-educational classes. A variety of women's yeshivot, notably in Jerusalem and New York City, teach college age and adult students at a variety of levels, including some offering advanced study in rabbinic literature.

STUERMER, DER, antisemitic German weekly, founded and edited by Julius *Streicher. It appeared in Nuremberg between 1923 and 1945, at first a local paper with a small circulation, but after 1935 with a circulation of 500,000. Its slogan, “*Die Juden sind unser Unglueck*” (“The Jews are our misfortune”), was pasted on walls in the streets and schools, thereby popularizing racial antisemitism among the masses. *Der Stuermer* encouraged the economic boycott and social isolation of Jews, further demanding that they be exterminated “root and branch.” It contained sensational gossip tinged with sadism. It defined the Jews as “defilers” of the “pure and superior Nordic race,” using crude lies, repetition of catchphrases, and caricatures depicting the stereotyped hideous *Rassenjude* (“Jew by race”), a devil in human form that destroyed everything good and healthy. In its “Ritual Murder” issue (May 1939), *Der Stuermer* revived the *blood libel accusation, with presumed proofs from the Talmud and frequent quotations from the Protocols of the *Elders of Zion. World War II was portrayed as the ritual murder of the whole of humanity by “World Jewry.” Because of its vulgarity, *Der Stuermer* aroused distaste even among Nazi leaders, who occasionally tried to silence it. Though *Der Stuermer* was crude and vulgar, it was not ineffective in shaping the concept of the Jew in the minds of certain segments of the German Public.

[Nathan Feinberg / Michael Berenbaum (2nd ed.)]

STULBERG, LOUIS (1901–1977), U.S. labor leader. Stulberg, a lifelong unionist, began as a teenage garment cutter and

rose to become president of the International Ladies Garment Workers Union (ILGWU), leading that organization for 10 years. In contrast with his predecessor, the fiery, high-decibel David *Dubinsky, Stulberg was regarded as a quiet but efficient leader and an astute financial manager. He was born in Poland but his family immigrated to Toronto, Canada, when he was three. His first job was as a cutter, but he was blacklisted in Toronto because of union activities and the family moved to Chicago, where he joined the ILGWU. He attended the University of Chicago for one year, played semi-pro baseball, and briefly considered a career as a shortstop. Devoting himself instead to union activities, he moved around the Midwestern U.S., working as a cutter and organizer in Toledo, Ohio, and Chicago before settling in New York City in 1927 and joining Cutters Local 10. Within two years, he was a business agent for Local 10 and in 1933 was named its business manager. As head of the cutters' dress department, he helped bring thousands of new members to the union during an East Coast organizing drive just before the start of World War II. In 1945, Stulberg joined the union's general staff as assistant executive secretary. Two years later he became manager of Local 62, which made women's undergarments, and was elected a vice president and member of the general executive board. In 1956 he was appointed by Dubinsky as executive vice president of the ILGWU, a non-elective position. He was elected general secretary-treasurer in 1959, making him Dubinsky's heir apparent. Stulberg became president of the ILGWU in 1966 and was reelected three times. He resigned as president in 1975, citing health problems. Stulberg's decade as president was marked by a major shift in ILGWU membership, from largely Jewish and Italian workers to Hispanics and African-Americans. Although membership had reached an all-time high of well over 400,000 in 1968, it began to fall as more apparel makers moved their operations to low-wage countries. It was during Stulberg's administration that the ILGWU broke away from the Liberal Party, which it had helped found. The union's leaders, including Stulberg, said the party had weakened the liberal-labor political coalition, contributing to Republican victories in New York State. Stulberg was also a vice president of the AFL-CIO and was a U.S. representative at the United Nations. He was also a fellow at Brandeis University in Waltham, Mass., where in 1969 the Louis Stulberg Chair of Law and Politics was established. In 1973, on the 25th anniversary of the State of Israel, he was awarded the Prime Minister's Medal.

[Mort Sheinman (2nd ed.)]

STURMAN, ḤAYYIM (1891–1938), *Haganah leader in Erez Israel. Born in the Kiev district, Ukraine, Sturman settled in Erez Israel with his parents in 1906. He then became an agricultural worker at Sejara. He joined the founders of *Ha-Shomer and participated in the establishment of *Merḥavyah and afterward of the Ha-Shomer settlement of *Tel Adashim. During World War I Sturman participated in the secret activities to provide the *yishuv* with arms. He was discovered and arrested by the Ottoman authorities, and he returned to

Tel Adashim after his release. Following the war he moved to Kevuzat *Kinneret and was one of the organizers of the *Gedud ha-Avodah (Labor Legion) settlement activities in the Harod area. In 1921 he participated in the founding of *En-Harod, of which he was a member until his death.

Sturman was among those primarily responsible for the defense of the Harod bloc and an active member of the national center of the Haganah. He traveled as a political and agricultural emissary to neighboring countries, aided by his fundamental knowledge of Arabic and the Arab way of thinking. During the Arab riots of 1936–38 he was constantly in responsible positions for the defense of his area. At the same period he was one of Orde *Wingate's advisers and friends. When he was returning from a visit to the *stockade and tower settlement of *Tirat Zevi together with two friends, all three were killed when their car went over a road mine near the Arab village of Samaria. The school shared by En-Harod and Tel Yosef, and the nearby Bet Sturman, which serves as a museum institute for research of the eastern Jezreel Valley, were established in his memory and kibbutz Ma'oz Hayyim was named after him.

His son, MOSHE, fell in the Israel War of Independence and Moshe's son, HAYYIM, was killed in 1969 in the Israel Defense Forces' commando action on Green Island at the mouth of the Suez Canal.

STURMANN, MANFRED (1903–1989), Israeli author writing in German. Born in Koenigsberg (East Prussia), his first book, *Althebraeische Lyrik* – a rendering of biblical poetry into German – appeared in 1923 with an introduction by Arnold Zweig. This was followed by several books of his own lyrical poems, the first of which, *Die Erben* (1929), was awarded the Lyrics Prize of the City of Munich. After his immigration to Erez Israel in 1938, he continued writing poetry as well as short stories in German. He dealt with the involved problem of an “Israel poet in the German language” in an essay published in *Meilensteine – Vom Wege des Kartells Juedischer Verbindungen КИУ in der Zionistischen Bewegung* (Tel Aviv, 1972). He stated that both the serene landscape of the years of his youth and “the discovery of the Zionist dream” had a decisive influence on his outlook, his thinking, and his writing.

Some of the short stories Sturmann wrote in Israel were inspired by his experience in the war of 1948, his social work in Jerusalem, and his deep love of this city and the country: *Die Kreatur* (1952) and *Abschied von Europa* (1963) contain a representative selection of his short stories. He was the literary administrator of Else *Lasker-Schueler.

[Erich Gottgetreu]

STUTSCHEWSKY, JOACHIM (1891–1982), composer, cello player, and folklorist. Stutschewsky was born in Romny (Ukraine) to a family of musicians who had been *klezmerim*

(entertainment players) for several generations. After studying at the Leipzig Conservatory (1909–11) he joined the Jena string quartet and played with the local orchestra. From 1918 to 1924 he stayed in Zurich, where he was active as soloist, chamber-music player, and cello teacher, and began to write his treatise on the art of cello playing which became recognized as one of the major modern manuals and has also been published as an official method in Russia. In Zurich, Stutschewsky began to promote lectures on and concerts of Jewish music, in cooperation with the movement begun by the Society for Jewish Folk Music. From 1924 to 1938 he stayed in Vienna and undertook concert tours dedicated to Jewish music in several countries. Going to Erez Israel in 1938, he established himself as one of the most influential musical personalities in the country, continuing as a cello pedagogue, composer, lecturer, and writer.

Stutschewsky's style as a composer began in the East European vein and also absorbed in Israel the local influences of the Near Eastern Jewish communities and the emergent new folk-song styles. His earlier writings, as well as his many arrangements of folk and traditional melodies, were a part of the efforts made during the 1920s and 1930s to propagate the cause of Jewish music as such. In the later ones, such as the book *Ha-Klezmerim* (1959) and the collections *Zemer Am* (1940) and *120 Niggunei Hasidim* (1950), he turned to specific tasks of collection and preservation including, in *Ha-Klezmerim*, invaluable reminiscences and materials from his own family and regional traditions of the *klezmer's* life and activities. In the field of general music Stutschewsky published a considerable number of arrangements and transcriptions for cello, which also became repertoire standards, and augmented his cello manual by several books of etudes. His other compositions include a symphonic poem *Safed* (1960) and other orchestral work; incidental music for the *Ohel Theater's *Fishke ha-Higger*, based on *Mendele Mokher Seforim's novel (1939); cantatas to texts by S. Shenhod; chamber music for various combinations; piano pieces (including *Ze'iriyot*, *Miniatures for Children*, 1946); cello pieces; numerous original and arranged songs to Hebrew texts; and arrangements of East European Jewish songs. He also wrote *Mein Weg zur juedischen Musik* (1936), and autobiographical notes in *Tazlil*, 8 (1968), 65–67.

[Bathja Bayer]

STUTTGART, city in Wuerttemberg, Germany. A small Jewish community with a synagogue was in existence by 1330–40. In November 1348 during the *Black Death persecutions, most of the Jews were burned to death, but some survivors were recorded in *Esslingen in 1385. In 1393 one Jew was recorded as living in Stuttgart. A new community had come into being by 1434, comprising eight families by 1470. Both a synagogue and a *mikveh* date from that period. Some time after 1492 Jews were banished in consequence of the will (enacted as a state law in 1498) of Count Eberhard III of Wuerttemberg. At the beginning of the 16th century Count Ulrich attempted to employ Jews in the economic development of

the territory. However, the banishment was reaffirmed by Emperor Charles V in 1521. In 1597 Duke Frederick I invited the Italian-Jewish inventor Abraham Colorni to experiment with saltpeter potassium but imprisoned him after a few unproductive months; Colorni later escaped. The duke's attempt in 1559 to attract a Portuguese-Jewish manufacturer met with ecclesiastical opposition. By 1710 a few Jews doing business with the ducal court were allowed to reside in Stuttgart, and by 1721 there were seven families in residence there. In 1734 Joseph Suess *Oppenheimer was appointed financial adviser by Duke Alexander; he fell into disfavor after the duke's death in 1737 and was executed in 1738. Newly admitted Jews were expelled in 1739. By 1770, four Jewish families lived in Stuttgart, among them Nathaniel Seidel, director of the mint, and the two brothers Seligmann (see *Eichthal-Seligmann family), lessees of the salt-mine concession from 1758.

After the admission of the merchant-banking *Kaulla family in 1779, a new community came into being. In 1831 the Central Wuerttemberg Jewish Council was organized in Stuttgart under state and church supervision. In 1834 a cemetery was acquired (a new one in 1876); in 1835 Joseph Maier, the first Wuerttemberg rabbi with the required Ph.D. degree (from Tuebingen University), was appointed; a prayer hall was consecrated in 1837. The growth of the community followed the two emancipation laws of 1828 and 1864. In 1808, 109 Jews lived in Stuttgart; the numbers rose to 211 in 1844; 847 in 1861; 1,169 in 1864; 1,801 in 1871; 3,015 in 1910; and 3,818 (1.4% of the total population) in 1913. In nearby Cannstatt, incorporated with Stuttgart in 1905, there were 469 Jews in that year. In 1925 the Jewish population of Stuttgart and Cannstatt was 4,870 (1.4% of the total population) and 4,490 in June 1933.

A synagogue was consecrated in 1861, and a separate Orthodox group maintained a prayer hall from 1880. The rabbis Maier (1794–1873) and Moses Wassermann (1811–1892) were raised to the nobility by the Wuerttemberg kings. From the 1890s the community had youth and cultural associations and branches of political organizations. From 1924 to 1938 it published a monthly for the Wuerttemberg Jewish communities, and a *Lehrhaus* (adult education center) was open from 1925 to 1938. In 1933 Jews in public office (among them eight jurists) and in cultural institutions were dismissed. Karl Adler, director of the conservatory for 11 years, founded the Jewish Arts Council for lay choirs. A Jewish school was founded in 1933, and a school for teachers of physical education in 1935. The B'nai B'rith Stuttgart Lodge was dissolved in 1937, and Polish Jews were deported on Oct. 26, 1938. Following the November 1938 pogrom, Adler organized an Emigration Aid and Self-Help Agency, which was led, after his emigration in May 1941, by the jurist Alfred Marx. The Wuerttemberg Jewish Central Council was dissolved in 1943. By 1941, 2,690 Jews had emigrated. The remainder were concentrated in a Jewish quarter, the older members of the community being evacuated to small towns and villages. From late 1941 through early 1945 Stuttgart was the collection point for the deportation of all Wuerttemberg Jews, beginning on July 1, 1941, to Riga (where the de-

portees were subsequently massacred), in 1942 first to *Izbica, *Auschwitz (four transports 1942–43), and then to *Theresienstadt (Aug. 5, 1942 to Feb. 1945). About 1,000 Stuttgart Jews died in deportation or in concentration camps.

[Toni Oelsner]

Post-World War II

About 20 Jews survived in Stuttgart, some by going into hiding; 45 returned from Theresienstadt (among them Alfred Marx) and a few from other concentration camps. In two Displaced Persons' camps in the city in 1945 there were more than 2,000 Jews. By the end of 1946, 1,276 Jews remained in Stuttgart, decreasing to 569 in 1950; in 1968 the community had 480 members. A synagogue (built by the surviving architect Ernst Guggenheim), the only one in Wuerttemberg, was consecrated in 1952; the enlarged community center was completed in 1964. Among the survivors, Dr. Richard Perlen (d. 1961) was appointed president of the Wuerttemberg supreme court. The house of Albert *Einstein's mother's family in Cannstatt-Stuttgart has been preserved. Stuttgart is the seat of the Jewish community of Wuerttemberg, which numbered 677 in 1989. There were 2,881 in 2004, among them about 1,500 members living in Stuttgart. The increase is explained by the immigration of Jews from the former Soviet Union. In 1989 the majority were living in Stuttgart; in 2004 about 45% were living outside Stuttgart. In 1999 the community opened an old age home.

STUTTHOF (Pol. *Sztutowo*), German concentration camp established in a secluded area 22½ mi. (36 km.) E. of Danzig, which existed from Sept. 2, 1939, until May 9, 1945. Surrounded by water on three sides, the land was wet and almost at sea level. It was situated along the Danzig-Elbing highway. Initially a civilian camp, it became a concentration camp in January 1942. Jewish prisoners (several hundred men, mostly residents of Danzig) were brought there as early as Sept. 17, 1939. Among them were the writer and journalist Jacob Lange

and the cantor of the Danzig synagogue, Leopold Schufftan. Almost all of these prisoners died within a few weeks. The initial population of prisoners were Poles; it also housed Soviet prisoners of war as well as Norwegians and Danes. Jews were a distinct minority. As it appeared that the war would last longer than planned and labor shortages would be prolonged, the work of these slaves became more valuable and thus conditions were slightly improved for the non-Jewish prisoner population precisely as the conditions of Jews became more lethal throughout German-occupied territory. The camp was expanded in 1943 and wooden barracks were replaced by concrete ones. Stutthof was a site of forced labor. Inmates worked at private industrial enterprises, foremost among them was the airplane factory of Focke-Wulff. They also worked in farming and in camp workshops. The camp staff were SS men and Ukrainian auxiliary police.

Until 1943 only small numbers of Jews from Warsaw, Bialystok, and some other places were deported to Stutthof. In the autumn of 1943, several hundred Jews found in hiding in Bialystok after the Bialystok ghetto uprising were brought there. Early in 1944 all the surviving Jewish prisoners were deported to the *Auschwitz concentration camp.

Besides the central camp 105 subcamps were built, notably in Stolp, Heiligenbeil, Gerdaun, Jesau, Schippenbeil, Seerappen, Praust, Burggraben, Thorn, and Elbing. About 20,000 Jewish prisoners, mostly women, were imprisoned there. In spring 1944 several thousand Jews from concentration camps in Ostland (in Latvia and Lithuania) were deported to Stutthof, and in the early summer thousands of Jewish women arrived from Hungary. The greatest increase of Jewish prisoners occurred in June–October 1944, when over 20,000 Jews were shipped to Stutthof from Auschwitz. These were mostly women from Hungary and the Lodz ghetto. Most of these people died in the first weeks from hunger and lack of water, or were gassed in the gas chamber, where, as in Auschwitz, Zyklon B rather than carbon monoxide was used. In the last months of 1944 about 12,000 Jewish prisoners (including almost 4,000 women) were deported from Stutthof to concentration camps in Germany: *Dachau, *Buchenwald, Neuengamme, and Flossenbuerg. In January 1945 forced evacuation – death marches – from Stutthof and its satellite camps began. At that time about 29,000 Jewish prisoners (including almost 26,000 women) were still alive in these camps. Five thousand marched to the Baltic sea coast and were executed by machine gun fire. The remaining prisoners were marched toward Lauenberg but were stopped by Soviet advances and returned to Stutthof. In April 1945, with the front collapsing, the prisoners were again moved. Some were shot in the sea; others were transported by boat to Neuengamme. En route many died. When the camp was liberated on May 9 there were some 100 prisoners still alive at Stutthof.

About 26,000 Jews were killed or drowned during the evacuation. It is estimated that altogether over 52,000 Jewish prisoners passed through Stutthof and its satellite camps. Only about 3,000 of them survived.

[Stefan Krakowski / Michael Berenbaum (2nd ed.)]

STYBEL, ABRAHAM JOSEPH (1884–1946), publisher and literary patron. Born in Zharki, Poland, Stybel engaged in the leather business. From his youth he was deeply interested in Hebrew literature. During World War I he moved from Warsaw to Moscow and became wealthy from his business dealings. He then decided to devote himself to fostering the advancement of Hebrew literature. In 1917 he founded the Stybel publishing house and invited David *Frischmann to be his chief editor. They began the systematic translation of some of the world's best literature by leading Hebrew writers, and also published a literary quarterly, **Ha-Tekufah*. After the October 1917 Revolution, when publishing of Hebrew literature was forbidden, Stybel moved to Warsaw and then to Berlin, and opened branches in New York (where he published the literary monthly *Miklat* under the editorship of Y.D. *Berkowitz) and in Erez Israel. He published hundreds of books, both translations and original works (such as the complete works of M.J. *Berdycewski and J.H. *Brenner). When his economic situation deteriorated, Stybel transferred his publishing and manuscripts to N. Twersky in Tel Aviv. In 1938 he renewed his publishing activities in Warsaw, and at the outbreak of World War II moved to the United States. There he reestablished his publishing house in 1945 under the name of The Institute of Goslava and A.J. Stybel, and printed an additional volume of *Ha-Tekufah* (vol. 36). He also published his notes and memoirs. His publishing house greatly advanced Hebrew book publication.

[Yehuda Slutsky]

STYNE, JULE (1905–1994), U.S. songwriter and theatrical composer. Born in London as Julius Stein, he went to the U.S. as a young boy, settling in Chicago with his family. At eight he began studying at the Chicago College of Music and won a medal in a Chicago Symphony competition for children. He moved to New York and became a vocal coach and then joined 20th Century Fox in Hollywood coaching such stars as Shirley Temple. He wrote songs including “I Don’t Want to Walk Without You,” with Frank *Loesser. He met Sammy *Cahn and they turned out a stream of popular hits, including “It’s Been a Long, Long Time” and “I’ve Heard That Song Before.” Many of their songs were written for Frank Sinatra, including the Oscar-winning “Three Coins in the Fountain.”

In 1987, Styne estimated that he had written 2,000 songs, had published 1,500, and had had 200 hits.

His tunes became standards for three generations and he composed such classic Broadway musicals as *Gypsy*, *Gentlemen Prefer Blondes*, *Bells Are Ringing*, and *Funny Girl*. The songs from the shows bore the stamp of the singers who introduced them: Ethel Merman, Carol Channing, Judy *Holiday, and Barbra *Streisand. His collaborators included Stephen *Sondheim and Betty *Comden and Adolph *Green. Styne was honored in 1990 by the John F. Kennedy Center for the Performing Arts for his cultural contributions to the nation.

[Stewart Kampel (2nd ed.)]

STYRIA (Ger. **Steiermark**), province in S.E. and central Austria, originally a duchy connected with the *Hapsburgs from 1186. The presence of Jews in Styria from the 11th century may be learned from place names such as *Judenburg (first mentioned c. 1080), Judendorf near *Graz (mentioned 1147), and Leoben (mentioned 1230). The existence of Jewish communities is attested only from the second half of the 14th century (in Graz, e.g., from 1389). The legal position of the Jews was based on the adaptation by Premysl *Otakar and Rudolph of Hapsburg of the Fridericianum of 1244 (see *Frederick II of Babenberg). In the early Middle Ages, Jews were occupied as traders, and later primarily moneylenders, and were instrumental in effecting Styria's shift to a money economy. Their moneylending activities often involved the formation of a consortium to lend money on a large scale to municipalities; even monasteries were frequently involved in such transactions. In 1310 or 1312 Jews were massacred in Fuerstenfeld (because of an alleged desecration of the *Host and blood *libel) and in Judenburg. After repeated requests by the Estates, *Maximilian I expelled the Jews from the region in 1496, the Estates undertaking to reimburse him for the consequent loss of taxes. The exiles settled primarily in *Burgenland and the north Italian Hapsburg provinces from which they traded intensively with Styria. Individual Jews settled in Styria in 1753 and 1775; a decree permitted the attendance by Jews at the Graz markets in 1781, but the expulsion edict of 1496 was renewed repeatedly, for the last time in 1828. Even after the 1848 Revolution their economic activities were restricted; only from 1861 could they acquire real estate.

In 1903 Jews lived in 47 localities. They took an active part in the development of heavy industry and the railway to Hungary; some engaged in farming. At the resort of Gleichenberg-Trautmannsdorf a Jewish hospital was founded in 1884. Antisemitism was strong in Styria, though not violent in its manifestation until 1938. Many holiday resorts would not admit Jews. After the *Anschluss* (March 1938), Polish citizens among the Styrian Jews were compelled to leave for Poland while others, mainly from Graz, were deported to the *Dachau concentration camp; Jewish businesses were "ary-anized." From Aug. 1, 1939, no Jew was permitted to live on Styrian territory.

After the end of World War II a community was reestablished in Graz in 1949. Styria has been depicted in Hebrew literature in the writings of Gershon *Shofman, who lived in a village there between the two world wars.

[Meir Lamed]

SUARÈS, ANDRÉ (Félix André Yves Scantrel; 1868–1948), French essayist, poet, and critic. Born near Marseilles, Suarès was of Portuguese-Jewish descent. At the Ecole Normale Supérieure in Paris he was a lifelong friend of the great writer Romain Rolland, to whom he apologetically revealed his Jewish origin. Except for scattered remarks, the fragmentary manuscript *L'Antisémitisme*, and letters written under a pseudonym in all of which he defends *Dreyfus and attacks injustice, his writings have no Jewish interest. A disciple of *Nietzsche, he adopted a negative attitude toward Judaism.

Possessed of an encyclopedic mind, Suarès was equally at home in literature, art, music, politics, and philosophy. He published poetry and several plays, including *La Tragédie d'Electre et d'Oreste* (1905), *Cresida* (1913), and *Orphée* (1935), which were never performed. A solitary and secluded life enabled him to devote himself to writing prolifically on the historical, artistic, and literary figures who for him incarnated genius or the heroic soul, and reflected his ideal of grandeur and beauty. His portraits and studies include *Images de la grandeur* (1901), *Trois Hommes: Pascal, Ibsen, Dostoievski* (1913), *Debussy* (1922), *Goethe, le grand Européen* (1932), and *Trois grands vivants: Cervantès, Tolstoï, Baudelaire* (1937). Among his meditative writings are *Voici l'Homme* (1906), *Sur la Vie* (3 vols., 1909–12), and *Valeurs* (1936).

[Sidney D. Braun]

SUAREZ, family of Egyptian bankers of Spanish descent, settled in *Egypt during the 19th century. About 1875 EDOUARD SUAREZ together with his brothers FELIX and RAPHAEL formed the Maison Suarez & Cie. which, after various reorganizations, carried on until its nationalization in 1956. During the 1880s, in cooperation with others of the family, he established the Crédit Foncier Egyptien, the leading mortgage lending institution, the Helwan and other railway constructions, the Cairo Omnibus Company, and the Tanta Water Supply. The Suarez family together with the *Cattai family established Egypt's first successful sugar refineries and contributed to the country's agricultural development. They also took part

in, and supplied managers to, important projects such as the Wadi Kom-Ombo Scheme and other industrial undertakings. LEON SUAREZ, son of Felix Suarez, entered his father's business in 1895. In 1903 he became administrator of two other Suarez business interests, the Société Cheikh Fadl and Société Wadi Kom-Ombo. He left the firm of Maison Suarez & Cie. on his father's death in 1906 to take the latter's place as administrator of the National Bank of Egypt and of the Crédit Foncier Egyptien. EDOUARD (EDGAR) SUAREZ, grandson of the firm's founder, served during 1914–17 as president of the *Alexandria Jewish community. Edgar had a great estate and was one of Egypt's great industrialists; he was president of the Eliyahu ha-Navi Lodge of B'nai B'rith in the years 1899–1903. EDMOND was the president of the Alexandria community; EMILE was the president of the *Tanta community in 1938; JOSEPH was a member of the school committee of Alexandria in 1854; CARLO was an author. His wife, NADIN TILCHE, was in 1913 the first woman to pass the matriculation exams and in 1921 the first woman physician in Egypt. MENACHEM was one of the wealthy Jews of 19th-century in Egypt.

[Joachim O. Ronall / Leah Bornstein-Makovetsky (2nd ed.)]

SUASSO, family of bankers originally from Spain with branches in Holland and England in the 17th and 18th centuries. One of its most distinguished members was ANTONIO (ISAAC) LOPEZ SUASSO (second half of the 17th century), who lived in The Hague and was considered one of the wealthiest merchants in Holland. He was also one of the leading shareholders of the West India Company, his investments in 1674 amounting to 107,677 gulden. In recognition of his diplomatic services, King Charles II of Spain granted him an estate in Brabant, together with the title of baron, despite the fact that he was a Jew. An ardent supporter of the House of Orange, Isaac Lopez placed 2,000,000 gulden unconditionally at the disposal of William III when he set out for England in 1688. His son, FRANCISCO (ABRAHAM ISRAEL) LOPEZ, second baron of Avernas de Gras, acted as the trustee for the affairs of Queen Christina of Sweden (1632–54) in Hamburg during the years following her abdication. He married Judith, the daughter of Manuel de Teixeira de Sampaio, and his daughter married Isaac Teixeira d'Andrade. His sons were ANTONIO (ISAAC) LOPEZ, who in 1714 married the daughter of Moses Mendes da Costa, the governor of the Bank of England, and ALVARO (JACOB ISRAEL) LOPEZ, who in 1735 became a member of the Royal Society. ANTONIO LOPEZ (1776–1857), great-grandson of the first baron of Avernas de Gras, was born in Amsterdam, and, in accordance with the will of his maternal grandmother, assumed his mother's name, Diaz de Fonseca,

and was converted to Christianity. He joined the British army, fought against the French, and in 1829 retired with the rank of captain. His last years were devoted to writing about political and military matters, his most important work being *La Politique Dégagée des Illusions Libérales* (2 vols., 1838).

SUBBOTIN, ANDREY PAVLOVICH (1852–1906), Russian economist and writer. In 1887 Subbotin made a journey to the *Pale of Settlement in order to determine the economic condition of the Jews. His findings first appeared in the *Ekonomicheskii Zhurnal* in 1887, and in 1888 and 1890 were published separately as *V cherte yevreyskoy osedlosti*. In this work Subbotin described the life of the Jewish working people, giving statistical information on their commerce, handicraft, and industry. His study was considered one of the first serious efforts to describe the economic situation of the Jews of the area.

Subbotin also participated in the plans of the *Jewish Colonization Association (ICA) for a study of the Jews in Russia. In his work, *Yevreyskiy vopros v yego pravilnom osveshchenii* ("The Jewish Problem in its True Light," 1910; also in *Yevreyskaya Biblioteka*, 10 (1903), 63–123), he presented the main features of Ivan S. *Bliokh's writings on the situation of the Jews in Russia. Thus the important results of Bliokh's work were preserved when the bulk of Bliokh's writings were destroyed by fire during printing.

SUBCARPATHIAN RUTHENIA (also known as **Ruthenia**, **Carpathian Ruthenia**, **Carpatho-Russia**, **Carpatho-Ukraine**, **Carpathia**, and **Transcarpathian oblast**; Rus. **Zakarpatskaya oblast**), historic region, part of (western) Ukraine. Its territory adjoined Romania, Hungary, Czechoslovakia, and Poland. Formerly part of Hungary, at the end of World War I the bulk of this territory passed to Czechoslovakia, becoming a province; a section of the county of Máramures was incorporated into Romania; in 1938, 1939, and 1940 most of the territory was gradually annexed by Hungary; after the reconstruction of Czechoslovakia, it was ceded in 1945 to the Soviet Union. The capital of the oblast is *Uzhgorod; its important towns are *Mukacevo, *Beregovo, *Vinogradov, and *Khust.

Documents confirm the presence of Jews in Subcarpathian Ruthenia from the first half of the 17th century. Some survivors from the *Chmielnicki massacres of 1648 who escaped from Poland to Hungary settled in this region and on the estates of noblemen there in this period. According to the government census of Jews in the region, there were about 100 families, or 450 persons, between 1725 and 1728. This num-

ber is, however, unreliable since, because of the numerous changes in sovereignty over sections of the region, it is difficult to determine the accuracy of the census lists; they were occasionally of a very general nature and referred to places and districts which became excluded from the present area of Zakarpatskaya oblast.

The almost exclusive occupations of the Jews during this period were the manufacture and sale of liquor and beer (see Wine and Liquor *Trade) on the estates of the noblemen, a limited amount of agricultural activity, and the maintenance of flour mills. The Jews were compelled to pay various taxes to both the owners of the estates and the government authorities. The taxes were a heavy burden, while the livelihood earned by the local population was meager. The number of Jews nevertheless steadily increased. In 1745 the government took the initiative of expelling the Jews from the Máramures district and sought to reduce their numbers in general. Despite this, further waves of Jewish immigration arrived from beyond the Carpathians – from Galicia and Poland, where the situation of the Jews had deteriorated. The new settlers scattered in many localities and there were some villages with only one or two Jewish families. This resulted in a degree of dissociation from the sources of traditional Jewish life. In most localities there was no *minyán* for the first few years, and there were few rabbis and Jewish teachers in the area. This cultural and spiritual desolation enabled the movement of Jacob *Frank to win many adherents in Subcarpathian Ruthenia. After the Frankist crisis, rabbis from beyond the Carpathians arrived and taught among the Jews of the towns and villages. Later the various trends of Ḥasidism also reached the Jews of the region. Its influence increased and remained strong until the liquidation of the Jews during the Holocaust.

Economic life also began to develop. The Jews of Galician origin were naturally inclined to establish commercial relations with their country of origin. During the early 19th century closer relations were also established with the center of the state, Hungary. During this period the influence began to be felt of the Orthodox disciples of the Ḥatam Sofer, Moses *Sofer, many of whom took up rabbinical office in communities of the region. In consequence, after the schism in Hungarian Jewry in 1868–69 (see *Hungary), most of the Jews in Subcarpathian Ruthenia and their community organizations remained Orthodox. The numerous Ḥasidim adhered to *zaddikim* of Galicia and Bukovina, predominantly to the ḥasidic “court” of *Kosov, as well as to those of *Vizhnitsa, *Zhidachov, and *Belz. Between 1825 and 1848 the Jewish population also increased in the smaller localities; a considerable number of villages had a Jewish population of over 100. In the public and political debates which then took place in Hungary, the question of the *emancipation of the Jews was also raised; many Christian leaders in the region supported the granting of equal rights to the Jews on condition that they would endeavor to assimilate from the external and cultural aspects into the Christian population. During the same period antisemitic criticisms were voiced against the Jews in Subcar-

pathian Ruthenia, their rapid natural growth, and their economic role within the general population.

In the four districts which in time formed the territory of the oblast (including Máramures, of which only a part belongs to this region from 1918 and at present) the Jewish population numbered about 93,000 in 1891, and about 120,000 in 1910.

In 1897 the Hungarian government investigated the impoverished social condition of the region's inhabitants. The investigator, E. Egán (1851–1901), an expert on agriculture, submitted antisemitic conclusions and sought discrimination against the Jews in the economic sphere. His conclusions became the basis of widespread violent anti-Jewish agitation, which was expressed in a series of articles by the publicist Miklós Bartha (1848–1905), later collected in *Kazár földön* (“In the Land of the Kazhars”). This work, published for the first time in 1901, was republished during the Nazi antisemitic period in 1939 and served as a manual for the renewed persecutions of the Jews of Subcarpathian Ruthenia. Despite the accumulation of obstacles against the Jewish population, there were large communities with numerous institutions, including yeshivot and charitable institutions, toward the close of the period of Hungarian rule at the end of World War I. Though the general cultural standard of the Jews was slightly inferior to that of the Jews in the other parts of Hungary, internal Jewish life flourished, and there were also frequent disputes between **Mitnaggedim* and Ḥasidim. The spoken language of most of the Jews in the region was Yiddish. The overwhelming majority of them, however, also knew Hungarian. Many Jewish professionals were to be found in the towns, mainly lawyers and physicians.

After the end of World War I almost the whole of the territory was incorporated into Czechoslovakia and the remainder into Romania. During this period the Jews rapidly adapted themselves to the democratic way of life of the new Czechoslovak state. According to the constitution of the Czechoslovak Republic, Jews were recognized as a national minority. They took part in municipal life and the political struggles. In many towns Jews were well represented on the municipal councils, and they also succeeded in sending a deputy to parliament in Prague. The Jews in the region numbered 93,341 (15.39% of its total population) in 1921, and 102,542 (14.14%) in 1930, when they formed 28.73% of Czechoslovakian Jewry.

Economically and socially, this period was characterized by extensive activity and development. A particular phenomenon of Subcarpathian Ruthenia was the considerable Jewish agricultural population. Two-thirds of the Jews lived in villages, and many of them engaged in agriculture. Their economic situation differed little from that of the Christian farmers. The region, in general, was poor and there were many unemployed among the Jews of the towns and villages. The American Jewish Joint Distribution *Committee established important institutions for the relief and assistance of the Jews of the region. The traditional yearning for the Land of Israel had already before this period prompted Jews to immigrate to the Holy Land where they joined the old *yishuv*,

mainly in Jerusalem. From its inception, political Zionism found adherents in Subcarpathian Ruthenia. Between the two world wars the movement developed to considerable dimensions among both the adults and youth. There was a considerable *aliyah*, mainly of working-class people and farmers. Zionist initiative was also evident in internal political life, in both the municipal and national spheres, the framework for this activity being the Jewish Party (see Zidovská *Strana). To a smaller but noticeable extent, Jews were also active within the Hungarian minority movement. Exceptional in this part of Central Europe was the network of Hebrew schools established in Subcarpathian Ruthenia. The first Hebrew elementary school was opened in Mukacevo in 1920, to be followed by the Hebrew secondary school in the same town in 1925, and another secondary school in Uzhgorod, in 1934.

Hebrew printing presses also functioned. Jewish newspapers published in Hebrew, Yiddish, and Hungarian became the platforms for lively polemics between the representatives of the various trends among the Jews in the region. Zionist publicists were active and also fought Hasidism through this medium. It may be estimated that about 10,000 Jews from Subcarpathian Ruthenia emigrated between 1918 and 1938, and at least an equal number moved to the western parts of Czechoslovakia.

Holocaust Period

As various parts of Subcarpathian Ruthenia were annexed by Hungary (1938; 1939; 1940), anti-Jewish persecutions were immediately initiated. At first these took the form of administrative measures by the new Hungarian government; they subsequently reached the stage of physical annihilation. Jews of military age were conscripted into labor battalions and sent to the eastern front, where most of them perished. From the spring of 1944 the Hungarian Fascist regime and the German Nazis collaborated in concentrating the Jews in ghettos and deporting them to the death camps. After March 19, 1944, when the extermination of Hungarian Jewry was set in motion, the authorities began their activities in Subcarpathian Ruthenia. A special operational garrison was organized within the framework of the eighth zone of the Hungarian gendarmerie within which territory the region was situated. The pretext for the speeding up of these activities was that the Jewish population would most likely collaborate with the approaching Red Army. Ghettos were set up in Mukacevo, Uzhgorod, Khust, Vinogradov, Beregovo, and other places. After the deportations to the camps had been accomplished, one of the most flourishing and variegated Jewish populations was effectively liquidated.

Contemporary Period

Only 10,000 to 15,000 Ruthenian Jews, out of over 100,000, survived the Holocaust. Several thousands of these did not return to their former residence and joined the movement of Displaced *Persons (see also *Berihah); up to 8,000 moved upon the cession of Ruthenia to the Soviet Union westward to Czechoslovakia, most of them to towns in the Sudeten area

depleted of their former German population. Some groups resettled in their former places of residence in Ruthenian towns and smaller localities. Later, other Jews arrived there from distant parts of the Soviet Union, mainly office workers and technical administrators employed in industry. Differences developed between the two Jewish groups, and they did not amalgamate. Culturally also, the character of the Jewish population changed. The Western Hungarian-Czech-German cultural influence was gradually replaced by Eastern Soviet culture. According to Soviet estimates, there were 13,000 Jews in the district in 1971, but there is reason to believe that their actual number was greater. They formed an amorphous group and Jewish life was in a process of disintegration, the remnant of the Jewish heritage being maintained mainly by the few survivors of the original population.

[Yehouda Marton]

SUBOTICA (Hung. *Szabadka*), city in the district of Bačka, Vojvodina province, in Serbia, part of the federation of Serbia and Montenegro; formerly known as Maria-Theresiopoli. Modern Subotica, with *Novi-Sad – the most important urban center of Vojvodina – was founded in 1775. At that time some Jews probably lived there as the treaty between the city and the royal authorities at Pressburg, concluded in 1743, already stipulated that “Greeks, Armenians, Jews, and gypsies may be admitted by the [city] senate” (*Judaeorum et Zigano-rum admissio a solo oppidani huius magistratus arbitrio dependebit*). In fact, the senate granted such a permission in 1775 to Jacob Heschel, known as “Hirsch from Paksch [Hungary].” Barely ten years later Jews asked and obtained authorization to found their own religious community, and a “Jew’s judge” was elected and subsequently confirmed in office. Before the end of the 18th century there was a synagogue, and 13 families had official status in the city.

At the beginning of the 19th century 43 Jewish families lived there, and the first rabbi, Lew Hirschmann, was installed, inaugurating an era of growth and prosperity. Jews were accepted as importers, middlemen, custom officials, etc. As they were not prevented from engaging in new fields, they became initiators of the food and spirits industries and gradually entered the liberal professions as well. Many Subotica Jews participated in the Austro-Hungarian war of 1848 on the Hungarian side, a large number losing their lives or becoming war invalids.

Under the leadership of the novelist Isidor Milko the community inaugurated a new synagogue in 1901, which is still standing (1971). A *talmud torah* was built soon after, and religious and communal life was intensified during the office of Rabbi Benat (Bernard) Singer. An exclusive achieve-

ment of Subotica's Jews was the opening of the Jewish Bernat Singer Hospital, named for the rabbi, in 1923. It operated until the Holocaust, when the Hungarian occupiers took it over. It served not only local needs but also those of other Yugoslav Jewry. In 1925 a short-lived Zionist weekly, *Szombat* (Sabbath), was published in Hungarian by Dr. Imre Vidor. Zionism became active under the leadership of the lawyer Moses (Moshe) Schweiger, son of Rabbi Hermann Schweiger of Zenta. In 1940 there were 6,000 Jews in Subotica out of a total population of about 100,000, and in addition to the numerous national and local communal organizations in the city there was a small Orthodox (ḥasidic) religious group.

Holocaust Period

When the Hungarian Fascist troops entered the city on April 11, 1941, the only resistance was made by several Jewish youths who threw bombs. Most of them were secretly tried and executed. During the occupation the fate of Subotica Jews was little different from that of Novi Sad and Vojvodina Jewry. They were arrested en masse, placed in an improvised ghetto nearby, transferred to Bacsalmás in old Hungary, and then deported to and murdered at *Auschwitz. The remaining Jews of Novi Sad and smaller places in the Bačka were first gathered in a four-story mill in Subotica – 3,500 people – before being herded into cattle wagons and sent to Poland. After the war the survivors tried to continue communal life. In 1948 about 800 of the remaining Jews left for Israel. The Jewish population of Subotica was approximately 400 in 1970 and 220 in 2004. The synagogue was partially restored and returned to use.

[Zvi Loker]

SUBSTANCE AND ACCIDENT (Heb. מְצֻדָּה and מְקֻרָּה respectively). According to Aristotle (*Categories*, ch. 5, *Metaphysics*, 5:8), substance is that which is neither predicable of a subject nor present in a subject, e.g., the individual man or horse; accident, something which may possibly either belong or not belong to any one and the selfsame thing (*Topics*, 1:5), e.g., the “sitting position,” which may belong or not belong to one and the selfsame thing (the man may be sitting at one time, not sitting at another). Aristotle further distinguishes (*Categories*, ch. 5) between primary substances, such as the individual man or horse, and secondary substances, such as the species “man” and the genus “animal.” Accidents occur in nine categories: quantity, quality, relation, place, time, position, possession, action, and affection. This account of substance and accident was generally accepted by medieval Jewish philosophers, as, for example, Abraham ibn Daud (*Emunah Ramah*, 1:1), Joseph ibn Zaddik (*Olam Katan*, 1:2), and Joseph Albo (*Sefer ha-Ikkarim*, 2:2).

Maimonides followed Aristotle in his definition of substance as the highest, most inclusive, genus, and of accident as the universal which can be either more general or more

limited than the species. Thus, for example, movement in relation to man is more general than the species; blackness is both more limited than the human species, which is not all black, and also more general, since it is found also outside of man. There are two kinds of accidents: one inheres permanently and inseparably in its subject, like the blackness of pitch and the heat of fire; the other is a separable accident, like the standing or sitting of a person (*Millot ha-Higgayon*, 10, tr. by I. Efron, in: *PAAJR*, 8 (1937–38), 34–65; see also, Samuel ibn Tibbon's glossary to his translation of the *Guide of the Perplexed*, *Perush me-ha-Millot ha-Zarot*, s.v. *mikreh, sikhut*).

Whether substance and accident are relative or absolute terms forms a significant controversy between Solomon ibn Gabirol and Ibn Daud. Ibn Gabirol holds that some things are substance in one respect and accident in another respect, while Ibn Daud maintains that the same thing cannot be both. For Ibn Daud, since the substance of a thing determines what it is, the selfsame thing cannot both be and not be a substance without being and not being itself simultaneously, which is impossible. In Ibn Gabirol's system, however, the terms substance and accident do not refer to the internal constitution of individual things but to their external relation to each other. It is the relation of things to one another in the hierarchy of emanated substances which determines their relative self-sufficiency, and hence the sense in which they are either substances or accidents.

The distinction between substance and accident also had a bearing on the medieval discussion concerning God and His attributes, for medieval philosophers inquired whether these two notions, derived from an analysis of the created world, were equally applicable to God. In addition, medieval philosophers also distinguished between essential attributes, attributes closely related to the essence, such as existence and unity, and accidental attributes, independent of the essence, such as mercy and anger, and they inquired in what way these attributes may be applied to God.

Saadia, a representative of Kalām philosophy, investigated in great detail whether substance and each of the accidents can be predicated of God and came to the conclusion that they cannot be (*Book of Belief and Opinions*, 2:8–12). God who created all substances and accidents must be unlike them and, hence, he cannot be described directly by any of them. If terms referring to substances and accidents are applied to both God and creatures, they must be applied to God figuratively. He also held that such terms as living, omnipotent, and omniscient do not introduce any multiplicity into the essence of God: while men use a multiplicity of terms, the properties to which these terms refer are identical with the essence of God (*Book of Beliefs and Opinions*, 2:4). In passing, Saadia refers to the distinction between essential and active (accidental) attributes (2:12; cf. 2:4), seemingly holding that essential attributes are to be understood as negations, while accidental attributes are to be understood as referring to God's actions. The same position is also held by Bahya ibn Paquda (*Hovot*

ha-Levavot, 1:10). Judah Halevi, though differing from the Kalām in his overall position, follows this school of thought in his account of attributes. According to him, attributes applied to God must be understood as negations, relations, or actions (*Kuzari*, 2:2).

The question of divine attributes took a new turn with the beginning of the Aristotelian period in Jewish philosophy. The discussion now rested on a distinction between the views of the Islamic philosophers Avicenna and Averroes concerning attributes. Discussing essential attributes, Avicenna held that such attributes are “accidents” superadded to the essence to which they belong, while Averroes maintained that they are contained within that essence. It followed for Avicenna that essential attributes had to be understood as negations, while, for Averroes, they could have a positive meaning. Among Jewish philosophers Maimonides followed Avicenna and Levi b. Gershom, Averroes.

Maimonides inquired (*Guide*, 1:53) whether attributes applied to God can be understood as definitions, parts of definitions, qualities, or relations and came to the conclusion that the attributes can be none of these. Only attributes of action can be applied to God: all accidental attributes must be understood as attributes of action. In another discussion (*Guide*, 1:57–58) he maintained that all essential attributes must be understood as negations. Levi b. Gershom (*Milḥamot Adonai*, 5:3, 12) opposed Maimonides (Avicenna), holding that there exists a similarity between attributes applied to God and creatures, though such attributes (e.g., substance, one, existing, gracious, strong, mighty) are applied to God in a primary and more perfect sense than they are applied to creatures. Ḥasdai Crescas (*Or Adonai*, 1:3, 1–4) agreed with Levi b. Gershom that attributes applied to God can have a positive meaning though he differed from him in his understanding of God and the exact nature of the attributes.

With the decline of Aristotelian philosophy, the distinction between substance and accidents and the relation of these two notions to God and His attributes lost their importance in Jewish philosophy.

[Jacob Haberman]

SUCCESSION, devolution of the deceased person’s property on his legal heirs.

Order of Succession

The Pentateuchal source of the order of succession is “If a man die and have no son, then ye shall cause his inheritance to pass unto his daughter. And if he have no daughter, then ye shall give his inheritance unto his brethren. And if he have no brethren, then ye shall give his inheritance unto his father’s brethren. And if his father have no brethren, then ye shall give his inheritance unto his kinsman that is next to him of his family and he shall possess it. And it shall be unto the children of Israel a statute of judgment, as the Lord commanded Moses” (Num. 27:8–11).

Scripture makes no mention of the father inheriting from his son but this is laid down in the Mishnah: “The father has precedence over all his offspring” (BB 8:2). An interpretation that son and daughter inherit like shares in their father’s estate – and that Scripture merely indicates that daughters inherit all of the estate in the absence of sons – was raised and rejected in the Talmud (BB 110a–b) and it was confirmed that the daughter only inherits if there is no son (see below). A daughter succeeding to her father’s estate was enjoined to marry “only into the family of the tribe of their father... So shall no inheritance of the children of Israel remove from tribe to tribe; for the children of Israel shall cleave everyone to the inheritance of the tribe of his fathers” (Num. 36:6–7; cf. also Philo, *Spec.* 2:126). In the Book of Tobit (6:10–11) two additional elements were attached to the above law: firstly, the enjoinder that the daughter marry “someone from a clan of her father’s tribe” was interpreted as a duty imposed not only on a daughter upon her father’s death, but also on the father – if he had no sons – to marry his daughter to one of his kinsmen; secondly, the father’s violation of the enjoinder was treated as punishable by death, “according to the law of the Book of Moses” (*ibid.*, 6:13). The sages of the Talmud laid down that the duty of the daughter to marry as above mentioned was applicable only to the particular generation to whom the enjoinder was directed (BB 120a and *Rashbam ad loc.*).

Jewish law has the parentelic system of succession, conferring the right of inheritance on all the kin of the deceased in the agnate (paternal) line of descendancy and ascendancy. Precedence among the heirs is determined, firstly, according to the degree of kinship with the deceased: the first parentela includes the deceased’s children and their descendants, to the end of the line; the second includes the deceased’s father and his descendants; the third, the father’s father and his descendants; and so on in an ascending order – “that the estate may ultimately find its way to Reuben (the eldest son of the Patriarch Jacob)” (BB 8:2; TB, BB 115a–b). The nearer parentela takes precedence over and excludes more distant ones from the inheritance: “the lineal descendants of any one with a priority to succession take precedence” (BB 8:2).

The mother’s family is not regarded as kin for the purposes of inheritance and therefore she does not inherit from her sons nor do her brothers or other relatives. Sons do, however, succeed to their mother’s estate (BB 8:1). In post-talmudic times the mother too was recognized as a legal heir in a number of *takkanot* (see Gulak, *Yesodei*, 3 (1922), 94).

Relatives of the deceased, even if born out of wedlock or of an invalid marriage, are his kin and legal heirs for all purposes as if born of a valid marriage, except for the offspring of a bondswoman or a non-Jewess, who take the status of their mother and are not numbered among the father’s family (Yev. 2:5; Sh. Ar., ḤM 276:6).

“Inheritance in the Grave” (Yerushah ba-Kever)

According to this principle, the place of a son who predeceases his father is taken by his children in inheriting the portion

which he, but for his death, would have inherited (BB 115a; Yad, Naḥalot, 1:3, 5). If the deceased's sole survivors should be a daughter and a son's daughter, the latter will inherit the whole estate since she takes the place of her father to the exclusion of his sister; the Sadducees, however, held the opinion that in such event the inheritance is shared between the deceased's daughter and his granddaughter (BB 115–116a). A son who predeceases his mother "does not inherit from his mother to transmit the [inheritance] to [his] brothers on his father's side" (BB 114b).

Primogeniture

The firstborn son of the father takes a double portion in his estate: "... he shall acknowledge the firstborn, ... by giving him a double portion of all that he hath; for he is the firstfruits of his strength; the right of the firstborn is his" (Deut. 21:16–17). The firstborn is entitled to the double portion even if he is a **mamzer*. On the other hand, the law of the firstborn does not apply to daughters who inherit in the absence of sons (Sif. Deut. 215). The firstborn only takes a double portion from the estate of his father and not from that of his mother or any other relative (Yad, Naḥalot, 2:8). If the firstborn predeceases his father, the double share which he would otherwise have inherited from his father's estate is taken by his heirs (Sh. Ar., ḤM 277:15). If the firstborn is born after his father's death (or in the case of twins) he does not receive a double portion (BB 142b).

The inheritance due to the firstborn equals the portions of two ordinary heirs. Thus if the deceased is survived by five sons including the firstborn, the latter takes a third, i.e., two-sixths of the estate, and the other four heirs take one-sixth each; if there are nine sons, the firstborn takes a fifth and each of the others takes one-tenth (Yad, Naḥalot, 2:1).

The portion of the birthright is fixed according to the state of the inheritance at the time of its devolution. Hence it is neither diminished by the birth of another son after the father's death, nor is it increased by the subsequent death of a son (BB 142b). The firstborn only receives a double portion out of the *muhzakim*, i.e., estate assets already held by the deceased in his possession at the time of his death. With regard to *re'uyim*, i.e., assets contingent to come to the deceased but not held by him at the time of his death, the firstborn takes only the share of an ordinary heir. Hence the firstborn does not take a double portion of an inheritance that accrues to his father after the latter's death, nor of the unrecovered debts owing by others to the latter – whether verbal or witnessed by deed. The firstborn does, however, take a double portion of all such outstanding debts owing to his father as were secured by pledges held by the latter in his possession at the time of his death (Bek. 8:9; Sh. Ar., ḤM 278:7). Just as he takes a double portion, so the firstborn is obliged to defray a double portion of the outstanding debts owed by his deceased father (BB 124a).

The Husband as Heir to His Wife

The husband is heir to his wife and takes precedence over all her other heirs. Opinions are divided in the codes as to

whether the husband's right to succeed to his wife's estate stems from the Pentateuchal or the rabbinical law (Yad, Naḥalot 1:8; Sh. Ar., EH 90:1 and *Beit Shemu'el* thereto, n. 1). The husband is heir to his wife even if their marriage was a prohibited one – as for example between a priest and a divorcee (Yad, Naḥalot 1:8) – provided only that they were still married to each other at the time of her death (Tur, EH 90). It does not matter that the husband was planning to divorce his wife, but if he had claimed that his marriage was based on a mistake, for example if he had raised a plea of blemish or defect on the part of his wife, he forfeits his right of inheritance (*Teshuvot Maimoniyot*, Ishut, no. 35). In explaining this *halakhah* the *aḥaronim* expressed the opinion that although mere admission by the husband concerning his wife's defect does not suffice to dissolve their marriage, yet for the purposes of inheritance the husband's admission is like the testimony of 100 witnesses and therefore upon the death of the wife her husband will not be regarded as one who is heir to his wife's estate (*Ḥelkat Mehokek*, EH 90, n. 15). According to some scholars, even a *mored* (see *Husband and Wife) or a husband who has refused to cohabit with his wife due to his vow, forfeits his right to inherit her estate (*Rema*, EH 90:5). The husband only inherits the part of his wife's estate in her possession at the time of her death and he does not take her place in inheriting her contingent inheritance (Sh. Ar., EH 90:1). If she became entitled to an inheritance during her lifetime but she died before gaining possession thereof, the inheritance will nevertheless be deemed to have been held by her and it will pass to her husband (Maharashdam, resp. EH no. 98).

The husband's right to inherit his wife's estate proved to be to the detriment of the wife's relatives and heirs since they received nothing at all from her estate. Various *takkanot* accordingly came to be made, aimed at defining the inheritance rights of the wife's heirs and limiting those of her husband. The first of these, dating from the mishnaic period, is known as the *ketubbah benin dikhrin* (i.e., *ketubbah* of male children). In terms thereof the husband inherited his wife's estate, but if the wife predeceased her husband leaving sons from the latter, these sons would upon their father's death inherit her *ketubbah* and dowry in addition to their portions in the estate of their father shared with his other sons. The object of the *takkanah* was "in order that all men might thereby be encouraged to give to a daughter as much as to a son" (Ket. 52b; Sh. Ar., EH 111), i.e., so that the father should not hesitate to give his daughter a large dowry since it would remain in the hands of his descendants and not with his daughter's husband. In geonic times the need for this *takkanah* fell away and it was abolished, since it had anyhow become customary for fathers to give more to their daughters (Tur, EH 111). Later many of the *posekim* sought to revive the validity of this *takkanah* but its abrogation was confirmed by Isserles (*Rema*, EH 111: 16).

In the period of the *rishonim* various *takkanot* were made to limit the husband's right to inherit his wife's estate. In some communities, if the wife died without issue, it became customary for the whole of the dowry given to her upon marriage to

be inherited by her father or his heirs, and in other communities for the dowry to be divided between the husband and the wife's heirs on the paternal side (Sh. Ar., EH 118:19; *Teshuvot Maimoniyyot*, Ishut no. 35).

In France and Germany one of the ordinances known as the *takkanat *Shum* (ש"מ – Speyer, Worms, Mainz) came to be widely accepted. The effect thereof was to oblige the husband to return whatever remained of his wife's dowry – save for deduction of burial expenses – to the donor thereof or to her heirs, if she died childless within a year of her marriage; the second part of the ordinance laid down that upon the death of either husband or wife within the second year of their marriage, half of the dowry was to be returned to the heirs of the deceased if there were no surviving children (*Rema*, EH 52:4). In Spain similar *takkanot* were made. The most important of these, the *takkanah* of Toledo, laid down that if the wife was survived by her husband and any children of their marriage, her estate was to be shared equally between them; if there were no surviving children, her estate was to be divided between her husband and those who would have succeeded to her estate had she survived her husband. The object of the *takkanah* was to prevent the entire inheritance of the wife's family from going to her husband, and in this manner the scholars restricted the husband's rights as legal heir to his wife – in the opinion of some of the *posekim* even in accordance with the Pentateuchal law (see above) – and afforded him only one-half of her estate (Rosh, resp. 55:1,6; *Rema*, EH 118:8).

The Wife's Rights to Her Husband's Estate

The wife is not a legal heir to her husband's estate (BB 8:1) but has a number of rights which afford her a share therein and ensure provision for her sustenance and essential needs until her death or remarriage. The *widow receives from the estate her husband's *ketubbah* obligations, the *dowry increment, and her own property brought into the marriage and she is further entitled to maintenance from the husband's estate until her death or remarriage.

Important changes were introduced by the *takkanot* of Toledo and Molina with regard to the widow's rights to the estate of her deceased husband. These had the object of strengthening the hand of the husband's heirs against the widow's claims upon the estate, and laid down that if the husband was survived by any children the wife might claim no more than one-half of the total value of the estate toward payment of her dowry, *ketubbah*, and its increment. Thus the husband's heirs were afforded the option of settling the widow's claims in full – as was usually done when the total amount thereof did not exceed one-half of the estate – or settling her claims by paying her one-half of the value of the estate, even if less than due to her. If there were no children and the widow's claims were directed against the other heirs to her husband's estate, the latter would first return to her whatever remained – in specie, at the time of her husband's death – of the dowry she had brought him, and from the remainder of the estate she would recover

her *ketubbah* and its increment in an amount not exceeding one-half of the value of the estate, the option as above mentioned again residing with the heirs (Rosh, resp. 50:9; Sh. Ar., EH 118:1; *Beit Shemu'el* ad loc. no. 1). In a *takkanah* of Castile it was laid down that a wife surviving her husband, without any children of their marriage, might take from the estate everything proved to have been brought by her as a dowry and remaining in specie at the time of her husband's death, and from the rest of the estate one-quarter, with three-quarters going to the husband's heirs (Rashba, resp., vol. 3, no. 432).

Inheritance Rights of Daughters

Since by law sons exclude daughters as heirs (see above), it became necessary to make provision for the support of daughters after the father's death. This was achieved by the scholars through an obligation imposed on the heirs of the deceased to maintain his daughters and by way of giving daughters part of the estate as a dowry.

MAINTENANCE OF DAUGHTERS. The rule is: "If a man died and left sons and daughters, and the property was great, the sons inherit and the daughters receive maintenance; but if the property was small, the daughters receive maintenance and the sons go a-begging" (Ket. 4:6; 13:3; 9:1). By mishnaic times this obligation had become part of the generally accepted law as a *tenai bet din* (i.e., a *takkanah* of the early scholars). Daughters are entitled to maintenance out of the estate of their deceased father until they reach the age of majority, or become betrothed (Ket. 4:11; 53b). Since the daughter's right to maintenance, as distinct from her right to a dowry, stems from the *ketubbah* deed (of her parents), any testamentary instruction of the deceased in deprivation of this right will have no legal validity (Ket. 68b; Sh. Ar., EH 112:10). Daughters only receive maintenance out of the estate of their deceased father if he is survived by sons as well; if the father is survived by daughters only, the latter share his estate – even though any of them be minors – and the question of their maintenance is no longer relevant (Sh. Ar., EH 112:18).

DOWRY. Sons are obliged to give their deceased father's daughters part of his estate as a dowry, as if the father were alive. This obligation is known as *issur nekhasim* (i.e., giving the daughter one-tenth of the estate), in terms whereof an assessment is made of what the father would have given his daughter as a dowry – according to his disposition, gathered from his friends and acquaintances, his transactions and standing – and if this cannot be established by the court, she is given one-tenth of the estate as the *parnasat ha-bat* (i.e., dowry; Sh. Ar., EH 113:1, based on Ket. 68a). According to some scholars, a daughter is also entitled to receive a dowry out of her deceased mother's estate (EH 113:1), but this is disputed by other scholars (*Rema*, EH 113:1). The father may deprive his daughter of a dowry by testamentary instruction since the *parnasat ha-bat* is merely an assessment of the father's disposition (Ket. 68b). Although the daughter's dowry is recoverable at the time of her marriage, the court may earlier decide

on what she should be given upon her marriage (*Beit Yosef* and *Darkhei Moshe*, EH 113).

The dowry is regarded as a charge in favor of the daughter on the estate of her father, as at the time of his death, and she may seize from third parties any of the estate assets sold or mortgaged by her brothers. However, debts incurred by the deceased himself, as well as the obligations for the *ketubbah* of his widow and maintenance for the latter and her daughters, take preference over the daughters' dowry (Ket. 69a; Sh. Ar., EH 113: 5, 6).

See also *Parent and Child.

Shetar Hazi Zakhar

In post-talmudic times it became customary in the Ashkenazi communities for a father to allot to his daughter one-half of a son's share in his estate, for which purpose there was evolved a special deed known as the *shetar hazi zakhar* ("deed for half of the male child's share"). The deed was written by the father – and sometimes by the mother too (*Naḥalot Shivah*, no. 21, n. 1) – in favor of the daughter or her husband. It was generally written at the time of the daughter's marriage, the father undertaking to pay his daughter a specified sum of money, generally a very high amount, to fall due for payment one hour before his death, with a condition exempting his sons from liability for such debt after his death if they should give the daughter one-half of a son's share in his estate (*Rema*, ḤM 281:7). This development was an important step toward the regulation of the daughters' right of inheritance in Jewish law (for further details see Assaf, bibl.).

Proselytes as Heirs

A proselyte is regarded as a newborn person whose ties of kinship with his family have been severed for inheritance purposes. The scholars ruled, however, that a proselyte may accept an inheritance from his gentile father, lest the loss thereof tempt him to return to his former ways. A proselyte's estate is inherited by sons born after his conversion to the exclusion of his other sons, whether or not proselytized along with himself (Kid. 17b; BB 142a). The estate of a proselyte who dies without any legal heirs may be acquired in the same way as abandoned property, by the firstcomer, who is regarded as an heir for the purposes of estate liabilities in favor of third parties (*Rema*, ḤM 275:28).

Devolution of Inheritance and Renunciation

Upon death the estate passes automatically and immediately into the ownership of the heirs. Hence an heir cannot renounce his share by waiver thereof, since in Jewish law a person cannot waive something that already belongs to him but only that which is yet to come to him, and the heir can only transfer his share in the same way as any other property is transferred through one of the recognized modes for its assignment or alienation (see *Acquisition, Modes of). An exception to this rule is the birthright portion of the firstborn (see above), as distinguished from his ordinary share (Tur, ḤM 278; Sh. Ar.; ḤM 278:10). An heir may, however, abandon his

share in the same way as he abandons any of his own property (*Sma*, ḤM 278, no. 27) and a husband's renunciation of his right to his wife's estate is valid if made prior to their marriage, but not thereafter (Ket. 9:1, 83a).

Debts of the Deceased

It is a *mitzvah* for the heirs of the deceased to pay his debts. They will be compelled to do so if they inherit land and, according to a *takkanah* of the *geonim*, the creditor may recover from the heirs even when they inherit movable property. If they inherit both, the heirs prevail if they want payment to be made out of the land rather than the movable property as desired by the creditor (Sh. Ar., ḤM 107:1). For the purposes of her dowry (see above) a daughter takes only from the land left by the deceased, a rule that survived the above-mentioned *takkanah* of the *geonim* (Sh. Ar., EH 113:2).

Payment is always recovered from the poorest quality land (i.e., *zibburit*, Sh. Ar., ḤM 108:18). A stipulation by the creditor to recover payment out of the debtor's best (*iddit*) or medium (*beinonit*) land is not binding on the latter's heirs unless this was expressly provided for in the stipulation (*ibid.*; see also *Execution). If the heirs of the deceased inherit nothing from him, they will not be obliged – not even morally – to defray his debts, since they do not have to do so out of their own property (Sh. Ar., ḤM 107:17). An heir is not heard if he should plead, "I do not take nor will I pay" (*Rema*, ḤM 107:1; and Sh. Ar., ḤM 278:10). The heirs are liable for debts of the deceased to the extent that these do not exceed the value of the assets held by the deceased at the time of devolution of the inheritance, his contingent assets (*re'uyim*) being excluded for this purpose (*Rema*, ḤM 104:16). However, a debt due to the deceased is considered part of the assets held by him at the time of his death. Some scholars have explained this special rule on the basis of the extensive development that took place with regard to credit transactions, with creditors coming to rely upon such as upon movable property rather than as contingent assets (Rosh, resp. 36:3), and other scholars have regarded loans due to the deceased as property held by him upon death since the money of the loan had previously been in his possession (*Beit Shemu'el*, EH 100, no. 3).

The creditor recovers his debt from each of the heirs on a pro-rata basis (Tos. to BB 107a s.v. *u-va ba'al hov*). A field hypothecated (see *Lien) by the deceased is recovered by the mortgagee from the heir who receives it as part of his share, and he may recoup from the remaining heirs (Sh. Ar., ḤM 175:4). Similarly, if a creditor should experience difficulty when seeking to recover a proportionate share of the debt from each of the heirs, he may recover the whole debt out of the share of any one of them, and that one may recoup from the others (Rosh, resp. 79:7).

A verbal debt (see *Obligations, Law of) is not recoverable from the heirs of the debtor except in the following cases: the debtor had before his death and from his sickbed admitted such indebtedness; the loan was for a fixed period and not yet due for payment; or the debtor had refused to make pay-

ment notwithstanding a judgment of the court, maintaining his refusal until death. In each of these three cases the creditor recovers without swearing an oath (Sh. Ar., ҲМ 108:11). A debt witnessed by deed is only recoverable after the creditor has sworn that the debt is still outstanding (Sh. At., ҲМ 108:17). If the heir should plead that he was left no property by the deceased and the creditor plead with certainty that the deceased did leave property, the heir will be exempted from liability upon taking the equitable *oath (*shevu'at hesset*; Sh. Ar., ҲМ 107:2). A creditor holding a bond of indebtedness with a credency (*ne'emanut*) clause in his favor (see **Shetar*) will not be exempted from delivering an oath when seeking to recover from the debtor's heirs unless he was so exempted expressly with reference to the debtor and his heirs (Sh. Ar., ҲМ 71:14–17). In case of a similar clause in favor of the debtor with regard to a plea of payment of the bond, the creditor will not be entitled to recover from the former's heirs on such bond (Sh. Ar., ҲМ 71:21).

Debts of the deceased are not recoverable from his heirs as long as they are minors regardless of any clause whatever stipulated in the bond of indebtedness, lest contradictory evidence come to light (*ibid.*, 108:3). However, in the three events mentioned above in which a verbal debt of the deceased is recoverable from his heirs, his debts will be recoverable from the minor orphans too (*ibid.*). The court has the discretion to allow debts to be recovered from the minor orphans if this be to their advantage, e.g., because the creditor is prepared to waive part of the debt in return for recovering the balance forthwith (*Rema*, ҲМ 110:1), and the minor heirs may also be recovered from when they are liable to a penalty for nonpayment on due date (*Siftei Kohen*, ҲМ 110, no. 3). If some of the heirs are majors the creditor recovers from them pro-rata to their share in the estate. For the purpose of division of the estate the court will appoint a guardian for the minor (Sh. Ar., ҲМ 110:1).

Commorientes

Where two persons die at or about the same time and it is unknown who died first, the rights of their heirs are determined in accordance with the following order of priority: If one of the claimants is a "certain" heir – i.e., whatever the sequence of the deaths – and the other a "doubtful" heir – i.e., only upon a particular sequence of death – the former claimant excludes the latter and takes all (*Rashbam*, ВВ 158b); if both claimants are doubtful heirs they take equal shares of the inheritance (Yev. 38a; Yad, Naḥalot 5:5); if one of the claimants is kin to the deceased himself and the other has become entitled through the death of a relative who is kin to the deceased, the former claimant takes all in both cases (Yad, Naḥalot 5:6), for the reason that the inheritance is not to be diverted from the kin of the deceased unless this is warranted by proof of a particular sequence of deaths (see M. Silberg, *Ha-Ma'amad ha-Ishi be-Yisrael* (1965), 314–22).

On the inheritance of public offices, see **Mishpat Ivri*; *Public Authority; on the inheritance rights of apostates, see *Apostasy (Family Law).

In the State of Israel

Matters of inheritance are governed by the Succession Law, 5725 – 1965, the provisions whereof accord with Jewish law in a number of respects and digress therefrom in others. Thus, as in Jewish law, the law lays down, inter alia, that children born out of wedlock and even *mamzerim* are included among the heirs (sec. 3 (c)). The Jewish law principles with reference to commorientes (see above) were adopted virtually without change. On the other hand the law differs from the traditional approach in laying down that the line of succession ends with the grandparents and their descendants, whereafter the state succeeds, and that both husband and wife are in the line of succession to each other. So too the law recognizes no distinction between sons and daughters, between the paternal and maternal lines (sec. 10), nor does it mention the double portion of the firstborn. (On the question of the absorption of Jewish law in these matters, see Elon, *bibl.*). An important principle incorporated in the law is that of the widow's right to maintenance out of the estate; unlike Jewish law, this right is extended to other relatives of the deceased besides the widow and daughter, and is also wider in scope (secs. 57, 58).

[Shmuel Shilo]

In the Regulations of the Chief Rabbinate of Israel

In 1943 the first steps were taken to promulgate regulations by the Chief Rabbinate to provide for equal distribution of a decedent's estate between sons and daughters, and between husband and wife. The Mandatory Succession Ordinance of 1923 provided that, where a person died intestate, and owned land classified as *miri* at the time of his death, the provisions of the Ordinance – mandating an equal distribution to sons and daughters, to the man and the woman – were binding upon the religious courts as well. The Israeli rabbinical courts complied with this Ordinance, but it was difficult to anchor this custom in the rule of *dina de-malkhuta dina* (see **Dina de-Malkhuta Dina*), insofar the majority of halakic decisors ruled that *dina de-malkhuta dina* does not apply to matters of inheritance. Thus, the rabbinical courts adopted an approach whereby the equal distribution was carried out on the basis of the agreement of both parties, entered into with a *kinyan*, to distribute the estate in a manner differing from the manner prescribed by Torah. (The rabbinical courts act in this fashion today as well, unless the parties have agreed that the rabbinical court adjudicate according to the rules set forth in Torah, pursuant to Section 155 of the Succession Law.)

In 1943, regulations were enacted setting forth the procedural rules in the rabbinic courts. Sections 182 and 183 of the regulations provide that, regarding *miri* land – the rabbinic court is to rule pursuant to the Succession Ordinance. Thus, the rabbinical courts accepted the regulations set forth in the Succession ordinance regarding certain portions of the inheritance as binding upon the parties by force of the Chief Rabbinate's regulations, and not only by force of rabbinical acquiescence de facto to an arrangement based on an authority external to

the rabbinical court. However, the incorporation provisions of the Succession ordinance should not be understood as a halakhic-normative provision that henceforth, Jewish Law mandates equal rights in the distribution of an estate between the sons and the daughters, and husbands and wives – i.e. as a substantive change in the laws of succession in Jewish law.

An attempt to make that substantive change in Jewish Law was made by Chief Rabbi Isaac Herzog in the years preceding the establishment of the State of Israel, and in the first years thereafter. Rabbi Herzog proposed that the Chief Rabbinate, together with the other prominent rabbis of that generation, should enact regulations regarding inheritance to provide for equal distribution of the inheritance between sons and daughters. His suggestion was that, at the time of the parents' marriage, a condition should be written in the *ketubbah* stating that the distribution of the "estate" (and not "the inheritance") be carried out in such a manner that the daughter would "receive" (and not "inherit") an equal share with the son, so long as she is unmarried, rather than only a tenth of the assets. Rabbi Herzog assumed that, if such regulations were enacted, the rabbinic courts would be conferred jurisdiction to adjudicate matters of inheritance, whereas without such regulations – and insofar as the rabbinic courts would rule according to the Shulhan Arukh – the Knesset would revoke the jurisdiction of the rabbinical courts over this issue and possibly over other issues relating to personal status. Rabbi Herzog hoped that, after promulgating these enactments, it would be possible to introduce a legislative proposal before the Knesset for the enactment of a Succession Law based on Jewish law. Beyond these considerations, Rabbi Herzog believed that such enactments were necessary as a substantive matter as well, just as he believed that enactments (*takkanot*) should be promulgated in many other areas. In view of the changes that had occurred in society over the course of time, as a result of which women were insisting upon their rights and demanding equality, it was the duty of the rabbinate to make efforts to find a solution that would address the feelings of women that they were discriminated against by Jewish Law. Rabbi Herzog proposed the promulgation of similar enactments regarding the inheritance of the eldest son and the inheritance by the husband of his wife's holdings. It should be emphasized that his proposals were based on halakhically acceptable measures and earlier regulations that had been promulgated in these matters.

Like Rabbi Herzog, Rabbi Ben Zion Meir Hai Ouziel, his Sephardi counterpart in the Chief Rabbinate, believed that equal distribution of the parents' property among sons and daughters could be provided for at the time of the marriage of the parents, through a will. Rabbi Herzog's proposals for rabbinical enactments were not accepted by the other members of the Chief Rabbinate Council, and the proposed enactments never proceeded beyond the "proposal" stage.

Regulations Promulgated by the Moroccan Sages in the Mid-Twentieth Century

In the 1950s, proposals were raised before the Rabbinical

Council of Morocco, regarding the promulgation of regulations to equate the status of daughters and sons. The reasons invoked by the Moroccan sages to justify such regulations were the changes that had occurred over time in the general outlook and in the situation, status and role of women, which was equal to that of men in the workplace and in terms of earning a livelihood. The regulatory proposal included a grant of equality to married women as well as unmarried women, representing a novel approach in comparison to the regulations that had been promulgated throughout the ages in this regard. These proposals were never promulgated as regulations, because shortly after this proposal was raised, Morocco gained political independence and the rabbinic courts' jurisdiction over questions of personal status was revoked. Nevertheless, these proposals of the Moroccan Rabbinical Council are instructive regarding the approach of the North African sages to the promulgation of regulations in our time, as opposed to the stricter approach, limiting halakhic creativity, adopted by the Ashkenazi sages since the time of the Emancipation in Europe (see **Takkanot*).

SUCCOTH (Heb. סֻכּוֹת; "booths"), name of two places mentioned in the Bible.

(1) A locality in the Jordan Valley; according to the etiological explanation in Genesis 33:17, it was named after the booths for cattle erected there by Jacob. It belonged to the kingdom of Sihon, from whom it passed to the tribe of Gad (Josh. 13:27). The city refused to aid Gideon in his pursuit of the Midianites and was consequently punished when he returned victorious; in this narrative it is also related that the city had 77 elders and there was apparently a high standard of literacy among its inhabitants (Judg. 8). It is mentioned with Zarethan as the metallurgic center where the brass vessels of the Temple were cast (I Kings 7:46; II Chron. 4:17, as Zeredah). According to Yadin, Succoth should be read in place of "booths" in II Samuel 1:11 and I Kings 20:12, 16. In his view, it served as David's secondary strategic center during his assault on Rabbath-Ammon and on the *Arameans; hence the reference to it in the Victory Psalm (Ps. 60:8; 108:8). Also according to Yadin's reading, it served as a base for *Ben-Hadad during his unsuccessful assault on Samaria. Succoth is identified in the Talmud (TJ, Shev. 9:2, 38d) with Ter'ela, the present-day Tell Deir 'Allā to the north of the junction of the Jabbok and the Jordan. Excavations carried out at the site by a Dutch expedition under H.J. Franken revealed a settlement dating from about the 15th century B.C.E. to the period of the monarchy. A Late Bronze Age sanctuary discovered there was destroyed in the early 12th century, as dated by an Egyptian cartouche of the late 19th Dynasty. Unique and still undeciphered clay tablets were found in this level. In the levels of the Israelite period, traces of metallurgic industries were found, in accordance with biblical tradition.

(2) The second station of the Israelites, located between Rameses and Etham, on the route of the Exodus (Ex. 12:37; 13:20; Num. 33:5, 6). In Egyptian texts the name occurs as *t-k-w*. The favored identification is with Tell Maskhūta, a border fortress in the eastern part of Wadi Ṭumaylāt (the biblical land of Goshen, west of the Bitter Lakes).

[Michael Avi-Yonah]

SUCCOTH-BENOTH (Heb. סֻכּוֹת-בְּנוֹת; LXX, *Socchôth/bainith/benithei/banitha*, *Rochchôthbaineithei*), unidentified deity worshiped by the Babylonians who were settled in Samaria after the fall of the Northern Kingdom (c. 722 B.C.E.; II Kings 17:30). Succoth-Benoth is a corrupted form of the name of a popular Babylonian god or goddess. A theory based on the Septuagint rendering proposes to identify Succoth-Benoth as *Sarpanitu*, Marduk's consort, popularly known as *Zêr-banitu*, "creative seed." Another theory sees

in Succoth-Benoth the Babylonian *SAG. KU* (Ninurta?), as in Amos 5:26.

SUCEAVA (Ger. *Suczawa*), town in Suceava province, Bukovina, N. Romania; formerly capital of Moldavia, from 1774 to the end of World War I under Austria. Jews lived there from the beginning of the 18th century. In 1774 there were 50 Jewish families (209 persons) living in the town. Although the Jews were oppressed by the Austrian authorities, their number increased as a result of immigration from Galicia and Russia. In 1782, 92 Jews were expelled from Suceava, the authorities claiming that they were unable to pay the taxes. Representatives of Suceava Jewry took an active part in the struggle of the Jews of Bukovina against the oppressions of the Austrian authorities. There were 160 Jewish families in Suceava in 1791, and 272, with the Jews in the vicinity, according to data of 1817. After 1848 their numbers increased rapidly, and the Jewish population numbered 3,750 (37.1%) in 1880; 6,787 in 1901; and 8,000 on the outbreak of World War I. With the advent of Romanian rule, many Jews moved to *Chernovtsy and other places; 3,496 Jews remained in 1930.

The communal institutions included a Jewish school, opened in 1790. A large synagogue was erected at the beginning of the 19th century. Jews also prayed in many *battei midrash* and a number of houses of prayer (*kloysen*). Ḥasidic influence in the community was strong. Zionist activity had been initiated during the Ḥibbat Zion period and an organization of Zionist students existed in Suceava before the First Zionist Congress. A number of smaller Jewish communities were affiliated to the Suceava community until they became independent. Jews engaged in the trade of liquor, wine, and beer. The cultural orientation was German. Jews played important roles in both municipal and national political life.

Holocaust and Contemporary Periods

The local Jews were persecuted by the Nazi German and Romanian authorities between 1940 and 1941. When deported to *Transnistria in 1941, they numbered 3,253. Only 27 remained in the town.

After World War II, when northern Bukovina was annexed by the Soviet Union, many Jews from Chernovtsy and other places in northern Bukovina who arrived in Suceava chose to remain there. Their numbers rose to 4,000 and community life was active during that period. The number of Jews subsequently declined as a result of emigration to Israel and other places. In 1971, there were still about 290 Jewish families in the town and Jewish life was maintained to a limited degree. Prayers were held in the central synagogue and a number of other places.

SUEDFELD, GABRIEL (1799–1872), private scholar, tutor, Hebrew writer; father of Max *Nordau. Born in Krotoszyn, he studied at the Lissa Yeshivah; although ordained, he never practiced as a rabbi. He became a follower of the Haskalah and published in the journal **Bikkurei ha-Ittim*, yet he remained strictly religious. After studying at the universities of Berlin and Breslau, he was a tutor in the households of *S.J. Rapoport in Prague, Rabbi M. *Schreiber (Sofer) in Pressburg, and the Fischhof family in Buda. Suedfeld eventually settled in Pest, where he earned a meager living teaching Hebrew and German. A master of the three classical languages, Hebrew, Greek, and Latin, Suedfeld also knew German, French, and Italian. He wrote philosophical and linguistic studies in Hebrew, as well as poetry, both original and translations, and miscellaneous prose in German. His Hebrew writings include *Ahuzzat Mere'im* (1825), and *Rehovot ha-Be'ur* (1850), a German translation of Ecclesiastes, with Hebrew commentary.

SUESS, EDUARD (1831–1914), Austrian geologist and politician. Suess was born in London, the son of a Christian father and a Jewish mother, but spent most of his life in Austria. He became an assistant at the Hofmuseum in Vienna in 1852, and five years later joined the staff of the University of Vienna, where he held the chair of geology from 1867 to 1901. While his early specialty was invertebrate paleontology, once he began teaching at the university, he devoted himself mainly to geology. His study of the formation of the Alps, *Die Entstehung der Alpen*, appeared in 1875, but his great work was *Das Antlitz der Erde* (4 vols., 1885–1907; *Face of the Earth*, 1904–09), which had a major influence on modern geotectonics. Investigating geological, geographical, and historical sources from all countries, Suess was – and remains – the only researcher ever to master singlehandedly the regional geological literature of the entire world.

A liberal in politics, Suess was elected to the provincial diet of Lower Austria in 1869, and for over 30 years from 1873 was a deputy for Vienna in the lower house of the Austrian parliament. He was president of the Austrian Academy of Sciences from 1898 to 1911. Although he always declared that he was not a Jew, he was a member of the Austrian association for defense against antisemitism.

[Leo Picard]

SUESSKIND VON TRIMBERG (c. 1200–1250), German minstrel (*Minnesaenger*), identified as “Suesskind the Jew of Trimberg” and portrayed wearing a beard and a Jew’s hat in the 14th-century Manesse Codex, which preserves six Middle High German lyrics ascribed to this otherwise unknown poet. In one of these lyrics, the *Minnesaenger* claims that since he

has fallen out of grace with the lords, he will take up life in the manner of old Jews. These few lines, a variation of the conventional *Armutsklage* or minstrel’s lament of his poverty, have given rise to much speculation about Suesskind’s Jewishness and even about an alleged influence of biblical and rabbinical literature on his lyrics.

Kastein, *Suesskind von Trimberg, oder die Tragoedie der Heimatlosigkeit* (1934); Spanier, in: *ZGJD*, 7 (1937), 138–55; Straus, in: *JSOS*, 10 (1948), 19–30; C. von Kraus, *Deutsche Liederdichter des 13. Jahrhunderts* (1953); Praver, in: *YLBI*, 8 (1963), 150–2; *Germ Jud*, 1 (1963), 384–7. **ADD. BIBLIOGRAPHY:** D. Gerhardt, *Suesskind von Trimberg* (1997); R.K. Weigand, in: M. Stone and G. Sharman (eds.), *Jenseits der Grenzen* (2000), 13–30; R. Bauschke, in: *Juden in der deutschen Literatur des Mittelalters* (2002), 61–86.

°**SUETONIUS (Caius Suetonius Tranquillus; c. 69–140 C.E.)**, Roman biographer. Suetonius’ “*Lives of the Caesars*” (*De Vita Caesarum*) yields a good deal of information on the Jews under the Julio-Claudian and Flavian emperors. Details which do not occur elsewhere are his observations on the mourning by the Jews after the murder of *Julius Caesar (*Divus Iulius*, 84), the negative attitude of *Augustus to Judaism (*Divus Augustus*, 93), the anecdote about *Tiberius and the Jewish grammarian Diogenes on the island of Rhodes (*Tiberius*, 32), and the account of the interrogation of a Jewish nonagenarian in connection with the Jewish tax under *Domitian (*Domitianus*, 12). He mentions (contradicted by Dio) Claudius’ expulsion of the Jews from Rome because of a riot caused by a certain Chrestus: this seems to constitute a reference to the early diffusion of Christianity. He also refers to Josephus’ prediction that Vespasian would become emperor. While Suetonius’ attitude toward Christianity is clearly derogatory (*Nero*, 16), he refrains from expressing an opinion on Judaism, and similarly does not explicitly censure the spread of Oriental cults in Rome. Suetonius, however, was closely attached to his ancestral Roman religion, and he stresses the negative attitude of Augustus, his ideal ruler, toward the Jewish and Egyptian cults equally. The general impression one gains of his attitude is that foreign cults are associated with unworthy emperors.

[Menahem Stern]

SUFFERING. The presence of suffering in the world poses a problem for religion insofar as it seems to contradict the notion of an all powerful benevolent God. It would seem that if God were good, He would not want His creatures to suffer, and if, all powerful, He would be able to prevent their suffering. Judaism has attempted to cope with the problem of suffering in various ways. The Bible is from the very beginning aware of suffering as a characteristic of human existence (Gen. 3:19; Job 5:7), as is rabbinic Judaism (PR 189b). In kabbalistic doctrine the existence of the world and man as distinct from God by definition entails the pain of separation from God. A similar position is taken by Leibnitz when he defines suffering in the “best of all possible worlds” as a necessary feature

of finiteness, and Paul *Weiss when he says “No matter how good and concerned God might be, there is always metaphysical evil to mark the fact that the universe is not God and God not the universe” (N. Glatzer (ed.), *The Dimensions of Job* (1969), 193).

Philosophical Explanations

Some religious philosophies overcome suffering by denying either its importance (Stoicism) or its reality (Spinoza), or by seeking release from existence in the world (Buddhism). A certain other-worldly emphasis is also characteristic of certain types of Christian thought. Augustine formulated the classic philosophical view of evil which states that since everything that exists must have been created by God and must be good, evil is not an existent but is merely privation, i.e., the absence of good. This essentially neoplatonic doctrine also has a long tradition in Jewish philosophy, Maimonides being among those who adopted this view (*Guide of the Perplexed*, 3:8–25). While he does not deny that suffering does exist, he believes that the particular evils which befall one are for the good of the universe as a whole. He opposes the doctrine that the innocent sometimes suffer in order to be rewarded in the **olam ha-ba*, holding that all suffering is punishment for priorly committed sins (*Guide*, 24). Among modern Jewish philosophers, Buber holds that evil is really only a “turning away” from the good toward “nothingness.” He adhered to this view even after the Holocaust, explaining that there is a turning away that is so far gone that it can never be turned back (M. Buber, *Good and Evil*, 1952). Judaism in its nonphilosophic form acknowledges the utter reality of evil and suffering. Indeed, God Himself is often described as suffering with man. Man is challenged to remedy suffering wherever it can be remedied, and to endure it without complaining wherever it is irremediable. M. Bred in *Heidentum, Christentum, Judentum* (2 vols., 1921) considers the attitude toward suffering the major distinguishing factor between Judaism and Christianity.

Compassion for the Suffering of Others

Judaism demands that man extend active sympathy toward the suffering of others. So that it may be remediable, the essence of suffering must be perceived not in death or natural catastrophes but in illness and poverty. “The poor are God’s people,” and they exist so that others may help others out of their poverty (BB 10a). Man is admonished to share in the suffering of the community and not enjoy himself while others are suffering (Ta’an. 11a). The historic Jewish penchant for medicine and social reform may have its source in the biblical and rabbinic attitude toward suffering. It is forbidden, according to Jewish law, to inflict suffering on animals (*zā’ar ba’alei hayyim*; BM 32a; Ex. 20:10). With the coming of the Messiah, illness, poverty, and even death will be abolished (Ex. R. 46:4).

Punishment and Purification

The primary traditional explanation of suffering is that it constitutes punishment for sin: “When a man sees that he is being chastised let him examine his ways” (Ber. 5a; Sanh. 27b).

There is a didactic element in this explanation insofar as it encourages man to refrain from sin in order to avoid suffering. However, it is difficult to uphold this explanation in the face of the suffering of the innocent and the prosperity of the wicked (Jer. 19:1, Eccles. 7:15, Job). One way of coping with the moral imbalance in the world is to formulate a doctrine of *reward and punishment in the *afterlife. Another explanation of the existence of suffering is that it is a process of purification. The Talmud terms such suffering “afflictions of love” (*yissurin shel ahavah*). Suffering was thought to be the ultimate form of divine purification leading to *unio mystica* (A. Rote, *Shomer Emunim*, 1 (1959), 111a, ch. 8). Nevertheless there is room within Judaism for protest to be leveled at God when suffering is thought to be undeserved. Among those who reproached God for inflicting suffering unjustly were *Abraham, *Job, and *Honi ha-Me’aggel, and *Levi Isaac of Berdichev. The *Holocaust has in the 20th century aroused much concern with the problem of suffering.

[Steven S. Schwarzschild]

SUFISM (Ar. *Taṣawwuf*). The Arabic form *Taṣawwuf* is the name by which Islamic mysticism has been known since the early 9th century C.E. and to which many paths (*ṭarīqa*, pl. *ṭuruq*) and individuals still adhere today. The name derives, most probably, from *ṣūf*, wool, and refers to the rough woolen garment (*jubbāt ṣūf*) with which ascetics, mystics, and prophets have been associated since biblical times. Sufis themselves prefer to point to another derivation: the root *ṣ-f-w*, which, in various verbal forms, denotes “purity” (*ṣafā*) and “[divine] choice” (*ṣafwa*, *iṣṭifā*). In their self-appraisal Sufis see these latter principles as more crucial than ascetic practices such as wearing wool. Primarily, Sufis see themselves as seekers (*murīdūn*) and wayfarers (*sālikūn*) on the path to God. The search for God (*irāda*, *ṭalab*) and the wayfaring (*sulūk*) on the path (*ṭarīq*) involve a gradual inner and ethical transformation through a number of stages or stations (*maqāmāt*). These include repentance (*tawba*), scrupulous performance of the divine commandments (*wara’*), abstention (*zuhd*), poverty (*faqr*), perseverance (*ṣabr*), trust in God (*tawakkul*) and surrender (*riḍā*). Although some of these stations are ascetical in nature, their primary functions are ethical, psychological and educational: they are designed as a means for combating the lower-self (*mujāhadat al-naḥs*) and as a tool for its training and education (*riyāḍat al-naḥs*). The lower-self (*naḥs*), being the seat of personal will and desire, is seen as the main obstacle for attaining God. In order to combat and train the lower-self, Sufis practice fasting (*ṣawm*), food and drink deprivation (*jū’*), wakefulness at night for the recitation of koranic passages (*qiyām al-layl*), periods of seclusion (*khalawāt*), roaming uninhabited places in states of poverty and deprivation, and lengthy meditations (*murāqaba*, *jam’ al-hamm*). The effortful path of self-denial and transformation through gradual stages (*maqāmāt*) is interwoven with effortless mystical experiences (*aḥwāl*). These are seen as spontaneous and

intense inner occurrences in which divine truths are revealed to the heart (*qalb, sirr*). They portray the dynamic and ecstatic aspect of the mystical life and are richly depicted in Sufi literature, poetry and vocabulary. The culmination of the mystical states is the self-absorption, or annihilation (*fanā'*) in God. Mystical experiences often produce states of ecstasy (*wajd*) and drunkenness (*sukr*), which may result in the exclamation of poetic verses, uncontrollable utterances, involuntary bodily movements, fainting and even death. The ecstatic exclamations (*shaṭahāt*) are at times shocking and seemingly blasphemous. The most notorious among the latter are attributed to Abū Yazīd al-Bisṭāmī (d. ca. 875) and to Maṣūir al-Ḥallāj. One of the most traumatic events in the history of Sufism is associated with the ecstatic utterances of al-Ḥallāj, in particular his "I am the Truth" (*anā al-ḥaqq*), for which, among other accusations, he was publicly executed in *Baghdad in the year 922.

For their proper training Sufi seekers are urged to put themselves under the guidance of a master (*murshid, shaykh*). Spiritual masters are revered men, and occasionally women, who constitute a "sacred hierarchy" and are known as "the Friends of God (*awliyā' allāh*). These are the protagonists of many edifying stories, recorded in Sufi compilations, which narrate of their miraculous acts (*karāmāt al-awliyā'*). The master directs the disciples in religious, ethical, psychological, and spiritual matters, including the interpretation of their dreams, perplexities and mystical experiences. Under the guidance of the master, or his deputy, the disciples perform the ritual known as "Remembrance of God" (*dhikr allāh*), in which God's names, as well as certain sacred formulae, are invoked repeatedly. Another practice that is often associated with Sufism is the spiritual concert, or "listening," *samā'*, in which poetic recitations, music and dances are performed by the participants, sometimes in states of ecstasy and elation.

The early Sufi circles of the 9th–11th centuries became the *nuclei* for the large Sufi Paths, or Brotherhoods (*ṭarīqa, ṭuruq*), which emerged from the 12th century on. The Brotherhoods are named after their believed founders, who had passed the teaching down to their disciples; they, in turn, pass it on to their own disciples in an uninterrupted "chain of transmission" (*silsila*). Currently, in spite of the general decline of Sufism due to disapproval from both modernists and fundamentalists, Sufi Brotherhoods and their local branches are still active throughout the Muslim world, as well as in the West. At present, as in the past, Sufism is an important factor in the spread of Islam, especially among Western seekers.

In the Middle Ages, especially in Muslim *Spain and later on in *Egypt, Sufism left its mark on some Jewish pietistic writers and circles. The most popular Sufi-inspired Jewish work, written in *Judeo-Arabic in 11th-century Saragossa, is *Baḥya ibn Paqudā's "The Duties of the Heart" (*Ḥovot ha-Levavot*). In Egypt, Sufism was highly regarded by the Pietist Circle of the Egyptian ḥasidim and their masters, in particular R. Abraham *Maimonides and his descendants, who saw in Sufi practices the continuation of biblical prophetic traditions.

SUGAR, SIR ALAN (1947–), British businessman. Born in north London, the son of an East End tailor, Sugar left school at 16 and founded the Armstrad Home Electronics group in 1968. It became nationally known in 1983 when it sold the first inexpensive home computer, retailing at the time at £300. In the 1980s Armstrad was regarded as a serious competitor for other major international computer firms like Apple, but in the 1990s the firm ran into difficulties, and in 1997 it was divided into two separate concerns, Betacom and Viglen. In the early 1990s Sugar became the chief owner of the Tottenham Hotspur football club. Known for his aggressive style, Sugar was given a knighthood in 1999. In 2005 he became host of a popular BBC television series, U.K. Apprentice. In 2005 he was estimated to have been the 55th richest man in Britain, worth £760 million.

[William D. Rubinstein (2nd ed.)]

SUGAR INDUSTRY AND TRADE. In the Middle Ages sugar was a luxury article, and sugar for European consumption was produced in Syria, Palestine, Crete, Egypt, Sicily, and southern Spain. The Cairo **Genizah* records reveal that making and selling sugar from sugarcane was one of the most common occupations of Jews in the Middle Ages; Sukkari was a common family appellation from the beginning of the 11th until the end of the 13th centuries in Egypt and in North Africa. Sugar refineries were often in Jewish hands. Jews are mentioned as exporters of sugar from Crete in the 15th century. When sugar began to be used for everyday consumption (15th century), *Marranos played a leading role in introducing sugarcane cultivation to the Atlantic islands of Madeira, the Azores, the Cape Verde Islands, and São Tomé and Príncipe in the Gulf of Guinea, and in the 16th century to the Caribbean Islands. They also brought the cultivation of sugarcane from Madeira to America, and the first great proprietor of plantations and sugar mills, Duarte Coelho Pereira, allowed numerous Jewish experts on sugar processing to come to Brazil. Among them was one of the first important Jewish proprietors of sugar mills, Diego Fernandes.

In Europe Marranos who were active in international commerce, such as the merchant family of Ximenes, played an important role in the import of sugar to Lisbon and thence to northwestern Europe, especially *Antwerp. During the 16th and the beginning of the 17th centuries there were many Jews among the merchants of Antwerp, the Portuguese colony, which was central to the sugar trade in the port and played a

vital part in the development of Antwerp as the central European sugar market, where many refineries were established. They made Brazil, where several Portuguese Jews had established sugar plantations and mills, the most important area of sugar production in the world. From around the 1620s *Amsterdam took the place of Antwerp in the sugar trade, and many Marranos left Brazil and Portugal to settle in Amsterdam. Some Jews (e.g., Abraham and Isaac *Pereire and David de Aguilar) owned refineries in Amsterdam. In 1639 ten of the 166 “*engenhos*” in Dutch Brazil belonged to declared Jews, while others belonged to Marranos who kept their Jewishness secret. The Jews of Brazil were not important as proprietors of mills but rather as financial agents, brokers, and export merchants. When Brazil came again under Portuguese rule in the second half of the 17th century, many Jews emigrated to Surinam, Barbados, Curaçao, and Jamaica, where they acquired large sugarcane plantations and became the leading entrepreneurs in the sugar trade. Benjamin d’Acosta introduced sugarcane to Martinique in 1655, bringing with him 900 Jews (who were expelled in 1683). Sugar production was introduced into South Africa in the 1840s by Aaron de Pass of Natal. From the beginning of the 17th century Hamburg played a growing role in the European sugar trade – to a considerable extent thanks to the activities of the Marranos who had settled there. Early in the 18th century Portuguese Jews lost their leading position in the sugar trade, in Hamburg because of the growth of competition, and in Brazil because of persecutions of the Marranos and the general decline of the trade in that country. In the first half of the 18th century, London gradually ousted Amsterdam as the center of the sugar trade; at the same time the role of the Jews became less important.

Jews also played a leading role in the development of the sugar-beet industry in Poland, Russia, the Ukraine, Hungary, and Bohemia. In eastern Europe Jews were the traditional buyers of agricultural produce from the estates and often leased the local refinery and mill from the landowners. Requests by Polish Jews to erect sugar refineries were turned down by the authorities in 1816, 1827, 1834, and 1837. Finally, Hermann Epstein built his first refinery in 1838 and by 1852 his was the largest and most modern in Poland. He was joined by L. *Kronenberg and other leading Polish Jewish industrialists and financiers. In the Ukraine Israel *Brodsky first helped finance Count Bobrinski, pioneer of Russian sugar-beet, and later he and his sons established numerous refineries. Other Jews entered this field (such as M. Halperin and M. Sachs) until, by 1872, one-quarter of the total sugar production in Russia was in Jewish hands. In 1914, 86 refineries in Russia (32% of the total) were owned by Jews; 42.7% of the administrators of the joint-stock sugar companies were Jewish, and two-thirds of the sugar trade was in Jewish hands. The percentage of Jewish workers, managers, technicians, and scientists employed in the field was correspondingly high. Between the two world wars, Jews in Poland were squeezed out of the sugar trade through the antisemitic economic policy. In Hungary a pioneering role in the development of the sugar-beet

industry was played by Ignac Deutsch; his grandson Sándor de Hatvany Deutsch (1852–1913; see *Hatvany-Deutsch family) enlarged the firm and represented Hungary at international sugar conferences.

[Hans Pohl / Henry Wasserman]

In Israel

In the early 1950s two sugar-beet refineries were established in Afula and Kiryat Gat, both for economic reasons and for social considerations, such as providing employment in development areas. Sugar-beet production grew from 21,000 tons in 1955 to a peak of 295,000 in 1965 (when 37,000 tons of sugar were produced). In 1969 only 22,500 tons of sugar were produced (18% of consumption) because low international prices led to decreased profits for growers and benefits for the economy. Since that time Israel’s sugar industry has continued to decline, though in 2006 Tate & Lyle formed a joint venture with Gadot Biochemicals to build and operate a sugar plant in Israel.

SUGERMAN, SIR BERNARD (1904–1976), Australian judge. Born in Sydney, the son of a salesman, Sugerman was educated at Sydney University and was a lecturer there on property law before becoming the first editor of the *Australian Law Journal* from 1927 to 1946. After a career at the bar (Sugerman became a KC in 1943), he was appointed to the Commonwealth Court of Conciliation in 1946–47 and then served as head of the New South Wales Land and Valuation Court from 1947 to 1961. He served as a member of the Supreme Court of New South Wales from 1961 to 1970 and was then president of the New South Wales Court of Appeal from 1970 until his death. He was knighted in 1970. Sugerman was active in many Jewish causes in Sydney.

°SUGIHARA, CHIUNE-SEMPO (1900–1985), Japanese diplomat in World War II and Righteous Among the Nations. Sugihara served as consul-general of Japan in Kaunas (Kovno), Lithuania, from the fall of 1939 until August 31, 1940, when, after Lithuania’s annexation to the Soviet Union, the Soviet authorities ordered all foreign legations closed. Before that, in early August, Sugihara was approached by a delegation

of Jewish refugees from Poland, headed by Dr. Zerah Warhaftig, with a request for Japanese transit visas. These, Warhaftig explained, were needed in order for his group of people to acquire Soviet transit visas on their way, via Japan, to the distant Caribbean island of Curacao – in the mistaken belief that no end visa was required for this island, under control of the Dutch government-in-exile. Staying in Lithuania meant for the refugees the prospect of having the Soviet authorities force them back to Poland, presently under German occupation. Sugihara asked for a few days to consider the request in the light of instructions from his superiors not to issue visas on a mass scale as well as to make sure that refugees would not prolong their stay in Japan on their way to a final destination. Recalling that momentous event years after the war, Sugihara related the struggle in his mind as he tried to come to a decision. “I really had a difficult time, and for two whole nights was unable to sleep. I eventually decided to issue transit visas... I could not allow these people to die, people who had come to me for help with death staring them in the eyes. Whatever punishment might be imposed upon me, I knew I had to follow my conscience.” Having decided positively, on August 10, 1940, Sugihara began issuing Japanese transit visas to anyone requesting them, the numbers reaching several thousand in an operation that continued to the day of Sugihara’s departure from Kaunas at the end August for a different assignment. The visa recipients, which included hundreds of yeshivah students (notably those of the Mir Yeshivah), left the area in time, before the German attack on the Soviet Union on June 21, 1941, and were thus saved – passing through Russia and Japan enroute to various destinations (Shanghai, the Philippines, Canada, and Palestine). Ironically, none of them headed for Curacao. In 1985, Yad Vashem awarded the aged Sugihara Chiune-Sempo the title of Righteous Among the Nations.

[Mordecai Paldiel (2nd ed.)]

SUICIDE. The duty of preserving life, including one’s own, is one of the paramount injunctions of Judaism (see **pikku’ah nefesh*). The prohibition of suicide is a natural corollary to this, and yet it is nowhere explicitly forbidden in the Talmud. However, post-talmudic authorities considered suicide a most heinous sin, even worse than murder. It was thought to be a denial of the doctrines of reward and punishment, the world to come, and the sovereignty of God, and the opinion was expressed that the suicide forfeits his portion in the world to come. Suicide is sharply to be differentiated from martyrdom, which, under certain circumstances, is the greatest *mitzvah* of Judaism; a difference must also be made between letting oneself be killed and active suicide (see **Kiddush ha-Shem* and *Hillul ha-Shem*).

Four definite suicides are recorded in the Bible. Samson (Judg. 16:30), Saul and his armor-bearer (1 Sam. 31:4–5),

and Ahithophel (11 Sam. 17:23). The first three are regarded as “suicide under mitigating circumstances,” so to speak. The Midrash, which regards suicide as rare (Gen. R. 82:8), includes the prohibition of suicide (“self-strangulation”) in the injunction “and surely your blood of your lives will I require” (Gen. 9:5), but specifically excludes Saul as well as *Hananiah, Mishael, and Azariah (Gen. R. 34:13). The Shulhan Arukh (YD 345:3) takes Saul as an example of permitted suicide “because he knew that the Philistines would do with him as they wished, and put him to death” (*Siftey Kohen*, ad loc.). Samson’s suicide, which brought in its train the death of the Philistines, is extolled as *kiddush ha-Shem*. The most famous act of suicide in Jewish history is the mass self-immolation of the garrison of *Masada in 73 C.E. as reported by Josephus (Wars, 7:320ff.). It has been suggested that they acted in accordance with their interpretation of the *halakhah* which included slavery and subjection to a foreign power as one of those principles concerning which one was enjoined “to be killed rather than transgress” (Rabinowitz, see bibl.). Other cases of suicide – such as the mass suicide in York in 1190 – which were motivated by either a desire to avoid forced conversion or fear, are considered to be acts of martyrdom.

It was only in the late post-talmudic tractate *Semaḥot* (Evel Rabbati 2:1–5) that the laws regarding suicide are formulated. It is laid down that no rites are to be performed in honor of the dead (e.g., **keri’ah* and **hesped*), but everything which appertains to respect for the mourners is permitted (YD 345:1; Maim. Yad, Evel 1:11). Solomon b. Abraham *Adret states that the “nothing to be done” does not include burial and shrouds (Rashba, Resp., vol. 2, no. 763). R. Ishmael states that an announcement was made concerning the suicide, “Woe, he has taken his life,” but R. Akiva disagreed, saying to him, “Leave him in silence. Neither honor him nor curse him.” Two cases are mentioned in the context of children (not necessarily minors) who committed suicide out of fear of punishment. The suicides were granted the full respects due to the dead. The moral which the rabbis derived from it was that it is better to punish than threaten punishment (Sem. 2:4–5).

A distinction is made between suicide while of sound mind (*la-da’at*) – to which alone these restrictions apply and suicide while of unsound mind (*she-lo la-da’at*), to which they did not apply; thus the suicide of a minor is not regarded as culpable. Only when there is the clearest evidence of *felo-dese*, deliberate intent, is a suicide to be considered as being of sound mind. “Who is a suicide of sound mind? It is not so regarded if a man climbed a tree or a roof and fell to his death, but only where he states, ‘I am climbing the roof or the tree and I am going to throw myself to my death,’ and one sees him acting accordingly... a man found strangled or hanging from a tree or cast upon a sword is regarded as a suicide while of unsound mind” (Sem. 2:2–3). It was, and in some places still is, the custom to bury suicides in a special section of the cemetery, but in recent years the tendency has grown to remove this stigma from the suicide, since the verdict is usually suicide while of unsound mind. The slightest indication is enough to

establish a state of “unsound mind” (J.M. Tukacinsky, *Gesher ha-Hayyim*, 1 (1960²), ch. 25, which also contains a full list of the laws regarding a suicide).

Apart from exceptional circumstances, such as during the Nazi persecutions, the incidence of suicides among Jews has been small. The mass suicides which took place during the Middle Ages to avoid forcible baptism, which are generally regarded as belonging to the category of *kiddush ha-Shem*, were not without their critics (see the incident recounted in *Da'at Zekenim*, to Gen. 9:5). The self-immolation of Meir Feinstein and Moshe Barazani who blew themselves to death in prison in Jerusalem in 1947 on the eve of their execution in order to cheat the hangman, was justified on the analogy of Saul. Their original intention, to commit the act on the way to the scaffold, causing the simultaneous death of their potential executioners, was based on the example of Samson. Rabbi S. *Goren (see bibl.), the chief rabbi of the Israel Defense Army, expressed the view that a soldier taken prisoner was entitled, and even obliged, to commit suicide if he feared that he might not be able to withstand torture, or that under it he might reveal military secrets. He was, however, subjected to considerable criticism for this view. However, with the growth of acculturation in the Western world, there is evidence that the rate among Jews is rising and approximating to that of the general population. See *Mental Illness.

[Louis Isaac Rabinowitz]

In Jewish Law

“But for your own life-blood I will require a reckoning” (Gen. 9:5) – these are the suicides whose blood is claimed by God (Gen. R. 34:13; Yad, Roze'ah 2:3). The “reckoning” is, of course, God's only, but on earth the suicide is denied certain honors due to the dead, provided the surviving mourners are not aggrieved by such denials (Sem. 2:1; YD 345:1). The suggestion that words of scorn be exclaimed at this grave was met by R. Akiva with the rejoinder, “do not abase him and do not praise him” (Sem. 2:1). In order to be reprehensible, the suicide must be voluntary and premeditated (*me'abbed azmo la-da'at*, that is, he must knowingly destroy himself). A person destroying himself is presumed to do so without the necessary premeditation (*she-lo la-da'at*) – whether from pathological depression and not being in possession of his mental faculties (cf. Yad, Sanhedrin 18:6), or from “duress” (see *Penal Law). Duress includes not only compulsion, such as the necessity to kill oneself rather than surrender to the enemy or violate God's laws (see below), but also the (subjectively) reasonable despair of life or the identification with a person who just died. Most of the suicides reported in Bible, Talmud, and Midrash fall into either of these categories, which may explain the fact that they are not adversely or deprecatingly commented upon. (For those in the Bible, to which the (possible) suicide of Zimri (1 Kings 6:18) may be added, see above.) Examples in the Talmud are that of the servant of Judah ha-Nasi who killed himself when learning of his master's death (Ket. 103b), and of the pagan executioner who joined Hananiah (Hanina) b. Teradyon in the flames (Av. Zar. 18a).

Duress is also present where the suicide amounts to self-inflicted punishment for real or imagined sinfulness: the apostate Yakum of Zererot is said to have entered paradise after having taken his own life in a manner devised to combine all four modes of judicial execution (Mid. Ps. to 11:7); and Hiyya b. Ashi is said to have caused his own death in despair over an offense he intended to commit and thought he had committed, though in fact he had not committed it at all (Kid. 81b). Where a man chooses to die rather than surrender to the heathen, no question of duress arises, because his conduct is highly praiseworthy (Git. 57b); the most notable instances are those related in the Books of the Maccabees (e.g., II Macc. 14:37–46) and the reported mass suicide at Masada (which has recently given rise to some halakhic discussion). As for the violation of Divine law, while every man has to decide for himself whether he will kill himself rather than commit any such violation (Git. 57b), the law was settled to the effect that where he is required to commit idolatry, adultery (*gillui arayot*), or murder, he must kill himself or let himself be killed rather than commit any of those crimes (Sanh. 74a; Sh. Ar., YD 157).

The scope of duress being as wide as it is, the law will presume that a man found dead from his own hand took his life involuntarily and without premeditation (Sem. 2:3), until the contrary is proved from what the man himself had been heard to say before his death (Sem. 2:2). As far as minors are concerned, the presumption of duress appears to be irrebuttable (Sem. 2:4–5; YD 345:3). So long as the presumption is not rebutted, a suicide may not in any way be discriminated against (Yad, Evel 1:11). The law, however, has to take cognizance of attempted suicide: a person who does any act by which he endangers his own life is liable to disciplinary *flogging (*makkat mardut*; Yad, Roze'ah 11:5). Opinions are divided whether a man may inflict nonfatal wounds on himself (BK 91b); and the law is that while he is not allowed to do so, he is not punishable if he does so (BK 8:6; HM 420:31); yet not only might he be punished at the hands of heaven (Tosef., BK 9:31), but the disciplinary flogging may always be imposed in lieu of punishment (Yad, Roze'ah 11:5; HM 427:10). If suicide attempts are epidemic or otherwise constitute a threat to national security, the court may exercise its emergency powers and impose not only floggings but also *imprisonment (cf. Yad, Roze'ah 2:4–5).

[Haim Hermann Cohn]

Suicide to Avoid Severe Torture

Throughout the generations halakhic authorities have confronted questions concerning the permissibility of suicide in situations other than when it becomes necessary to avoid committing one of the three cardinal prohibitions previously discussed. These questions arose during periods of anti-Jewish violence and pogroms and attempts to coerce Jews into to apostasy.

Rabbenu Tam (Tos. Avodah Zarah, 18a) ruled that it is a *mitzvah* to commit suicide in order to escape extreme pain and torture, especially when used against a person to coerce apostasy. According to other halakhic authorities, sui-

cide under such circumstances, is not required but permitted (Maim., Torat ha-Adam), while according to other authorities, such suicide is prohibited (Maharshah, *Yam shel Shelomo*, BK 8:59).

During the *Holocaust, this question again arose in a practical context. In Resp. *Mi-Ma'amakim* (1.6), Rabbi Ephaim Oshry relates to a question submitted by a Jew from the Kovno ghetto who asked whether he was allowed to commit suicide to avoid a horrible death accompanied by severe suffering as well as to avoid witnessing the deaths of his family.

The responsum discusses the opinions of earlier authorities, and cites the incident of the suicide of King Saul (1 Samuel 31:4), The answer given was that, under the circumstances, suicide was permitted, but the author requested that the responsum not be publicized to prevent it from providing assistance to Nazi murderers by sowing despair among the Jews.

The responsum concludes with the following comment: "Nonetheless we may take pride in the fact that there were no suicides in the Kovno ghetto with the exception of three people whose morale was completely shattered. The remaining Ghetto residents continued to believe and were fully confident that God would not abandon His people and would halt the murderers."

SUKENIK, ELIEZER LIPA (1889–1953), Israel archaeologist. Born in Bialystok, Poland, he settled in Erez Israel in 1912. In 1914, he began his teaching career, and eventually was appointed field archaeologist at the Hebrew University. He directed the excavations of the synagogues of *Beth-Alpha (1928) and *Hammath-Gader (1932) and participated with L.A. *Mayer in the clearance of the remains of the Third Wall in *Jerusalem (1925–27). From 1931 to 1933 he was a member of the expedition to *Samaria. In 1935 he was promoted to lecturer in archaeology and in 1938 he was appointed professor; in the same year he also became director of the University Museum of Jewish Antiquities. He excavated a number of synagogues and Jewish tombs in the vicinity of Jerusalem, the latter containing remains which he claimed were evidence of early Christianity, as well as Chalcolithic remains in Ḥaderah, including a tomb, and a Bronze Age site at Tell Jarisha. In 1947

Sukenik was instrumental in acquiring part of the *Dead Sea Scrolls – whose importance he immediately recognized – and he devoted the rest of his life to their study.

His many publications include excavation reports on Beth-Alpha, Hammath-Gader, Japhia and Salbit Sha'alvim synagogues (published in the *L.M. Rabinowitz Bulletin*) and a study of the Dura-Europos synagogue, as well as the *Dead Sea Scrolls* (1958).

[Michael Avi-Yonah]

His wife, HASYA SUKENIK-FEINSOD (1889–1968), was a pioneer kindergarten teacher. Also born in Bialystok, she settled in Erez Israel in 1912, where she was among the founders of the kindergarten system and served as supervisor of kindergartens and director of kindergarten teachers' seminaries. She was a member of the *Asefat ha-Nivḥarim and the leader of the Women's Equal Rights Association. Their sons were: Yigael *Yadin, soldier and archaeologist; Yoseph Yadin, actor; and Matityahu Sukenik, a pioneer Israel Air Force pilot who fell in the War of Independence.

SUKKAH (Heb. סֻכָּה), booth erected for the festival of *Sukkot, in accordance with the biblical commandment "Ye shall dwell in booths seven days" (Lev. 23:42). The reason for the commandment given in the Bible is "that your generations may know that I made the children of Israel to dwell in booths, when I brought them out of the land of Egypt" (Lev. 23:43). Since the Israelites in the desert dwelt in tents and not in booths, the Talmud records a dispute between R. Eliezer and R. Akiva on whether the *sukkot* in Leviticus 23:43 were actual or metaphorical booths, the latter referring to the protective "clouds of glory" (Suk. 11b) which accompanied the Israelites throughout their 40-year sojourn. Details of the *sukkah's* construction are discussed in the talmudic tractate *Sukkah. According to *Bet Shammai (whose ruling is here accepted, Maim. Yad, Shofar, Sukkah ve-Lulav, 6:8), the *sukkah* must be large enough to contain a man's head, most of his body, and his table (Suk. 2:7), an area defined as seven handbreadths square (Sh. Ar., Oḥ 634:1; Yad, loc. cit. 4:1; for a conical or circular shaped *sukkah*, see Suk. 8a). The height of the structure must not be less than ten handbreadths, nor more than 20 cubits (Suk. 1:1; see also *Weights and Measures). The most important section in the construction of the *sukkah* is the roof made of covering known as *sekhakh*. The *sekhakh* must be cut from that which grew in the soil and which is not susceptible to ritual impurity (Suk. 1:4; 9b; Rashi, ad loc.; Yad, loc. cit. 5:1). An overhanging tree, for example, is invalid as *sekhakh* (Suk. 1:2). The *sekhakh* must be so arranged that the shaded area within the *sukkah* will exceed the unshaded (Suk. 9b–10a; Sh. Ar., Oḥ 626:1). Any material may be used in the construction of the walls (Suk. 1:5), at least two of which must be complete, while the third may be partial (Suk. 6b; Yad, loc. cit. 4:2; Sh. Ar., Oḥ 630:2). It is particularly meritorious to begin construction of the *sukkah* at the conclusion of

the *Day of Atonement (Isserles to Sh. Ar., OH 625:1). Despite the opinions quoted in the Jerusalem Talmud (Ber. 9:4, 14a, and see also Rashi to Mak. 8a), no benediction is said on the construction of the *sukkah* because the biblical commandment is fulfilled by “dwelling” in it and not in its construction (Sh. Ar., OH 641:1).

“Throughout the seven days (‘and nights,’ Suk. 43a) of the festival, the *sukkah* must be regarded as one’s principal abode, and the house merely a temporary residence” (Suk. 2:9). Thus, it is forbidden to eat any major repast or to sleep outside the *sukkah* (Suk. 26a; Yad, loc. cit. 6:6; Sh. Ar., OH 639:2), and it is obligatory to eat in the *sukkah* on the first night of the festival (Suk. 2:6; Yad, loc. cit. 6:7; Sh. Ar., OH 639:3). These laws do not apply to women, slaves, and infants (Suk. 2:8; Yad, loc. cit. 6:1; Sh. Ar., OH 640:1); and if rain is likely to spoil one’s food, it is permitted to transfer the meal to the house (Suk. 2:9; Yad, loc. cit. 6:10; Sh. Ar., OH 639:5). Each time one eats in the *sukkah* the blessing “to dwell in the *sukkah*” (Suk. 46a) is recited, usually after the blessing over bread (Sh. Ar., OH 643:3). On the first night of the festival these blessings are made before the *She-Heheyanu* *benediction, since the latter can thereby be made to apply both to the observance of the festival and to the first performance of the duty to dwell in the *sukkah* (Suk. 56a; Yad, loc. cit. 6:12; Sh. Ar., OH 643:1). However, in the Diaspora, the order of the benedictions is reversed on the second day of the festival (*ibid.* 661). It is customary to decorate the *sukkah* with fruit (which may not be eaten during the festival, Suk. 10a–b), and with the symbols of Sukkot, and to recite special welcomes to the seven “guests of the festival” (the **Ushpizin*), Abraham, Isaac, Jacob, Moses, Aaron, and David, on each day of Sukkot (see Zohar, Lev. 103b). According to the Midrash (Gen. R. 48:10), the Children of Israel were divinely protected in the wilderness by the shelter of the Tabernacles solely because the Patriarch Abraham had given shelter to three strangers beneath the tree on his property (Gen. 18:2–5). It is also customary to construct a *sukkah* at the synagogue (see *Ozar ha-Ge’anim*, (1934), 33 nos. 51–53), where a token meal (usually a **Kiddush*), is held after the holiday services. In present-day Israel the Samaritans erect the *sukkah* inside their houses, while Jews construct *sukkot* on the sidewalks, roofs, and balconies of their houses reminiscent of what is described in Nehemiah: “So the people went forth... and made themselves booths, every one upon the roof of his house, and in their courts, and in the courts of the house of God...” (8:16–18).

*Philo suggested that the *sukkah* was built to show misfortune at a time of good fortune and to remind the rich of the poor (Spec. Leg. 2:208–9) and Maimonides similarly interprets the lesson of the Tabernacle (Guide 3, 43). There are modern scholars who see the origin of the custom in a reinterpretation of some ancient agricultural rite but the nature of this is disputed.

SUKKAH (Heb. סֻכָּה; “booth”), sixth tractate of the order *Mo’ed* in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. It deals, in five chapters, with laws relating to the festival of *Sukkot (Tabernacles). The festival is sometimes referred to simply as the *hag* (“the holiday”; Num. 29:12; Neh. 8:14, etc.), and in fact, this name is employed throughout this tractate, indicating that it was considered the most outstanding festival. The observances with which this tractate is primarily concerned are the “dwelling in booths” and the taking of the four *species. Two other ceremonies dealt with are the ceremony of the willow branches and the rite of water libation.

Chapter one covers the making of the *sukkah*; chapter two continues the subject, and goes on to define the term “dwelling” in the *sukkah*. The question of exemptions is also touched upon. Chapter three deals with the four species. Chapter four gives further information on the various ceremonies, including the above-mentioned ceremony of the willow branches and the rite of the water libation, and chapter five describes vividly the festivities surrounding the festival of the water drawing. Information is also given about other occasions when the trumpets were sounded, as well as on how the various sacrificial duties were distributed among the priestly divisions and how they shared the sacrificial portions.

The Mishnah of *Sukkah* can be divided into two main sections: chapters 1–3 and chapters 4–5. Both the language and the contents as well as the places mentioned therein show that the latter belong to the period of the Second Temple. Nevertheless these two chapters are not of the same source, and differences in language are recognizable in them. The reason is that though in the main they belong to the time of the Temple, they were adapted and worded by later *tannaim*, some of whose names have remained there, such as R. Judah (5:4) and Johanan b. Beroka (4:6). The Babylonian *Gemara* to tractate *Sukkah* is unique compared with most other tractates. Especially numerous in this tractate are the “transposed themes,” i.e., the themes which contradict the same themes found in parallel passages in other tractates, both in the circumstances attributed to them (*ukimta*) and the discussions themselves. On the other hand the *Gemara* displays a remarkable similarity to that of the Jerusalem Talmud, to which there is no parallel with regard to the other tractates of the Babylonian Talmud. On this basis, J.N. Epstein has come to the conclusion that despite the fact that it shows many similarities to other tractates, *Sukkah* is to be regarded as belonging to a class of its own. In addition *Sukkah* contains a considerable number of the disputes between Abbaye and Rava and a comparatively large number of additions of the *savoraim*. *Sukkah* was translated into English in the Soncino Talmud by I.W. Slotki (1938).

The tractate ends with an obscure reference to the priestly watch of Bilgah (see I Chron. 24:14), which was in various ways discriminated against. The alternate reasons for this are given in the Tosefta (4:28; variations in TJ 5:8 and TB 56b), namely that they were disgraced by a female member, Miriam, who became an apostate and traitor and married a Greek captain

during the Hasmonean struggle against the Syrio-Greeks. The other reason given is that they were negligent in their Temple service. Other aggadic points to be noted are the description of the splendor of the Great Synagogue in Alexandria, which is referred to as a Great Basilica (Tosef. 4:6), and the story of Trajan's persecution of the Jews and its reasons (TJ 5:1, 55b). Of interest also are the discussions of the relative merits of charity and sacrifices (TB 49b) and observations on the problem of freedom of will (TB 52b).

[Arnost Zvi Ehrman.]

SUKKOT (Heb. סֻכּוֹת; “booths” or “tabernacles”), the festival, beginning on the 15th day of Tishre, which commemorates the *sukkot* in which the Children of Israel dwelt in the wilderness after the Exodus. The festival lasts for seven days, of which the first (and the second in the Diaspora) is a *yom tov* (a festival on which work is prohibited) and the other days *hol ha-mo'ed* (intermediate days on which work is permitted). Immediately after Sukkot, on the eighth day (and the ninth in the Diaspora), is the festival of Shemini Azeret (“the eighth day of solemn assembly”) which is a *yom tov*.

In the Bible

Tabernacles, the “feast of ingathering” (Ex. 23:16b; 34:22b), was celebrated by the Israelites at the time of the ingathering from the threshing floor and wine press (Deut. 16:13; cf. Ex. 23:16b; Lev. 23:39a) “at the end of the year” (Ex. 23:16b; cf. “at the turn of the year,” 34:22b). The last of the three Israelite feasts connected with the agricultural year (Ex. 23:16; 34:22; Lev. 23:34–36, 39–43; Num. 29:12–38; Deut. 16:13–15), Tabernacles was from ancient times one of the most important feasts of the Israelites and is therefore called “the feast of the Lord” (Lev. 23:39; Judg. 21:19) or simply “the feast” (1 Kings 8:2, 65; 12:32; Ezek. 45:25; Neh. 8:14; 11 Chron. 5:3; 7:8). The seven-day feast (Deut. 16:13a; cf. 1 Kings 8:65 [= 11 Chron. 7:8]) was originally – like *Passover – congruent with the period of a week; the date (in the month of Etanim, i.e., the seventh month (Sept./Oct.), 1 Kings 8:2) was determined by the end of the harvest. After the Exile (Ezek. 45:25) it was dated to the 15th to the 21st of the seventh month (Lev. 23:34–36a, 39–41; Num. 29:12–38) and prolonged by one day, the *azeret*, on the 22nd day of the month (Lev. 23:36b; Num. 29:35; Neh. 8:18; 11 Chron. 7:9). The note that Jeroboam I celebrated this feast one month later, on the 15th of the eighth month (1 Kings 12:32–33), did not have any climatic or calendaric reasons. It may be a Deuteronomistic reproach for the king's incorrect cultic behavior (cf. 12:33a). The third agricultural festival, like the other two, was taken over from the Canaanites. According to Judges 9:27, the Shekhemites celebrated a feast of joy at the end of the grape harvest; a similar Israelite feast in the vineyards, at which the girls danced, was celebrated every year in Shiloh according to Judges 21:19–21. Festival joy is shown in other places to be a main feature of the feast (Lev. 23:40; Deut.

16:14; Neh. 8:17). It is not yet mentioned in Judges 21:19–21, but later in the Bible the seven-day dwelling in booths became the central custom of the feast (cf. Lev. 23:42; in Jerusalem this was carried out at the Temple square according to Neh. 8:14ff.); hence the name “Feast of Booths” or “Tabernacles” (Lev. 23:34; Deut. 16:13, 16; 31:10; Zech. 14:16, 18–19; Ezra 3:4; 11 Chron. 8:13). As the main feast of the year, Tabernacles was the occasion for the consecration of Solomon's Temple (1 Kings 8). According to the Deuteronomistic construction, in every seventh year the law was to be read before the gathered people on the same occasion (Deut. 31:10–11). At the end of days all the peoples would assemble for the feast in Jerusalem to worship the Lord (Zech. 14:16ff.). Unlike Passover and Pentecost the Feast of Booths was rather late, its connection with the Exodus was, therefore, forced. According to Leviticus 23:42–43, the Israelites were to dwell in booths as they did during the Exodus from Egypt; but in the wilderness at the time they did not have booths, but tents.

Critical Theories Concerning Origin

According to the Bible, the Feast of Booths was a thanksgiving festival. Recent information concerning cult and feasts in Mesopotamia has led biblical scholars to use new methods of research to gain further knowledge about this feast. P. Volz and – independently – S. Mowinckel tried to understand the Feast of Booths as an old Israelite New Year's festival. Through the cultic-mythic explanation of the so-called “Psalms of Enthronement” (Ps. 47; 93; 96–99) and a number of other psalms, Mowinckel reconstructed a feast of YHWH's enthronement which was celebrated every year at the time of the Feast of Booths (1922); from the structure of the Sinai pericope he derived the ritual of this celebration which centered around the reading of the law as the expression of the divine will and covenant between God and people (1927). British and Swedish scholars have interpreted the Israelite Feast of Booths as a New Year's festival by connecting it with a so-called “cultic pattern” which they suppose to have existed in the Ancient Near East. The object of the ritual in which the sacral king had a central part was the securing of life (Johnson, Widengren, and others). On the other hand, G. von Rad, going beyond Mowinckel, found the structure of the “feast of the renewal of the covenant” (“*Bundeserneuerungsfest*”) in the Book of Deuteronomy and in Joshua 24 (in connection with Deut. 27). Because according to Deuteronomy 31:10–11 and Nehemiah 8 the law was read during the Feast of Booths, it has been concluded that this feast is identical with the Feast of Booths. As Mowinckel supposed the feast of enthronement, including the procession of the ark, to be the highlight of cultic life in Israel and the “*Sitz im Leben*” of most of the psalms and their literary forms, so A. Weiser maintained that the “feast of the covenant,” including a cultic theophany of YHWH, was the highlight. H.J. Kraus assumed that a “feast of tents” had been celebrated as a nomadic forerunner of the Feast of Booths in a cultic camp around the tent sanctuary (possibly in Beer-Sheba), as a reminder of the march through the wilderness

from Egypt to Palestine. For the pre-Exilic period, Kraus, referring to 11 Samuel 6, 7 and Psalms 132, reconstructed a “royal Zion Feast” to be held on the first day of the Feast of Booths. This feast, held on the first day of the festival, which included a procession of the ark (cf. 11 Sam. 6 and 1 Kings 8), celebrated the election of Jerusalem and of the Davidic dynasty. Under the influence of Deutero-Isaiah, this feast became a celebration of the beginning of the kingship of God over his people, and, thus, the Feast of Booths secondarily became a feast of YHWH’s enthronement.

These theses have – to varying extents – influenced research, but all of them also called forth important objections. Nowhere in the Bible is it said that one of these subjects is always connected with the Feast of Booths. The feast of ingathering was celebrated, according to Exodus 23:16, “at the end [not at the beginning] of the year” (E. Kutsch, in: ZAW, 83 (1971)). It was thought to be at the “beginning” of the year because it was dated on the 15th to the 21st of the seventh month, and the first day of this month – in the post-biblical period (RH 1:1, 2; but cf. already Lev. 23:24b, 25; Num. 29:1–6; Neh. 8:2) – became New Year’s Day. The feast itself never was a New Year’s feast; therefore it lacks any important equivalent in relation to Mesopotamian parallels. Further, the formula “YHWH *malakh*” (Ps. 93:1; 96:10; 97:1; cf. 47:9) does not mean “YHWH has become king” but “YHWH rules as king” (D. Michel, in: VT, 6 (1956), 40–68); it emphasizes God’s kingship, but not an enthronement acted out in the cult. 11 Samuel 6 and 1 Kings 8 report two different transfers of the ark (to the City of David, to the Temple), each of which took place only once, and therefore do not reflect a regularly held procession of the ark. A “feast of the covenant,” or “feast of the renewal of the covenant,” cannot have existed because *berit* in the Bible does not mean “covenant” (E. Kutsch, in: ZAW, 79 (1967), 18–35), and because Israel did not interpret her relationship to YHWH as a “covenant” (E. Kutsch, in: *Tuebingen Theologische Quartalschrift*, 150 (1970), 299–320). Deuteronomy 31:10–11 prescribes a proclamation of the law before the people, which constitutes a statement of their commitment to YHWH (not a covenant), to take place – if at all – every seventh year on the Feast of Booths. After the Exile such an act could be dated to the first or second of the seventh month (Neh. 8:1ff.), to Pentecost (11 Chron. 15:10ff.; cf. Ex. 19:1), to the 24th of the seventh month (Neh. 10:1ff. in connection with 9:1), or the beginning of the first month (11 Chron. 29:10; cf. 29:3). Joshua 24:25 and 11 Kings 11:17a; 23:3 do not give any fixed date. Such an act of commitment was at no time bound to a certain feast, therefore it was not bound to the Feast of Booths. Furthermore, it is impossible to derive (cf. Weiser) from Joshua 24 or the Psalms a connection between the commitment of the people and the proclamation of the divine salvatory acting (“*Heilshandeln*”) as the contents of the Feast of Booths. Kraus wrongly presupposes that the “Tent of Meeting” and the Ark were jointly used in an early Israelite cult (according to PC) and that the “Tent of Meeting” stood at some time in Shiloh (1 Sam. 1:7, 9, 24; 3:3, 15 against Joshua 18:1; 19:51 (both belonging to PC); 1 Sam.

2:22). On the other hand the basis of the “royal feast of Zion” (the parallelism between 11 Sam. 6 and 1 Kings 8 (see above) and the traditional historical connection between 11 Sam. 6 and 7) cannot be proved.

In the New Testament the Feast of Booths in John 7 is the background of Jesus’ appearance in Jerusalem. The fact that according to 7:37, Jesus “on the last [i.e., on the seventh] day of the feast” calls the ones who thirst to come to him is connected with the custom of pouring water from the first to the seventh day of the feast that was common in the time of Jesus. On the other hand, no motives of the Feast of Booths are presupposed in Mark 9:2ff.

[Ernst Kutsch]

Sukkot in Rabbinic Literature

Two special observances are mentioned in the Book of Leviticus (Lev. 23:39–43): that the people should dwell in booths for seven days, so “that your generations may know that I made the Children of Israel to dwell in booths, when I brought them out of the land of Egypt,” and that the people were to take on the first day “the fruit of goodly trees, branches of palm trees, and boughs of thick trees, and willows of the brook” to “rejoice before the Lord.” Rabbinic authorities named these the *arba’ah minim*, “the *four species” (of plant); the “fruit of goodly trees” is the citron (*etrog*); the “boughs of thick trees” are myrtle twigs (*hadasim*); the palm branch is the *lulav*; and the willows are *aravot*. In the Book of Nehemiah, it is said that from the days of Joshua to Nehemiah, the people had not dwelt in booths (Neh. 8:17), but in the same chapter it is stated: “Go forth unto the mount, and fetch olive branches, and branches of wild olive, and myrtle branches, and palm branches, and branches of thick trees, to make booths as it is written” (Neh. 8:15). There is no mention of olive branches in Leviticus and none of willows in Nehemiah. Moreover, from Nehemiah it would appear that the various plants were used to cover the booths (and this was, in fact, the interpretation of the *Saducees) whereas in the rabbinic tradition, the command to dwell in booths and the command to “take” the four species are treated as two separate precepts. In Zechariah’s vision all the nations of the world will come to Jerusalem in the new age to celebrate the festival of Sukkot (Zech. 14:16).

According to the rabbis, biblical law obliges every male Jew to take *arba’ah minim* in the hand on the first day of Sukkot (based on Lev. 23:40). The rabbis, however, understood the reference in the verse to “rejoice before the Lord your God seven days” to apply to the Temple, where the *arba’ah minim* had to be taken each day. After the destruction of the Temple, Johanan b. Zakkai ordained that wherever Jews celebrate Sukkot, the *arba’ah minim* should be taken in the hand for seven days in commemoration of the Temple (Suk. 3:12). The four species were to be held in the hand while *Hallel* (Ps. 113–8) is chanted and they were to be waved at the beginning of Psalm 118 and while reciting verse 25 of the Psalm (Suk. 3:9). The *lulav* was to be held in the right hand together with three *hadasim* and two *aravot* and the *etrog* in the left hand (Suk. 3:4). The *lulav*, the largest of the four species, gives its name to the

four so that the benediction is: “Blessed art Thou... Who has sanctified us with His commandments and commanded us to take the *lulav*.” (Suk. 46a; for laws concerning the *sukkah*, see **Sukkah*.)

Rabbinic authorities mention a special ceremony of “water-libation” during the seven days of Sukkot (Suk. 4:9). The Sadducees rejected the ceremony because they could find no support for it in Scripture (Suk. 4:9 and 48b; Jos., Ant. 13:372). The special rites of “water-libation,” accompanied by the playing of the flute, took place only on *ḥol ha-mo'ed* (except on the Sabbath), not on *yom tov*. The ceremony was known as Simḥat Bet ha-Sho'evah (“the rejoicing of the place of water-drawing”), based evidently on Isaiah 12:3 “Therefore with joy shall ye draw water out of the wells of salvation” (Suk. 5:1). There were said to be three huge golden candlesticks in the Temple court which were lit on these occasions “and there was not a courtyard in Jerusalem that did not reflect the light of the Bet ha-Sho'evah” (Suk. 5:2–3). “Men of piety and good works used to dance before them with burning torches in their hands, singing songs and praises” (Suk. 5:4). It was further said that whoever had not seen the Simḥat Bet ha-Sho'evah, had never witnessed real joy in his life (Suk. 5:1).

Laws and Customs of Sukkot

It is customary to use leaves or straw as the roof covering of the *sukkah*; the walls, however, may be of any material. The *sukkah* must be so well covered that there is more shade (i.e., covered space) than open space but the covering should not be so thick that even strong rain cannot penetrate. It must have at least three walls (the third need only be one handbreadth in width), and be beneath the open sky, not under a tree or inside a house. It should be decorated in accordance with the general rule that precepts be “adorned.” On the first night of the festival, a person is obliged to eat at least the equivalent of an olive's bulk of bread in the *sukkah* but not during the remainder of the festival. If meals are eaten, they must be partaken of in the *sukkah*. In modern times, in colder regions, many do not sleep in the *sukkah* since the rules of *sukkah* do not apply where there is severe discomfort. The pious have heated *sukkot* so that they can fulfill the obligation of sleeping there. Not only is a person not obliged to sleep or eat in the *sukkah* when rain penetrates, but he is forbidden to do so, on the grounds that it is indelicate and presumptuous to insist on carrying out a religious duty from which there is exemption. It is customary to build a *sukkah* adjacent to the synagogue for the benefit of congregants who have no *sukkah* of their own. In some Reform congregations, a symbolic *sukkah* is erected in the synagogue itself, even though it has no validity as a *sukkah* in Jewish law. A custom, originating with the school of Lurianic Kabbalah in the 16th century, is to “invite” each day one of the biblical heroes to the *sukkah*. These **Ushpizin* (“guests”) are: Abraham, Isaac, Jacob, Moses, Aaron, Joseph, and David; they correspond to the seven *Sefirot* of lovingkindness, power, beauty, victory, splendor, foundation, and sovereignty.

The *lulav* is held with the spine facing the holder. On the first day it is necessary for each person to take his own *arba'ah minim*, but on the other days of the festival they may be borrowed. *Arba'ah minim* purchased by the congregation can, however, be taken even on the first day, since each congregant has had a share in them. The *arba'ah minim* are waved while the *Hallel* is recited. They are waved first toward the east, then the south, the west, the north, above and below. Toward the end of the service in the synagogue, a scroll is taken from the Ark and the congregation walks in procession around the *bimah* holding the four species as a reminder of the processions around the altar in Temple times. In liturgy, Sukkot is referred to as *zeman simḥatenu* (“the season of our rejoicing”).

Hoshana Rabba

The seventh day of Sukkot is known as Hoshana Rabba (“the Great *Hoshana*”); the name is taken from the word *hoshana* (“Save, I Pray”) which is frequently used in the prayers of the day. The *hoshana* prayers for a good harvest in the year to come are recited during a procession seven times around the *bimah* after which five *aravot* bound together are beaten. In Temple times, *aravot* were carried around the altar seven times on this day (Suk. 4:5). In post-talmudic times, the day became a supplement to the *Day of Atonement, a special day of judgment on which God's decrees for the coming year are finalized. Consequently, it is the custom to spend the night of Hoshana Rabba in prayer and study, particularly of the Book of Deuteronomy.

Shemini Azeret

“On the eighth day ye shall have a solemn assembly (*azeret*): ye shall do no manner of servile work” (Num. 29:35). The eighth day of Sukkot is treated by the rabbis as a separate festival, *regel bifenei azmo*. The *Yizkor* (Memorial service) and a special prayer for rain (*Tefillat Geshem*) are recited during **Musaf* (in Israel before it), in the synagogue. The Book of Ecclesiastes is read in the synagogue on the intermediate Sabbath of Sukkot or, when there is no intermediate Sabbath, on this day. Among the reasons given for the reading are: Its melancholy nature which makes it appropriate reading for the autumn festival; and the verse: “Divide a portion into seven, yea, even into eight” (Eccles. 11:2) applied by the rabbis to the seven days of Sukkot and to this eighth day (see The Five *Scrolls).

Simḥat Torah

The last day of the festival is *Simḥat Torah (“rejoicing in the Torah”) which in Israel coincides with Shemini Azeret. On this day, the annual reading of the Torah from the scroll in the synagogue is concluded. Simḥat Torah is a post-talmudic festival, but was known in the geonic period. Over the years, a number of ceremonies have grown up around the day. The person called to the reading of the last portion of the Torah is known as *Ḥatan Torah* (“the bridegroom of Torah”). A new cycle of Torah reading is begun as soon as the old cycle is concluded. The person called to begin the new cycle is known as

Hatan Bereshit (“the bridegroom of Genesis”). The “bridegrooms” invite their fellow-congregants to a party in honor of the day (see *Bridegroom of the Law). On Simḥat Torah eve, and again during the day, all the scrolls are taken from the Ark and carried in procession around the synagogue while songs of praise are chanted. In many communities it is the custom to dance with the scrolls.

See *Simḥat Torah; **Hakkafot*; Festivals; **Hoshanot*.

[Louis Jacobs]

In Art

Elongated receptacles for the *lulav* are traditionally made of knotted palm leaves; silver receptacles are also found, sometimes similar to the short-lived palm leaf holder, but they are comparatively late. The use of containers for the *etrog* is also late. These most frequently take the form of a rectangular box ranging in style from the simple to the baroque; there are others, more unusual, shaped like the fruit and usually featuring a stem, the reason being that the stem of the *etrog* must remain intact throughout the duration of the festival. In Eastern Europe the *etrog* was very often kept in a silver box originally intended to be used for some secular object such as sugar.

Despite its austere associations, the *sukkah* has in traditional practice always been richly decorated. Different fruits hang from its roof of foliage, and very often there are pictures and tapestries on the wall. Some of these pictures are called *ushpizin*.

Some *sukkot* are collapsible. One of the best known originates from Fischbach in southern Germany and dates from the early 19th century. It is now in the Israel Museum. The structure is complete with numbered boards and beams, and its walls are elaborately decorated with paintings depicting the city of Jerusalem, the Temple, the Western Wall, the Levites, Moses on Mt. Sinai, Elijah in the valley of Kerith, and a secular scene of a man going hunting while his wife waits for him outside their house.

On the last day of Sukkot, which is also Simḥat Torah, the Scrolls of the Law are carried around the *bimah* and the members of the congregation wave gaily decorated flags, which have constituted a very attractive form of folk art.

SULAMITH, first German-language periodical for Jews. Founded in 1806 by David Fraenkel (1779–1856), the Dessau educator, and Joseph Wolf (1762–1826), and edited by the former, it carried the masthead, “A periodical for the advancement of culture and humanism among the Jewish nation”; by 1810, however, the word “Israelites” had replaced the words “Jewish nation.” Fraenkel viewed his creation as a continuation of the Koenigsberg **Me’assef* and fully supported *Mendelssohn and his program as interpreted by his radical followers. Through poems and edifying discourses, the paper advocated a return to a purified and tolerant Judaism. It endorsed the modern education of rabbis, emphasized preaching and sermons in the service, and supported the modern educational efforts made in *Seesen, *Frankfurt, and *Dessau, and the religious innovations introduced there. The list of subscribers (not confined to Germany alone) was relatively small, but it included financiers, manufacturers, and court advisers who were generally also leaders of their respective communities and advocates of the reforms proposed by *Sulamith*.

[Andreas Kennecke (2nd ed.)]

SULEIMAN I (the Magnificent), Ottoman sultan 1520–1566, called al-Qānūnī, “the Legislator,” “the Lawgiver,” as the Turks referred to him for his extensive legislative achievements in fiscal and feudal law. The epithet “the Magnificent” was given to him by the Europeans as a tribute to the fact that his rule coincided with the golden period of the *Ottoman Empire. The Jews called him “King Solomon,” not only because of his name, but also because of his wisdom and legislative activities. Suleiman conquered *Hungary and laid siege to Vienna in 1529. He annexed *Iraq and *Yemen and extended Ottoman control of North Africa from *Egypt to the borders of *Morocco. Generally he followed the positive system of his father and grandfather toward the Jews, but there were also some problems, caused especially by his tax policy and the pressure to get money from the Jewish population. The long years of his reign represented the pinnacle of Ottoman Jewry, and under his reign the Jewish communities achieved their highest political and economic status, and also benefited from the involvement of Jews in Suleiman’s court. In these years thousands of Jews, many of them *anusim* from Portugal, immigrated into the Ottoman Empire. The Jewish population in his days achieved records in communal, social, economic, and intellectual life. Under Suleiman’s rule the Jewish settlement in Erez Israel, especially in *Safed, had a strong presence. Like his father and grandfather, Suleiman used the *sürgün* system, and transferred Jewish residents from their native cities to other cities. In 1523 he transferred 150 Jewish families from *Salonika to *Rhodes just after its conquest in 1522. According

to one testimony, 150 of the richest and most respected Jewish landlords in Salonika (men, women, and children) were transferred at the command of Sultan Suleiman. He wanted to develop Rhodes and to establish it economically. The Jews were forced to remain on the island, but there were people who did succeed in escaping from there. Suleiman had followed this system after he captured Buda in 1526. Despite the fact that the Jews were among the few who had remained in Buda and had delivered the keys to the city into his hands, he still took the Jews with him, leading them off in boats as *sürgün*. The Jews were dispatched as *sürgün*, in the category of craftsmen and tradesmen. The Jews of Buda were settled in Sofia, Kavalla, and according to one source, in Salonika as well. Other Jews from Buda settled during Sultan Suleiman's reign in *Edirne (Adrianople), *Istanbul, and perhaps even in Safed. Joseph b. Solomon Ashkenazi, who handed Suleiman the keys to the city of Buda, was awarded, together with his descendants, tax exemption and special grants. The firman written by Suleiman to Ashkenazi was renewed during the Ottoman era by other sultans.

Generally Suleiman was strict, in accordance with the laws of *Islam and state legislation. Suleiman codified the regulations regarding the attire of his subjects, and during his reign the obligation of the Jews to preserve all *Omar regulations was discussed. The Jews had to obtain firmans from the sultan, permitting them to restore several synagogues in some cities. On the other hand, Suleiman did not enforce all of Omar's regulations. For example, Moses *Hamon, his physician and adviser, acquired the right to build a four-story house, and there are sources about Jews in Istanbul who felt free to dress in expensive wool and muslin, silky atlas and cotton cloaks and expensive shoes. Preserved in the Ottoman archives are dozens of firmans written by Suleiman dealing with the status of the Jews of Erez Israel and other communities. Suleiman ordered local Ottoman officials to change their attitude toward the Jewish population and to prevent pressure and extortion. Many of these orders were written in response to letters of complaint sent to Suleiman by the Jews.

A number of Jews held important posts during Suleiman's rule, some acting as diplomatic agents of the Ottoman Empire in European capitals. As one of his Jewish advisers, the aforementioned Moses Hamon accompanied the sultan on his travels and campaigns. Hamon also interceded on behalf of the Jews with the sultan. Following the Amasya blood libel in 1553, Hamon persuaded the sultan to issue a special decree prohibiting provincial judges from trying cases of blood libel and requiring them to refer such cases to the Imperial divan for trial. Hamon was in close contact with the party in the court led by Hurrem Sultan (Roxelana), Suleiman's favorite wife, and Grand Vizir Rustem Pasha. Hamon is also believed to have interceded with Suleiman to exert pressure on Venice to facilitate the departure of the Mendes-Nasi family for the Ottoman Empire. Moses Hamon was the man who influenced Suleiman to bring Gracia Mendes to Istanbul in 1552 and to protect her on the way from Italy to the Ottoman capital.

Hamon strived to assist Jews in the Ottoman Empire who requested his political help. But there is no proof that he took up the request of the impoverished clothiers of Salonika to intervene on their behalf at the court of the kadi of Istanbul. On the other hand, he did intervene in the quarrel in the community of Salonika about the activity of the wealthy Barukh.

Another Jew who had an important role in the state, especially in foreign affairs, was Don Joseph *Nasi. Deeply impressed by Nasi's erudition and financial and diplomatic talent, the sultan made him one of his confidants, and gave him his protection and several economic monopolies. In 1555 Suleiman, at Nasi's request, urged Pope Paul IV, who had burned a group of Portuguese *anusim* in Ancona, to release the Ottoman Jewish subjects who had been arrested. When the Nasi family declared that their agents, who were Ottoman subjects, were among the prisoners, Suleiman urged the pope to free them. Since some of the Ancona prisoners were Nasi's agents, they could be considered Ottoman subjects. The effort failed and the Jews were burned. Suleiman also made efforts in 1555 to release confiscated possessions of Jewish merchants in the papal territory. Suleiman protested, claiming that this act had caused many Jews of Salonika and Istanbul to go bankrupt, so they were unable to pay their taxes to the Ottoman treasury. In the last days of his reign, in 1666, Suleiman, under Jewish influence at his court, interceded concerning money interests of some Levantine Jewish merchants who owed debts to Venetian merchants. In the course of this crisis, Grand Vizier Mehmed Sokollu intervened, and a sultanic messenger was sent to Venice, with a special firman issued by Suleiman. This intervention was in favor of the Segura family, whose members were close to Joseph Nasi and possessed important businesses in the empire.

Finally the sultan gave Gracia Mendes, as a *multazima* during the years 1560–1566, the ruined city of *Tiberias and its environs, and permitted her to build the walls of the city. Details about this agreement are written in the orders of Suleiman to the governor of *Damascus and to other Ottoman officials. The chronicler Joseph ha-Kohen writes about the important role of Joseph Nasi in developing the city of Tiberias.

During Suleiman's rule the Jews of the Ottoman Empire made great cultural and economic progress. They developed the empire's commerce and succeeded in renting from the sultan the right to collect taxes, especially customs duties. Despite this, at the same time there were the first indications of financial pressure on the Jews by the authorities, and it required great efforts on the part of the Jews close to the court to keep such pressure to a minimum.

Suleiman had connections with two Jewish women called *Kiera (kira) who had good relations with the wives in the harem. When he ascended to the throne, in 1520/1521, he gave the Jewish kira, Stronillah, who served his mother Hafsa Sultan, an exemption from taxes for her and her descendants. This woman adopted Islam at the end of her life and received the name Fatma. We do not know if her conversion was under pressure by the sultan. Another kira, Esther *Handali, was cer-

tainly active in the harem before the death of Suleiman, and served Nur-Banu, the favorite concubine of Selim II, continuing her services to that woman during the reign of Selim II. Under Suleiman's reign the two kiras did not gain political influence but did have opportunities to become wealthy.

The Ottoman censuses organized by Sultan Suleiman have considerable importance for the history of the Jews in the 16th century. In Erez Israel four censuses were carried out in his time. Suleiman built the wall around the Old City of Jerusalem which still stands (see *Jerusalem, Under Ottoman Rule). This deed made a great impression throughout the Jewish Diaspora.

The attitude of Suleiman to the Jews of Salonika was described by many writers and historians. In 1537 Suleiman visited Salonika and granted the Jewish residents a decree exempting them from the obligation of being "celep" (that is, rich men chosen by the Ottoman officials to use their own money to buy thousands of sheep and to drive them to Istanbul, where they would sell the sheep to the butchers of the city at a fixed price, which often resulted in a financial loss) and from the obligation to be the operators of the silver mines in Siderokapisi, near Salonika. But in 1545 this document was burned in the Great Fire which broke out in Salonika, and the Jews lost these rights. For 20 years the Jews of Salonika sent emissaries to Istanbul to attempt to renew the old order, but their efforts failed. R. Moses *Almosnino did succeed in obtaining the reissue of the order.

The death of Suleiman in Transylvania (September 6, 1566) and his funeral (November 22, 1566) are described by the same Moses Almosnino, who was present in Istanbul at that time, in his book *History of the Ottoman Kings*. In a second work he described Sultan Suleiman's reign. The entire book is full of admiration for Suleiman's wisdom and statesmanship as well as his attitude toward his subjects, Muslim and non-Muslim. He calls Sultan Suleiman "Our great master Sultan Suleiman, may his memory live forever." The feelings of admiration toward Suleiman are noted also in the colophon of the response by R. Isaac Bar Sheshet published in Istanbul in 1556. The publisher, Shemuel ha-Levi, wrote at the time of the publication, "In Istanbul, the fine city, the city of a great king, a faithful shepherd, our master the Sultan Suleiman, may his splendor be exalted, and his honor grow, and in his times and ours Judea and Israel be redeemed, and may the redeemer come to Zion." Sultan Suleiman was the first Ottoman sultan in whose honor a special poem was written in Hebrew. This poem was written by the Istanbuli poet Shelomo ben Mazal Tov (d. 1545). The last book published in Istanbul during Suleiman's reign was *Sefer Yuhasin* by R. Abraham *Zacuto. It was printed in 1566, a few months before Suleiman's death during his campaign in Hungary, and the publisher expressed his wishes for the sultan: "...May the Lord bring him back here in peace without obstacles, and may the Lord cause all his enemies to be defeated by him ..."

[Abraham Haim / Leah Bornstein-Makovetsky (2nd ed.)]

SULEIMANIYA (al-), Kurd province in N.E. *Iraq in which there were about ten Jewish communities and village settlements. The most important communities were in Suleimaniya, Ghulambar, Zardiawa, Halabja, Halibrüy, Mazüran, Mirwa, Sürdash, Fishdal, and Franjawin. In 1827 the traveler David d'Beth Hillel found about 100 Jewish families in the provincial town of Suleimaniya. They owned a beautiful synagogue, most of them were merchants, others were craftsmen, and the community was led by a *nasi* who was the banker (**şarrāf bāshī*) of the pasha. During the 1890s there were 180 Jewish families in the town and the number of Jews who spoke Jebel (mountain) Aramaic increased at the beginning of the 20th century. In 1906 the number of Jews was about 1,500. According to official statistics of 1930, however, there were 47,510 inhabitants in the whole of the al-Suleimaniya region, of whom 900 were Aramaic-speaking Jews. In 1948 they all immigrated to Israel.

[Abraham Ben-Yaacob]

SULITA (Rom. *Sulița*), village in Botosani district, Moldavia, Romania. Founded in 1817, the town passed in 1840 to the ownership of the Moldavian ruler Prince Michael Sturza who was interested in developing the locality. In 1843 when a conflagration destroyed the town, the Jews there wished to leave

but the ruler helped them to reestablish their dwellings and exempted them from taxes for 25 years. Their community increased from 496 in 1831 to 1,831 (63% of the total population) in 1899; 80% of the Jews were occupied as craftsmen, and others were merchants. Some were occupied in sheep raising and marketing. The community had five prayer rooms, a *heder* and a primary school (founded in 1890 with the aid of the *Jewish Colonization Association), a ritual bath, and a hostel for poor travelers.

During the Peasants' Rebellion in 1907 nearly all the houses belonging to the Jews were pillaged and destroyed. By 1930 the Jewish population had decreased to 1,062, but their proportion in the population had increased to 76.1%. In 1932 the landlord of the estate on which the town was built brought a lawsuit to have the Jews expelled, but lost the case. In World War II the Jews in Sulița were deported to Botosani. A few returned after the war, numbering 380 in 1947, and 250 in 1950. In 1969 there were fewer than ten Jewish families in Sulița.

[Theodor Lavi]

SULIȚEANU, GHISELA (1920–2006), Romanian ethnomusicologist. She played a very special role within the discipline of Romanian ethnomusicology. She joined the Institute of Folklore immediately after its founding in 1949 and was one of its most assiduous workers until her retirement in 1979. However, she continued to work on her incredibly large musical collections from the field as well as on her theoretical ideas. She earned her Ph.D. at the University of Bucharest in 1974; her thesis was on the psychology of folk music, a quarter of which was published in 1980. She collected a great deal of Sephardi and Ashkenazi folk music as well as religious (synagogal) music. The only anthology of Jewish folk music in Romania was published by Emil Săculeț in the late 1950s, but Sulițeanu also worked on this anthology, even writing the foreword for the book's first edition (1956), which was destroyed – withdrawn from the market immediately after it was printed, then recycled as scrap paper. Despite fears and lack of institutional support, Sulițeanu was the only one among the remaining Jewish colleagues who continued to collect, transcribe, write, and publish on Jewish music. In later years she very much wanted to see the publication of her long commentary and huge transcription of the *Purimspiel Joseph and His Brothers* that she identified and recorded in Romania in the early 1970s. She also worked hard on a book devoted to her studies from 1960 to 1980 on the folk music of the Turkish and Tartar communities in southeastern Romania. Sulițeanu embraced many modern subjects and approaches, familiarizing local academic research with ideas and books coming from the West (she was the first, and actually the only one to plead for the introduction into Romania of the ideas of the famous international ethnomusicologists Lomax, Ellis, Merriam, and Blacking). Although she was allowed to travel

abroad and contribute papers read at various international congresses and conferences, she was never invited to teach in Romania at the university level. Thus, she shined individually and modestly without transforming or turning specifically Romanian scholarship toward the paradigms and perspectives she was capable of opening up. Among her numerous works are volumes devoted to the folk dance music in Muscel (1976), ballads in southeastern Romania – Brăila County (1980) – a huge lullaby anthology (1986), her *Psihologia folclorului muzical* ("Psychology of Folk Music"), and numerous academic essays found in various ethnomusicological journals, proceedings, and collective books.

[Marin Marian (2nd ed.)]

SULLAM, SARA COPPIO (1592?–1641), Italian poet. Born into a wealthy Venetian family – her father and uncle were benefactors of Leone *Modena and financed the printing of several of his works – Sara Sullam spent her life in Venice. She became known through the sonnets and letters she exchanged with Ansaldo Cebà, a Genoese nobleman and monk. This correspondence, which was conducted at a remarkably high literary level (somewhat resembling the platonic "game of love" then in vogue), arose from Cebà's publication of a verse epic on Queen Esther (1615–16). When this work came to Sara's attention it aroused her enthusiasm, and from 1618 to 1622 the two writers exchanged sonnets, letters, and gifts. Sara lavished praise on Cebà for choosing the tragic figure of Esther as a literary theme, thus departing from the conventional use of motifs drawn from classical Greek and Roman sources, and even declared her spiritual love for him. In reply, Cebà praised Sara who, "though a Jewess," revealed in her writings her thorough humanistic education and the purity of her soul. Cebà's replies were, however, primarily aimed at inducing her to convert. Shortly before his death, having despaired of these endeavors and in the hope of gaining merit for himself as a faithful Christian, he published the letters and poems which he had written to Sara (*53 Lettere di Ansaldo Cebà, scritte a Sara Copia Sullam e dedicate a Mare Antonio Doria*, Genoa, 1623). The letters written by Sara were, however, omitted from this publication.

In 1614 Sarah had married Jacob Sullam, a prominent member of the Venetian Jewish community, and she took an active part in the city's cultural life, her house serving as a meeting place for Jewish and Christian scholars. In 1621 Baldassar Bonifaccio (later Cardinal of Cape d'Istria) attacked her in a pamphlet, claiming that the poetess had denied the immortality of the soul, a belief shared by Jews and Christians alike. The religious liberty which Venetian Jewry then enjoyed enabled Sara to make public her reply in a witty and mordant manifesto refuting Bonifaccio's allegations. She also answered his charge with two caustic sonnets in which she declared her pride in her faith. In 1619 Leone Modena dedicated to Sara Coppio Sullam his Italian version of Salomon *Usque's tragedy *Esther*, and also composed her epitaph. A volume of her collected sonnets (ed. L. Modena) appeared in 1887.

[Joseph Baruch Sermoneta]

°**SULPICIOUS SEVERUS** (fourth century), Christian writer. Severus used the Bible and classical authors in his history of the world. He sees the siege of Jerusalem in 70 C.E. as divine retribution for the Jews' part in the crucifixion of Jesus. He disagrees with Josephus (perhaps following a lost passage from Tacitus) and blames Titus for the destruction of the Temple (*Chronica* 2:30).

[Jacob Petroff]

SULTANSKY, MORDECAI BEN JOSEPH (c. 1772–1862), Karaite scholar and writer. He was born in Lutsk, Volhynia. His father was a *hazzan* and a head of the *bet din* in Lutsk. Sultansky served as a teacher in his native town. At the age about 40, apparently after a large fire that broke out in 1813/4 in Lutsk, Sultansky moved to the Crimea where he functioned as *melammed* in *Chufut-Qaleh, and later as *hazzan* in *Yevpatoriya. At the end of his life he went to his son Isaac, who lived in Kherson, Ukraine. In Chufut-Qaleh Sultansky, together with A. Firkovich, was engaged in publishing Karaite books in the printing house of Eupatoria. Sultansky was widely read in both Karaite literature and such rabbinic authors as Maimonides, Abraham ibn Ezra, Judah Halevi, Bahya ibn Paquda, and Levi b. Gershom, and he also studied Talmud. The most important of his printed works is his *Zekher Zaddikim* (also entitled *Kizzur Aggadah*; ed. by S. Poznanski, 1920), a detailed account of Karaite history from its beginnings to the author's time. This book demonstrates anti-rabbinic tendencies and contains numerous incorrect historical data and other errors. Since it lacks a critical approach it is of little scientific value. This book is an example of modern Karaite historiography, which demonstrates at the same time an interest in modern research and manipulation of the facts for the ideological and political purposes of the community. His main concepts concerning Karaite history, presented in this book, were adopted by Sultansky's disciple A. *Firkovich before the latter started his public and research activity.

Sultansky also published a Hebrew grammar entitled *Petaḥ Tikvah* (pt. 1, Yevpatoriya, 1857); *Tetiv Da'at* (ibid., 1858), a philosophical defense of Karaism, containing many quotations from old rabbinic and modern Hebrew authors, and polemics against Rabbanism and Ḥasidism; *Sefer ha-Ta'am* (10s SPb A 132) – answers to questions posed by a counselor of Czar Alexander I about the origins of Karaites; *Palgei Mayyim*, a commentary on the Lamentations of Jeremiah (10s SPb B 429). Most of his works remained unpublished, among them *Or ha-Ganuz* (philosophical composition); *Hod Malkhut* – the treatise about Karaism and against Rabbanism which he planned to present to Czar Nicholas I, but for some unknown reason did not; *Yalkut Yosef* (commentaries on the Torah); *Mikhtam Sur me-Ra* (ethical composition). Sultansky also studied new

Hebrew written works belonging to the Haskalah. He was on a friendly terms with Peretz Smolenskin and Efraim Deinard.

[Golda Akhiezer (2nd ed.)]

SULZBACH, town in Bavaria, Germany (united with the village of Rosenberg in 1934). A Jewish settlement is first mentioned in 1305. It suffered during persecutions in 1337, and during the Black *Death persecutions of 1349 it was probably annihilated. A community was reestablished only 300 years later, in 1666, under the rule of Duke Christian-August of Pfalz-Sulzbach. During the early history of the new community its settlers were mainly *Schutz juden* with limited residence permits. After the first three families had arrived, a cemetery was consecrated. In the wake of the expulsion of Jews from Vienna in 1670 additional settlers came to the town, and in that year the community's first rabbi, Joseph Moses Hause, took office. By 1682 the community had an organized school under the direction of David Brot. In 1685 a liberal charter of privileges was granted, and was renewed in 1712. According to the charter the recognized head of the community acted as its representative in all negotiations with the authorities. At first, public prayers were held in a private house, but in 1687 a house was converted into a synagogue, and in 1737 a new synagogue was built. By 1699 there were 15 Jewish families in Sulzbach. Among the important personages of the community was Joseph b. Eliezer Oettingen, author of *Edut be-Yosef* (Sulzbach, 1741), a Bible commentary. The Schwabacher family, its members noted for their work as court factors and merchants, also lived in Sulzbach in the 18th century. In 1745 there were 22 families in the community, in 1829, 65. The community possessed a *Memorbuch*, of importance in tracing its history and development. The synagogue was destroyed by fire in 1822 and another was built in 1824. An elementary school for Jewish children was founded in 1825, and functioned until 1923. In accordance with the *Toleranzpatent of 1813 there were to be no more than 65 families in the town, and that number was roughly maintained until the middle of the 19th century when the Jewish population was gradually reduced by emigration. By 1933 there were only eight Jews living in Sulzbach.

Hebrew Printing

The inclination of Duke Christian-August toward mysticism and Kabbalah aroused his interest in the Hebrew language and led him to grant an authorization in 1669 for the founding of a Hebrew press in his town. As a result Sulzbach became renowned in the Jewish world. The first of the Jewish printers was Isaac bar Judah Yudeh Katz of Prague. In 1684 the ownership of his press passed to the Bloch family, and from 1699 until 1851, the year the press shut down, it was held by the Frankel-Arnstein family. The Sulzbach press printed 702 works, which consisted mostly of *siddurim*, *mahzorim*, Bibles, three editions of the Talmud, and popular *musar* (ethical) literature

in Judeo-German. The press first achieved fame as a result of its excellent edition of the Zohar, printed in 1684. The half-folio edition of the *mahzor enjoyed a wide circulation ever since 1699 when it first appeared; there was hardly a community in southern Germany ("Ashkenazi ritual") where it was not employed as *mahzor-kahal* (community *mahzor*) by the *hazzan*. The publication of the Talmud in Sulzbach was the cause of a serious dispute with the Proops *brothers of Amsterdam. The demise of the press was due partly to the prohibition on importing Hebrew books into the Austrian Empire as well as to the excellent quality of work produced by Wolf *Heidenheim's press in *Roedelheim, with which the Sulzbach press could not compete.

SULZBACH, ABRAHAM (1838–1925), educator and scholar. Sulzbach, born in Hamburg, studied rabbinics with the local chief rabbi (A. Stern), S.B. *Bamberger in Wuerzburg, and M. Landsberg in Berlin; in Wuerzburg and Berlin he also attended university, studying history and philology. From 1862 to 1912 he taught German, history, geography and talmudic subjects at the high school (*Realschule der Israelitischen Religionsgesellschaft*) that S.R. *Hirsch had established in Frankfurt.

Among his published works are *Renan und der Juidismus* (1867); *Dichterklaenge aus Spaniens besseren Tagen* (1873, 1903²); *Die religioese und weltliche Poesie der Juden vom 7. bis zum 16. Jahrhundert* (1893; later in J. Winter and A. Wunsche, *Die juedische Literatur seit Abschluss des Kanons*, vol. 3); *Bilder aus der juedischen Vergangenheit* (1914, 1923²); *Die Ethik des Judentums* (1923; extracts from R. Judah he-Hasid, *Sefer Hasidim*); and he edited an anonymous commentary on Job (1911). Sulzbach also translated the book of Esther (*Das Buch Esther*, 1904³; 1906⁴; incl. the evening prayer for Purim) and the *Targum Shenit* of Esther (1920) into German and edited some prayer books with translation, such as *Sefer ha-Hayyim* (1905⁸, 1930¹⁰; repr. 1983) and *Koheleth Schelomo* (1908).

SULZBACH, WALTER (1889–1969), sociologist. Sulzbach was born in Frankfurt and was a professor at the university there until the Hitler regime. In 1937 he immigrated to the United States, where he assumed various teaching and research positions. Sulzbach's writings are chiefly concerned with the sociology of nations, social classes, and political parties. He conceived of a nation entirely as a political unit, disregarding other criteria such as language and ethnicity. His position regarding imperialism and social classes was Marxist with the addition of socio-psychological components. It

was from this point of departure that he wrote *Vorurteile und Instinkte; Eine Untersuchung ueber die Rassenabstossung und den Anti-semitismus* (1923). His most important contribution was an article on the concept of the nation, "*Begriff und Wesen der Nation*," in *Dioskuren*, 2 (1923). He also wrote *Nationales Gemeinschaftsgefuehl und wirtschaftliches Interesse* (1929) and *National Consciousness* (1943).

SULZBERGER, ARTHUR HAYS (1891–1968), U.S. publisher of *The New York Times*. Sulzberger, who was born in New York, married Iphigene B. Ochs, the only child of Adolph S. *Ochs, publisher of *The New York Times*, in 1917. He joined the staff of the paper in 1919, after his release from service in World War I as a lieutenant in the field artillery. Given wide-ranging training and responsibilities in all areas of the paper's operation, he was named publisher of the paper and president of The New York Times Co. when Ochs died in 1935. Under his direction, the paper was successful not only in perpetuating Ochs's high traditions of comprehensive, responsible, and impersonal journalism, but also in extending the scope and influence of its coverage through increased attention to interpretative reporting, news of consequence in political and economic affairs, and the world of culture and the arts. As the newspaper's top executive, he also played a dominant role in its affiliated operations, including: the *Chattanooga Times*, the paper published by Ochs at the time he went to New York; the Spruce Falls Power and Paper Co. Ltd., of Canada, the largest newsprint producer in the world; and Interstate Broadcasting Co.

As his father-in-law had done, he too trained a son-in-law to succeed him, Orvil Eugene Dryfoos (1912–1963), who had married his daughter Marian. When Sulzberger went into semi-retirement in 1961, he continued as chairman of the board but turned over day-to-day direction of the paper to Dryfoos as publisher. When Dryfoos died suddenly (in 1963), he was succeeded by ARTHUR OCHS SULZBERGER (1926–), son of Arthur Hays Sulzberger. Sulzberger had joined *The New York Times* staff after service with the U.S. Marines. He devoted several years to gaining extensive experience in both its editorial and business operations. After serving as a cub reporter on *The New York Times*, he worked for a year as a reporter for *The Milwaukee Journal*, and then returned to *The New York Times* for assignments on the foreign news desk, as a correspondent in London, Paris, and Rome. He returned to New York in 1955 as assistant to the publisher. He was named assistant treasurer in 1958, and was president and publisher from 1963 until 1992 and served as chairman until 1997. In 1972 he won the Pulitzer Prize for publishing *The Pentagon Papers*. In 2005 he received the Katharine Graham Lifetime Achievement Award from the Newspaper Association of America. His son ARTHUR OCHS SULZBERGER JR. (1951–) became the publisher of *The New York Times* in 1992 and chairman

in 1997. Sulzberger's first cousin CYRUS LEO SULZBERGER (1912–1993) was a prominent *New York Times* foreign affairs columnist. He wrote a large number of books, among them *Seven Continents and Forty Years: A Concentration of Memoirs* (with A. Malraux, 1977).

[Irving Rosenthal / Ruth Beloff (2nd ed.)]

SULZBERGER, MAYER (1843–1923), U.S. jurist and communal leader. He was born at Heidelberg, Germany, and was to remember the cries of the mobs that were part of the anti-Jewish movement that followed the Revolution of 1848. His father, a *hazzan* and teacher, immigrated to the United States in 1849 and settled in Philadelphia. Sulzberger studied law in the office of Moses A. *Dropsie, was admitted to the bar in 1865, and became one of the leading lawyers of Philadelphia. He was elected a judge of the Court of Common Pleas in 1895. In 1909 President William Howard Taft wished to appoint him U.S. ambassador to Turkey but Sulzberger preferred to remain a judge. He served until 1915 when, by this time president judge of the Court of Common Pleas, he refused to run for reelection so that he might devote himself to his Hebrew studies. However, he was a member of a commission to revise the constitution of Pennsylvania in 1920. As a judge he impressed the lawyers practicing before him not only by his legal learning but by his impatience with words that lacked substance. He regarded judicial precedents as “more or less tentative hypotheses,” to be followed only when they were socially serviceable and to be ignored or set aside when they led to conclusions at war with new social needs.

In 1906 he helped organize, and was the first president of, the *American Jewish Committee. As its president, he helped bring about the abrogation of the commercial treaty between the United States and Russia because of Russia's refusal to recognize U.S. passports when issued to Jewish citizens. He was also a founder and the first president of the Young Men's Hebrew Association of Philadelphia, a vice president of the Philadelphia Jewish Hospital, which his father had helped found, and a trustee of the Baron de Hirsch Fund. Although he believed in making Erez Israel a place of refuge and a home for Jews, he was not a Zionist and did not believe in a Jewish state.

While still in his early twenties, Sulzberger had helped Isaac *Leeser in the publication of *The Occident and American Jewish Advocate* and, after Leeser's death in 1868, he continued its publication for a year. He was one of the founders of the *Jewish Publication Society of America and, for many years, chairman of its Publication Committee. He helped reorganize, in 1901, the *Jewish Theological Seminary of America in New York and was a governor of *Dropsie College in Philadelphia. He had been secretary of the board of trustees of Maimonides College, the first Jewish seminary in the United States (1867–73), and was a trustee of *Gratz College from its

foundation. He was also one of the original members of the *American Jewish Historical Society. Among his other communal activities was that of trustee of the Jefferson Medical College. He collected an important library of Hebrew books and manuscripts and in 1902 presented this to the Jewish Theological Seminary as the nucleus of its library. Sulzberger lectured on Hebrew jurisprudence and government at Dropsie College and at the Jewish Theological Seminary.

The lectures, based principally on a study of the text of the Bible, were published as *The Am Ha-Aretz – the Ancient Hebrew Parliament, a Chapter in the Constitutional History of Ancient Israel* (1909); *The Policy of the Ancient Hebrews* (1912); *The Ancient Hebrew Law of Homicide* (1915); and *The Status of Labor in Ancient Israel* (1923). His conclusions in the lectures (so he wrote in the preface to the last of these publications) may at first sight seem “bizarre” and “will scarcely meet with ready acceptance since they depart from notions very generally entertained,” but their object was to stimulate the students to follow them “without preconceived opinions,” and also to stimulate research. It was in this last volume that he pointed out that “a great movement for the protection and improvement of the laboring mass was initiated in Israel more than three thousand years ago, and continued to promote its life and literature, becoming indeed a part of the mental condition of the people.”

SULZER, SOLOMON (1804–1890), Austrian cantor and reformer of liturgical music. He was cantor in his native town of Hohenems, Tyrol, at the age of 16, and from 1826 officiated at the New Synagogue in Vienna. His singing won the admiration of Schubert and Liszt. Sulzer adopted a path of moderate reform, for which he won the support of the head of the community, Isaac Noah *Mannheimer. He sought to “renovate” traditional *hazzanut* by taking into consideration the musical trends of the time. Sulzer applied his principles in his great work *Shir Ziyyon* (Song of Zion), in the first part of which, published in 1840, he purified many melodies of their unbecoming additions and trimmings. He allowed his choral music, however, to be dominated by the style of Christian church music of his time, even using Christian compositions. The second part, published in 1866, included recitatives in the ancient Polish style, taken from Polish or Russian cantors, with improvements.

Though his innovations aroused little sympathy among the cantors of Eastern Europe, they were not considered as foreign or “un-Jewish,” like those of the Reform movement,

and they were widely adopted in modern synagogues between 1835 and 1876. Actually, as was later to become evident, Sulzer offered his community only a compromise between his own musical compositions and prevailing practice. He himself would have preferred complete reform. In a memorandum written in 1876, he suggested the introduction of an organ, curtailment of the liturgy, the use of German hymns, and even abolition of the traditional cantillation of the Torah. His approach to *hazzanut* was that of a professional musician seeking a complete break with the old style. This brought him criticism from Eastern European Jewry or only partial acceptance. Nevertheless, Sulzer restored splendor to the prayer service and enjoyed wide respect in Central Europe.

A new scientific edition of Sulzer's *Shir Ziyon* appeared in Vienna in the series *Denkmaeler der Tonkunst in Oesterreich*.

SUMAC (mishnaic Heb. סִמָּךְ), the Arabic name for the *Rhus coriaria*. This shrub or low tree, belonging to the family Anacardiaceae, which includes the *terebinth and the *pistachio, grows wild in the groves of Israel. The tree is dioecious, with pinnate leaves containing a high proportion of tannin which is used in the manufacture of leather, whence its Hebrew name *og ha-bursaka'im* ("tanner's sumac"). The female trees bear reddish fruits (in Ar. *sumac* means "red") arranged in dense clusters. The fruits are shaped like lentils, and are hairy with an acrid taste. It is used as a spice by some Oriental communities. It was cultivated in mishnaic times and is therefore reckoned with those fruits to which the law of **pe'ah* applied (Pe'ah 1:5), but in Judea where it grew wild abundantly it was not very highly valued and a lenient attitude was adopted about *pe'ah* (Dem. 1:1).

SUMBAL (Sunbal), SAMUEL (d. 1782), Moroccan diplomat. After a prosperous career in trade, Sumbal entered the service of the sultan of *Morocco as an interpreter and confidential adviser. Ultimately, he was responsible for the conduct of the sultan's foreign policy and was the Moroccan representative in all negotiations with the envoys of the European states. In recognition of his potential utility, the Spanish government granted him a yearly allowance. In 1751 he was sent on a special mission to *Denmark as ambassador.

Sumbal occupied an important position in the life of the Moroccan Jewish communities and was recognized as their **nagid*. In 1780 he fell into disgrace on the charge of smuggling currency abroad, but escaped from prison and made his way

to Gibraltar. There he helped to provision the fortress during the siege which was in progress. He subsequently returned to Morocco, and died in *Tangier.

Sumbal's son JOSEPH HAYYIM SUMBAL (d. 1804) then went to Denmark, where he successfully asserted his father's financial claims. In 1787 he created a great stir by proclaiming a new syncretistic religion. Later he settled in *London where by his eccentricity he attracted great attention. In 1794 he was appointed Moroccan ambassador to the English court. In 1797 he married a well-known actress and journalist, Mary Wells, who converted to Judaism. Subsequently, they quarreled and separated, as she recorded in lurid detail in her autobiography. He ultimately settled in Altona (Hamburg), where he died.

SUMER, SUMERIANS.

Prehistory

Sumer (Akk. *Šumer* i Sumerian *Kengir*) is the earliest known name of the land corresponding roughly to the southern half of Iraq. It was first settled about 5000 B.C.E. by agriculturists from the hilly regions to the north and/or east, known as Ubaidians because their remains were first uncovered in al-Ubaid, a tell near Ur. Nothing is known about their language except for traces left in a number of geographical names and words, relating to agriculture and technology, borrowed by the Sumerians. Following the settlement of the land by the Ubaidians, nomadic Semites from the north and west infiltrated the land as settlers and conquerors. The Sumerians themselves did not arrive until about 3500 B.C.E. from their original home, which may have been in the region of the Caspian Sea. Sumerian civilization, therefore, is a product of the ethnic and cultural fusion of Ubaidians, Semites, and Sumerians; it is designated as Sumerian because at the beginning of recorded history it was the Sumerian language and ethos that prevailed throughout the land.

History

History of a legendary character begins in Sumer in the first half of the third millennium with the three partly contemporaneous dynasties of Kish, Erech (Uruk), and Ur. Some of the outstanding rulers of this era were: Etana of Kish, a figure of legendary fame; Enmerkar, Lugalbanda, and Gilgamesh of Erech, three heroic figures celebrated in a cycle of epic tales; and Mes-anne-padda of Ur, the first ruler from whom we have contemporary inscriptions. The three-cornered struggle among these cities so weakened Sumer that for a century or so it came under the domination of the Elamite people to the east. It recovered during the reign of Lugal-anne-mundu of Adab (c. 2500), who is reported to have controlled not only Sumer but some of the neighboring lands as well.

The Near East in the third millennium B.C.E., showing Sumer lying between the Tigris and Euphrates rivers. Boundaries of modern states are outlined in gray. After Y. Aharoni, Carta's Atlas of the Bible, Jerusalem, 1964.

Authentic history, recorded on significant contemporary documents, begins with the second half of the third millennium. The earliest-known ruler from this period is Mesilim (c. 2475), noted for arbitrating a dispute between the two rival city states, Lagash and Umma. In the century that followed, Lagash played a dominant political role in Sumer; under one of its rulers, Eannatum (c. 2425), it became for a brief period the capital of Sumer. Its last ruler, Urukagina (c. 2360), was history's first-known social reformer; the documents from his reign record a sweeping reform of a whole series of bureaucratic abuses and the restoration of "freedom" to the citizens. Urukagina was defeated by Lugal-zagge-si (c. 2350) of Umma, an ambitious king who moved his capital to Erech and succeeded in making himself ruler of all Sumer. By this time, however, Semites from the north and west had infiltrated northern Sumer, and one of their leaders, Sargon (c. 2325), defeated Lugal-zagge-si and conquered all Sumer, and indeed much of ancient western Asia. Later generations claimed that his power extended even to Egypt and India. Sargon built a new capital, Agade (biblical, Akkad), and following his reign the land came to be known as "Sumer and Akkad."

The Dynasty of Akkad endured for over a century. Toward the end of its rule, Sumer suffered a humiliating invasion by the Gutians from the Zagros hills, and thus came un-

der Gutian domination for close to a century (c. 2200–2100). Throughout much of this period, however, the city of Lagash seemed to flourish, and one of its rulers, Gudea (c. 2140), whose statues and inscriptions have made him one of the figures best known to the modern world, exercised considerable power in spite of the Gutian overlordship.

Sumer was finally liberated from its Gutian yoke and, under the Third Dynasty of Ur, founded by Ur-Nammu (c. 2100), a king noted as the promulgator of the first-known law code, it experienced a remarkable renaissance. Ur-Nammu's son, Shulgi (c. 2080), was one of the great monarchs of the ancient world. A rare combination of statesman, soldier, administrator, and patron of music and literature, he founded Sumer's two leading academies at Nippur and Ur. The last of the dynasty, the pious, pathetic Ibbi-Sin (c. 2015), was a victim of infiltration by the nomadic Amurru from the west, of unrelenting military attacks by the Elamites from the east, and of traitorous intrigues by his own governors and generals. Ur was finally destroyed and Ibbi-Sin carried off to Elam, a calamity long mourned by the poets of Sumer in dolorous laments. Following the destruction of Ur, Ishbi-Irra, one of Ibbi-Sin's traitorous generals, established a dynasty in Isin (c. 2000) that lasted for some 200 years. Isin was destroyed by Rim-Sin (c. 1800), a king of neighboring Larsa, who, in turn, was subjugated by Hammurapi (c. 1750) of Babylon. With the reign of

Hammurapi, the history of Sumer comes to an end, and that of Babylonia begins.

Society

Sumerian society was predominantly urban in character; large and small cities dotted the landscape and shaped its social, political, and economic life. Physically the city was rather drab and unattractive. Streets were narrow, crooked, and winding; they were unpaved, uncleaned, and unsanitary. Houses were thick-walled mudbrick compounds of several rooms, with here and there a more elegant two-story home. But the city had its broad boulevards, busy bazaar, and tempting public square. Above all, there was the sacred precinct with its monumental temple and sky-reaching ziggurat. The citizen took great pride in his city and loved it dearly, as is manifest from the heart-breaking laments in which the poets bewailed its destruction.

The population of the city, which may have varied from 10,000 to 50,000, consisted of free citizens, serf-like clients, and foreign and native slaves. Some of the free citizens were high temple functionaries, important palace officials, and rich landowners; together these formed a kind of noble class. The majority of free citizens were farmers and fishermen, artisans and craftsmen, merchants and scribes. The serf-like clients were dependents of the temple, palace, and rich estates; they were usually given small plots of land for temporary possession, as well as rations of food and wool. Slaves were the property of their owners, but had certain legal rights: they could borrow money, engage in business, and buy their freedom.

The basic unit of society was the family. Marriage was arranged by the parents, and the betrothal, often accompanied by a written contract, was legally recognized as soon as the groom presented a bridal gift to the bride's father. Women had high legal standing: they could hold property, engage in business, and qualify as witnesses. But the husband could divorce his wife on relatively slight grounds and could marry a second wife if the first was childless. Children were under the absolute authority of the parents and could be disinherited or even sold into slavery.

Politically, the cities were governed by a viceroy who was subject to the king. Kingship was hereditary, but usurpers were frequent, and capitals changed from time to time. The king's word and authority were supreme, but he was not an arbitrary despot; as intermediary between the people and their gods, it was his responsibility to insure the prosperity and well-being of the land by leadership in war, the upkeep of the irrigation system, the building and restoration of the temples and their ziggurats, and the preservation and promotion of law and justice. There were also city assemblies of free citizens which originally wielded considerable power, but later became consultative bodies.

Religion

The Sumerians believed that the universe and everything in it were created by four deities: the heaven-god An, the air-god Enlil, the water-god Enki, and the mother-goddess Ninhursag.

To help them operate the universe effectively, these four deities, with Enlil as their leader, gave birth to, or "fashioned," a large number of lesser gods and goddesses, and placed them in charge of its various components and elements. All the gods were anthropomorphic and functioned in accordance with duly prescribed laws and regulations; though originally immortal, they suffered death if they over-stepped their bounds. Man was created for the sole purpose of serving the gods and supplying them with food and shelter, hence the building of temples and the offering of sacrifices were man's prime duties. Sumerian religion, therefore, was dominated by priest-conducted rites and rituals; the most important of these was the New Year sacred marriage rite celebrating the mating of the king with the goddess of love and procreation. Ethically, the Sumerians cherished all the generally accepted virtues. But sin and evil, suffering, and misfortune were, they believed, also divinely planned and inevitable; hence each family had its personal god to intercede for them in time of misfortune and need. Worst of all, death and descent to the dark, dreary netherworld were man's ultimate lot, and life on earth was therefore man's most treasured possession.

The Written Word

Sumer's most significant contribution to civilization was the development of the cuneiform system of writing into an effective tool of communication. It began about 3000 B.C.E. as a crude pictographic script used for simple administrative memoranda, in which the signs represented ideograms or logograms; it ended up a thousand years later as a flexible phonetic syllabary adaptable to every kind of writing: legal, historical, epistolary, and literary. To teach and disseminate it, schools were established throughout the land, and thus formal education came into being. For purposes of instruction, the schoolmen developed a curriculum consisting of copying and memorizing especially prepared "textbooks" inscribed with long lists of words and phrases that covered every field of knowledge available to them: linguistic, botanical, zoological, geographical, mineralogical, and artifactual. An important part of the curriculum was mathematics, since no scribe could function as a competent secretary, accountant, or administrator without a thorough knowledge of the sexagesimal system of notation current throughout the land; the students had to copy, study, and memorize scores of tablets involving all sorts of mathematical operations, as well as numerous problem texts involving their practical application.

See also *Mesopotamia.

Biblical Echoes

There are a number of biblical words that go back in all probability to Sumerian origin: *anak* (Sumerian *naga*), "tin"; *eden* (*edin*), "Eden"; *gan* (*gan*), "garden"; *hekhhal* (*egal*), "palace"; *hiddeqel* (*idiglat*), "Tigris"; *ikkar* (*engar*), "farmer"; *kisse* (*guza*), "chair"; *malah* (*malah*), "sailor"; *perat* (*buranum*), "Euphrates"; *shir* (*sir*), "song"; *tammuz* (*dumuzi*), "Tammuz"; *tel* (*dul*), "mound"; *tifsar* (*dubsar*), "scribe"; *tomer* (*nimbar*), "palm-tree." Far more significant are the literary motifs,

themes, patterns, and ideas that go back to Sumerian prototypes: the existence of a primeval sea; the separation of heaven and earth; the creation of man from clay imbued with the breath of life; the creative power of the divine word; several “paradise” motifs; the Flood story; the Cain-Abel rivalry; the Tower of Babel and confusion of tongues; the notion of a personal, family god; divine retribution and national catastrophe; plagues as divine punishment; the “Job” motif of suffering and submission; the nature of death and the netherworld dreams as foretokens of the building of temples. Not a few of the biblical laws go back to Sumerian origins, and in such books as Psalms, Proverbs, Lamentations, and the Song of Songs there are echoes of the corresponding Sumerian literary genres. Sumerian influence on the Hebrews came indirectly through the Canaanites, Assyrians, and Babylonians, although to judge from the Abraham story and the often suggested Ḥabiru-Hebrew equation, the distant forefathers of the biblical Hebrews may have had some direct contact with the Sumerians. The Biblical word for Sumer is generally assumed to be Shinar (Heb. שִׁנְאָר; Gen. 10:10). It has also been suggested that Shinar represents the cuneiform *šum(er)-ur(i)*, i.e., Sumer and Akkad, and that the biblical equivalent of Sumer is Shem (from cuneiform *šum(er)*); hence the *anshe ha-shem* of the days of yore in Genesis 6:4.

[Samuel Noah Kramer]

SUMMERS, LAWRENCE H. (1954–) U.S. economist, secretary of the Treasury, 27th president of Harvard University. Born in New Haven, Connecticut, Summers is the son of two noted economists, Robert and Anita Summers, and nephew of two Nobel laureates. His father’s brother, Paul *Samuelson, won the Nobel prize in economics in 1970, and his mother’s brother, Kenneth *Arrow, won the same prize two years later.

Larry Summers grew up in Penn Valley, Pennsylvania, in the Philadelphia suburbs, and attended the Lower Merion public schools. At 16 he was accepted for admission to Massachusetts Institute of Technology, where he majored in economics and was an active member of the debate team before graduating in 1975. For graduate school, Summers moved down the Charles River to Harvard University and studied under renowned economist Martin Feldstein. After completing his dissertation, “An Asset-Price Approach to Capital Income Taxation,” Summers received his Ph.D. in economics in 1982. He had already been a member of the economics faculty at MIT for three years, where he had been named an assistant professor in 1979 and an associate professor in 1982.

Upon receipt of his Ph.D., Summers went to Washington to serve as a domestic policy economist for the President’s Council of Economic Advisors. One year later, Summers, then

28, returned to Harvard as the youngest member of the economics faculty to be granted tenure.

Summers’ research at Harvard was broad ranging, with many of his most important contributions coming in the fields of public finance, labor economics, financial economics, and macroeconomics. He also produced research on topics in international economics, developmental economics, economic demography, and economic history.

In 1987, Summers was named Nathaniel Ropes Professor of Political Economy at Harvard and was the first social scientist to win the Congressionally established Alan T. Waterman Award from the National Science Foundation. In 1993, Summers received the prestigious John Bates Clark Medal from the American Economic Association, an award given every two years to the outstanding American economist under the age of 40.

Summers returned to Washington in 1991, serving this time as vice president of development economics and chief economist at the World Bank. Summers guided the Bank’s research, statistics, and training programs, and created strategies for assisting developing nations and the Bank’s global loans. Among his highest profile efforts was a publication that demonstrated the tremendous return on investing in educating girls in developing countries.

Two years later, President Clinton appointed Summers undersecretary of the Treasury for International Affairs, under then-Secretary Lloyd Bentsen, giving Summers authority over building and executing U.S. international economic policy. In 1995, incoming Secretary Robert Rubin promoted Summers to the Treasury Department’s number two post, deputy secretary of the Treasury, where he played a high-profile role handling many of the United States’ economic, financial, and tax matters on the domestic and global stages. At this time, Summers worked closely with Alan Greenspan, chairman of the Federal Reserve, formulating governmental responses to several financial crises in developing nations around the world.

When Rubin announced his resignation in 1999, President Clinton chose Summers to be the next secretary of the Treasury, and the Senate confirmed him on July 2. Summers remained Treasury secretary until President Clinton’s second term ended in January 2001. As secretary, Summers served as the president’s chief financial advisor. He managed a diverse department with a workforce of almost 150,000 employees spread across over a dozen bureaus and offices in such areas as trade policy, law enforcement, and currency production.

Summers’ efforts as secretary of the Treasury include helping build an enormous pay down of U.S. national debt, managing the enactment of the most sweeping financial deregulation in 60 years, reforming the International Monetary Fund and international financial architecture as a whole, and securing debt relief for the world’s poorest nations. At the conclusion of his term, Summers received the department’s highest honor, the Alexander Hamilton Medal, named after the first secretary of the Treasury.

After leaving Treasury, Summers served as the Arthur Okun Distinguished Fellow in Economics, Globalization, and Governance at the Washington-based think-tank, the Brookings Institution. His work there continued to focus on international financial crises.

In the spring of 2001, after a nine-month search to replace outgoing President Neil Rudenstine, the President and Fellows of Harvard College announced their election of Summers, then 47, as the 27th president of Harvard University. Summers officially assumed the office on July 1, 2001. His tenure as president was marked by such university priorities as enhancing financial aid for students from families of modest means, expanding opportunities for students to study and work outside the United States, encouraging a comprehensive review and renewal of the undergraduate academic experience, spurring a range of interdisciplinary initiatives in the sciences as well as other academic domains, and planning for a major physical expansion of the Harvard campus. His address focusing attention on antisemitism in the world from the Chapel of Harvard University generated international attention. Summers began these well-publicized remarks by expressing astonishment that the world situation had so changed that he would have to speak forthrightly of this problem. Summers resigned the Harvard presidency in March 2006.

[Sheryl Sandberg (2nd ed.)]

SUMPTUARY LAWS, enactments issued by communities against luxury and ostentation; frequently combined with a distinctly class aim – that each should dress according to his standing in the community – allied to the wish to help people withstand the temptation of conspicuous consumption beyond their means. The sumptuary laws were also designed to put an end to anti-Jewish agitations stemming from accusations of ostentatious living. **Takkanot* of a sumptuary nature referred either to dress and jewelry or to the size of banquets held at weddings and circumcision ceremonies and the number of guests permitted to attend them: e.g., the Rhenish *synods of 1202–23 limited banquets to those who participated in the religious ceremony. A conference held in 1418 at Forlì, Italy, limited the number of guests who could be invited to a wedding to 20 men, ten women, five girls, and all the relatives up to second cousins. They also permitted the wearing of fur-lined jackets, in any color other than black, provided that the sleeves and the garments themselves were not fringed with silk. The Castilian synod convened at Valladolid in 1432 forbade Jews aged 15 and over to “wear any cloak of gold thread, olive-colored material, or silk, or any cloak trimmed” with these materials on occasions other than “a time of festivity or at a reception of a lord or a lady, or at balls or similar social occasions.” In the 16th and 17th centuries the communities of Salonika, Mantua, and Rome issued periodic anti-luxury regulations. The Cracow community ordinances of 1595 contained paragraphs on sumptuary laws. The Lithuanian Council (see *Councils of the Lands) in 1637, referring to its previous regulations which had been wholly disregarded, empowered

local rabbis to decide how many guests might be invited to festive meals. The Polish Council of Four Lands in 1607 enjoined Jews from wearing gentile apparel “in order that the Jews be distinguished by their dress.” In 1659 the number of invited guests at a circumcision was scaled according to the host’s means: “a person who pays two zlotys in taxes may invite 15 persons, four zlotys 20 persons, six zlotys 25 persons, including the rabbi, the preacher, the cantor, and the beadle.” In Moravia the cost of wedding clothes was determined by the amount of the dowry. In Carpentras, the papal possession in southeastern France, sumptuary regulations were adopted in three stages (1712–40). In many places these statutes were honored more in the breach than in the observance.

[Isaac Levitats]

SUN (Heb., שֶׁשׁ; poetical form שֶׁמֶשׁ; Isa. 24:23; 30:26; Song 6:10, et al.). A deity for Israel’s neighbors, the sun is for Israel “the greater light to rule the day”, created on the fourth day of creation (Gen. 1:16). In Joseph’s dream, the sun and the moon personify his parents (Gen. 37:9–10). In Joshua 10:12–14, the sun is said to have stood still to give the Israelites time to defeat the Amorites.

Cult

In the Bible, the sun is either feminine or masculine in gender. As a deity it is masculine in Mesopotamia, and feminine in Ugarit, South Arabia, and other places. The Hittites worshiped a god and a goddess of the sun. Under the Sumerian name Uta or the Semitic Shamash, the sun, as the god of justice, was worshiped especially at the temple of Ebabbar in Sippar, in northern Babylonia. In the stele of Hammurapi’s code from Susa, Hammurapi is depicted standing before Shamash who is seated on a throne (see Pritchard, *Pictures*, 175, no. 515).

The rare word for sun שֶׁשׁ (Job 9:7; cf. *har ḥeres* in Judg. 1:35, identical with *ir shemesh* in Josh. 19:41) has no known cognate in the Semitic languages.

The cult of the sun, very popular in Palestine – as is attested by place-names such as Beth-Shemesh, En-Shemesh, Ir-Shemesh – was forbidden in Deuteronomy 4:19 and 17:3. It was, nevertheless, introduced into Judah by Manasseh (II Kings 21:3, 5). King Josiah abolished the cult (II Kings 23:5) and destroyed the horses and chariots of the sun placed “by the kings of Judah at the entrance of the Temple” (23:11).

See Host of *Heaven; *Moon; *Sundial.

In the Aggadah

The usual word for “sun” in rabbinic literature is *ḥammah*, although *shemesh* also occurs. The sun and the moon were created on the 28th of Elul (Pd-RE 8). Although they were originally equal in size, jealousy induced dissensions between them, each claiming to be greater than the other. This necessitated the reduction in size of one of them, and the moon was chosen to be degraded because it had unlawfully intruded

into the sun's domain. This is based on the phenomenon that the moon is sometimes visible while the sun is still above the horizon (Pd-RE 6; Gen. R. 6:3). Originally, the sun was designated as Jacob's tutelary luminary but later God assigned it to Esau, the moon being designated for Jacob. For this reason the Jewish people reckon by the lunar calendar (Gen. R. 6:3). It was God's original intention that the sun alone should furnish light to the earth. However, when He foresaw the future idolatrous worship of the heavenly objects, He decided that it would be better to have two large celestial bodies so that the danger of one becoming a central deity would be minimized (Gen. R. 6:1). For this reason, the sun and moon stand in judgment daily before God, ashamed to go forth, pleading "People worship us and anger the Holy One, blessed be He!" (Mid. Ps. to 19:11). When Joshua bade the sun stand still it first refused, but complied when Joshua said, "Faithless servant! Did not my ancestor [Joseph] see you in his dream, bowing down to him?" (Gen. R. 84:11).

God placed the sun in the second firmament because placing it in the one nearest the earth would have consumed all beings by its heat (Mid. Ps. to 19:13). Indeed, the sun is kept in a sheath. In the future, God will draw forth the sun from its sheath and the wicked will be consumed by its intense heat. Hence during that period there will be no Gehinnom (Ned. 8b). Simultaneously, the sun will heal the righteous of all ills, and will be a glorious ornament for them (Ned. 8b). The sun ascends by means of 366 steps, and descends by 183 in the east and 183 in the west. There are 366 windows in the firmament through which the sun successively emerges and retires. These windows are arranged so as to regulate the sun's movements in accordance with the *tekufot* ("seasons") of the year. The sun bows down before God and declares its obedience to His commands. Three letters of God's name are written on the sun's heart, and it rides in a chariot. One set of angels leads it by day and another set leads it by night (Pd-RE 6).

The rotation of the sun causes the emission of beams and rays just as dust is produced by sawing wood. The sound which the sun makes during its rotations would be heard were it not for the din of the city of Rome (Yoma 20b). The rabbis differ as to the color of the sun. One holds that its natural color is truly red as it appears at sunrise and sunset, yet it appears white during the day because its powerful rays dim the sight of man. Another says the sun is actually white, but it appears red in the morning when it passes through and reflects the red roses of the Garden of Eden, and also toward evening when it passes through and reflects the fires of Gehinnom (BB 84a). The Talmud deduces the healing efficacy of sunlight from the verse "But unto you... shall the sun of righteousness arise with healing in its wings" (Mal. 3:20; Ned. 8b). Abraham possessed a precious stone which healed the sick. When he died God set it in the sphere of the sun (BB 16b). Sunshine on the Sabbath is considered a blessing for the poor because they have the leisure time to enjoy its rays (Ta'an. 8b).

An eclipse of the sun is an evil sign for the gentiles while an eclipse of the moon augurs evil for the Jews. When the solar

eclipse occurs in the eastern horizon it forecasts bad tidings for the inhabitants of the East; if in the western horizon it betokens ill to those of the West; while if it occurs in the zenith it threatens the entire world. When the color of the eclipse is red it symbolizes war; when gray, famine; when changing from red to gray, both war and famine. When the eclipse occurs in the beginning of the day or of the night it signifies that evil will come soon; if late in the day or night, then it will arrive tardily. Jews who are true to their faith need not worry about these premonitions since the prophet already said: "...be not dismayed at the signs of heaven, for the nations are dismayed at them" (Jer. 10:2; Suk. 29a).

[Alfred Rubens]

SUN, BLESSING OF THE (Heb. בְּרִכַּת הַחֶמֶד), a prayer service in which the sun is blessed in thanksgiving for its creation and its being set into motion in the firmament on the fourth day of the world (Gen. 1:16–19). The ceremony is held once every 28 years. It takes place after the morning prayer, when the sun is about 90° above the eastern horizon, on the first Wednesday of the month of Nisan. The date is based on calculations by the *amora* *Abbaye, according to whom the vernal equinox cycle (called *maḥzor gadol*) always begins then (Ber. 59b). Although Abbaye's method became obsolete after the adoption of R. *Adda's calendar, the ceremony has not fallen into desuetude. The order of the recital is as follows: Psalms 84:12, 72:5; 75:2, Malachi 3:20, Psalms 97:6 and 148, the benediction: "Praised be the Maker of creation," which is followed by Psalms 19 and 121, the hymn *El Adon* (of the *Shaharit* prayer of the Sabbath), the *baraita* of Abbaye (Ber. 59b), and the quotation of an *aggadah* by R. Hananiah b. Akashya (Mak. 3:16). The rite ends with a short thanksgiving prayer in which the congregation expresses gratitude for having been sustained until this day, and the hope to live and reach the days of the Messiah and of the fulfillment of the prophesy of Isaiah "and the light of the sun shall be sevenfold, as the light of the seven days" (Isa. 30:26). The dates for the ceremony in the second half of the 20th century were April 8, 1953 and March 18, 1981. For the first half of the 21st century the dates are April 1, 2009 and March 18, 2037.

SUNBAT (Sambutia), town of Lower *Egypt. The Jewish community seems to have been very old because one of *Abraham b. Sahlan's ancestors is mentioned in his family tree as having lived there in the ninth century. The community is also mentioned in the list of contributions for the redemption of prisoners in the middle of the 12th century. *Maimonides ap-

pealed to the Jews of Sunbat, in a circular letter addressed to the communities of the eastern region of the Delta, and Anatoli b. Joseph, the *dayyan* of *Alexandria at that time, wrote a poem dedicated to Shabbetai, a teacher in Sunbat. It seems that the community existed until the 17th century because Joseph b. Isaac *Sambari reports that in 1623 a *Sefer Torah* was transferred from Sunbat to a synagogue in *Cairo.

[Eliyahu Ashtor]

SUNDERLAND, industrial city in N.E. England. The first Jewish settler in Sunderland was Abraham Samuel, a jeweler and silversmith. A community probably existed in the 1750s; a rabbi, Jacob Joseph, came from Holland in 1790, while the first cemetery dates from slightly earlier. Since in the 18th century Sunderland was a coal port of some importance, trading with Holland, Scandinavia, and Danzig, it attracted Jewish settlers from Holland, Bohemia (after foreign Jews were expelled in 1763), and Poland (between 1760 and 1780). The two congregations, Polish and Israelite (Dutch and Bohemian settlers), combined in 1857 to form the Sunderland Hebrew Congregation. Around the 1870s immigration began from Krottingen (Lithuania), again by way of the cheap sea route from Danzig. A larger influx followed the great fire in Krottingen in 1889. This element and other Orthodox Eastern European Jews in the 1890s formed the *bet ha-midrash* which has contributed to Sunderland's reputation for Jewish observance and learning. It has a yeshivah and a *kolel* (institute for higher talmudical studies). In 1968 there was an estimated Jewish population of 1,350. In the mid-1990s the estimated Jewish population dropped to approximately 210. The 2001 British census found 45 declared Jews in Sunderland. One reason for this apparent sharp decline in population probably lies in the fact that *Gateshead, with its famous yeshivah, is situated in the same conurbation in north-east England. Sunderland has an Orthodox synagogue.

[Vivian David Lipman]

SUNDIAL. Although sundials can be traced back to earlier periods in Egypt and Mesopotamia, the earliest textual reference to a sundial appears to be 11 Kings 20:8–11 (cf. Isa. 38:7–8). There a shadow-tracking device, ascribed to Ahaz, is used for a sign that Hezekiah would be healed. The Masoretic Text speaks of *ma'lot ahaz*, literally "the steps of Ahaz." Various ancient versions and commentators disagree over whether the device is an actual sundial or a set of stairs attached to Ahaz's palace. Unfortunately, 1QIsa^a, which contains the variant *ma'lot 'lyt*, does not resolve this question.

A fragment of a portable, disk-shaped sundial excavated at Tel Gezer has been dated to the reign of Merneptah (1225–1215 B.C.E.) whose cartouches were inscribed on its back. Earlier representations of this type were found on the ceilings of the early 15th century tombs of Amenhotep I and Serenmuth.

These appear as a circle subdivided by radiating lines into 24 equiangular sections.

A later development, the sundial found at Qumran, was shaped like a shallow bowl with three circular dials and a small vertical *gnomon* in its center. The upper dial was divided into approximately 90 sections. The middle dial resembled those known from 1 Enoch 72, with 18 equiangular 20° "parts." This appears to be a shallow form of the *hemisphaericum* of *Aristarchus* described by Vitruvius (end first cent. B.C.E.).

For the preceding two dials, since the increments were represented by equally spaced "steps" on each dial, and since the movement of the shadow of the *gnomon* travels faster at mid-day and slower at the day's beginning or end, the actual time that the shadow spent within each step varied accordingly. Also, the number of steps through which the shadow passed each day either increased or decreased depending on the season. The solstices, equinoxes, and months (or "gates") were tracked by noting where the first shadow of the *gnomon* became visible on the dial or by the rising of certain constellations at night.

The latest and most common sundials were the typical Greco-Roman, quarter-spherical *hemicyclium*, and the "conical" *conicum*. Twelve equiangular sections on these dials measured hours which in real time varied both according to the time of the day and season. Three concentric circles, running perpendicular to the hour lines, marked the full extent of the shadow at the four cardinal points of the year.

[Stephen Pfann (2nd ed.)]

SUPERCOMMENTARIES ON THE PENTATEUCH, commentaries mostly on the chief commentators of the Pentateuch – *Rashi, Abraham *Ibn Ezra, and *Nahmanides. Supercommentaries began to be composed soon after the appearance of the original commentaries. By far the largest number of such supercommentaries are on Rashi, the most popular commentator on the Pentateuch. An early supercommentary was *Minhat Yehudah* (Leghorn, 1783). It was compiled by *Judah b. Eliezer, probably in Troyes, in the year 1313. The author quotes comments on Rashi by his teacher and earlier authorities. The most extensive supercommentary is by Elijah *Mizrahi. It was printed for the first time in Venice in 1527, some time after the author's death, and in itself is largely quoted and discussed by later supercommentators. Prominent rabbis who wrote supercommentaries on Rashi included: Israel *Isserlein (*Be'urim al Perush Rashi*..., Venice, 1519); Obadiah di *Bertinoro (*Amar Neke*, Pisa, 1810); Samuel *Almosnino, whose supercommentary was printed in c. 1525 in Constantinople with three other supercommentaries; Solomon *Luria (*Yeri'ot Shelomo*, Prague, 1608); Moses *Mat (*Ho'il Moshe*, *ibid.*, 1611); Mordecai *Jaffe (*Levush ha-Orah*, Prague, 1604); *Hayyim b. Bezalel (*Be'er Mayim Hayyim*, 1694–99); *Judah Loew b. Bezalel (*Gur Aryeh*, Prague, 1578–79); Issachar Baer Eilenburg (*Zeidah la-Derekh*, Prague, 1623–24); *David

b. Samuel ha-Levi, author of *Turei Zahav* (*Divrei David*, Dyhernfurth, 1689); David *Pardo (*Maskil le-David*, Venice, 1760); and Ḥayyim *Palache (Palaggi) (*U-Vaḥarta baḤayyim*, Smyrna, 1874). *Sifte Ḥakhamim* (Frankfurt on the Main, 1712) by Shabbetai *Bass is primarily a selection from other supercommentaries. A critical edition of the text of Rashi's commentary with a supercommentary, called *Zekhor le-Avraham*, was prepared by Abraham *Berliner (1866).

The concise, abrupt, and enigmatic style of Abraham ibn Ezra gave rise to numerous supercommentaries, not only on his commentary on the Pentateuch, but also on those to other books of the Bible. However, most of these have remained in manuscript. Small selections from some of them have been published in modern times. Early supercommentaries on Ibn Ezra's Pentateuch commentary which appeared in print were *Zafnat Pa'ne'ah* (complete edition 1911–30) by Joseph b. Eliezer Bonfils, *Mekor Ḥayyim* (Mantova, 1559) by Samuel *Zarza, and *Megillat Setarim* (Venice, 1554) by Samuel ibn *Motot – all three from the 14th century. Another 14th century product, *Perush ha-Sodot shel ha-RABE al ha-Torah* deals only with Ibn Ezra's enigmatic statements. An abridged version of it was published in 1903 (in I. Last, *Asarah Kelei Kesef*, pt. 2). The work has been doubtfully ascribed to Joseph ibn *Kaspi. Other supercommentaries on Ibn Ezra were written by Moses *Almosnino, Yom Tov Lipmann *Heller, and Solomon *Maimon. Modern supercommentaries includes those by Moses Cremieux, Judah Leib Krinski, Isaac Meijler, and Leopold Fleischer. The supercommentary of Solomon Zalman Netter, which was first published in 1859, is to a large extent based on early supercommentaries.

One of the chief commentators on the Pentateuch, Naḥmanides, was widely quoted and discussed by subsequent commentators. His critical observations on Rashi were dealt with by Rashi's supercommentators, while kabbalists elucidated his kabbalistic allusions. Special treatises dealing with these kabbalistic references were written by the 14th-century kabbalists Shem Tov b. Abraham *Ibn Gaon, Joshua *Ibn Shu'ayb, Meir ibn *Sahula, and *Isaac b. Samuel of Acre. Isaac *Aboab ("the last *Gaon* of Castille") wrote a supercommentary on Naḥmanides (Constantinople, 1525). Joseph *Caro was said to have written explanations on parts of Rashi's and Naḥmanides' commentaries. Among rabbis and scholars of modern times who wrote supercommentaries or explanatory notes on Naḥmanides may be mentioned Mordecai Gimpel *Jaffe, Abraham Lieblein, Jacob Aryeh Frankel, Isaac *Maarsen, Aryeh L. Steinhart, and Joseph Patsanovski. New critical editions of Naḥmanides' commentary accompanied by a supercommentary were prepared by Zevi Menahem Eisenstadt (1958–61; on Genesis only) and by C.D. Chavel (1959–60; on the whole Pentateuch).

[Tovia Preschel]

SUPRASKY, YEHOSHUA (1879–1948), General Zionist leader in Erez Israel. Born in Goniadz, Bialystok district, Suprasky engaged in trade and industry. He was a delegate to the Zionist Conference in Minsk (1902), was a member of the Zionist central committee in Russia, and worked for investment in Erez Israel. He visited Erez Israel in 1912 and in 1914 and settled there in 1920. He founded the Ha-Manḥil Company to build houses in Tel Aviv as well as the Tiberias Hot Springs Co. Ltd., and the Kinneret Company in Tiberias. He was a member of the Tel Aviv municipal council (1925–32), vice chairman of the community board, and a member of the Va'ad Le'ummi. A leader of the *General Zionists in Palestine and of the world movement, he advocated the encouragement of private initiative in the settlement and upbuilding of Erez Israel. Suprasky was also a member of the Zionist General Council (1921–48), a delegate to 14 Zionist Congresses (from the fifth to the 19th), and a founder of the Mifdeh Ezraḥi (a building and loan fund). Neveh Yehoshu'a in Ramat Gan is named in his honor.

[Abraham Aharoni]

SURA, site of one of the leading Babylonian academies. In fact, two different settlements by the name of Sura are mentioned in the Babylonian Talmud. One was located in Syria at the northern extremity of the Euphrates, a 15-days' journey from *Pumbedita. It was an important station on the caravan route from Pumbedita to Erez Israel (Av. Zar. 16b, which describes the journey and the encampment of R. Zeira during his *aliyah* to Erez Israel from Babylonia). This settlement, however, was not a center of Torah study and therefore little is related about it.

The famous Sura, the important center of Torah studies for several centuries, was located in southern Babylonia, where the Euphrates divided into two rivers. The soil of Sura and its environs was noted for its great fertility. Agricultural activity was centered around vineyards, orchards, wheat, and barley, and the farmers of Sura, among them scholars, were intensively involved in these pursuits. They irrigated their fields with the waters of the Euphrates, planted vineyards, engaged in wine growing and its trade, and reared livestock.

The Persian Period

The growth of Sura was due to the Torah center which was established there by *Rav after going to Babylonia from Erez Israel in 219. There is no knowledge of an earlier *bet midrash* in Sura, and it seems that Sura's earlier inhabitants were unfamiliar with Jewish laws. In the course of time, Rav succeeded in surrounding himself with hundreds of students from the Diaspora; his *bet midrash* and *bet din* became the basis of one of the two most important religious centers in Babylonia. Rav's *takkanot* and legal decisions, his halakhic and aggadic statements and the discussions which opened in their wake, and his actions in public and private life provided the foundation for the Babylonian Talmud. After Rav's death in 247 Sura lost its central role for seven years, during which time the deci-

sive authority in matters of *halakhah* was wielded by Samuel in *Nehardea.

After Samuel's death in 254, Sura regained its prominence under the leadership of Rav *Huna, the disciple of Rav. It maintained this status until the end of the third century. At the end of the 290s the academy of Pumbedita rose in importance, and under the leadership of *Judah b. Ezekiel became the center of *halakhah* in Babylonia. A *bet midrash* for the study of the Torah and teaching continued to exist in Sura, but its importance and decisive authority were not regained until the days of Rav *Ashi (367–427), who even managed to broaden the scope of the academy. In addition to the masses of students who streamed there, especially during two months of the year, he also instituted the *Shabbeta de-Rigla* in Sura, which was attended by the eminent *hakhamim* of Babylonia, headed by the *exilarch and his retinue. Rav Ashi also built a new synagogue. During his time the academy was transferred to *Mata Meḥasya, which was very near Sura. After the death of Rav Ashi, who was one of the most important editors of the Babylonian Talmud, the central religious role of Sura diminished. In the period of the **savoraim* the number of *hakhamim* and students decreased as a result of the upheavals which followed the persecutions of Firūz and Yazdagird.

SURAT, port N. of Bombay. In the 17th century, Portuguese, Dutch, and English trading companies arrived in Surat, for centuries the main trading center between Europe and Asia. A few Jews were among them, often diamond merchants; Anglo-Portuguese Jews in London developed a flourishing trade with Surat though they were not allowed to settle there. A permanent Jewish settlement came into existence in the last decades of the 17th century. First to settle were Dutch-Portuguese merchants from Amsterdam, headed by Pedro Pereira who conducted widespread commercial transactions associated with both the Dutch and the English East India companies. Around 1740, they were followed by Anglo-Ashkenazi Jews, such as Abraham Elias and then, toward the end of the 18th century, by Arabic-speaking Jews from *Aleppo, *Baghdad, and *Basra. One of Surat's leading merchants was Moses *Tobias, who played a prominent role in the affairs of the city. When *Bombay became the British administrative center and

*Calcutta rose to prominence, the Jewish settlement in Surat declined and most of its inhabitants moved to one of these two cities. In the 19th century a few individual Jews in government service settled in Surat. Some Jewish tombstones of the 17th and 18th centuries are still preserved.

SURE, BARNETT (1891–1960), U.S. biochemist, born in Vilkomir (Ukmerge), Lithuania. Sure went to the U.S. in 1908. He became professor and head of agricultural chemistry department, University of Arkansas in 1927. Sure was an independent discoverer of vitamin E and of a new member of the vitamin B complex. He wrote *The Vitamins in Health and Disease* (1933) and *Little Things in Life: The Vitamins, Hormones and Other Minute Essentials for Health* (1937).

°**SURENHUIS, WILHELM** (Surenhuysen, Gulielmus Surenhusius; (1666–1729), Dutch Hebraist. Surenhuis was professor of Greek and Hebrew at the Amsterdam Athenaeum Illustre and was in close touch with the German Orientalist Johann Christof *Wolff of Hamburg. He published *Dissertatio de natura Pandectarum Hebraicarum* (1704), the exegetical “New Testament catalogue” *Sefer ha-Mashweh* (1713), and *De oratione Dominica Hebraica* (1715), a Hebrew version of the Christian “Lord's Prayer” (with various translations into other languages). However, he is best remembered for his monumental *Versio Latina Mischnae et Commentationes Maimonidis et Obadjae Bertinoro...* (6 vols., 1698–1703) in Hebrew and Latin. Although Surenhuis used a manuscript Spanish version by Jacob *Abendana in preparing his edition, much of the work was original and 40 tractates of the Mishnah were translated by the editor himself. An earlier Latin version by Isaac Abendana, Jacob's brother, remains in manuscript (University of Cambridge, 1663–75). A catalogue of Surenhuis' library appeared in 1730.

SURETYSHIP (Heb. עֲרָבִית), one person's undertaking to fulfill the obligation of another toward a third person (called the *arev*, *hayyav*, and *nosheh*, respectively). In Jewish law fulfillment of an obligation is secured primarily through the assets of the debtor – “a man's possessions are his surety” (BB 174a; see *Lien) – and it is in addition to this that a person may serve as a surety for the fulfillment of the debtor's obligation toward his creditor.

Suretyship in the Bible and the Talmud

The biblical term *'eravon* (“pledge”), although philologically related to the term *'arev* or *'arevut*, occurs in the sense of an obligation secured by property and not personally (Gen. 38:17ff.; and see Targ. Onk. and Rashi thereto; cf. Neh. 5:3). The form of

personal pledge mentioned in the matter of Judah's undertaking to Jacob to be surety for Benjamin's safe return (Gen. 43:9) has no bearing on the present discussion, since Judah was at one and the same time surety and principal debtor (ibid., 8; and see *She'iltot* 32). Detailed discussion of suretyship is to be found in Proverbs, where the surety's undertaking is described as given verbally and accompanied by a handshake (*teki'at kaf*; Prov. 6:1–5; 11:15; 17:18; 22:26; see also Job 17:3). It is likely that a handshake also served as the mode of establishing other kinds of obligations (see Ezra 10:19). In the Book of Proverbs there is a strong exhortation against undertaking a suretyship obligation because, if it is unfulfilled, the creditor might levy payment even on the surety's garments and bedding (20:16; 22:27; 27:13). Since this is the extreme consequence with which the surety is threatened, it may be deduced that the creditor is forbidden to subject the surety to personal bondage, just as he is forbidden from so subjecting the debtor (see *Obligations, Law of). Suretyship involving the bodily subjection of an individual is to be found only in the field of military law, with reference to the taking of hostages in time of war (II Kings 14:14; II Chron. 25:24).

A guarantee to present the debtor before his creditor and the court (on due date) is described in the Talmud as "the law of the Persians" (BB 173b). The existence of this phenomenon in Jewish law was hinted at in geonic times (*She'elot u-Teshuvot ha-Ge'onim*, no. 213), but Maimonides denied the validity of this form of suretyship (Yad, Malveh, 25:14; also see *Hassagot Rabad* and *Maggid Mishneh* thereto). The unfavorable attitude expressed in Proverbs toward the very act of undertaking a suretyship obligation is reflected also, although to a lesser degree, in the apocryphal books (Ecclus. 8:13; 29:17–20). Even in talmudic times suretyship is mentioned as one of the things a man is advised to avoid (Yev. 109a).

Formation of Suretyship

At first Jewish law recognized suretyship only insofar as it was undertaken before or at the time of the creation of the debtor's principal obligation (BB 10:7; "If a man loaned his fellow money on a surety's security..."), because in such an event "he had lent him the money through his trust in the surety" (ibid., 8). R. Ishmael decided that a written suretyship was valid even if it was given after creation of the principal obligation (ibid.; and cf. Ket. 101b–102b). Some of the early *amoraim* held that such a suretyship was valid even if it was undertaken verbally, but the *halakhah* was decided in accordance with the opinion of R. Nahman, to the effect that a verbal suretyship is valid if given at the time of creation of the principal obligation ("at the time the money is handed over"); otherwise (i.e., "after the money has been handed over") it will only be valid if accompanied by a *kinyan sudar* (see *Acquisition, Modes of; BB 176a–b and Codes). The distinction stems from the general principle in Jewish law that the promisor's "final making up of the mind" (*gemirat ha-da'at*, see *Contract) is an essential precondition of a valid undertaking. Hence it may be presumed that this requirement is satisfied on the part of the

surety whenever the loan is given "on his security" – even if undertaken verbally – since he is aware that the very loan is given on the strength of his suretyship; the position is different, however, if the suretyship is given after the execution of the loan transaction, since then the surety's final decision is not manifest unless his verbal undertaking is accompanied by the formality of a *kinyan sudar*. According to the view of the Babylonian *amoraim*, which was accepted as the *halakhah*, the possible absence of a *gemirat ha-da'at* was to be feared more with a suretyship undertaking than with any other kind of undertaking, since the very essence of the suretyship undertaking is tainted with the defect of **asmakhta* – i.e., the surety's confident assumption that the borrower will pay the debt and the claim against him will never materialize. The invalidating effect of *asmakhta* on suretyship was overcome by the scholars through reasoning that the surety derives pleasure from being regarded as trustworthy and a man of means.

In the following cases a verbal suretyship without a *kinyan* is valid even if it is undertaken after establishment of the principal obligation: if it is given on the instructions of the court (BB 176b and codes); if on the strength of the suretyship the lender has returned to the borrower the bond of indebtedness or pledge (Sh. Ar., ḤM 129:3); and if the surety is not an individual but the community or its representative (Resp. Maharam of Rothenburg, ed. Prague, no. 38; see also *Public Authority). Alternatives to a *kinyan sudar* also came in to being. Thus, according to some of the *posekim*, a written suretyship obviates any need for a *kinyan* (Nov. Ramban, and *Beit ha-Behirah*, BB 176; Sh. Ar., ḤM 129:4). Suretyship may also be established by handshake whenever custom decrees that an obligation may be established in this way (*Darkhei Moshe*, ḤM 129:5; *Rema*, ḤM 129:5). It is interesting to note the historical changes concerning the use of a handshake as a means of establishing a suretyship obligation. In biblical times it had this function; it fell into complete disuse during the talmudic period, and it appeared again in post-talmudic times under the influence of its use in other contemporary legal systems. According to some of the *posekim*, even a verbal suretyship undertaken after the establishment of the principal obligation is valid if it is the custom to dispense with the need for a formal *kinyan* (see *Minhag).

Arev and Arev Kabbelan

The *tannaim* and the *amoraim* of Erez Israel knew the regular form of surety (*arev*) in which the creditor must first sue and seek to recover payment from the debtor; only when the debt cannot be satisfied out of the debtor's property may the creditor turn to the surety for payment, because it is presumed that it was the surety's intention to become liable for the debt only in such an event. A creditor who wished to ensure effective recovery of the debt could stipulate with the surety that "I shall recover from whomever I choose," whereupon he could claim directly from the surety whether or not the debtor had sufficient property to satisfy the debt. R. Simeon b. Gamaliel's opinion, that as long as the debtor has property, payment

must always be demanded from him first, was not accepted as *halakhah* (BB 10:7; TJ, BB 10:14, 17d, and see statements of R. Johanan, loc. cit.). The Babylonian *amoraim*, however, interpreted these mishnaic statements (in the light of R. Johanan's variant version) to mean that even when the creditor has stipulated with the surety as mentioned above, he may not, in the opinion of all, demand payment from the surety as long as the debtor's known assets, such as land, have not been exhausted. In their opinion, the only case in which the creditor may claim directly from the surety without first excusing the debtor (even if he has known assets) is when the surety is an *arev kabbelan*, that is, when he has carefully formulated his undertaking in a particular manner so as to avoid the use of terms such as "loan" or "suretyship," saying instead, e.g., "Give to him and I shall give to you." Thus, once more, R. Simeon b. Gamaliel's contrary opinion, that the debtor must first be excused if he has any property even if the surety is an *arev kabbelan*, was not accepted as *halakhah* (BB 173b and Tos. ad loc. s.v. *Ḥasurei Mehasrei*).

An explanation for the restraint on the freedom of contract in suretyship, contrary to the general principle of Jewish law that "contracting out of the Torah" is permissible in matters of civil law, lies in the apprehension expressed by the Babylonian *amoraim* about the surety's lack of final resolve when making a suretyship undertaking, and the resulting inference that the surety does not seriously intend to be bound by his undertaking as long as the debt may be recovered from the principal debtor – even if he has expressly agreed to it (Rashba, Nov. BB 173b). In post-talmudic times the scholars sought ways in which to overcome the restriction on the freedom of stipulation in suretyship because of its limiting effect on the scope of credit transactions. Some scholars interpreted the statements of the Babylonian *amoraim* to mean that they, like the *amoraim* of Erez Israel, held the opinion that the creditor might claim directly from the surety once he has stipulated with the latter to recover "from whomever I choose" (Ibn Miggash, quoted in *Sefer ha-Terumot*, 35:2; Yad, Malveh 25:4; and see Elon, bibl., 203ff.). Other scholars considered the version "I shall recover from whomever I choose" to be ineffective and distinguished it from one worded "I shall recover first from whomever I choose," holding that this entitles the creditor to claim directly from the surety whether or not the debtor has any property (Ramban, Nov. BB 173b; Tur, ḤM 129:17, et al.). The *halakhah* was decided according to the former opinion (Sh. Ar., ḤM 129:14).

The post-talmudic socioeconomic realities spurred a number of further developments designed to enable the creditor to claim directly from the surety, including a regular surety, even without prior stipulation to this effect. Thus it was laid down that if the debtor is violent and does not comply with the judgment of the court, or if he is abroad and the suit against him involves many difficulties, or if he has died, the creditor may claim directly from the surety (Yad, Malveh 25:3; 26:3 and *Maggid Mishneh* thereto; Sh. Ar., ḤM 129:8–12). The creditor always retains the right to claim first from the debtor,

even when he is entitled to claim directly from the surety, and the debtor is not entitled to refer him to the surety; however, if the surety is a *kabbelan* who has personally received the money of the loan from the lender and passed it on to the borrower, no legal tie will have been created between lender and borrower, and the lender will be entitled to recover the debt from the surety alone (Yad, Malveh 26:3; Sh. Ar., ḤM 129:15, 19).

Substance and Scope of Suretyship

The surety's obligation is secondary to that of the principal debtor; hence the validity of the suretyship obligation is co-extensive with that of the principal obligation, and extinction of the latter automatically terminates the suretyship: "if there is no debt, there is no suretyship" (Resp. Maharashdam, ḤM no. 218). Thus, e.g., if the principal obligation is void because the debtor was acting under duress (see **Ones*), the suretyship will be equally ineffective – even though it was undertaken according to the law (ibid. and Resp. Reshakh, pt. 1, no. 44). Moreover, the same result follows even when the underlying principal obligation is essentially valid but cannot be realized against the debtor on account of a procedural defect, as may happen if the name of the debtor and other details mentioned in a bond of indebtedness fit two persons and do not allow for his proper identification, thus barring proceedings against him. In such an event the surety, too, cannot be called upon for payment, not even in the case where he is surety to two debtors who have identical names (Bek. 48a; Tur and Sh. Ar., ḤM 49: 10; cf. also the contrary opinion of *Rema*, ḤM 129:8 and *Baḥ* thereon).

On the other hand, suretyship may be undertaken in respect of only a part of the principal obligation, and the surety may also stipulate that his obligation shall only be in effect for a specified period after the debt has fallen due (Resp. Rashba, vol. 1, no. 1148; *Rema* and standard commentaries to Sh. Ar., ḤM 129:1 and Tur, ibid.; *Arukh ha-Shulḥan*, ḤM 129:7). Suretyship may be undertaken in respect of either an already existing principal obligation or one about to be established, the sole distinction between them being their two different modes of establishment (see above). The validity of suretyship in respect of a debt of an unfixd amount is a matter on which there is a division of opinion in the codes. It was held by some scholars that if the surety has said, "I am surety for whatever amount you shall give," he is liable for the whole amount, "even if one hundred thousand" (Yad, Malveh, 25:13; see Samuel b. Hophni, bibl., ch. 3). According to other *posekim*, the surety is not liable at all in such an event: "since he does not know what it is that he has bound himself for, neither can he have made a final resolve nor has he bound himself" (Yad, loc. cit.). A third opinion is that the suretyship is binding to the extent of the amount for which the surety may reasonably be presumed to have bound himself, with attention given to his financial means (*Hassagot Rabad* and *Maggid Mishneh* loc. cit.). The *halakhah* was decided to the effect that a suretyship for an unspecified amount is valid (Sh. Ar., ḤM 131:13).

Scope of the Surety's Liability

The suretyship obligation includes liability for the expenses incurred by the creditor in claiming payment, such as the costs of a legal suit (Sh. Ar., *ḤM* 129:10 and *Sma* n. 29), and for any other reasonable loss suffered by the creditor (Tur, *ḤM* 131:7–10 and Maharik, quoted in *Beit Yosef*, *ibid.*, Sh. Ar., *ḤM* 131:7–8). According to the majority of the *posekim*, a regular surety is discharged from liability if the creditor, after due date of payment, neglects to recover the debt from the debtor when he has the possibility of doing so (Tur and Sh. Ar., *ḤM* 131:4; *Beit Yosef* and *Baḥ* thereto). Similarly, “if the debtor was present in the town when the debt fell due for payment and the creditor allowed him to depart the town, he cannot claim from the surety” (*Keneset ha-Gedolah*, *ḤM* 129; Tur no. 58). The surety is likewise discharged from liability if the creditor releases any of the debtor's property which he holds as a pledge (Resp. Rashba, vol. 1, no. 892; Sh. Ar., *ḤM* 129:8 and *Rema* thereto; *Sma* *ḤM* 129–26; *Arukh ha-Shulḥan* *ḤM* 129:26).

Suretyship in Respect of Different Kinds of Obligations

In general, suretyship may validly be undertaken with reference to all kinds of obligations, regardless of the manner in which they arise (for instance from loan, the most common case, tort (Git. 49b), and so on). In certain cases, however, this has been a matter of halakhic dispute, particularly with reference to the husband's **ketubbah* obligation. Among the *tannaim* and *amoraim* of Erez Israel, and for most of the period of the Babylonian *amoraim*, there was never any doubt that a person could be surety for the husband's obligations toward his wife in respect of her *ketubbah* (BB 9:8; BB 174b, in the matter of Moses bar Azri). However, in the sixth generation of the Babylonian *amoraim*, following on their raising the problem of the invalidating effect of *asmakhta* on suretyship (see above), they likewise called into question the measure of final resolve and seriousness with which the surety might undertake his obligation in respect of a *ketubbah* liability. There were two reasons for this: firstly, because it was considered that in such a case the surety intends no more than to perform a *mitzvah* and to bring about a matrimonial tie between the couple concerned; secondly, because in this case the husband undertakes to give his wife an amount which comes out of his own pocket and not one which the wife has initially expended – unlike the case of a loan, for instance, in which the creditor is made to incur an actual expenditure. Special requirements were accordingly laid down for the validity of suretyship as regards the *ketubbah*. Some scholars held regular suretyship to be entirely ineffective here, except if the surety is the groom's father (because of the kinship the existence of *gemirat ha-da'at* may be presumed), in which case it is valid if executed by *kinyan sudar*; other scholars held that regular suretyship is effective when executed by *kinyan sudar*, and that this formality is unnecessary when the surety is the groom's father. If the suretyship is of the *kabbelan* type, the scholars agree that it is valid in all cases and there is no need for a *kinyan* (BB 174b; Yad, Malveh 25:6; Ishut 17:9 and *Hassagot Rabad* thereto).

With regard to a gift, the scholars are further divided on the question of whether the suretyship undertaking in respect of this is to be treated like suretyship for the *ketubbah* (because in gift also the donee will suffer no actual loss if the transaction is not carried out), or whether it should be regarded otherwise since in the case of a gift it cannot be said that the surety's intention is the performance of a *mitzvah*; (Tur, *ḤM* 129 and *Beit Yosef* thereto, no. 5; Sh. Ar., EH 102:6 and *Rema* thereto).

A Surety's Right of Recourse Against Debtor

A surety has the right to recoup from the debtor whatever he has paid to the creditor in discharge of the principal obligation. In order for him to succeed in his claim against the debtor, it will not suffice for the surety to present the bond of indebtedness as holder thereof; he must prove – by way of the creditor's certification or in some other equally persuasive manner – that he has actually discharged the debt (Tosef. BB 11:15; Yad, Malveh, 26:7–8; Sh. Ar., *ḤM* 130:1, 3). The surety's right of reimbursement is to be explained either on the basis of an implied agreement between the debtor and the surety that the latter will be entitled to reimburse himself from the former if he discharges the principal obligation, or that upon receiving payment from the surety the creditor assigns to him (by way of subrogation) his right of recovery against the debtor (BB 32b and *Rashbam* thereto; *Maggid Mishneh*, Malveh 26:8; and see below).

The right of recourse against the debtor is available to the surety only when his suretyship has been solicited by the former and, in the case of a regular surety, only after the creditor has already proceeded against the debtor (Yad, loc. cit. 6; Sh. Ar., *ḤM* 131:2). For if he is a surety on his own initiative, “any person who wishes to avenge himself of his neighbor might do so by becoming surety for him in order to turn to the latter after discharging his debt” (Resp. Radbaz no. 2084); an unsolicited surety is in the position of a volunteer who pays another's debt without the latter's knowledge or approval and as such also has no right of action against the debtor (Ket. 107b–108a; Yad, loc. cit.; Sh. Ar., *ḤM* 128:1; see also **Unjust Enrichment*). Suretyship established in the debtor's presence will be presumed to have been undertaken with his approval (Resp. Radbaz, no. 2084; *Leḥem Mishneh* to Yad, Malveh 26:6). There is also an opinion that the surety has a right of recourse against the debtor even if he has not been solicited by him (*Maggid Mishneh*, relying on the opinion of Rabad to Yad, Malveh, 26:6; cf., however, Tur, *ḤM* 129 and Resp. Radbaz no. 2084, where this view is contested and Rabad's opinion interpreted differently). The surety's right of recourse extends not only to the amount of the principal obligation but also to the expenses he has incurred in the matter, because it is presumed that the debtor “takes upon himself... to compensate for and make good all loss... even without expressly stipulating to this effect” (Resp. Rosh 18:7; Tur and Sh. Ar., *ḤM* 131:7ff.), except for unreasonable expenses such as “interest much above the customary” (*Beit Yosef*, *ḤM* 131, n. 7; and see above with regard to the scope of the surety's liability).

Plurality of Sureties and Debtors

If there are several sureties, the creditor may not claim more from each than his proportional share of the debt, unless he has expressly contracted for the right to recover the whole amount of the debt from any of them (Tosef. BB 11:15). Maimonides, contrary to this *halakhah*, held that the creditor may recover the whole of the debt from any one of several sureties, and Abraham b. David of Posquières was of the opinion that the matter is determined by local custom, but other *posekim* confirmed that a proportional share only may be recovered from each (Yad, Malveh 25:10 and *Hassagot Rabad* thereto; Sh. Ar., ḤM 132:3 and standard commentaries). Where several debtors are jointly involved in a single legal transaction – such as “two who borrow on the same bond... or a partner who borrows on behalf of the partnership” – some of the *posekim* hold that each is a principal debtor in respect of the whole debt, but the majority opinion is that each is liable as principal debtor in respect of his proportional share only and must be considered a regular surety as regards the rest of the debt; i.e., the creditor must first claim from each his proportional share, and only if one of them is unable to pay will the other be liable as surety for him (TJ, Shevu. 5:1, 36a; Yad, 5:9 and standard commentaries; Tur and Sh. At., ḤM 77:1–2; for further particulars see *Obligations, Law of).

In the State of Israel

In 1967 the Knesset enacted the Surety Law, which replaces the provisions of the *Mejelle* (Ottoman law) on this subject. Although largely based on Jewish law, it nevertheless deviates from it on one central matter. The law provides that “the surety and debtor are jointly and severally liable to the creditor, but the creditor may not require of the surety fulfillment of his suretyship without first requiring the debtor to discharge his debt” (sec. 8). The creditor is not required to make prior demand of the debtor if this need is waived by the surety, or if it is clear that the debtor has no property, or if service of the demand against him involves special difficulties. The law accordingly allows the creditor to turn directly to the surety, even a regular one, since a demand from the debtor is a mere formality and it is not necessary that legal proceedings be instituted against him. This accords with the attitude of both the *Mejelle* (arts. 643, 644) and English law, both of which dispense even with the need for a prior demand from the debtor, a requirement which is indeed of little practical value (E. Jenks, *Digest of English Civil Law*, 1 (1938³), 277, no. 682). On the other hand, Swiss law (*Code des obligations*, para. 495–6) and the Nordic Draft Code of 1963 (see V. Kruse, *A Nordic Draft Code* (1963), para. 1301) accord with Jewish law in this respect and require the creditor, in the absence of an express agreement to the contrary, to claim first from the principal debtor and to exhaust execution proceedings against him before turning to the surety, except if there are special difficulties involved in suing the debtor. Swiss law furthermore recognizes the institution of *Solidarbuergschaft* (ibid. para. 496), which is akin to the *arev kabbelan* in Jewish law.

[Menachem Elon]

Arevut and Asmakhta

According to Professor Berachyahu Lifshitz, a regular surety (hereinafter – guarantee) signifies a promise to pay a creditor if the debtor defaults, and is the prototype for all forms of promises. This is the case in Roman law as well as in Jewish law. Indeed, various sources indicate that the word *arevut* did not originally connote a specific kind of undertaking, being rather a generic term for undertaking. This is also indicated by the verses from the Book of Proverbs cited in the relevant passage in Bava Batra 173b: According to their literal meaning, they deal with a commitment given by one person to another, and not necessarily in the context of a third party, the debtor.

In Jewish law there is a dispute whether a promise (= **Asmakhta*) is binding or not. This is the import of the Talmudic statement (ibid.) that the validity of a guarantee depends on the aforementioned debate. It is also the reason for Rabbi Ashi's statement (ibid.), which became the accepted explanation for the validity of the guarantee obligation – that the guarantor “assumes the responsibility.” In other words: from that moment onward the guarantor becomes indebted, thereby removing the guarantee transaction from the category of a general promise, the fulfillment of which is contingent upon a future occurrence. The pleasure imputed to the guarantor by reason of the creditor's trust in him (upon the transfer of the money) causes him to agree to this type of undertaking. If the guarantee is given after the transfer of money, there is a requirement for a *kinyan sudar*, a symbolic act of transfer whose mode of operation, legally, creates a bond “as of now,” due to some benefit purportedly derived by the person giving the undertaking. A conditional guarantee is invalid, just like any other conditional undertaking, unless given according to the halakhic rules governing conditions.

According to this approach, the *arev kabbelan* is also considered the recipient of the funds just like the “real” debtor, and therefore it is possible to collect payment directly from him without first attempting to collect from the principal debtor, for he too is considered a “debtor.”

In the Decisions of the Israeli Supreme Court

Reliance on the laws of guarantee in Jewish law is found in the case of *Maor* (CA 8034/95 *Maor v. John*, 52 (4) PD 97; Justice Y. England). In that case, at the request of his creditor, a restraining order was issued against the debtor to prevent him from leaving the country. In order to obtain the creditor's consent to the debtor's leaving the country for a short period in order to raise funds, a third party signed a *shetar arevut* (deed of guarantee), in which he gave a commitment that the debtor would return to Israel by a specific date, and if not – the guarantor would be responsible for all his debts. The debtor delayed his return to Israel, and two weeks after the date he was supposed to return he was killed in a traffic accident abroad. His body was brought to Israel for burial. The guarantor argued that the guarantee had never taken effect, because the debtor had intended to return to Israel, even though he was late, and it

was only because of his death that he had not returned; and if, on the other hand, the guarantee had gone into effect, then the return of his body to the country annulled it. The exceptional circumstances of this case made it difficult to find a solution in accordance with the Israeli Guarantee Law, and the Court drew inspiration from the provisions of Jewish law in this matter. The Court begins its argument by mentioning the distinction in Jewish law between *guarantee* involving the guarantor's personal liability (*shi'bud ha-guf*), as distinct from liability of his assets (*shi'bud mammon*), and refers to various sources that discuss this distinction (see bibliography). The Court interprets the significance of a guarantor's obligation to bring the debtor to court, in light of the statements of Rabbi Naḥshon Gaon quoted in the *Tur* (ḤM 129), in which he states that "upon his bringing him to Court the surety shall be exempted (from his obligation)... if he brought him on the Shabbat eve at dusk and he escaped after the Shabbat, then the guarantor is not exempted." The author of *Be'er Heitev* explains that the guarantor is not absolved from his obligation because the presentation of the principal debtor before the Court must be done in such a manner as to enable the conduct of a judicial hearing and to compel the principal debtor to pay, and in the case mentioned his presentation before the Court was only for the duration of the Shabbat, during which it was impossible to conduct a hearing, for "if it was impossible to adjudicate the case in his presence and to have him take an oath, then it was as if he had never been brought before the Court, and the guarantor is obliged to bring him again" (*Be'er Heitev*, ḤM 129:10,29). From this the Court infers that no significance attaches to the fact that the debtor's body was brought back to Israel after his death, and that in order for the surety to be released from the obligation of his guarantorship the debtor's presentation must be in a manner which enables the law to be enforced upon him.

In his minority opinion in the *Maor* case, Justice (Ret.) Yaakov Türkel opined that "the appellant in our case has taken a strictly legal approach, attempting to base it on the dry, lifeless wording of the deed of guarantee... it is incumbent upon us to 'release the shackles' imposed by the written words, and to plumb their true import, reflecting the intentions of the contracting parties. We must restore the 'spirit of life' to the words of the guarantee, and interpret it according to its real intention, in view of the duty of good faith mandated by section 39 of the Contracts Law. Consequently, the appellant's action to enforce the guarantee deed should be dismissed (ibid. 113, 114). Regarding the duty of good faith in Jewish Law, Justice Tirkel refers to the judgment of Justice Menachem Elon in CA 391/80 *Lasserman et al. v. Shikun Ovedim Ltd.* 38 (2) PD 197, 263–264 (see *Contract (the principle of Good Faith)).

In another case the Supreme Court deliberated on principles of the laws of guarantee in Israeli law with respect to a third party's surety to indemnify the father for payment of maintenance for children, in case the father is sued for additional amounts beyond the maintenance determined in the divorce agreement, see CA 255/81 *Kott v. Kott*, 36(1) PD 236; FH

4/82 *Kott v. Kott*, 38(3) PD 197. That case concerned an indemnification agreement between the mother and the father which provided that the implementation of the agreement would be deferred until the child grew up. The judgment discussed the question of whether this deferral also affected the guarantor's undertaking – "Does the fact that the performance of the undertaking of the principal debtor (the mother) is deferred affect the guarantor's performance of his obligation, under the provisions of the Guarantee Law? Can the guarantor rely on the defense plea provided in section 7 (a) of the Guarantee Law, whereby "Any plea that the debtor may have against the creditor in relation to the obligation shall also be available to the creditor?" (*Kott*, p. 240). Deputy President Menachem Elon addressed this question basing himself on the Guarantee Law, 5732 – 1967 and the sources of Jewish Law (Yad, Creditor and Debtor, 26:2; Sh. Ar., ḤM, 129:9, *Sifte Cohen*, ḤM 129 (23)). Justice Elon wrote that "in the case before us, the guarantor cannot invoke this claim. The wife's obligation to indemnify is deferred because her financial position does not enable her to discharge that obligation without impinging on the satisfaction of the child's maintenance needs, whereas the essence of the guarantee is to ensure the obligation of indemnification in the event that the woman – who is obliged to indemnify – is unable to do so. From that perspective, it is irrelevant if the temporary deferral of the wife's discharge of her obligation to indemnify was legally mandated, for reasons of the child's best interest" (*Kott*, p. 241).

SURGUN, ISAAC (1701–1791), merchant in the service of the Dutch East India Company. Originally from Constantinople, Surgun settled on the Malabar Coast in Calicut and *Cochin early in the 18th century. Dealing in a variety of commodities, he owned warehouses, factories, and ships. His commercial transactions brought him into contact with many native Indian and Muslim potentates and European merchants; Dutch, English, and Hebrew sources stress his linguistic abilities, including Arabic and Portuguese. When in 1759 the Dutch East India Company needed a spokesman to represent its interests before the new Mysore rulers, Haidar Ali Khan and his son Tipu Sahib, Surgun’s ability and prestige made him a natural choice. In 1779 he secured the freedom of a group of English visitors who had been imprisoned in Calicut. With his death, the family fortunes declined.

[Walter Joseph Fischel]

SURINAME, republic on the northeastern coast of South America, between Guiana (formerly British Guiana), Brazil, and French Guyana and bordered on the north by the Atlantic Ocean. The first permanent settlement was founded in 1652 by the English governor of Barbados, Francis Lord Willoughby, and three vessels with English and Jewish settlers were sent to Suriname. Jews leaving Remire in *French Guyana joined them in 1663. A second group from Remire was brought to Suriname by English ships in 1667. Maps from that same year show Jewish plantations in the colony. On August 17, 1665, the English authorities published an official grant of privileges to the Hebrew Nation in Suriname, to be considered English-born, to practice and perform all ceremonies and customs of their religion, including marriages and wills, the observance of Sabbath and holidays, to maintain a tribunal of their own, and a grant of a plot of land in the capital, Thorarica, for a place of worship, a school, and a cemetery.

In 1667, the Dutch occupied Suriname and confirmed the privileges given to the Jews; in 1669 additions were made to them giving permission to work on Sundays, with free passage on that day and also noting that Spanish-Portuguese Jews “having been plagued by debts on property seized by the In-

quisition, should not be seized for non-payment.” A special military unit was composed of Jews.

With these privileges the Dutch prevented the evacuation of the Jews as English citizens to *Jamaica, and only a small group left.

On a hill on the banks of the Cassipoera creek, where the majority of the Cayenne Jews had settled, a wooden synagogue was consecrated; downhill a Jewish cemetery was located, its oldest grave dating from 1667.

Gradually Jews moved to a healthier area on the banks of the Suriname River, where they were joined by the Jews in Thorarica. The region, still called the “Jewish Savanna,” began to flourish. Jewish knowledge of planting and processing sugar and other tropical produce attained a high level. A township known geographically as “Jews Town” (Joods Dorp) was called by the Jews “Jerusalem on the Riverside.” In 1685 a brick synagogue was built called Berakha ve-Shalom, which also housed communal authorities and the Jewish Court of Law. The plantations around it that became small settlements had biblical names, such as Mahanaim, Succoth, Gilgal, Beersheba, Carmel, Goshen. By 1694 the population of the Savanna was composed of 570 Jews employing 9,000 laborers in 40 plantations; in the mid-eighteenth century the Jewish population reached 2,000, the majority of the white population of Suriname, in 115 plantations, employing tens of thousands of workers. Portuguese Jews from Amsterdam and Ashkenazi Jews from Rotterdam joined their brothers in Suriname.

In 1759 a “siva” (brotherhood) of liberated slaves and mulattoes descended from Jewish planters was established, called “Darkhe Yesharim” (The Way of the Righteous), whose members gradually became assimilated into the Jewish community after following the Jewish faith and intermarrying with Jews.

A series of disastrous attacks by the French navy, slave rebellions, and the production of sugar from beets in Europe led to the decline of the Jewish Savanna at the end of the eighteenth century. The planters began moving to the capital Paramaribo; in the nineteenth century about one hundred impoverished Jews still lived in the Savanna, with Jewish residence continuing until the synagogue was destroyed by fire in 1932.

In Paramaribo the community became one of small shopkeepers, anti-Jewish feelings became more prominent, and in 1925 the special privileges of the Jews were discontinued. The Portuguese Jewish synagogue Zedek ve-Shalom was erected in Paramaribo in 1716, followed by the High German (Ashkenazi) synagogue Neve Shalom in 1735. The floors of the two synagogues are covered with sand and the Sephardi rite is followed in them. By the close of the 20th century the two communities were praying together. The Jewish population dropped to 1,500 at the beginning of the 20th century; in 1923, there were 1,818 Jews. By the time of the independence of Suriname (1975), it had declined to 500 and by the end of the 20th century it was about 200 among a general population of 400,000.

The Neve Shalom synagogue was restored at the end of the 20th century. The furnishings of Zedek ve-Shalom were

transferred to the Israel Museum, and the building abandoned. Community life, however, still functions.

SUROWIECKI, WAWRZYNIEC (1769–1827), Polish aristocrat; the most celebrated Polish economist of the late 18th–early 19th century. In his book *On the Decline of Industry and Towns in Poland* (1810) he discussed the theory that the Jews had played a negative role in Poland, stating that certain characteristics criticized in them were caused by their bad living conditions and the influence of religious orthodoxy, and maintaining that these characteristics also appear in all groups engaged in commerce. The Jews, he considered, played a basic role in the historical development of the Polish economy and he concluded that they were bound to raise the level of Polish commerce, agriculture, and industry. In his view they had the necessary qualities to perform this task: industry, thrift, and the ability to learn new ways. The fact that they were able to survive difficult times was thanks to the close relationship between their personal and general interests which, Surowiecki averred, was a basic Jewish quality.

[Itzhak Goldshlag]

SURVIVORS OF THE SHOAH VISUAL HISTORY FOUNDATION, THE. The foundation was established in 1994 by filmmaker Steven Spielberg, with the goal of recording the visual testimony of Holocaust survivors and eyewitnesses so that future generations will have direct unmediated access to their experiences. Spielberg was moved by the power of oral history during his experience creating *Schindler's List*. The oral histories provided him with specific details that made his movie only more vivid. He was beseeched by survivors coming forward to tell their stories, and he undertook a public commitment to record 50,000 testimonies and to disseminate such testimonies in five initial repositories: Yad Vashem in Jerusalem, the Simon Wiesenthal Center in Los Angeles, the Museum of Jewish Heritage in New York, the United States Holocaust Memorial Museum in Washington, and the Fortunoff Archives of Holocaust Testimonies at Yale University in New Haven, Connecticut. Since its inception, the task of dissemination has become both more modest and more extensive. Until the technology enables the entire archive to be available off site at a reasonable cost, segments of the archive, often site specific, are being made available at multiple sites.

This project was not the first oral history project. The Fortunoff archive was begun in 1978 and has been recording testimonies ever since. And during the 1980s and 1990s,

as video technology evolved, regional and local projects were developed in many communities throughout the United States and Canada. The United States Holocaust Memorial Museum began its oral history project in the late 1980s, and the Hebrew University and Yad Vashem began their projects, which were audio and not video recording projects, as early as the 1950s. Still, no project of this size and scope had ever been developed regarding the Holocaust, and none was as global in reach, especially once the project fully developed.

It was a race against time. Survivors were rapidly aging. Within a few years, the last witnesses would be gone. Just after the war, many survivors had been anxious to tell the world about their experiences, their tragedies, but were silenced by disbelief or incredulity. In midlife, many wanted to share with their children, but they were afraid of upsetting them.

As they were approaching old age, these survivors were invited to give testimony to ensure that their stories would be preserved. They understood that it was time to relate their experiences. These memories would have to be shared if they were to go forth to the future. *Schindler's List* and Holocaust museums had heightened interest in the Event. The more distant we become from the Event, the more the significance of the Holocaust intensifies. In classrooms throughout the world the encounter between survivors and students – the transmission of memories, a discussion of values, and a warning against prejudice, antisemitism, racism, and indifference – has become intense.

Between 1994 and 2000, 51,700 Holocaust survivors and other victim groups and/or witnesses were interviewed. The testimonies were taken in 56 countries and in 32 languages. The Foundation interviewed Jewish survivors, homosexual survivors, Jehovah's Witness survivors, liberators and liberation witnesses, political prisoners, rescuers and aid providers, Roma and Sinti survivors, survivors of eugenics policies, and war crimes trials participants. Almost half of the archive's testimonies were collected in English – most of them in the United States. Among the 31 other languages, more than 7,000 are in Russian and more than 6,300 are in Hebrew. There are approximately 1,000 Dutch interviews, 1,800 French, 1,300 Hungarian, 1,400 Polish, and 1,300 Spanish interviews. The following languages are represented with approximately 500 to 1,000 testimonies: Bulgarian (600), Czech (500), German (900), Portuguese (500), Slovak (500), Yiddish (500).
