KABBALAH — *Seth Pancoast*

The Kabbalah was formerly a tradition, as the word implies, and is generally supposed to have originated with the Jewish Rabbins. The word is of Hebrew origin, but the esoteric science it represents did not originate with the Jews; they merely recorded what had previously been traditional.

The Kabbalah is a system of philosophy and theosophy that was obtained at a very remote period of time by the wise men of the east, through the unfoldment of the intuitive perceptions.

Self consciousness forms the basis of mind, and knowledge is acquired through the reception of activities from without, which are recorded in consciousness; there are two sources through which knowledge is received — one subjective, the other objective. The former gives us a knowledge of the causal side of the cosmos, and the latter, the objective or material side, which is the world of effects, on account of being evolved from the former.

"The outward doth from the inward roll,
And the inward dwells in the inmost soul."

If this be true, the great first cause — God — has evolved out of Himself the esoteric or subjective world, in which He is to be found manifested. Out of the subjective, by change of energy and substance through law, He evolved the objective world.

Therefore, the antecedents of the objective are to be found in the unseen or invisible portion of the universe. In a work we are preparing for the press, which has been a study for over thirty years, we will show what spirit is, that it is self-generating and self-sustaining, and from it, through volition, the cosmos was evolved.

Do not understand by the above remark that spirit becomes matter through evolution, and that the universe is a huge *Divine Personality*. We have too high a conception and reverence for Deity, to suppose for an instant that He became a material being through the evolution of the universe. He is not in any manner *personally associated* with either the esoteric or exoteric cosmos. *Spirit is distinct from matter, but not from energy; energy is the source of matter. It is therefore through energy and law that God is associated with the universe. The law is His Providence, and His will the executive.* A miracle is an impossibility, for it requires a suspension of the law upon which the universe is reared. To suspend this law for one moment would disarrange the harmony of the entire universe. Therefore, the suspension of this unique law, which controls energy in the production of substance and matter, would immediately suspend evolution, and the entire universe and all that is associated with it would at once become disintegrated.

The Providential law, being one of harmony, applies to everything outside of the spirit of God, and therefore cannot be violated with impunity. The beauties of nature result from its harmony, and when it is violated, discord ensues. We see this in nationalities, society, individuals, and in fact in all departments of nature. If the violation goes beyond certain limits, revolution is the result, and if it is not corrected, destruction naturally follows. The greater the violation the more difficult it is to overcome the discordancy. Dissipation is sure to be rewarded with sickness, and if carried too far, with death. Luxury and licentiousness, if persisted in, will destroy society as well as nationalities. History affords us ample proof of this. This law, no matter how slightly violated, brings its comparative punishment, and when obeyed, its corresponding reward.

After these preliminary remarks, we turn to our subject, the

Kabbalah, and show how it has been preserved and transmitted or handed down from one generation to another. The study of external nature alone affords us no evidence of a future life, — on the contrary, it tends to disprove it, which accounts for the agnostic belief which has become so prevalent of late years. In the investigation of external phenomena, we recognize matter, energy, and life; the latter we are told is the result of protoplasmic cell action, — the same of mind. The *continuity* observed through all the departments of nature implies that there is a law controlling energy in the production of forms. If energy had nothing to guide it, its movements would be erratic, and nature would become a conglomerate discordant mass. Now the existence of a law implies a law giver, for it is not self-creating or self-sustaining, therefore we logically conclude that there is something back of material nature that is not recognized by the external senses. What proof have we of the existence of an external world, except through consciousness? An unborn child, if it possessed reasoning facilities, would deny the existence of its own mother. A person born blind can have no conception of the beauties of nature, and if the sense of touch be suspended with that of sight, we could form no conception of solidity; if born deaf, of the harmony and discord of sound or of music. *We therefore perceive that we can have no conception of the existence of an external world except through neural activities recorded in consciousness*, and without the unfoldment of the inner consciousness, we can form no opinion of a future life. In fact, logically speaking, we have the same grounds for denying its existence as we would have of the external world, providing objective consciousness was closed.

This accounts for the doubt, uncertainty, and fear respecting the future, which is intensified by the present system of religious teachings. The spiritual world is as much a reality as this, in fact

more so, for it undergoes no change, as this one does.

The study of Theosophy has demonstrated to the writer that there is another source of knowledge which can only be acquired through the cultivation of a plane of consciousness which is not reached by objective neural activities, but can be by unfoldment of inner consciousness.

It is the development of this state of consciousness that brings us *en rapport* with the esoteric world. The question now arises, How are we to develop this much desired condition? It can only be accomplished through the harmony of the moral attributes of the spirit. Harmony is the only passport to Heaven, and the absence of harmony, which is discord, is the only passport to what Christianity terms Hell. Therefore, heaven and hell are only conditions of the spirit, which are beautifully illustrated in the 20th chapter of the Apocalypse, where it describes the angel descending from heaven, having the key of the bottomless pit and a chain. With the key he unlocked hell, and with the chain he bound the devil for a thousand years. The angel is the representative of holiness and purity, which is only attained through the harmony of the spirit; the key is a symbol of light, and the chain that of truth; hell is supposed to be the abode of darkness, and the devil a spirit of falsehood and error. We will now ask the question, Is there anything to banish darkness but light? Anything to disperse falsehood and error but truth?

Christ was an Essene, and this secret order was a branch of the Kabbalah. St. John was his favorite disciple, whom he fully initiated into the mysteries. During this disciple's exile on the Isle of Patmos or Patmo, he wrote the Apocalypse, which is a profound Kabbalistic production, describing the unity, duality, ternary, and septenary of the Kabbalah. The ancient adepts found from experience that, in order to develop the interior or

subjective consciousness, it was necessary allegorically speaking) to "wear the cloak of Apollonius;" that is, to withdraw from the outer world, practice to the fullest extent self-denial, and spend their wakeful moments in esoteric meditation. In order to isolate themselves from society, they established secret sanctuaries, in which they met for mutual communion and religious exercises.

As they advanced in spiritual knowledge they found that there were various grades of harmony in the subjective or spiritual world, and each individual on leaving this life gravitated, as it were, to the sphere with which he was in harmony. They divided their sanctuaries into seven degrees to correspond with the harmonies in esoteric nature, and to each degree there were three years of spiritual probation. As harmony results from the analogy of contraries, there were as many degrees of discord as there were of harmonies. The former they designated hell. The material cosmos, that is, what we call the external world, was, as it were, middle ground between the two, which they called Hades, into which the soul passed at death, and the spirit was made cognizant of its record while on earth. Physical death, they claimed, was merely a change from a physical to a spiritual condition; the soul or spiritual body being formed at the same time that the physical was, but in a very different manner. After death, the soul either ascended or descended, depending not upon gravity, but upon harmony.

It will thus be perceived that each degree in the sanctuary required a separate or distinct initiation for each one, which was intended to represent a higher state of moral and intellectual advancement. The last or seventh degree was the one of perfection which brought about illumination, when the subjective world was as much a reality to the inward or subjective consciousness as the outward world is to the objective. When this condition of moral and intellectual unfoldment was obtained, all

interest in this life was gone and the spirit longed for separation from its physical casket. The neophyte seeking spiritual knowledge could only attain to the wisdom of the different degrees by advancing morally, so as to be in harmony with the degrees. The knowledge thus obtained was never recorded, but communicated verbally in symbolic language. By this means it was kept a profound secret, and handed down traditionally. The first record we have of the Kabbalah was made by Rabbi Akiba and Rabbi Simeon Ben Jochai; the former compiled *The Sepher Jetzirah*, "Book of Creation," and the latter, *The Sepherhaz Sohar*, "Book of Light." The first is regarded by the Kabbalist as the key of the second. The Sohar has never been translated, and, as a late Bishop of the Church of England justly states, never will be by a Christian. This is owing to its symbolic character, which can only be interpreted by a Kabbalist. It is in three volumes, in unpointed Hebrew, and consists of a mixture of Armenic and Semetic languages. The Sepher Jetzirah maybe procured in three languages, the Hebrew, Latin, and German.

Fig. A:

Fig. B:

We now come to the most interesting part of our subject. The key to the Kabbalah is the "Word," consisting of four Hebrew letters, which may be arranged in a cross inclosed in a circle, Fig. A. The Christian Kabbalist inserted the Hebrew letter Sin, as a representative of Christ in the ineffable name, Fig. B. The four-lettered name was the one given to Moses on the Mount, with the understanding that it represented his (Jehovah) verbalization in the universe. The Word was held in profound reverence by all, Kabbalists as well as the Jews, and all ancient secret orders, and was never spoken audibly, in fact never mentioned, except in the

last initiation, when it was whispered in the initiate's ear by the Grand Master of Ceremonies. The knowledge and power the Word confers upon the recipient of its meaning is given in a fragment of a clavicle of Solomon: "I, Solomon, King of Israel and Palmyra, have sought and obtained in part the Holy Chocmah, which is the wisdom of Adonai. I have become King of the spirit of heaven and of earth, master of the inhabitants of the air and the souls of the sea, because I procured the key of the occult gate of light. I have accomplished great things by the virtue of *Schema Hamphorasch*, and by the thirty-two paths of the *Sepher Jetzirah*. Number, weight, and measure determine the form of all things, substance is one, and God created it eternally. Happy is he who knows the letters and numbers; numbers are ideas, and ideas are forces, and forces Elohim. The synthesis of Elohim is Schema. Schema is one, and its pillars are two, its power is three, its form four. Its reflection gives eight, and eight multiplied by three gives the twenty-four thrones of wisdom. On each throne rests a crown of three jewels, each jewel bears a name, each name an absolute idea. There are seventy-two names on the twenty-four crowns of Schema. Thou shall write these names on thirty-six talismans, two on each talisman — one on each side. Thou shalt divide these talismans into four series of nine each, according to the number of the letters of the Schema. On the first series engrave the letter Jod, figure of the blooming rod of Aaron; on the second series the letter He, figure of the cup of Joseph; on the third series the letter Vau, the figure of the source of David, my Father; on the fourth series the letter He, the figure of the Jewish shekel. The thirty-six talismans will be a book that will contain all the secrets of nature, and by their divers combinations thou wilt make the Genii and Angels speak."

The Schema represents the four-lettered name; when mathematically constructed into seventy-two different forms, it is

called Schema-hamphorasch, and represents seventy-two paths of wisdom, which constitute the keys of universal science.

The history of the Kabbalah is yet to be written, which can only be accomplished by one versed in its secrets. Historians have not done it justice; they have debased it by associating it with necromancy or the black art, which is to the Kabbalah what false religion is to pure Christianity. The kernel lies hidden in the rubbish of the past, where it has been preserved for future generations. When it is disrobed of its vile and obnoxious covering it will be found to have lost none of its beauty and brilliancy. The light of the Orient has been preserved by the wise men of the east, in symbols and allegorical language, and when the time arrives, which is not far distant, someone possessing the key, which is the *Word*, will unlock its mysteries and bring it forth in its divine purity, to enlighten the present and future generations.

The cycle of Tritheme, which commenced in 1878, will prepare some one to bring it forth from its oblivion, and through its teachings a new train of thought will be instituted and an impetus given to the moral and emotional development which will be the harbinger of a bright future. Science will take new strides, religion will throw aside her thread-bare garment and assume a new dress, which will accord with the teachings and example of Christ. When this occurs, the conflict between religion and science will cease and harmony be established. The two then will be like brother and sister, aiding each other in the development of the intellectual and moral attributes of the spirit. It is no fault of science that a difference between them has occurred; it has advanced, while religion has been carrying on a warfare about creeds and dogmas which has retarded her progress.

Christianity of to-day is as different from what it was in the first

and second centuries of the Christian era, as modern masonry is different from what it was in ancient times. Religion has attempted to control humanity through fear, having created a devil to keep man in subjection, and force the belief that God, who is the quintessence of purity and holiness, is a vindictive and angry being, who takes delight in chastising those who through ignorance violate the Divine Law. While this religious conflict has been progressing, Christianity has gradually lost its hold on the public mind. At the same time humanity longs to know something of the future which science cannot give.

How is this emotional or moral want to be supplied? for humanity cannot progress intellectually beyond objective knowledge, without the development of the moral attributes. We venture the assertion that if the same advancement had been made in the development of the emotional attributes of the spirit as has been in the intellectual, there would have been no agnosticism, and science would be far in advance of what it is. Science has about reached the limit of objective knowledge, and cannot advance until it acquires a knowledge of this world's antecedents, which will enable it to correct numerous errors and give an impetus to further development. This cannot be done so long as they ignore the existence of a subjective consciousness.

The Kabbalah embodies both philosophy and theosophy. The former gives us a knowledge of the universe, and the latter teaches man how to know himself and his God. It will also elevate masonry and all secret organizations having their rise from it, by showing that ancient masonry was not merely a social and beneficial order like modern masonry, but an organization for the unfolding of the moral and intellectual attributes.

The Kabbalah has shown its fruits in philosophy through such minds as Thales, Solon, Plato, Pythagoras, Goethe, and many

others. In religion through Zoroaster, Confucius, Christ, Old and New Testament, and the Early Christians, and later through the United Brethren, to which Jacob Behmen belonged, and other theosophic sects. If the views we have advanced be correct, that it is through the development of the inner consciousness that man attains to a knowledge of the subjective or causal world, and that the knowledge of the Kabbalah will enable us to unfold these faculties, how urgent we all should be to have its secrets revealed.

The Path

SEERSHIP — *Murdhna Joti*

The following remarks are not intended to be a critique upon the literary merits or demerits of the poem which is taken as the subject of criticism. In 1882, *The Theosophist* (1) published a review of "The Seer, a Prophetic Poem," by Mr. H. G. Hellon, and as clairvoyance is much talked of in the West, it seemed advisable to use the verses of this poet for the purpose of inquiring, to some extent, into the western views of Seership, and of laying before my fellow seekers the views of one brought up in a totally different school.

I have not yet been able to understand with the slightest degree of distinctness what state is known as "Seership" in the language of western mysticism. After trying to analyze the states of many a "seer," I am as far as ever from any probability of becoming wiser on the subject, as understood here, because it appears to me that no classification whatever exists of the different states as exhibited on this side of the globe, but all the different states are heterogeneously mixed. We see the state of merely catching glimpses in the astral light denominated *seership*, at the same time that the very highest illustrations of that state are called *trances*.

As far as I have yet been able to discover, "Seership," as thus understood here, does not come up to the level of *Sushupti*, which is the dreamless state in which the mystic's highest consciousness — composed of his highest intellectual and ethical faculties — hunts for and seizes any knowledge he may be in need of. In this state the mystic's lower nature is at rest (paralyzed); only his highest nature roams into the ideal world in quest of food. By *lower nature*, I mean his physical, astral or psychic, lower

emotional and intellectual principles, including the lower fifth. (2) Yet even the knowledge obtained during the Sushupti state must be regarded, from this plane, as theoretical and liable to be mixed, upon resuming the application of the body, with falsehood and with the preconception of the mystic's ordinary waking state, as compared with the true knowledge acquired during the several initiations. There is no guarantee held out for any mystic that any experience, researches, or knowledge that may come within his reach in any other state whatever, is accurate, except in the mysteries of initiation.

But all these different states are necessary to growth. *Yagrata* — our waking state, in which all our physical and vital organs, senses, and faculties find their necessary exercise and development, is needed to prevent the physical organization from collapsing. *Swapna* — dream state, in which are included all the various states of consciousness between *Yagrata* and *Sushupti*, such as somnambulism, trance, dreams, visions, &c. — is necessary for the physical faculties to enjoy rest, and for the lower emotional and astral faculties to live, become active, and develop; and *Sushupti* state comes about in order that the consciousnesses of both *Yagrata* and *Swapna* states may enjoy rest, and for the fifth principle, which is the one active in *Sushupti*, to develop itself by appropriate exercise. In the equilibrium of these three states lies true progress.

The knowledge acquired during *Sushupti* state might or might not be brought back to one's physical consciousness; all depends upon his desires, and according as his lower consciousnesses are or are not prepared to receive and retain that knowledge.

The avenues of the ideal world are carefully guarded by elementals from the trespass of the profane.

Lytton makes Mejnour say: (3) "We place our tests in ordeals that

purify the passions and elevate the desires. And nature in this controls and assists us, for it places awful guardians and unsurmountable barriers between the ambitions of vice and the heaven of loftier science."

The desire for physical enjoyment, if rightly directed, becomes elevated, as a desire for something higher, gradually becoming converted into a desire to do good to others, and thus ascending, ceases to be a desire, and is transformed into an element of the sixth principle.

The control by nature to which Mejnour refers is found in the natural maximum and minimum limits; there cannot be too much ascension, nor can the descent be too quick or too low. The assistance of nature is found in the Turya state, in which the adept takes one step and nature helps for another.

In the Sushupti state, one might or might not find the object of his earnest search, and as soon as it is found, the moment the desire to bring it back to normal consciousness arises, that moment Sushupti state is at an end for the time being. But one might often find himself in an awkward position when he has left that state. The doors for the descent of the truth into the lower nature are closed. Then his position is beautifully described in an Indian proverb: "The bran in the mouth and the fire are both lost." This is an allusion to a poor girl who is eating bran, and at the same time wants to kindle the fire just going out before her. She blows it with the bran in her mouth; the bran falls on the dying ashes, extinguishing them completely; she is thus a double loser. In the Sushupti state, the anxiety which is felt to bring back the experience to consciousness acts as the bran with the fire. Anxiety to have or to do, instead of being a help as some imagine, is a direct injury, and if permitted to grow in our waking moments, will act with all the greater force on the plane of

Sushupti. The result of these failures is clearly set forth by Patanjali. (4)

Even where the doors to the lower consciousness are open, the knowledge brought back from Sushupti state might, owing to the distractions and difficulties of the direct and indirect routes of ascent and descent, be lost on the way either partially or wholly, or become mixed up with misconceptions and falsehood.

But in this search for knowledge in Sushupti, there must not remain a spark of indifference or idle inquisitiveness in the higher consciousness. Not even a jot of lurking hesitation about entering into the state, nor doubt about its desirability, nor about the usefulness or accuracy of the knowledge gleaned on former occasions, or to be presently gleaned. If there is any such doubt or hesitancy, his progress is retarded. Nor can there be any cheating or hypocrisy, nor any laughing in the sleeve. In our normal wakeful state it always happens that when we believe we are earnestly aspiring, some one or more of the elements of one or more of our lower consciousness belie us, make us feel deluded and laugh at us, for such is the self-inconsistent nature of desire.

In this state which we are considering, there are subjective and objective states, or classes of knowledge and experience, even as there are the same in Yagrata. So, therefore, great care should be taken to make your aims and aspirations *as high as possible* while in your normal condition. Woe to him who would dare to trifle with the means placed at his disposal in the shape of Sushupti. One of the most effectual ways in which western mystics could trifle with this is to seek for the missing links of evolution, so as to bring that knowledge to the normal consciousness, and then with it to extend the domain of "scientific" knowledge. Of course, from the moment such a desire is entertained, the one who has it is shut out from Sushupti. (5)

The mystic might be interested in analyzing the real nature of the objective world, or in soaring up to the feet of *Manus*, (6) to the spheres where Manava intellect is busy shaping the mould for a future religion, or had been shaping that of a past religion. But here the maximum and minimum limits by which nature controls are again to be taken account of. One essential feature of Sushupti is, as far as can now be understood, that the mystic must get at all truths through but one source, or path, viz: through the divine world pertaining to his own lodge (or teacher), and through this path he might soar as high as he can, though how much knowledge he can get is an open question.

Let us now inquire what state is the seership of the author of our poem "The Seer," and try to discover the "hare's horns" in it. Later on we may try to peep into the states of Swedenborg, P. B. Randolph, and a few of the "trained, untrained, natural-born, self-taught, crystal, and magic mirror seers."

I look at this poem solely to point out mistakes so as to obtain materials for our study. There are beauties and truths in it which all can enjoy.

In ancient days it was all very well for mystics to write figuratively so as to keep sacred things from the profane. Then symbolism was rife in the air with mysticism, and all the allegories were understood at once by those for whom they were intended. But times have changed. In this materialistic age it is known that the wildest misconceptions exist in the minds of many who are mystically and spiritually inclined. The generality of mystics and their followers are not free from the superstitions and prejudices which have in church and science their counterpart. Therefore in my humble opinion there can be no justification for writing allegorically on mysticism, and, by publication, placing such writings within reach of all. To do so is

positively mischievous. If allegorical writings and misleading novels are intended to popularize mysticism by removing existing prejudices, then the writers ought to express their motives. It is an open question whether the benefit resulting from such popularization is not more than counterbalanced by the injury worked to helpless votaries of mysticism, who are misled. And there is less justification for our present allegorical writers than there was for those of Lytton's time. Moreover, in the present quarter of our century, veils are thrown by symbolical or misleading utterances over much that can be safely given out in plain words. With these general remarks let us turn to "The Seer."

In the Invocation, addressed evidently to the Seer's guru, (7) we find these words:

"When in delicious dreams I leave this life,
And in sweet trance unveil its mysteries;
Give me thy light, thy love, thy truth divine!"

Trance here means only one of the various states known as cataleptic or somnambulic, but certainly neither Turya nor Sushupti. In such a trance state very few of the mysteries of "this life," or even of the state of trance itself, could be unveiled. The so-called Seer can "enjoy" as harmlessly and as uselessly as a boy who idly swims in the lagoon, where he gains no knowledge and may end his sport in death. Even so is the one who swims, cuts capers, in the astral light, and becomes lost in something strange which surpasses all his comprehension. The difference between such a Seer and the ordinary sensualist is, that the first indulges both his astral and physical senses to excess, while the latter his physical senses only. These occultists fancy that they have removed their interest from *self*, when in reality they have only enlarged the limits of experience and desire, and transferred their interest to the things which concern their larger span of life.

(8)

Invoking a Guru's blessings on your own higher nature for the purpose of sustaining you in this trance state, is as blasphemous and reprehensible an act of assisting descent, and conversion of higher into lower energies, as to invoke your Guru to help you in excessive wine drinking; for the astral world is also material. To be able to solve the mysteries of any consciousness whatever, even of the lowest physical, while in trance, is as vain a boast of the hunters for such a state as that of physiologists or mesmerists. While you are in trance state, if you are not ethical enough in your nature, you will be tempted and forced, by your powerful lower elements, to pry into the secrets of your neighbors, and then, on returning to your normal state, to slander them. The surest way to draw down your higher nature into the miry abyss of your physical and astral world, and thus to animalize yourself, is to go into a trance or to aspire for clairvoyance.

"And thou, (Guru) left me looking upward through the veil,
To gaze into thy goal and follow thee!"

These lines are highly presumptuous. It is impossible, even for a very high Hierophant, in *any of his states whatever*, to gaze into his Guru's goal (9) his subjective consciousness can but *barely* come up to the level of the normal or objective consciousness of his Guru. It is only during the initiation that the initiated sees not only his own immediate goal, but also Nirvana, which of course includes his Guru's goal also; but after the ceremony is over he recollects only his own immediate goal for his next "class," but nothing beyond that. (10) This is what is meant by the God Jehovah saying to Moses: "And I will take away mine hand and Thou shall see my back, but my face shall not be seen." And in the Rig Veda it is said: (11) "Dark is the path of Thee, who art bright: the light is before Thee."

Mr. Hellon opens his poem with a quotation from *Zanoni*: "Man's first initiation is in trance: in dreams commence all human knowledge, in dreams he hovers over measureless space, the first faint bridge between spirit and spirit — this world and the world beyond."

As this is a passage often quoted approvingly, and recognized as containing no misconceptions, I may be permitted to pass a few remarks, first, upon its intrinsic merits, and secondly, on Lytton himself and his *Zanoni*. I shall not speak of the rage which prevails among mystical writers for quoting without understanding what they quote.

In *Swapna* state man gets human, unreliable knowledge, while divine knowledge begins to come in Sushupti state. Lytton has here thrown a gilded globule of erroneous ideas to mislead the unworthy and inquisitive mysticism hunters, who unconsciously prize the globule. It is not too much to say that such statements in these days, instead of aiding us to discover the true path, but give rise to numberless patent remedies for the evils of life, remedies which can never accomplish a cure. Man-made edifices called true Raja Yoga, (12) evolved in trance, arise confronting each other, conflicting with each other, and out of harmony in themselves. Then not only endless disputation arises, but also bigotry, while the devoted and innocent seekers after truth are misled, and scientific, intelligent, competent men are scared away from any attempt to examine the claims of the true science. As soon as some one sided objective truth is discovered by a Mesmer, a defender of ancient Yoga Vidya (13) blows a trumpet crying out, "Yoga is selfmesmerization, mesmerism is *the key* to it, and animal magnetism develops spirituality and is itself spirit, God, Atman," deluding himself with the idea that he is assisting humanity and the cause of truth, unconscious of the fact that he is thus only degrading Yoga Vidya. The ignorant medium contends

that her "control" is divine. There seems to be little difference between the claims of these two classes of dupes and the materialist who sets up a protoplasm in the place of God. Among the innumerable hosts of desecrated terms are *Trance*, *Yoga*, *Turya*, *initiation*, &c. It is therefore no wonder that Lytton, in a novel, has desecrated it and misapplied it to a mere semi-cataleptic state. I, for one, prefer always to limit the term *Initiation* to its true sense, viz., those sacred ceremonies in which alone "Isis is unveiled."

Man's first initiation is *not* in trance, as Lytton means. Trance is an artificial, waking, somnambulistic state, in which one can learn nothing at all about the real nature of the elements of our physical consciousness, and much less any of any other. None of Lytton's admirers seems to have thought that he was chaffing at occultism, although he believed in it, and was not anxious to throw the pearls before swine. Such a hierophant as Mejnour — not Lytton himself — could not have mistaken the tomfoolery of somnambulism for even the first steps in Raja Yoga. This can be seen from the way in which Lytton gives out absolutely erroneous ideas about occultism, while at the same time he shows a knowledge which he could not have, did he believe himself in his own chaffing. It is pretty well recognized that he at last failed, after some progress in occultism as a high accepted disciple. His Glyndon might be Lytton, and Glyndon's sister Lady Lytton. The hieroglyphics of a book given him to decipher, and which he brought out as *Zanoni*, must be allegorical. The book is really the master's ideas which the pupil's highest consciousness endeavors to read. But they were only the mere commonplaces of the master's mind. The profane and the cowardly always say that the master descends to the plane of the pupil. Such can never happen. And precipitation of messages, from the master is only possible when the pupil's highest ethical and intuitive faculties reach the

level of the master's normal and objective state. In *Zanoni*, this is veiled by the assertion that he had to *read* the hieroglyphics — they did not *speak* to him. And he confesses in the preface that he is by no means sure that he has correctly deciphered them. "Enthusiasm," he says, "is when that part of the soul which is above intellect soars up to the Gods, and there derives the inspiration." Errors will therefore be due to wilful misstatements or to his difficulty in reading the cipher.

"In dreams I see a world so fair,
That life would love to linger there,
And pass from this to that bright sphere.
In dreams ecstatic, pure and free,
Strange forms my inward senses see,
While hands mysterious welcome me."

Such indefinite descriptions are worse than useless. The inward senses are psychic senses, and their perceiving strange forms and mere appearances in the astral world is not useful or instructive. Forms and appearances in the astral light are legion, and take their shape not only from the seer's mind unknown to himself, but are also, in many cases, reflections for other people's minds.

"Oh, why should mine be ever less,
And light ineffable bless
Thee, in thy starry loneliness,"

seems to be utterly unethical. Here the seer is in the first place jealous of the light possessed by his guru, or he is grasping in the dark, ignorant even of the *rationale* of himself being in lower states than his guru. However, Mr. Hellon has not erred about the existence of such a feeling. It does and should exist in the trance and dreaming state. In our ordinary waking state, attachments, desires, &c., are the very life of our physical senses, and in the same way the emotional energies manifest themselves on the

astral plane in order to feed and fatten the seer's astral senses, sustaining them during his trance state. Unless thus animated, his astral nature would come to rest.

No proof is therefore needed for the proposition that any state which is sustained by desires and passions cannot be regarded as anything more than as a means for developing one part of the animal nature. Van Helmont is of the same opinion as Mr. Hellon. (14) We cannot, therefore, for a moment believe that in such a state the "I" of that state is *Atman*. (15) It is only the false "I"; the vehicle for the real one. *Ahankara* — lower self, or individuality of the waking state, for even in trance state the lower sixth principle plays no greater part and develops no more than in the wakeful state. The change is only in the field of action, from the waking one to the astral plane; the physical one remaining more or less at rest. Were it otherwise, we would find somnambules day by day exhibiting increase of intellect, whereas this does not occur.

Suppose that we induce the trance state in an illiterate man. He can then read from the astral counterpart of Herbert Spencer or Patanjali's books as many pages as we desire, or even the unpublished ideas of Spencer; but he can never make a comparison between the two systems, unless that has already been done by some other mind in no matter what language. Nor can any somnambule analyze and describe the complicated machinery of the astral faculties, much less of the emotional ones, or of the fifth principle. For in order to be analyzed they must be at rest so that the higher self may carry on the analysis. So when Mr. Hellon says:

"A trance steals o'er my spirit now,"

he is undoubtedly wrong, as *Atman*, or spirit, cannot go into a trance. When a lower plane energy ascends to a higher plane, it

becomes silent there for a while until by contact with the denizens of its new home its powers are animated. The somnambulant state has two conditions, (a) waking, which is psycho-physiological or astro-physical; (b) sleeping, which is psychical. In these two the trance steals partly or completely only over the physical consciousness and senses.

"And from my forehead peers the sight," etc.

This, with much that follows, is pure imagination or misconception. As for instance, "floating from sphere to sphere." In this state the seer is confined to but one sphere — the astral or psycho-physiological —; no higher one can he even comprehend.

Speaking of the period when the sixth sense shall be developed, he says:

"No mystery then her sons shall find,
Within the compass of mankind;
The one shall read the other's mind."

In this the seer shows even a want of theoretical knowledge of the period spoken of. He has madly rushed into the astral world without a knowledge of the philosophy of the mystics. Even though the twelfth sense were developed — let alone the physical sixth — it shall ever remain as difficult as it is now, for people to read one another's mind. Such is the mystery of Manas. (16) He is evidently deluded by seeing the apparent triumphs during a transitional period of a race's mental development, of those minds abnormally developed which are able to look into the minds of others; and yet they do that only partially. If one with a highly developed sixth principle were to indulge for only six times in reading others' minds, he would surely drain that development down to fatten the mind and desires. Moreover, Mr. Hellon's seer seems to be totally unaware of the fact that the

object of developing higher faculties is not to peer into the minds of others, and that the economy of the occult world gives an important privilege to the mystic, in that the pages of his life and *manas* shall be carefully locked up against inquisitive prowlers, the key safely deposited with his guru, who never lends it to any one else. If with the occult world the laws of nature are so strict, how much more should they be with people in general.

Otherwise, nothing would be safe. The sixth sense would then be as delusive and a curse to the ignorant as sight and learning are now. Nor shall this sixth sense man be "perfect." Truth for him shall be as difficult to attain through his "sense," as it is now. The horizon shall have only widened, and what we are now acquiring as truth will have passed into history, into literature, into axiom. "Sense" is always nothing else than a channel for desire to flow through and torment ourselves and others.

The whole poem is misleading, especially such expressions as: "His spirit views the world's turmoil; behold his body feed the soil. — A sixth sense race borne ages since, to God's own zone. "Our higher self — Atman — can never "view the world's turmoil," nor behold the body. For supposing that it did view the body or the world's turmoil, it would be attracted to them, descending to the physical plane, where it would be converted more or less into physical nature. And the elevation of a sixth sense race unphilosophically supposes the raising up of that sense, which certainly has only to do with our physical nature, at most our astro-physical nature, to the sphere of God or Atman.

By merely training the psychical powers true progress is not gained, but only the enjoyment of those powers; a sort of alcohol on the astral plane, which results in unfavorable Karma. The true path to divine wisdom is in performing our duty unselfishly in the station in which we are placed, for thereby we convert lower nature into higher, following Dharma — our whole duty.

5. The following from the *Kaushitaki Upanishad*, (see Max Muller's translation, and also that published in the Bibliotheka Indica, with Sankaracharya's commentary — Cowell's tran.) may be of interest to students. "Agatasatru to him: 'Balaki, where did this person here sleep? Where was he? Whence did he come back?' Balaki did not know. And Agatasatru said to him: 'Where this person here slept, where he was, whence he thus came back, is this: The arteries of the heart called Hita extend from the heart of the person towards the surrounding body. Small as a hair divided a thousand times, they stand, full of a thin fluid of various colors, white, black, yellow, red. In these the person is when sleeping, he sees no dream (Sushupti). Then he becomes one with that prana (breath) alone.'" (Elsewhere the number of these arteries is said to be 101.) "And as a razor might be fitted in a razor case, or as fire in the fire place, even thus this conscious self enters into the self of the body, to the very hair and nails; he is the master of all, and eats with and enjoys with them. So long as Indra did not understand the self, the Asuras (lower principles in man) conquered him. When he understood it, he conquered the Asuras, and obtained the pre-eminence among all gods. And thus also he who knows this obtains pre-eminence, sovereignty, supremacy." And in the *Khandogya Upanishad*, VI Prap. 8, Kh, I: "When the man sleeps here, my dear son, he becomes united with the True — in Sushupti sleep — he is gone to his own self. Therefore they

say, he sleeps (Swapita), because he is gone (apita) to his own (sva). And in *Prasna Up II, 1*, "There are 101 arteries from the heart; one of them penetrates the crown of the head; moving upwards by it man reaches the immortal; the others serve for departing in different directions." [ED.] ([return to text](#))

6. This opens up an intensely interesting and highly important subject, which cannot be here treated of, but which will be in future papers. Meanwhile, Theosophists can exercise their intuition in respect to it. [ED.] ([return to text](#))

7. *Guru*, a spiritual teacher. ([return to text](#))

8. Vide *Light on the Path*, Rule 1, note, part I. ([return to text](#))

9. There is one exceptional case where the Guru's goal is seen, and then the Guru has to die, for there can be no two *equals*. ([return to text](#))

10. There is no contradiction between this and the preceding paragraph where it is said, "To see the Guru's goal is impossible." During the initiation ceremony, there is no separateness between those engaged in it. They all become one whole, and therefore even the High Hierophant, while engaged in an initiation, is no more his separate self, but is only a part of the whole, of which the candidate is also a part, and then, for the time being, having as much power and knowledge as the very highest present. [ED.] ([return to text](#))

The Path

THE NATURE AND OFFICE OF BUDDHA'S RELIGION

From a dissertation by the Rt. Rev. H. Sumangala, High Priest of Adam's Peak, Ceylon. (1)

What must a religion chiefly reveal? A religion, as such, must for the most part propound what is not generally seen and felt in the nature of sentient beings. It must also proclaim "the ways and means" by which the good of the world is attained. These *teachings* are essential to a religion, or it would, at best, become only a system of philosophy or a science of nature. We find these two essentials fully treated in the religion of Buddha.

Buddha says: (2) "The world has mounted on the passions and is suspended therefrom — that is, the thoughts of men are hanging down from the lusts and other evils. The whole world is encompassed by decay; and Death overwhelms us all, (consumption and decay ever slowly but steadily creep in and eat into each and everything in existence, and it is here likened to something like land encircled by sea). Nature has subjected us to birth, decay, and death, *and the deeds of our past lives are covered by the terrors of death from our view*, although the time of their action is not very far removed from our present state of existence. Hence it is that we do not view the scenes of our past births. Human life before it arrives at its final destiny is ever inseparable from Jati, Jara, Marana, etc., (birth, infirmities, death, etc.). As we are at present we are in sorrow and pain, and we have not yet obtained the highest object of our being. It behooves us, therefore, to exert ourselves everytime and by all means to attain to our *summum ultimum*, and we have to use and practice 'the ways and means' shown in religion in earnestness and integrity."

Now what are they as set forth in Buddhism? "The man who is ever fully in the observance of the precepts of morality; who sees and understands things well and truly; who has perfect and serene command over his thoughts; and who has his mind fixed well in proper contemplation. I say that such a man alone will safely pass over the dreadful torrent of metempsychosis, which is indeed hard to be gone over safely and without meeting with great obstacles and difficulties."

The way to holiness of being, to destruction of sorrows, pain, and sufferings, and to the path to Nirvana and to its attainment, is the starting of memory, on the body, on sensation, on mind, and on the true doctrines, largely discoursed on by the Lord Gautama Buddha. "Men are sanctified by their deeds, their learning, their religious behavior, their morals, and by leading a holy life; *they do not become holy by race or wealth.*" (3)

Buddha has opened up to us a supreme path for sanctification, described in detail in many verses of His *Dharma*. (4) He says: "Oh Bhikkus! what is the holy path which ought to be walked over to destroy pain and sorrows! It is the *ariya* path, consisting of eight members or component parts, which are: Right Seeing or correct belief; right Thinking; right Words; right Actions; right Living; right Exertions; right Recollecting; and right Composing of Mind — *the practice of Yoga.*"

Of all the paths this, the eight membered one, is the Supreme; of the Truths, the fourfold one is the highest; of all classes of knowledge, that of Nirvana is the most excellent, and of all bipeds Buddha is the highest and most supremely exalted and enlightened.

I. Right seeing is the correct and full comprehension of the four facts or divisions, which are: Sorrows, the origin of sorrows, the destruction of sorrows, and the ways and means to be used for

that destruction. Now this Right seeing may be viewed in two ways, (1) *worldly*, (2) *over worldly*, or above the worldly way. The first is understanding, while still we have not overcome our lusts, passions, and desires, the effects of good and bad actions, and that such acts alone brought about the effects; the second is brought about by destroying lust, anger, &c., and rightly comprehending what are known as the "four supreme verities."

II. Right thinking includes pondering on the abandoning of all merely worldly happiness, bad desires, anger, &c., and the cherishing of thoughts to live separated from them all; loathing to take life, and the continued mental exercise of the determination not to hurt a sentient being.

III. Right Speech avoids lying, slandering, uttering rough or vulgar words, and vain babbling or empty talk.

IV. Right Actions is sanctifying the body by refraining from killing, stealing, enjoying unlawful sexual intercourse, &c.

V. Right Living is obtaining a livelihood by being worthily employed, supporting one's self.

VI. Right Exertion is to labor willingly and earnestly to prevent evil thoughts *from arising in the mind*, nipping even the buds of such thoughts already sprung, and by nourishing good thoughts and by creating morally virtuous ideas when heart and mind are vacant and empty of them.

VII. The seventh is the four above mentioned — in possession.

VIII. The last member includes the four *dhyanas*. *Samma Samadhi*, or Right Meditation, is the last member of the Supreme Path. In religion *Samadhis* are of various natures, but now we will confine ourselves to one particular *Samadhi*.

It is that state of mind in which dispersed thoughts are brought

together and concentrated on one particular object. The chief feature is composure of the mind, and its essential characteristic is the restriction of thoughts from dispersion. Stability aids its sustentation, and undisturbed happiness is its natural result.

The primary stage of this state of mind is known as Upachara Samadhi; (5) the second, or advanced stage, as Uppana Samadhi. (6)

It is also divided into two classes. *Lokiya*, (7) which any one may enter into; and *Lokuttara* (8) which can be entered into only by those who are free from worldly desires. The first is a preliminary step to the attainment of the second. For the first, the devotee must give himself up to devotion in the manner prescribed in 3d, 4th, and 5th angas of the *Arya astangikamarga chatuparisuddhi silas*, and then free himself from the ten worldly troubles, which arise: from building houses; connections with family; excessive gains; the duties of a teacher; from manual work; journeys for another or for one's own gain; sickness of teacher, pupils, and parents; bodily sufferings; constant study, and worldly power and its loss. Being free from these, he must then be acquainted with the systematic process of meditation, instructed by a friend or an eminent preceptor.

Meditation is of two classes. First, that wherein the devotee exercises universal love of mankind, reflects that death is close at hand, and that the human body, being liable to decay, is not to be regarded with consideration. The second is that which applies to a man according to his moral nature. (9) These are forty in number. Taking one let us see how meditation should be practiced.

Man's moral nature is divided into six classes: Sensuous, irascible, ignorant, faithful, discreet, reflective. The first three are evil, and the last three good qualities. If in any man's nature an evil and

virtue combine, that which predominates will influence his moral character. The process of meditation, then, is to be decided by the preceptor according to the tendency of the moral character as thus influenced. (10) The devotee then seeks retirement resigned to Buddha.

STUDIES IN THE UPANISHADS: I

[BY A STUDENT]

Many American theosophists are asking, "What are the Upanishads?" They are a portion of the ancient Aryan literature which this journal has set itself to help lay before theosophists of America, to the end that whatever in them is good and true may be brought out. As Max Muller says, hitherto the Upanishads have not received at the hands of Sanskrit and oriental scholars, that treatment which in the eyes of philosophers and theologians they seem so fully to deserve. He also calls them "ancient theosophic treatises" and declares that his real love for Sanskrit literature was first kindled by them. (1) They have received no treatment at all in the United States, because they are almost absolutely unknown in the original tongue in this country, and in translations, have been but little studied here. Europe and America differ in this, that while in England and Germany nearly all such study is confined to the book-worm or the theologian, here there is such a general diffusion of pretty fair education in the people, that the study of these books, as translated, may be made popular, a thing which in Europe is perhaps impossible.

Muller returned to the study of the Upanishads after a period of thirty years, during which he had devoted himself to the hymns and Brahmanas of the Vedas, and found his interest in them undiminished. As for the period of these treatises, he says that has been fixed provisionally, at about 800 B. C.

The word means "secret charm," "philosophical doctrine;" and more strictly, "to sit down near." Hindu theologians say the Upanishads belong to revealed religion in opposition to that which is traditional. In the opinion of our friend Muller, to whom

all western students must ever remain grateful no matter how much they may disagree with his views as to the Vedas being the lispings of baby man, "the earliest of these philosophical treatises will always maintain a place in the literature of the world, among the most astounding productions of the human mind in any age and in any country." (2)

Professor Weber placed the number of Upanishads at 235; (3) in 1865 Muller put them at 149, and others added to that number, so that even today the actual figures are not known. Indeed it is held by several Orientalists, that before they assumed their present form, a large mass of traditional Upanishads must have existed.

The meaning of the word which ought to be borne most in mind is, "secret knowledge, or true knowledge" although there may be a Upanishad or secret knowledge, which is false.

In the Chandogya Upanishad (I, 1,) after describing the deeper meaning of OM, it is said that the sacrifice which a man performs with knowledge, with faith, and with the Upanishad, *i.e.*, with an understanding of the secret charm, or underlying principles and effects, is more powerful than when with faith, the only knowledge possessed is of the rites themselves, their origin and regularity. The sacrifice referred to is, not alone the one offered on the altar in the temple, but that daily sacrifice which every breath and every thought, brings about in ourselves.

THE MUNDAKA UPANISHAD

This is in the *Atharva Veda*. Although it has the form of a mantra, it is not to be used in the sacrifices, as its sole object is to teach the highest knowledge, the knowledge of Brahman, which cannot be obtained by either worship or sacrifices. Offerings to the Gods, in no matter what mode or church, restraining of the breath, penances, or cultivation of the psychic senses, will not lead to the

true knowledge. Yet some works have to be performed, and many persons require works, sacrifices and penances as stepping stones to a higher life. In the progress of these works and sacrificial performances, errors are gradually discovered by the individual himself. He can then remove them. So the Hindu commentators have explained the title of this Upanishad as the "shaving" one. That is, it cuts off the errors of the mind like a razor. It is said by European scholars that the title has not yet been explained. This may be quite correct for them, but it is very certain the Hindu explanation appears to the Hindu mind to be a very good one. Let us proceed.

FIRST MUNDAKA

This means first shaving, or beginning of the process for removing error. It may be considered as a division equivalent to "first title," after which follow the lesser divisions, as: *First Khanda*.

"1. Brahma was the first of the Devas, the maker of the universe, the preserver of the world. He told the knowledge of Brahman, the foundation of all knowledge, to his eldest son Atharva."

Here at once should be noted, that although in Hindu theology we find Brahma, Vishnu and Siva, as the creator, preserver and destroyer, forming the Trinity, the Upanishad now before us — for cutting away error — has not such a division. It says Brahma is first, also the maker and the preserver. Even knowledge that is true for certain stages of development becomes error when we rise up into the higher plane and desire to know the true. Similarly we find Buddha in his congregation teaching his disciples by means of the "three vehicles," but when he had raised them to the higher plane, he informed them that these vehicles might be discarded and *sat* or truth be approached through one

vehicle.

The knowledge here spoken of is Brahman knowledge which is the supreme vehicle.

"2. Whatever Brahma told Atharvan that knowledge Atharvan told to Angir, he told it to Satyavaha Bharadvaga, and he in succession told it to Angiras. "3. Sannaka, the great householder, approached Angiras respectfully and asked 'Sir, what is that through which if it is known, everything else becomes known?' "4. He said to him: 'Two kinds of knowledge must be known, this is what all who know Brahman tell us, the higher and the lower knowledge.' "5. 'The lower knowledge is the Rig-Veda, Yajur-Veda, Sama-Veda, Atharva-Veda, Phonetics, Ceremonial, Grammar, Etymology, Metre and Astronomy; but the higher knowledge is that by which the Indestructible (Brahma) is apprehended. "6. 'That which cannot be seen nor seized, which has no origin and is without qualities, no eyes nor ears, no hands nor feet, the eternal, the all pervading, infinitesimal, that which is imperishable, that is what is regarded by the wise as the source of all beings. "7. 'As the spider sends forth and draws in its thread, as plants grow on the earth, as from every man hairs spring forth on the head and the body, thus does everything arise here from the Indestructible. "8. 'The Brahman swells by means of meditation; hence is produced matter; from matter mind, breath and intellect, the seven worlds, and from the works performed by men in the worlds, the eternal effects, rewards and punishment of works. "9. 'From Him who perceives all and who knows all, whose meditation consists of knowledge, from that highest Brahman is born that other Hiranyagarbha — name, form, and matter.'"

This Khanda unfolds broadly the whole philosophy. The following ones go into particulars. It is very easy here to see that the imperishable doctrine could not be communicated directly by the Great Brahma to man, but it has to be filtered down through various channels. The communicator of it to mortals, however, would be regarded by his finite auditors as a god. The same method is observable in the *Bhagavad-Gita* (ch. iv) where Krishna says to Arjuna that "this never failing doctrine I formerly taught unto Vivaswat and he to Manu, who told it to Ikswaku, succeeding whom came the Rajarshis who studied it." Manu is regarded as of a wholly Divine nature although not the Great Brahm.

Now, when Angiras, as detailed in the Upanishad, had received this higher knowledge, he was approached by a great householder, by name Saunaka. This has reference to an ancient mode of life in India when Saunaka would be called a grihastha, or one who was performing all his duties to his family, his tribe, and his nation while still in the world. All the while, however, he studied the knowledge of Brahman, so that when the proper time came for him to give up those duties of life, he could either die or retire to solitude. It was not considered then to be a virtue for one to violently sever all ties and assume the garb and life of a mendicant devoted to religious contemplation, but the better way was thought to be that one which resulted in our, so to speak, consuming all the Karma of our family in ourselves. Otherwise it would inevitably result that if he retired with many duties unfulfilled, they waited, figuratively speaking, for him, sure to attach to him in a succeeding incarnation and to work him either injury or obstruction. So it was thought better to work out all such results in the present life as far as possible.

We find here also a foreshadowing of some ideas held by the Greek philosophers. In the third verse, the question is asked:

"What is that through which when it is known, the knower thereof knows everything else." Some of the Greeks said that we must first ascend to the general, from which descent to the particular is easy. Such, however, is directly opposite to the modern method, which delights in going from particulars to generals, from effects to causes. The true knowledge proceeds as shown in the Upanishad. By endeavoring to attain to the Universal Soul of all, the knowledge of the particular parts may be gained. This is not easy, but it is easy to try. At the same time do not forsake modern methods altogether, which correspond to the lower knowledge spoken of in Verse 5. Therefore Angiras says: Two kinds of knowledge, the lower and the higher, must be known.

Here and there are persons who seem not to need the lower knowledge, who pay no attention to it, and who apprehend the higher flights impossible for others. This is what is known as the result of past births. In previous incarnations these persons studied upon all the lower planes so that their spiritual perceptions do not now need that help and training which the lower knowledge gives to others. They are approaching that state which is beautifully described by Longfellow in his "Rain in Summer," in these words: —

"Thus the seer,
With vision clear,
Sees forms appear and disappear,
In the perpetual round of strange,
Mysterious change
From birth to death, from death to birth;
From earth to heaven, from heaven to earth:
'Till glimpses more sublime,
Of things unseen before,
Unto his wondering eyes reveal

The Universe, as an immeasurable wheel
Turning forevermore
In the rapid and rushing river of Time."

(To be continued)

The Path

THE MYSTERY OF NUMBERS — *Seth Pancoast*

In a previous article on the Kabbalah, we spoke of it as being a tradition embodying a noble philosophy, which is but slightly understood, owing to its symbolical representations.

There were three forms of symbols introduced by the Ancient Theosophists to express their thoughts and convey their ideas from one to another. The object of the symbolic language was for the purpose of preventing their esoteric knowledge from becoming public property and to obviate persecution from those who were in authority and held different views. These three forms were: hieroglyphics, numbers and allegories.

It is the Kabbalistic science of numbers of which we purpose to speak. Deity in constructing the universe, employed but few means to accomplish a great purpose. They consisted *energy* and *law*. The former is under control of the latter. The first act was the positing of energy, which formed substance. In this manner He converted chaos, which was a motionless, dark abyss, into activity and light. Light is not energy, but primarily resulted from the activity of atomic substance.

God creates all things by number, weight and measure, and with an arithmetical and geometrical precision. The universal *continuity* observed in nature is owing to the law that controls energy. Any interference with this law throws energy out of harmony, producing discord, and consequently a varying of continuity.

Every seed has within it an individual life energy which gives to it when developed into a plant or tree its type and form. Any external interference induces a struggle for life in the forces in

maintaining their ancestral types and forms. Heredity may produce the same by interfering with the law controlling development.

The Kabbalists never intended to convey the idea that numbers possessed special virtues. They merely represent them: for example 3 represents a life entity; without this ternary combination it would be impossible for life to exist. The self-existing Deity is a Triune Entity: so is every individual life form. Whether it be a *Monera*, the lowest structureless life organism, or *Man*, the highest in the scale of living beings. Number three is therefore called the generating number.

Again, 7 is the harmonic numeral, there being seven primary grades of harmony, and in order to extend it, the scale of seven must be repeated, and every repetition lessens the harmony and tends to discord.

The *Sepher Jetzirah*, which is recognized by the Kabbalist as the key of the Sohar, is a wonderful and obscure work. Its wisdom is represented in ten numbers and twenty-two letters. From the numbers "are drawn or cut" the twenty-two letters which are divided into three mothers, seven double and twelve single letters. According to the Sepher there were three acts of creation; 1st, *Conception or Idea*; 2nd *The Word*; 3rd. *The Writings*. For example, *first*, God conceived in His own mind, the archetype of the universe which constituted the design; *second*, the Word represents the law and the energy it controls and directs in carrying out the design; *third* the product arising from the second constitute the writings.

The Sepher Jetzirah teaches that the hidden ways of wisdom are in the ten *sephiroth*, which are usually termed spheres. The Hebrews use the word "ways," which with us mean degrees, forms or species. These hidden ways are the workings of the

forces producing differentiation of forms, which represents the twenty-two letters, which are expressed as one in three, and three in seven, and seven in twelve, making twenty-two.

The ten sephiroth interest us the most for they represent the unity and synthesis of numbers and the manifestations of Deity in nature. The first setir is called the *Crown* on account of its being the abode of the *En Soph* (1) the unmanifested infinite Being; but the first form by which he became known was the *Memra* or "word," which is represented by the first three sephiroth, namely, *Kether*, "the Crown," *Chochma*, "wisdom," *Binah*, "understanding." (2) To express it more clearly, the first three sephiroth comprise a Triune Entity, the verbalized spirit of God consisting of self-consciousness, wisdom and love which embodied the *Word*, "the heavenly man," "the man on high," (Ezekiel I, 26), the Adam Kadmon of the Kabbalist, the Paradisical Adam of Genesis, the Christ of the Christians and the Buddha of the Buddhists.

In order to be understood, we will state that the Triune spirit of the world contains the word, and is therefore the source of energy and life in both the subjective and objective worlds, and in fact is the source of all that exists outside of spirit. It is under the direction of spirit in developing forms and giving them activity and life. We thus perceive how a knowledge of the word gives us an insight into the work of God in creation.

Jacob Behmen was a mystic, and acquainted with the meaning of the word which he obtained through illumination or the unfolding of inner consciousness. What he called the *Signatura Rerum* — the signature of all things — is the word. He describes it as coming from a triune entity, which he locates in the super-celestial world. It is first manifested in the subjective or esoteric world, and afterwards in the objective. He also alludes to the septenary which he applies to the external world; he could not

have understood the laws of harmony or he would not have made this application, for it applies to both the subjective and objective worlds.

We will now explain the *Tetractys* of Pythagoras; before doing so, however, we have a few remarks to make regarding his Kabbalistic knowledge. He is said to have been initiated into the secrets of nature by Daniel and Ezekiel, and subsequently admitted into the Egyptian Sanctuaries upon a personal recommendation by King Amosis. His tetractys proves that he was thoroughly familiar with theosophical science, which enabled him to study nature and arrive at correct conclusions. It is a noted fact that he was familiar with the movements of the heavenly bodies: which science did not reveal until centuries after his death. If he mistook some of its details, his substantial correctness was none the less wonderful. He was the founder of the renowned school of Crotona, about five hundred years before Christ. He maintained that the Sun is the center of a system around which all the planets revolve, and that the fixed stars were each the center of a system. He also believed that the planets were inhabited and that they and our earth are ever revolving in harmonious order — "keeping up a grand celestial concert, inaudible to man, but as a music of the spheres audible to God." He was not permitted to declare publicly all that he knew, but taught it privately to a few chosen friends. He was also familiar with the laws of attraction and repulsion, which constituted one of the most important duties of the sanctuaries. Newton was led to the discovery of these forces through the study of the Kabbalah.

Speaking of Pythagoras calls to mind the Kabbalistic enigma written by Plato and sent to Dionysius: "all things surround our King, (God) He is the cause of all things: seconds for seconds and thirds for thirds." This expresses the division of the Sephiroth.

Plato was an earnest and most intelligent Kabbalist.

We will now explain for the first time the Tetractys of Pythagoras, which reveals the numerical meaning of the word. We remark, however, before doing so, that there is a greater enigma attached to it than is expressed by the numbers, which we cannot give for several reasons. One is, the name has never been imparted; when obtained, it was through self illumination; another is, it would open the doors of masonry, and reveal the secrets of the order. It is the key to mysticism — to religion and universal science.

In the Tetractys the four letters composing the name, are arranged in a triangular form, enclosed with a double circle. (3) The numerical division he has made applies to the *super-celestial*, *celestial* and *material* worlds:

The Tetractys of Pythagoras.

Super Celestial. — The first series of numbers 1, 2, 3, 4 of the tetractys refers to the super-celestial world.

- 1 is the unity of God represented thus: ① God in nothing.
- 2 is the duality of God.
- 3 is the spirit of a triune entity.
- 4 is Divine volition, capable of determining choice and forming a purpose, and manifesting activity.

Celestial. — The above numerals are combined in the following

order: — $1+2=3$ — the manifestation of the word, in the celestial world. $2+3=5$ — substance or quintescent matter, produced by the activity of the word.

$3+4=7$ — the law of harmony — the providence of God in Nature. The celestial world is called by the Kabbalist the world of harmony, which none can occupy save the pure in spirit. Harmony is the only passport to Heaven.

Material. — The numeral 1, which represents the unity of God, is not represented in this world — we only have the following numerals:

$2+3+4=9$ — humanity with the word unmanifested in the spirit. Yet it exists and can be made manifest through harmony of the spirit. It not being manifested debar's humanity from the pleasure of enjoying the light of the celestial world. It is for this reason the Kabbalist called it the world of darkness or Hades. It is also called the world of discord. There are as many grades of discord here as there are harmonies in the world above. When man throws off the material covering of his soul, his consciousness reveals to him his moral standard and he gravitates to the sphere with which he is in accord. If harmonious he ascends, if discordant he descends.

10 is the synthesis of numbers. In the beginning before Deity manifested himself, it stood thus ①; in the consummation of creation it became reversed, thus 10.

The Path

SUFISM: I — *C. H. A. Bjerregaard*

In Two Parts: Part I, Texts; Part II, Symbols.

The spirit of Sufism is best expressed in the couplet of Katebi:

"Last night a nightingale sung his song, perched on a high cypress,
when the rose, on hearing his plaintive warbling, shed tears in
the garden, soft as the dews of heaven."

INTRODUCTION.

Sufism has not yet received fair treatment in any publication that has appeared in Western literature.

The reason is that no Western writer upon the subject has endeavored to understand it, either because of an intellectual bias or from willful perversion. Most treatises are written under strong dogmatic prejudices, or by persons intellectually and morally incapable of rising to the A B C of a spiritual philosophy.

The present attempt to represent the doctrines and practices of Sufism has been made in the hope of overcoming the effect of these evils. We have studied patiently Sufism from Sufi works and claim to be in full sympathy with our subject.

That which we here present to the judgment of the candid reader is a part of a larger work we have been engaged on for many years; a work designed as a text book for students in Mysticism. This fact, the intention of making a text book for reference on all mystic questions, will account for the unusual method adopted in this series of articles.

In the first part we shall give a resume of Sufi doctrine with copious quotations from Sufi works. In the second we shall give a

full exposition of Sufi practices and symbols.

The following is a partial list of works consulted and quoted without further reference:

Tholuck, *Sufismus, sive theosophia persarum* — Tholuck, *Bluthensamm-lung der morgenl Mystik* — Malcolm, *Hist. of Persia* — Trans. of the lit. soc. of Bombay, vol. 1, art. by Capt. Graham — J. von Hammer, *Geschichte der Schonen Redekunste Persiens, mit einer Bluthenlese* — Garcin de Tassy, *la poesie phil. et rel. chez les Persans*, in *Rev. cont.* 1856 — Fleischer, *uber die farbigen Lichterscheinungen der Sufis*, in *Zeitsh. f. morgl. PART I — TEXTS.

ORIGIN OF SUFISM

It is generally conceded among the Sufis that one of the great founders of their system, as found in Islam, was the adopted son and son-in-law of the Prophet, Ali-ibn-Abi-Talib. But it is also admitted that their religious system has always existed in the world, prior to Mohammed. It is known that a tribe, Sufah, from whom possibly the name is derived, in "the time of ignorance" separated themselves from the world and devoted themselves to

spiritual exercises like those of the present Sufis.

Sufism in its best known forms must thus be considered to be the philosophy of Mohammedanism and to represent the protest of the human soul against the formalism and barrenness of the letter of the Quran. Still there is much in favor of Schmokler's assertion (*Essai sur les écoles philos. chez les Arabes*) that Sufism is neither a philosophical system nor the creed of a religious sect, but simply a way of living.

Perhaps the simplest statement is this: *Sufism is Theosophy from the standpoint of Mohammedanism.*

Said-Abul-Chair (about A. D. 820) is often called the author of Sufism. Abu Hashem (A. D. 767) has been called the first Sufi.

The *Dabistan* maintains the identity of the pure Sufis and that of Platonism and it has popularly been supposed that Sufism has borrowed very much from the Vedanta and from Plato and Aristotle; it has even been confidently asserted that the similarity is so striking to the student, that it is a most easy matter to find identical statements in either of them. We must confess that our study does not prove the assertion. The similarity is to be accounted for by the universality of truth.

ETYMOLOGY

The root of the word implies wisdom, the Greek Sophia, purity, spirituality, etc. Some have connected it with suf, wool, on account of the woolen garment worn by the devotees.

Graham (1) maintains that "any person or a person of any religion or sect, may be a Sufi. The mystery lies in this: a total disengagement of the mind from all temporal concerns and worldly pursuits; an entire throwing off not only of every superstition, doubt, or the like, but of the practical mode of

worship, ceremonies, etc., laid down in every religion, which the Mohammedans term *Sheriat*, being the law, or canonical law; and entertaining solely mental abstraction, and contemplation of the soul and Deity, their affinity, etc." In short, Sufism may be termed the religion of the heart, as opposed to formalism and ritualism.

"Traces of the Sufi doctrine exist in some shape or other in every region of the world. It is to be found in the most splendid theogonies of the ancient school of Greece and of the modern philosophers of Europe. It is the dream of the most ignorant and the most learned, and is seen at one time indulging in the shade of ease, at another traversing the pathless desert." (Malcolm Hist. of Persia.)

Abu-Said-Abul-Chair, the accredited founder of Sufism, when asked what Sufism was, answered: "What you have in the head, give it up; what you have in the hand, throw it away; whatever may meet you, depart not from it."

Dschuneid, a Sufi Shaikh, thus defined Sufism: "To liberate the mind from the violence of the passions, to put off nature's claims, to extirpate human nature, to repress the sensual instinct, to acquire spiritual qualities, to be elevated through an understanding of wisdom, and to practice that which is good — that is the aim of Sufism."

Abul Hussein Nuri thus expressed himself: "Sufism is neither precept nor doctrine, but something *inborn*. If it were a precept, it could be followed; if it were a doctrine, it could be learned; it is rather something inborn — and as the Quran says: 'Ye are *created* in the image of God.' Evidently no one can, either by application or by teaching, possess himself of the likeness of God."

SUFI DOCTRINES

DEITY

The Deity alone is and permeates all things. All visible and invisible things are an emanation from Deity, and are not absolutely distinct from it.

One sect "the Unionists," believe that God is as one with every enlightened being. They compare the Almighty to a flame, and their souls to charcoal; and say, that in the same manner that charcoal when it meets flame, becomes flame, the immortal part, from its union with God becomes God.

According to the Dabistan, the presence of the universal Deity is fivefold. The first is the presence of "the absolute mystery." The absolute mystery is one with "the invariable prototypes" (or realities of things). The second is the presence of "the relative mystery," and this belongs to pure intellects and spirits. The third is the presence of "the mysterious relation," which is nearest to the absolute evidence: this is the world of similitude or dream. The fourth is the presence of the "absolute evidence" which reaches from the center of the earth to the middle of the ninth empyrean heaven. The fifth is "the presence of the rest," and this is the universe in an extensive, and mankind in a restricted acceptation.

Silvestre de Sacy gives the following explanation to the above from Jorjani. The five divine presences are (1) the presence of the absolute absence (or mystery); its world is the world of the fixed substances in the scientific presence. To the presence of the absolute mystery is opposed: (2) the presence of the absolute assistance; it is the world of the throne or seat of God, of the four elemental natures. (3) The presence of the relative absence; this is divided into two parts: The one nearer the presence of the absolute mystery; the world of which is that of spirits, which belong to what is called intelligences and bare souls: the other: (4) Nearer the presence of the absolute assistance: the world of

which is that of models (images). (5) The presence which comprises the four preceding ones, and its world is the world of mankind, a world which reunites all the worlds, and all they contain.

GOOD AND EVIL: ETHICS

There is no absolute difference between Good and Evil; all that exists, exists in unity and God is the real author of all the acts of mankind.

The Sufi says that evil only came into the world through ignorance, and that ignorance is the cause of error and disunion among men. The following tale answers to the point: "Four travelers — a Turk, an Arab, a Persian, and a Greek, having met together, decided to take their meal in common, and as each one had but ten paras, they consulted together as to what should be purchased with the money. The first said *Uzum*, the second *Ineb*, the third decided in favor of *Inghur*, and the fourth insisted upon *Stafilion*. On this a dispute arose between them and they were about to come to blows, when a peasant passing by happened to know all four of their tongues, and brought them a basket of grapes. They now found out, greatly to their astonishment, that each one had what he desired."

They believe the emanating principle, proceeding from God, can do nothing without His will and can refrain from nothing that He wills. Some of them deny the existence of evil on the ground that nothing but good can come from God.

The Dabistan: One sect, "the Eternals," conceive that man is taught his duty by a mysterious order of priesthood, (2) whose number and ranks are fixed, and who rise in gradation from the lowest paths to the sublimest height of divine knowledge.

Another sect, "the Enlightened," teach that men's actions should

neither proceed from fear of punishment nor the hope of reward, but from innate love of virtue, and detestation of vice.

THE SOUL, ITS LIFE AND CONDITIONS

The soul existed, before the body and is confined in it like in a cage. To the Sufi, death is liberation and return to the Deity.

The soul is confined in a body (metempsychosis) to be purified, to fulfill its destination, the union with Deity.

Without the grace of God (Fazlu allah) no soul can attain this union, but God's grace can be obtained by fervently asking for it.

*The soul of man is of God, not from God, an exile from Him; it lives in the body as in a prison and banishment from God. Before its exile the soul saw *Truth*, but here it only has glimpses "to awaken the slumbering memory of the past." The object of all Sufi teaching is to lead the soul onward by degrees to reach that stage again.*

"You say 'the sea and the waves,' but in that remark you do not believe that you signify distinct objects, for the sea when it heaves produces waves, and the waves when they settle down again become sea; in the same manner men are the waves of God, and after death return to His bosom. Or, you trace with ink upon paper the letters of the alphabet, a, b, c; but these letters are not distinct from the ink which enabled you to write them; in the same manner the creation is the alphabet of God, and is lost in Him."

RELIGIONS

are matters of indifference; still they serve as stepping-stones to realities. Some are more useful than others, among which is al-Islam, of which Sufism is the true philosophy.

THE WORLD, &C.

The world is life and intellect, as far as the mineral kingdom; but the manifestation of intellect in everybody is determined by the temperature of the human constitution. Sometimes beauty attains an excellence which is uttered with ecstasy, and becomes a modulation more powerful than that which strikes the ear; and this is the work of the prophet.

THE TARIGAH OR "JOURNEY OF LIFE" AND ITS STATES

The main duty of this life is *Meditation on the Unity of Deity* (wahdaniyah), the *Remembrance of God's Name* (Zikr), and *Progression in the Tarigah* (the Path, the Journey of Life).

Human life is a *journey* (safar) and the seekers after God are *travellers* (salik). *Perfect knowledge* (marifah) of Deity as diffused throughout creation is the purpose of the journey. *Sufism is the guide*, and the *end of the journey, is Union with God*.

The natural state of every human being is nasut. In this state the disciple cannot yet observe the Law (shariat). This is the lowest form of spiritual existence.

The states in the Tarigah are the following:

The first state is called *Shariat* — the *state of law or method*. The student's passions are in this degree checked by a rigid observance of ritual, &c., whereby he learns human nature and to respect order and finds out for himself the rudiments of a knowledge of God.

The second state is *Tureequt* or the way, or road. This state implies mental or spiritual worship, abstracted totally from the above. The student learns to see the propaedeutic nature of ceremonies and devotes himself to realities. At this stage the ascetic exercises begin and he holds communion with *Melkut* or

the angelic world.

The third state, *Huqeequt*, or the state of truth is the state of inspiration or greater natural knowledge. The Sufi now lives no more in faith but in subjective truth and spiritual power; he has seen the similarity of God's nature and his own; all antinomies are destroyed, even sin disappears from his reflections.

The fourth and last state is *Marifut* or union of spirit and soul with God. "Union (with God) is reality, or the state, truth and perception of things, when there is neither lord nor servant." Still "the man of God is not God; but he is not separate from God." At this stage man's "corporeal veil will be removed, and his emancipated soul will mix again with the glorious essence, from which it had been separated, though not divided." (3)

Aziz Ibn Muhammad Nafasi in a book called *al-Maqsadu 'l-Aqsa* or the "Remotest Aim," (trans, in E. H. Palmer's *Oriental Mysticism*) marks out the journey a little differently from that already described.

When a man possessing the necessary requirements of fully developed reasoning powers turns to them for a resolution of his doubts and uncertainties concerning the real nature of the Godhead, he is called a *talib* "a searcher after God."

If he has further desire for progress he is called a "murid" or "one who inclines," and he places himself under the instruction and guidance of a teacher and becomes a "traveller."

The *first* stage of his journey is called "ubudiyah" or "service" and is as described above.

The *second* stage is *ishq* or "love." He loves God. The divine love filling his heart, it expels all other loves and brings him to the *third* stage, *Zuhd* or "seclusion." He occupies himself exclusively

with contemplation of God and his attributes, and comes to the *fourth* state, Marifah or "knowledge."

When settled he is come to the *fifth* stage, wajd or "ecstasy" he now receives revelations and soon reaches the sixth stage, that of hagigah or "*truth*" and proceeds to the final state, that of "wasl," or "union with God."

He has now finished the journey and remains in the state he has come to, still going on, however, progressing in depth of understanding. Finally he comes to "the total absorption into Deity."

The Zikr, or ecstatic exercises belonging to the training on this journey, will be explained in our second part: Symbols.

THE SEVEN WAY-STATIONS OF PILGRIMAGE are these: (4)

The *first* degree consists of penitence, obedience, and meditation, and in this degree the light is, as it were, green.

The *second* degree is the *purity of the Spirit* from satanic qualities, violence, and brutality, because as long as the spirit is the slave of satanic qualities, it is subject to concupiscence, and this is the quality of fire. In this state Iblis evinces his strength, and when the spirit is liberated from this, it is distressed with the quality of fierceness, which may be said to *be flashing* and this is conformable to the property of wind. Then it becomes insatiable (lit. eager after anything to excess), and this is similar to water. After this it obtains quietness, and this quality resembles earth (*i.e.*, apathy or cessation from all action). In the degree of repose, the light is as it were, blue, and the utmost reach of one's progress is the earthly dominion.

The *third* degree is the *manifestation of the heart*, by laudable qualities, which is similar to red light, and the utmost reach of its

progress is the middle of the upper dominion; and in this station the heart praises God, and sees the light of worship and spiritual qualities.

The *fourth* degree is the *applying of the constitution to nothing else but to God* and this is similar to yellow light, and the utmost reach of its progress is the midst of the heavenly *Malkat* "dominion."

The *fifth* degree of the soul is that which resembles white light, and the utmost aim of its progress is the extreme heavenly dominion.

The *sixth* degree is the *hidden*, which is like a black light, and the utmost reach of its progress is "the world of power."

The *seventh* degree is "the evanescence of evanescence," which is annihilation " and "eternal life," and is colorless. It is *absorption* in God, non-existence and effacement of the imaginary in the true being, like the loss of a drop of water in the ocean. It is *eternal* life as the union of the drop with the sea. "Annihilation" is not to be taken in the common acceptance, but in a higher sense, "annihilation in God."

SUFI SYMBOLICAL LANGUAGE

The Sufis inculcate the doctrine, "Adore the Deity in his creatures." It is said in a verse of the Quran — "It is not given to man that the Deity should speak to him; if it does so it is by inspirations, or through a veil." *Thus all the efforts of man should tend to raise the veil of divine love and to the annihilation of the individuality* which separates him from the Divine essence; and this expression "raise up the veil" has remained in the language of the East as expressive of great intimacy.

One of the most violent and able of the enemies of the Sufis, says that they deem everything in the world a type of the beauty and

power of the Deity and adds that it appears from both their actions and writings, that it is in the red cheeks of beautiful damsels that they contemplate its beauty; and in the "impious" daring of Nimrod and of Pharaoh, that they see and admire the omnipotence of its power. (5)

The Persian commentator *Suruni* says in regard to sexual love: "the beauty of the wife is a ray from God and not from the beloved herself. The Mystic recognizes the fact of the divine beauty everywhere in creation, and loves because he in beauty sees a revelation of the blessings of the divine name. It is therefore the prophet says he prefers these three things to all others: women, incense, and enjoyments."

Jellaladdin Rumi said: "They (the Sufis) profess eager desire, but with no carnal affection, and circulate the cup, but no material goblet: since all things are spiritual, all is mystery within mystery."

Jami exclaims, addressing the Deity:

Sometimes the wine, sometimes the cup we call Thee!
Sometimes the lure, sometimes the net we call Thee!
Except Thy name, there is not a letter on the tablet of the universe:
Say, by what name shall we call Thee?

Nizami explains himself:

Think not that when I praise wine I mean the juice of the grape;
I mean that wine which raiseth me above self,
"My cup-bearer" is to perform my vow to God:
"My morning draught from the tavern" is the wine of self oblivion.

My heaven so long as I have enjoyed existence.

Never hath the tip of my lip been stained with wine!

In regard to *Hafis* it is maintained that by *wine* he invariably means *devotion*; and his admirers have gone so far as to compose a dictionary of words of the language, as they call it, of the *Sufis*. In that vocabulary *sleep* is explained by *meditation* on the divine perfections, and *perfume* by hope of divine favor; *gales* (*i.e.* Zephyrs) are illapses of grace; *kisses and embraces*, the raptures of piety; *idolators, infidels, and libertines* are men of the purest religion, and their *idol* is the creator himself: *the tavern* is the cell where the searcher after truth becomes intoxicated with the wine of divine love. Read with this key to the esoteric meaning, Mr. Clouston says, the gazelles of Hafis are no longer anacreontic and bacchanalian effusions, but ecstatic lucubrations on the love of man to his creator. The *keeper*, or wine seller, the spiritual instructor: *beauty* denotes the perfection of the supreme being; *tresses and curls* are the expansion and infiniteness of his glory; *lips*, the hidden and inscrutable mysteries of his essence; *down* on the cheek, the world of spirits, who encircle the creator's throne; and a *black mole* is the point of indivisible unity; lastly, *wantonness, mirth and ebriety*, mean religious ardor, ecstasy and abstraction from all terrestrial thoughts and contempt for all worldly things.

Mohammed Missiree: On the Tesavuf, or spiritual life of the Sufis. Translated from the Turkish by John P. Brown, Esq., of the American embassy at Constantinople. (In Journ. of Am. Orient. Soc. vol. viii.):

What is the beginning of at-Tesavuf? Faith, which has six pillars, namely: (1) Belief in God, (2) in His Angels, (3) in His Books, (4) in His Prophets, (5) and in the Last Day, and (6) in His decree of Good and Evil. What is the result of the Tesavuf? It is not only the

reciting with the tongue of these pillars of faith but also establishing them in the heart. What is the distinction between a Sufi and an ordinary person? The knowledge of an ordinary person is a "counterfeit faith" whereas that of the Sufi is "true faith" What do you mean by "counterfeit faith?" It is that which an ordinary person has derived from his forefathers, or from the teachers and preachers of his own day, without knowing why it is essential that a man should believe in these six articles for his soul's salvation. What is the proof of faith? The proof of faith consists in a search being made for the true origin of each of these six pillars of faith, until the enquirer arrives at "the Truth." The Sufis regard certain things as lawful which are forbidden. For instance, they enjoin the use of wine, wine-shops, the wine-cup, sweethearts; they speak of the curls of their mistresses, and the moles on their faces, cheeks, &c. and compare the furrows on their brows to verses of the Quran. What does this mean? The Sufis often exchange the external features of all things for the internal, the corporeal for the spiritual, and thus give an imaginary signification to outward forms. They behold objects of a precious nature in their natural character and for this reason the greater part of their words have a spiritual and figurative meaning. For instance, when, like Hafis, they mention wine, they mean a knowledge of God, which, figuratively considered, is the love of God. Wine, viewed figuratively, is also love; love and affection are here the same thing. The wine-shop, with them, means "spiritual director," for his heart is said to be the depository of the love of God. The sweetheart means the excellent preceptor, because, when anyone sees his beloved, he admires her perfect proportions, with a heart full of love. As the lover delights in the presence of his sweetheart, so the Salik rejoices in the company of his beloved preceptor. The sweetheart is the object of a worldly affection, but the preceptor of a spiritual attachment. The curls or ringlets of the beloved are the grateful

praises of the preceptor, tending to bind the affections of the disciple; the moles on her face signify that when the pupil, at times, beholds the total absence of all worldly wants on the part of the preceptor, he also abandons all the desires of both worlds — he perhaps even goes so far as to desire nothing else in life than his preceptor; the furrows on the brow of the beloved one, which they compare to verses of the Quran, mean the light of the heart of the preceptor; they are compared to verses of the Quran, because the attributes of God, in accordance with the injunction of the Prophet, "Be ye endued with divine qualities," are possessed by the preceptor.

(To be continued.)

THEOSOPHICAL SYMBOLISM — *Nilakant*

The number 7 has, ever since the Theosophical Society was founded November 17th, 1875, played a prominent part in all its affairs, and, as usual, the symbols which particularly relate or pertain to the Society are in number, seven. They are: first the seal of the Society; second, the serpent biting his tail: third, the gnostic cross near the serpent's head; fourth, the interlaced triangles; fifth, the cruxansata in the centre; sixth, the pin of the Society, composed of a cruxansata entwined by a serpent, forming together T. S.: and seventh, OM the sacred Vedic word.

The seal of the Society contains all of the symbols enumerated, excepting *aum*, and is the synthesis of them. It, in fact, expresses what the Society is itself, and contains, or ought to, in symbolic form, the doctrines which many of its members adhere to.

A symbol to be properly so called, must be contained in the idea or ideas which it is intended to represent. As a symbol of a house could never be the prow of a boat, or the wing of a bird, but must be contained somewhere in the form of the house itself: that is, it must be an actual part chosen to represent or stand for the whole. It need not be the whole, but may be a lower form or species used as the representative of a higher of the same kind. The word is derived from the Greek words meaning *to throw with*, that is to throw together. To be a just and correct symbol, it should be such as that the moment it is seen by one versed in symbolism, its meaning and application become easily apparent. The Egyptians adopted to represent the soul passing back to its source, after the trial in the Hall of Two Truths, a winged globe, for a globe is a symbol of either the Supreme Soul or a portion of it, and the wings were added to represent its life and flight to the upper

spheres. In another branch of their symbology they represented justice by a scale which gives a just balance; while even there in the Hall of Two Truths, they reverted again to the other mode and symbolized the man being weighed by justice, in the form of his heart over against the feather of truth in the opposite pan of the scales.

There is one very curious hieroglyph of the Egyptians which deserves some study by those of curious mind. Here we will merely point it out, remarking that there is a mine of great value in the Egyptian method of picturing their ideas of the macrocosm. In one of the numerous papyri now in the British Museum, there is a picture of a globe being held up by a beetle by means of his head and two fore legs, while he is standing upon a sort of pedestal which has certain divisions, looking on the whole, like a section of an hour glass crossed by horizontal lines that project from each side. This pedestal represents stability: but what does the whole mean or shadow forth? Those who can follow up suggestions should direct their thoughts to the relation which the Sun bears to the earth in its orbital revolution.

To proceed with our analysis: The second symbol is, the serpent biting his tail. This is wisdom, and eternity. It is eternity, because that has neither beginning nor end and therefore the ring is formed by serpent swallowing his tail. There is an old hermetic symbol similar to this, in which the circle is formed by two serpents interlaced and each swallowing the tail of the other one. No doubt the symbolism in that is, in respect to the duality of the manifested All, and hence, two serpents inextricably entwined.

Furthermore, the scales of the reptiles form the figures of facettes or diamonds, which shadow forth the illimitable diversity of the aspects of wisdom or truth. This is not due to any want of coherence or congruity in truth itself, but solely to the diverse

views which each individual takes of the one Truth. These reflecting facettes are the beings composing the macrocosm: each one has developed himself only to a certain degree, and therefore can only appreciate and reflect that amount of wisdom which has fallen to his lot. As he passes again and again through the form of man, he slowly develops other various powers of appreciating more truth, and so at the last may become one with the whole — the perfect man, able to know and to feel completely his union with all. This is when he has acquired the highest Yoga. So in our experience and in history and ethnology we find individuals, nations and races, whose want of responsiveness to certain ideas, and others whose power to grasp them, can only be explained by the doctrines of Reincarnation and Karma. If those doctrines are not accepted, there is no escape from a blank negation.

It is not necessary to express the duality of the Supreme Soul by two serpents, because in the third component part of the Seal, elsewhere, that is symbolized by the interlaced triangles. One of these is white, that one with the point uppermost, and the other is black with its apex directed downward. They are intertwined because the dual nature of the Supreme, while in manifestation, is not separate in its parts. Each atom of matter, so called, has also its atom of spirit. This is what the *Bhagavad-Gita* (1) denominates Purusha and Prakriti, and Krishna there says that he is at once Purusha and Prakriti, he is alike the very best and the very worst of men. These triangles also mean, "the manifested universe." It is one of the oldest and most beautiful of symbols, and can be discovered among all nations, not only those now inhabiting the earth, but also in the monuments, carvings and other remains of the great races who have left us the gigantic structures now silent as far as the voice of man is concerned, but resounding with speech for those who care to listen. They seem to be full of ideas turned into stone.

The triangles thus combined form in the interior space, a six sided plane figure. This is the manifested world. Six is the number of the world, and 666 is the great mystery which is related to the symbol. St. John talks of this number. Around the six sided center are the six triangles projecting into the spiritual world, and touching the enclosed serpent of wisdom. In an old book, this is made by the great head of the Lord rising above the horizon of the ocean of matter, with the arms just raised so that they make the upper half of the triangle. This is the "long face," or macroscopos, as it is called. As it rises slowly and majestically, the placid water below reflects it in reverse, and thus makes the whole double triangle. The lower one is dark and forbidding in its aspect, but at the same time the upper part of the darker one is itself light, for it is formed by the majestic head of this Adam Kadmon. Thus they shade into one another. And this is a perfect symbolism, for it clearly figures the way in which day shades into night, and evil into good. In ourselves we find both, or as the Christian St. Paul says, the natural and spiritual man are always together warring against each other, so that what we would do we cannot, and what we desire not to be guilty of, the darker half of man compels us to do. But ink and paper fails us in the task of trying to elucidate this great symbol. Go to Hermes, to St. John, the Kabbalah, the Hindu books, wherever you please, and there will you find the seven times seven meanings of the interlaced triangles.

OM is the Sacred Vedic syllable: let us repeat it with a thought directed to its true meaning. (2)

Within the small circle, placed upon the serpent, is a cross with its ends turned back. This is called the Gnostic Cross. It signifies evolution, among other ideas, for the turning back of its ends is caused by the revolving of the two diameters of the circle. The vertical diameter is the spirit moving down and bisecting the

horizontal. This completed, the revolution round the great circle commences, and that motion is represented in the symbol by the ends turned back. In Chapter III. of *Bhagavad-Gita*. Krishna says: "He who in this life does not cause this cycle, thus already revolved, to continue revolving lives to no purpose, a life of sin, indulging his senses." That is, we must assist the great wheel of evolution and not oppose it; we must try to help in the great work of returning to the source from whence we came, and constantly endeavor to convert lower nature into higher, not only that of ourselves, but also of our fellow men and of the whole animated world.

This cross is also the symbol of the Hindu Chakka, or discus, of Vishnu. In the Mahabharata is described the conflict between the Asuras and Devas, for the possession of the vase of Amreeta which had been churned with infinite trouble, from the ocean, and which the Asuras desired to take for themselves. The conflict began when *Rahu*, an Asura, assuming the form of a Deva, began drinking the ambrosia. In this case the Amreeta was spiritual wisdom, material existence, immortality, and also magic power. The deceit of *Rahu* was discovered before he had swallowed, and then the battle began.

"In the midst of this dreadful hurry and confusion of the fight, *Nar* and *Narayan*, entered the field together. *Narayan* beholding a celestial bow in the hands of *Nar*, it reminded him of his Chakka, the destroyer of the Asuras. The faithful weapon, ready at the mind's call, flew down from heaven with direct and refulgent speed, beautiful, yet terrible to behold. And being arrived, glowing like the sacrificial flame, and spreading terror around, *Narayan* with his right arm formed like the elephantine trunk, hurled forth the ponderous orb, the speedy messenger, and glorious ruin of hostile towns, who raging like the final all destroying fire, shot bounding with desolating force, killing

thousands of the Asuras in his rapid flight, burning and involving, like the lambent flame, and cutting down all that would oppose him. Anon he climbeth the heavens from whence he came."
(Mahabharata, Book I, Chap 15.)

Exekiel, of the Jews, saw this wheel, when he was among the captives by the river Chebar in Chaldea. In a vision he saw the four beasts and the man of the Apocalypse, and with them "for each of the four faces," was a wheel, of the color of a beryl; it was "as a wheel within a wheel," and they went wherever the living creatures went, "for the spirit of the living creatures was in the wheels." All of this appeared terrible to him, for he says: "And when they went I heard a noise like the noise of great waters, like the voice of the Almighty, a noise of tumult like the noise of a host."

There are many other meanings concealed in this symbol, as in all the others.

In the center of the interlaced triangles is placed the *Cruxansata*. This is also extremely ancient. In the old Egyptian papyri it is frequently found. It signifies life. As Isis stands before the candidate, or the soul, upon his entry, she holds in one hand this cross, while he holds up his hand that he may not look upon her face. In another there is a winged figure, whose wings are attached to the arms, and in each hand is held the same cross. Among other things we find here the horizontal and vertical diameters once more, but conjoined with the circle placed on top. This is the same as the old astrological sign for Venus. But in the seal, its chief and most important meaning is *the regenerated man*. Here in the center, after passing the different degrees and cycles, both spirit and matter are united in the intelligent regenerated man, who stands in the middle knowing all things in the manifested universe. He has triumphed over death and holds

the cross of life.

The last theosophical symbol is, the pin of the Society, adopted early in its history but not used much. It is the cross we have just been considering, entwined in such a way by a serpent, that the combination makes T S as a monogram.

The foregoing is not exhaustive. Every symbol should have seven meanings of principal value, and out of every one of those we have been considering can be drawn that number of significations. Intelligent study of them will be beneficial, for when a consistent symbol, embodying many ideas is found and meditated upon, the thought or view of the symbol brings up each idea at once before the mind.

A HINDU CHELA'S DIARY: I (1)

In the month of December he arrived at Benares, on what he hoped would be his last pilgrimage. As much as I am able to decipher of this curious manuscript, written in a mixture of Tamil — the South Indian language — with Mahratta, which, as you know, is entirely dissimilar, shows that he had made many pilgrimages to India's sacred places, whether by mere impulse or upon actual direction, I know not. If he had been only any ordinary religiously disposed Hindu we might be able to come to some judgment hereupon, for the pilgrimages might have been made in order to gain merit, but as he must long ago have risen above the flowery chains of even the Vedas, we cannot really tell for what reason these journeys were made. Although, as you know, I have long had possession of these papers, the time had not until now seemed ripe to give them out. He had, when I received them, already long passed away from these busy scenes to those far busier, and now I give you liberty to print the fragmentary tale without description of his person. These people are, you know, not disposed to have accurate descriptions of themselves floating about. They being real disciples, never like to say that they are, a manner quite contrary to that of those famed professors of occult science who opportunely or inopportunately declare their supposed chelaship from the house top.

* * * Twice before have I seen these silent temples standing by the rolling flood of sacred Ganges. They have not changed, but in me what changes have occurred! And yet that cannot be, for the I changeth not, but only the veil wrapped about, is either torn away or more closely and thickly folded round to the disguising of the reality. * * * It is now seven months since I began to use the privilege of listening to Kunala. Each time before, that I came to

see him, implacable fate drove me back. It was Karma, the just law, which compels when we would not, that prevented me. Had I faltered then and returned to the life then even so far in the past, my fate in this incarnation would have been sealed — and he would have said nothing. Why? Happy was I that I knew the silence would have not indicated in him any loss of interest in my welfare, but only that the same Karma prevented interference. Very soon after first seeing him I felt that he was not what he appeared exteriorly to be. Then the feeling grew into a belief within a short time so strong that four or five times I thought of throwing myself at his feet and begging him to reveal himself to me. But I thought that was useless, as I knew that I was quite impure and could not be trusted with that secret. If I remained silent I thought that he would confide to me whenever he found me worthy of it. I thought he must be some great Hindu Adept who had assumed that illusionary form. But there this difficulty arose, for I knew that he received letters from various relatives in different parts, and this would compel him to practice the illusion all over the globe, for some of those relatives were in other countries, where he had been too. Various explanations suggested themselves to me. * * * I was right in my original conception of Kunala that he is some great Indian Adept. Of this subject I constantly talked with him since — — although I fear I am not, and perhaps shall not be in this life worthy of their company. My inclination has always been in this direction. I always thought of retiring from this world and giving myself up to devotion. To Kunala I often expressed this intention, so that I might study this philosophy, which alone can make man happy in this world. But then he usually asked me what I would do *there* alone? He said that instead of gaining my object I might perhaps become insane by being left alone in the jungles with no one to guide me; that I was foolish enough to think that by going into the jungles I could fall in with an adept: and that if I really wanted to gain my object

I should have to work in the reform in and through which I had met so many good men and himself also, and when the Higher Ones, whom I dare not mention by any other names, were satisfied with me they themselves would call me away from the busy world and teach me in private. And when I foolishly asked him many times to give me the names and addresses of some of those Higher Ones he said once to me: 'One of our Brothers has told me that as you are so much after me I had better tell you once for all that I have no right to give you any information about them, but if you go on asking Hindus you meet what they know about the matter you might hear of them, and one of those Higher Ones may perhaps throw himself in your way without your knowing him, and will tell you what you should do.' These were orders, and I knew I must wait, and still I knew that through Kunala only would I have my object fulfilled. * * *

"I then asked one or two of my own countrymen, and one of them said he had seen two or three such men, but that they were not quite what he thought to be '*Raj Yogs*.' He also said he had heard of a man who had appeared several times in Benares, but that nobody knew where he lived. My disappointment grew more bitter, but I never lost the firm confidence that Adepts do live in India and can still be found among us. No doubt too there are a few in other countries, else why had Kunala been to them. * * * In consequence of a letter from Vishnurama, who said that a certain X (2) lived in Benares, and that Swamiji K knew him. However, for certain reasons I could not address Swamiji K directly, and when I asked him if *he* knew X he replied: "If there be such a man here at all he is not known." Thus evasively on many occasions he answered me, and I saw that all my expectations in going to Benares were only airy castles. I thought I had gained only the consolation that I was doing a part of my duty. So I wrote again to Nilakant: "As directed by you I have neither let him know what I

know of him nor what my own intentions are. He seems to think that in this I am working to make money, and as yet I have kept him in the dark as regards myself, and am myself groping in the dark. Expecting enlightenment from you, etc." * * * The other day Nilakant came suddenly here and I met Sw. K. and him together, when to my surprise K at once mentioned X, saying he knew him well and that he often came to see him, and then he offered to take us there. But just as we were going, arrived at the place an English officer who had done Kunala a service in some past time. He had in some way heard of X and was permitted to come. Such are the complications of Karma. It was absolutely necessary that he should go too, although no doubt his European education would never permit him to more than half accept the doctrine of Karma, so interwoven backward and forwards in our lives, both those now, that past and that to come. At the interview with X, I could gain nothing, and so we came away. The next day came X to see us. He never speaks of himself, but as 'this body.' He told me that he had first been in the body of a Fakir, who, upon having his hand disabled by a shot he received while he passed the fortress of Bhurtpore, had to change his body and choose another, the one he was now in. A child of about seven years of age was dying at that time, and so, before the complete physical death, this Fakir had entered the body and afterwards used it as his own. He is, therefore, doubly not what he seems to be. As a Fakir he had studied Yoga science for 65 years, but that study having been arrested at the time he was disabled, leaving him unequal to the task he had to perform, he had to choose this other one. In his present body he is 53 years, and consequently the inner X is 118 years old. * * * In the night I heard him talking with Kunala, and found that each had the same Guru, who himself is a very great Adept, whose age is 300 years, although in appearance he seems to be only 40. (3) He will in a few centuries enter the body of a *Kshatriya*, (4) and do some great deeds for India, but the time had

not yet come."

The Path

SUFISM: II — C. H. A. Bjerregaard

In Two Parts: Part I, Texts; Part II, Symbols.

The spirit of Sufism is best expressed in the couplet of Katebi:

"Last night a nightingale sung his song, perched on a high cypress, when the rose, on hearing his plaintive warbling, shed tears in the garden, soft as the dews of heaven."

(Continued)

SUFI ECSTASY

MOTTO: "Highest nature wills the capture; "Light to light!"
the instinct cries;

And in agonizing rapture falls the moth, and bravely
dies.

Think not what thou art, Believer; think but what thou
mayest become

For the World is thy deceiver, and the Light thy only
home." (*Palm Leaves.*)

ABULFAZL (A.D. 1595):

O Lord, whose secrets are for ever veiled,
And whose perfection knows not a beginning!
End and beginning both are lost in thee;
No trace of them is found in thy eternal realm.
My words are lame; my tongue, a stony tract;
Slow wings my foot, and wide is the expanse.
Confused are my thoughts; but this is thy best praise —
In ecstasy alone I see thee face to face!

SHEMS TEBREEZ:

What advice, O Musselmans? I don't know myself; I (1) am neither Christian nor Jew, nor am I a fire-worshipper nor Musselman.

I am not from the East or West, nor am I of land or fire.

I am not from the country of Iran, nor am I from the land of Khoodassan.

I am neither of water nor air, nor am I of fire or earth.

I am not of Adam or Eve, nor am I of the inhabitants of paradise.

My place is no place, my sign is without sign:

I have neither body nor soul, — what is there then? I am the soul of my Beloved. (2)

When I took out my heart, the two worlds I saw as one. He is the first, he is the last, he is the manifest, He is the secret. Except Him, and that I am Him, I do not know anything else.

O thou, Shems Tebreez, why this rapture in this world?
Except with rapture, and enthusiastic ardour, this work cannot be effected."

ECSTASY: THE HEART AS MEDIUM.

All the earth I'd wandered over, seeking still the beacon light.

Never tarried in the day time, never sought repose at night;
Till I heard a reverend preacher all the mystery declare,
Then I looked within my bosom, and 'twas shinning brightly there.

(E. H. Palmer, *Orient. Myst.*)

Who so knoweth himself, knoweth the Godhead. — Thy soul is the sufficient proof of the existence of the Godhead: When by reflection thou hast penetrated to that deep within, thou shalt discover there the Universal Worker of

his work. (*D'Herbelot — Persian Paraphrases.*

Wouldst know where I found the Supreme? One step beyond self. — Behind the veil of self shines unseen the beauty of the Beloved. — (*Aphorisms.*)

Soul of the soul! Neither thought nor reason comprehend thy essence, and no one knows thy attributes. Souls have no idea of thy being. The prophets themselves sink into the dust before thee. Although intellect exists by thee, has it ever found the path of thy existence? *Thou art the interior and the exterior of the soul.* — (*Attar.*)

They who see God are ever rapt in ecstasy. * * * (*The Mesnevi.*)

ECSTASY: NATURE AS MEDIUM

The varied pictures I have drawn on space,
Behold what fair and goodly sights they seem;
One glimpse I gave them of my glorious face,
And lo! 'tis now the universal theme.

(*E. H. Palmer, Orient. Myst.*)

Recognize the mark of Deity in every place, and never place the foot without its own limit. The world is the image of the Godhead. — (*Buslami.*)

RABIA LEGENDS

— The widow *Rabia* (3) is reported having said "an interior wound consumes my heart; it can only be cured by communion with a friend. (4) I shall remain sick till the day of judgment when I shall reach my end. —

— It is told of *Rabia* that once when requested to marry, she answered: My being has for a long time been in marital

communion; hence I say that my ego is long ago lost in itself and arisen again in Him (in God); since then I am entirely in His power, yea, I am He. He, who would ask me for a bride, would ask me, not from myself, but from Him (God). *Hassan Basri* (a famous Mohamedan Theologian) asked her how she had reached this state. She answered: In this way, everything which I had found I lost again in Him (God). When questioned as to by which mode she knew Him, she made answer: O, *Hassan*, you know Him by certain methods and means, I know Him without modes and means. —

— *Ibn Chali Kan* tells about Rabia that she often in the middle of the night went up upon the roof and in her lonesomeness cried out: O, my God! Now is silenced the noise of the day, and the lover enjoys the night with the beloved, but I enjoy myself in my lonesomeness with Thee; Thou art my true lover. —

— It is told of her that once while journeying to Mecca on seeing the Kaaba she exclaimed: What is the Kaaba to me? I need the Lord of the Kaaba! I am so near God that I apply to myself his words: He who approaches me by an inch, him I approach by a yard. What is the Kaaba to me? —

— *Feri'd Eddin Attar* tells about her, that she, once while crossing the fields, cried out: Deep longing after God has taken possession of me! True, Thou art both earth and stone, but I yearn to behold Thee, Thyself. The high God spoke to her in her heart, without a medium: O, Rabia! Do you not know that once when Moses requested to see God, only a grain fell from the sun and he collapsed: Be satisfied with my name! —

— Once asked if she beheld God while worshipping Him. "Assuredly," said she, "I behold Him, for Whom I cannot see, I cannot worship." —

— Once when Rabia was sick three famous Theologians called upon her, namely *Hassan Basri*, *Malik Dinar*, and *Schakik Balchi*. Hassan said: The prayers of that man are not sincere who refuses to bear the Lord's chastisements. Schakik added to that: He is not sincere who does not rejoice in the Lord's chastisements. But Rabia, who detected selfish joy even in those words, replied: He is not sincere in his prayers, who does not, when he beholds his Lord, forget entirely that he is being chastised. —

— On one occasion Rabia was questioned concerning the cause of an illness and replied: I allowed myself to think on the delights of paradise, therefore my Lord has punished me. —

ACTS OF ADEPTS (5)

Munsoor Halaj attained victory of the body, by incessant prayer and contemplation. He used to say "*I am the Truth.*"

The following story is told of him. He observed his sister go out frequently at night, and wondering what it meant, he resolved to watch her and see where she went. He did so and found that she went to a company of celestial spirits, who gave her of their nectar or immortal beverage. Thinking that a drop might be left in the cup after his sister had drank from it, he took hold of it and did, much against her warning, get a drop of the divine fluid. Ever afterwards he went about exclaiming "I am the Truth!" This was too much for the observers of the canonical law and they sentenced him to be impaled alive. When they came to take him, he told them, that he did not fear them, they could do him no harm, and when they were putting him on the stake, he disappeared from them and appeared in a sitting posture in the air at a small distance over the stake. This was repeated several times. His spirit ascended to heaven and asked the Prophet if it be right that he should suffer. The Prophet advised him to suffer, otherwise there would be an end to formal religion. On this

Munsoor Halaj's spirit descended and permitted the body to take the course of nature. When about to be impaled, he called a disciple of his, told him the secret and that his voice, "I am the Truth" would be heard, when they after burning him, should throw his ashes into the sea; and that the sea would rise and overflow all the land, if they did not take his godhra (6) and place it on the rising-waves. It so all happened. —

A Sufi poet has explained the cause of Munsoor's death, to lie in the fact, that he revealed a mystery.

Of *Shems Tebreez* the following story is told. He raised a King's only son from death by throwing his mantle over him and ordering him "Rise by my order." For this he was summoned before the ecclesiastical court and sentenced to be flayed alive. When the sentence came to be executed, no knives could cut him, his body was invulnerable. It is related, that he ascended in spirit to heaven and the Prophet directed him to undergo his punishment, which he subsequently did. He directed the doctors of Law, himself, how to begin to cut the skin from his feet, or rather made the incision himself. When they had thus flayed him, he requested his own skin, be given to him as the letter of the law was fulfilled, and they gave it to him. Of this he made his *Khirqeh* or derwish's habit, threw it over his shoulders, and went away.

After that the doctors of law ordered everybody to give him nothing to eat, drink, etc. He thus remained for some days without food, etc. At last he found a dead ox and cut out a piece, but as no one dared give him fire, he ordered the sun to descend from the firmament and come nearer to broil his meat. The sun obeyed — but the prince and people fearing the consequences implored him to relieve their sufferings by ordering the sun to return to its station. He granted their request.

Al-Ghazzali (Abu Hamid Muhammed ibn Muhammad ibn Ahmad al Ghazzali.) surnamed Hajjatu 'l-Islam ("the proof of Islam"). He was born at Tus A.D. 1058 and died A.D. 1111. —

The following are his own words: "I said to myself: the aim of my life is simply to know the truth of things; therefore I must ascertain what *knowledge* is. * * I then said to myself the only hope of acquiring incontestable convictions is by the perceptions of the senses and by necessary truths. Their evidence seemed to me to be indubitable. I soon began to examine the objects of sensation and speculation to see if they were beyond doubt and doubts crowded in upon me, that my incertitude became complete. * * I abandoned the senses, therefore, having seen all my confidence in their truth shaken. * * * Perhaps, said I, there is no assurance but in the notions of reason, viz., in first principles. * * * Upon this the senses replied: "What assurance have you that your confidence in reason is not of the same nature as your confidence in us? May there not be some other judge superior to reason? The non-appearance of such a judge is no proof of his non-existence. * * * I came to reflect on sleep, how during sleep we give to visions, reality and consistence, and have no suspicion of their untruth. On awaking we see they were nothing but visions. What assurance have we that all we feel and see and know when we are awake does actually exist?"

Al Gazzali had now come to disbelief and distrust of the world of sense. He gave his wealth away, left Bagdad and retired into Syria, to the desert, where he spent two years in solitary struggle, combating his passions, purified his heart and prepared for another world. *He attained freedom.* Afterwards he said: "The life of man passes through three degrees. The first or infantile state is that of pure sensation; the second is that of understanding, and the third that of reason, where the intellect perceives the

necessary truths, etc. But there is a fourth state, beyond these three, in which man perceives the hidden things, that have been, and that will be and the things that escape both the senses and reason. This state is Freedom."

AL GAZZALI: ALCHEMY OF HAPPINESS

CHAP I. ON THE KNOWLEDGE OF THE SOUL, AND HOW KNOWLEDGE OF THE SOUL IS THE KEY TO THE KNOWLEDGE OF GOD.

O seeker after the divine mysteries! Know thou that the door to the knowledge of God will be opened to a man first of all, when he knows his own soul, and understands the truth about his own spirit, according as it has been revealed, "he who knows himself knows his Lord also."

If you wish, O seeker of the way! to know your own soul, know that the blessed and glorious Cod created you of two things: the one is a visible body, and the other is a something internal, that is called spirit and heart, which can only be perceived by the mind. But when we speak of the heart, we do not mean the piece of flesh which is in the left side of the breast of man, for that is found in a dead body and in animals: it may be seen with the eyes, and belongs to the visible world. That heart, which is emphatically called spirit, does not belong to this world, and although it has come to this world, it has only come to leave it. It is the sovereign of the body, which is its vehicle, and all the external and internal organs of the body are its subjects. Its special attribute is to know God and to enjoy the vision of the Beauty of the Ford God. — They will ask you about the spirit. Answer, "The spirit is a creation by decree of the Ford. The spirit belongs to the world of decrees. All existence is of two kinds, one is of the world of decrees, and the other is of the world of creation. To Him belong creation and decree."

— That spirit, which has the property of knowing God is called the heart; it is not found in beasts, nor is it matter or an accident. The heart has been created with angelic qualities. It is a substance of which it is difficult to apprehend the essence. The law does not permit it to be explained, but there is no occasion for the student being acquainted with it at the outset of his journey.

— Know, O seeker after the divine mysteries! that the body is the kingdom of the heart, and that in the body there are many forces in contrariety with the heart, as God speaks in his Holy Word.

— Know, O student of wisdom! that the body, which is the kingdom of the heart, resembles a great city. The hand, the foot, the mouth and the other members resemble the people of the various trades. Desire is a standard bearer; anger is a superintendent of the city, the heart is its sovereign, and reason is the vizier. The sovereign needs the service of all the inhabitants. But desire, the standard bearer, is a liar, vain and ambitious. He is always ready to do the contrary of what reason, the vizier, commands. He strives to appropriate to himself whatever he sees in the city, which is the body. Anger, the superintendent, is rebellious and corrupt, quick and passionate. He is always ready to be enraged, to spill blood, and to blast one's reputation. If the sovereign the heart, should invariably consult with reason, his vizier, and when desire was transgressing, should give to wrath to have power over him (yet, without giving him full liberty, should make him angry in subjection to reason, the vizier, so that passing all bounds he should not stretch out his hand upon the kingdom), there would then be an equilibrium in the condition of the kingdom, and all the members would perform the functions for which they were created, their service would be accepted at the mercy seat, and they would obtain eternal felicity.

The dignity of the heart is of two kinds; one is by means of

knowledge, and the other through the exertion of divine power. Its dignity by means of knowledge is also of two kinds. The first is external knowledge, which everyone understands: the second kind is veiled and cannot be understood by all, and is extremely precious.

— In the second, by the power of thought, the soul passes from the abyss to the highest heaven, and from the East to the West.

The most wonderful thing of all is, that there is a window in the heart from whence it surveys the world. This is called the invisible world, the world of intelligence, or the spiritual world.

— The heart resembles a pure mirror, you must know, in this particular, that when a man falls asleep, when his senses are closed, and when the heart, free and pure from blamable affections, is confronted with the preserved tablet, then the tablet reflects upon the heart the real states and hidden forms inscribed upon it. In that state the heart sees most wonderful forms and combinations. But when the heart is not free from impurity, or when, on waking, it busies itself with things of sense, the side towards the tablet will be obscured, and it can view nothing. For, although in sleep the senses are blunted, the image-making faculty is not, but preserves the forms reflected upon the mirror of the heart.

— In death, the senses are completely separated and the veil of the body is removed, the heart can contemplate the invisible world and its hidden mysteries, without a veil, just as lightning or the celestial rays impress the external eye.

— If a person calls into exercise, in perfection, holy zeal and austerities, and purifies his heart from the defilement of blamable affections, and then sits down in a retired spot, abandons the use of his external senses, and occupies himself

with calling out "O God! O God!" his heart will come into harmony with the visible world, he will no longer receive notices from the material world, and nothing will be present in his heart but the exalted God. In this revelation of the invisible world, the windows of the heart are opened, and what others may have seen in a dream, he in this slate sees in reality. The spirits of angels and prophets are manifested to him and he holds intercourse with them. The hidden things of the earth and heaven are uncovered to him. * * * Probably the knowledge of all the prophets was obtained in this way, for it was not obtained by learning.

— When the heart is free from worldly lusts, from the animosities of society and from distractions by the senses, the vision of God is possible. And this course is adopted by the Mystics. It is also the path followed by the prophets.

— The heart of man while in the spiritual world knows its Maker and Creator; it had mingled with the angels and knows for what service it was created.

— To whomsoever this revelation has been vouchsafed, if it directs him to reform the world, to invite the nations to turn to God, and to a peculiar way of life, that person is called a prophet, and his way of life is called a law; and that influence which proceeds from him, which transcends what is ordinary, is called a *miracle*. If he has not been appointed to invite nations, but worships in accordance with the law of another, he is called a *saint*, and that which proceeds from him, which transcends what is ordinary, is called a *manifestation of grace*.

— The knowledge of God, which is the occasion of the revelation of truth, cannot be acquired without self-denial and effort. Unless a man has reached perfection and the rank of a Superior, nothing will be revealed to him, except in cases of special divine grace and merciful providence, and this occurs very rarely.

— You have now learned, O student of the divine mysteries, the dignity of the heart through knowledge.

— Now listen to the heart's dignity through divine power and the greatness of which it is capable.

— When God wills it, the angels send forth the winds, cause the rain to fall, bring forth the embryo in animals, shape their forms, cause seeds to sprout in the earth and plants to grow, many legions of angels being appointed to this service. The heart of man, being created with angelic properties must also have influence and power over the material world; * * * and if the animal and ferocious qualities should not be dominant, if it should look upon a lion or tiger with "majesty" they would become weak and submissive. If it should look with kindness upon one who is sick, his infirmity might be changed to health. If it should look upon the vigorous with majesty, they might become infirm. The reality of the existence of these influences is known both by reason and experience.

— In whomsoever these influences are shown to have power, if he occasions misery in the exercise of this power, he is designated a sorcerer.

— The heart has dominion and control through three channels. One is through visions; — the second is through the dominion which the heart exercises over its own body; — the third source of dominion of the heart is through knowledge. — Some persons have all things opened up to them by the will of God. This kind of knowledge is called "infused and illuminated" as God says in his Word: "we have illuminated him with our knowledge." These three specialities are all of them found in certain measure in some men, in others two of them are found, and in others, only one is found: but whenever the three are found in the same

person, he belongs to the rank of prophets or of the greatest of the saints. Man cannot comprehend states of being which transcend his own nature. No person can understand any individual who belongs to a scale of rank above him.

— The path of mysticism is sought for by all men, and longed for by all classes of society, yet those who attain to the end are exceedingly rare.

— The body is but an animal to be ridden by the heart, which is its rider, while the heart's chief end is to acquire a knowledge of God.

CHAP. II. ON THE KNOWLEDGE OF GOD.

— In the books of former prophets it is written, "Know thine own soul, and thou shalt know thy Lord," and we have received it in a tradition, that "He who knows himself, already knows his Lord."

— Everyone in the sphere to which he attains, is still veiled with a veil. The light of some is as of a twinkling star. Others see as by the light of the moon. Others are illuminated as if by the world-effulgent sun. To some the invisible world is even perfectly revealed, as we hear in the holy word of God: "And thus we caused Abraham to see the heaven and the earth." And hence it is that the prophet says: "There are before God seventy veils of light; if he should unveil them, the light of His countenance would burn everything that came into His presence."

CHAP. III. ON THE KNOWLEDGE OF THE WORLD.

— Know, that this world is one stage of our life for eternity. For those who are journeying in the right way, it is the road of religion. It is a market opened in the wilderness, where those who are travelling on their way to God, may collect and prepare provisions for their journey, and depart thence to God, without

sorrow or despondency.

— The world is delusive, enchanting and treacherous.

— The world will be brought to the great assembly at the last day, in the form of a woman with livid eyes, pendent lips, and deformed shape, and all the people will look upon her, and will exclaim, "what deformed and horrible person is that, whose aspect alone is severe torture to the soul." And they will be answered, "It was on her account that you were envying and hating one another, and were ready to slay one another. It was on her account that you rebelled against God, and debased yourselves to every sort of corruption." And then God will order her to be driven off to hell with her followers and her lovers. (7)

The Lord Jesus (upon whom be peace!) declares that the world is like the man who drinks sea water. The more he drinks, the more his internal heat increases, and unless he stops, he will destroy himself by drinking.

CHAP. IV. ON THE KNOWLEDGE OF THE FUTURE WORLD.

— Know, beloved, that we cannot understand the future world, until we know what death is: and we cannot know what death is, until we know what life is: nor can we understand what life is, until we know what spirit is.

— The following is an illustration of the duration of eternity, so far as the human mind can comprehend it. If the space between the empyreal heaven to the regions below the earth, embracing the whole universe, should be filled up with grains of mustard seed, and if a crow should make use of them as food and come but once in a thousand years and take but a single grain away, so that with the lapse of time there should not remain a single grain, still at the end of that time not the amount of a grain of mustard seed would have been diminished from the duration of eternity.

— Prayers are of three degrees, of which the first are those that are simply spoken with the lips. Prayers are of the second kind, when with difficulty, and only by a most resolute effort, the soul is able to fix its thoughts on Divine things without being disturbed by evil imaginations: of the third kind, when one finds it difficult to *turn away* the mind from dwelling on Divine things. But it is the very marrow of prayer, when He who is invoked takes possession of the soul of the suppliant, and the soul of him who prays is absorbed into God to whom he prays, and his prayer ceasing, all consciousness of self has departed, and to such a degree, that all thought whatsoever of the praying is felt as a veil betwixt the soul and God. This state is called by the Mystics "absorption," for the reason that the man is so absorbed, that he takes no thought of his body, or of anything that happens externally, none of what occurs in his own soul, but, absent as it were from all such matter whatsoever, is first engaged in going *towards* his Lord, and finally is wholly *in* his Lord. If only the thought occurs that he is absorbed into the Absolute, it is a blemish: for that absorption only is worthy of the name which is unconscious of itself. And these words of mine, although they will be called, as I well know, but foolish babbling by raw theologians, are yet by no means without significance. For consider, the condition of which I speak, resembles that of a person who loves any other object, as wealth, honor, or pleasure. We see such persons so carried away with their love, and others with anger, that they do not hear one who speaks to them, nor see those passing before their eyes; nay, so absorbed are they in their passion, that they do not perceive their absorption. Just so far as you turn your mind upon your absorption, you necessarily turn it away from that which is the object of it."

Again he says: "The commencement of this is the going to God, then follows the finding Him, when the "absorption" takes place. This is, at first, momentary, as the lightening swiftly glancing upon the eye. But afterwards confirmed by use, it introduces the soul into a higher world, where the most pure, essential essence meeting it, tills the soul with the image of the spiritual world, while the majesty of deity evolves and discovers itself."

Omar Khayyam (Ghias uddin Abul Fath Omar ibn Ibrahim Al Khayyam) was born in Khorassan "the focus of Persian culture" and is supposed to have died A. D. 11 23.

He was not affiliated with any Sufi order, but large parts of his works are full of true Sufi philosophy and are recognized as such.

The first part of the following quotations are taken from the translation by E. H. Whinfield in Trubner's Oriental Series. The second part is extracted from B. Quarritch's ed. 1879.

MOTTO: There is a mystery I know full well,
Which to all, good and bail, I cannot tell;
My worlds are dark, but I cannot unfold
The secrets of the "station" where I dwell.

(66) — to attain unconsciousness of self
Is the sole cause I drink me drunk with wine. —

(108) They preach how sweet those Houri brides will be,
But I say wine is sweeter — taste and see! —

(120) Ten powers, and nine spheres, eight heavens made
He,
And planets seven, of six sides, as we see,
Five senses, and four elements, three souls,
Two worlds, but only one, O man, like thee. —

(124) What lord is fit to rule but "Truth?" not one.

What beings disobey His rule? not one. —

(131) Thy being is the being of Another,
Thy passion is the passion of Another.
Cover thy head, and think, and then wilt see,
Thy hand is but the cover of Another. —

(148) Allah hath promised wine in Paradise,
Why then should wine on earth be deemed a vice? —

(225) When the fair soul this mansion doth vacate,
Each element assumes its principal state, —

(266) They go away, and none is seen returning,
To teach that oilier world's recondite learning:
'Twill not be shown for dull mechanic prayers,
For prayer is naught without true heartfelt yearning.—

(285) Life's fount is wine, Khizer (8) its guardian
I, like Elias, (9) find it where I can;
'Tis sustenance for heart and spirit too,
Allah himself calls wine "a boon to man." —

(340) Man is the whole creation's summary,
The precious apple of great wisdom's eye;
The circle of existence is a ring,
Whereof the signet is humanity. —

(351) The more I die to self, I live the more,
The more abase myself, the higher soar;
And, strange! the more I drink of Being's wine,
More sane I grow, and sober than before! —

(369) This world a body is, and God its soul,
And angels are its senses, who control
Its limbs — the creatures, elements, and spheres;
The One is the sole basis of the whole. —

(376) Some look for truth in creeds, and forms, and rules;
Some grope for doubts or dogmas in the schools;
But from behind the veil a voice proclaims,
"Your road lies neither here nor there, O fools." —

(400) My body's life and strength proceed from Thee!
My soul within and spirit are of Thee!
My being is of Thee, and Thou art mine,
And I am Thine, since I am lost in Thee! —

(31) Up from Earth's Centre through the Seventh Gate
I rose, and on the Throne of Saturn (10) sate,
And many a Knot unravel'd by the Road;
But not the Master-knot of Human Fate. —

(32) There was the Door to which I found no Key;
There was the Veil through which I might not see:
Some little talk awhile of *Me* and *Thee*
There was — and then no more of *Thee* and *Me*. (11) —

(33) Earth could not answer; nor the Seas that mourn[lb]
In flowing Purple, of their Lord forlorn;
Nor rolling Heaven, with all his Signs reveal'd
And hidden by the sleeve of Night and Morn.

(34) Then of the *Thee in Me* who works behind[lb]
The Veil, I lifted up my hands to find
A Lamp amid the Darkness; and I heard,
As from Without — "*The Me Within Thee Blind!*" —

(35) Then to the Lip of this poor earthen Urn
I lean'd, the Secret of my Life to learn:
And Lip to Lip it murmur'd "While you live,
Drink! — for once dead, you never shall return." —

(36) I think the Vessel, that with fugitive

Articulation answered, once did live,
And drink; and Ah! the passive lip I kiss'd.
How many kisses might it take — and give! — (12)

(44) Why, if the Soul can fling the dust aside.
And naked on the Air of Heaven ride.
Wer't not a Shame — wer't not a Shame for him
In this clay carcase crippled to abide?

(50-52) A Hair perhaps divides the False and True;
Yes; and a single Alif were the clue —
Could you but find it — to the Treasure-house.
And peradventure to *The Master* too.
Whose secret Presence * * *
* * * * eludes your pains;
Taking all shapes * * * ; and
They change and perish all — but He remains.[lb]
A moment guess'd — then back behind the Fold
Immerst of darkness* * *

(55-56) You know, my Friends, * * *
I made a Second Marriage in my house;
Divorced old barren Reason from my Bed,
And took the Daughter of the Vine to spouse.
For "Is" and "Is-not" though with Rule and line,
And "Up-and-Down" by Logic I define,
Of all that one should care to fathom, I
Was never deep in anything but — Wine.

(66-67) I sent my Soul through the Invisible,
Some letter of that After-life to spell:
And by and by my Soul returned to me,
And answer'd: "I myself am Heav'n and Hell;"
Heav'n but the Vision of fulfill'd Desire

And Hell the shadow from a Soul on fire
Cast on the Darkness info which Ourselves,
So late emerg'd from, shall so soon expire.
* * * the Banquet is ended!

FARIDU 'D-DIN SHAKRGUNJ (about A. D 1200).

Man, what thou art is hidden from thyself.
Kwnw'st not that morning, mid-day, and the eve
Are all within Thee? The ninth heaven art Thou,
And from the sphere into the roar of time
Didst fall ere-while, Thou art the brush that painted
The hues of all the world — the light of life
That ranged its glory in the nothingness.
Joy! Joy! I triumph now; no more I know
Myself as simply me. I burn with love.
The centre is within me, and its wonder
Lies as a circle everywhere about me.
Joy! Joy! No mortal thought can fathom me.
I am the merchant and the pearl at once.
Lo! time and space lay crouching at my feet.
Joy! Joy! When I would revel in a rapture,
I plunge into myself, and all things know.

Saadi (Shaikh-Muslah-ud-Din Saadi) was born at Shiraz, the capital of Persia. A.D. 1176.

He thus characterizes his life and his studies: "I have wandered to various regions of the world, and everywhere have I mixed freely with the inhabitants; I have gathered something in each corner; I have gleaned an ear from every harvest." The divan of Saadi is *by* his countrymen reckoned to be the true Salt mine of poets. Jami calls him "the nightingale of the groves of Shiraz."

We would call him the moral philosopher of Sufism. His writings

do not contain much metaphysics.

SAADIS' GULISTAN (OR ROSE GARDEN):

MOTTO: The Rose may continue to bloom five or six days;
But my *Rose garden* is fragrant for ever.

Who, when the drum soundeth for departure, hath not made up
his burden;

— Shame on the man * *

Who, on the morning of his journey, is still indulging in sweet
sleep.

— They asked Lockman, the wise, from whence he learnt wisdom.
He answered: "From the blind; for till they have tried the ground,
they plant not the foot."

— The world, O my brother, abideth with no one.

— Ask the inhabitants of Hell, they will tell you it is Paradise.

— The sons of Adam are limbs of one another, for in their
creation they are formed of one substance.

When Fortune bringeth affliction to a single member, not one of
the rest remaineth without disturbance.

— Know that from God is the difference of enemy and friend, for
the hearts of both are alike in His keeping.

— So long as thou art able, crush not a single heart, for a sigh has
power to overturn a world.

— Not a word can be said, even in child's play, from which an
intelligent person may not gather instruction; but if a hundred
chapters of wisdom were read in the hearing of a fool, to his ears
it would sound as nothing but child's play.

— Yesternight, towards morning', a warbling bird stole away my reason, my patience, my strength, and my understanding. My exclamations, by chance, reached the ear of a most intimate friend. "Never," he said "could I believe that the voice of a bird should have such a power to disturb thy intellect!" — "It is not," I replied, "befitting the condition of man, that a bird should be reciting its hymn of praise, and that I should be silent."

— One day the Prophet said to Abu Huraizah: "Do not come *every* day, that our friendship may increase."

A holy man has said: "With all the beauty which attends the sun, I have never heard that anyone has taken him for a friend, except in winter, when he is veiled, and *therefore* is loved.

— The treasure chosen by Lokman was patience: without patience there is no such thing as wisdom.

— Were every night a night of power, *the Night of Power*, would lose its worth. Were every pebble a ruby, the ruby and the pebble would be of equal value.

[Quran, Chap, xcvi: Verily we sent down the Quran in the night of al Kadr. — Therein do the angels descend, and the spirit of *Gabriel* also, by the permission of their Lord *with his decrees* concerning every matter. It is peace until morning. Comp. footnote to Lane's transl. of the Quran and our Part II: Symbols].

— How should the multitude find its way to their secret chambers, for, like the waters of life, they are hidden in darkness?

They kindle themselves the flame, which, as a moth, consumeth them; not wrapping themselves up like the silk-worm in its own web.

Seeking for the Soul's repose on the bosom which only can give

repose, their lips are still dry with thirst on the very margin of the stream:

Not that they have no power to drink the water, but that their thirst could not be quenched, even on the banks of the Nile.

"The bird of the morning only knoweth the worth of the book of the rose; for not every one who readeth the page understandeth the meaning."

(*Hafiz.*)

SAADIS' BOOSTAN [FRUIT GARDEN OR GARDEN OF PLEASURE]

His nature's true state all are helpless to read.
The extent of *His* glory, no mortal has found;
His exquisite beauty, no vision can bound.

* * * * *

To the skirt of *His* praise Reason's hand comes not nigh.

* * * * *

The mind can't *this* world by reflection embrace.

But the Lord of the sky and the earth's rutted skin.
On none shuts the door of subsistence for sin.
Like a drop in the ocean of knowledge are seen
Both *His* worlds, and the faults, Me sees, kindly, He'll
screen.

* * * * *

The Creator is mercy-diffusing and kind,
For He helps all *His* creatures and knows ev'ry mind.
In Him, self-reliance and grandeur you see,
For *His* kingdom is old and *His* nature is free. —

* * * * *

He is tardy in seizing on those who rebel,
And does not excuse-bringers rudely repel.

* * * * *

When you've penitent turned "*It is past*," He will write.

* * * * *

The extent of God's mercies, no mortal can guess;
The need of His praises, what tongue can express?

Who knows that communion with God you don't share,
When without an absolution you stand to say pray'r?

* * * * *

That pray'r is the key of the portal of hell,
Over which in men's presence a long time you dwell.
If your path does not lead to the Maker alone,
Your carpet for pray'r into Hell will be thrown!
He ordered, and something from nothing arose;
Who something from nothing but He could disclose?
Again to nonentity's hiding He flings us. —

And thence to the plain of the judgment He brings us.
Let the robes of deceit, name and fame be dispersed!
For a man becomes weak if in garments immersed.
Wordly love is a veil by which nothing is gained;
When you snap the attachments the Lord is obtained.

* * * * *

Know, that the people in ecstasy drown'd,
In the eyes of the Lord special favour have found!
He watches the "friend," in the fierce burning pile?

* * * * *

You've no road in yourself while to self you are wed;
The enraptured alone are informed on this head. —
Some one said to a Moth "Oh, contemptible mite!
Go! love one who will your affection requite.

* * * * *

Between you and the candle no friendship can be!

* * * * *

No one tells you your conduct is perfectly right
In destroying your life for the love of the light!
Observe what the moth, full of hot anguish, said:
"If I burn, oh astonishing! What is the dread?"

* * * * *

* * *I fancy the flame is a beautiful rose!

* * * * *

Won't you helplessly, one day, your life give away?
For the sake of space and death, better give it to-day

A wild beast is not likely to change into man;
Instruction is lost on it, strive as you can.

* * * * *

Effort makes not a rose from a willow to grow;
A warm bath will not whiten a negro like snow.
Since naught can the arrow of destiny brave.
Resignation's the shield that is left to God's slave.

POLARITY OF THE HUMAN BODY — *Ch. J. Quetil, F.T.S.*

Mr. H. Durville, Director of the "Journal du Magnetisme," published in Paris, France, has made some very interesting experiments which have led him to fix the exact Polarity of the Human Body. To understand well what I am going to state, it is necessary to know first that the French call the South pole of the Earth, Austral, and the North pole, Boreal, and that they call the end of the compass needle or of a Magnet which is attracted to the North of the Earth, Austral, and the end which is attracted to the South, Boreal.

Mr. Durville has replaced the denominations Austral and Boreal by the terms positive and negative, based on the following Electro-Chemical law. If a Saline solution be submitted to the action of a Voltaic current, the acids go to the pole +, or positive and the alkalis to the pole –, or negative.

Also if we put in the water contained in two different glasses, the two electrodes of a pile, uniting the two glasses by a wet woolen or cotton thread, the water in the glass exposed to the electrode +, will take a fresh and acidulated taste, and the water in the other glass exposed to the electrode –, will take an alkaline, tepid and unsavoury taste. Now, if we submit two glasses filled with water to the poles of a Magnet, the water exposed to the Austral pole will take an acidulated taste, and the water exposed to the Boreal pole will take an alkaline taste.

There is, then, a concordance of nature between the positive or + pole of the pile, and the Austral or positive pole of the Magnet, both being fresh and acids; and between the negative or – pole of the pile, and the Boreal or negative pole of the Magnet, both being tepid, nauseous and alkaline. Consequently we can call +, or

positive, the Austral pole of the Magnet and –, or negative, the Boreal pole. Furthermore, if we magnetize two glasses of water, one with the right hand, and the other with the left hand, the first will become acidulated and fresh, and the second, tepid, nauseous and alkaline.

Then, there is again concordance of nature between the positive or – pole of the pile, the positive or Austral pole of the Magnet, and the right hand, which are fresh and acidulated; and between the negative or – pole of the pile, the negative or Boreal pole of the Magnet, and the left hand which are tepids, nauseous and alkalines.

Consequently we can call positive or +, the right hand and the Austral pole of the Magnet, as well as the positive pole of the pile; and negative or –, the left hand and the Boreal pole of the Magnet, as well as the negative pole of the pile.

We know that the Earth is a Magnet and that it acts like one.

We also know that when Magnets act freely one upon another, the poles of the same name are repulsed and the poles of contrary names are attracted.

Now, Mr. Durville found by repeated experiments that all the right side of a sensitive subject is strongly influenced by the positive pole of the Magnet which produces contraction, repulsion and excitation; while, on the contrary, the other pole relaxes, attracts and calms the same side. The Austral pole of the Magnet presented within about 4 inches of the forehead of the subject, repulses him and puts him to sleep; while the left hand attracts and awakens him. It is evident, then, that the positive pole of the Magnet and the right hand are poles of the same name; and, if the Austral pole of the Magnet is positive, then the Boreal or Northern pole of the Earth must be negative. The

physical laws of the Human Magnetism are consequently identical with those governing the actions of the Magnets.

The Human body represents three horse-shoe Magnets, two of them having the neutral point at the summit of the head and the third in an inverted position to that of the two first ones. The axis the most important divides us laterally from right to left, the other from the forepart to the back part of the body. The first horse-shoe Magnet has its neutral point at the summit of the head, and its extremities or poles at the right hand and the left hand, the right hand being the positive, and the left hand the negative pole.

The second horse-shoe Magnet has also its neutral point at the summit of the head, and the extremities or poles of its two branches are the right and the left foot, the right foot being positive and the left foot negative.

The third horse-shoe Magnet, the one in an inverted position, has its neutral point at the perineum and the extremities of its branches are the forehead and the occiput. The forehead being positive and the occiput negative.

From this it follows that in the human body, from the extremities of the feet to the summit of the head, all the right side is positive and the left side negative, and from the forehead to the perineum all the forepart of the body is positive, while the opposite or back part, from the occiput to the perineum is negative. The Human body possesses other polary axes of less importance.

Reichenbach has found, through experiments made with many sensitives, that the end of the Magnet which seeks the North pole of the Earth, the end we call positive, sends to the left hand of a sensitive a fresh breeze, while the other end emits a tepid one. He also found that the positive end emits in the dark a blue light,

while the negative one emits a yellow red light. His sensitives found that in the dark, the right side of the human body emits a blue light, while the left side emits a yellow red one. Then the right side of the body has the same quality of Magnetism as the positive, or North seeking, or Austral pole of the Magnet, and the left side has the same quality of Magnetism as the negative, or South seeking, or Boreal pole of the Magnet. Those experiments of Reichenbach agree thus entirely with those made by Mr. Duville. His polarity of the Human body is also the same as given by Andrew Jackson Davis, page 91 of his work "The Harbinger of Health." There are consequently very strong reasons for believing that the theory of Mr. Durville is the right one, since it has been confirmed by practical experiments made by himself, Reichenbach and Davis.

Mr. Durville concludes his article in the "Journal du Magnetisme," January number of 1886, with some interesting points in Therapeutics. Diseases can be classed as of two kinds, those due to atony or paralysis of the organs, and those due to excitation or inflammation.

The object of Medicine is to excite the functions of the atonic organs and to calm or moderate those which are too active. Magnetizers knew that the ends of the fingers presented within a few inches of the diseased part, will produce excitation, while the palm of the hand applied on produces calm; but they could not always obtain the desired effect for want of the knowledge of the true polarity of the Human body.

The right hand will produce attraction, calm and easiness on the left and back side of the body; and repulsion, excitation and uneasiness on the right and forepart of the body; and the left hand will produce the same corresponding effects on the right and forepart of the body, and on the left and backpart. The right-

hand, a positive pole, will act with more energy than the left-hand, a negative one.

He found by experiments that the most certain and active results are produced by presenting the palm of the hand within about two inches from the diseased part, the attractions and repulsions being in inverse ratio of the square of the distances. Every time we want to take off a pain, or calm an excitation, we will succeed by presenting the palm of the right hand to the diseased part, if that part is on the left side or the back of the body, or by presenting the palm of the left hand, if it is on the right side or the forepart of the body. For example, a heaviness in the head, a neuralgia and in general, all kinds of headaches, will cease more or less rapidly under the influence of the palm of the hand presented with the fingers upright at about two inches from the forehead. To calm the nervous system, place yourself on the left of the patient and apply the left hand on the epigastrium, and the right hand on the vertebral column, on the corresponding part. If we were to use the other hand on the same part, we should increase for a while the intensity of the pain. To obtain the desired result, the time necessarily varies according to the nature of the disease and sensibility of the patient.

With a knowledge of the laws regulating the human polarity, Magnetism becomes an exact science, a positive one. But the application of it is also an art which constant practice may improve considerably.

The Path

THE HERMETIC PHILOSOPHY: I

Fragments of the Ancient Wisdom Religion have come down to us from the remotest past, through many channels, and in various forms.

The study of philology alone will be inadequate to discover the true meaning of ancient sacred writings, though it may very greatly assist the labors of those who have already gained a clue to the Secret Doctrine. The Theosophist and the Antiquarian differ very widely, and though the former has sometimes been accused of searching out obsolete doctrines and magnifying the achievements of the past, but little observation will be required to reveal the fact, that that for which they search may be very old because it is valuable, but never valuable merely because it is old. In short that of which they are in search may truly be said to never fade, and ne'er grow old, though it is often lost sight of. Occultism is not a new craze as some suppose, it is not simply a line of the marvelous, it is rather the profoundest of all sciences, conforming in its methods of research and the character of its results to those of all sciences. The naturalist does not hesitate to construct from a single tooth or a few fragments of bone, the entire animal and assign to it its proper place, declare its habits, modes of life, size, &c., &c., even though he fixed its era centuries ago, and no one nowadays questions the general correctness of the result; the study of comparative anatomy and the science of biology testify all this. In like manner and by similar methods may one familiar with the science of occultism, which deals with the operation of uniform laws in the higher realms of nature, arrive at exact data from very small beginnings, and with this advantage, viz., that he has the means at hand to verify his conclusions, which the naturalist has not, for in this realm there

are no extinct species, the elements of human nature, and the laws which underlie their unfoldment and manifestation are the same now, as thousands of years ago.

It is the custom of many who are entirely ignorant of this higher science to deny its existence and ridicule its cultivators. Just as an uneducated and conceited boor would ridicule an Agassiz for attempting to reconstruct an animal from its thigh bone. When, therefore, one entirely ignorant not only of the principles but of the existence of such a thing as occult science, examines ancient records in which it is concealed, he will arise from his task possibly better satisfied with his own possessions as contrasted with the "ignorance" of past ages, but seldom wiser for his endeavor. Few persons nowadays are ignorant of the form of most ancient hierarchic writings, as consisting of, or containing a double meaning under the garb of allegory or parable. It is moreover becoming quite generally known that many of these ancient records are of vital importance to us of the present day, as containing the very knowledge of which we stand most in need, and the amount of attention they are receiving may be determined by observing the interest in, and almost unprecedented sales of such works as Arnold's *Light of Asia*, while the labors of men like Max Muller in rendering the ancient scriptures into English have made it possible for everyone to gain some familiarity with the religious casts of antiquity. Bearing in mind these general observations, let us briefly examine one of the most ancient, most famous, and yet least comprehended sources of ancient wisdom. As to the questions who was Hermes? which Hermes? when did he write? we have these points for the philologists and historians, quoting here the remark of Iamblichus in his treatise on the Mysteries: "Hermes, the God who presides over language was formerly very properly considered as common to all priests; and the power who presides over the true

science concerning the Gods is one and the same in the whole of things. Hence our ancestors dedicated the inventions of their wisdom to this deity, inscribing all their own writings with the name of Hermes," and "the late learned Divine Doctor Everard" in the preface to his translation of the Divine Pymander 1650, contends that Hermes Trismegistus lived a long time before Moses, that he had "perfect and exact knowledge of all things contained in the world," * * "that he was the first that invented the art of communicating knowledge to the world by writing, that he was King of Egypt, that he styled himself the son of Saturn, and that he was believed to have come from heaven, and not to have been born on earth." (1)

The above writer goes on to say that Hermes did excel in the right understanding of, because he attained to, the knowledge of the quintessence of the whole universe, otherwise called the *Elixir* of the philosophers, which secret many ignorantly deny, many have sought after, and some have found. A description of this great Treasure is said to have been found engraved upon a Smaragdine Tablet in the valley of Hebron after the flood. (2)

To the modern reader, all this sounds very queer, a bundle of contradictions and vagaries, taxing reason and even credulity. But suppose we are told, that it was designed for exactly that purpose, that only they who were *determined* to find the truth, and who therefore had faith that it existed somewhere, were expected to walk around or dig under this stumbling-block. If we turn now to *Isis Unveiled* p. 507, Vol. I, we shall find the inscription said to have been found on the tablet.

A HINDU CHELA'S DIARY: II

"Yesterday I went with Kunala to look at the vast and curious temples left here by our forefathers. Some are in ruins, and others only showing the waste of time. What a difference between my appreciation of these buildings now, with Kunala to point out meanings I never saw, and that which I had when I saw them upon my first pilgrimage, made so many years ago with my father. * * * * *

A large portion of the MS. here, although written in the same characters as the rest, has evidently been altered in some way by the writer, so as to furnish clues meant for himself. It might be deciphered by a little effort, but I must respect his desire to keep those parts of it which are thus changed, inviolate. It seems that some matters are here jotted down relating to secret things, or at least, to things that he desired should not be understood at a glance. So I will write out what small portion of it as might be easily told without breaking any confidences.

It is apparent that he had often been before to the holy city of Benares, and had merely seen it as a place of pilgrimage for the religious. Then, in his sight, those famous temples were only temples. But now he found, under the instruction of Kunala, that every really ancient building in the whole collection had been constructed with the view to putting into imperishable stone, the symbols of a very ancient religion. Kunala, he says, told him, that although the temples were made when no supposition of the ordinary people of those eras leaned toward the idea that nations could ever arise who would be ignorant of the truths then universally known, or that darkness would envelop the intellect of men, there were many Adepts then well known to the rulers

and to the people. They were not yet driven by inexorable fate to places remote from civilization, but lived in the temples and while not holding temporal power, they exercised a moral sway which was far greater than any sovereignty of earth. (1) And they knew that the time would come when the heavy influence of the dark age would make men to have long forgotten even that such beings had existed, or that any doctrines other than the doctrine based on the material rights *of mine* and *thine* had ever been held. If the teachings were left simply to either paper or papyrus or parchment, they would be easily lost, because of that decay which is natural to vegetable or animal membrane. But stone lasts, in an easy climate, for ages. So these Adepts, some of them here and there being really themselves Maha Rajahs, (2) caused the temples to be built in forms, and with such symbolic ornaments, that future races might decipher doctrines from them. In this, great wisdom, he says, is apparent, for to have carved them with sentences in the prevailing language would have defeated the object since languages also change, and as great a muddle would have resulted as in the case of the Egyptian hieroglyphics, unless a key stone had also been prepared; but that itself might be lost, or in its own turn be unintelligible. The ideas underneath symbols do not alter, no matter what might be the language, and symbols are clear immortally, because they are founded in nature itself, in respect to this part of the matter, he writes down that Kunala informed him that the language used then was not Sanskrit, but a far older one now altogether unknown in the world.

From a detached sentence in the MS., it is shadowed out that Kunala referred to a curious building put up many years ago in another part of India and now visible, by which he illustrated the difference between an intelligent construction and unintelligent one. This building was the product of the brain of a Chandala, (3)

who had been enriched through a curious freak. The Rajah had been told upon some event occurring, by his astrologers, that he must give an immense sum of money to the first person he saw next day, they intending to present themselves at an early hour. Next day, at an usually early season, the Rajah, arose, looked out of the window, and beheld this Chandala. Calling his astrologers and council together and the poor sweeper into his presence, he presented him with lacs upon lacs of rupees, and with the money the Chandala built a granite building having immense monolithic chains hanging down from its four corners. Its only symbology was, the change of the chains of fate; from poor low caste to high rich low caste. Without the story the building tells us nothing.

But the symbols of the temple, not only those carved on them, but also their conjuncture, need no story nor knowledge of any historical events. Such is the substance of what he writes down as told him by Kunala. He says also that this symbology extends not only to doctrines and cosmology, but also to laws of the human constitution, spiritual and material. The explanation of this portion is contained in the altered and cryptic parts of the MS. He then goes on:

* * * "Yesterday, just after sunset, while Kunala and X were talking, Kunala suddenly seemed to go into an unusual condition, and about ten minutes afterwards a large quantity of malwa flowers fell upon us from the ceiling.

"I must now go to — and do that piece of business which he ordered done. My duty is clear enough, but how am I to know if I shall perform it properly. * * * When I was there and after I had finished my work and was preparing to return here, a wandering fakir met me and asked if he could find from me the proper road to Karli. I directed him, and he then put to me some questions that looked as if he knew what had been my business: he also had

a very significant look upon his face, and several of his questions were apparently directed to getting me to tell him a few things Kunala had told me just before leaving Benares with an injunction of secrecy. The questions did not on the face show that, but were in the nature of inquiries regarding such matters, that if I had not been careful, I would have violated the injunction. He then left me saying: "You do not know me but we may see each other." * * * I got back last night and saw only X, to whom I related the incident with the fakir, and he said that, 'it was none other than Kunala himself using that fakir's body who had said those things, and if you were to see that fakir again he would not remember you and would not be able to repeat his questions, as he was for the time being taken possession of for the purpose, by Kunala, who often performs such things.' I then asked him if in that case Kunala had really entered the fakir's body, as I have a strange reluctance toward asking Kunala such questions, and X replied that if I meant to ask if he had really and in fact entered the fakir's person, the answer was no, but that if I meant to ask if Kunala had overcome that fakir's senses, substituting his own, the answer was, yes; leaving me to make my own conclusions. * * * I was fortunate enough yesterday to be shown the process pursued in either entering an empty body, or in using one which has its own occupant. I found that in both cases it was the same, and the information was also conveyed that a Bhut (4) goes through just the same road in taking command of the body or senses of those unfortunate women of my country who sometimes are possessed by them. And the Bhut also sometimes gets into possession of a part only of the obsessed person's body, such as an arm or a hand, and this they do by influencing that part of the brain that has relation with that arm or hand; in the same way with the tongue and other organs of speech. With any person but Kunala I would not have allowed my own body to be made use of for the experiment. But I felt perfectly safe, that he would not only let me

in again, but also that he would not permit any stranger, man or gandharba, (5) to come in after him. We went to ___ and he * *. The feeling was that I had suddenly stepped out into freedom. He was beside me and at first I thought he had but begun. But he directed me to look, and there on the mat I saw my body, apparently unconscious. As I looked * * * the body of myself, opened its eyes and arose. It was then superior to me, for Kunala's informing power moved and directed it. It seemed to even speak to me. Around it, attracted to it by those magnetic influences, wavered and moved astral shapes that vainly tried to whisper in the ear or to enter by the same road. In vain! They seemed to be pressed away by the air or surroundings of Kunala. Turning to look at him, and expecting to see him in a state of samadhi, he was smiling as if nothing, or at the very most, but a part, of his power had been taken away * * * another instant and I was again myself, the mat felt cool to my touch, the bhuts were gone, and Kunala bade me rise.

He has told me to go to the mountains of — where — and — usually live, and that even if I were not to see any body the first time, the magnetized air in which they live would do me much good. They do not generally stop in one place, but always shift from one place to another. They, however, all meet together on certain days of the year in a certain place near Bhadrinath, in the northern part of India. He reminded me that as India's sons are becoming more and more wicked, those adepts have gradually been retiring more and more toward the north, to the Himalaya mountains. * * * Of what a great consequence is it for me to be always with Kunala. And now X tells me this same thing that I have always felt. All along I have felt and do still feel strongly that I have been once his most obedient and humble disciple in a former existence. All my hopes and future plans are therefore centred in him. My journey therefore to up country has done me

one good, that of strengthening my belief, which is the chief foundation on which the grand structure is to be built. * * * As I was walking past the end of Ramalinga's compound holding a small lamp of European make, and while there was no wind, the light three several times fell low. I could not account for it. Both Kunala and X were far away. But in another moment, the light suddenly went out altogether, and as I stopped, the voice of revered Kunala, who I supposed was many miles away, spoke to me, and I found him standing there. For one hour we talked; and he gave me good advice, although I had not asked it — thus it is always that when I go fearlessly forward and ask for nothing I get help at an actual critical moment — he then blessed me and went away. Nor could I dare to look in what direction. In that conversation, I spoke of the light going down and wanted an explanation, but he said I had nothing to do with it. I then said I wanted to know, as I could explain it in two ways, viz: 1st, that he did it himself, or 2nd, that some one else did it for him. He replied, that even if it were done by somebody else, *no Yogee will do a thing unless he sees the desire in another Yogee's mind.* (6) The significance of this drove out of my mind all wish to know *who* did it, whether himself, or an elemental or another person, for it is of more importance for me to know even a part of the laws governing such a thing, than it is to know who puts those laws into operation. Even some blind concatenation of nature might put such natural forces in effect in accordance with the same laws, so that a knowledge that nature did it would be no knowledge of any consequence.

(To be continued)

FOOTNOTES:

1. In the ancient Aztec civilization in Mexico, the sacerdotal order was very numerous. At the head of the whole establishment were

two high priests, elected from the order, solely for their qualifications, as shown by their previous conduct in a subordinate station. They were equal in dignity and inferior only to the sovereign, who rarely acted without their advice in weighty matters of private concerns. Sahagun *Hist. de Nueva Espana*, lib. 2; lib. 3 cap. 9- *Torq. Mon. Ind.* lib. 8 cap 20; lib. 9, cap. 3, 56; cited by Prescott in vol. 1, *Conq. Mex.* p. 66). — [Ed.] ([return to text](#))

2. King or Ruler. ([return to text](#))

3. A low caste man, *e.g.* a sweeper. Such a building can now be seen at Bijapur, India. — [Ed.] ([return to text](#))

4. An obsessing astral shell. The Hindus consider them to be the reliquae of deceased persons. — [Ed.] ([return to text](#))

5. Nature spirit or elemental. — [Ed.] ([return to text](#))

6. This sentence is of great importance. The Occidental mind delights much more in effects, personalities and authority, than in seeking for causes, just as many Theosophists have with persistency sought to know when and where Madame Blavatsky did some feat in magic, rather than in looking for causes or laws governing the production of phenomena. In this italicized sentence is the clue to many things, for those who can see. — [Ed.] ([return to text](#))

PORTRAIT OF PLATO IN CARNELIAN STONE — *Fulvius Ursinus*

This portrait was taken from an old work by John Moretus, published in 1606 at Antwerp, containing 167 other portraits of ancient Greek and Latin philosophers, poets, orators, and scholars of renown. Accompanying each is a description in old Latin, and a literal translation of that which is given of the head of Plato is as follows:

"This likeness of Plato is represented on some precious stone, perhaps a Carnelian, very beautiful, of oval shape, and in the highest style of art, which one hundred years before, a Cardinal under Julius Caesar a Pontifical legate in the Florentine Council had brought from Greece. But it is long haired and bearded, as are the other likenesses of Plato, as the son of Ailius writes, that the first debate between Plato and Aristotle was about the hair and beard, because Aristotle, contrary to the fixed habit and style

of Plato, was accustomed to have his hair cut and his face shaved.

"Very like to this portrait is that which is seen cut very artistically in Carnelian stone, and which was once in the possession of the first Cardinal of the Holy Cross, which in addition to the likeness of Plato, has also a likeness of the great teacher himself, Socrates.

"On the pillar of Hermes, which has the head broken off, these words are inscribed in Greek: *'Plato was a son of Ariston, an Athenian.'*

"This also Laertius himself confirms, since he writes that he was born at Athens of his father Ariston, in the village Collyteum, eighteen years after the second year of the Olympiad, Aminia being chief ruler.

"Moreover there is extant in marble, by Fulvius, a portrait of this same Plato of the very highest artistic skill: and there is another very like to this by the same artist cut in a most beautiful Carnelian stone which represents Plato at that time an old man, as it would appear, about eighty-one years old, at which time, engaged in writing extensively he died, one hundred and eight years after the first year of the Olympiad. In the same Carnelian portrait not only is the forehead of Plato represented very broad on account of which he was called by the name of Plato, prior to which he had been called Aristocles; but also his shoulders are very broad on which account some wished him to select a name from the Greek language.

"A statue of this same Plato was dedicated in the Academy, the work of a Silanian sculptor of the highest rank; and Cicero reminds us in his Brutus, of a statue which he had, in these words: "Then we erected a statue of Plato on the public square, etc., etc.""

The Path

NOTES ON THE CABBALAH OF THE OLD TESTAMENT: I — J.

Ralston Skinner

I said in my article on Hebrew Metrology, (1) that the system embracing it was a language, veiled under the Hebrew text of Scripture, and that "To the extent to which the language was known among the Jews, the learning and teaching thereof was called 'CABBALAH.'"

It is a fact that so little is known of Cabbalah that its existence has been denied. It has seemed to possess a like property with that of Prester John, namely, the more and further he was searched for the less he could be found and the more fabulous he became. After the same fashion, as very much was related of wonders connected with Prester John, so the most marvelous things are claimed for Cabbalah. The Cabbalistic field is that in which astrologers, necromancers, black and white magicians, fortune tellers, chiromancers, and all the like, revel and make claims to supernaturalism *ad nauseam*. Claim is also made that it conceals a sublime divine philosophy, which has been attempted to be set forth in a most confused and not understandable way. The Christian quarrying into its mass of mysticism, claims for it support and authority for that most perplexing of all problems the Holy Trinity, and the betrayed character of Christ. The good, pious, ignorant man picks up Cabbalah at will as a cheap, easy and veritable production, and at once, with the poorest smattering of starved ideas, gives forth to the world, as by authority, a devout jumble of stuff and nonsense. With equal insurance, but more effrontery the knave, in the name of Cabbalah, will sell amulets and charms, tell fortunes, draw horoscopes, and just as readily give specific rules, as in the case of that worthy, Dr. Dee, for raising the dead, and actually — the

devil.

No wonder then that the whole affair has been discredited and condemned by the rational and the wise.

Discovery has yet to be made of what Cabbalah really consists before any weight or authority can be given to the name. On that discovery will rest the question whether the name should be received as related to matters worthy of rational acknowledgment.

The writer claims that such a discovery has been made, and that the same embraces rational science of sober and great worth. He claims that it will serve to clear up and take away very much of the mysticism which up to this time has been an unexplainable part of religious systems, — especially the Hebrew or Jewish, and the Christian, so much so that the supernatural in those systems will have to give place to the rational, to a very great extent. He claims that that sublime science upon which Masonry is based, is in fact, the substance of Cabbalah, — which last is the rational basis of the Hebrew text of Holy writ.

Cabbalah is inseparably connected with the text of the Scriptures, and an exposition of the inner sense of the same is as John Reuchlin claimed necessary to a right and full understanding of the Sacred Text. But he saw vaguely, being taught only in a mystic phraseology which was really a blind, and he did not come into possession of the solid, rational grounds of it which he could formulate and impart. For this reason, though he was right in his general assertion, his scheme failed, and his works in this regard, passed away from the common sense world, and have ever since lived only among the mystics and dreamers.

Like all other human productions of the kind, the Hebrew text of the Bible was in characters which could serve as sound signs for

syllabic utterance, or for this purpose what are called letters. Now in the first place, these original character signs were also pictures, each one of them; and these pictures of themselves stood for ideas which could be communicated, — much like the original Chinese letters. Gustav Seyffarth shows that the Egyptian hieroglyphics numbered over six hundred picture characters, which embraced the modified use, syllabically, of the original number of letters of the Hebrew alphabet. The characters of the Hebrew text of the Sacred Scroll were divided into classes, in which the characters of each class were interchangeable; whereby one form might be exchanged for another to carry a modified signification, both by letter, and picture and number. Seyffarth shows the modified form of the very ancient Hebrew alphabet in the old Coptic by this law of interchange of characters. This law of permitted interchange of letters is to be found quite fully set forth in the Hebrew dictionaries, such as Fuerst's and others. Though recognized and largely set forth it is very perplexing and hard to understand, because we have lost the specific use and power of such interchange. In the second place, these characters stood for *numbers* — to be used for numbers as we use specific number signs, — though, also, there is very much to prove that the old Hebrews were in possession of the so-called Arabic numerals, as we have them, from the straight line 1 to the *zero* character, together making $1+9=10$. The order of these number letters run from 1 to 9, then 10 to 90, then 100 upward. In the third place it is said, and it seems to be proven, that these characters stood for musical notes; so that for instance, the arrangement of the letters in the first chapter of Genesis, can be rendered musically, or by song. Another law of the Hebrew characters was that only the consonantal signs were characterized, — the vowels were not characterized, but were supplied. If one will try he will find that a consonant of itself cannot be made vocal without the help of a vowel; therefore it was said that the consonants made the frame

work of a word, but to give it life or utterance into the air, so as to impart the thought of the mind, and the feeling of the heart, the vowels had to be supplied. Thus the dead word of consonants became quickened into life by the Holy Spirit, or the vowels.

This being said then: —

First: The Holy or Sacred Text was given in consonants only, without any vowelizing, or signs of vowels.

Second: The letters were written one after the other at equal distances, without any separation whatever of distinct words, and without any punctuations whatever, such as commas, semi-colons, colons or periods.

It will be seen at once that a various reading of the text might be had in many places, both by differing arrangements of letters, and by a differing supplying of vowels. A very important difference of reading may be instanced in the first line of Genesis. It is made to be read "B'rashith bara Elohim," etc., "In the beginning God created the heavens and the earth"; wherein Elohim is a plural nominative to a verb in the third person singular. Nachminedes called attention to the fact that the text might suffer the reading, "B'rash ithbara Elohim," etc. "In the head (source or beginning) created itself (or developed) Gods, the heavens and the earth," — really a more grammatical rendering.

What the originally and intended right reading was who can tell? It may be surmised, however, that it was made to subserve a coordinating, symmetrical and harmonious working of the characters to unfold and develop their various uses; — as sound signs to frame a narrative, — as numbers to develop geometrical shapes and the numerical enunciations of their elements, comparisons and applications, — as pictures to show forth ideas in some accordance with the story told, and finally, — as musical

sounds to give an appropriate song to embrace the whole. The whole compass was to embrace rational proof, through operations in nature, of the existence of that Divine Contriving Willing Cause which we call God. But be this as it may there was no end of effort for thousands of years, by the best trained and most learned men of the Hebrews and Jews, to give and preserve what had to be decided upon by them as the right reading of the Sacred Text. This reading was certainly perfected as we have it, as early as the time of Ezra; and as to the various readings which offered, the present was perfected as the orthodox one, — or that one to be received by the profound vulgar.

It must be known that it is claimed for the Sacred Scroll by the Hebrew, that no letter in it has ever been changed, and that even the marginal readings were part of the original text for a varied use thereof, in perfect accord with the object of its writing. Unlike the Christian Gospels, with the Hebrews and Jews, alike, the original text was sacredly precious as to its every and very letter, and had to be thus preserved. To the contrary of this, the Gospels can be changed in their reading to suit the currently changing ideas of what the same should be. The marks to indicate "*right reading*" were after the time of Ezra gradually made public, were called *Massorah*, and finally, edited by Ben Chajim, were published by Bomberg, in Venice, in the fifteenth century.

After this fashion and mode the books of the Old Testament were prepared and read by the Jews long before the time of the Christian Era. They were thus accepted at that time; and afterwards by the Christian World: — so that, to day, we accept the record, as thus prepared by the ancient orthodox Jewish and Hebrew Church.

Whatever may have been the Jewish mode of complete interpretation of these books, the Christian Church had taken

them *for what they show on their first face*, — and that only. As they may be read orally, so is their fullest meaning to be gathered from the oral reading; and by means of what the sound of the words may convey to the ear the full and complete intendment of meaning is to be had. The Christian Church has never attributed to these books any property beyond this; and herein has existed its great error.

Now, as said, the substance of the Cabbalah is a rendering of the secret doctrine of the Old Testament, and this is not only asserted, but an argument is raised about the matter in the following set terms: "If the Law simply consisted of ordinary expressions and narratives, ex. gr. the words of Esau, Hagar, Laban, the ass of Balaam, or of Balaam himself, why should it be called the Law of Truth, the perfect law, the true witness of God? Each word contains a sublime source, each narrative points not only to the single instance in question, but also to generals." (Sohar iii, 149 b). "Woe be to the son of man who says that the Tora (Pentateuch) contains common sayings and ordinary narratives. * * There is the garment that every one can see, but those who have more understanding do not look at the garment but at the body beneath it; while the wisest, the servants of the Heavenly King, those who dwell at Mount Sinai, look at nothing else but the soul (i.e., the secret doctrine), which is the root of all the real Law." (Sohar, iii, 152 a).

Now it is a strange thing, that in the quotations made by Dr. Ginsburg in his Essay, (2) can be gleaned a series of data wherewith to arrange a philosophy of Cabbalistic teaching, covered by the names and remarks on the Ten Sephiroth. The "*trick of the thing*" lays plainly before the eyes in its development, and yet is perfectly concealed from unintelligent observation. In other words, the very text is laughing at the worthy doctor, while he is criticizing it with an apparent aspect of superiority and

authority. The same thing is to be found in the text of Plutarch's *Morals*, by C. W. King, and in many other texts where the like phenomenal mode is practiced. It in fact is said that the Cabbalah is evolved by "*hints scarcely perceptible*," and the cunning of the concealment is something to admire and laugh at. The description in *Sohar* of the mode of communication tends to explain what has been said:

"The opinion that the mysteries of the Cabbalah are to be found in the garment of the Pentateuch is still more systematically propounded in the following parable: 'Like a beautiful woman, concealed in the interior of her palace, who when her friend and beloved passes by, opens for a moment a secret window and is seen by him alone, and then withdraws herself immediately and disappears for a long time, so the doctrine only shows herself to the chosen (i.e., to him who is devoted to her with body and soul); and even to him not always in the same manner. At first she simply beckons at the passer by with her hand, and it generally depends upon his understanding this gentle hint. This is the interpretation known by the name of *ramaz*. Afterwards she approaches him a little closer, lisps him a few words but her form is still covered with a thick veil, which his looks cannot penetrate. This is the so-called *daraus*. She then converses with him with her face covered by a thin veil; this is the enigmatic language of the *hagadah*. After having thus become accustomed to her society, she at last shows herself face to face and entrusts him with the innermost secrets of her heart. This is the secret of the Law, *sod*. He who is thus far initiated in the mysteries of the *Tora* will understand that all these profound secrets are based upon the simple literal sense, and are in harmony with it, and from this literal sense not a single iota is to be taken and nothing is to be added to it.'" (*Sohar*, ii, 99.)

SUFISM: III — C. H. A. Bjerregaard

In Two Parts: — Part I, Texts; Part II, Symbols.

The spirit of Sufism is best expressed in the couplet of Katebi:

"Last night a nightingale sung his song, perched on a high cypress, when the rose, on hearing his plaintive warbling, shed tears in the garden, soft as the dews of heaven."

(Continued)

SAADIS' BOOSTAN (FRUIT GARDEN OR GARDEN OF PLEASURE)

Continued:

CONVERSATION BETWEEN THE CANDLE AND THE MOTH:

I remember one night lying sleepless in bed,
That I heard what the moth to the fair candle said:
"A lover am I, if I burn it is well!
Why you should lie weeping and burning, do tell."
"Oh my poor humble lover!" the caudle replied,
"My friend, the sweet honey away from we hied.
When sweetness away from my body departs,
A fire-like *Farhads* (1) to my summit then starts."
Thus she spoke, and each movement a torrent of pain
Adown her pale cheeks trickled freely like rain.
"Oh, suitor! with love you have nothing to do,
Since nor patience, nor power of standing have you.
Oh, crude one! a flame makes you hasten away;
But I, till completely consumed, have to stay.
If the burning of love makes your wings feel this heat,
See how I am consumed, from the head to the feet!"
But a very small portion had passed of the night

When a fairy-fated maiden extinguished her (2) light.
She was saying while smoke from her head curled above,
"Thus ends, oh my boy, the existence of love!"
If the love-making science you wish to acquire,
You're more happy extinguished than being on fire.
Do not weep o'er the grave of the slain for the friend:
Be glad! for to him lie will mercy extend.
If a lover, don't wash the complaint from your head!

I have told you: don't enter this ocean at all!
If you do; yield your life to the hurricane squall!

The above translation is from the hand of G. S. Davie but since this story is representative of Sufi love, I add another made by S. Robinson.

I remember that one night, when I could not close my eyes in sleep, I heard the moth say to the taper.

"I am a lover, therefore it is right that I should be burnt, but wherefore shouldst thou be lamenting and shedding tears?"

It replied: "O my poor airy friend, my honey-sweet Shirin is going away;

"And since my Shirin hath left me, like Ferhad's (3) my head is all on fire."

So spoke the taper, and each moment a flood of sorrow flowed down over its pale cheek.

Then it continued: "O pretender, love is no affair of thine: for thou hast neither patience nor persistency.

"Thou takest to flight before a slight flame; I stand firm till I am totally consumed.

"Thou mayest just singe a wing at the fire of love; look at me, who burn from head to foot."

A part of the night was not yet gone, when suddenly a Peri-faced damsel extinguished the light.

Then said the taper: "My breath is departed, the smoke is over my head; — such my son, is the ending of love!"

If thou wouldst learn the moral of the story, it is this: Only will the pangs of burning affection cease, when life's taper is extinct.

Weep not over this monument of thy perished friend — rather praise Allah, that he is accepted by Him.

If them art indeed a lover, wash not the pains of love from thy head; wash rather, like Saadi, thy hand from all malevolence.

The man who volunteereth a service of peril will not withdraw his grasp from his purpose, though stones and arrows rain down upon his head.

I have said to thee: "Take heed how thou goest to the sea; but if thou wilt go, resign thyself to its billows."

Jelaluddin Rumi (Mevlana — Our Lord — Jelalu-'d-din, Muhammed, Er Rumi of Qonya) usually called *Jelal or Mulla* (4) Born A. D. 1195, he died 1273.

Jelal is the greatest poet among the Sufis and is their Grand Master of spiritual knowledge. His name means "Majesty of Faith." He instituted the order of the Mevlevi, the "dancing or whirling dervishes," of which we shall speak more later on. This order is a realization of Jelal's father's prophecy about his son: "The day shall come, when this child will kindle the fire of divine enthusiasm throughout the world."

Jelal is truly the greatest Sufi saint, for marvelous were his

powers. In the *Menaqibu'l Afifin* (the Acts of the Adepts) by *Shemsu'-d-din Ahmed, el Eflaki* the following acts are recorded against his name. "When five years old, he used at times to become extremely uneasy and restless, so much so that his attendants used to take him into the midst of themselves. The cause of these perturbations was that spiritual forms and shapes of the absent (invisible world) would arise before his sight, that is, angelic messengers, righteous Genii, and saintly men — the concealed ones of the bowers of the True One (spiritual spouses of God), used to appear to him in bodily shapes: * * * His father used on these occasions to coax and soothe him by saying: "These are the Occult Existences. They come to present themselves before you, to offer unto you gifts and presents from the invisible world." These ecstasies and transports of his began to be publicly known and talked about. The honorific title of Khudavendgar (5) was conferred upon him at this time by his father, who used to address him as "My Lord." — "It is related that when Jelal was six years old, he one Friday afternoon was taking the air on the terraced roof of the house, and reciting the Quran, when some other children of good families came in and joined him there. After a time, one of these children proposed that they should try and jump from thence on to a neighbouring terrace, and should lay wagers on the result. Jelal smiled at this childish proposal, and remarked: "My brethren, to jump from terrace to terrace is an act well adapted for cats, dogs, and the like, to perform; but is it not degrading to man, whose station is so superior. Come now, if you feel disposed, let us spring up to the firmament, and visit the regions of God's realm." As he yet spake, he vanished from there sight. Frightened at Jelal's sudden disappearance, the other children raised a shout of dismay, that some one should come to their assistance, when lo, in an instant, there he was again in their midst; but with an altered expression of countenance and blanched cheeks. They all uncovered before him, fell to the earth

in humility, and all declared themselves his disciples. He now told them that, as he was yet speaking to them, a company of visible forms, clad in green raiment, had led him away from them, and had conducted him about the various concentric orbs of the spheres, and through the signs of the Zodiac, showing him the wonders of the world of spirits, and bringing him back to them so soon as their cries had reached his ears.

At that age, he was used not to break his fast more often than once in three or four, and sometimes even seven, days.

When Jelal went to Damascus to study, he passed by Sis in Upper Cilicia. There, in a cave, dwelt forty Christian monks, who had a great reputation for sanctity, but in reality were mere jugglers. On the approach of Jelal's caravan to the cave, the monks caused a little boy to ascend into the air, and there remain standing between heaven and earth. Jelal noticed this exhibition, and fell into a reverie. Hereupon, the child began to weep and wail, saying that the man in the reverie was frightening him. The monks told him not to be afraid, but to come down. "Oh!" cried the child, "I am as though nailed here, unable to move hand or foot." The monks became alarmed. They flocked around Jelal, and begged him to release the child. After a time, he seemed to hear and understand them. His answer was: "Only through the acceptance of Islam (6) by yourselves, all of you, as well as by the child, can he be saved." In the end they all embraced Islam, and wished to follow Jelal as his disciples, but he recommended them to remain in their cave, as before, to cease from practising jugglery, and to serve God in the spirit and in truth. So he proceeded on his journey.

To prove that man lives through God's will alone, and not by blood, Jelal one day, in the presence of a crowd of physicians and philosophers, had the veins of both his arms opened and allowed

them to bleed until they ceased to flow. He then ordered incisions to be made in various parts of his body; but not one drop of moisture was anywhere obtainable. He now went to a hot bath, washed, performed an ablution, and then commenced the exercise of the sacred dance.

(To be continued.)

FOOTNOTES:

1. *Farhad* was the youthful lover of *Sairin*. ([return to text](#))
2. *Her* refers to the candle. The moth is the lover and the candle the beloved. ([return to text](#))
3. See note above. ([return to text](#))
4. Mulla is the Persian form of the Arabic Maulawi, "a learned man," "a scholar." ([return to text](#))
5. Khudawand is a Persian word signifying "lord," "prince," "master." A professor: a man of authority. It is used as a title of the Deity and by Christian missionaries in India it is generally employed as a translation of the Greek Kyrios, "Lord." (Hughes Dic.) ([return to text](#))
6. *Islam* means *the resigning or devoting one's self entirely to God, and his service.* ([return to text](#))

THE HERMETIC PHILOSOPHY: II

(Continued from June Number.)

The inscription said to have been found on the Smaragdine Tablet and to which reference was made in a former article, and which Dr. Everard refers to as containing the "*Elixir* of the philosophers," is further explained by the author of *Isis*, where it is also said "It is for the Hermetic student to watch its motions, to catch its subtile currents, to guide and direct them with the help of the *Athanor*, the Archimedean lever of the Alchemist." (1) It is further stated in plain words that this mysterious agent "is the universal magical agent, the astral light, which in the correlation of its forces furnishes the Alkahest, the philosophers' stone, and the elixir of life." (2) Now one great advantage to the student who follows carefully these hints is, that he soon discovers certain basic principles which reach far and wide, and in Hermetic language enable him to ascend from Earth to Heaven, and descend from Heaven to Earth, not in a vague, fanciful way, but as applicable to physical phenomena as to philosophical synthesis. These basic principles are not hypothesis, they are the *first principles of Nature*, as manifested in the phenomenal universe, a thread or clue to the labyrinth of phenomena.

There is a vast difference between modern and ancient science in regard to the Ether: The former hypothecates it to bridge a gap in phenomena and at once, as if ashamed of its weakness, turns its back upon it. Not so our ancient Hermetic brethren. Modern speculation regarding a fourth dimension of space apprehends the necessity for something beyond the old conception, as does physical science. And yet the latter reaches no solid ground, though the problem lies in the rubbish derived from analytical

science, and the necessity which has compelled it to pay tribute. There is a logical, uniform, invariable antithesis in all manifested nature, which at once suggests the unmanifested. Sometimes the change of a letter or an accent in a word or its division into syllables produces wonderful results, *e.g.*, atonement, at-one-ment. So here in the phenomenal universe, nothing and no-thing are not synonymous. To say that the ether tills all space, penetrates the densest matter, and gives rise by emanation to the whole phenomenal universe, and yet that it is *nothing* is nonsense, but that it is no-thing is perfectly true. The ether is to the phenomenal universe what the 0 is to the mathematician, nothing in itself and yet from association, implication or involution, it enters into even form and quantity. Oken has shown (3) that there are really two zeros, or that zero exists as $0+$ and $0-$, and even here begins the science of symbolism in the ancient *Mathesis*. It is in this shoreless ocean of ether that suns and solar systems are suspended. It is the alkahest or universal solvent from which all forms and qualities of matter and life proceeds, and into which they return. It is luminous, and yet the abode of darkness, the Unmoved Mover of Plato.

Take now the three dimensions of space, and we find the *idea* of length, breadth and thickness are associated with objects. Where there is no object upon which the eye can rest, we have then no length, no breadth, no thickness, *i.e.*, Ether, the antithesis of objective forms in which occur all phenomena. This ether is called the Mirror of Isis, because in it are impressed or mirrored all forms. When these forms are clothed upon then occurs, first, a *positing*; second, motion; third, the "picture" in the ether is involved and the outer material shape evolved. Nay, there is no first, second, third about it, for all occurs coincidently. The last analysis of physics is matter, force and motion; and these three, inseparable on the physical visual plane, resolve back into the

ocean of ether, which contains them all *potentially*, and which sends them out as an indissoluble trinity. Compared with matter then, the ether is transcendental, and yet we cannot say it is nothing, as has already been pointed out. Now all life, all matter, all forms, are in their essence cyclic. This is readily seen in the colloidal forms incident to organic life, but even in crystalline forms, though often overlooked, it is none the less apparent.

In relation to objective manifestation, preserving the idea of cyclic form, the ether is spoken of as the center which is everywhere, and the circumference which is nowhere.

Proceeding now with the idea of center and circumference (as yet only an idea) let us imagine a globule of protoplasm to spring instantly into visual existence. The act of *positing* was geometrical, *i.e.*, "position without extension." Let this positing represent *force*, and extension represent matter, typically, (in all directions) but this tension and extension begets motion, all together; creation, from the hitherto "*without form and void*" *i.e.*, the ether.

What was the immediate coefficient of the positing? a picture, a Divine idea, an essential form, projected in the ether. This idea is now being clothed upon, or involved in matter, and coincidentally the outer material shape and structure is being evolved. Here is an equation being solved, and from this on, it is easy to trace what occurs even under a good microscope. We are, however, interested in principles rather than processes, therefore we will preserve our typical sphere with its center and circumference.

We shall presently come back to the Smaragdine inscription, and then be able to see what a revelation it contains, and what a magical key it affords to unlock the doors of knowledge.

(To be continued.)

STUDIES IN THE UPANISHADS: II

(Continued from May number)

Longfellow, in the lines last quoted, symbolized the Universe by an immeasurable wheel forever turning in the stream of time. Allowing for the western habit of studying effects and not causes, this is a fair simile. Yet it is faulty in that it presupposes two co-existing eternities; the wheel of the Universe, and the stream in which it turns. There can be but one eternity,

Saunaka asks in this Upanishad a natural question, propounded by nearly every thinking man, especially by students of occultism who are continually seeking a royal road to the accomplishment of their objects. He wishes to be told what may be the great solvent of all knowledge. The reply of Angiras points out two great roads, which include all the others. The lower road is the one of hard work for countless births, during which we acquire knowledge slowly in all directions, and, of course, when that is possessed, one rises to the higher road.

This is the true initiation, nature, so to speak, acting as the initiator. In replying to Saunaka, Angiras did not mean to be understood, that a man could in one birth pass over the lower road, but that the progress of a human monad toward perfection proceeded in a certain fixed manner which included all experiences. Of course if we say that we appear on the earth once only, and then disappear from it, to the place called by the spiritualists of America, "the summer land," and by the Christian, "heaven," there is no need for one to acquire the lower knowledge, for that might be obtained in the life after death. But we regard it as true that the spirit, in order to acquire complete knowledge, must inhabit a human form, and one term of tenancy

in such a form will not be enough for the testing of the countless varieties of life, of temptation, of triumph, failure and success.

The sage Angiras in this Upanishad looks at man from the standpoint of one who can see the great stream of life which flows through the eternal plain, and therefore he could not have meant to apply his words to one incarnation, but to the whole series through which man has to pass until he reaches "immortal, blest nirvana."

In the journey along this road we will encounter great differences in the powers of our fellow travellers. Some go haltingly and others quickly; some with eyes bent on the ground, a few with gaze fixed on the great goal. Those who halt or look down will not reach the end because they refuse to take the assistance to be found in the constant aspiration to the light. But we are not to blame them: they have not yet been often enough initiated to understand their error. Nature is kind and will wait for them much longer than their human fellows would if they were permitted to be their judges. This ought to give us a lesson in charity, in universal brotherhood. Very often we meet those who show an utter inability to appreciate some spiritual ideas which we quite understand. It is because they have not, so far, been able to transmute into a part of themselves, that which we have been so fortunate as to become possessed of, and so they seem devoted to things that to us appear to be of small value.

The Bhagavad-Gita says that there is no detriment or loss to one's efforts in any direction, be it good or bad; that is, in going through these countless incarnations, all inquiry, every sort of investigation, no matter even if it seems at the close of any one life that the life was wasted, is so much energy and experience stored up. For although, in the course of one existence, physical energy is expended, there is, all the while, a storing up of spiritual

energy which is again a power in the next succeeding life.

In consequence of the modern, western system of education, we are apt constantly to forget the existence of the great force and value belonging to our super-sensuous consciousness. That consciousness is the great register where we record the real results of our various earthly experiences; in it we store up the spiritual energy, and once stored there, it becomes immortal, our own eternal possession. The question then will be asked: "How is one to store up such spiritual energy: do we do it unconsciously, and how are we to know that any has been stored up?" It is to be done by trying to know and to act truth; by "living in the eternal," as *Light on the Path* directs. To live thus in the eternal, does not mean that we shall abandon the cares and struggles of life, for so surely as we do we must suffer, but that we should try to make the real self direct its aspirations ever to the eternal truth.

This series of births is absolutely necessary, so that the "lower knowledge" can be acquired; and just so long as we do not acquire that, we must be reborn. Here and there will occur exceptions to this rule, in those great souls who with "an astonishing violence," leap beyond and over all barriers, and by getting the higher knowledge, become at the same time, possessors of the lower knowledge also.

In the Chaldean Oracles such souls are thus described: "More robust souls perceive truth through themselves, and are of a more inventive nature," and by Proklus in I Alkibiad: "such a soul being saved, according to the oracle, through its own strength." But even this rapid progress must be regarded as comparative, for even these "robust souls," had to go through certain incarnations in which they were accumulating to themselves that very strength and ability to outstrip their fellows which, later on, placed them in the front rank.

In consequence of our ignorance of what we really are, not knowing at the time we begin the struggle in this present life whether the real man inside has passed through incarnations full of this necessary experience or not, we must not, because of the fancied importance we give ourselves, neglect the *lower knowledge*. There are many pitfalls besetting the road. Perchance we feel a certain degree of illumination, or we are able to see or hear in the astral world, and at once the temptation presents itself to claim to ourselves a spiritual greatness not our own. The possession of such astral acuteness is not high spirituality *per se*, for one might be able, as Buddha declares in the Saddharma-Pundarika, to smell the extraordinary odors arising in ten points of space which are not perceived by ordinary people, or to hear the innumerable and strange voices, sounds, bells, discords and harmonies produced by the whole host of unknown and unseen spirits of the earth, air, water and fire, and still be altogether devoid of spirituality. If we let ourselves then, be carried away by this, it is only a form of pride that precedes a severe fall. Being carried away with it, is at once a proof that we are not master, but are mastered by what is merely a novel experience.

But if we wisely and carefully test all experience, being willing to descend low enough to learn and study so that the instrument may be tuned and perfected, we may avoid the pitfalls, or be able to cross them should they be inevitable, whereas if we are deluded by supposed self-illumination, and run after that to the exclusion of all study, we will perhaps, enjoy a period of excitement and of self-satisfaction, but it will end, and the end will be bitter. As Buddha says: "He who ignores the rotation of mundane existences, has no perception of blessed rest."

The very fact that a man is in the world and has a continual fight with his passions and inclinations, proves that he is not yet in any condition to leave it. And of even the very far advanced, it was

said by those who were near the time of the Upanishads:

"The disciple who by his discrimination has escaped from the triple world, thinks he has reached pure, blessed nirvana; but it is only by knowing all the laws of the lower world, and the universal laws as well, that the immortal, pure, blest nirvana is reached. There is no real nirvana without all-knowingness; try to reach this."

The Path

STAR COLOURS AND ANIMAL MAGNETISM

It is well known that yellow is the complementary of blue, and red of green, color, and it struck me that, relating to this subject, the remarks of Mr. Isaac Sharpless, who is an undoubted authority in astronomical matters, are of some importance.

Writing from Haverford College Observatory, June 3d instant, he says:

"The question of star colors has been receiving attention from the hand of an English gentleman, W. S. Franks. He has examined carefully the colors of a list of 1893 of the brightest stars, with especial reference to the distribution in the heavens of the different colors. He finds 962 white stars, 614 yellow, 168 orange, 10 red, 15 green, 59 blue, 58 purple and 7, for some reason, have no colors given. He finds that the constellations which contain a large percentage of white stars are in or near the Milky Way, and wherever stars are closely associated together; while the yellow and orange stars are most plentiful in large straggling constellations.

"It is well known that a certain kind of spectrum is connected with certain star colors. The yellow stars belong to the class of our sun and include such bright stars as Capella. The white stars, like Vega, have a spectrum of a great number of fine lines, and the red gives a banded spectrum. It has been a favorite theory that the colors indicate the age of the stars, if not in years, at least in development. That the white are the youngest: as they cool they become yellow, then red, and, finally invisible, just as a piece of iron would in cooling down from a white heat. There is much to commend this idea, though, of course, as to the relative ages of the stars we know very little, and some changes appear to be in

the opposite direction. Perhaps there are people to whom the idea of different colors in stars is a novelty. They have a general idea that there are bright points of light overhead, at night, and probably they have observed, in a general way, that some are brighter than others. It will not require a very close watch, however, to add to the knowledge of the sky the additional fact that they are differently colored. Castor and Pollux which now shine in the west in the evening are very evidently diverse, and a careful amateur can go over the heavens and notice among the brighter stars quite a variety.

"But a telescope increases the capacities for this work immensely. Nearly all the very red stars are too faint to be seen by the naked eye, and many which show the strongest contrasts of color are double stars, which require considerable magnifying power to separate them. Blue and green stars are never solitary, but associated with a red or a yellow star, which is nearly always brighter, so that color has something to do with association. There are also sometimes clusters of stars which show great variety of color. Sir John Herschel describes one in the Southern Hemisphere which resembled a mass of colored gems. There is probably a prolific field of discovery yet undeveloped in connection with star colors."

The experiments of Reichenbach and others have shown that from crystals and human bodies emanate not only influences of a positive and negative character — which are also referred to in the PATH at p. 86 — but also that certain colors are seen by sensitives to arise from the human head, eyes, and hands. Now, as animal magnetism is slowly forcing recognition from the scientific world, why are we not justified in giving some credence to the views held by the old Hermetic philosophers, that the human being derives its magnetism and vitality from the stars: that is, that these colors seen by sensitives, are to be directly

traced to the sidereal influences and atmospheres. They gave to each color an appropriate star, and we find curiously enough, that although it is claimed against them that they were ignorant and had no appliances, they, without apparatus, knew that the stars had colors, while to the sun they ascribed life. Now in this century our astronomers tell us, as above, of star colors of great variety and peculiar combination. These are mere hints, however, which I would like more competent men to enlarge upon. — ISAAC MYER.

[Note: — We are personally acquainted with several persons who can see these magnetic colors, and they all agree in the main as to the conditions of health or of temper which accompany them. Mere quick thoughts they see as bright sparks: sensuality seems pink or reddish: while life and wisdom, appear as blue. It is interesting to note also, that in the Hindu system, when Krishna is represented as the life giver, or as the principle of life, he is painted blue, which color Reichenbach found proceeded from the *positive* pole: while the passive mendicant or ascetic of Hindustan, has to wear the yellow robe, which stands for the *negative* pole that emits the yellow ray. It is also rather curious that the ancient Egyptians in their papyri painted wisdom, which is cold, of a yellow color, and the son of life appears in blue. — Ed.]

The Path

A HINDU CHELA'S DIARY : III(1)

(Continued from July number)

"I have always felt and still feel strongly that I have already once studied this sacred philosophy with Kunala, and that I must have been, in a previous life, his most obedient and humble disciple. This must have been a fact, or else how to account for the feelings created in me when I first met him, although no special or remarkable circumstances were connected with that event. All my hopes and plans are centred in him, and nothing in the world can shake my confidence in him especially when several of my Brahmin acquaintances tell me the same things without previous consultation. * * *

"I went to the great festival of Durga yesterday, and spent nearly the whole day looking in the vast crowd of men, women, children and mendicants for some of Kunala's friends, for he once told me to never be sure that they were not near me, but I found none who seemed to answer my ideas. As I stood by the ghaut at the river side thinking that perhaps I was left alone to try my patience, an old and apparently very decrepit Bairagee plucked my sleeve and said: 'Never expect to see any one, but always be ready to answer if they speak to you; it is not wise to peer outside of yourself for the great followers of Vasudeva: look rather within.'

"This amazed me, as I was expecting him to beg or to ask me for information. Before my wits returned, he had with a few steps mingled with a group of people, and in vain searched I for him: he had disappeared. But the lesson is not lost.

" Tomorrow I return to I_____.

"Very wearying indeed in a bodily sense was the work of last week and especially of last evening, and upon laying down on my mat last night after continuing work far into the night I fell quickly sound asleep. I had been sleeping some hour or two when with a start I awoke to find myself in perfect solitude and only the horrid howling of the jackals in the jungle to disturb me. The moon was brightly shining and I walked over to the window of this European modeled house threw it open and looked out. Finding that sleep had departed, I began again on those palm leaves. Just after I had begun, a tap arrested my attention and I opened the door. Overjoyed was I then to see Kunala standing there, once more unexpected.

"Put on your turban and come with me,' he said and turned away.

"Thrusting my feet into my sandals, and catching up my turban, I hurried after him, afraid that the master would get beyond me, and I remain unfortunate at losing some golden opportunity.

"He walked out into the jungle and turned into an unfrequented path. The jackals seemed to recede into the distance; now and then in the mango trees overhead, the flying foxes rustled here and there, while I could distinctly hear the singular creeping noise made by a startled snake as it drew itself hurriedly away over the leaves. Fear was not in my breast for master was in front. He at last came to a spot that seemed bare of trees, and bending down, seemed to press his hand into the grass. I then saw that a trap door or entrance to a stairway very curiously contrived, was there. Stairs went down into the earth. He went down and I could but follow. The door closed behind me, yet it was not dark. Plenty of light was there, but where it came from I cared not then nor can I now, tell. It reminded me of our old weird tales told us in youth of pilgrims going down to the land of

the Devas where, although no sun was seen, there was plenty of light.

"At the bottom of the stairs was a passage. Here I saw people but they did not speak to me and appeared not to even see me although their eyes were directed at me. Kunala said nothing but walked on to the end, where there was a room in which were many men looking as grand as he does but two more awful, one of whom sat at the extreme end.

* * * * *

[Here there is a confused mass of symbols and ciphers which I confess I cannot decipher, and even if I had the ability to do so, I would check myself, because I surmise that it is his own way of jotting down for his own remembrance, what occurred in that room. Nor do I think that even a plain reading of it would give the sense to any one but the writer himself, for this reason, that it is quite evidently fragmentary. For instance, I find among the rest, a sort of notation of a division of states or planes: whether of consciousness, of animated, or of elemental life, I cannot tell; and in each division are hieroglyphs that might stand for animals, or denizens of the astral world, or for anything else — even for ideas only, so I will proceed at the place of his returning.]

"Once more I got out into the passage, but never to my knowledge went up those steps, and in a moment more was I again at my door. It was as I left it, and on the table I found the palm leaves as I dropped them, except that beside them was a note in Kunala's hand, which read:

"'Nilakant — strive not yet to think too deeply on those things you have just seen. Let the lessons sink deep into your heart, and they will have their own fruition. To-morrow I will see you.' * * * *

"What a very great blessing is mine to have had Kunala's

company for so many days even as we went to _____. Very rarely however he said a few words of encouragement and good advice as to how I should go on. He seems to leave me as to that to pick my own way. This is right, I think, because otherwise one would never get any individual strength or power of discrimination. Happy were those moments, when alone at midnight, we then had conversation. How true I then found the words of the Agroushada Parakshai to be:

"Listen while the Sudra sleeps like the dug under his hut, while the Vaysa dreams of the treasures that he is hoarding up, while the Rajah sleeps among his women. This is the moment when just men, who are not under the dominion of their flesh, commence the study of the sciences.' (2)

"The midnight hour must have powers of a peculiar nature. And I learned yesterday from glancing into an Englishman's book, that even those semi barbarians speak of that time as 'the witching hour,' and it is told me that among them 'witching' means to have magic power. * * * *

"We stopped at the Rest House in B — yesterday evening, but found it occupied and so we remained in the porch for the night. But once more I was to be blessed by another visit with Kunala to some; of his friends whom I revere and who will I hope bless me too.

"When every one had quieted down he told me to go with him to the sea which was not far away. We walked for about three quarters of an hour by the seashore, and then entered as if into the sea. At first a slight fear came into me, but I saw that a path seemed to be there, although water was all around us. He in front and I following, we went for about seven minutes, when we came to a small island; on it was a building and on top of that a triangular light. From the sea shore, the island would seem like

an isolated spot covered all over by green bushes. There is only one entrance to go inside. And no one can find it out unless the occupant wishes the seeker to find the way. On the island we had to go round about for some space before we came in front of the actual building. There is a little garden in front and there was sitting another friend of Kunala with the same expression of the eyes as he has I also recognized him as one of those who was in the room underground. Kunala seated himself and I stood before them. We stayed an hour and saw a portion of the place. How very pleasant it is! And inside he has a small room where he leaves his body when he himself moves about in other places. What a charming spot, and what a delightful smell of roses and various sorts of flowers! How I should wish to visit that place often. But I cannot indulge in such idle dreams, nor in that sort of coveteousness. The master of the place put his blessing hand upon my head, and we went away back to the Rest House and to the morrow full of struggles and of encounters with men who do not see the light, nor hear the great voice of the future; who are hound up in sorrow because they are firmly attached to objects of sense. But all are my brothers and I must go on trying to do the master's work which is only in fact the work of the Real Self which is All and in All."

FOOTNOTES:

1. In reply to several inquiries as to the meaning of *Chela*, we answer that it here means an accepted disciple of an Adept. The word, in general, means, *Disciple*. ([return to text](#))
2. See Agrouahada Parakshai. 2d book, 23d dialogue. — [Ed.]. ([return to text](#))

NOTES ON THE CABBALAH OF THE OLD TESTAMENT: II —
Ralston Skinner

Ginsburg and others tell us that Raymond Lully and John Picus de Mirandola had acquired knowledge of the Hebrew and the Cabbalah. Mirandola studied Hebrew and Cabbalistic theology under Jochanan Aleman, who came to Italy from Constantinople, and — "found that there is more Christianity in the Cabbalah than Judaism; he discovered in it proof for the doctrine of the Trinity, the Incarnation, the Divinity of Christ, the heavenly Jerusalem, the fall of the angels, the order of the angels" and so on, and so on. "In 1486, when only 24 years old, he published 900 *theses*, which were placarded in Rome, and which he undertook to defend in the presence of all European scholars, whom he invited to the Eternal City, promising to defray their traveling expenses. Among the theses was the following: 'No science yields greater proof of the Divinity of Christ than magic and the Cabbalah.'"

Through Picus de Mirandola, Reuchlin became aware of this phase of Hebrew philosophy or theosophy, as, by a school of the rabbins, a recognized appurtenant to the Hebrew Scriptures. He not only examined into the Cabbalah to satisfy his thirst for facts of literature, but, on investigation, became a convert to the system, — "within two years of beginning to learn the language, published (1494) his *De Verbo Miritico*, and afterwards (1516) with more matured learning, his *De Arle Cabbalistica*." And thus the joint efforts of Mirandola and Reuchlin established a field of literature, of the Cabbalah, which has always flourished, and will continue to flourish so long as our civilization shall last.

It is interesting and useful to place this great fact, but it is a matter of especially great weight and value that the knowledge of

the Cabbalah was sprung upon the world of letters, with, and *as an essential part of* the Reformation itself. Not that the philosophy of the Cabbalah became engrafted into the study and development of Hebrew (and consequently Christian) theosophy; — for, because of lack of knowledge of what the Cabbalah really was, such could not be the case, — but it was entitled so to be, and the assertion of its existence as a real element of Scripture was, even then, so strongly and enduringly made, that, though an unknown quantity except by name, it has ever since stood firmly, and ready to have such claim made good: — with a vitality that has outworn four hundred years of patient waiting.

Of course there was a field of Jewish Cabbalistic literature, — not open, but confined, for the most part, as a kind of sacred mystery, within narrow and restricted limits, even among the Jews themselves. It was of the same nature with what is called, today, The Speculative Philosophy of Free Masonry, an ever seemingly substantive embodiment out of surrounding shadowy mists and mental logs, wherein a doubt always exists whether after all there is in the nebulous matter of the mist itself anything from whence substance may congeal: or, it may, for illustration, be compared to the city of King Arthur, before whose gate Gareth, standing, says: "But these my men — (your city moves so wierdly in the mist), — doubt if the King be King at all, or come from Fairy land: and whether this be built by magic, and by fury kings and queens, or whether there be any city at all, or all a vision." It is necessary to make a brief mention of this literature with its sources: both that these may be known, and that a foundation may be laid for what is stated as to the reality of Cabbalah, and its significance.

There is almost no teaching of the Cabbalah in the English language except the Essay by Christian D. Ginsburg, LL. D., to which we have referred. Dr. Ginsburg says: "It is a system of religious philosophy, or more properly, of theosophy, which has

not only exercised for hundreds of years are extraordinary influence on the mental development of so shrewd a people as the Jews, but has captivated the minds of some of the greatest thinkers of Christendom in the sixteenth and seventeenth centuries, and which claims the greatest attention of both the philosopher and theologian."

It is faintly claimed that some statements applying to Cabbalah are to be found in the Talmud; but apart from this we have: — (1) The Commentary on the Ten Sephiroth, by R. Azariel ben Manachem (1160 - 1238), who was a pupil of Isaac the Blind, and master of the celebrated R. Moses Nachmanides, (2) The Book Sohar (Light), or Midrash, Let there be Light, claimed to have been a revelation from God, communicated through R. Simon ben Jochai, A.D. 70-110, to his select disciples. This book has been pronounced by the ablest critics to have been a pseudograph of the thirteenth century, — the composition of Moses de Leon, who lived in Spain; who, by the admission of his wife and daughter after his death, first published and sold it as the production of R. Simon ben Jochai, and (3) The Book Jetzirah or Book of Creation, — of unknown age and authorship, first mentioned as early as the eleventh century in the Book Chazari, by R. Jehudah Ha Levi, — as the literary sources for the entire system and scope thereof, so far as disclosed, it is from these sources that the entire volume of Cabbalistic literature has had rise and development.

From these sources, and the numberless treatises and expositions thereon, the history of the subject matter and containment of Cabbalah is laid down as follows: It was first taught by God himself to a select company of angels. After the fall the angels taught it to Adam. From Adam it passed to Noah, thence to Abram, the friend of God who carried it to Egypt. Moses, who was learned in all the wisdom of Egypt, was initiated into it from the land of his birth. He covertly laid down the principles of its

doctrines in the first four books of the Pentateuch, but withheld them from Deuteronomy ("this constitutes the former the '*man*' and the latter the '*woman*'"). Moses initiated the seventy elders, and they again passed the sacred and secret doctrine down to the heads (continually imparting the same) of the Church of Israel. David and Solomon were adepts in it. No one dared to write it down till the supposititious Simon ben Jochai, who really lived and taught, as one of the most celebrated doctors, at the time of the destruction of the second temple: and his teachings are claimed to constitute the Book of Sohar, published, as already said, by Moses de Leon of Valladolid, in Spain. But Ben Jochai, or whoever worked under his name, though he wrote and published, as said, covered the true doctrine by veils, so that no one but an initiate, or, as the saying runs, "by the gift of God" could penetrate behind them; — though the veils of the words still plainly held the secret doctrine, to those who could see. The Cabbalah, as an exposition to the Sacred Text of Holy Writ, was claimed to contain the Wisdom of God in every branch and department of His working, — and all terms and descriptions were exhausted to express the ineffable reward to him who might be permitted to penetrate behind the veil, either by initiation or "by the gift of God;" satiating every function of enjoyment, and affording an indescribable bliss, in the ultimate possessions of the Divine conceptions.

More definitely: — The exposition of the system treats of the impersonal First Cause manifesting within the limits of the finite. "Before he gave any shape to this world, before he produced any form, he was alone, without a form and resemblance to anything else. (1) who, then, can comprehend him, how he was before the creation, since he was formless? Hence, it is forbidden to represent him by any form, similitude, or even by his sacred name, by a single letter or a single point; and to this, the words,

'Ye saw no manner of similitude on the day the Lord spake unto you' (Deut. iv. 15) — *i.e.*, ye have nor seen anything which you could represent by any form or likeness, — refer" (Sohar 42 b, 43 a, Sec. AB): — And this shows clearly enough that the supposed sacred names of Scripture do not have reference to the Impersonal First Cause, as its essential designations, but rather to its creations. * * Then — "The creation, or the universe, is simply the garment of God *woven from the Deity's own substance* (The Impersonal manifesting in the cosmos, in modes to be expressed by the sacred names and otherwise). For although, to reveal himself to us, the Concealed of all the Concealed, sent forth the *Ten Emanations* (the Ten Sephiroth) called the Form of God, Form of the *Heavenly-Man*, yet since even this luminous form was too dazzling for our vision, it had to assume another form, or had to put on another garment which consists of the *universe*. The universe, therefore, or the visible world, is a further expansion of the Divine Substance, and is called in the Cabbalah, '*the Garment of God*.'" (Sohar i, 2 a) — "The whole universe, however, was incomplete, and did not receive its finishing stroke till *man* was formed, who is the *acme of the creation*, and the macroscosm uniting in himself the totality of beings, — 'the heavenly Adam,' *i.e.*, the Ten Sephiroth, who emanated from the highest primordial obscurity (The Impersonal First Cause), created the *earthly Adam*" (Sohar ii, 70 b). This is more definitely expressed in another place, where it says: — "Jehovah (for which stands the letter *jod*, or *j* or *i*) descended on Sinai *in fire*" the word for which is *a-sh* fire. Let the *j*, or *i*, the signature for Jehovah, descend in the midst of this word, and one will have *a i sh*, which is the Hebrew word for *man* man; thus *man* became out of the *Divine fire* — "Man is both the import and the highest degree of creation, for which reason he was formed on the sixth day. As soon as man was created every thing was complete, including the upper and nether world, for every thing *is comprised in man*. He unites in

himself all forms." (Sohar iii, 48 a) — "But after he created the form of the Heavenly Man, he used it as a chariot (Mercabah) (wheels, circles) wherein to descend, and wishes to be called by this form, which is the sacred name Jehovah." (Sohar i, 42 b, 43 a, section A B.)

It is to be observed especially, as to the ground work of the Cabbalah, that the first manifestation was in the "*Ten Sephiroth*" or Emanations, so called, out of which came the "*Heavenly Man*"; and the human or earth man represented these Ten Sephiroth in himself. "The lower world is made after the pattern of the upper world; everything which exists in the upper world is to be found as it were in a copy on earth; still the whole is one." (Sohar i, 20 a.)

Thus it is that the compass of the Cabbalah, by Sohar, is idealized in the form of a *man*. This man represented the combination of the Ten Sephiroth, or, as systematically called, *Emanations*, in which as a unity the whole cosmos existed in its segregated detail; and through which all knowledge thereof, physically, psychically and spiritually, was to be had, in passiveness and in activities; — and through which these activities, as of all potencies — as of angels and powers, — had their special existences. These Emanations had names of qualities, as Beauty, Strength, Wisdom, etc., etc., each name being located upon one of nine parts marked out on the form of the man; each of which was called a *Sephira*. The totality of the man being taken as *one*, this added to the nine made ten; and as a number this was the letter *jod*, already spoken of. The locations of these Sephiroth (shown as circles) are united one with another, so that one Emanation may flow into another; one into all, and all into one; — and the 22 letters of the alphabet with the 10 vowel sounds, are found therein, or thereby; and these are called the "*thirty-two ways or canals of Wisdom*"; and as these letters stood also for numbers, there is in this containment every possible mode of expression *by word and number*. The

exposition of the Old Testament, especially the Tora, in the secret or esoteric way, is claimed under this statement; — that is, by numbering the letters of words, and by their permutations and changes of positions; so that this is one of the functions of the Emanations or Sephiroth; and a mighty one for disclosing the Wisdom of God.

The Book Jetzirah deals especially with these letters and numbers: "*By thirty-two paths of secret wisdom*, the Eternal, the Lord of Hosts, the God of Israel, the living God, the King of the Universe, the Merciful and Gracious, the High and Exalted God, He who inhabiteth eternity, Glorious and Holy is His name, hath created the worldly means of numbers, phonetic language and writing."

The Commentary on the Ten Sephiroth, by R. Azariel Ben Menachem, as its name implies, is directly in consonance with the Sohar.

As to the Book Jetzirah, Dr. Ginsburg says: "The *Book Jetzirah*, which the Cabbalists claim is their oldest document, has really nothing in common with the cardinal doctrines of the Cabbalah. There is not a word in it bearing on the En Soph (Impersonal First Cause), the Archetypal Man," and so on, and so on. But here the doctor is at fault for this reason: — The word "*Sephiroth*" means "*Numbers*" and the *Ten Sephiroth* means the Ten Numbers; and in the Cabbalistic way these are composed out of a geometrical shape. The circle is the first *naught*, but out of this naught develops a straight vertical line, viz: the diameter of this circle. This is the first *One*; and having a first one, from it comes 2 and 3 and 4 and 5 and 6 and 7 and 8 and 9, — the circle or naught and its diameter one, the embracement of all together, forming the comprehensive *Ten*, or Ten Numbers, Ten Sephiroth, Ten Emanations, the Heavenly Wan, the great Jah, of the ineffable

name. Hence the contents of the book Jetzirah are of the very essence of the other two, and all are one.

FOOTNOTE:

1. It is interesting to compare the *Brihadaranyaka-Upamshad*, 4th Brah., with this: "In the beginning this was Self alone, in the shape of a spirit. He looking round, saw nothing but his Self." — [Ed.]

The Path

SUFISM: IV — C. H. A. Bjerregaard

The spirit of Sufism is best expressed in the couplet of Katebi:

"Last night a nightingale sung his song, perched on a high cypress, when the rose, on hearing his plaintive warbling, shed tears in the garden, soft as the dews of heaven."

NOTES ON *JELALUDDIN RUM* — Continued:

— Space forbids us to dwell any longer upon the miracles of this wonderful man of whom *Shems Tebreez* once asserted, in Jelal's College, that "whosoever wished to see again the prophets, had only to look on Jelal, who possessed all their qualifications; more especially of those to whom revelations were made, whether by angelic communications, or whether in visions; the chief of such qualities being serenity of mind with perfect inward confidence and consciousness of being one of God's elect. Go and look upon Jelal, if thou wish to comprehend the signification of that saying *the learned are the heirs of the prophets* together with something beyond that, which I will not here specify."

We must add a few passages from Jelal's lectures, etc. These were his last Instructions, "*the best of mankind is he who benefiteth men*" and, "*the best of speech is that which is short and to the purpose.*" Jelal once at a funeral spoke thus: "The ordinary reciters, by their services, bear witness that the deceased lived a Muslim. My singers, however, testify that he was a Muslim, a believer, and a lover of God." He added: "Besides that; when the human spirit, after years of imprisonment in the cage and dungeon of the body, is at length set free, and wings its flight to the source whence it came, is not this an occasion for rejoicings, thanks, and dancings? The soul in ecstasy soars to the presence of

the Eternal; and stirs up others to make proof of courage and self sacrifice. If a prisoner be released from a dungeon and be clothed with honor, who would doubt that rejoicings are proper? So too, the death of a saint is an exactly parallel case." Once, when requested to give a lecture to men of science, he answered: "A tree laden with fruit, had its branches bowed down to the earth therewith. At the time, doubts and gainsayings prevented the gardeners from gathering and enjoying the fruit. The tree has now raised its head to the skies, and beyond. Can they hope, then, to pluck and eat of its fruit?" —

Jelal's chief work, and the reference-book of Sufism, is the *Mesnevi (Mathnawi)* usually known as the *Mesneviyi Sherif, or Holy Mesnevi*. It is truly one of the most famous books of the East, studied and commented upon wherever dogmatic religion has been abandoned for esoteric truth.

From the preface we quote the following:

"This is the book of the Rhymed Couplets (Mathnawi, Mesnevi). It contains the roots of the roots of the roots of the one (one true) Religion (of Islam); and treats of the discovery of the mysteries of reunion and sure-knowledge. It is the Grand Jurisprudence of God, the most glorious Law of the Deity, the most manifest Evidence of the Divine Being. The refulgence thereof "is like that of a lantern in which is a lamp" (1) that scatters beams more bright than the morn. It is the paradise of the heart, with springs and foliage. One of these springs is "the fount named Salsabil" (2) by the brethren of this religious order (3) but, by saints and those miraculously endowed, it is called "the Good Station," (4) and "the Rest Resting place. (5) The just shall eat and drink therein, and the righteous shall rejoice and be glad thereof. Like the Egyptian Nile, it is a beverage for the patient, but a delusion to the people of Pharaoh and to blasphemers; even as God, whose name be

glorified, hath said: "He misleads therewith many, and He guides therewith many; but He misleads not therewith (any), save the wicked." (6)

"It is a comfort to man's breast, an expeller of cares. It is an exposition of the Quran, an amplification of spiritual aliments, and a dulcifier of the disposition; written "by the hands of honorable scribes" (7) who inscribed thereon the prohibition: "Let none touch it save the purified." (8) It is (a revelation) "sent down (from on high) by the Lord of (all) the worlds," (9) which vanity approacheth not from before, nor from behind, (10) which God watches over and observes, he being "the best of a Preserver," (11) and "The Most Compassionate of the merciful ones" (12) unto whom pertain (many) titles, his utmost title being God, whose name be exalted."

Further on he says: "I have exerted myself to enlarge this book of poetry in rhyming couplets, which contains strange and rare narratives, beautiful sayings, and recondite indications, a path for the devout, and a garden for the pious, short in its expressions, numerous in their applications." —

The Mesnevi is said to contain twenty-six thousand six hundred and sixty couplets and a large part of them ought to be cited here, but space forbids. We offer a few selections entirely at random.

The strength of strongest man can merely split a stone;
The Power that informs man's soul can cleave the moon.
If man's heart but untie the mouth of mystery's sack,
His soul soon soars aloft beyond the starry track.
If heaven's mystery divulged should, 'haps become,
The whole world 'twould burn up as fire doth wood
consume.—

Saints' ecstasy springs from a glimpse of God, his pride.
His station's that of intimate. He's bridegroom; God is

bride.

A bride's veiled graces are not seen by groom alone;
Her unveiled charms solely to him in private shown.
In state she first appears before the people all;
Her veil removed, the groom alone is at her call.
Who's not received the gift of knowledge from above,
Will ne'er believe a stock could sigh and moan for love
He may pretend to acquiesce; not from belief;
He says: "Tis so," to scape a name much worse than thief.
All they who're not convinced that God's "Be" is enough,
Will turn away their face; this tale they'll treat as "stuff."
If he (man) from *esse*, reach not *posse's* state, he's *nil*. —
(God) Himself He's veiled in man, as sun behind a cloud.
This seek to comprehend. God knows what mysteries
shroud.

The sun He is; the sun of spirit, not of sky;
By light from Him man lives; — and angels eke, forby. —
The soul it is originates all vital force. —
The Prophet hath assureth us God's the soul of all. —
The world's renewed each moment, though we still remain
In ignorance that permanence can change sustain.
Life, like a river, ceaselessly, is still renewed. —
Each night Thou settest free the soul from trap of flesh,
To scan and learn the hidden records of Thy wish.
Each night the soul is like a bird from cage set free,
To wander. Judge and judgment, then, it does not see.
By night the pris'ner loses sense of bars, of chains;
By night the monarch knows no state, no pomp retains;
The merchant counts no more, in sleep, his gains and loss;
The prince and peasant, equal, on their couches toss.
The Gnostic is so e'en by day, when wide awake:
For God hath said: "Let quietude care of him take."
Asleep to all the things of earth by night, by day,

As pen in writer's hand he doth his guide obey. —
Of this, the Gnostic's privilege, a trace'd suffice
To rob of sleep and reason vulgar souls of ice.
His spirit wanders in the proves of th' absolute.
His soul is easy; body, still, calm, quiet, mute. —
In sleep thou bearest no burden; borne thou art instead.

* * * * *

Know then, thy sleep's a foretaste of what is to come,
From the rapt state of saints arriving at their home.
The saints were well prefigured by the "Sleeper's Seven,"
"Their sleep," "their stretchings," "their awaking" lead to
heaven.—

Each night, in profound sleep our consciousness sinks,
Becomes non-existent; — waves on seashore's brinks. —
The body's a cage and a thorn to the soul.

Hence, seldom are body and soul wholly whole. —
Both men and fairies pris'ners are in earthly cage.—

If lifted could be from our souls the dark veil,
Each word of each soul would with miracles trail. —

The soul unto the flesh is joined, by God's decree,
That it may be afflicted, — trials made to see.

Th' Infinites' lovers finite's worshippers are not
Who seek the finite lose th' Infinite, as we wot,
When finite with the finite falls in love, perforce,
His loved one soon returns to her infinite source. —

In non-existence mirrored, being we may see; —
Annihilate thy darksome self, thy being's pall.

Let thy existence in God's essence be enrolled,
As copper in alchemists' bath is turned to gold.

Quit "I" and "We," which o'er thy heart exert control.
"Tis egotism, estranged from God, that clogs thy soul. —
Discharge thyself of every particle of self;
So shalt thou see thyself pure, free from soil of pelf.

Within thy heart thou'lt see the wisdom of the saints,
Without a book, a teacher, or professor's plaints. —
Thyself * * purge of self. Abstraction thou shall gain. —
Both love and soul are occult, hidden and concealed.
A lover's whole life is but self-sacrifice;
He wins not a heart, save his own heart's the price. —
When love for God is lighted in the human heart,
It fiercely burns; it suffers not effects' dull smart;
— love is love's own sign, giv'n from the highest sphere. —
The heart's with God, — the heart is God, — boundless,
immense!

From all eternity, the figures of all things,
Unnumbered, multitudinous, gleam in hearts' wings.
To all eternity each new-created form
In heart of saint reflected is, most multiform. —
Have patience, thou too, brother, with thy needle's smart.
So shall thou, 'scape the sting of conscience in thy heart.
They who have conquered, — freed themselves from
body's thrall,
Are worshipped in the spheres, the sun, the moon, stars,
all.

Whoever's killed pride's demon in his earthly frame,
The sun and clouds are slaves, to do his bidding, tame.
His heart can lesions give of flaming to the lamp;
The very sun not equals him in ardent vamp. —
The inward hymn that's sung by all the hearts of saints
Commences: "O component parts of that thing *Not*."
Now since they take their rise in this *Not*, negative.
They put aside the hollow phantom where we live.
Ideas and essences become "things" at His word. —
This world's a negative; the positive seek them.
All outward forms are cyphers; search, the sense to know.-
Mankind the songs of fairies never hear at all,

They are not versed in fairies' ways, their voices small. —

"Allah, Allah!" (13) cried the sick man, racked with pain the long night through;

Till with prayer his heart grew tender, till his lips like honey grew.

But at morning came the Tempter; said "Call louder, child of Pain! See if Allah ever hear or answers 'Here am I,' again."

Like a slab, the cruel cavil through his brain and pulses went; To his heart an icy coldness, to his brain a darkness sent.

Then before him stands Elia: says. 'My child, why thus dismayed? Dost repent thy former fervor? Is thy soul of prayer afraid?'

"Ah!" he cried, "I've called so often; never heard the 'Here am I;' And I thought, God will not pity; will not turn on me his eye."

Then the grave Elias answered, "God said, 'Rise, Elias, go Speak to him, the sorely tempted; lift him from his gulf of woe.

Tell him that his very longing is itself an answering cry;

That his prayer, "Come, gracious Allah!" is my answer 'Here am I.'"

— When thy mind is dazed by color's magic round,

All color's lost in one bright light diffused around.

Those colours, too, all vanish from our view by night.

We learn from this, that color's only seen through light.

The sense of colour-seeing's not from light distinct.

So, too, the sudden rainbow of our mind's instinct.

From sunlight, and the like, all outer colours rise;

The inward tints that mark our minds, from God's sunrise,

The light that lights the eye's the light that's in the heart.

Eye's light is but derived from what illumines that part.

The light that lights the heart's the light that comes of God,

Which lies beyond the reach of sense and reason, clod!

By night we have no light; no colour can we see.

Thus, light we learn by darkness, its converse.

Agree! A seeing of the light, perception is of tints;

And these distinguished are through darkness gloomy
hints.

Our griefs and sorrows were by God first introduced,
That joy to sense apparent thence should be reduced
Occult things, thus, by converse, grow apparent, all.
Since God has no converse, apparent He can't fall.
Sight first saw light, and then the colours saw,
From converse converse stands forth, as Frank from Negro.
By converse of the light, distinguish we the light;
A converse 'tis that converse shows unto our sight.
The light of God no converse has in being's bound;
By converse, then, man has not its distinction found.
Our eyes cannot distinguish God, decidedly;
Though He distinguish Moses and the Mount from thee. —

The doctrine, which Jelal was most emphatic about was the
extinguishment of Self, and his teachings are quite characteristic
for him, though the general doctrine is a common one among the
Sufis. *He argues for simplicity.* He tells us a story about a dispute
between Chinamen and Greeks before the Sultan, as to who is the
more skilful of the two nations, in the art of decoration. The
Chinese ask for and get thousands of colours and work hard,
while the Greeks ask for no color; they only polish their front,

"Effacing every hue with nicest care,"

and when the Sultan came to examine the relative merit of
Chinese gorgeous-ness and Greek simplicity,

"Down glides a sunbeam through the rifled clouds.
And, lo the colours of that rainbow house
Shine, all reflected on those glassy walls
That face them, rivalling: The sun hath painted
With lovelier blending, on that stony mirror
The colours spread by man so artfully. —

Know them. O friend! such Greeks the Sufis are,
Having one sole and simple task, to make
Their hearts a stainless mirror for their God.

(To be continued.)

THE SINGING SILENCES — *Julius*

Theosophists may be interested in an experience which I have named as above; "Singing" — because of a peculiar resonance which I then hear: "Silences" — because this resonance only reaches me in moments of retirement and silence.

Occurring throughout a life-time, at infrequent and remote interval, they have, since I became a Theosophist, increased until they embrace all isolated moments. They consist of a resonance difficult to describe, but resembling the vibrant note of a distant locomotive, resounding in the night atmosphere of a mountain gorge, and partaking somewhat of that melodious wail caused by running the moistened finger around the rim of a glass.

Sometimes, though rarely, a low orchestral harmony unites briefly with this monotone. Unable to find any word which conveyed this cadence, I now discover that the word "*Aum*," (hitherto unknown to me,) does so exactly, the A sound being the opening note, which prolongs itself into the M, or closing sound, when the keynote is then struck over again. Thus the "Singing Silences" mainly consist of innumerable repetitions of the word "*Aum*," distinctly and musically uttered, having a resonant or vibrant quality, and a measured rise and fall, such as all sound assumes if one alternately closes and uncloses the ear. If the analyst will alternately inhale air with the mouth and expel it with the nostrils, he will gain a fair idea of this sound minus its musical vibration.

It is, moreover, invariably accompanied by a sensation of physical repose, even peace, and a perfect mental quiescence which falls about me like an enfolding mantle. The frequency of these moments has greatly increased since my attention has been

specifically turned to them. Hitherto, beyond a momentary curiosity as to their nature, I attached no importance to their occurrence; the very rarity caused them to be easily forgotten in the whirl of every day life; I admitted to myself with surprise, however, that my innumerable pleasures, my keen enjoyments, shrank to nothing before the deep delight of these brief but peculiar moments, and I applied to them the opening lines of Faber's hymn to music.

Reading the article on "Aum" in the April "PATH" I was startled by such passages as this: "There is, pervading the whole universe, a homogeneous resonance, sound, or tone, which acts, so to speak, as the awakener or vivifying power, stirring all the molecules into action." I then called to mind various facts connected with Sound, as for instance, that a regiment marching over a bridge is ordered to "break step," lest the regular footfall strike the "co-efficient of vibration," which would destroy the bridge: also that the measured trot of the smallest dog will cause a perceptible vibration in a wire bridge, no matter what its size. Moreover, the monotonous sound of the railroad, in time changes the texture of the car wheels and axles from fibrous into crystalline, with consequent fracture.

In Reichenbach's "Researches on Magnetism" we find this statement. * * * "The following laws prevail in nature. A. There resides in matter a peculiar force, hitherto overlooked, which, when the crystalline form has been assumed, is found acting in the line of the axes."

Since then, the homogeneous tone acts upon all the molecules of creation, may not this singing resonance cause such a transformation of brain energy as to vivify or awaken it in time, to the True, or Central Idea? We have seen that Sound, so to speak, polarizes certain particles of matter attracting them to the

earth, the great magnet, from which they came; it confers upon other particles this same magnetic power, as in the case of crystallization; it awakens similar tones, as when several untouched harps vibrate in harmony when the musical key note is struck upon one alone. Why then may not the thought awakened by a fixed musical sound be in time attracted to the real source of that sound, of all sound? And as thought causes a disturbance among the molecules of the brain, some sound, however aerial, must accompany this vibration: does not my brain then answer this singing resonance with the note homogeneous to all the ethereal space?

In the article from "THE PATH" before quoted, I find the following lines. "Having taken the Bow, the great weapon (Om), let him place on it the arrow (the Self), sharpened by devotion; * * * Brahman is called the aim. It is to be hit by a man who is not thoughtless." The "Singing Silences" are superinduced by meditation, thought, devotion: the closest imitation of them possible to the human voice consists in chanting, half aloud, the word "Aum," over and over, as heretofore described. Do those Yogees who repeat "Aum" thousands of times daily, follow this practice in order to produce the resonance, or homogeneous tone, and to calm the mind, (as they claim to do,) by means of the harmonious monotony thus engendered? True, it fails to lead them to the higher knowledge, but is this not because the mental condition is self induced, like the delusive trances of self mesmerization? On the other hand, if (as they claim again,) it throws them into a trance like state or crystallization of thought, is not this because it is after all, in some measure, akin to the natural resonance? The idea herein advanced would thus seem to be further supported, since this mechanical repetition of "Aum," and its sedative power, is as the power of the microcosm, faintly outlining that of the macrocosm, (or real resonance,) to lead

towards the calm which incubates the dawning thought and leads towards the true Illuminated State. "THE PATH" goes on to state that we are "led by the resonance, which is not the Divine Light itself, towards that Radiance which is Divine; the resonance is only the outbreathing of the first sound of the entire Aum."

This constant and peculiar singing, provocative as it is of a peaceful abstraction so great as to exclude all outer things and thoughts, seems to induce a state which draws the hearer into the border lands of Spirit. Works on eastern travel and foreign witnesses, alike affirm that many fakirs repeat "Aum," and also "Rama," thousands of times, merely because they are told that such a thing is useful, while others do it with the mind fixed on realizing the True. Studious investigation always reveals a deep philosophy underlying religious forms, from which there is no reason to suppose this one to be exempt.

Listening attentively to the "Singing Silence," I fall, after a brief space, into an unbroken and dreamless sleep which lasts for hours; hearing, without listening, I experience a sensation of physical refreshment and mental placidity. It came to me uncalled for, unnoticed, unrecognized; when finally a sense of pleasure fastened upon my mind, I idly accepted it, but without questioning, as a curious personal peculiarity. It was only when, giving myself up to thoughts of higher things, I met it upon the threshold of meditation, found it daily recurring, daily growing in distinctness and power, that I recognized it as a possible psychical experience. As I never strove to produce it at the outset, so I never attempt to increase or evoke it now; I should not know how to set about doing so. *It influenced me*; I have no control whatever over it. It comes as it wills, and is not subject to my command.

Is this then one of the practical significances or uses of "the word Om, as expressed in tone?" Does this bell-like resonance have

such an effect upon the molecules of the human body, (including those of the brain,) as to polarize them in time to The Spirit? If there are those who doubt the existence of a great undercurrent of universal tone, described by "THE PATH" as Nada Brahma,— the divine resonance upon which depends the evolution of the visible from the invisible, — they will at least grant its probability when they consider that this has been admitted by some of the greatest intellects of the world, many of whom firmly believed in the "music of the spheres." Plato taught it. Maximus Tyrius says that "the mere proper motion of the planets must create sounds, and as the planets move at regular intervals, these sounds must be harmonious." The Encyclopedia Britannica says, "the origin of musical sounds consists in the regular, periodic vibration of some surface in contact with the air, whereby motion is imparted to the air. The loudness or intensity of the note depends on the magnitude of the motion or pitch." The regular motions of the planets of our system, as well as those of known moving stars, such as Sirius, may well be accompanied by a rhythmical sound arising from the ether waves thus set in motion, That we do not hear it, may be due to the density of our atmosphere, yet it may be none the less transmitted along the ether waves and heard by the inner ear of those whose sense is developed. Pythagoras was the first philosopher to suggest this idea, which is mentioned by Shakespeare:

"There's not the smallest orb which thou behold'st
But his motion like an angel sings,
Still quiring to the young eyed cherubims:
Such harmony is in immortal souls;
But while this muddy vesture of decay
Doth grossly close it in, we cannot hear it."

He also speaks of it again in Pericles.

"Kepler's idea of the universe was essentially Pythagorean and Platonic. He thought that the planetary movements were related to musical intervals." (Cyclo. Brit.) Montaigne, Milton, Donne, Pope, Newton, Tycho-Brahe and others believed in the "music of the spheres." Faber beautifully attributed it to the vibration caused by the shooting rays of light on their journey earthward:

"Thou art fugitive splendors made vocal
As they glanced from that shining sea."

All are agreed that the idea has come down to us from the earliest times.

Finally, if this resonance exists as the great undertone of nature, it is probable, natural and consistent that it should be a stepping stone towards reaching Spirit, since harmony and accord are vitally necessary to our progress in either the physical or the psychical world. The effect of harmonious sound on the moral nature of man has received much scientific attention in relation to its influence over the insane. The Rev. R. H. Haweis speaks of it in "Music and Morals," as "the much neglected study of Musical Psychology." His remarks are greatly to our present point. What has Nature done for the musician? She has given him sound. * * Thoughts are but wandering spirits that depend for their vitality upon the magnetic current of feeling. Emotion is often weakened by association with thought, whereas thoughts are always strengthened by emotion. I have endeavored to * * * to show that there is a region of abstract emotion in human nature; * * * that, this region of emotion consisted of infinite varieties of mental temperature that upon these temperatures or atmospheres of the soul depended the degree, and often the kind of actions of which at different times we were capable. * * Who will deny that the experience of such soul-atmospheres must leave a definite impress upon the character? * * * But if, as we have maintained,

music has the power of actually creating and manipulating these mental atmospheres, what vast capacities, for good or evil must music possess! * * * The Bible itself pays a tribute to the emotional effect and power of changing the soul's atmosphere possessed by even such a primitive instrument as David's Harp. "When the evil Spirit from God was upon Saul, then David took an harp, and played with his hand. So Saul was refreshed, and was well, and the evil Spirit departed from him." (1 Sam. xvi, 23.) I have no doubt whatever that the acknowledged influence of music over the insane might be far more extensively used; indeed if applied judiciously to a disorganized mind, it might be as powerful an agent as galvanism in restoring healthy and pleasurable activity to the emotional regions. Who can deny then, if such a mysterious command as this is possessed by music over the realm of abstract emotion, that music itself must be held responsible for the manner in which it deals with that realm, and the kind of succession, proportion and degrees of the various emotional atmospheres it has the power of generating.

Testimony upon these various points might be multiplied, but is not the above sufficient to indicate a possibility at least that these "Singing Silences" are closely allied to "Nada Brahma," the omnipresent sound, the vibration caused perhaps by the speeding of Light, (which is the first Divine Thought.) from the Central Sun, and in the mighty harmony of its coming, awakening and vivifying all things?

"I guess, by the stir of this music
What raptures in heaven can be.
Where the sound is Thy marvellous stillness.
And the music is light out of Thee."

MUSINGS ON THE TRUE THEOSOPHIST'S PATH: I — *American Mystic*

"The way of inward peace is in all things to conform to the pleasure and disposition of the Divine Will. Such as would have all things succeed and come to pass according to their own fancy, are not come to know this way; and therefore lead a harsh and bitter life; always restless and out of humor, without treading the way of peace."

Know then Oh Man, that he who seeks the hidden way, can only find it through the door of life. In the hearts of all, at some time, there arises the desire for knowledge. He who thinks his desire will be fulfilled, as the little bird in the nest, who has only to open his mouth to be fed; will very truly be disappointed.

In all nature we can find no instance where effort of some kind is not required. We find there is a natural result from such effort. He who would live the life or find wisdom can only do so by continued effort. If one becomes a student, and learns to look partially within the veil, or has found within his own being something that is greater than his outer self, it gives no authority for one to sit down in idleness or fence himself in from contact with the world. Because one sees the gleam of the light ahead he cannot say to his fellow "I am holier than thee" or draw the mantle of seclusion around himself.

The soul develops like the flower, in God's sunlight, and unconsciously to the soil in which it grows. Shut out the light and the soil grows damp and sterile, the flower withers or grows pale and sickly. Each and every one is here for a good and wise reason. If we find partially *the why* we are here, then is there the more reason that we should by intelligent contact with life, seek in it

the farther elucidation of the problem. It is not the study of ourselves so much, as the thought for others that opens this door. The events of life and their causes lead to knowledge. They must be studied when they are manifested in daily life.

There is no idleness for the Mystic. He finds his daily life among the roughest and hardest of the labors and trials of the world perhaps, but goes his way with smiling face and joyful heart, nor grows too sensitive for association with his fellows, nor so extremely spiritual as to forget that some other body is perhaps hungering for food.

It was said by one who pretended to teach the mysteries "It is needful that I have a pleasant location and beautiful surroundings." He who is a true Theosophist will wait for nothing of the sort, either before teaching: or what is first needful, learning. It would perhaps, be agreeable, but if the Divine inspiration comes only under those conditions, then indeed is the Divine afar from the most of us. He only can be a factor for good or teach how to approach the way, who forgetting his own surroundings, strives to beautify and illumine those of others. The effort must be for the good of others, not the gratifying of our own senses, or love for the agreeable or pleasant.

Giving thought to self will most truly prevent and overthrow your aims and objects, particularly when directed toward the occult.

Again there arises the thought "I am a student, a holder of a portion of the mystic lore." Insidiously there steals in the thought "Behold I am a little more than other men, who have not penetrated so far." Know then oh, man, that you are not as great even as they. He who thinks he is wise is the most ignorant of men, and he who begins to *believe* he is wise is in greater danger than any other man who lives.

You think, oh, man, that because you have obtained a portion of occult knowledge, that it entitles you to withdraw from contact with the rest of mankind. It is not so. If you have obtained true knowledge it forces you to meet all men not only half way, but more than that to seek them. It urges you not to retire but, seeking contact, to plunge into the misery and sorrow of the world, and with your cheering word, if you have no more (the Mystic has little else) strive to lighten the burden for some struggling soul.

You dream of fame. We know no such thing as fame. He who seeks the upward path finds that all is truth; that evil is the good gone astray. Why should we ask for fame? It is only the commendation of those we strive to help.

Desire neither notice, fame or wealth. Unknown you are in retirement. Being fameless you are undisturbed in your seclusion, and can walk the broad face of the earth fulfilling your duty, as commanded, unrecognized.

If the duty grows hard, or you faint by the way, be not discouraged, fearful or weary of the world. Remember that "Thou may'st look for silence in tumult, solitude in company, light in darkness, forgetfulness in pressures, vigor in despondency, courage in fear, resistance in temptation, peace in war, and quiet in tribulation."

The Path

HERMES TRISMEGISTUS — *Isaac Myer*

THE FOURTH STATE OF MATTER DESCRIBED IN THE TABLET

That a tablet, now called the SMARAGDINE, was found there is no doubt. Its discovery is attributed by tradition to an *isarim* or initiate, who it is said, took it from the dead body of Hermes — this could not have been the Egyptian god Thoth — which was buried at Hebron, in an obscure ditch. The tablet was held between the hands of the corpse. Some authors say that it was of emerald, which I do not believe; it probably was of green strass or paste, an imitation of emerald, in the manufacture of which the Egyptians excelled. Be it as it may, the contents evidently refer to that subtile body, called by the great scientist Sir William Thompson, "the luminiferous aether," — to that mysterious, invisible to us, some-thing, in which the matter-atoms float, the *azoth* of the Hermetic philosophers, the *astral light* of the occultists, the *akasa* of the Hindus; which physical science attempts to grasp, comprehend and sometimes use, under the name of electricity, magnetism, heat, light, etc; which is experimentally made visible, in one of its forms, by means of Professor Crooke's "radiant matter" and which he terms the fourth state of matter. It permeates all things, going through flesh and blood, and steel and glass, the diamond and sapphire, with the facility of water through a net. A translation of this tablet is:

(1)

"It is true without falsehood, certain and very veritable, that that which is below, is as that which is above, and that that which is on high, is as that which is below, so as to perpetuate the miracles of all things.

And as all things have been and come from One, by the mental

desire of One, so all things have been produced from that One only by adaptation.

The Sun (Osiris) is thence the father, and the Moon (Isis) the mother. The Air, its womb, carries it thence, and the Earth is its nurse.

Here is the producer of all, the talisman of all the world.

Its force (or potentiality) is entire, if it is changed into the Earth, you separate the Earth from the Fire, the subtile from the gross. Sweetly, but with great energy, it mounts from the Earth to the Heaven, and again descends to the Earth with powerful energy, and receives the potentiality of the superior and inferior things.

You have, by this means, the light (or fire) of the whole universe. And upon account of this, all obscurity itself, with that, will fly entirely thence.

In this is the energy the strongest of all energy, for it vanquishes all subtile things and penetrates all the solid things.

Thus the world was created. From this will be and will go out admirable adaptations, of which the medium is here.

And because of these reasons I am called Hermes Trismegistus, possessing the three divisions of the philosophy of the universe.

It is complete, this that I have said of the operation of the Sun."

The reader must take note, that the fire referred to here, is not the perceptible fire, but the hidden occult fire, which is concealed in all things, and only becomes evident through a tearing asunder of the atoms. The fire, which we see, is the black fire, the other the unseen, is the white fire. So the ancient Hebrew philosophy says, the Tablets of the Law given to Moses, were written by the Deity with black fire on white fire. It is referred to but concealed in the

Maasey B'reshith, the great occult book of which is the Book of Genesis.

FOOTNOTE:

A HINDU CHELA'S DIARY: IV

(Continued)

"I have been going over that message I received just after returning from the underground room, about not thinking yet too deeply upon what I saw there, but to let the lessons sink deep into my heart. Can it be true — must it not indeed be true — that we have periods in our development when rest must be taken for the physical brain in order to give it time as a much less comprehensive machine than these English college professors say it is, to assimilate what it has received, while at the same time the real brain — as we might say, the spiritual brain — is carrying on as busily as ever all the trains of thought cut off from the head. Of course this is contrary to this modern science we hear so much about now as about to be introduced into all Asia, but it is perfectly consistent for me.

"To reconsider the situation: I went with Kunala to this underground place, and there saw and heard most instructive and solemn things. I return to my room, and begin to puzzle over them all, to revolve and re-revolve them in my mind, with a view to clearing all up and finding out what all may-mean. But I am interrupted by a note from Kunala directing me to stop this puzzling, and to let all I saw sink deep into my heart. Every word of his I regard with respect, and consider to hold a meaning, being never used by him with carelessness. So when he says, to let it sink into my 'heart,' in the very same sentence where he refers to my thinking part — the mind — why he must mean to separate my heart from my mind and to give to the heart a larger and greater power.

"Well, I obeyed the injunction, made myself, as far as I could,

forget what I saw and what puzzled me and thought of other things. Presently, after a few days while one afternoon thinking over an episode related in the *Vishnu Purana* (1) I happened to look up at an old house I was passing and stopped to examine a curious device on the porch; as I did this, it seemed as if either the device, or the house, or the circumstance itself, small as it was, opened up at once several avenues of thought about the underground room, made them all clear, showed me the conclusion as vividly as a well demonstrated and fully illustrated proposition, to my intense delight. Now could I perceive with plainness, that those few days which seemed perhaps wasted because withdrawn from contemplation of that scene and its lessons, had been with great advantage used by the spiritual man in unraveling the tangled skein, while the much praised brain had remained in idleness. All at once the *flash* came and with it knowledge. (2) But I must not depend upon these flashes, I must give the brain and its governor, the material to work with.

"Last night just as I was about to go to rest, the voice of Kunala called me from outside and there I went at once. Looking steadily at me he said: 'we want to see you,' and as he spoke he gradually changed, or disappeared, or was absorbed, into the form of another man with awe-inspiring face and eyes, whose form apparently rose up from the material of Kunala's body. At the same moment two others stood there also, dressed in the Tibetan costume; and one of them went into my room from which I had emerged. After saluting them reverently, and not knowing their object, I said to the greatest,

"'Have you any orders to give?'

"'If there are any they will be told to you without being asked,' he replied, 'stand still where you are.'

"Then he began to look at me fixedly. I felt a very pleasant sensation as if I was getting out of my body. I cannot tell now what time passed between that and what I am now to put down here. But I saw I was in a peculiar place. It was the upper end of — at the foot of the — range. Here was a place where there were only two houses just opposite to each other, and no other sign of habitation; from one of these came out the old fakir I saw at the Durga festival, but how changed, and yet the same: then so old, so repulsive; now so young, so glorious, so beautiful. He smiled upon me benignly and said:

"Never expect to see any one, but always be ready to answer if they speak to you; it is not wise to peer outside of yourself for the great followers of Vasudeva: look rather within.'

"The very words of the poor fakir!

"He then directed me to follow him.

"After going a short distance, of about half a mile or so, we came to a natural subterranean passage which is under the — range. The path is very dangerous; the River — flows underneath in all the fury of pent up waters, and a natural causeway exists upon which you may pass; only one person at a time can go there and one false step seals the fate of the traveller. Besides this causeway, there are several valleys to be crossed. After walking a considerable distance through this subterranean passage we came into an open plain in L—K. There stands a large massive building thousands of years old. In front of it is a huge Egyptian Tau. The building rests on seven big pillars each in the form of a pyramid. The entrance gate has a large triangular arch, and inside are various apartments. The building is so large that I think it can easily contain twenty thousand people. Some of the rooms were shown to me.

"This must be the central place for all those belonging to the —— class, to go for initiation and stay the requisite period.

"Then we entered the great hall with my guide in front. He was youthful in form but in his eyes was the glance of ages.* * The grandeur and serenity of this place strikes the heart with awe. In the centre was what we would call an altar, but it must only be the place where focuses all the power, the intention, the knowledge and the influence of the assembly. For the seat, or place, or throne, occupied by the chief —— the highest —— has around it an indescribable glory, consisting of an effulgence which seemed to radiate from the one who occupied it. The surroundings of the throne were not gorgeous, nor was the spot itself in any way decorated — all the added magnificence was due altogether to the aura which emanated from Him sitting there. And over his head I thought I saw as I stood there, three golden triangles in the air above — Yes, they were there and seemed to glow with an unearthly brilliance that betokened their inspired origin. But neither they nor the light pervading the place, were produced by any mechanical means. As I looked about me I saw that others had a triangle, some two, and all with that peculiar brilliant light."

[Here again occurs a mass of symbols. It is apparent that just at this spot he desires to jot down the points of the initiation which he wished to remember. And I have to admit that I am not competent to elucidate their meaning. That must be left to our intuitions and possibly future experience in our own case.]

"14th day of the new moon. The events of the night in the hall of initiation gave me much concern. Was it a dream? Am I self deluded? Can it be that I imagined all this? Such were the unworthy questions which flew behind each other across my

mind for days after. Kunala does not refer to the subject and I cannot put the question. Nor will I. I am determined, that, come what will, the solution must be reached by me, or given me voluntarily."

"Of what use to me will all the teachings and all the symbols be, if I cannot rise to that plane of penetrating knowledge, by which I shall my self, by myself, be able to solve this riddle, and know to discriminate the true from the false and the illusory? If I am unable to cut asunder these questioning doubts, these bonds of ignorance, it is proof that not yet have I risen to the plane situated above these doubts. * * * Last night after all day chasing through my mental sky, these swift destroyers of stability — mental birds of passage — I lay down upon the bed, and as I did so, into my hearing fell these words:

"'Anxiety is the foe of knowledge; like unto a veil it falls down before the soul's eye; entertain it, and the veil only thicker grows; cast it out, and the sun of truth may dissipate the cloudy veil.'

"Admitting that truth; I determined to prohibit all anxiety. Well I knew that the prohibition issued from the depths of my heart, for that was master's voice, and confidence in his wisdom, the self commanding nature of the words themselves, compelled me to complete reliance on the instruction. No sooner was the resolution formed, than down upon my face fell something which I seized at once in my hand. Lighting a lamp, before me was a note in the well known writing. Opening it, I read:

"'Nilakant. It was no dream. All was real, and more, that by your waking consciousness could not be retained, happened there. Reflect upon it all as reality, and from the slightest circumstance draw whatever lesson, whatever amount of knowledge you can. Never forget that your spiritual progress goes on quite often to yourself unknown. Two out of many hindrances to memory are

anxiety and selfishness. Anxiety is a barrier constructed out of harsh and bitter materials. Selfishness is a fiery darkness that will burn up the memory's matrix. Bring then, to bear upon this other memory of yours, the peaceful stillness of contentment and the vivifying rain of benevolence." (3) * * * * *

[I leave out here, as well as in other places, mere notes of journeys and various small matters, very probably of no interest.]

"In last month's passage across the hills near V—, I was irresistibly drawn to examine a deserted building, which I at first took for a grain holder or something like that. It was of stone, square, with no openings, no windows, no door. From what could be seen outside, it might have been the ruins of a strong, stone foundation for some old building, gateway or tower. Kunala stood not far off and looked over it, and later on he asked me for my ideas about the place. All I could say, was, that although it seemed to be solid, I was thinking that perhaps it might be hollow.

"'Yes,' said he, 'it is hollow. It is one of the places once made by Yogees to go into deep trance in. If used by a chela (a disciple) his teacher kept watch over it so that no one might intrude. But when an adept wants to use it for laying his body away in while he travels about in his real, though perhaps to some unseen, form, other means of protection were often taken which were just as secure as the presence of the teacher of the disciple. 'Well,' I said, 'it must be that just now no one's body is inside there.'

"'Do not reach that conclusion nor the other either. It may be occupied and it may not.'

"Then we journeyed on, while he told me of the benevolence of not only Brahmin Yogees, but also of Buddhist. No differences can be observed by the true disciple in any other disciple who is perhaps of a different faith. All pursue truth. Roads differ but the

goal of all remains alike."

* * * "Repeated three times: 'Time ripens and dissolves all beings in the great self, but he who knows into what time itself is dissolved, he is the knower of the Veda.'

"What is to be understood, not only by this, but also by its being three times repeated?

"There were three shrines there. Over the door was a picture which I saw a moment, and which for a moment seemed to blaze out with light like fire. Fixed upon my mind its outlines grew, then disappeared, when I had passed the threshold. Inside, again its image came before my eyes. Seeming to allure me, it faded out, and then again returned. It remained impressed upon me, seemed imbued with life and intention to present itself for my own criticism. When I began to analyze it, it would fade, and then when I was fearful of not doing my duty or of being disrespectful to those beings, it returned as if to demand attention. Its description:

"A human heart that has at its centre a small spark — the spark expands and the heart disappears — while a deep pulsation seems to pass through me. At once identity is confused, I grasp at myself; and again the heart reappears with the spark increased to a large fiery space. Once more that deep movement; then sounds (7); they fade. All this in a picture? Yes! for in that picture there is life; there might be intelligence. It is similar to that picture I saw in Tibet on my first journey, where the living moon rises and passes across the view. Where was I? No, not afterwards! It was in the hall. Again that all pervading sound. It seems to bear me like a river. Then it ceased, — a soundless sound. Then once more the picture; here is Pranava. (4) But between the heart and the Pranava is a mighty bow with arrows ready, and tightly strung for use. Next is a shrine, with the Pranava over it, shut fast, no

key and no keyhole. On its sides emblems of human passions. The door of the shrine opens and I think within 1 will see the truth. No! another door? a shrine again. It opens too and then another, brightly flashing is seen there. Like the heart, it makes itself one with me. Irresistible desire to approach it comes within me, and it absorbs the whole picture.

"Break through the shrine of Brahman; use the doctrine of the teacher." (5)

[There is no connection here of this exhortation with any person, and very probably it is something that was said either by himself, in soliloquy, or by some voice or person to him.

I must end here, as I find great rents and spaces in the notes. He must have ceased to put down further things he saw or did in his real inner life, and you will very surely agree, that if he had progressed by that time to what the last portions would indicate, he could not set down his reflections thereon, or any memorandum of facts. We, however, can never tell what was his reason. He might have been told not to do so, or might have lacked the opportunity.

There was much all through these pages that related to his daily family life, not interesting to you: records of conversations; wordly affairs; items of money and regarding appointments, journeys and meetings with friends. But they show of course that he was all this time living through his set work with men, and often harassed by care as well as comforted by his family and regardful of them. All of that I left out, because I supposed that while it would probably interest you, yet I was left with discretion to give only what seemed to relate to the period marked at its beginning, by his meetings with M—, and at the end by this last remarkable scene, the details of which we can only imagine. And likewise were of necessity omitted very much that is sufficiently

unintelligible in its symbolism to be secure from revelation. Honestly have I tried to unlock the doors of the ciphers, for no prohibition came with their possession, but all that I could refine from its enfolding obscurity is given to you.

As he would say, let us salute each other and the last shrine of Brahman; Om, hari, Om! Trans]

FOOTNOTES:

1. [An ancient Hindu book full of tales as well as doctrines. — [Ed.] " ([return to text](#))
 2. These *flashes* of thought are not unknown even in the scientific world, as, where in such a moment of lunacy, it was revealed to an English scientist, that there must be iron in the sun; and Edison gets his ideas thus. — [Ed.] ([return to text](#))
 3. The careful student will remember that Jacob Boehme speaks of the "harsh and bitter anguish of nature which is the principle that produces bones and all corporification." So here the master, it appears, tells the fortunate chela, that in the spiritual and mental world, anxiety, harsh and bitter, raises a veil before us and prevents us from using our memory. He refers, it would seem, to the other memory above the ordinary. The correctness and value of what was said in this, must be admitted when we reflect that, after all, the whole process of development is the process of *getting back the memory of the past*. And that too is the teaching found in pure Buddhism as well also as in its corrupted form. — [Ed.] ([return to text](#))
 4. The mystic syllable OM. — [Ed.] ([return to text](#))
 5. There is some reference here apparently to the Upanishad, for they contain a teacher's directions to break through all shrines until the last one is reached. — [Ed.] ([return to text](#))

The Path

KARMA

The child is the father of the man, and none the less true is it:

"My brothers! each man's life
The outcome of his former living is;
The bygone wrongs brings forth sorrows and woes
The bygone right breeds bliss."

* * * *

"This is the doctrine of Karma."

But in what way does this bygone wrong and right affect the present life? Is the stern nemesis ever following the weary traveler, with a calm, passionless, remorseless step? Is there no escape from its relentless hand? Does the eternal law of cause and effect, unmoved by sorrow and regret, ever deal out its measure of weal and woe as the consequence of past action? The shadow of the yesterday of sin, — must it darken the life of to-day? Is Karma but another name for fate? Does the child unfold the page of the already written book of life in which each event is recorded without the possibility of escape? What is the relation of Karma to the life of the individual? Is there nothing for man to do but to weave the chequered warp and woof of each earthly existence with the stained and discolored threads of past actions? Good resolves and evil tendencies sweep with resistless tide over the nature of man and we are told:

"Whatever action he performs, whether good or bad, every thing done in a former body must necessarily be enjoyed or suffered."

Anugita, cp III.

There is good Karma, there is bad Karma, and as the wheel of life

moves on, old Karma is exhausted and again fresh Karma is accumulated.

Although at first it may appear that nothing can be more fatalistic than this doctrine, yet a little consideration will show that in reality this is not the case. Karma is twofold, hidden and manifest, Karma is the man that is, Karma is his action. True that each action is a cause from which evolves the countless ramifications of effect in time and space.

"That which ye sow ye reap." In some sphere of action the harvest will be gathered. It is necessary that the man of action should realize this truth. It is equally necessary that the manifestations of this law in the operations of Karma should be clearly apprehended.

Karma, broadly speaking may be said to be the continuance of the nature of the act, and each act contains within itself the past and future. Every defect which can be realized from an act must be implicit in the act itself or it could never come into existence. Effect is but the nature of the act and cannot exist distinct from its cause. Karma only produces the manifestation of that which already exists; being action it has its operation in time, and Karma may therefore be said to be the same action from another point of time. It must, moreover, be evident that not only is there a relation between the cause and the effect, but there must also be a relation between the cause and the individual who experiences the effect. If it were otherwise, any man would reap the effect of the actions of any other man. We may sometimes appear to reap the effects of the action of others, but this is only apparent. In point of fact it is our own action

" * * None else compels

None other holds you that ye live and die."

It is therefore necessary in order to understand the nature of Karma and its relation to the individual to consider action in all its aspects. Every act proceeds from the mind. Beyond the mind there is no action and therefore no Karma. The basis of every act is desire. The plane of desire or egotism is itself action and the matrix of every act. This plane may be considered as non-manifest, yet having a dual manifestation in what we call cause and effect, that is the act and its consequences. In reality, both the act and its consequences are the effect, the cause being on the plane of desire. Desire is therefore the basis of action in its first manifestation on the physical plane, and desire determines the continuation of the act in its karmic relation to the individual. For a man to be free from the effects of the Karma of any act he must have passed to a state no longer yielding a basis in which that act can inhere. The ripples in the water caused by the action of the stone will extend to the furthest limit of its expanse, but no further, they are bounded by the shore. Their course is ended when there is no longer a basis or suitable medium in which they can inhere; they expend their force and are not. Karma is, therefore, as dependent upon the present personality for its fulfillment, as it was upon the former for the first initial act. An illustration may be given which will help to explain this.

A seed, say for instance mustard, will produce a mustard tree and nothing else; but in order that it should be produced, it is necessary that the co-operation of soil and culture should be equally present. Without the seed, however much the ground may be tilled and watered, it will not bring forth the plant, but the seed is equally in-operative without the joint action of the soil and culture.

The first great result of Karmic action is the incarnation in physical life. The birth seeking entity consisting of desires and tendencies, presses forward towards incarnation. It is governed

in the selection of its scene of manifestation by the law of economy. Whatever is the ruling tendency, that is to say, whatever group of affinities is strongest, those affinities will lead it to the point of manifestation at which there is the least opposition. It incarnates in those surroundings most in harmony with its Karmic tendencies and all the effects of actions contained in the Karma so manifesting will be experienced by the individual. This governs the station of life, the sex, the conditions of the irresponsible years of childhood, the constitution with the various diseases inherent in it, and in fact all those determining forces of physical existence which are ordinarily classed under the terms, "heredity," and "national characteristics."

It is really the law of economy which is the truth underlying these terms and which explains them. Take for instance a nation with certain special characteristics. These are the plane of expansion for any entity whose greatest number of affinities are in harmony with those characteristics. The incoming entity following the law of least resistance becomes incarnated in that nation, and all Karmic effects following such characteristics will accrue to the individual. This will explain what is the meaning of such expressions as the "Karma of nations" and what is true of the nation will also apply to family and caste.

It must, however, be remembered that there are many tendencies which are not exhausted in the act of incarnation. It may happen that the Karma which caused an entity to incarnate in any particular surrounding, was only strong enough to carry it into physical existence. Being exhausted in that direction, freedom is obtained for the manifestation of other tendencies and their Karmic effects. For instance, Karmic force may cause an entity to incarnate in a humble sphere of life. He may be born as the child of poor parents. The Karma follows the entity, endures for a longer or shorter time, and becomes exhausted. From that point,

the child takes a line of life totally different from his surroundings. Other affinities engendered by former action express themselves in their Karmic results. The lingering effects of the past Karma may still manifest itself in the way of obstacles and obstructions which are surmounted with varying degrees of success according to their intensity.

From the standpoint of a special creation for each entity entering the world, there is vast and unaccountable injustice. From the standpoint of Karma, the strange vicissitudes and apparent chances of life can be considered in a different light as the unerring manifestation of cause and sequence. In a family under the same conditions of poverty and ignorance, one child will be separated from the others and thrown into surroundings very dissimilar. He may be adopted by a rich man, or through some freak of fortune receive an education giving him at once a different position. The Karma of incarnation being exhausted, other Karma asserts itself.

A very important question is here presented: Can an individual affect his own Karma, and if so to what degree and in what manner?

It has been said that Karma is the continuance of the act, and for any particular line of Karma to exert itself it is necessary that there should be the basis of the act engendering that Karma in which it can inhere and operate. But action has many planes in which it can inhere. There is the physical plane, the body with its senses and organs; then there is the intellectual plane, memory, which binds the impressions of the senses into a consecutive whole and reason puts in orderly arrangement its storehouse of facts. Beyond the plane of intellect there is the plane of emotion, the plane of preference for one object rather than another: — the fourth principle of the man. These three, physical, intellectual,

and emotional, deal entirely with objects of sense perception and may be called the great battlefield of Karma. (1) There is also the plane of ethics, the plane of discrimination of the "I ought to do this, I ought not to do that." This plane harmonizes the intellect and the emotions. All these are the planes of Karma or action what to do, and what not to do. It is the mind as the basis of desire that initiates action on the various planes, and it is only through the mind that the effects of rest and action can be received.

An entity enters incarnation with Karmic energy from past existences, that is to say the action of past lives is awaiting its development as effect. This Karmic energy presses into manifestation in harmony with the basic nature of the act. Physical Karma will manifest in the physical tendencies bringing enjoyment and suffering. The intellectual and the ethical planes are also in the same manner the result of the past Karmic tendencies and the man as he is, with his moral and intellectual faculties, is in unbroken continuity with the past.

The entity at birth has therefore a definite amount of Karmic energy. After incarnation this awaits the period in life at which fresh Karma begins. Up to the time of responsibility it is as we have seen the initial Karma only that manifests. From that time the fresh personality becomes the ruler of his own destiny. It is a great mistake to suppose that an individual is the mere puppet of the past, the helpless victim of fate. The law of Karma is not fatalism, and a little consideration will show that it is possible for an individual to affect his own Karma. If a greater amount of energy be taken up on one plane than on another this will cause the past Karma to unfold itself on that plane. For instance, one who lives entirely on the plane of sense gratification will from the plane beyond draw the energy required for the fulfillment of his desires. Let us illustrate by dividing man into upper and lower nature. By directing the mind and aspirations to the lower plane,

a "fire" or centre of attraction, is set up there, and in order to feed and fatten it, the energies of the whole upper plane are drawn down and exhausted in supplying the need of energy which exists below due to the indulgence of sense gratification. On the other hand, the centre of attraction may be fixed in the upper portion, and then all the needed energy goes there to result in increase of spirituality. It must be remembered that Nature is all bountiful and withholds not her hand. The demand is made, and the supply will come. But at what cost? That energy which should have strengthened the moral nature and fulfilled the aspirations after good, is drawn to the lower desires. By degrees the higher planes are exhausted of vitality and the good and bad Karma of an entity will be absorbed on the physical plane. If on the other hand the interest is detached from the plane of sense gratification, if there is a constant effort to fix the mind on the attainment of the highest ideal, the result will be that the past Karma will find no basis in which to inhere on the physical plane. Karma will therefore be manifested only in harmony with the plane of desire. The sense energy of the physical plane will exhaust itself on a higher plane and thus become transmuted in its effects.

What are the means through which the effects of Karma can be thus changed is also clear. A person can have no attachment for a thing he does not think about, therefore the first step must be to fix the thought on the highest ideal. In this connection one remark may be made on the subject of repentance. Repentance is a form of thought in which the mind is constantly recurring to a sin. It has therefore to be avoided if one would set the mind free from sin and its Karmic results. All sin has its origin in the mind. The more the mind dwells on any course of conduct, whether with pleasure or pain, the less chance is there for it to become detached from such action. The *manas* (mind) is the knot of the heart, when that is untied from any object, in other words when

the mind loses its interest in any object, there will no longer be a link between the Karma connected with that object and the individual.

It is the attitude of the mind which draws the Karmic cords tightly round the soul. It imprisons the aspirations and binds them with chains of difficulty and obstruction. It is desire that causes the past Karma to take form and shape and build the house of clay. It must be through non-attachment that the soul will burst through the walls of pain, it will be only through a change of mind that the Karmic burden will be lifted.

It will appear, therefore, that although absolutely true that action brings its own result, "there is no destruction here of actions good or not good. Coming to one body after another they become ripened in their respective ways." — Yet this ripening is the act of the individual. Free will of man asserts itself and he becomes his own saviour. To the worldly man Karma is a stern Nemesis, to the spiritual man Karma unfolds itself in harmony with his highest aspirations. He will look with tranquility alike on past and future, neither dwelling with remorse on past sin nor living in expectation of reward for present action.

FOOTNOTE:

1. See *Bhagavad-Gita* where the whole poem turns upon the conflict in this battle field, which is called the "sacred plain of *Kurukshetra*," meaning, the "body which is acquired by Karma."

The Path

SUFISM: V — *C. H. A. Bjerregaard*

(Continued)

In Two Parts: Part I texts; Part II Symbols

PART II — SYMBOLS.

It must have become clear to our readers, that the sweet and peaceful sentiments of the couplet of Katebi, placed as motto over our first part, are the expressions of at least one side of the inner life of Sufism. But, if we listen more closely, we shall hear the plaintive note of the nightingale more distinct and perceive more readily the gloom of the cypress; both of them, like the soul of man, bewail in melancholy our disunion from Deity. That, too, is another side of Sufism, which now has been illustrated, and we have given enough quotations to show, that the highest aim of the Sufi is to attain self-annihilation by losing his humanity in Deity.

So far the direct teachings as they lie on the surface of our quotations. The grand undercurrents are the relations of The Universal Self and The Individual Self. The expression "Self" has not been used, but "God" and "Soul" because of the peculiarity of the exoteric forms of current Mohammedan Theology, which the Sufi-Doctors find themselves bound to observe.

We have yet to quote the Sufi poets Hafiz, Jami, Nizami, Attar and others, but as their teachings are veiled under symbols, they naturally find their place in this our second part, and shall be treated fully toward the end. We will begin with the more ecstatic features of practical Sufism, with the Dervishes, the Moslem saints, and thus develop the *subjective* forms of Sufism. We shall come to appreciate the use of a ritualistic service and ascetic practices, when we see these framed in close harmony with the

laws of Nature and conducive to Union with Self.

Where we use the phrase The Personal, our readers will understand it as the *subjective* equivalent for the objective "Self."

An historic study of the rise of Sufism out of original asceticism, will afford us an excellent view of the evolution of Sufism itself as well as of all other forms of Mysticism. Hence we must devote some space to it.

It must undoubtedly be maintained that asceticism and monastic life are entirely inconsistent with Mohammedanism, and in fact Mohammed himself was far from anything like it, and constantly preached against it, advocating an active life and an aggressive religion.

But neither Mohammed nor his followers could stem the tide of ascetic influences from the East, from Buddhism: nor from the West, from Christianity. These two religious systems had existed for centuries and were both characterized by monastic institutions, and missionary spirit. But, much deeper than these individual influences lies the power of a new historic cycle beginning about a century after Mohammed, just at the time we find the greatest number of Islam saints, with a distinctive monastic cast. The era is characterized by a new civilization in the West, and a consolidation of the Eastern conquests. The Mohammedan power encircles Christendom and threatens to destroy both Church and Christianity. In the East itself a terror of existence befell the minds of men and has left the strongest impressions in the writings of such men as Ata Salami and Hasan, &c.

Even in Mohammed's lifetime an attempt was made to engraft the elements of the contemplative life upon his doctrine. The facts are

well known. One evening, after some more vigorous declamations than usual on the prophet's part — he had taken for his theme the flames and tortures of hell — several of his most zealous companions, among whom the names of Omar, Ali, Abou-Dharr, and Abou-Horeirah are conspicuous, retired to pass the night together in a neighbouring dwelling. Here they fell into deep discourses on the terrors of divine justice, and the means to appease or prevent its course. The conclusion they came to was nowise unnatural. They agreed that to this end the surest way was to abandon their wives, to pass their lives in continued fast and abstinence, to wear hair-cloth, and practice other similar austerities: in a word, they laid down for themselves a line of conduct truly ascetic, and leading to whatever can follow in such a course. But they desired first to secure the approbation of Mohammed. Accordingly, at break of day, they presented themselves before him, to acquaint him with the resolution of the night, as well as its motives and purport; but they had reckoned without their host. The prophet rejected their proposition with a sharp rebuke, and declared marriage and war to be far more agreeable to the Divinity than any austereness of life or mortification of the senses whatever, and the well known passage of the Quran: "O true believers, do not abstain from the good things of the earth which God permits you to enjoy," revealed on this very occasion, remains a lasting monument of Mohammed's disgust at this premature outbreak of ascetic feeling. This lesson and many others of a similar character, for the time being, checked any and all appearance of declared forms of asceticism, but could not prevent the ultimate triumph of the truer and better parts of human nature. "Fate" would have it, that within his own family, lie hidden the germs, destined in after ages, down to the present day, and probably as long as Islam shall exist, to exert the mightiest influence in the Mohammedan world.

Ali, Mohammed's cousin, and Ali's son *Hasan*, his grandson *Zein el Abidin*, and after them *Djaufar es Sadik*, *Mousa el Kadhim*, *Ali er Ridha*, and others of their race, were members of a family which became the very backbone of asceticism. They were successively looked up to by individual ascetics as the guides and instructors in word and deed of self-denial and abnegation.

In the *Menaqibu 1 Arafin* (the Acts of the Adepts) it is related that the Prophet one day recited to Ali in private the secrets and mysteries of the "Brethren of Sincerity" enjoining him not to divulge them to any of the uninitiated, so that they should not be betrayed; also, to yield obedience to the rule of implicit submission. For forty days, Ali kept the secret in his own sole breast, and bore therewith until he was sick at heart. As his burden oppressed him and he could no more breathe freely, he fled to the open wilderness, and there chanced upon a well. He stooped, reached his head as far down into the well as he was able; and then, one by one, he confided those mysteries to the bowels of the earth. From the excess of his excitement, his mouth filled with froth and foam. There he spat out into the water of the well, until he had freed himself of the whole, and he felt relieved. After a certain number of days, a single seed was observed to be growing in that well. It waxed and shut up, until at length a youth, whose heart was miraculously enlightened on the point, became aware of this growing plant, cut it down, drilled holes in it, and began to play upon it airs, similar to those now performed by the dervish lovers of God, as he pastured his sheep in the neighbourhood. By degrees, the various tribes of Arabs of the desert heard of this flute-playing of the shepherd, and its fame spread abroad. The camels and the sheep of the whole region would gather around him as he piped, ceasing to pasture that they might listen. From all directions, the nomads flocked to hear his strains, going into ecstasies with delight, weeping for joy and

pleasure, breaking forth in transports of gratification. The rumor at length reached the ears of the Prophet, who gave orders for the piper to be brought before him. When he began to play in the sacred presence, all the holy disciples of God's messenger were moved to tears and transports, bursting forth with shouts and exclamations of pure bliss, and losing all consciousness. The Prophet declared that the notes of the shepherd's flute were the inspiration of the holy mysteries he had confided in private to Ali's charge.

Thus it is that, until a man acquires the sincere devotion of the linnnet-voiced flute-reed, he cannot hear the mysteries of "The Brethren of Sincerity" in its dulcet notes, or realize the delights thereof; for "faith is altogether a yearning of the heart, and a gratification of the spiritual sense."

In regard to "The Brethren of Sincerity" mentioned above it can be said that the Mohammedans in the East know perfectly well that there exists on earth, among the initiated a secret hierarchy which governs the whole human race, infidels as well as believers, but that their power is often exercised in such a manner that the subjects influenced by it know not from what person or persons its effects proceed.

In this hierarchy the supreme dignity is vested in the *Khidr*. This is a man indeed, but one far elevated above ordinary human nature by his transcendent privileges. Admitted to the Divine Vision, and possessed in consequence of a relative omnipotence and omniscience on earth; visible and invisible at pleasure; freed from the bonds of space and time; by his ubiquitous and immortal powers appearing in various forms on earth to uphold the cause of truth; then concealed awhile from men; known in various ages as Seth, as Enoch, as Elias, and yet to come at the end of time as the Mahdi; this wonderful being is the centre, the prop,

the ruler, the mediator of men of ascetic habits and retirement, and as such he is honoured with the name of *Kothb*, or axis, as being the spiritual pole round which and on which all move or are upheld. Under him are the *Aulia*, or intimate friends of God, seventy-two in number (some say twenty-four), holy men living on earth, who are admitted by the Kothb to his intimate familiarity, and who are to the rest the sources of all doctrine, authority, and sanctity. Among these again one, pre-eminent above the rest, is qualified by the vicarious title of *Kothb- ez-zaman*, or axis of his age, and is regarded as the visible depository of the knowledge and power of the supreme Kothb — who is often named, for distinction's sake, *Kothb el-Atkab*, or axis of the axes — and his constant representative amongst men. But as this important election and consequent delegation of power is invisible and hidden from the greater number even of the devotees themselves, and neither the Kothb- ez-zaman nor the *Aulia* carry any outward or distinctive sign of dignity and authority, it can only be manifested by its effects, and thus known by degrees to the outer world, and even then rather as a conjecture than as a positive certainty.

On the authority of the famous saint of Bagdad, Aboo-Bekr el Kettanee, E. W. Lane (1) states that the orders under the rule of this chief are called *Omud* (or *Owtad*), *Akhyar*, *Abdal*, *Nujaba*, and *Nukaba*, naming them according to their precedence, and remarks that perhaps to these should be added an inferior order called *Ashab ed-Darak*, that is "Watchmen" or "Overseers." The *Nukaba* are three hundred and reside in El-Gharb (Northern Africa to the West of Egypt): the *Nujaba* are seventy and reside in Egypt; the *Abdal* are forty and are found in Syria; the *Akhyar* are seven and travel about the earth; the *Omud* are four and stand in the corners of the earth. The members are not known as such to their inferior unenlightened fellow-creatures, and are often

invisible to them. This is most frequently the case with the Kothb, who, though generally stationed at Mekka, on the roof of the Kaaba, is never visible there, nor at any of his other favorite stations, yet his voice is often heard at these places.

Let us add that their great power is supposed to be obtained by self-denial, implicit reliance upon God, from good genii and by the knowledge and utterance of "the most great name."

Eflaki, the historian, has given us the links of a spiritual series, through whom the mysteries of the dervish doctrines were handed down to and in the line of Jelaludin er Rumi.

Ali communicated the mysteries to the Imam Hasan of Bara, who died A.D. 728. Hasan taught them to Habib, the Persian † A.D. 724) who confided them to Dawud of the tribe Tayyi † A.D. 781) who transmitted them to Maruf of Kerkh † A.D. 818); he to Sirri († A.D. 867) and he to the great Juneyd († A.D. 909). Juneyd's spiritual pupil Shibli († A.D. 945) taught Abu-Amr Muhammed, son of Ilahim Zajjaj († A.D. 959) and his pupil was Abu-Bekr, son of Abdullah of Tus, who taught Abu-Ahmed Muhammed, son of Muhammed Al-Gazzali († A.D. mi), and he committed those mysteries to Ahmed el-Khatibi, Jelal's great-grandfather, who consigned them to the Imam Sarakhsi († A.D. 1175). Sarakhsi was the spiritual teacher of Jelal's father Baha Veled, who taught the Sayyid Burhanu-d-Diu Termizi, the instructor of Jelal. — -We shall now proceed with the history.

(To be continued.)

RETICENCE OF MAHATMAS AND EVOLUTION OF THE INDIVIDUAL — *Julius*

Members of the Theosophical Society and the general public have alike manifested a wide divergence of opinion both as regards the fundamental aim of the Society, and its adaptation to individual cases. To get a right view of these points, it is first absolutely necessary that the Society should be considered as a whole, and to remember that like every movement in the physical or spiritual world, it must be governed by the great law of Evolution. This is its primal Cause, and the evolution of the individual its primary work. It is not, as its history shows, an ephemeral institution, to last for a given period, like a hospital, or a society to benefit animals, or poor children, or fallen women. It is a spoke of the universal wheel of Evolution. When the world contained a body of persons sufficiently developed on the spiritual plane, they naturally formed a nucleus, from which rays presently diverged to various parts of the globe. Stimulating centres of energy which are constantly expanding through the individual efforts of their members. What is true of the whole body is true also of its component parts, and each individual, in mental capacity and psychical conditions is precisely what his previous experience, or his evolutionary ratio entitles him to be. Only by means of ever increasing effort on his own part, can he invigorate these powers.

In founding the Theosophical Society, it was hoped that the united labors of all for each and of each for all, might result in so much enlightenment and expansion of individuals as the friction of many minds, all directed to one issue, should through the correlation of moral forces afford. Hence the Society was based upon the idea of Universal Brotherhood.

There are at present two classes of persons who misinterpret this aim of the Society. The first class is variously composed of — (A) those persons who suppose the Society to be solely devoted to a large phase of the subject, such as the progressive development of the entire body of the present race, or to the united interests of great masses of people, leaving the individual altogether alone in the up-hill path of his own spiritual development. (B) Various persons in different parts of the world who have seen fit, coincidentally with giving in their adherence to the idea of Universal Brotherhood, to ridicule it as "a mere sham" or "a pure formula" or "an Utopian impossibility:" the wavering incredulity of every such person arises no doubt from individual or constitutional peculiarity. (C) Such as suppose this basic idea to be an elastic declaration which may always be used as a shield to ward off the unpopular or chaffing accusation of an interest in Mysticism. (D) Those who base their denial of universal brotherhood upon the very sensible rule requiring applicants for initiation to have endorsement from active fellows of the Society. "If you make distinctions you are not universal," is the cry of these last.

All the above persons will sooner or later discover that the Society as a whole progresses through the spiritual advancement of individual members. If the individual retrogrades, the common welfare is minus so much; if he progresses, it is plus so much, and when many rise all are presently lifted as by specific gravity, into a higher plane. For this reason not only the exoteric and much slandered founders of the Society, but also the hidden and real founders have always given much of their time and thought to individuals. At the same time they have unceasingly insisted upon the necessity for individual efforts, that each member might develop himself. This is the true meaning of Evolution. It is not the expansion of the man by means of an external force acting

upon inert tissue, but an impulse from within outward and upward, enhanced by the cumulative effect of previous impulses, and further assisted by such favoring environment as his condition may permit him to assimilate.

It is in this final respect that the second class under consideration have erred. They demand greater extraneous aid for the individual. Such persons, having joined the Society and asserted their belief in the existence of Mahatmas, or Adepts, or highly advanced human beings, have after a time uttered complaints because they had no personal communications from these Great Beings, while they feel such attentions to be their due. These persons have said, — "We have declared our belief in these wise and holy Men; we have joined the Society, but we have not been favored with any proofs directly from them." Such persons require a letter under seal, projected in a phenomenal manner through the air or otherwise. Nothing short of this will satisfy them, and if they do not get it, they are likely to leave the fold of the Society, as they themselves intimate. Their complaint, in general terms, is that the Mahatmas are reticent, altogether too reticent to suit their requirements. They say that it is declared that certain other persons have received such evidence in the shape of letters, and they cite Messrs. Sinnett, Olcott, Damodar, Hume, Madame Blavatsky and several Hindus as the favored recipients. The complainants then state that their aspirations, their need, their merit, equal that of these persons, that they are, to put it roughly, "every bit as good." Some who do not say as much, think it, and a general outcry arises of, — "Why do we not get such letters as proofs? Are we not justified in ascribing undue reticence to the Mahatmas?" When in addition it is said that some others have seen the Mahatmas, or heard their voices and received gifts from them, the injured ones reiterate the complaint, — "Why are the Mahatmas so reticent? This attitude

has finally become that of the press and the public at large, so that the question presents itself, — "Are the Mahatmas unduly reticent?"

The solution of this question is bound up in the subject of the "Evolution of the Individual." As regards the general evolution, the Mahatmas cannot be thus accused, for had we their knowledge of the whole, so as to be able to feel and know what all minerals, plants, animals and men feel collectively, we should see that in this department Mahatmas are never accused even in thought of withholding either knowledge, favor or blessing. The whole moves by law (which law includes the Mahatmas themselves), and as a whole recognizes this law and knows no possible departure from it.

As heretofore stated, the work of the Theosophical Society lies within the department of individual evolution, and just as its sphere may only be enlarged through the constant labors of its members, so every individual follows the same law, *will he, nil he*. The Mahatmas are not reticent. They can justly be no more than the favoring environment to the individual soul. They give to each human well just the water it can hold: to overflow it would be waste. It has been well said that the human mind, like the atmosphere, has its saturation point. To realise when we have reached this point is the first step on the path of self-knowledge: to strive to expand our boundaries by incessant study and observation, carries us leagues further on our way. Those who journey thus have neither time nor desire for complaint. We enter into this life through our parents, subject to law. From one mystery we pass, ignorant of the future, into another mystery: lessons are learned in each. So is the soul born into the higher life and becomes by degrees acquainted with its mysteries. Through each order of life runs the law of natural selection. "A man is a method, a progressive arrangement, a selecting principle," says

Emerson. As the man chooses the friends and the pursuits best adapted to him, so by the law of spiritual dynamics is the soul attracted to just such food as it can assimilate, to the influences necessary to its present development. If the individual mind fails to grasp this idea and to see that we ourselves, (and not the Mahatmas,) create our own possibilities, how far less fitted is it to profit usefully by the very opportunities it demands. The gratification of curiosity, the quickening of interest in personalities or phenomena as such, are not growths of the soul, nor can they advance the evolution of the individual. The Mahatmas do not withhold us from Truth, but we ourselves. When we come to be a part of it, we shall know it: when we come to live in its laws, who can shut us away from it? The upright heart cries, — "Mine is mine, if the universe deny me, and not all the Mahatmas combined can convey to me one truth in which I am not ready to dwell. The Spirit communicates itself; the Masters but interpret the vision, as soothsayers the dreams of Kings. I am a king when the Spirit exalts me, made so by the super-royal act. I will not covet borrowed robes, nor whine as a beggar for charities, but wait until I am come into mine own estate. Then the Wise Ones will teach me how to rule it." The heart that chooses in truth this noble part, has felt already the quickening touch of the Divine. Like Jove of old, it bids the earth-bound waggoner abate his cries, and put first his own shoulder to the wheel.

Let complainants therefore reflect how ignorant they are of their own capacity to understand psychological data, and how necessary it is that they should first develop themselves in that direction. A ray of light may shoot by us unseen and unknown, to be lost in the further space, for want of the timely interposition of a reflective surface. Or it may stream directly into the eye, and even so may still be lost, should the eye lack the power to receive

the impression. Thus an attempt at direct communication or illumination may be and often is frustrated for lack of the perceptive eye and soul. Shall we expect to receive these at other hands, as by a miracle, when we know well that we never fully profit by any experience which we have not lived out for ourselves. Who amongst us has not seen a child reject with impatience the teachings of his elders, and presently return home brimful of wonder and dogmatism over the very same fact which some companion had knocked into him? The strong soul must be self delivered. Amongst our number there are indeed those who have the spiritual eye in part, and the Mahatmas, desirous to arouse it more fully, now and then project a beam of wisdom which the eye fails to receive and it passes on to those who are better fitted to absorb it. "No man can learn what he has not preparation for learning, however near to his eye is the object. A chemist may tell his most precious secrets to a carpenter, and he shall never be the wiser, — the secret he would not utter to a chemist for an estate. God screens us evermore from premature ideas. Our eyes are holden that we cannot see things that stare us in the face, until the hour arrives when the mind is ripened; then we behold them, and the time when we saw them not is like a dream." (1)

Let us then press forward to this harvest time, neither asking for help, nor doubting that it is at hand though unseen, and remembering above all that what we consider reticence, or silence on the part of the Mahatmas, is often but a higher order of speech which we do not as yet understand, and to whose golden accents untiring endeavor alone can give the key.

WHAT IS THE "THEOSOPHICAL SOCIETY"? — F. Hartmann

AN OPINION IN REGARD TO WHAT IT OUGHT TO BE.

[BY A MEMBER.]

I am often asked by strangers who have heard some accounts of the doings of the Theosophists: What is the Theosophical Society, and what is its purpose? Some believe it to be a sect, in which no opinion is suffered to exist unless it is first sanctioned by certain "Headquarters" or "Boards of Control"; others believe it to be a school for occultism and witchcraft; others think that it is a new form of Buddhism, coming under some disguise to overthrow Christianity, while some of those who do not belong to the Christian church suspect it of being an effort to spread Christian doctrines among them by clothing them in some new and more acceptable form. Nearly everyone of such inquirers sees in the T. S. only a bug-bear, and there are all sorts of opinions except the right one prevailing about it.

To all such objections I can only answer by showing to them the printed "Rules of the Theosophical Society," where under the head "Objects of the Society," it says: "*The Society represents no particular religious creed, interferes with no man's caste, is entirely unsectarian and includes professors of all faiths.*" This sounds so beautifully, that people who have been accustomed all their life to cling to creeds and dogmas and "recognized authorities" are unable to believe that it can be true. Moreover the objectors have heard of "Boards of Control," of "Presidential Orders," of "Official Organs," etc., and all these things have such an air of sectarianism, that they seem to be hardly compatible with the spirit of freedom, so loudly proclaimed by the T. S. It is asked: What has a "Board of Control" to control? Who enforces

obedience to presidential orders? Does the official organ promulgate the dogmas of the sect; and if not, what then is the use of these things? It seems therefore time that we should once more consider what the T. S. is, or what it ought to be.

It must be plain to every lover of truth, that, however great the progress may be, which modern civilization has made in regard to the material and temporal welfare of man, the world is still far from having attained physical, intellectual, moral and spiritual perfection. Disease and crime, suffering and death, poverty, tyranny and ignorance are still in existence, and although there are many organized bodies, whose purpose it is to do good and to cure the ills of humanity, still the majority of such bodies are hampered to a certain extent by old beliefs, usages, creeds and superstitions, their activity is not sufficiently free, because their opinions are not free; they may benefit a certain class of humanity, but not all mankind; they know perhaps a part of the truth, but not all of it; their charity extends over a small circle, but not over the whole world. The root of all evil is ignorance, with its children, superstition, fear, crime and disease; the only remedy against ignorance is to spread the knowledge of truth.

There have been at all times men and societies, willing to spread *that which they believe to be the truth*, by all means which were at their command, whether fair or foul; there have been people ready to force their opinions in regard to the truth upon others, by the power of the sword, the faggot, the rack and the fire; but the truth cannot be spread in this manner. Real knowledge of the good, the beautiful and the true can only be attained by obtaining the knowledge of self, and the knowledge of self must grow in every individual in the course of his development. It can no more be implanted by others or be forced upon another, than a tree be made to grow by pulling its trunk. The object of the true Theosophist is therefore to attain self-knowledge, and to employ

the knowledge which he possesses, for the purpose of accomplishing the greatest good.

There is perhaps not a single country upon the face of the earth, in which may not be found a number of persons, who desire to obtain self-knowledge, to find the truth by means of a free and unrestricted investigation, and to employ their knowledge for the benefit of humanity. There are persons who desire to see true progress in the place of stagnation, knowledge in the place of accepted but still dubious opinions, wisdom in the place of sophistry, universal love and benevolence in the place of selfishness. Such men and women may be found here and there, and each one acts in the way he considers the best. Some work by means of the school, others by means of the pulpit; some teach science, others influence the sense of the beautiful and true by their works of art, others speak the powerful language of music: but the most advanced of these give an example to others by their own Christlike conduct in the affairs of every-day life.

The great majority of such persons, interested in the welfare of humanity, live isolated although they may be residing in crowded cities; for they find few who share their mode of feeling and thought and who have identical objects in view. They are often living in communities where little more but selfishness, the greed for money-making or perhaps bigotry and superstition are found. They are isolated and without the support of those who sympathize with their ideas; for although one universal principle unites all those who have the same object in view: still their persons are unknown to each other and they seldom find means for mutual intercourse and exchange of thought.

Now let us suppose that in each country a center of communication were to be established, by means of which such persons could come into contact with each other, and that at each

such center a journal or newspaper were to be established, by means of which such persons could exchange their thoughts; — not a center from which supreme wisdom was to be dispensed and from whence dogmas were to be doled out for the unthinking believers; but a center through which the thought of the members of the society could freely flow; and we could then have an ideal "Theosophical Society." Such a center would resemble a central telephone station to which all the different wires extend, and it would require a trustworthy servant at the office to connect the wires and to attend to the *external* affairs connected with the affairs of the office; but if such a "telephone operator" would attempt to interfere with the messages running over the wires, and to assume an authority to say what kinds of opinions should be wired and what messages should be suppressed; if he were to assume the role of a dictator and permit only such messages to pass over the wires as would be in harmony with his own ideas; then the object of the center of communication would come to nought: we would again have papal dictates and presidential orders in the place of liberty of thought and speech, and there would be an end of the object and purpose of the society.

But on the other hand, if every unripe mind were to be permitted to have his effusions printed at the expense of the society, and to teach things which perhaps a few months afterwards, having learned to know better, he would be sorry to think that they had ever seen the light, such a proceeding would throw discredit upon the society and be moreover altogether impracticable.

Our "telephone operator" should therefore be a man possessed of the greatest circumspection and discrimination, and while he should never interfere with the expression of any opinion, no matter how much opposed the latter may be to his own opinion, he should at the same time be permitted to cut down the messages sent over his wires to certain limits and to present

them, if necessary, in a more suitable form.

As regards the liberty of speech, it would be an absurdity if such a society were to attempt to prescribe to any of its members what kind of opinions or dogmas he should express; because whatever opinions he may pronounce, they could never be regarded as being the opinions of the society as a whole; for the society as such "*represents no particular creed" and "is entirely unsectarian."* If in spite of this solemn assertion anyone chooses to believe that the opinions publicly expressed by a member of the society represent the creed of the society, such an unfortunate circumstance can only be deplored, but will do no serious harm. On the other hand if a "president" or "board of control" should attempt to preside over more important things than merely over the meetings of the members, and if a "board of control" would attempt to control the conscience and the opinions of the member instead of merely exercising its control over the external affairs of the Society: and if an "official organ" would attempt to postulate what ought and what ought not to be believed by the members of the society, such a proceeding would be in direct opposition to the spirit, the object and the purpose of that society, and in contradiction to the principles upon which it was founded: and while it should be the object of every lover of truth to assist the growth of a true "Theosophical Society," and to maintain its purity of principle, it should also be his aim to suffocate in the germ everything that is opposed to liberty and freedom of speech.

I beg every member of the Theosophical Society to well consider these points, for upon their consideration and decision, depends the solution of the question, whether the Theosophical Society shall end in a farce, or whether it shall be the great movement which it was intended to be.

APOLLONIUS AND THE MAHATMAS: I

The journey to India made by the great adept, Apollonius, of Tyana, was a special interest for us modern students of occultism. The story of this journey, related in the life of Apollonius by Philostratus, has been held by many to be a fable, and Mr. Tredwell, in his laudable work, omits any account of it. To an earnest Theosophist, however, the internal evidence of the narration is too strong to be resisted, although it is told at third hand probably with the adornments, which an accomplished Greek author thought needful for the requisite grace of style.

Apollonius may perhaps be said to have been the Master whose mission was to set the temples in order for the departure of the glorious classic era. Born in the same century as Jesus of Nazareth, nowhere did the teachings of the two, so far as it appears, come into open contact, although the fame of the former spread far and wide in Europe, Asia and Africa during his lifetime. It is said, however, that although no creed bears his name, his work in the world was nevertheless immense and his teachings have, in many unperceived ways, influenced millions of human beings down to the present day.

Apollonius was still a young man when he went to India, but even then he was famous for his wisdom. He had been sent, as a boy of fourteen years, to school in Tarsus by his wealthy father, but he did not like the ways of that city and he was allowed to remove to Aegae, also in Sicily, where he studied the great philosophers and was specially drawn to the teachings of Pythagoras. At the age of sixteen he fully adopted the Pythagorean life and held firmly to it ever after, letting his hair grow long, eating no flesh, and drinking no wine, and wearing no clothing made of animal products. He

took up his abode in the temple of Asclepius, and thousands were attracted thither by the wisdom of the wonderfully beautiful youth. Grown to manhood, he made a vow of silence and spoke not a word for five years. Then for a time he taught in Antioch. When asked how the wise man should treat questions of learning, he replied: "Like the law-giver. For the law-giver must make that, of whose truth he has convinced himself, into commandments for the multitude."

He now conceived the idea of a journey to India to meet the wise men known as Brahmins and Hyrkanians. He afterwards told the Egyptian Gymnosophists that his thoughts were directed to them in his youth, but his teacher pointed out to him that in India lived the men who stood nearest the source of wisdom, and from whom the Egyptians themselves derived their light. His seven disciples in Antioch had not the courage to undertake the journey with him, and he departed with two of his family servants, "one for writing rapidly and the other finely," according to Philostratus. At Ninus he was joined by Damis the Ninivite. This young Assyrian was thenceforth his devoted disciple, accompanying him on all his many journeys throughout his long career. It is to Damis that we chiefly owe the detailed accounts of the doings of the Master thenceforward. We are thereby enabled to see Apollonius in his daily life; in his various deeds and actions, his familiar sayings recorded as he talks with his faithful companion about the common sights and occurrences around them. The picture is therefore exceptionally intimate, and the man himself is brought near to us as well as his divine teachings. When Damis was reproached for writing down such trifles about his master, and compared with a dog devouring the crumbs from a table, he replied: "When the gods are feasting they doubtless have servants who take care that no crumbs of ambrosia are lost."

A year and eight months were spent in Babylon, where King

Bardanus, who was a friend of wisdom, received Apollonius with great honors. Considerable intercourse was had with the Magi; he learnt something of them and also taught them something. Damis was forbidden to accompany him in his visits to them, but he said that Apollonius visited them at noon and at midnight. Once Damis asked "What are the Magi?" and was answered, "They are indeed wise, but not in everything." The King became ill, and Apollonius spoke so much and so divinely about the soul that the monarch said to those around: "Apollonius not only relieves me of concern for the Kingdom, but also for Death."

Apollonius, in departing, refused all gifts, but the King provided him with camels and all things needful for the journey. When the King asked what he would bring him from India he replied, "A joyful gift, O King! For if intercourse with the men there makes me wiser, I shall come back to thee better than I now am."

Upon this the King embraced him and said: "May'st thou but come: for this gift is great."

They crossed what they called the Caucasus mountains, separating India and Medea. May it not be that from this ancient designation we get the name of the Caucasian race, rather than from what is now known as the Caucasus? This would make the place of origin identical with that commonly ascribed to the Aryans.

Crossing the Indus they soon came to Taxila, which they called the capital of India. It is difficult to trace out their exact course, the present names of most geographical features being quite different from the designations given by Damis. It would probably require a thorough Occultist to tell just what places they did visit. King Phraotes was the ruler at Taxila, and in him Apollonius found an initiate. The latter was struck with the modest simplicity of the monarch's surroundings on entering the

palace, and inferred that he must be a philosopher. The King told Apollonius the course which a youth took who proposed to dedicate himself to the pursuit of Wisdom. When he had reached his 18th year he had to cross the Hyphasis river to those men who had attracted Apollonius to India. Beforehand, however, he had to make his intention publicly known, in order that he might be restrained in case he was not pure. To be pure one had to be without blemish in respect to father and mother, and moreover with an upright ancestry for three generations. If without fault in this respect the youth himself was then examined as to whether he had a good memory, whether he was naturally inclined to uprightness or would only have it appear so, whether given to drink or gluttony, of boastful habits, evil or foolish ways, whether obedient to father, mother and instructors, and finally if he had made no evil use of the bloom of his youth. "Since wisdom stands in great esteem here," said the King, "and is honored by the Indians, it is of great moment that those who seek to devote themselves unto it should be carefully examined and made to undergo thousand-fold tests."

(Concluded in December.)

The Path

SUFISM: VI — C. H. A. Bjerregaard

In Two Parts: — Part I, Texts; Part II, Symbols.

PART II — SYMBOLS.

The practical expounders and preachers of Sufism are the Dervishes, the monks of Islam.

Zaous Abou Add er-Rahman, of Persian origin, but born in Yemen, led the way. He had passed his early youth in the society of Zein el Abidin, the son of Hasan, and grandson of Ali, and the first of that family who in life and writing professed the mystical ideas and austere practices, which ever afterwards distinguished the race. Abou-Horeirah, the devoutest of Mohammed's own companions, and EbnAbbas were also his masters. He took up his abode at Mecca, the center of religious feeling, and soon Zaous' influence began to appear among the crowd of pilgrims from all parts of the Mohammedan empire; they began to imitate his long prayers, his fasts, and extreme poverty, and above all his open contempt for all worldly dignity and rank, and many adopted the peculiarity of his dress, the long and patched garment and the high woollen cap, both of which later became so characteristic of the Sufi.

One of his most distinguished followers was *Hasan Yesar*, like Zaous, of Persian origin, but born in Arabia, in Medinah. Having received his liberty (he was born after his mother had become a slave of Omm Salma, one of the numerous wives of the Prophet), he retired to Basra, on the Persian Gulf, a town known for its attachment to the family of Ali and their doctrines, and henceforth a stronghold of the ascetic sect. His life proved the truth and strength of his doctrines, and Basra was now their

headquarters.

Malik Ebn Dinar, a Persian, and a slave by birth, known for his love of manual labor, poverty and humility, next appears as chief among the ascetics of his age.

Omar Abou Othman, was a disciple of Hasan Yesar and also an inhabitant of Basra. Hasan Yesar described him as one worthy of angels and prophets for preceptors and guides, one who never exhorted save to what he had first put in practice, nor deterred from anything except what he himself inviolably abstained from. He was a vigorous asserter of man's free-will.

About the same time *Omar Abou Durr at Coufa* and *Sofein Abou Abd Allah* displayed similar examples of austerity and virtue, and so did *Hammad Abou Ismail*, son of the celebrated Abou Hanifah, *Abd Allah Merouji*, and *Mohammed Ebn es Semmak*.

But whether at Mecca or at Basra, the various ascetics already mentioned, and the many not mentioned; whatever personal influence they exercised, and virtues they possessed, they did not form a particular and distinct association or brotherhood. No common rule united them, nor did they group themselves around any superior or chief, as yet.

But the next prominent man among them was not only a remarkable man as an ascetic, but also the father and founder of all the numerous Dervish family. His name was *Fodheil Abou Ali Zalikani*. He was born of Persian parents and spent his youth as a highway robber. One night he had scaled the walls of a house where the girl of whom he was enamored dwelt, and concealed on the roof, awaited the moment to descend and gratify his passion. But while thus occupied he heard a voice repeating the well-known verse of the Quran: "Is it not high time for those who believe to open their hearts to compunction?" "Lord, it is high

time indeed," replied Fodheil; and leaving the house, as well as his evil design, he retired to a half-ruined caravansarai not far off, there to pass the rest of the night. Several travellers were at the moment lodged in the caravansarai, and, concealed by the darkness, he overheard their conversation: "Let us start on our journey," said one; and the others answered: "Let us wait till morning, for the robber Fodheil is out on the roads." This completed the conversion of the already repentant highwayman. He advanced towards the travellers, and, discovering himself to them, assured them that henceforth neither they nor any others should have aught to fear from him. He then stripped himself of his weapons and worldly gear, put on a patched and tattered garment, and passed the rest of his life in wandering from place to place, in the severest penitence and in extreme poverty, sometimes alone, sometimes with numerous disciples, whom he took under his direction, and formed into a strict and organized brotherhood. But with all his austerity of life, his prolonged fasts and watchings, his ragged dress and wearisome pilgrimages, he preferred the practice of interior virtue and purity of intention to all outward observances, and used often to say that "he who is modest and compliant to others, and lives in meekness and patience, gains a higher reward by so doing than if he fasted all his days, and watched in prayer all his nights." At so high a price did he place obedience to a spiritual guide, and so necessary did he deem it, that he declared: "Had I a promise of whatever I should ask in prayer, yet would I not offer that prayer save in union with a superior." But his favorite virtue was the love of God in perfect conformity to his will, above all hope and fear. Thus when his only son — whose virtues resembled his father's — died in early age, Fodheil was seen with a countenance of unusual cheerfulness; and being asked by his intimate disciple Ragi Abou Ali, afterwards Kadhi of the town of Rei, the reason therefore, he answered: "It was God's good pleasure, and it is therefore my

good pleasure also." We must notice one more of his famous sentences: "Much is he beguiled who serves God from fear or hope, for this true service is for mere love;" and, speaking of himself: "I serve God because I cannot help serving Him for very love's sake."

Fodheil died in the year 187 of the Hegira. His disciple was *Ibrahim Ebn Adhem*, son of noble parents and also a Persian by birth, and he is an example upon the forbearance under injury and reluctance to have their right manifested, so prominent amongst the disciples of Fodheil.

After the death of Fodheil the supreme direction of the brotherhood was vested in *Bishar el Hafi*, a native of Meron and inhabitant of Bagdad. When young he had, like Fodheil, led a reckless life, till one day walking in the streets he saw written on a piece of paper, torn and trampled on by the feet of the passers-by, the name of God. He picked it up and, having cleaned it to the best of his ability, took it home and placed it out of the reach of further profanation. The same night he heard a voice saying to him; "Bishar, thou has honored my name. I will accordingly render thy name honorable in this world and in that to come." He awoke from sleep a changed man, and began a new life of penance and virtue. The name Hafi signifies *barefoot*. He walked barefooted. His greatest trial was from the veneration of man: "O God," he used to say, "save me from this honor, the requital of which may perchance be confusion in another life."

Our space forbids us to dwell upon the Egyptian ascetics who helped to lay the foundation for the future Sufism. We pass by them and dwell mainly with the Persian representatives.

About this time — the beginning of the fourth century — two events occurred of greatest importance in the history we are narrating. The Samanide princes had gained ascendancy in the

empire over the Abbaside Caliphs. All the princes of the Samanide race were remarkable for their piety and patronage of learning. *Nasser Ebn Ahmed*, signalized himself by his love of retirement and religious meditation. He founded an oratory at Bokhara which soon became the resort of the now numerous ascetics, and soon other similar institutions arose throughout the country and *the dervishes of the East now look on them their permanent name and manner of life.*

The other event which characterized this era was the outbreak of open heterodoxy among the ascetics. Hitherto they had concealed their tenets and practices, opposed as they were to the prevailing system, much after the fashion of Ali Zein el Abidin, grandson of the famous Ali, grand-master of the secret order:

"Above all things I conceal the precious jewel of my knowledge,
Lest the uninitiated should behold it, and be bewildered;
Ah, how many a rare jewel of this kind, should I openly display it,
Men would say to me: "Thou art one of the worshippers of idols;
And Zealous Muslims would set my blood at price,
Deeming the worst of crimes an acceptable and virtuous action."

After these ascetics had learned their strength from their union they began to take part in politics and worked zealously with that party that wished to overthrow the family and religion of Mohammed and place Ali and mysticism in their stead. They accordingly soon had martyrs in their ranks. Thus died at Bagdad the famous *Hosain Abou Meghith el Halladj*. To his school belonged the three giants of learning and piety: Abd-el-Kadir el Ghilani, Mohi ed Din Ebn-Aarabi el Moghrebi, and Omar Ebn el

Faridh. We pen a few of his words:

"I am He whom I love, and He whom I love is I;
We are two spirits, inhabiting one outward frame:
And when you behold me, you behold Him,
And when you behold Him, you behold us twain."

He taught the freedom of the human will and wrote the following satire on the predestinarian system of Islam:

What can man do, if the decrees of predestination
surround him,
Binding him in his every state? answer me, O learned
professor.
He (*i.e.*, as if He, that is God) cast him into the ocean, bound
hand and foot, and then said to him,
Woe to you, woe to you, should you get wet with the
water."

He it is who thus in his verse addresses God:

"I love Thee with a twofold love, the love of friendship,
And the love grounded on this alone, that Thou art worthy
of it.
Cut as to that my love which is the love of friendship,
It is a love which leaves me no thought for any save Thee;
And as to the love of Thee according to Thy worthiness,
O raise from betwixt us the veil, that I may behold Thee.
Nor is any praise due to me either for this or for that (love),
But to Thee alone the praise both for this and that."

Halladj's three famous disciples gave their names to the three principal brotherhoods among the Mohammedans, and their work remains to this day.

Abd-el-Kadir el Ghilani was a Persian by birth and resided at

Bagdad. Nobody doubted that he was the Kothb of his time, and as such he announced himself in his ecstatic state, though ordinarily he strove to conceal himself under the veil of a mean and despicable appearance. He founded the order of the Qadiriya which association counted in its ranks some of the greatest names among Eastern mystics and poets. The doctrine of the order was that of Hosein el Halladj, whom he taught the order to look upon as their master, though their doctrine was commonly veiled under a seemingly orthodox terminology. They subsist to this day and are counted among the most prominent.

M. D'hosson in his celebrated work on the Ottoman empire traces the origin of the Faquirs to the time of Mohammed in the following manner: In the first year of the Hegira, forty-five citizens of Mecca joined themselves to many others from Medina. They took an oath of fidelity to the doctrines of their Prophet, and formed a sect or fraternity, the object of which was to establish among themselves a community of property, and to perform every day certain religious practices in a spirit of penitence and mortification. To distinguish themselves from other Mohammedans, they took the name of Sufis. This name, which later was attributed to the most zealous partisans of Islam, is the same still in use to indicate any Muselman who retires from the world to study, to lead a life of pious contemplation, and to follow the most painful exercises of an exaggerated devotion. To the name of Sufi they added also that of Faquir, because their maxim was to renounce the goods of the earth, and to live in an entire abnegation of all worldly enjoyments, following thereby the words of the Prophet: "Poverty is my pride." Following their example, *Abu Bakr and Ali* established, even during the lifetime of the Prophet and under his own eyes, religious orders, over which each presided, with Zikrs or peculiar religious exercises, established by them separately, and a vow taken by each of the

voluntary disciples forming them. On his decease, Abu Bakr made over his office of president to one *Salman l-Farisi*, and Ali to *al-Hasann l-Basri*, and each of these charges were consecrated under the title of *Khalifah*, or successor. The two first successors followed the example of the Khalifahs of Islam, and transmitted it to their successors, and these in turn to others, the most aged and venerable of their fraternity. Some among them, led by the delirium of the imagination, wandered away from the primitive rules of their society, and converted, from time to time, these fraternities into a multitude of religious orders. * * * It was about A. H. 49 (A. D. 766) that the Shaikh Ahvan, a mystic renowned for his religious fervor, founded the first regular order of the Faquirs, now known as the Alwaniyah.

The Bastamiyah, the Nagshbandiyah, and the Bakhtashiyah descend from the original order established by Abu Bakr. All the others come from Ali.

THE FAQUIRS OR DERVISHES.

The Arabic word *Faqir* signifies *poor*, poor in the sense of being in need of mercy, poor in the sight of God. The Persian equivalent *Darvish* is derived from *dar* "a door" — those who "beg from door to door."

The dervishes are, as stated before, the *practical* expounders of Mohammedanism. They are divided into two great classes, the *be Shara* (with the law), or those who govern their conduct according to the principles of Islam: and the *be Shara* (without the law), or those who do not rule their lives according to the formal principles of any religious creed, although they call themselves Muslims. To the latter, the Sufis principally belong. These Faquirs are called either *Azad*, the free, or *Majnub* the absorbed. The former shave their beards, whiskers, eyebrows, etc., and live a life of celibacy.

Every school and every brotherhood has its own distinctive teachings and technicalities, and its peculiar practices and observances, its saints and doctors, great men and founders.

A student will also readily discover a different character in Arabic and Persian Sufism. The Arabic being nearer to Christianity takes up much from it, but moulds it in its peculiar way; the Persian being nearer the traditions of Zoroaster and in immediate contact with Manichaeism, naturally borrows from thence. Thus the "pantheistic" tendencies, such as Divine absorption, universal manifestation of the Deity under the seeming appearances of limited forms, the final return of all things to the unity of God, a tendency to regard matter as evil, the reprobation of marriage, etc. — these were ideas that rose from Persian soil, while the ideas of a radiant Divinity mediating between the supreme fountain-head of Being and the created world: of an all-prevailing Spirit of love; of detachment from the world: of poverty, humility, etc., were more akin to Christian belief.

Still Saadis' description applies to all: "The outward tokens of a dervish are a patched garment and a shaven head; and the inward signs, those of being alive in the spirit, and dead in the flesh: — 'not he who will sit apart from his fellow-creatures at the door of supplication with God: and, if he shall reject his prayer, will stand up in disobedience; or if a mill-stone come rolling down a mountain, he is not intelligent in the ways of providence, that would rise to avoid it.'"

"The ritual of the Dervishes is gratitude and praise, worship and obedience, contentment and charity, and a belief in the unity and providence of God, having a reliance on and being resigned to his will, confident of his favour, and forbearant of all: whosoever is endowed with these qualifications is in truth a dervish, notwithstanding he be arrayed in gorgeous apparel: whereas, the

irreligious and hypocritical vainboaster, sensualist, and whore monger, who turn days into nights in his slavish indulgences, and converts nights into days in his dreams of forgetfulness; who eats whatever falls in his way, and speaks whatever comes uppermost, is a profligate, though clothed in the sackcloth of a saint. —"

The dervishes differ, says A. Vambery, (1) from each other only by the manner in which they demonstrate their enthusiasm; still the more we penetrate towards the East, the greater is the purity with which they have been preserved. In Persia the dervishes play a much more important part than in Turkey, and in Central Asia, isolated as it has been from the rest of the world for centuries, this fraternity is still in full vigor, and exercises a great influence upon society.

According to A. Vambery, the *Bektashi*, *Mevlevi*, and *Rufai* orders are principally found in Turkey; the *Kadrie* and *Djelali* in Arabia; the *Oveisi* and the *Nurbakhchi Nimetullahi* in Persia; the *Khilali* and *Zahibi* in India, and the *Nakishbendi* and *Sofi* (a recent order) in Central Asia.

According to Th. P. Hughes (2) the following are the chief orders of Faqirs met with in North India: (1) The *Naqshbandia*, the followers of Khwajah Pir Mohammed Naqshband, and are a very numerous sect; they usually perform the Zikr-i-Khafi (3) or the silent devotion. (2) The *Qadiria* sprung from the celebrated Sayyid Abdul Qadir, surnamed Pir Dustagir, whose shrine is at Bagdad. They practice both forms of the Zikr. Most of the Sunni Moulavis of the north-west frontier of India are members of this order. In Egypt it is most popular among the fisherman. (3) The *Chishtia* are followers of Banda Nawaz, whose shrine is at Calburgah; they are partial to vocal music, for the founder of the order remarked, that singing was the food and support of the soul. They perform the Zikr-i-Jali. (4) The *Jalalia* founded by Sayyid Jalal-ud-din of

Bokhara; they are met with in Central Asia. Religious mendicants are often of this order. (5) The *Sarwardia* are popular in Alganistan and comprise many learned men. They are the followers of Hasan Bisri of Basra, near Bagdad. These five are all ba-Shara Faqirs.

The be-Shara Faqirs are very numerous. The most popular order is that of the *Mudaria*, founded by Zinda Shah Murdar of Syria, whose shrine is at Mukanpur, in Oudh. From these have sprung the *Malang* Faqirs who crowd the bazaars of India. They wear their hair matted or tied in a knot. The *Rafia* order is also a numerous one in some parts of India. They practice the most severe discipline and mortify themselves by scourging.

The secrets of the dervish orders cannot be learned. An initiation is described in Lane's Society in the Middle Ages and the following is another.

The following is the account of the admission of Tewekkul Beg into the order of the Qadiriya-faqirs, one of the four most prominent ones, by Moolla Shah, a Saint and poet of some celebrity, who died in the year of the Hegira 1072 (1661-62 of our era), at Lahore, where his shrine was reared by the Princess Fatima, daughter of Shah-Jihan. Tewekkul is himself the narrator:

"Having been introduced, by means of Akhond Molla Mohammed Say'd into the intimate circle of Molla Shah, my heart through frequent intercourse with the Sheikh was filled with a burning desire of reaching the sublime goal [of the mystical science], and I no longer found sleep by night nor rest by day * * I passed the whole of that night without being able to shut my eyes, and betook myself to reciting a hundred thousand times the one hundred and twelfth chapter of the Qoran. I accomplished this in several days. It is well known that in this chapter of the Qoran the great Name of God is contained, and that through the power of

that Name, whoever recites it a hundred thousand times may obtain all that he desires. I conceived then the wish that the Master should bestow his affection upon me. And, in fact, I convinced myself of the efficacy of this means, for hardly had I finished the hundred thousandth recitation of this chapter of the book of God, when the heart of the Master was filled with sympathy for me, and he gave order to Senghin Mohammed, his vicar, to conduct me on the following night to his presence. During that whole night he concentrated his mind upon me, while I directed my meditation upon my own heart; but the knot of my heart was not unloosed. So passed three nights, during which he made me the object of his spiritual attention, without any result being manifested. On the fourth night Molla Shah said, 'This night Molla Senghin and Salih Beg, who are both very susceptible to ecstatic emotions, will direct their whole mind upon the neophyte.' They obeyed this order, while I remained seated the whole night, my face turned towards Mecca, at the same time concentrating all my mental faculties upon my own heart. Towards daybreak, a little light and brightness came into my heart, but I could distinguish neither form nor color. After morning prayer I presented myself, and the two persons I have just mentioned, before the Master who saluted me and asked them what they had done to me. They replied: 'Ask him, himself.' Then, addressing me, he told me to relate to him my impressions. I said that I had seen a brightness in my heart; whereupon the Sheikh became animated, and said to me: 'Thy heart contains an infinity of colors, but it is become so dark that the looks of these two crocodiles of the infinite ocean [the mystic science] have not availed to bestow upon it either brightness or clearness; the moment is come when I myself will show thee how it is enlightened.' With these words he made me sit in front of him, while my senses were, so to speak, inebriated, and ordered me to reproduce within me his appearance. Then, having blindfolded

me, he bade me concentrate all my mental faculties upon my heart. I obeyed, and in an instant, by the divine favor and the spiritual assistance of the Sheikh, my heart was opened. I saw then within me something like a cup, turned upside down: and this object having been turned up again, a feeling of illimitable happiness filled my whole being. I said to the Master, 'This cell, where I am sitting before you — I see a faithful reproduction of it within me, and it seems as if another Tewekkul Beg were seated before another Molla Shah.' He answered, 'It is well; the first vision which presents itself to thy view is the figure of the Master.'* * * He next bade me uncover my eyes, which I did, and I then saw him, by the material organ of vision, seated in front of me. Again he made me bandage them, and I perceived him by my spiritual vision, seated in front of me just the same. Full of wonder I cried out, O my Master, whether I look with my bodily eyes or my spiritual vision, it is always you that I see. Meanwhile I saw advance towards me a dazzling figure, and upon my telling the Master of it, he bade me ask the apparition its name. In my spirit I put to it that question, and the figure answered me by the voice of the heart, 'My name is Abd Alkadir Glilany.' I heard this answer by my spiritual ear. The Master then advised me to pray the Saint to give me his spiritual help and succor. I made this petition; and the apparition said to me, 'I had already granted to thee my spiritual assistance; hence it is that the knots of thy heart have been loosed.' Full of deep gratitude, I imposed on myself the obligation of reciting every Friday night the whole Qoran in honor of this great Saint, and for two whole years I never neglected this practice. Molla Shah then said, 'The spiritual world has been shown to thee in all its beauty: remain there seated, effacing thyself completely in the marvels of this unknown world.'

"I obeyed strictly the directions of my Master, and, day by day, the

spiritual world became more and more unveiled before me. The next day I saw the figures of the Prophet and his chief Companions, and legions of Saints and Angels passed before my inner vision. Three months passed in this manner, after which the sphere where all color is effaced opened before me, and then all the figures disappeared. During all this time the Master ceased not to explain to me the doctrine of the union with God and of mystical intuition. But, nevertheless, the Absolute Reality would not show itself to me. It was not until after a year that the knowledge of the Absolute Reality, in its relation with the conception of my own existence came to me. The following verses revealed themselves at that moment to my heart, whence they passed unbidden to my lips: —

'That this corruptible frame was other than water and dust
I knew not: the powers of the heart and the soul and the
body I knew not,
Woe is me! that so much of my life without Thee has for
ever fled from me.
Thou wert I; but dark was my heart: I knew not the secret
transcendent.'

"I submitted to Molla Shah this poetical inspiration, and he rejoiced that the idea of the union with God was at last manifested to my heart: and addressing his disciples, he said: 'Tewekkul Beg has heard from my mouth the words of the doctrine of the union with God, and he will never betray the mystery. His inner eye is opened; the sphere of color and images is shown to him, and at last the sphere where all color is effaced has been revealed to him. Whoever after having passed through these phases of the union with God, has obtained the Absolute Reality, shall no more be led astray, whether by his own doubts or by those which sceptics may suggest to him.'"

(To be continued)

The Path

MUSINGS ON THE TRUE THEOSOPHIST'S PATH: II — *American Mystic*

"Work as those work who are ambitious. — Respect life as those do who desire it. — Be happy as those are who live for happiness." — *Light on the Path*.

We are tried in wondrous ways, and in the seemingly unimportant affairs of life, there often lie the most dangerous of the temptations.

Labor, at best, is frequently disagreeable owing either to mental or physical repugnance. When he who seeks the upward path, begins to find it, labor grows more burdensome, while at the time, he is, owing to his physical condition, not so well fitted to struggle with it. This is all true, but there must be no giving in to it. It must be forgotten. He *must work*, and if he cannot have the sort he desires or deems best suited to him, then must he take and perform that which presents itself. It is that which he must needs. It is not intended either, that he do it to have it done. It is intended that he work as if it was the object of his life, as if his whole heart was in it. Perhaps he may be wise enough to know that there is something else, or that the future holds better gifts for him, still this also must to all intents be forgotten, while he takes up his labor, as if there were no to-morrow.

Remember that life is the outcome of the Ever-Living. If you have come to comprehend a little of the mystery of life, and can value its attractions according to their worth; these are no reasons why you should walk forth with solemn countenance to blight the enjoyments of other men. Life to them is as real, as the mystery is to you. Their time will come as yours has, so hasten it for them, if you can by making life brighter, more joyous, better.

If it be your time to fast, put on the best raiment you have, and go forth, not as one who fasts, but as one who lives for life.

Do your sighing and crying within you. If you cannot receive the small events of life and their meanings without crying them out to all the world, think you that you are fitted to be trusted with the mysteries?

The doing away with one or certain articles of diet, *in itself*, will not open the sealed portals. If this contained the key, what wise beings must the beasts of the field be, and what a profound Mystic must Nebuchadnezar have been, after he was "turned out to grass!"

There are some adherents of a faith, which has arisen in the land, who deem it wise to cast away all things that are distasteful to them; to cut asunder the ties of marriage because they deem it will interfere with their spiritual development, or because the other pilgrim is not progressed enough. Brothers, there lives not the man who is wise enough to sit as a judge upon the spiritual development of any living being. He is not only unwise but blasphemous who says to another: "Depart! You impede my exalted spiritual development."

The greatest of all truths lies frequently in plain sight, or veiled in contraries. The impression has gone abroad that the Adept or the Mystic of high degree, has only attained his station by forsaking the association of his fellow creatures or refusing the marriage tie. It is the belief of very wise Teachers that all men who had risen to the highest degrees of Initiation, have at some time passed through the married state. Many men, failing in the trials, have ascribed their failure to being wedded, precisely as that other coward, Adam, after being *the first transgressor* cried out "It was Eve."

One of the most exalted of the Divine Mysteries lies hidden here — therefore, Oh Man, it is wise to cherish that which holds so much of God and seek to know its meaning; not by dissolution and cutting asunder, but by binding and strengthening the ties. Our most Ancient Masters knew of this and Paul also speaks of it. (Ephesians v. 32.)

Be patient, kindly and wise, for perhaps in the next moment of life, the light will shine out upon thy companion, and you discover that you are but a blind man, claiming to see. Remember this, that you own not one thing in this world. Your wife is but a gift, your children are but loaned to you. All else you possess is given to you only while you use it wisely. Your body is not yours, for Nature claims it as her property. Do you not think, Oh Man, that it is the height of arrogance for you to sit in judgment upon any other created thing, while you, a beggar, are going about in a borrowed robe?

If misery, want and sorrow are thy portion for a time, be happy that it is not death. If it is death be happy there is no more of life.

You would have wealth, and tell of the good you would do with it. Truly will you lose your way under these conditions. It is quite probable, that you are as rich as you ever will be, therefore, desire to do good with what you have — and *do it*. If you have nothing, know that it is best and wisest for you. Just so surely as you murmur and complain just so surely will you find that "from him that hath not, shall be taken even that which he hath." This sounds contradictory, but in reality is in most harmonious agreement. Work in life and the Occult are similar; all is the result of your own effort and will. You are not rash enough to believe that you will be lifted up into Heaven like the Prophet of old — but you really hope some one will come along and give you a good shove toward it.

Know then, Disciples, that you only can lift yourselves by your own efforts. When this is done, you may have the knowledge that you will find many to accompany you on your heretofore lonely journey; but neither they or your Teacher will be permitted to push or pull you one step onward.

This is all a very essential part of your preparation and trial for Initiation.

You look and wait for some great and astounding occurrence, to show you that you are going to be permitted to enter behind the veil; that you are to be Initiated. It will never come. He only who studies all things and learns from them, as he finds them, will be permitted to enter, and for him there are no flashing lightnings or rolling thunder. He who enters the door, does so as gently and imperceptibly, as the tide rises in the nighttime.

Live well your life. Seek to realize the meaning of every event. Strive to find the Ever Living and wait for more light. The True Initiate does not fully realize what he is passing through, until his degree is received. If you are striving for light and Initiation, remember this, that your cares will increase, your trials thicken, your family make new demands upon you. He who can understand and pass through these patiently, wisely, placidly — may hope.

The Path

POETICAL OCCULTISM: I — S. B. J.

SOME ROUGH STUDIES OF THE OCCULT LEANINGS OF THE POETS

I.

In the *Bhagavid-Gita* and the *Upanishads* it is held that:

Ishwara, the Lord of all things, dwells in the heart of every mortal being, and from that place causes the illusions of the world to appear to man as reality.

Light on the Path dwells upon the necessity of understanding your own heart: It tells us to seek for the source of evil there, where it lives, as fruitfully in the heart of the devoted disciple as in that of the man of desire, and that your heart is the profoundest mystery of all the great obscurities.

Longfellow felt this when, in *The Beleaguered City*, he sang: —

I have read, in the marvelous heart of man,
That strange and mystic scroll,
That an army of phantoms vast and wan
Beleaguer the human soul.

This verse occurs to him in connection with the old story that the City of Prague was once beleaguered by a vast phantom army, which camped down on the opposite bank of the river, and he likens the human heart to Prague. Here, in the city dwells Ishwara, who, while thus imprisoned, is beleaguered by the vast army — the phantoms of all the acts and thoughts of the person in this and other lives. Occultism declares with the poet, that the heart is a mystic scroll; it is a veritable field also, in which are sown many seeds that may lie unnoticed, not only during one life,

but often for many many incarnations, but sure to blossom forth one day under favoring circumstances. And as they begin to grow, they evoke the phantoms of the deeds that sowed them, and those ghostly hosts sweep round the soul in its prison house.

In *Resignation*, Longfellow wrote: "There is no death! What seems so is transition."

This is one of the propositions of Occultism. The poet was writing upon the death of the physical body of a girl much beloved, and was considering the change which in common life is known as "death." But the followers of the Wisdom Religion know that this terrible change is not really death, is not in any sense the moment of decease of even the physical man. The visible being is a congeries of energies or elements which are by no means all dead when the person breathes his last, nor when the body is consigned to the grave. It is only the transition, as Longfellow says, of the informing spirit, to another sphere of action.

The same view is taken in the *Atharva Veda*, where it says, "Everything is transformed. Life and death are only modes of transformation, which rule the vital molecule from plant up to Brahma himself."

The occult philosophy considers as death, only that process, and period, of separation between *all* the various elements of one's lower human and animal nature; so that, in the case of suicides and other sudden and premature deaths, what occultists know as "death," extends over a long period of time. The moment called death by the world, is only the time of separation between the body and the life principle, which the Hindus call *jiva*; this is the moment when the transition begins.

Goethe was a profound student of occultism. Its influence is to be traced throughout his works, and a leading motive in many of his

dramas is the dominance over the lives of men of that power which we call *Karma*. His masterpiece, *Faust*, upon which a library of commentaries has been written, can only be truly read in the light of Occultism. *Faust* comes to an end with the following "Mystic Chorus" sung by the assembled Hosts of Heaven:

All that's impermanent
Is but a likeness.
The Unattainable
Here findeth witness;
The Indescribable,
Here is it done;
The Ever-womanly
Leadeth us on.

A wealth of occult meaning is packed into these eight closing lines of the grand drama, which is designed to depict the course of the soul from Heaven, through earth, back to Heaven. All that is impermanent, or of the earth, belonging to the realm of matter, is but a likeness, or symbol, designed for the instruction of man, who must learn to read the lesson if he is to progress. The Unattainable in the desires of those on and of the earth finds witness, or comes to pass, in the realization of all aspirations in the life beyond. The indescribable is done there, because man in the flesh has no senses adequate to comprehend those things pertaining to a higher plane of existence. The Ever-womanly is that which makes progress of the soul possible — the feminine principle which attracts the masculine, or pure spirit, to its opposite pole and thereby causes it to manifest itself. It is by these successive manifestations that the individual is carried forward, enriched by the experience which only thus, through the attraction of the Ever-womanly, or eternal feminine principle, is attained. So the Ever-womanly, or that whereby God the spirit is made manifest in matter, is the means to lead the soul of man on

its course through the grandest possibilities of the Universe to the most exalted heights of the Indescribable. Wordsworth, in his *Ode on Immortality*, says:

Our birth is but a sleep and a forgetting;
The soul that rises with us, our life's stay,
 Had had elsewhere its setting,
 And cometh from afar.
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory, do we come
 From God, who is our home.
Heaven lies about us in our infancy!
Shades of the prison-house begin to close
 Upon the growing boy;
But he beholds the light, and whence it flows —
 He sees it in his joy.
The youth, who daily farther from the east
 Must travel, still is nature's priest.
And by the vision splendid
 Is on his way attended;
At length the man perceives it die away,
And fade into the light of common day.

It is very clear here that Wordsworth is setting down the theory of "Re-incarnation." For he says the soul had elsewhere its setting; in order to set elsewhere, it must have had elsewhere an existence. He also refers, quite as curiously as do Whitman and Whittier, to a coming from the east, as if he had memories of a previous life in some oriental land where such ideas prevailed.

Shelley in *Prometheus Unbound*, sings:

Man, O not men! a chain of linked thought,
Of love and might to be divided not,

Compelling the elements with adamant stress;
As the sun rules, even with a tyrant's gaze,
The unquiet republic of the maze
Of Planets, struggling fierce towards heaven's free
wilderness.

Man, one harmonious soul of many a soul,
Whose nature is its own divine control,
Where all things flow to all, as rivers to the sea;
Familiar acts are beautiful through love;
Labor and pain and grief, in life's green grove,
Sport like tame beasts, — none knew how gentle they could
be!

In the foregoing verses, the doctrine of Brotherhood is enunciated. Shelly refers to humanity as one, composed of its many units, — the one-life running through all; and also, in the first two lines, to the fact admitted by occultism, but sneered at by science, and dogmatic theology, that this "chain of linked thought," compels the elements, and actually affects the course and destiny of the world. That is, that the Karma of the physical world, indissolubly bound up in that of the individuals upon it, is moulded and concentrated by the force of men's thoughts and lives. To carry this out in one direction, we say that esoteric theosophy teaches that the inclination of the earth's axis is made greater or less by the influence of the wickedness or goodness of the people upon the earth, thus bringing down what the people call evils, such as glacial disturbances, cyclones, earthquakes and other vicissitudes of earthly life. However fanciful this theory may appear, it remains for us quite true; and as the scientific world has no reason to give for the inclination of the axis, or for the precession of the equinoxes, we are entitled to hold an opinion where they have none. For the devout Christian this theory ought to have merits, if he chooses to remember that

Sodom and Gomorrah were destroyed for their wickedness. They grew so horribly bad that fire was brought upon them either from heaven or beneath. If it ever happened, it must have been a cyclic disturbance. Science pooh-poohs it. Did it take place, then it was the culminating point for the dynamic power of the evil deeds and thoughts of the inhabitants.

In many places in the Christian bible, reference is made to the crying out to the Lord of the blood of the slain. Now as blood has no power to cry out, we must try in some way to make sense of these expressions, and the only way is by giving to the thoughts which produce deeds of violence, a dynamic power. It would then be easy to attribute to the blood the ability to cry out for justice, instead of saying that the deeds of blood require compensation.

But when blood is shed, elemental spirits pour in to the spot, drawn there by the emanations arising from it, and they become important factors in this supposed "calling out of the blood from the ground." Being strengthened by the human exhalations, they are a new force composed not only of the thoughts of the murdered, but also of the despair, hate and revenge of the slain. Science of course of this knows nothing, and cares less. She cannot tell how long this new force, thus compounded of elementals, blood, and the thought of slayer and his victim, will last. But the God of the Christians knew all about this. In Genesis, Ch. iv, Verse 10, He says to Cain:

"What hast thou done? the voice of thy brother's blood crieth unto me from the ground. And now art thou cursed from the earth, which hath opened her mouth to receive thy brother's blood from thy hand."

The blood furnishes the *occasion*, the thoughts of each give it *force*, and the elementals give it a *voice* to call on God.

The Path

THE CORNER STONE — *J. D. Buck*

Tradition relates that in the building of King Solomon's temple there was a stone of such peculiar shape that the workmen could find no place for it, though it was regularly cut and with great care, and contained the *sign* of the Master. When the temple was near completion a place was found for the stone which the builders had through ignorance rejected. It was the *Keystone* of the *Royal Arch*.

Those who have opened the halls of learning to this generation have given a foundation stone, and repeatedly declared that no other foundation can endure, that the floods of time and the storms of passion will surely sweep with the besom of destruction every superstructure not founded on this rock. And yet there are those who wear the garb of fellow-crafts, and claim the wages of workmen, who not only reject this stone but ridicule it, and laugh it to scorn. The result is manifest in the confusion of the workmen, and it will presently become manifest that those who thus reject the cornerstone of Theosophy are brothers of the shadow literally, rather than Sons of Light; they will find no designs on the tracing-board, and they will be accused of murdering the "widow's son."

The time for wages will surely come, and even they who have come in at the ninth hour and labored faithfully in the vineyard will receive due wages.

The corner stone of Theosophy is distinctly stated to be *Universal Brotherhood*. A firm belief in this principle is required of every candidate for membership in the Theosophical Society. This is the sole requirement for affiliation, it is made plain, and no one can plead ignorance of this one requirement. To claim fellowship in

the society, and ignore or repudiate its cardinal doctrine is not only the most pronounced hypocrisy, but works in every way to the injury of the individual and the society. Those therefore who are not ashamed to repudiate this cardinal principle ought in all fairness to retire from the society, and direct their energies into more congenial channels.

But aside from explicit repudiation of this principle of Brotherhood there is too often a tacit disregard of its requirements. It has been charged against the Society, that in the enunciation of this simple doctrine, they have announced nothing new, and it may at once be answered that it is not claimed as a novelty, but an *actuality*. And yet it is too often the case, that the application of this principle of universal brotherhood reaches no further than to the admission to membership in the T. S. of persons of either sex, and of every creed, color, and nationality, while in the relations of members and the necessary work of the society, the principle of brotherhood is too often practically ignored. It may therefore be profitable to inquire into the reasons assigned by the Masters for giving out to the world at this time their priceless treasures, and the purpose for which the Theosophical Society was instituted, though these purposes have been time and again stated, in plain English, and are printed in the rules and by-laws of the society, as well as in every application for membership. The misinterpretation of these plain declarations leads to constant disappointment, and hinders the legitimate work of the Society.

We have been repeatedly told that the Masters are no respecters of persons. They have on every occasion persistently and consistently refused to teach occultism to individuals. They have stated over and over again the terms on which anyone can gain their notice, or hope to advance in spiritual knowledge or power, viz: by working unselfishly and unceasingly for the advancement

of the Brotherhood of man. This is the plan on which the masters work. Whatsoever they have given out has been designed for the elevation and well-being of the *whole human race*.

They have chosen such agents or assistants as were available for the promulgation of their doctrines, and they have distinctly stated, that not for this generation alone, but more especially for the coming Yuga, do they labor, like wise husbandmen, sowing now the seed for future harvests.

The meaning of Universal Brotherhood, and the mission of the Theosophical Society become thus perfectly plain, and we can misinterpret only at our peril. The masters have said, work with us, and become a part of us, and sharers with us.

Creeds and sects are innately selfish, dividing mankind into selfish circles of conceited and selfish men. Creeds are crumbling; replace them with universal benevolence, toleration, charity, justice — in one word, BROTHERHOOD. He, therefore, who repudiates brotherhood, denies all. He who forgets charity, kindness, forbearance, forgiveness, has no right to call himself a Theosophist. We should have charity for everything but for uncharitableness. Let those who will in the face of all this, strive for occult power. Let them in spite of constant warning force, if they can, themselves into the astral plane, to be driven back in everlasting terror by the "Demon of the Threshold," or end their days in an Asylum for the Insane, but let them look for no assistance or protection from the Masters.

Pure and undefiled Theosophy leads man only to higher planes of thought and life. It puts him in possession of the true philosopher's stone, by enabling him to convert the energies of life, into higher uses, for the welfare and elevation of his race. It teaches him neglect of no common duty or obligation, and it nowhere holds out the inducement that a Mahatma can be

evolved by some secret hocus-pocus out of a mountebank. The mountebanks will presently denounce Mahatmas and repudiate theosophy, but they will prove as powerless to stay the tide of truth as to achieve mahatmahood. They may deceive the foolish and unwary, and console themselves with the company of Coloumb, Hodgson & Co., but those who have accepted in deed and in truth the simple doctrine of universal brotherhood *with all that it implies*, will possess their souls in patience and perfect trust, for they have heard the music of BATH COL.

The Path

THE SOCIETY OF THE ROSICRUCIANS

A ROUGH SKETCH OF THEIR FUNDAMENTAL DOCTRINES.

The following are in outline the fundamental doctrines of the Brothers of the Rosy Cross. He who fulfills the required conditions, may find all necessary information in the "Book of Initiation," and they say that when he is ready he finds with ease, a guide who, through his *higher self* instructs and directs him infallibly.

It is understood that the Society desires to be truly spiritual and asks no fees, but it seeks as members only those who are practical workers in the cause of humanity. But it is a secret body, not from fear of enemies, but in order to spread the truth, unimpeded by the war of opinions. The truth being eternal, is not subject to opinion, but to those who are able to see, it stands revealed in its own light.

1. The *Universe* as a whole is a *Unity*, having only *one*, eternal, universal and fundamental cause for its existence. All the multifarious forms, essences, powers or principles, are not originally self-existent, but are merely various manifestations of that one and universal cause. They are various modes of one original activity, and their shapes or organisms are the products of that activity, working upon different planes of existence and in various stages of evolution.

2. This cause, being eternal, unlimited and infinite, is beyond the power of the intellectual comprehension of any mortal and limited being. Its presence may be perceived everywhere, but in its highest aspect it can fully be known only to itself. Beings lower than itself, may intuitively feel its presence, but cannot

intellectually know it, until they have risen up to its own level on the plane of existence. To avoid circumlocution, we call that eternal (spiritual) principle in its highest aspect "*God*" or "*Brahm*"; both words signifying originally "Good." (1)

3. In this eternal and universal cause, the center or fountain of *All*, is contained potentially everything existing in the Universe. It is itself, germinally or in a more or less developed state contained in everything that exists, It forms the (spiritual) center of every living organism, and life itself is only a mode of manifestation of its own power. It is the cause and the architect of every form; it builds the form which it in habits, from that center, by the power of its own (consciously or unconsciously active) *will* and *thought*, and by the means offered by eternal nature, the latter being itself a product of previous states of its own existence and eternal action.

4. The highest form of activity of this principle requires for its perfect expression, perfect means. The perfect cannot manifest its perfection in an imperfect organism. The place which a being occupies on the ladder of evolution, depends on the progress which that divine principle, acting in the center of each being, has made in evolving an organism, adapted to its manifestation.

5. The most perfect organism for the manifestation of the divine and universal principle in its highest aspect, of which we know, is the (spiritual) organism of Man. In this organism, this divine principle, after having attained *sensation* and *consciousness* in the lower forms of nature, may acquire (spiritual) *self-consciousness* and *self-knowledge*, evolving what is called the individual *mind*, with all its powers and faculties, for (spiritual) perception and *real knowledge* or wisdom.

6. The (ordinarily) visible so called physical body of man is not the *real* Man, but merely a more or less imperfect representation

of the real, or "inner man," whose sphere of activity may extend as far as the sphere of his mind; in other words — as far as the power of his (spiritual) perception. The "inner man" is a reality, which after having attained — by the power of self differentiation — an individual existence, will retain its individuality, after the physical forms, which it has occupied for the purposes of evolution during its life upon a planet, have been disintegrated and changed into other forms.

7. Every being continues to exist in its essence after the (physical) form which expressed its essential character, has dissolved and disappeared; but as long as it has not acquired (spiritual) self-consciousness and self-knowledge, it is forced, after a time of rest, to reappear in a new form (mask or personality), to resume the process of its further development. (2) After the divine principle in man has attained individual (spiritual) self-consciousness and self-knowledge, it requires no more embodiments in (physical) forms, and may, harmoniously united with the *All*, continue to exist as a self-conscious intelligence.

8. The attainment of spiritual self-consciousness and self-knowledge and the necessarily resulting perfection, therefore involves the attainment of immortality, and the latter can only be acquired by acquiring the former. Only that which is perfect remains; the imperfect is continually subject to change.

9. Although the individual human monad, without (spiritual) self-consciousness and knowledge, may arrive at that state of perfection in the slow course of its evolution, extending perhaps over many millions of years, nevertheless there is no necessity to wait until nature may, perhaps slowly and unaided, accomplish her object, but she may be assisted by the individual will and effort of those who know how to proceed.

10. The *first* necessary requirement for all who desire perfection,

is therefore *to know* the laws that rule in the visible and invisible universe, and the attainment of the knowledge involves a study of the constitution of the *Universe* and of the constitution of (the soul of) *Man*.

11. From knowledge springs power, but those who possess knowledge, will be in the possession of something that will not benefit them, unless they desire to put it to some practical use. The *second* requirement is therefore *to will*, and as an individual will, deviating from the direction of the will of universal good, or acting in opposition to the latter, is evil, and can only bring final destruction upon him that exercises it, consequently the will of the individual must act in accordance with the universal will of God.

12. To act evil is for the majority of men far easier than to do good. Good will and desires to become useful must be made to accomplish some work. To overcome the resistance of evil and to put good into practice requires energy, courage and effort, and the *third* necessary requirement is therefore *to dare* to practice the good which we know and desire.

13. But as a power, after it has once been obtained, may be employed for good or for evil purposes, and as it is not desirable that persons with evil inclinations and tendencies, should be taught the way to prolong their personal existence after the dissolution of their physical form, because their existence would cause the infliction of injury upon others, and expose themselves to a long, slow and painful final disintegration; therefore, the deepest secrets of the Rosicrucians, and the way to the practical application of the secret knowledge, should be taught only to those who are good and pure to a degree sufficient to warrant that the mysteries communicated and revealed to them, may not be misapplied. The *fourth* necessary requirement for the

Rosicrucian is, therefore, *to be silent*, in regard to that which it is not expedient to speak.

FOOTNOTES:

1. These words are continually giving rise to misunderstandings and misinterpretations, because nearly every one has a different opinion of what is "Good." ([return to text](#))

The Path

HINDU SYMBOLISM: I — *Isaac Myer*

The student of Hindu metaphysical religious philosophy, will find most of its important formulations, veiled under a mystical symbolism; to understand which, is a key to the hints in the Upanishads and other esoteric writings.

We propose to give those interested, a series of illustrations from Hindu drawings with descriptions; in the latter, our study of the Kabbalah has been of great assistance.

The figure is a symbolical representation of Brahman (neuter) intertwined in Itself. (1) It is the highest deity of the Hindus, the principle of the universe; the representation is, of It, at the immediate instant of Its revealing Itself in the emanation of the universe, and before Its entrance into any kind of matter and before Its self renunciation. It symbolises the God — dawn between the pauses of emanative creation, its preservation, and the dissolution of created forms. Wrapped in Its cloak-sphere, Brahman conducts Its toe into Its mouth, perhaps to make, an eternal circle of Itself, perhaps to signify the union of the *linga* and *yoni*, perhaps to indicate the retrogression of Itself into Itself,

or may be the eternity and unfathomableness of Its nature, plunged in the contemplation of Its own essence. Compare with this the great figure of Neith or Typhe, the Heaven goddess of the Egyptian Zodiac of Dendera. Brahman (neuter) or Para-brahma, i.e. the Great Brahma, as an unrevealed deity, has neither temple or image in India. It is in effect considered in Itself without form or figure, but exteriorly It manifests Itself in many figures and symbols. It is the unit and the multiplied in all, at the same instant, smaller than an atom, it is greater than the whole universe, which cannot contain it, and is ineffable and inexpressible in Its essence. The ancient Hindus say of it in the Vedas: — "Brahman is eternal, the being above all others, revealing Itself in felicity and joy. The universe is Its name, Its image, but that first existence, which contains all in Itself, is the soul really existing. All the phenomena have their cause in Brahman, It is not limited by time or space, is imperishable, is the soul of the world and of each particular existence." * * * "That universe is Brahman, it comes from Brahman, exists in Brahman, and it will return to Brahman."

"Brahman, the Being existing in Itself, is the form of all wisdom and of all the worlds without end. All the worlds are made only one with It, because they are through Its Will. That eternal Will is innate in all things. It reveals Itself in the emanation (or creation), in the preservation, and in the destruction (which is also a re-creation), and in the movements and forms, of Time and Space." The Atharva-Veda says: — "All the gods are in (Brahman) as cows in a cow-house. In the beginning Brahman was this (universe). It created gods. Having created gods, It placed them in these worlds, viz: Agni in this world, Vayu in the atmosphere, and Surya in the sky. (2) And in the worlds which are yet higher, It placed the gods which are still higher. Then Brahman proceeded to the higher sphere." This is explained by a commentator to be Satyaloka, (3)

the most excellent limit of all the worlds. In the "Taittiriya Brahmana" it is; "Brahman generated the gods, Brahman (generated or emanated) this entire world. Within It are all these worlds. Within It is the entire universe. It is Brahman who is the greatest of beings. Who can vie with It." Brahman (neuter) is the only real eternal true essence; when It passes in to actual manifested existence It is called Brahma; when It develops Itself in the universe It is called Vishnu, and when It again dissolves Itself into simple being, It is called Siva; all the other deities are only symbols or manifestations of the eternal neuter Brahman. (4)

The Vishnu Purana says: "Glory to Brahman, who is addressed by that mystic word AUM, (5) who is associated eternally with the triple universe (heaven, sky, earth), and who is one with the four Vedas. Glory to Brahman, who both in the destruction and renovation of the universe is called the great and mysterious cause of the intellectual principle, who is without limit in time or space, and exempt from diminution and decay, etc. To that supreme Brahman be for ever adoration."

In its highest development, the doctrine of the Vedas is a rational and philosophical pantheism, combined with the most ideal, pure, and absolute monotheism, that the mind can conceive. The doctrines as to Brahman (neuter) in their higher conceptions, are similar in many respects to the exalted ideas as to the Ain Soph or Non Ego, of the Kabbalah.

Brahman, the Eternal, in Itself, Being, goes out of Its profundity in Its eternity, to emanate the universe of all the things, and undeniably establishes that great law of production, through the opposition and yet a harmonious blending, as to which, all nature offers everywhere a similitude, evidence, and image. Its first emanation is the creating energy, force or potentiality, which

manifests Itself in Time, the mother and the matrix of the existences, that is the Sakti, Para Sakti or Maya, the first virgin and first female or plasticity, containing all in germ, symbolized by the Yoni. Its spouse, the spiritualizing, the man-type, is symbolized by the Lingam.

THE COMMON SENSE OF THEOSOPHY — *Mohini M. Chatterji*

[Reprinted from the *Dublin University Review*, May 1886 by Permission of the Author.

It is difficult to break down the Chinese wall of misconceptions with which all new movements of thought become more or less completely surrounded. The assimilation by the public mind of ideas which lie outside its mechanically-regulated every-day life is a slow process, which the vigour of the constitution does not justify. For all movements, which possess any vitality at all, always provoke to an unusual degree of activity the imaginative faculties of their opponents. More or less fantastic caricatures of the aims and methods of a struggling movement are generated by an unconscious process of invention, fathered upon the movement, and then knocked down with solemn pomposity. At the end of the achievement, when the invader of orthodox indolence and respectable indifference is found to gain ground in the midst of the dust-storm of misrepresentations, a wondering sneer is directed against personalities who have not had the decency and good sense to die at the command of their antagonists. The Theosophical movement has proved no exception to this general rule. Oppositions against it are generally but attempts to remove this disturber of established ease by finding some excuse for ignoring its existence. False issues are raised in every direction, and a candid examination of the truths that Theosophy embodies is evaded in the confusion. It is a profitless task to hunt the brood of Error which, like the giants of Norse folk-lore, sally forth at night to slay and devour, but melt into thin air when surprised by a ray of sunlight. Kicking at nothing is an exhausting process. Unmindful of this, many, in the words of the author of *Religio Medici*, have "rashly charged the

troops of Error, and remained as trophies unto the enemies." It is therefore proposed to set forth a "plain, unvarnished" statement of what Theosophy really is, and of the work in which the Theosophical Society is engaged, and leave the decision to the common sense of the reader. The transcendental metaphysics of Theosophy will be but slightly touched upon here. For fuller information the inquirer is referred to sources indicated by the publications of the Theosophical Society and the writings of the Theosophists of the day.

What, then, is Theosophy? Numberless are the misconceptions to which the word has given rise. Etymology does not throw any great light on it. The interpretation of "God-wisdom" can be spread over a very large area. Without following the history of the word, it may be stated that the chief exponents of the present revival of Theosophy take it to mean Wisdom-religion. Their interpretation, while open to no great philological objection, is sufficiently precise for all literary purposes. Theosophy from this standpoint is synonymous with Truth — the Truth that has been clothed in various garbs of religion; it also implies that this Truth is attainable by a natural development of wisdom, without the intervention of supernatural means. Thus it will be seen that Theosophy does not attach infallibility to any particular system of revelation, but maintains that under suitable conditions Truth reveals itself to every individual. The sun shines equally on all; the crystal reflects it; the clod of earth does not. Yet Theosophy sets great value on all systems of revelation, looking upon them as finger-posts which indicate the direction in which Truth is to be sought, although it declines to accept them as invitations to surrender personal inquiry. This tenet of Theosophy is founded upon the consideration that Truth is the result of real experience, and does not consist in the transfer of intellectual symbols from one person to another. To speak about Truth is one thing, and to

perceive it is quite another. It is a fact of common experience that the most accurate and elaborate description of, say, a flower is by no means an efficient substitute for a visual contact with it, although the description has an abundant value of its own. Hence individual consciousness is consistently upheld as the only criterion of Truth, but this consciousness derives material help in its development and expansion by the study of the experiences of others. Thus Theosophy teaches that *personal exertion is the only means by which progress can be achieved*. But in the effort for growth the ultimate unity of consciousness must not be ignored. Individuals are not distinct crystals, placed side by side, but the varied manifestations of one unchanging universal consciousness. As light from one single source produces the appearance of different lights by reflection from a number of surfaces, so this universal consciousness, remaining itself unchanged, produces endless individualities, which in the course of their evolution reach perfection by recognising this essential unity. According to Theosophical thinkers this doctrine forms the fundamental truth upon which all religions are based; it is the final consummation of all philosophical thought and the crowning experience of all practical mysticism.

The search for this truth, and the practical realization of it are not considered as mere gratification of intellectual curiosity, but as the very *summum bonum* of evolutionary progress. It is the Nirvana of the Buddhists, the Moksha of the Brahmins, and not very different from the Beatific Vision of the Christians. When this condition, or rather want of condition, is realized in consciousness, pain is forever extinguished. Nirvana is by no means the annihilation of consciousness, but its rest in the infinite plenitude of being. Needless to discuss the Nihilist view of Buddhism which some scholars of ability have brought forward; suffice it to say, that the Theosophists on this point share the

responsibility of their opinion with many names of great eminence. Nirvana is the extinction of all pain because, being the ultimate unity of all being, it cannot be the playground of those contending forces which alone produce pain.

Proceeding upon this basis, the essential features of Theosophy can be thrown into relief by determining its relations to Religion and Science. As the Science of Religion, it looks upon the different systems of faith as so many languages seeking to express the truth about man, his origin, nature, and destiny, as well as his relations to the surrounding world of objects. But, as a word or phrase is nothing but a sound in the absence of experience of the object connoted, so the proper comprehension of religious symbology can be acquired only by realizing the truths that underlie it. From the Theosophic standpoint the different systems of religion appear as like various forms evolved by the peculiarities of time, place, and other special causes, to embody the bodiless truth.

It is necessary to guard against a misconception which may arise here. Theosophy is not eclecticism, which is a mosaic, while Wisdom-Religion is an organic whole. Theosophy is like an abstract mathematical formula of which each religion is a particular application. It does not select bits from all religions and piece them together according to some fanciful standard of symmetry. But being the inner truth itself, Theosophy regards religions as various descriptions of that truth. It will no more recognise antagonism between religions than the linguist will condemn the description of the same thing in different languages because of peculiarities of idiom and grammar. Theosophy is not hostile to any religion, but is bound, in the interest of truth, to oppose the tyranny of ecclesiastical forms on individuals. Humanity, in the course of its evolution, produces individuals who outstrip the generality in the realization of truth, and are thus enabled to perceive the capabilities of the truth to be

manifested within a certain period of time. To help the masses struggling blindly for the light of truth, these teachers of mankind construct a symbology of words and emblems to represent the truth. But, as acquisition of wisdom is a change in the quality of the consciousness of the acquirer, and not merely a surface expansion of it, the symbology, though eminently useful, is not in itself spiritual knowledge, and can never be converted into it except when "inwardly digested." The physical process of digestion supplies a striking analogy in this matter. Food, assimilated by different organisms, follows their original differences. Spiritual food, on assimilation, partakes of the peculiarities of the individual, and two individuals cannot be exactly identical, whether physically or otherwise. A contrary supposition would violate the *lex parsimoniae*, in nature. Consequently, Theosophy is the uncompromising supporter of the freedom of individual conscience. On the other hand, it condemns a selfish desire for self-development as wrong, on account of its violation of the essential unity of being. One of the greatest Theosophists of the world, Gautama Buddha, declared, "Let the sins of the Kali Yuga (1) fall upon me, and let the world be redeemed." This noble saying found an echo in the Christian Apostle, who would be anathema from Christ if he could save the world thereby.

Nor has Theosophy any antagonism to the scientific spirit. Claiming to be the religion of Truth, it must show itself to be the most exact of all exact sciences. According to it truth cannot be dissociated from real experience; the mere intellectual form of it can never be the truth any more than the word man can be the human being. It opposes the dogmatisms of science which deny independent reality to facts of mental experience because of their eminently unscientific character. If there be no operation of thought matter itself will disappear. The contrary of this —

existence of matter without relation to a conscious knower — has never been experienced. Therefore matter and consciousness are both eternal or neither. Further, it rejects the mechanical theory of the universe on account of its unreasonableness. If consciousness is derivable from unconsciousness, a fundamental law of reason becomes stultified. Unconsciousness is the negation of consciousness, and therefore an affirmation of the absence of all relations to consciousness is its essential property. How, then, can it be related to consciousness so as to produce it? If the atoms themselves are considered conscious the difficulty is not removed. For consciousness must be associated with the notion of I, and if this egoism is to be postulated for each atom it is inexplicable how a man, composed of myriads of atoms, possesses yet a single indivisible notion of I. It is clear therefore that there is in nature a principle of consciousness whose units are not atoms but individualities, and as the principle is eternal its units must also be so. For the ocean cannot be salt unless the quality of saltiness inhered in every one of its drops. Theosophy for these, among other reasons, holds against materialism that the individuality in man is immortal. In this, however, it does not maintain that the present body, emotion or thought of a man will as such abide forever, but that the unit of consciousness which is now manifested as the man, will never undergo any change in essence. For change, independent of consciousness, is unthinkable. It is in fact the unchangeableness of consciousness that by comparison renders the conception of change a reality. In ordinary language no doubt such phrases as the "growth and development of consciousness" are in use, but strictly speaking it is the basis in which the consciousness inheres that changes, the phrases in question being of the same character as those which ascribe motion to the sun in relation to the earth. Moreover, if one unit of consciousness were to change in essence, that is, become annihilated, the same liability must attach to all other

units, and we shall be driven to hold that the principle of consciousness in nature is destructible, while matter which cannot exist in its absence is indestructible. From the indestructibility of individual consciousness, and its relations to matter, two important deductions follow. First, that this relation, which is perpetually changing, changes according to a definite law. The products of the change are bound each to each in a definite way. What is now is not wholly unrelated to what was before. This is a matter of experience, and in fact experience is based upon it. Without the law of causation experience would be impossible, on whatever plane we take experience — mental or physical. Thus by the application of the law of causation to our being, it follows that the experience of pleasure and pain in the present must be the necessary consequence of causes generated in the past. A contention may here be raised that it is a fact of experience that many sufferings and enjoyments come to us of which we are not conscious of having generated the causes. But it is without any real force. What connection is there between *our* consciousness of a cause and its power to produce effect? If we receive in the system malarious germs, the disease is not prevented because we were unconscious of the reception. Whatever you sow the same you reap, whether you are conscious of the sowing or not. The law of causation, thus applied to personal experience of suffering and enjoyment, is called by the Brahmins and Buddhists the Law of Karma.

The second deduction hinges on to the first and forms with it a harmonious whole. If the individual consciousness is immortal, and its experiences are governed by the Law of Karma, then it follows that so long as all causes, capable of producing effects on the present plane of life, are not exhausted, and the generation of similar causes is not stopped, the individual consciousness will remain connected with the experience of earthly-existence. Thus

the ego successively incarnates itself on this earth until it has collected all experiences that life on this planet can offer. The doctrine of reincarnation is taught by all religions of the world, Christianity not excepted. In the Gospel of St. Matthew it is declared in no uncertain tone that John the Baptist was the incarnation of Elias (chap xvii. 12, 13). It is not intended fully to discuss the scientific and metaphysical bases of the doctrine of reincarnation, as the subject has been adequately dealt with in a recent Theosophical publication. (2) But it will not be out of place to consider the ethical objection which is so frequently brought forward against the doctrine. Is it just that a person should experience pleasure or pain for acts done in a previous life of which no recollection is preserved? The argument thus implied is based upon the confusion of the two different meanings of the word justice as applied to the regulation of human affairs, and to the operation of natural laws. Human beings are admittedly imperfect in knowledge, and it is required for the well-being of society that all its members should feel confident that they are not liable to arbitrary punishment. For this reason it is necessary that before inflicting punishment the grounds for it should be disclosed. But justice, as affecting the operation of natural laws, is a totally different thing. The workings of nature being invariably governed by the law of Causation are not amenable to conditions which depend upon admitted inability to apply that law without failure. The moral amelioration, which it is fancied that a knowledge of the precise cause of our sufferings would produce, is more than compensated for by the numberless incentives to good, which gratitude and other similar motives supply.

The teachings of Theosophy from the standpoint of common sense can be briefly summed up thus: —

1. That there is a principle of consciousness in man which is immortal.

2. That this principle is manifested in successive incarnations on earth.
3. That the experiences of the different incarnations are strictly governed by the law of causation.
4. That as each individual man is the result of a distinct causal necessity in nature, it is not wise for one man to dominate the life and action of another, no matter what their relative development may be. On the other hand it is of paramount importance that each individual should ceaselessly work for the attainment of the highest ideal that he is capable of conceiving. Otherwise, pain will arise from the opposition of the real and the ideal. Be as perfect as your Father in heaven is perfect.
5. That for the above reasons it is wise and just to practise the most ungrudging toleration towards all our fellow-creatures.
6. That as absolute unity of all nature subsists forever, all self-centred actions are bound to end in pain to the actor on account of their opposition to this fact. The foundation of morals must therefore lie in the feeling of Universal Brotherhood of Man.
7. That the harmony of the unit with the whole is the only condition which can remove all pain, and as each individual represents a distinct causal operation of nature, this harmony is attainable only through the individual's own exertions.

The Theosophical Society is an organization having for its object the study of truth upon the most unsectarian basis, and as a result of such study it believes that the truths enumerated above are, if generally accepted, calculated greatly to benefit the age. It is necessary, however, to add that there are many members in the Society, earnest in the pursuit of truth, who are not prepared to subscribe to all these doctrines without further thought and

study; but all are agreed as to the ethical principles involved therein. The chief aim of the Theosophical Society is "to form the nucleus of a universal Brotherhood of mankind without distinction of race, color or creed." The basis of brotherhood, which the Theosophical Society considers scientific has already been adverted to. The Theosophic brotherhood does not limit the freedom of individual development. It requires nothing from its members but a desire to recognise the unity of the human family as a natural fact which cannot be ignored with impunity, and a living conscious feeling of which is sure to lead to the highest development of the individual.

The Theosophical Society is convinced that the most efficacious means for the study of truth is furnished by the ancient religious and philosophical systems of the world, as they are free from the disturbing influences by which contemporary forms are surrounded. The Society therefore earnestly labours to promote an appreciative study of Eastern philosophy, built up by generations of Theosophists, as affording easy access to the Wisdom-Religion of the world.

Further, the Society seeks to combat materialism by the investigation of abnormal phenomena which afford a practical demonstration of the existence of a Psyche in man and to lead to a proper comprehension of the laws which underlie those phenomena. Theosophists do not believe in supernaturalism, and discard the notion of miracles as involving an unreasonable limitation of the possibilities of nature. The views of the leading Theosophists with regard to this subject are to be found very ably expounded in Madame Blavatsky's *Isis Unveiled*, and Mr. Sinnett's *Esoteric Buddhism*. All Theosophists, whether in perfect agreement with these views or not, look upon them as opening immense vistas of thought on subjects which are as important as they are neglected.

In conclusion, it is to be clearly stated that the Theosophical Society is composed of a body of earnest students and inquirers, and not of dogmatic teachers. But naturally a large number of members hold convictions in common on many points. Yet in each case the final authority comes from no external source but from within.

"There is no religion higher than Truth," is the motto of the Society.

The Path

THEORIES ABOUT REINCARNATION AND SPIRITS — H. P. Blavatsky

Over and over again the abstruse and mooted question of Rebirth or Reincarnation has crept out during the first ten years of the Theosophical Society's existence. It has been alleged on *prima facie* evidence, that a notable discrepancy was found between statements made in "*Isis Unveiled*" Vol. I, 351-2, and later teachings from the same pen and under the inspiration of the same master. (1)

In *Isis*, it was held, — reincarnation is denied. An occasional return, only of "depraved spirits" is allowed. "Exclusive of that rare and doubtful possibility, *Isis* allows only three cases — abortion, very early death, and idiocy — in which reincarnation on this earth occurs." ("C. C. M." in *Light*, 1882.)

The charge was answered then and there as every one who will turn to the *Theosophist*, 1882, can see for himself. Nevertheless, the answer either failed to satisfy some readers or passed unnoticed. Leaving aside the strangeness of the assertion that *reincarnation* — *i.e.*, the serial and periodical rebirth of *every* individual *monad* from *pralaya* to *pralaya* (2) is denied in the face of the fact that the doctrine is part and parcel and one of the fundamental features of Hinduism and Buddhism, the charge amounted virtually to this: the writer of the present, a professed admirer and student of Hindu philosophy, and as professed a follower of Buddhism years before *Isis* was written, by rejecting reincarnation must necessarily reject KARMA likewise! For the latter is the very *corner-stone* of Esoteric philosophy and Eastern religions: it is the grand and one pillar *on which hangs the whole philosophy of rebirths*, and once the latter is denied, the whole

doctrine of Karma falls into meaningless verbiage.

Nevertheless, the opponents without stopping to think of the evident "discrepancy" between charge and fact, accused a Buddhist by profession of faith of denying reincarnation hence also by implication — Karma. Adverse to wrangling with one who was a friend and undesirous at the time, to enter upon a defence of details and internal evidence — a loss of time indeed, — the writer answered merely with a few sentences. But it now becomes necessary to well define the doctrine. Other critics have taken the same line, and by misunderstanding the passages to that effect in *Isis* they have reached the same rather extraordinary conclusions.

To put an end to such useless controversies, it is proposed to explain the doctrine more clearly.

Although, in view of the later more minute renderings of the esoteric doctrines, it is quite immaterial what may have been written in "*Isis*" — an encyclopedia of occult subjects in which each of these *is hardly sketched* — let it be known at once, that the writer maintains the correctness of every word given out upon the subject in my earlier volumes. What was said in the *Theosophist* of August, 1882, may now be repeated here. The passage quoted from it may be, and is, most likely "incomplete, chaotic, vague, perhaps clumsy, as are many more passages in that work the first literary production of a foreigner who even now can hardly boast of her knowledge of the English language." Nevertheless it is quite correct, so far as that collateral feature of reincarnation is therein concerned.

I will now give extracts from *Isis* and proceed to explain every passage criticised, wherein it was said that "a few *fragments* of this mysterious doctrine of reincarnation *as distinct from* metempsychosis" — would be then presented. Sentences now

explained are in italics.

"Reincarnation *i.e.* the appearance of the same individual, *or rather of his astral monad, twice on the same planet* is not a rule in nature, it is an exception, like the teratological phenomenon of a two-headed infant. It is preceded by a *violation of the laws of harmony of nature*, and happens only when the latter *seeking to restore its disturbed equilibrium, violently throws back into earth-life the astral monad which had been tossed out of the circle of necessity by crime or accident.* Thus in cases of abortion, of infants dying before a certain age, and of congenital and incurable idiocy, nature's original design to produce a perfect human being, has been interrupted. Therefore, while the gross matter of each of these several entities is suffered to disperse itself at death, through the vast realm of being, *the immortal spirit and astral monad of the individual — the latter having been set apart to animate a frame and the former to shed its divine light on the corporeal organization — must try a second time to carry out the purpose of the creative intelligence,* (Vol. I p. 351.)

Here the "astral monad" or body of the deceased personality — say of John or Thomas — is meant. It is that which, in the teachings of the Esoteric philosophy of Hinduism, is known under its name of *bhoot*; in the Greek philosophy is called the *simulacrum* or *umbra*, and in all other philosophies worthy of the name is said, as taught in the former, to disappear after a certain period more or less prolonged in *Kama-loka* — the Limbus of the Roman Catholics, or *Hades* of the Greeks. (3) It is "a violation of the laws of harmony of nature" though it be so decreed by those of *Karma* — every time that the astral monad, or the *simulacrum* of the personality — of John or Thomas — instead of running down to the end of its natural period of time in a body — finds

itself (a) violently thrown out of it by whether early death or accident; or (b) is compelled in consequence of its unfinished task to re-appear, (*i.e. the same astral monad wedded to the same immortal monad*) on earth again, in order to complete the unfinished task. Thus "it must try a second time to carry out the purpose of creative intelligence" or *law*.

If reason has been so far developed as to become active and discriminative there is no (4) (*immediate*) *reincarnation* on this earth, for the three parts of the triune man have been united together, and he is capable of running the race. But when the new being has not passed beyond the condition of Monad, or when, as in the idiot, the trinity has not been completed on earth and therefore cannot be so after death, the immortal spark which illuminates it, has to re-enter on the earthly plane as it was frustrated in its first attempt. Otherwise, the mortal or astral, and the immortal or divine souls, *could not progress in unison and pass onward to the sphere above*. (5) (*Devachan*). Spirit follows a line parallel with that of matter; and the spiritual evolution goes hand in hand with the physical.

The Occult Doctrine teaches that: —

(1) There is no *immediate* reincarnation on Earth for the Monad, as falsely taught by the Reincarnationists Spiritists; nor is there any second incarnation at all for the "*personal*" or *false* Ego — the *perisprit* — save the exceptional cases mentioned. But that (a) there are re-births, or periodical reincarnations for the immortal Ego — ("Ego" during the cycle of re-births, and *non*—Ego, in Nirvana or Moksha when it becomes *impersonal* and *absolute*); for that Ego is the root of every new incarnation, the string on which are threaded, one after the other, the false personalities or illusive bodies called men, in which the Monad-Ego incarnates

itself during the cycle of births; and (b) that such reincarnations take place not before 1,500, 2,000, and even 3,000 years of Devachanic life.

(2) That *Manas* — the seat of *Jiv*, that spark which runs the round of the cycle of birth and rebirths with the Monad, from the beginning to the end of a Manvantara, — is the real *Ego*. That (a) the *Jiv* follows the divine monad that gives it spiritual life and immortality into Devachan, — that therefore, it can neither be reborn before its appointed period, nor reappear on Earth *visibly* or *invisibly* in the *interim*; and (b) that, unless the fruition, the spiritual aroma of the *Manas* — or all these highest aspirations and spiritual qualities and attributes that constitute the higher SELF of man become united to its monad, the latter becomes as *Non* existent; since it is *in esse* "impersonal" and *per se* Ego-less, so to say, and gets its spiritual colouring or flavour of Ego-tism only from each *Manas* during incarnation and after it is disembodied, and separated from all its lower principles.

(3) That the remaining four principles, or rather the — $\frac{1}{2}$ — as they are composed of the terrestrial portion of *Manas* of its Vehicle *Kama-Rupa* and *Lingha Sarira*, — the body dissolving immediately, and *prana* or the life principle along with it, — that these principles having belonged to the *false* personality are unfit for Devachan. The latter is the state of Bliss, the reward for all the undeserved miseries of life, (6) and that which prompted man to sin, namely his terrestrial passionate nature can have no room in it.

Therefore the non-reincarnating principles are left behind in *Kama-loka*, firstly as a material residue, then later on as a reflection on the mirror of Astral light. Endowed with *illusive* action, to the day when having gradually faded out they disappear, what is it but the Greek *Eidolon* and the *simulacrum* of

the Greek and Latin poets and classics?

"What reward or punishment can there be in that sphere of disembodied human entities for a *foetus* or a human embryo which had not even time to breathe on this earth, still less an opportunity to exercise the divine faculties of its spirit? Or, for an irresponsible infant, whose senseless monad remaining dormant within the astral and physical casket, could as little prevent him from burning himself as any other person to death? Or again for one idiotic from birth, the number of whose cerebral circumvolutions is only from twenty to thirty per cent, of those of sane persons, and who therefore is irresponsible for either his disposition, acts, or for the imperfections of his vagrant, half-developed intellect." (*Isis*, vol. I, p. 352.)

These are then, the "exceptions" spoken of in *Isis*, and the doctrine is maintained now as it was then. Moreover, there is no "discrepancy" but only *incompleteness* — hence, misconceptions arising from later teachings. Then again, there are several important mistakes in *Isis* which, as the plates of the work had been *stereotyped* were not corrected in subsequent editions.

One of such is on page 346, and another in connection with it and as a sequence on page 347.

The discrepancy between the first portion of the statement and the last, ought to have suggested the idea of an evident mistake. It is addressed to the spiritists, *reincarnationists* who take the more than ambiguous words of Apuleius as a passage that corroborates their claims for their "spirits" and reincarnation. Let the reader judge (7) whether Apuleius does not justify rather *our* assertions. We are charged with denying reincarnation and this is what we said there and then in *Isis*!

"The *philosophy* teaches that nature *never leaves her work unfinished; if baffled at the first attempt, she tries again.*

When she evolves a human embryo, the intention is that a man shall be perfected — physically, intellectually, and spiritually. His body is to grow, mature, wear out, and die; his mind unfold, ripen, and be harmoniously balanced: his divine spirit illuminate and blend easily with the inner man. So human being completes its grand cycle, or the "circle of necessity," until all these are accomplished. As the laggards in a race struggle and plod in their first quarter while the victor darts past the goal, so, in the race of immortality, some souls outspeed all the rest and reach the end, while their myriad competitors are toiling under the load of matter, close to the starting point. Some unfortunates fail out entirely and lose all chance of the prize: some retrace their steps and begin again."

Clear enough this, one should say. Nature baffled *tries again*. No one can pass out of this world, (our earth) without becoming perfected "*physically, morally and spiritually.*" How can this be done, unless there *is a series of rebirths* required for the necessary perfection in each department — to evolve in the "circle of necessity," can surely never be found in one human life? and yet this sentence is followed without any break by the following parenthetical statement: "This is what the Hindu dreads above all things — *transmigration and reincarnation*; only on other and inferior planets, never on this one!!!"

The last "sentence" is a fatal mistake and one to which the writer pleads "*not guilty.*" It is evidently the blunder of some "reader" who had no idea of Hindu philosophy and who was led into a subsequent mistake on the next page, wherein the unfortunate word "planet" is put for cycle. "*Isis*" was hardly, if ever, looked into after its publication by its writer, who had other work to do;

otherwise there would have been an apology and a page pointing to the *errata* and the sentence made to run: "The Hindu dreads transmigration in other *inferior* forms, on this planet."

This would have dove-tailed with the preceding sentence, and would show a fact, as the Hindu *exoteric* views allow him to believe and fear the possibility of reincarnation — human and animal in turn by jumps, from man to beast and even a plant — and *vice versa*; whereas *esoteric* philosophy teaches that nature never proceeding backward in her evolutionary progress, once that man has evolved from every kind of lower forms — the mineral, vegetable, and animal kingdoms — into the human form, he can never become an animal except morally, hence— *metaphorically*. Human incarnation is a cyclic necessity, and law; and no Hindu dreads it — however much he may deplore the necessity. And this law and the periodical recurrence of man's rebirth is shown on the same page (346) and in the same unbroken paragraph, where it is closed by saying that:

"But there is a way to avoid it. Buddha taught it in his doctrine of poverty, restriction of the senses, perfect indifference to the objects of this earthly vale of tears, freedom from passion, and frequent intercommunication with the Atma — soul-contemplation. *The cause of reincarnation is ignorance of our senses, and the idea that there is any reality in the world, anything except abstract existence.* (8) From the organs of sense comes the "hallucination" we call contact; "from contact, desire; from desire, sensation (which also is a deception of our body,) from sensation, the cleaving to existing bodies; from this cleaving, reproduction; and from reproduction, disease, decay, and death."

This ought to settle the question and show there must have been

some carelessly unnoticed mistake and if this is not sufficient, there is something else to demonstrate it, for it is further on:

"Thus, like the revolutions of a wheel, *there is a regular succession of death and birth*, the moral cause of which is the cleaving to existing objects, while the instrumental cause is *Karma* (the power which controls the universe, prompting it to activity, merit and demerit). It is therefore, the great desire of all beings who would lie released *from the sorrows of successive birth*, to seek the destruction of the moral cause the cleaving to existing objects, or evil desire."

"They in whom evil desire is entirely destroyed are called *Arhats*. Freedom from evil desire insures the possession of a *miraculous* power. At his death, the Arhat is never reincarnated; he invariably attains nirvana — a word, by the by, falsely interpreted by the Christian scholar and skeptical commentators. Nirvana is the world of *cause*, in which all deceptive effects or delusions of our senses disappear. Nirvana is the highest attainable sphere. The *pitris* (the pre-Adamic spirits) are considered as reincarnated by the Buddhistic philosopher, though in a degree far superior to that of the man of earth. Do they not die in their turn? Do not their astral bodies suffer and rejoice, and feel the same curse of illusionary feelings as when embodied?"

And just after this we are again made to say of Buddha and his Doctrine of "Merit and Demerit," or Karma:

"But this *former life* believed in by the Buddhists, is not a life on *this planet* for, more than any other people, the Buddhistical philosopher appreciated the great doctrine of cycles."

Correct "life on this planet" by "*life in the same cycle*" and you will have the correct reading: for what would have appreciation of "the great doctrine of cycles" to do with Buddha's philosophy, had the great sage believed but in one short life on this Earth and in the same cycle. But to return to the real theory of reincarnation as in the esoteric teaching and its unlucky rendering in *Isis*.

Thus, what was really meant therein, was that, the principle which *does not reincarnate* — save the exceptions pointed out — is the *false* personality, the illusive human Entity defined and individualized during this short life of ours, under some specific form and name; but that which *does* and has to reincarnate *nolens volens* under the unflinching, stern rule of Karmic law — is the real EGO. This confusing of the real immortal Ego in man, with the false and ephemeral *personalities* it inhabits during its Manvantaric progress, lies at the root of every such misunderstanding. Now what is the one, and what is the other? The first group is —

1. The immortal Spirit — sexless, formless (arupa) an emanation from the One universal BREATH.
2. Its Vehicle — *the divine* Soul — called the "Immortal Ego," the "Divine monad," etc. etc., which by accretions from *Manas* in which burns the ever existing *Jiv* — the undying spark — adds to itself at the close of each incarnation the essence of that individuality *that was*, the aroma of the culled flower that is no more.

What is the *false* personality? It is that bundle of desires, aspirations, affection and hatred, in short of *action*, manifested by a human being on this earth during one incarnation and under the form of one personality. (9) Certainly it is not all *this*, which as a fact for us, the deluded, material, and materially thinking lot —

is Mr. So and So, or Mrs. somebody else — that remains immortal, or is ever reborn.

All that bundle of *Egotism* that apparent and evanescent "I" disappears after death, as the costume of the part he played disappears from the actor's body, after he leaves the theatre and goes to bed. That actor re-becomes at once the same "John Smith" or Gray, he was from his birth and is no longer the Othello or Hamlet that he had represented for a few hours. Nothing remains now of that "bundle" to go to the next incarnation, except *the seed for future Karma* that *Manas* may have united to its immortal group, to form with it — the disembodied *Higher Self* in "Devachan." As to the four lower principles, that which becomes of them is found in most classics, from which we mean to quote at length for our defence. The doctrine of the *perispirit* the "false personality," or the remains of the deceased under their astral form — fading out to disappear in time, is terribly distasteful to the spiritualists, who insist upon confusing the temporary with the immortal Ego.

Unfortunately for them and happily for us, it is not the modern Occultists who have invented the doctrine. They are on their defense. And they prove what they say, *i.e.*, that no "*personality*" has ever yet been "reincarnated" "on the same planet" (*our earth*, this once there is *no* mistake) save in the three exceptional cases above cited. Adding to these a fourth case, *which is the deliberate, conscious act of adeptship*; and that such an *astral* body belongs *neither to the body nor the soul* still less to the immortal spirit of man, the following is brought forward and proofs cited.

Before one brings out on the strength of undeniable manifestations, theories as to *what* produces them and claims at once on *prima facie* evidence that it is the *spirits* of the departed mortals that re-visit us, it behooves one to first study what

antiquity has declared upon the subject. Ghosts and apparitions, materialized and semi-material "SPIRITS" have not originated with Allan Kardec, nor at Rochester. If those beings whose invariable habit it is to give themselves out for *souls* and the phantoms of the dead, choose to do so and succeed, it is only because the cautious philosophy of old is now replaced by an *a priori* conceit, and unproven assumptions. The first question is to be settled — "Have spirits any kind of substance to cloth themselves with?"

Answer: That which is now called *perisprit* in France, and a "materialized Form" in England and America, was called in days of old *peri-psyche*, and *peri-nous*, hence was well known to the old Greeks. Have they *a body* whether gaseous, fluidic, ethereal, material or semi-material? No; we say this on the authority of the occult teachings the world over. For with the Hindus *atma* or *spirit* is *Arupa* (bodiless,) and with the Greeks also. Even in the Roman Catholic Church the angels of Light as those of Darkness *are absolutely incorporeal*: "*meri spiritus, omnes corporis expertes*," and in the words of the "SECRET DOCTRINE," *primordial*. Emanations of the undifferentiated Principle, the Dhyān Chohans of the ONE (First) category or pure Spiritual Essence, are formed of the *Spirit of the one Element*; the second category of the second Emanation of the Soul of the Elements; the third have a "*mind body*" to which they are not subject, but that they can assume and govern as a body, subject *to them*, pliant to their will in form and substance. Parting from this (third) category, they (the spirits, angels, Devas or Dhyān Chohans) have *BODIES* the first *rupa* group of which is composed of one element *Ether*; the second, of two — ether and fire; the third, of three — Ether, fire and water; the fourth of four — Ether, air, fire and water. Then comes man, who, besides the four elements, has the fifth that predominates in him — Earth: therefore he suffers. Of the Angels, as said by St. Augustine and Peter Lombard, their bodies are made *to act* not to suffer. It is earth and water, *humor et humus*, that gives an

aptitude for suffering and passivity, *ad patientiam*, and *Ether* and *Fire* for action." The spirits or human *monads*, belonging to the first, or indifferentiated essence are thus incorporeal; but their third principle (or the human Fifth — *Manas*) can in conjunction with its vehicle become *Kama rupa* and *Mayavi rupa* — body of desire or "illusion body." After death, the best, noblest, purest qualities of *Manas* or the *human* soul ascending along with the divine Monad into Devachan whence no one emerges from or returns, except at the time of reincarnation — what is that then which appears under the double mask of the spiritual *Ego* or soul of the departed individual? *The Kama rupa element with the help of elementals*. For we are taught that those spiritual beings that can assume a form at will and appear, *i.e.*, make themselves objective and even tangible — are the angels alone (the Dhyan Chohans) and the *nirmanakaya* (10) of the adepts, whose spirits are clothed in sublime matter. The astral bodies — *the remnants* and *dregs* of a mortal being which has been disembodied, when they do appear, are not the individuals they claim to be, but only their simulachres. And such was the belief of the whole of antiquity, from Homer to Swedenborg; from the *third* race down to our own day.

More than one devoted spiritualist has hitherto quoted Paul as corroborating his claim that spirits do and can appear. "There is a natural and there is a spiritual body," etc., etc., (I Cor. xv, 44); but one has only to study closer the verses preceding and following the one quoted, to perceive that what St. Paul meant was quite different from the sense claimed for it. Surely there is a *spiritual* body, but it is not identical with the *astral* form contained in the "natural" man. The "spiritual" is formed only by our individuality *unclothed* and *transformed after death*; for the apostle takes care to explain in Verses 51 and 52, "*Immut abimur sed non omnes*." Behold, I tell you *a mystery*, we shall *not all sleep* but we shall *all*

be changed. This corruptible must put on incorruption and this mortal must put on immortality.

But this is no proof except for the Christians. Let us see what the old Egyptians and the Neo-Platonists — both "*theurgists*" *par excellence*, thought on the subject: They divided man into three principal groups subdivided into principles as we do: pure immortal spirit; the "Spectral Soul" (*a luminous phantom*) and the gross material body. Apart from the latter which was considered as the terrestrial shell, these groups were divided into six principles: (1) *Kha* "vital body"; (2) *Khaba* "astral form," or shadow, (3) *Khou* "animal soul" (4) *Akh* "terrestrial intelligence;" (5) *Sa* "the divine soul" (*or Buddhi*;) and (6) *Sah* or mummy, the functions of which began after death. *Osiris* was the highest uncreated spirit, for it was, in one sense a generic name, every man becoming after his translation *Osirified*, *i.e.*, absorbed into *Osiris* — *Sun* or into the glorious divine state. It was *Khou*, with the lower portions of *Akh* or *Kama rupa* with the addition of the dregs of *Manas* remaining all behind in the astral light of our atmosphere — that formed the counterparts of the terrible and so much dreaded *bhoots* of the Hindus (our "elementaries"). This is seen in the rendering made of the so called "Harris Papyrus on magic." (*papyrus magique*, translated by Chabas) who calls them *Kouey* or *Khou*, and explains that according to the hieroglyphics they were called *Khou* or the "revivified dead," the "resurrected shadows." (11)

When it was said of a person that he "*had a Khou*" it meant that he was possessed by a "Spirit." There were two kinds of *Khous* — the justified ones, — who after living for a short time *a second life* (*nam onh*) failed out, disappeared; and those *Khous* who were condemned to wandering without rest in darkness *after dying for a second time* — *mut, em, nam* — and who were called the *H'ou—metre* ("second time dead") which did not prevent them

from clinging to a vicarious life after the manner of Vampires. How dreaded they were is explained in our Appendices on Egyptian Magic and "Chinese Spirits" (*Secret Doctrine*). They were exorcised by Egyptian priests as the evil spirit is exorcised by the Roman Catholic *cure*; or again the Chinese *houen*, identical with the *Khou* and the "Elementary," as also with the *lares* or *larvae* — a word derived from the former by *Festus*, the grammarian; who explains that they were "the shadows of the dead *who gave no rest in the house they were in* either to the Masters or the servants." These creatures when evoked during theurgic, and especially *necromantic* rites, were regarded, and are so regarded still, in China — as neither the Spirit, Soul nor any thing belonging to the deceased personality they represented, but simply, as his reflection — *simmulacrum*.

"The human soul," says Apuleius, "is an *immortal God*" (Buddhi) which nevertheless has his beginning. When death rids it (the Soul), from its earthly corporeal organism, it is called *lemure*. There are among the latter not a few which are beneficent, and which become the gods or demons of the family, *i.e.*, its domestic gods: in which case they are called *lares*. But they are vilified and spoken of as *larvae* when sentenced by fate to wander about, they spread around them evil and plagues. (*Inane terriculamentum, celerum noxium malis*;) or if their real nature is doubtful they are referred to as simply *manes* (Apuleius. see — *Du Dieu de Socrate*, pp. 143-145. Edit. Nix.) Listen to Yamblichus, Proclus, Porphyry, Psellus and to dozens of other writers on these mystic subjects.

The Magi of Chaldea believed and *taught that the celestial or divine soul* would participate in the bliss of eternal light, while the animal or *sensuous* soul would, if good, rapidly dissolve, and if wicked, go on wandering about in the Earth's sphere. In this case, "it (the soul) assumes at times the forms of various human phantoms and even those of animals." The same was said of the

Eidolon of the Greeks, and of their *Nephesh* by the Rabbins: (See *Sciences Occultes*, Count de Resie. V. 11). All the *Illuminati* of the middle ages tell us of our *astral Soul*, the reflection of the dead or his *spectre*. At *Natal* death (birth) the pure spirit remains attached to the *intermediate* and *luminous* body but as soon as its lower form (the physical body) is dead, the former ascends heavenward, and the latter descends into the nether worlds, or the *Kama loka*.

Homer shows us the body of Patroclus — the true image of the terrestrial body lying killed by Hector — rising in its spiritual form, and Lucretius shows old Ennius representing Homer himself, shedding bitter tears, amidst the *shadows and the human simulachres* on the shores of Acherusia "*where live neither our bodies nor our souls, but only our images.*"

"* * * Esse Acherusia templa,
* * * Quo neque permanent anima, neque corpora nostra,
Sed quedam simulacra * *"

Virgil called it *imago* "image" and in the *Odyssey* (I. XI) the author refers to it as the type, the model, and at the same time the copy of the body; since Telemachus will not recognize Ulyssus and seeks to drive him off by saying — "No thou are not my father; thou art a demon, trying to seduce me!" (*Odys.* I. XVI. v. 194.) "Latins do not lack significant proper names to designate the varieties of their demons; and thus they called them in turn, *lares*, *lemures*, *geni* and *manes*." Cicero, in translating Plato's *Timaeus* translates the word (*dimones* by *lares*; and Festus the grammarian, explains that the inferior or lower gods were the *souls* of *men*, making a difference between the two as Homer did, and between *anima bruta* and *anima divina* (animal and divine souls). Plutarch (in *proble. Rom.*) makes the *lares* preside and inhabit the (haunted) houses, and calls them, cruel, exacting, inquisitive, etc., etc. Festus thinks that there are good and bad

ones among the lares. For he calls them at one time *prostites* as they gave occasionally and watched over things carefully (*direct apports*), and at another — *hostileos*. (12) "However it may be" says in his queer old French, Leloyer, "they are no better than our devils, who, if they do appear helping sometimes men, and presenting them with property, it is only to hurt them the better and the more later on. *Lemures* are also devils and *larvae* for they appear at night in various human and animal forms, but still more frequently with features that THEY *borrow from dead men*." (*Livre des Spectres*. V. IV p. 15 and 16).

After this little honour rendered to his Christian preconceptions, that see Satan everywhere, Leloyer speaks like an Occultist, and a very erudite one too.

"It is quite certain that the *genii* and none other had mission to watch over every newly born man, and that they were called *genii*, as says Censorius, because they had in their charge our race, and not only they *presided* over every mortal being but over whole generations and tribes, being the *genii of the people*."

The idea of guardian angels of men, races, localities, cities, and nations, was taken by the Roman Catholics from the prechristain occultists and pagans. Symmachus (Epistol, I. X) writes: "As souls are given to those who are born, so *genii* are distributed to the nations. Every city had its protecting genius, to whom the people sacrificed." There is more than one inscription found that reads: *Genio civitates* — "to the genius of the city."

Only the ancient profane, never seemed sure any more than the modern whether an apparition was the *eidolon* of a relative or the genius of the locality. Enneus while celebrating the anniversary of the name of his father Anchises, seeing a serpent crawling on his tomb knew not whether that was the *genius* of his father or the genius of the place (Virgil). "The *manes* (13) were numbered

and divided between good and bad; those that were *sinister*, and that Virgil calls *numina larva*, were appeased by sacrifices that they should commit no mischief, such as sending bad dreams to those who despised them, etc:

Tibullus shows by his line: —

Ne tibi neglecti mittant insomnia manes. (Eleg., I. II.)

"Pagans thought that the *lower Souls* were transformed after death into *diabolical aerial spirits*." (Leloyer p. 22.)

The term *Eteroprosopos* when divided into its several compound words will yield a whole sentence, "an other than I under the features of my person."

It is to this terrestrial principle, the *eidolon* the *larva*, the *bhoot* — call it by whatever name — that reincarnation was refused in *Isis*. (14)

The doctrines of Theosophy are simply the faithful echoes of Antiquity. Man is a *Unity* only at his origin and at his end. All the Spirits, all the Souls, gods and demons emanate from and have for their root-principle the SOUL OF THE UNIVERSE — says Porphyry (*De Sacrifice*). Not a philosopher of any notoriety who did not believe (1) in reincarnation (metempsychosis), (2) in the plurality of principles in man, or that man had *two* Souls of separate and quite different natures; one perishable, the *Astral Soul*, the other incorruptible and immortal; and (3) that the former was not the man whom it represented — "neither his spirit nor his body," but his *reflection*, at best." This was taught by Brahmins, Buddhists, Hebrews, Greeks, Egyptians, and Chaldeans; by the post-diluvian heirs of the prediluvian Wisdom, by Pythagoras and Socrates, Clemens Alexandrinus, Synesius, and Origen, the oldest Greek poets as much as the Gnostics, whom Gibbon shows as the most refined, learned and enlightened men of all ages ("See Decline

and Fall," etc.). But the rabble was the same in every age: superstitious, self-opinionated, materializing every most spiritual and noble idealistic conception and dragging it down to its own low level, and — ever adverse to philosophy.

But all this does not interfere with that fact, that our "fifth Race" man, analyzed esoterically as a septenary creature, was ever *exoterically* recognized as mundane, sub-mundane, terrestrial and supra mundane, Ovid graphically describing him as —

"Bis duo sunt hominis; *manes, caro, spiritus, umbra*
Quatuor ista loca bis duo suscipiunt.
Terra tegit carnem, tumulum circumvolat umbra,
Orcus habet manes, spiritus astra petit."

OSTENDE, Oct., 1886

FOOTNOTES:

1. See charge and answer, in *Theosophist*, August, 1882. ([return to text](#))
2. The cycle of existence during the manvantatra — period before and after the beginning and completion of which every such "monad" is absorbed and reabsorbed in the ONE soul, *anima mundi*. ([return to text](#))
3. Hades has surely never been meant for *Hell*. It was always the abode of the sorrowing *shadows* of astral bodies of the dead personalities. Western readers should remember Kama-loka is not Karma-loka, for Kama means *desire*, and Karma does not. ([return to text](#))
4. Had this word "immediate" been put at the time of publishing *Isis* between the two words "no" and "reincarnation" there would have been less room for dispute and controversy. ([return to text](#))

5. By "sphere above," of course "Devachan" was meant. ([return to text](#))

6. The reader must bear in mind that the esoteric teaching maintains that save in cases of wickedness when man's nature attains the acme of Evil, and human terrestrial sin reaches *Satanic* universal character, so to say *as some Sorcerers* do — there is no punishment for the majority of mankind after death. The law of retribution as *Karma*, waits man at the threshold of his new incarnation. Man is at best a wretched tool of evil, unceasingly forming new causes and circumstances. He is not always (if ever) responsible. Hence a period of rest and bliss in Devachan, with an utter temporary oblivion of all the miseries and sorrows of life. *Avitchi* is a *spiritual* state of the greatest misery and is only in store for those who have devoted *consciously* their lives to doing injury to others and have thus reached its highest spirituality of EVIL. ([return to text](#))

7. Says Apuleius: "The soul is born in this world upon leaving the soul of the world (*anima mundi*) in which her existence precedes the one we all know (on earth). Thus, the Gods who consider her proceedings in all the phases of various existences and as a whole, punish her sometimes for sins committed during an *anterior* life. *She dies* when she separates herself from a body in which she crossed this life as in a frail bark. And this is, if I mistake not, the secret meaning of the tumulary inscription, so simple for the initiate: "*To the Gods manes who lived.*" But this kind of death does not annihilate the soul, it only transforms (one portion of it) it into a *lemure*. "*Lemures*" are the *manes* or ghosts, which we know under the name *lares*. When they keep away and *show us a beneficent protection*, we honour in them the protecting divinities of the family hearth: but if their crimes sentence them to err, we call them *larvae*. They become a plague for the wicked, and the vain terror of the good." ("Du Dieu do Socrate" Apul. class,

pp., 143-145.) ([return to text](#))

8. "The cause of reincarnation is ignorance" — therefore there is "reincarnation" once the writer explained the causes of it. ([return to text](#))

9. A proof how our theosophical teachings have taken root in every class of Society and even in English literature may be seen by reading Mr. Norman Pearson's article "Before Birth" in the "Nineteenth Century" for August, 1886. Therein, theosophical ideas and teachings are speculated upon without acknowledgment or the smallest reference to theosophy, and among others, we see with regard to the author's theories on the *Ego* the following: "How much of the *individual personality* is supposed to go to heaven or hell? Does the whole of the mental equipment, good and bad, noble qualities and unholy passions, follow the soul to its hereafter? Surely not. But if not, and something has to be stripped off, how and when are we to draw the line? If, on the other hand, the Soul is something distinct from all our mental equipment, except the sense of self, are we not confronted by the incomprehensible notion of a personality without any attributes."

To this query the author answers as any true theosophist would: "The difficulties of the question really spring from a misconception of the true nature of these attributes. The components of our mental equipment — appetites, aversions, feelings, tastes and qualities generally — are not absolute but relative existences. Hunger and thirst for instance are states of consciousness which arise in response to the stimuli of physical necessities. They are not inherent elements of the soul and *will disappear* or become modified, etc.," (pp. 356 and 357). In other words the theosophical doctrine is adopted, Atma and Buddhi having culled off the *Manas* the aroma of the personality or

human soul — go into Devachan; While the lower principles the astral *simulacrum* or false personality void of its Divine monad or spirit will remain in the *Kamaloka* — the "Summerland." ([return to text](#))

10. *Nirmanakaya* is the name given to the astral forms (*in their completeness*) of adepts, who have progressed too high on the path of *knowledge* and absolute truth, to go into the state of Devachan; and have on the other hand, deliberately refused the bliss of nirvana, in order to help Humanity by invisibly guiding and helping on the same path of progress elect men. But these astrals are not empty shells, but complete monads made up of the 3d, 4th, 5th, 6th, and 7th principles. There is another order of *nirmanakaya*, however, of which much will be said in the *Secret Doctrine*. — H. P. B. ([return to text](#))

11. Placing these parallel with the division in esoteric teaching we see that (1) *Osiris* is Atma; (2) *Sa* is Buddhi; (3) *Akh* is Manas; (4) *Khou* is Kama-rupa, the seat of terrestrial desires. (5) *Khaba* is Lingha Sarira; (6) *Kha* is Pranatma (vital principle); (7) *Sah*, is mummy or body. ([return to text](#))

12. Because they drove the enemies away. ([return to text](#))

13. From *manus* — "good," an *antiphrasis*, as Festus explains. ([return to text](#))

14. Page 12. Vol I. of "*Isis Unveiled*" belief in reincarnation is asserted from the very beginning, as forming part and parcel of universal beliefs. "Metempsychosis" (or transmigration of souls) and reincarnation being after all the same thing. ([return to text](#))

POETICAL OCCULTISM: II — *Julius*

SOME ROUGH STUDIES OF THE OCCULT LEANINGS OF THE POETS.

II.

Perhaps no passage in *Light on the Path* is more forcible than that which warns the disciple against allowing the idea of separateness from any evil thing or person to grow up within him. He is bidden to "be wary, lest too soon you fancy yourself a thing apart from the mass." The Bhagavad-Gita utters the same truth in other words by picturing man as led astray by the pride of self-sufficiency and the great danger underlying the desires and passions of the individual soul. Throughout life the student of occultism daily renews the struggle of soul against flesh, of faith against desire. This combat is finely pictured in Tennyson's *Palace of Art*. It is truly an occult palace. Four courts are made, east, west, south and north, with a squared lawn in each, and four great fountains "stream in misty folds." Here we are reminded of the Garden of Eden with its four rivers, of which Eliphas Levi says: "this description of the terrestrial paradise is resumed in the figure of a perfect pentacle. It is circular or square, since it is equally watered by four rivers disposed in a cross." The square, answering to the number four was indeed the great kabbalistic figure, representing the Trinity in Unity. Nor is the mystic circle wanting in our occult palace, for there are "cool rows of circling cloisters" about the squares, and a gilded gallery that "lent broad verge to distant lands," and "incense streaming from a golden cup," another mystic symbol, representing the passive or negative side of nature. Full of sumptuousness was this palace, built for the soul that she might dwell in sensuous luxury, remote from the

struggling world. Then the poet shows us further into the recesses of his sweet thought, and we see in the pictures with which the palace was hung, a portrayal of the various life experiences of the soul as it passes from phase to phase, from room to room of this great palace which is human life.

"Full of great rooms and small the palace stood,
All various, *each a perfect whole*
From living nature, fit for every mood
And change of my still soul.

From high estate to low the soul thus passes, from a "glimmering land" to "iron coast and angry wave;" from uplands of toil and harvest, to the "high bleak crags of sorrow, from Greece and Sicily to India or the North, until "every landscape, as fit for every mood was there, not less than truth designed," a rich panorama of re-incarnations. Amongst all these the soul moves joyful and feasting, "Lord of the senses five," communing with herself that all these are her own in the "God-like isolation which is hers."

"Then of the moral instinct would she prate,
And of the rising from the dead,
As hers by right of full-accomplished Fate,
And at the last she said:

I take possession of man's mind and deed.
I care not what the sects may brawl.
I sit as God, holding no form of creed
But contemplating all."

So three years she throve and prospered, but in the fourth year, (mark again the occult number of perfection,) a great dread came upon her, she was plagued in "the abysmal deeps of personality" with a sore despair. The moment of choice, the turning point had come, that period of which Esoteric Buddhism speaks as

occurring for the race in the fifth round but to which some exceptional personalities have forced themselves in this our fourth round. Many occultists will see their own experience mirrored in that of this tormented and lonely soul, contemplating her "palace of strength whereof the foundation stones were laid since her first memory," only to see in its dark corners, "uncertain shapes, horrible nightmares, white-eyed phantasms and hollow shades enclosing hearts of flame." Do we not seem to see all the elemental world, led on by the dread Dweller of the Threshold here confronting us? The struggle is even more powerfully depicted but the lesson is learned; the soul may retrieve herself by a lowly life: she throws aside her royal robes, and recognizing the need of mixing with her kind, begs for a "cottage in the vale."

The poet reserves for his last verse the final lesson that only when we lead others to the heights and share these with our kind, can we ourselves stand steadfast there:

"Yet pull not down my palace towers, that are
So lightly, beautifully built;
Perchance I may return with others there
When I have purged my guilt."

A footnote in the September PATH states: — "After all, the whole process of development is the process of *getting back the memory of the past*. And that too is the teaching found in pure Buddhism, etc." Sometimes we are conscious of vague callings to do a certain thing, and critically regarding ourselves, we cannot see in this life any cause. It seems the bugle note of a past life blown almost in our face: it startles us; sometimes we are overthrown. These memories affect us like the shadows of passing clouds across our path, now tangible; then fading, only a cloud. Now they start before us like phantoms, or like a person behind you as you look at a mirror, it looks over the shoulder. If they are indeed

reminiscences of other lives, although dead and past, they yet have a power. Hear what Lowell whispers in "*The Twilight*" of these mysterious moments:

"Sometimes a breath floats by me,
An odor from Dreamland sent,
Which makes the ghost seem nigh me
Of a something that came and went,
Of a life lived somewhere, I know not
In what diviner sphere.
Of mem'ries that come not and go not;
Like music once heard by an ear
That cannot forget or reclaim it;
A something so shy, it would shame it
To make it a show.
A something too vague, could I name it.
For others to know:
As though I had lived it and dreamed it,
As though I had acted and schemed it
Long ago.

And yet, could I live it over,
This Life which stirs in my brain;
Could I be both maiden and lover,
Moon and tide, bee and clover,
As I seem to have been, once again.
Could I but speak and show it.
This pleasure more sharp than pain.
Which baffles and lures me so!
The world would not lack a poet,
Such as it had
In the ages glad,
Long Ago."

Emerson, who saw further into the world of nature than any poet of our race, gives us this:

"And as through dreams in watches of the night.
So through all creatures in their form and ways,
Some mystic hint accosts the vigilant.
Not clearly voiced, but waking a new sense.
Inviting to new knowledge, *one with old.*"

The hermetic maxim, "As above so below," sends us indeed to nature for initiation, and the Gita follows up this nail with a hammer by saying: "The man, O Arjoona, who from what passeth in his own breast, whether it be pain or pleasure, beholdeth the same in others, is esteemed a supreme Yogi." Analogy, Harmony. Unity, these are the words traced over and over for us, the shining rays of the one Law. These are the thoughts in which the poets delight. Emerson speaks again with still clearer voice:

"Brother, sweeter is the Law
Than all the grace Love ever saw,
If the Law should thee forget,
More enamored serve it yet.

* * * * *

* * I found this;
That of goods I could not miss
If I fell within the line;
Once a member, all was mine:
Houses, banquets, gardens, fountains,
Fortune's delectable mountains.
But if I would walk alone
Was neither cloak nor crumb my own."

The Biblical verse: — "It is more blessed to give than to receive," is a great occult teaching. As we strengthen the muscles by exercise, so we enlarge the intelligence and the heart by constantly

dispensing our means, whether these be golden thoughts, or time, or affections, all along the line of Brotherhood. Not because of a sentiment, but because Life is made up of vibrations which our scientists, cautious as they are, admit may affect the farthest stars.

"Like warp and woof, all destinies
Are woven fast,
Linked in sympathy, like the keys
Of an organ vast.
Pluck but one thread, and the web ye mar;
Break but one of a thousand keys, and the paining jar
Through all will run."

This from Whittier reminds us of the lines on Karma in *Light on the Path*. "Remember that the threads are living, — are like electric wires, more, are like quivering nerves. How far, then, must the stain, the drag awry, be communicated." Yes, the communion of saints is a living fact. We all commune, not alone with one another; with those above us and with those below, but essentially with our time. Not one of us can escape its influence: we oppose its conclusions, deny its powers, and meanwhile it speaks through us, without our knowledge, the passwords we do not yet understand. This "dark age" is still the birth-place of spiritual development, of an awakening belief in the supernatural, or that which overshadows nature. We have had no more safe, practical sober poet than Whittier, who sweetly sings the life of every day, when he is not stirred by the fret of the times, to Freedom's larger issues. Yet hear him describing the power of a "wizard:"

All the subtle spirits hiding
Under earth or wave; abiding
In the caverned rock, or riding
Misty clouds, or morning breeze.

Every dark intelligence,
Secret soul, and influence
Of all things, which outward sense
Feels, or hears, or sees, —
These the wizard's skill confessed.—"

Is not here an "outward sense" of Professor Denton's discoveries of the "soul of things?" But hear further the poet's confession of faith in the occult power of will:

"Not untrue that tale of old!
Now as then, the wise and bold
All the powers of nature hold,
Subject to their kingly will.

* * * * *

Still to such, life's elements,
With their sterner laws dispense,
*And the chain of consequence
Broken in their pathway lies.*
To his aid the strong reverses,
Hidden powers and giant forces,
And the high stars in their courses,
Mingle in his strife."

The italicized lines are almost an echo of the words of an Adept when speaking of the possibility for the disciple, of an ultimate escape from the laws of Karma, which give him the right to demand the secrets of nature. "He obtains this right by having escaped from the limits of nature, and by having freed himself from the rules which govern human life." So does Whittier's initiate. For every one of us there looms a danger in our being prone to mistake desire for will. The paradox of Levi is sound and true: "The will obtains all that it does not desire." Meditation in this direction will reveal some deep and useful truths to the

practical occultist.

But to return to our poets. There are many butterfly hints to be found fluttering through their lines. Time has spared us this one from Marvel:

"At some fruit-tree's mossy root.
Casting the body's vest aside
My soul into the bows does glide;
There, like a bird, its sits and sings."

And Matthew Arnold, turned dreamer for the nonce, has netted us one, more meaty than diaphanous, in which we find hints of periodic Devachanic sleep, between every period of earth struggle, of man's threefold nature which serves to hide the memory of his other lives, and a touch of Karma as well:

"The Guide of our dark steps a triple veil
Betwixt our senses and our sorrow keeps;
Hath sown with cloudless passages the tale
Of grief, and eased us with a thousand sleeps."

It would sometimes seem, as in the above quotation, that the poet himself was scarcely conscious of the full bearing of what he wrote, as if that dim something from another life of which Lowell spoke, had brushed him with its wing unawares. Often the higher Self speaks out from a man's work, to other men whose consciousness has a higher development than his own, while it has not as yet revealed itself to him. How many men tremble thus on the borders of the unseen. Let us beware whom we set down as remote from our communion, "for in an instant a veil may fall down from his spirit, and he will be far ahead of us all." There is an occult verse from Goethe which has been quoted by Tyndall in one of those sad and baffled paragraphs which darkle through the works of our scientists, shadowy witnesses that these

distinguished materialists and physicists are often nearer our path than they or we suspect. Through such they seem to call for deliverance. We give the verse in its setting, leaving Tyndall's prose to point its poetic meaning.

"As regards knowledge, physical science is polar. In one sense it knows, or is destined to know everything. In another sense it knows nothing. Science understands much of this intermediate phase of things that we call nature, of which it is the product; but science knows nothing of the origin or destiny of nature. Who or what made the sun, and gave his rays their alleged power? Who or what made and bestowed upon the ultimate particles of matter their wondrous power of varied interaction? Science does not know: the mystery, though pushed back, remains unaltered. To many of us who feel that there are more things in heaven and earth than are dreamt of in the present philosophy of science, but who have been also taught by baffled efforts, how vain is the attempt to grapple with the Inscrutable, the ultimate frame of mind is that of Goethe:"

 "Who dares to name His name,
 Or belief in him proclaim,
 Veiled in mystery as He is, the All-enfolder?
 Gleams across the mind His light,
 Feels the lifted soul His might;
 Dare it then deny His reign, the All-upholder?"

The Path

HINDU SYMBOLISM: II — *Isaac Myer*

This figure represents Brahma-Maya or Mahat-Maya, Brahma Viraj, or the great Illusion.

The androgene or male-female, the Great Appearance, the first revelation of the Being or Brahman (neuter), under the form of the double-sexed first emanation. The neuter, became male and female, by separation into the male, positive, forming the spiritual — the entities or the noumena, and his sakti or female, the negative, or plastic, matter, the illusionary or phenomenal existence. The sakti, is his developing energy, force or potentiality. This symbol, the divine type of the first male and female, which can be compared with the terrestrial Adam before the final separation of Eve, is really in consonance with this Adam's perfect ideal, the Adam Kadmon or Heavenly Adam of the Kabbalah. The Brahma-half is on the right side, the good side, man's, the Maya-half is on the left, the evil side, the woman's. So according to the Hebrew sacred writings, through Eve the woman, evil was brought into the world. Compare with this the Greek myth of Pandora. Issuing from the linga-yoni is the pearl chain, or connected circle of the existences, looked upon as united

atoms, and the symbol of all the existing. It is held up by the hand on the male side.

Brahman (neuter), appears here as manifested in the male in union with the female sakti, of the preformatory imagination, as the nine creative monarch and Pearl King, richly decorated with the circles of the soul-monads and atoms. On his head is the world egg cap. The veil of the existences, upon which are woven the ideas or models of the to-be-emanated existences, flows from the linga-yoni to the highest part of the head and thence down the right side. He as the male, has a tendency to twist himself upon himself and his face bears the stamp of deep meditation. The aureole of fire is on the male side and from it scintillate sparks upon the veil of Maya. On the Maya side, the attitude is that of joy or dancing; the hand raised as if in play, holds up the veil, bells are hanging on her robe and singularly the Egyptian hieroglyphic for the water of life is shown; while the bust is developed. Portrayed upon the veil are the prototypes of the creatures. Compare the symbolism of the girdle of Aphrodite and that of Venus.

As the double spouse of Brahman (neuter) considered apart and in opposition to It. The Brahma-Maya is the life in nature, of which, Brahman (neuter) is the soul. The Brahma-Maya is that blind energy and force, potential and powerful, and eternally fecund, which is incessantly producing under forms which are without cessation renewed; and which is adored in India to-day, as the Great Mother, the Universal Mother, in other words all nature deified. Maya is the mother of Love or Desire, the first principle or affinity of all affection, creation, matter. She is even matter itself, but the primitive subtile matter co-existing with God (Brahman, neuter) from all eternity, contained in It, and symbolized by the three colors, red, white, black; the three qualities or powers of creation, preservation and destruction,

consequently the Trimurti, and also the three *gunas* (qualities), Truth, Action, and Indifference, of the Bhagavad Gita. (1) It is Maya, who through the attraction of her beauty, causes the Most High, from the bosom of Its ineffable profundity, forgetting Itself, to unite Itself, in the intoxication of desire with that divine enchantress.

The mysterious veil, which she had woven with her hands, received entirely from both, and the thought of the Eternal Almighty became fecundated, and fell into Time. The innumerable forms of the creatures, represent the perfect ideals woven upon the magic tissue, the woven warp and woof of all existence, with which veil Maya (2) envelops her spouse and causes the recurrence of the gift of life.

FOOTNOTES:

1. These three qualities are explained by Krishna in the *Bhagavadgita*, as *Satwa* good or inactive being purely spiritual; *Rajas* bad and active; and *Tamas* inactive or indifferent and bad. They exist in every human mind and are mingled in greater or less proportions at all times, according to the individual and also according to his varying circumstances. His teaching in regard to the *Tamo guna* is the same as that taught in the Christian Bible, for he says that for the indifferent man there is no salvation — he is as it were "ejected like a broken cloud;" and in I James v, 6, 7, the doubting man is declared incapable of obtaining anything, while in Rev. iii, 16, the Laodiceans are accused of being neither cold nor hot, that is of being indifferent, and they are condemned to be "spewed out of the mouth," which is the same as the fate described as awaiting those in whom indifference predominates, Krishna declaring that they become more and more deluded at each succeeding generation until at last they reach the lowest round of the ladder in the shape of primordial matter. The

difference between the two schools is, that Krishna's allows the doctrines of Reincarnation and Karma, while the modern Christians, blind to their own Bible, reject these supremely important laws, or rather ignore them as yet. [Ed.] ([return to text](#))

2. *Maya* is the Sanskrit for *illusion*. [Ed.] ([return to text](#))

THE THEOSOPHICAL MAHATMAS — *H. P. Blavatsky*

It is with sincere and profound regret — though with no surprise, prepared as I am for years for such declarations — that I have read in the Rochester *Occult Word*, edited by Mrs. J. Cables, the devoted president of the T. S. of that place, her joint editorial with Mr. W. T. Brown. This sudden revulsion of feeling is perhaps quite natural in the lady, for she has never had the opportunities given her as Mr. Brown has; and her feeling when she writes that after "a great desire * * to be put into communication with the Theosophical Mahatmas we (they) have come to the conclusion that it is useless to strain the psychical eyes toward the Himalayas * * " is undeniably shared by many theosophists. Whether the complaints are justified, and also whether it is the "Mahatmas" or theosophists themselves who are to blame for it is a question that remains to be settled. It has been a pending case for several years and will have to be now decided, as the two complainants declare over their signatures that "we (they) need not run after Oriental Mystics, *who deny their ability to help us.*" The last sentence, in italics, has to be seriously examined. I ask the privilege to make a few remarks thereon.

To begin with, the tone of the whole article is that of a true *manifesto*. Condensed and weeded of its exuberance of Biblical expressions it comes to this paraphractical declaration; "We have knocked at their door, and they have not answered us; we have prayed for bread, they have denied us even a stone." The charge is quite serious; nevertheless, that it is neither just nor fair — is what I propose to show.

As I was the first in the United States to bring the existence of our Masters into publicity; and, having exposed the holy names of

two members of a Brotherhood hitherto unknown to Europe and America, (save to a few mystics and Initiates of every age) yet sacred and revered throughout the East, and especially India, causing vulgar speculation and curiosity to grow around those blessed names, and finally leading to a public rebuke, I believe it my duty to contradict the fitness of the latter by explaining the whole situation, as I feel myself the chief culprit. It may do good to some, perchance, and will interest some others.

Let no one think withal, that I come out as a champion or a defender of those who most assuredly need no defense. What I intend, is to present simple *facts*, and let after this the situation be judged on its own merits. To the plain statement of our brothers and sisters that they have been "living on husks," "hunting after strange gods" without receiving admittance, I would ask in my turn, as plainly: "Are you sure of having knocked at the right door? Do you feel certain that you have not lost your way by *stopping so often on your journey at strange doors, behind which lie in wait the fiercest enemies of those you were searching for?*" Our MASTERS are not "a jealous god;" they are simply holy mortals, nevertheless, however, higher than any in this world, morally, intellectually and spiritually. However holy and advanced in the science of the Mysteries — they are still men, members of a Brotherhood, who are the first in it to show themselves subservient to its time-honored laws and rules. And one of the first rules in it demands that those who start on their journey *Eastward*, as candidates to the notice and favors of those who are the custodians of those Mysteries, should proceed by the straight road, without stopping on every sideway and path, seeking to join other "Masters" and professors often of the Left-Hand Science, that they should have confidence and show trust and patience, besides several other conditions to fulfill. Failing in all of this from first to last, what right has any man or woman to complain

of the liability of the Masters to help them?

Truly "'The Dwellers of the threshold' are within!"

Once that a theosophist would become a candidate for either *chelaship* or favours, he must *be* aware of the mutual pledge, tacitly, if not formally offered and accepted between the two parties, and, *that such a pledge is sacred*. It is a bond of seven years of probation. If during that time, notwithstanding the many human shortcomings and mistakes of the candidate (save two which it is needless to specify in print) he remains throughout every temptation *true to the chosen Master*, or Masters, (in the case of *lay* candidates), and as faithful to the Society founded at their wish and under their orders, then the theosophist will be initiated into ——— thenceforward allowed to communicate with his *guru* unreservedly, all his failings, save this one, as specified, may be overlooked: they belong to his future *Karma*, but are left for the present, to the discretion and judgment of the Master. He alone has the power of judging whether even during those long seven years the *chela* will be favoured regardless of his mistakes and sins, with occasional communications with, and from the guru. The latter thoroughly posted as to the causes and motives that led the candidate into sins of omission and commission is the only one to judge of the advisability or inadvisability of bestowing encouragement; as he alone is entitled to it, seeing that he is himself under the inexorable law of Karma, which no one from the Zulu savage up to the highest archangel can avoid — and that he has to assume the great responsibility of the causes created by himself.

Thus, the chief and the only indispensable condition required in the candidate or chela on probation, is simply unswerving fidelity to the chosen Master and his purposes. This is a condition *sine qua non*; not as I have said, on account of any jealous feeling, but

simply because *the magnetic rapport between the two once broken, it becomes at each time doubly difficult to re-establish it again*; and that it is neither just nor fair, that the Masters should strain their powers for those whose future course and final desertion they very often can plainly foresee. Yet, how many of those, who, expecting as I would call it "favours by anticipation," and being disappointed, instead of humbly repeating *mea culpa*, tax the Masters with selfishness and injustice. They will deliberately break the thread of connection ten times in one year, and yet expect each time to be taken back on the old lines! I know of one theosophist — let him be nameless though it is hoped he will recognize himself — a quiet, intelligent young gentleman, a mystic by nature, who, in his ill advised enthusiasm and impatience, changed *Masters* and his ideas about half a dozen times in less than three years. First he offered himself, was accepted on probation and took the vow of chelaship; about a year later, he suddenly got the idea of getting married, though he had several proofs of the corporeal presence of his Master, and had several favours bestowed upon him. Projects of marriage failing, he sought "Masters" under other climes, and became an enthusiastic Rosicrucian; then he returned to theosophy as a Christian mystic; then again sought to enliven his austerities with a wife; then gave up the idea and turned a spiritualist. And now having applied once more "to be taken back as a chela" (I have his letter) and his Master remaining silent — he renounced him altogether, to seek in the words of the above manifesto — his old "Essenian Master and *to test the spirits* in his name."

The able and respected editor of the "Occult Word" and her Secretary are right, and have chosen the only true path in which with a very small dose of blind faith, they are sure to encounter no deceptions or disappointments. "It is pleasant for some of us," they say, "to obey the call of the 'Man of Sorrows' who will not

turn any away, because they are unworthy or have not scored up a certain percentage of personal merit." How *do* they know? unless they accept the cynically awful and pernicious dogma of the Protestant Church, that teaches the forgiveness of the blackest crime, provided the murderer *believes sincerely* that the blood of his "Redeemer" has saved him at the last hour — what is it but *blind* philosophical faith? Emotionalism is *not* philosophy; and Buddha devoted his long self sacrificing life to tear people away precisely from that *evil breeding* superstition. Why speak of Buddha then, in the same breath? The doctrine of salvation by *personal* merit, and *self* forgetfulness is the corner-stone of the teaching of the Lord Buddha. Both the writers may have and very likely they did — "hunt after *strange* gods; " but these *were not* our MASTERS. They have "denied Him thrice" and now propose "with bleeding feet and prostrate spirit" to "pray that He (Jesus) may take us (them) once more under his wing," etc. The "Nazarene Master" is sure to oblige them so far. Still they will be living on "*husks*" *plus* "blind faith." But in this they are the best judges, and no one has a right to meddle with their private beliefs in our Society: and heaven grant that they should not in their fresh disappointment turn our bitterest enemies one day.

Yet, to those Theosophists, who are displeased with the Society in general, no one has ever made to you any rash promises; least of all, has either the Society or its founders ever offered their "Masters" as a *chromo-premium* to the best behaved. For years every new member has been told that *he was promised nothing*, but had everything to expect only from his own personal merit. The theosophist is left free and untrammelled in his actions. Whenever displeased — *alia, tentanda via est* — no harm in trying elsewhere; unless, indeed one has offered himself and is decided to win the Masters' favors. To such especially, I now address myself and ask: Have you fulfilled *your* obligations and pledges?

Have you, who would fain lay all the blame on the Society and the Masters — the latter the embodiment of charity, tolerance, justice and universal love — have you *led the life* requisite, and the conditions required from one who becomes a candidate? Let him who feels in his heart and conscience that he has, — that he has never once failed seriously, never doubted his Master's wisdom, never sought *other* Master or Masters in his impatience to become an Occultist with powers; and that he has never betrayed his theosophical duty in thought or deed, — let him, I say, rise and *protest*. He can do so fearlessly: there is no penalty attached to it, and he will not even receive a reproach, let alone be excluded from the Society — the broadest and most liberal in its views, the most Catholic of all the Societies known or unknown. I am afraid my invitation will remain unanswered. During the eleven years of the existence of the Theosophical Society I have known, out of the seventy-two regularly accepted chelas on probation and the hundreds of *lay* candidates — only *three* who have not hitherto failed, and *one only* who had a full success. No one forces any one into chelaship; no promises are uttered, none except the mutual pledge between Master and the would-be-chela. Verily, Verily, many are the called but few are chosen — or rather few who have the patience of going to the bitter end, if bitter we can call simple perseverance and singleness of purpose. And what about the Society, in general, outside of India. Who among the many thousands of members does *lead the life*? Shall any one say because he is a strict vegetarian — *elephants and cows are that* — or happens to lead a celibate life, after a stormy youth in the opposite direction; or because he studies the *Bhagavat-Gita* or the "Yoga philosophy" *upside down*, that he is a theosophist *according to the Master's hearts*? As it is not the cowl that makes the monk, so, no long hair with a poetical vacancy on the brow are sufficient to make of one a faithful follower of *divine* Wisdom. Look around you, and behold our UNIVERSAL Brotherhood so called! The Society

founded to remedy the glaring evils of Christianity, to shun bigotry and intolerance, *cant* and superstition and to cultivate real universal love extending even to the dumb brute, what has it become in Europe and America in these eleven years of trial? In one thing only we have succeeded to be considered higher than our Christian Brothers, who, according to Lawrence Oliphant's graphic expression "Kill one another for Brotherhood's sake and fight as devils for the love of God" — and this is that we have made away *with every dogma* and are now justly and wisely trying to make away with the last vestige of even nominal authority. But in every other respect we are as bad as they are: backbiting, slander, uncharitableness, criticism, incessant war-cry and ding of mutual rebukes that Christian Hell itself might be proud of! And all this, I suppose is the Masters' fault: they will not help those who help others on the way of salvation and liberation from selfishness — with kicks and scandals? Truly *we are* an example to the world, and fit companions for the holy ascetics of the snowy Range!

And now a few words more before I close. I will be asked: "And who are you to find fault with us? Are you, who claim nevertheless, communion with the Masters and receive daily favors from Them; Are you so holy, faultless, and so worthy?" To this I answer: I AM NOT. Imperfect and faulty is my nature; many and glaring are my shortcomings — and for this my Karma is heavier than that of any other Theosophist. *It is* — and must be so — since for so many years I stand set in the pillory, a target for my enemies and some friends also. Yet I accept the *trial* cheerfully. Why? Because I know that I have, all my faults notwithstanding, Master's protection extended over me. And if I have it, the reason for it is simply this: for thirty-five years and more, ever since 1851 that I saw my Master *bodily* and personally for the first time, *I have never once denied or even doubted Him,*

not even in thought. Never a reproach or a murmur against Him has escaped my lips, or entered even my brain for one instant under the heaviest trials. From the first I knew what I had to expect, for I was told that, which I have never ceased repeating to others: as soon as one steps on the Path leading to the *Ashrum* of the blessed Masters — the last and only custodians of primitive Wisdom and Truth — his Karma, instead of having to be distributed throughout his long life, falls upon him in a block and crushes him with its whole weight. He who believes in what he professes and in his Master, will stand it and come out of the trial victorious; he *who doubts*, the coward who fears to receive his just dues and tries to avoid justice being done — FAILS. He will not escape Karma just the same, but he will only lose that for which he has risked its untimely visits. This is why having been so constantly, so mercilessly slashed by my Karma using my enemies as unconscious weapons, that I have stood it all. I felt sure that Master would not permit that I should perish; that he would always appear at the *eleventh* hour — *and so he did*. Three times I was saved from death by Him, the last time almost against my will; when I went again into the cold, wicked world out of love for Him who has taught me what I know and made me what I am. Therefore, I do His work and bidding, and this is what has given me the lion's strength to support shocks — physical and mental, one of which would have killed any theosophist who would go on doubling of the mighty protection. Unswerving devotion to Him who embodies the duty traced for me, and belief in the Wisdom — collectively, of that grand, mysterious, yet actual Brotherhood of holy men — is my only merit, and the cause of my success in Occult philosophy. And now repeating after the *Paraguru* — my Master's MASTER — the words He had sent as a message to those who wanted to make of the Society a "miracle club" instead of a Brotherhood of Peace, Love and mutual assistance — "Perish rather, the Theosophical Society and its hapless Founders," I say

perish their twelve years' labour and their very lives rather than that I should see what I do today: theosophists, outvying political "rings" in their search for personal power and authority; theosophists slandering and criticizing each other as two rival Christian sects might do; finally theosophists refusing to *lead the life* and then criticizing and throwing slurs on the grandest and noblest of men, because tied by their wise laws — hoary with age and based on an experience of human nature milleniums old — those Masters refuse to interfere with Karma and to play second fiddle to every theosophist who calls upon Them and whether he deserves it or not.

Unless radical reforms in our American and European Societies are speedily resorted to — I fear that before long there will remain but one centre of Theosophical Societies and Theosophy in the whole world — namely, in India; on that country I call all the blessings of my heart. All my love and aspirations belong to my beloved brothers, the Sons of old Aryavarta — the Motherland of my MASTER.

The Path

LINES FROM LOWER LEVELS — *Jasper Niemand*

Many will turn from this heading. Whether they really live upon the upper levels or only imagine such to be their dwellings, these words are probably mute to them. A laggard in the great race, one who has only just rounded the starting buoy in stress of weather, here signals to his unseen companions amid heavy seas. If a score of blind men, turned loose to beat the city's by-ways, should meet and compare mischances, some light would presently dawn among them. We are not isolated in spiritual experience. Though Falsehood wears myriad masks, when Truth looks in, she turns the same face on all.

It is of the beginning of the Way that I speak. Confusions and perplexities beset us. Most of these are of our own conjuring. The insidious canker of Doubt is first, is worst of all. Better stop right where you are for a lifetime than advance with this moral leprosy unexterminated. It will spread through future existences until it has eaten the heart to the core. Now it is in our power. Wrestle boldly with every doubt until you have converted it to a certainty; thus you force it to bless you in departing, as Jacob did the Angel. Why should we doubt? The day on which I first heard of the Wisdom-Religion is for me set apart like a potent jewel in the crest of Time. My thought salutes its messengers with the grand old words, — "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth Peace." The Peace of this religion is the proof absolute of its Wisdom. Our vitality is exhausted with the life struggle; it seems a dead pull against the current. Reason tells us we ought to be able to move with the stream. Man has a false idea of his own requirements; this is why possession satiates all. We are ignorant that the desire for Unity lies hidden in the deeps of every human heart. This is the Truth at

the bottom of the well; it is the basic need of all mankind. Recognise it, and you may sweep unwearied along the resistless current of evolutionary progress. We begin to realize the inability of existing creeds to sound and explain our Being. Every one of us craves a belief which shall not be a formula, but Life itself, which shall develop and complete the constituency of lives.

Our religions violate the golden rule of Architecture, — "Ornament construction; do not construct ornamentation." Their slight framework is florid with theological detail, garlanded with the varying ideals of centuries. Not so does the Master Builder plan. Yet the keystone of each arch is the Truth manifest in the Past, the Truth which still bears witness to Divinity to the new Age.

When men meet their belief in every department of life, when it assists them on every plane, so that they eat better, sleep better, love better, create better and die better by it, then will it be a vital law to them, not a garment to be laid aside on work days. Theosophy does all this. It informs every deed, makes of each fact a new revelation, and testifies to more religion in one chapter of Natural Philosophy, than in all the sermons of next Sunday. Study these grand similitudes and we find how single is Truth, so that the three great laws of Motion are also those of Emotion, and Newton spoke for my heart, as well as for the universe. All life is thus related; if you doubt the validity of theory or action, test them by this law of correspondence.

Do I revolt from the rule of gentle procedure in the teeth of wrath or abuse. I recall the axiom of mechanics, — "Motion seeks the line of least resistance," — and my moral force proves itself perpetual motion by its avoidances of friction. *Truth is the same in every part.* You shall pass every beam of thought through this prism; if it is a pure ray each component will have its distinct

value on its own plane, and all will blend again to Light.

Sometimes we are chilled as by a sense of isolation from the main body of our kind. This is imaginary; you shall not think we are few, or stand alone. Even now the thoughtful listener hears the soughing of the rising flood of Public Opinion. This was the mainstay of Science in her late tilt with the Church. The People, weary of barren Theology demanded in facts, in laws, the manifestation of the Divine. Now it begins to call Science to account for her limitations. Do we doubt the bubbling interest in Psychology? We should scan our newspapers, novels, magazines, boudoir gossip even, to feel the pulse of the general tide. Science yields so far to the pressure as to explain why she cannot or does not make thorough and sustained psychical investigations, and with a blunt, — "so much the worse for you," the public turns expectantly to the broader or younger men who better gauge the tendency of our time.

This tendency is to cooperation, to unification. Science and Religion are one, are truth, and blindness is the portion of those who dismember her kingdom. A pertinent case is that of a physician well known to New York clinics who used his mesmeric power in putting patients to sleep in the presence of his students and maintaining their complete unconsciousness during painful operations, thus carried to successful conclusions without the dangerous drawback of anesthetics. Less gifted confreres frowned down the "irregularity." This is a thinking Age, and men are losing confidence in the judgment of scientists whose biased attitude would bar them from jury service in the pettiest court of the land.

Again there are those who are tried by the mistakes, the treachery, or the public misunderstanding of other adherents of Theosophy. What does it matter? The world swung on while

Galileo recanted, and though a disciple betrayed his Master, the Christian world still kneels. Our noblest opponents are often unconscious Theosophists, judging them by their fervid search for Truth. When *their hour* strikes, they will find her; meanwhile Wisdom needs no converts. Man passes; *Truth is*, and needs no concern of ours. Do not think either that the Wisdom-Religion is only for the strong or the intellectual; it is for all. Food is meant to sustain life, and Love to develop it, but excess in either may kill. So those whose nature is morbid, exaggerate the aspect of Truth and go mad of their own phantasms. Every Science, every Art, every Religion has its list of these moral suicides and those who confront you with it are like the old nurses who scare children from the jam closet with "bogies."

I said that we breed our own perplexities. Take the first day of the new life, when with fledgeling resolves aflutter we come glowing and resolute down the stairs. We had ordered a spartan meal which Love has spared us. Frowning, we order the dainties away and sit reflecting on the encumbrances of earthly affection; wounded, it leaves our side. Our plain food comes; it is ill cooked and the retarded servant has a scowl which we resent: the household jangles and jars. The meal has not refreshed us, and the lack of the soothing but condemned cigar brings our irritability to a head. We hasten to lock ourselves into the study for meditation; but a bird sings in at the window, and Love's voice pleads at the door. We shut out the song and chide the syren. Why is our heart so heavy now when bent on eternal things? Knocking! We open with a martyr face. A friend is there, a dogged churchman; his salvation is in our hands! He chats of the weather, our club, state politics. We broach a higher theme, we denounce, cut and thrust, argue. Surprised he listens in courteous silence, and as he leaves us we remember too late that he too cherishes his religion, we curse the follies of the wretched day

and call Theosophy for the nonce "impracticable." Brothers! the man of creeds who can hear our dogmatism with self control is perhaps nearer the Essential than we are. He who plunges into restraints which unhinge and irritate him is no better than the man who loses his reason through drink. Both lack moderation, the result is the same, and we have only to do with results. Devote your thoughts to ascetic meals, and no Lucullus of the town is more prostrate before his viands than yourself. Moderation declares the sage. Accept all that comes with equal content, the thought held high above all. When the daily functions are fulfilled I have done nothing; the soul is no participant in these. Advance towards the Eternal and the Transient will imperceptibly drop away from you. No shirking of the duties of our position avails. *Comrades! The battle field is there where the long roll finds you standing.* Your past acts enlisted you under just that flag; fight it out there! The universal charge is carried through the vigor of individuals, each acting from his own headcentre and not from that of another. "The duties of a man's own particular calling, although not free from faults, is far preferable to the duty of another, let it be ever so well pursued." (1) On this plane we are a body militant; on the next plane we shall transform this activity, but as long as individuality exists, it would seem that each must move in an orbit of his own. There is as much egotism in snatching at the burden not meant for us, as in refusing that which is. Do all necessary acts promptly and with your best ability, abandoning at once all care for the result. Do you say this is not Theosophy? You mistake. True Theosophy is everything that elevates or aids mankind, were it but the singing of a ballad to lighten another's toil. "It is not that you must rush madly or boldly out *to do, to do*. Do what you find to do. Desire ardently to do it, and even when you shall not have succeeded in carrying out anything but some small duties, some words of warning, your strong desire will strike like Vulcan upon other hearts in the

world, and suddenly you will find that done which you had longed to be the doer of. Then rejoice, that another had been so fortunate as to make such a meritorious Karma. Thus like the rivers running into the unswelling passive ocean, will your desires enter into your heart." Prop this concern for ephemera and forms; heed essentials only, Get to the centre of every vital fact and live there as at the heart of an opal, darting forth prismatic rays of Love and Faith upon all created things.

If we set out upon a journey to lands unknown, we should observe the inhabitants, gathering the spirit of their laws from their manners, ourselves courteous yet cautious with all. So in this passage to the unseen, that which is essential is the spirit of things. What affair is it of mine if this man glows with gratified desire, or that woman shines in undue laces and coquetries? Do I know the principles of their constitution? Can I vouch that these errors are not the mere husk of habit, which dropping-off may reveal a larger kernel of Virtue than I possess? Nor will I hastily become the spiritual bondsman of him who stands above me. He has not exhausted the sum of Truth; tomorrow I shall find a fraction of my own. All these finical distinctions are not of the Eternal. The substratum of all things is Wisdom. The twist of Failure has its strands of silver. The pratings of the fool dissuade men from folly. I have never done anything of myself: a clarion impulse commands my best deeds; high thoughts radiate to me from I know not what sphere. Ask yourself before friend or foe, — "How does the spirit manifest in him?" For above and below it manifests equally. The undeviating brute, true to its every principle, has a volume of teaching for us. We cannot read until we know the alphabet and Nature holds our primer daily before us. Do not hawk Truth about to the careless crowd. Not because you belittle it, (that is impossible,) nor yet yourself, (that is immaterial,) but because you must hold fast in silence to all that

you possess to support you in the tests of the future. Nor is Truth a nostrum to be forced down the unready throat. Thereby you disgust a man with Truth; who covets that responsibility? Ah, gentle hearts and virile minds! Are you wounded by the wantonness of those you long to save? These errors are perhaps their appointed teachers in your stead. Error is not exempt from the law! Can Love check a cyclone in mid career, or does Reason outrun the whirlwind? Desire has a lustier voice than yours. Let these errant ones wisely alone. Presently when success is at an ebb, or the complacent Ego is stung by pride or pain, they will hear the low plaint of the soul. Then, their state related to yours, they will turn to you as the heliotrope to the sun. Trust to the law of spiritual affinity. He for whom you have a thought will be attracted to you for it; he will in some way ask it of you. Distrust the intellect in these replies. Only the dwellers of the upper levels draw their thought crystal pure from the Fountain-head of Mind. Below, sympathy is the universal solvent; its ardent fusion welds mankind. Speak to me in our common language; it is that of the heart. You cannot so much as tie up a straying rosetree without sympathy. Try it, and the tender shoots are nipped as by a frost. Do you say that it is hard that you should not help others? Perhaps you only want to help them in your own way. The difference between loving a man for himself, and loving him for myself, is the difference between "heaven" and "hell." There is no hell but that which we create in our hearts, and selfishness is its yawning portal. Effort for Wisdom is help for all; he who thinks wisely does a deed of beneficence. Beneath generous yearnings lurks sometimes the wish that this "I," shall become influential or admired, have clients and suitors in the anteroom. Lest I deceive myself I will mutely speed my good wishes to all. Only when we have learned how to preserve a wise silence, will the first stammerings of speech come to us. Speak then from your own knowledge, simply, without trying to adorn Truth. Many of our

most valued writers are at times too transcendent, too erudite for us of the lower level. As the great orator or actor sees one face grow towards his from out the vast field of faces, and concentrating his burning purpose into that focus, sees streaming thence the homogeneous force which electrifies the throng, — so I would have each writer among you address his thought to some especial comrade within his mind, that you may drop this mantle of remoteness, and let us feel you tense and vibrant with helpfulness, pressing close to our side. The West needs a more ringing note than the mystic Orient mind. Let the spirit of your nation speak through your work and to your fellows every word will be an occult charm.

Why are we so impatient that we do not receive the accolade of accepted duty from those Royal Souls who proceed us on the Way? "They also serve who only stand and wait." (2) He who cannot wait contentedly may be sure he cannot serve. We must master the diurnal before we can overcome the spiritual. Some say that a heroic deed is easier than submission to pinpricks. We may survive Niagara when a drop of water per second on the brain is madness. Friends; the struggle for the Eternal is not one daring deed nor yet hundreds of them. It is a calm unbroken forgetfulness of the lower self for all time. Begin it on your present plane. You have within you the same guide that the Masters possess. By obeying It, they have become what they are. Hark! A voice resounds within. "Know thy true Self; it is thy guide." If the voice seems silent, it is perhaps because you ask with the mind only, which is a higher kind of curiosity. When a spiritual need cries out within you, the answer will come with a flash to the reverent listener. But in all the three worlds there is no power to save you but your own. When we have exhausted the possibilities of growth on our present plane, we rise naturally to a higher level. If here we find a Master, it is because we have come

into the region where he dwells. Better than desiring to deserve is deserving to desire. Of this be sure. All that is rightfully yours will come to you. So reads the Law.

As a mountain climber leans forward, treads zig-zag, counteracting gravity and the air's resistance, so shall you walk with care. We do not know what moral resistance we arouse, what unseen evil lurks near, what stone our passage may loosen to fall on those below. We do not know the delicate adjustment of this aerial world. Keep eyes and mind fixed on the heights above, lest the yawning abyss from which you rose, attract you. Distrust your emotions, your thoughts above all. An insidious thought, like a traitor in the fortress, tends outward to the legions of evil and would deliver you up to them. Who knows where the ripples of a hasty thought may end? We are pledged by our theosophic vow to do naught that can dishonor our Society. What more dishonoring than unjust, angered or vagrant fancies which corrupt the atmosphere of others and may breed a moral pestilence. "He that hateth his brother is a murderer." (3) Perhaps there are times when this is literally true. "If he does not love his brother whom he hath seen, how can he love God, Whom he hath not seen?" Pass this word along the line; — "Eternal vigilance is the price of safety."

You who are inclined to dispute these thoughts, do better; ignore them. They are a life experience, not meant for you who have it not, nor are you once named herein. They are true from one standpoint and for those upon the same plane. Hereafter all must alchemize virtues and vices alike. Be not discouraged at these necessary transitions; they do not convict you of radical error. Give me an unknown seed; its potentiality is a secret from me, but in faith I plant and tend it. As it waxes to the budding glories of branch and flower, and thrills with the fecund boon of fruitage, I am no whit the loser, and hidden at the root of this larger

heritage, the same seed remains life bestowing and true. Thus Knowledge is not final; it must expand and germinate or it is but a dead thing. "Veil upon veil shall lift, but there shall be veil upon veil behind." (4)

Does he who writes thus always follow his own teachings? *No!* A hundred, a thousand times, no! Deluded, he climbs by devious paths and from the very brink of attainment, falls!

"Jove strikes the Titans down. Not when they set about their mountain piling, but when one stone more would complete the work." (5)

Then with toil and pain he rises and cons the chart once more. Beloved Brothers! — and there is nowhere one so lost, so estranged, so low or so great whom this name does not call — he will have received these blows to a benign purpose, if their teachings shall roll away a single stone from your upward path.

The Path

POETICAL OCCULTISM: III — S. B. J.

SOME ROUGH STUDIES OF THE OCCULT LEANINGS OF THE POETS

Many will find in Whitman, the fullest measure of mystic truths, plainly and significantly stated, to be met with in any modern poet. For instance, a recognition of the reality of Reincarnation, and of its necessity, constantly recurs in his poems. Passages like these attest it: "Believing I shall come again upon the earth after five thousand years. Births have brought us richness and variety, and other births have brought us richness and variety." "And as to you Life, I reckon you are the leavings of many deaths, (no doubt I have died myself ten thousand times before.)" In contemplating an idiot he muses:

"And I knew for my consolation what they knew not,
I knew of the agents that emptied and broke my brother,
The same wait to clear the rubbish from the fallen
tenement,
And I shall look again in a score or two of ages,
And I shall meet the real landlord, perfect and unharmed,
every inch as good as myself."

Are not the "agents," mentioned above, the operations of Karmic law? Among the last lines of the closing poem of his volume are the following:

"I receive now again of my many translations, from my
avatars ascending, while others doubtless await me,
An unknown sphere more real than I dream'd, more direct,
darts awakening rays about me, *So long!*
Remember my words, *I may again return.*"

Neither rhyme nor verse are essential to true poetry. Even words are but its vehicle, and not the poetry itself. Poetry is that manifestation of the mind which excites the imagination and arouses in responsive minds a sense of beauty. All that which does this is poetic in quality: that which does not, which awakens no response, leaving one cold and unimpressed, is prosaic. Poetry, therefore, possesses the rhythmic quality, for beauty appeals to no sense, except through its power of producing rhythmic action upon the brain through the nerves of sight, hearing, etc. Rhythm is a product of harmonious vibration and produces the sensation of beauty by its play upon the nerves in a succession of reiterated, regular groups of impressions. All sensations of ugliness, etc., which are the causes of pain and disease, are due to the discordant impressions made by irregularity in the series of vibrations. Thus does strict mathematical law underlie all effects of beauty. All poetry is in some way rhythmic, and arouses rhythmic action.

The highest poetry is truth made manifest in the guise of beauty. Poets have often expressed in verse their feeling of the total inadequacy of words to present to others the sublimity and beauty of the thoughts which at moments occur to them. The poetic temperament is one which enables an approach to that state which some exalted men attain in perfection, and which is the ultimate destiny of the entire human race. The poet perceives fragments of the Divine thought as embodied in natural materials; he reads pages of the great book of Creation and interprets more or less clearly the significance of the symbols that exist on every hand in growing things, in things inanimate, in the waters and the heavens, and in the thoughts, sentiments, passions and emotions of men. In assuming the mental state which may be called the *poetic attitude*, he throws himself into rapport with his Higher self, his *atma*, and thus obtains a glimpse of the eternal

truth, so much of which his memory retains as accords with his personality and with the nature of his mood; of this he incorporates in poetic form that which his power of expression enables him to give. Walt Whitman characterizes this state in his lines:

"I lie abstracted and hear beautiful tales of things and the reasons of things,
They are so beautiful I nudge myself to listen,
I cannot say to any person what I hear — I cannot say it to myself — it is very wonderful!"

The more unconscious one becomes of physical surroundings the more clearly does his mind act; its operations are attended with less friction. By withdrawing his attention from bodily environment he enters upon the plane of the higher consciousness. This accounts for the greater ease with which mental work proceeds after one has been engaged in it for some little time; it absorbs his attention so that the surrounding objects and circumstances no longer distract it. In other words, the mental machinery settles down to smooth running, after overcoming the various hitches and obstructions attending the starting of the train of thought. Everyone knows how earnest devotion to any object makes him oblivious to all else. Under such conditions one, in reality, loses consciousness and is merged in the object. Self, the illusory Self, simply consists in a sense of the existence of the body and the relations borne to it by surrounding objects.

Therefore, in concentration of the mind upon the object lies the true secret of power, and the man who best knows how to do this is the most powerful among his fellows. The best work is that done when one is least conscious of material environment. This accounts for remarkable examples of work done in a

somnambulistic state when all consciousness of physical surroundings is lost, and the Self becomes so absorbed in the object that on returning to ordinary consciousness it cannot remember the process of its most perfect activity of thought. And yet people refuse to accept the truth of Reincarnation because they cannot remember, in this gross physical state, their former existences through the intervening *Devachanic* periods when their consciousness was lifted to a plane above the thralldom of matter!

Whoever knows anything of ceremonial magic, whether practically or theoretically, recognizes the necessity of rhythmic action, or the institutions of a regularly recurring set of vibrations. Many will testify to the marvels wrought by the earnest repetitions of a rhythmic formula. It seems likely that the transfer of consciousness and the performance of phenomenal feats by Adepts are wrought by their command of some formula or method which enables them instantly and perfectly to achieve the harmonious condition of mental vibration crudely acquired by novices only by elaborate processes. The logical inference may be drawn that the purpose of the rhythmic form of poetry is not only to arouse harmonious thoughts in the minds of hearers or readers, but is due to the fact that the poet, by subjecting his mind to a rhythmic flow of thought, opens it to the reception of impressions from the highest source of thought. In the words "I nudge myself to listen" the poet strikingly and graphically depicts the effort to maintain his concentration of mind as he lies abstracted when he feels his attention slipping away from the sublime mysteries which, in the greatness of their wonder, are beyond his power to realize in any thoughts he may frame. Poets are often unconscious of the full greatness of the truths they reveal after the moment of their receptive state has passed, but they, perhaps, awake to a sense of the true significance of their

words years after.

This concentration of mind is insisted on in the Hindu systems in many different ways. It is called by them *Ekkragrata* or *one-pointedness*. In the dialogues the expression is constantly used, and Krishna is said to say to Arjuna (in *Bhagavad-Gita*). "Has thou listened to me with thy mind fixed on one point?" It is to bring about such a condition that practitioners of Hatha Yoga — which in English simply means any practice tending to develop psychical powers, such as mediumship and the like — prescribe that the Yogee shall sit with his sight concentrated upon the tip of his nose. And this practice, although scarcely commendable, has a scientific basis which shows that the much belittled Aryans had a wonderful fund of knowledge. The fixing of the eyes upon the tip of the nose puts the focus about three inches from the eyeball, and that produces first, concentration, because of the effort to remain fixed, and secondly, a hypnotic state in which trance results with psychic vision and the like. They prescribed it for another reason not likely to be admitted by our science; three inches from the eyes was said by them to be the clairvoyant point.

Our poet Whitman, whether he was aware of it or not, constantly enunciated the doctrine of Karma. In "Assurances," to be found in *Leaves of Grass*, he says:

I need no assurances. I am a man who is pre-occupied of his own soul;

I do not doubt that from under the feet and beside the hands and face I am cognizant of, are now looking faces I am not cognizant of, calm and actual faces.

I do not doubt but the majesty and beauty of the world are latent in any iota of the world.

I do not doubt I am limitless, and that the universes are limitless; in vain I try to think how limitless.

I do not doubt that the orbs and the systems of orbs play their swift sports through the air on purpose, and that I shall one day be eligible to do as much as they, and more than they.

I do not doubt that temporary affairs keep on and on millions of years.

I do not doubt interiors have their interiors, and exteriors have their exteriors, and that the eyesight has another eyesight, and the hearing another hearing, and the voice another voice.

I do not doubt that the passionately-wept deaths of young men are provided for, and that the deaths of young women and the deaths of little children are provided for.

(Did you think life was so well provided for, and Death, the purport of all life, not well provided for?)

I do not doubt that wrecks at sea, no matter what the horror of them, no matter, whose wife, child, husband, father, lover, has gone down, are provided for to the minutest points.

I do not doubt that whatever can possibly happen anywhere at any time, is provided for in the inherences of things.

I do not think Life provides for all and for Time and Space, but I believe Heavenly Death provides for all.

Here he dwells upon the belief that all things are provided for. It would be error to say that he was a fatalist, just as it is a mistake to hold that the Mohammedan doctrine of "Kismet" is pure fatalism. Edwin Arnold in "Pearls of the Faith," enlarges on that pearl called *Al-Kadar*, in these words:

"When ye say *Kismet*, say it wittingly, O, true believers! under Allah's throne place is not left for those accursed three, 'Destiny,' 'Fortune,' 'Chance.' Allah alone ruleth his

children: *Kismet* ye shall deem each man's allotted portion *

* *"

And Whitman plainly states that the provision which is made for all the happenings is a provision existing "in the inherences of things," and not a fatalistic decree by an irresponsible Almighty.

He also says that he is limitless. This is the doctrine of the Upanishads. Everyone is limitless, for Ishwara, the Lord, dwells in the heart of every mortal being. Jesus also, said: "the kingdom of heaven is *within* you." Now the kingdom of heaven cannot be apart from God, so that the Nazarene herein says the same thing as the Upanishads.

Again, in the lines, "I do not doubt that interiors have their interiors, and exteriors have their exteriors, and that the eyesight has another eyesight, and the hearing another hearing, and the voice another voice," Whitman might be said to be taking the words from the mouths of those sages who in ancient India penned the Upanishads. In those it is incessantly insisted that these interiors really are the Universal Self which is "the eye of the eye and the hearing of the ear." And a knowledge of that is the key to unlock the doors of glory and praise. As it is beautifully said in Brihadaranyaka-Upanishad: (1)

"This Self is the footstep of everything, for through it one knows everything. And as one can find again by footsteps what was lost, thus he who knows this finds glory and praise."

And further, "Therefore, now, also, he who thus knows that he is Brahman (the Self) becomes all this, and even the Devas cannot prevent it, for he himself is their Self."

The Path

APOLLONIUS AND THE MAHATMAS: II — S. B.

(Concluded.)

When Apollonius asked about the wise men whom Alexander the Great was said to have conquered and then held converse with, Phraotes said that they were the Oxydraks, a war-like people who claimed Wisdom though they knew nothing of consequence; the truly wise men dwelt between the Hyphasis and Ganges. Had Alexander gone thither he could not have conquered them, even with ten thousand Achilles and thirty thousand Ajaxes. "For they fight not in battle against advancing enemies, but being holy men, beloved by God, they repulse them through aerial apparitions and lightning flashes."

When Apollonius took his departure Phraotes gave him the following significant letter to the Brahmins:

"The King Phraotes greets his teacher Iarchas and the Wise men with him. Apollonius, the wisest of men, regards you as wiser than himself, and comes to learn from you. Let him not depart without knowledge of all which you yourselves know. For thus nothing of your wisdom will be lost; since no one speaks better than he, or has a truer memory. Let him also behold the throne whereon I sat when then, Father Iarchas, gavest me my kingdom. His attendants also deserve praise for their attachment to such a man. Be thou happy. Be happy all of you."

When they came near the hill where the wise men dwelt their guide was filled with fear, for the Indians stood more in awe of these men than of their own King, and the King who ruled the land where they lived was accustomed to consult them about everything he said or did.

When near a village not a stadium from the hill, a youth approached them, blacker than any Indian, with a gleaming, moon-shaped mark between his eyebrows. He bore a golden anchor, which in India took the place of the Herald's staff. He addressed Apollonius in Greek, which did not astonish him, since all the dwellers in the village [a lamasary?] spoke that tongue but it did astonish the others to hear their master called by name; Apollonius, however, it filled with confidence as he remembered the purpose of his journey. "We have come to men truly wise," he said to Damis "for they have a fore-knowledge of things." Asking the youth what was to be done, he was told: "Those with you remain *here*; thou, however, shall come just as thou art, for so *They* command. In this *They* Apollonius recognized Pythagorean language and he followed with joy.

In one of his conversations with the Egyptian Gymnosophists, years afterwards, Apollonius thus characterized the wise men of India: "I saw the Indian Brahmins who dwell upon the earth and not upon the earth; in a strong fortress though unfortified; and, without possessions, possessing everything." The deep, interior significance of this is evident to a Theosophist. Damis, in the matter-of-fact way often customary with him, also gives these words a literal interpretation, saying that they had their bed upon the earth and strewed the ground with herbs selected by themselves; he himself had seen them floating in the air two ells above the earth; not for hocus pocus — for they despised vain striving — but in order, by thus floating with the sun, to be near and pleasing unto the god. This was what was meant by "upon the earth and not upon the earth." The strong fortress, unfortified, meant the air in which they dwelt, for although they appeared to live under the open heaven, they spread a shadow over themselves, were not wet by the rain, and were in the sunshine whenever they wished. And since they obtained everything the

moment they wished it, Apollonius rightly said that they possessed what they did not possess. "They wear their hair long, they bind a white mitra around their heads, their feet are bare. The form of their clothing resembles that of a sleeveless undergarment; the material is a wool produced by the earth of itself, white like the Pamphylian, but softer, and so fat that oil flows from it. Of this they make their sacred garments, and when another than these men seeks to gather this wool the earth will not release it. By the power of the ring and the staff which they bear every thing can be done, but both are kept as a secret." This personal description by Damis corresponds in certain particulars with what we are told of the Masters to-day. The account of the wool leads some commentators to believe that asbestos is meant.

Iarchas welcomed Apollonius in Greek and asked him for the letter from Phraotes; when Apollonius wondered at his gift of prescience he remarked that a *delta* was lacking in the letter, left out by mistake, and so it proved. After reading the letter Iarchas asked: "What dost thou think of us?"

And Apollonius replied: "As no other person in the land whence I came, as my journey hither shows."

"What makest thou think that we know more than thou dost?"

"I believe," answered Apollonius, "that your knowledge is deeper and much more divine."

Iarchas hereupon said: "Others are accustomed to ask the new comer whence he comes and for what purpose; the first sign of our wisdom shall be this: that the stranger is not unknown to us. So then, test this:"

Hereupon he told Apollonius his history from father and mother down, what he had done in Aega?, how Damis had come to him, what tidings of importance had happened on the way, etc. As

Apollonius asked in surprise whence came that knowledge.

Iarchas answered: "Thou also earnest gifted with this wisdom, but not yet with all of it."

"And wilt thou teach me all thy wisdom?" asked Apollonius.

"By all means, and in ungrudging abundance, for this is wiser than miserly to conceal that which is worthy of knowing. Besides, Apollonius, I see thou hast been richly gifted by Mnemosyne, and she is the one among the gods whom we most love.

"Dost thou also behold," asked Apollonius, "of what manner my nature is?"

"We see all peculiarities of the soul, for we know them by thousandfold indications," replied Iarchas.

When mid-day came they rose in the air and did homage to the sun. The youth who bore the anchor was then told to go and provide for the companions of Apollonius. Swifter than the swiftest of birds he went and returned, saying: "I have provided for them." He was then commanded to bring the throne of Phraotes, and when Apollonius had seated himself thereon they continued their conversation. Iarchas told him to ask what he wished, for he had come to men who knew all things. Apollonius asked if they knew themselves, for he believed that they, like the Greeks, held knowledge of self to be difficult. But Iarchus answered with an unexpected turning: "We know all things, because first of all we know ourselves; for no one of us can approach this wisdom without first attaining knowledge of self."

Apollonius asked further, what they held themselves to be?

"Gods," answered Iarchas.

"And wherefore?"

"Because we are good men."

Apollonius found so much wisdom in this saying that he made use of it in his speech of defence before the Emperor Domitian.

They talked about the soul and reincarnation, and Iarchas told him that the truth was "as Pythagoras taught you, and as we taught the Egyptians." They spoke about the previous incarnation of Apollonius as steersman of an Egyptian ship, in which capacity he had refrained from following the inducements held out by pirates to let his vessel come into their hands.

Concerning this Iarchas said that refraining from unrighteousness did not constitute righteousness.

The King came to visit the Brahmins and a wonderful feast was prepared for him; everything came of itself: Pythian tripods, and automatic attendants of black bronze, the earth spread out herbs softer than beds to recline on, delicate viands appeared in orderly succession, etc. The accounts of these phenomena occasioned great remark during the subsequent career of Apollonius, and people would persist in mixing them up with the teachings of the master just as today they inextricably confound Madame Blavatsky's famous cup and saucer with Theosophy. But we are told that Apollonius did not concern himself with phenomena; when he saw these wonderful things he did not ask how they were done, nor to be taught to do them, but he contented himself with admiring them. And we are also told that the marvelous things he did were not accomplished through ceremonial magic, but through the perfection of his wisdom.

Damis was subsequently allowed to come to the Brahmins and when he asked about the composition of the world and the four elements they replied that there were five — the fifth being ether, which was to be regarded as the primal source of the gods.

"For everything that breathes the air is mortal; that which drinks the ether is immortal and divine," said Iarchas. He also said that the world was to be regarded as a living being of both sexes, having a more ardent love for itself than that of one person to another, being united and bound to itself." Damis learnt much from his intercourse with the Brahmins, but he wrote that at the secret discourses Apollonius was alone with Iarchas, and from there originated the four books written by the former. Iarchas, said Damis, gave Apollonius seven rings bearing the names of the seven planets, and Apollonius wore them one after the other according to the name of the day of the week.

The foregoing is an incomplete account of the remarkable journey and experience of Apollonius, as is necessitated by the limits of a brief article.

Many passages of deep wisdom have had to be passed over, and many remarkable things are told, hard to understand, but which, there is reason to believe, have an occult significance.

The Path

THE HERMETIC PHILOSOPHY: II — B.

(Concluded from the July Number.)

"The music of the spheres" is not a mere figure of speech, but an actuality.

The Soul of the World has its central Sun whose life throbs pulsate throughout immensity. If we study the phenomena and conditions of either crystallization or organization we shall find that every atom in the vast universe is set to music. There is the pean of life, and the dirge of death, the major and the minor key. The rhythm is the same whether in the ebb or flow of life, but the serried columns march in opposite directions. The Unity lies back of all phenomena in the infinite ocean, the universal solvent, as the crystal lies latent, potential, unmanifested, in the solution of salt. So all things exist potentially in the ether. The real form of everything is perfect, essential, divine. Only the effigy appears with ebb and flow; with swell and cadence like martial music. Only in the Garden of the Gods can the perfect flower and fruit appear. There is but one approximation to perfect form to be apprehended by mortals — the Sphere — and even this is ideal or geometrical, not actual. The dimensions of space pertain to objects: objects exist in time, and the essence of time is motion. (1) Imagine the intelligence of man posited in an ocean of Ether, a thinking principle, without form or extension, and the fallacy of space as generally conceived becomes manifest, and disappears. Matter, space, time, and motion, these pertain to outwardly manifested existence. Read backward the genesis of crystal, plant, animal or man, and one plan, one basis is discovered in all.

"Out from the shore of the great unknown" come trooping these effigies of diviner being, these shapes of diviner forms. In the

beginning was the Word, the Fiat has gone forth. Listen O! man to the music of Bath Col the voice of thine own soul. Adonai speaks. If thou art *conscious*, His voice is *conscience*. It is the memory of the voice of God in fields elysian, thy former divine abode. Thou mayest involve in thy life on earth thine Augoeides, "being of light," a "gleaming brightness." This is thy holy mission, the meaning of thy human shape, thy manly powers, thy subtle intellect, thy holy intuitions. These are but the seed of larger life, the bird of promise. The unfolded flower shall be thy highest aspiration, thy holiest wish, and its ripened fruit shall bear thee to the garden of the gods, with knowledge and power as thy servants. Ask but thine own soul, counsel with thy better self, and if thou findest not within the silence the answering voice, then return to thy wallowing in the mire, and the husks which the swine do eat, rather than to thy *father's house* which thou hast made, and will henceforth continue to make a den of thieves, at best, a whited sepulchre.

Now let us read the Tablet of Hermes, bearing in mind the fact that man is an epitome of the universe, thus actually or potentially containing all that is, and if he knows how to read and to unfold his own nature, powers and possibilities, he may read thereby the universe, unfold its laws, comprehend its plan, and if he be master of himself, thus revealed to his understanding, his powers shall be co-extensive with knowledge. He shall possess the MASTERS' WORD.

[This tablet is printed in full in September *Path*, 1886]

The reader is referred to *Isis Unveiled* for explanation of the Azoth to which, on the physical plane, the tablet refers, (2) and I might say in passing, that those who complain that the Brothers closely guard occult secrets, will do well, even at this late day, to read *Isis Unveiled*, There are several matters contained in those

two volumes which the careless reader, and complaining "theosophist" has possibly overlooked. In fact there is less concealment in all occult matters than the ignorant and time-serving suppose. There can be no better safe-guards to Royal Secrets, than ignorance and defective vision, for which defects there is no surgery or remedy outside ourselves.

"God saith, Let the man endued with a *mind*, mark, consider, and *know himself well*. * * And before they give up their bodies to the death of them, they hate their senses, knowing their works and operations.

"Rather, I, that am the mind itself, will not suffer the operations or works, which belong to the body, to be finished and brought to perfection in them, but being the *Porter* and *Doorkeeper* I will shut up the entrances of evil, and cut off the thoughtful desires of filthy works.

"But to the foolish, and evil, and wicked, and envious, and covetous, and profane, I am far off, giving place to the revenging demon * *

"For the sleep of the body is the sober watchfulness of the mind, and the shutting of my eyes, the true sight, and my *silence* great with child; and full of good, and the pronouncing of my words the blossoms and fruits of good things." (3)

"Wherefore we must be bold to say that *an earthly man is a mortal god, and that the heavenly God is an immortal Man*." (4)

Compare with this the following from the writings of Plato:

"He who has not even a knowledge of common things, is a brute among men; he who has an accurate knowledge of human concerns alone, is a man among brutes; but he who knows all that can be known by intelligent inquiry is a god among men."

In these brief and imperfect outlines enough has been given to show the thoughtful student, the agreement of the Hermetic doctrines with the teachings of Theosophy, indeed, any real progress in the comprehension of the one, may be taken as a key to the other. These, together with the teachings of the Kabbala, are but different forms of the *Secret Doctrine*; none of them are to be fully apprehended by the intellect alone; but only when the mind is *illuminated* by the light of understanding, and the process by which this illumination is to be achieved, through diligent inquiry, unselfish work, and repression of the senses, appetites and passion, has been often pointed out, and is found repeated and reiterated in all these writings. If any, therefore, are disposed to complain that they are left to grope in darkness, they have no one to blame but themselves. To the conscientious student, the constant wonder is at the richness of the feast spread out on every hand.

Like a beautiful landscape to the blind, or music to the deaf, are the pages of wisdom to the ignorant and selfish. Eyes have they but they see not, ears have they but they hear not, and so long as they are joined to their idols they may as well be let alone. But to the earnest disciple, to the true seeker of *The Path* these are the everlasting verities: let them run and not be weary, walk and not faint, seek, and they shall *surely find*, desire, and they shall attain, knock, and the door of knowledge shall open, obey, and they shall in turn command, labor, and they shall obtain rest.

"Rest is not quitting
The busy career,
Rest is the fitting
Of self to one's sphere.
'Tis the brook's motion,
Clear, without strife,
Fleeting to ocean

After this life.
'Tis living and serving
The highest and best,
'Tis *onward unswerving*,
And this is true rest."

The Path

THE ELEMENTALS, THE ELEMENTARY SPIRITS: I — C. H. A.

Bjerregaard

AND THE RELATIONSHIP BETWEEN THEM AND HUMAN BEINGS.

The subject of my paper is "*The Elementals, the Elementary Spirits, and the relation between them and human beings.*"

I will endeavor to give an outline of some of the teachings of the occult science relative to these beings, their relationship to the universal powers and to us, and our power over them.

In the general statement I shall probably not be able to say anything new to students of the occult forces of nature, except it be in the illustrations I shall bring forth from what I consider new sources, from Leibnitz's Monadology, namely:

In Leibnitz's Monads, I think we may see the very substance of the astral sphere, in which the elementary spirits "wrap themselves," according to a statement in the Kabbala. We may even see more, we may even look upon them as the Elementals themselves.

If Leibnitz's Monads may be considered not only as Elementals, but also the very substance of the astral sphere, and if it be so, that according to the Zohar, "the spirits, when they come down clothe themselves with air, or wrap themselves in elements," then it becomes a subject of the greatest importance to us how or by what means we may influence the astral sphere, or in other words, it becomes very important by *what kind of Monads* we are surrounded.

As a help to the proper consideration of this momentous question, I shall offer some information regarding the natural auras or objective spheres, that surround us, and also some historic facts

regarding the use of aromatic vapors, odors, &c.

Having come so far with my paper, I shall say a few words about our power over the elementals "clothed with air and wrapped in elements," by defining the power of *Mind* and by describing those — almost unknown — small nerve centres of the human hand, called *the Pacinian corpuscles*.

I shall only stop to define these two tools, the *head* and the *hand*, and leave out, for the present, the third of the human trinity, the *heart*.

Having defined the power of mind and the hand, I shall come to a close with a few suggestions as to the use of these powers regarding the subject under consideration.

Elementary Spirits are defined in "Isis Unveiled" to be "the disembodied *souls*. The depraved souls have at some time prior to death separated from themselves their divine spirits, and so lost their chance for immortality. Eliphas Levi and some other Kabbalists make little distinction between elementary spirits who have been men, and those beings which people the elements, and are the blind forces of nature."

The points to mark in this definition are these: (1) Elementary Spirits are disembodied *souls*; (2) they are disembodied souls of *the good*, and (3) of *the depraved*, i.e., of those, in whom the higher principles have never been developed, nor even born into light. They are the *shades* of those who, by their sins and moral misery, have closed the most interior principles of the constitution of man, and having closed the door against them, have no part in life, but sooner or later become dissolved and disintegrated in the surrounding elements.

In the manifestations common among Spiritualists, these Elementary Spirits play the most prominent parts. The Elementals

do not. We shall concern ourselves mainly with the Elementals.

Elementals are defined in "Isis Unveiled" as "the creatures *evolved* in the four kingdoms of earth, air, fire, and water, and called by the Kabbalists gnomes, sylphs, salamanders, and undines. They may be termed the forces of nature, and will either operate effects as the servile agents of general law, or may be employed by the disembodied spirits — whether pure or impure — and by living adepts of magic and sorcery, to produce desired phenomenal results. *Such beings never become men.*"

They are in popular mythology and folktales called by a great many names, peris, fauns, elves, brownies, pixies, &c., &c.

They are not disembodied human spirits, but distinct Creations. They have their homes in the astral sphere but are found commonly on earth.

The definition already given from "Isis Unveiled" I will amplify by a few lines I have extracted and translated from the various works of Paracelsus:

"All elements have a soul and are living. The inhabitants of the elements are named *Saganes* (Saganae), *i.e.*, elements. They are not inferior to men; they differ from men by having no immortal soul. They are the powers of Nature, *i.e.*, *they are the ones who do that which is usually ascribed to Nature*. We may call them beings, but they are not of Adam's kin. They eat and drink such substances as in their element serve for eating and drinking. They are clothed, they marry and multiply themselves. They can not be incarcerated, and die like the animals, having no soul."

"They know all that is going on, and do often reveal it to men, who are able to converse with them. But they are very unreliable, and some are very treacherous. They like children and simple minded persons the best. They avoid drunken and beastly men.

They reveal more of their nature to the simple minded and innocent ones than to the learned and arrogant ones. They are rather simple minded themselves."

"There are more women among them than men, and a congregation of women is called a Venus-mount. The fable told about Tannhauser is no mere tale, it is true."

Thus far, we have, perhaps, no difficulty in following Paracelsus, but when we read further into his revelations, our common sense fails to comprehend the mysteries laid open. Yet, I will say for myself, that though I can not comprehend it, I can readily apprehend such a state of things as that described in the following words:

"They can come to us and mix with our society. They can bear us children; but such children do not belong to them, *they belong to us*. We may bring these elemental wives to us by faith, pure thinking and our image-making powers. When they enter our sphere of existence and copulate with us, they appear, on account of their strange manners, like gods."

"Those that live in the water are called Nymphs or Undines, those in the air Sylphs, those of the earth Pygmies or Gnomes, those of the fire Salamanders. Nymphs or Undines look much like human beings, the others differ more or less."

"It is particularly the Undines or Nymphs that unite with men. When an Undine marries a man, both she and her child become souls."

From the Kabbala we can draw many statements corroborating the testimony of Paracelsus. In fact all the most valuable teachings *we possess*, relative to Elementals, as far *as they are printed and given to the public*, are derived from the Kabbala. According to it all activity, all events, in History and in Nature, are

in the hands of spirits, either Elementals or Elementary. We find them as ministering everywhere, from the Zodiac down to the smallest worm. We find them mentioned by name, those of the sphere of the Shechina as well as those presiding over the four elements.

In *Jalkut Chadash* it is stated: "There is not a thing in the world, not the least herb, over which is not set a spirit."

The Kabbalistic work *Berith Menucha* (by Abraham, a son of Isaac, a Jew from Granada), their names are given:

The spirit that presides over fire is named *Jehuel*, and under him range seven other spirits. Prince *Michael* is set over water, and under him rule seven other spirits. *Jechiel* rules over the wild animals and these rule under him. *Anpiel* rules over the birds and two princes rule beside him. *Hariel* controls the cattle and besides him three spirits. *Samniel* rules the creatures of earth and water and *Mesannahel* the worms. *Deliel* together with three princes command the fishes; *Ruchiel* and three others, the winds; *Gabriel*, the thunder; *Nariel*, the hailstorm; *Maktuniel*, the rocks and *Alpiel* the fruitful trees, while *Saroel*, the unfruitful. *Sandolfon* governs men.

These names are important, as you know, for they are the key to the respective powers of each of these spirits.

As stated in "Isis Unveiled," Eliphas Levi and other Kabbalists make no or very little distinction between Elementals and Elementary Spirits. This cannot be right by Levi to do. There are essential differences. The *Elementals never become men, nor were they ever men*. The Elementary spirits as defined by Levi resemble very much such spirits as those we are familiar with in ordinary spiritism. I shall in this paper only give them a passing notice and speak about the Elementals mainly.

From the definition already given, it is evident that the Elementals exist in a great variety of forms, some are mere forces of nature, pure abstract beings; others have some kind of body, at least, when we speak of gnomes, sylphs, undines, &c., we represent them in figures more or less human.

In the Kabbala and other Jewish secret books and traditions, the Elementals are represented as a middle race of beings, which, by a general name, the Jews called *Schedim* (the male Ruchin and the female Lilin). They are really the lowest and the dregs of the spiritual orders. They are divided into four classes: (1) Those of Fire; these cannot be seen with the eye; they mean to do good, and often help men. They understand the Thora and have communion with the angelic world. They are masters of many of nature's secrets.

It was these beings which Solomon employed, according to Mohammedan traditions, in erecting the temple. We are told, (1) that "the male genii to erect various public buildings, among others also, the temple. The female genii he obliged to cook, to bake, to wash, to weave, to spin, to carry water, and to perform other domestic labors. The stuffs they produced Solomon distributed among the poor."

Much curious information can be had from these Mohammedan traditions. Solomon, we are told, once asked an Elemental, who appeared to him in the form of a fish, as to how many there were of that kind, and received the following reply: "There are of my species alone, seventy thousand kinds, the least of which is so large that thou would appear in its body like a grain of sand in the wilderness."

We are further told, that Solomon, by means of a certain stone, "had dominion over the kingdom of spirits, which is much greater than that of man and beasts, and fills up the whole space between

the earth and heaven. Part of these spirits believe in the only God, but others are unbelieving. Some adore the fire; continually others the sun; others, again, the different stars; and many of them even water. The first hover round the pious, to preserve them from evil and sin; but the latter seek in every possible manner to torment and to seduce them, which they do the more easily, since they render themselves invisible, or assume any form they please. Solomon desired to see the genii in their original form. An angel rushed like a column of fire through the air, and soon returned with a host of demons and genii, whose appalling appearance filled Solomon, in spite of his dominion over them, with horror. He had no idea that there were such misshapen and frightful beings in the world. He saw human heads on the necks of horses, with asses' feet; the wings of eagles on the dromedary's back; and the horns of the gazelle on the head of the peacock. Astonished at this singular union, he prayed the angel to explain it to him: "This is the consequence," replied the angel, "of their wicked lives and their shameless intercourse with men, beasts and birds; for their desires know no bounds; and the more they multiply, the more they degenerate."

(2) The second group consists of those of Fire and Air; they are lower in order than the former, those of Fire, but they are good and wise. They are also invisible. They inhabit, like the former, the upper regions.

(3) The third group consists of those of Fire, Air and Water, they are sometimes visible to our senses.

(4) The fourth class is also made of Fire, Air and Water, but have besides an element of Earth in their constitution. They may be fully seen by human eyes.

This class and those of the third are of a wicked disposition and deceive men, and are glad to do us harm. They have no moral

sense at all. Some of them live in the waters, some in the mountains and deserts, and some in filthy places. Some of them are hideous to look upon, and are said to be met with even in open daylight.

The two first classes mentioned stand bodily next to men and are very dangerous. They possess extraordinary powers, standing, as they do, between the visible and the invisible worlds. They have some knowledge of the future and are particularly wise in regard to natural things. Some of these have in the time past been worshipped as gods and national deities. The Kabbala is quite emphatic in warnings against them, saying that they are untrustworthy because "their natural affinities are towards the lower realms of existence, rather than the higher."

All these elementals, whatever class they belong to are subject to dissolution. *Their lives are not centred on an eternal principle.* They die — and that is the end of them.

It is also worthy of notice that there is a close parallel between the teachings of the Kabbala on this point with that of the *Vishnu Parana* regarding the composition of the descending order of emanations. According to the Kabbala, as we have just heard, the Elementals of the first order were pure Fire, those of the next were Fire plus Air, those of the next Fire, Air, and Water, while those of the lowest order consisted of Fire, Air, Water plus Earth. Each of them as they live on a lower plane add a new element to their constitution. The same law is found in the groupings of the elements according to the *Vishnu Purana*. The purest one is Ether and has only one property, sound. The next is Air which to sound adds touch; the next is Fire, which to sound and touch adds colour; the next is Water, which to the three former adds a fourth, taste; the last is *Earth*, which to all the former adds smell, thus possessing five properties.

The harmony in the teachings of these two authorities, resting as they do on so different a basis is an additional argument for the truths of their teachings on the main subject.

Thus far I have been speaking of *Elementals* in the commonly accepted sense. But, it appears to me that there is another order of beings which also may be called *Elementals*, though perhaps in another sense.

I mean the ten *Sephiroth*.

The Kabbala teaches that the *En-Soph* (the One without end, the Boundless) is present in the *Sephiroth* or "intelligences," by means of which creation is effected.

These Sephiroth, these "intelligences" or spheres, as they also have been called, these spiritual substances are emanations from the *En-Soph* in which they existed from all eternity. They are emanations, not creations. A creation implies diminution of strength, but an emanation does not, hence the ten Sephiroth form among themselves, and with the *En-Soph*, a strict unity. They are in fact only differing from the *En-Soph* in the same way as light differs from its source, the fire. They are boundless on one side of their being, but finite manifestations on the other. They are both infinite and finite.

It has been stated that the whole world is like a gigantic tree full of branches and leaves, the root of which is the spiritual world of the Sephiroth; or it is like an immense sea, which is constantly filled by a spring everlastingly gushing forth its streams. That which thus has been said about the world applies equally to the Sephiroth. They are like trees rooted in the *En-Soph*, but blossoming and bearing fruit in the world. They are open within but closed without. Though they partake of the divine nature, they are on the outer side the garments of the Most High. This

their outer side is their bodily form, and it is with this *we* may come in contact.

It is almost blasphemy to call the outer side of the Sephiroth bodily — for body is to us something very low. Let us, therefore, beware of attaching anything low or mean to Body, when we speak of the Sephiroth. Let us bow down and revere, for we are in the presence of the Holy, even when we in thought rise to the bodily form of the Sephiroth.

The Sephiroth, through the divine power immanent in them, uphold the World. *They are the Elemental Forces of the World*. Through them flows all Power and all Mercy. Yea, the En-Soph is revealed through the Sephiroth, and becomes incarnate in them. It is stated in the Kabbala that the En-Soph, through various Sephiroth, became incarnate in Abraham as love, in Isaac as power, in Jacob as beauty, in Moses as firmness, in Aaron as splendor, in Joseph as foundation, etc.

The soul, notwithstanding its connection with the body, if it remain uncontaminated and pure, is able to ascend to the Kingdom of the Sephiroth and to "command them". But great mysteries surround the secrets connected with this power, and but few have they been who have been pious enough and strong enough to be admitted.

That the Sephiroth are powers, "Elementals," and not individual beings is evident from their division into three groups, intelligence, animation and matter.

Each of the three groups is again subdivided, the first into (1) the Crown or the inscrutable Height, (2) the creative Wisdom, (3) the conceiving Intellect. The result of the combination of the latter two: the creative Wisdom and the conceiving Intellect, is in the Kabbala called knowledge (= Logos), which certainly shows these

three Sephiroth to be spiritual substances, rather than individualities according to the common acceptance of the term. But it is not enough that we escape the mistakes which we would fall into if we regarded the Sephiroth as individualities, we must also beware of regarding them as mere *abstractions*, which the terms wisdom and intellect might lead us into. We shall never arrive at the truth, much less the power of associating with these celestials, until we return to the simplicity and fearlessness of the primitive ages, when men mixed freely with the gods, and the gods descended among men and guided them in truth and holiness.

The *first* group of the Sephiroth rests in so sublime an atmosphere and so near the Deity, that we can know nothing of their nature or activity.

The *second* group of the Sephiroth exercises its power over the moral world, and consists of (1) infinite Grace, (2) divine Justice, and (3) Beauty, which is the connecting link between Grace and Justice.

Here again we have to do neither with mere moral states nor with abstractions, but with embodiments of living and moving realities. Human eyes can, however, neither see them, nor can human hands touch them, for they are far removed from them, existing as they do on another plane of existence. Yet, he who *keeps his virtue*, and who knows the key to the chain of existences, can bring them out from their own realm and into his own and cause them to act.

The *third* group of the Sephiroth stands in relation to Matter in the same way as the other two stand to the Mind and the Heart, and may be called *Elementals par excellence*. They are called Firmness, Splendor, primary Foundation and Kingdom. —

I now wish to engage your attention by describing to you Leibnitz's Monads. His monads have all the characteristics of Elementals, at the same time, that they seem to be purely physical molecules. But this very duplicity is an argument for my theory, that Leibnitz's monad is a faithful definition of an Elemental. If it should be proved that they are not Elementals, and I doubt that that can be proved, they will at least serve as *illustrations* as to what an Elemental is.

Leibnitz (2) formulates his conception of substance in direct opposition to Spinozism. To Spinoza substance is dead and inactive, but to Leibnitz's penetrating powers of mind everything is living activity and active energy. In holding this view he comes infinitely nearer the Orient than any other thinker of his day or after him. His discovery that an *active energy forms the essence of substance* is a principle that places him in direct relationship to the seers of the East.

This fact, that the chief points of Leibnitz's philosophy are derived from this conception of an active energy forming the essence of substance, places it at once in our confidence.

From Leibnitz's *Monadology* I translate the following paragraphs:

§1. "The Monad is a *simple substance*, entering into those which are compound; simple, that is to say, without parts."

§2. "Monads are the veritable Atoms of Nature, in one word, the elements of things."

When *Leibnitz* speaks of atoms it must not be understood that he is a materialist. He is far from it. Indeed, his system has been called a spiritualistic *atomistic*. Atoms and Elements to him are SUBSTANCE not *Matter*. They are centres of force or better "spiritual beings, whose very nature it is to act." These elementary particles are vital forces, not acting mechanically, but from an internal

principle. They are incorporeal or spiritual units, inaccessible to all change from without, but only subject to internal movement. They are indestructible by any external force. Leibnitz's monads differ from atoms in the following particulars, which are very important for us to remember, otherwise we shall not be able to see the difference between Elementals and mere matter.

Atoms are not distinguished from each other, they are qualitatively alike, but one monad differs from every other monad, qualitatively; and every one is a peculiar world to itself. Not so with the atoms; they are absolutely alike quantitatively and qualitatively and possess no individuality of their own. Again, the atoms of materialistic philosophy can be considered as extended and divisible, while the monads are mere "metaphysical points" and indivisible. Finally, and this is a point where these monads of Leibnitz closely resemble the Elementals of mystic philosophy, these monads are representative beings. Every monad reflects every other. Every monad is a living mirror of the universe, within its own sphere. And mark this, for upon it depends the power possessed by these monads, and upon it depends the work they can do for us: in mirroring the world, the monads are not mere passive reflective agents, but *spontaneously self-active*; they produce the images spontaneously, as the soul does a dream. In every monad, therefore, the adept may read everything, even the future. Every monad — or elemental — is a looking-glass that can speak.

The monads may from one point of view be called *force*, from another *matter*. To occult science *force* and *matter* are only two sides of the same substance.

Such a doctrine is of course much objected to by people of the modern age, who pretend to possess very fine analytical powers, and yet are unable to conceive of matter under any other

conditions than those cognizable by our coarse senses.

Those who have *intellectual* difficulties in seeing that Brahm is everything and everything is Brahm must take this doctrine *on faith* for awhile. A little earnest practice will lead them to see that truth is not attained through reflection, but through immediate intuition.

If we should desire to look upon these monads as matter, I know of no better comparison than with that which has been called Matter in a *Fourth* state or condition, a condition as far removed from the state of gas as a gas is from a liquid.

If we should desire to look upon these monads as *force*, I know of no better comparison than with that which Faraday called "Radiant Matter" and which by Crooke's experiments has been shown to be so much like mere *force*, or matter completely divested of all the characteristics of bodies that its physical properties have been so modified that it has changed nature and appears under the *form* of force.

In §8 of the Monadology Leibnitz declares that "The Monads have *qualities* — otherwise they would not even be entities." The qualities attributed to them make them appear very much like living rational beings. I am disposed to look upon them as upon those little beings represented by Raphael, as heads resting upon a pair of wings: pure intelligence, or spirits who have not yet attained to bodily life. If they have not a *thinking* soul, they are at least forces that resemble life. Continuing, Leibnitz (§11) says: "We might give the name of *Perfection* (Entelechies) to all monads inasmuch as there is in them a certain Completeness or Perfection. There is a sufficiency which makes them the sources of their own internal actions, and, as it were, incorporeal automata." Says Leibnitz: (§19) "If we choose to give the name of soul to all that has perceptions and desires, in the general sense

which I have just indicated, all simple substances or monads may be called souls."

You see these infinitesimal beings are regarded by the great philosopher very much like intelligent existences; and yet they are very far removed from our conceptions of soul-life and existence. They are like the Elemental of the Kabbala: they never become men.

Continuing his definitions, he says (§60): "The monads are limited, not in the object, but in the mode of their knowledge of the object." That is the objective would have no power over them, but they themselves have only a limited knowledge of the objectivity, hence also a limited power. But that does not preclude the possibility of their being the means of the greatest influence upon the objective world — in the hands, namely, of an intelligent human being or spirit. "They all", says Leibnitz, "tend (confusedly) to the infinite, to the whole; but they are limited and distinguished by the degrees of distinctness in their perception."

Now I quote (§62) a sentence that reechoes the most beautiful philosophy of the Orient. Leibnitz has seen as distinctly as the old nature worshippers of the early Aryans, that "every monad represents the entire universe." This short sentence is the key to all mystical philosophy and to all magic; it is only second to such sentences as these: "God dwells in all things in His fullness," (Vemana verse), and "The world is the image of God," (Sufi philosophy).

It is a common mistake in the world to believe that God and his truth is only to be found in the Grand, in the Large, in the infinitely large.

In opposition to this, much of our mystical and esoteric philosophy points to the infinitely *Small*, declaring, that if we can

become humble enough to descend to nature's workshop, we shall learn more from the "atoms in space" upon which God let fall a "beam of his glory," than from all the magnificent systems of the learned. Hear what Leibnitz himself says, though he is not a mystic. He ought to have been, for his insight was truly remarkable. He declares (§66) "There is a world of creatures, of living things, of animals, of Perfection of souls, in the minutest portion of matter." (§67) "Every particle of matter may be conceived as a garden of plants, or as a pond full of fishes — all swarming with life!"

Keep this in mind, that I am not talking about *atoms of MATTER*, but of *atoms of substance*, real unities, the first principles in the composition of things. *Leibnitz* himself, besides calling these corpuscular units Monads, has also called them *Metaphysical points*, and *Scaliger* called them *seeds of eternity*, and a Persian poet has put it very clearly before us, that an atom is not a unit, by saying, "*Cleave an atom, and you will find in it a Sun.*" Here is the kernel of our subject, the substance of an atom in space is the storehouse of the immanent forces to which elementals, and elementary spirits to some extent, have access, and by means of which they work.

This view is fully corroborated by a representative of modern science, Sir John F. W. Herschel, who has approached very near to the teachings of occult science by declaring the presence of mind in atoms. In the *Fortnightly Review* of 1865, Sir John Herschel stated as follows: "All that has been predicated of Atoms, 'the dear little creatures,' as Hermione said, all their hates and loves, their attractions and repulsions, *according to the primary laws of their being*, only becomes intelligible when we assume the presence of MIND."

These various definitions of the Monads as given by Leibnitz,

answer in many important points exactly to what we find in occult teachings about the Elementals, and I can see no good reason why we should not look upon Leibnitz's Monadology as a work on Elementals.

We are really done with him as far as our subject is concerned, but before dismissing him to turn to other wisdom, permit me to quote a few more passages, though they do not bear directly upon the subjects of monads. He says (§83-86): "Among other differences which distinguish spirits from ordinary souls, there is also this: "That souls in general are living mirrors, or images of the *universe of creatures*, but spirits are, furthermore, images of Divinity itself, or of the Author of Nature, capable of cognizing the system of the universe, and of imitating something of it by architectonic experiments, each spirit being, as it were, a little divinity in its own department. — Hence spirits are able to enter into a kind of fellowship with God. — All spirits constitute the City of God — that is to say, the most perfect state possible under the most perfect of monarchs. — The City of God, this truly universal monarchy, is a moral world within the natural; and it is the most exalted and the most divine among the works of God."

(To be continued.)

FOOTNOTES:

1. Dr. G. Weil: The Bible, the Koran, and the Talmud. ([return to text](#))

2. Leibnitz was born 1646 at Leipzig, and died 1716. According to Schwegler's Hist. of Phil. he was, next to Aristotle, the most highly gifted scholar that ever lived, and according to F. Papillon ("Nature and Life") modern students in various departments of science and philosophy have verified his ideas and endorsed them to a large extent. ([return to text](#))

The Path

THOUGHTS IN SOLITUDE: I — *Pilgrim*

Within the symbols and doctrines of the Christian Church may indeed lie hidden all the truths of the Occult Philosophy, and another and abler pen has already traced the correspondences, but it is necessary to realize differences as well as likenesses, and while Christianity, as a definite system, has embodied for the world many noble ideas, it seems to the writer to have been able to display only one fact of the divine jewel of Truth — to have been able to trace only a short line of the celestial circle of Wisdom.

Putting aside all such unphilosophical dogmas, as a personal anthropomorphic God — atonement by the vicarious sacrifice of another — eternal damnation and such like, which may be regarded as the outworks of the Creed, and which indeed many of its own professors deny or minimize, and coming to the essential kernel of the system — the inner stronghold of the faith — that which would be regarded as such by all its truest sons throughout these nearly nineteen centuries of its existence, it would yet seem to be but a one-sided statement — a partial view — compared with the all-embracing Catholicity of the Occult Wisdom.

Unfortunately the outworks and excrescences above referred to, have, during these many centuries, so warped the thoughts and feelings of the populations professing this religion that it is no longer the pure and exalted doctrine as preached by its founder, but something very different. There are, no doubt, here and there good and noble souls, who practice the higher virtues of Christianity, but they are in such a minority that they are quite unable to affect the popular standard.

When one begins to analyse the stupendous outgrowth called

Western Civilization, of which steam and electricity, in their practical uses, may be regarded as the types, and to ask how and by what means this vast fabric has arisen, we are informed by those who are able to see below the mere surface of things that the setting of men's minds in a certain direction must have been the factor, and it is only logical that if a man's highest religious duty is put before him as the saving of his own soul from perdition, a tendency of mind which may be characterized as the supremely selfish must naturally be set in motion. When the converging lines of heredity through many generations have so strengthened this tendency that it has become a potent factor, the development "*in excelsis*" of the purely intellectual faculties as dissociated from the moral will be seen to be the inevitable result, and from this has naturally evolved the Western Civilization which is spoken of with so much pride. But are not nations like trees to be known by their fruits? "Do men gather grapes of thorns, or figs of thistles?"

What sins are dwelt on with more emphatic reprobation throughout the whole teachings of Christ than those of hypocrisy and cupidity? And where is hypocrisy deeper than within the Christian fold? So deep indeed, that it has become an integral part of the nature, and is no more recognized as a vice than it was by the Pharisees of old. And where is the worship of mammon more rampant than throughout the length and breadth of Christendom? The preachers of the Churches may utter faint-hearted protests, but the nations nevertheless remain prostrate before their idol, and as steam and electricity extend their sway, and new countries are laid open to modern progress, the more primitive races, to avoid extinction, join in the mad competition for wealth. But whether conspicuously shown in the acts of States lustful to conquer fresh territory, or hidden in the individual character, where it displays itself in the haste to grow rich by fair

means or foul, it remains none the less a gnawing canker at the heart of Christendom.

What a gulf there lies between the practice of modern Europe and the divine teachings of the Master.

"Lay not up for yourselves treasures upon Earth, where moth and rust doth corrupt, and where thieves break through and steal. But lay up for yourselves treasures in heaven where neither moth nor rust doth corrupt, and where thieves do not break through nor steal. For where your treasure is, there will your heart be also."

And again: "Ye cannot serve God and Mammon."

There is probably no teaching more thoroughly altruistic in its character, and which, if it could be literally applied, would exercise so direct and beneficial an influence on the human race as the teaching of Christ, but to the impartial student there seems to be none, the spirit of whose revelation has been more perverted and degraded by his followers of all denominations, and following the spiritual law whose complement on the physical plane may be recognized in the axiom that action and reaction are equal, the moral light to which Christ's teachings soared is the measure which decides the depth to which such teaching, when perverted, must inevitably fall, and Christendom may veritably be said to have become Anti-Christian. (1) All the religions of the world have more or less lost the divine afflatus by which they were originally vivified, but it has been reserved for Christianity to mould the life of the nations from the very blackness of the shadows cast by the "Light of the World."

When we ask to what goal or catastrophe this Western Civilization is hurrying, it is still more necessary to have the eyes of those who are able to read the signs of the times. The following

is an extract from a letter to which many of the above ideas may be traced which was signed "a Turkish Effendi" (in the absence of any right to suggest the real and more authoritative name), and was published by his correspondent in Blackwood's Edinburgh Magazine of January, 1880:

"The persistent violation for centuries of the great altruistic laws propounded and enjoined by the great founder of the Christian religion, must inevitably produce a corresponding catastrophe; and the day is not far distant when modern civilization will find, that in its great scientific discoveries and inventions, devised for the purpose of ministering to its own extravagant necessities, it has forged the weapons by which it will itself be destroyed. No better evidence of the truth of this can be found than in the fact that Anti-Christendom alone is menaced with the danger of a great class revolution: already in every so-called Christian country we hear the mutterings of the coming storm, when labor and capital will find themselves arrayed against each other — when rich and poor will meet in deadly antagonism, and the spoilers and the spoiled solve, by means of the most recently invented artillery, the economic problems of modern 'progress.' It is surely a remarkable fact that this struggle between rich and poor is specially reserved for those whose religion inculcates upon them as the highest law — the love of their neighbor — and most strongly denounces the love of money. No country which does not bear the name of Christian is thus threatened."

But to return from this long digression, take Christianity, I say, in its loftiest ideal, as taught and practiced by its founder — and it certainly is a very lofty one — altruism in its most sublimated form — self-sacrifice incarnate upon Earth — giving of its life-

blood to raise the sons of men, and drawing all to Him by the sheer force of divine love, until the believer's heart is set on flame, and nothing seems worthy in his eyes short of absolute union with this divine personality who is at once his Saviour, his brother and his God.

Yet were you to analyse the thoughts and feelings of the most ecstatic saint, would they display more than an ardent soul, a devout mind and a holy life?

Those of the Dualist Philosophy might indeed argue that such an one had his feet well planted on the narrow way — but the students of the wider Philosophy of Nature know well that everything on Earth — religion included — is under the governance of natural law. The attainment of perfection is not to be achieved by sentiment alone — *it is a scientific process*, and knowledge is the supreme enlightener.

The devotion of Bhakti is indeed a necessary prelude to progress in the religious life, under the guidance of whichever special cult the neophyte may aspire, but it is as it were the outer court of the Temple, and the Holy of Holies cannot be reached by any save those who have attained knowledge.

Without some previous study of occult writings, this word knowledge will entirely fail to carry home the idea which it is intended to express, and let alone the liability to misinterpretation from this cause, how can anyone pretend to describe it who has himself none of this knowledge, who has not yet trodden one step of the path that leads there, and who can only strain with vague imagination towards the sublime conception of the inmost workings of Nature through her manifold diversity laid bare before the intuitive vision? However, although it is an act of temerity on the writer's part, these few words may convey some idea to those who are no further on the

path than himself.

When the lower states of consciousness have been so welded in the fire of supreme emotion that duty, though involving the most appalling sacrifice, is no longer a thing to strive after with pain and struggle, but is a natural outcome of the life — the absolute expression of unity with nature — when the higher faculties, emotional, ethical and intellectual, whose respective functions may be said to be the perceiving of the Beautiful, the Good, and the True, have been so merged in one that the Buddhi or divine spark which hitherto flickered, becomes a bright, steady, luminous flame — when the "Explosion," as St. Martin called it, has taken place, "by which our natural will is forever dispersed and annihilated by contact with the divine," — then and then only is one fit to begin to tread the path of knowledge.

That it leads altogether beyond human experience, and entirely transcends what we can conceive is but too apparent.

The 15th and 16th Rules in the second part of "*Light on the Path*" may help towards a vague apprehension of what this knowledge means.

15th. Inquire of the earth, the air and the water of the secrets they hold for you. The development of your inner senses will enable you to do this.

16th. Inquire of the holy ones of the earth of the secrets they hold for you. The conquering of the desires of the outer senses will give you the right to do this.

And the final secret of all may be said to be wrapped up in the mystery of "self." When the knowledge of the individualization of Being is reached, man has learned all that this world can teach him, and in the words "Know thyself" lie folded the ultimate possibilities of Humanity. Knowledge is indeed the supreme

enlightener.

"There is no purifier like thereto
In all this world, and he who seeketh it
Shall find it — being grown perfect — in himself."

Whether any intelligible idea as to the knowledge itself can be evolved from what is here written — it will at least be apparent that a goodness so exalted as to be scarcely imaginable as a human attribute is required as Unnecessary qualification for the commencement of the search.

Well did Shelley write in his Prometheus:

"The good want power but to weep barren tears
The powerful goodness want — worse need for them.
The wise want love; and those who love want wisdom.
And all best things are thus confused to ill.
Many are strong and rich, and would be just
But live among their suffering fellow-men
As if none felt: they know not what to do."

and the current Theologies of the world have not been able to remove the reproach. In the case of Christianity the failure may, to a great extent, be owing to its sentimentality and its failure to realize that to be supremely good it is necessary to be wise — though wise with a higher wisdom than that referred to in the above lines.

But Christianity's greatest fall has probably been its disregard of the facts of Reincarnation. Whatever interpretation may be put on the great Master's utterance on this subject, and however the early church may have regarded it, it is notorious that Christianity, as interpreted by its mediaeval and modern professors alike, has entirely ignored the evolution of the soul progressing through innumerable earthly existences, and has

instead adopted the illogical and unphilosophic dogma of a human soul born into the world from nothingness and meriting by its 70 or 80 years of earth-life an Eternity of bliss or an Eternity of misery.

But one does not expect of the child the reason-guided actions of mature manhood — its teachings must be given in the form of dogma, to which it must yield implicit obedience. Nor do we expect the infant school to provide the same training that the University does for the cultured intellect. Similarly the various Religions of the world have been the infant schools for growing Humanity until the complete stature of manhood should be reached.

It has been remarked by some Christians who are much enamored of the self-devoted love exhibited by the Founder of their faith, and the strong feeling of personal love and attachment thereby called forth from them, that Theosophy is cold because it does not dwell exclusively on that side of the nature, but while each separate Religion that has existed in the world may be regarded as the analysis of one special characteristic of the mind, the occult philosophy gathers into one synthetical whole all its varied characteristics. The different religions accentuating as they do different truths may be regarded at the same time — according as one looks at them from the scientific or religious stand-point — and both views are equally tenable and mutually comprehensive — as natural evolutions of the peoples among whom they arose, and as revelations from the unseen universe of partial truths which have to be received and assimilated before mankind can be fitted to comprehend the Supreme Truth in its abstract purity.

It will be seen from the foregoing that what we call Theosophy is the supreme expression of all Religion, as it is the final synthesis

of all Science — for it is faith merged in Knowledge.

When one looks abroad on the world and sees how few even among the Religious, the Cultured and the Intellectual are able to grasp the Truth by intuitive vision — while the masses of mankind are sunk in degradation and semi-barbarity, the mind is lost in the vistas of the future, during which the present Religions or those which may have taken their place will have to continue their work of teaching.

Education is slow and Evolution is tardy, and the whole circle of wisdom is slow to trace; but the march of Nature has been as it was bound to be — for the best — and the line of Pope

"One truth is clear, whatever is is right."

seems more and more to be borne in upon the mind as an Eternal verity.

Destiny has guided us till now, and has made us what we are, but we who now realize the omnipotence of the divinely guided *Will*, have become potentially the makers — let us take it in our hands and shape our own career, for the sooner we rise to the heights of our Being, the sooner shall we be able to stretch down helping hands to the suffering Humanity of To-day.

FOOTNOTE:

1. It is an old declaration of the esoteric doctrine that "the counterfeit religion will last as long as the true one." — [Ed.]

The Path

**THE ELEMENTALS, THE ELEMENTARY SPIRITS: II — C. H. A.
Bjerregaard**

AND THE RELATIONSHIP BETWEEN THEM AND HUMAN BEINGS

(Continued.)

There are several designations for "angels" in the Bible, which clearly show that beings like the elementals of the Kabbala and the monads of Leibnitz, must be understood by that term rather than that which is commonly understood. They are called "morning stars," (Job 38, 7); "flaming fires," (Ps. 104, 4); "the mighty ones," (Ps. 103, 20) and St. Paul sees them in his cosmogonic vision (I Col. 1,16) as "principalities and powers." Such names as these preclude the idea of personality, and we find ourselves compelled to think of them as impersonal existences, in the same way as we conceive the angel that troubled the waters of the pool of Bethesda as an *influence*, a spiritual substance or *conscious* force.

I stated above that the Kabbala taught that all events in Nature and History were under the immediate superintendence of spirits, elementals and elementary. It was in harmony with such teachings, that the translators of the Septuagint translated Deuteronomy 32, 8-9, thus: "When the Most High divided to the nations their inheritance, he set the bounds of the Heathen according to the number of the spirits, but He Himself took His abode in Israel."

According to this translation, which differs radically (1) from the orthodox, spirits *i.e.* Elementals and Elementary Spirits, are the rulers, the principalities and powers among the heathen, *i.e.* all people outside of Israel. Whatever we may think of the

exclusiveness of this passage, and the work given the "chosen people" to perform, we can verify this passage historically.

All people of the earth — so far as we know their religious and philosophical ideas — have drawn their spiritual life from sources very different from those whence the leaders of Israel derived *their* inspiration. I say the leaders of Israel, for the Israelites as a people, never comprehended the mission imposed upon them, they constantly fell back into what has been called the "idolatry" of the nations around. The people, as a people, were true to their natural instincts, which led them to follow the guiding influence of natural *ideas*, (*i.e.* Elementals and Elementary Spirits).

I need not tell you that the *Ideas* now spoken of are not merely Conceptions, such as we, according to common usage, are wont to believe. Ideas to the antique world, were exactly the same thing as Leibnitz called monads, and the Kabbala Elements and Elementary Spirits. Plato, for instance, attributes to ideas an independent, singular existence and hypostative power. He calls them Gods (in the *Timeaus*), and asserts that movement, life, animation, and reason belong to them, (in the *Sophistes*).

The nations of the earth, all those not belonging to the chosen few, have indeed been — for good and for evil — guided by the Spirits, now called Elementals, now Ideas and now Gods. Therefore, if any one will study the history of mankind, he must begin with a knowledge of these occult powers. If any one will guide mankind's history, he must follow the laws of these occult forces.

If we recognize the translation of the Septuagint as given above, and find ourselves outside the pale of the chosen people, whose work is in "the plan of salvation," we know where to look for the intermediate powers between ourselves and the Deity, we know

that they are the Elementals, the powers of Nature, the silent, but invincible giants of the Elements.

The importance to Theosophists of the modern school of clear conceptions on these points are evident. I need not point out to you why and wherefore.

In the Zohar it is stated that, "when spirits come down, they clothe themselves with air or wrap themselves in Elements." It is also stated that, "some spirits have a natural affinity for the air-(elements), others for fire-(elements), and when they come down to the earth, they envelop themselves either in air-(elements) or fire-(elements), according to their nature."

These statements, which can easily be supplemented with many more like them, are of the greatest importance, when the question is of spirit manifestations, for it becomes a matter of grave consequence by what kind of monads we are surrounded.

But, before speaking of the atmosphere of monads that surround us, I must define the auras or emanations that proceed from all objects in nature.

As an aromatic scent emanates from a flower, so all other bodies emit either colors or rays of "imponderable" matter. Copper and Arsenic send out auras of red matter; Lead and Sulphur emit a blue colored substance; Gold, Silver Antimony green, etc. In short, Science teaches that all matter is luminous, *i.e.* shines by its own light.

Human beings, be they spiritual-minded or not, are also surrounded by their spheres. We all know this. We have all felt these sphere influences, and some of you have perhaps seen them. It is said that persons of a high and spiritual character have beautiful auras of white and blue, gold and green, in various tints; while low natures emit principally dark red emanations, which in

brutal and vulgar persons darken almost to black.

The impulse or motive power, the cause, if you choose, of these emanations is the soul of man, of course. According to the condition of the soul, these emanations are more or less powerful, more or less extensive, more or less clear. The stuff they are made of, what is it? It is of course physical, though they may not be measured and weighed by any scientific instrument known at this day.

These emanations are soul-rays and they become reflected upon those small MONADIC bodies already described. I cannot prove this to you experimentally, but I can see these reflections as clearly as a physical experiment can demonstrate to you the light-reflection of the sun's rays upon a raindrop.

Swedenborg claimed to have *smelled* the inner nature of certain spirits he met with in the spiritual world, and to have determined their moral value by these rays. In his work "Heaven and Hell," he has recorded several such experiences. It is an innate power of the soul, that enables it to throw off these rays and it does it by necessity, for without going beyond itself, to express itself, the soul would never realize itself.

The soul can, however, also be trained to emit these rays or auras, consciously.

If we will believe the famous Norse traveller and explorer of Spirit-land, already referred to, Em. Swedenborg, we may learn from his *Arcana Celestia*, that "the particular quality of a spirit is perceived immediately on his entrance into the other life, *from his sphere*" that "sphere is *the image* of the spirit extended beyond him;" "indeed, it is the image of *all* that is in him." The cause of the spheres around spirits, the same author states to be from "the activity of things in the interior memory," from "*the ruling love.*"

Swedenborg further states, that "by the sphere which exhales from the spirit of man, even while he lives in the body, every deed, however secret, becomes manifest in clear light," and that good or evil spirits recognize him by his sphere; and that good spirits can not be present with those who are in worldly and corporeal loves, however pious exteriorly, because they instantly perceive their sphere of evil as something filthy; and, on the other hand, that good spirits readily associate with those surrounded by pure and heavenly spheres. But it is not necessary to have recourse to the seers and those spiritually illuminated, most of us have some knowledge of these facts from daily life. Who has not perceived the low and filthy sphere that surrounds the sensual, or the intolerable atmosphere of a proud and haughty spirit, or been depressed in the surroundings of a melancholy and passionate man or woman? Indeed, we all have perceptions as to these things; some stronger, some less developed.

It is, as I said, the very life of the soul to diffuse itself through all its surroundings. Without such an activity it would not be soul. An inactive, an inert soul has no existence.

Next, the soul, while thus actualizing itself, takes its material from the monads, just described, and moulds them into such shapes and forms as are requisite for its own life and the influence it endeavors to exert. The Soul has the power to mould and shape them into any possible condition. (More about this later on.) This faculty is its image-making power or the form-making power of the soul.

In order to understand this image-making power, let it first be remembered, that it is an axiom in all mystical and spiritual philosophy, that the spiritual degree in man (Atman) contains in its unity with the Universal soul, the patterns of all things and that these are reflected through the soul (Buddhi and Manas).

This being so, *the soul (Buddhi and Manas) to understand the principle of creation has only to descend to its own deep, the spirit (Atman), there to find it reflected.* Having found and realized the idea of creation, the soul may take material from the ethereal world, called by the Orientals Akasa, and out of it build any form — image, I call it — it likes.

Unless the soul gives such form and shape to the ideas and life, that dwells in its own inner deep, these will remain uncreated and the soul uneducated by not approving of its opportunities.

This is what I call the image-making power of the soul. Upon it depends all Kardiology or the science of the heart, and all Rationality. Upon it depends our attainment of psychic powers.

It is not only an innate and natural tendency of the soul (Manas) to go beyond its body to find material with which to clothe the life that it wants to give expression to. The soul (Manas) can and must *be trained to do this* CONSCIOUSLY.

You can easily see that this power possessed *consciously* will give its possessor the power to work magic.

And this leads me directly to the subject of the use of aromas, odors, etc., wherewith to create a suitable atmosphere around us; an atmosphere congenial to the nature of spirits.

You all remember the splendid scene in Bulwer's Zanoni where Glyndon meets the Dweller of the Threshold. In that scene is described all the mystery of aromatic vapors, their effect upon the human mind, and the assistance they offer to spirit manifestations.

In short, it is of the greatest importance that we produce the right environment by the right kind of emanations or auras, and atmospheres: "As we give, so we shall receive!"

It would require a volume to relate the religious, political, economic, and gallant history of odors and perfumes. I shall mention a few instances only.

From the highest antiquity we find that priests have employed odoriferous substances. The worshippers of light, the Zoroastrians, laid perfumes five times a day upon the sacred flame, that symbolized light and life. The Greeks were very profuse in the use of ambrosia, and believed that the gods always appeared in fragrant clouds. You all know the importance of smoke and perfumes in the rituals used at the Mysteries and around the sacred tripod on which rested the prophetesses at Delphi. The Romans almost carried the use of incense and odoriferous substances too far. From the classic people the custom was borrowed by the Christian Church. There was even a time, when the Romish Church owned large estates in the East, devoted exclusively to the cultivation of balms and essences to be used in the rites of worship.

But it was not only in religious practices that these delicate media were used to facilitate the descent of spiritual beings. All through the Orient, even to this day, they are employed in the private life for the same purpose; not for mere luxury, as some people will have us believe. It was very appropriate indeed, that the Greeks should burn aromatic substances during their banquets, and who can estimate the soothing influence upon the wild and warlike Romans of their beautiful custom of perfuming their baths, their sleeping rooms and beds, and their drinks. It is not at all likely that the Romans should have been ignorant of the high spiritual significance of these practices. Why should they before battle anoint the Roman eagles with the richest perfumes, if they did not think it pleasing to the god of war and his followers, if they did not thereby expect to prepare a suitable atmosphere for their descent.

I pass by the modern use of these things. Among the many abuses with which we are familiar, the strong human instinct asserts itself everywhere. We expect, for instance, that Youth and Beauty shall be surrounded by a sphere, sweet-smelling and elevating; and our instincts are true in this, for there is a close parallel between purity and aromatic odors.

It is a truth well understood that Spirit does not act immediately upon Matter. There always is a medium between them. It seems rational that it should be so. Spirit and Matter being the two poles of one and the same substance need the intermediate middle as a point of conjunction and exchange of energy.

Applying this general law to the particulars before us, it seems most natural to conclude that the Elementals are the media by means of which all our spiritual efforts are exerted upon Nature, and that nothing can be done without their intervention.

But the question also arises: how do we make the Elementals perform this work for us? By what means do we influence them?

Occult Science teaches that "the pure of heart," those that, having travelled over "the Path," have come to "freedom," can, by a mere mental effort or by stretching out the hand, "do these things."

In view of this teaching, I shall state a few facts relative to the power of the Mind and the Hand.

(1) The Word spoken consists of the thought or idea we want to convey to the person spoken to, and (2) this thought clothed in a form, a kind of vessel, by means of which we send the thought flying through space. These two elements are the main factors of the Word.

Let us now look a little closer upon each of these two factors.

When an animal in distress calls for another, we, human beings, understand that it throws its desire or animal life into the sounds which proceed from that throat, and the other animal answers *instinctively*, we say quite correctly, for we do not think that the animals *reason* about their doings.

This kind of "language," if it can be so called, is not much different from the language of mankind at large. All language as used in ordinary daily life is but slightly higher in character, but not different in degree.

Language — the Word — is spoken when an Idea or Spiritual Life is communicated. In the true sense, we only speak or pronounce the Word when the Highest finds a channel into the actual world by means of our vocal organs.

That is the Word! Now, about its Form. Whence comes its material? For form is something substantial. It is not enough that an architect has a design to a building in his mind, he needs actual material with which to erect the house if it is to be realized on the actual side of existence. As surely as he procures stones and wood, etc., so do we also need material substances with which to construct our mental edifices. From what world do we draw these substances? From the astral or ethereal molecules! From the Monads!

By a pre-established harmony, the suitable monads glomerate around the heavenly idea that proceeds to reveal itself upon our tongue when we speak the Word. Thus the thought gets its Form.

Thus far I have spoken of the thought or idea descending to utter itself upon our tongue, we being the mere tools of the idea. And such is almost always the case. We neither originate thought nor its form. Thought or Spirit speaks through us as the passive agents. Yet we all know how we boast of our oracles, of our

prophets and our seers, even because they act as passive agents.

But there is a language still higher. It is possible for man to originate thought and to control the form to such thought. The adepts know this secret and they have arrived at that power by getting beyond the "ordinary" laws of life. They are not mere channels for the flux and reflux of thought; they originate and control thought.

Heaven's first law is order. As we know some of the laws according to which we formulate speech in a logical way, so that other sphere outside (or inside, if you like), which is full of the germs of life, has its laws. Hence the adepts, too, follow certain rules or laws, when they want to originate or control thought and its form. Vulgarly, the laws or methods are called spells or incantations.

Before we consciously can work spells or control spirits and their energies, we must arrive at the state of the adept, where he is beyond the laws that govern, so to say, the surface of things. But we cannot come there on any highroads nor by any short cuts. We must travel the road of self-denial and that of illusion.

As it is possible to enter into the sanctuary of a temple by sheer brutal force, so it is possible to get into possession of formulas and spells which work wonders, though we be neither pure of mind nor strong of heart.

Would formulas and spells under such conditions be useful to us? They may! They may not! They may also work our destruction. We have been taught that they are more dangerous to us than a naked sword in the hands of a child. The child may accidentally do some useful work with its sharp instrument, but it may also destroy itself.

From this we should learn that the true course to pursue in

regard to the performing of wonders by means of Elementals or Elementary Spirits is to first to attain to the state of an adept: to learn to control life and thought.

If we should happen to come in possession of spells or incantations without knowing the proper use of them — better not use them!

But how do we attain to that state just described?

I can not define the way nor teach anybody how to do so, but I think that the way must be very much like that travelled by the Lord Buddha and now followed by "the Adepts."

But, as it is not our immediate duty to prepare for the performance of miracles, we have been warned to abstain from such vain pursuits.

Far better is it for us to follow the directions given for moral life:

"Try to get as near to wisdom and goodness as you can in this life. Trouble not yourself about the gods. Disturb yourself not by curiosities or desires about any future existence. Seek only after the fruit of the noble path of self-culture and of self-control." These are words from Buddhist Scriptures.

It is not only by mind that we may control the Elementals and the Elementary spirits. The hand forms a most important element among the tools used in occult science.

I shall not define the science of chiromancy, but describe the magnetic points of the fingers.

Have you given any thought and attention to the hand? Generally we consider the head of a man and put our estimate upon him according to the size of his brain. But we neglect the hand. And yet the hand is as important a factor in the execution of spiritual

acts as is the brain.

The hand is the executive organ of the dynamico-mysterious actions of the Spirit of man. Through the hand its psychico-somatic operations take place, through it its whole spiritual-psychical energy flows out, when laid upon the sick, for instance.

It may be readily enough understood that the spiritual activity of the spirit of man ultimates itself in acts, and that almost all of these are executed by the hand, but it is probably but little known that in healing, for instance, there is a peculiar physical basis in the hand, upon which the healing power is dependent, *the Pacinian corpuscles*, namely.

It is now many years ago (it was in 1830 and 1840) that Pacini, a physician of Pistola, made his discovery; but with the exception of the literature to which it gave rise, and which is known only to a few learned men and a few librarians of larger libraries, little or nothing is known of his discovery.

Pacini found in all the sensible nerves of the fingers many small elliptical, whitish corpuscles. He compared them to the electrical organs of the torpedo and described them as animal magneto-motors, as organs of animal magnetism. And so did Henle and Kolliker, two German anatomists, who have studied and described these corpuscles very minutely.

In the human body they are found in great numbers in connection with the nerves of the hand, also in those of the foot. Why should they not be in the feet? Let us remember the rhythmical structure of the human body, particularly the feet, and it becomes clear why they are there; the ecstatic dances of the enthusiasts and the not-sinking of somnambulists in water or their ability to use the soles of their feet as organs of perception and the ancient art of healing by the soles of the feet — all these

facts explain the mystery.

They are found sparingly on the spinal nerves, and on the plexuses of the sympathetic, but never on the nerves of motion.

They are most numerous on the small twigs of nerves and generally placed parallel to them, though often at an acute angle. They are more or less oval, sometimes elongated and bent. They are nearly transparent, with a whitish line traversing their axis. The corpuscles of the human subject are from one-twentieth to one-tenth of an inch in length.

They consist of a series of membranous capsules, from thirty to sixty or more in number, enclosed one within the other. Inside of these capsules there is a single nervous fibre of a tubular kind enclosed in the stalk, and advancing to the central capsule, which it traverses from, end to end. Sometimes the capsules are connected by transverse bands.

Anatomists are interested in these Pacinian corpuscles because of the novel aspect in which they present the constituent parts of the nerve-tube, placed in the heart of a system of concentric membranous capsules with intervening fluid, and divested of that layer which they (the anatomists) regard as an isolator and protector of the more potential central axis within.

This apparatus — almost formed like a voltaic pile, is the instrument for that peculiar vital energy, known more or less to all students as Animal Magnetism.

Since the cat is somewhat famous in all witchcraft, let me state that in the mesentery of the cat, they can be seen in large numbers with the naked eye, as small oval shaped grains a little smaller than hempseeds. A few have been found in the ox (the symbol of the priestly office); but they are wanting in all birds, amphibia and fishes.

Though his discovery was disputed it has since been verified and the theory strongly supported. These organs are the beneficent media through which the Spirit operates.

From time immemorial the human hand has been regarded as the life-point of a mysterious magical power, but not until Pacini's discovery do we know its seat. These corpuscles are its seat. Are they perhaps agglomerations of such monads as I have described and thus the media by means of whom the highest spiritual powers perform their work?

We find the Elementals under all forms of existence, as mere natural forces, totally, to our perceptions, destitute of any self-conscious life; we find them also attaining a form very near the human. There is no valid reason against supposing them to be the stuff out of which we form thoughts, much less against considering them to be the life-giving elements in the Pacinian corpuscles.

Let us maintain the theory that there is no *such thing as a dead or inanimate force* in the universe. *Every atom, itself a form of power, is alive with force.* Every atom in space *reflects the Universal Self*, who is:

The Soul of Things.

I shall now come to the end of my paper by a few words which contain the practical purpose of my lecture.

(1) The monads, just described, whether they reflect the auras, that surround us consciously or unconsciously, whether they are used as mind-stuff or be located in the Pacinian corpuscles of the hand, are physical media of intercourse between the Elementaries and the adepts.

Why not! If Eastern adepts and Western mediums are in

possession of power to atomize "the body," to make it become the smallest of the smallest, to enter into a diamond, for instance, if they have power to magnify "the body" to any dimensions; to change the polarity of the body, to make it become the lightest of the lightest as in the well known phenomena of levitation, why should the Elementaries, existing, as they do, under much more favorable circumstances, not be able to enter into matter, to enter into atoms which "contain a Sun" and there, for the time being direct its vital principle and its universal orbs, to such purposes as they choose, to make it serve the adept's or magician's will, who seeks aid or enlightenment?

(2) I contend that they do! And I argue for the necessity of producing such surroundings of auras of monads as will facilitate and raise the standard of what is commonly called "Mediumship."

(3) I argue for a cultivation of the image-making power of the soul, that we may be able to direct and utilize consciously the intercourse with the Elementaries.

(4) I wish to have a knowledge spread abroad about the Pacinian corpuscles, that we may lay our hands upon mankind and cure its ills.

I feel personally convinced that there is both "Light and Life "to be found upon these lines of study and conduct.

1. The orthodox translation is "When the Most High divided to the nations their inheritance, when he separated the sons of Adam, he set the bounds of the people according to the number of the children of Israel." ([return to text](#))

POETICAL OCCULTISM: IV — S. B. J.

SOME ROUGH STUDIES OF THE OCCULT LEANINGS OF THE POETS.

Whitman, in his short and remarkable poem, "To him that was Crucified," perceives very clearly the verity of Mahatmahood; the existence of men who live upon a higher plane than that of ordinary mortals, and who are united in an order of spiritual brotherhood. The poem runs: (1)

My spirit to yours, dear brother,
Do not mind because many sounding your name do not
understand you,
I do not sound your name, but I understand you,
I specify you with joy, O my comrade, to salute you, and to
salute those who are with you, before and since, and those
to come also,
That we all labor together transmitting the same charge
and succession,
We few equals indifferent of lands, indifferent of times,
We, enclosers of all continents, all castes, allowers of all
theologies,
Compassionaters, perceivers, rapport of men,
We walk silent among disputes and assertions, but reject
not the disputers nor anything that is asserted,
We hear the bawling and din, we are reached at by
divisions, jealousies, recriminations on every side,
They close peremptorily upon us to surround us, my
comrade,
Yet we walk unheld, free, the whole earth over, journeying
up and down till we make our ineffaceable mark upon
time and the diverse eras,

Till we saturate time and eras, that the men and woman of races, ages to come, may prove brethren and lovers as we are.

These lines, sublime as they are, will probably be regarded as little short of blasphemous by many of our good friends who, *sounding his name, do not understand him*; who, worshipping him as the only Man-God, have lost sight of the God in man, the *Christ*, the potential development of which in all men was the great lesson which the Nazarene sought to convey. They little think that he whose name they sound may perhaps be walking the earth today, striving to bring men to the light, but despised and rejected by themselves because in an unrecognized and strange guise, while the same old truths are again trampled upon, since they lack the endorsement of established authority.

The poet, however, shows that he, too broad to be limited by one name, truly understands the mission of Jesus; he, with his own grand teachings of universal brotherhood despised and misunderstood because of their unfamiliar form, is elevated by the sublimity of the truths that inspire himself to the level which gives him the right to address the founder of Christianity as a comrade. He sees, too, with a directness that probably has come to no other modern poet, that there is a band of "Equals" working for the same end, "transmitting the same charge and succession," through all races, through all ages, and giving vitality to all religions. The free, uninfluenced attitude which he who would grow towards the light must maintain is expressed here with most effective simplicity, as is the end for which *THEY* are striving — so to saturate the world and all eras with their precepts as finally to lift all mankind into the unity of perfect Brotherhood.

The true mental abnegation is here referred to, just as Krishna in the Bhagavad-Gita tries to teach Arjuna. In speaking of the

necessity for retiring to the forest so as to attain perfection untroubled by man, he says to Arjuna that the true philosopher will look with equal mind upon all classes of men, upon all systems of thought and all objects of sense, esteeming all alike, inasmuch as they are all one in the Supreme Spirit, and that spirit found in each, so that to retire to the forest is not a necessity. Thus Whitman says that he and all others of the same mind, are indifferent of lands, times, disputes or disputers, allowers of all theologies, because they well know — as occultism teaches — that each theology and each assertion is one facet of the great Truth.

The result of this state of mind is beautifully set forth in the lines which say that amid the bawling and din, reached at by divisions and jealousies on every side that close peremptorily upon us to surround and fetter us, we walk free, unheld by all, because we are fixed upon the immutable rock of the True. This is the imperturbability sought by the ancient Chinese philosophers, who, themselves students of occultism, esteemed that equanimity above all else.

There are various passages throughout Whitman's poems that intimate a perception, perhaps intuitive, of the existences of the Masters. For instance, he says, "I see the serene company of philosophers," and in "A Song of the Rolling Earth" are the lines:

"The workmanship of souls is by those inaudible words of the earth,
The masters know the earth's words and use them more than audible words."

And again, towards the end of the same poem:

"When the materials are all prepared and ready, the architects shall appear."

The thought here is identical with that in "*Light on the Path*" (note

to Rule 21, First Section):

"Therefore in the Hall of Learning, when he is capable of entering there, the disciple will always find his master."

And in the following note:

"When the disciple is ready to learn, then he is accepted, acknowledged, recognized. It must be so; for he has lit his lamp, and it cannot be hidden."

The poem in question concludes with the following exalted lines which contain a significant statement of one of the great truths of Occultism:

"I swear to you the architects shall appear without fail,
I swear to you they will understand you and justify you,
The greatest among them shall be he who best knows you,
and encloses all and is faithful to all,
He and the rest shall not forget you, they shall perceive
that you are not an iota less than they,
You shall be fully glorified in them."

It is hardly possible to say whether or not the poet means that these architects are in one sense the various, changeful mortal costumes the human monad had here and there, in many races and places, assumed while passing through the wheel of re-births. When he says that the architects "will understand you and justify you," we may easily picture the time when the regenerated man, now able to see all his illusionary entrances upon the stage of life under the costume of varied personalities, can understand that all these different incarnations were fully justified by the need for the particular experience found in each new life, and thus he himself is glorified and justified by these architects, who were really himself.

Complete proof of Whitman's belief in re-incarnation is to be found in the following lines from "*facing West from California's Shores*:"

Facing west from California's shores,
Inquiring, tireless, seeking what is yet unfound,
I a child, very old, over waves, towards the house of
maternity, the land of migrations, look afar,
Look off the shores of my Western sea, the circle almost
circled;
For starting westward from Hindustan, from the vales of
Kashmere,
From Asia, from the north, from the God, the sage, and the
hero,
From the south, from the flowery peninsulas and the spice
islands,
Long having wander'd since, round the earth having
wander'd.
Now I face home again, very pleas'd and joyous.
(But where is what I started for so long ago?
And why is it yet unfound?)

This last query is answered in *Light on the Path* (rule 12, § I.):
"You will enter the light, but you will never touch the flame." The
Self is what we seek. It resides in the heart of every mortal
creature "smaller than a grain of mustard seed;" the heart is in
the Sun — and now we speak of the real heart and the real
spiritual sun which is "now hidden by a vase of golden light" —
(as the Upanishads say) — the Sun in the mouth of Brahman and
Brahman is the All.

HINDU SYMBOLISM: III — *Isaac Myer*

3

This figure represents the Mystic Brahma espousals with Parasakti. The latter is the divine principle of intellectual emanative potentiality or energy, and the ideal of archetypal womanhood. The Sakti is conceived of as the female part of the energy of Brahma's intellectual, creative power and creative wisdom. Brahma is here the true Para-Brahma, and Para-Sakti a true Para-sarasvadi. The sexless in Brahman (neuter) is here transmuted into the male or energizing power, as the principal symbolic type of the divine emanative, yet immanent, creative power, as the masculine principle of the ideal or Great Androgynic Man or the Makrokosm; and the flaming Sun is here depicted as the flaming sun-face, representative of the male-active deity, also called Purusha. The Sakti or Para-Sakti, the fructifying energy and potentiality of Brahman's wisdom, wears upon her head a bright fire-flaming crown or nimbus.

The veil surrounding them, is the mystic veil produced by the

ideation of the eternal thought of the eternal Mind. In the left hand of the sun-figure on the first finger, is carried a bird or perhaps a dove, which is intended to symbolize the flight of the ideal creation from the eternal Mind before the appearance of that which appears to us to be the real world. In the right hand he holds the end of the mystic veil. On the head of Maya — the woman — is the world-egg cap. Below, in the shadow of the spherical cloak of the God-dawn, is seen the world-egg surrounded by the spiritualizing Ananda the snake of eternity, which as if asleep and inactive, is suspended around the egg.

In India the principal general symbols are fire and water, sun and moon, man and woman, bull and cow, the linga and yoni, the lotus and the sacred fig (*ficus indica*). The lotus is formed of red, white and blue colors; blue is considered the same as black.

The Path

"LIGHT ON THE PATH" — Charles Johnston

"The Soul of man is immortal and its future is the future of a thing whose growth and splendour has no limit."

It is with extreme diffidence that I venture to undertake a short commentary or analysis of the book whose title heads this article; not only because of the nature of the work itself, but also because it has already been twice commented upon, once by the author, and once by a very learned student of Eastern Literature. The author's notes, however, were rather an extension of the original text than a commentary in the strict sense of the word: while the object of the second annotator was more an attempt to show the identity of the doctrines contained in *Light on the Path* with those of ancient Brahamanical Philosophy, than to give the nature of those doctrines in themselves.

The object of this paper on the contrary, is to attempt to analyze the scheme of Philosophy in accordance with which this little book has been written; in other words, to attempt to set forth the intellectual counterpart of the spiritual doctrines of *Light on the Path*. It is inevitable that, in thus changing the doctrine from the Spiritual to the intellectual plane, so to speak, the intellectual counterpart should be inferior to the Spiritual original. To counterbalance this loss, however, it is true on the other hand that the intellectual counterpart may render the spiritual original accessible to some, the conformation of whose minds renders them unable to appreciate it directly. It is in the hope that this may be so that the present paper has been attempted.

To begin with, then, the work we are considering indicates a possible enlightenment of the Soul, and development of the higher part of our nature; and further states that these results

cannot take place before a certain battle has been fought and won: we have, therefore, to discover what the soul is; what is the nature of the battle; what are the opposing forces; and what are the results of the struggle.

The combatants are the higher nature, or Soul on the one side; and the lower nature or egotism on the other. The higher nature includes the intellectual, Spiritual, and aesthetical powers: that is to say, the powers which deal with the perception of truth, goodness, and beauty.

The sense of truth is characteristically manifested in the conquest of some intricate mathematical problem, or in following successfully some difficult chain of reasoning.

The sense of beauty is manifested in the joy with which we behold the splendor of a glorious sunset.

The sense of goodness is manifested in the voice of an approving conscience, or in the reverence and admiration we feel for some godlike and noble character.

It is undeniable that the intellect can discriminate between what is, and what is not true, within its own domain, the aesthetical faculty also can pronounce with certainty as to the presence or absence of that quality which we call beauty.

So can the moral nature decide without hesitation as to what is or what is not in accordance with Righteousness, These three powers of the higher nature are subject to development, that is to say, at different periods they will perceive the qualities of beauty, truth, and goodness in different objects, and in different degrees; but as to the reality of the three qualities their voice is ever the same.

The three powers perceive three harmonies, each in its own

domain; when the three are harmoniously developed the three harmonies are perceived to be one, and to this one great harmony are given the names of the Eternal and the Law of God. The seer of old feeling the sense of Righteousness within him exclaimed: "I will rejoice in the Eternal, and in him will I put my trust." When the powers of the higher nature are developed, under all temporary disharmony and chaotic disturbance, are perceived a deeper order and more enduring harmony ever at work. Marcus Aurelius had perception of a deep Spiritual truth, when he wrote the concluding sentences of the following utterance.

"Figs, when they are quite ripe, gape open: and in the ripe olives, the very circumstance of their being near to rottenness, adds a peculiar beauty to the fruit, and ears of corn bending down, and foam which flows from the mouth of wild boars, and many other things, — though they are far from being beautiful, in a certain sense, — still, because they come in the course of nature, have a beauty in them, and they please the mind; so that if a man should have a feeling and a deeper insight with respect to the things which are produced in the universe, there is hardly anything which comes in the course of nature, which will not seem to him to be, in a manner, disposed so as to give pleasure." That is, — in all things, could we but perceive it, is the harmony of the Eternal.

The first harmony, the harmony of truth, is perceived by the scientific materialist; that is to say, he is capable of perceiving the reign of Law in the physical universe.

The artistic nature can perceive the harmony of beauty in nature and art.

By the spiritually-minded is perceived the moral harmony.

It is the distinctive mark of modern Civilization that the harmonies of truth and beauty, of Science and Art are perceived

and openly recognized by all, while the harmony of Holiness is passed over, in silence and oblivion. It is the object of Theosophy, rightly understood, to arouse the world to a renewed sense of the harmony of Righteousness.

So much for the higher nature. Confronting it stands the Egotism. For where the moral sense dictates peace and goodwill to all men, the Egotism raises a selfish claim for a monopoly of all good things, all pleasures, all enjoyments. The first enjoyment the Egotism demands is to surpass and dominate all other Egotisms which it seems to see pursuing the same pleasures as itself. Hence the command: "Kill out ambition." Having once gained this domination the self cries out for enjoyments both sensual and sensuous, for all the pleasures of life. Hence the need for the command "Kill out the desire of life;" the self is also deterred by indolence from carrying out any good inspirations that may descend through the thick mist which surrounds it, from the higher nature: Against indolence it is written "Kill out the desire of comfort."

But the moral sense condemns the existence of this self, this centre of force, which is not in accordance with its perception of Harmony. When once the moral nature comes to perceive the evil of egotism, the question inevitably arises for solution, "Shall this cause of dis-harmony cease or continue?" If the decision is for its continuance one of two things will happen. Either, before the moral nature has been completely paralysed and atrophied by neglect, — before the seared conscience is completely silenced, — the fact will be recognised, in the midst of pain and sorrow unspeakable, that "to work for self is to work for disappointment;" and in that case the moral nature may at last meet with its development and all may be well; "the weak must wait for its growth, its fruition, its death, and it is a plant that lives and increases through the ages." It has been said also "the

forging of earthly chains is the occupation of the indifferent, the awful duty of unloosing them through the sorrows of the heart is also their occupation" and truly "both are foolish sacrifices."

Either this takes place, or, — the moral nature at last becomes completely deadened, all the force and vital power which has been drawn away from it goes to strengthen the Egotism which becomes from henceforth a centre of evil, of destruction; an enemy of the eternal.

It seems that individual existence means a certain amount of force; which may vitalise either the powers of the higher nature or those of the egotism; or those of both, in part. It seems also that the egotism is a group of centres, so to speak, from some or all of which the energetic force of the individual may work: so that, for example, when this force works from one centre in the egotism sensuality arises; when from another centre, hate; from another, evil ambition, and so on. When the energetic force is raised to the higher nature it may act from various centres; from one, as charity; from another, as holiness, and so on. Hence, "any good quality may become any other good quality" — if the conditions are favorable. It seems also that the Will can degrade the energetic force from the soul to the egotism; or, conversely, can raise it from the egotism to the soul; so that, by the alchemical power of the will, so to speak, the baser metal becomes converted and, rising to the top of the still, becomes pure gold. Besides the higher and lower natures we have been considering there resides also, in the complete being, consciousness or sense of existence and will. When all the portions of energetic force, — or the Satwaic sparks, as they are elsewhere called, — rise to the higher nature, the individual becomes one with the Eternal, and a part of the United Spirit of Life, and individual existence ceases, in a sense. When the question is asked "Shall the self cease or continue?" the moral nature answers decisively "It ought to cease." If the truth of this

mandate is recognised, at once a terrible struggle arises; self opposed rises with tenfold force and violence; again and again it craftily casts doubt on the truth of the moral nature; raises obstacles, temptations and hindrances; all the pleasures it has enjoyed are to be swept away forever; all the momentum and power that the egotism has gained, through long continued indulgence and unhindered growth, are brought to bear at once on the struggle; the whole nature is torn by the conflict, the will is tried to the uttermost; but under all this turmoil and strife lies the assured consciousness of final victory; it is felt that sooner or later the self must be destroyed, that it is built for time and not for eternity, that its days are numbered.

During the struggle intervals of peace occur, and grow greater and longer as the end approaches; till at last, when the final victory is won this peace becomes habitual.

But as the conflict goes on, the will at last gains strength to say, once for all "Henceforth, forever, will I serve self no more." And immediately the first struggle is ended. The dominance of self is forever destroyed. In reply to the command "Seek in the heart the source of evil, and expunge it" the soul can say "this also have I done," then comes "peace to the troubled spirit" peace deep and pure. The soul recognises that the self has been the cause of individual existence; when the self is removed the soul tends to harmonise itself with the great harmony, to become one with the eternal; but all the evil tendencies to selfishness and sin, must be gradually overcome, for though their cause and source has been destroyed, yet they still maintain a certain momentum. Not yet can it be said that the soul is perfectly at one with the United Spirit of Life. Much remains to be done, yet much has been done already, for during the struggle the energetic force has become loosened from the centres of self, and has ascended to strengthen and vivify the soul, which becomes strong, fully awakened, and in

harmony with the eternal; the flower of the soul is opening, the first step on the Path is taken. In the *Idyll of the White Lotus* the same author has given the same history in another form. The New Testament story is the same, and so is the scheme of Christian Theology for those who have eyes to see it; for that story is "the tragedy of the soul, it has been told in all ages and among every people."

"Enter the Path! there spring the healing streams
Quenching all thirst! there bloom the immortal flowers
Carpeting all the way with joy! there throng Swiftest and
sweetest hours."

Dublin, Ireland.

The Path

MUSINGS ON THE TRUE THEOSOPHIST'S PATH: III — *American Mystic*

If you desire to labor for the good of the world, it will be unwise for you to strive to include it all at once in your efforts. If you can help elevate or teach but one soul — that is a good beginning, and more than is given to many.

Fear nothing that is in Nature and visible. Dread no influence exerted by sect, faith, or society. Each and every one of them originated upon the same basis — Truth, or a portion of it at least. You may not assume that you have a greater share than they, it being needful only, that you find all the truth each one possesses. You are at war with none. It is peace you are seeking, therefore it is best that the good in everything is found. For this brings peace.

It has been written that he who lives the Life shall know the doctrine. Few there be who realize the significance of The Life.

It is not by intellectually philosophizing upon it, until reason ceases to solve the problem, nor by listening in ecstatic delight to the ravings of an *Elemental clothed* — whose hallucinations are but the offspring of the Astral — that the life is realized. Nor will it be realized by the accounts of the experiences of other students. For there be some who will not realize Divine Truth itself, when written, unless it be properly punctuated or expressed in flowery flowing words.

Remember this: that as you live your life each day with an uplifted purpose and unselfish desire, each and every event will bear for you a deep significance — an occult meaning — and as you learn their import, so do you fit yourself for higher work.

There are no rose-gardens upon the way in which to loiter about,

nor fawning slaves to fan one with golden rods of Ostrich plumes. The Ineffable Light will not stream out upon you every time you may think you have turned up the wick, nor will you find yourself sailing about in an astral body, to the delight of yourself and the astonishment of the rest of the world, simply because you are making the effort to find wisdom.

He who is bound in any way — he who is narrow in his thoughts — finds it doubly difficult to pass onward. You may equally as well gain wisdom and light in a church as by sitting upon a post while your nails grow through your hands. It is not by going to extremes or growing fanatical in any direction that the life will be realized.

Be temperate in all things, most of all in the condemnation of other men. It is unwise to be intemperate or drunken with wine. It is equally unwise to be drunken with temperance. Men would gain the powers; or the way of working wonders. Do you know, O man, what the powers of the Mystic are? Do you know that for each gift of this kind he gives a part of himself? That it is only with mental anguish, earthly sorrow, and almost his heart's blood, these gifts are gained? Is it true, think you, my brother, that he who truly possesses them desires to sell them at a dollar a peep, or any other price? He who would trade upon these things finds himself farther from his goal than when he was born.

There *are* gifts and powers. Not just such as you have created in your imagination, perhaps. Harken to one of these powers: He who has passed onward to a certain point, finds that the hearts of men lie spread before him as an open book, and from there onward the motives of men are clear. In other words he can read the hearts of men. But not selfishly; should he but once use this knowledge selfishly, the book is closed — and he reads no more. Think you, my brothers, he would permit himself to *sell* a page

out of this book?

Time — that which does not exist outside the inner circle of this little world — seems of vast importance to the physical man. There comes to him at times, the thought that he is not making any progress, and that he is receiving nothing from some Mystic source. From the fact that he has the thought that no progress is being made the evidence is gained that he is working onward. Only the dead in living bodies need fear. That which men would receive from Mystic sources is frequently often repeated, and in such a quiet, unobtrusive voice, that he who is waiting to hear it shouted in his ear, is apt to pass on unheeding.

Urge no man to see as yourself, as it is quite possible you may see differently when you awake in the morning. It is wiser to let the matter rest without argument. No man is absolutely convinced by that. It is but blowing your breath against the whirlwind.

It was at one time written over the door: "Abandon Hope, all ye who enter here." It has taken hundreds of years for a few to come to the realization that the wise men had not the slightest desire for the company of a lot of hopeless incurables in the mysteries. There is to be abandoned hope for the gratification of our passions, our curiosities, our ambition or desire for gain. There is also another Hope — the true; and he is a wise man who comes to the knowledge of it. Sister to Patience, they together are the Godmothers of Right Living, and two of the Ten who assist the Teacher.

The Path

THOUGHT EFFECTS — *H. N. H.*

Some thirty years ago, I began a five years' residence in a foreign land. Whilst there, I was conscious of a stern conflict going on within me to keep myself from falling into some of the ways and beliefs of the people of that land. So strong was the assault in one direction upon the Idol of Right which had been set up within me by a New England training, that for fear it should topple and fall, I was constrained to withdraw myself little by little from social relations, until finally I came to be pretty much alone, living on the pampas with flocks, herds, nature generally, and a few books for company. Even after this change the fight went on, though in a less active form and on a more desultory scale.

After I went from there, reflection upon the subject brought me to this conclusion among others, viz.: that one of the most powerful forces emanating from distinct societies of mankind works by mental action upon man from the unseen atmosphere surrounding him.

It is said advisingly, "When in Rome do as the Romans do." It may be said, warningly: "When one enters upon living in Rome, he can scarce help *but* do as the Romans do."

In these later days, investigation of Theosophy has shown me of what nature was the obstacle against which I had been contending so stoutly.

It was of the Karma of that nation. It has shown me also the method of that unseen, unheard influence which "is in the air," ever about us, ever ready to move us, to govern us. And this method of influence, unseen and unheard, is the action upon us of forces existing on the Astral Plane. Among these forces are the

thoughts of men living upon the objective plane of Earth.

After so much of preface, I come to a more particular consideration of some of the effects of those thoughts of man, which are unexpressed by speech or action, upon others and upon himself:

1st. How may we effectually resist the force of bad influence of locality operating on *us* from the Astral Plane?

2nd. How may we do something, otherwise than by precept and example, towards overcoming the evil Karma of Locality which may be affecting *others*?

3rd. How may we in individual cases help some unfortunates with whose needs we are acquainted?

An answer is — by Thoughts.

In man's advancement from darkness into light, in the "Human Soul's" departure from lower materiality to entrance into right Spiritual living, among other means to be used to attain that end are right thought, right action, right speech and right meditation. Of these, *right thought*, is of primary importance, for it is the foundation from which only the others can spring into life. Actions in objectivity are illusions; they are shadows of our personality created by thoughts. Thoughts are nearer, more akin to our personality than actions are, for they are primary expressions from personality, always preceding conscious speech and action. Of all the indices to our personality of which we have knowledge thoughts are the clearest; we are as our thoughts are. In compliance with that grand mandate, "Know Thyself," why scan life's *page* of speech and actions — shadows — when a vast *volume* of thoughts — realities — expressions of our personality, lies open to us for finding knowledge of self?

Though independent of speech and action, thoughts are realities. They are real, living, active forces, until their force is expended, — but the effects of right thoughts last forever. Space does not necessarily limit their reach. They are in the air, so to speak, everywhere, and can move with a rapidity that is instantaneous. They may not only be sent, but are received. It takes but the veriest morsel of time to send a thought to the Sun; at the Sun it takes as little time to receive a thought from the Earth.

To the first question — "how may we effectually resist the force of bad influence of Locality operating on *us* from the Astral Plane?" — one way is to search for Spiritual Truth. That truth is "in the air." It is conveyed to us by Thoughts. But a thought "from the air" is as a seed. A mustard seed planted in ice will not fructify; a spiritual thought-seed falling upon a "Human Soul" which is bound and tied to Earth by its "Animal Soul" will not fructify. The mustard seed must fall into ground properly prepared for its reception, ere by culture it can sprout, grow, and bear fruit. And so, too, must the soil of the "Human Soul," be made ready in order that it shall afford an appropriate bed upon which the ever-present Spiritual thought-seed shall alight. On such a prepared soil it will *surely* fall; as surely as the magnetic needle points to its pole, and once there, by our own culture it may grow into "an everlasting tree of Holiness."

How is that bed prepared? How is it that we become ready to receive Spiritual Truth? By right thought, right action, right speech and right meditation. It lies within our *inner selves* whether we shall advance in Spiritual knowledge and life, and nowhere else; it must be our purpose, our business. No dictum of the Schools can bring it about. No printed book on esoteric wisdom or on ethics, or on the multitudinous religions of man can give it to us; — belonging to the Theosophical Society does not necessarily lead us into Spiritual life. These, to the hungry

"Human Soul," may be of immense importance, but if the "Human Soul" — principle 5, be not first prepared, if we do not look upward and build upward, all these means, — Spiritual thoughts that are "in the air," wise books, this society of yours — they are all to such a spiritually-desert soul, but as of old — "pearls before swine" — hidden light — a force shut out by ourselves from acting within us.

When we are engaged in right searching for Spiritual Truth, bad forces from the Astral Plane are inoperative upon us: Thus may we effectually resist the force of bad influence of Locality operating on *ourselves* from the Astral Plane.

The second question we are considering is, "How may we do something, otherwise than by precept and example, towards overcoming the evil Karma which may be affecting *others*?"

Surely, again, it is by right thought, and right action, speech and meditation. For, not only do they prepare the way for the reception of Spiritual Truths, but the ego, so thinking, acting, speaking and meditating, is, while so employed, disseminating Spiritual light on all sides through the Astral Plane. He is throwing out Spiritual truth-seed which is reaching far and near. Wherever a "Human Soul" is in need of it, and hungering for it, it *will surely fall*; for there the soil is ready for its reception. These right thoughts have gone into "the air," and are certain to strike in somewhere for good.

Thus by *right thought* we may do something otherwise than by precept and example, towards obliterating the evil Karma of locality which is affecting *others*.

Regarding the third question; it seems to me that we all know some particular individuals to whose high needs we can minister by direct intention through the power of thought.

Who, that observes and reflects, cannot gather from his own experience the fact that thought can fly to a person at a distance? How common to say "I was thinking of one and he appeared." It is not an uncommon experience for one to unexpectedly entertain serious, at any rate marked thoughts about another, and subsequently to find that the other was similarly occupied in mind with him at the same time. It is odd if there be not some among you who know that thought messages have been sent, received and acted on by the object-person when the receiver was in an abnormal condition to the sender. By these and other illustrations which doubtless will occur to you, we *know* that it is within the province of cause and effect that thought has power to operate on others at a distance by direct intention of the sender, by mental action alone.

Believing in the reality of thought — *knowing* the reality of thought — in its power to shield us from evil; in its power to affect others unknown to us; in our power to project it to special individuals, what opportunities it affords us for conferring high good.

But in order to do positive good to another by this direct thought unexpressed by speech or action, some certain conditions are necessary, which we may consider as milestones that shall indicate the progress of our own ascending path from materiality to spirituality. To be a power by thought influence, — (I do not refer now to thought sent by will power to a particular "sensitive" who is in subjective state to the sender — which condition is on a lower plane than that which we are now considering,) presupposes intensity of love born of and nurtured by Spirituality for those whose high good we thus seek to establish. There must first be born in us an enthusiasm for giving high and positive good to another unconsciously to him. According to our unselfish love in this matter will be our enthusiasm, as is our enthusiasm,

shall be the energy of our missive-thought; and according to the energy of that thought will be its effect upon the object to which it is sent, — the more powerfully intense the thought the deeper it will penetrate; — the longer its effects will endure.

Right meditation will be required of us to determine what we really desired to effect. If we arrive at the position within ourselves necessary for obtaining power for affecting another for good by thought message, there will be engendered within us a portion of that grand principle on which this Society is founded, viz: Universal Brotherhood — unselfish love for others.

In making thought message to others, on the basis of lifting them to a higher plane of action, a part of our daily life, by its reaction upon ourselves we shall surely be "laying up treasures in Heaven" — and full will be our material for Devachanic life.

As in Devachan one shall live in the good he has done while in objective earth life — shall live in the true beauty he has learned to perceive — shall live in the effects of his good-life, his thoughts while here on earth can be made for the Devachanic period of his existence a vast store-house of "good-life" of purest water. But it must be of thoughts untinged by selfish considerations. It must be of thoughts evolved through love of others for *their* good.

Right thought being the grand power it is:

1st. To resist within *ourselves* the bad Karma of Locality.

2nd. By which to weaken and destroy the bad Karma of Locality, which is disastrously affecting *others*.

3rd. By which from a basis of spiritual love we may send light to a groping soul, — what heavy responsibility is ever over us that it shall be our purpose, our study to "think aright." — To live much in thus right thinking — we shall ever be lifting some of the heavy

Karma from off the world. It is thus, that we can live in the Eternal, for right thought is of the Universal Mind, and Universal Mind is of the Eternal.

Reflect that persistent right thinking affects humanity constantly in the right direction, ever from the gross and material to the refined and Spiritual. It will ever be a constant force so long as evil exists. Let this idea sink into our consciousness. Let right thought be to us as the strong arm with which to do good to others. One need not long for wealth, for position or power that he may do good to others; the poorest in material wealth, the humblest in station, the most insignificant among men has within himself this ever open store-house of power for conferring good on which he can draw without limit; a wealth he can scatter broadcast, or can give by direct selection of object with the surety that he is bestowing benefits broadly, — knowing that he is successfully contending against Spiritual poverty — which is the sum of evil.

He who uses this wealth, can do so — *must* do so only by sacrifice of thought of self. He must be interested only in combating evil by helping humanity at large; of offering special help to those whom he knows are desirous of help. As his life-love for the objects in view is the only foundation upon which he can do these works, — love of self can not be a power within him.

To put it the other way. Begin the work of thought for the good of others by first forgetting self; as fast as possible get away from the dominion of materiality. Live in the love of doing *enduring* good to others — these conditions *are* the true and upward advancement of ourselves. The doing of these things *is the reward*; — it is the advancing into *God-life*. It is part of our real Eternal selves. It is living in the Eternal — the everlasting good; for the God-life — the good-life is the only eternally active one. By

living thus, the gross and material now enchaining our entities will be broken down and will die and leave us — and die they must sooner or later or the "I am I" shall perish.

Brooklyn, Oct. 15, 1886

The Path

ENVIRONMENT — *Hadjj Erinn*

To the Western mind the doctrines of Karma and Reincarnation contain difficulties which while they seem imaginary to the Eastern student, are nevertheless for the Western man as real as any of the other numerous obstructions in the path of salvation. All difficulties are more or less imaginary, for the whole world and all its entanglements are said to be an illusion resulting from the notion of a separate I. But while we exist here in matter, and so long as there is a manifested universe, these illusions are real to that man who has not risen above them to the knowledge that they are but the masks behind which the reality is hidden.

For nearly twenty centuries the Western nations have been building up the notion of a separate I — of *meum* and *tuum* — and it is hard for them to accept any system which goes against those notions.

As they progress in what is called material civilization with all its dazzling allurements and aids to luxury, their delusion is further increased because they appraise the value of their doctrine by the results which seem to flow from it, until at last they push so far what they call the reign of law, that it becomes a reign of terror. All duty to their fellows is excluded from it in practice, although the beautiful doctrines of Jesus are preached to the people daily by preachers who are paid to preach but not to enforce, and who cannot insist upon the practice which should logically follow the theory because the consequences would be a loss of position and livelihood.

So when out of such a nation rises a mind that asks for help to find again the path that was lost, he is unconsciously much affected by the education not only of himself but also of his

nation through all these centuries. He has inherited tendencies that are hard to be overcome. He battles with phantasms, real for him but mere dreams for the student who has been brought up under other influences.

When, therefore, he is told to rise above the body, to conquer it, to subdue his passions, his vanity, anger and ambition, he asks, "what if borne down by this environment, which I was involuntarily born into, I shall fail." Then when told that he must fight or die in the struggle, he may reply that the doctrine of Karma is cold and cruel because it holds him responsible for the consequences which appear to be the result of that unsought environment. It then becomes with him a question whether to fight and die, or to swim on with the current careless as to its conclusion but happy if perhaps it shall carry him into smooth water whose shores are Elysian.

Or perhaps he is a student of occultism whose ambition has been fired by the prospect of adeptship, of attaining powers over nature, or what not.

Beginning the struggle he presently finds himself beset with difficulties which, not long after, he is convinced are solely the result of his environment. In his heart he says that Karma has unkindly put him where he must constantly work for a living for himself and a family: or he has a life long partner whose attitude is such that he is sure were he away from her he could progress: until at last he calls upon heaven to interpose and change the surroundings so opposed to his perfecting himself.

This man has indeed erred worse than the first. He has wrongly supposed that his environment was a thing to be hated and spurned away. Without distinctly so saying to himself, he has nursed within the recesses of his being the idea that he like Buddha could in this one life triumph over all the implacable

forces and powers that bar the way to Nirvana. We should remember that the Buddha does not come every day but is the efflorescence of ages, who when the time is ripe surely appears in one place and in one body, not to work *for his own* advancement but for the *salvation of the world*.

What then of environment and what of its power over us?

Is environment Karma or is it Reincarnation? THE LAW is Karma, reincarnation is only an incident. It is one of the means which The Law uses to bring us at last to the true light. The wheel of rebirths is turned over and over again by us in obedience to this law, so that we may at last come to place our entire reliance upon Karma. Nor is our environment Karma itself, for Karma is the subtle power which works in that environment.

There is nothing but the SELF — using the word as Max Muller does to designate the Supreme Soul — and its environment. The Aryans for the latter use the word *Kosams* or sheaths. So that there is only this Self and the various sheaths by which it is clothed, beginning with the most intangible and coming down to the body, while outside of that and common to all is what is commonly known as environment, whereas the word should be held to include all that is not The Self.

How unphilosophical therefore it is to quarrel with our surroundings, and to desire to escape them? We only escape one kind to immediately fall into another. And even did we come into the society of the wisest devotees we would still carry the environment of the Self in our own bodies, which will always be our enemy so long as we do not know what it is in all its smallest details. Coming down then to the particular person, it is plain that that part of the environment which consists in the circumstances of life and personal surroundings is only an incident, and that the real environment to be understood and cared about is that in

which Karma itself inheres in us.

Thus we see that it is a mistake to say — as we often hear it said — "If he only had a fair chance; if his surroundings were more favorable he would do better," since he really *could not* be in any other circumstances at that time, for if he were it would not be he but some one else. It must be necessary for him to pass through those identical trials and disadvantages to perfect the Self; and it is only because we see but an infinitesimal part of the long series that any apparent confusion or difficulty arises. So our strife will be, not to escape from anything, but to realize that these *Kosams*, or sheaths, are an integral portion of ourselves, which we must fully understand before we can change the abhorred surroundings. This is done by acknowledging the unity of spirit, by knowing that everything, good and bad alike, is the Supreme. We then come into harmony with the Supreme Soul, with the whole universe, and no environment is detrimental.

The very first step is to rise from considering the mere outside delusive environment, knowing it to be the result of past lives, the fruition of Karma done, and say with Uddalaka in speaking to his son:

"All this Universe has the Deity for its life. That Deity is the Truth. He is the Universal soul. He Thou art, O Svetaketu!"

The Path

A YEAR ON THE PATH — *William Q. Judge*

The present issue of this Magazine closes the first year of its publication. It was not started because its projectors thought that they alone knew the true Path, but solely out of an intense longing to direct inquiring minds towards a way which had seemed to many persons who had tried it, to hold out the possibility of finding an answer to the burning questions that vex the human heart.

The question is always naturally asked "What is the Path?" or "What is the Philosophy?" which is the same thing, for of course the following of any path whatever will depend upon the particular philosophy or doctrines believed in. The path we had in view is held by us to be the same one which in all ages has been sought by Heathen, Jew and Christian alike. By some called the path to Heaven, by others the path to Jesus, the path to Nirvana, and by the Theosophists the path to Truth. Jesus has defined it as a narrow, difficult and straight path. By the ancient Brahmins it has been called, "the small old path leading far away on which those sages walk who reach salvation;" and Buddha thought it was a noble fourfold path by which alone the miseries of existence can be truly surmounted.

But of course mental diversities inevitably cause diversity in the understanding of any proposition. Thus it happens that Theosophists have many different views of how the path should be followed, but none of them disagree with the statement that there must be *one* Truth, and that no religion can be called higher than Truth. We therefore have pursued, as far as possible, a course which is the result of the belief that the prevalence of similar doctrines in the writings and traditions of all peoples

points to the fact that *the true religion is that one which will find the basic ideas common to all philosophies and religions.*

We turned most readily and frequently to the simple declarations found in the ancient books of India, esteeming most highly that wonderful epic poem — the Bhagavad-Gita. And in that is found a verse that seems to truly express in powerful words what philosophers have been blindly grasping after in many directions.

"It is even a portion of myself (the Supreme) that in this material world is the universal spirit of all things. It draweth together the five organs and the mind, which is the sixth, in order that it may obtain a body, and that it may leave it again; and that portion of myself (Ishwar) having taken them under his charge, accompanieth them from his own abode as the breeze the fragrance from the flower." (1)

To catch the light which gleams through this verse, is not for mortal minds an easy task, and thus it becomes necessary to present as many views from all minds as can be obtained. But it seems plain that in every religion is found the belief that that part of man which is immortal must be a part of the Supreme Being, for there cannot be two immortalities at once, since that would give to each a beginning, and therefore the immortal portion of man must be derived from the true and only immortality.

This immortal spark has manifested itself in many different classes of men, giving rise to all the varied religions, many of which have forever disappeared from view. Not any one of them could have been the whole Truth, but each must have presented one of the facets of the great gem, and thus through the whole surely run ideas shared by all. These common ideas point to truth. They grow out of man's inner nature and are not the result of revealed books. But some one people or another must have paid more attention to the deep things of life than another must.

The "Christian" nations have dazzled themselves with the baneful glitter of material progress. They are not the peoples who will furnish the clearest clues to the Path. A few short years and they will have abandoned the systems now held so dear, because their mad rush to the perfection of their civilization will give them control over now undreamed of forces. Then will come the moment when they must choose which of two kind of fruit they will take. In the meantime it is well to try and show a relation between their present system and the old, or at least to pick out what grains of truth are in the mass.

In the year just passing we have been cheered by much encouragement from without and within. Theosophy has grown not only in ten years, but during the year past. A new age is not far away. The huge, unwieldy flower of the 19th century civilization, has almost fully bloomed, and preparation must be made for the wonderful new flower which is to rise from the old. We have not pinned our faith on Vedas nor Christian scriptures, nor desired any others to do so. All our devotion to Aryan literature and philosophy arises from a belief that the millions of minds who have trodden weary steps before ours, left a path which might be followed with profit, yet with discrimination. For we implicitly believe that in this curve of the cycle, the final authority is *the man himself*. In former times the disclosed Vedas, and later, the teachings of the great Buddha, were the right authority, in whose authoritative teachings and enjoined practices were found the necessary steps to raise Man to an upright position. But the grand clock of the Universe points to another hour, and now Man must seize the key in his hands and himself — as a whole — open the gate. Hitherto he has depended upon the great souls whose hands have stayed impending doom. Let us then together enter upon another year, fearing nothing, assured of strength in the Union of Brotherhood. For how can we fear

death, or life, or any horror or evil, at any place or time, when we well know that even death itself is a part of the dream which we are weaving before our eyes.

Our belief may be summed up in the motto of the Theosophical Society "There is no religion higher than Truth," and our practice consists in a disregard of any authority in matters of religion and philosophy except such propositions as from their innate quality we feel to be true.

The Path

PAPYRUS — THE GEM — *Rameses*

The roads were thronged with the people moving toward the great square, for it was a feast of the Goddess. The temples were crowded, while long lines of men and maidens in the robes of "The Sacred" wound in and out toward the river.

Music and song rose and fell upon the evening breeze, like the pulse of a throbbing heart. Here and there could be seen the Scribes, and seated in an open space, the Tale-tellers. One of these, as I rested near him, told the tale of

ONE WHO FOUND THE GEM.

"In the land of the Wise-men, there dwelt a young man. Many years had he labored in a strange mine; the 'Mine of the Priceless Gems;' — hopefully, bravely, but fruitlessly. He had long known that he who should find the Master Stone, would be free, be full of peace and dig no more, for nothing better could be found. He also knew that he who found the stone should seek to share it with all men.

"Many small stones had he found, but they were laid aside to be used when the great stone was reached.

"Silently and steadily he worked on, until one gloomy day when he had grown so weak that he could make but one more effort, that effort was rewarded, and before him lay the great gem. Weary, weak, but joyful, he gathered it into his bosom, and went forth to share it with others; for he who told not of his gem, or shared it not with all men must lose the stone.

"Far he wandered, telling his wonderful story, the *finding of the Priceless Stone* — the stone that made men greater, wiser, more

loving than all things living; the stone that no man could keep unless he gave it away.

"Far he wandered in his own country, seeking to tell his story and give of the Stone to each one he met. Silently they listened — gravely they meditated and gently they said to him: 'This is Kali-yuga, the dark age. Come to us a hundred thousand years from now. Until then — the stone is not for us. It is Karma.'

"Far into another land he wandered, ever trying for the same end. Gravely they listened, quietly they spoke: 'Peace be with you. When the Lotus ceases to bloom and our Sacred River runs dry, come to us. Until then we need not the stone.'

"Over the seas unto another land he went, for fully he believed that there they would hear and share with him. The many days of wandering and the long journey across the sea had made him thin and ragged. He had not thought of this, but as he told his story he was reminded of it and many other things, for here the people answered in many ways, and not always gently.

"Some listened, for his story was new to them, but the gem was uncut, and they wished it polished.

"Others paused and desired him to tell his story in their tents, for that would make them exalted and famous, but they wanted not the gem. As he did not belong to their tribe, it would bring discredit upon them to receive anything from him.

"One paused to listen and desired some of the stone, but he desired to use it to elevate his own position and assist him in overreaching his fellows in bartering and bargaining. The Wanderer was unable to give any of the stone to such as this one.

"Another listened, but inasmuch as the Wanderer refused to make the gem float in the air, he would none of it.

"Another heard, but he already knew of a better stone, and was sure he would find it, because he ate nothing but star-light and moon-beams.

"Another could not receive any of the stone or listen to the story, for the Wanderer was poor and ragged. Unless he was dressed in purple and fine linen and told his story in words of oil and honey, he could not be the possessor of the gem.

"Still another heard, but he knew it was not the gem. As the Wanderer had been unsuccessful before, surely he could not have found the stone. Even had he found it, he could not have the proper judgment to divide it. So he wanted none of the stone.

"Near and far went the Wanderer. Still ever the same. Some wanted it, but the stone was too hard, or not bright enough. He was not of their people, or was ignorant. He was too ragged and worn to suit their ideas, so they wanted none of the stone.

"Saddened, aged and heart-sore, he wandered back to the land of the Wise men. To one of these he went, telling of his journeyings and that no man would share with him the magnificent stone, and also of his sorrow that he too must lose it.

"'Be not troubled, my son,' said the Wise One, 'the stone is for you, nor can you lose it. He who makes the effort to help his fellow man is the rightful owner and still possesses the entire stone, although he has shared it with all the world. To each and every one to whom you have spoken, although they knew it not, you have given one of the smaller stones which you first found. It is enough. When the Master Stone is cut and polished, then is the labor of the fortunate possessor ended. The long journeying and weary wandering, the sorrow-laden heart and tear-dimmed eyes, have cut and polished your gem. Behold, it is a white and a fair stone!'

"Drawing it from his bosom, the Wanderer gazed into the wonderful light of the stone while an expression of great peace stole over his face. Folding the gem close to his bosom his eyelids closed, and he fell asleep, a wanderer no more."

The Path

HERALDS FROM THE UNSEEN — *Jasper Niemand*

"Behold, I show you a mystery. We shall not all sleep, but we shall all be changed." — I Cor. xv, 51. "I have found the small old path leading far away." — UPANISHAD.

To him who without murmuring, confident in the perfect justice of the law, waits and watches, there comes a herald from heights unseen. The just man follows him and attains; the unwise may surprise him and follow also. But when the fool has rushed unbidden in where angels fear to tread, he meets a mailed Truth with a drawn sword, on whose point he dies. Now there are two deaths. From the one he may rise, "in a moment, in the twinkling of an eye, * * * for the dead shall be raised," (1) and this by the vivifying power of truth, if so be he have one identical incorruptible atom in his spiritual make up, or else that rash being is dead forever, and the spirit monad creates another in the dream of three thousand years.

The indivisible Truth in its entirety is incommunicable in the words of our plane. A clue may indeed be given; it is the herald to those who await him. It is useless to turn the page to see who this is that offers the clue. Of myself I know nothing, yet through me may much be made known. I am the trumpet; through it the herald may proclaim a mystery.

It was in a night of silence that a Power bade me waken, and drew me to a dark cave wherein It passed. Not so I, for the entrance was narrow and I had encumbrances about me. Only many nights later, when I had parted with effort, hope and fear, did I stand within. All of me that was essential had entered; this was enough. Then a musical chord breathed low, the darkness dispersed, and I saw the Unknown Land.

It was a circling land of streams, Light everywhere, flowing, flowing, flowing. The flow was cadenced and welled from a mysterious Centre of blackness at the edges of which spouted cataracts of flame. My thought shrank with awe of the Darkness, but an unknown grasp of Might expanded within me and drew me to that flaming verge. On the knees of the soul I fall and am not. I become one with the All, and consciously resting in Omniscience I know the whole. Yet *what* forever dwells, wakeful and brooding with that dark pavillion, nor man nor angel may discover. Profounder than all Being, *It is*, girt about by unfathomed fires. "Ye shall enter the light, but ye shall never touch the flame." (2)

A stir was over that central Dark, a titanic breath, like the sighing of myriad seas, measured, omnipotent. Where its harmonious friction fretted the verges of space, the flames burst forth, and with fecund pulsations gave birth to heat, light, motion and sound. The Centre felt a boundless attraction for the circumference, pouring toward it with inexhaustible energy, for "the heart of it is Love." This was the force centrifugal, which in a dazzle of starry scintillations thrusts the universal glooms apart with a song. Were this all, Discord and Division were the end. But the circumference trembled also with a vast yearning toward the Centre, so that it ever tended to return there, as the prodigal, enriched in experience, returns to the mystic house of the Father. This was the centripetal force, and these two caused the double vibration of the Astral Light, and they are all you shall know though you blend with the infinite forever. "Whatever there is, the whole world when gone forth trembles in His breath: that Brahman is a great terror, like a drawn sword. They who know it become immortal." (3)

Then a voice said — "The Absolute evolves thought from Himself, and the vibration of this thought in the passive wells of space

generates Light and its correlated forces. The Thought is, — 'Creation!' The singing breath is the Word; the Light is the Absolute made manifest, and the Universe begins." At once I saw divergent lances of light pour their serried splendors into the void, and the point of each spear displaced the mist which curling backward from the centre of energy thus formed, communicated the movement to sister vapors in turn. Activities shoot, play back and forth, elongate, crystalize, and so great planets spring into the arena, feel the first instinct of separate Being, struggle to depart, — an estranged Self — in meteoric desolation, when the magnetic impulse of the Centre streams along the creative ray, meets the responsive principle, and lo! each chafing Orb, held in leash by Love, wheels into the circle of attraction and obeys the Law. The astral world has begun!

Thence presently the Light spreads afresh, reflected and repeated from every facet of every star, till arrowy glories, vibrant with each vibration sped forth by the primary pencils of light, in turn create dull planetary masses in the luminous abyss; then ever renewed corruscations quicken their dust with whose initial tremor shining crystals sparkle out and glide together about a glistening ring whose centre is ever a darkness ruffled by the out-reaching current from that first tinted Gloom. So new spheres form, these, repeating the parent movement, with wide spreading auras touch and arouse their neighbors, and interpenetrating, revolving, throwing off, taking on, converging, diverging, modifying and modified, a world of forms is evolved whose final expression of Being is Man. Thus further departing, the infinite variations end in individuality and the greater the individuality, the more it leans to the centrifugal force, and the lack of equilibrium in the forces draws man further from the Eternal and he forgets the Law. His aura, his rays are nerve currents centred in the personality, but linked by star-beam and moon-ray to the

quivering Source of all light, so that each man vibrating, imparts to the Akasa about him his own specific rate of vibration, and all men, all things, suspended as it were in this fine ether which fills the universe, act and react each on each, every one striving to modify the others to his own vibratory ratio, while the Light in the same way attacks all, and the battle of the giants is here. So the final expression of "evil" is inertia, and the highest attribute of Spirit is the Thought which is Life.

Once again the Voice spoke then saying: "What gives Life?" Someone answered: "Vibration." And when It said, "Look back to the earth world," I obeyed. I saw the modern sage reducing all the great forces, all the intoxicating play of colors and the bewildering tangle of harmonies to this one source, — Vibration. I saw wondering students bending over sensitive flames that danced or died at the mandate of sound. I saw a child playing with iron filings on glass, and as he drew a bow athwart the pane they marshalled into tiny mimicries of the primitive crystalline creation. I saw the Frost spirit, tracing his white wonders of tropical forests on vibrant surfaces, blazoning symbols of summer on the grim escutcheon of the snow. I saw Sound disintegrating granite and iron, taming wild beasts with a lure, transforming brothers into demons at the sibilant hiss of a scathing word. (4) I saw Light fecundating the soil, and the teeming battalions of the underworld issuing from the palpitating spark in their germs; the selective art of the flower, choosing the kindred color of her tribe from all the flashing scale, gave up to me its secret of the synchronous vibration of that hue with the astral soul within her fragrant form. Passion I saw also, flaming in two breasts that for one tumultuous moment became one, and knew it for an instant of similar vibration. Aye, and saw that Love was a steadfast quality of motion between loyal hearts, saw too that Anger and Hatred had their rise in the same source, and

mounting upward I saw that Faith was a similitude of vibration with Truth itself. Again the Voice spoke; "Dost thou see aught but Vibration anywhere?" I answered: "Such all life is, and from such all proceeds. He who cons its secret laws and can institute its musical numbers at will, is a God! He can create and destroy." "Go then, and by analogy learn what thou art," said the Voice, and like the rebel fraction of a star I fell from Glory, and found myself alone in the Maya world again, with these words thrilling my brain. "But He, that Highest Person, who wakes in us while we sleep, shaping one lovely sight after another, He indeed is called the Light, He is called Brahman, He alone is called The Immortal. All worlds are founded on It and no one goes beyond. This is that." (5)

It is rarely that a man gets the whole of his thought; often others supply it. Analogy is the power of following a thought into all its correlations, and I shall ask you to do this in a measure with mine. These puny pages cannot contain the theme of cycles, and falling short, it scarce matters by how many pen strokes I fail. Consider this first; what are we? Look abroad over our Society, largely; we see each member working on his own particular line. So it must be with man for ages. When you shall have exhausted your special hobby, when through astral perception, or mesmeric control or mental acumen, you shall have attained high powers, the hour of your limitation will strike, as its awful knell can strike, even from the towers of Futurity, and you will know that you have not found that cornerstone on which alone the Eternal rests, — your indivisible Self. "Great ones fall back, even from the threshold, unable to sustain the weight of responsibility; unable to pass on." (6) Follow from the start that solitary beacon which informs the ultimate goal: *Unity*. Make it your touchstone and your guide; other stars are reflected lights only. The doctrine of unselfishness is no sentiment, but of logical, practical utility. The

individual way lies from limited Being, through Becoming, to unlimited Being, precisely as the universal way lies from sterile Unity, through Division to fecund Unity, or from the one Life through Death to the Life of the All. He who in final choice elects the path of Division, chooses Death eternal. You may indeed wend homeward through the devious tangle of reflected rays, but how long, how hard are such path! I would see your souls with eagle swoop make straight for the Central Sun. Look then within you. Man! Woman! Are you what you seem? Till this thought daily; it will bear the harvest of Life.

With analogy for our guide we observe that the first forms of life are crystalline and have two poles. You man, are also a magnetic sphere with physical and spiritual poles. On the physical side of the subject we find modern scientists telling us that man is matter in a state of low vibration, and thought, matter in a state of high vibration. (7) In this ascertained view, Spirit is a higher state of vibration than we at present cognize. "Does the fact look crass and material, threatening to degrade thy theory of Spirit? Resist it not; it goes to refine and raise thy theory of matter just as much." (8) Nor do I say this is all. Trust your highest ideal to the unconditioned causation lying back of that primal vibration — Absolute Thought.

The vibrant tension of fixed thought must in time heighten the vibratory ratio of the man, for tension excites increased pulsation. This rarefies the density of all bodies, and the friction of intensified chemical action establishes light, heat and odic force. The increased porosity of the physical body tends to disengage the atoms of the astral body, and the generation of a strong odic current forces it out to the astral world, (always attracting it) all the sooner because the intensified pulsation of thought-tension sends the auric emanations further into space, thus draughting a larger portion of the world-soul to the entity.

All vibration being attended with sound (which may or may not escape the ear) we proceed to examine tones and find them varying from the lowest of eight vibrations per second, to the highest known to western science of 24,000 per second. Remember that the tones of anger, hatred, scorn are all deep notes, those of cheerfulness, love, hope are treble. Here we discover the apparently inexplicable effect of spoken words which raise or depress our vibrations to their own by means of the etheric medium. To resist the wildfire spread of passion or anger we have but to check the vibration by holding steadily to our own; this maintained, may raise that of others, precisely as the high musical note constantly sounded, raises all lower ones at all related, to its own pitch. Tyndall says: "Scientific education ought to teach us to see the invisible as well as the visible in nature; to picture with the vision of the mind those operations which entirely elude bodily vision; to look at the very atoms of matter in motion and at rest, and to follow them forth without once losing sight of them * * to see them integrating themselves in natural phenomena." So I shall ask you to imagine a tone at a high rate of vibration, to see it striking the hearer's brain at a certain focus, creating there a centre of energy, which tending to crystalization, fixes the thought in the mind. And the more permanent duration of pleasant (which are high) thoughts and tunes is evident if we glance back over a long period of time and note how the joys stand out and the griefs disappear; so we always forget physical suffering. Moreover we may see this tone raising his vibratory ratio and glancing off at an angle of reflection equal to that of incidence, reacting upon the surrounding ether and upon all hearers. The magical success of eastern mantras depends upon the exact intonation, which governs the vibratory result, and the proper intonation of the sacred books, learned from the priests, doubtless increased their effect. Turning to colors, we find them varying in vibration from violet $1/60000$ inch to red $1/38000$ inch,

and the violet has greater actinism; so it would seem to follow that the more extended the undulation the greater the chemical action and resultant odic force. Hence the tone of animals or man is not such a poor test of their nature as we might suppose, and a certain clue to character is given in a preferred color. The higher sounds thus create greater akasic disturbance through increased undulation. Deleuze in his work on magnetism says: "The word which indicates our will can often exert an action. * * The very tones of the magnetizer, being produced by the vital energy, act upon the organs of the patients." Reichenbach proved that all chemical action is a source of odic force, and the transmersion of air being nothing less, additional witness is born to the occult power of a word. All mesmerizers are now agreed that motions and words are unnecessary; the will suffices; what is this but the tension of fixed thought. Everything in Nature has its own specific rate of vibration; if we know and can reproduce and heighten it we can call the thing into existence or pass ourselves within its consciousness. Hence the old saying that numbers are the names of things. The "lost word" itself is, doubt it not, a sound of the highest possible vibration, represented by the Aum, or sound of the eternal outpour of Light, the Logos of the Christians. The ordinary ear may not grasp this sound, but Tyndall tells us such are not dead because they have passed from our ken. (9) When we remember that this astral vibration can in time elevate that of all matter, we glimpse alike the great factor of Evolution and of the use of Aum. The thought being spiritually fixed, an unbroken vital current sets in between the man and the "One eternal Thinker, thinking non-eternal thoughts. He though one, fulfils the desire of many. The wise, who perceive Him within their Self, to them belong eternal joy, eternal peace!" (10) — Here we perceive the force of the repeated injunction to be calm; how else can the harmonious medium act upon us?" The man who is not calm and subdued, or whose mind is not at rest, he can never obtain the

Self, even by knowledge." (11)

Follow me now to the plane of soul. As all things from planet to molecule have their mystic centre, that of man is found in the heart, whose systole and diastole are regulated by the double movement of the Astral Light. There, hemmed about by the light of the semi-material soul, is the dusky centre, where the spirit may awaken and breathe. "The self is smaller than small, greater than great, hidden in the heart of the creature." Air is breathed by the lungs; the soul breathes the astral light. As that spiritual monad who is your own Augoides, breathed first upon the plastic Akasa and drew together, the principles of a man, so It must again breathe upon this silent centre to create the spiritual man. It does not inhabit him, It overshadows him. It is his "Father in Heaven" to whom Jesus bade him pray; his Creator. In each heart stands this shrouded altar to an unknown God. "Whom ye therefore ignorantly worship, Him declare I unto you." He has created the physical man hundreds of times, for His mission is unfulfilled until through Evolution, He shall have made "one higher than the angels." In that illimitable future which evades the mind, my soul sees ultimate beings in their glory, raise the swelling tide of Being higher still. So Divinity raises Itself by Itself and man expands God. Here is the adhesion of Jesus to the destiny latent in Humanity. "Be ye perfect as your Father in Heaven is also perfect."

(Concluded in April.)

THOUGHTS IN SOLITUDE: II — *Pilgrim*

The votaries of Religions that preach salvation only through the acceptance of their dogmas must inevitably be more or less animated by the proselytising spirit, and the more pretentious the claims of power to save by the inculcation of orthodox opinion, the more urgent must appear the necessity to spread those opinions as widely as possible. Indeed it seems imperative on one who holds such a faith in his heart of hearts, that he should spend his life in trying to spread it.

But when the true philosophic thought is attained and the law of Karma with its infinite ramifications realized as the all prevading power, how vain will seem all attempts to control or even deeply affect the destiny of others. Truly Occultism teaches the widest tolerance, and though its student will doubtless as formerly try to influence all who are brought into contact with him in his journey through life, and if possible instil into them the thoughts that actuate him and give his life a definite purpose, yet will he realize that over his own life alone has he paramount power. He may exercise his wordly wisdom as the sower of seed, may avoid what is most patently the rocky or the thorny ground, but he will gradually learn to cease to look for results from even the most promising, and will rise more and more on the wings of devotion to the true giver of the increase.

While therefore it is a subject for satisfaction if the Theosophical Society should indeed prove to be the dawn of that better hope for mankind the nucleus of that Universal Brotherhood which shall overspread all lands, and which shall plant in the hearts of men the Science-Religion along whose lines will move the spiritual progress of all future Humanity, yet as a Society it can

scarcely be expected to be free from the imperfections inherent in all organization, which being of the earth is necessarily earthly — and after all it is a matter of very small moment in what form truth is given to the world. This only is certain that truth must advance that no man can stay the wheel of evolution — that the Divine Wisdom which we believe animates us will one day be recognized by all mankind as the only solution of the problem of the Universe, and as the guide to Life Eternal.

And Destiny will not be hurried — spite of our impatience — any more than she can be retarded. The evil Karma of the World must work itself out. The unclean man let him be unclean still, let him measure every depth of vice and taste of every spring of passion till the hour strikes for him also and his painful upward progress has to begin. So have the Rishis done who went before us, so have we done in past existences, indeed we may have but extricated ourselves from the slough, and the mire may still be clinging to our feet. For no man can transcend experience, and all earthly places, foul and clean alike, must be trodden by him. Nor when the words or acts of others come into direct antagonism with our own personality, any more than when the cruelty and injustice in the world at large are brought painfully before us, shall we continue to blame the actors, or allow the old prejudices "with their lurid colourings of passion" to dominate us any longer, for the true philosophic thought will have taught us to recognize that all acts are but the result of the "Three Qualities" blended in infinite combination — the great Karma of the World working itself out.

The deeper one looks into this Western Civilization of ours, and the more one realizes in what degrading depths its masses are sunk, in what heartless frivolity so many of the more opulent spend their lives, and in what superstitious intolerance its so-called Religious World moves, it seems indeed a forlorn hope to

attempt to carry conviction of the Occult Truth or expect a widespread acceptance of it. But though this age of Darkness may exhibit an appalling depth of materiality, yet in all ages of the world, the blind multitude are many and the lovers of Wisdom few. And indeed this love of Wisdom is no light attainment, but one for which the soul has been educated through life times of experience and paroxysms of pain, for while the gratification of any of the senses still continues to give supreme satisfaction, there is no room in the soul for Theosophic thought. Not until by the slow education of repeated experience it is realized that the senses can no longer satisfy, that even the higher joys of communion with ones kind — though culminating in the ideal union of two souls — are but steps in the ladder to the Supreme Thought, can any true idea of the Divine Wisdom have been formed. Indeed a time will come for the student when the gratification of the senses will actually cause pain. It may be ushered in for one through the sense of sight, when the most beautiful scenery of earth, and the most perfect combinations of mountain wood and water only accentuate by their faint reflex the passionate desire for that land which no eye hath seen, that land which no eye can see. Or the symphonies of earthly music which once enthralled the soul may raise the longing for the song of the celestial choir to that ecstatic point where it becomes unrecognisable from pain. And so the student is driven inward to find at last his refuge in pure Thought, and he begins to perceive that the Eternal World of ideas is the only real World, the only one in which pure Being is to be found, and that this phenomenal existence is indeed but the circling of the nets of delusion, the restless, tossing of the false salt waves of sense which reward "with droughts that double thirst" the deluded souls that float on them.

The more the student lives in this ideal world, the more will he

find that the association with those whose interests are exclusively centred on earthly things becomes repugnant to him, and that even the calls of duty to descend from the tranquil heights of Thought, to the jarring discord of action in the world, are responded to with increasing pain, though duty in such cases is likely to be in process of changing her sphere of action. When the inner struggles of one still bound by ties of earth suggest such thoughts as these, surely the isolation from contact with the rude world of the most spiritual men, those who have achieved the sublime heights of Mahatmaship, is no longer a thing to wonder at, but becomes apparent as an absolute necessity.

The desires above referred to of seeing the invisible, and realizing the divine, will probably if practised continuously enough, and with sufficient intensity, be the prelude to some partial lifting of the veil, when the ecstatic may reap in a moment of beatific vision more than he ever dreamed of, and receive accretion of strength for the coming years, though this is more likely to be the immediate reward of some supreme self-devotion whether in act or thought, and when the words of Krishna, "near to renunciation — very near — dwelleth eternal peace" will flash upon the soul as truth that requires no word of mortal man to give it authority.

But woe to the man who unduly cultivates his spiritual faculties without being a complete master of his lower nature — the beast below will turn and rend him some day — the little bit of lust unconquered may be the means of his complete undoing. For as his astral consciousness develops, his whole being intensifies, including the small unconquered part of his physical nature, which he will then have to fight upon the Astral plane, in far more terrible struggle than had he conquered on the physical. It becomes in fact what is symbolically known as the "Dweller on the threshold" that has to be fought and conquered before the neophyte can aspire to gain the first glimmering of vision on the

true spiritual plane. For it must always be remembered that our nature is threefold, "body, soul and spirit" as the initiate St. Paul expressed it, and until the personality has transferred all its forces unto the soul plane, it cannot expect to attain to that of spirit. From this it will be evident how necessary it is to live more and more continuously in the Eternal Thought until all fleshly appetites and desires of sense die off by sheer inanition.

The vague dreams with which life began, and which the child with memories fresh from "that imperial palace whence he came" pictured in a material way of a golden city with walls of jasper and with gates of pearl, and into which no unclean thing was permitted to enter, are lost for a while in the frenzied rush of youth and early manhood, but maturer years bring them back with an added pathos and a more spiritualized meaning. It is indeed the Golden city we all seek for — "the city that hath foundations whose builder and whose maker is God."

The Path

HINDU SYMBOLISM: IV — *Isaac Myer*

AUM symbolized as in unison with the attributes of the Trimurti, as the symbolic foundation of the elementary universe. This has a certain connection with figures Nos. 1 and 2 and 3.

The idea is to represent the mystic body of Brahman (neuter) and the ideal type of the Trimurti. The representation is of a four-handed cloud picture. A wreath of clouds forms the outline of the head which is without any tiara. Two suns indicate the eyes without lids, always open. This symbolism is also found in the Hebrew books, *e.g.* the Zohar. The nose and eyebrows are formed by a palm tree divided on the top, in the centre. This tree was considered as androgynous. The mouth is merely an opening in the clouds; from it emanate, four principal rays, the four-worlds of the Kabbalah. AUM is winged, Brahman (neuter) is not, for the latter is also AUM — Prana, the breath of the highest life and mystic carrier of the Will of Brahman (neuter). AUM is the bird of the Brahman Desire or Wish.

The four hands of AUM are holding the archetypes of the four

elements, fire, water, air, earth, in their height and depth. The lower are supporting the Himalayan Mountains, the mountains of the gods. From which comes the German Himmel *i.e.*, Heaven. The linga yoni is shown as the symbol of all the creative and emanative powers which lie in the mystic cloud garment of AUM. In this figure are nearly all the principal symbols of the Brahmanical religious metaphysics.

The bond which unites Prakriti to Brahman (neuter) is Prana, the subtle body of Brahman, the form of the Being, the divine breath, the principle of the organism, the respiration so to say, of the Deity; in Sanskrit it also means "breath of man," more correctly it is AUM, the first form of the creator, the Sun engendered before Time, the first Word (the Logos) which went from Its mouth, the 'Hokmah or Wisdom of the Kabbalah, when It prepared its work, the creative Word. Prana and AUM are confounded in Maya, and as it, they have formed the Cow. AUM is the son of Maya as he is the son of Brahman (neuter), because Maya is Brahman. AUM is the first born Word or Logos of the Deity, the Memrah of the Jews, the Honover of the Persians, the origin of the Vedas. It has revealed and manifested all the emanated things, the so-called creation. It appeared before all things, and contains all qualities, all the elements, and is the name and body of Brahman (neuter), and consequently as infinite as It. The Will, Desire, Word is the master architect and creator of all the things. Brahma meditating upon the divine Word, therein found the primitive water, the common bond of all the creatures, the primitive fire, and the Trimurti of the Vedas, also the worlds and universal harmony of all the things. The image of AUM is the Cow, which is also a symbol of the universe. The universe was concealed and at first was hidden under the waters, and the waters were in Atma. These waters are those without any shores, all that which exists is water, and the water and AUM make but

one; these primitive waters are the sea of Maya, the celestial ocean of all existence.

There are to be found further in this symbolical picture many other suggestions flowing from the Ancient Aryan or Hindu system. That system is believed to contain in germ all the others which have since arisen, as: the Hermetic, the Jewish, the Christian and others. Space, however, forbids a more extended explanation at present, and the student is recommended to study the four which have appeared in this magazine.

The Path

THROUGH THE GATES OF GOLD

The most notable book for guidance in Mysticism which has appeared since *Light on the Path* was written has just been published under the significant title of "Through the Gates of Gold." (1) Though the author's name is withheld, the occult student will quickly discern that it must proceed from a very high source. In certain respects the book may be regarded as a commentary on *Light on the Path*. The reader would do well to bear this in mind. Many things in that book will be made clear by the reading of this one, and one will be constantly reminded of that work, which has already become a classic in our literature. Through the Gates of Gold is a work to be kept constantly at hand for reference and study. It will surely take rank as one of the standard books of Theosophy.

The "Gates of Gold" represent the entrance to that realm of the soul unknowable through the physical perceptions, and the purpose of this work is to indicate some of the steps necessary to reach their threshold. Through its extraordinary beauty of style and the clearness of its statement it will appeal to a wider portion of the public than most works of a Theosophical character. It speaks to the Western World in its own language, and in this fact lies much of its value.

Those of us who have been longing for some thing "practical" will find it here, while it will probably come into the hands of thousands who know little or nothing of Theosophy, and thus meet wants deeply felt though unexpressed. There are also doubtless many, we fancy, who will be carried far along in its pages by its resistless logic until they encounter something which will give a rude shock to some of their old conceptions, which

they have imagined as firmly based as upon a rock — a shock which may cause them to draw back in alarm, but from which they will not find it so easy to recover, and which will be likely to set them thinking seriously.

The titles of the five chapters of the book are, respectively, "The Search for Pleasure," "The Mystery of Threshold," "The Initial Effort," "The Meaning of Pain," and "The Secret of Strength." Instead of speculating upon mysteries that lie at the very end of man's destiny, and which cannot be approached by any manner of conjecture, the work very sensibly takes up that which lies next at hand, that which constitutes the first step to be taken if we are ever to take a second one, and teaches us its significance. At the outset we must cope with sensation and learn its nature and meaning. An important teaching of *Light on the Path* has been misread by many. We are not enjoined to kill out sensation, but to "kill out *desire* for sensation," which is something quite different. "Sensation, as we obtain it through the physical body, affords us all that induces us to live in that shape," says this work. The problem is, to extract the meaning which it holds for us. That is what existence is for. "If men will but pause and consider what lessons they have learned from pleasure and pain, much might be guessed of that strange thing which causes these effects."

"The question concerning results seemingly unknowable, that concerning the life beyond the Gates" is presented as one that has been asked throughout the ages, coming at the hour "when the flower of civilization had blown to its full, and when its petals are but slackly held together," the period when man reaches the greatest physical development of his cycle. It is then that in the distance a great glittering is seen, before which many drop their eyes bewildered and dazzled, though now and then one is found brave enough to gaze fixedly on this glittering, and to decipher something of the shape within it. "Poets and philosophers,

thinkers and teachers, all those who are the 'elder brothers of the race' — have beheld this sight from time to time, and some among them have recognized in the bewildering glitter the outlines of the Gates of Gold."

Those Gates admit us to the sanctuary of man's own nature, to the place whence his life-power comes, and where he is priest of the shrine of life. It needs but a strong hand to push them open, we are told. "The courage to enter them is the courage to search the recesses of one's own nature without fear and without shame. In the fine part, the essence, the flavor of the man, is found the key which unlocks those great Gates."

The necessity of killing out the sense of separateness is profoundly emphasized as one of the most important factors in this process. We must divest ourselves of the illusions of the material life. "When we desire to speak with those who have tried the Golden Gates and pushed them open, then it is very necessary — in fact it is essential — to discriminate, and not bring into our life the confusions of our sleep. If we do, we are reckoned as madmen, and fall back into the darkness where there is no friend but chaos. This chaos has followed every effort of man that is written in history; after civilization has flowered, the flower falls and dies, and winter and darkness destroy it." In this last sentence is indicated the purpose of civilization. It is the blossoming of a race, with the purpose of producing a certain spiritual fruit; this fruit having ripened, then the degeneration of the great residuum begins, to be worked over and over again in the grand fermenting processes of reincarnation. Our great civilization is now flowering and in this fact we may read the reason for the extraordinary efforts to sow the seed of the Mystic Teachings wherever the mind of man may be ready to receive it.

In the "Mystery of Threshold," we are told that "only a man who

has the potentialities in him both of the voluptuary and the stoic has any chance of entering the Golden Gates. He must be capable of testing and valuing to its most delicate fraction every joy existence has to give; and he must be capable of denying himself all pleasure, and that without suffering from the denial."

The fact that the way is different for each individual is finely set forth in "The Initial Effort," in the words that man "may burst the shell that holds him in darkness, tear the veil that hides him from the eternal, at any moment where it is easiest for him to do so; and most often this point will be where he least expects to find it." By this we may see the uselessness of laying down arbitrary laws in the matter.

The meaning of those important words, "All steps are necessary to make up the ladder," finds a wealth of illustration here. These sentences are particularly pregnant: "Spirit is not a gas created by matter, and we cannot create our future by forcibly using one material agent and leaving out the rest. Spirit is the great life on which matter rests, as does the rocky world on the free and fluid ether; whenever we can break our limitations we find ourselves on that marvellous shore where Wordsworth once saw the gleam of the gold." Virtue, being of the material life, man has not the power to carry it with him, "yet the aroma of his good deeds is a far sweeter sacrifice than the odor of crime and cruelty."

"To the one who has lifted the golden latch the spring of sweet waters, the fountain itself whence all softness arises, is opened and becomes part of his heritage. But before this can be reached a heavy weight has to be lifted from the heart, an iron bar which holds it down and prevents it from arising in its strength."

The author here wishes to show that there is sweetness and light in occultism, and not merely a wide dry level of dreadful Karma, such as some Theosophists are prone to dwell on. And this

sweetness and light may be reached when we discover the iron bar and raising it shall permit the heart to be free. This iron bar is what the Hindus call "the knot of the heart!" In their scriptures they talk of unloosing this knot, and say that when that is accomplished freedom is near. But what is the iron bar and the knot? is the question we must answer. It is the astringent power of self — of egotism — of the idea of separateness. This idea has many strongholds. It holds its most secret court and deepest counsels near the far removed depths and centre of the heart. But it manifests itself first, in that place which is nearest to our ignorant preceptions, where we see it first after beginning the search. When we assault and conquer it there it disappears. It has only retreated to the next row of outworks where for a time it appears not to our sight, and we imagine it killed, while it is laughing at our imaginary conquests and security. Soon again we find it and conquer again, only to have it again retreat. So we must follow it up if we wish to grasp it at last in its final stand just near the "kernel of the heart". There it has become an iron bar that holds down the heart, and there only can the fight be really won. That disciple is fortunate who is able to sink past all the pretended outer citadels and seize at once this *personal devil* who holds the bar of iron, and there wage the battle. If won there, it is easy to return to the outermost places and take them by capitulation. This is very difficult, for many reasons. It is not a mere juggle of words to speak of this trial. It is a living tangible thing that can be met by any real student. The great difficulty of rushing at once to the centre lies in the unimaginable terrors which assault the soul on its short journey there. This being so it is better to begin the battle on the outside in just the way pointed out in this book and *Light on the Path*, by testing experience and learning from it.

In the lines quoted the author attempts to direct the eyes of a very

materialistic age to the fact which is an accepted one by all true students of occultism, that the true heart of a man — which is visibly represented by the muscular heart — is the focus point for spirit, for knowledge, for power: and that from that point the converged rays begin to spread out fan-like, until they embrace the Universe. So it is the Gate. And it is just at that neutral spot of concentration that the pillars and the doors are fixed. It is beyond it that the glorious golden light burns, and throws up a "burnished glow." We find in this the same teachings as in the Upanishads. The latter speaks of "the ether which is within the heart," and also says that we must pass across that ether.

"The Meaning of Pain" is considered in a way which throws a great light on the existence of that which for ages has puzzled many learned men. "Pain arouses, softens, breaks, and destroys. Regarded from a sufficiently removed standpoint, it appears as a medicine, as a knife, as a weapon, as a poison, in turn. It is an implement, a thing which is used, evidently. What we desire to discover is, who is the user; what part of ourselves is it that demands the presence of this thing so hateful to the rest?"

The task is, to rise above both pain and pleasure and unite them to our service. "Pain and pleasure stand apart and separate, as do the two sexes; and it is in the merging, the making the two into one, that joy and deep sensation and profound peace are obtained. Where there is neither male nor female, neither pain nor pleasure, there is the god in man dominant, and then is life real."

The following passage can hardly fail to startle many good people: "Destiny, the inevitable, does indeed exist for the race and for the individual; but who can ordain this save the man himself? There is no clew in heaven or earth to the existence of any ordainer other than the man who suffers or enjoys that which is ordained."

But can any earnest student of Theosophy deny, or object to this? Is it not a pure statement of the law of Karma? Does it not agree perfectly with the teaching of the Bhagavat-Gita? There is surely no power which sits apart like a judge in court, and fines us or rewards us for this misstep or that merit; it is we who shape, or ordain, our own future.

God is not denied. The seeming paradox that a God exists within each man is made clear when we perceive that our separate existence is an illusion; the physical, which makes us separate individuals, must eventually fall away, leaving each man one with all men, and with God, who is the Infinite.

And the passage which will surely be widely misunderstood is that in "The secret of strength." "Religion holds a man back from the path, prevents his stepping forward, for various very plain reasons. First, it makes the vital mistake of distinguishing between good and evil. Nature knows no such distinctions." Religion is always man-made. It cannot therefore be the whole truth. It is a good thing for the ordinary and outside man, but surely it will never bring him to the Gates of Gold. If religion be of God how is it that we find that same God in his own works and acts violating the precepts of religion? He kills each man once in life; every day the fierce elements and strange circumstances which he is said to be the author of, bring on famine, cold and innumerable untimely deaths; where then, in The True, can there be any room for such distinctions as right and wrong? The disciple, must as he walks on the path, abide by law and order, but if he pins his faith on any religion whatever he will stop at once, and it makes no matter whether he sets up Mahatmas, Gods, Krishna, Vedas or mysterious acts of grace, each of these will stop him and throw him into a rut from which even heavenly death will not release him. Religion can only teach morals and ethics. It cannot answer the question "what am I?" The Buddhist ascetic

holds a fan before his eyes to keep away the sight of objects condemned by his religion. But he thereby gains no knowledge, for that part of him which is affected by the improper sights has to be known by the man himself, and it is by experience alone that the knowledge can be possessed and assimilated.

The book closes gloriously, with some hints that have been much needed. Too many, even of the sincerest students of occultism, have sought to ignore that one-half of their nature, which is here taught to be necessary. Instead of crushing out the animal nature, we have here the high and wise teaching that we must learn to fully understand the animal and subordinate it to the spiritual.

"The god in man, degraded, is a thing unspeakable in its infamous power of production. The animal in man, elevated, is a thing unimaginable in its great powers of service and of strength," and we are told that our animal self is a great force, the secret of the old-world magicians, and of the coming race which Lord Lytton foreshadowed. "But this power can only be attained by giving the god the sovereignty. Make your animal ruler over your self, and he will never rule others."

This teaching will be seen to be identical with that of the closing words of "The Idyll of the White Lotus": "He will learn how to expound spiritual truths, and to enter into the life of his highest self, and he can learn also to hold within him the glory of that higher self, and yet to retain life upon this planet so long as it shall last, if need be: to retain life in the vigor of manhood, till his entire work is completed, and he has taught the three truths to all who look for light."

There are three sentences in the book which ought to be imprinted in the reader's mind, and we present them inversely:

"Secreted and hidden in the heart of the world and the heart of man is the light which can illumine all life, the future and the

past."

"On the mental steps of a million men Buddha passed through the Gates of Gold; and because a great crowd pressed about the threshold he was able to leave behind him words which prove that those gates will open."

"This is one of the most important factors in the development of man, the recognition — profound and complete recognition — of the law of universal unity and coherence."

The Path

CONSIDERATIONS ON MAGIC — *Pythagoras*

We hear a good deal nowadays and are likely to hear still more of occult science. In this regard we may as well accept the inevitable. All things have their day, and all things revolve in cycles; they come and go, and come again, though never twice the same. Even our very thoughts conform to this universal law. The life, the teachings, and the fate of Pythagoras are involved in mystery, but the fate of the schools which he established and of the followers who succeeded him are matters of history. The slaughter of the Magi stands over against the abuses and abominations which were perpetrated in their name, and doubtless by many styling themselves Magicians.

It is not the object of this brief paper to attempt to define magic, or elucidate occult Science as such, but rather to suggest a few considerations which are of vital import at the present time, equally important to those who utterly deny to magic any more than an imaginative basis, as to those who convinced of its existence as a science, are, or are to become investigators. In both the publications and conversations of the day, frequently occur the expressions "black magic," and "white magic" and those who follow these studies are designated as followers of the "*left hand path*," or the "*right hand path*". It ought to be understood that up to a certain point all students of magic, or occultism, journey together. By and by is reached *a place where two roads meet*, or where the common path divides, and the *awful voice from the silence*, heard only in the recesses of the individual soul utters the stern command: "*Choose ye this day whom ye will serve.*" Instead of black and white magic, read, black and white *motive*.

The student of occultism is rushing on his destiny, but up to a

certain point that destiny is in his own hands, though he is constantly shaping his course, freeing his soul from the trammels of sense and self, or becoming entangled in the web, which, with warp and woof will presently clothe him as with a garment without a seam.

If early in the race he finds it difficult to shake off his chains, let him remember that at every step they grow more and more tyrannical, and often before the goal is reached where the ways divide, the battle is lost or won, and the decision there is only a matter of form. That decision once made is irrevocable, or so nearly so that no exception need be made. Man lives at once in two worlds: the natural and the spiritual, and as in the natural plane he influences his associates, and is in turn influenced by them, so let him not imagine that in the spiritual plane he is alone. This will be a fatal mistake for the dabbler in magic, or the student in occultism. Throughout this vast universe, the good will seek the good, and the evil the evil, each will be unconsciously *drawn to its own kind*.

But when man faces his destiny in full consciousness of the issues involved, as he must before the final decision is reached, he will be no longer unconscious of these influences, but will recognize his companions: companions, alas! no longer, *Masters* now, inhuman, pitiless; and the same law of attraction which has led him along the tortuous path, unveils its face, and by affinity of evil, the slave stands in the presence of his master, and the fiends that have all along incited him to laugh at the miseries of his fellow men, and trample under his feet every kindly impulse, every tender sympathy, now make the measureless hells within his own soul resound with their laughter at him, the poor deluded fool whose selfish pride and ambition have stifled and at last obliterated his humanity.

Blind indeed is he who cannot see why those who are in possession of arcane wisdom, hesitate in giving it out to the world, and when in the cycles of time its day has come, they put forth the only doctrine which has power to save and bless, UNIVERSAL BROTHERHOOD with all that the term implies.

There may be those who have already in this new era, entered the left-hand road. But now as of old, "by their works ye shall know them". To labor with them is in vain. Selfishness, pride and lust for power are the signs by which we may know them. They may not at once cast off disguise, and they will never deceive the true Theosophist. They can nevertheless deceive to their ruin the ignorant, the curious, the unwary, and it is for such as these that these lines are penned, and the worst of it is, that these poor deluded souls, are led to believe that no such danger exists, and this belief is fortified by the so-called scientists, who are quoted as authority, and who ridicule everything but rank materialism. Yet notwithstanding all this, these simple souls flutter like moths around the flame till they are drawn within the vortex. It is better a million times, that the proud, the selfish and time-serving should eat, drink and be merry, and let occultism alone, for these propensities unless speedily eradicated, will bear fruit and ripen into quick harvests, and the wages thereof is death, literally the "*second death*".

The purpose of Theosophy is to eradicate these evil tendencies of man, so that whether on the ordinary planes of daily life, or in the higher occult realms, the Christ shall be lifted up, and draw all men unto him.

"Man's inhumanity to man
Makes countless thousands mourn."

The Christs of all the ages have preached this one doctrine: Charity and Brotherhood of Man. To deny the law of charity is to

deny the Christ. The Theosophical Society is not responsible for unveiling to the present generation the occult nature of man. Modern Spiritualism had already done this; nor is the responsibility to be charged to the Spiritualists, for these unseen forces had revealed themselves in the fullness of time, and many millions had become convinced, many against their wills, of the reality of the unseen universe. These things *are here*, and neither crimination, or recrimination is of any use. The responsibility therefore, rests entirely with the individual, as to what use he makes of his opportunities, as to his purposes and aims, and as he advances in his course, involved in the circle of necessity, he influences whether he will or no, those whose spheres of life touch at any point his own. *As ye sow, so shall ye also reap.* By and by the cycle will close and both the evil and the good will return like bread cast upon the waters. This is a law of all life.

Imagine not that they are weak and vacillating souls who enter the left-hand road: Lucifer was once a prince of light, admitted to the councils of the Most High. He fell through pride, and dragged downward in his fall all who worshiped the demon pride. This is no foolish fable, but a terrible tragedy, enacted at the gates of paradise, in the face of the assembled universe, and reenacted in the heart of man, the epitome of all. Only Infinite pity can measure the downfall of such an one, only Infinite love disarm by annihilation, and so put an end to unendurable woe, and that only when the cycle is complete, the measure of iniquity balanced by its measure of pain. Occultism and magic are not child's-play, as many may learn to their sorrow, as many visitants of dark circles have already and long ago discovered. Better give dynamite to our children as a plaything, than Magic to the unprincipled, the thoughtless, the selfish and ignorant. Let all who have joined the Theosophical Society remember this, and search their hearts before taking the first step in any magical

formulary. *The motive determines all.* Occult power brings with it unknown and unmeasured responsibility.

If in the secret councils of the soul, where no eye can see, and no thought deceive that divine spark conscience, we are ready to forget self, to forego pride, and labor for the well-being of man, then may the upright man face his destiny, follow this guide and fear no evil. Otherwise it were far better that a millstone were hung about his neck, and he were cast into the depths of the sea.

The Path

UNIVERSAL UNITY — *Henry Turner Patterson*

'Tis said they who the starry heavens watch
Spending their time in silent contemplation
And view the worlds and systems moving round
Become so filled with peace and perfect trust
That unto them life, death, grief, care and fear
Are almost naught. So, I, a long time past
Having passed my time in watching night by night
The stars move in their orbits; and my days
In making out their past and future course
One August night, while that the quiet moon
Flooded tree and bush, and vale and hill-top
Stream, and bank and spire and roof with light
And whistling and rustling leaves added
Their voices to the myriad sounds
Of insect life, fell fast asleep. And then
I saw the moon swinging slowly to and fro,
And round our Sun the earth and other satellites
Revolving ceaselessly. And as they moved
I heard a sweet melodious sound
And felt a soft and mellow light
And still I saw our Sun with other suns
All circling round one common central point
All these centres round some other centre circling.
The sound increased till all things seemed but sound
The light increased till all things seemed but light
The heat increased till all things seemed but heat
And then I felt my soul beat rapturously
Against the throbbing pulsing central life.
From thence I felt the light, the heat, the sound,

The life, the love, the peace pass out unceasingly.
From thence I knew all life to flow. And passing out
I knew all life was part of it, and it of life;
I knew that I was it, and it was I;
That sound and light, and life, and I and it were one
That life and death and tree and bush and stream
And bank and flower and seed and it are one
Then there passed into my soul, a perfect,
Great content. And rising from my sleep,
I passed into my life a happy man.

The Path

HERALDS FROM THE UNSEEN: II — *Jasper Niemand*

(Concluded.)

"Yet mark it well, man cannot compel the God. The self cannot be gained by the Veda, nor by the understanding, nor by much learning. He whom the Self chooses, by him alone the Self can be gained. The Self chooses him as His own." (1) How then would you attract the Shining One? You must first strive to raise your own vibrations. Tension does this, the tension of lofty thought, benevolent feelings, the living spirit of holy books, communion with high minds, any and every elevating practice, the mind fixed on the True. And, look you, this is no matter where you may dissect from the outset; you must have Faith. If you institute the conditions, the event follows; such is the economy of the occult world. What is faith but the institution of conditions? "He cannot be reached by speech, by mind, or by the eye: He cannot be apprehended except by him who says, '*He is*'." You must bear some relation to Spirit, or its eternal vibrations cannot raise you. Knowledge attained, you will find it submitting triumphantly to every test. Calm is the essence of Faith because a similitude of vibration with Truth (in its living record) is only possible when you are no longer at the mercy of astral currents. Then "regard most earnestly your own heart." (2) The soul is there; all may feel its heat, some hear its musical tones as it expands. Sink your thoughts down to that heat: the Spirit (Buddhi) enters by the head, and your final object is to bind heart and head together in an abiding consciousness of Unity. The Bhagavad-Gita tells us plainly that when the mind roams man "should subdue it, bring it back, and place it within his own breast;" not, as you see, in the brain. Now by "mind" the intellect is not meant, but manas, the collective thoughts and desires upon which Reason (or Buddhi)

may act as guide or control. You will find that you can think from the heart, just as all strong emotions, — such as fear, love, suspense, — take their rise in the heart and spread wave-like over the chest, and have no similarity to the flash of an idea in the brain. In the ordinary man the brain is only the focus for the thoughts streaming in through the solar plexus, and many are lost, just as millions of seeds in nature are lost. So the Upanishad echoes the warning: — "The mind must be restrained in the heart till it comes to an end; — that is knowledge, that is liberty; all the rest are extensions of the ties." When we are able to think from the centre we shall realise what is now difficult to believe, — that our present intellection is not the highest avenue of knowledge.

"When a man is delivered from his mind, that is the highest point." We sink our thoughts then into the flowing Light as men sink nets into the sea, — withdrawn, they are full to breaking.

A distinguished confrere, speaking of this subject in the October *Theosophist*, says that the right "Word" must be known, when we may sink it down to the heart where it becomes a living power: he adds that *Om* is used for this purpose in India and *Jao* in Europe. These are good words as we all know, and represent high vibrations. The Upanishad says plainly: — "Om is the sound-endowed body of him:" and again; "The syllable Om is what is called the Word and its end is the silent, the soundless, fearless, * * * immovable, certain Brahman. We are told by the authors of Man that "in incantations, sound is so modulated as to produce the same state of the body as that which invariably accompanies the generation of any desired psychic or spiritual force." Nor is it difficult to find the rationale of this use of sound when we consider that there exists in the Akasa a latent and eternal power called Yajna, which is supposed to form a bridge between mortals and spirits, or gods, like the ladder in Jacob's dream. "Isis" states that it can be called into play by the lost Word receiving impulse

through will power. This sound is the Vach, or dormant "Word" of the sacred Mantras, evoked by those who know their proper intonation. Krishna says that as Adhiyajna (Lord of Yajna) he is present in this body. Reflect deeply on this. He who can fret the sensitive akasic chords with heat-compelling tones may see this stupendous electric force burst outward from its hidden lair and rend for him the veil of Isis. So indeed he mounts to the Gods.

When Hartmann adds, however, that attempts to carry on this practice without first obtaining a "Word" just suited to our condition from an Adept are dangerous, he tends to frighten away those who would try to find the "Lord of all worlds" for themselves, as if an Adept were needed when "Ishwar resideth in the breast of every mortal being." (3) An Adept can impart an impulse, stimulate our vibrations momentarily; he cannot strain his powers to raise us to an artificial status and hold us there. Knowledge is Being; you *cannot* know more than you are. You have within you the eternal motor, — Thought. Apply it through the universal vehicle, — Will. I do not say that such external impetus as Adepts can give is not a great advantage, *provided it is in your Karma*. Otherwise it is useless except to teach you a lesson through premature failure, and The Brothers, foreseeing the end, will if left to themselves deal more wisely with the man of desires than he with himself. Anyone may follow Krishna's behest and "raise himself by himself." Students should give serious attention to the point that mere automatic processes have as such no place in the higher science of the Wisdom-Religion. Astral perception confuses and retards; it is but a period of synchronous vibration with that sphere; "ye cannot *serve* two masters:" though, all service ended, you may become astral serpent and spiritual dove in one. Yogees in India who pronounce Om for years with fixed thought often make no apparent progress; its full application is beyond their ken; it would seem beyond Hartmann's also. For the

article in question somewhat belittles the practice of Charity, Devotion, and the like, whereas all precedence comes to naught in the final test, (and I consider nothing short of that,) if these sacred principles do not constitute the integral make up of the heart. "Though I speak with the tongues of men and angels and have not charity, I am become as sounding brass." I repeat, men have fallen into a way of considering such injunctions as mere adornment, whereas they are structural necessities, truths as demonstrable as any mathematical equation. How shall I think as a god if I have not the large outlook of a god? I would not willingly behold any differentiation in the universe which is not visible from the standpoint of the polar star! The sum of Karma consists of all deeds referable to the self; the deeds done for self increase the sense of self, while spiritual life consists in the absence of self. Thus the fundamental necessity of spiritual growth is that all be done for all. Whatever tends to raise the vibration is of value, your intuitions must direct you to a wise admixture. Persevere; "to the persevering mortal the blessed Immortals are swift." (4) In some quiet moment you will feel a touch upon the heart as if a spent bullet had lodged there, or a soft stir, as a nestling dove. Later, sounds will ensue, sounds like singing sands, or piping winds, or the surge of golden bells chiming adown far coasts. Sometimes a fine aerial music attends the august vibrations, as heralds announce the King. *For when the sound arises, the Light is near.* Then control the mind, whose centrifugal tendency is immense; it is a Ulysses who must be tied to the mast when these syren voices echo, lest it lose itself in the sea of sense. Attend only to those ideas to which the sounds give rise in the heart. Other wonders accrue, fields of color, flashing sights and psychic sense unfolding, but to describe these is to leave the student at the mercy of a vivid imagination. I can only state that something is born again under the potency of the *Word*, and this *Word* is a fixed rate of high vibration.

You have now a clue; try. On the doors and walls of the temple the word "Try" is written. The entrance found, use this key. "The mouth of the true Brahman is covered with a golden lid, open that, O Sun, that we may go to the true One, Who pervades all. He who is that person in the sun I am He."

"After having left behind the body, the organs of sense and the objects of sense (as no longer belonging to us), and having seized the bow whose stick is fortitude and whose string is asceticism (the true kind), having stricken down with the arrow consisting of freedom from egotism the first guardian of the door of Brahman, having killed that guardian, he crosses by means of the boat Om to the other side of the ether within the heart, and when the ether is revealed (as Brahman), he enters slowly, as a miner seeking minerals enters a mine, into the hall of Brahman. After that let him by means of the doctrine of his teacher, (trying his intuitive way and not that of another), break through the first shrine of Brahman (consisting of the four nets of food, breath, mind and knowledge), till he reaches the last shrine of Brahman. Thenceforth pure, clean, tranquil, breathless, endless, imperishable, firm, unborn, and independent, he stands in his own greatness, and having seen the Self standing in His own greatness, he looks at the wheel of the world, (therefore he may still be in the world,) as one who having alighted from a chariot looks on its revolving wheel." (5)

Take up the analogy. Get to the wondrous centre and ask of the latent Light, and "all shall be changed." Then Brothers, give, give what you receive. Cast all your treasures to all the winds of morning; the closing pinions of the night will bring them back transformed. *Fear nothing!* Bend the inner ear and you shall hear that royal Watch who calls across the Darkness, "All's well! All's well!"

Ishwar, Lord of the Light! Make me to be a channel through which Thou flowest. Teach me to know Thy voice in other hearts as well as in mine own, and inform us with Thine effulgence through the generating cycles — Om!

SUGGESTIONS AS TO PRIMARY CONCEPTS — *J. D. Buck*

"The world for us" is our *idea* of the world, nothing more, nothing less. "God for us" is our idea of God; likewise each individual is an embodiment of his idea of himself.

There is also a world of ideas, the aggregate of which constitutes the Ideal world.

No one imagines that this present existence is the Ideal world, but all admit that it is at best, a *striving towards it*.

These propositions may be taken tentatively, and it will thus be seen, if they are found true, that our ideals are the patterns after which our lives are formed.

If there is a world of ideas of which the ideal, or perfect, man forms a part, the ideas which we entertain may have a great deal to do in facilitating our progress toward the realization of our highest possibilities. In other words, if our ideas conform to the cosmic or Divine ideal we shall become "Co-workers with God" toward that ideal. If it be true that "There is a Power that shapes our ends, rough hew them as we may," instead of "kicking against the pricks" we should follow the line of least resistance, and, instead of rebellious children, wounded and bruised continually by the sharp rocks of daily experience, we shall become willing and obedient, and thus, in facilitating our own upward progress, we shall be enabled to help others in innumerable ways toward the same end.

It therefore makes a great deal of difference how we look at things. Our belief or idea of anything does not alter the thing itself, though this might seem to be the case. One may imagine the moon to be a big cheese, or the sun a ball of fire consuming

millions of tons of coal per second, or God to be a huge half-human monster, but that such belief could make these things other than they are, no one but the imbecile or the insane will imagine.

Since the advent of Theosophy in these latter times, many words and ideas have been imported from the East, and the result has often been to add to our former bewilderment rather than to make more clear the duties and the possibilities of man. Even when these words and ideas have been translated into English, they have been but partly successful in removing our obscurity.

It is for this reason that the whole Theosophic movement has been often designated as an attempt to supplant Christianity by Buddhism; and though this has been again and again denied, in the absence of clear concepts not of theosophy but of the existence of things, (which concepts have been long lost to the Western world), this denial has not changed opinion or enlightened individuals. Thus do additional reasons appear why our primary concepts should be clear, rational, and therefore true, as far as we go.

While therefore it is true that many of our ideas come from these Eastern sources, it is equally true that they may be clothed in Western garb, and thus become comprehensible to Western minds. One may by great labor learn to read Sanskrit, Hindustani, or German, but there are few aliens who are ever able to think in any language save their mother tongue. Our forms of thought, *i.e.*, our ideas, will still be clothed in the nursery garb wherein we were cradled.

The first object of every earnest seeker should be *to find himself*. This he cannot do all at once. Most of us would be objects of pity if we could, and we might turn with loathing and despair from the reality, divested of all conventional or imaginary accessories. If

we would enter in and possess the land of promise, we must drive out the giants, not all at once, but "*little by little*;" as we drive out the giants and subdue the wilderness, we must cultivate the soil and so *enter into the land*, TO POSSESS IT. Man lives at once in two worlds, the outer, physical, natural world, and the inner or spiritual. If we take man as he is, and nature as we find it, we shall find a two-fold division running through both, and we shall ultimately find that DUALITY is everywhere the basic condition in the manifestation of all things.

If we examine the world about us, as to its real character, and describe it in the language of science, we find Matter, Force, and Motion. Matter is that which occupies space and resists motion. Force is that which produces motion in matter. Matter is indestructible, it changes form and combination. Force is indestructible; and finally matter and force are inseparable, indissoluble. This leads to the concept of the persistence of motion. If we conceive of atoms or molecules, we must think of them as never for an instant at rest. A motionless atom therefore is unthinkable; as soon as it ceases to move, it ceases to be. Now this moving physical panorama we call the phenomenal world, its essence is motion, and motion implies change.

Matter, both mass and molecule, is continually appearing and disappearing; and whenever, wherever, and howsoever it appears, force accompanies it.

Now suppose we call the line of its appearance and final disappearance the boundary of the phenomenal or the Ether, and think of this ether as the ocean in which both matter and force dissolve and motion ceases, or, that the ether is potentially both matter and force, latent, unmanifested. When therefore an appearance or manifestation occurs, even of a single atom, matter, force, and motion represent it, and the substratum in

which it appears, commonly called space, is the all surrounding, all pervading ocean of ether.

Science calls this Ether "Luminiferous." This is the Astral Light, and yet this luminosity is not light as we think of it. The difference between luminosity and light is similar to that between magnetism and electricity. Light is luminosity plus polarity, and polarity implies duality, hence motion, hence phenomena, transition, change.

The center of man is consciousness: the avenues through which this center of consciousness comes in contact with the external world of phenomena are the senses. If the essence of phenomena is change, so is change the essence of the senses. Sensory and motor impressions are simply changes apprehended or appreciated by the nerves, the result of which is transmitted to consciousness. A nerve channel therefore, incapable of change, is incapable of either sensory or motor impressions, and hence is out of communication with the centre, consciousness; or, in other words, that part of the body is "paralysed." The realm of consciousness heretofore in communication with that realm is latent, but is not paralysed. The brain is the seat or center of consciousness, but it is not the office of the brain to manifest consciousness; that is the office of the body, and particularly of the muscular system by bodily motion and facial expression. There are bodily conditions in which consciousness remains, yet the individual is unable to manifest it. The brain is therefore the house in which consciousness dwells, in which it is *usually*, but not necessarily, confined. The delicate surface of the gray matter of the brain is the canvas on which is exhibited to the indwelling consciousness the panorama of events occurring in the outer world of phenomena. Here we find the origin, the basis, and the conditions of thought, of all intellectual processes whatsoever. In health these moving pictures are geometrical in form, and

mathematical as to number, rhythm, and movement. The action of the heart conforms to, or again determines, this rhythm. Mental emotions change the action of the heart; disturbance of the heart's action gives rise to emotion, *i. e.*, there is a close sympathy between heart and brain, and hence between the functions of each. The mistake in modern physiology is in supposing that the brain originates consciousness, whereas it only is related to its manifestation. It would be far more correct to say that consciousness originates the brain. It is quite probable that all sensations and functions, other than the purely organic, originate from the single sense of feeling, and consciousness as related to the phenomenal world is a development of feeling, *viz.*; experience.

It may thus be seen what is the nature of the phenomenal universe, and of man's being as related thereto, *viz.*: change, transition, the past is dead, the future is not, the present is an *instant of change*, and our consciousness of it is a consciousness of change, and that only; what it is *in itself*, we do not know. This is what our Eastern Brothers call M_AY_A, a moving panorama of illusions, which generally lead to delusion.

All this is related to the physical world, but one side of the nature of man, but one-half of the world itself. Oken says of the sun that "it shines *by virtue of its standing in the midst.*" The sun of the Microcosm is consciousness. If we call the light of consciousness luminosity, then are the sensory and motor impulses passing too and fro along the nerves polarized light, qualification, analysis, the vibrations of which break on the shore of consciousness, to be merged in its mysterious deeps. Sensations precipitated, deprived of motion, are experienced, and the recorded result is consciousness. As already remarked, this is consciousness related to one side of existence. The other half of the problem is the Noumenal. All existence is an equation: duality and manifestation

are synonymous terms. Consciousness is the lamp which stands in the midst between the two worlds, the phenomenal and the noumenal, in the place of the sign of equality.

(To be continued.)

The Path

THOUGHTS IN SOLITUDE: III — *Pilgrim*

CONTENT AND SATISFACTION.

The ideas these words represent lie at opposite poles of the circle. The former should stand for the philosophic calm, the minor peace, the comparative equability of Soul which the disciple has attained, while the latter implies the stagnation of Will, the death of aspiration and of all true progress.

When the first impetuous burst of feeling is over, and time with her slowly disenchanting hand has begun to blur the outlines of the first vivid creation of thought, the knowledge gained seems to be the only possession left, — the knowledge that there is a Path to thread and that no thought is worth thinking, and no word worth uttering that has not for its aim the one supreme object — the finding and the treading of this path that leads to deliverance from conditioned existence. But it is one thing to be possessed of this merely intellectual knowledge, and another to have the Will, the Courage, and the Strength to find and to tread the path.

After much uncertain questioning and many anxious thoughts about the path, remembering always that "it is not found by devotion alone, by religious contemplation alone, by ardent progress, by self sacrificing labour, by studious observations of life, that none alone can take the disciple more than one step onwards, and that all steps are necessary to make up the ladder," a clue may yet be obtained from the lines in the *Bhagavat-Gita*, so beautifully rendered by Mr. Edwin Arnold

Some few there be

By meditation find the Soul in self

Self-schooled, and some by long philosophy

And holy life reach thither; Some by works:
Some never so attaining hear of light
From other lips and seize and cleave to it
Worshipping; yea! and those — to teaching true
Overpass Death!

Aye! "The aids to noble life are all within," — the path indeed lies there, in other words there are as many pathways to perfection as there are individual Souls.

There is no doubt a saturation point for Energy as there is for Truth in the individual; — it may come in the form of lethargic weariness, or it may come in the form of satisfaction. To the old man, weary of life, the rest of death is sweet, but even though he may seem to have earned repose, such feeling still appertains to the quality of "Tamas," and should be resisted at any cost. The feeling of satisfaction is far more insidious, — indeed it is the limit to any further possible advance placed by the man's own deepest sub-conscious self. Around us are to be seen men in all stages of moral growth who have attained to this satisfaction. Though the mere gratification of the senses and the social amenities of civilized countries may become to the majority of the votaries of pleasure a dull meaningless treadmill, we yet see some to whom such life affords true satisfaction. They have reached their goal. And if we turn to the Religious world, who does not know one or two of the many happy Souls who have attained the complete rest of satisfaction? Burning questions do not exist for them — they deem that they have solved the insolvable — They too have reached their goal. Nor does this sphere of objective life in which we dwell alone exemplify the working of this law of nature. The realm of the Deva-lokas, could we penetrate to those serene heights of being, would show us Souls who had attained to their Sainly rest, who had reached their supreme satisfaction — rest and satisfaction however that must along with all

conditioned existence come to an end some time. But to the god in the Deva-loka, as to the worldly epicure, the satisfaction he has reached is the evidence of the limit of advance, — the advance made in the different cases being merely one of degree. Each has shown an incapacity for further endurance, whether of suffering or of joy, though in most cases it must be suffering, and their progress has therefore come to an end. But man has within him the potentiality of Godhead, not the Deva (god) in his realms of bliss, but the absolute unity with the divine Spirit of Life of which nature is a manifestation, — the Being where all individuality is merged in one, — the one ever-permanent state of Nirvana — the Peace of God that passeth all understanding.

When after long years of incessant goading the goad within ceases to act, a minor peace is attained. It is a matter of wonder to the disciple, who cannot understand why it should be so, — he has had no hand in the slackening of the torture cords, — he only knows that the strain is withdrawn and that in the quietude his thought can range undisturbed. But with the removal of the pain, he seems to feel as if his search were less intense, and then follows the inexplicable paradox of the actual invocation of pain by one part of his nature, while the other part of him regards with fear and dismay any recurrence of it. Nevertheless this tranquility of contents continues. It goes without saying that this state includes the perfect content in all outward conditions. It may not have reached the transcendent light, where fear of any earthly catastrophe as well as desire for any earthly gain are alike non-existent. The disciple still remains a creature of habit, and imagination can easily conjure up situations where the equanimity would be entirely overthrown. But at least fresh desire for earthly objects has, as a rule, ceased to operate. All earthly life, indeed, stands before his mind, in its true colour, as possessing value only so far as giving opportunity of recognizing

its utter valuelessness, and of stretching forward to those things which have permanence and value, and the one all-absorbing desire that remains is that, when the burden of earthly existence has again to be taken up, the progress gained in the last life may not be lost; that, in the words of Plato, we may so pass through the waters of Lethe as not to defile our souls with absolute oblivion.

In one of the early numbers of the *Theosophist* the aspirants for chelaship are warned against too soon undertaking a life for which they are not yet fitted, and all are advised to master first their most apparent weaknesses — their most besetting sins. The mastering of such, and the continuing to be the master until relapse is constitutionally impossible, (though this may imply a period which one life may not cover), would indeed seem to be for most the necessary entrance to the Path. While by this exercise of self restraint the aspirant is acquiring the necessary Will, Strength, and Courage for the treading of the Path when found, "new hands and new feet are being born within him" with which to scale the heights that lie beyond. The search for perfection may well find its simile in the scaling of some seemingly inaccessible peak. After journeying for long years through the dim forest on the plain, and falling into many a slough of despond, with torn garments and with bleeding feet the climber has at last emerged. The forest lies below him and he sees the dim plain stretching to the horizon, but it is only the first plateau of the mountain he has scaled, and straight in front of him rises a seemingly perpendicular face of rock. Yet up this face of rock he has to go, for there can be no turning back when it is realized that what he has undertaken is the one thing worth doing.

But while insisting on the necessity of the gradual strengthening of the character by victory over all the faults of which the disciple is conscious, the common mistake of the religious must not here

be made, and the conquering of any one sin or of all sins be mistaken for the goal, instead of a mere preparation for the treading of the path. Indeed — given a sufficiently ardent desire for the ultimate goal — all sins and weaknesses that stand between the disciple and the object of his desire will by that very fire of desire be annihilated in a flash of thought. One of the most important means of keeping alive and intensifying this desire is by keeping the goal constantly in view. And as it must have been the failure of all earthly things to satisfy the heaven-born longings of the aspirant that first set his face towards the path, so the bringing back before the mind's eye the past experience of futile longings and disillusionings will best serve as impetus for the next transport of Heavenward flight.

What a man sets his whole heart on, that he will undoubtedly attain sooner or later. The man whose desires do not rise above the gratification of his physical senses gets what he desires, and that, as a rule, quickly. He whose life is concentrated in the emotional nature will in time achieve his "*summum bonum*" in the union of love he has dreamt of with another soul. He to whom the acquirement of knowledge is the one thing needful must attain what he desires, and that in exact ratio with his energetic search for it, while the philanthropist whose aim is to do good to others — whether on the material or the moral plane, and who feels impelled to the so-called sacrifice of self in some definite course of action, — though this lies far apart from the "killing out of all sense of separateness" which constitutes the true "self-sacrifice" — will doubtless also achieve his reward, though in some less obvious way. But

"Narrow

"The heart that loves, the brain that contemplates,

"The life that wears, the spirit that creates

"*One* object and *one* form and builds thereby

"A sepulchre for its eternity."

We who recognize the finger of Maya in all these things, and whose search is for that intuitive Wisdom in which they are all embraced, but which transcends them all, does it not behoove us to lift our minds more and more continuously to the Supreme? and to free our thoughts more and more from all limitations? for as it was the inability to fix the soul in worship on the attributeless Deity (though he had freed himself from *all* personal desires) that prevented the devotee from straightway attaining Nirvana, and instead landed him in the heavens of the Devaloka, where the conditions of bliss he had pictured to his mind as the Supreme were his inevitable reward, so should we even now begin to free our minds from all limited conceptions, and strain more and more towards the infinite.

I cannot better conclude than by quoting the last few lines in Faridu-d-din Attar's description of the seven stages in the road leading to union with the Divine Essence.

"Last stage of all is the Valley of Annihilation of Self; of complete Poverty, (1) — the seventh and supreme degree which no human words can describe. There is the great ocean of Divine Love. The world present and the world to come are but as figures reflected in it — And as it rises and falls how can they remain? He who plunges in that sea and is lost in it finds perfect peace."

1. This is the common term among the Muslim Mystics for the highest degree of the contemplative life. ([return to text](#))

PARACELSUS I: — S. B.

It is a noteworthy fact in Occultism that the great Masters who in the body have worked among men have been members of the healing craft, the noblest of all the learned professions. It is the noblest, because in its true character it combines the functions of both priest and physician: healer of the soul as well as of the body. Such will be the master minds of the nobler civilization which will some day dawn upon the world; the spiritual chiefs of a people will also guard the health of their bodies as well as of their souls. Hermes, we are told, was a great physician and the head of a grand brotherhood of Adepts. Both Jesus of Nazareth and John the Baptist were members of the Essene fraternity, an order of therapists. Apollonius of Tyana served his novitiate in the temple of Hippocrates and became a healer of men. In the middle ages and the beginning of modern times in Europe, we find the Brotherhood of the Rosicrucians devoted to the attainment and application of medical, as well as spiritual, knowledge. Even in primitive society, among wild tribes like the red Indians, we find their sacred orders composed of "medicine men," and there is good reason to believe that some of these possess valuable occult powers. To these spiritual and therapeutic esoteric brotherhoods, found throughout history, may probably be traced all the progress made by mankind, material as well as intellectual and spiritual. Through their knowledge of the secret forces of nature there have come into the world at large those beginnings of mechanical and chemical science which lie at the base of those physical achievements that constitute the power and pride of our present material civilization, — little mindful of its indebtedness though the latter be. Why is it that these two great functions are combined in the Master Teachers of mankind,

— the care of the body as well as of the soul? It is not to lead man, by slow degrees, up to the condition of bodily perfection that shall characterize the glorious "Coming Race"? — a race combining the godly and the human in the attributes described in *Through the Gales of Gold*, which tells us: "The animal in man, elevated, is a thing unimaginable in its great powers of service and of strength." Thus shall we see realized a divine race with powers over Nature beside which the potency of the intricate mechanical devices of the present age, attained at the cost of the enslavement and degradation of toiling millions, shall be more puny than are the crude implements of cave-dwelling man in comparison with those of which our age so arrogantly boasts.

Paracelsus, there is high authority for saying, was really one of the greatest Masters ever known upon the earth. In rank he may be compared with Hermes Thrice-Master. Although he was the father of modern chemistry, his name has not yet ceased to be a by-word among men, for his revolutionary methods in medicine naturally gained him the hostility of the doctors and druggists of his day, whose pretensions he ruthlessly overturned. Being the "regulars," they naturally had the ear of the public, and their denunciations have therefore colored history so that, although science is now beginning to recognize its debt to him, he is still widely regarded as having been a noisy impostor.

The world is therefore much indebted to Dr. Hartmann's admirable book. (1) It is particularly appropriate that a physician should write the best popular account of the great master of medicine. Dr. Hartmann has done his work with thorough sympathy, and has made it his most important contribution to Occult literature, good though his previous work has been. It is notable how great Adepts who have worked visibly among men have made their appearance at the turning point of a cycle. Apollonius and Jesus came when the Roman Empire was at the

height of its glory and approaching its fall. Paracelsus appeared at the dawn of the modern era which is coming into bloom today, and his teachings laid the foundations for our present physical science. How great these teachings were may be seen in the substance of his writings as given by Dr. Hartmann. The date of his birth is significant; 1493, the year after the discovery of America by Columbus. We see him, a greater Columbus, standing on the threshold of the new world, — not only the enlargement of the known domain of the globe, the opening up of vast continents to the dominant race, but of the expansion of wealth, of the intellect, of religion. He was the contemporary of Luther; but, though the radical reform effected by the father of Protestantism was one of the main features of the change in the cycle, Paracelsus stood on a plane too high to take part in sectarian quarrels, and said: "Among all sects there is none which possesses intellectually the true religion. We must read the Bible more with our hearts than with our brains, until at some time the true religion will come into the world."

Concerning the Adeptship of Paracelsus Dr. Hartmann remarks: "An old tradition says — and those who are supposed to know confirm the tale — that his astral body having already during physical existence become self-conscious and independent of the physical form, he is now a living Adept, residing with other Adepts of the same Order in a certain place in Asia, from whence he still — invisibly, but nevertheless effectually — influences the minds of his followers, appearing to them occasionally even in visible and tangible shape." It is considered by some students to be still more likely that, at this period, He who was once known as Paracelsus is in a body whose astral meets with others in Asia. The present being an important period in the world's history, it has been hinted that a great Teacher may be expected to appear among men. The multitude, however, will hardly be likely to fall

down and worship Him when he comes; indeed, his treatment at their hands would probably be something quite different. Comparatively few would be likely to recognize Him, for only spirit can perceive spirit.

There is a passage in Dr. Hartmann's work concerning the physical appearance of Paracelsus which calls for some comment. The fact that he was beardless gave rise to a tradition that he was emasculated in his infancy. This could not have been. The requirements of Adeptship necessitate a body complete in all its parts. Paracelsus was one of the Rosicrucians, and there are reasons why he could not have been a member of that fraternity, had he been thus physically defective. It is more likely that his beardlessness had another significance. It is said that the physical characteristics of the great teachers have been those of a race superior to that among which they worked. Gautama Buddha, for instance, established the religion for the greater part of the Mongolian race, but not only was he an Aryan; according to tradition he was light haired, and of blonde complexion, and Abbe Huc so describes the beautiful presentation of him in the magnificent temporary sculptures in the great Festival of the Flowers annually given at the lamassery of Kunbum in Tibet. The personal appearance of Jesus of Nazareth is unknown to the world, but there is reason for believing that he was not of a Jewish type and was wholly unlike the conventional representations. To those who have read Bulwer's *Coming Race*, possibly a hint of the reason for the beardlessness of Paracelsus may occur.

Dr. Hartman calls attention to the short and concise manner in which Paracelsus expressed his thoughts. This quality of his writings will be perceived in the extracts given, which are translated into admirable English. There is no ground for the charge that he was inflated and boastful in his style. He simply

spoke with self-confidence, like all men who speak with authority. Apollonius said, when asked how the wise man should speak concerning that which he knew: "He should speak like the law-giver. For the law-giver must present to the multitude in the form of commandments that which he knows to be true." It was thus that Paracelsus taught. As Dr. Hartmann well says: "It is a daily occurring fact that he who exposes and denounces the faults of others appears to the superficial observer as boasting of his own superiority, although no such motive may prompt him."

It is highly unlikely that the charges of drunkenness brought against Paracelsus had any foundation. He had a host of bitter enemies, and the making of such charges by them without warrant would be very natural. Ground for this accusation has been supposed to be found in a letter to some students at Zurich, in which he addressed them as *Comibones optimi*. But it seems most likely that this referred to fellowship in drinking the "wine" of wisdom, particularly since the letter is a very serious and pathetic one. As Arnold remarks in his "History of Churches and Hermetics": "A man who is a glutton and a drunkard could not have been in possession of such divine gifts."

That Paracelsus obtained his great knowledge not by study of books is evident from the fact that he read very little. For ten years he did not read a book, and his disciples testify that he dictated his works to them without memoranda or manuscripts. His spiritual precepts are of the most exalted character, and agree thoroughly with what has recently been given out from Eastern sources. He asks: "What is a philosophy that is not supported by spiritual revelation?" Concerning prayer, or a strong aspiration for that which is good, he said: "It is necessary that we should seek and knock, and thereby ask the Omnipotent Power within ourselves, and remind it of its promises and keep it awake, and if we do this in the proper form and with a pure and sincere heart,

we shall receive that for which we ask, and find that which we seek, and the doors of the Eternal that have been closed before us will be opened, and what was hidden before our sight will come to light. The next point is Faith; not a mere belief in something that may or may not be true, but a faith that is based upon knowledge, an unwavering confidence, a faith that may move mountains and throw them into the ocean, and to which everything is possible, as Christ has Himself testified. The third point is imagination. If this power is properly kindled in our soul, we will have no difficulty to make it harmonize with our faith. A person who is sunk into deep thought, and, so to say, drowned in his own soul, is like one who has lost his senses, and the world looks upon him as a fool. But in the consciousness of the Supreme he is wise, and he is so to say, the confidential friend of God, knowing a great deal more of God's mysteries than all those that receive their superficial learning through the avenues of the senses; because he can reach God through his soul, Christ through faith, and attract the Holy Ghost through an exalted imagination. In this way we may grow to be like the Apostles, and to fear neither death nor prison, neither suffering nor torture, neither fatigue nor hunger, nor anything else."

The preceding very important passage illustrates the profound thought of Paracelsus. The nature of mystic development is very clearly outlined. The relation is evident between the sentence about a person "drowned in his own soul" and the end of Rule 16, First series, in *Light on the Path*: "And that power which the disciple shall covet is that which shall make him appear as nothing in the eyes of men." The closing chapter in *Through the Gates of Gold* is devoted particularly to this subject, as may be seen in the words concerning the man who has once really won the victory: "Those burning sensations which seemed to him to be the only proofs of his existence are his no longer. How, then, can

he know that he lives? He knows it only by argument. And in time he does not care to argue about it. For him there is then peace; and he will find in that peace the power he has coveted. Then he will know what is that faith which can remove mountains."

The wide wanderings of most occult students are a significant fact. Pythagoras journeyed to Egypt and to India. Apollonius also went thither, and spent nearly all his life in journeying over the world. Nearly all well-known students of Occultism of today have travelled extensively. Madam Blavatsky, for instance, has made repeated visits to nearly all quarters of the earth, and has had many strange adventures. Paracelsus was also a great traveler; he journeyed far in the East and was taken prisoner by the Tartars. It is said that he even went as far as India, and it is not unlikely that he may have visited the Masters in Tibet. Of the reason for his roamings he said: "He who wants to study the book of Nature must wander with his feet over its leaves. Books are studied by looking at the letters which they contain; Nature is studied by examining the contents of her treasure-vaults in every country. Every part of the world represents a page in the book of Nature, and all the pages together form the book that contains her great revelations." This is an application of the injunction, "Learn from sensation and observe it."

A deep scientific perception is manifest in the works of Paracelsus, and he evidently saw far into the future. Dr. Hartmann points out that his doctrine bears a great resemblance to that of Darwin and Haeckel. The quality of mind which we call modern, but which may better be termed universal since it is evident in the words of the greatest men of all ages, was inherent in Paracelsus. The following prophetic passage from his "Occult Philosophy" is a witness to his thoroughly enlightened spirit: "True science can accomplish a great deal; the Eternal Wisdom of the existence of all things is without a time, without a beginning,

and without an end. Things that are considered now to be impossible will be accomplished; that which is unexpected will in future prove to be true, and that which is looked upon as superstition in one century will be the basis for the approved science of the next."

This is now being found true by modern science concerning the teachings of Paracelsus. For instance, it is acknowledged that the germ theory of disease, generally supposed to be one of the original discoveries of recent medical investigators, was promulgated by Paracelsus himself; while Jaeger, the eminent German scientist, finds his own discoveries agreeing with the theories of Paracelsus, and he pronounces certain medical proceedings recommended by the latter, which have been held to be based upon the crudest superstitions, to be really in accordance with the highest scientific teachings concerning molecular action.

THE BHAGAVAD-GITA: I — *William Brehon*

If the title of this sacred Hindu poem were paraphrased, it would read:

The Holy Song of God Himself, who, at the beginning of Kali-Yuga or the dark age, descended upon earth to aid and instruct Man.

GITA means song, and BHAGAVAD is one of the names of Krishna. Krishna was an Avatar. According to the views of the Brahmins, we are now in Kali-Yuga, which began about the time of Krishna's appearance. He is said to have descended in order to start among men those moral and philosophical ideas which were necessary to be known during the revolution of the Age, at the end of which — after a brief period of darkness — a better Age will begin.

The composition of this poem is attributed to Vyasa, and as he is also said to have given the Vedas to men, a discussion about dates would not be profitable and can well stand over until some other occasion.

The Bhagavad-Gita is a portion of the Mahabharata, the great epic of India. The Mahabharata is so called because it contains the general history of the house of Bharat, and the prefix *Maha* signifies *great*. Its more definite object, however, is to give an account of the wars of the Kooros and Pandoss, two great branches of the family. And that portion included in our poem is the sublime philosophical and metaphysical dialogue held by Krishna with Arjuna, on the eve of a battle between the two aspirants for dominion.

The scene of the battle is laid on the plain called "Kuru-Kshetra," a strip of land near Delhi, between the Indus, the Ganges, and the

Himalayan mountains. Many European translators and commentators, being ignorant of the psychological system of the Hindus — which really unlies every word of this poem, — have regarded this plain and the battle as just those two things and no more; some have gone so far as to give the commercial products of the country at the supposed period, so that readers might be able, forsooth, in that way to know the motives that prompted the two princes to enter into a bloody internicine conflict. No doubt such a conflict did take place, for man is continually imitating the higher spiritual planes; and a great sage could easily adopt a human event in order to erect a noble philosophical system upon such an allegorical foundation. In one aspect history gives us merely the small or great occurrences of man's progress; but in another, any one great historical epoch will give us a picture of the evolution in man, in the mass, of any corresponding faculty of the Individual Soul. So we see, here and there, western minds wondering why such a highly tuned metaphysical discussion should be "disfigured by a warfare of savages." Such is the materializing influence of western culture that it is hardly able to admit any higher meaning in a portion of the poem which confessedly it has not yet come to fully understand.

Before the Upanishads can be properly rendered, the Indian psychological system must be understood; and even when its existence is admitted, the English speaking person will meet the great difficulty arising from an absence of words in that language which correspond to the ideas so frequently found in the Sanskrit. Thus we have to wait until a new set of words have been born to express the new ideas not yet existing in the civilization of the West.

The location of the plain on which this battle was fought is important, as well as are also the very rivers and mountains by which it is bounded.

And equally as needful to be understood, or at least guessed at, are the names of the respective princes. The very place in the Mahabharata in which this episode is inserted has deep significance, and we cannot afford to ignore anything whatever that is connected with the events. If we merely imagine that Vyasa or Krishna took the Sacred Plain of Kuru-Kshetra and the great battle as simply accessories to his discourse, which we can easily discard, the whole force of the dialogue will be lost.

Although the Bhagavad-Gita is a small work, there have been written upon it, among the Hindus, more commentaries than those upon the Revelation of St. John among the Christians.

I do not intend to go into those commentaries, because on the one hand I am not a Sanskrit scholar, and on the other it would not tend to great profit. Many of them are fanciful, some unwarrantable; and those that are of value can be consulted by any one anxious to pursue that line of inquiry. What I propose here to myself and to all who may read these papers is, to study the Bhagavad-Gita by the life of that spiritual lamp — be it small or great — which the Supreme Soul will feed and increase within us if we attend to its behests and diligently inquire after it. Such at least is the promise by Krishna in the Bhagavad-Gita — the song Celestial.

(To be continued.)

The Path

REINCARNATION — *E. D. Walker*

A WESTERN STUDY OF THE SUBJECT.

Although commonly rejected throughout Europe and America, reincarnation is unreservedly accepted by the majority of mankind at the present day, as in all the past centuries. From the dawn of history it has prevailed among the largest part of humanity with an unshaken intensity of conviction. Over all the mightiest Eastern nations it has held permanent sway. The ancient civilization of Egypt, whose grandeur cannot be overestimated, was built upon this as a fundamental truth, and taught it as a precious secret to Pythagoras, Aristotle, Plato, Plotinus and Ovid, who scattered it through their nations. It is the keynote of Plato's philosophy, being stated or implied very frequently in his dialogues. "Soul is older than body," he says. "Souls are continually born over again from Hades into this life." In his view all knowledge is reminiscence. To search and learn is simply to revive the images of what the soul saw in its pre-existent state in the world of realities. The swarming millions of India also have made this thought the foundation of their enormous achievements in government, architecture, philosophy and poetry. It was a cardinal element in the religion of the Persian Magi. Alexander the Great gazed in amazement on the self-immolation by fire to which it inspired the Gymnosophists. Caesar found its tenets propagated among the Gauls. The circle of metempsychosis was an essential principle of the Druid faith and as such was impressed upon our forefathers the Celts, the Gauls and the Britons. It is claimed that the people held this doctrine so vitally that they wept around the new born infant and smiled upon death — for the beginning and end of an earthly life were to them the imprisonment and release of a soul, which must

undergo repeated probations to remove its earthly impurities for final ascent into a succession of higher spheres. The Bardic triads of the Welsh are replete with this thought, and a Welsh antiquary insists that an ancient emigration from Wales to India conveyed it to the Brahmins. In the old civilizations of Peru and Mexico it prevailed universally. In the mysteries of Greece, Rome and Britain the ceremonial rites enacted this great truth with peculiar impressiveness for initiates. The Jews generally adopted it from the Babylonian captivity. John the Baptist was a second Elias. Jesus was commonly thought to be a reappearance of John the Baptist or of one of the old prophets. The Talmud, the Kabbala and the writings of Philo are full of the same teaching. Some of the late Rabbins assert many entertaining things concerning the repeated births of the most noted persons of their nation. This idea played an important part in the thought of Origen and several other leaders among the early Church Fathers. It was a main portion of the creed of the Gnostics and Manichaeans. In the middle ages the sects of the Cathari, the Bogomiles and many scholastics advocated it. It has cropped out spontaneously in many Western theologians. The elder English Divines do not hesitate to inculcate pre-existence in their sermons. The Roman Catholic Purgatory seems to be a makeshift improvised to take its place.

Men of profoundly metaphysical genius like Scotus, Kant, Leibnitz, Lessing, Schopenhauer, Schlegel and the younger Fichte have upheld reincarnation. Scientists like Flammarion have earnestly believed it. Theological leaders like Julius Muller, Dorner, H. Ernesti Ruckert and Edward Beecher have maintained it. In exalted intuitional natures like Boehme and Swedenborg its hold is apparent. Most of the mystics bathe in it. Of course the long line of Platonists from Socrates down to Emerson have no doubt of it. Even amid the predominance of materialistic

influences in Christendom it has a considerable following. Traces of it are found among the aborigines of North and South America and in many barbaric tribes. At this time it reigns without any sign of decrepitude over the Burmese, Chinese, Japanese, Tartar, Tibetan, and East Indian nations, including at least 750,000,000 of mankind and nearly two-thirds of the race. Throughout the East it is the great central thought. It is no mere superstition of the ignorant masses. It is the chief principle of Hindu metaphysics, — the basis of all their inspired books. Such a hoary philosophy, upheld by the venerable authority of ages, ruling from the beginning of time the bulk of the world's thought, is certainly worthy of the profoundest respect and study.

But the Western fondness for democracy does not hold in the domain of thought. The fact that the majority of the race has agreed upon reincarnation is no argument for it to an Occidental thinker. The conceit of modern progress has no more respect for ancient ideas than for the forgotten civilizations of old, even though in many essentials they anticipated or outstripped all that we boast of. Therefore we propose to treat this subject mainly from a Western standpoint, showing,

I. Some reasons which may assure us of the truth of reincarnation.

II. The most interesting poetical expressions of this idea in our own tongue.

I. — WESTERN EVIDENCES OF REINCARNATION.

The old Saxon chronicler, Bede, records that at a banquet given by King Edwin of Northumbria to his nobles, a discussion arose as to how they should receive the Christian missionary Paulinus who had just arrived from the continent. Some urged the sufficiency of their own Druid and Norse religions and advised the death of the invading heretic. Others were in favor of hearing

his message. At length the King asked the opinion of his oldest counsellor. The sage arose and said "O King and Lords. You all did remark the swallow which entered this festal hall to escape the chilling winds without, fluttering near the fire for a few moments and then vanishing through the opposite window. Such is the life of man, whence it came and whither it goes none can tell. Therefore if this new religion brings light upon so great a mystery, it must be diviner than ours and should be welcomed." The old man's advice was adopted.

We are in the position of those old ancestors of ours. The religion of the churches, called Christianity, is to many earnest souls a dry husk. The germinant kernel of truth as it came from the founder of Christianity, when it is discovered under all its barren wrappings is indeed sufficient to feed us with the bread of life. It answers all the practical needs of most people even with the husks. But it leaves some vital questions unanswered which impel us to desire something more than Jesus taught — not for mere curiosity but as food for larger growth. The divine law which promises to fill every vacuum, and to gratify at last every aspiration has not left us without means of grasping a portion of these grander truths, by independent methods.

The commonest idea of the soul throughout Christendom seems to be that it is created specially for birth on this world and after its lifetime here it goes to a permanent spiritual realm of infinite continuance. This is a very comfortable belief derived from the appearances of things, and those holding it may very properly say "My view agrees with the phenomena and if you think differently the burden of proof rests upon you." We accept this responsibility. But a careful observer knows that the true explanation of facts as a rule is very different from the appearance. Ptolemy thought he could account for all the heavenly motions on his geocentric theory and his teachings were

at once received by his contemporaries. But the painful studies of Copernicus and Galileo had to wait a century before they were accepted, although they introduced an astronomy of immeasurably nobler scale. Is it not a relic of the old confidence in appearances to consider the orbits of human souls as limited to our little view of them?

There are six arguments for Reincarnation which seem conclusive.

1. That the idea of *immortality* demands it.
2. That *analogy* makes it the most probable.
3. That *science* confirms it.
4. That the *nature of the soul* requires it.
5. That it *explains* many *mysterious experiences*.
6. That it alone *solves* the problem of *injustice* and *misery* which broods over our world.

1. Immortality demands it.

Only the positivists and some allied schools of thought, comprising a very small proportion of Christendom doubt the immortality of the soul. But a conscious existence after death has no better proof than a pre-natal existence. It is an old declaration that what begins in time must end in time. We have no right to say that the soul is eternal on one side of its earthly period without being so on the other. Far more rational is the view of certain scientists who, believing that the soul originates with this life, also declare that it ends with this life. That is the logical outcome of their premise. If the soul sprang into existence specially for this life, why should it continue afterward? It is precisely as probable from all the grounds of reason that death is the conclusion of the soul as that birth is the beginning of it. On the contrary all the indications of immortality point as unflinchingly to an eternity preceding this existence: the love of prolonged life,

the analogy of nature, the prevailing belief of the most spiritual minds, the permanence of the ego principle, the inconceivability of annihilation or of creation from nothing, the promise of an extension of the present career, the injustice of any other thought.

All the probabilities upon which the assurance of the soul's immortality rests, confirm the idea that it has an eternal existence in the past as well as in the future. What the origin of the soul may have been does not affect this subject, further than that it antedates the present life. Whether it be a spark from God himself, or a divine emanation, or a cluster of independent energies, its eternal destiny compels the inference that it is uncreated and indestructible. Moreover, it is unthinkable that from an infinite history it enters this world for its first physical experience and then shoots off to an endless spiritual existence. The deduction is rather that it assumed many forms before it appeared as we now see it and is bound to pass through many coming lives before it will be rounded into the full orb of perfection and reach its ultimate goal.

2. The argument from analogy is especially strong.

The universal spectacle of incarnated life indicates that this is the eternal scheme everywhere, the variety of souls finding in the variety of circumstances an everlasting series of adventures in appropriate forms. For many centuries in the literature of nations a standard simile of the soul surviving its earthly decay has been drawn from the transformation of the caterpillar into the butterfly. This world is the grub state. The body is the chrysalis of the soul. But the caterpillar came from a former life, in the egg. The violent energy of the present condition argues a previous stage leading up to it. It is contended with great force of analogy that death is but another and higher birth. This life is a groping embryo plane implying a more exalted one. Mysterious

intimations reach us from a diviner sphere,

"Like hints and echoes of the world
To spirits folded in the womb."

But the same indications argue that birth is the death of an earlier existence. Even the embryo life necessitates a preparatory one preceding it. So complete a structure must have a foundation. So swift a momentum must have travelled far. As Emerson observes "We wake and find ourselves on a stair. There are other stairs below us which we seem to have ascended; there are stairs above us, many a one, which go upward and out of sight."

The grand order of creation is everywhere proclaiming, as the universal word, "change". Nothing is destroyed but all is passing from one existence to another. Not an atom but is shifting in lively procession from its present condition to a different form, running a ceaseless cycle through mineral, vegetable and animal existence, though never losing its individuality, however diverse its apparent alterations. Not a creature but is constantly progressing to something else. The tadpole becomes a fish, the fish a frog, and some of the frogs have turned to birds.

"There is a spirit in all things that live
Which hints at patient change from kind to kind
And yet no words its mystic sense can give
Strange as a dream of radiance to the blind."

Evolution has remoulded the thought of Christendom, expanding our conception of physiology, astronomy and history. The more it is studied the more universal is found its application. It seems to be the secret of God's working. Now that we know the evolution of the body, it is time that we learned the evolution of the soul. The biologist shows that each of us physically before birth runs through all the phases of animal life — polyp, fish, reptile, dog,

ape and man — as a brief synopsis of how the ages have prepared our tenements. The preponderance of special animal traits in us is due, he says to the emphasis of those particular stages of our physical growth. So in infancy does the soul move through an unconscious series of existences, recapitulating its long line of descent, until it is fastened in maturity. And why is it not true that our soul traits are the relics of former activities?

3. Furthermore, the idea that the soul is specially created for introduction into this world is antagonistic to all the principles of science. All nature proceeds on the strictest economical methods. Nothing is either lost or added. There is no creation or destruction. Whatever appears to spring suddenly into existence is derived from sufficient cause — although as unseen as the vapor currents which feed the clouds.

Physiologists contend that the wondrous human organism could not have grown up out of mere matter but implies a pre-existent spiritual idea which grouped around itself the organic conditions of physical existence and constrained the material elements to follow its plan. This dynamic agent — or the soul — must have existed independent of the body before the receptacle was prepared. The German scientists Muller and Stahle, have especially illustrated in physiology this idea of a pre-existent soul monad.

The common resurrection idea makes immortality an arbitrary stroke of God at the end of the earthly drama. But science allows no such exceptional miracle. It recognizes rather the universality of resurrection throughout all nature. We have no experience whatever of the resurrection taught by theologians; but we constantly see new appearances of souls in fresh bodies. These cannot have darted into their first existence as we behold them. From the hidden regions of some previous existence they must

have come.

4. A much more weighty and penetrative argument is that the nature of the soul requires reincarnation. The conscious soul cannot feel itself to have had any beginning any more than it can conceive of annihilation. The sense of persistence overwhelms all the interruptions of forgetfulness and sleep, and all the obstacles of matter. This incessant self-assurance suggests the idea of the soul being independent of the changing body, its temporary prison. Then follows the conception that as the soul has once appeared in human form so it may reappear in many others. The eternity of the soul past and present leads directly to an everlasting succession of births and deaths, disembodiments and reembodiments.

The identity of the soul surely does not consist in a remembrance of all its past. We are always forgetting ourselves and waking again to recognition. But the sense of individuality bridges all the gaps. In the same way it seems as if our present existence were a somnambulant condition into which we have drowsed from our earlier life, oblivious of most of that former activity, and from which we may after a while be roused into wakefulness.

The study of infancy shows that the mental furniture with which we begin this life presupposes a former experience. The moral character of children, especially the existence of evil in them long before it could have been implanted by the present existence has forced many acute observers to assume that the human spirit had made choice of evil in a pre-natal sphere.

The unsatisfied physical inclinations of a soul are indestructible and require a series of physical existences to work themselves out. And the irrepressible eagerness for *all the range of experience* necessitates a course of reincarnations which shall accomplish that result.

5. Reincarnation explains many curious experiences. Most of us have known the touches of feeling and thought that seem to be reminders of forgotten things. Sometimes as dim dreams of old scenes, sometimes as vivid lightning flashes in the darkness recalling distant occurrences, sometimes with unutterable depth of meaning. It appears as if Nature's opiate which ushered us into this arena had been so diluted that it did not quite efface the old memories, and reason struggles to decipher the vestiges of a former state. Almost everyone has felt the sense of great age. Thinking of some unwonted subject often an impression seizes us that somewhere, long ago, we have had these reflections before. Learning a fact, meeting a face for the first time, we are puzzled with an obscure assurance that it is familiar. Travelling newly in strange places we are sometimes haunted with a consciousness of having been there before. Music is specially apt to guide us into mystic depths where we are startled with the flashing reminiscences of unspeakable verities which we have felt or seen ages since. Efforts of thought reveal the half-obliterated inscriptions on the tablets of memory, passing before the vision in a weird procession. Everyone has some such experiences. Most of them are blurred and obscure. But some are so remarkably distinct that those who undergo them are convinced that their sensations are actual recollections of events and places in former lives. It is even possible for certain persons to trace quite fully and clearly a part of their by-gone history prior to this life.

Sir Walter Scott was so impressed by these experiences that they led him to a belief in pre-existence. He writes (in "Guy Mannering"), "How often do we find ourselves in society which we have never before met, and yet feel impressed with a mysterious and ill defined consciousness, that neither the scene nor the speakers nor the subject are entirely new; nay feel as if we could anticipate that part of the conversation which has not

yet taken place." Bulwer Lytton describes it as "that strange kind of inner and spiritual memory which often recalls to us places and persons we have never seen before and which Platonists would resolve to be the unquenched and struggling consciousness of a former life." Explicit occurrences of this class are found in the narratives of Hawthorne, Coleridge, DeQuincy and many other writers. A striking instance appears in a little memoir of the late Wm. Hone, the Parodist, upon whom the experience made such a profound effect that it roused him from thirty years of materialistic atheism to a conviction of the soul's independence of matter. Being called in business to a house in a part of London entirely new to him, he kept noticing that he had never been that way before. "I was shown" he says, "into a room to wait. On looking around, to my astonishment everything appeared perfectly familiar to me: I seemed to *recognize* every object. I said to myself, what is this? I was never here before and yet I have seen all this, and if so there is a very peculiar knot in the shutter." He opened the shutter and there was the knot.

A writer of reputation mentions the following instance: A friend's child of four years was observed by her elder sister to be talking to herself about matters of which she could not be supposed to know anything. "Why, Winnie," exclaimed the elder sister, Louisa, "What do you know about that? All that happened before you were born!" "I would have you know, Louisa, that I grew old in heaven before I was born!" Similar anecdotes might be produced in great number.

Objectors ascribe these enigmas to a jumble of associations producing a blurred vision like the drunkard's experience of seeing double, a discordant remembrance, snatches of forgotten dreams — or to the double structure of the brain. In one of the lobes, they say, the thought flashes a moment in advance of the other and the second half of the thinking machine regards the

first impression as a memory of something long distant. But this explanation is unsatisfactory as it fails to account for the wonderful vividness of some of these impressions in well balanced minds, or the long trains of thought which come independent of any companions, or the prophetic glimpses which anticipate actual occurrences. Far more credible is it that each soul is a palimpsest inscribed again and again with one story upon another and whenever the all-wise Author is ready to write a grander page on us He washes off the old ink and pens his latest word. But some of us can trace here and there letters of the former manuscript not yet effaced.

6. The strongest support of this theory is its happy solution of the problem of moral inequality and injustice and evil which otherwise overwhelms us as we survey the world. The seeming chaos is marvellously set in order by the idea of soul-wandering. Many a sublime intellect has been so oppressed with the topsyturviness of things here as to cry out "There is no God. All is blind chance." An exclusive view of the miseries of mankind, the prosperity of wickedness, the struggles of the deserving, the oppression of the masses, or on the other hand, the talents and successes and happiness of the fortunate few, compels one to call the world a sham without any moral law to regulate it. But that consideration yields to a majestic satisfaction when one is assured that the present life is only one of a grand series in which every individual is gradually going the round of infinite experience for a glorious outcome, — that the hedging ills of to-day are a consequence of what we did yesterday and a step toward the great things of to-morrow. Thus the tangled snarls of earthly phenomena are straitened out as a vast and beautiful scheme, and the total experience of humanity forms a magnificent tapestry of perfect poetic justice.

The crucial test of any hypothesis is whether it meets all the facts

better than any other theory. No other view so admirably accounts for the diversity or conditions on earth, and refutes the charge of a favoritism on the part of Providence. Hierocles said, and many a philosopher before and since has agreed with him, "Without the doctrine of metempsychosis it is not possible to justify the ways of God." Some of the theologians have found the idea of pre-existence necessary to a reasonable explanation of the world, although it is considered foreign to the Bible. Over thirty years ago Dr. Edward Beecher published "The Conflict of Ages," in which the main argument is this thought. He demonstrates that the facts of sin and depravity compel the acceptance of this doctrine to exonerate God from the charge of maliciousness. His book caused a lively controversy and was soon followed by "The Concord of the Ages" in which he answers the objections and strengthens his position. The same truth is taught by Dr. Julius Muller, a German theologian of prodigious influence among the clergy. Another prominent leader of theological thought, Dr. Dorner, sustains it.

But, it is asked, why do we not remember something definitely of our previous lives, if we have really been through them?

It has been shown that there are traces of recollection. The reason of no universal conviction from this ground is that the change into the present career was so violent and so radical as to scatter all the details and leave only the net spiritual result. As Plotinus said "Body is the true river of Lethe; for souls plunged into it forget all." The real soul life is so distinct from the material plane that we have difficulty in recalling many experiences of this life — especially when an abrupt departure from old associations severs the connecting links. Who retains all of his childhood's life? And has anyone a memory of that most wonderful epoch — infancy? Our present forgetfulness is no disproof of the actuality of past lives. Every night we lose all knowledge of what has gone

before, but daily we awaken to a recollection of the whole series of days and nights. So in one life we may forget or dream and in another recover the whole thread of experience from the beginning — or the substance of it. In the cases of decrepit old age we often see the spirits of strong men divested of all memory of their life's experience and returning to a second infancy — in a foretaste of their entrance upon the next existence.

We conclude, therefore, that Reincarnation is necessitated by immortality, that analogy teaches it, that science upholds it, that the nature of the soul needs it, that many strange sensations support it, and that it alone grandly solves the problem of life. The fullness of its meaning is majestic beyond appreciation, for it shows that every soul from the lowest animal to the highest archangel belongs to the infinite family of God and is eternal in its conscious essence, perishing only in its temporary disguises; that every act of every creature is followed by infallible reactions which constitute a perfect law of retribution; and that these souls are intricately interlaced with mutual relationships. The bewildering maze thus becomes a divine harmony. No individual stands alone, but trails with him the unfinished sequels of an ancestral career, and is so bound up with his race that each is responsible for all and all for each. No one can be wholly saved until all are redeemed. Every suffering we endure apparently for faults not our own assumes a holy light and a sublime dignity. This thought removes the littleness of petty selfish affairs and confirms in us the vastest hopes for mankind.

In this connection the following extracts from distinguished writers are specially interesting: —

Schopenhauer, the German Philosopher, writes (in "The World as Will and Idea"): "The fresh existence is paid for by the old age and death of a worn out existence which has perished, but which

contained the indestructible seeds out of which this new existence has arisen. They are one being."

The doctrine of metempsychosis springs from the earliest and noblest ages of the human race and has always been spread abroad in the earth as the belief of the great majority of mankind — as the teaching of all religions excepting that of the Jews and the two which have proceeded from it. The belief in this truth presents itself as the natural conviction of man wherever he reflects at all in an unprejudiced manner; where it is not found it must have been displaced by positive religious doctrine from another source. It is obvious to everyone who hears of it for the first time. See how earnestly Lessing defends it (in the last seven paragraphs of his 'Erziehung des Menschengeschlechts').

Lichtenberg also says: 'I cannot get rid of the thought that I died before I was born!' Even the skeptical Hume says in his radical essay on immortality: 'The metempsychosis is therefore the only system of this kind that philosophy can hearken to.'

What resists this belief is Judaism and its two descendants (Christianity and Mohammedanism) because they teach the creation of man out of nothing. Yet how difficult it has been to link the conception of future immortality to this is shown by the fact that most of the old heretics believed in reincarnation — Simonites, Manicheans, Basilidians, Valentinians, Marcionists and Gnostics. Tertullian and Justinian inform us that "even the Jews themselves have in part fallen into it."

From a letter written by that curious genius William Blake (the artist) to his friend John Flaxman (the sculptor); (see Scoones' English Letters, p. 361):

"In my brain are studies and chambers filled with books and

pictures of old which I wrote and painted in ages of eternity before my mortal life; and these works are the delight and study of archangels.

"You, O dear Flaxman, are a sublime archangel, my friend and companion from eternity. I look back into the regions of reminiscence and behold our ancient days before this earth appeared and its vegetative mortality to my mortal vegetated eyes. I see our houses of eternity which can never be separated, though our mortal vehicles should stand at the remotest corners of heaven from each other."

The novelist Bulwer thus expresses his opinion of this truth: "Eternity may be but an endless series of those migrations which men call deaths, abandonments of home after home, even to fairer scenes and loftier heights. Age after age the spirit may shift its tent, fated not to rest in the dull Elysian of the heathen, but carrying with it evermore its two elements, activity and desire."

One of Emerson's earliest essays ("THE METHOD OF NATURE") contains this paragraph: "We cannot describe the natural history of the soul, but we know that it is divine. I cannot tell if these wonderful qualities which house to-day in this mortal frame, shall ever re-assemble in equal activity in a similar frame, or whether they have before had a natural history like that of this body you see before you; but this one thing I know, that these qualities did not now begin to exist, can not be sick with my sickness nor buried in my grave; but that they circulate through the Universe: before the world was, they were. Nothing can bar them out, or shut them in, but they penetrate the ocean and land, space and time, form and essence, and hold the key to universal nature."

Edgar A. Poe writes (in "EUREKA"): "We walk about, amid the destinies of our world existence, accompanied by dim, but ever present memories of a Destiny more vast — very distant in the by-gone time and infinitely awful.

"We live out a youth peculiarly haunted by such dreams, yet never mistaking them for dreams. As *memories* we know them. During our youth the distinctness is too clear to deceive us even for a moment. But the doubt of manhood dispels these feelings as illusions."

The second portion of our study will be — Reincarnation in the Light of our own Poets.

The Path

THE DOCTRINE OF INNATE IDEAS — *E. D. Fawcett*

[A PROBLEM OF WESTERN METAPHYSICS SOLVED IN THE LIGHT OF THE ESOTERIC DOCTRINE.]

The controversy as to whether our ideas of causation, substance, time and space are innate and referable to the original constitution of the mind or complex notions acquired from our experience of sensations, is one that cannot fail to be of interest to the student of occultism. The Intuitionist school headed by Kant regard these ideas as existing in the mind independently of experience, as a necessary condition of our subjectivity; the Sensationalists — who include in their number some of the most eminent psychologists of the day — as due to our sensations and traceable to the operation of the Laws of Association. Mr. Herbert Spencer occupies a middle position between these contending parties. According to him they are the expression of the racial experience in the mental heredity of the individual. Take as an illustration our idea of space. According to the Intuitionists it is innate — a condition of our perception of objects; in contradistinction to this view it is held by others that "space in the abstract is merely the community or similarity of extended bodies and of the intervals between them commonly called empty space" (1) our conception of space is contingent on our perception of objects; these latter again on our sensations, and the fact of our inability to perceive objects which do not occupy some position in relation to one another, produces so powerful an association between these two ideas, that we are unable to think of any object without the accompanying notion of its location *somewhere*. Hence the idea of space. The Spencerian Evolutionist, however, while admitting the justice of the Sensationalist contention with regard to the primary development of the idea, recognises in the

phenomenon as present in the mind of the infant, an ancestral legacy bequeathed in the vehicle of heredity, an heirloom representing the experience of the countless organisms that constituted the evolutionary ascent up to civilized man. As, however, it is impossible to conceive of the heredity of a *form of thought* and in addition this explanation is purely materialistic, I shall not have occasion to regard it in the course of these brief remarks.

It is clear then that we can look for no decisive answer to Western psychology. To quote the forcible remarks of Buckle on European metaphysics: (2) "Whoever will take pains to estimate the present condition of mental philosophy must admit, that, notwithstanding the influence it has always exercised over some of the most powerful minds, and through them over society at large, there is, nevertheless, no other study which has been so zealously prosecuted, so long continued and yet remains *so barren of results*. * * * * Men of eminent abilities, and of the greatest integrity of purpose have in every civilized country, for many centuries, been engaged in metaphysical inquiries; and yet at the present moment their systems, so far from approximating towards truth, are diverging from each other with a velocity which seems to be accelerated by the progress of knowledge." The too confident advocacy of them by their respective supporters as the truth, and nothing but the truth, he adds, has, "thrown the study of the mind into a confusion *only to be compared to that in which the study of religion has been thrown by the controversies of the theologians*." It would be difficult to frame a more severe indictment than this drawn up by so impartial and justly renowned a critic. It merely shows, that the physical intellect alone is absolutely inadequate to embrace the vast domain of Psychology or to formulate the more remote laws of being. *Eastern* psychologists — the masters of occult science — are

therefore right in asserting that to form a true conception of the nature and potentialities of mind, it is necessary to develop faculties which enable the inquirer to rise altogether above the plane of our present consciousness. The contradictions and barrenness of the European "science" of mind are too palpable to escape remark even from the most unobservant critic. At the present day instead of being merely the accessory support to, Physiology has become the *basis* of, Psychology. The revival of mysticism, however, justifies us in questioning the durability of this tendency to subordinate the mental to the physical. Impermanency of influence is not the least noticeable feature of Western metaphysical speculation — a fact which has unquestionably caused the study of psychology and philosophical subjects generally to be now regarded by the majority of persons with positive aversion. The Truth has long proved a Will o' the Wisp to the Pure Reason. When intellectual giants like Kant, Hegel, Schopenhauer, Mill and Bain only succeed in evolving mutually-exclusive and contradictory systems, it is evident that the physical intelligence must eventually resign its place to INTUITION in the search after Abstract Knowledge. But we are digressing.

The solution proposed of the long-standing problem before us is based on the philosophy of our Revered Teachers. It concedes a portion of truth to the speculations both of the Associationalists and Sensationalists. While it relegates the *primary* acquisition of such ideas to Sensation it declares them to be *innate in the mind of the human infant*. The Esoteric Doctrine shows the differentiation of individualities — *i.e.* the capacity of mind to exist as an entity apart from brain on the dissolution of its material substratum — taking place in the higher animal kingdom. It is admitted that animals acquire their notions of time, space, etc., — where present — from sensation, as described by the Associationalists.

On the other hand owing to the *impress* of these ideas in the soul (3) in its upward evolutionary journey, they are undoubtedly, as claimed by the Intuitionists, innate in the human "subject" — the *generalized experience of former objective existences rising once again into consciousness*. If this contention is true we have here a solution in the light of the Esoteric Doctrine of one of the most stoutly debated of metaphysical problems.

FOOTNOTES:

[The Path](#)

PARACELSUS: II — S. B.

It is a notable fact that the life of Paracelsus formed the theme for the first important work of one of the greatest of modern poets, Robert Browning, in whom the mystical tendency forms one of the strongest characteristics of his thought. *Paracelsus* is a wonderful composition; almost marvelous when it is considered that it was written when the poet was but 28 years old. It exhibits a noble maturity of intellect; in the exalted spirituality of its thought it has never been surpassed by any of the poet's subsequent works. It shows that Browning had a true appreciation of the greatness of the Master. In his note he says that he has taken very trifling liberties with his subject and that "the reader may slip the foregoing scenes between the leaves of any memoir of Paracelsus he pleases, by way of commentary." Browning must have studied the writings of Paracelsus closely, and with his inner vision, for throughout the poem there runs a deep vein of occultism. Although he has followed the historical accounts of the Master, and therefore depicts some blemishes upon his character which could hardly have existed in reality, it seems not unlikely that a mind of the lofty spiritual quality of Browning's may, in its aspiration for true knowledge of his theme, have been impressed by that of Paracelsus himself, or of the one formerly known by that name.

The poem has the form of a drama in five acts. The first act has its scene at Wurzburg, where Paracelsus is studying under Tritheim, in 1512, a youth of 19 years. With him is Festus, his boyhood's friend, older than he, and Michal, the betrothed of Festus. The three are together in a garden, and Paracelsus is about to enter upon his long wanderings through the world. To these two he confides the secret of his aspirations. Festus, who has a

conservative nature, endeavors to dissuade him from his enterprise, and to pursue knowledge in the ordinary channels. Paracelsus then tells something of the extraordinary nature which has distinguished him from his fellowmen. He says:

"From childhood I have been possessed
By a fire — by a true fire, or faint or fierce,
As from without some master, so it seemed,
Repressed or urged its current: this but ill
Expresses what I would convey — but rather
I will believe an angel ruled me thus,
Than that my soul's own workings, own high nature,
So become manifest. I knew not then
What whispered in the evening, and spoke out
At midnight. If some mortal, born too soon,
Were laid away in some great trance — the ages
Coming and going all the while — till dawned
His true time's advent, and could then record
The words they spoke who kept watch by his bed, —
Then I might tell more of the breath so light
Upon my eyelids, and the fingers warm
Among my hair. Youth is confused: yet never
So dull was I but, when that spirit passed,
I turned to him, scarce consciously, as turns
A water-snake when fairies cross his sleep."

These words characterize the born Adept and show that the poet really apprehended the nature of the memories of past existences. Paracelsus confesses how the impulse was ever with him to devote himself to the good of mankind and do some great work in its behalf. In his youth, as he sat under Trithem's teachings, he felt somehow that a mighty power was brooding, taking shape within him, and this lasted till one night, as he sat revolving it more and more, a still voice from without spoke to

him, and then it was that he first discovered his aim's extent,

"Which sought to comprehend the works of God,
And God himself, and all God's intercourse
With the human mind."

The voice continued:

"There is a way —
'Tis hard for flesh to tread therein, imbued
With frailty — hopeless, if indulgence first
Have ripened inborn germs of sin to strength:
Wilt thou adventure for my sake and man's,
Apart from all reward?' And last it breathed —
'Be happy my good soldier; I am by thee,
Be sure, even to the end!' — I answered not,
Knowing Him. As He spoke, I was endued
With comprehension and a steadfast will;
And when He ceased, my brow was sealed His own.
If there took place no special change in me,
How comes it all things wore a different hue
Thenceforward? — pregnant with vast consequence —
Teeming with grand results — loaded with fate;
So that when quailing at the mighty range
Of secret truths which yearn for birth, I haste
To contemplate undazzled some one truth,
Its bearings and effects alone — at once
What was a speck expands into a star,
Asking a life to pass exploring thus,
Till I near craze."

This voice is that which speaks to all true Mystics. It is the higher Self that speaks; the voice of the Warrior, spoken of in *Light on the Path*, "He is thyself, yet infinitely wiser and stronger than thyself." It may also be the voice of a Master, as well. For, at the

stage where the bonds of the personality are loosened, the sense of separateness has disappeared, and the higher Self of one is that of all. In this passage, the poet gives beautiful utterance to the fact of the spiritual rebirth, the moment when the lower consciousness becomes united with the higher.

Again, in the following words, the fact of reincarnation is expressed:

"At times I almost dream
I too have spent a life the sages' way,
And tread once more familiar paths. Perchance
I perished in an arrogant self-reliance
An age ago; and in that act, a prayer
For one more chance went up so earnest, so
Instinct with better light let in by Death,
That life was blotted out — not so completely
But scattered wrecks enough of it remain,
Dim memories; as now, when seems once more
The goal in sight again."

This feeling of the truth of reincarnation finds utterance throughout Browning's work. It would be difficult to account for the greatness of a person like Paracelsus except under the theory of pre-existence.

"The dim star that burns within," and the reason for its dimness, is gloriously expressed in the following words:

"Truth is within ourselves; it takes no rise
From outward things, whate'er you may believe:
There is an inmost center in us all,
Where truth abides in fulness; and around
Wall upon wall, the gross flesh hems it in,
This perfect clear perception — which is truth;

A baffling and perverting carnal mesh
Blinds it, and makes all error: and 'to know'
Rather consists in opening out a way
Whence the imprisoned splendor may escape,
Than in effecting entry for a light
Supposed to be without. Watch narrowly
The demonstration of a truth, its birth,
And you trace back the effluence to its spring
And source within us, where broods radiance vast,
To be elicited ray by ray, as chance Shall favor."

This passage, which is pure mysticism, is too long to quote entire, but the reader will find that it continues in the same exalted strain, showing how the unveiling of the soul, the higher self, may, through various means, be accomplished by what seems chance, or, as it says in *Through the Gates of Gold*, man may "tear the veil that hides him from the eternal at any point where it is easiest for him to do so; the most often this point will be where he least expects to find it." The poet has seen clearly, with Paracelsus himself, how it is that matter bars in the spirit, and he asks:

"May not truth be lodged alike in all,
The lowest as the highest? some slight film
The interposing bar which binds it up,
And makes the idiot, just as makes the sage
Some film removed, the happy outlet whence
Truth issues proudly? See this soul of ours!
How it strives weakly in the child, is loosed
In manhood, clogged by sickness, back compelled
By age and waste, set free at last by death:
Why is it, flesh enthralles it or enthrones?
What is this flesh we have to penetrate?
O not alone when life flows still do truth
And power emerge, but also when strange chance

Ruffles its current; in unused conjuncture,
When sickness breaks the body — hunger, watching,
Excess or languor, — oftenest death's approach —
Peril, deep joy, or woe."

It was to give clearer hints for this setting free of the soul that *Through the Gates of Gold* was written. In the second act Browning shows us Paracelsus in Constantinople in the year 1521, where history tells that he was at that time, having spent something like seven years in the Orient, "among the Tartars," a term that permits a wide range for his whereabouts. The Master was accordingly then 28 years old. He is said to have received the "Philosopher's stone," in reality the Great Jewel or Master Stone, described in the beautiful story called "Papyrus," — printed in the March THE PATH — from a German Adept, Solomon Trismosinus. Browning, however, lays the scene at "the House of the Greek conjuror." This act, though very beautiful, is of slight value historically, as it was designed to carry out the motive of the poem that Paracelsus failed by seeking to attain his end through knowledge alone, leaving love out of account. In this regard Browning failed to grasp the full greatness of the Master, for Paracelsus could not have held his exalted position in the Rosicrucian brotherhood without being inspired by the most unbounded love for humanity.

To carry out this idea of the necessity of both knowledge and love, Browning introduces an Italian poet, Aprile, who has sought to attain the same end as Paracelsus through love alone. Aprile dies in the arms of Paracelsus and thus teaches him the lesson of love. This passage may be taken as symbolic of the union of the distinctive traits of the individuals and the assimilation of their essences by him who has arrived at the stage of killing out the sense of separateness. This is shown in the words addressed by Paracelsus to Aprile:

"Are we not halves of one dissevered world,
Whom this strange chance unites once more? Part? never!
Till thou, the lover, know; and I, the knower,
Love — until both are saved."

In this act are the following glorious words spoken by the dying Aprile:

"God is the PERFECT POET,
Who in creation acts his own conceptions.
Shall man refuse to be ought less than God?
Man's weakness is his glory — for the strength
Which raises him to heaven and near God's self,
Came spite of it: God's strength his glory is,
For thence came with our weakness sympathy
Which brought God down to earth, a man like us."

We will pass over the next two acts as comparatively unimportant to our purpose. In the last act we find Paracelsus, in the year 1541, at the age of 48, dying at Salzburg, alone with his faithful friend Festus. He tells Festus of the sensations of his dying moments in a passage in which occur inspired words, depicting the soul in the state of Eternity, where time and space are as nought. He tells Festus "You are here to be instructed. I will tell God's message," and he describes his experiences on the threshold of the Eternal as containing his entire past life:

"If I select
Some special epoch from the crowd, 'tis but
To will and straight the rest dissolve away,
And only that particular state is present,
With all its long-forgotten circumstance,
Distinct and vivid as at first — myself
A careless looker-on, and nothing more!

Indifferent and amused, but nothing more!
And this is death: I understand it all.
New being waits me; new perceptions must
Be born in me before I plunge therein;
Which last is Death's affair, and while I speak,
Minute by minute he is filling me
With power; and while my foot is on the threshold
Of boundless life — the doors unopened yet,
All preparations not complete within —
I turn new knowledge upon old events,
And the effect is — But I must not tell;
It is not lawful."

What follows may be taken, perhaps, in a sense, for a mystic initiation. Mustering superhuman strength Paracelsus stands upon his couch, dons his scarlet cloak lined with fur, puts his chain around his neck, his signet ring is on his finger, and last he takes his good sword, his trusty Azoth, in his grasp for the last time, and says:

"This couch shall be my throne: I bid these walls
Be consecrate; this wretched cell become
A shrine; for here God speaks to men through me:"

Then he tells the story of his birth to power, and of the wisdom he has attained. He tells how

"I stood at first where all aspire at last
To stand: the secret of the world was mine.
I knew, I felt, (perception unexpressed,
Uncomprehended by our narrow thought,
But somehow felt and known in every shift
And change in the spirit, — nay, in every pore
Of the body, even,) — what God is, what we are,
What life is — how God tastes an infinite joy

In infinite ways — one everlasting bliss,
From whom all being emanates, all power
Proceeds; in whom is life forevermore,
Yet whom existence in its lowest form
Includes."

It is a long address, and so full of the most spiritual thought that it seems a pity space will not allow it to be quoted entire. There is one passage which corresponds very closely to a passage in Hartmann's work, from one of Paracelsus's writings, describing the union in man of the attributes of this sphere of life which had, here and there

"Been scattered o'er the visible world before,
Asking to be combined — dim fragments meant
To be united in some wondrous whole —
Imperfect qualities throughout creation,
Suggesting some one creature yet to make —
Some point where all those scattered rays should meet
Convergent in the faculties of man."

This point of convergence is spoken of in *Through the Gates of Gold* as "that primeval place which is the only throne of God, — that place whence forms of life emerge and to which they return. That place is the central point of existence, where there is a permanent spot of life as there is in the midst of the heart of man." Again we see the same subject treated in the closing part of the *Gates of Gold*, the mighty results to be attained through the subjugation of the animal nature in man to the godly nature, looked forward to by Paracelsus, as Browning makes him speak, with prophetic vision, in the following words:

"But when full roused, each giant limb awake,
Each sinew strung, the great heart pulsing fast,
He shall start up, and stand on his own earth,

And so begin his long triumphant march,
And date his being thence, — thus wholly roused,
What he achieves shall be set down to him!
When all the race is perfected alike
As Man, that is: all tended to mankind,
And, man produced, all has its end thus far;
But in completed man begins anew
A tendency to God."

And it is given significantly, as a trait of completed man, that such

"Outgrow all
The narrow creeds of right and wrong, which fade
Before the unmeasured thirst for good; while peace
Rises within them ever more and more.
Such men are even now upon the earth,
Serene amid the half-formed creatures round,
Who should be saved by them and joined with them."

These words of Paracelsus are almost the last in the poem:

"As yet men cannot do without contempt —
'Tis for their good, and therefore fit awhile
That they reject the weak, and scorn the false,
Rather than praise the strong and true, in me.
But after, they will know me!
If I stoop into a dark tremendous sea of cloud,
It is but for a time; I press God's lamp
Close to my breast — its splendor, soon or late,
Will pierce the gloom: I shall emerge one day!

We believe that the time is not far distant when he will be understood, will be known, and shall emerge.

SUGGESTIONS AS TO PRIMARY CONCEPTS: II — J. D. Buck

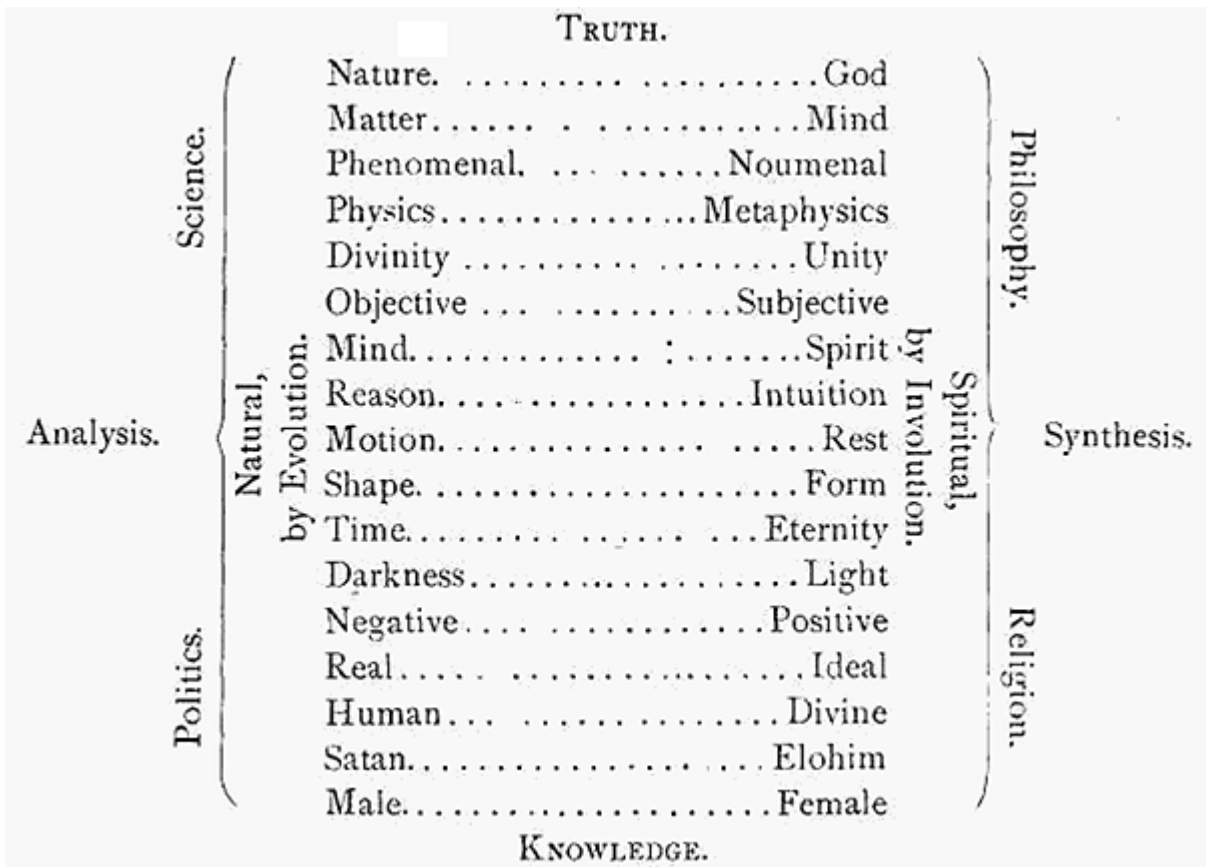

[Continued from April, Volume 2, number 2]

In our former article we had arrived at the fact of consciousness, as the representative of the noumenal in existence. Consciousness is also the alembic in which the experiences of the outer life are precipitated. It may justly then, be called the *central sun* of individual existence. Consciousness is not the one life, nor is it spirit, though it partakes of both, for life is diffused and participated in by plants and animals, in which may also be discerned the dawn, or germs of consciousness. But as the life of man on the physical side has its root in matter, so the life of man on the noumenal side has its root in spirit. Matter and spirit are thus the two extremes of cosmic substance. We may say crudely, that spirit precipitated, consolidated, is matter, while the intermediate condition is the ether. Oken has shown that self-consciousness belongs only to man. An animal is conscious of hunger or lust, and follows blindly the all absorbing passion, but no animal is self-conscious, that is: conscious of self, as a whole. A very common mistake is made in reading accounts of creation recorded in ancient scripture, in regarding it (creation) as a process once for all completed, when the fact is that the process of creation is forever repeated, and the process is for ever the same, and we can observe it now as "at the dawn of creation:" "eternity," applying to a limitless past, as to an endless future. Another fatal mistake may here be pointed out, though not in its natural order, and that is the vagueness of our concepts of the idea "God." Our ideas of God can have but two sources, viz: external nature and internal nature of man, there are no other sources from which the God-idea can be derived. From the one — nature at large — our ideas of an underlying force holding the stellar orbs in place and moving them in cyclic order, adjusting and adapting all things great and small are purely Pantheistic. From the other — the inner nature of man — endowed with intelligence, love, and aspiration, our ideas are purely anthropomorphic, and these two views of the ONE, the BOUNDLESS, are not, as

commonly supposed, antagonistic, but perfectly consistent, as will presently appear, for the idea is not only fortified by scripture, but no other concept can for a moment be entertained when this is once comprehended, for it illuminates alike the soul of man and the sacred page.

Mr. J. Ralston Skinner, a most able Caballist, thus translates the first utterance of the books of Moses: "*In (or out of) His own essence as a womb, God, in the manifestation of two opposites in force, created the two heavens, i. e., the upper, or light, and the lower or dark; signifying the equivalents of heat and cold, day and night, expansion and contraction, summer and winter; in short, the all embracing cosmic relations.*" (1)

The meaning of this and its exceeding value will not at once appear to one who has not carefully considered its bearings. It is well known that the word here translated as God is *Elohim*, and that it is plural, and while this fact has been ignored in the current version, the real idea has at the same time been lost sight of. The idea of One Power operating in a twofold way or by opposites, will be found to be not only a key to the text, but to cosmic unfoldment. Our primary concepts must agree with the constitution and existence of things, or they are worthless, and but little investigation is required to show us that this idea of polarity or DUALITY, lies at the foundation of all created things, and when it is once clearly apprehended it furnishes a key to creative energy. The following table will illustrate this antithesis, though it is approximate and by no means exhaustive, but if found true in principle it may assist to more exact and comprehensive concepts.

Let it be borne in mind that our present purpose is not to build up a system or elaborate a theory, but to suggest concepts which are fundamental in the nature of things, and which therefore must be included in all systems of thought that undertake to grasp existence. This duality of existence is so intimately blended in our every day experience as to be practically overlooked. Moreover, owing to the materialistic tendency of the age, it is the custom to express spirit in terms of matter, and so to ignore practically one-half of existence. It may readily be seen that volumes might be written to illustrate this antithesis of nature, or the duality of existence.

Now it must be borne in mind that all living organisms spring from a germ, and that in the preparation or vivification of this germ, male and female elements or agencies are employed. Here then are the conditions in which to observe the processes of creation, and these conditions are by no means past finding out.

A vivified organic cell contains potentially the complete organism, and by its study we learn not only the process in any given case, but *nature's plan*.

Every germ is therefore a *Center of Life*. In the vivification of the germ or cell, both male and female elements are employed. All activities whether in germ, or completed organism, consist in currents or movement to, and from the center, *i.e.*, outflowing and inflowing, or "circulation," and development is *always a living equation*, of which *evolution is one-half* and *involution the other half*, in strict accordance with the basic condition of duality. We hear a great deal nowadays of the "polarity of the human body" A magnet is a body whether of iron or "flesh" in which there is an orderly or systematic arrangement of the polarity of its atoms, molecules, or cells, and this polar arrangement may be according to a single system, or a series of systems, the lower subordinate to the higher, as in animals or man. Crystallization and organization depend on this systematic polar arrangement. Every cell of a living body (as of a magnetic bar of steel the atoms) is a polarized cell, for to say that it "lives" is to say that it is dual, *i.e.*, polarized. (2)

A hint in this direction is all that time and space will at present allow, yet the philosophical continuity of concepts must be apparent, and the more the idea is followed out and unfolded, the more apparent will the truth and universality of these concepts become.

All this is best comprised and comprehended in the language of symbolism. Let us imagine in space or in the Ether a "geometrical point," (say where two rays of light cross or intersect). This geometrical point is "position without dimension," *i. e.*, an "ideal point." Now let this "ideal" point become "real," that is let it "*appear*" as the light, the water, and the dry land "*appear*" as recorded in the sacred text.

Coincident with this appearance, at this point is the birth of matter and force from the bosom of ether or the womb of cosmos; movement of the atom is the result. It "whirls in space" viz., in the ether, it has an "atmosphere" of its own, is a world in itself, a minature world, and its new relations to the surrounding ether assigns it a "circumference," it is

polarized, evolves and involves, *i. e.*, has centre and circumference the moment it *realizes* existence. This is the "centre that is everywhere and the circumference that is nowhere." This centre of "cosmic dust" is at first "without form and void." The spirit of all things is at its center, as it floats in the ocean of ether; its primary or cosmic form is a globule, and its first evolution is an emanation from its centre, but as it is polarized this emanation occurs in opposite directions. If in one direction only, it would form a radius, but in opposite directions it forms an equator or diameter line. Matter, space, time and motion are thereby for it determined. It is definitely related to itself and its surroundings. These relations are, for diameter I ; for circumference $3,14159+$ or π . It will be seen that these are the facts and the true relations as we find them, and it matters not whether these emanations from the bosom of the ether occur singly, or in groups of myriads, or sufficient to form a planet, the principle is the same. If each atom so emanating associates with fellows this association must be by virtue of inherent similarity, attraction, or consonant rhythm. These basic principles may be conveniently studied in the process of crystallization, and are exemplified in every snowflake formed from a drop of water, as in the unfolding of every germ, leaf, or flower. We now see that there is a *world* of meaning in the Smaragdine Tablet to which we have previously referred; only those ridicule it who are too stupid to understand, or too conceited to "consider the lilies," and who will therefore never behold them arrayed in all their glory.

(To be continued.)

THOUGHTS IN SOLITUDE: IV — *Pilgrim*

As said Solomon the wise, "there is no new thing under the sun." Our thoughts are but the thoughts of preceding ages. That this must be so will be apparent when one considers the Eternity behind. All possibilities of nature must have been realized and all thoughts thought in the — to us — dim past. And while the wheel of evolution still turns this must be so. At the apex of the orbit in each revolution, a few of the greatest souled ones have attained emancipation, a few have been able to lift the latch of the Golden Gate. But the remainder of the candidates in nature's school who have failed at the final test have again to begin the weary round, along with those evolving from lower conditions, with only so much light to guide them through the labyrinth of life as may have been enshrined in the traditions or religions evolved during the previous efflorescence of Humanity. How are they to regain the thoughts of the past and obtain some true interpretation of the mystery of life? All thoughts indeed are writ in the Akasa from which the Prophets and Poets of all ages have drawn their inspiration and in proportion to a man's striving to get below the mere surface of things, will be the degree in which he succeeds in making part of that inheritance of the ages his own possession.

The scholar too would seem to have a part to play. What worthier object can be his than that of rendering intelligible in the speech of his epoch, the thoughts and ideas enshrined in the dead languages of the great thinking races of the past? The scholars of to-day, those who have drunk deep at the wells of Sanskrit and Greek learning, have indeed a heavy responsibility upon their shoulders. Were it not a worthier aim of life to make common property the thoughts and ideas of the sublime ancients than to wrap themselves as so many do — though there are one or two

notable and glorious exceptions — in the self-gratulation of exclusive culture and stagnate in the memory of past achievement?

Those too who are animated by the Theosophic spirit, and who feel the supreme desirability of the path they are striving to tread, are bound to find words more or less appropriate to carry to the world a conviction of this supreme desirability, words which may convey some idea of the animating life within which is quite as much an embodiment of the scientific spirit of the seeker after truth, and the single-eyed determination of the man of the world to achieve his object, as of any devotional or religious feeling. Religion — in Christian countries at least — has been made far too much a thing of sentiment, it has its use no doubt in prompting to the initial effort, but when the path is chosen it would seem that singleheartedness of aim and firm determination were the dominant qualities required.

The thought that prompted the present paper was expressed in a footnote written by a friend in that mystical work of the middle ages "Theologia Germanica." The text expresses the thought that all that is, is well pleasing and good in God's eyes, while the footnote by citing one out of the many instances of earthly action so diametrically opposed to what the most optimistic could consider as pleasing to God, commands as the necessary corollary to the text its converse proposition.

Search as deeply as we may into Nature's life, and obtain though we may some intuition of the love which may be regarded as "creation's final law," that law in its working throughout all objective existence must still appear to us as unutterably hideous. The cosmos exists indeed for those who have extended enough vision, in other words the faith to see it, its picture may be seen in the depths of the soul, that very throne of God, but to us who

tread the pathways of the world, who are daily brought in contact with the social evils of this generation, the crime, the ignorance? the poverty, the suffering, how can such existence appear to us other than a chaos? Is it not a veritable Hell on Earth? But is there no "best Philosophy" such as Shelley speaks of

"Whose taste

"Makes this cold common Hell — our life — a doom

"As glorious as a fiery martyrdom?"

The reproach of being unpractical is often made against those who are deeply imbued with the philosophic spirit — they may not have the ready panacea for the cure of existing evils demanded by the philanthropist, whose partial remedy he is so apt to consider as such, and to apply with ill-considered action — but they who look deep down see the real remedy, though their words may fall as vain sounds on the ears of the world.

The forces too that have long been set in motion are not lightly to be diverted from the goal towards which they have been hastening, and that goal is for us beginning to loom but too clearly in view. That child born of man's deep seated sense of justice (perverted though it may be) out of the dam, dire poverty, the shrieking red-clad socialist stalks among us, and following the inevitable law of retribution, over the people who have fallen deepest in the slough of materialism, and have been most dominated by the lusts of the flesh, is beginning to tremble the moan of the coming storm, while in their most populous cities the cries rise loudest. It may be too late now entirely to ward off the storm, but surely its fury might be mitigated were we even now to read the lesson aright.

To a people whose upper classes are pandered to by nameless lusts, and whose lower classes breed like beasts of the field, without recognizing, as the beasts do, a non-breeding season, to

this adulterous and lascivious generation were it not a worthy aim to show by word and deed that *it is* possible to dissociate love from lust, and that the loftiest emotion of which Humanity is capable has no necessary connection with the sexual bond? But what advance can be made till society recognizes that instead of offering a premium on marriage, they rather are worthy of admiration who can guard inviolate the sacred seed, under the influence of an aim the worldling knows not of — the aim of transferring the life-force from the material into the spiritual plane, with whatever results may accrue from this transformation of energy, of transcendental powers, or sweeter far the realization of the Platonic dream of union with our other half, the finding that within ourselves lay the twin soul which has been the object of our life-long search, in other words that in the microcosm, man, as in the macrocosm, God, are contained both the male and the female elements of existence.

What a contrast to this age of materiality to read of that old time when to prevent the depopulation of the country, it was necessary to enjoin each true-hearted Brahman to marry and beget one child before devoting himself to the main object of existence which should be to-day as it was then, the practise of Yoga.

But besides helping to counteract the dominant evil of our time another reason can be given for the practise of celibacy, though this lies more on the interior plane, and is therefore more a subject of speculation. For it is a satisfaction to think that by refusing further to swell the already overteeming populations, the ranks of the unborn are lessened to a smaller degree, that a few more souls continue to enjoy the rosy dreams of Heaven.

But though the general acceptance of a less gross form of life would greatly tend towards the amelioration of human existence,

to expect it from this generation would seem like putting the effect before the cause, for what is there to impel towards any curbing of the passions while Ignorance holds almost undivided sway? All evils under which Humanity groans may indeed be ascribed to that baleful influence, and it is useless to lop off one of the hydra heads of the monster, while she is capable of replacing it by a still more hideous growth. Andromeda truly pictures Humanity to-day, but where is the redeemer Perseus to be looked for save under the shining garb of the occult wisdom? The worldly knowledge with its glittering train of physical sciences and mechanical inventions can never set Humanity free, it but weaves round its votaries still more deluding webs of darkness. But we may hope that Reason will once more "shed her beams of dawn" over the dim world, and that true faith will once more shine in the hearts of men, for when the knowledge has filtered in that this life is but one of an endless chain of similar existences, will not the futility of gratifying every whim of the senses, which must so often before have been gratified give place to the desire for freedom from such dominance, and to the yearning for some more lasting bliss? and when it is realized that our present thoughts and acts are the factors that determine our future lives and that the pain (or joy) of the present is the retribution of the past, will not a goad be fixed in the hearts of many to drive them on the right way? and finally, when it is dimly perceived that the soul in past existences has experienced all heights and depths of earthly things — has realized all the sweets of wealth, of honor, of power, of love — that the bitter has been very bitter indeed and that the sweetest of the sweet has failed to give permanent satisfaction, will there not spring up in the soul a deep distaste for this loathsome life, a firm intent to pierce the veil of Maya that hides from us the celestial region?

This piercing of the veil, or to adopt a simile which will carry us a

little further, this scaling of the mountain is conceived of in very different ways. To some it seems as the culmination of one gigantic effort, to others as the result of infinitely slow progress. It is now pictured as "the killing of the deadly serpent of self for which Supreme moment is needed a strength such as no hero of the battle field needs." Elsewhere it is described as the steadfast toil of the will "till efforts end in ease and thought has passed from thinking," as the gradual centering of all thought in the eternal thought till all earth-born desires and fears die out through sheer lack of the nourishment whereby they may be kept alive. The truth may lie in the union of these two apparently contradictory modes of thought, or it may be that as the different natures of men impel them to different lines of action, the pathways are really different though conducting to the same goal, or it may be suggested that the desperate effort referred to above, the supreme moment when the strength of the hero is needed, may be symbolised in the action of one of the mountain climbers, who has strayed from the true mountain side, into some rocky cul-de-sac, up some misleading pinnacle. A desperate leap will doubtless be required of him to reach the true breast of the mountain again. But he who has started on the ascent with a true guide will not mistake the rocky pinnacle for the snow-clad summit. His progress will be fast or slow as the strength and will within him shall decide. Therefore to the aspirant should it ever seem like the steady ascent of the mountain for which are demanded all his combined energies of courage, prudence and steadfastness. And as the summit is approached, all dread anticipation of what the future may bring as well as the fever of personal desire and earthly passion will be left behind like the mist of the valley. Hope and Fear alike will disappear in the purity of that serene air.

And the love which could no longer identify itself with any one

object of desire, or find any resting place on earth will have been gradually purged from all taint of animal passion, and will daily become more Godlike in its diffusion, until personal likes and dislikes melt away before its intensity of worship of the one supreme Perfection. All appearances of difference will then be blotted out — friends and enemies, kinsmen and aliens, yea, good and evil men — all will appear alike — for God only will be seen in all, and the bliss of Yoga will be attained.

The Path

LETTERS ON THE TRUE: I — *Jasper Niemand*

MY COMRADES

A renowned occultist said recently; "Do not write like the Peripatetics, but put your soul into it." The wisdom of this advice becomes at once apparent. We may not all attain those brave pinnacles in the distance, but the first hard steps lie close at hand, to be taken by every earnest man. He takes them more or less in the dark. Now our struggle is for Union; not merely to be in Union, but to be that Union itself. This idea should attend us from the outset, for ideas create men. So in considering the subject of Truth, and how to become It, I find myself confronted with my individual experience, and my conception of its value soon enlarges as I find it repeating itself in many another life. It would seem that I might thus come to you, a friend to friends, speaking plainly of such hidden essences as I may find in diurnal things. I do not offer a universal panacea. I point out that which is for me The Way. Yet I say also with Ulysses: "I am a part of all that I have met," and to those sharers of my larger nature I manifest that which I have found. You are very present with me, oh, my Comrades! Distance cannot shut you from me. Maya cannot hide you. As we breast the tide of this Dark Age, I seem to feel your hearts beating time with mine. I meet one, and he becomes identical with me; then perhaps another and still another, until merged in the pulsation of a single Hope, we are but so many throbs in the Great Heart of All. I salute you out there in the Unknown, and may we one day come together with the large homeric joy of fellow warriors! Now you know in what spirit I address you.

Would to God Truth were more believed in! I say this amid

frequent surprise. Yet it is a mimic Truth by which we live. This puppet virtue emasculates. It cozens our judgment, disowns our intuitions and divides our motives. We drift to and fro with the material scum of Being. When do we come face to face, speaking entire thoughts? We look each at the other's mask, and Truth is dumb. Shy as schoolboys we are before the tricky illusion of form. As friends commune best in the twilight, so we shrink back within the veiled recesses of the mind, and if we speak our conviction, it is in parable. Who has a true relation in life? Between the closest lovers there arises this impalpable wall of fictitious personality. We do not break through it. The heart pants for the True, but it cannot reveal its necessities to those whose thirst is slaked at shallower streams. If we dared be what we are with one another, we might get down to bed rock, and begin to understand somewhat of this great mine called Life, and the lay of its ore veins, and where a man may blast through to everlasting riches. You will say to me; "Shall I disclose the sacred core of my soul to be gapped at and appraised as the thing for which I have paid just so much blood and so many tears?" *Never!* I know well that even those who under ties of birth and law have a right to confidence, do not always know of its existence. You sit among them in the twilight, gazing towards the horizon, striving to catch the first divine harmonies of the on-coming night, and when they say to you, "Of what are you thinking?" you answer; — "I wondered if tomorrow will bring good harvest weather." For you have tried it and found no scale to measure, no bottom to the box. It is a common need that I specify. We are delivered up at the bar of custom, impressed under arbitrary standards, bidden accept the verdict of self impanelled citizens for the swift mandate of our own soul. She mocks at this usurped authority. We have too long allowed others to bind us in the names of the great Verities, and now we discover beneath those august mantles, plastic little gods of civic creation. It is a tale as old as the

world.

It lies within our power to change this in some degree at least. He who would have true relations, must himself be true. Let him distrust names, and sift facts. Give nothing the right to pass you unchallenged. The most trifling opinion must give the eternal countersign before I admit it within my lines. I receive no idea until I have tested it by all the laws known to me, whether natural or supra-natural. For if I give out some false thought to another, I poison his spring. I have a corsican feud with that lying word — "*Independence*." I would raze it from the memory of men. There is no such thing. The True repudiates it. Exact Science protests her ignorance of this fabled monster. Even on the physical plane, each man, himself a glowing sphere in action, throws off and inhales by every pore, particles of matter, of mind stuff, of cell stuff, of all that goes to the making of the mere flesh and blood man. Case him up in plaster of paris with but the necessary orifices for organic functions, and see how long he will live. Put him into solitary confinement and mark what becomes of his "independent" brain. We interchange bodies with one another and recruit them even from the dead. Reject me; put the Atlantic between us, and I will send a shaft to your heart in the shape of my thought. I have seen proud men chafe at a comrade's suggestions, and accept unconsciously the alms of a thousand stranger minds. We have a tremendous lien upon one another. All Humanity impinges upon every man, at every instant, on every plane. Where among the worlds do you find Independence? Is your constitution larger than that of Orion? Shall continuity be displaced, that you may stretch yourself? Accept the reign of Law: and instead of Independence write "*Interdependence*" on the lintel of the heart. I do not say this procedure is always painless. Truth is a goddess who demands a human sacrifice. For my part, give me facts, though they crush me. Something finer will spring up

from the remains.

Being true friends we shall find them. Here in this perplexed world if hearts could get together, and together — untinged by sense — go out through one another's real experience, much might be found out. Such friends love truly because each in the other sees the true self reflected. They do not hold silence but reveal hidden thoughts, and by mutual comparison, which is greater and surer, eliminate error, realize the True in all things and "keep each other awake in Him." They hold intercourse also, at times which they do not recollect, as we do with all higher souls who love us, and who certainly exist, though not now known to our mortal eye and memory, and who drink perhaps often with us the little ambrosia that we are able to reach. For this infrequent boon doubtless all people languish, knowing not what it is that they desire, and thus many a soul goes through life seeking it for years, and often, too often, concludes that it is a search for Utopia, because the rough experience of long seasons proves apparently that "friends such as we desire are dreams and fables." (1) It need not be so, if you will not have it so. Be wholly true and you must find within your circle at least one heart equal to yours, with whom you can establish this priceless interchange. Seek one another; break up the ice and get out into free air. The man of the world and the deifier of the practical, will alike bear witness that in such union is strength indeed, no matter to what issue. It can be maintained where lives have a mutual lodestar. Yet be on your guard against the intellectual tramp, who is ever ready to refresh himself in your inner domain and gape at your wonders. The curious and the idle have no right of way through my mind.

The awakening soul demands a plain and vital relation. She cries to all her environments: "Hereafter I am bound by no arrogant claims. Does your word reverberate in me? I follow! Does your

thought attract mine? Take it! I will give you all that is yours in me; I will not give you one jot more. Hope not to mould me within given limits. I shape myself only to the True. I will no longer be merely virtuous. I am Virtue!" Such is the language of the soul, to whom her own Being is sufficient fact, who offers no explanations, no excuses, but faces the interlocutor boldly, and answers: "Thus have I done. Am I or am I not free?" When the eternal comparison is established, however, she bears herself humbly before it, so long as she has not herself become that Eternal in very fact. She knows that there is but one place in the universe whereon a man may make a square stand, and he does so with the Law to back him. That place is his Duty. The equation of the Past has brought him there. All these paltry concerns, this material pressure are outcomes of the energies of that Astral Medium which is at once his flux and his teacher. He and others about him are making these things themselves. He must learn why and how; for this lesson there is no better place than that wherein his soul first rouses from her stupor.

I spoke of Virtue. What is that? Emerson once told us: "Virtue is the adherence in action to the nature of things." That commanding Nature, which is the True, stands above the adherent virtue. Growth and decay advance through retrogression, the fermenting and cathartic processes, these are Nature's. She gives, not opiates, but astringents. To sin, which is to go off at a tangent from the True; to suffer, which is discordant vibration; to return when a latent attraction, developed through pain, sets out towards the sphere of harmonious action; all this is natural. To lose a thousand vintages through the evolution of finer forces, to make here a rose and there a desert, these, with many transmuting and conserving powers, Nature offers as analogies to the student of the True and forbids him to condemn any of them. Sometimes convention establishes this natural

order, simply because it is too massive to be overlooked, as when well-bred people select only topics of general interest to all. Then the crowd follow, not because it is true, but because it is convention. This cold acceptance freezes up the vitality of the germ. Let a man agree with his own soul that he will not lie because he galvanizes non-being into Being; that he will not steal because he goes behind the law which gives him all that is his own and will demand restitution at compound interest for the very word of which he may have deprived another. Let him not covet aught because his true manhood depends on his balance of power, his control of desire. Let him demand of himself the *Why*, of every impulse. Let him seek out the basic reason of his thoughts and actions, and assuring himself of his hidden motive, kill or exalt that as it may deserve. This is vital. What I say here of man applies once and for all to woman also. I am considering that fontal essence in which is no sex, no condition, no division — the True. If the whole tendency be to that, the greatest secrets in occultism can be known. Loyalty must be a sum, not a fraction. Take Truth alone for your headlight, thereby the world may see your course, and children and jejune idlers be warned from its track. I do not say you should rise up and cast off the outer life all at once. That is your protection; you will need it for some time to come. But I say that you should look sleeplessly for the true kernel of these external things. Our advance must even be made with discrimination, often in befriending silence. Remember that under the present social constitution, as long as Theosophy seems to unfit men for their private capacities and obligations, so long will the world condemn it as lacking in moral and in common sense. Its exponents may not deal violently with established relations. You are to work out, not to jump out. If we love the True, we shall fulfil every personal claim, every formal pledge incurred by our position in life, at no matter what cost, rather than allow a false deduction to be drawn which shall implicate

the good faith of our moral philosophy. Those to whom we are due alone can free us. An Adept wrote recently: "To find masters, you must be unclaimed by man or woman." Unfulfilled duties are ropes which drag us back. Men are eager to serve this cause; let them bear the result of their actions for its honor until the high law sets them free. Only an overwhelming certainty of a divine mission, of a certified call to Adeptship and the service of Humanity at large frees us from these present considerations by removing us to a higher plane, wherein we stand justified. While I live among men I wear the garment appointed to their assembly. Hours befall when I am called to quit this communion for that of the gods! Then I only know the laws of the soul and emerge from these platitudes of this lower world.

We cannot too deeply inhale the knowledge that Truth is not a surface growth. How often I have seen the clue overlooked by seekers; how often seen the messenger refused! Perhaps the tenor of his speech was too foreign, or too unassuming; or time was lost in questioning his methods, or the student flung away in fancied independence, forgetting that men do not own their own minds, but are debtors to the great currents of Thought. These flow through us like a river; the individual mind is but one of a million ripples, yet the force gathers momentum from ripple to ripple and all are the river. Only a large nature can receive a gift with grace and integrity; it has no fear of belittling itself by acceptance, for it knows that in the True we only receive in due proportion to our gifts, and that it must speedily bestow this bounty elsewhere. You do not hesitate to accept the services of a bank clerk because he is paid for them. Do you suppose that equity is confined to men, and that the Eternal gives us no retainer? Dismiss this commercial weighing and counting; give and take as the winds do! If an archangel stood within a body whose exterior did not announce that divine prompter, men of average standing would

reject him while searching for him. "I faint with the desire to find those who will unselfishly accept me and work for the rest. I give myself in all things for your benefit and would be glad if by my death or by my loss you could reach enlightenment. I would transfer, could I do so, all my experience to your soul and give it away to you. For what? For nothing at all save your acceptance. You know very well we can do no more than offer these goods. We set up the wooden image before the eyes of men and not one taking the sword cuts it in two, to find the jewels within. Then we sadly go on again." (2) That is the language of spiritual power and self confidence ignores it daily. If Jesus and Buddha walked the earth to-day without followers or protestations, how many men who clamor for the mysteries would recognize Them by an innate perception of Their qualities? I marvel that others suppose the Great Spirits of all ages to have passed onward to realms of bliss, without a second thought for the belated brotherhood behind. By the inexorable laws of Their perfected natures, some must have returned, in renunciation and bondage, to live and humbly teach and cheer reluctant men.

Do not take any man at his surface valuation or yours, but look to the spirit within his words. This discernment of spirits is a great power; it can be cultivated. Close your eyes, summon up the man before your thought and try to *feel his total effect* as it impresses itself on your passive mind. Then regard him impersonally as a problem solved, not forgetting that a foolish man may at times become the mouthpiece of unseen powers. Our perception is often tested thus; be vigilant, lest unawares you reject the fruit of life. But you wish to pluck it for yourself without the aid of any man? Friend! Such fruit never grew. *The One Itself can only realize through the many.* Are you higher than that?

Others again fall into the besetting error of students who are tempted at the outset to elaborate a system. The wish to set our

intellectual acquisitions in order is natural enough, but as on our present plane we can only attain to partial conceptions, we may harden them into a finality, become insensibly attached to them as being our very own, and reject all that does not accord with them. Must the universal march up and toe my chalk line? Eschew mental habit; it is a great encruster. Submit the outer and inner man to the solvent of will. Heed the indications of Nature. Observe the bird as it folds its wings and drops down the air to the predetermined spot. Consider the lightning, when from the lurid sheeted flow it forges a bolt and darts it to the mark. Every bullet that scores must first be liquid lead. Fix your motive, then make your thought fluidic and free. We are much conjured in the name of consistency. In heaven's name then, let us be consistent, but to the Truth itself, through all its varied manifestations. Each man need care only for what he is this moment, and pass on easily with life to the next. There are times when we rise into an instant perception of Truth through the total nature of the soul. Then I feel myself great, by reason of this power, yet infinitely small, in that I do not hourly contain it. The laws governing this tidal wave form part of my inner consciousness, just as many of my forces are out yonder in the infinite correlations of cosmic energy. A full perception of them enables a man to hold up hand and lure, and the hawks swoop down. When a comrade displays this touchstone of the soul we know one another without any words. Many men of positive nature think that they also have fallen heir to this power because they test and are confident. They stand fast in reality by the lower knowledge of the delusive self, and can no more apprehend this internal aurora which throbs and gleams through the expanded man than a child discriminates between Northern Lights and the glare of distant conflagrations. The reason for this, as for all mistakes, inheres deeply in the elemental nature of man, and suggestions can be given whereby he may first recognize and then if he be a strong man — conquer

it. To this end let us unite our efforts, for you know it is through sharing this faulty nature that I have been led to an earnest contemplation of possible remedies.

SUGGESTIONS AS TO PRIMARY CONCEPTS: III — *J. D. Buck*

(*Concluded*)

As a man thinketh, so he is. — *Christian Scripture.*

All that we are, is the result of what we have thought. —
Buddhist Scripture.

Man contains within himself the fountains of wisdom, and the keys of knowledge. He who looks outside of himself for wisdom will search in vain. The unfoldment of *understanding*, this is true wisdom. Man is ignorant, not because wisdom inhabits a deep well, but because man's understanding is so shallow. The grandest truths of nature lie open all around us; the veil of Isis is but another name for the blindness of man. "As above, so below, as on earth, so in heaven." The same law which rounds a drop of water and crystallizes a snow-flake, forms a planet and builds a mountain. There is law, and rhythm, and melody, and exact proportion, in all created things. Exact geometry determines the form of all things. Every atom of matter in the universe is set to music. The parts of every complex body, whether of man or mountain are related to the whole by exact ratios, definite multiples. The proportion of every element in a compound is definitely fixed. So are the conditions for the development of every seed or germ, from monad to man. If you alter these conditions, nature gives no response, she is *silent*, and she *waits*. What to her are "time and space"? Hers is the eternal! the everlasting! the boundless! She never argues, never wrangles, never complains. The Caballa Denudata has been at last translated into English. Yet where are the ancient secrets "*laid bare*." We shall search for them in vain. He who knew these secrets in the olden time sometimes *hid* them in books, but

revealed them there, *never!* There are three that bear witness, the instructive tongue, the listening ear, and the faithful breast. The instructive tongue could only babble to the gaping crowd, hence it is silent. Ears have they but they hear not, was said of them of old time. In the faithful breast the demons of pride, lust, and mammon have long ceased to bear witness. Silence reigns in heaven. There was never one who *led the life*, who did not at last come to *know the doctrine*.

We have already shown that the nature of the phenomenal universe and the bodily senses are the same. Each exists by virtue of change, motion, unrest, transition, that is their *essence*.

Therefore *they are, because they are not!* You can neither detain nor repeat them. Even our thoughts are of the same nature, you cannot detain, or control them. They come and go, and come again, yet never twice the same, something is added, something wanting. Sum up our sensations as pleasure and pain, the two poles of feeling, each necessary to the other, each the exact complement of the other. How vainly do we strive to retain the pleasure and get rid of the pain. He who never suffers, never enjoys; he who is incapable of suffering is incapable of enjoyment. He who has suffered shall surely enjoy, measure for measure, for such is the law of life.

The first great division under the conception of the duality of all things is, on the one side, the phenomenal, the outer, visible changing universe; on the other the noumenal, the opposite; and the reason why this side of being is so little known, and so seldom even recognized, is that we live so largely in the things of sense and time, and this fact will presently make apparent the reason why we know nothing of any previous incarnation. If we recognize the duality of existence and discover that life is an equation, death becomes the great cancellation of the excess on the side of time. We have, already shown that individual self-

consciousness is the centre in man. The sphere of consciousness is the monad that incarnates, the nucleolus of the cell. This conscious monad stands in the center between the phenomenal and the noumenal. This is the Life of which the poet speaks,

"Between two worlds life hovers like a star,
"From morn till eve on the horizon's verge."

The language of symbolism is very expressive in this direction, and may embody in a picture the size of a halfpenny the whole science of man. Cross the palm of the hand with two pins, and he who knows how to read and unfold will give you the whole of

Caballa,  Connect the upper and the lower points thus  and you have a double triangle, or a double mountain, literally, Mt. Sinai, (1) or Mountain of Light. Next take the cell from which

man's organism springs.  with its cell wall, cell contents, nucleus (and contents), nucleolus (and contents), and let the apices of the triangles meet at the border of the nucleolus, thus,

 Now let the lower triangle represent the three lower principles of man, those related to the phenomenal world, and the upper triangle represent the three principles related to, or drawn from the noumenal world, and let us suppose the above diagram to represent the conditions at birth, at the dawn of consciousness. We have already shown that the development of all germs is a two-fold process, from "vivification" to "birth," and from birth to death, viz: the shape and physical life *evolves*, while the essential or typical form and spiritual life *involves*, thus maintaining the equation or equilibrium. In the above diagram the nucleolus represents the central sphere. Let the dawning of consciousness be represented by the interlacing of the triangles,

thus,  The lower triangle still represents the phenomenal world, the things of time and sense, the upper triangle the

noumenal; and as by evolution the lower triangle advances upward, so by involution the upper triangle advances downward, while the central space, formed by coalescence of the two, represents consciousness.

Now suppose this coalescence, approximation or interlacing continues, thus,  till we have at last a complete geometrical figure,  our familiar double triangle, or six-pointed star. This would involve an exact equation, evolution equal to involution, with progressive expansion of the central area of consciousness.

Our geometry fortifies our proposition still further, for if we fold each of the points of the triangles toward the center we shall form a complete hexagon, the six sides and six angles thereof representing the angles and sides of the two original triangles, thus making our symbolism complete. *The realm of consciousness has absorbed both the phenomenal, and the noumenal*, and the perfect or Divine Man stands revealed, and thus, and thus only, can man be made in the image of God. A spark of the Infinite expanding in self-consciousness till *at one* with the *All*, "as above, so below, to accomplish the purpose of *one thing*" viz.: the Anthropomorphic God, the Godlike man. Now suppose we represent the lower triangular space as dark, and the upper as light, the coalescence would then be mixed in the central area.

How then can this central space, consciousness, be illuminated? By conscience, the "voice of God" within the soul, and the result of this illumination is *righteousness*. But suppose this process of illumination — grand expansion — goes on naturally until the seventh year in the life of the child, and that from that time worldliness sets in, and the "dark world" gains the ascendancy and holds it throughout life. Consciousness *i. e.*, experience, pertains almost wholly to the lower triangle, the spiritual life

(noumenal) is lost sight of, ignored, and at last ridiculed and denied. "Eat, drink, and be merry, for tomorrow we die." Suppose that two substances naturally unite in equal proportions to form a chemical compound, and that for one pound of the one substance we place in the crucible one hundred of the other, what is the result? If there be *conditions for combining at all*, we shall find in the crucible when emptied, exactly *two pounds* of the compound, and the balance "REFUSE." How many such incarnations would it take to make man master of two worlds, twice born, a son of light. Is it any wonder we have lost our birthright, and forgotten our last incarnation? How many of the men and women of the world have any consciousness of spiritual existence? How many declare with pride that they are materialists, *i e.*, outcasts disinherited by their own act? How many will be born into the next world like the weak sickly wailing waifs that are born into this, who after one feeble gasp sink back into the great unknown from whence they came. How many have discerned the Gates of Gold?" He that would lose his life for *My* sake, shall surely find it."

These are but primary concepts, true or false according to him who reads. It is not enough to suppress the appetites and passions, we must "press forward to the mark of our high calling." We are not to despise or to destroy, but to transmute, and to aspire. If we but listen in silence, "sink down into the abyss" there is one who is ever ready to exalt us. Our ears have been so long accustomed to the clash and clangor of time, that we hear not the voice of the silence, or if we hear we are afraid. According to the desires of the heart, and the *fergency* thereof shall be the fruition. Strong passions, strong appetites, indicate strength of life, and if the *desire* but once seize hold of righteousness *to possess it*, and if we *persist* and are *determined*, and refuse to let it go, coy and shy as a bride at first, it will at length come like a heavenly guest to rest in our bosom.

The Path

NOTES ON THE ASTRAL LIGHT: I — *B. N. Acle*

To the student of occultism few more absorbing subjects present themselves than that of the Astral Light; and when one considers its strange sights and sounds, the mysterious creatures by whom it is inhabited, the enormous and incalculable influence it exerts on our lives and destinies, it is not surprising that information should eagerly be sought from the explorers of so fascinating a region. One of the most indefatigable of these inquirers was the late Abbe Constant — better known, perhaps, under the non de plume of "Eliphas Levi." As his works, however, are not translated, there are many would-be readers to whom they are not accessible; and it is in the belief that, to such, a brief compendium of his more important remarks would be not unwelcome, the following Notes made by a theosophist in the course of his own studies are offered.

If they should seem lacking in symmetry, or even entire continuity, it must be borne in mind that they are only what they profess to be — "Notes"; or, more correctly speaking, verbatim extracts from the various volumes in which this subject is treated of, often in connection with other, though kindred topics; they may fairly claim to be faithful and accurate translations — as any one may verify — but they make no pretense to literary finish; they are simply the words of the author, without alteration or comment; for this reason quotation marks are unnecessary, all that follows this paragraph being translation pure and simple.

The primordial light vehicle of all ideas, is the Mother of all forms, and transmits them from emanation to emanation, diminished or altered only by the density of the surroundings; the forms of objects, being modifications of this light, remain in the

light where they are reflected back; thus the Astral Light, or the terrestrial fluid termed the Grand Magical Agent, is saturated with images or reflections of all kinds, which the soul can evoke and submit to what the Kabbalists call its "lucidity."

These images are always before us, and are only temporarily obscured by the more obtrusive impressions of reality during our waking hours, or by the pre-occupation of our thoughts, which render our imagination inattentive to the shifting panorama of the Astral Light; when we are asleep, they present themselves to us of their own accord and thus dreams are produced; dreams which are vague and incoherent, unless some dominant wish remains active during our sleep and gives, although unknown to us, a direction to the dream, which thus becomes a vision.

The Astral Light acts directly upon the nerves, which are its conductors in the physical economy, and which convey it to the brain; thus a somnambulist can see by the nerves, without needing material light; the astral fluid containing latent light, just as science recognizes latent heat.

The empire of the Will over the Astral Light, which is the physical soul of the four elements, is symbolized in Magic by the Pentagram; by means of this we can compel spirits to appear in visions, either when awake or asleep, by bringing before our lucidity their reflection which exists in the Astral Light, if they have lived, or the reflection of their spiritual nature, if they have never lived; this explains all visions, and demonstrates, especially, why those who see the dead see them always either as they were when alive, or as they are while yet in the grave, and never as they are in that state of existence which escapes the perception of our present organization.

When the Magician has attained perfect lucidity, he can direct at will the magnetic vibrations in the whole mass of the Astral Light;

by means of these vibrations he can influence the nervous systems of persons, quicken or retard the currents of life, soothe or trouble, cure or make ill — in a word, kill or raise from the dead. The lucid will is able to act upon the mass of the Astral Light, and, in concert with other wills which it thus absorbs and utilizes, compels immense and irresistible currents. It should also be noted that the Astral Light can render itself denser or rarer, according as the currents accumulate or scatter it, at given centres; when it lacks sufficient energy to nourish life, there result diseases which terminate with fatal suddenness, and are the despair of physicians.

The Astral Light is the omnipresent tempter, symbolized by the serpent of Genesis; this subtle agent, ever active, ever abounding in power, flowing with seductive dreams and pleasing images; this force blind in itself, and swayed by the wills of others either for good or evil; this circulating medium, ever vivified with unquenchable life, that causes vertigo to the rash spectator; this material spirit, this fiery body, this impalpable and all-pervading ether, this enormous seduction of Nature — how shall we define its entirety, how qualify its actions? Indifferent, so to speak, in its nature, it lends itself alike to good or evil — it diffuses light and brings darkness; it is a serpent, but also an aureole; it is fire, but it may either be that which belongs to the torments of Hell, or that which carries up the incense offered to Heaven.

To be its master, we must, like the woman of the Bible, trample its head under our feet.

To vanquish the serpent, that is to dominate the circle of the Astral Light, we must be able to place ourselves outside of its currents; in other words, to insulate ourselves. This torrent of universal life is also pictured in religious dogmas as the expiatory fire of Hell. It is the instrument of Initiation, the monster to be

subdued, the enemy to be vanquished; it produces the larvae and phantoms that respond to the evocations and conjurations of Black Magic; in it are preserved those forms whose fortuitous and fantastic assemblage people our nightmares with such abominable monsters. To allow ourselves to be swept away by this raging flood is to fall into abysses of madness more frightful than death, to drive away the darkness of this chaos and compel it to give perfect forms to our ideas, is to create, to have triumphed over Hell. The Astral Light directs the instincts of animals, and combats the intelligences of man, which it tends to pervert by the splendour of its reflections and the falsity of its images; this fatal and unavoidable tendency guides and renders still more injurious, the Elementals and Elementaries; whose restless desires seek sympathy in our weakness, and tempt us not so much in order to cause our destruction, as for their own benefit. The Book of Conscience, which according to the Christian dogmas is to be made manifest at the Last Judgment, is nothing more or less than the Astral Light, in which are preserved the impressions of all our words, that is to say of all our deeds and of all forms.

Those who renounce the empire of reason, and allow their will to wander after the reflections of the Astral Light are subject to alternations of madness and melancholy, which lead them to imagine these wonders to be the result of possessions of a demon; and there is no doubt that by means of these reflections evil spirits are able to influence impure souls and make them their docile instruments, and cause them to torment the organisms in which they dwell. It is, therefore, extremely dangerous to trifle with the mysteries of Magic, and above all supremely rash to practice its rites from curiosity, and by such experiments to tempt the higher powers; and the inquisitive who, not being Adepts, meddle with evocations or occult magnetism, are like children playing on a barrel of gunpowder — sooner or later they will be

the victims of a terrible explosion. To insulate ourselves from the Astral Light, it does not suffice merely to envelope ourselves in a mantle of wool, as did Apollonius of Tyana; above and beyond all, the heart and spirit must be absolutely calm, freed from the dominion of the passions, and assured of perseverance in action by an inflexible will; and these acts of will must be ceaselessly repeated, for only by persistence in such acts does the will become strong. There are certain intoxicating substances which, by heightening the nervous susceptibility, augment the power of the representations of the Astral Light and consequently increase its seductions; by means of these, also, when used in a contrary direction, spirits can be terrified or subdued.

In order to command the Astral Light, it is necessary to understand its double vibration, and the balance of forces known as magic equilibrium.

This equilibrium, regarded in its primal cause, is the will of God: in man, it is liberty; in matter, it is mathematical equilibrium. Equilibrium produces stability and duration. Liberty brings forth the immortality of man, and the will of God formulates the laws of eternal right. Equilibrium in ideas is wisdom; in forces it is power; equilibrium is rigorous, if the law is kept, it exists; if it be violated, though ever so little, it does not exist. It is for this reason that nothing is useless, or wasted, every word, every motion, is for or against equilibrium, for or against Truth; for equilibrium represents Truth, which is composed of contraries which are reconciled, or at least equilibrated. Almighty power is the most absolute Liberty; but absolute Liberty cannot exist without perfect equilibrium; magic equilibrium is therefore one of the first conditions of success in the operations of science; and we must seek it even in occult chemistry by learning to combine contraries without neutralizing them. By magic equilibrium is explained the great and ancient mystery of the existence and

relative necessity of Evil; this relative necessity, in Black Magic, furnishes a measure of the power of demons, or evil spirits, to whom the virtues practised on earth impart more fury, and apparently more power.

(To be continued.)

The Path

THOUGHTS IN SOLITUDE: V — *Pilgrim*

THE TWO PATHWAYS.

In man's attempt to pierce the dark mists of ignorance that surround him, in his search after the perfect life, two ideas alternately dominate his horizon — two pathways seem alternately to invite his footsteps. These may roughly be designated as the Scientific and the Religious.

When full consideration is given to the stupendousness of the undertaking, to the almost inconceivable heights at which we aim; when it is realized that we aspire to reach the ranks of the Dhyān Chohans, the rulers of our Planetary System; to become, in fact, part of that diffused Divine consciousness in which is upheld the life of the World, does it not seem reasonable to conclude that all knowledge and all power must have been realized and beneficently practised by such an one in his upward course — that the conquering of the desires of the outer senses must have been accompanied by the development of the inner senses, through whose agency the whole elemental kingdom must have been cognised and conquered, and the hearts and minds of men read as in an open book?

But when the disciple realizes that all earthly power, honor, dominion, has long been put aside by him as valueless — that the one word which has dominated his being is love, and that the failure to realize any perfect union on earth has created and intensified the desire to plunge and to be lost in the Nirvanic ocean of Divinity, will not the attainment of powers and the development of inner senses appear to him as mere circumlocution and surplusage? Why not make for his goal at once? The bondage of material life being but the impulse to act,

liberation consists in destroying this impulse, not by suppression, but by the knowledge that the ego is independent of it. This knowledge is attained through faith, but the faith that leads up to it is liable to die if not fed by obedience to the will of God — "If thou wouldst enter the life, keep the commandments" — the commandments set in the various Scriptures of Humanity — then in long-suffering patience work out the term of imprisonment in flesh.

"Ruling the flesh

"By mind, governing mind with ordered Will;

"Subduing Will by knowledge, making this

"Serve the firm Spirit, and the Spirit cling

"As Soul to the eternal changeless Soul,"

till the "dark" and "passionate" qualities of Nature have melted away, and the serenity of "Satwa" alone remains. And the soul, which has centred itself more and more on the Supreme Soul, will find its earthly ties gradually dissolve, until the last one disappears, and it naturally gravitates to its eternal home.

This is a lovely picture, and there are many to whom such a pathway — the pathway of Religion — must have inconceivable attractions; but let us pause and consider well whether it is one which we in this Kali Yuga are yet fitted to follow to the exclusion of all others,

If we were such complete masters of the physical nature as to be absolutely fearless under any conceivable circumstances, and if our hearts were filled with such an all-embracing love for Humanity that at no moment would we hesitate to lay down our lives for it, we might, perhaps, consider ourselves worthy of passing through the final gateway of contemplative devotion. Doubtless there are few men, worthy of the name, who have not risen, in moments of exaltation, to the thought that even the

physical well-being — let alone the eternal salvation! — of suffering Humanity would be cheaply purchased by his death. It needs not to turn for an example to the Cross of Calvary, though that is regarded by Christians who fail to realize the inner meaning of their own faith as something uniquely transcendental in its self-sacrifice. Heroism is not so far to seek, and History can point to many a martyr who has braved as painful and ignominious a death without the stupendous motive for the sacrifice, such as might well goad any high-souled man to make it. But it is another thing to live constantly in the devoted frame of mind referred to, from merely rising to it in moments of exaltation.

Doubtless, also, there are men who, by the judicious use of right emotion, can, at times, so nerve themselves that fear shall seem an unknown word; but who is able to live in constant disregard of consequences, even on the physical plane with which we are tolerably well acquainted? So long as the horrors of the unknown psychic plane transcend anything we can conceive of on the physical, or while the realms of darkness contain one thought of terror for our imaginations, how can we consider ourselves worthy of the final crown of being? For is it not Perfection that we aim at? And where a trace of fear is present, or where love in its plenitude is absent, how can we expect to be within measurable distance of our goal? Four lines from one of Matthew Arnold's poems, many of which seem to breathe a subtle, though possibly unintentional aroma of occult thought, may here partially help to express the idea intended:

"And he who flagged not in the earthly strife
"From strength to strength advancing — only he,
"His soul well knit, and all his battles won,
"Mounts, and that hardly, to eternal life."

Though it must be remembered that fear is an attribute of the physical only, there is an interblending of the elements of our nature, and it stands to reason that the unknown sights and sounds of the plane just beyond that of which the physical is cognisant are capable of striking a far deeper terror, as well as of fascinating with a more subtle power.

And is it not logical to suppose that, as the disciple has gradually realized the unsatisfying nature of all earthly things — has learned to put aside its temptations, and to rise occasionally to a standpoint where its fears cannot assail him, so he must start on his journey of discovery in the unknown psychic world — armed always with the firm will and the lofty aspirations towards the Spirit — till he has learned also that its attractions cannot detain him, and that he has the power within him to dominate its terrors?

Until, therefore, we can stand as master in our house of life, and until the "Enthusiasm of Humanity" has possessed our Being, we must not imagine that we can discard the Scientific pathway before we have really begun to tread it. Indeed, the desire to tread the Religious path alone may, in some cases, have a partially selfish origin not altogether unallied to the slothful quality of "Tamas."

When it is realized, too, that work for Humanity "all up the line" is the prevailing rule, that the Divine and Semi-divine beings whom we know under the name of Mahatmas and Adepts are unremitting in their arduous work for the race, it will become apparent that the breaking down of the walls of our personality, and the merging of our individual being in the universal Divine Being, is a very far-off goal, which not all of them even have yet reached.

The attitude of mind of all students of Occultism towards the

great mass of Humanity, must, as stated in Zanoni, be one either of pity or of scorn — as a fact, it seems to fluctuate between these two. The feeling of scorn, indeed, easily rises in the breast when contemplating the petty aims and prejudiced views of even the noblest and worthiest specimens of the race we have known; and when to a naturally proud disposition is added the conviction that the objects of desire striven for by the mass of men are below contempt, the feeling of scorn often seems to carry all before it; and when it is felt that through pain and suffering heights of thought have been scaled, and that contemporaries, and even those who were once looked up to as teachers, have been left below, it often seems as if the only refuge from the lonesome isolation were to be found in a scornful pride. But surely, pity is the truer feeling, and it must be with relief that the disciple turns to the softer memories of past years, when the mere glance of a passer in the street carried home a tale of untold endurance and uncomplaining suffering, or when a modulation of voice opened the flood-gates of emotion, and the deep pathos of the fate of this suffering Humanity seemed to bind all together in community of being. It is in such moments as these, when it is realized that the supremest bliss would be obtained by the utter abandonment of "self" for the Great Cause, that the two pathways really merge in one, and it is felt that the "great renunciation" must be the final outcome alike of the love of God and of the service of Man.

It would seem, then, that our efforts to identify ourselves with the great whole must not be confined to yearnings after the ineffable Perfection, but must also take the form of work, on whatever plane it may be, for a more or less recognisedly concrete Humanity. It is very difficult to know what special form this work should take. While fully accepting the ideas expressed in Number II of this series, as to the futility of attempting to exert paramount influence on the thoughts of others, Ignorance must yet be

recognised as the prime curse of mankind; the attempts at diffusion of the true philosophic thought must, therefore, ever stand in the first place; and doubtless, along with the increased effort to enlighten Humanity, there will arise in the heart of the worker a greater love for and identification with Humanity which must lead to a more or less partial breaking down of the partition walls of his individuality.

If we turn from the evolution of the individual to the evolution of the race, as a whole, the analogous thoughts which occur are, that while the veil of obscurity must ever hide the future, and while it must remain impossible for us to know whether our special efforts in this or in that direction are destined to be successful, it may broadly be stated that — at least in this Western civilization of ours — individualism seems to have reached its zenith, and that the problems for the race to work out in the future will probably lie in the altruistic effort to supplant individualism by schemes which will more or less recognise the underlying Brotherhood of Humanity. The societies of to-day that call themselves Socialistic put forward plans that may be utterly inchoate and unworkable — and some of their members certainly appear to hold opinions as to the rights of revolution and violence which are alike hateful and fearsome to all true lovers of order — but those who think their work lies in this direction will doubtless feel impelled to try and discover the truth that underlies all these manifestations, with the view of guiding, if possible, the forces towards a peaceful issue.

The development of the inner senses is also one of the many pathways that must be pursued for the attainment of the real knowledge and power whereby we may potently help this suffering humanity, and give our aid to the few strong hands who hold back the powers of darkness "from obtaining complete victory." When by the unfoldment of the inner perceptions, we

have reached the platform whence earthly life is seen as from a height, the physical nature will have become a mighty tool in our hands to be used in the service of man. What vistas of work for the race will then unfold to our view! Of those who can grasp this idea by strong imaginative power, some will, no doubt, feel urged to force the development, though such forcing must doubtless be attended with danger. That it can be forced is a fact known to many students of occultism, and he who is in earnest will doubtless find a more or less competent instructor. To step consciously into situations where previous experience will be unavailing and where dangers are known to exist certainly requires courage, but how is greater strength to be gained or courage to be acquired save by undertaking the task and facing the danger? Nothing should be done rashly, and every step should be taken with due caution, but the path will have to be trod some day, and if only a little courage and a little strength are already possessed, this would seem to be a means of increasing our store of them. A sudden stoppage of the heart by an access of sheer terror, or a death in life dragged on to the grave through the delirium of madness, are awful possibilities to contemplate, but even were the investigator by some rash attempt to make utter wreck of himself in conflict with one of the elemental forces of nature, it should always be remembered that it would only be of his present earth-life that the wreck would be made, and that when his time came to appear again on the earthly scene, he would doubtless come back endowed with greater powers than if he had not made the attempt at all.

The separation throughout this paper of the two pathways, the Scientific and the Religious, has been made, it must be remembered, for purposes of contrast. Such division is purely arbitrary. Man's nature is indeed complex, but it is a unity in complexity; similarly, the path, though multiform, is one. But it is

more especially in carrying out such investigations or developments as those just dwelt on that the supreme necessity of the qualities known as the devotional or religious is apparent. Indeed, it may safely be asserted that the searcher who starts with a mere scientific interest, and in his own strength only, runs the greatest possible danger, while he is certain of success whose animating motive is the all-embracing love of Humanity, or the still intenser worship of the Supreme Perfection. If the old self regains its dominance, the disciple may well tremble, for in such moments the "Dweller of the Threshold" has a secret ally in the man's inner stronghold; but while the love and the faith continue to be his guiding impulses failure is impossible, for when "Self" is cast aside, what is there to fear for? and when God dwells in the heart, then is strength made perfect.

The Path

LETTERS ON THE TRUE: II — *Jasper Niemand*

MY COMRADES: —

The elemental nature of man has long engaged my thoughts, for so soon as I look within myself I am confronted with a mystery. Others admit the same experience. There is in me a morass, or a mountain, or a cold water dash which appalls me, it seems so icy and dead. In it none of my friends do walk; all is frozen and silent. Yet I seem to like the place, for there I can stand alone, alone, alone. When a boy I had often to cross that cold tract, and then I did not want to meet any boys. I wished to go alone, not with despair, but with a grim and terrible pleasure. I could weep and enjoy with another, and drink in their words and their souls, and the next week that cold arctic death came between us. It does so still. What think you, comrades, is that? But the stars still shine overhead, and on the margin flit the shapes of my loved, and I know that I shall either go back to them or meet them on the further side. It is not grim nor ghastly at all but is certainly unseen by the crowd. This mystery rose before me often and surprised me. It knew so much that it wanted to tell me. Soon I found that all my energies were but the play of correlated powers upon the margin of that strange spot. Where did all my life force come from, if not from that? What else had saved my ideals from the degradation of our material mechanical life? Over there in the centre, mist-enfolded, is the tented Self, the watchful god. Only a great tide of love, impersonal, unselfish, divine, can dissolve the lower self and flood us over that arctic desolation. Such love is the aloe flower, and blooms but once a century. Here, on the near side of the mystery, the side nearest the outer man, embedded in his heart, is the lurker, the elemental self.

When first we discover a trace of the soul within ourselves, there is a pause of great joy, of deep peace. This passes. The Soul, or Self, is dual, semi-material, and the material or outer covering is known as the elemental self, the Bhutatma of the Upanishads. As you know, Bhuts or Bhoots are elementals or spirits of a certain lower order. It is this lower self—"human soul"—which feels the effects of past Karma weighing it downwards to each fresh descent into matter, or reincarnation. These effects, in the shape of latent impulses, accompany the higher principles into Devachan, where the spiritual energies work themselves out in time. Those karmic tendencies then germinate in their turn, and impel the soul to their necessary sphere of action,—the earth life—to which it again descends, carrying with it as its germ, the true Self or Buddhi, which may develop so far as to unite with Atma, or Divine Spirit.

Now our bodies, and all the "false I" powers, up to the individual soul, are partial forms in common with the energetic centres in the astral light, while the individual soul is total, and according to the power and purity of the form which it inhabits, "waits upon the gods." All true things must be total, and all totalities exist at once, each in all, and hence the power of the soul to exhibit Truth; hence those sudden gleams from the half awakened soul of which the occultist becomes aware as his consciousness locates nearer and nearer the centre; he draws ever closer to the blaze of Light, until his recognition of it becomes enduring because it is now himself. In the earlier stages this perception is physical as well as mental and cannot be likened to any other sensation. There is a flash, a thrill, a surge, sometimes a *fragrant sound*, and a True thought is born into the world of the lower man.

It thus follows that only such forms as are total, reveal entire Truth, and those that partake of lower nature, or are partial, receive but a limited view of Truth. These partial forms

participate in each other, and exist partially in those that are total. Such partial forms are the energetic centres in the astral light, are elementals, such are our astral bodies, and hence the affinity subsisting between all, so that it is only when our consciousness is located in part in the astral body that we perceive things pertaining to the astral plane. The elemental self is a partial form, existing partially in the true Self, with which it can only be really incorporated when entirely purified from all material dross, when it is no more itself, but that other Self, even as the Spirit enters Nirvana. This gross, or false self, is great in its way; it must be known and conquered. Of it the Upanishad says that when “overcome by bright and dark fruits of action he enters on a good or bad birth,” he dwells in the body and “thus his immortal Self is like a drop of water on a lotus leaf, and he himself is overcome by the qualities of nature. Then because he is thus overcome, he becomes bewildered, . . . and he sees not the Creator, the holy Lord, abiding within himself. Carried along by the waves of the qualities, darkened in his imaginations, unstable, fickle, crippled, full of desires, vacillating, he enters into belief, believing ‘I am he,’ ‘this is mine,’ he binds his Self by his self as a bird by a net.” We are told that if this elemental self be attached to sound, touch, outer objects—in a word, to desire and sensation —“it will not then remember the highest place.” When the student thinks that he loves, hates, acts or rejects at will, he is only the manifester or machine, the motor is the elemental Self. It must have sensation, must enjoy through the senses or organs, or it would be extinguished in the higher principles. For this enjoyment it has sought the earth world again. So it casts up clouds and fumes of illusion whereby the man is incited to action, and when he denies it one mode of satisfaction, it inoculates him with a craving for some other. When he forsakes the temptations of the outer life, it assails him with those of the mind or heart, suggests a system to ossify him, a specialty to limit him, emotions

to absorb him, evokes a tumult to drown the “still, small voice.” Pride, dogmatism, independence, desire, hope and fear, these and many other qualities are its aids under mock titles. It disturbs the true proportions of all things. It cozens and juggles him beyond belief. Instead of relying upon the great All as himself, developing that faith and standing fixed by the Law, the man increases his confidence in his personal abilities, opens his mind to the thousand cries of self-assertion and puts his trust in this “will o’ the wisp” nature which strives to beguile him from firm ground. This self of death and ashes tells him every hour that he, the man he now knows as himself, is a being of judgment and power. The contrary is true; the first advance to the True must be humbly made, under the fixed belief which later becomes knowledge, that the man as he now appears to himself is to be wholly distrusted and self-examined step by step. As the physical atoms are all renewed in each seven years’ course, so a man has many mental deaths and births in one incarnation, and if he makes steady resistance to the undermining principle of Reversion to Type, carefully testing the essence of motives and thoughts, the very well-spring of deeds, he soon finds that one higher state of consciousness is succeeded by another and still others, in each of which transient conditions he temporarily and illusively lives, until he takes the last stronghold of the lower self and beholding its dissolution, crosses with a supreme effort to where the watchful god awaits him.

As the man has advanced on the animal, driving it from every subterfuge, lopping off its hydra heads and searing them with the fire of spiritual wisdom, and stands calm and firm in the equipoise achieved by the strength of his attraction for the True, then it is that the enemy makes a sudden halt upon the psychic plane, and summons to its service the grim battalions of the deadliest warfare ever known to the human race. The Dweller of

the Threshold stands revealed, a congeries of materialistic essences expressed from the man's entire past, a bestial apaunder of his lower self, and this lusty huntsman, whose quarry is the soul, shouts a view-halloo to all the nameless devils of its pack and gives and takes no quarter. The conquest of the body, the dispersal of worldly interests are child's play to this struggle, where the enemy itself is still a sharer in the divine, *and is not to be killed but subdued*. All the powers of Maya, all the startling vividness of universal illusion are at its disposal. It has for allies the hosts of earth and water, air and fire, terrible apparitions, horrid thoughts incarnate in malodorous flesh and reeking with desire, creatures dragged from the polluted depths of animal existence, sounds hideous and inconceivable, sensations that cast a frigid horror over the palsied mind. The man battles with misty evils that elude the very grasp of thought, he cannot even answer for his own courage, for the foe is within, it is himself, yet not himself, and its surest weapons are forged in the fires of his own heart. Thence too comes his strength, but his perception of that is obscured in this hour. The last stand of gross Matter, the last barricade before Spirit, is here, and over it the conqueror passes to the frontiers of his kingdom. Hereafter, spiritual warfare is appointed him, the ache and turmoil of the flesh are left behind. The pen refuses to deal with this first great contest, the thought falls back from it, and he who faces its issue is a madman indeed, unless he wears the magic amulet.

It should be ever borne in mind that this self of myriad deceptions is the ruler of the astral or psychic plane. Hence that plane is a play-ground of elemental forces most dangerous and entangling to man. Great intellects, pure hearts are bewitched there. Persons of natural psychic powers are easily stayed in this *cul de sac*, this "no thoroughfare," especially when those powers are inherited from past lives and have no simultaneous growth

with soul in this. They dazzle and blind their possessor. Evil has its greatest momentum on the astral plane. If a man lingers too long he becomes as much intoxicated as is the worldly man with material life, for these too are only senses of a more dazzling order, matter vitalized and more deadly. Its very language, dealing as it does with subtle gradations of color, light, odor and sound, is easily misinterpreted by those who have not obtained the total perception of the illuminated Self. Some think that they have acquired this illumination and steep themselves in psychic enjoyment and action. It is the fickle light of the astral world which floods and bewilders the elemental self. This plane is a necessary experience, a passing trial, not a goal. Only Adepts can fathom its mazes as they look down upon them from above and correctly interpret their bearings. Students must observe and try to control them without acting from them or depending upon them.

So comrades, I say again, procure the magic amulet. It is pure motive. Motive is the polarity of the soul. A polarized ray of light is one so modified by the position of its medium that it is incapable of reflecting or refracting itself in any but one direction. Its polarity depends upon the parallel direction of every molecule of ether constituting the vehicle of the ray. Divergence in one affects the whole. Are you so fixed down in those unfathomed deeps of yours? Do you know to what medium you respond and its position in the Celestial? He who claims to be sure of his motive, he, more than any other, is under the sway of the great magician. How can he be wholly sure when he does not so much as know fully the constitution of the mere outer man? Dares he aver to what the action of his immense and forgotten past has polarized his soul? Can he answer for the essential Motive at its centre when he comes face to face with the mystery at last? The highest keep constant watch over motive. The wise

student feeds and increases it. Few indeed have the warrant to “put it to the touch, to win or lose it all.” That warrant is only found at the core of the life, written in the blood of the heart. He who can give up all for All, even to his own salvation, he may confront the elemental self. There is nowhere any safety for him unless his hope is anchored in the unmanifest, his present trust in Karma. If the soul has been deflected, future unselfish motive can in time restore its integrity, whereas to loose the ungoverned soul now is to fall a victim to its lower tendency. Rely on Karma, It is divine. We cannot escape It; we may become It.

The Path

**THE POETRY OF REINCARNATION IN WESTERN LITERATURE: I —
*E. D. Walker***

The poets are the seers of the race. Their best work comes from the intuitional heights where they dwell, conveying truths beyond reason, not understood even by themselves but merely transmitted through them. They are the few tall pines towering above the common forest to that extraordinary exaltation where they catch the earliest and latest sunbeams which prolong their day far beyond the limits below, and penetrating into the rare upper currents whose whisperings seldom descend to the crowd.

However diverse the forms of their expression, the heart of it is thoroughly harmonious. They are always prophets voicing a divine message received in the mount, and in these modern days they are almost the only prophets we have. Therefore it is not a mere pleasantry to collect their testimony upon an unusual theme. When it is found that, though working independently, they are in deep accord upon Reincarnation, the inevitable conclusion is that their common inspiration means something — namely that their gospel is worth receiving.

It may be objected that these poems are merely dreamy effusions along the same line of lunacy, with no real attachment to the solid foundations upon which all wholesome poetry is based; that they are kinks in the intellects of genius displaying the weakness of men otherwise strong. But so universal a feeling cannot be disposed of in that way, especially when it is found to contribute to the solution of life's mystery. All the poets believe in immortality though unaided reason and observation cannot demonstrate it. Some inexperienced people deride the fact that nearly all poetry centres upon the theme of Love — the most

illogical and airy of sentiments. But the deepest sense of the world is nourished by the certainty of these "vague" truths. So the presence of Reincarnation in the creed of the poets may give us courage to confide in our own impressions, for "all men are poets at heart." What they have dared publish we may venture to believe and will find a source of strength.

It is well known that the idea of reincarnation abounds in Oriental poetry. But as our purpose is to demonstrate the prevalence of the same thought among our own poets, most of whom are wholly independent of Eastern influence, we shall confine our attention to the spontaneous utterances of American and European poets. We shall find that the great majority of the highest Occidental poets lean toward this thought, and many of them unhesitatingly avow it.

Our study will extend through four parts.

I. American Poets.

II. English Poets.

III. Continental Poets.

IV. Platonic Poets.

If any readers are familiar with other poetic expressions of reincarnation we would be obliged to them if they will kindly communicate the information to us.

REINCARNATION IN AMERICAN POETRY

PART I.

PRE-EXISTENCE

While sauntering through the crowded street
Some half-remembered face I meet,
Albeit upon no mortal shore
That face, methinks, hath smiled before.

Lost in a gay and festal throng
I tremble at some tender song
Set to an air whose golden bars
I must have heard in other stars.
In sacred aisles I pause to share
The blessing of a priestly prayer,
When the whole scene which greets mine eyes
In some strange mode I recognize.
As one whose every mystic part
I feel prefigured in my heart.
At sunset as I calmly stand
A stranger on an alien strand
Familiar as my childhood's home
Seems the long stretch of wave and foam.
A ship sails toward me o'er the bay
And what she comes to do and say
I can foretell. A prescient lore
Springs from some life outlived of yore.
O swift, instructive, startling gleams
Of deep soul-knowledge: not as dreams
For aye ye vaguely dawn and die,
But oft with lightning certainty
Pierce through the dark oblivious brain
To make old thoughts and memories plain:
Thoughts which perchance must travel back
Across the wild bewildering track
Of countless aeons; memories far
High reaching as yon pallid star.
Unknown, scarce seen, whose flickering grace
Faints on the outmost rings of space.

PAUL HAMILTON HAYNE.

A MYSTERY.

The river hemmed with leaving trees
 Wound through the meadows green,
A low blue line of mountain showed
 The open pines between

One sharp tall peak above them all
 Clear into sunlight sprang,
I saw the river of my dreams
 The mountain that I sang.

No clue of memory led me on
 But well the ways I knew,
A feeling of familiar things
 With every footstep grew.

Yet ne'er before that river's rim
 Was pressed by feet of mine.
Never before mine eyes had crossed
 That broken mountain line.

A presence strange at once and known
 Walked with me as my guide,
The skirts of some forgotten life
 Trailed noiseless at my side.

Was it a dim-remembered dream
 Or glimpse through aeons old?
The secret which the mountains kept
 The river never told.

J. G. WHITTIER.

FROM "THE METEMPSYCHOSIS OF THE PINE."

As when the haze of some wan moonlight makes
Familiar fields a land of mystery,

Where, chill and strange, a ghostly presence wakes
In flower or bush or tree,

Another life, the life of day o'erwhelms
The past from present consciousness takes hue
As we remember vast and cloudy realms
Our feet have wandered through:

So, oft, some moonlight of the mind makes dumb
The stir of outer thought: wide open seems
The gate where through strange sympathies have come
The secret of our dreams;

The source of fine impressions, shooting deep
Below the falling plummet of the sense
Which strike beyond all Time and backward sweep
Through all intelligence.

We touch the lower life of beast and clod
And the long process of the ages see
From blind old Chaos, ere the breath of God
Moved it to harmony.

All outward vision yields to that within
Whereof nor creed nor canon holds the key;
We only feel that we have ever been
And evermore shall be.

And thus I know by memories unfurled
In rarer moods and many a subtle sign,
That at one time and somewhere in the world
I was a towering pine.

BAYARD TAYLOR.

THE POET IN THE EAST.

The poet came to the land of the East
When spring was in the air,
The East was dressed for a wedding feast
So young she seemed and fair
And the poet knew the land of the East
His soul was native there.

All things to him were the visible forms
Of early and precious dreams
Familiar visions that mocked his quest
Beside the western streams
Or gleamed in the gold of the clouds unrolled
In the sunset's dying beams.

BAYARD TAYLOR.

THE METEMPSYCHOSIS.

I know my own creation was divine.
Strewn on the breezy continents I see
The veined shells and burnished scales which once
Enclosed my being — husks that I had.
I brood on all the shapes I must attain
Before I reach the perfect, which is God.
For I am of the mountains and the sea
The deserts and the caverns in the earth
The catacombs and fragments of old worlds.

I was a spirit on the mountain tops,
A perfume in the valleys, a nomadic wind
Roaming the universe, a tireless voice.
I was ere Romulus and Remus were;
I was ere Nineveh and Babylon.
I was and am and evermore shall be
Progressing, never reaching to the end.
A hundred years I trembled in the grass

The delicate trefoil that muffled warm
A slope on Ida; for a hundred years
Moved in the purple gyre of those dark flowers
The Grecian woman strew upon the dead.
Under the earth in fragrant glooms I dwelt,
Then in the veins and sinews of a pine
On a lone isle, where from the Cyclades
A mighty wind like a leviathan
Ploughed through the brine and from those solitudes
Sent silence frightened.

A century was as a single day.
What is a clay to an immortal soul?
A breath, no more. And yet I hold one hour
Beyond all price, — that hour when from the sky
A bird, I circled nearer to the earth
Nearer and nearer till I brushed my wings
Against the pointed chestnuts, where a stream
Leapt headlong down a precipice; and there
Gathering wild flowers in the cool ravine
Wandered a woman more divinely shaped
Than any of the creatures of the air.
I charmed her thought. I sang and gave her dreams,
Then nestled in her bosom. There I slept
From morn to noon, while in her eyes a thought
Grew sweet and sweeter, deepening like the dawn.
One autumn night I gave a quick low cry
As infants do: we weep when we are born,
Not when we die: and thus came I here
To walk the earth and wear the form of man,
To suffer bravely as becomes my state,
One step, one grade, one cycle nearer God.

ONE THOUSAND YEARS AGO.

Thou and I in spirit land
One thousand years ago,
Watched the waves beat on the strand:
Ceaseless ebb and flow,
Vowed to love and ever love,
One thousand years ago.

Thou and I in greenwood shade
Nine hundred years ago
Heard the wild dove in the glade
Murmuring soft and low,
Vowed to love for evermore
Nine hundred years ago.

Thou and I in yonder star
Eight hundred years ago
Saw strange forms of light afar
In wildest beauty glow.
All things change, but love endures
Now as long ago.

Thou and I in Norman halls
Seven hundred years ago
Heard the warden on the walls
Loud his trumpets blow,
"Ton amors sera tojors "
Seven hundred years ago.

Thou and I in Germany,
Six hundred years ago.
Then I bound the red cross on
True love I must go,
But we part to meet again

In the endless flow."

Thou and I in Syrian plains

Five hundred years ago

Felt the wild fire in our veins

To a fever glow.

All things die, but love lives on

Now as long ago.

Thou and I in shadow land

Four hundred years ago

Saw strange flowers bloom on the strand:

Heard strange breezes blow.

In the ideal love is real

This alone I know.

Thou and I in Italy

Three hundred years ago

Lived in faith and deed for God,

Felt the faggots glow,

Ever new and ever true

Three hundred years ago.

Thou and I on Southern seas

Two hundred years ago

Felt the perfumed even-breeze

Spoke in Spanish by the trees

Had no care or woe.

Life went dreamily in song

Two hundred years ago.

Thou and I mid Northern snows

One hundred years ago

Led an iron silent life

And were glad to flow

Onward into changing death,
One hundred years ago.

Thou and I but yesterday
Met in fashion's show.

Love, did you remember me,
Love of long ago?

Yes: we kept the fond oath sworn
One thousand years ago.

CHARLES G. LELAND.

THE FINAL THOUGHT.

What is the grandest thought
Toward which the soul has wrought?
Has it the spirit form,
And the power of a storm?

Comes it of prophesy
(That borrows light of uncreated fires)

Or of transmitted strains of memory
Sent down through countless sires?

Which way are my feet set?
Through infinite changes yet
Shall I go on,
Nearer and nearer drawn
To thee,
God of eternity?

How shall the Human grow,
By changes fine and slow,
To thy perfection from the life dawn sought?
What is the highest thought?

Ah! these dim memories,
Of when thy voice spake lovingly to me,

Under the Eden trees,
Saying: "Lord of all creation thou shalt be."
How they haunt me and elude —
How they hover, how they brood,
On the horizon, fading yet dying not!
What is the final thought?

What if I once did dwell
In the lowest dust germ-cell,
A faint fore-hint of life called forth of God,
Waxing and struggling on,
Through the long flickering dawn,
The awful while His feet earth's bosom trod?
What if He shaped me so,
And caused my life to blow
Into the full soul-flower in Eden-air?
Lo! now I am not good,
And I stand in solitude,
Calling to Him (and yet he answers not):
What is the final thought?

What myriads of years up from the germ!
What countless ages back from man to worm!
And yet from man to God, O! help me now!
A cold despair is beading on my brow!
I may see Him, and seeing know him not!
What is the highest thought?

So comes, at last,
The answer from the Vast. . . .
Not so, there is a rush of wings —
Earth feels the presence of invisible things.
Closer and closer drawn
In rosy mists of dawn!

One dies to conquer Death
And to burst the awful tomb —
Lo, with his dying breath,
He blows love into bloom!
Love! Faith is born of it!
Death is the scorn of it!
It fills the earth and thrills the heavens above,
And God is love,
And life is love, and, though we heed it not.
Love is the final thought.

MAURICE THOMPSON

FROM "A POEM READ AT BROWN UNIVERSITY."

But, what a mystery this erring mind?
It wakes within a frame of various powers
A stranger in a new and wondrous world.
It brings an instinct from some other sphere,
For its fine senses are familiar all
And with the unconscious habit of a dream
It calls and they obey. The priceless sight
Springs to its curious organ, and the ear
Learns strangely to detect the articulate air
In its unseen divisions, and the tongue
Gets its miraculous lesson with the rest,
And in the midst of an obedient throng
Of well trained ministers, the mind goes forth
To search the secrets of its new found home.

N. P. WILLIS

To the above may be added the following which have already been printed in THE PATH: "Rain in Summer," by H. W. Longfellow; "The Twilight," by J. R. Lowell; "Facing Westward from

California's Shore," and parts of "Leaves of Grass," by Walt Whitman.

EVIDENCE AND IMPOSSIBILITY — *E. D. Fawcett*

[THE LOGIC OF A PRIORI NEGATION AND THE RELATIONS OF THE SUBJECTIVE TO THE OBJECTIVE IN THE ESTIMATION OF EVIDENCE.]

It is a not uncommon fact of experience that evidence of apparently great intrinsic weight is rejected on the ground of the improbability or impossibility of the occurrence it attests. As this question as to the reliability of evidence has been re-opened of late years by the imposing body of testimony presented in favour of super-normal phenomena — lifted entirely above the range of ordinary scientific experience — it may not be amiss to consider in as brief a manner as possible, the logical basis of the *a priori dismissal* of such facts as "impossible," as also to shadow forth the relations of the Subjective and the Objective in the formation of our beliefs and convictions.

According to J. S. Mill, whose words I quote at some length (1), as admirably illustrative of the *true* scientific attitude towards attestations of abnormal occurrences in general — an attitude unfortunately rarely adopted by our materialistic present-day philosophers "the positive evidence produced in support of an assertion which is nevertheless rejected on the score of impossibility or improbability is never such as to amount to full proof. It is always grounded on some approximate generalization. The fact may have been asserted by a hundred witnesses; but there are many exceptions to the universality of the generalization that what a hundred witnesses affirm is true. (2)... The evidence then in the affirmative being never more than an approximate generalisation all will depend on what the evidence in the negative is. If that also rests on an approximate generalisation it is a case for the comparison of probabilities.... If,

however, an alleged fact be in contradiction, not to any number of approximate generalisations, but to a completed generalisation, grounded on a rigorous induction, it is said to be impossible and is to be disbelieved totally."

All this is eminently scientific — common sense formulated in an elaborate terminology.

Whatever is asserted counter to a complete induction is necessarily false. But clearly to be complete the induction must first embrace all the phenomena. And if facts not amenable to inclusion in it, are brought forward supported on credible testimony, are we to declare the induction incomplete and admit the facts or exclude them by asserting its present comprehensive character? Must we not reject the induction in the face of the attested facts? Have we in any way the right to call it already complete? To this Mr. Mill answers: —

"I answer we have that right whenever the scientific canons of induction give it to us; that is whenever the induction *can* be complete. We have it, for example, in a case of causation in which there has been an *experimentum crucis*. If an antecedent A, superadded to a set of antecedents in all other respects unaltered, is followed by an effect B which did not exist before. A is in that instance at least, the cause of B, or an indispensable part of its cause; and if A be tried again, with many totally different sets of antecedents and B still follows, then it is the whole cause. If these observations or experiments have been repeated so often as to exclude all supposition of error in the observer, a law of nature is established; and so long as this law is received as such, the assertion that on any particular occasion A took place and yet B did not follow, *without any counteracting cause*, must be disbelieved."

These remarks of Mill utterly overthrow the position of the

pseudo-scientific sceptics who impugn the validity of all abnormal facts on the ground of their being "opposed to the Laws of Nature."

Equally in the case of the phenomena of spiritualism as in that of miracle-evidence, the position of the ultra-'rationalistic' school is only tenable when the assertion is put forward that the laws of nature — *i.e.* the observed sequence of certain antecedents or sets of antecedents by certain consequents — were temporarily suspended for a special purpose. But every Theosophist, philosophical Spiritualist, in discussing the phenomenal aspect of his belief, admits the presence of "*some counteracting cause*" and with this admission before him it becomes not only arbitrary, but *unscientific*, for the sceptic to deny on purely *a priori* grounds phenomena attested by so many observers of repute and sagacity. This I think is apparent even from the standpoint of so rigid a thinker as Mill. Arm chair Negation is on his declaration clearly shown to be little better than an arrogation of omniscience. It is a reversion to the old scholastic fallacy — before the days of Bacon and the foundation of science on observation and generalisation upon facts — of attempting to settle all philosophical questions on the starveling regime of Deductive Logic. No justification can be offered for such an exhibition of prejudice, unless — and in this lies the real point at issue in the theoretical handling of the question — the existence of any unknown laws of nature and that of beings competent to manipulate them or living men consciously or unconsciously furnishing the conditions requisite for their manifestation is denied *in toto*. The former plea is one which not even the boldest sceptic would care to urge; the progress and future prospects of science being *based on the supposition that next to nothing has been yet ascertained of the secrets this magnificent Universe holds in store for posterity.*

The denial of the latter assertion is simply worthless for the

reason that in this case Scientists while on the one hand professing their unalterable devotion to the laws of Induction, deliberately give the lie to their protestations by refusing for the most part even to entertain such a possibility, much less to examine the evidence on the validity of which they proceed so presumptuously to dogmatize. Consult Dr. Bain's Logic Part II. This eminent psychologist while admitting in his discussion of the value of Hypotheses, "that it would seem irrational to affirm that we already know all existing causes, and *permission must be given to assume, if need be, an entirely new agent* (p. 131) and also that natural agencies can never be suspended; they may be *counteracted by opposite agencies*" (p. 81), has the temerity to remark (p. 149) that all evidence to the effect that a table rose to the ceiling of a room without physical contact is to be totally disbelieved! What! This — the commonest experience of spiritualism, a phenomenon *millions* of investigators could if necessary vouch for — is to be dismissed with a sneer by the 'scientific' reasoner! And for what reason? Because it conflicts with a complete Induction — the Law of Gravity. We will not stop to consider whether Polarity is not the true explanation of the phenomena of 'gravitation.' We have merely to remember Mr. Mill's remarks and the admissions of Dr. Bain himself. Why postulate a suspension of the law of gravity with a '*counteracting cause*' in view. The duty of the Scientists is clear, viz., to investigate and inform us of the nature of this cause, not to sit still in their arm-chairs and attack the veracity or sanity of countless painstaking observers. The foolish statement above commented upon is about as 'scientific,' as would be the assertion that when A lifts a stone from the ground, there is a suspension of law; the necessary explanation clearly being that a new cause has intervened producing a new effect. Prof. Huxley has assured us that the possibilities of Nature are infinite; brags that outside of pure mathematics it is imprudent to make use of the term

"impossible." In all such cases, as the one above, where the evidence in favor of a super-normal fact is exceedingly strong, our object should be to accept the attestations of the witnesses and *then search for the unknown "counteracting cause."* Was not the existence of the planet Neptune first ascertained in this manner? Is it not the scientific Method of Residues — one of the triumphs of Inductive Logic — which Sceptics of the stamp of Professor Bain are deliberately ignoring in the compilation of such sophistries as the specimen "on exhibit" above?

To what absurd lengths, however, some writers, claiming a community of common-sense with their fellow-men, can proceed is to be seen in the following quotation from the well-known materialist, Dr. Ludwig Buchner (3): "There can be no doubt that all pretended cases of clairvoyance rest upon fraud or illusion. Clairvoyance, that is a perception of external objects without the use of the senses is an impossibility... No one can read an opaque sealed letter, extend his vision to America, see with closed eyes what passes around him, look into the future or guess the thoughts of ethers. These truths rest upon the natural laws, which are irrefutable, and admit, like other natural laws, of no exception. All that we know, we know by the medium of our senses. There exist no super-sensual and super-natural things and capacities; and they never can exist, as the external conformity of the laws of nature would thereby be suspended. As little as a stone can ever fall in any other direction than towards the centre of the earth, so little can a man see without using his eyes. Cases so repugnant to the laws of nature have never been acknowledged by rational unprejudiced individuals. Ghosts and spirits have hitherto only been seen by children or ignorant and superstitious individuals. All that has been narrated of the visits of departed spirits is sheer nonsense."

And this is "Science!" This the boasted freedom of Inductive

research — *a priori* negation and a fatuous bigoted scepticism. The last few observations just quoted in the present intellectual and social status of the witnesses for these unpalatable psychic phenomena are simply folly, empty vapourings of a distorted mind. To-day it is Science that plays the bigot and inquisitor. Better the deposed idols of orthodoxy than the dead-sea fruits of Materialistic blindness! In the words of a celebrated physiologist "The morality which flows from scientific materialism may be comprehended within these few words, 'Let us eat and drink for to-morrow we die.' All noble thoughts are vain dreams, the effusions of automata with two arms running about on two legs, which, being finally decomposed into chemical atoms, combine themselves anew, resembling the dance of lunatics in a mad-house." (4)

The question of the relation of the subjective to the objective in our estimation of evidence is one of very great interest. We must premise our remarks by saying that there is no intention here of discussing that feeble and contemptible receptivity known as credulity, which practically converts the person exhibiting it into a species of intellectual dust-bin into which rumours of all kinds drift pell mell. "Rubbish shot here" is not the mental signboards the erection of which we advocate. But students of history and believers in the theory of cycles are compelled to admit that the progress of beliefs and opinions is one in which objective evidence as such plays a relatively unimportant part — that in short it is the menial pre-dispositions of humanity at large which determine the intrinsic force of external facts considered in their relation to contemporary thought.

This feature of intellectual development is one fully verified by all historical data and indeed a corollary of the theory of cycles. For instance the widespread diffusion of materialistic views at the present day may seem to a superficial observer to be due to the

fuller evidence as to the connection of mind and brain possessed by our modern physiologists and physicists. But we find on closer inspection that the arguments of Materialism from Democritus and Lucretius to Buchner, have practically remained the same in their *objective* entirety — it is the *subjective* disposition of men in general to assimilate such interpretations of nature, that determines their present cogency. Experience shows us that the objective in all similar cases, only acquires evidential force, when the subjective corresponding to it in the human mind is in the ascendant. Take the problem of Miracle-evidence. Here again it is exceedingly questionable whether the rationalistic contentions against the reality of the gospel phenomena have in any way increased in weight *per se* through the centuries. Even Strauss admitted that he had only re-stated the arguments which were always at the service of the pioneers of liberal thought. What then has determined the rebellion against Orthodoxy, but the growth of a *subjective* tendency to reject all such accounts on *a priori* grounds — the influence of a changed intellectual environment. Given Miracle-Evidence = X, and the original Subjective Receptivity = Y, the rejection of the former has been due not to an intrinsic diminution in the evidential force of N *per se*, but by a decline in the extent of the latter factor to perhaps $Y/2$ or $Y/4$, exemplified in the use of the term a "*grouping antecedent improbability*." Theosophists, however, who adopt the philosophical plan of admitting the 'miracle'-evidence but the same time of declining to base upon such a foundation the supernatural inferences grouped under the head of orthodox Christianity, are thus shown to be occupying a position impregnable to the assaults of Theologian and Scientist alike. Again it was nothing but the *preparedness* of public opinion which resulted in the favourable debut of the Darwinian theory of evolution. The startling assumptions, geological,

palaeontological and other difficulties, and lavish display of hypotheses, which characterized this celebrated speculation at its outset, would have assuredly involved its rejection, but for the *subjective receptivity* of the scientific world in general. The subjective pre-disposition to receive such a view being already present, the objective correspondences in nature must — despite of apparent checks and obstacles — be *made* to dove-tail with the theory. It did not rest on its *objective* evidences "not on its experimental demonstration" as Tyndall himself admits (Belfast Address) but "in its general harmony with the method of nature as hitherto known." This is therefore a distinct case in which *mental conditions* absolutely determine the cogency of *objective data*. As a convincing illustration of the correctness of this contention, we need only turn to the consideration of the relations of physical science and spiritualism. If objective evidence *per se* was competent to enforce conviction, the acceptance of psychic phenomena as established facts would have now been a thing of the past. It is beyond question that the body of witnesses in favour of these phenomena greatly exceeds in number that on which the assertions of any distinct branch of science rests. These witnesses include some of the most liberal scientists, and literary men, thinkers of the greatest perspicacity and acuteness. — inquirers rescued from the talons of Materialism, as well as former Agnostics, Positivists and Sectarians.

Where in ordinary scientific investigation we have usually only the *dictum* of the individual experimenter to accept "on faith"; in accounts of psychic occurrences we are almost invariably presented with the collective testimony of numerous observers. How comes it about that Tyndall in his Belfast Address can pay a deserved compliment to that luminary of the Evolution-School, Mr. A. R. Wallace, and in the same materialistic effusion

stigmatise spiritualism as "degrading" thus indirectly impugning the powers of observation of the scientist whom he has just eulogized? (5) Darwin quotes or repeats the same author over 50 times in his "Descent of Man:" but it is consistent for those who pin their faith to that work, to avail themselves in this way of the evidence of Mr. Wallace where it suits their purpose and to reject or ignore it wholly where it does not. Science, we have been told by one of its most eminent representatives, is bound to face every problem presented to it. Whether it does so, the treatment experienced by honest inquirers like Crookes, Zollner, Hare and others at the hands of their purblind fellow scientist may be left to show. Well; we have had the Popes of theology, we must now bear, as well as we may, the Popes and Inquisition of science.

Objective facts, therefore, present themselves differently to different minds. The Christian idea of "Faith" is not without its substratum of truth. And in questions such as those of Spiritualism and Theosophy, we maintain that wanting the *subjective receptivity of the individual mind objective evidence is valueless*. Facts by themselves however well supported by incontrovertible testimony make no appeal to the intellect, if some recess is not already prepared for their reception. And is not this Receptivity innate in many, if not in the majority of our brother-theosophists? Ought we not to regard our *capacity* to accept the teachings of the Masters as *a glorious Karmic Heritage* — the outcome of some vague spiritual aspirations in a former existence — a ray from a distant past lighting up the Cimmerian gloom of the materialistic world in which we live? Such at least would seem us be the teaching of the Secret Doctrine.

FOOTNOTES:

1. "System of Logic." People's Edition, p. 408. ([return to text](#))
2. A very questionable statement. The exceptions are extremely

rare. There undoubtedly have been cases — as in the celebrated Crystal Palace Fire incident when a vast crowd mistook a fluttering flag for a straggling chimpanzee — when multitudes have been subject to misapprehension, but in all these the error arose from an illusory interpretation only of something really objective. The evidence for the generality of psychic phenomena stands on wholly different grounds — in fact the actuality of the attested facts usually depends on one question — are all the witnesses conspiring to lie? The contrary admitted, the attested facts must also be. ([return to text](#))

3. "Force and matter." p. 152. (Engl. Edit. Trubner & Co.) — A more *dogmatic* work than which, though based professedly on inductive principles, we may search in vain among the Patristic literature to find. ([return to text](#))

4. Prof. Rudolph Wagner quoted by Buchner "Force and Matter," p. 255. ([return to text](#))

5. The subjective deficiency resulting in this extraordinary inconsistency is curiously exemplified in the following extract from a letter quoted in Crooke's "Phenomena of Spiritualism" (p. 82). It confirms our position as to the intrinsic force of evidence.

"Any *intellectual* reply to your facts I cannot see. Yet it is a curious fact that even I with all my tendency and desire to believe spiritualistically, and with all my faith in your power of observing and your thorough truthfulness, feel as if I wanted to see for myself: and it is quite painful to me to think how much more proof I want. Painful, I say, because I see that *it is not reason which convinces a man*, unless a fact is repeated so frequently that the impression becomes a habit of mind." ... In other words the writer, though a liberal critic and *even anxious* to assimilate the facts, could not because his KARMA had not endowed him with that *Subjective Receptivity* which alone *stamps* objective evidence

with a lasting cogency. ([return to text](#))

REINCARNATIONS OF MAHATMAS — S. B.

A few words about what are called the "artificial" reincarnations of Mahatmas may be of service in clearing up some quite general misapprehensions on the subject. Of course it is hardly possible for us, under our present circumstances, to gain an understanding of the conditions governing these reincarnations, but some idea of the general principle involved may be of material aid to us in our studies. Perhaps *continuous* reincarnations might be the better term, since the word "artificial" is apt to convey the impression of something unnatural, whereas they must be quite as much within the order of Nature as those of ordinary humanity. But they are distinguished from the latter by the fact that the course of physical existence is uninterrupted; that when one garment of flesh has served its purpose it is cast aside and another is straightway assumed, until the Mission of the Great Soul is accomplished; whereas with ordinary humanity there is a long subjective existence in the Devachanic state intervening between the periods of physical life.

But a consideration of the lives of the great teachers of the world will bring us to the conclusion that the reincarnated Mahatma does not at once demonstrate that he is what is called an Adept; that is, a person gifted with extraordinary attributes and with powers over the forces of nature. It is necessary that the new personality should be developed; that it should be aroused to a consciousness of the Great Soul which animates it. The personality is that collection of attributes and experiences amassed during a single life in the physical. Through the right use made of these experiences, this personality, the Inner Self, raises itself to a recognition of the Higher Self and thereby unites its

consciousness with that of the latter. This union once brought about, the higher consciousness is never lost.

This exalted state attained, the entity, — that which constitutes the feeling of individuality — never departs from it. But each time the reincarnation takes place the process has to be repeated for the outer personality. This, at first sight, will be apt to be regarded as an affliction, constituting a continuous series of struggles appalling in their long array, particularly when we are told in *The Idyll of the White Lotus* that to attain the union with the Highest Self may mean to "retain life upon this planet so long as it may last." Many might at once be inclined to doubt whether a boon were involved in such a prospect.

On reflection, however, it will be seen that the real state of the case is quite the contrary. The struggle can occur but once for each personality. The Higher Self, "the proud, indifferent god who sits in the sanctuary," remains undisturbed all the while, viewing the whole series of incarnations calmly and unmoved, and unaffected by anything that may happen. It is a process of educating a long series of various personalities into a consciousness of the Eternal, and each, on attainment, becomes one with the Higher Self, sharing with all who have gone before, the lofty standpoint from which the work is thenceforth carried on. Thus each personality of a Mahatma, until its spiritual rebirth is accomplished, may have to endure to a greater or less degree, according to circumstances, that which we call sin and suffering, and all this sin and suffering is essential to its work in the world. So it must have been with the personalities of all the great Masters who have had their work to do in the world.

The Mahatma, however, can neither sin nor suffer, whatever the personality may do, for he well knows that there is no final distinction between good and evil, between pleasure and pain,

and that each and all work alike to the same end. The nature of any particular personality of a series varies, of course, according to the work on earth for which it is the chosen instrument, and so the period of the spiritual rebirth — or the recognition of, and union with, the Higher Self — may come at various points, sooner or later, in the earthly career. There may be, and perhaps generally is, an intuitive perception of one's true Self in early childhood, as Browning has so beautifully depicted in his *Paracelsus*, in the passage beginning:

"From childhood I have been possessed
By a fire — by a true fire, or faint or fierce,
As from without some master, so it seemed,
Repressed or urged its current."

The final consummation may come to pass either in youth, in early manhood, or in full maturity. When this time comes, one then recognizes that all sin and suffering have been mere illusion; that they were but means to a given end.

This may throw some light on what are called the shortcomings of persons who may be far advanced in mystical development; shortcomings which the world cannot comprehend as consistent with their connection with grand spiritual teaching's. The fact, however, affords no pretext to any person for self-excuse of their own shortcomings; a point in which lies a great danger. By thus endeavoring to excuse themselves, and seeking a pretext for selfish indulgences, they commit the profanation of attempting to exalt the finite consciousness of their lower Self, to the place of the infinite consciousness of the Higher Self, which alone can rightly judge in such contingencies.

While the personality of the incarnated Master is a human being, with all the attributes which make any other human being, its constitution is naturally of a finer order, so as to make it an

instrument adapted to the work for which it has been brought into the world. Much may be learned in this respect from the following extract from a letter from a Master concerning the reincarnations of Buddha:

"As in the legend of the miraculous conception, which came into the Christian religion from the Eastern source, the Buddha spirit overshadows the mother, and so prepares a pure and perfect home for its incarnated self. The mother must be virgin in soul and thought."

The difference between the reincarnations of Mahatmas and those of ordinary humanity is, after all probably only one of degree. The same experiences must be passed through by each and all. The great end must finally be attained by the latter "even though it take billions of centuries," as Kernning, the German mystic, powerfully puts it. And, with the former, it must be the consummation also of billions of centuries. Time, however, is one of the illusions of the physical.

The process and course of the reincarnations of an individuality may be symbolized by a string of beads, each new personality being the formation of a new bead and adding it to the series. Each bead *seems* to have an individual consciousness which, however, in reality is the consciousness of the whole. The circumstances of the physical life are what obscure the knowledge of this fact, a knowledge which is attained by clearing away the clouds that dim the light which is always there. On reaching this state, the consciousness becomes transferred from that of the single bead to that of the whole, but its continuity is not thereby interrupted, any more than an interruption is necessitated by becoming familiar with all the rooms in a house after leaving some particular room in which one's infancy has been spent, or by passing out of the house into the open air. The

knowledge of the greater includes that of the less; the less is by no means lost, — it has been indispensable, but after its lesson has been learned its relative importance is diminished. It would be well for us to strive to bear in mind that all our past personalities really exist to-day as much as they ever did, and that they now are as much ourselves as is this particular present personality which we call ourselves.

The following passage in *Through the Gates of Gold* is a powerful and glorious picture of the state which consummates the union with the Highest Self and which transcend pleasure and pain, sin and suffering: "In that inmost sanctuary all is to be found: God and his creatures, the fiends who prey on them, those among men who have been loved, those who have been hated. Difference between them exists no longer. Then the soul of man laughs in its fearlessness, and goes forth into the world in which its actions are needed, and causes these actions to take place without apprehension, alarm, fear, regret or joy."

SOME POETRY OF THE SUFIS

DEAR PATH: I send you a little fragment from the Sufi poetry, and hope you will find it acceptable.

Rome, Italy. K. H.

A PARABLE OF JELLALEDDIN.

At the Beloved's door a timid knock was heard;
And a voice came from within, sweeter than morning bird,
Softer than silver drops that from plashing fountains fall,
 "Who is there?" — And the stillness stirred
 For a moment and that was all.

And the lover who stood without, eager and full of fear,
Answered the silver Voice, — "It is I, who am waiting here;
Open then, my Beloved, open thy door to me!"
 But he heard the response ring clear
 "This house will not hold Me and Thee!"

And the door remained fast shut, and the lover went away
Far into the desert's depths, to wait and fast and pray:
To dwell in the tents of Sorrow and drink of the cup of
Grief:
 And Solitude taught him each day,
 And Silence brought him relief.

And after a year he returned, and knocked at the close-shut
door,
And he heard the Beloved's Voice as it answered him once
more,
"Who is there?" And soft as the dew, or the velvety
roseleaf's fall,

And low as when angels adore,
He said — "Tis Thyself that doth call!"

And his heart stood still with fear, and his eager eyes were
dim; —
Then through the silent night rang the sound of a marriage
hymn;
And the bolts and bars flew back, and the door was open
wide,
 And fair on the threshold's rim
 Stood his Beloved, his Bride!

THOUGHTS IN SOLITUDE: VI — *Pilgrim*

SIR PHILIP SIDNEY

When sickened with the petty aims of the world around — when wearied and despairing in the quest of the ideal brotherhood, it is refreshing to recognise a kinship of spirit even across the gulf of centuries — to feel that the brotherhood of love we seek for is no vain dream, and that when we are worthy to enter its ranks, comrades such as Sydney will be there to welcome us.

On reading over the life of this paragon of the Elizabethan period, though his actual achievement seems at first sight scarcely to warrant the renown he won, the aroma of his character which so captivated his contemporaries, is still felt to be the truest criterion by which to judge the man.

But the chief lesson to be learned by students of occultism from the life of Sidney is that in proportion as passion rises to intensity is its power to act as the true alchehest in the transmutation of the baser metals of our nature into the pure gold of the heart.

For the mass of men who stagnate through life without one intense-passion to fire their nature, the formula of Eliphas Levi — modified as follows would indeed seem to be appropriate — though of course referring to the ultimate destiny, not to the result of any one earth-life. "The spiritual passion towards good and the spiritual passion towards evil are the two poles of the world of souls: between these two poles vegetate and die without remembrance the useless portion of mankind."

To see that Sidney was made in a more fiery mould, it needs but to read his "Astrophel and Stella." Though the complete purging of his nature and the conquest of self is only made apparent in the

concluding sonnets, the passionate outbursts of his love, and the fiery path he had to tread are manifest throughout the poem, and naturally form a bond of union — all the closer when the culmination of the desire has been identical — with those who have had analogous experience.

It is perhaps difficult at first to realize how the love of an actual living woman should have the same purging and purifying effect as a similar love idealised, but nature is not to be bound by rules of our making in her methods of drawing different souls towards perfection. Both may be taken as illustrations of the fact that whether emotion starts from a pleasurable or a painful source, on reaching a high enough degree of intensity, it enters the region where pleasure and pain are merged in one, and then it is that it becomes the solvent of the man's lower nature.

It must indeed have been a fiery ordeal that Sidney passed through, for the earthly love by its intensity so to burn itself clean out of the heart and leave only the lofty aspirations expressed in the following sonnet, which truly seem to formulate the very sum and substance of Theosophic thought.

"Thou blind man's mark, thou fool's self chosen snare,
Fond fancies' scum, and dregs of scattered thought;
Band of all evils; cradle of causeless care;
Thou web of will whose end is never wrought!
Desire, Desire! I have too dearly bought
With price of mangled mind thy worthless ware;
Too long, too long, asleep thou hast me brought,
Who shouldst my mind to higher things prepare.
But yet in vain thou hast my ruin sought;
In vain thou mad'st me to vain things aspire;
In vain thou kindlest all thy smoky fire:
For virtue hath this better lesson taught —

Within myself to seek my only hire,
Desiring naught but how to kill desire."

The Path

SHALL WE KNOW OUR FRIENDS IN HEAVEN? — *Charles Johnston*

When that system of philosophy which is now known as the Esoteric Doctrine was first given to the world, it was stated that, in the state of "Spiritual Bliss" or Devachan, — which was entered by the soul which had passed through the "World of Desire," or Kama Loka, after separation from the body — the soul was not alone but was surrounded by those friends who had been loved on earth, and that these friends were as peaceful and happy as the soul in whose company they were.

Some time afterwards the questions were submitted to the authorities in occult matters, the ninth of which, asking for further information as to the intercourse with beloved Souls, was especially directed to ascertain whether those friends who accompanied the enjoyer of "Spiritual Bliss" appeared as they were when he died, supposing that he died first, or as they were when they died themselves.

It is notable that, of the ten questions asked, only this ninth and another also dealing with the same condition of "Spiritual Bliss" were left unanswered, while most of the others were answered fully, not to say voluminously; so that the question we are considering received no further elucidation from the occult authorities, and consequently, still remains open.

Our best chance of arriving at approximately correct conclusions in questions of this sort is by examining them in the light of the analogy afforded by those states of consciousness which are accessible to us while experiencing incarnated existence.

If we examine the various conditions of consciousness grouped under the name of sleep, we may obtain a partial insight into the

conditions of after-death experience, and we may gain at least a clue to the solution of the question at issue.

In the ordinary course of events, before reaching the state of deep sleep we pass through an intermediate stage of dreaming, in which we review the events of the day, many of our day's wishes and desires working themselves out and obtaining their fulfilment, and very often faces, which during the day have made a vivid impression on us, reappear in our dreams, acting as we have seen them act and manifesting the various mental and moral qualities which we believe them to possess; in short, in appearance, action, speech and thought very much as we know them in waking life, sometimes as they are, sometimes as they have been formerly, and sometimes in several characters of varying age and growth in a single dream.

It would be very interesting to know what relation the image of a person appearing in a dream has to the mental state, at the time, (if the person dreamed of, if it has any such relation, and what effect various personalities have on each others' dreams while these dreams are in progress; at present, however, we will do no more than indicate such a line of inquiry, suggesting as a clue the modern discoveries in telepathy.

It is sufficient for our purpose that in the state of dreaming the images of our friends are present to us, similar in appearance and in mental qualities to what they were when the state of dreaming began.

The next condition is that of dreamless sleep, some of the higher stages of which have been indicated in a very able article published in the first number of this magazine. Only two characteristics of this state need be noticed, the second higher than the first; one is that it is a state of peaceful calm in which neither the body and physical surroundings, nor the dream-life

with its surroundings are present to the consciousness, and the other, that it is the day of the intuitional faculties, the moral and ethical nature, in which the soul becomes vividly conscious of moral law.

To what degree the moral environment of the soul, in this condition of dreamless sleep, is influenced by the moral nature of other individualities, especially those of superior development, is also a very interesting inquiry, but at present we must be content with considering dreamless sleep as a condition of peaceful rest and consciousness of moral law, in which the soul is not conscious of the class of objects manifested in waking and dream life, and in which, consequently, friends could not be present to the consciousness in any form at all similar to our waking or dream experience of them.

These two states will give us a clue to the experiences after death in the "World of Desire" or Kama Loka, and in the state of "Spiritual Bliss" or Devachan. As in dreaming our desires obtain the gratification which was denied them in waking life, so that we often hear of sufferers from thirst dreaming of cooling streams, so we are told that in Kama Loka the lower desires we have accumulated during life must work themselves off before Devachan is reached.

From this we are led to infer that in Kama Loka our friends or at least those of them who have been associated with such desires, may be present to our consciousness in form, speech, and thought as we have known them in life.

In Devachan, however, if our analogy be true, nothing resembling the ordinary appearance of such friends, indeed nothing at all belonging to the class of objects which are cognised by the senses, nothing but what is soundless and invisible can be present to the consciousness.

If, however, it be true that the moral nature of others has an influence on our intuitional consciousness in dreamless sleep, it is also probably true that the moral nature of others, especially of our friends, as being those with whom our moral nature is most in harmony, will influence our consciousness in the Devachanic condition, and will do so, of course, quite irrespective of the question whether they are alive or dead, supposing it be possible to reach the Devachanic state in so short a time as the survival of friends would imply.

But our friends, if present at all, will not be present to us in any visible form, they will make themselves felt as a moral influence, strong in proportion to their purity and affinity to us.

We will conclude with a quotation from Sankaracharya which gives a very suggestive hint as to the entities really concerned in both waking and dream life:

"In dream where there is no substantial reality, one enters a world of enjoyment by the power of *manas*. So it is in the waking life, without any difference, all this is the manifestation of *manas*."

The Path

LETTERS ON THE TRUE: III — *Jasper Niemand*

MY COMRADES: —

As we turn our thoughts in upon ourselves, we find the good on top; the bad is below. We must set the blaze of self-examination to the task and drag out the lurker within. We think we have abandoned ambition and comfort, but we have only given up those of the lower plane, the mere reflection of the great ambitions and joys of a larger life. The rays of Truth burn up the covers we had placed upon those seeds, and then the real seeds begin to sprout and cause new troubles. Do not ignore this; it has cost others many years and tears of blood to self-learn it. Men have been deceived as to their motives up to high passages of the Way.

Indolence is a great deceiver. We trust to the sufficiency of "our Divine Spirit," and so hope to reach the goal easily with the natural evolution of the race. We forget that the kingdom must be taken by violence. It is by no means sure that we shall make the connection with spirit in this life journey. Thousands may and do fail to make it. Your divine spirit is only yours in so far as it is that of all others equally: not yours but *ours*, making us one. The Bhagavad-Gita destroys the idea that if there be in us this higher self, it will, even if we are indolent, triumph over the necessity for effort, and lead us to find beatitude in common with the whole stream of man. "The man of doubtful mind enjoys neither this world nor the other (the Deva world) nor finds beatitude."

Sometime then during the period of choice for the race this self must be discovered, purified and set free. The period is long — but it ends. The unprogressed soul falls back: it may die, for only the spiritual monad is incorruptible. On the soul itself depends

this spiritual polarity; each personality heightens or lessens it by the greater or smaller impetus given by him to the life of the lower self. Its luxurious growth throttles the true self as mistletoe devitalizes the live-oak. "Bitten by the world, like one bitten by a great serpent; darkened with passion, like the night; changing its dress in a moment like an actor: fair in appearance, like a painted wall:" thus the Upanishad warns us against the elemental self.

These warnings are not meant to discourage, but to strengthen. The Way is narrow, but it is there. So narrow it is, and so often lost amid the bustling highways of life, that many who have wandered far afield still think their feet are set upon it. There is oftentimes much to discourage us in the attitude of our nearest friends. They are on far shores, and when we arrive they speak of the small potato patch they tend and see nothing in our talk of what is over the sea, and of the grander interests beyond the little place they stand on. This is a blow dealt the inner man and hurts inside. Life is all up in arms against us. A letter sent me by one of my comrades goes clearly and nobly to the root of this matter:

"Dear Jasper: I gave your letter to a distressed soul: she returned thanks saying it was a cooling draught to one athirst. The thanks of course are yours.

"Now this lady says it was refreshment to the weary, that letter True, or she would not say it. But it was not so to me nor to you. It all seems so well understood to be so. We needed it not. But she illustrates a certain state of progress. She is not yet where we are, but which is happier? She is happier, but poorer in hope. We are not all too happy, but are rich in hope, knowing the prize at the end of time, and not deterred by the clouds, the storms, the miasms and dreadful beasts of prey that line the road. Let us then at the very outset wash out of our souls all desire for reward, all hope that we may attain. For so long as we thus hope and desire

we shall be separated from the Self. If in the Self all things *are*, then we cannot wish to be something which we can only compass by excluding something else. Standing where we are, let us purify ourselves to be all things.

"So being beyond this lady so grateful, we find that everything we meet on this illusory plane of existence is a lure that in one way or another has power to draw us out of our path. That is the point we are at, and we may call it the point where lures of Maya have omnipresent power. Therefore we must beware of the illusions of matter.

"Before we got to this stage we knew the fateful lure, the dazzling mirror of the elemental self, here and there in well defined places and entrenched as it was, so to say, in strongly marked defences. Those we assaulted; and that was what it desired, for it did think that it then had no need to exercise the enchantment which is hard because so subtle, and so distributed here and there that we find no citadels to take, no battallions in array. But now our dearest friends are in league with this beautiful, deceitful Maya. (1) How strongly do I realize the dejection of Arjuna as he let his bow drop from his hand and sat down on his chariot in despair. But he had a sure spot to rest upon. He used his own. He had Krishna near, and he might fight on.

"So in passing along past those stages where the grateful lady and others are, we may perhaps have found one spot we may call our own and possess no other qualification for the task. That spot is enough. It is our belief in the Self, in Masters: it is the little flame of intuition we have allowed to burn, that we have fostered with care.

"Then come these dreadful lures. They are in fact but mere carcasses, shells of monsters from past existences, offering themselves that we may give them life to terrify us as soon as we

have entered them either by fear or love. No matter which way we enter, whether by attachment to them or by repugnant horror, it is all one: they are in one case vivified by a lover: in the other by a slave who would be free but cannot.

"Here it is the lure of enjoyment of natural pleasures, growing out of life's physical basis; there it is self-praise, anger, vanity, what not? Even these beautiful hills and river they mock one, for they live on untrammelled. Perhaps they do not speak to us because they know the superiority of silence. They laugh with each other at us in the night, amused at the wild struggles of this petty man who would pull the sky down. Ach! God of Heaven! And all the sucklings of Theosophy wish that some great, well diplomaed adept would come and open the secret box; but they do not imagine that other students have stepped on the spikes that defend the entrance to the way that leads to the gate of the Path. But we will not blame them, nor yet wish for the things — the special lots — that some of them have abstracted, because now that we know the dreadful power that despair and doubt and violated conscience have, we prefer to prepare wisely and carefully and not rush in like fools where angels do not pass uninvited.

"But, Companion, I remind you of the power of the lure. This Path passes along under a sky and in a clime where every weed grows a yard in the night. It has no discrimination. Thus even after weeks or months of devotion, or years of work, we are surprised at small seeds of vanity or any other thing which would be easily conquered in other years of inattentive life, but which seem now to arise as if helped by some damnable intelligence. This great power of self-illusion is strong enough to create a roaring torrent or a mountain of ice between us and our Masters. Z. .

...."

The Path lies not in extremes but midway, like that Sun whose centre is everywhere, like that Eternal Liberty which Boehme says is the middlemost and within all things. We must pin ourselves down to a rigid appreciation of the mathematical workings of Law and trace their connection with our own constitution. It would seem well to take all the suggestions we can get, but I have known travellers on western prairies who preferred to go a day's journey out of their road, rather than make inquiry of a passer by. If the law of Continuity remains unbroken, as it must if it exists at all, and from its very nature cannot be suspended, then there must be personalities far more progressed than ourselves, somewhere along the vast chain stretching from man to the Deity. I have heard comrades repel the idea that any "Master" could aid them. The western mind detests that word; American boys will not even say "schoolmaster." And yet it is only an equivalent for Teacher, and how glorious are the teachings.

If a man's magnetic sphere be confused, however, he cannot feel the attraction of higher spheres; he does not believe in their existence. If they do not exist to his hope or his intuition, for him they are not, nor will he feel their benefit even indirectly until he shall have evolved enough spiritual energy to enable him to assimilate the currents which unceasingly flow from them to raise the powers of the race. Let every man have his mind within his own power and resolve firmly to believe. Our own is everywhere if we will only take it! We do not justly value the gifts of Truth given us without personal attestation. We clamor for persons and authorities; we have a sense of injury which cries to the echo; "if Truth be true she will sign her name. "Not always: for how then can the perceptions of men be tested in the absence of genuine relations? How can those students be discovered who do not depend upon a revenue stamp to recognize a genuine article?

If a man receives a gem, does he growl because the jeweller's case came not with it? What lustre can a name add to Truth? We should need no guarantee beyond the spirit of the words; the words themselves are often traps. Nothing avails us at last but the touch-stone of our own souls; it is deeply concealed in the heart, far beyond the elemental nature. It is not mind, judgment, reason: it is the fire which tests and welds.

The Path

THE POETRY OF REINCARNATION IN WESTERN LITERATURE: II —

E. D. Walker

PART II.

BRITISH POETRY.

FROM "INTIMATIONS OF IMMORTALITY."

Our birth is but a sleep and a forgetting
The soul that rises with us, our life's star
Hath had elsewhere its setting
And cometh from afar.

Not in entire forgetfulness
And not in utter nakedness

But trailing clouds of glory do we come
From God who is our home.

Heaven lies about us in our infancy
Shades of the prison house begin to close
Upon the growing boy;

But he beholds the light, and whence it flows
He sees it in his joy.

The youth who daily farther from the East
Must travel, still is nature's priest
And by the vision splendid
Is on his way attended.

At length the man perceives it die away
And fade into the light of common day.

WM. WORDSWORTH

A REMEMBRANCE.

Methinks I can remember when, a shade
All soft and flowery was my couch, and I

A little naked child, with fair white flesh
And wings all gold bedropt, and o'er my head
Bright fruits were hanging and tall balmy shrines
Shed odorous gums around me and I lay
Sleeping and waking in that wondrous air
Which seemed infused with glory, and each breeze
Bore as it wandered by, sweet melodies;
But whence, I knew not. One delight was there
Whether of feeling or of sight or touch
I know not now — which is not in this earth,
Something all-glorious and all beautiful,
Of which our language speaketh not, and which
Flies from the eager grasping of my thought
As doth the shade of a forgotten dream.
All knowledge had I, but I cared not then
To search into my soul and draw it thence.
The blessed creatures that around me played
I knew them all, and where their resting was,
And all their hidden symmetry I knew,
And how the form is linked into the soul,
I knew it all, but thought not on it then
I was so happy.

And once upon a time
I saw an army of bright beaming shapes
Fair faced and rosy cinctured and gold winged
Approach upon the air. They came to me
And from a crystal chalice silver brimmed
Put sparkling potion to my lips and stood
All around me, in the many blooming shades,
Shedding into the centre where I lay
A mingling of soft light, and then they sang
Songs of the land they dwelt in; and the last

Lingereth even till now upon mine ear.

Holy and blest

Be the calm of thy rest

For thy chamber of sleep

Shall be dark and deep

They shall dig thee a tomb

In the dark deep womb

In the warm dark womb.

Spread ye, spread the dewy mist around him

Spread ye, spread till the thick dark night surround him.

Till the dark long night has bound him

Which bindeth all before their birth

Down upon the nether earth.

The first cloud is beaming and bright

The next cloud is mellowed in light

The third cloud is dim to sight

And it stretches away into gloomy night.

Twine ye, twine, the mystic threads around him

Twine ye, twine, till the fast firm fate surround him

Till the firm cold fate hath bound him

Which bindeth all before their birth

Down upon the nether earth.

The first thread is beaming and bright

The next thread is mellowed in light

The third thread is dim to sight,

And it stretches away into a gloomy night.

Sing ye, sing, the fairy songs around him

Sing ye, sing, till the dull warm sleep surround him

Till the warm damp sleep hath bound him

Which bindeth all before their birth

Down upon the nether earth.

The first dream is beaming and bright
The next dream is mellowed in light
The third dream is dim to sight
And it stretches away into gloomy night.

Then dimness passed upon me and that song
Was sounding o'er me when I woke
To be a pilgrim on the nether earth.

DEAN ALFORD, 1850.

FROM "CATO'S SOLILOQUY ON THE SOUL.

Eternity — thou pleasing, dreadful thought
Through what variety of untried being
Through what new scenes and dangers must we pass?
The wide, th' unbounded prospect lies before me
But shadows, clouds and darkness rest upon it.

JOSEPH ADDISON.

RETURNING DREAMS.

As in that world of Dream whose mystic shades
Are cast by still more mystic substances,
We ofttimes have an unreflecting sense
A silent consciousness, of some things past
So clear that we can wholly comprehend
Others of which they are a part, and even
Continue them in action, though no stress
Of after memory can recognize
That we have had experience of those things
Or sleeping or awake:

Thus in the dream,
Our universal Dream, of Mortal Life,
The incidents of an anterior dream,

Or it may be, Existence, noiselessly intrude
Into the daily flow of earthly things,
Instincts of good — immediate sympathies
Places come at by chance, that claim at once
An old acquaintance — single random looks
That bare a stranger's bosom to our eyes;
We *know* these things are so, we ask not why
But act and follow as the Dream goes on.

R. M. MILNES, (Lord Houghton).

FROM "THE MYSTIC."

Who dreams not life more tearful than the hours
Since first into this world he wept his way
Earthward, may be called of God, man's soul
In patriarchal periods, comet-like
Ranges, perchance, all spheres successive, and in each
With nobler powers endowed and senses new
Set season bideth.

PHILIP TAMES BAILEY.

FROM "DE PROFUNDIS."

BIRTH.

Out of the deep, my child, out of the deep.
Where all that was to be, in all that was,
Whirled for a million aeons thro' the vast
Waste dawn of multitudinous eddy light —
Out of the deep, my child, out of the deep,
Thro' all this changing world of changeless law.
And every phase of ever heightening life,
And nine long months of ante-natal gloom,
Thou comest.

Tennyson also writes: —

For how should I for certain hold
Because my memory is so cold.
That I *first* was in human mould?

It may be that no life is found
Which only to one engine bound
Falls off, but cycles always round.

But, if I lapsed from nobler place,
Some legend of a fallen race
Alone might hint of my disgrace.

Or, if through lower lives I came —
Tho' all experience past became
Consolidate in mind and frame —

I might forget my weaker lot;
For is not our first year forgot?
The haunts of memory echo not.

Some draughts of Lethe doth await
As old mythologies relate
The slipping through from state to state

Moreover, something is or seems,
That touches me with mystic gleams,
Like glimpses of forgotten dreams —

Of something felt, like something here;
Of something done, I know not where;
Such as no language may declare.

In Shelley's poems the ideas of pre-existence and many lives may frequently be met expressly or implied. The title over one of his

songs of unrest "The World's Wanderer" evidently alludes to himself, as do the lines in it

"Like the world's rejected guest."

The song of the spirits in "Prometheus Unbound" pictures vividly the human soul's descent into the gloom of the material world:

To the deep, to the deep!

Down, down!

Through the shade of sleep

Through the cloudy strife

Of Death and of Life

Through the veil and the bar

Of things which seem and are

Even to the steps of the remotest throne,

Down, down!

While the sound whirls around

Down, down!

As the fawn draws the hound

As the lightning the vapour

As a weak moth, the taper;

Death, despair; love, sorrow;

Time both; today, tomorrow;

As steel obeys the spirit of the stone

Down, down!

In the depth of the deep

Down, down!

Like the veiled lightning asleep

Like the spark nursed in embers,

The last look Love remembers,

Like a diamond which shines

On the dark wealth of mines

A spell is treasured but for thee alone,
Down, down!

THE RETREAT.

Happy those early days when I
Shined in my angel-infancy
Before I understood this place
Appointed for my second race
Or taught my soul to fancy aught
But a white celestial thought;
When yet I had not walked above
A mile or two from my first love,
And, looking back, at that short space
Could see a glimpse of his bright face
When on some gilded cloud or flower
My gazing soul would dwell an hour
And in those weaker glories spy
Some shadows of eternity;
Before I taught my tongue to wound
My conscience with a sinful sound;
Or had the black art to dispense
A several sin to every sense.
But felt through all this flashy dress
Bright shoots of everlastingness.

Oh, how I long to travel back
And tread again that ancient track!
That I might once more reach that plain
Where first I left my glorious train;
From whence the enlightened spirit sees
That shady city of palm trees.
But ah! my soul with too much stay
Is drunk and staggers in the way

Some men a forward motion love,
But I by backward steps would move
And when this dust falls to the urn,
In that state I came, return.

HENRY VAUGHAN

Edmund W. Gosse treats the idea of Wordsworth's "Intimations"
in a way directly opposite to the older poet, in these verses:

TO MY DAUGHTER.

Thou hast the colors of the Spring
The gold of king cups triumphing
 The blue of wood-bells wild,
But winter thoughts thy spirit fill
And thou art wandering from us still
 Too young to be our child.

Yet have thy fleeting smiles confessed
Thou dear and much desired guest
 That home is near at hand.
Long lost in high mysterious lands
Close by our door thy spirit stands
 In journey well nigh past.

Oh sweet bewildered soul, I watch
The fountains of thine eyes, to catch
 New fancies bubbling there,
To feel one common light, and lose
The flood of strange etherial hues
 Too dire for us to share!

Fade, cold immortal lights, and make
This creature human for my sake
 Since I am nought but clay;

An angel is too fine a thing
To sit behind my chair and sing
And cheer my passing day.

I smile, who could not smile, unless
The air of rapt unconsciousness
Past with the fading hours;
I joy in every childish sign
That proves the stranger less divine
And much more meekly ours.

FROM "A RECORD."

None sees the slow and upward sweep
By which the soul from life-depths deep
Ascends, — unless, mayhap when free
With each new death we backward see
The long perspective of our race
Our multitudinous past lives trace.

WILLIAM SHARP.

THE PATH has already shown Browning's expression of Reincarnation contained in Paracelsus. In his poem "One Word More" occur these lines also:

I shall never, in the years remaining
Paint you pictures, no, nor carve you statues
This of verse alone one life allows me
Other heights in other lives, God willing.

Similar glimpses of this thought occur in Byron, Pope, Coleridge, Swinburne and others, but it is difficult to select a continuous and complete wording of it in them.

NOTES ON THE ASTRAL LIGHT: II — *B. N. Acle*

FROM ELIPHAS LEVI'S WORKS. (*Continued.*)

That which is true in cause, is real in effect; that which is not realized does not exist. The realization of speech is the Word, properly so called: a thought is realized in becoming a word — realized by signs, by sounds, by figures. This is the first degree of realization. Then it impresses itself upon the Astral Light by these signs or words, it influences other minds by repeating itself in them, refracts itself in traversing the imaginations of others, assumes therein new forms and proportions, and finally transmutes itself into actions and modifies society and the world. This is the last degree of realization. Those who are born in a world which is modified by an idea, bear the imprint of it, and it is thus that the word is made flesh.

The Astral Light, figured in ancient symbology by the serpent biting its tail, represents in turn, folly and prudence, time and eternity, the Tempter and the Redeemer; thus this Light, being the vehicle of life, serves as an auxiliary alike to good or evil, assumes the fiery shape of Satan as well as the form of the Holy Spirit. It is the universal weapon in the wars of the Angels, feeds the fires of Hell, and furnishes the lightning of Saint Michael. It may be likened to a horse that has the attributes of the chameleon, and reflects always the armor of its rider.

The law of realization produces what may be called *magnetic respiration*; which impregnates objects and places, and communicates to them an influence corresponding to our dominant wishes. In a word, the universal agent, the latent Astral Light, tends ever to equilibrium; it fills every void, and aspires ever to repletion. For this reason vice is contagious, just as are

certain physical maladies, and so it works powerfully for the proselytism of either vice or virtue. For this reason, also, relics, be they either of saints or of great criminals, may produce marvellous effects either of sudden conversion or perversion. The soul breathes just as the body does; it draws in that which it esteems happiness, and gives out the ideas which result from its inmost sensations. So diseased souls have a bad breath, and vitiate the moral atmosphere; that is to say, they mingle impure reflections with the Astral Light which penetrates them, and thus establish deleterious currents.

We are often astonished, when in society, at being assailed by evil thoughts and suggestions that we would not have imagined possible, and we are not aware that we owe them solely to the presence of some morbid neighbor; this fact is of great importance, since it relates to the manifestation of conscience — one of the most terrible and incontestable secrets of the magic art.

This magnetic respiration throws about the soul a halo, of which it is the centre, and surrounds it with the reflection of its own actions, which make for it a heaven or a hell.

No actions are isolated, and none can be hidden; everything that we really wish, that is to say, everything that we confirm by our acts, remains in the Astral Light, in which its reflections are preserved; these reflections again influence our thoughts, by mingling with our lucidity, and thus a man becomes, and continues to be, the author of his destiny.

The Astral Light, combining with ethereal fluids, forms the astral phantom of which Paracelsus speaks in his philosophy of intuition. This astral body, being freed at death, attracts to itself, and preserves for a long time, by the sympathy of likeness, the reflections of the past life; if a powerfully sympathetic will draws it into the proper current, it manifests itself in the form of an

apparition.

The Astral Light, transmuted into human light at the moment of conception, is the primary envelope of the soul. This fluidic body, like the mass of the Astral Light, has two contrary movements, attractive on the right hand, and repulsive on the left; or reciprocal, as in the case of the two sexes; this produces in us the strife of contending emotions, and contributes to the terrors of conscience; thus are produced in us sometimes temptations, sometimes subtile or unexpected graces.

This is the explanation of the traditional dogma of the two attendant Angels who help us or oppose us: these two movements of the Astral Light may be represented by a Balance, in which are weighed our resolutions.

The Astral body is not always of the same sex as the material body: that is to say, these two forces, swaying, so to speak, from right to left, often seem to contradict the visible organization; thus are produced the striking errors of the human passions, and thus may be explained, although without in the least justifying them, the amorous peculiarities of an Anacreon or a Sappho.

There are persons who cannot be offended with impunity, and one who does them an injury may begin to die from that very moment; there are some men whose influence is felt at once, and whose mere glance may change the direction of the current of our life.

The basilisk who killed by his look, is not a fable, but a magic allegory. As a rule, it is injurious to the health to have enemies, and it is not possible, with impunity, to brave the reprobation of anyone: before opposing ourselves to a force or a current, we should be sure that the person or the current is not stronger than we are; otherwise, we shall be overwhelmed or even annihilated.

Many sudden deaths are attributable to no other cause than this. The dramatic deaths of Nadab and Abihu, of Ananias and Sapphira, were caused by the electric currents of the faith that they outraged.

The intense reprobation that was aroused by the massacre of St. Bartholemew was the sole cause of the horrible malady and death of Charles IX; and Henry IV, if he had not been sustained by the enormous popularity which he owed to his personal magnetism, or the sympathetic power of his astral life, could scarcely have survived his conversion, and would have perished beneath the contempt of the Protestants, combined with the distrust and hatred of the Catholics.

Unpopularity may be a proof of integrity and courage, but it is never a proof of political wisdom. Outrages to public opinion are fatal to statesmen; and it is possible to recall the premature and violent death of more than one illustrious man, of which it is not fitting to speak here. These verdicts of public opinion may be very unjust, but they are none the less causes of failure, or even sentences of death. On the other hand, injuries done to a single human being may, and unless reparation is made, must, cause the destruction of a community or of a whole nation. This is what is meant by "the cry of blood" — for at the bottom of every injustice, lies the germ of a homicide.

It is because of these terrible laws of solidarity, that Christianity insists so strenuously upon the forgiveness of injuries, and the necessity of reconciliation. He who dies without forgiving his enemy, hurls himself into eternity armed with a dagger, and devotes himself to the horrors of eternal murder.

THE SYMBOLISM OF THE EQUILATERAL TRIANGLE — *Lydia Bell*

The triangle holds its place as a symbol in the mathematics of ideal proportions. As a symbol in ethics it at once suggests the idea of mathematical exactness and method in connection with spiritual problems. A true spiritualism is able to demonstrate its position in the exactness of the law of pure mathematics. A spiritualism that fails in this, fails in the only method known to finite comprehension as exact, and leads to the inference, that a law can express more than the law giver. The law of mathematics holds our highest concept of absolute Truth. The law is universal, and in its unfolding gives us the highest possible relation. Music, art, poetry, all that we know of the ennobling and beautifying expressions of the soul, manifest themselves in numbers. The truth of music is in measure; the truth of art is in proportion; the truth of poetry is in ratio. Science has never revealed anything but a broader application of the law of number. Chemistry is combination or addition. Botany is analysis or subtraction. In astronomy we strike the true because the incomprehensible — we deal with the unknown quantity. The true basis of reasoning is from cause to effect. To correctly measure the force of a stream we will go to its source. When the source is unknown, it becomes the unknown quantity of our calculation, and through the application of it as an unknown quantity, we approximate to a true knowledge of it. In dealing with the greatest of all problems — that of existence — mathematical principles have been ignored. I know it is objected that mathematics are too cold for religion. "We want the warmth of sentiment and emotion in spiritual things." The warmth of sentiment and emotion, unsupported by the truth of mathematics, is the song without music, poetry without rhythm, and art without harmony. It

abides where music, poetry and art have not yet become the language of the soul. As compared to the warmth derived from a mathematical basis, it is the flash of light reflected from a mirror as distinguished from the direct glow of a sunbeam; one scorches and dazzles, the other warms; one blinds the vision, the other is a "lamp to the feet," revealing the way. A change in the multiplication table to suit the fancy of every one who had a problem to solve, would make a chaos of all calculation — without an exact basis in ethics this is our condition in spiritual things. One man's revelation is not another's; and each holds his opinion, or sentiment, as truth. One man's opinions or any set of men's opinions cannot alter the truth as discovered in mathematics. Here and here only, can we determine the problem of life in the terms of law. Here we reach a solution that brings us to the recognition of brotherhood in spiritual things, as we are a recognized brotherhood in mathematics. The axioms of truth have no more to be changed in dealing with the realities of life, than in dealing with its grosser calculations. A universal brotherhood finds its realization in the universal recognition of a Deity that appeals to all in the harmony of an everywhere manifested law.

Starting with the triangle as the unit of all subjective operations our conception of it is based upon our knowledge of the objective unit: we proceed from a knowledge of the part to a concept of the whole — or unknown unit. To do this we transmute the objective to the subjective and raise the power of the numeral to infinity. When thus raised to the power of the infinite unit the triangle is our symbol for truth. As a symbol for the whole of truth, it holds the key to all science, to all wisdom, and its study leads with certain steps to and through that door wherein the mystery of life ceases to be a problem, and becomes revelation. An understanding of the triangle depends upon the analysis of the

objective unit, the arithmetic definition of which is "a single thing." The first idea we get from this single thing is wholeness; nothing can be added to it nor subtracted from it without impairing its unity as a single thing. Second: Its unity involves the idea that it can be separated, that it consists of parts. Third: These parts hold certain unchanging relationship to each other, then as related to its wholeness it has unity, as related to its separableness it has diversity, and as related to its unchangeableness it has identity; unity, diversity and identity, are the essential qualities of every "single thing," or every unit, and the equilateral triangle is the symbol that manifests these three qualities in unity. The figure 3 does not do it as we lose in it the idea of three related parts. Three separate 1's will not do it, as the idea of unity is lost. We combine the three is to express the unity and diversity, and when combined we have the idea of identity, and the triangle is the symbol of the subjective unit, Each side of the triangle is the figure 1, and this manifests unity in its wholeness, diversity in its two ends and identity in its central; point which is changeless for every figure 1. Thus the figure 1 manifests the triangle in the symbol and the first deduction we make is: *the unit is a trinity*. The triangle is a unit, each part of the triangle is a unit, hence, it follows that *every part manifests the whole*. Seen in motion the triangle measures the arc of the pendulum, these successive arcs make the circle and the circle marks Infinity — or the pendulum swing that marks eternity in space and time, and so annihilates space and time. This idea of the unit in connection with motion and form gives the idea of motionless and formless as manifested truth. Form and motion involve change, the unit cannot change. The magnetic needle in its perfect poise illustrates what I mean, and shows: the motion of the unit in, positive or centrifugal, in negative or centripetal, and poise. *Perfect poise is changeless*. The absolute is always the center, a change in the center belongs to finite perception and not

to Infinite Truth. The unknown quantity of Infinite Poise will always be the unknown quantity, but as the part manifests the whole we shall always have a measure of understanding proportioned to our discernment. As we do not hold the center, we do not hold both the positive and negative, and so we manifest a minus quantity in all our thinking. The *symbol cannot change*. Its action in truth is *Energy in Poise*. Delsarte makes a clear exposition of this principle. Perfect expression in music is vibrating harmony, and then music is soundless. The human form is the prophecy of the principle in limbs — or positive, head — negative and torso — poise, the hand manifests it in fingers, palm and thumb, the thumb indicates the line of physical balance, and falls when the balance is lost.

Blood, bone, and breath, circulation, secretion and respiration: all functional activity shows us the symbol. We have it in the planet as water-centrifugal, earth-centripetal, and air-poise, or manifested as liquid — solid and gas. It expresses the law of chemical affinity and the organic cell. Light, electricity and magnetism are its etherialized exponents. Of the three primary colors, blue is the life or centrifugal ray, yellow is the illuminating or centripetal ray and red is the warm or poised raw. The ideal of these rays is blue for life or will, yellow (or wisdom, and red for love, which brings us to the Divine Father principle, the Divine Mother principle, and the Divine Guild as the Divine Trinity of manifested truth, or the circle of manifested Deity. The nearer man approaches a form that manifests *Energy in Poise*, the nearer he is to taking his place in the line of the triangle. In expression, voice is centrifugal or going out, gesture is poised or within, and the word is centered or coming back, and this is the order manifested in the child. We reach true expression in proportion as the energy of going out is at one with the energy of coming back: in other words when the impulse of the creature in

aspiration is one with the Creator in inspiration, man finds himself a part of the line of the triangle, a part of the word that "in the beginning was God." To express the truth of the triangle, is to manifest the supreme energy of the universe, and that means the bringing of the line of life in ourselves into the line of truth in ourselves. This is the true work of existence. Love measures the poise, *and we know when we have attained it*. There is no room for finding fault, for recrimination or judgment of our neighbor, the battle is with the self.

The Path

THOUGHTS IN SOLITUDE: VII — *Pilgrim*

THE HIGHER CARELESSNESS.

When the mental vision has been searching with troubled and anxious gaze for some sure clue to the heavenward path, or when it has recoiled in horror before the picture of an effete civilization breaking up, and anarchy and violence taking the place of order, it is an intense relief to realize that there is an inner stronghold where the worn warrior may retire to, that there is a sure harbour where the storm tossed bark may find rest. And this harbour is ever at hand, this stronghold may be entered any moment. It requires but the conviction of its paramount necessity, it requires but the surrender — absolute and unconditional — of the man's lower nature to the other pole of his Being, and lo! he has attained a peace and a strength that the crumbling of the world in ruins at his feet could not shake. To be able to live in this state permanently is to have attained the condition of the Yogi or the Saint, but to have experienced it even for one moment teaches that it is the first step on the true spiritual path, which the mental vision might grope for through eternity without finding.

For one whose imagination can conjure up scenes of that human earthquake, a social revolution, where the impossibility of gauging the forces or of foreseeing the developments, adds so awfully to the horror of the situation. Surely strength and courage must be the paramount qualities required, courage to keep the heart from fainting at the dread anticipation, and strength to keep the brain from reeling in the conflict.

But if the man has so fixed his soul on the Supreme soul, has so surrendered his will to the divine Will, has so identified himself with the Deity, that he feels he is but a tool in the omnipotent

hand, the divine carelessness will have entered into him, and that will give him strength. There will be no looking forward with dread anticipation, for he cares not what happens to him — the duty that lies at his hand he will do with a clear brain and a steadfast will, caring not for the result though it may be danger and death — but what matters that? the flesh may quail at the final parting, but the man who has identified himself with the spirit within, which has inhabited many a house of flesh, has raised himself above mortal fears.

It is only in moments of supreme concentration and by intense imaginative power that we who toil on on lower levels can occasionally get a glimpse of this serene condition, which as far as words can describe it would seem to be portrayed in the second part of *Light on the Path* (Rule 8). "You can stand upright now, firm as a rock amid the turmoil, obeying the warrior who is thy self and thy king. Unconcerned in the battle save to do his bidding, having no longer any care as to the result of the battle — for one thing only is important — that the warrior shall win; and you know he is incapable of defeat, standing thus, cool and awakened, use the hearing you have acquired by pain and by the destruction of pain, &c."

Even these who are still bound by the desires of action may occasionally reach in imagination the exalted serenity of this state of being, and such contemplation must doubtless help in freeing from the bondage of desire. Philanthropic work for Humanity will no longer seem an object for action, for the devotee will have become conscious that the Supreme Power that acts by him, is also guiding by invisible hands the whole course of human affairs, and the well-meant remedial actions of purblind men will, under the new illumination of the eternal light, appear to him in their true character as the ineffectual gropings of captives in a cavern. And the very fact of his no longer desiring to garner the

fruit of his actions will cause his actions to be all the more far reaching in their results. The will becomes omnipotent when dissociated from human desire, for it is then part of the divine will.

His attitude towards Humanity will also find a parallel in his attitude towards Divinity, for the passionate adoration will have been left behind, and will have given place to the carelessness of the divine serenity.

The conquering of all earthly desires must be a work of ages, and many lessons will doubtless still remain to be learned by him who has attained to this state. It is written that the aspirant must always look forward with awe, and always be prepared for the battle, but in the vast scale of Being, great distance is lost in the infinite beyond, and from our present standpoint this higher carelessness would indeed seem to be the ultimate state realizable by man while still he bears the body, for what other is it than a foretaste while in the body of that "peace of God which passeth all understanding"?

The Path

AM I MY BROTHER'S KEEPER? — *American Mystic*

(Genesis 6:9)

Many students, in their search for light, find divers problems presented to them for solution; questions so puzzling from the contradictory aspects which they present, that the true course is difficult of attainment for those who seek Right Living.

One of these questions, Is it our duty to interfere if we see a wrong being done? arises.

The question of duty is one that can be decided fully only by each individual himself. No code of laws or table of rules unchanging and inflexible will be given, under which all must act, or find duty.

We are so ignorant or so newly acquainted with a portion of the Divine Will that generally we are poorly fitted to declare decisively what is wrong, or evil.

Each man is the law unto himself — the law as to right and wrong, good and evil. No other individual may violate the law of that man, any more than any other law, without producing the inevitable result, the penalty of an infracted law.

I dare not declare that any one thing or course is evil in *another*. For me it may be evil. I am not wise enough to know what it is for another. Only the Supreme knows, for He only can read the heart, the mind, the soul of each. "Thou shalt not judge," saith the sacred writing.

My duty is clear in many places, but in the performing of it I may neither act as a judge or hold animosity, anger, or disgust.

Were a man to abuse an animal, surely I must interfere to prevent suffering to the helpless, dumb and weak, for so we are enjoined. This done, my duty lies in helping my brother, for he knew not what he did.

My aim is to find Wisdom, and my duty, to do away with ignorance wherever it is encountered. His act was caused by ignorance. Were a man to abuse wife or child through unwise use of wine or drug truly it is my duty to prevent suffering or sorrow for either wife or child, and also to prevent greater misery — perhaps murder. They are human beings, my fellows. This done, my duty lies toward the man, not in condemnation, but seeking the cause that makes him unwise, strive to alleviate — if not free him from it. He also is my brother.

If men steal, lie, cheat, betray the innocent or are betrayed by the knowing, my duty lies in preventing for others, if I may, sorrow and anguish, pain and want, misery, suicide or bloodshed, which may be, for *others* the result of these acts.

My duty lies in preventing effects such as these from love for and a desire to help all men, not because men's actions seem to me wrong or their courses evil. I know not the causes of their actions, nor all the reasons why they are permitted. How then may I say this or that man is evil, this or that thing is wrong? *The effects* may to *me* seem evil, inasmuch as such appears to be the result for others. Here my duty is to prevent evil to other mortals in the way that seems most wise.

"Finally this is better that one do
His own task as he may even though he fail,
Than take tasks not his own, though they seem good."
— *Song Celestial (Bhagavad-Gita)*.

He who seeks "the small old path" has many duties to perform.

His duty to mankind, his family — nature — himself and his creator, but duty here means something very different from that which is conveyed by the time and lip-worn word, *Duty*. Our comprehension of the term is generally based upon society's or man's selfish interpretation. It is quite generally thought that duty means the performance of a series of acts which *others* think *I* ought to perform, whereas, it more truly means the performance of actions by me which *I know* are good for *others*, or the wisest at the moment.

It would be quite dangerous for me to take upon myself the duty of another, either because he told me it was good, or that it was duty. It would be dangerous for him and me if I assumed that which he felt it was good to do, for that is his duty, and cannot be mine. That which is given him to do I cannot do for him. That which is given me to do no living thing can do for me. If I attempt to do another's duty then I assume that which belongs not to me, was not given me. I am a thief, taking that which does not belong to me. My brother consenting thereto becomes an idler, fails to comprehend the lesson, shifts the responsibility, and between us we accomplish nothing.

We are instructed to do good. That is duty. In doing good all that we do is covered, that for which we are here is being accomplished and that is — duty. We are enjoined to do good *where it is safe*. Not safe for ourselves, but safe for the objects toward which our duty points. Often we behold beings suffering great wrong. Our emotions prompt us to rush forward and in some way prevent the continuance of it. Still the wise man knows it is not safe. Were he to do so his efforts would only arouse the antagonism and passions of superior numbers, whose unrestrained and ungoverned wills would culminate in the perpetration of greater wrongs upon the one who already suffers. It is safe to do good, or my duty, after I find how to do it in the

way that will not create evil, harm others or beget greater evils.

For him who seeks the upward way there is no duty — for nothing is a duty. He has learned that the word conveys an erroneous meaning when applied to the doings of the Seeker. It implies the performance of that which savors of a task, or a certain required or demanded act necessary before progress is made or other deeds be performed. Of duty, there is none such as this.

He learns to do good and that which appears the wisest at the time, forgetting self so fully that he only knows his doing good to others — forgetting self so far that he forgets to think whether he is doing his duty or not — entering Nirvana to this extent that he does not remember that he is doing his duty. That *for him* is duty.

"Resist not evil," saith one of the Wise. He who said this knew full well his duty, and desired to convey to us knowledge. That he did not mean men to sit idly by while ignorance let slip the dogs of pain, anguish, suffering, want and murder, is surely true. That he did not mean men to kneel in puerile simulation of holiness by the roadside, while their fellow men suffer torture, wrong or abuse, is still more true. That he did not intend a man to sit silently a looker-on while that which is called evil worked its will upon others when by the lifting of a finger, perhaps, its intentions might be thwarted and annulled — is truth itself. These all would be neglect of a portion of the whole duty of man. He who taught that men should "resist not evil" desired them only to forget themselves. Men think that all things which are disagreeable to them, are evil. By resistance he meant complaint, anger and objection to or against the inevitable, disagreeable or sorrowful things of life, that come to self, and he *did not* mean man to go forth in the guise of a martyr, hugging these same penalties to his bosom while he proclaims himself thereby the possessor of the

magic *pass word*; (which he will never own and which is never uttered in that way) *I have Suffered*.

If men revile, persecute or wrong one, why resist? Perhaps it is evil, but so long as it affects one's-self only, it is no great matter. If want, sorrow or pain come to one why resist or cry out? In the resistance or war against them we create greater evils. Coming to one's-self, they should have little weight, while at the same time they carry invaluable lessons in their hands. Rightly studied they cause one to forget himself in the desire to assist others when similarly placed, and the Lotus of duty — or love for man — to bloom out of the Nile mire of life. Resist not evil, for it is inseparable from life. It is our duty to live, and accept uncomplainingly, all of life. Resist not evil, but rather learn of it all the good which in reality it only veils.

Seek in it, as well as in the gleaming good, for *the Mystery*; and there will come forth from both the self-same form upon whose forehead is written "Duty," which being interpreted, meaneth efforts for the good of all *other* men, and over whose heart is written: "I am my brother's keeper."

The Path

CHRISTIANITY - THEOSOPHY — *Wm. H. Kimball*

THEOS: *Ingenerate Creative Father or Life-giving Power.*

THEOGONY: *Generative, Creative Maternity or Life-bearing Process from the Father.*

THEOSOPHY: *Generated Body in divine Human Form — Embodied Wisdom of the Father.*

All positive Science, of whatever form or degree, must both analyze and synthetize its subject or theme, before it can vindicate its power as embodied science.

We may say of science itself, accordingly, that, according to strict creative law, it is a *one*, (science) in three-fold order — as *thesis*, *analysis*, and *synthesis*. And this triunity of sciential nature is realized by the human understanding according to the various planes of man's mental constitution, which is itself a triune power apportioned to the threefold providence of Creative Wisdom. This providence gives us:

Firstly: a *Subordinate-Natural Sphere* in the Corporeal realm of creation, primarily related to sensuous experience.

Secondly: a *Superior-Natural Sphere* in the reflective or ideal realm, mediately related to moral and rational experience; and

Thirdly: *Supreme-Natural Sphere*, in the vital realities of eternal Life and Law that are intrinsically one with the human soul as the central verities of all divine intuitions, revelations, and fulfilling powers.

So, the human intellect comes to be fortified in understanding and power according to its attainments in the degrees of Sub-Natural, Super-Natural, and Supreme-Natural degrees of science.

In the first it mainly memorizes observed things and facts.

In the second it analyzes and synthetizes things, facts and ideas immediately related thereto.

In the third it comes to be opened to the contemplation of the necessary laws of Creative Being, thence systematically traces the operation of those laws in the varied processes of forming and filling the creaturely vessel as a spiritual subject fitted to creative designs; and finally comprehends the full law and testimony of that end itself, as God's true creation achieved in divine Sonship humanly realized.

Such is a briefest possible outline of the service of the Christian Revelation, as I understand it, to the human intellect. And the powers of life in man unfold and work by the same order of creative degrees; so that from right *being*, through true *knowing*, in divinest *doing*, creation becomes livingly consummated in the human form in conscious oneness with the Divine and thus endowed with all the powers of supreme mastery or lordship.

And I understand that the process to this *end* is vitally set forth in the Christian Revelation as a crucial travail in creation towards full creative glorification and ascension to the majesty there inherent. And I further understand that the reign of worldliness in the creaturely subject must give place to the rule of the spirit (aspiration for holiness or wholeness in life) ere man can escape from the practice of penance and self-abnegation, and become born into the *consummating degree* of ascension *towards* the Highest. After this birth into the spirit of righteousness (the love of right for its own sake) there is no more achievement through repentance or penitence and *forcible* putting away of besetting evils; yet there is a liability to fall and bruising until evolution in this spirit shall have wrought its perfect ends. But the old process of repentance and forgiveness cannot be available here, because

if the spirit or heart is right there can be no repentance.

If one in love with cleanliness fell into a pool of filth he would not indulge self-accusing or repentant moods. He would rather pity his misfortune and make it a stimulus for greater care as to missteps in future. And inasmuch as evolution is a law of development in every degree of human experience, this consummating degree under the sway of Holy Spirit must involve a long process of growth ere it becomes matured, just as the fruitional degree of growth in the corn is "first the blade, then the ear, then the corn fully ripe in the ear."

This ripening degree in the human form is not effected by the economy of the previous degree — the experience of repentance and forgiveness as conscious motors of life — but by the scourgings of afflictions and pains and purgatorial fires, designed to "destroy the adversary." Remedial agencies are ample providences to creative designs in all the various conditions of human growth and final gathering in divine fulness by the great Husbandman of Creation, just as an earthly husbandman first prepares the soil and plants the seed, then laboriously cultivates, and at last reaps and gathers the ripened fruits into useful stores — all different processes to one end.

So, while I see in the revelation of Jesus Christ the full light of the *End*, I also see the glory of the Father as requisite primary Life, and thence the clear methods of the creative operations in his natural humanity, before creaturely fruition and "rest" in His Divine Natural Humanity can be realized.

Seeing all this, I want to emphasize the manifest truth that Christianity, seen by the light of creative law that it surely displays, and not by the fallacious and unstable flashes of its professed votaries throughout Christendom during the many toilsome centuries of development of the rank stock, is not a

limitary or exclusive system, but is as broad and catholic as is any possible conception of Human brotherhood.

Its seizure and exposition of special instrumentalities and truths, is only in order that the sublime truth of the *inherent unity* of mankind in creative source, and the *seeming* adherent diversity and contrariety of man in process of creative development, may be surely authenticated as *being* and *seeming* made one in full creative composure at last; and this not for Judaistic stock and its special fruit alone, but for all humankind. For "there is neither Greek nor Jew, circumcision nor uncircumcision, Barbarian, Scythian, bond nor free; but Christ all and in all."

Now, although I have never seen my way to a connection of myself with any of the *various* churches in Christendom — which appear to me to be only crude fragments or broken parts of the great Unitary Humanity, and hence not truly representing that Humanity — I have yet remained a firm votary of the truth actually revealed by the Christian Gospel — the truth of "God in the Christ reconciling the whole world unto himself." So, from the true Christian attitude one may be grounded in all the breadth of universal human brotherhood; and not only that, may come to comprehend the exact law of Creator, Creating and Created. One may come here, not only to a scientific perception of the truths of creative order, but to a practical knowledge of the methods of organizing those truths in human affair? — to qualify human character, order human thought and activities — and thus intelligently cooperating with creative purpose, gradually abolishing unbelief and evil and settling into the harmony of final order and good will towards all men.

One can have no true, satisfactory knowledge of a man from seeing him in his common nature as a human person: for here is where men meet in communal or chaotic indifference. A man

must be known in his special nature — in his manifest power of *doing* — in his productive activity organically embodied — to be vitally known and rated in value. Art-genius in man is of no account *to human fellowship* until that genius becomes sampled in an embodying form that duly reveals it. Then the artist will be known and greeted according to the character of his achievement, at least by such as are duly cultured in his sphere of genius. So, the Creative Genius cannot be known by the dim vision of Theistic faith — by any conception of God's mere *being* as Creator. And as our common humanity stands to Him as embodying instrumentality stands to the artist, that humanity must be divinely fashioned to sample the infinite love, wisdom and power, ere Creation's Artist can be known and truly worshipped, God's creative power being amply sampled in His Divine Natural Humanity personally embodied — this being the Light and Life of the Christian Revelation — He should be known and worshipped by this revealed Light. He cannot be known, *as Creator*, by physical and spiritual conditions short of this revealed *Life in human form*. All degrees of our human development in historic experience, are only so many steps in the forming and qualifying processes of Creative Wisdom, towards His sublime purpose in creation. Hence to rate Christianity by the human conditions or states manifested by professed votaries during the era o! Christian, development, is equivalent to rating the growing ear of grain by its enveloping husk, rather than by the matured "first-fruit" given in the planting.

The grand oratorical chord of UNIVERSAL HUMAN BROTHERHOOD, struck with such force and held with such tenacity by *Theosophy*, is simply the resonant thrill of Creative Wisdom as it livingly plays to fulfil its purpose in the *actual* unity of Humanity — the associate order of Man in organic brotherhood on the earth. And only this aim is the worthy endeavor of man under whatever

banner he marches. In Christian Science the End is clear from the Beginning, and *vice-versa*.

Let us not indulge strife and contention over formal differences, but unite all our forces, under whatever name, in the furtherance of God's ultimate purpose in the Divine Natural Humanity.

If we are Theosophists, intelligently surveying the whole field by Theistic Wisdom, we shall see that God's life as *Creative Theos* must eternally *Be*: thence it must operate through *Theogonal or generative processes*, involving creaturely spirit in natural man as the requisite instrumentality. Thence we must see that true *Theosophic* embodiment — the organic form and activity of *Theos-Wisdom* in the Natural Humanity — must become the fulfilling reality. So, under other terms, as (1) Creative Theos, (2) Creative Theogony, (3) Creative Theosophy in organic form Theistically qualified, is seen just what the truly informed Christian beholds in the Christian Revelation as a science, (1) of Creative Being, (2) of Creative operations in natural man, (3) of Creative End in Divine Natural man, with harmony and order organically realized in all human affairs. Thus it is seen that from the attitude *of true* Christian Science the ampler aspects of Theosophy will be relished with most vital zest. And going on to work "in the unity of the spirit and diversity of operations," *formal* unity will ultimately be realized through the perfect, scientific adjustment of all institutions in constant human service.

The Path

LETTERS ON THE TRUE: IV — *Jasper Niemand*

MY COMRADES:—

That the way to the Immortal lies through the heart of man, is evident to him who observes that in it arise all those feelings which drive him into thought and action and constitute the sum of his life. A primary study of the office and nature of the heart then suggests itself to the wise student, for it is far easier to sink back into the eternal than to dive. The diver must needs have power to retain breath against the rush caused by diving, while to sink back gives time to get and keep breath.

As to the office of the heart of man — by heart I mean that physiological organ which is also the psychological seat of the various emotions and desires whose total we call "mind." "I have changed my mind," is really to say I have changed my desire. The Hindu philosopher calls it "Manas; the heart; the internal organ of perception which receives the external impression of the senses and transmits them through the consciousness (Ahankara) and the intellect (Buddhi) to the soul, and is the seat of the passions."

(1) The seat of the astral soul being in the heart, that spark causes the systole and diastole of the heart by its own vibration in unison with the whole body of Astral Light. We can thus conceive of the heart as "pumping up" such light along the nervous system (just as it does the blood through the circulatory system) whence it is transmitted in rhythmic shocks to the brain, and reflected by the gray matter there to its mysterious inhabitant, Consciousness. If the heart's action be disturbed by passion or emotion, the rhythm of such shocks is altered. These passions and emotions have a two-fold source. They may take their rise in outside astral currents proceeding from other lives: they stream into the heart,

which — if it accepts the insidious suggestions — passes them along as we have seen, and the man carries them out to pleasure himself unless he controls them by his will. Or such thoughts may proceed from the Universal Mind in original purity, and be misconceived by the elemental self of man. The heart may be either (or both) an organ of action or an organ of perception. As the former, it hurries man along the bustling highways of action and fatally commits him to a return to life. As the latter, it perceives the influx of emotions and classes each as a petition of the body which the calm judge within refuses to entertain. Hence we have the saying, "Keep a steady heart," and hence the repeated injunctions of Vedic literature. It is the object of this letter to examine into the methods of such control, but a word as to the nature of soul is first in order.

Brief statements are necessarily incomplete, but it suffices our present purpose to say that the soul has also two offices. Its higher part communicates with the Divine Spirit: the lower elemental part collects the essential experiences of earth life and transfers them to that higher self. Here is a most important link, because these selections determined the tenor of experience, its spirituality or materiality. These selections again, are governed by the heart, or feeder of the elemental self, and it has in turn the option of choice between the pure or the impure, being, however, like all other parts of man, controllable by his supreme will. As we have seen, the heart must take note of all transmissions from without, but if it remains equilibrated, neither recoiling in horror nor eagerly attracting the material, and "free from the pairs of opposites," (2) they are not recorded upon the brain with sufficient vividness to become deeds. In other words, the consciousness does not refer them to self and the man is not moved to action. The intellect has another choice: it may discover the *true nature* within all thoughts, and return them, thus raised

to their highest power, to strengthen the heart. It thus becomes apparent that we must secure the entire co-operation of the heart in order to train the lower nature to submit to the diviner will of man. We must control and regenerate the mind.

The universal mind is the first production of nature, by which, I mean the eternal nature, the material (so to say and in a sublimated sense) essence of Deity. Evidently the first issuing outward or manifestation of the Unknown, was a Thought. Mind is the link between soul and body; it is a subtle form of matter, and is the vehicle of the soul, whether in an individual or a universal sense. Even a mode of motion, such as mind, is "matter" as compared with spirit. Mind serving to transmit the outward to the inward, may also convey the internal to the external. It may look forward or back. Be it remembered that spirituality is not what we understand by the words "virtue" or "goodness." It is the power of perceiving formless, spiritual essences. It may be used for good or evil purposes. The heart may be preoccupied with the eternal or the transitory in either (or both) outward and inward, for selfish or unselfish ends. Hence the initial importance of purifying the natural. Within the beast is that luminelle of the World-Soul, the Archaeus (3) which is the medium between God and man, and it may be alchemized (4) to be the Christ or Christos which is the mediator "for our sins, and not for ours only, but for the sins of the whole world." (5) Thus along the whole line, at every station and in every part, we have the power of choice, we may depart or return. While man is unconscious of his possible destiny, Karma governs automatically. When he becomes integrally conscious of it and the "moment of choice" is reached, he may turn the faculties of every organ either way. The responsibility of that Knowledge is then upon him and all his actions have a centupled power. (6) We must not forget that no part of his body or constitution stand by itself alone, but reacting

and interacting forms a compact whole.

When the student examines his heart, he first discovers that he does not at all know it; he is not what he appears to himself to be. Perhaps he recovers from some grief which he thought would end his life or his interest in life; or he has longed apparently to end physical suffering by death and finds he has lived on because the real inner man had still the will to live, and finds the intermissions of pain as sweet as by-gone joys. Some withered part of his nature puts forth new buds, or the deadened senses resume the simplicity of youth and with the dying Falstaff he "babbles o' green fields."

"Festus, strange secrets are let out by Death,
Who blabs so oft the follies of this world:
And I am Death's familiar, as you know.
I helped a man to die, some few weeks since,
Warped even from his go-cart to one end –
The living on Prince's smiles, reflected from
A mighty herd of favorites. No mean trick
He left untried; and truly well nigh wormed
All traces of God's finger out of him.
Then died, grown old; and just an hour before
Having lain long with blank and soulless eyes —
He sate up suddenly, and with natural voice
Said, that in spite of thick air and closed doors
God told him it was June; and he knew well
Without such telling, harebells grew in June;
And all that kings could ever give or take
Would not be precious as those blooms to him." (7)

Perhaps sudden revulsions from the path of evil or pleasure have surprised him; or at the wizard touch of realization, the lover, the miser, the votary, the worshipper in him kneel no more but

pursue the nimble chameleon desire to some remoter shrine. Behold the profound wisdom of Truth, which places the ultimate forever beyond his reach!

Seeing then that he can predicate nothing of himself, the student confines himself to an observation of the feelings welling up from those unfathomed deeps. It is here that I am fain to meet him with a few suggestions, for as I watch that tidal ebb and flow within my breast I see that I tasted so much of the gross sweetness of life in other lives that I know most of it now by reason of its being in me.

It appears insufficient to restrain passion or to check action so that they are pent up within us and wait over for their chance in another life. Under the law of attraction those accumulated forces will draw themselves forcibly together within the dreaming soul and driving outward, propel it back to earth and form. So Behmen tells us that the magnet or essential desire of nature compresses itself into a substance to become a plant and in this compression of the desire becomes a feeling or working, whence comes the growing and smell of the plant, and he goes on to remind us that if it were not for such an outgoing and working of the trinity in the eternal unity, the unity were but a stillness, and there would be no nature, no color, shape or figure, nor any world at all. This is the pattern by which all things proceed.

Neither is it wise to rush on in deliberate expenditure. While the burnt out nature may leave us in sight of the spiritual, we may stand there too exhausted to put forward the immense effort required to pass through. (8) It is not needful to plunge again into the mud of sensation to know it. Nor yet should we ignore those parts of us which produce such experience, but admit them and test them. We should not willingly rush back into desires of the past, but accept all situations and study them, the heart fixed on

the True. Then they do not sweep us off into delirious action, but we convert them into true action. Every man may misinterpret or pervert a true ray; he may reflect or deflect. The particular disposition of each man determines the direction, the mode of expression which he may give to any impulse instilled into his mind; this disposition is regulated by the preponderance and proportions of the "three qualities" in his nature. I shall hope to show that all impulse is based upon the True. We must then carefully watch those indices of old fires which are now only banked, and try to turn their powers, by inwardly knowing them, into our service. The discovery and right use of the true essence of Being — this is the whole secret.

The case standing thus, we ask ourselves what is the strongest motor of man. Is it not Desire? When I look out over life I see this strange potency dissimulating yet forcing its underground current along in defiance of laws and civilizations, asserting itself now and then in colossal upheaval, sacrificing health, wealth, fame, honor, love, and life for the intoxicating passion of the hour. I see also, in the arc of life, how the first fierce color of Desire, burning higher, blends here and there to purer hues in the solvent of the one light, and nerves men to sublime self sacrifice. Then I understand that the cohesion of life is in the True, and that this force, properly understood, must be the clue to man's whole nature. Back of its multiform expressions I find one meaning — desire to be. In lovers, in the poet, in the hero's leap to the deed, in the sensualist's longing to be born anew to joy, even in dumb brutes this vigorous stir of force means to expand one's finest essences for a new result on some one of many planes, and the truth of the eternal creative impulse, shines through the low act, as the fire soul through the opal's cloudy heart. Even in passion, tho' I find six drops of poison to the seventh, in that last drop hides the sublime counterpart. It is fed by some experience. Do

not the intense sympathies for others feed and express it? I find that the desire of things is the love of them; this is the "desire which produces will, and it is will which develops force, (9) and the latter generates matter, (10) or an object having form. (11) As the Deity first feels desire "to beget His heart or son," so man follows the divine example, and by transubstantiation, begets a new heart or nature, and a new inner form.

Taking up the fact that man may misunderstand his own heart, I remind you that there are in nature, three great forces.

1st. — The creative. It corresponds to "Love in man." It is "Brahma, the universal expansive force in nature;" the Creator.

2d. — The preservative. It is Maya, the formative power of illusion or ideation; this stands for Vishnu, the preserver, and takes the form of Vanity in man.

3d. — The destructive force. Siva the destroyer; in nature the great separator which annihilating forms or illusions, brings us back to the recombinations of love and closes the circle. This force is Anger in man, and these three, Love, Vanity, Anger, are the three great gates of life and death.

As the author of "Primary Concepts" has most admirably shown us, all things are dual or polar. The other pole of love is lust; of illusion, falsehood; of anger, justice. Duality is the condition of manifestation: without it the deity must remain forever unseen. There is nothing finally and eternally "good" save the mysterious unit. Neither good nor evil is inherent in manifestations, forms or powers, but depend upon the uses to which these emanations are put. The moment departure from Deity takes place the free-will of Being becomes apparent; two paths present themselves for choice — duality and division. Duality is the harmonious inter-action of

two opposites in force. Duality in action is a trinity in unity, composed of two forces and the resultant; this is the condition of life. Division is the discordant, or disconnected working of two forces, whereby one overpowers the other, acts for a time in sterile isolation and then ceases to exist in that shape or form. This is the condition of change or death. Without intercorrelation, without attraction and repulsion, we are without the attributes of life. As the life of the material universe can thus be traced to magnetism or desire, so all our personal desires have a common aim: sensation, or the realization of life. This is also the law of the Deity!

Tracing special desires back to their causes, I find each to be rooted in the True. Ambition is a perverted love of excellence. Falsehood is a misshapen desire to create. Fame is a restricted thirst for the immortal, and so on with all the originally pure thoughts of the universal mind, which have been appropriated and misconstrued by the elementary nature of man. Division has occurred through man's forcible adaptation of a true principle to personal and selfish ends. He ate the fruit of the tree of knowledge on that day when he first conceived good and evil to be single separate modes of progression, instead of counterbalancing powers working together for the same end and confined to the expression of harmony. He will regain his lost Eden on that day when he can look at every desire in the broad, quiet light of this question: How can I give desire such vent as shall conduce to the benefit of other men? The great watchword of the True is this; in last analysis all things are Divine!

To instance such a mode of dealing with any master passion, we will take up love, itself the basis of all desire. Continuity is said to be the law of laws in the world of effect. Love — the ethical expression of continuity — holds an identical position in the world of cause. Gravitation, polarity, attraction, cyclic necessity:

hope, faith, aspiration; the sum of each and all of these is love. By this force, raised to its highest power, Masters become. Their great attainment consists in this — that they embody the law of love.

It would seem then that we should recognize the existence of this huge force of passion within us, so that we may drag it out on our mental and spiritual planes and clutch it so tight that we are master. This is not done by pretending to ourselves that such and such a propensity does not exist. All things must exist in each one of us, and we must understand them all as a figure of the real. For example — the contest of the sexes. Why do women lure men? Why do men rush after them? And do not women act with those who seek them just as nature does with us? She shows a part, and then retreats behind the bars. Then again she comes out and sometimes throws herself into our arms: this latter not so often. Although men and women differ much, either is to the other the mysterious undiscovered, to be conquered and known. Especially does this attraction come out when we have started upon the path, unless where a person is wholly devoid of it by nature, having burnt it out in other lives. What then are we to do? To yield is a mistake; it is the high spring of the impulse that we must understand, and then stand master of the lower form. This is the method spoken of in the Gita as burning it out in the fire of spiritual wisdom, for being bent upon finding the True, we naturally discard these false disguises. This same fight and self examination is to be carried on with the other traits, such as anger, vanity and so on, not referring it to self, but as sharing in the processes of nature, and for the sake of all those who are deluded by their own perversions of the True.

The heart sends out its impulses in circular and magnetic waves of feeling which surge through the man until they reach the coarse outer shell which renders them into the gross terms of

matter. That does not suffice the inner man, much less the soul, for what they clamor for so loudly in that throb of fire and blood is the large sensation of those rich fields beyond the Gates of Gold. If we could catch that vibration before it reached the outer body, we should find that the inner man gave it a finer meaning, and if we will drop back within ourselves, we may by introspection come to understand somewhat of this higher language. We can arrest the ripples of feeling further and further within ourselves if we will to do it, and work off their impulse by the expenditure of higher energies which reacting, feed the soul itself. When we are attacked by an adversary, the universal mind says "separation"; the individual heart translates "anger." When a current of invincible attraction reaches us, the body shouts "passion," but the pure heart whispers "divine love," and gives a thought or act of brotherhood to all. Ah, my comrades, have not we and desire come together to learn this deathless lesson — that joy enduring is not in matter and that even its most tender love can not long contain the strange, the universal heart of man? We must then re-adjust our comprehension to its real meanings. This great victory can be won by supreme effort, and we are preparing ourselves for it by the daily efforts we do make. We may look to the natural laws of energy and growth for further help, and these will form the subject of another letter.

The Path

THE POETRY OF REINCARNATION IN WESTERN LITERATURE: III

— *E. D. Walker*

CONTINENTAL POETRY

Ever since the time of Virgil, whose sixth Eneid contains a sublime version of Reincarnation, and of Ovid, whose metamorphoses beautifully present the old philosophies of metempsychosis, this theme has attracted many European poets beside those of England. While the Latin poets obtained their inspiration from the East, through Pythagoras and Plato, the Northern singers seem to express it spontaneously, unless it came to them with the Teutonic migration from the Aryan cradle of the race, and shifted its form with all their people's wanderings so that it has lost all traces of connection with its Indian source. The old Norse legends teem with many guises of soul-journeying. In sublime and lovely stories, ballads and epics, these heroic vikings and their kindred perpetuated their belief that the human individuality travels through a great series of embodiments which physically reveal the spiritual character. The Icelandic Sagas also delight in these fables of transmigration and still fire the heart of Scandinavia and Denmark. It permeated the Welsh triads, oldest of all European poetry, and among the early Saxons this thought animated their Druid ceremonies and their noblest literature. The scriptures of those magnificent races whom Tacitus found in the German forests, whose intrepid manliness conquered the mistress of the world, and from whom are descended the modern ruling race, were inspired with this same doctrine. The treasures of these ancient writings are buried away from our sight, but a suggestion of their grandeur is found in the heroic qualities of the nations who were bred upon it. The following selections are representative of the chief branches of

Continental European. Boyesen, although an American citizen, is really a modernized Norwegian. Goethe stands for the Teutonic race, and Schiller keeps him good company though it is difficult to quote distinct evidence from the latter. Victor Hugo and Beranger speak for France, and Campanella represents Italy.

TRANSMIGRATION.

My spirit wrestles in anguish
With fancies that will not depart
A wraith who borrowed my sunbeam
Has hidden himself in my heart.

The press of this ancient being
Compels me forever to do
The phantom deeds of a phantom
Who lived long ages ago.

The thoughts that I feel seem hoary
With weight of centuries bent,
My prestine creative gladness
In happier climes was spent.

My happiest words sound wierdly
With laughter bathed in dread,
A hollow ghost of laughter
That is loathe to rise from the dead.

My tear has its fount in dead ages
And choked with their rust is my sigh,
The haunting voice of a spectre
Will ne'er from my bosom die.

Perchance in the distant cycles
My soul from Nirvana's frost
Will gather its scattered life beams

Rekindling the soul that I lost.

And then I may rise from my graveyard,
And freed at last, may try
The life of a nobler being
In the soul that shall then be I.

— H. H. BOYSEN

THE SONG OF THE EARTH SPIRITS.

IN GOETHE'S "FAUST."

The soul of man
Is like the water
From heaven it cometh
To heaven it mounteth
And thence at once
It must back to earth
Forever changing.

From Victor Hugo's poem:

"TO THE INVISIBLE ONE."

(A CELLE QUI EST VOILEE.)

I am the drift of a thousand tides
The captive of destiny.
The weight of all darkness upon me abides
But cannot bury me.

My spirit endures like a rocky isle
Amid the ocean of fate,
The thunderstorm is my domicile,
The hurricane is my mate.

I am the fugitive who far
From home has taken flight;

Along with the owl and evening star
I moan the song of night.

Art thou not too, like unto me
A torch to light earth's gloom,
A soul, therefore a mystery,
A wanderer bound to roam.

Seek for me in the sea bird's home,
Descend to my release,
Thy depths of cavernous shadows dumb
Illume, thou angel of peace!

As night brings forth the rosy morn
Perhaps 'tis heaven's law
That from thy mystic smile is born
A glory I ne'er saw.

In this dark world where now I stay
I scarce can see myself;
Thy radiant soul shine on my way;
Duty's my guiding elf.

With loving tones and beckoning hand
Thou say'st "Beyond the night
I catch a glimpse upon the strand
Of thy mansion gleaming bright."

Before I came upon this earth
I know I lived in gladness
For ages as an angel. Birth
Has caused my present sadness.

My soul was once a heavenly dove
Thou who all power retains,
Let fall a pinion from above

Upon this bird's remains!

Yes, 'tis my dire misfortune now
To hang between two ties
To hold within my furrowed brow
The earth's clay, and the skies.

Alas the pain of being man
Of dreaming o'er my fall
Of finding heaven within my span,
Yet being but a pall;

Of toiling like a galley slave,
Of carrying the load
Of human burdens, while I rave
To fly unto my God;

Of trailing garments black with rust
I, son of heaven above!
Of being only graveyard dust
E'en though my name is — Love.

THE TRANSMIGRATION OF SOULS.

(LA METEMPSYCOSE.)

In philosophic mood, last night, as I was idly lying,
That souls may transmigrate, methought there could be no
denying;

So, just to know to what I owe propensities so strong,
I drew my soul into a chat — the gossip lasted long.

"A votive offering," she observed, "well might I claim for
thee,

For thou in being had'st remained a cypher but for me.

Yet not a virgin soul was I when first in thee enshrined."

Ah, I suspected, little soul, thus much that I should find.

"Yes," she continued, "yes, of old — I recollect it now —
In humble Ivy was I wreathed round many a joyous brow.
More subtle next the essence was that I essayed to warm —
A bird's, that could salute the skies, a little bird's my form;
Where thickets made a pleasant shade, where
Shepherdesses strolled
I fluttered round, hopped on the ground, my simple lay I
trolled,
My pinious grew, while still I flew, in freedom on the
wind."

Ah, I suspected, little soul, thus much that I should find.

"Medor my name, I next became a dog of wondrous tact,
The guardian of a poor blind man, his sole support in fact.
A trick of holding in my mouth a wooden bowl I knew,
I led my master through the streets, and begged his living
too.

Devoted to the poor, to please the wealthy was my care,
Gleaning as sustenance for one what others well could
spare.

Thus good I did, since to kind deeds so many I inclined."

Ah, I suspected, little soul, thus much that I should find.

"Next, to breathe life into her charms, in a young girl I
dwelt;

There in soft prison softly housed, what happiness I felt!
Till to my hiding place a swarm of cupids entrance gained,
And after pillaging it well, in garrison remained.

Like old campaigners there the rogues all sorts of mischief
did,

And, night and day, while still I lay in a little corner hid,
How oft I saw the house on fire I scarce can call to mind."

Ah, I suspected, little soul, thus much that I should find.

"Some light on thy propensities may now upon thee break,
But prithee, hark! one more remark, I still," says she,
"would make.

'Tis this — that having dared one day with heaven to make
too free,

God, for my punishment resolved to shut me up in thee;
And, what with sitting up at night, with work and woman's
art,

Tears and despair — for I forbear, some secrets to impart,
A poet is a very hell for souls thereto consigned."

Ah, I suspected, little soul, thus much that I should find.

— BERANGER

A SONNET ON CAUCASUS.

I fear that by my death the human race

Would gain no vantage. Thus I do not die.

So wide is this vast cage of misery

That flight and change lead to no happier place.

Shifting our pains, we risk a sorrier case:

All worlds, like ours, are sunk in agony:

Go where we will, we feel; and this my cry

I may forget like many an old disgrace.

Who knows what doom is mine? The Omnipotent

Keeps silence; nay, I know not whether strife

Or peace was with me in some earlier life.

Philip in a worse prison we hath pent

These three days past — but not without God's will,

Stay we as God decrees: God doth no ill.

— T. CAMPANELLA

GOSPELS AND UPANISHADS — *Charles Johnston*

"The principle which gives life, undying and eternally beneficent, is perceived by him who desires perception."

As the clouds are dispelled by the rising sun, so do many things become clear before the growing light of spiritual knowledge. A great initial difficulty is to discern between the lawful and the unlawful, to find the precise boundary between the selfish and the unselfish. Many things which are amongst the lawful, nevertheless seem to be also amongst the selfish; even the first move, the initial devotion to spiritual studies has been stigmatised as selfish, and therefore tainting all that follows. Doubtless it is a difficult task to choose between the sweet and bitter fruit on the tree of knowledge, but still some light may be thrown on the choice.

Let us go back to what is logically, though not perhaps chronologically, the first step in religious consciousness. Religion began, says one of the most discerning students of Christianity, when the first man obeyed the deeper law in his heart, which prompted him to restrain his tendency to selfishness and sensuality, to subordinate them to his higher nature, to sacrifice the ephemeral to the durable. The recognition of the earliest whisper of religious consciousness, he considers the characteristic of Israel; and Israel's mission and place in world history is, in his view, the assertion of this intuition. Israel, he says, felt the moral law more vividly, and obeyed it more faithfully than other nations, and Israel's testimony on the subject is among the most precious of the world's possessions. These views are clear and intelligible, and if we examine the record of Israel's religious consciousness, they will appear of great weight.

(1)

The essence of Religion is antithesis — opposition between two great forces, powers, or qualities; the quality of the terms of the antithesis gives us a clue to the phase of religious consciousness.

Israel's antithesis was between the "law of the eternal" and the "way of sinners." Further examination shows that the second term meant for Israel the various phases of selfishness and sensuality, of the instincts of self-preservation and reproduction. Opposed to these Israel felt another force, the "law of the Eternal." If an adherence to this Law, and a consequent change of the tendency of life, followed its recognition, Israel experienced as the result a feeling of completeness, strength and happiness. He found that after introducing this new factor into his consciousness he was able to "rejoice and shout for joy." But the recognition of the "Eternal which makes for Righteousness," whose earliest manifestation is the voice of conscience, is not merely the introduction of a new factor, it is a complete alteration of the event of life, of the purpose of existence. Formerly the life was lived for pleasure, for the gratification of egotism, for the satisfaction of desire. Now it is lived for the "Lord," for Holiness, for the Eternal that makes for Righteousness.

This is the teaching of the first Covenant to Israel; the second adds to it, and makes it clearer. Its beginning is of course the same, an intuition of the Law of the Eternal, a sense of Righteousness.

The result of developing and using this sense, of rendering perfect obedience to the "Law of the Eternal," is a feeling of happiness, of invigoration, of renewed life. A complete and persistent adherence to this law discloses several facts of great importance. The first is, that at any moment there are two different lives possible for any person — the life in the "world" and the life in the "kingdom of heaven." The first is the life which is based on the

satisfaction of the lower worldly and sensual desires; the second is lived through the development of the higher nature — that part of us which is in touch with the "Eternal." It is a notable fact, or rather an essential characteristic, in the first of these two lives, that the term "satisfaction of desire" is really incorrect, for the essence of "desire" is the impossibility of satisfying it, the fact that just as the object desired, and eagerly pursued, appears within reach, just as the hand is stretched out to seize it, it suddenly starts away again to an infinite distance. Examples of this truth might be multiplied indefinitely; for example, who has ever known of a rich man come to the conclusion that he had gathered enough wealth, and that it was undesirable to add to it? This fact has been poetically expressed in several forms; its brighter aspect has been symbolised as a child gathering flowers, who always sees farther on a bloom more beautiful than those within his reach; its dark side is the story of the Dead Sea fruit, outwardly beautiful and tempting, with glossy skin, golden and red, but when tasted turning to ashes in the mouth. The recognition of the insatiate nature of desire leads to a complete abandonment of the life in the "world," and an entire devotion to the life in the "Eternal," this change of poles being described as a "death unto sin, and a new birth unto Righteousness." The two chief elements of the life in the "world" which must be annihilated before the life in the "Kingdom" can take its place, are enjoyment of the body, and the existence of the egotism, — the centre of the forces which make up the lower nature.

When this is done and perfect adherence to the law of the "Eternal" is substituted, another fact is discovered. This is the possibility of gradual assimilation to this law, until absolute identification with it takes place. When this identification is complete, the conditions of the "Eternal's" own existence are shared with the added life; a feeling of power, of freedom from

death and dissolution, of permanence and eternalness is experienced. This is "inheriting the Kingdom," and "drinking the Water of Life." The new Life is found to be independent of the condition of time, of past, present and future; no temporal considerations apply to it, no such thing as death is possible: this is the true doctrine of the "immortality of the soul" or rather of "the reality of Eternal life." A modern philosopher perceived this clearly when he wrote — "To truth, justice, love, the attribute of the Soul, the idea of immutability is essentially associated." Jesus living in these moral sentiments, heedless of sensual fortunes, heeding only the manifestation of these, never made the separation of the idea of duration from the essence of these attributes, nor uttered a syllable concerning the duration of the soul. In the flowing of love, in the adoration of humility, there is no question of continuance. The soul is true to itself, and the man in whom it is shed abroad cannot wander from the present, which is infinite, to a future which would be finite. "These facts of religion, the sense of Righteousness, and the life in the Eternal, are as verifiable as that fire burns and that water is wet." It should not be supposed that this is intended to convey the idea that they are easy and simple matters; far from it, they are the most difficult things possible. The world's materialism, the prevailing religious ideas, the neglect of your intuition, the dominance of desires, all these complicate the nevertheless absolutely verifiable problem, just as a polar ice-field, far from all fuel, complicates the problem of demonstrating that fire is hot, or the sandy Arabian desert, makes it no easier to prove that water is wet. Difficulties which are certain to occur have been stated many times, and need not be repeated. The answer, therefore, to the problem of the precise extent of selfishness is that everything which belongs to the temporary, illusory life — the life in the "world" is selfishness, while everything which belongs to my true life, the life in the Eternal, is unselfish, is my eternal birthright,

and imperative to be done.

The case may be also stated thus, all things tend to fulfil the law of their nature. The plant tends to produce leaves, branches and fruit; if prevented it droops, withers and dies. The soul seeks stability, strength, peace; not finding these it fails to fulfil its law, suffering and sorrow are the inevitable result. All actions that do not help me to fulfil the law of my nature are wrong; such are all things selfish and sensual; from them never arise peace and happiness, nor ever can. But everything which tends to the fulfilment of the perfect law is my unalienable right and necessity; as light and water are the indispensables of the plant. Such is the answer that the religion of the gospels gives to our problem, if we interpret it on the lines of one of its most enlightened advocates. Yet in spite of this intuitional grasp of Christianity — the outcome of the religious Semitic mind — or perhaps on account of this very sympathy with it, this same critic shows an almost entire inability to master the expression of Aryan religious feeling. Alluding to the theory of the author of "La science des religions" that Christianity is only cloudy Aryan metaphysics, he says "such speculations take away the breath of the mere man of letters." Burnouf conceives the object of Aryan faith to be that idea of the Absolute which the Semitic mind could never grasp; a conception, or rather a non-conception resembling the "Unknowable" of Herbert Spencer. But what appears to me the true Aryan faith teaches something quite different from Herbert Spencer's "Unknowable Absolute". It was hardly the doctrine of the Absolute Schopenhauer spoke of, when he said, "it has been my solace in life, it will be my solace in death." It is hardly devotion to the Unknowable that makes the Hindu eat religiously, live religiously and die religiously. Such emotion for the Abstract Vast is hardly within the power of the mere mortal. It seems to me that the true Aryan faith is the doctrine of the Atma

or Highest Self. The Self stands apart, silent, unmoving, eternally at rest. It is reflected in the phenomenal world, as the sun is reflected in a stream. When the Highest Self is reflected in that bundle of objectivities called a body the illusion of the egotism or delusive self is created, which causes the expressions "I" and "mine" to be attributed to the body. The various changes and disturbances in the bundle of objectivities cause perturbation of the illusory self as the wind blowing on the stream causes disturbance of the image of the sun. The true Self, like the sun, remains unmoved and changeless.

The idea of self-hood is applied to the egotism by Illusion. I have seen an illusionary identification of interest in an external object cause as lively emotion as physical pain: for example, I have seen a person suffer as keenly when a china vase fell and was broken, as if the accident had happened to a part of the body. The Illusion produces a pseudo-sensation of the injury to the vase, just as if it were penetrated by real sensory nerves. Exactly similar is the illusion by which interest is involved in the body or the egotism. They have not the property of self-hood, any more than the vase. Whenever sleep overtakes us, both body and personality cease to exist as far as our consciousness is concerned. Shall we then make a god of this twelve hours' potentate? who only requires the approach of night to banish him from existence. The essential quality of self-hood which our consciousness demands is absolute and inviolable permanence. Whatever once really exists can never cease to exist. Our Highest Self, our Atma, we perceive within us, or rather, perception takes place, what is called perception being the first undefined motions of essential Being struggling to assert itself. The gradual perception of the fact that the illusory personality is not the true Self, the slow realisation of the true Self, the consequent detachment of interest from the personality, the transfer of interest to the Highest Self. These form

some of the first steps of the Aryan doctrine. But before perception can take place, before the true Self can dawn on the mind, all evil desires must cease. "He who has not first turned away from his wickedness, who is not tranquil with passions subdued, he can never obtain the Self." (2) Thus we found that the faith of the gospels teaches that the evil passions must be overcome before the life in the eternal can be reached. For the Self in the Eternal, and the life of the Highest Self in Eternal life. Another truth in the Aryan doctrine, involved in the very term Highest Self, is thus expressed: "There is one eternal thinker, thinking non-eternal thoughts, who though one fulfils the desires of many, the wise who perceive him in their self, to them belongs peace and not to others." This recognition of the Ancient in the Self is thus expressed by Jesus — "I and the Father are one." The gradual recognition that the Highest Self is really your self, the realiest part of you, is the Aryan way of expressing the Semitic idea of *becoming* the Eternal. It is really becoming gradually aware of the fact that you have been the Eternal all the while and had forgotten it. The "one who fulfils the desires of many", is the self, and this statement of the fact that this self is my self, your self and every one else's self, is semitically expressed thus, "love your neighbors as yourself." This unity of self in many apparently different selfs is the metaphysical basis of the doctrine of universal Brotherhood. Progress begins with an intuitive perception, in the gospel of the inferiority of the law of the "world" and of the majesty of the law of the Eternal, in the Upanishads of the non-essential nature of the egotism, and of the divine pre-eminence of the Highest Self. Without this initial intuition it is difficult to understand how progress could take place. To minds of one type it will take the Semitic, to minds of another it will take the Aryan form. Recent teaching has declared "within you is the light of the world — the only light that can be shed upon the path. Seek out the way by making the profound

obeisance of the soul to the dim star that burns within. Steadily as you watch and worship, its light will grow stronger, then you may know that you have found the beginning of the way, and when you have found the end its light will suddenly become the infinite light." This initial perception leads to a resolute destruction of the lower nature; when this is completed the Highest Self will be clearly perceived. It was the instinctive struggle of the nature to establish the true relation between the Highest Self and the egotism which led to the primary intuition. Let those who desire to possess this intuition, but do not yet possess it, take courage, for the aspiration is the sure precursor of perception, as the dawn is of the day. First comes this desire, or rather, aspiration towards spiritual life, then comes intuitional perception of the Highest Self. The Eternal which is struggling, as it were, to free itself from the bonds of matter, gradually frees itself till at last it is entirely liberated and starts away an infinite distance from matter, across an impassable gulf, and then comes perception of the fact that it was not really the Highest Self at all which was enthralled. A few of the teachings of the Ayran doctrine concerning the Highest Self may help us here. "The self, the Ancient is unborn eternal, everlasting; he is not killed though the body is killed. If the killer thinks he kills, if the killed thinks he is killed, they do not understand. The knower, the self, is not born; it dies not. When all desires that dwell in the heart cease, then the mortal becomes immortal and obtains the Highest. The wise man who by means of meditation or his self, recognises the Ancient — (who is difficult to be seen, who has entered into the dark, who dwells in the abyss) — as God he indeed leaves pleasure and pain far behind; he rejoices because he has obtained a cause for rejoicing. The sun does not shine there, nor the moon, nor the stars; when He shines, everything shines after Him. "Having conquered the desires of the egotism, having overcome the illusion of the body," stand aside in the battle and look for the warrior. Obey him as

though he were thy self, and his spoken words were the utterance of thy secret desires. He is thy self, yet thy art but finite, and liable to error. He is eternal and sure. He is eternal truth. When once he has entered thee and become thy warrior, he will never utterly desert thee, and at the day of the great peace he will become one with thee."

"Ye are not bound! the soul of things is sweet,
The Heart of Being is celestial rest;
Stronger than woe is will: that which was good
Doth pass to better — Best."

FOOTNOTES:

1. For all that, in the opinion of the students of the True Law, it was not from a vivid feeling and strict obeying of the moral law that Israel holds such a place in Western religious thought, but because the progenitors of the Jews were Adepts possessing high powers, who by prostituting those to selfish ends, fell from their high estate, while at the same time they retained many high traditions regarding both the moral law and occult wisdom. David and Solomon are examples of some of the greatest of those Adepts falling like stars from heaven. — [Ed.] ([return to text](#))

PAPYRUS — *Rameses*

The Tale-teller, shading his gentle eyes from the evening sun, paused a moment while he listened to the soft strains of the music as it floated out from the open Temple. The joyous crowd swept by unheeding, except for one or two who dropped out of the current and were left stranded among those who had gathered at his feet. Presently he came back from the realm of harmony whither he had drifted, and as the world-light once more stole over his face he told the tale of:

"THREE WHO SOUGHT OUT THE WAY."

Word had gone forth over all lands "that all who sought earnestly and in the true manner should find the way to the mysterious Temple of the Veiled Goddess."

Three kings of the land, moved by the power of the words, determined that they also would become students and reach the goal.

Intu, the Illustrious, making ready for the search, deemed nothing else could be more potent in his quest than the seal of his kingdom. Thereupon he bound on his forehead the Great Seal, a hawk.

Kour, the Magnificent, making ready for the way thought nothing could be more powerful in his searching than the seal of his kingdom. Making ready he bound upon his breast the Great Seal, a golden heart.

Kadmon, the Sorrowful — a king only by sufferance, for his kingdom consisted only of that which the others did not value — Kadmon deemed it wise also, inasmuch as they would all journey

together, to take his seal; which was the two others in union; but furthermore, he blindfolded his eyes.

The Three passing onward encountered many strange and unfamiliar things, for the road was new, and no wayfarer could know more than one step onward, which was the one he was then taking. Upon each side, and frequently in front, barring the way, were curious objects, sometimes pleasant and agreeable, but more often quite the reverse. The foliage of the trees was new and strange, while the fruits were perplexing in their incongruity. At times the same fruits grew on different sorts of trees, while at others the same sort of trees bore entirely dissimilar fruits. The path which they were pursuing was quite the opposite of an ordinary one, for before them it was visible but one step, while it stretched far into the distance behind them. Intu, however, had already made all plain to himself by a process of reasoning entirely his own. It was, that these things being the direct opposite of all in his own country which he ruled, therefore they could only be caused by some one different from himself — a superior being, that being must be the Goddess — therefore they were upon the right path, at least he was.

Kour thought these things delightful, they were so strange, so new. In fact they were phenomenal and he loved phenomena. They gave him such queer sensations, and anything which did that or made him feel other than when in his own land — must be caused by the Goddess — oh yes, they were on the right path, at least he was. As for Kadmon he seeing none of these things, could only judge by that which he remembered of his own country. Each of the others told him of their existence in their own way. This was confusing. He determined, therefore, to walk onward as if he were in his own land, but to press steadily on. They were thus, in reality treading three separate paths, and in their several ways they passed many persons who had stopped to rest — to eat

or sleep — or because the way was dark and difficult; some because they were too poor, others because they were ill, footsore or blind. Intu lost some time, for he stopped to argue with many on the peculiarities of the way and the logical reasonableness of it, but he had no time to pause for aught else.

Kour felt for the wayfarers, he was sorry for and loved them. If they would only feel as he did they could go on easily, but he had no time to stop to make them feel that way.

Both Intu and he had all such people in their own lands. There was no time to waste on natural things. It was the supernatural in a metaphysical or soul-stirring way they sought.

And Kadmon, the Sorrowful, paused. In his land these were to be found also. He too realized the reasonableness of the way. He too loved it and was exalted by it. He too felt for and loved the other wayfarers. He did more — he sorrowed for them. What mattered it if he did not find the temple immediately, he was young, the others growing old and blind, they were sorrowful and weary. So he stopped and gave his thoughts and help to the ill, cheering the weary, helping the poor, and blindfolded as he was, led the blind over the step he had just passed. So interested did he become in these labors he forgot he was himself seeking the Goddess.

It was but a little distance farther on that they caught up with Intu, which was not surprising as he had reached the end of his path. It had ended at a stone wall. As he could not scale the wall, he sat down to reason "why an ordinary stone wall should obstruct such an extraordinary path?" Being a very perplexing intellectual problem — there he remained. A little farther and Kour was passed. He had encountered a radiant maiden, partially veiled, who told him wondrous tales of strange happenings. Her manner was very mysterious, and he felt she was the Goddess. Taking her hand in his and leaning his head upon her bosom, he

was so happy that he knew she was the Goddess and there he remained to dream.

And Kadmon, tarrying with the sorrowful and weary, felt the bandage slip from his eyes, as the light from the rising sun streaming in red and gold over the path fell upon and glorified the ragged wayfarers. In the brilliance over their heads he read the words: "This way lies the path to the Temple" while a soft voice breathed into his soul: "By the way of Intu alone, the path is not found. By that of Kour alone, it is not gained. Both wisely used in unison are guides while on the road. By something, which is greater than either, only, is the Temple reached. Work on!"

And the sorrowful, taking in his own, the hands of the weary and weak, passed on.

The Path

NOTES ON THE ASTRAL LIGHT: III — *B. N. Acle*

FROM ELIPHAS LEVI'S WORKS

(*Continued.*)

To be able to command this agent, is to be the depository of the power of God Himself: all effective Magic, all real power, is there: and all books of true science have no other aim than to demonstrate this. In order to command this great magical agent two things are necessary — to *concentrate*, and to *project*. On one of the arms of the Androgyne of Henri Khunrath, is inscribed "COAGULA:" on the other, "SOLVE," — to concentrate, and to expand, are the two master words of Nature: but how can we "concentrate," or "expand," the Astral Light, the soul of the world? Concentration may be effected by isolation, and expansion by the magic chain. But he who has prejudices or fears, who is passionate, or a slave of his passions, can never concentrate nor coagulate the Astral Light. All true Adepts have been self centred, sober, and chaste even unto death: and the reason of this is, that in order to be master of a force, it must not be permitted to have dominion over us.

To form "the magic chain," is to establish a magnetic current, which becomes powerful in proportion to its length. Enthusiasm is contagious, because it is only produced by settled faith: and faith begets faith; to believe, is to will with reason; to will with reason is to will with a power. I do not say infinite, but indefinite.

All enthusiasm propagated in a society by means of regular practices and communications, creates a magnetic current, and conserves and augments itself by means of this current. The tendency of this current is to carry away and exalt, often beyond

measure, persons of a weak or impressionable nature, those of nervous organisms, and temperaments predisposed to hysteria or hallucination: such persons become powerful media of communication of the magic force, and facilitate the transmission of the Astral currents: To oppose the manifestations of such currents, therefore, is, as it were, to fight against fate. When the young Pharisee, Saul, threw himself with all the fanaticism of a head-strong sectary, against the overwhelming spread of Christianity, he placed himself, without knowing it, at the mercy of that power he thought to combat: accordingly, he was thunder-struck by a terrible magnetic flash, which was rendered more instantaneously effective, no doubt, by the combined action of a cerebral congestion and a burning sun.

There are some sects of enthusiasts at whom we may laugh — while at a distance — but in whose ranks we enlist, in spite of ourselves, as soon as we come within the sphere of their influence. These magnetic circles and magnetic chains sometimes establish themselves automatically, and influence, in accordance with fatal laws, those who expose themselves to their action: every one of us is perforce drawn into such a circle of relations, which constitutes his world, and to whose influence he must submit.

Great cycles make great men, and vice versa: there are no "misunderstood geniuses:" there are "*eccentric*" men, and the word is so admirably descriptive, that it seems that it might have been invented by an Adept. The eccentric man of genius is he who seeks to establish a circle for himself by combating the forces of central attraction and the established currents: his fate is either to be crushed in the struggle, or to succeed.

The man of genius is he who discovers a real law, and consequently possesses an invincible power of action and

direction: he may possibly die in the accomplishment of his work, but what he wills comes to pass in spite of his death, and often even because of it, for death is a veritable assumption: "If I be lifted up" said the greatest of Initiates, "I will draw all men unto me."

The law of magnetic currents is the law of the movement of the Astral Light: this movement is always double and propagates itself in contrary directions. A great action always opens the way for a great reaction, and the secret of consummate success lies solely in the ability to foresee reactions. To oppose one's self to a current that is beginning to run its circle, is to court destruction: to oppose a current that has run through its circle, is to take lead of the reflex currents: the great man is he who appears at the right moment, and can decipher the meaning of the new movement.

The various phenomena which have lately excited so much interest in Europe and America, the rapping tables, and fluidic manifestations, are merely magnetic currents which are beginning to form spontaneously; and are, in fact, the solicitations of Nature, inviting us, for the good of Humanity, to form again the great sympathetic and religious chain: for the stagnation of the Astral Light means the annihilation of the human race: and even the stagnation of this agent is from time to time manifested, by terrifying symptoms of decomposition and death: Cholera Morbus, for example, and the diseases of the grape, and the potato, have no other cause than this. All the mysterious movements of tables are attributable to this universal magic agent; which seeks a chain of enthusiasms, in order to form new currents: it is a force blind in itself, but which may be directed by the will of man: and it is influenced by prevailing opinions: this universal fluid, if we may so call it, being the common medium of all nervous organisms, and the vehicle of all

sensitive vibrations, establishes between persons of an impressionable nature, an actual physical solidarity, and transmits, from one to another, the impressions of imagination and thought.

The movement of an inert body, determined by the undulations of the universal agent, obeys the dominant impression, and reproduces in its revelations sometimes the lucidity of the most marvellous visions, sometimes the oddity and deception of the most incoherent dreams.

Thus, the extravagances of the ecstasies of St. Medard, the phenomena of raps in furniture, of musical instruments playing apparently of their own accord, are all illusions produced by the same cause.

The exaggerations which are induced by that fascination which is a peculiar intoxication, caused by the congestion of the Astral Light, the oscillation impressed on inert matter by the subtle and universal agent of movement and of life is all that there is at the bottom of much that is so apparently marvellous, as one can easily convince himself, by producing them, at will, by following the directions laid down in the "*Dogma and Ritual*"

The Path

"THE WORD" — F. Hartmann

I have read with great interest the excellent article entitled "Heralds from the Unseen" in the April number of *THE PATH*, and which expresses my own views perhaps more completely than I expressed them in an article to the *Theosophist*, to which reference is made, and which seems to have given rise to some misconception. It is, however, stated in my paper on "Occultism in Germany," that a beginner may obtain a certain *Word* by a "Master" to practice, which would just suit his condition, and Mr. Niemand asks: "Why should an Adept be needed when Ishwar resideth in the breast of every mortal being." It is perfectly true that Ishwar resides in every human heart; but not everyone is able to hear distinctly what he says, or to recognize his presence there. In my opinion the practical "Word" serves the especial purpose to bind and control one's thoughts and to raise the vibrations within, so as to bring them into harmony with that Light which one desires to enter so that we may recognize the Ishwar within ourselves. Mr. Niemand says: "Whatever tends to raise the vibration is of value. Your intuitions must direct you to a wise adminture." Supposing, however, that your own intuitions are not sufficiently strong to be unmistakably understood by you, or — in other words — that you are not yet enough spiritually advanced to understand the voice of the Ishwar within; would it not be useful to obtain instructions, such as exactly suit your condition from some Adept, or through the instrumentality of some one through whom the Ishwar can speak comprehensibly to your lower self? Surely an Adept cannot do the thinking or growing for another person; but he may guide a person either by the silent influence of his thoughts or by giving him verbal or written instructions. He may thus aid the disciple, so that the

latter may find his own *Master* within himself, which is the only Master that anyone is entitled to worship, because it is each one's own Higher Self.

In that article "Occultism in Germany" it is stated that the exercise of charity, or the promulgation of doctrines, etc., are not sufficient for practical progress, and Mr. Niemand thinks that by making this statement virtue has been somewhat belittled. If so, the *Bhagavad-Gita* might be construed as belittling it likewise; for it belittles those works which — although being considered good — are the outcome of Rajo-Guna. (1) There are millions of people who perform acts of charity from some motive or other, or who attempt to teach others things of which they know little themselves, and who nevertheless — or perhaps on account of their motives — make very little progress in the knowledge of self. One of the main points besides the practice of universal charity without any selfish interest, seems to be not only the control of the passions, but also to obtain perfect mastery over one's own *thoughts*. The practice of the "Word" seems to be the most efficient method to learn how to control one's thoughts, as it forces the latter to remain concentrated upon that word. The reason why many "Yogees" practice the pronunciation of OM often for years without any apparent progress, may be due to the cause that they pronounce it with their lips and not with their hearts. In such a case this practice will be as useless as the repetition of a litany, while the mind is wandering without restraint wherever it pleases. It can furthermore not be immaterial what Word or object a person selects to rest his thoughts upon, as every word corresponds to a certain idea, and the mind should rest upon the highest conception which it is able to grasp; nor can we grasp anything which is not within ourselves, and before we can grasp it fully and comprehend it intellectually, we must first be able to feel it within ourselves. The great mistake

which our "psychical researchers" make, is that they attempt to hunt in externals for things which they can only find within themselves, and that they seek to understand intellectually things which they do not feel, or which — if they feel them — they reject and call "hallucinations."

It seems, moreover, that besides the above mentioned use of the "Word" if practiced properly, there is an occult power connected with this practice by which some spiritual forces may be set in motion, which will tend to awaken the spiritual consciousness. This power has already been referred to in Mr. Niemand's article.

Spiritual life surely consists in giving up the idea of self; and even for that purpose the practice of the Word seems to me highly useful, because he who practices it properly, does not think of himself, but of a condition which is superior to self. What else can the practice of the Word be, but a fervent prayer, spoken by the soul, with a full concentration of mind; a prayer which is at the same time a command, by which the king within assumes mastery over the animal forces? What else can it be but a simultaneous exercise of thought and Will, such as is said to take place in the bosom of Brahm at the beginning of each Manvantara? (2) If God in his own essence said at the beginning: "Let there be Light;" and it was Light, why could not the God in Man repeat the process, and say within his own heart, firmly and full of devotion. "Let there be Light," and is it not possible that it might then become light within; provided the words are properly pronounced, not with the lips, but with the thought and the Will.

It may be that a person can get along well enough without receiving any instruction or help from Adepts, provided he is without such aid able to find the "Lord of all worlds," and there are also others who, when they heard of the Adepts, have begun to seek only for them, instead of seeking for the Master within,

but there are also those who desire the truth for its own sake and do not possess sufficient wisdom to find it unaided; and to those the Adepts may give their aid, perhaps invisibly and unconsciously to the former, provided they deserve it by seriously desiring to give up their own selves. Such at least seems to have been the prevalent belief even in the most ancient times, and all the forms of initiation as well as modern church-institutions and educational arrangements are based upon the supposition that those who know a great deal can inform those who know less, and benefit them thereby. This truth is too self-evident to need any explication.

I am glad that Mr. Niemand has called attention to this question, as it shows that in speaking about occult matters it is necessary to be very explicit to avoid being misunderstood.

FOOTNOTES:

1. There is no real difference between the author and Jasper Niemand. Bhagavad-Gita allows that "works" must be performed, but always insists on Charity and Devotion. This Devotion is to be directed toward the One Life, and until all acts are performed with that in the mind, there will be constant rebirths. — [Ed.] ([return to text](#))

2. Manifestation of a world or system. — [Ed.] ([return to text](#))

THE POETRY OF REINCARNATION IN WESTERN LITERATURE: IV
— *E. D. Walker*

The largest inspiration of all Western thought is nourished by the Academe. Not only idealism but the provinces of philosophy and literature hostile to Plato are really indebted to him. The noble loftiness, the ethereal subtlety, the poetic beauty of that teaching has captivated most of the fine intellects of mediaeval and modern times and it is impossible to trace the invisible course of exalted thought which has radiated from this greatest Greek, the king of a nation of philosophers.

Adopting Emerson's words "Out of Plato come all things that are still written and debated among men of thought. Great havoc makes he among our originalities. We have reached the mountain from which all these drift boulders were detached. The Bible of the learned for twenty-two centuries, every brisk young man who says fine things to each reluctant generation is some reader of Plato translating into the vernacular- his good things * * How many great men nature is incessantly sending up out of the night to be *his men* — Platonists! the Alexandrians, a constellation of genius; the Elizabethans, not less; Sir Thomas More, Henry More, John Hales, John Smith, Lord Bacon, Jeremy, Taylor, Ralph Cudworth, Sydenham, Thomas Taylor. Calvinism is in his *Phaedro*. Christianity is in it. Mahometanism draws all its philosophy, in its hand book of morals, the *Akhlak-y-Jalaly*, from him. Mysticism finds in Plato all its texts. "We know not how much of the world's later poetry is due to the suggestion and nurture of the poet-philosopher. But in closing our studies of the poetry of Reincarnation it may be of interest to group together the avowed Platonic poets.

Most illustrious of all the English disciples of this master, in the brilliant coterie of "Cambridge Platonists," was Dr. Henry More whom Dr. Johnson esteemed "one of our greatest divines and philosophers and no mean poet." Hobbes said of him that if his "own philosophy was not true he knew none that he should sooner adopt than Henry More's of Cambridge;" and Hoadley styles him "one of the first men of this or any other country." Coleridge wrote that his philosophical works "contained more enlarged and elevated views of the Christian dispensation than I have met with in any other single volume; for More had both the philosophical and poetic genius supported by immense erudition." He was a devout student of Plato. In the heat of rebellion he was spared by the fanatics. They pardoned his refusal to take their covenant and left him to continue the philosophic occupations which had rendered him famous as a loveable and absorbed scholar. He wove together in many poems a quaint texture of Gothic fancy and Greek thought. His "Psychozoia" or "Life of the Soul," from which the following verses are taken is a long Platonic poem tracing the course of the soul through ancient existences down into the earthly realm. Campbell said of this work that it "is like a curious grotto whose labyrinths we might explore for its strange and mystic associations." Dr. More was an intimate friend of Addison and long a correspondent of Descartes.

PLATONIC POETS ON REINCARNATION.

From Henry More's "Philosophical Poems" (Psychozoia).

I would sing the pre-existency
Of human souls and live once o'er again
By recollection and quick memory
All that is passed since first we all began.
But all too shallow be my wits to scan

So deep a point and mind too dull to climb
So dark a matter. But thou more than man
Aread, thou sacred soul of Plotin dear
Tell me what mortals are. Tell what of old they were.

A spark or ray of divinity
Clouded with earthly fogs, and clad in clay
A precious drop sunk from eternity
Spilt on the ground, or rather slunk away.
For then we fell when we 'gan first t'essay
By stealth of our own selves something to been
Uncentering ourselves from our one great stay
Which rupture we new liberty did ween
And from that prank right jolly wits ourselves did deem.

Show fitly how the pre-existing soul
Enacts and enters bodies here below
And then entire unhurt can leave this moul
In which by sense and motion they may know
Better than we what things transacted be
Upon the earth, and when they best may show
Themselves to friend or foe, their phantasmay
Moulding their airy arc to gross consistency.

Milton imbibed from his college friend Henry More an early fondness for the study of Plato, whose philosophy nourished most of the fine spirits of that day and he expresses the Greek sage's opinion of the soul in his Comus:

The soul grows clotted by oblivion
Imbodies and embrutes till she quite lose
The divine property of her first being;
Such as those thick and gloomy shadows damp
Oft seen in charnel vaults and sepulchres
Lingering and setting by a new made grave

As loth to leave the body that it loved.

Milton's Platonic proclivities are also shown in his poem "On the Death of a Fair Infant:"

Wert thou that just maid, who once before
Forsook the hated earth, O tell me sooth,
And came'st again to visit us once more?
Or were thou that sweet smiling youth?

Or any other of that heavenly brood
Let down in cloudy throne to do the world some good?
Or wert thou of the golden-winged host,
Who having clad thyself in human weed,
To earth from thy prefixed seat did'st post,
And after short abode fly back with speed
As if to show what creatures heaven doth breed.

Thereby to set the hearts of men on fire
To scorn the sordid world and unto heaven aspire.

In the old library of poetry known as Dodsley's Collection, is a Miltonic poem by an anonymous Platonist which is very interesting and as it is difficult of access we quote the best part of it:

PRE-EXISTENCE.

IN IMITATION OF MILTON.

Now had th' archangel trumpet, raised sublime
Above the walls of heaven, begun to sound;
All aether took the blast and fell beneath
Shook with celestial noise; th' almighty host
Hot with pursuit, and reeking with the blood
Of guilty cherubs smeared in sulphurous dust,
Pause at the known command of sounding gold.
At first they close the wide Tartarian gates,

Th' impenetrable folds on brazen hinge
Roll creaking horrible; the din beneath
O'ercomes the war of flames, and deafens hell.
Then through the solid gloom with nimble wing
They cut their shining traces up to light;
Returned upon the edge of heavenly day
Where thinnest beams play round the vast obscure
And with eternal gleam drives back the night.
They find the troops less stubborn, less involved
In crime and ruin, barr'd the realms of peace,
Yet uncondemned to baleful beats of woe,
Doubtful and suppliant; all the plumes of light
Moult from their shuddering wings, and sickly fear
Shades every face with horror; conscious guilt
Rolls in the livid eye-ball, and each breast
Shakes with the dread of future doom unknown.

'Tis here the wide circumference of heaven
Opens in two vast gates, that inward turn
Volumnious, on jasper columns hung
By geometry divine; they ever glow
With living sculptures, they arise by turns
To imboss the shining leaves, by turns they set
To give succeeding argument their place;
In holy hieroglyphics on they move.
The gaze of journeying angels, as they pass
Oft looking back, and held in deep surprise.
Here stood the troops distinct; the cherub guard
Unbarred the splendid gates, and in they roll
Harmonious; for a vocal spirit sits
Within each hinge, and as they onward drive,
In just divisions breaks the numerous jars
With symphony melodious, such as spheres
Involved in tenfold wreaths are said to sound.

Out flows a blaze of glory: for on high
Towering advanced the moving throne of God.
Above the throne, th' ideas heavenly bright
Of past, of present, and of coming time,
Fixed their immoved abode, and there present
An endless landscape of created things
To sight celestial, where angelic eyes
Are lost in prospect; for the shiny range
Boundless and various in its bosom bears
Millions of full proportioned worlds, beheld
With steadfast eyes, till more arise to view,
And further inward scenes start up unknown.
A vocal thunder rolled the voice of God
Servants of God! and virtues great in arms
We approve your faithful works, and you return
Blessed from the dire pursuits of rebel foes;
Resolved, obdurate, they have tried the force
Of this right hand, and known almighty power;
Transfixed with lightning down they sunk and fell
Into the fiery gulf and deep they plunge
Below the burning waves, to hide their heads.
For you, ye guilty throng that lately joined
In this sedition, since seduced from good,
And caught in trains of guile, by sprites malign
Superior in their order; you accept,
Trembling, my heavenly clemency and grace.
When the long era once has filled its orb,
You shall emerge to light and humbly here
Again shall bow before his favoring throne,
If your own virtue second my decree:
But all must have their races first below.
See, where below in chaos wondrous deep
A speck of light dawns forth, and thence throughout

The shades, in many a wreath, my forming power
There swiftly turns the burning eddy round,
Absorbing all crude matter near its brink;
Which next, with subtle motions, takes the form
I please to stamp, the seed of embryo worlds
All now in embryo, but ere long shall rise
Variously scattered in this vast expanse,
Involved in winding orbs, until the brims
Of outward circles brush the heavenly gates.
The middle point a globe of curling fire
Shall hold, which round it sheds its genial heat;
Where'er I kindle life the motion grows.
In all the endless orbs, from this machine;
And infinite vicissitudes that roll
About the restless center; for I rear
In those meanders turned, a dusty ball,
Deformed all o'er with woods, whose shaggy tops
Inclose eternal mists, and deadly damps
Hover within their boughs, to cloak the light;
Impervious scenes of horror, till reformed
To fields and grassy dells and flowery meads
By your continual pains. Here Silence sits
In folds of wreathy mantling sunk obscure,
And in dark fumes bending his drowsy head;
An urn he holds, from whence a lake proceeds
Wide, flowing gently, smooth and Lethe named;
Hither compelled, each soul must drink long draughts
Of those forgetful streams, till forms within
And all the great ideas fade and die:
For if vast thought should play about a mind
Inclosed in flesh, and dragging cumbrous life,
Fluttering and beating in the mournful cage,
It soon would break its gates and wing away:

'Tis therefore my decree, the soul return
Naked from off this beach, and perfect blank
To visit the new world; and wait to feel
Itself in crude consistence closely shut,
The dreadful monument of just revenge;
Immured by heaven's own hand, and placed erect
On fleeting matter all imprisoned round
With walls of clay; the ethereal mould shall bear
The chain of members, deafened with an ear,
Blinded by eyes, and trammelled by hands,
Here anger, vast ambition and disdain,
And all the haughty movements rise and fall,
As storms of neighboring atoms tear the soul,
And hope and love and all the calmer turns
Of easy hours, in their gay gilded shapes,
With sudden run, skim e'er deluded minds,
As matter leads the dance; but one desire
Unsatisfied, shall mar ten thousand joys.

The rank of beings, that shall first advance
Drink deep of human life; and long shall stay
On this great scene of cares.
From all the rest That longer for the destined body wait,
Less penance I expect, and short abode
In those pale dreamy kingdoms will content;
Each has his lamentable lot and all
On different rocks abide the pains of life.

The pensive spirit takes the lonely grove;
Nightly he visits all the sylvan scenes,
Where far remote, a melancholy moon
Raising her head, serene and shorn of beams,
Throws here and there her glimmerings through the trees.
The sage shall haunt this solitary ground
And view the dismal landscape limned within

In horrid shades, mixed with imperfect light.
Here Judgment, blinded by delusive sense,
Contracted through the cranny of an eye,
Shoots up faint languid beams to that dark seat,
Wherein the soul, bereaved of native fire,
Sets intricate, in misty clouds obscured.

Hence far removed, a different being race
In cities full and frequent take their seat,
Where honour's crushed, and gratitude oppressed
With swelling hopes of gain, that raise within
A tempest, and driven onward by success,
Can find no bounds. For creatures of a day
Stretch their wide cares to ages; full increase
Starves their penurious soul, while empty sound
Fills the ambitious; *that* shall ever shrink,
Pining with endless cares, while *this* shall swell
To tympany enormous. Bright in arms
Here shines the hero, out he fiercely leads
A martial throng his instruments of rage;
To fill the world with death, and thin mankind.
There savage nature in one common lies
And feels its share of hunger, care and pain,
Cheated by flying prey; and now they tear
Their panting flesh; and deeply, darkly quaff
Of human woe, even when they rudely sip
The flowing stream, or draw the savory pulp
Of nature's freshest viands; fragrant fruits
Enjoyed with trembling, and in danger sought.

But where the appointed limits of a law
Fences the general safety of the world,
No greater quiet reigns; the blended loads
Of punishment and crime deform the world,
And give no rest to man; with pangs and throes

He enters on the stage; prophetic tears
And infant cries prelude his future woes;
And all is one continual scene of gulf
Till the sad sable curtain falls in death.

Then the gay glories of the living world
Shall cast their empty varnish and retire
Out of his feeble views; the shapeless root
Of wild imagination dance and play
Before his eyes obscure; till all in death
Shall vanish, and the prisoner enlarged,
Regains the flaming borders of the sky.

He ended. Peals of thunder rend the heavens,
And chaos, from the bottom turned, resounds.
The mighty clangor; all the heavenly host
Approve the high decree, and loud they sing
Eternal justice; while the guilty troops,
Sad with their doom, but sad without despair,
Fall fluttering down to Lethe's lake and there
For penance, and the destined body wait.

Shelley's Platonic leanings are well known. The favorite Greek conceit of pre-existence in many earlier lives may frequently be found in other poems besides the "Prometheus Unbound" quoted in part II of our series.

The last stanza of ""The Cloud," is Shelly's Platonic symbol of human life:

I am the daughter of earth and water
And the nursling of the sky
I pass through the pores of the ocean and shores
I change, but I cannot die.
For after the rain when with never a stain
The pavilion of heaven is bare

And the winds and sunbeams with their convex gleams
Build up the blue dome of air
I silently laugh at my own cenotaph
And out of the caverns of rain
Like a child from the womb, like a ghost from the tomb,
I arise and unbuild it again.

Another poem entitled "A Fragment," certainly refers to pre-existence:

Ye gentle visitants of calm thought
Moods like the memories of happier earth
Which come arrayed in thoughts of little worth
Like stars in clouds by weak winds enwrought.

Coleridge has embodied his Platonic view of pre-existence in this sonnet, "Composed on a homeward journey; the author having received intelligence of the birth of a son":

Oft o'er my brain does that strange fancy roll
Which makes the present (while the flash doth last)
Seem a mere semblance of some unknown past,
Mixed with such feelings as perplex the soul
Self questioned in her sleep; and some have said
We lived, ere yet this robe of flesh we wore.
O my sweet baby! when I reach my door
If heavy looks should tell me thou art dead
(As sometimes through excess of hope, I fear)
I think that I should struggle to believe
Thou wert a spirit, to this nether sphere
Sentenced for some more venial crime to grieve;
Did'st scream, then spring to meet Heaven's quick reprieve,
While we wept idly o'er the little bier.

In Emerson, the Plato of the nineteenth century, the whole feeling

of the Greek seems reflected in its most glorious development. Many of his poems clearly suggest the influence of his Greek teacher, as his "Threnody" upon the death of his young son, and "The Sphinx" in which these two stanzas appear:

To vision profounder
Man's spirit must dive;
His aye-rolling orb
At no goal wilt arrive;
The heavens that now draw him
With sweetness untold
Once found for new heavens
He spurneth the old.
Eterne alteration
Now follows, now flies
And under pain, pleasure, —
Under pleasure, pain lies.
Love works at the centre,
Heart-heaving alway;
Forth speed the strong pulses
To the borders of day.

Many of the church hymns glow with the enthusiasm of Platonic pre-existence, and are fondly sung by Christians without any thought that, while their idea is of Biblical origin, it has been nourished and perpetuated by the Greek sage, and directly implies reincarnation. For instance:

"I'm but a stranger here, heaven is my home."

"Heaven is my fatherland, heaven is my home."

Mrs. Elizabeth Rowe, the friend of Bishop Ken and of Dr. Isaac Watts, has left this allusion to pre-existence in

A HYMN ON HEAVEN.

Ye starry mansions, hail! my native skies
Here in my happy, pre-existent state
(A spotless mind) I led the life of Gods,
But passing, I salute you, and advance
To yonder brighter realms, allowed access,
Hail, splendid city of the almighty king
Celestial salem, situate above, &c.

The Path

NATURE'S SCHOLAR — *J. Campbell Ver Planck*

There was once an old Scholar who counted his friends by scores in his youth, and had now mislaid or lost them. Early in life he had wandered away from men and things to seek the Truth, and journeyed very far in his search, coming at last to an inheritance of little land and much learning, left him by an antiquarian ancestor. Deep down in quiet country dales he lived upon dreams and moldy books, well loved by all about him, for he never knew the current rates of wage or purchase, nor yet when maids hung gossiping over hedges, and dinner burned in the oven. The simple folk of the country side had their own way with him whom they called "the poor dear soul" and cherished as their own backbone, never letting any man out of their own township serve or despoil him, so much they felt they owed him. Some went so far in gratitude as to say he was not near so old as he looked, for if his hair *was* grey, there were firm, bright eyes and sturdy calves to give age the lie and maintain it. Moreover, the time a band passed through the village, he had been espied by Molly through the door chink, striding up and down, whistling as loud as any boy and cutting the air with his cane in a style far beyond the drum-major. It was the kitchen verdict that he must have been "shocking bad" in his youth; his dinner was done to a turn that night and the maids had new ribbands in their caps and arch provocation on their faces.

Be his age what it might, day after day the Scholar read and wrote, or slowly paced his rustic walks, now amid rose blooms, now upon the sere rustle of leaves or crunch of snow, but always with a faithful old hound to heel on his right, whose head hung low like the master's. Nothing breathed on that homestead that did not seem to have greater right there than the Scholar: the

very toads and lizards sat and swelled for pride of ownership in mossy nooks on his walk, and busy winter birds stood still at his approach, and pecked briskly at the brown boughs won by sun from ice, knowing well that not even creeping things had ever seen cause to turn aside for him. One hoary spider had indeed been seen to think the Scholar would learn more if he took some notice of creatures, but everyone knows that since Bruce introduced a spider to history, the tribe has been hypercritical of the insufficient methods of man. It is certain that the Scholar considered himself a mere sojourner there where he was master, and meant to return to anxious friends when he could carry the Truth to them. But the great tomes of his legacy were many and wise; still he lingered, still he sought, while Time went tiptoe past him.

One morning, as he wrote, a caprice of the Spring wind burst open the study casement. A gush of wild-wood fragrance and the shrill lilt of a girl's voice in song flooded into the room together. Some subtle quality of the voice made him throw down his pen and glance at a picture on his table. From beneath its coating of dust a merry brown eye laughed out at him and a round shoulder gleamed whitely. Taking up this picture, he polished it remorsefully with his worn coat cuff, muttering like one asleep: "Poor Kate! I have kept her waiting long. I cannot give myself to happiness or woman, until I find the Truth."

Straightway upon this came a miracle! His door swung open. There upon his threshold, young and rosy, lap and hair full of blossoms, face full of dimples, stood Kate herself. As the man's eye went from the picture to the woman, the man's heart leaped up hot and strong. He dropped the painted thing and caught the living beauty in his arms. "My Kate! you have waited for me!" Small chance has Truth with her own at times, when velvety cheek is so near and the springtide is yet young!

What said the beauty? She laughed again, and kissed him with the careless, cruel, kindness of youth to age. "Yes, we waited and rang till we were tired, so I came on to explore. Awfully nice of you to know me!"

"But Kate" — he stammered.

"Harriet. I'm not named for Mamma," she rattled on. "Mamma's out there with Papa and the children."

"Children?" gasped the Scholar.

"Yes. Ten, besides me. Don't you hear them?"

Surely he heard them. Ten! they sounded like legions. The mere pursuit of truth is at once a recompense and a protection! Yet even a votary is vulnerable when a young girl goes on to say: "Let me call them, you'll sprain yourself, rushing about so. I shook your nerves; see how your hand trembles."

No wonder, poor Scholar. In that moment he looked double his age, for he — long unacquainted with mirrors — saw for the first time his stooping shoulders, his crows-feet and wrinkles, reflected in her blithe indifference, her attention wandering from him to his surroundings. His dead youth rose up with power, and stared him in the face; then fell away from his heart in ashes.

That heart was staunch though, as are the hearts of those who seek the Truth, so by the time his guests stepped beneath his roof, he stood ready to welcome them with gentle courtesy — his Kate, grown portly, but fresh and good-humored still, and secretly flattered to see, (as she did with the tail of her eye) her portrait so cleanly kept when all else was so dusty, and hoping her husband would not remark it. Her husband, (who would not have cared if he had, she having tapped his single vein of sentiment and run it dry,) a grave, cautious Scientist: a friend of his, a Speculator,

attracted by unlikeness, whose sharp glance bestowed a hypothetical value wherever it fell: these and other friends had hunted the Scholar up to renew old ties in his country home, seeing which, the very cockles of his heart warmed to them. Soon milk was foaming into pails; sounds of beating and churning and frothing arose. Maids scurried in all directions. Slugs disturbed on young green things, and cackling hens in angry session on the barn floor, alike averred that never had such an evil day befallen poultry yard and kitchen garden. "Humph" snarled old Peter: "me airly salad he should not have, an' me meanin' to sell it in market the Saturday, but for his bein' the boss, dang him!" To which Cook replied with much feeling that "Lord knows, I ain't never before seen the poor, dear gentleman ask for his own." Peter glared at her. "Woman! That's just what I am objectin' to. It's the first time makes the *precydent*. He's got the *precydent* on us now," with which mysterious omen hanging over her, Cook retired to her pans and sauces.

The day passed all too quickly, and when the hour for departure came round, the Scholar was so reluctant to part with his friends that he bethought him of making a gift to every one, that some portion of himself might go with them. Gathering them about him, he begged that each would tell him what they had liked best in his home, adding — the wily old Scholar! — that then these things might serve to remind him of friends, and perhaps smile at him in their absence. They were very worldly wise people, however, coming from the city beyond the hills, that city whose knowing lights out-winked the stars, whose mists denied a right of way to the sun himself. So perhaps they saw through his cunning, for all hung back until he said to the Artist: "Come Sir; you have praised my homestead much. What will you crown with your final approbation 'e're you leave me?"

The Artist could but smile back into the genial face bending

towards him. "Why, Sir, the fairest thing you own is one that in itself contains the true rules of all Art. It is as blue as the heavens, and like them, a living lesson in gradation of color, and its form displays the perfect 'line of beauty.'"

The Scholar's gaze sought the dark cabinets on his walls, each rich with its own freight, but the Scientist spoke up with decision. "On the contrary, the finest thing our friend possesses is colorless, formless; its beauty is its utility: its protean energy is a fountain of Power."

"Learning and Art are all very good," chirruped the speculator, flecking off his eyeglass. "But if ever you chance to be hard up, let me choose what possession of yours shall be put upon the market, and you shall pocket its attractions — less commission — in more cash than anything else I see is likely to bring you."

A swift cloud of deprecation passed over the company, as when a breeze ruffles a grain field and there is a stir, a rustle and a withdrawal from the rude intruder. The Scholar's cheek even reddened slightly, seeing which, the Poet hastened to staunch the wound, as is the royal prerogative of poets. "Sir," said he, "you have here an instrument of wonderful sweetness. It tunes ear and brain alike to the sweetest harmonies, and though I must leave it, I take its music with me, captured in my latest song, and all the world shall sing it."

He was a famous Poet, so the rest hastened to agree with him. "As for me," said a youth, gazing ardently at Harriet; "what I admired most was an image of the loveliest woman God ever made; what I envy most seemed to hold her in its arms, and these were one thing."

"And I," said a reproachful youth whom she had jilted, "I liked the one thing that cannot be trampled upon, nor does it change and

grow out of knowledge, like the fickle world around us."

"Fancy! Now for my part the jolliest thing here is always changing, never the same. It's a racer! No women for me!" So spoke the Dandy whom Harriet secretly loved. Stung, she turned away to hide her palpitating bosom, but flung a dart behind her, as girls will. "Diamonds." cried she, "give me our host's ancestral diamonds. Larger ones I never saw. Brilliants! Glorious! such quantities. My heart is set on having just such stones."

Her lovers stroked their callow chins and thought of their salaries, but before the puzzled Scholar could ask for an explanation, her mother took his hand, saying plaintively, "My good friend, next to yourself, what I value most is none of these things they name, but just something in your dairy which makes yours the sweetest cream and butter I ever tasted. How my poor children ever grow up on city fare, a merciful heaven only knows."

Everyone laughed at this touching idea, for just then the "poor children" rushed up with a loud rumble, as of thunder, and precipitated themselves upon the Scholar. The one at the rear, who still had some breath remaining, shouted out; "We never saw such a splendid stream. Don't we wish we had it at home." Their host was about to confess that he had never noticed it, when his voice was drowned in a general exclamation from all the grown people in one breath: "That was what I meant too; it is the stream yonder!"

The astonished Scholar turned to look at his choicest possession, now rosy under the setting sun. Its cascade swept down in a serpentine curve, while part of the water writhed backward from the lip of the fall, making a spiral within a spiral in strange double movement; an ebb and a flow. Below the outpour of life-giving water, six eddies swirled away, each in its own circle, but

interlinked by a current that emptied itself in a larger whirlpool further down. The little wind that rises out of the east at nightfall in the spring, struck coldly across this boiling vortex, condensing its foam into a silvery mist that gathered, rose, took on a graceful wraithlike shape, and floated away, a freed thing to the free ether. The Scholar drew himself up in sudden excitement and wonder, then these words burst from him in a torrent strangely unlike the calm evenness of his accustomed speech. "At last! At last I have found the secret. See" — and he pointed to the cascade — "there is the movement that creates life; it circles through the eddies and out of the whirlpool evolves the new-born life itself, the immortal that seeks the skies. Rejoice with me!"

The tears ran down his cheek, but his voice rang like a bugle and his form had a majesty they could not understand. They fell back a few paces. Their mirth was extinguished, their manners constrained. Like guilty hearts they made hasty farewells, avoiding his eye: their thanks fell crisp and cool on the air, like frost. While still their footsteps pressed his land, drowsy birds in the hedges saw them put heads close together in the shadows and whisper furtively, "Mad! He is mad. What will people say? We will never come again." The branches, closing behind them with a shudder, shed a soft rain of blossoms to obliterate their presence; then twining closer, shut the Scholar forever away from the world and its friends.

Lost in an ecstasy, he stood by the hurrying waters. A Voice called to him from somewhere; a Voice of airy mystery; a soundless but almighty Voice, so that he trembled as he answered, "Lord, here am I."

"Seest thou not, oh, Seeker," said the Voice, "that though Truth wears different garb to different men, it is but the livery of their own minds; beneath it is the One Truth that mirrors forth all the

rest, changeless and resplendent under as many names as there are men? It is to be found in all things in Nature, even as the water is in all things: men pursue its splendor blindfold through the worlds, to find it shining beside their own door."

"And thou, who art thou?" asked the Scholar.

"I am that Spirit which moves above the face of the waters. With Truth I dwell in her supreme abode. Seek me there."

An awful thrill, half fear, half joy ran through the hearer's breast, for these last words resounded from the deeps of his heart. Then he knew the supreme abode of Truth and worshipping in it, he became Nature's Scholar, and she made him young again with that youth which men call Immortality

The Path

THOUGHTS IN SOLITUDE: VIII — *Pilgrim*

What is known in the present day under the name of Theosophy, as has repeatedly been stated, is the primary truth which all the religions of the world alike have enshrined — it may be regarded as the kernel of which the religions have been the husks, and it would seem that in the development of this idea, and in the comparison of the objects aimed at by the various religions and by Theosophy, that we shall best realize the stupendous scope and importance of this divine hidden wisdom.

While some of the religions may have been more transparent husks than others through which the kernel of the wisdom of the ages might be dimly visioned, in other words, while some may contain vague hints of the wider horizon and the more transcendent heights of being, it may generally be stated without making invidious distinctions that the religions of the world as a rule have concerned themselves almost exclusively with the present earth life and the life lying immediately beyond. It is with the rewards and punishments of this state in the immediate future, and with the moral or virtuous thoughts and actions of the present life, which are supposed to be the means of meriting the former and of avoiding the latter, that the priesthoods and the teachers of religion have principally dealt. Indeed, so engrossed in the pursuit of worldly objects have the priesthoods of some religions become that the wider horizon has been completely lost by them.

While the quality of spirituality is but feebly developed in mankind, while the occupations and aims of this present earth life continue to absorb so very much the greater part of the energy of men, and while the intellectual development of those

who have some dim perception of a higher state has still to achieve its period of blossom, the different religions adopted by the various races of men will continue to supply the required needs. But there are a few in each country who have risen above the prevailing level — the forerunners we take it of the mighty coming race, and their numbers are being daily added to — men of thought and feeling who through pain and inward struggle have emancipated themselves from the deadly bonds of superstition, and who have at the same time been too great hearted to fall into the still deadlier grip of the opposing faction that usurps the name of science, and that parades its little aims under the denial of all that is most sacred in humanity — men who by intense imaginative power have grasped and realized all that this life has to give, and have been forced to put it by as failing to satisfy their highest aspirations. For such men the Theosophic advent has been a true Eirenicon. No longer bounded by the dimly imaged heaven which superstitious ignorance stretched into eternity, all life now lies before the impartial student of nature in logical order. The law of absolute justice under the name of Karma, which follows with impartial reward or retribution every act, every word and every thought, is now recognized alike as satisfying the moral conscience of the religious man, and as extending over the whole horizon of man's nature the inevitable sequence of cause and effect which the scientists have shown to exist in the material world; while in marked contrast alike to the agnostic acceptance of annihilation, and to the diabolic theory of the arbitrary awardment of eternal bliss or eternal misery to the poor struggling mortals, who after a short life time of 70 or 80 years are surely unlikely to be deserving of either, the picture is completed by the steady progress and evolution of the soul through the continually repeated vicissitudes of earthly life — alternated and relieved by the blissful dreams of heaven where the infinite variety of human

character will through aeons of time reap in subtle distinction that which is the due of each.

The objects of the Theosophical Society may be stated as twofold. Firstly to act as a counter movement alike to the decaying but still lingering superstitions, and still more to the rampant and growing materialism of the present day, and the best way to attain this first object is surely to give to the world such a system of thought as may help to explain the mysteries of life. Such a system as will at once satisfy man's logical requirements, his moral feeling of fitness, and his highest spiritual aspirations. And where will such a system be found as in the doctrines Theosophy teaches? The second and main object to which the first leads up, is to act as a guide to the pathway of deliverance by which man may escape from the alternating miseries of birth and death, and attain the one permanent state of Being. This is the great — the divine — secret — to be bound no longer in conditioned existence — to merge the manhood in the Godhead! To catch a glimpse of one of the thousand states of ecstatic being that lie in infinite gradation between us and that stupendous goal would blind us with excess of light. Surely then the only figure before the mind when whispering in worshipping awe of that ineffable state of being should be the kneeling angel with head bent low, and wings crossed before the face.

While a large and increasing number are likely to be influenced by the teachings of Theosophy towards more tolerant and wider views of life, the number of those who will feel impelled to attempt the great undertaking will not probably in this age of darkness be relatively large. But indeed it is not a matter of choice, the destiny of each guides unerringly in the path he is bound to tread, the good within drives and will drive in ways that we know not of. The deep depression or the cutting sorrow of former years may pass away, the torture may take a more subtle

form, but while the wings are yet too weak to soar for long in the heavenly air, the detachment from earthly things is bound to bear its first fruits of pain, and the heart will still remain steadily crushed between the upper and the nether millstones. When the aimlessness of this life has made itself felt, to the exclusion of all other thought, to escape from its desolating curse must seem the one object worthy of accomplishment. The converging lines of Karma must doubtless have led those who feel impelled to scale the transcendent heights, compared with which the most soaring ambition of earthly life sinks into nothingness, but in weak-kneed moments to be thrust on such a path of greatness is felt to be a pathetic destiny, a forlorn hope, truly forlorn if the present life alone is regarded, but it is a forlorn hope that *has* to be led.

To realize with vivid distinctness the inanity of all earthly bliss, and yet to catch no refreshing glimpse of the beatific vision; to taste no strengthening sip of the heavenly Amrit, this is indeed a desolateness without any parallel in worldly life, it is the "indescribable vacuum" of the heart, so well pictured in an article in the June *Theosophist* entitled "Divine Heartache." But as the writer there goes on to describe in words which recall St. John of the Cross's "Obscure Night of the Soul" the apparent contraction of the heart is caused by the divine fire which is driving out its rheum and filthy moisture, and is but a prelude to the ultimate expansion. St. Thomas a Kempis, also dwells on the trouble of mind the disciple must learn to bear, and points out that "to be in a state of great devotion and sweetness" is not advantageous "for it is not by these things that a true lover of virtue is known, nor doth the spiritual progress and perfection of a man consist in these things."

It is written, "He that hath put aside woman hath put aside the world" and this would seem to be the best illustration of that final detachment which is the prelude to the first step on the path to

higher things. The different earthly desires from that of mere animal comfort up to the most ideal love, have all got characteristics that blend into each other, but earthly desire at every turn has to be fought and conquered, or put in other words it is a continual raising of the object of desire, either through the failure of realization or through the satiety that comes of realization. It may have required the experience of many incarnations to weed out of the heart the desire for wealth, for title, for power, for consideration among men, at each death of the body a step may have been gained, and the object of desire raised a degree in nobility, until its culmination is reached in the desire for the ideal union, the true marriage of the soul, to which the bodily union is but a subsidiary supplement. The intensity of a fruitless passion if kept undegraded by any acceptance of a lower love, if steadily nursed through a whole life-time as the one thing worthy of achievement, may have alchemical force enough to transmute this love into what it already resembles, the still loftier and purer love of the Universal Soul. "Woman" may have been "put aside" and the ideal union as a tangible reality in this life despaired of — in moments of enthusiasm the earthly love may appear totally eclipsed by the heavenly — but while lungs fit to breathe the heavenly ether are still undeveloped, descents have to be made to the lower air, the old hopes of love rise again in the breast though more faintly, and the old torture is gone through again.

But if the ultimate goal is steadily kept before the mind's eye, each pang that has been endured should have given added strength. The goad that drives each man to higher things is deep seated in his being, and must remain so through life until it ceases to be a goad at all by the conquest of the special desire against which it was directed, and if only we bear in mind that it is a matter of small moment whether or not we attain our earthly desires, and

that the one thing important is to follow loyally what at the time seems to us highest and worthiest — though that highest and worthiest ideal is ever moving upwards — periods of peace and satisfaction are bound to come at last, and we may repeat with Sidney

"Leave me, O Love, that readiest but to dust;

"And thou my mind aspire to higher things;

"Grow rich in that which never taketh rust;

"Whatever fades but fading pleasure brings.

* * * * *

"Then farewell World! thy uttermost I see

"Eternal Love, maintain thy life in me!"

The Path

THE BHAGAVAD-GITA: II — *William Brehon*

(Continued from April number.)

In the few introductory lines with which I took up this subject, it was stated that not being a Sanskrit scholar I did not intend to go into the commentaries upon the poem in that language. The great mass of those commentaries have looked at the dialogue from various standpoints. Many later Hindu students have not gone beyond the explanations made by Sankaracharya, and nearly all refuse to do more than transliterate the names of the different personages referred to in the first chapter.

But there is the highest authority for reading this poem between the lines. The Vedas themselves say, that what we see of them, is only "the disclosed Veda," and that one should strive to get above this *disclosed* word. It is here clearly implied that the undisclosed Vedas must be hidden or contained in that which is apparent to the outer senses. Did we not have this privilege, then surely will we be reduced to obtaining true knowledge solely from the facts of experience as suffered by the mortal frame, and fall into the gross error of the materialists, who claim that mind is only an effect produced by the physical brain-molecules coming into motion. We would also have to follow the canonical rule, that conscience is a safe guide only when it is regulated by an external law such as the law of the church, or of the Brahmanical caste. But we very well know that within the material, apparent — or disclosed — man, exists the *real* one who is undisclosed. This valuable privilege of looking for the inner sense, while not straining after impossible meanings in the text, is permitted to all sincere students of any holy scriptures, Christian or Pagan. And in the poem itself, Krishna declares that He will feed the lamp of

spiritual wisdom so that the real meaning of his words may be known; so too the Upanishads uphold the existence of a faculty together with the right to use it, whereby one can plainly discern the real, or undisclosed, meaning of holy books. Indeed, there is a school of occultists who hold, as we think with reason, that this power may be so developed by devoted persons, that even upon hearing the words of a holy book read in a totally unfamiliar language, the true meaning and drift of the strange sentences become instantly known. (1) The Christian commentators all allow that in studying their Bible, the spirit must be attended to and not the letter. This *spirit* is that *undisclosed* Veda which must be looked for between the lines.

Nor should the Western student of the poem be deterred from any attempt to get at the real meaning, by the attitude of the Brahmins, who hold that only Brahmins can be told this real meaning, and, because Krishna did not make it plain, it may not be made plain now to Sudras, or low caste people. Were this view to prevail, then the whole Western body of theosophists would be excluded from using this important book, inasmuch as all persons not Hindus are necessarily of Sudra caste. Krishna did not make such an exclusion, which is only priestcraft. He was himself of shepherd caste and not a Brahmin; and he says that any one who listens to his words will receive great benefit. The sole limitation made by him is that one in which he declares that these things must not be taught to those who do not want to listen, which is just the same direction as that given by Jesus of Nazareth when he said, "cast not your pearls before swine."

But as our minds work very much upon suggestion or clues, and might in the absence of any hints as to where those clues are placed, be liable to altogether overlook the point, we must bear in mind the existence among the Aryans of a psychological system that gives substance and impulse to utterances declared by many

Orientalists to be folly unworthy of attention from a man of the nineteenth century civilization. Nor need we be repulsed from our task because of a small acquaintance with that Aryan psychology. The moment we are aware of its existence in the poem, our inner self is ready to help the outer man to grasp after it, and in the noble pursuit of these great philosophical and moral truths, which is only our eternal endeavor to realize them as a part of our being, we can patiently wait for a perfect knowledge of the anatomy and functions of the inner man.

Western Sanskritists have translated many important words into the very lowest of their real meanings, being drawn away from the true by the incomplete Western psychological and spiritual knowledge, or have mixed them up hopelessly. Such words as *Karma* and *Dharma* are not understood. *Dharma* means *Law*, and is generally turned into *duty*, or said to refer merely to some rule depending upon human convention, whereas it means an inherent property of the faculties or of the whole man, or even of anything in the cosmos. Thus it is said that it is the duty, or *Dharma*, of fire to burn. It always will burn and thus do its whole duty, having no consciousness, while man alone has the power to retard his "journey to the heart of the Sun," by refusing to perform his properly appointed and plainly evident *Dharma*. So again, when we read in the *Bhagavad-Gita*, that those who depart this life, "in the bright half of the moon, in the six months of the sun's Northern course" will go to eternal salvation, while others "who depart in the gloomy night of the moon's dark season while the sun is in the Southern half of his path," ascend for a time to the moon's region, to be reborn on this earth, our Orientalists tell us this is sheer folly, and we are unable to contradict them. But if we know that the Aryans with a comprehensive knowledge of the vast and never inharmonious correspondence reigning throughout the macrocosm, in speaking thus meant to admit that

the human being may be or not in a state of development in strict conformity to the bright or dark moon, the verse becomes clear. The materialistic critic will take the verse in the fourth chapter which says that, "he who eats of the ambrosia left from a sacrifice passes into the supreme spirit," and ask us how the eating of the remnants of a burnt offering can confer salvation. When, however, we know that Man is the altar and the sacrifice, and that this *ambrosia* is the *perfection of spiritual cultivation* which he eats or incorporates into his being, the Aryan is vindicated and we are saved from despair.

A strange similarity on one point may be noticed between our poem and the old Hebrew record. The Jews were prepared by certain experiences to enter into the promised land, but were unable to do so until they had engaged in mighty conflicts with Hivites, Jebuzites, Perizites, and Amalakites. Here we find that the very opening verse signalizes a war. The old, blind king Dhritarashtra asks his prime minister to tell him what these opposing forces of Pandoos and Kooroos have been doing assembled as they are resolved upon war. So too the Jews assembled upon the borders of the promised land, resolved on conflict, and sustained in their resolve by the declarations of their God who had brought them out of the darkness of Egypt, carried on the fight. Egypt was the place where they had, in mystic language, obtained corporification, and stands for ante-natal states, for unformed chaotic periods in the beginning of evolution, for the gestation in the womb. We are on the eve of a gigantic combat, we are to rush into the midst of "a conflict of savages." If this opening verse is understood as it was meant, we are given the key to a magnificent system, and shall not fall into the error of asserting that the unity of the poem is destroyed.

Dhritarashtra is blind, because the body, as such, is blind in every way.

Some one has said — Goethe I think — that the old pagan religions taught men to look up, to aspire continually toward the greatness which was really his to achieve, and thus led him to regard himself as but little less, potentially, than a God; while the attitude of man under the Christian system is one of humility, of bowed head and lowered eyes, in the presence of his God. In approaching the "jealous God" of the Mosaic dispensation, it is not permissible to assume an erect position. This change of attitude becomes necessary as soon as we postulate a Deity who is outside and beyond us. And yet it is not due to the Christian scriptures in themselves, but solely to the wrong interpretation given them by priests and churches, and easily believed by a weak humanity that needs a support beyond itself on which to lean.

The Aryans, holding that man in his essence *is God*, naturally looked up to Him and referred everything to Him. They therefore attributed to the material of the body no power of sight or feeling. And so Dhritarashtra, who is *material existence*, in which thirst for its renewal inheres, is blind.

The eye cannot see nor the ear hear, of themselves. In the Upanishads the pupil is asked: "What is the sight of the eye, and the hearing of the ear?" replying, that these powers reside solely with inner organs of the soul, using the material body as the means for experiencing the phenomena of material life. Without the presence of this indwelling, informing, hearing and seeing power — or being — this collection of particles now deified as *body* is dead or blind.

These philosophers were not behind our nineteenth century. Boscovitch, the Italian, Faraday, Fiske and other moderns, have concluded that we cannot even see or know the *matter* of which these bodies and the different substances about us are mule up, and that the ultimate resolution is not into atoms finely divided,

but into "points of dynamic force"; and therefore, we cannot know a piece of iron, we only know the *phenomena* it produce? This position is an ancient Aryan one, with another added — that the real perceiver of those phenomena is the *Self*.

It is only by an acceptance of this philosophy, that we will ever comprehend the facts of nature which our science is so laboriously noting and classifying. But that science ignores a large mass of phenomena well known to spiritualists here and to ascetics in Asia, because the actual existence of the Self as the final support of every phase of consciousness is denied. "The disappearance of the ascetic is a possibility." But the West denies it, while it is doubtful if even spiritists will admit that any living man can cause that phenomena known as "form" to disappear. They are, however, willing to grant that a "materialized spirit form" may disappear, or that some mediums are living who have disappeared while sitting in a chair, either as an actual dissipation of molecules or by being covered as with a veil. (2)

In those instances the thing happened without knowledge or effort on the part of the medium, who was a passive agent. But the Eastern ascetic possessing the power of disappearing, is a person who has meditated upon the real basis of what we know as "form," with the doctrine ever in view, as stated by Boscovitch and Faraday, that these phenomena are not realities, *per se*, and adding that all must be referred to the Self. And so we find Patanjali in his compilation of Yoga aphorisms stating the matter. In his twenty-first aphorism Book III, he says that the ascetic being aware that form, as such, is nothing, can cause himself to disappear. (3) It is not difficult to explain this as a species of hypnotism or psychologizing performed by the ascetic. But such sort of explaining is only the modern method of getting out of a difficulty by stating it over again in new terms. Not until it is admitted that the Self eternally persists and is always unmodified,

will any real knowledge be acquired by us respecting these matters. In this Patanjali is very clear in his seventeenth Aphorism, Book IV., where he says: "The modifications of the mental state are always known, because the presiding spirit is not modified."

We must admit the blindness of Dhritarashtra, as body, and that our consciousness and ability to know anything whatever of the modifications going on in the organism, are due to the "presiding spirit."

So this old, blind rajah is that part of man, which, containing the principle of thirst for existence, holds material life. The Ganges bounding his plain on one side typifies the sacred stream of spiritual life incarnated here.

At first it flows down unperceived by us, through the spiritual spheres, coming at last into what we call matter, where it manifests itself — but yet remains unseen, until at last it flows into the sea — or death — to be drawn up again by the sun — or the Karma of reincarnation. The plain is sacred because it is the "temple of the Holy Ghost." Kuru-Kshetra should then read: "The body which is acquired by Karma." So the King does not ask what this body itself has been doing, but what have the followers of material existence, that is the entire host of lower elements in man by which he is attached to physical life, and the followers of Pandu, that is the entire set of spiritual faculties, been doing on this sacred plain.

It follows then that the enumeration of generals and commanders gone into by the prime minister in reply to the king, must be a catalogue of all the lower and higher faculties in man, containing also, in the names adopted, clues to powers of our being only at present dimly guessed at in the West or included in such vague terms as Brain and Mind. We find these generals given their

appropriate places upon either side, and see also that they have assigned to them various distinctive weapons, which in many cases are flourished or exhibited in the preliminary movements, so that our attention may be drawn to them.

(To be continued.)

FOOTNOTES:

1. We have in mind an incident where a person of some slight development in this direction, heard read several verses from the Vedas in Sanskrit — with which he had no acquaintance — and instantly told what the verses were about — B. ([return to text](#))

2. For an instance see Olcott's "*People from the other world*," respecting a female medium. — W. B. ([return to text](#))

3. The Aphorism reads: "By performing Sanyama — restraint (or meditation) — about form, its power of being apprehended (by the seer's eye) being checked, and luminousness, the property of the organ of sight, having no connection with its object (that is the form), the result is the disappearance of the ascetic." — W. B. ([return to text](#))

The Path

MEDIUMSHIP — *Albertus*

There is no more misunderstood or misapplied word than "Medium." Having been appropriated by the Spiritist, it is as a natural result, today supposed to mean just what he makes it mean.

Men take a word, saddle it with a meaning, ride it rough shod on a full gallop over and into every thing until other men shrink in terror from it; or else he stands and curses it for a vile and useless thing. Those who have given the word its present meaning, ascribing all things to the work of disembodied spirits, have made the Medium what he is, and taking to their bosoms the Frankenstein whom they have raised — hug him close, whether he be angel or devil. So long as the Medium gives forth the utterances of "*Spirits*" it matters not at all whether they are the words of divine truth, pure lies, or the thoughts of the Medium; without the slightest true effort to discover the source, all is accepted and claimed for Spirits. This and some other modes of proceeding have discouraged many intelligent students from researches touching Mediumship, and caused all men, outside of a limited number, to distrust or fear the name.

Nevertheless Mediumship does exist, no matter how much it may be reviled or we be prejudiced against it. But Mediumship does not consist wholly in reality of so called communications from dead men, or the alleged materialization of Spirit forms through whose veins the red blood of Nature courses, and whose breaths frequently bear a suspicious odor of onions. While there is not one of the phases of Spiritism which is not founded upon a truth, yet these demonstrations almost generally are the results of unscrupulous persons seeking gain or self. A Medium gaining a

little knowledge of some unfamiliar occult law, takes it for granted that all is learned, calls it a spirit, and immediately applies it to his own purposes. Finding he can go only a certain length with it, instead of seeking further knowledge, he strains and improvises upon it, to gain his ends or the gold he covets. We do not say they are not Mediums for they are. All the charlatans and pretenders who cling to the skirts of Spiritism also. They are Mediums for the lower passions and elementals. The error of Spiritists lies in the fact that they ascribe *all* things to Spirits. Clairaudience, Clairvoyance, Psychometry, Hypnotism, etc., are all claimed as the work of a Spirit or Control.

All men are Mediums or Sensitives, and to what extent they little know. We do not claim that all men are Mediums for Spirits of dead men, or that they are all instruments for the most exalted Intelligences, but they are Mediums for Elementals — the embodied, the disembodied, for those who never have or may never be embodied — for all that the Astral holds, and sometimes for that which is beyond the Astral. They are Mediums for their own Inner and Higher selves or those of other men, and frequently failing to recognize them, they call them "Spirits."

The Psychometrist is a Medium or Sensitive, but he is such for the manifestation of the souls of things. The Hypnotic also, but he is for the manifestation of his own and the latent powers of other mortals. The Clairvoyant sees that which is recorded on the Astral.

The Clairaudient may hear the voices of Spirits, he may quite as easily hear the thought, but unspoken words, of other living men, the voices of forces or that of his own unrecognized Inner or Higher Self.

Upon the Astral Light all things are recorded; the knowledge of ages, the acts of all time, the forms of all who have died and all

who live, the thoughts of all who have ever existed or do exist are photographed upon it. It has been and is being daily admitted more freely by wise men, that there are other forces and powers in Nature of which we, largely, have little knowledge. The souls of animate and inanimate things, the lights, colors and auras of non-luminous bodies, the powers of and forces exerted by immovable or quiescent things, and the effects of all these upon the human organism, are realized only to a slight extent by the enlightened and unprejudiced scientist, and fully known only to the *true* occult student.

Thought passes to and fro from man to man. At a higher level it does the same from higher intelligences to man, and all in a sphere beyond the material. Men, from different causes, rising to different levels above their ordinary outer selves, come into the Astral where all is spread out before them. They see and read only that for which they are fitted, and comprehend only that for which they are prepared. Through conscious or unconscious exaltation they rise into or come in contact with some current of thought or unspoken word which enters their brains by divers roads. Comprehended partly perhaps, but being entirely foreign to their normal personal manner of thinking — knowing they have heard a voice — it is ascribed to a Spirit, although in fact it may be the thought of a living man they hear, feel, see or are repeating. All men who by effort, training, or super-sensitive personality, lift themselves consciously or are lifted unconsciously above the material, and secure the wisdom knowledge and inspiration of other planes, are mediumistic.

Every student who has sought the Occult and attained his object has been a Medium, from Buddha, Pythagoras, Zoroaster, Apollonius, Plato, Jesus, Boehme, down to those of later times or of today.

The Adept as well as the Chela, the Initiate as well as the Neophyte, the Master as well as the Student. The Chela is but the Medium for his own latent possibilities — his Master and Nature's laws. The Neophyte likewise, for all by a striving for a high ideal, seek to place themselves upon a plane where Occult laws may make themselves visible or intelligible through their agency, and the silent voices of the Great Unseen become audible, be they individualized or diffused through all space as forces are. All things speak and convey a meaning, nothing is silent — all things speak from the monad, through all nature, forces, spheres, and space to the Omniscient silence — the ever living Word, the voice of the All Wise, and all men hear or feel some of these in some way and are Mediums for them.

Forces there are which wait but the will or desire of souls to spring into a certain degree of human intelligence, and make themselves heard to and through the one who has brought them into Material life.

Man's body is but a Medium. If it be not for his own Inner and Higher Self; then it is for those of other men; for we express the thoughts and acts of others quite as often as our own.

There has never been a wise or good word spoken, a note of true music sounded, a line of true poetry penned, a harmonious blending of color painted that was not the result of Mediumship. There never was an occult law explained, a divine mystery revealed through man, chela, student, Adept or Master, that was not the result of Mediumship.

The Master is higher than the chela who is his Medium. There is something higher than the Master, and he is Its Medium; looked at in its true light Mediumship is one of the wonders of the Creator. He who possesses most of this gift, realizing what it is and knowing how to wisely use it may feel himself supremely

blest. The Mystic and true Theosophist realizing what a Medium really is, may well hesitate before he joins with those who cast aside divine wisdom because it has come through an instrument declared in horror by some to be Mediumistic.

The Path

**THE THEOSOPHICAL MEANING OF GOETHE'S FAUST: I — F. S.
Collins**

IN TWO PARTS.

PART I.

If the question were asked, what one literary work best represents the spiritual and intellectual problems of the eighteenth and nineteenth centuries, the majority of educated and thoughtful men would, I think, answer, Goethe's Faust. As the *Divina Commedia* represents the whole intellectual, social and moral movement of Dante's time, so Goethe's poem may be said to include the whole spirit of modern life, in all its phases.

And just as in the *Divine Comedy* we can read in the literal sense an account of the author's travels through the various circles of material regions of punishment, purification, and reward; while there can be read also a consistent political meaning, the symbols considered as referring to the contests then raging in Italy, where Pope, Emperor, and civic republics, contended for their various interests; while deeper and truer than either, lies the spiritual sense, most precious of all, and as living as ever, when the literal and the political interpretations have become a matter of the past; so in Faust, every one who reads it may draw from it the meaning that it has for his special need, the answer for his special question; and the deepest thinker, the most spiritual interpreter of it will be the least likely to claim that he has fully comprehended its possibilities, or penetrated to its innermost sense.

And the inner meaning of both these is the same; it is the same question which underlies all the great Bibles of Humanity; how

shall man, the imperfect, become perfect? Each age has to meet this problem, each states the solution in its own form; many are the answers, but very few, only one in an age, comes to be accepted as the voice of that age; and the inner sense of these is very nearly the same, though the external forms may be far different.

In what I may have to say as to the answer which "Faust" gives to the universal problem, I am much indebted to the very thoughtful and instructive work of Mr. D. J. Snider, "Goethe's Faust, a Commentary." To the theosophist, especially, this book is a perfect treasury of interpretations of inner meanings in Goethe's poem.

The action of "Faust" was tersely characterized by Goethe himself, in conversation with Eckerman, as "From heaven through earth to hell, and back to heaven." Faust himself, the hero, is the representative man, the type of humanity in its contest with the obstacles and temptations within and without, which beset his path. In the development of the Faust legend, what may be fairly so called, though the name of Faust is not always found in it, can be seen in three forms; the medieval, the protestant, and the modern.

In the medieval, which we first find about the fifth or sixth century of our era, the hero is known by the name of Theophilus; he renounces the faith, denies its power, uses magic arts, sells himself to Satan, but is at last, by special interposition of the Virgin, turned from his fate, and dies penitent and devout. This is the medieval form of the legend; a contest between the church and the devil, in which the church wins; the eternal womanly is the saving element here, but in the form of the Virgin Mary; any lower feminine element, if present at all, is only as an ally of the satanic power.

The Protestant Faust, the Faust of German legends, is in a certain

sense a popular hero; he defies everything in his ambition for knowledge and power; he does not generally use his compact with Satan for malicious purpose. He must fall, the ideas of divine government demand it; but he commands our admiration as he goes down; he falls under the divine stroke, but "impavidum ferient ruinae."

The problem of our day demands that Faust should question everything, defy precedents and tradition, try every power of the human soul for pain and joy; and yet not perish like the Protestant Faust, not surrender in blind faith to the church, like the medieval. This is the problem that the poem we are considering is to solve.

The poem is emphatically the work of Goethe's whole life; begun very early, finished in his very last years, it illustrates every period of his literary style, and yet it is an organic whole, every part in living relation to the rest. A short dedication, written twenty-four years after the poet began the work, and in which he recalls the memories of the earlier days, is followed by the Prologue on the Stage, in which the manager, the actor, and the poet set forth their various ideals of a play. Gain is the object of the manager, applause that of the actor, while the poet speaks from that higher standpoint above personal motive. One word of his I think we will find gives a clue to the right interpretation of individual references in Goethe's works. The object of the poet is "to call the individual to the universal consecration." A scene, a character, may have been drawn from some event in Goethe's experience, from some person of his acquaintance; but in the work it stands not merely for the individual; we must understand it as having the universal consecration.

Then comes the Prologue in Heaven; one of the grandest scenes in literature; the song of the archangels defies translation; a hint of

its grandeur may be obtained in our language, but hardly more.

RAPHAEL.

The sun-orb sings, in emulation,
 'Mid brother-spheres, his ancient round;
His path predestined through Creation
 He ends with step of thunder sound.
The angels from his visage splendid
 Draw power, whose measure none can say;
The lofty works, uncomprehended,
 Are bright as on the earliest day.

GABRIEL.

And swift, and swift beyond conceiving.
 The splendor of the world goes round,
Day's Eden-brightness still relieving
 The awful Night's intense profound:
The ocean-tides in foam are breaking,
 Against the rocks' deep bases hurled,
And both, the spheric race partaking,
 Eternal, swift, are onward whirled!

MICHAEL.

And rival storms abroad are surging
 From sea to land, from land to sea;
A chain of deepest action forging
 Round all, in wrathful energy.
There flames a desolation, blazing
 Before the Thunder's crashing way;
Yet, Lord, Thy messengers are praising
 The gentle movement of Thy Day.

THE THREE.

Though still by them uncomprehended,
From these the angels draw their power,
And all Thy works, sublime and splendid,
Are bright as in Creation's hour. (1)

This scene is in form much like the first chapter of the book of Job; the celestial hierarchy is assembled, the angels chant their grand calm hymn; they seem wholly absorbed in the contemplative state, perceiving nothing of the discussion which occupies the rest of the scene. Their state seems to be one of Devachanic bliss, a strong contrast to man's earthly career of struggle, summed up by the words with which the Lord characterizes it

"Es irrt der Mensch, so lang 'er strebt"
"Man must err, as long as he strives."

Mephistopheles, who later in the poem describes himself as "the spirit that always denies," presents himself among the sons of God; every word speaks a satirical, mocking dissatisfaction and disgust with all the wonders of the universe; especially strong is his contempt for man, the wretched insect, who strives to be a god, and with such absurd results.

Heaven being represented somewhat in the guise of a medieval court, Mephistopheles takes his proper place in it as the jester, the court fool; considering him as such, the good-natured tolerance which the Lord shows for his half subservient, half insolent familiarity, becomes comprehensible to us. In the clear vision of infinite wisdom, what can the spirit of denial be but a mocking buffoon. As the Lord says to him:

"Ich habe deines Gleichen nie gehasst.
Von allen Geistern, die verneinen,
Ist mir der Schalk am wenigsten zur Last."

"The like of thee have never moved my hate.
Of all the denying spirits,
The waggish knave is the least burdensome."

And after Mephistopheles has wagered that Faust's strivings will end in his falling completely from the right way, the Lord tells him:

"A good man through obscurest aspiration,
Has still an instinct of the on true way."

The heavens close, and Mephistopheles is left alone, a characteristic sneer from him ending the scene.

"I like to see the Old Man, now and then,
And take care not to break with him entirely;
It's really very kind in such a noble lord,
To talk so sociably with a poor devil."

Now we can see that though the framework of the prologue much resembles that of Job, there is this difference; in the older poem Job is the true worshiper of Jehovah, and Satan's wager is that he serves only for reward; take away his prosperity, and he will cease to worship God. Mephistopheles on the other hand mocks at the blind struggles of Faust to reach truth, and wagers that they will end in disappointment and disgust, and finally lead him to the spirit of pure denial. The form of the problem has somewhat changed in 3,000 years, and the form of its solution must be somewhat different.

The scene is now transferred to earth, and Faust is introduced, and in the very first lines we see the conflict going on in him between the aspiration, the inner conviction that there is a higher, truer knowledge, a genuine wisdom; and the spirit of negation which finds only disappointment in every effort to attain this lofty truth.

Through the first act this conflict continues in Faust's soul; the contest is as yet internal, and we hear it in the form of his soliloquy. He has studied the four faculties, and now finds that the truth is no more within his grasp than before; he has much learning, but it does not give him the truth. Now he turns to magic; what the ordinary learning of the schools cannot give him, he will seek from the great spirits of nature; and by the sheer force of his aspiration he brings before him the two spirits, the nature spirit and the earth spirit, but he cannot hold them, and when for the moment he speaks to the earth spirit as to an equal, he is crushed by the contemptuous reply.

"Thou'rt like the Spirit which thou comprehendest, not me!"

The spirit disappears, and Faust, overwhelmed, exclaims:

"Not thee!

Whom then?

I, image of the Godhead!

Not even like thee!"

A knock at his door from his Famulus, answers his question.

This stinging repulse brings Faust down lower than before. In the moment that he thinks himself the equal of the mighty spirit, he is told he can comprehend nothing higher than the dull routine of a scholastic pedant. Intellectual denial has again conquered aspiration. The world can give him nothing, but at this moment his eye falls upon a vial on the shelf; another possibility opens to him: what he despairs of life giving him, death may give, and he raises the poison to his lips. At this moment, from without, the Easter songs reach his ear: he hesitates, and as the angelic song rises higher and higher, the glass falls from his hand: he will live.

Faust has been defeated in his three attempts to reach the truth;

through study, through magic, and through death. But if the mind cannot reach truth, it can be used for sensuous gratification, and in the next scene we see Faust in the company outside the city gate. The Easter festival, which in its spiritual sense held Faust back from suicide, now appears in the bright spring-time, bringing out from the winter seclusion every form of life. The procession from the city, apprentices, servants, students, maidens, citizens, soldiers, all brought out by the warm sun to enjoy the pleasure of awakening spring and sense, is true to the life, even of to-day. The ease with which the spiritual aspiration passes into the lower emotion is shown by this Easter festival culminating in the Song under the Linden, whose sensuous excess is prophetic of the results of Faust's new tendency.

Faust himself almost involuntarily invokes the elementary spirits, to bring him, if they can do so, to a new and brighter life: and almost immediately the black poodle is seen running about near them. The negative evil half of Faust's nature has taken objective form; no longer is the conflict to be internal only; and as the desire for animal happiness has created the external form, the animal shape is the most fitting for it to assume. Faust intuitively perceives something unusual in the dog, but Wagner, like so many of the commentators of Faust, sees a "poodle and nothing more;" he is a type of those who positively refuse to see anything but the external husk, and have no patience with those who desire to discern an inner meaning. In the next scene, Faust has gone home, taking with him the poodle, who lies quietly down beside the stove.

Aspiration is again in the ascendant in Faust, and he now meditates and comments on the first words of the gospel of John; but as the sentence "In the beginning was the Word" inspires him to lofty thoughts, the dog becomes restless and uneasy, and disturbs Faust by barking and howling. This reminds us of what

the occultists teach is a general law; that whenever the higher part of our nature aspires and strives to the divine, the lower part of one's self stirs to fiercer opposition.

Apprehending at last that something more than a mere animal is concerned, Faust evokes by spells of increasing power, the inner form from out the beast. First the Seal of Solomon, the interlaced triangles, as a spell for elemental spirits; and we may note his incidental remark that these forms are only powerful when used by one who knows the true nature of the elements. Stronger spells are needed, and at last are efficacious, and Mephistopheles appears as a travelling scholastic; a solution, as Faust says, that makes him laugh.

After a little conversation, in which Mephistopheles states clearly enough his character, and is treated rather contemptuously by Faust, he asks for leave to depart, and explains that he must go out by the same way he came in, but is barred by the pentagram, the five pointed star, traced on the threshold, which, imperfect in one point, let him come in, but will not let him go out. The law of Karma is recalled to us by this necessity of evil going out as it came in; for we know that every wrong action must pay its penalty in its own kind, before we can get clear of it.

In the next scene, Faust again is visited by Mephistopheles, now in his characteristic costume, which he will wear through most of the drama; the feather, sword, and dress of the man of the world. His bargain is soon made: when he can satisfy Faust through the senses, then he wins him forever: he is at Faust's bidding day and night till then, but when once Faust says to the moment, "delay, thou art so fair," then the wager is won. A profitable bargain for the devil, it would seem, and it is reckless enough in Faust to make such a bargain; but after all, would it not be the same, bargain or no? When aspiration is satisfied with sense, what is

there more? it is all over with the man, and he is lost at any rate. We need not fear for Faust, for even as he makes the agreement, his contempt is great for all that Mephistopheles can offer:

"Was willst du, armer Teufel, geben?"

"You poor devil, what can you give?"

A short scene follows in which Mephistopheles, disguised in Faust's professorial robes, has an interview with a boy just come to college, and asking advice and instruction. In the advice and instruction that Mephistopheles gives him is concentrated about as much of bad advice and sensual suggestion as could be condensed in few lines; and yet we must note that here, as indeed throughout the whole of the drama, Mephistopheles uses hardly a single direct falsehood. The incarnation of evil and denial, he shows a vast knowledge, an equanimity that rarely is disturbed, and a directness of assertion that does not need to use any literal misstatement. In a later scene, when Faust fiercely denounces him and accuses him of bringing evil on Margaret, Mephistopheles is able calmly to point out that he has only clearly stated the thoughts and fulfilled the wishes which Faust himself had, but was ashamed to acknowledge.

But now Mephistopheles is to show Faust the world, and this world is naturally a world suited to Mephistopheles' purpose, a world with its institutions and society, but all perverted. Self is the object in all; the sensual gratification of self. But Faust must pass through all this: as we are told in *Light on the Path*,

"All steps are necessary to make up the ladder. The vices of men become steps in the ladder, one by one as they are surmounted."

Now we are to see man guided by the spirit of denial, in his relations to the world. The first scene, Auerbach's cellar, shows us the repulsive result when the ordinary needs of life, eating and

drinking, become the object of life. We may consider it as representing the state of those in whom the three lower principles of the occult classification have the highest place in the consciousness. This scene causes only disgust to Faust, and we next have "The Witches' Kitchen," a strange scene, a riddle to commentators, which is perhaps rightly interpreted by Mr. Snider as representing the perverted relation of the sexes; a view which we may broaden a little and consider as representing the supremacy of the fourth (Kama Rupa) principle. Here Mephistopheles seeks to captivate Faust by passion, but he only partially succeeds; instead of mere lust, Faust finds a higher ideal, his admiration for the beauty of form redeems his passion from the animal character it would otherwise have, and it leaves him still unsatisfied, aspiring for something higher.

So far, he has dealt with a perverted Mephistophelean world; but now he is himself, under the guidance of Mephistopheles, to pervert the hitherto calm and quiet world of Margaret. The story of Margaret, though naturally an episode in Faust's progress, is yet in one sense a complete story in itself, and appeals strongly to our emotions. To many it is *the* Faust story, being so much simpler and easier of comprehension than the "world bible" of the whole great drama that it has readily adapted itself to scenic and musical representation. And Gretchen's story is in many respects the same as Faust's, but simpler and less complicated intellectually. There is not in her case the intellectual denial of truth; her mind is naturally more intuitional, and her fall is through her affection for Faust; but misguided by this, the consequences are indeed terrible for her; she sins against the two great institutions which are her safeguard, the family and the church; and her fall will bring about the destruction of her mother, her brother and her child; when she turns in terror at the approaching shame and pain, and prays to the Virgin in an

appeal of wonderful force and pathos, there is no answer. Then the terrible scene in the church, when she kneels among the multitude, and the Dies Irae of the choir alternates with the accusing voice of the "Evil Spirit" her conscience, whispering in her ear; neither of them sparing her or offering her any forgiveness. It is the inexorable law of Karma! she has sinned, she must suffer the penalty. The church cannot remove an ounce weight from her suffering in this life; afterwards, it promises nothing, but reserves judgment.

Faust has now left her, and we see him in another of the relations to the perverted world, in which Mephistopheles has placed him; the Brocken scene, which under the form of a midnight gathering of witches to do honor to their master, represents a type of society in which selfishness is supreme. Multitudes flock to the gathering, with similar aim, but there is no sympathy; the selfish object may be wealth, sensuality, fame, or anything else; and there is no crime that they are not ready to commit, if necessary for their object; no one will lend a helping hand to another. In many cases, the love of evil has become a passion for evil for its own sake, and we may see here an image of the man in whom the higher principles are drawn down to the service of the lower self; whose fate will be far worse than that of those who live in the lower nature without development of the higher.

Mephistopheles is perfectly at home here, but not Faust; he but half enters into it, and at the point when the wild carnival is at its highest, there rises before him a vision of Margaret, sad, pale, and with a slender blood-red mark about her neck. Instantly he realizes what has been the result to her, in his absence, of their love. It is the turning point in his career; hitherto he has followed Mephistopheles' lead, and even urged him faster on; and now that that lead has brought Margaret into misery, crime, and under

sentence of death, Mephistopheles only says "she is not the first." If Faust were to follow the devilish advice and leave her to her fate, it is hard to see how he can ever escape from the downward path he has so far followed. But he does not leave her to her fate; his love for her now shows itself no longer the passion that demands its gratification; it becomes the unselfish desire to save her from the results of his acts. Mephistopheles, hitherto his willing guide, now is his unwilling assistant, and he turns back to save Margaret.

But her redemption must be different from his, as the motives of her fall were different; not undermined by doubt, but falling through her affection, punishment and salvation must correspond. In prison, she acknowledges the justice of her fate; crazed with suffering, she does not at first recognize Faust, who comes to release her; then when she does know him, and he urges her to escape with him, she refuses. Half confusedly she goes over all the story of the first meeting and all that followed; she cannot go with him, and as she sees Mephistopheles at the door, urging haste before the daylight comes, she shudders; Faust in desperation attempts to carry her away by force, but though the vision of her coming execution rises before her, she turns from him, saying, "Judgment of God, I have given myself over to Thee." Her only possible salvation is here; acceptance of the result of her actions, refusal to escape even with the one she loves; yet her last words before she falls, lifeless, are apprehensive for his fate; and as her spirit passes away, we hear from above, fainter and fainter, her voice lovingly calling his name.

Mephistopheles coldly exclaims "She is judged;" but a voice from above replies "She is saved!" and we all feel that her total sinking of all personal hope or fear in the unselfish love for another, has redeemed her. Faust's nature, however, needs a much longer experience and trial; the evil spirit must go out of him by the way

it came in. The episode of Gretchen is ended, as far as Faust's earthly career is concerned: but we may note the half reminiscence, half prophecy of her words in the last scene: "We shall meet again, but not at the dance," which recall to us the Linden song at the beginning of the drama, and point to the final scene of the second part, which is yet far before us.

FOOTNOTE:

1. Taylor's Translation. ([return to text](#))

The Path

CAIN AND ABEL — *Charles Johnston*

"The first step is Sacrifice; the next, Renunciation."

"*Es leuchtet mir ein*, I see a glimpse of it!' cries he, elsewhere: 'there is in man a HIGHER than Love of Happiness: he can do without happiness, and instead thereof find Blessedness! was it not to preach forth this same HIGHER that sages and martyrs, the Poet and the Priest, in all times, have spoken and suffered, bearing testimony, through life and through death, of the Godlike that is in man, and how in the Godlike only has he Strength and Freedom? which God-inspired doctrine art thou also honoured to be taught; O Heavens! and broken with manifold merciful afflictions even till thou become contrite and learn it! O, thank thy Destiny for these; thankfully bear what yet remain; thou hadst need of them; *the Self in thee needed to be annihilated.*" (1)

The Bibles, poetry, tradition, concur in this verdict. When life has been exalted above mere animalism, a time comes when the Self in thee needs to be annihilated.

Other sacrifices may be difficult; this renunciation is supremely difficult. To destroy what surrounds us is comparatively easy; to rise in the air and destroy the ground we stood on, not so easy, and yet this is what must be done.

Vices may be abandoned — virtues even may be acquired — for selfish reasons; but to banish once and forever, all selfish motives, all personal objects, to work resolutely for universal ends — this can never be done selfishly.

Can we give a reason for following the good, the beautiful, the true? None, but that we find them good, beautiful, true.

To work in this pure disinterestedness and unselfishness is what is necessary.

The Self in thee needs to be annihilated.

Up to this point of progress, the individual has worked.

After this sacrifice, there is no longer an individual; there is only God, working through what were the powers of the individual.

The cup that separated the water from the ocean has been annihilated. Now, there is only the ocean.

After the sacrifice, it is perceived that only an unreality, a bond, was offered up; but till the sacrifice is consummated, what is to be sacrificed is seen as Self.

This sacrifice of Self is made after the illusory nature of the life of the senses is perceived; after it is seen that within the sensuous world there is a spiritual world, of which the sensuous world is a husk.

This perception, the Orientals call — "overcoming the illusions of the Ten." (2)

When the inner world is perceived, these physical senses and organs are superseded by five inner senses, and five inner organs of sense.

This truth is told again and again in the Hebrew Bible. Moses, (the Soul) led the Twelve Tribes (senses, organs, desire, egotism) from bondage in Egypt (sense-life). During the probation in the desert, these Twelve were superseded by Twelve Tribes who had never known bondage, (astral senses, etc.).

But the individual having gone so far, was to cease from individual life.

Moses saw the Land of Promise from afar, but himself entered not in. He died, and another entered in.

The Self was annihilated; there was no longer Man, but God only. Those who have read the *Idyll of the Lotus* have learned the same lesson.

Sensa — the soul — triumphs over Agmand and the Ten. But Sensa himself perished by the hands of Agmand and the Ten.

It is the darkest fact in human life, but an inexorable fact, that there is no redemption without sacrifice; the Self needs to be annihilated; and the Christians have rightly made the sacrifice on Calvary the central picture of their religion; Christ had to sacrifice himself before he could ascend to his Father.

This is the meaning of Cain and Abel.

To the Soul (Adam) resting in calm unity, was added Personal desire (Eve). Eve is the type of personal life in its essential character, as recipient of alternate emotions of pleasure and pain, sweet and bitter, good and evil. For Eve tastes the fruit of knowledge of good and evil.

Now, two paths lie open — continued personality through many lives, or redemption through self-sacrifice: Cain is the first; Abel the second.

Cain offers no real sacrifice, and ever after, having chosen egotism and isolated life, he bears the brand of fear, for fear ever follows strife. The brand remains till Cain learns the "perfect love that casts out fear."

Abel offers the true sacrifice — the whole animal nature. But soul has served Self too long. Before the soul has regained its divinity, the bonds of individuality must be broken by sacrifice. At last the sacrifice is consummated. Abel lies bleeding on the ground, but

the liberated soul re-enters Eden, passing the flaming swords of the Cherubim, and advances triumphant to the Tree of Life. There is no longer man, but God only. For this is offered the prayer of the Eastern Saint —

"The dew is on the Lotus; — Rise, Great Sun!
And lift my leaf, and mix me with the wave!
Om mani padme hum, the Sunrise comes!
The dew-drop slips into the shining sea!"

The Path

PERSONALITIES — *Harij*

Step aside, O toiling brother, into a convenient by-way, and for a moment let the surging crowd pass by. Do not tremble like a child for fear that you may be hopelessly left behind, for you will be forced back all too soon, though if you really pause, and truly ponder, you will never again be so completely identified with the pursuits of the crowd, though you will still be a part of it. Ask of your soul: "What are these personalities that make up the mighty human tide so widely rushing past—this rushing tide replenished at every instant by birth, depleted at every instant by death, yet flowing on forever?" How read you this journey from the cradle to the grave?

Think of the countless myriads whose weary, toiling, bleeding feet have worn deep the channels of this river of time. Listen to the complaints of the weary, the cries of the wounded, the groans of the despairing. Watch with pity the ashen faces as they hear the sound of the cataract ahead, over which they know they must plunge alone into unknown depths. Many are resigned in the presence of fate, for there is true courage at the heart of humanity, but how few are joyous except through ignorance and forgetfulness, and these are the frightened ones in the presence of the inevitable.

Listen to the loud acclaims, when in the rushing stream one is for a moment borne aloft on the crest of a wave, and watch the envy, and even malice of those who are inevitably drawn into the hollow of the wave, as they also struggle to reach the crest. Alas! the waves of Wealth, and Fame, and Power; Alas! the bubbling foam of Love. The night cometh, and the stream is still; yet even in the arms of the Brother of Death the echoes of these mighty

waves chant their requiem.

Listen a little deeper, O brother of my soul, and hear the sound of many voices: "What shall I eat? What shall I drink? and wherewithal shall I be clothed?" and then Alas! "O whither do I tend?"

And still the surging tide rolls on. A friend is passing yonder; hail him, and beckon him to thy side. He answers: "I cannot wait; I have not time." Alas! what hath he else but Time, and the foam of the maddening billows?

Turn now to thy companion, he who bade thee turn aside. Canst thou stop to consider, "Is he short, or tall, or fat, or lean, or black, or white, or man, or woman?" "Are his garments soiled, or clean?" "Comes he from the East, or from the West?" "Hath he letters of introduction?" "On whose authority did he bid thee halt?" "Did he speak in conventional language, and with the proper accent?" "Has his raiment the odor of the sea, or the breath of the mountain, or the fragrance of the flowery vale?"

Be sure it is not thy awakened soul that thus inquires, tis only the voices of the stream yonder, and when thou turnest to look for thy companion, lo! he is gone, and thou art alone, alone with thy soul, and with the echoes of the stream. Fear chills thy blood, and every separate hair stands on end, and as thou rushest back into the surging stream, even thy boon companions are terrified at thy staring eyes, and thy death-like face.

Hast thou seen a ghost? yea verily, the ghost of ghosts, the *Dweller of the Threshold*, and yet thou mightest have found a friend, a teacher, a brother. Rush back into the stream. O! terrified, thou that fleest from thy shadow, and plunge beneath its festering waves, yet even as its murky waters overwhelm thee, thy muscles creep and fear tugs at thy heartstrings.

Drain deep the cup, mount high the wave,
Tramp down the weak, envy the brave!
Bear high the bowl with dance and song,
Laugh at thy fears, shout loud and long.

"O wine of Life! O vintage rare!
Pressed by sore feet in deep despair."

Slowly the pendulum of time
Swings to and fro, with measured chime,
The Dweller e'er on Bacchus waits,
And jealous guards the golden gates.

O! wine of wisdom! soul distilled,
Won from the silence, Life fulfilled.

Vain are the things of time and sense,
Who follows these finds recompense,
Yet he who turns from these and waits,
The glimmer of the golden gates

Will bless the hand what e'er it be
That tenders chart, or offers key.

Came not the Christ in humble mien?
Poor and despised, the Nazarene,
And humble fishermen chose He
Beside the sea of Galilee.

Left not Lord Buddha throne and power
To meditate at midnight hour?

What matters it what hand bestows
The balm of healing for our woes?
For God is God, and Truth is Truth,
Ripe age is but immortal youth.

Let personalities alone,
Go through the gates! and reach the throne.

How many are turned aside by personalities? How many look to the garb of the messenger, forgetting the message, and yet is not the message plain? At one time the message comes from a manger, at another it descends from a throne. Yet is the message ever the same. Nature and time regard not personalities, but swallow up all alike, yet do nature and time and destiny teach ever the same great lesson, and he who would learn of these must both forego and forget personalities, his own and those of others. Personalities are but the fleeting waves on the river of time, caused by the friction of the winds of fortune; they are thy weakness and not thy strength. Thy strength is in thy soul, and thy soul's strength is in the calm, and not in storm revealed.

Inquire not who or what the messenger, but study well the message that comes to thy soul, and bears thee ban or blessing according as thou receivest it, and while thou waitest with lamps untrimmed the Bridegroom passes by.

What matters it to thee what infirmities the messenger may bear, except as thou mayest help him so to bear them that truth may run a freer race? Is it not enough for thee that truth hath given him her signet ring? Judge then of this, and if he falter in his speech or loiter by the way, take up the theme in clearer tones and speak it from thy soul to all thy kind.

Wilt thou withhold thy blessing from the hand that bears the gift, and covet while rejecting the very gift it bears? If thou art so at cross purposes with thyself how canst thou be *at one* with truth?

Truth is many-sided, speaks every language, is clothed in every garb, yet is she ever still the same, *One*, and unchangeable, now and forever. And if she is no respecter of persons, canst thou be more select than she? Alas! thou canst not find her thus, but error rather, and self-deceived rush down the stream of Time, and when thy personalities fall off then shalt thou realize that thou

didst refuse the banquet of the gods by scorning thus their messenger. Search out, and know and love and serve the truth, *for truth's own sake*. Follow it through all disguises with scent more sure and keen than hound in search of game. Refuse it not, though it reach thee from a dunghill, welcome it as though straight from God's own throne, and thus shall it ne'er escape thee, and neither love nor hate nor fear shall mar thy harvests, and truth shall honor thee, as thou hast welcomed her.

Beware of false authority, for neither pope nor priest nor book can of itself contain it all, and yet despise them not, for so thou'lt miss the truth. The sole authority for truth is *truth's own self* and if thy soul is but akin to her, thy quickened soul will recognise her every garb, by ties more strong than blood, by kinship everlasting, and as the waters mingle with the sea, so flows thy soul into the bosom of the deeps whence springs afresh in thee the everlasting Life which is the vital breath of Truth.

The Path

THE PATH OF ACTION — *Hadji Erinn*

The Mohammedan teacher directs his disciples to tread carefully the razor's edge between the good and the bad; only a hair line divides the false from the true. In this the Asiatic took an excellent illustration, for the "hair line" is the small stroke *alif*, which, placed in a word, may alter the sense from the true to the false.

In chapter four of the Bhagavad-Gita, entitled, "Jnana-Yog," or the book of the Religion of Knowledge, the blessed Krishna instructs Arjuna upon the nature of action, saying: "Renunciation of and devotion through works, are both means of final emancipation; but of these two, devotion through works is more highly esteemed (by Him) than the renunciation of them"; and, "the nature of action, of forbidden action, and of inaction must be well learned. The Path of Action is obscure and difficult to discern."

In ordinary humdrum life these words of Krishna are true enough, but their force is strangely felt in the mind of the devoted student of Theosophy, and especially if he happens to be a member of the Theosophical Society.

That body of investigators has now passed its probationary period, so that, as a whole, it is an accepted chela of the Blessed Masters who gave the impulse that brought it into being. Every member of it, therefore, stands to the whole Society as every fibre in the body of any single chela does to the whole man. Thus now, more than ever before, does each member of the Society feel disturbing influences; and the Path of Action becomes more and more likely to be obscured.

Always existing or coming into existence in our ranks, have been

centres of emotional disturbance. Those who expect that these perturbations ought now to cease and grow less likely to recur, will find themselves mistaken. The increase of interest that is being taken in the Society's work, and the larger number of earnest students who are with us than at any previous period, constitute elements of agitation. Each new member is another nature added, and every one acts after his own nature. Thus the chances for being discomposed are sure to increase; and it is better thus, for peace with stagnation partakes of the nature of what is called in the Bhagavad-Gita, *Tamagunan*, or, of the quality of darkness. This quality of darkness, than which there is nothing worse, is the chief component of indifference, and indifference leads only to extinction.

Still another element in this equation that every earnest Theosophist has to solve, and which in itself contains the potency of manifold commotions, is a law, hard to define, yet inexorable in its action. For its clearer comprehension we may say that it is shown in nature by the rising of the sun. In the night when the moon's rays flooded the scene, every object was covered with a romantic light, and when that luminary went down, it left everything in a partial obscurity wherein many doubtful characters could conceal their identity or even masquerade for that which they were not. But on the sun's arising all objects stand out in their true colors; the rugged bark of the oak has lost the softening cover of partial day; the rank weeds can no longer be imagined as the malwa flowers. The powerful hand of the God of day has unveiled the character of all.

It must not be supposed that a record has been kept by any officials, from which are to be taken and published the characters of our members. There is no need of that; circumstances taking place in natural order, or apparently from eccentric motion, will cause us all, whether we will or not, to stand forth for what we

are.

Every one of us will have to stop and learn in the cave outside of the Hall of Learning, before we can enter there. Very true that cave, with all its dark shadows and agitating influences, is an illusion, but it is one that very few will fail to create, for hard indeed to be overcome are the illusions of matter. In that shall we discover the nature of action and inaction; there we will come to admit that although the quality of action partakes of the nature of badness, yet it is nearer to the quality of truth than is that which we have called darkness, quietude, indifference. Out of the turmoil and the strife of an apparently untamed life may arise one who is a warrior for Truth. A thousand errors of judgment made by an earnest student, who with a pure and high motive strives to push on the Cause, are better than the outward goodness of those who are judges of their fellows. All these errors made in a good cause, while sowing good seed, will be atoned by the motive.

We must not then be judges of any man. We cannot assume to say who shall or shall not be allowed to enter and to work in the Theosophical Society. The Masters who founded it wish us to offer its influence and its light to all regardless of what we may ourselves think; we are to sow the seed, and when it falls on stony ground no blame attaches to the sower.

Nor is our Society for good and respectable people only. Now, as much as when Jesus of Nazareth spoke, is it true that there is more joy in heaven over one sinner who repenteth, than over ninety-nine just men who need no repentance.

Remembering then, that the Path of Action is obscure and difficult to be discerned, let us beware of the illusions of matter.

THE BHAGAVAD-GITA: III — *William Brehon*

(Continued from November number.)

Salutation to Krishna! the Lord of Devotion, the God of Religion, the never failing help of those who trust in him.

We now have discovered that the poem is not disfigured by this account of a conflict that begins in the first chapter; to be then dropped while the two great actors retire to their chariot for a discussion. This description of forces, and the first effect on Arjuna of his survey, show us that we are now to learn from Krishna, what is the duty of man in his warfare with all the forces and tendencies of his nature. Instead of the conflict being a blemish to the poem, it is a necessary and valuable portion. We see that the fight is to be fought by every human being, whether he lives in India, or not, for it is raging on the sacred plain of our body. Each one of us, then, is Arjuna.

In the Sanscrit, the first chapter is called "Arjun-Vishad," which in English means, "The despair and despondency of Arjuna." Some have called it "The Survey of Army"; but while truly an Army is surveyed, that is not the essential meaning intended. It is the result of the survey we are to consider; and that result upon Arjuna, who is the person most interested — the one who is the chief questioner and beneficiary throughout the whole action of the poem — is despondency.

The cause of this despondency is to be inquired into.

Arjuna, in the flush of determination, and before any analysis of either the consequences to himself or to others who might become involved, entered the conflict, after having chosen Krishna as his charioteer. The forces are drawn up in line of

battle, and he rides out to survey them. At once he sees ranged against him, relatives of every class, in their turn preparing to destroy others, their relatives, friends and acquaintances as well as Arjuna's, who are enlisted on his side. Turning to Krishna, he says that he cannot engage in such a war, that he perceives only evil omens, and that even if the opposers, being ignorant, may be willing to fight with such dreadful consequences in view, he cannot do so, but must give up the battle 'ere it is begun.

Thereupon:

"Arjuna, whose heart was troubled with grief, let fall his bow and arrows, and sat down on the bench of his chariot."

Every student of Occultism, Theosophy or true religion, — all being the one thing — will go through Arjuna's experiences. Attracted by the beauty or other seductive quality, for him, of this study, he enters upon the prosecution of it, and soon discovers that he arouses two sets of forces.

One of them consists of all his friends and relations who do not view life as he does, who are wedded to the "established order," and think him a fool for devoting any attention to anything else, while the general mass of his acquaintances and those whom he meets in the world, instinctively array themselves against one who is thus starting upon a crusade that begins with his own follies and faults, but must end in a condemnation of theirs, if only by the force of example. The other opponents are far more difficult to meet, because they have their camp and base of action upon the Astral and other hidden planes; they are all his lower tendencies and faculties, that up to this time have been in the sole service of material life. By the mere force of moral gravity, they fly to the other side, where they assist his living friends and relatives in their struggle against him. They have more efficiency in producing despondency than anything else. In the poem, it is

referred to in the words addressed by Arjuna to Krishna:

"I am not able to stand; for my understanding, as it were turneth round and I behold inauspicious omens on all sides."

All of us are brought to this study by our own request made to our Higher Self, who is Krishna. Arjuna requested Krishna to be his charioteer, and to drive him forth between the two armies. It does not matter whether he now is consciously aware of having made the request, nor whether it was made as a specific act, in this life or in many another precedent one; *it was made and it is to be answered at the right time*. Some of us have asked this many times before, in ancient births of ours in other bodies and other lands; others are making the request now; but it is more than likely in the case of those who are spurred on to intense effort and longing to know the truth, and to strive for unity with God, that they have put up the petition ages since. So now Krishna, the charioteer of this body with its horses — the mind — drives us forth so that we may stand with our Higher Self and all the tendencies connected with it on one side, and all the lower (but not all necessarily evil) principles on the other. The student may, perhaps, with ease face the crowd of friends and relatives, having probably gone through that experience in other lives and is now proof against it, but he is not proof against the first dark shadow of despair and ill result that falls upon him. Every elemental that he has vivified by evil thinking now casts upon him the thought,

"After all, it is no use; I cannot win; If I did, the gain would be nothing; I can see no great or lasting result to be attained, for all, all, is impermanent."

This dreadful feeling is sure in each case to supervene, and we might as well be prepared for it. We cannot always live on the enthusiasm of heavenly joys. The rosy hue of dawn does not

reach round the world; it chases darkness. Let us be prepared for it, not only at the first stage, but all along in our progress to the Holy seat; for it comes at each pause; at that slight pause when we are about to begin another breath, to take another step, to pass into another condition.

And here it is wise, turning to the 18th, and last, chapter of the poem, to read the words of the Immortal Master of life:

"From a confidence in thy own self-sufficiency thy mayest think that thou wilt not fight. Such is a fallacious determination, *for the principles of thy nature will compel thee*. Being confined to actions by the duties of thy natural calling, *thou wilt involuntarily do that from necessity*, which thou wantest through ignorance to avoid."

In this, Krishna uses the very argument advanced by Arjuna against the fight, as one in its favor. In the chapter we are considering, Arjuna repeats the Old Brahmanical injunction against those who break up the "eternal institutions of caste and tribe," for, as he says, the penalty annexed is a sojourn in hell, since, when the caste and tribe are destroyed, the ancestors being deprived of the rites of funeral-cakes and libations of water, (1) fall from heaven, and the whole tribe is thus lost. But Krishna shows, as above, that each man is naturally, by His bodily tendencies, compelled to do the acts of some particular calling, and that body with its tendencies are merely the manifestation of what the inner man is, as the result of all his former thoughts up to that incarnation. So he is forced by nature's law — which is his own — to be born just where he must have the experience that is needed. And Arjuna, being a warrior, is compelled to fight, whether he will or no.

In another chapter, the institution of caste is more particularly referred to, and there we will have occasion to go into that subject

with more detail.

As stated in the last paper, the substratum, or support, for the whole Cosmos, is the presiding spirit, and all the various changes in life, whether of a material nature or solely in mental states, are cognizable because the presiding spirit within is not modifiable. Were it otherwise, then we would have no memory, for with each passing event, we, becoming merged in it, could not remember anything, that is, we would see no changes. There must therefore be something eternally persisting, which is the witness and perceiver of every passing change, itself unchangeable. All objects, and all states of what western philosophers call Mind, are modifications, for in order to be seen or known by us, there must be some change, either partial or total, from a precedent state. The perceiver of these changes is the inner man — Arjuna-Krishna.

This leads us to the conviction that there must be a universal presiding spirit, the producer as well as the spectator, of all this collection of animate and inanimate things. The philosophy taught by Krishna, holds, that at first this spirit — so called, however, by me only for the purpose of the discussion — remained in a state of quiet with no objects, because as yet there was no modification. But, resolving to create, or rather to emanate the universe, IT formed a picture of what should be, and this at once was a modification willingly brought about in the hitherto wholly unmodified spirit; thereupon the Divine Idea was gradually expanded, coming forth into objectivity, while the essence of the presiding spirit remained unmodified, and became the perceiver of its own expanded idea. Its modifications are visible (and invisible) nature. Its essence then differentiates itself continually in various directions, becoming the immortal part of each man — the Krishna who talks to Arjuna. Coming like a spark from the central fire, it partakes of that nature, that is, the quality

of being unmodifiable, and assumes to itself — as a cover, so to speak — the human body (2) and thus, being in essence unmodified, it has the capacity to perceive all the changes going on around the body.

This *Self* must be recognized as being within, pondered over, and as much as possible understood, if we are to gain any true knowledge.

We have thus quickly, and perhaps in an inadequate way, come down to a consideration of Arjuna as composed of all these generals and heroes enumerated in this chapter, and who are as we said, the various powers, passions and qualities included in the Western terms, "Brain and Mind."

Modern, physical, mental and psychological sciences, have as yet but scratched the surface of that which they are engaged in examining. Physical science confessedly is empiric, knowing but the very outposts of the laws of nature: and our psychology is in a worse state. The latter has less chance for arriving at the truth than physical science, because scientists are proceeding to a gradual demonstration of natural laws by careful examination of facts easily observable, but psychology is a something which demands the pursuit of another method than that of science, or those now observed.

It would avail nothing at present to specify the Aryan nomenclature for all the sheaths — as they call them — that envelope the soul, because we as yet have not acquired the necessary ideas. Of what use is it to say that certain impressions reside in the *Anandamaya* sheath. But there is such an one, whether we call it by that name or by any other. We can, however, believe that the soul, in order to at last reach the objective plane where its experience is gained, places upon itself, one after the other, various sheaths, each having its peculiar

property and function. The mere physical brain is thus seen to be only the material organ first used by the real percipient in receiving or conveying ideas and perceptions; and so with all the other organs, they are only the special seats for centralizing the power of the real man in order to experience the modifications of nature at that particular spot.

Who is the sufferer from this despondency?

It is our false personality, (as it has been called in Theosophical literature) as distinguished from Krishna — the higher self — which is oppressed by the immediate resistance offered by all the lower part of our nature, and by those persons with whom we are most closely connected, as soon as we begin to draw them away from all old habits, and to present a new style of thinking for their consideration.

For Arjuna, sinking down upon the seat of that chariot which is his body, fell back upon his own nature, and found therein the elements of search and courage, as well as those previous ones of gloom which arise first, being nearer the natural man. Reliance and pressure upon our own inner nature, in moments of darkness, are sure to be answered by the voice of Krishna, the inner guide.

The first consequences of the despondency

Are, to make us feel that the battle we have invited ought not to be carried on, and we then are almost overwhelmed with the desire to give it up. Some do give it up, to begin it again, in a succeeding life, while others like Arjuna, listen to the voice of Krishna, and bravely fight it out to the end.

"Thus, in the Upanishads, in the holy Bhagavad-Gita, in the science of the Supreme Spirit, in the Book of Devotion, in the colloquy between the Holy Krishna and Arjuna, stands the first

chapter by name:

"THE DESPONDENCY OF ARJUNA."

Salutation to the God of battles, to the charioteer, to him who disposeth the forces aright, who leadeth us on to victory, with whom alone success is certain: that he may guide us to where the never-dying light shineth: Om!

(To be continued.)

FOOTNOTES:

1. This reference by Arjuna is to the immemorial custom of the son, or descendants, offering to the departed, at stated times, funeral-cakes and water, called "Shradda and Pinda" — one of the so-called superstitions of the Hindus.

It has always been a grave question with me, whether the boasted "freedom from superstition," of Western 19th century civilization is an unmixed good, or any evidence of real progress. All such ancient forms have been swept away, and with them nearly every vestige of true religious feeling, leaving only an unquenchable thirst for money and power. In the present ignorance of the true reason at the bottom of these forms, the assertion is made that they mean nothing whatever. But in the Catholic church it is continued, and to some extent believed in, as is shown in their masses for the dead; surely these masses would not be offered if supposed to have no effect on the state of those for whom they are offered.

Although greatly corrupted and debased, it is in this church alone that these old practices are preserved. *Shradda* and *Pinda* are now neglected, because the inner constitution of man, and the constitution of the Macrocosm, are not understood in such a way as to make the ceremony of the slightest use. — W. B. ([return to](#)

2. It is also, of course, inherent in all nature. — W. B. ([return to text](#))

The Path

SONGS OF THE UNSEEN — *J. Campbell Ver Planck*

I.

EFFLUX AND INFLUX.

When Brahma opes his golden door,
 What ambient shapes of Life and Light,
What radiant tides of Being pour
 With song into the dazzled night!
The winds that fashion worlds take flight,
Glad heralds of the Sons of Might;
And dancing stars trip on before
When Brahma opes his golden door.

When Brahm would close his gates supreme,
 With Life's vast ebb his halls are strown.
Thunders, and powers, and forms that teem,
 Fear to be shut in space alone.
Along the meteoric foam
World after world comes shuddering home.
The last pale hours slip swift between
And Brahm hath closed his gates supreme.

II.

RECOLLECTION.

When from mysterious spheres outflows
 A Voice that calls my hidden name,
The world's strong ties like bubbles break
 Against its ancient claim.
"Have I forgot thee? Never!
No Age our bond can sever.

*I love thee now, as I have ever,
And ever shall, forever."*

In vain my heart seeks earthly homes,
 In vain my thought declares me free.
Those mighty tones sweep o'er my soul,
 And they are one with me.
*"Can'st thou forget me? Never!
What power the bond can sever?
Then love? me now, as thou hast ever,
And ever shalt, forever."*

ENVOI.

When Brahma opes his golden door
Within the soul, rich visions soar:
But desolation reigns, I ween,
When Brahm hath closed that gate Supreme.

The Path

**THE THEOSOPHICAL MEANING OF GOETHE'S FAUST: II — F. S.
*Collins***

IN TWO PARTS

PART II.

In passing to the second part of Faust, we find quite a change in the character of the poem; the interest in the strictly personal career of Faust lessens, the limitations of space and time become more vague and indistinct; we pass from what Mephistopheles called the lesser to the greater world. Activity in the state, in humanity in general, characterizes the second part; we have gone through the contest in Faust's own mind, then in the family, and in the limited civic relations shown in the Gretchen episode; Faust has turned from his care for pure self to something higher, and we shall see this broaden out still more now. The first part was all within a short space of time, and the scene was all in or near a German city of some medieval period. Now we find medieval emperors and their courts, Helen and Menelaus, and hints at men of the present century, mingled, orderly enough with regard to their poetic and inner significance, but without any regard for chronology. In its main lines, the plot, if so we may call it, of this part, follows the medieval Faust legend; the making of gold, the bringing of Helen, the winning a battle, and the contest with the devil at death; these four are here reproduced, but with a much higher and broader significance. The making of gold, the material gold, is transformed into a myth of industry, the development of wealth by modern progress, its value when guided by the ideal, beneficent to all; but when wealth is sought for itself, destructive to self and all. The bringing of Helen, the "teufelin" from Mephistopheles' own home, is transformed into a representation

of the love of the beautiful and of culture, as a necessary stage in man's progress.

The winning of a battle for the emperor is transformed into a study of true and false governments; and the last scene is changed from the devil's triumphantly claiming his bargain, to the final victory of unselfish endeavor. Through all these the line of Faust's development follows, not always in clear sight, but always moving forward.

The introduction to the second part shows Faust, asleep, among the forms and spirits of bright, natural, elemental life. These are to wipe away from his brain the remembrance of the past, that he may awake afresh to a new career. We may see in this much resemblance to the subjective state between two incarnations, when the sorrowful remembrances of the past fade out, and the man begins his new career with refreshed energy. Faust so awakens, looking round at the bright landscape with delight. In his soliloquy, we will do well to notice these lines, showing his changed mental attitude.

"Life's pulses now with fresher force awaken
To greet the mild ethereal twilight o'er me;
This night, thou, Earth! hast also stood unshaken
And now thou breathest new-refreshed before me,
And now beginnest, all thy gladness granting,
A vigorous resolution to restore me,
To seek that highest life for which I'm panting.
The world unfolded lies in twilight glimmer,
A thousand voices in the grove are chanting;
Vale in, vale out, the misty streaks grow dimmer;
The deeps with heavenly light are penetrated;
The boughs, refreshed, lift up their leafy shimmer
From gulfs of air where sleepily they waited;

Color on color from the background cleareth,
Where flower and leaf with trembling pearls are freighted:
And all around a Paradise appeareth.

Look up! — The mountain summits, grand, supernal,
Herald, e'en now, the solemn hour that neareth;
They earliest enjoy the light eternal
That later sinks, till here below we find it.
Now to the Alpine meadows, sloping vernal,
A newer beam descends ere we divined it,
And step by step unto the base hath bounded;
The sun comes forth! Alas, already blinded,
I turn away, with eyesight pierced and wounded!

'Tis thus, when, unto yearning hope's endeavor,
Its highest wish on sweet attainment grounded,
The portals of fulfilment widely sever;
But if there burst from those eternal spaces
A flood of flame, we stand confounded ever;
For life's pure torch we sought the shining traces,
And seas of fire — and what a fire! — surprise us.
Is't Love? Is't Hate? that burningly embraces,
And that with pain and joy alternate tries us?
So that, our glances once more earthward throwing,
We seek in youthful drapery to disguise us.

Behind me, therefore, let the sun be glowing!
The cataract, between the crags deep-riven,
I thus behold with rapture ever-growing.
From plunge to plunge in thousand streams 'tis given,
And yet a thousand, to the valleys shaded,
While foam and spray in air are whirled and driven.
Yet how superb, across the tumult braided,
The painted rainbow's changeful life is bending,

Now clearly drawn, dissolving now and faded,
And evermore the showers of dew descending!
Of human striving there's no symbol fuller:
Consider, and 'tis easy comprehending —
Life is not light, but the refracted color.

No longer is it a contradiction between the aspiration to gaze directly at truth, and the denial of the possibility of truth; he realizes that truth is, but also realizes that before he can gaze directly upon it, he must learn to see its reflection in every part of the manifold life around him.

We need not dwell on the next act, the Mythos of Industry, but merely note that, through Faust's suggestions of utilizing the resources of nature, represented under the form of treasures hidden in the earth, the Emperor's court is enriched, and every one feels himself a wealthy man. And now Faust is to furnish amusements before the Emperor, and the scene of Paris and Helen is to be shown. That is to say, the new wealth demands artistic display, but cannot create the beautiful in art: it can only demand it in exchange for money. Faust, by the aid of Mephistopheles, is to furnish it. and to do so must descend to the "Mothers" "throned in venerable solitude," in the void and desolation. Mephistopheles declares that it is nothing, where they dwell: Faust logically concluding that what Mephistopheles, himself the spirit of negation, pronounces nothing, must be distinctly something; just as in mathematics, the product of two minus quantities is a plus quantity; and he exclaims "In thy nothing I hope to find the All." And indeed, that which seems to the purely earthly mind to be no existence at all, to be pure annihilation, may be to a higher spiritual insight, the perfection of being. Faust succeeds in abstracting himself from all space and time; and from the realm of pure form brings back Helen, the impersonation of Greek classic beauty; but when he exhibits her

to the court, he is himself so charmed with her, though a mere shadow, that he tries to seize her, to keep her for himself from Paris, also a shade, who appears with her. The consequence is that both the forms instantly vanish, and Faust falls senseless.

Faust now fully believes in the truth as revealed in beauty; the old negation of the intellect is gone as far as that is concerned; but, as he has so often seen, aspiration alone will not give him the truth, and we next find him in the old German University, which he left so long before: no longer he denies the possibility of attaining truth; he sees where it is, in the form of the beautiful; but he must rise gradually to it, his soul must gradually grow up to it, through the same steps by which it was developed: as Helen is the perfect flower of classic culture and beauty, Faust must pass through the various forms through which the Greek mythus arose.

Passing over a number of scenes of the drama, for want of time, we come to the Classic Walpurgis Night, where we trace the development of the Greek idea. First, on the Pharsalian Field, we have a gallery of strange forms, which well illustrate how the divine in man, in his upward progress, gradually overpowers the animal. In this gallery of mythical forms, we first meet a group of three oriental forms: the griffon, half bird and half lion; a colossal ant; and the Arimaspeans, a one eyed race. Next a group of sphinxes, Egyptian forms, in which though the animal predominates, the human is more conspicuous than in the last group. Third, the sirens, Greek forms, in which humanity becomes more preponderant.

Another series begins with the water nymphs, pure children of nature, who beckon Faust on, and charm him by their beauty, but cannot delay him in his pursuit of Helen, the perfection of beauty. Next Chiron, the centaur, the human strongly predominating the animal; useful as a guide and to carry Faust, but not high enough

to bring him directly to Helen, or indeed to appreciate the passion for her: he carries Faust to Manto the prophetess, an impersonation of the Ideal as Chiron is of the Practical. He is incessantly in motion, but she gives her character in the line "I wait and time around me wheels"; she can help Faust to find Helen, for when Chiron half sarcastically tells her this is Faust's longing, she replies:

"Him I love that longs for the Impossible."

A saying of Goethe's which comes quite appositely here "To live in the Idea, means to treat the Impossible as if it were possible," may be compared with the eleventh rule in *Light on the Path*, "Desire only that which is unattainable." Through Manto's abode Faust passes to Helen's and we see him no more at present.

In the next act Helen herself appears; not a mere shade, but a living woman; and as in the first part we saw Margaret's fall and redemption, as an episode in Faust's career, though in itself independent, so also the Helena poem may be viewed as independent in itself, or as a part of the Faust drama. We may consider her as she first appears the ideal of beauty the sensuous beauty of the Greek race; and as Faust to win her must pass through a long experience, so she, to be fitted for Faust, must have her nature changed from this to something higher.

Troy has fallen, and Menelaus has brought back to Greece his recaptured wife; his ship has reached the Spartan shore, and he sends Helena, accompanied by a troop of attendants, captive Trojan women, before him to his palace to have all preparations made for a sacrifice to the gods, as soon as he shall arrive. The Trojan women, who always speak as chorus, represent the purely sensual element; as Mephistopheles represented the negative side of Faust's character, to overcome which is the work of the whole drama, so this chorus represents the lower side of Helena's

character, and it is only because she has the capacity for something higher, that she can become, if she can endure the experiences before her, worthy to be the wife of Faust. The chorus praises her beauty, but she feels that that has been the cause of all the misery that has come upon her, and through her upon her kindred and nation. The chorus has but little sorrow over the past, if only they can enjoy the bright sunshine, and the sensual happiness of the present; but her heart is full of remorse for the past and apprehension for the future; her world-wide fame gives her no satisfaction. As she enters the palace, in which she passed her happy childhood, she now knows not whether she returns as wife and mistress, or as sacrificial victim; and at the family hearth she sees, cowering, a hideous form; she turns to enter the bridal chamber and the form springs up against her, a veritable Dweller of the Threshold; a violent storm of abuse rages between this monster, Phorkyas, and the chorus of Trojan women. The latter symbolically represent the charm of sensual pleasure, the former its evil result; both, though dramatically distinct from Helena, are really parts of her own nature, but she is higher than the sensual longing, and will prove higher than the sharp remorse, which, in the form of Phorkyas, now brings before her with stinging clearness, her many sins and their terrible results: crushed by the weight of these, she sinks to the ground, but rises again, willing to bear the appointed doom, not disputing the justice of her condemnation. Phorkyas is conquered; now she has but to obey, and is ready to aid. Helen's strength of character has now made her fit for Faust, to whom Phorkyas conducts her and the chorus, passing at once from classic Greece to medieval times. We cannot follow all of this but can note that we may consider the whole of the third act as representing Faust, the universal man, gathering to himself the highest possible culture, impersonated in Helena; he makes her wholly his own, his wife. Is not this the highest attainable for man? No, we shall see later

that it is not. Helen leaves Faust at the end of this act, returning to Persephone in Hades. She disappears from out Faust's career, but her influence remains forever. The chorus refuses to follow her to the underworld, preferring the pleasures of sunny day, the only pleasure they can comprehend; though with the certainty that it must soon end, and they disappear into the elements to cease to exist as individuals. Panthalis only, the leader of the chorus, turns from them, and descends to Hades, faithful to the queen; faithful service and unselfish devotion gain for her the immortality which her fellows lose. For the descent to Hades is only the passing out of the Faust consciousness, not from existence: the subjective Devachanic consciousness may be, as we know, far stronger than the consciousness of the objective world which we too often look at as the only real one.

Faust has won the highest culture, but instead of crowning his career it will be a curse to him if he stops here. Unless he turn and use all he has acquired for an unselfish end, he will yet lose his forfeit to Mephistopheles. As in the tale of the gem, (1) "he who tells not of his gem, and shares it not with all men, must lose it," it is "the stone no man could keep unless he gave it away."

"The true and the Beautiful must now be employed in the service of the Good."

But as we read in the notes to *Light on the Path*: "It is impossible to help others till you have obtained some certainty of your own."

The fourth act shows the outworking of Faust on the world around him; he has formed the plan to reclaim from the sea a new land, and to rill it with his own activity; his individual culture is to be for the benefit of all. To this end he joins the Emperor, now hard pressed by a revolt which threatens to overthrow State and Church. Faust gains the victory over the insurgents, saves the ancient established order, which now

reorganizes with all the old abuses; but Faust is granted his strip of land, from which he proceeds to build up a new civilization; not by violent overthrow, but by gradual gain and progress.

In the fifth act we find him, a very old man, still unsatisfied; nowhere has he found the moment which was to fulfill his contract with Mephistopheles. Mephistopheles himself has lately been far less prominent; no longer Faust's guide, he is hardly more than his unwilling servant. True to his spirit of denial, he mocks at the tasks Faust sets to him, but more and more he fulfills his description of himself in the first act. "A part of that power which always wills the bad and always accomplishes the good."

At last, old and blind, comes upon Faust his last struggle, the contest with "Sorge," in this case anxiety for the future, the state after death. Faust is not overcome. "Let a man stand fast here and look about: what need he to sweep into eternity? To the strong man this world is not dumb. Thy might, O Sorge, I shall not recognize." Faster he pushes on his work of providing a happy home for untold generations, and in the enthusiasm of his vision of future ages, pronounces this distant view, the supreme moment of bliss. The promise of Mephistopheles is now fulfilled in the letter: Faust's term on earth is ended— he falls lifeless. But only in the letter is the contract fulfilled: it is by no delight of the senses, by no selfish pleasure, even the highest, that Faust is satisfied. Pure unselfish happiness: he has identified the individual with the all, it is the true brotherhood of humanity, no temptation of Mephistopheles could have done this. Faust dies freed from every personal desire, not in the hope of a reward in the future life, any more than with an unsatisfied longing on earth.

In the first part, the chorus of angels at Easter sang a song of love, but it was met by the denial and unbelief of Faust. Now the same

songs of love are sung, but the answer of denial comes from Mephistopheles. In the first scene, Mephistopheles had not yet been evolved externally, but was still contained in Faust's soul; the gradual process of evolving Mephistopheles from Faust and freeing the latter from his influence is the story of the whole poem, and now at last the spirits of love find Faust responsive to their invitation. He has fully purified himself from the spirit of denial, which is the same as the spirit of selfishness, of limitation. As the angels sing "Love leads only loving ones in," and "who unceasingly strives, him can we redeem," we see the vindication of the prophecy of the prologue:

"A good man, through obscurest aspiration,
Has still an instinct of the one true way."

And as, in the final scene, Faust's soul is borne upward, through sphere after sphere of spiritual glory, to the Queen of Heaven herself, we see again the spirit, "once called Gretchen," who long before called in despair on the Virgin to help her in her need, now again appealing, in almost the same words, but this time joyously asking for the privilege of welcoming the loved one yet dazzled by the new day.

As in Faust, so in Margaret, self is lost in pure devoted love, and at the word of the Mater Gloriosa she rises to higher spheres, there to draw him after her; as the mystic chorus tells, the summing up of the whole wonderful drama, whose meaning every one must feel to the measure of his apprehension, but can hardly express in words.

Alles vergaengliche All that's impermanent
Ist nur ein Gleichniss. Is but a likeness.
Das Unzulaengliche The Unattainable
Hier wird's Ereignis. Here findeth witness;
Das Unbeschreibliche The Indescribable,

Hier ist es gethan;	Here is it done;
Das Ewig-weibliche	The Ever-womanly
Zieht uns heran.	Leadeth us on. (2)

NOTES ON THE ASTRAL LIGHT: IV — *B. N. Acle*

From Eliphas Levi's *WORKS*.

(Concluded.)

We have alluded, heretofore, to a substance diffused throughout Infinity: this unique substance is at once Heaven and Earth, that is to say, according to its degrees of polarization, subtile or fixed.

It is this substance that Hermes Trismegistus denominates the great Telesma; when it produces brilliancy, it is called Light; it is this substance that God created, first of all, when He said, "Let there be Light."

It is at once matter and motion, a fluid and a perpetual vibration; and the force that is inherent in it, and sets it in motion, is called Magnetism.

In Infinity, this unique substance is Ether or Etherial Light; in the stars, which it magnetizes, it becomes the Astral Light; in organic beings, magnetic or fluidic light; and in man, the astral body or the plastic medium.

The wills of all intelligent beings act directly upon this light, and through it, on all Nature, which is thus subjected to the modifications of intelligence.

This light is the universal mirror of all thought and all form; it preserves the images of all that has been, the reflections of worlds that have passed away, and, by analogy, the prophecies of worlds that are yet to come. This light, which is called in Hebrew "Aour," is the liquid and living Gold of the Hermetic philosophy; the positive principle is its sulphur, the negative its Mercury; and these principles, when equilibrated, form its Salt. All matter,

therefore, is impelled to motion by reason of its double magnetism, and tends, inevitably, to equilibrium; the regularity and variety in this motion, result from different combinations of this equilibrium.

A fluid is matter in active motion, and constantly agitated by reason of the variation of its equilibrium; a "solid," is the same matter in less active motion; or in apparent repose, because it is more or less solidly equilibrated.

There is no solid that cannot be immediately reduced to powder, dissipated in smoke, and rendered invisible, if the equilibrium of its molecules should suddenly be entirely destroyed; and there is no fluid that cannot be instantly rendered harder than the diamond, if its constituent molecules could be immediately equilibrated.

To direct these two magnetisms, therefore, is to destroy or create, to produce forms or to annihilate them — in a word, to exercise the omnipotence of nature.

Our plastic medium is a magnet that attracts or repels the Astral Light, by the compulsion of the will: it is a luminous body, that reproduces, with the greatest fidelity, the forms that correspond to ideas: it is the mirror of the imagination.

This plastic body is nourished by the Astral Light, precisely as the organic body is nourished by the products of the earth. During sleep, it absorbs the Astral Light, by immersion; and in waking hours, by a kind of respiration, more or less slow.

In natural somnambulism, the plastic medium is surcharged with nutriment, which it does not perfectly assimilate: the will, although fettered by the torpor of sleep, strives to repel the medium; and a reaction, which is to some extent mechanical, ensues, whereby the light of the medium is equilibrated, by

means of the movement of the body; this explains why it is dangerous to awaken somnambulists suddenly — for the surcharged medium might, in such cases instantly withdraw to the universal reservoir, and entirely abandon the organs which, at that time, are separated from the soul, thus causing death. Hallucinations and visions, result from wounds inflicted on the plastic medium, causing local paralysis; sometimes it ceases to radiate, and substitutes images of its own, for the realities existing in the light, sometimes it radiates too powerfully, and condenses itself in some undesirable or fortuitous locality just as the blood settles in excrescences of the flesh: then the chimeras of the brain take form, and we appear to ourselves glorious or deformed, according to the ideal of our hopes or fears.

Hallucinations, being dreams of our waking hours, always presuppose a state analogous to somnambulism, and somnambulism may be regarded as sleep borrowing its phenomena from waking states; hallucination is the waking state, still swayed, in part, by the astral intoxication of sleep. Our fluidic bodies attract and repel one another, according to laws analogous to those of electricity; thus are produced instinctive sympathies and antipathies, which equilibrate each other: for this reason, hallucinations are often contagious; a circle of illusion is formed, and a whole multitude is easily carried away; this is the history of strange apparitions and popular prodigies; thus are explained the performances of the Mediums in America, and the folly of tableturning. Lunatics and idiots are more susceptible to magnetism than persons of sound mind — and the reason is apparent; it requires very little to completely turn the head of a man who has been drinking heavily, and disease is much more easily contracted, when all the organs are predisposed to submit to its impressions, and already manifest its symptoms. Fluidic maladies have their fatal crises; every abnormal tension of the

nervous apparatus, leads to a contrary tension, in accordance with the inexorable law of equilibrium; exaggerated love changes to aversion, and all exalted hatred approximates closely to love. The reaction comes with the violence and the suddenness of the thunderbolt. Ignorance is dismayed or indignant — science accepts the inevitable in silence.

The vibrations of the voice modify the movement of the Astral Light, and are powerful factors of magnetism. Baron du Potet says, in his recent book on "Magic," that it is possible to kill by means of magnetism, just as it is by electricity; this revelation has nothing surprising for those who understand the analogies of Nature; it is certain that, by unduly dilating, or suddenly contracting, the plastic medium of a person, it can be separated from his body; cases have been known where one was thus killed, by being thrown into a paroxysm of anger, or overwhelming fear. Our plastic medium inhales and exhales the Astral Light, or the vital breath of the earth, just as our body breathes the terrestrial atmosphere; and as, in some localities, the air is impure, and unfit to be breathed, so certain phenomenal circumstances may render the Astral Light unwholesome and incapable of being assimilated; and as the air in some places is too stimulating for certain organizations, but exactly suited to others, so it is with the Astral Light.

The Path

RAYS FROM THE EAST

(FRAGMENTS OF M.S.S., WRITTEN DOWN BY J.)

The longings of no human heart are to be lightly set aside; each one of them is a sub-tone in the great harmony of life; each one is the cry of some brother who has often forgotten his language, but still feels his wants. In his heart burns, however feebly, the spark from the Divine ever seeking the way back to the centre from which it came.

True it is that a man may have been initiated, in his past lives, into many degrees of knowledge and power, who yet had not had certain experiences necessary before entering on the next degree; and furthermore, that not one single degree can be lost to him, even though he may now appear before you, in a human garb not inviting, not puissant, not impetuous, nor in any sense free from faults.

•• once wrote: "An abyss opens behind each step; he cannot go back, and an irresistible impulse urges him forward."

That "abyss" is the "era of achievement," the passage from an "intermediate form" into a "new type." It is *not* mere absorption. Absorption goes on for periods anterior to it. During the absorption, and after saturation, the being goes on assimilating. Adjacent tissue — so to say — alters by either what your scientists call *infiltration*, or by what Patanjali calls *supply of natures*. There could not be, when the process is completed, any recession to the old type after the intermediate form has disappeared. But truly, just as in your material world, during vast shadowy periods, the vacated — almost — intermediate types floated about until the *habit* of nature had changed and they became useless, and many

beings had again and again reoccupied these forms, so in each daily life, or moral life, the intermediate forms remain until *your* habit has totally altered. They then disappear forever. So it is an abyss, great, profound, wide, silent and tenantless.

In a sense it is like the closed valve in the circulation, which permits no blood to engorge the heart. And the impulse that urges forward, has its source in the great heart which urges on the astral light that makes our poor human hearts beat to and fro. And as the mere motion of the heart cannot be stopped at ease because it is the servant of the great heart, so the impulse cannot be resisted by him who has voluntarily gone into the vast circulation of the great Adam; who, urged on by reverberating echoes from a *living* past, has started toward the goal. Often he knows not why he does so, and is perhaps unaware that the echoes have transformed themselves, by the subtle alchemy of nature, into unconscious leanings very often called "atavistic" (wrongly) by scientific men. So he knows them not as echoes.

Perhaps failure to carry out a chosen plan is part of a necessary step. Our failures to encompass a set end are our best teachers, provided we recognize the real work that inevitably is contained in the failure.

The very rush of the onset made by him who impetuously enters *the path*, has in itself the recoil, and a brave ship is required; and not only a brave ship, but also the pilot called by the name "experience," and the captain who has sailed in many seas.

Each man keeps his own account — with his eyes closed; but his hand writes down the correct sums, and the balance *has to be struck*.

The examiner of accounts is deaf, dumb and blind; the entries are in relief, and he measures them by touch.

I charge you to give these words to those whom you know are waiting and anxious to hear or see any words of mine.

May we be guided towards the living Truth.

The Path

THE BHAGAVAD-GITA: IV — *William Brehon*

(Continued from December number.)

Salutation to the Prowess of Krishna! May it be with us in the fight, strengthening our hearts that they faint not in the gloomy night that follows in the path of the day.

THE FIRST ABYSS.

The first chapter is ended. In one aspect, the Bhagavad-Gita is a personal book. It is for each man; and it is in that way we have so far considered it. Some have called it obscure, and others a book which deals solely with the great principles of nature; with only great questions of cosmogony; with difficult and bewildering questions relating to the first cause; and still others think it is contradictory and vague. But this first scene in the great colloquy is plain. It has the din of arms, the movement of battalions and the disposition of forces with their generals. No one need feel any hesitation now, for we are face to face with ourselves. The weak man, or he who does not care for Truth no matter where it leads, had better shut the book now. Unless he can go on reading the poem with the fixed intention of applying it to himself, it will do him no good whatever. He may say, however, that he will read it for what it may seem to contain, but if he reads to the end of time and does not fairly regard this first lecture, his knowledge gained further on will be no knowledge. It is indeed the book of the great mystery; but that problem was never solved *for* any one; it must be settled and solved *by* each one *for himself*. No doubt it was for this reason that Vyasa, to whom the poem is attributed, placed this conflict, in which the principal characters are Arjuna and Krishna, at the outset. It would have been easier to have made them sit down for a philosophical discourse beforehand in which

reasons *pro* and *con* regarding any battle would be discussed, and then, after all that was done, to show us Arjuna, encouraged and equipped, entering upon the war sure of victory because he had spent much time in dispelling his doubts. But instead of doing this he pictures the impetuous Arjuna precipitating the battle before he had considered whom it was he had to fight.

It does not appear in the Bhagavad-Gita, that Krishna had induced Arjuna, as was the case, to make the war for the purpose of regaining his kingdom. While stirring him up to it Krishna had wisely refrained from telling that which Arjuna finds out on the first day, that he had to oppose all these friends, kinsmen and preceptors. It was a wise reticence. If we completely apprehended the enormous power of our passions and various tendencies, most of us would throw up the fight in advance; for nothing would persuade us that any power within could withstand against such overwhelming odds. For us then the incitement to fight is found, not so much in any conversation that we hold now with Krishna, but in the impulses which are carried across, again and again, from incarnation to incarnation.

We take up the gage over and over, life after life, in experience after experience, never completely defeated if we always look to Krishna — our Higher Self. And in the tale of Arjuna we find this also. For in a succeeding book called "Anugita," is an account of the hero walking with Krishna through the Palace of Maya. The battle over, for the time, Arjuna tells his friend that he has really forgotten much that he had told him (in Bhagavad-Gita) and asks for a succinct repetition. This is given to him by the great warrior.

The palace of Maya is this body of illusion, built up around us by desire. In our last births we had all the advice given in this poem, and walking to-day through the palace, which sometimes seems so lovely, we now and then have reminiscences from the past:

sometimes we stoutly take up the fight: but surely, if we have listened to the Guide aright we will compel ourselves at last to carry it out until finished.

In coming to the conclusion of this first chapter, we reach *the first abyss*. It is not the great abyss, albeit it may seem to us, in our experience, to be the greatest. We are now *vis-a-vis* with our own despair, and doubt his companion. Many a student of Theosophy has in our own sight reached this point — all true students do. Like a little child who first ventures from the parent's side, we are affrighted at what seems new to us, and dropping our weapons attempt to get away; but, in the pursuit of Theosophy it is not possible to go back,

Because the abyss is behind us.

There is in nature a law that operates in every department whether moral or physical, and which may now be called that of undulation and then that of inhibition; while at other times it reappears as vibration, and still again as attraction and repulsion, but all these changes are only apparent because at bottom it is the same. Among vegetables it causes the sap to flow up the tree in one way and will not permit it to return in the same direction. In our own blood circulation we find the blood propelled from the heart, and that nature has provided little valves which will not permit it to return to the heart by the way it came, but by the way provided. Medical and anatomical science are not quite sure what it is that causes the blood to pass these valves; whether it is pressure from behind communicated by the heart, or the pressure by atmosphere from without which gently squeezes, as it were, the blood upon its way. But the Occultist does not find himself limited by these empirical deductions. He goes at once to the centre and declares that the impulse *is* from the heart and that that organ receives its impulse from the great astral heart or

the Akasa, which has been said by all mystics to have a double motion, or alternate vibration — the systole and diastole of nature.

So in this sense the valve in the circulation represents the abyss behind us that we cannot re-pass. We are in the great general circulation, and compelled whether we like it or not, to obey its forward impulse.

This place of dejection of Arjuna is also the same thing as is mentioned in "*Light on the Path*" as the silence after the storm. In tropical countries this silence is very apparent. After the storm has burst and passed, there is a quietness when the earth and the trees seem to have momentarily ceased making their familiar, manifold noises. They are obeying the general law and beginning the process of assimilation.

And in the astral world it is just the same. When one enters there for the first time, a great silence falls, during which the regulated soul is imbibing its surroundings and becoming accustomed to them. It says nothing but waits quietly until it has become in vibration precisely the same as the plane in which it is; when that is accomplished then it can speak properly, make itself understood, and likewise understand. But the unregulated soul flies to that plane of the astral world in a disturbed state, hurries to speak before it is able to do so intelligibly and as a consequence is not understood, while it increases its own confusion and makes it less likely that it will soon come to understand. In the Theosophical Society, as well as out of it, we can see the same thing. People are attracted to the astral plane; they hear of its wonders and astonishments and like a child with a new toy in sight they hurry to grasp it. They refuse to learn its philosophy because that seems dry and difficult. So they plunge in, and as Murdhna Joti said in a former article in this magazine, they then

"swim in it and cut capers like a boy in a pool of water."

But for the earnest student and true disciple, the matter is serious. He has vowed to have the truth at whatever cost, willing to go wherever she leads — even if it be to death.

So Krishna, having got Arjuna to where the battle has really begun, where retreat is not possible, begins to tell his loved disciple and friend what is the philosophy that underlies it all and without which success cannot be compassed.

We should not fail to observe at this point, that when Arjuna threw down his bow and arrows, the flying of missiles had already begun. We cannot say that when the philosophical discourse began between these two the opposing forces declared a truce until the mighty heroes should give the signal, because there is nowhere any verse that would authorize it, and we also can read in the accompanying books that all the paraphernalia of war had been brought on to the field and that the enemy would not desist, no matter what Arjuna might do. Now there is a meaning here, which is also a part of the great abyss the son of Pandu saw behind him, and which every one of us also sees.

We enter upon this great path of action in occultism mentally disposed towards final victory. This mental attitude instantly throws all the parts of our being into agitation, during which the tendencies which are by nature antipathetic to each other separate and range themselves upon opposite sides. This creates great distress, with oftentimes wandering of the mind, and adds additional terror to our dark despair. We may then sink down and declare that we will fly to a forest — or as they did once in Europe, to a monastery — so as to get away from what seems to be unfavorable ground for a conflict. But we have evoked a force in nature and set up a current and vibration which *will go on* no matter what we do. This is the meaning of the "flying of arrows"

even when Arjuna sat down on the bench of his chariot.

At this point of our progress we should *examine our motive and desire*.

It has been said in some Theosophical writings of the present day, that a "spiritualized will" ought to be cultivated. As terms are of the highest importance we ought to be careful how we use them, for in the inner life they represent either genuine, regulated forces, or useless and abortive things that lead to nothing but confusion. This term "spiritualized will" leads to error, because in fact it has no existence. The mistake has grown out of the constant dwelling on "will" and "forces" needed for the production of phenomena, as something the disciple should strive to obtain — whether so confessed or not — while the real motive power is lost sight of. It is very essential that we should clearly understand this, for if we make the blunder of attributing to *will* or to any other faculty an action which it does not have, or of placing it in a plane to which it does not belong, we at once remove ourselves far from the real knowledge, since all action on this plane is by mind alone.

The old Hermetic statement is: "*Behind will stands desire*," and it is true.

Will is a pure, colorless force which is moved into action by *desire*. If desire does not give a direction the will is motionless; and just as desire indicates, so the will proceeds to execute.

But as there are countless wills of sentient beings constantly plying to and fro in our sphere, and must be at all times in some manner acting upon one another, the question arises, what is that sort of knowledge, which shows how to use the will so that the effect of counteracting wills may not be felt. That knowledge is lost among the generality of men and is only instinctive here and

there in the world as a matter of Karmic result, giving us examples of men whose will seems to lead them on to success, as Jay Gould and others.

Furthermore, men of the world are not desiring to see results which shall be in accord with the general will of nature, because they are wanting this and that for their own benefit. Their desire, then, no matter how strong, is limited, or nullified: (1) by lack of knowledge of how to counteract other wills; (2) by being in opposition to the general will of nature without the other power of being able to act strongly in opposition to that too.

So it follows — as we see in practice in life — *that men obtain only a portion of that which they desire.*

The question next arises: Can a man go against the general will of nature and escape destruction, and also be able to desire wickedly with knowledge, and accomplish, through will, what he wishes?

Such a man can do all of these — except to escape destruction. That is sure to come, no matter at how remote a period.

He acquires extraordinary knowledge, enabling him to use powers for selfish purposes during immense periods of time, but at last the insidious effects of the opposition to the general true will makes itself felt and he is destroyed forever.

This fact is the origin of the destruction-of-worlds-myths, and of those myths of combats such as between Krishna and Ravana, the demon god, and between Durga and the demons.

For in other ages, as is to again occur in ages to come, these wickedly desiring people, having great knowledge, increase to an enormous extent and threaten the stability of the world. Then the adherents of the good law can no longer quietly work on

humanity, but come out in force, and a fight ensues in which the black magicians are always destroyed, because the good Adepts possess not only equal knowledge with the bad ones, but have in addition the great assistance of the general will of nature which is not in control of the others, and so it is inevitable that the good should triumph always. This assistance is also the heritage of every true student, and may be invoked by the real disciple when he has arrived at and passed the first abyss.

"And when the Great King of Glory saw the Heavenly Treasure of the Wheel, he sprinkled it with water and said: 'Roll onward, O my Lord, the Wheel! O my Lord, go forth and overcome!'"

(To be continued.)

The Path

RAHULA'S INHERITANCE — *J. Campbell Ver Planck*

"* * The spirit promised me that I should dwell with the crooked moon in her eternal beauty."

In that wonderful Age which our nurses call Once-upon-a-time, the Prince Rahula came into the Hall of Sages and demanded his birthright. The Wise Ones heard him in silence, and he seemed to be dismissed without an answer. On the following day he came again, with the same ill success; so the third time and up to the seventh demand, being always unnoticed and even, as he thought, unseen. On the eighth day a messenger returning to the Council of Sages, found Rahula seated upon a plinth at the entrance to the temple.

"What doest thou there, my Lord?" demanded the messenger.

"I have taken up my abode here, nor will I stir hence until the Wise Ones shall have heard me," answered Rahula.

"But is it meet that thou shouldst sit here so lowly, Prince that thou art?"

"It is meet that a man do all things to obtain his birthright. For him there is nothing else, and great or small, honey or poison, mine shall be mine."

The messenger bowed before him. "Thou art more than royal: thou art wise," he said. Then he hastened within, and when the Sages heard what he had seen they sent for Prince Rahula, who presently saluted them reverently and said: "I am come to claim mine own. I am the Prince Rahula and I am well known to you; seven times already have I claimed it."

"Yes, my Son," answered the Elder; "but it is customary to prove a

man, that his determination may show him the true heir, so that no impostor shall receive the inheritance kept for him by the Sons of Wisdom. Only those who know their rights and wrest them from Fate by strong courage, are true Princes of the royal line. But there is still a sign and countersign to pass between us ere we bestow thy birthright upon thee. Dost thou know them?"

The young Prince smiled a smile that was rarely sweet, drew himself to his full height, and tossing back his mantle, displayed to the Sages a crimson heart, transfixed with a golden lance. The Sages rose and saluted the Emblem, and parting their robes, each showed such a heart beneath his own breast. Only in the centre of theirs was written the word *Humanity*, and the lances were of living light, and a musical throb that was in itself a perfume was the pulse of each heart.

"Thou knowest the sign indeed," said the Elder to Rahula. "Take now the countersign. Remember that the wise and perfect heart pulsates for man alone. Thou hast demanded thy birthright in the name of the pierced heart: take it, and go in Peace."

At his signal the messenger brought to Rahula a large and brilliant crystal. It was shaped like the crescent moon: one side of it was covered with hieroglyphs cut into the stone; the other sparkled from innumerable facets like a field of hoar frost at sunrise. Rahula looked at it seriously. "A strange gift for a warrior," he said. "What is its use, my Lords? What shall I do with it?"

The Elder answered: "It is the birthright deposited with us at thy coming into the world and we can give thee no other. Its use is for thee to discover. We are but the guardians, not the interpreters. I have spoken."

Vainly Rahula besought him, no other word was uttered; the

Sages had resumed their silence and at last, lit by the rays of the shining moon, Rahula left the temple and re-entered life. Long he considered the jewel: of the characters he could make nothing. So he determined to hang the great crystal beneath the royal gateway, where all men might see it, and perchance its use might be discovered. This was done, and the life of the great city passed on beneath the mysterious crystal. Soon strange tales were told of it; at night its wonderful brilliance shattered the darkness with a thousand rays, which were never so softly penetrating as when they lit the weary to his home, or pointed out his task; which were never so blinding and sharp as when they shone into the face of sin and confessed it. These living rays seemed to single out certain men and passing before them, to light them to happiness and good fortune. It was found that such men had always sought after the light with single hearts, so that people began to desire to be well considered by the spirit of the gem, and to take its rays for guidance. Others still, looking for the solution of grave problems of labor and of want, found the answer in the hieroglyphs of the crystal moon, and translated them into many longing lives. Nor was this all. The gem reflected the heavens and their mysteries to those who looked down upon it from hard won heights, and cast also an illumination from those holy lands upon the wayfarers beneath who could not climb so far. It shed from its resplendent facets the life and warmth of the sun, and through the solemn marches of the nights it testified to the living Truth beyond the stars, and so renewed the religion of the people. All who appealed in faith to its hidden spirit were helped: the sick who struggled to touch it were made whole or given great patience and content. At the first touch of sunrise, at the last ray of sunset, seven musical notes rang from its flashing rim and turned to ineffable harmony the lives of all who heard them. Thus the light of a great peace fell over the city; friend and foe alike came from afar to share it and the reign of Rahula blessed even his enemies.

The Prince thought long over the strange power of the crystal as the happy people passed and repassed beneath it. He thought it too diffused; he determined to concentrate and heighten it, and summoning his servants, bade them take down the crystal from the gateway and bring it into one of the great halls of the palace. When this was done, and the soft shining no longer lit those stony ways, the people murmured, so that the Prince went out and himself spoke with them:

"I have been long learning the use of my birthright," he said, "The crystal is too rare a thing to hang thus exposed to the elements, to the enterprise of my rivals, the greed of envious men and to all the chances of fate. I have built an altar in the palace hall; the gem shall hang above it; incense shall rise; the gods will answer me from between the horns of my crystal moon, and send riches to me and to my kingdom. These I will myself dispense to you, and the jewel shall still bless you, but my foes shall be confounded."

All were silent a moment. Afterwards a woman in the crowd fell to weeping and cried out: "Do not this thing, my Lord! Hide not the light of thy birthright from us. We love the gem, and that love is more to us than any riches."

"You shall still love it," replied Rahula "more, you shall worship it, for this crystal is the abode of a mighty spirit; it is the signet of the Gods."

"To worship is not always to love," sobbed the woman, and the crowd complained loudly. But Rahula replied again: "The gem will make my reign renowned. It shall not be profaned by the dust and steam of the byways, by the fevered touch of the sick and the desecration of unhallowed eyes. In the shelter of a sacred place it shall shine for the good alone, and those who do homage

to me and who are taught of my priests, these the crystal shall bless, and not my enemies; yea, it shall still bless all untrue people. I have said." Rahula disappeared and the crowd went away muttering.

A great change came over the city. Little by little, the old turmoil came back, the old discord and wrangling went on beneath the gateways. The memory of that soft shining died out of the fevered hearts, and soon only the aged and the little children remembered to mourn for the lost gem. But within the temple incense rolled, priests knelt consulting the oracles, wise men interpreted the hieroglyphs seeking riches and fame for Rahula, while over all the white moon hung pale and shuddering in the perfumed breeze. A change came over it like the change in the city. The smoke of worship obscured the rays, then obstructed them; then they ceased shining altogether and the face of the moon was veiled in mist. The temple music drowned the bell notes, and though it was stopped when this was discovered, those notes sounded no more, for the sunrise and sunset glow no longer flooded the crystal rim. The hieroglyphs told wonderful tales of fame and pomp and war, but all turned out illy, and Rahula found that his priests had read them backward, that only the people knew their language by instinct, as the language of their infancy. The glory and beauty of the great gem were gone: none but the priests would do it homage, and it hung, a dulled and impotent thing in the chill silence above the altar. Rahula felt a certain awe, a sense of coming disaster. He bade his servants take down the crystal, set cunning artificers to brighten and restore it, and then, ordering a great festival to be held, he had the stone replaced above the gateway, and waited for the joy and praises of the people.

Instead he heard jeers, flouting and anger. "Does he weary of his pleasure, that he flings it forth to us again?" cried some. Others

said: "The stone has brought him ill fortune, and he would cast it over the city instead." Some pointed at it as an old superstition; some prostrated themselves in loud worship, but these were men of evil conscience who sought to propitiate the Prince for their own ends. Some indeed there were who tried to read words of comfort or peace in the gem, but the artificers of the Prince had altered the signs unknowingly and all the real meaning was defaced. While Rahula saw this, first with anger, then with deadly pain and grief, a black storm slowly rolled up, gathered, burst, and in an hundred lightnings the stone was shattered, its splintered fragments hurled down the tempest and lost. The people fled the city in terror, crying that the gods had punished them for reverencing a birthright other than their own, as was forbidden to man. When the storm was over, one pallid star looked out of the clouds upon a deserted palace, and a lonely Prince brooding over his lost birthright, questioning the mystery of that destruction.

Long he searched his heart in the solitude but it gave no answer that he understood; he too had forgotten a language. He rose with sudden recollection; he would go to the hall of Sages. Even as he thought this the Elder stood before him. The Prince shot a glance of hope into that calm face, a glance that changed to one of dismay as the Sage said gravely: "What hast thou done with thy birthright?"

"I? Nothing;" stammered Rahula. Mocking echoes multiplied the word. "Nothing! Nothing!" came back to him from all his empty halls like an accusation. He turned quickly upon the Elder:

"Answer me this," he said. "What is this gem, whose power and value are so great, and yet so small? What is it that is both everything and nothing?"

"It is Life. Life which bestowed upon the world is of priceless

worth to thee and to all, and which for selfish ends is but an empty thing; Life which thou shalt lose if thou keepest it for thyself. Used as a means, Life is glorious in power and opportunity, fruitful in blessing. Used as an end, a thing sought and worshipped in itself, it is the scorn of mortals and the sport of gods. This was thy only birthright, and thou hast lost it."

"But I will find it again; I will seek the world for the fragments," spoke Rahula. "They shall once more mirror heaven and once more shine upon the people." He went forth to search strongly, a weary search of centuries, for wherever mankind may dwell, there still wanders Rahula, seeking those broken fragments, seeking to restore their scattered meaning. Happy he, who having received Life whole from the gods, gives it back to them in unbroken integrity through the lives of all the people.

The Path

KEELEY'S "INTER-ETHERIC FORCE."

The following is a free translation from a French rendering of some important passages from the new book Mme. H. P. Blavatsky is now finishing in London, and entitled "*The Secret Doctrine*." Our translation has not been revised by the author, so that she must not be held accountable for any possible small errors that may have crept in through such double filtering: but the general sense is in strict accord with her views expressed long ago to us, and we feel warranted in saying that any errors are only verbal and not substantive. It was not thought necessary, either, to give the long quotations respecting Keeley's claims, as these are well known in this country.

"Every student of occultism knows that *sound* is one of the most formidable of occult powers: one whose least exercise, by an occultist, is productive of results a hundred thousand fold greater than all the electricity that could be produced even by such a waterfall as Niagara. It is possible to produce a sound capable of lifting in air the Pyramid of Cheops: or of bringing back to life, and inspiring with renewed vigor, one who is at the very point of death.

"For *sound* comprises the elements of a species of ozone whose production is beyond the powers of Chemistry, but appertains to those of Alchemy. This ozone can recall a man to life, provided that the Astral, or vital, body has not been irrevocably separated from the physical body, by the severance of the odic or magnetic tie which unites them. The Author ought to know something about this by personal experience, having been snatched from the jaws of death, on three separate occasions, thanks to this power.

"In the opinion of occultists, Mr. Keeley is on the threshold of one

of the greatest secrets of the universe: a secret upon which depends the whole mystery of physical forces, as well as the esoteric meanings of *the egg of the world*. Occult philosophy regarding the manifested and the non manifested Cosmos as forming a *unity*, it follows that the ideal conception of the first is symbolically expressed by this '*golden egg*,' which has two poles.

"It is the positive pole that exerts itself in the manifested world of matter; while the negative pole loses itself in the absolute unknowable, the *Sat*.

"This, however, cannot be the doctrine of Mr. Keeley, since he believes in a personal God. However, his ideas about the etheric, material constitution of the universe bear a striking likeness to ours: in fact, they are almost identical.

"But Mr. Keeley's *inter-etheric* centre is not exactly the centre of *laya* of the Eastern Occultists. The former can be produced at will, as has been proved by the phenomena of the Astral bells:(1) but the *centre of laya* cannot be produced by *human* will.

"If we are unwilling to accept the explanation that Mr. Keeley gives us — one which, from the occultist point of view, is perfectly orthodox, except for some obscurities of language — what answer will official science make to *facts* which it is impossible to deny? Occult philosophy only discloses its sacred mysteries one at a time. It drops them, like precious pearls, from time to time, during the course of the centuries, and only at those epochs which are marked by the movement of the rising wave of Evolution which bears humanity slowly, silently, but surely towards the birth of the sixth race. For once having passed out of the possession of their legitimate guardians, these mysteries cease to be occult: they fall into possession of the public, and run the risk of becoming in the hands of egoists — the Cains of the human race — curses, instead of the blessings that they formerly were.

"However, when men like Mr. Keeley are born, endowed with special mental and psychic powers, they are, as a general rule, aided by the guardians of the occult; since if they were left to their own resources, they would advance but slowly, and would soon become martyrs of their discoveries, or victims of less scrupulous speculations. But they are never thus aided except upon the express condition that they shall never, whether consciously or unconsciously, become a new peril to the humanity of their century, one more danger to the poor, who are daily offered in holocausts to the very rich by those who are less so.

"Mr. Keeley, then, is what the Kabbalists term a 'magician born.' Such as he is, however, he does not know, and never will know, the full extent of his powers. He will only be able to profit by such as he has discovered himself, in his own nature. And this for two reasons. Firstly, because he attributes to these powers a false origin which will prevent him from giving them full play; and secondly, because he is incapable of communicating to others that which is an inherent capacity of his own nature. He will, therefore, be unable to transmit all of his secret for permanent application.

"It is not *rare* to find individuals endowed with a like faculty. If we do not hear them spoken of more frequently, it is because in almost all cases they live and die without suspecting that they are possessors of any abnormal powers. Such powers are considered abnormal to-day, only because they are as little known as was the circulation of the blood before the epoch of Harvey. The blood existed and acted in the same way that it does to-day, in the first man that was born of woman: just so there is in man a principle that is capable of directing and regulating the vibratory inter-etheric force. This principle exists, at least, in those whose 'inner

self' is connected by direct descent with that group of *Dhyan-Chohans* called the 'first-born of the Ether.' From the psychic point of view, humanity is divided into different branches, each of which is attached to one of the groups of *Dhyan-Chohans* who 'in the Beginning' created the *psychic man*. Mr. Keeley, favored by such a connection, and being endowed, in addition, with a remarkable psychic temperament and an extraordinary mechanical genius, is capable of achieving the most marvellous results. That which he has just accomplished is in itself sufficient 'to demolish, with the hammer of science, the idols of science' — those idols whose feet are clay.

"There are limits which Mr. Keeley will be unable to pass: yet, without doubt, his name will go down to posterity for that which he shall have accomplished in the domain of *psycho-physical* inventions. He will be known as *the benefactor of the rich*. Whether *the poor* will have cause to bless this great man is quite another question. The miners, the engineers, the mechanics, the millions of unfortunate working men who gain with difficulty their daily bread by the work of their hands, will find themselves without occupation on the day that the 'etheric force' of Mr. Keeley shall have taken the place of steam engines and other means of locomotion. *But that day will not come!*

"The force that Mr. Keeley has just unwittingly discovered is none other than that terrible astral power known to the Atlanteans, and called by them *Mash-mak*. It is 'vril' of 'the Coming Race' of Bulwer's romance, and of the future races of humanity. The word 'vril' may possibly be an invention of the writer of that story: but the force itself is not, for it is referred to in all of the secret books of India. It is this identical vibratory force which, directed against an army by means of a machine (*agni-rath*) stationed in a 'flying vessel,' according to the instructions laid down in the *Ashtar Vidya* (2) would reduce a hundred thousand men and elephants to

cinders as easily as if they were wisps of straw. It is mentioned in the '*Vishnu Purana*' under the symbol of the 'glance' of Kapila, — the Sage who, by the glance of his eye, reduced the sixty thousand sons of King Sagara to a heap of ashes.

"And is it conceivable that it will be permitted to our generation to add this *Satanic* power to the choice collection of the toys of the children of Anarchy, — such as melinite, dynamite clocks, explosive oranges, 'bouquets of flowers,' and such like innocent trifles? Is it possible that the 'Elder Brothers' of the race should deliver, to the cupidity of our century, this destructive agent, which, in the hands of some modern Attila or of some Anarchist thirsting for blood, could in a few days reduce Europe to primitive chaos? Never! The discovery of Mr. Keeley comes a hundred thousand years before its proper time. It will never truly take its place in the cyclic evolution of humanity until the threatening tide of capitalistic monopoly shall have ebbed; which will take place when just claims shall have been listened to.

"When such a thing as unjustly paid labor exists only as a matter of history — when the cry of famine ceases to be heard in the world, — then only will the discovery of Mr. Keeley cease to be an anachronism, because then the poor will have more use for it than the rich."

In the foregoing we find additional interest upon reading in the *N. Y. Sun*, of December 15, 1887, an account of the last annual meeting of Mr. Keeley's company, at which his report upon his discovery was read. Among other things he said:

"After a succession of interesting but laborious experiments, he produced in March of 1885 what he termed a liberator, which could be operated in conjunction with the generator, and was a vast stride in advance of anything accomplished hitherto. Meanwhile phenomena

had been unfolded to him, opening "a new field of experiment, as the result of which he became possessed of a new and important discovery. Hereafter he shall not, he says, require the generator or liberator, and his operations will be conducted without either the vaperic or etheric forces, which heretofore played such an important part in his exhibitions. What name to give his new form of force he does not know, but the basis of it all, he says, is vibratory sympathy. It may be divided, too, into negative and sympathetic attraction, these two forms of force being the antithesis of each other. As to the practical outcome of his work, Mr Keeley could make no promises.

"Among the work yet to be done is the construction of a sympathetic machine of a very delicate character. While this will be a perfect vibratory structure itself, its function is to complete the work of graduation or governing of the force, but as to what length of time it will take to complete the work he cannot say."

Evidently the end is not yet. By this report we see that even since Madame Blavatsky wrote her remarks, Mr. Keeley has been thrown off the track, has *given up* — or gone beyond — all that he had hitherto done, and now is engaged on "a new form" and a "sympathetic vibrator," which will take longer to complete than he cares to say; and when that is completed, there will be further steps necessary before practical results are seen.

THE APPEAL UNTO CAESAR — *Jasper Niemand*

When Rome ruled the world, in her Caesar was focussed all her power. A claimant for Justice, challenging judgment with the cry: — "I appeal unto Caesar!" was answered: "Then Caesar will hear you." He had taken refuge at the foot of the throne, and men spoke of an appeal unto Caesar, as a supreme and final step. It evoked an irrevocable decision. Despite the lapse of time this appeal impresses the mind with unimpaired majesty because it is the type of a living truth. The appeal unto Caesar has eternally place in the spiritual world.

When a man first feels within himself the strange throb of that power which tells of a higher life than that in which he is immersed; when it spurs him away from the material and beckons to him as from glimpses of the spiritual, he looks about him for information, for traces of a course to be pursued. He questions his fellows; he reads many books; he hearkens to teachers and authorities, both real and nominal. A huge mass of external information is sifted by him, and in the end he finds — confusion! His intellect may be fed for a while, but at last the support of the heart fails it; it is saturated, plethoric, atrophied. He turns then to Life itself. He questions the boasts and the despair, the revelry and the agony; he asks of Love, of Hope, of Fear, and Faith. He contemplates the ideals of all art and the untrammelled freedom of Nature, aiming perhaps nearer to the secret as he marks the inalterable round of seasons, and how winter draws itself together with bitter contraction to burst into the ferment, the vernal revel of spring. He snatches at the wings of dreams; he confronts the phalanx of great problems and the most shadowy suggestions alike; but he has not the clue to the labyrinth; he knows not that this eternal alternation is Life itself,

and that he must look deeper still. The heart, unsupported by the intellect, now fails him also. He hears, perhaps of the teachers of the East, or of the "Leaders of the world" from whom. "*when the wind is blowing*," comes the mystical fragrance which is the ambrosia of the soul. (1) But the wind is not then blowing (that is — his time has not come in the Law), and it is borne in upon him that he is but one of millions along the centuries who have given a momentary cry out of the press of existence, and have then returned contentedly to the "flesh pots of Egypt," He has yet to prove that he possesses, in some degree at least, the power of flight. So he receives no valid or enduring comfort from any of these directions; and meanwhile, all about him, the enticements of Life are plucking at his garments, the currents of the world are urging him to and fro. Here, many desist: he who perseveres listens next *within*. He hears vaguely, now this prompting and now that, in the multiform vacillations of the soul, itself bewildered by the long sojourn in matter; even the inner sanctuary, in which he most trusts, seems to betray his hope. Then if his soul be as yet weak, his thought fails, the spiritual vision fades into the mists, and he resumes the accustomed march of life, keeping "lock step," with his imprisoned companions like one awakening, heavy and unrefreshed, from the phantasmagoria of dreams. We lose sight of him in the struggling multitude; he has leapt from the wave only to fall back into the depths. But he who is strong, rendered stronger still as he gathers to himself the forces he has overcome, now discards all other powers, and takes his resolute stand upon his own nature. He declares that since he can conceive a higher Life, it must exist within his reach, and he wills with an indomitable will to attain it. How, he knows not, but he relies upon that inner prompting alone.

Then he makes the appeal unto Caesar. By Caesar he is never

unheard.

In those shining spheres where dwell the glorious ones forever, all is peace and silence. A far sound travels up the star strewn cope. The stir of its approach touches the Gods with a tremor; they thrill to it, bending closer, for it has that charm which alone conjures them, the essential charm of humanity. (2) It is the voice of man, which selfless, is stronger than all the angels, and selfish, is weaker than the dumb plaint of the brute. Perhaps this is the first intelligence of the wanderer received in his Father's house. Perhaps they have heard it coming before, and Life has beaten it back. Nearer it comes and nearer, gaining force as it advances, from the sympathies of heaven's messengers and powers all leaping forth to increase and sustain it; it falls like a star into the sea of eternity which swells to meet it, and ripples spread and overflow, magical, musical and full of healing. Oh! with what exultant flight, with what a rush of glory the strong voice of humanity cleaves the interstellar space and opens up the way from Gods to men. Along that way, long retarded souls come flocking after, jubilant among the jewelled auroras. Celestial spheres flash responsively; the silver echoes waken, and God proclaims to God, with solemn triumph, that man once more has claimed his own! "There is joy in the presence of the angels of God, over one sinner that repenteth." (3) For this hour the God has waited longer than souls can remember. The power of the divine self rests upon the rights of the man who has appealed to it. They are the two poles of a sphere, and the might of the higher can only be universally manifest, below as above, through complete union with the lower. This union ensures immortality to the human soul, and the splendor of distinct fruition to the divine spirit. So when the Higher Self hears the appeal, it responds to the holiest of pledges. This appeal may have been made before in other ages, and the present cry may be the renewal of forgotten

vows; or it may now be made for the first time in the first expansion of psychic evolution. For this no special rule can be given. In each life all previous lives repeat themselves, just as the law of reproductive thought or association operates at any cataclysm, so that all similar events may thus be seen. Each sleep brings up all former sleep, and an accident today would enable one sufficiently developed to see and feel all the accidents that had before come to the sufferer. (4) So it seems that there comes finally one incarnation which repeats with emphasis the sum total of all other lives, so that the man is hurried through the round of experience with furious rapidity. Such an incarnation ripens the period known as "the moment of choice." The actual advent of this period is denoted by the strength of the soul which encounters it: it must *know*, before it can decide. It is not a "moment" in the usual sense of the word, but a period of greater or lesser duration, and I believe it may even extend over several lives. It cannot be entered upon, until the appeal to Caesar has been made.

This appeal is not really the initiative. The spark within, which we carry from the Father's house as a traveller takes with him the love tokens of his home; that exiled spark awakens. It does so because it has at last heard a messenger from the heavenly mansion, and it asserts its remembrance in answer, just as ties of blood assert themselves when estranged brothers meet suddenly in foreign lands, or as the bonds of humanity draw close, in automatic and inherent action, before a common danger. The divine spark knows, what the mind of man ignores, and what the soul forgets, that there is peril for its associates, even peril of eternal death. As from time to time the God remembers the wanderer, so its responsive longings break forth in muffled warning within the troubled breast of man. The Great one, waiting patiently through the ages, sends airy heralds, an impulse

of power, a formless, soundless, vibratory message like a flaming light, down the mysterious thread which connects man and God as the moonbeam connects earth and sky. Up that wondrous way every aspiration of man must travel, and down it scintillate the responses of that enduring Love by which alone we live.

He who is strong now passes into a blank darkness, which no power can penetrate for him: from the vortex of pain he suddenly snatches his soul and places it upon the outer verge of peace. Then he must find his way into the heart of the silence.

He is answered, I said; but he does not always hear the answer. The spiritual language is not understood by him. At first, the echoes of his own need are all that come back to him, fraught with a majesty and a pathos from the spheres they have touched, which often intoxicate him into a passion of self pity. He does not recognize that this added grandeur is the olive branch brought him from beyond the waste of waters; that it is a guarantee of the divine hearing. He does not know that its significance enters his heart, his eyes, his speech, and that in the added dignity of his mien, weary seekers feel blindly an assurance that the higher life exists. They feel, though too often unable to translate clearly, that another has called upon Caesar and that the Supreme Power lives. He has touched IT for a moment, though he knows it not, and all are heartened though none may discover it of himself or of the others.

A certain melancholy then floods the heart of the seeker. It is a sadness sweeter than the ringing clamor of worldly joys; its aftertaste is gracious and not fevered. It is "that which in the beginning is as poison, and in the end is as the water of life." (5) He continues to meditate and to search his soul; to look for truth apart from his conceptions of it; to distinguish the necessities of his lower nature from the intuitions of his higher nature (though

both seemingly speak through the one voice,) and to send up aspirations to the God, who responds with a vivifying shower of new hopes. He feels them faintly. For as the ray of light speeds to his succor, it encounters the material darkness in which he lives. A small portion of it may pass through and invigorate his heart, but part is refracted by the things about him, reflected in the surface thoughts and customs of the world and reaches him distorted and falsified. Then too, the more powerful the ray, the more the darkness, receding before it, impacts itself about him, denser than ever, and the faults, the errors nearest his heart are driven home and hold riot there. So it often happens that when rescue is nearest it seems to the beleaguered one immeasurably remote, and that the response of Caesar seems to condemn him in the mocking voices of despair and sin. Men fancy that the answer of the Divine Self must bring peace; it is not so at first. Jesus said: "Think not that I am come to send peace on earth: I came not to send peace, but a sword." (6) There is much warfare yet; only through it do we enter into the peace. We have to wrestle with the power, as Jacob did with the angel, before it will wholly bless us. When it does so, it is for the sake of humanity and man must make his appeal for the same reason. This is the rite of sacrifice which the Gita speaks of as having been instituted from the beginning — this interchange with the Divine. Having consciously appealed, we have challenged the Supreme: we have placed ourselves within the grasp of the law and the compact must be kept. Nor can we advance until then. A master once wrote to one who asked to become his disciple: "May the powers to which you have appealed *be permitted by still greater and much higher powers* to help you." He meant the Great One and the law.

I knew a seeker after Truth who was beaten back at every point. He lay prostrate in despair under the most awful weight that ever crushes the human soul. All his nature cried out for God. He felt a

touch that rolled the stone away and looking upward, he beheld in the air above him a shape of light all calm and resplendent, whose aspect was a transfiguration of his own. More I know not, but this my brother who was lost has been found again.

There are many of you, my comrades, who stand in just this stead: you have called and you have been answered; but you have not heard. You will say to me: "How shall we hear, and how interpret the voice?" I cannot tell you this; there are as many ways as there are men. Each of you, and he only, is judge of himself; he and Caesar. But I can assure you that every aspiration you feel, and the renewal of them, are messages from the God. His replies may take the shape of added sorrows and gathering storms, for all these are the means of your trial and your growth, and you have elected them yourself, sowing their seeds in other lives. Try then to look upon each as just the help which you now need. So long as you have an unselfish thought, you are not deserted; so long as you have faith, you have heard. This succor stands fast in the True: it can never be uprooted, severed or lessened. It is your inheritance, your right which no one can deny you but yourself. Even your ignorance can only obscure it. The true voice will speak to you of the sorrows of the world, of the grand futurity of mankind, of your diviner Self.

The hour of appeal is the pregnant moment. If you lose it now, how long may you not have to wait, powerless dreamers in the heavenly lands, tasting rich rewards which fail at last? Then you must return again from that world of effects to this one. Seek the world of cause instead. Causes are sovereign; they alone are eternal.

Amid the roar of the world, the stupendous rush of its fierce tides, the swoop of its hurricanes, the fell power of its lightnings which reveal only darkness to the seared soul; amid its miasmatic

pettiness, amid its joys and its better hopes, cling still to that one thought which, like the sea gull, can well outride a thousand storms, the thought of that Humanity which shall merge into Divinity; the thought of the Self, the All. Strengthen it with all the love of your heart, all the sweetness of your nature, and send up a mighty cry to heaven. For when through the spirit, the man wills, when his soul soars to claim its right, then distant spheres are shaken and Being is apprehended. Appeal! Appeal unto Caesar!

THE BHAGAVAD-GITA: V — *William Brehon*

(Continued from January number.)

SECOND CHAPTER.

"And now, under the Lotus in the Heart, glows the lamp of the Soul. Protected by the gods who there stand guard, it sheds its soft rays in every direction."

A mighty spirit moves through the pages of the Bhagavad-Gita. It has the seductive influence of beauty; yet, like strength, it fills one as with the sound of armies assembling or the roar of great waters; appealing alike to the warrior and the philosopher, it shows to the one the righteousness of lawful action, and to the other the calmness which results to him who has reached inaction through action. Schlegel, after studying the poem, pays tribute to it in these words: "By the Brahmins, reverence of masters is considered the most sacred of duties. Thee therefore, first, most holy prophet, interpreter of the Deity, by whatever name thou wast called among mortals, the author of this poem, by whose oracles the mind is rapt with ineffable delight to doctrines lofty, eternal, and divine — thee first, I say, I hail, and shall always worship at thy feet."

The second chapter begins to teach philosophy, but in such a way that Arjuna is led on gradually step by step to the end of the dialogue; and yet the very first instructions from Krishna are so couched that the end and purpose of the scheme are seen at the beginning.

Although philosophy seems dry to most people, and especially to minds in the Western world who are surrounded by the rush of their new and quite undeveloped civilization, yet it must be

taught and understood. It has become the fashion to some extent even in the Theosophical Society to scout careful study or practice and go in for the rapid methods inaugurated in America. In many places emotional goodness is declared to exceed in value the calmness that results from a broad philosophical foundation, and in others astral wonder seeking, or great strength of mind whether discriminative or not, is given the first rank. Strength without knowledge, and sympathetic tears without the ability to be calm, — in fine, faith without works — will not save us. And this is one of the lessons of the second chapter.

The greatest of the Ancients inculcated by both symbols and books the absolute necessity for the acquirement of philosophical knowledge, inasmuch as strength or special faculties are useless without it. Those Greeks and others who recorded some of the wisdom of the elder Egyptians well illustrated this. They said, "that in the symbols it was shown, as where Hermes is represented as an old and a young man, intending by this to signify that he who rightly inspects sacred matters ought to be both intelligent and strong, one of these without the other being imperfect. And for the same reason the symbol of the great Sphinx was established; the beast signifying strength, and the man wisdom. For strength when destitute of the ruling aid of wisdom, is overcome by stupid astonishment confusing all things together; and for the purpose of action the intellect is useless when it is deprived of strength." So, whether our strength is that of sympathy or of astral vision, we will be confounded if philosophical knowledge be absent.

But, so as not to be misunderstood, I must answer the question that will be asked, "Do you then condemn sympathy and love, and preach a cold philosophy only?" By no means. Sympathy and emotion are as much parts of the great whole as knowledge, but inquiring students wish to know all that lies in the path. The

office of sympathy, charity, and all other forms of goodness, so far as the effect on us is concerned, is to entitle us to help. By this exercise we inevitably attract to us those souls who have the knowledge and are ready to help us to acquire it also. But while we ignore philosophy and do not try to attain to right discrimination, we must pass through many lives, many weary treadmills of life, until at last little by little we have been forced, without our will, into the possession of the proper seeds of mental action from which the crop of right discrimination may be gathered.

Arjuna asks Krishna:

"As I am of a disposition which is affected by compassion and the fear of doing wrong, my mind is bewildered. Tell me truly what may be best for me to do! I am thy disciple, wherefore instruct me in my duty, who am under thy tuition; for my understanding is confounded by the dictates of my duty, and I see nothing that may assuage the grief which drieth up my faculties, although I were to obtain a kingdom without a rival upon earth or dominion over the hosts of heaven."

Krishna, now the Guru — or spiritual teacher — of Arjuna, makes a reply which is not excelled anywhere in the poem; pointing out the permanence and eternal nature of the soul, the progress it has to make through reincarnation to perfection, the error of imagining that we really do anything ourselves, and showing how all duties must be performed by him who desires to reach salvation. The words used by the Blessed Lord in speaking of the soul cannot be added to by me. He says:

"The wise grieve not for dead or living. But never at any period did I, or thou, or these Kings of men, not exist, nor shall any of us at any time henceforward cease to exist. As

the soul in the body undergoes the changes of childhood, prime, and age, so it obtains a new body hereafter; a sensible man is not troubled about that. But the contact of the elements, O son of Kunti! which bring cold and heat, pleasure and pain, which come and go and are temporary, these do thou endure, O Bharata (1) For that man whom, being the same in pain and pleasure and ever constant, these elements do not afflict, is fitted for immortality.

There is no existence for what does not exist, nor is there any non-existence for what exists. * * * Know this, that that by which all this universe is created is indestructible. No one can cause the destruction of this inexhaustible thing *

* He who believes that this spirit can kill, and he who thinks it can be killed, both of these are wrong in judgment.

It is not born, nor dies at any time; it has no origin, nor will it ever have an origin. Unborn, changeless, eternal both as to future and past time, it is not slain when the body is killed. How can that man, O Son of Pritha! who knows that it is indestructible, constant, unborn, and inexhaustible, really cause the death of anybody or kill anybody himself? As a man abandons worn-out clothes and takes other new ones, so does the soul quit worn-out bodies and enter other new ones. Weapons cannot cleave it. Fire cannot burn it, nor can water wet it, nor wind dry it. It is constant, capable of going everywhere, firm, immovable, and eternal. It is said to be invisible, incomprehensible, immutable.

Therefore, knowing it to be such, thou art not right to grieve for it."

This is the same doctrine as is found in the Isavasaya-Upanishad: — *The Identity of all Spiritual Beings, and Resignation*. And by "Spiritual Beings" is meant all life above the inorganic, for Man is not admitted to be material. There is only one life, one

consciousness. It masquerades under all the different forms of sentient beings, and those varying forms with their intelligences mirror a portion of the *One Life*, thus producing in each a false idea of egoism. A continuance of belief in that false ego produces a continuance of ignorance, thus delaying salvation. The beginning of the effort to dissipate this false belief is the beginning of *the Path*; the total dissipation of it is the perfection of Yoga, or union with God. The entry upon that Path *cannot be made until resignation is consummated*; for, as the Upanishad and the Bagavad-Gita say:

"All this: whatsoever moves on earth, is to be surrendered to the Lord — the Self. When thou hast surrendered all this; then thou mayest enjoy."

If this be true, then how necessary to consider philosophy so as to be able to cut off the false belief? And how useless to pursue occultism merely for your own benefit? You may know all about currents and polarities, about any and *every* phenomenon possible in the astral world, but with the death of your body it is lost, leaving to you only the amount of real Spiritual advance you happen to have made. But once resign and all is possible. This will not ruin your life nor destroy any proper ideals; poor and petty ideals had better be at once lost. It may seem that all ideals are gone, but that will be only the first effect *of* taking this step.

We must be ready to say at any moment under whatever circumstances, whether expected or unexpected: "It is just what I in fact desired." For only those ideals can be dissipated which rest upon a lower basis than the highest aim, or which are not in accord with Nature's (God's) law. And as our aim ought to be to reach the supreme condition and to help all other sentient beings to do so also, we must cultivate complete resignation to the Law, the expression and operation of which is seen in the

circumstances of life and the ebb and flow of our inner being. All that can be gotten out of wealth, or beauty, or art, or pleasure, are merely pools of water found along our path as it wanders through the desert of life. If we are not seeking them their appearance gives us intense pleasure, and we are thus able to use them for our good and that of others just so long as the Law leaves them to us; but when that superior power removes them, we must say: "It is just what I in fact desired." Any other course is blindness. All the passing shows of life, whether fraught with disaster or full of fame and glory, are teachers; he who neglects them, neglects opportunities which seldom the gods repeat. And the only way to learn from them is through the heart's resignation; for when we become in heart completely poor, we at once are the treasurers and disbursers of enormous riches.

Krishna then insists on the scrupulous performance of natural duty. (2)

And considering thine own duty as a Kshatriya, thou art not right to waver. For there is nothing better for a Kshatriya than lawful war." (3)

In order to see more clearly the occasion for his insistence upon performance of duty, we must remember that at the opening of the battle Arjuna "threw down his bow and arrows." This, in India, meant that he then resolved to desert the circumstances in which Karma had placed him and *to become an ascetic*, or, as has been frequently proposed by Western students, he wished to get away from a state of Society which offered apparent obstruction to spiritual culture. But Krishna refers him to his birth in the Kshatriya — or Warrior — caste, and to the natural duty of a Kshatriya. which is war. The natural caste of Arjuna might have been represented as that of [Merchant, but wisely it was not, for this is the book of action, and only a warrior fitly typifies action:

(4) so his natural duty will stand for whatever be that of any man. We are not to shirk our Karma; by abhorring it we only make new Karma. Our only true course is to "let the motive for action be in the action itself, never in its reward; not to be incited to action by the hope of the result, nor yet indulge a propensity to inertness." (5) This advice and the direction (6) to see the one Spirit in all things and all things in *it* express the gist of the Bhagavad-Gita's teaching as to the proper attitude to be assumed by those striving after salvation.

In verse 40 Krishna alludes to this system as being one of initiation:

"In this no initiation is lost, nor are there any evil consequences, and even a little of this practice saves from great danger; there is no destruction of nor detriment to one's efforts."

Although not proclaimed in the newspapers nor advertised here and there through Secretaries, Delegates, and "Doors," this is the mother and the head of all systems of initiation. It is the progenitor of the mystic Rosicrucians, who have adopted the *lotus* and changed it into a *rose*, (7) and all the other hundreds of initiating occult societies are merely faint and incomplete copies of this real one; but, unlike those, *it* has never dissolved. It is secret, because, founded in nature and having only real Hierophants at the head, its privacy cannot be invaded without the real key. And that key, in each degree, is the *aspirant himself*. Until that aspirant has become in fact the sign and the key, he cannot enter the degree above him. As a whole then, and in each degree, it is self-protective.

Thus including all other systems, it is the most difficult of all; but as at some time, in this life or in a succeeding age, we must perforce enter this *Lodge*, the attempt at entry might as well be

made at once. Of this we will speak in our next.

(To be continued.)

FOOTNOTES:

1. In this verse — the 14th — Krishna calls Arjuna by two names; first — as son of Kunti his mother, and second — as Bharata descendant of the mighty Bharata. He is reminded of his earthly origin in the beginning when reference is made to the elements that produce bodily sensations: and at the end, when adjured to endure these changes, his attention is directed to a great and powerful, spiritual, paternal ancestor. All of this is significant. —

B. ([return to text](#))

2. Some students, as well as critics, have said that theosophy teaches a running away from family and from the world, and that neither knowledge nor salvation can be gained without a ridiculous asceticism which would upset the natural order. This is wrong. And when it is believed to be a fact — now asserted by me in confidence of support from all real theosophists — that the Blessed Masters who ordered the founding of our Society constantly read and inculcate the Bhagavad-Gita's philosophy, we perceive that such assertions against the Society's aims are incorrect. — B. ([return to text](#))

3. Verse 31. ([return to text](#))

4. My opinion is that the Kshatriya caste is the greatest. The Brahmans, it is true, have always had more veneration paid them as being spiritual teachers and thus representing the *head* of Brahma; but in some of the Aryan sacrifices there is an occasion when the Kshatriya ranks the Brahman. The latter are more the conservators of true Doctrine; but when the time comes for the "gods to descend in order to establish a new harmony on earth," they always begin with a warrior. Osiris who educated and

solidified the Egyptians was a warrior, and the mysterious Melchisedek, who blessed Abraham, was Prophet, Priest, and King, that is — warrior. Then, too, the warrior caste could learn and speak the Vedas as well as engage in war, whereas the Brahman's only duty was that of a teacher and not fighter. The Kshatriya therefore stands in the position of mediator between the action of the body of Brahma and the calm inaction of Brahma's head. — B. ([return to text](#))

5. Verse 47. ([return to text](#))

6. Chapter 13. ([return to text](#))

7. The probability is, that the Rosicrucian "rose" was altered from the *lotus* because the latter flower was not understood in Europe, whereas the rose was: and the rose is the nearest to the lotus, taken all in all. In Japan the *lotus in the heart* is adhered to; they say that by directing attention to the heart, it is found to burst open into a lotus of eight petals, in each of which resides one power, while in the centre sits the lord of all. — B. ([return to text](#))

The Path

THE LESSONS OF KARMA — *Charles Johnston*

"There's a divinity that shapes our ends,
"Rough-hew them how we will."

The idea most usually attached to the word Karma is, a power, inherent in the nature of things, — by the action of which good deeds are rewarded with happiness, while evil deeds bring suffering and pain. According to this view, Karma becomes a sort of moral police, continually adjusting and correcting the errors and extravagances of the human race, and vigilantly providing that none shall trespass on the domain of another.

Karma has been described as an application of the Law of Action and Re-action to the mental forces, and its spirit has been summed up in the words: "Whatsoever a man soweth, the same shall he also reap." And all this is undoubtedly true; and these ideas, when displacing the belief that occurrences are merely accidental and fortuitous, are of the highest importance; but though true in itself, this idea falls far short of the whole truth; for when examined scientifically it is found to be aimless; the continual action of this compensatory law, its perpetual adjusting and correcting, is mere temporising, it goes nowhither. It is nothing more than the endless swingings to-and-fro of an isolated pendulum. The pendulum is merely mechanical, and, when detached is unnatural; for all nature has a purpose, and moves ever onward. Nature is organic; much more so is super-nature.

If the limited view of Karma be compared to a pendulum, its true action might be represented by a tree; (1) and its rewards and punishments may be compared to leaves, produced in spring only to fall in autumn and again produced the next spring, only again to fall. But the tree is better than it was a year ago; the pendulum

merely does its work to undo it again; but not so the tree. It has added something to itself by every effort, it has assimilated to itself an enlarged territory won from the inorganic world.

The force within and behind the tree works forward, and for definite ends, and this fact makes the tree a fitting emblem of the law of Karma.

Observation of life teaches us that beyond the mere rewarding, or compensatory action of pain and pleasure, they have another use; this deeper use is for discipline — development. In the light of subsequent insight, events which at the time seemed quite insignificant and objectless appear in their true light as teachers, and the lesson which they have taught — and for which and no other the learner was ripe, becomes evident.

By what appears at the time mere chance, one may meet a certain person, or group of people; conversation on various subjects may take place; various views may be expressed, various feelings manifested: the necessary nourishment which the learner's growth demands may be received quite unnoticed; and years after, a sudden necessity or circumstance may reveal the purpose of that meeting, and may turn a beam of light on the grain of gold unconsciously received. This is true of all events, but chiefly of persons, the greatest of events.

Persons are the great teachers, the greatest revealers in the lesson of life; we may learn through another what our single sight might never have perceived.

Amongst the lessons to be learned from persons, perhaps the most important are those to be drawn from Sex.

Nature has grouped all human beings into two great classes, — sexes; each being complementary to the other, and this being true especially on the mental plane. Every peculiarity of each sex, each

feature which differentiates it most notably from the other, is a further perfection of this complementary character, an additional attraction to bind the two sexes together in mutual harmony.

And when the highest perfection of this mutual harmony is attained, in complete good understanding and perfect sympathy, what lesson is learned?

The more perfect the sympathy — in its best sense, of sharing another's life, and penetrating it with filaments of love, — the more clearly this truth is apprehended: — that, far deeper than any difference between the sexes, lies a radical unity and identity; though masquerading under very different appearances, the soul of man and the soul of woman are the same, the same in the laws which govern their life, in their nature, and in their divinity.

It would seem that Life, the great teacher, having brought the evolving souls to vivid individual consciousness, and despairing of ever teaching them sympathy, of ever illumining for them the inner spiritual nature of each other and revealing to them their identity, had organised this charade of the sexes, had invented these masks of man and woman, male and female.

Besides this perception of identity, there is another lesson taught, another object subserved, by the complementary nature of the sexes. A poor cramped egotist enters the arena of life; all things seem to look bitterly upon him; a cloak of perpetual misery seems thrown over him; he seems tied and bound with iron bonds, so that in the presence of others he can never even be *himself*; he feels frost-bitten and crushed, and he knows that if by some miracle he could drink a deep draught of elixir and burst his bonds, he could at last walk upright — a man among men.

He is an egotist, an unfortunate, not sufficiently developed to learn the grand lesson of sympathy, and this through no taint of

evil, but because the stream of life is half congealed within him, awaiting some miracle, some angel to stir the waters into life. By and by the miracle happens; the great teacher brings him face to face with another soul, qualified in all things to supplement his deficiencies. At once he feels an infusion of supernal power. In the presence of this elect one, he feels thrilled with warm waves of celestial vigour; a part of the infinite promise of life is realised, one of the prophecies of spirit is fulfilled in joy. At last the poor egotist can burst his bonds; he tastes the divine sweetness of sympathy with another soul; he learns that threads of gold bind soul to soul, that soul traverses soul with ethereal arteries conveying to each the life of the other in addition to its own. And he learns also one sublime lesson — the divinity of renunciation. Through giving he receives; through self-sacrifice he inherits his kingdom.

And the lesson by no means ends here, in sympathy with a single soul, — great and notable benefit though that be. Gaining such large good from one, he learns to credit others with the same excellence; his faith extends in an ever widening circle, till at last he embraces all humanity in holy bonds of love.

If harmony teaches great lessons, great also are the lessons to be learned from discord.

All strife produces pain; as great pain to the oppressor as to the oppressed, — perhaps greater. Seek to tyrannize over another, and not only does that other rise against you, but within you rises a truer self, and takes the part of the oppressed. My every tyranny against my brother is at once punished by this truer self, with a corresponding weight of fear.

At last I learn the lesson, that one cannot be harmed without the harm reacting on the other, on all; that the well-being of one is inseparable from the well-being of all. I throw down my arms,

and make amends by generous dealing. At once my brother's attitude changes, from enemy he becomes friend. He has been waiting for this opportunity to acknowledge me as brother; and once again the great teacher teaches the lesson of sympathy. Henceforth my brother's life is a part of my life, and the power we command belongs to both.

And thus the most ordinary events, and even our own errors, are turned to benefits. A firm hand, a power that sits above us, and whose secret we cannot command, guides our evil to wider good, and turns our erring energies into right channels.

Every event in life teaches its lesson, consciously or unconsciously, to us. If we are dull learners it may have to be repeated twice or many times: if we aid the teaching by ready perception, it may be taught but once, and then we can pass on to grander problems and higher themes.

Since every event thus bears for us a secret and spiritual value, and we cannot guess beforehand the nature of that value, is it not futile in us officiously to take on ourselves the direction of the lessons, with a grand assumption of omniscience; saying "To such a life I shall devote myself; such and such things shall I perform; and from such and such I shall abstain"; like an unskilled pilot without chart or compass, steering in the dark to an unknown land.

Were it not better to drop this pretence of wisdom which we cannot make good; boldly to face events as they meet us, and with good courage and resolution to dare and endure all things, so only that the golden lesson hidden in the events be not lost?

It has been hinted that those who seek wisdom should abandon all their present occupations and live the life of a desert ascetic; and some have even thought to draw down on themselves the

gifts of divinity by a mere mechanical walking away from their duties; but not thus is life's secret to be surprised, by turning the back on our appointed duties, and more important still on the lessons they contain for us.

The books on wisdom are written in cypher; the true ascetic is he who, without abandoning his duties, renounces all selfish aims, and leaving behind his animal nature, takes refuge in the secret place of his soul.

Much more than this is allegorical, concealing a spiritual nature within it; perhaps, amongst others, the saying that earth's greatest sages dwell on her loftiest mountains is an allegorical picture of the truth that the divinest souls are those who have raised themselves furthest from earthly things to the peaks of purity, forever embosomed in the serene azure of spirit; for all things in the physical world have thus their inner vital meanings; though doubtless, were we to search earth's loftiest summits we would come face to face with the stately forms of holy sages, for as the spiritual fact is complete so also must the earthly picture of it be complete.

Life, the great Teacher, has thus designed his lessons. For those whose sight is gross, the teaching is framed in physical pictures, in faces, in trees, in mountains, and in the broad bosom of earth; but those whose sight is finer perceive within each of these a deeper and truer fact, for which alone these have their being.

These externals, forests and hills, the restless ocean, the everlasting stars, are ever eloquent sermons hymning the divinity of spirit. The life of the world says, with the *Erd-Geist* in *Faust* —

"Thus at the roaring Loom of Time I ply,

"And weave for God *the garment thou see'st him by.*"

The great teacher brings to us person after person, event after

event; from each, as we are able, we learn its lesson; from each, as we are able, we wrest its secret, a value unknown and inscrutable until we are face to face with it.

Though at first the lesson may be bitter and unwelcome, we learn at last that what seemed bitter was in reality most sweet, and that what seemed hurtful was pregnant with healing; in our highest moods we are one with the teacher and perceive his ends; in our moments of deepest insight, we perceive that the teacher is our true self; and though we may writhe under subsequent sharp lessons, we are willing to endure; certain that the suffering is for our ultimate benefit.

These considerations teach no indolent and idle acquiescence in the tide of events; our duty and advantage is to throw ourselves on the side of the teacher and to check all perverse tendencies which else would thwart and neutralise the lesson. Let those who esteem this an easy task, try it conscientiously for a single day.

Since all events and persons have thus an interior and unapparent value, since all are intimately related to our development and lasting good, we infer that this truth holds for others also; and we are thus able to perceive dimly the mighty power and beneficent directing energy which lies behind life, turning the good and evil of each to the welfare of all. Let us therefore cast ourselves on Truth and work out our divine destiny without fear; this is the truest good for ourselves, and as surely is it the truest good for all others.

By working out our own divine destiny we gain the power of well doing, for he alone who has access to the heart of good can do good to his neighbor. Such laws as these teach us a noble carelessness of petty ends and events, and forbid forever all sordid taking thought for the morrow.

Perceiving the swing of these grand laws, we can boldly take in hand the game of life, with a heart for every fate. And so we find the first and last word of Karma to be discipline — development. But discipline to what end? Is it for the great prizes of earthly life? to glorify our three score years and ten?

Far otherwise is the tendency of these mighty laws; they lead not to wealth so often as to poverty, not to praise and fame so often as to contempt and obloquy, not so often to the throne as to the scaffold.

And thus, — unless we are bemocked by a lifelong illusion, unless we are the fools of a never-ending nightmare, — we have, in the sweep and tendency of these majestic laws, an intimation of our higher destiny and a sure certificate of our immortal good.

"Then first shalt them know,
"That in the wild turmoil,
"Horsed on the Proteus,
"Thou ridest to power,
"And to endurance,"

The Path

THE BEANS OF PYTHAGORAS — *H. L. Sumner*

In a recent number of the *Theosophist* is a paragraph in reply to an enquirer as to "why Pythagoras banned the bean," which seems to me as far from correct as the explanations given by an Athenian skeptic who derisively said that "beans are the substance which contains the largest portion of that animated matter of which our souls are particles," and that the flowers of the bean put in a vessel and buried ninety days would deposit in the bottom of the vessel the head of a child; concluding, amid bursts of laughter, that Pythagoras himself has made the experiment.

Beans were anciently used in casting votes by balloting, the white beans for affirmative and the black ones negative. When Pythagoras said to his disciples, "Abstain from beans," he had no reference to them as an article of diet, for he ate them himself. What he did mean, and what his immediate followers already understood, was that they should abstain from the intrigues of politics as being antagonistic to a philosopher's pursuits.

It also couched a warning of the danger of criticising the popular government.

All the divine teachers have taught in symbols and inverted language, and time has proven the wisdom of this method.

He that had "eyes to see," or "ears to hear," saw and heard then, as now; and the poor little cursed bean is a symbol of the "letter that killeth."

If I have restored the bean to its deserved place of honor on our tables, I have done a good work for the oncoming rule of vegetarianism under which all true theosophists must come soon

or late.

Perhaps it may be in place to say that *all* the supposed gastric difficulties the bean is reported to cause may be entirely overcome by boiling, both the green and the dry, in a weak solution of soda, for ten or fifteen minutes, before reboiling them in the usual manner.

The foregoing considerations arose in my mind because of the question frequently raised by vegetarian occultists — in embryo — that beans, having some unknown and peculiar property of retarding spiritual development, should be eschewed by those who are cultivating psychic powers. Nothing was certain in the matter, however, and the great fear of beans has seemed to have its foundation in a mystery that I hope I have solved.

I am quite sure too that, even if the bean has any retarding influence, it cannot act upon real spiritual progress, for that rests primarily upon right thought, speech, and action.

The Path

THE BHAGAVAD-GITA: VI — *William Brehon*

(Continued from February number.)

In my last I said that a system of initiation is spoken of which is the mother of all others, and that all the rest are mere exoteric copies or perversions of the real. In order that the idea intended to be expressed may be made clear, it is to be stated that the system is not confined to India, but at the same time it is true that the Western world has up to this time been so deeply engaged in the pursuit of mere money and external enjoyment that no body of Hierophants has taken up its actual residence in Europe or America as yet. There is very little force in the objection that, if those Adepts have such powers as have been ascribed to them, they could very easily have a residence here and overcome all the influences of the place. If it were in the least necessary that they should be here, no doubt can there be that they would come. But as all of the work required to be done, all that could possibly be accomplished, is to be achieved by the Messengers sent out into each country who, so to say, prepare the ground, with the assistance of the Adepts, for others who follow them, there would be a waste of energy if the Hierophants appeared in person. Nor are those Messengers dismayed by the critical attitude of those persons who, wanting a sign, continually deny that the help for the workers is afforded because the givers of it cannot be seen; and it can also be admitted that even the workers themselves are not continually in receipt of instruction or telegrams showing how and where to work. They are men and women who possess a faith that carries them through a long course of effort without a glimpse of those who have sent them. Yet at the same time some of them now and then see very plain evidence of the fact that they are constantly assisted.

"That we all labor together transmitting the same charge
and succession,
We few equals indifferent of lands, indifferent of times,
We, enclosers of all continents, all castes, allowers of all
theologies,
Compassionaters, perceivers, rapport of men,
We walk silent among disputes and assertions, but reject
not the disputers nor anything that is asserted,
We hear the bawling and din, we are reached at by
divisions, jealousies, recriminations on every side,
They close peremptorily upon us to surround us, my
comrade,
Yet we walk unheld, free, the whole earth over, journeying
up and down till we make our ineffaceable mark upon
time and the diverse eras,
Till we saturate time and eras, that the men and women of
races, ages to come, may prove brethren and lovers as we
are."

So all this preparation is similar to that of the primeval forest by the early settlers in America; it is as yet hardly a tilling of the soil, but rather a clearing off of trees and weeds. This is not because they are unable to do more, but because the weeds and trees are there requiring to be removed before the Elder Ones can usefully push on in person the further development.

"When the materials are all prepared and ready the architects shall appear."

All human beings are working through this system of initiation, and for that reason it includes all the exoteric societies. Very often the Masters in this have appeared in those when they saw an opportunity for sowing the seed, which, although for a time to be enclosed in the shell of formalism, was to be preserved for future

use; just as the Egyptian mummy held in its hand for centuries the germ that blossomed and bore fruit in our day. And since man in all his struggles must be helped, they have assisted in political changes where a hope was held out for the rise of a beneficent era. (1) The great mass of men are not with their own knowledge engaged in the work of this powerful and impregnable *Lodge*, but they will knowingly engage therein some point in the course of their long evolution. And yet at every hour of each day these Masters are willing and anxious to meet those who are clear-eyed enough to see their true destiny, and noble-hearted so as to work for "the great orphan, Humanity."

Then, further, none of us, and especially those who have heard of the Path or of Occultism or of the Masters, can say with confidence that he is not already one who has passed through some initiations with knowledge of them. We may be already initiated into some higher degree than our present attainments would suggest, and are undergoing a new trial unknown to ourselves. It is better to consider that we are, being sure to eliminate all pride of that unknown advance we have made. Having so concluded, we know that this long life is in itself another initiation, wherein we succeed or fail just as we learn the lesson of life. Some, I know, will not hasten to adopt this view, for they desire the Law to work in the manner appointed by them; they wish to have a sign or a password or a parchment or some wonderful test profounded, to which they shall be ready to submit at a certain time and place. But this is not the manner of it, and all true students know that. Surely if the little circumstances of life are not understood, if they have yet power to light the torch of anger or blow up the smouldering fire of lust, no set time or tournament will be offered for you by the Masters of this *Lodge*. Those set times and larger tests *are* given and have in their place to be overcome, but they belong to the day when you have raised

the arch of attainment all perfect but the keystone; — that is found or lost in the appointed trial.

Reaching to the actual door of this Lodge is the path that I spoke of in my last, and leading to that Path are many roads. We might as well attempt to enter the Path in this incarnation as to wait for succeeding lives.

There is great encouragement in Krishna's words to Arjuna in the second chapter: "In this system there is no destruction of or detriment to one's efforts; even a very small portion of this duty delivereth a man from great fear." This refers to the Law of Karma. Every point of progress gained is never in reality lost. Even did we die at a time when our lives were not stainless, the real level of our development would not be lowered, for upon reassuming a mortal body in some after life on this earth we take up the thread just where we dropped it. In a later chapter Krishna says that we "come in contact with the knowledge which belonged to us in our former body, and from that time we struggle more diligently toward perfection." Patanjali also says the same thing, and all the Aryan sacred books concur in the opinion. (2) The thoughts and aspirations of our life form a mass of force that operates instantly upon our acquirement of a body that furnishes the corresponding instrument, or upon our so altering our mental state as to give it opportunity for action. The objection that this would be a suspension of energy is not tenable, since such a thing is well known in the physical world, even if called by some other name. We are not obliged to rest on that objection, as it by no means follows that the energy is suspended; it has its operation in other ways.

The encouragement given by Krishna leads us to consider what method is offered for entering upon the Path. We find it to be a right knowledge of the Spirit. This right knowledge is found in the

second chapter.

As by all illuminated sages, the ultimate truth is first declared by the Blessed Lord as we have seen, and in the very chapter wherein Right Action is insisted upon as the way to liberation. He then, proceeding to explain himself further, points out errors common to humanity, and certain false views that prevailed in India then, as they do now.

Verse 41: — In this system there is only one single object of a steady, constant nature, O Son of Kuru. Those who do not persevere, and whose principles are indefinite, have objects with many ramifications and without end.

In the men thus described, desires for worldly or intellectual acquisitions prevail, and, desires being infinite, as also capable of producing endless modifications of desire, there is no concentration possible. This also has an application to the methods of our present scientific schools, which indulge in an eternal seeking for so-called facts before general principles are admitted. One single branch of investigation with them has endless ramifications that no human being could compass in a life-time, Then: —

Not disposed to meditation and perseverance is the intention of those who are devoted to enjoyments and dominion, and whose minds are seduced by that flowery sentence which is proclaimed by the unwise, who delight in texts from the Vedas, O son of Pritha, and say, "There is nothing else than that," being covetous-minded and considering heaven as the very highest good; offering rebirth as the reward of actions, and enjoining many special ceremonies for the sake of obtaining pleasures and dominion, and preferring the transient enjoyment of heaven to eternal absorption.

This is better understood when some of the ideas held in India regarding sacrifices and ceremonies are known. In the Occident sacrifices have long gone out of use, as there appeared to be no reason for them. And yet it must seem strange to the reflective mind that Christian nations should claim redemption through the Jews whose prophet enjoined sacrifices, and when Jesus himself said that not one jot or tittle of the law should pass away. In the place of the sacrifices of the East, the West has adopted a mere theory to be embraced, together with an uncertain moral code to be followed, with a result which is the same as that claimed by the Hindus — save only in one respect. That difference lies in the doctrine of Reincarnation. The Christian looks for an eternal reward in heaven and knows nothing of reincarnation on earth, while the Hindu relies upon pleasure to be had in heaven — called *Swarga* — and a continuation of it upon earth by reason of a fortunate rebirth. They have special ceremonies, certain sorts of sacrifices, penances, prayers, and actions, the result of which is a rebirth on earth in a royal family, or with great riches, or in any other sort of pleasant circumstances; and also a sure admittance to heaven. Some ceremonies procure entrance into a delightful state after death which will last for incalculable periods of time.

Now no one of these sorts of procedure leads us to the ultimate, but all are causes of Karma and of delusion: therefore Krishna did not approve them to Arjuna. And his warning is useful to theosophists who are students or wish to become such. With them the false view warned against by Krishna has altered itself into a craving for phenomena, or to perform some action that shall bring them the favor of Mahatmas, or a morbid fear of making Karma, or else an equally accentuated desire to acquire good Karma. They should abandon those attitudes and carefully study the following verses, trying to incorporate their true meaning into their very being.

The subject of the three Vedas is the assemblage of the three qualities. O Arjuna! be thou free from these three qualities, from the ordinary influence of the natural opposites, reposing on eternal truth, free from worldly anxieties, self-possessed. * * Let, then, the motive for action be in the action itself, never in its event. Be not one whose motive for action is the hope of reward. Let not thy life be spent in inaction. Depend upon concentration, perform thy duty, abandon all thought of the consequence, and make the event equal to thee, whether it terminate in good or evil; for such an equanimity is called Yoga (union with God).

By far inferior to union with wisdom is action. Seek an asylum, then, in wisdom alone; for the miserable and unhappy are so on account of the event of things. Men who are endued with true wisdom dismiss, by means of this concentration, alike successful and unsuccessful results. Study then to obtain this concentration of thy understanding, for such concentration is a precious art.

Wise men, who have abandoned all thought of the fruit which is produced from their actions, are freed from the chains of birth in this world, and go to the regions of eternal happiness.

When thy reason shall get the better of the gloomy weakness of thy heart, then shalt thou have obtained all knowledge which has been or is to be taught. When thy understanding, by study brought to maturity, shall be fixed immovably in contemplation, then shall it obtain true wisdom.

The first portion of this paper was designedly enlarged in order to

precede the above. The last quoted verses contain the essence of what is called Karma-Yoga, or, as it might be translated, *concentration and contemplation while engaged in action*. It is difficult, just as it is difficult to enter upon the Path, and if we desire to tread that aright we must know what we should do as true travellers. Krishna seems to me to here settle the dispute as to whether faith or works will save us. Mere faith will not do it, because in every act of faith there is some action. And it would appear to be impossible to acquire true faith without at once turning it into that sort of action which our faith shows us must be done, as it were, in evidence; yet action, pure and simple, will not be a cause of liberation, inasmuch as action, or Karma, will produce new Karma. We must therefore seek for concentration in order that we may be able to do those actions which the All-Wise presents to us to be done, remaining the while unaffected. We have nothing to do with the results; they will come of themselves, and are beyond us: they are already done so far as we are concerned. But if we perform either an act of faith or an action of the body, hoping for any result — no matter what —, we become to that extent attached to the consequences, and thus bound by them. It matters not whether those consequences be good or bad. Many will think that it is well to have attachment to good consequences, since that has been the received opinion. But this is unwise, because the only reason for it is found in the idea that thereby one is somewhat better than some other persons who are enamoured of evil results and desire to see them come to pass. This idea produces separateness, and is opposed to that *identity* without the realization of which there can be no true knowledge. We should therefore be imitators of the Deity, who, while acting as he does in the manifestation of universes, is at the same time free from all consequences. To the extent that we do so we become the Deity himself, for, as we follow the dictates of the Lord who dwells in us, we resign every act upon the altar, leaving

the consequences to Him.

The attitude to be assumed, then, is that of doing every act, small and great, trilling or important, because it is before us to do, and as a mere carrying out by us as instruments of the will of that Deity who is ourself. Nor should we stop to inquire whether the act is of any use to the Lord within, (3) as some ask. For, they say, of what possible benefit to Him can be the small hourly acts which, as soon as done, are forgotten? It is not for us to inquire. The act that pleases that Lord is the act which is done as presented with no attachment to its result, while the act that is displeasing to Him is the one which we do, desiring some result therefrom.

This practice is the highest; that which some day we must and will learn to perform. Other sorts are inculcated in other writings, but they are only steps to lead us at last to this. Therefore I said, Let us enter the Path as soon as we can.

EAST AND WEST — *Jasper Niemand*

When Shakespeare wrote "Comparisons are odious," his rare art condensed into those three words a signal truth. Each person, plane, or thing has its own conditions of Being, which temporarily subserve universal conditions, and any comparison can only establish the difference between them. This difference is ephemeral and deceptive. To examine it is wise. For in examining we learn something of the *modus operandi* of Nature. But to insist upon the difference, to dwell upon it, to "point a moral and adorn a tale" with it, is folly, since we accustom ourselves to regard it as a finality, whereas it is only a means. We invest this brief effect with the authority of a cause, losing sight of the fact that the terminus of differentiation is the higher Unity. These contrasts reveal only the workings of the Real Essence, while veiling that Reality itself.

Many theosophists — and others, for the matter of that — have contracted a habit of comparing the East with the West to the disadvantage of the former. A smaller number, while they also emphasize this contrast, reverse the decision, awarding the place of honor among nations to India. The merits of either civilization are often discussed with such heat that the amenities of all civilization are forgotten. Seeds of jealousy are thus sown, and the impartial observer finds his friend on the right exclaiming; — "How is it possible for a sane man to compare a stagnant civilization like that of India with the affluent vigor of American life;" — and his friend on the left retorting; — "Every thinking man knows that the wealth of life consists in its results and not in its action; in this view India stands first." The question is never solved as between these disputants, since it remains a matter of opinion. On that plane you cannot solve it at all. Its decision must

depend upon your own conception of the evolutionary goal. If that goal is the efflorescence of material life, then indeed the East lies prostrate, and the West may flaunt it from her colossal throne. But if the end and aim of Law is the unfoldment of spiritual life; if stars are swung on high and worlds are moved in space in order that the Divine-Human may run its course and attain perfection, then indeed the East has stood and stands nearer that goal than our present western race can well conceive. She alone has in later years borne Great Souls (1) and has reserved silent places for their habitation.

This only holds good in a given period of Time. The case is not so sharply put by Nature. The distinction "East and West" is not of her making; it bears the stamp of man. Nature has evolved but one nation. Its name is Humanity. In this department as in all others she has planned interchange, co-operation, action and reaction. We see this exemplified in families. The children differ much, and the wise Mother, while fostering their affection on the ground of relationship, takes care to strengthen the bond by making the gifts of one child supply the deficiencies of the other. The boy is to protect his sister, and she to reciprocate with painstaking love. So in physical nature, members of a type interact, and each type has a relationship and a meaning, whether hidden or evident, in the life of every other type. Isolation is not the intention of Nature. Where she has decreed the survival of the fittest, the occultist knows well that the inherent energy of souls provides this birthright for every soul that truly wills.

It is otherwise with man. He wrests and divides facts up to suit theories, and his distinctions are often arbitrary. When we consider the art of the potter, the weaver, the artisan in gold or other metals, of the painter, the decorator, the architect, we find that India has long surpassed us in all these things, consigning

marvels of beauty to the dusky splendor of her temples and her tombs. The learning of her pundits is as profound as it is world-renowned. It is then chiefly in her social, industrial, and political institutions, in all the rivalry and competition which this ambitious age has agreed to call "Life," that India falls behind our western ideals. Are we then so happy in this fevered West of ours, and is happiness the chief aim of man or is it not? In China, where the statistics of the past year do not show as many murders among her teeming population as in the single State of New York during the same period; in Tibet, where crime is almost unknown; in Egypt, Japan, and India where real contentment feeds upon itself and upon little else, we are taught that man may be serene and that mind may control matter without our splendid appanage of Life at all. The thought will arise; which nation is the greater, she who must grasp all material possessions, or she who is content to Be? Western nations have breasted the roaring surf of action to be thrown back upon the sands exhausted, dying out at last with

"The Glory that was Greece
And the grandeur that was Rome,"

while those of the East arose far back of history and still survive. In India there are now specimens of the first races, as well as the present one to which we belong. She has not changed, but, like the bounteous earth, has given always to her ruling conqueror. Many successive waves of invasion have rolled over her, but she, instead of being altered, has herself changed the habits and beliefs of her conquerors. The present English invasion has not lasted long enough to show this effect. But it will be seen. Already fruits are appearing in the wonderful rise of investigation of Indian literature, and through this English channel a deep effect has been made upon English speaking people in their religious ideas. Nor has she been truly conquered, because from her

greatest to her least institution she is always herself; her development has been from within, and she resists the imprint of all races but her own. All our so-called discoveries, I care not what, are replicas or variations; to the Orient belonged the first mould, and she took it from nature. Our inventors and innovators deny this in good faith. They are ignorant of the achievements of the East; her records are unread by them, her parables and metaphors unsolved, her inscriptions undeciphered, and her scientific tabulation of obscure powers and forces of man and nature are strongly withheld by her own hand. Enough has been shown and "discovered" to prove this statement generally true, and modern learning, which already hails her as mother of all languages, will in course of time unveil the least details of her knowledge.

Such points I should not myself insist upon, because I do not deem them vital. As I said before, we are limited to a moment of Time. We are not yet overlooking the Past from the summits of Futurity and recognizing them as one. In this present moment the important question is not so much what we were or shall be, but what we are. *Now* is the pregnant instant, and the West possesses it, while the East waits and watches from afar. The cyclic impulse is now with us, and not with her. Guardian in chief of the secret doctrine, well-spring of all the great religions, she has now deposited in the West the precious seed gathered by her in remote harvests. The West gives the soil, and richer soil was never precipitated in the crucible of Time. Above and within our seething life, what protean energies have their ebb and flow! In their midst the seed first decays; then, touched by their glowing vigor, it leaps anew to life.

It has been said by men wise in the knowledge of the Eternal, that the end of nature is to provide fruition for the soul. (2) She does this through the mind, whose office as ministrant is to present

pleasure upon pleasure, gift upon gift, experience upon experience to the monarch within; he accepts them one by one, tests and casts them away. When the material treasury is at last exhausted, the King finds that he, and not his officer, is the ruler, and that his real wealth lies within himself. Through this phase the West is now passing; our gorgeous tissue of life is woven for the enjoyment of the awakening soul. Already in more advanced individuals of the race, that soul has begun to discriminate, to turn from the outer to the inner life, and the tremendous activity and momentum of our civilization are urging on this crisis.

Those who have found the priceless pearl shining softly within their lives are bewildered at the sight. Telling the tale to other men they are pitied or derided, and they learn to work on in silence, striving to break through to this inner light, watching with longing eyes for some comrade who knows the way. It is here that the Eastern science meets them, teaching the application of this new knowledge, its unfoldment and its possibilities. She is like the nurse who helps the woman in travail, who cares for her new born babe. The hour comes when the nurse is not needed in that life but passes to others, just as the child in time outgrows the sweet fountains of his mother's breast, and his need of her is only a memory to his manhood. She does not stand lower in his eyes for all that. Even so the universe is no longer needed by God, and in its turn passes away.

There is then, no cause for pride, for jealousy, or for any comparison whatsoever in this matter. Theosophists who believe in Reincarnation can easily see that their particular country does not in reality belong specially to them, since they may have been Hindus in their last previous birth, and those spirits now inhabiting Hindu bodies were quite as likely, in *their* last incarnation, owners of European or American tenements of clay; and both, in long anterior times, may have trod the cities of

ancient Egypt or Chaldea. It is quite as narrow for the Brahman to talk of his glorious Aryavarta as it is for the American or Englishman to claim for the West the first beginning of civilization, light, or progress. There is neither right nor priority. Truth is not enclosed within the boundaries of physical geography. It is not found within any boundaries at all; it is the Boundless. It is neither ours nor India's. It is not even Humanity's, but Humanity is Truth. Let us then become this Truth. To become it, we must leave idle distinctions aside. As children, we once lived in our toys. A noble boy yesterday showed me a drawer full of his most cherished playthings. He was keeping them, he said, so as to have a lot when he should be grown up, for he had noticed that his parents had now no toys to play with: he supposed they had broken all theirs in their childhood, and, while pitying them, he resolved not to be caught in that sad plight! How much we resemble this little fellow: we think we can never dispense with the baubles of the mind. When we slip away from all these involved ideas, these ingenious mechanisms, these traps which Nature sets to detain unripe souls from her secrets; when we stride out under the heavens resolved to Be, we find that Truth is not divided off into town lots, but is everywhere: it is not purchasable stock held by limited companies, but is to be had freely for the seeking. Since to seek it is to acknowledge that we have not found it yet, we must be presently in error upon some points, and most probably those to which our tastes or prejudices have most strongly attached themselves, because their ferment disturbs the nature and clouds that inner mirror which alone can reflect Truth, but to whose glass we so often hold up Error. We have forgotten that Truth which once we knew. It is ourselves; it is within us. Our elder brothers have reminded us of our common birthright; they have given a portion of it back to us. They do not ask us to adopt it, but to adapt it. They proclaim our right to revive this knowledge. We have snatched the blazing beacon

from their hands, and we will pass it on. Perhaps, in our turn, we may restore it to the East. The tasks of future cycles are not ours. This present moment we may read. We may see that only in our narrow purview does any distinction exist between us; we may see that we are inextricably interlinked. Our interests and our future are one and the same: our possessions we exchange; shall we not exchange hearts?

Though brothers, we play different parts in the universal scheme. Inheritors and future custodians, we cannot refuse to acknowledge the pioneers of Truth. If there be any reality in evolutionary law, this ancient race must have developed the rare blossoms of human perfection before our own. A mighty, though unseen, current of spiritual energy flows from them to us, and it is urged onward by higher spheres from which they receive it. Shall we cut ourselves off in thought from this sacred influx? Shall we like spendthrifts, cast our inheritance away and stand beggared before the just demands of races yet to be? Shall we not rather endeavor to fit ourselves to replenish that living tribute which Nature pays to the Eternal? All that comes to us being already our own in the Law, shall we not receive this seed with grateful souls and make it bear a thousandfold in the fields of the West. Ah! blot me out that word! There is neither East nor West; neither above nor below; neither distinction nor difference. There is only the Whole; we are part of its organic life, and there is none greater than we save *He who has no Name*.

THE PRIDE OF POSSESSION — *Harij*

We often see the term "Just Pride" used as though pride in any form were justifiable. Most persons nowadays are ready enough to condemn pride of blood and pride of wealth, though such condemnation is not often unmixed with envy, but the pride of an honorable name or of worthy achievement or of genius few think of condemning, and there is even a pride in poverty itself which is often its greatest burden and which stands squarely against all progress and all improvement. Yet are not all these things incidents of life, mere accessories or human nature, only fancied possessions, not real.

Let it be understood that pride *per se* is evil and that only, and that the indulgence of it in any form or for any reason is also evil and folly. Pride is the basis of all caste and caste legislation in State or in society. The meaning of it is that, because of this or that, I am better than my neighbor, and, being better than he, I cannot therefore associate with him on equal terms, and this it is, more than all else save only greed, that prevents the reign of Universal Brotherhood.

"What, then," says one, "do you deny that there are inequalities in life that one is wise and another foolish, one beautiful and another deformed and ugly, one strong and another weak?" Surely not; but he who is strong is weakened by pride; he who is beautiful is deformed by pride; and he who is wise is degraded by pride to the level of folly. Pride of wealth, blood, power, and place is by no means the only offence. Who has not seen the so-called educated dominate and trample upon the ignorant as ruthlessly as the strong can anywhere overcome the weak, or the rich oppress the poor?

Such are never educated in any true sense, though they have that base coinage which passes current in an age of mediocrity and is often mistaken for true gold, to be found at last but "fool's gold." How many people are brave and noble in adversity; how many good people have been spoiled by prosperity. And what are good and bad, rich and poor, wise and ignorant, but terms of comparison, mere temporary states, inns for the night, stations for a day in the journey of the soul!

The desire to better one's condition in life is natural enough, and is the key to all personal progress. To feel that one is designed for better things than he has yet achieved is an intuition of the soul, its choicest heritage, but all such achievements should be by honest endeavor, not by fraud. He who can simply grumble at Providence for having placed him below his deserts is not likely to better his condition. Thousands of poor persons who hate and envy others because they are rich would, if grown suddenly rich, be more proud and oppressive than any whom they now despise; and very few among these envious poor are willing to practice the economy and self-denial which are the cause of the wealth they envy; and yet they are fond of saying "we are as good as they," and will often repel kindness and offers of assistance with scorn, too proud to be pensioners, yet not too proud to be envious.

Pride doth indeed cover a multitude of sins. Pride is evil in any form, though it may and doubtless does serve to push the soul to better things, just as fear restrains it from worse things. When once it has been clearly perceived that nothing which can by any possibility be the subject of envy or pride is in any sense a true possession, then pride and envy must cease. Wealth, fame, and power, — these are but relative terms for temporary states, and envy is the false light by which they allure their pursuers, while pride is the miasm by which they silence the voice of the soul and

lull it to lethargy and decay. He who seeks real possessions, to have and to hold by the soul's franchise, envieth not and is never proud, for he well knows that the things that he prizes are the heritage of humanity. He cannot hold them or compass them, create or destroy them, though he can become a part of them through the serving of all, and thus partake of their nature. These are Truth, Justice, Love, and Understanding, not mere "abstract qualities," but the Jewels of the soul no less than the crown and glory of the Deity. These shine by their own light, and are to be loved and sought for themselves alone. We shall not envy, but rather honor, him who possesses them. Possessing them, we shall not be proud, but reverent, grateful, helpful, and so help on the reign of Universal Brotherhood, well knowing that every jewel we help to place in the crown of a brother will add lustre to our own. These are the true possessions, and they are divested of all pride and envy.

THE GREAT ORPHAN. (1)

Woe stalks abroad in all the land,
Want and despair together stand,
God's image trampled in the dust!
How long, O Lord! and Thou art just?
 How long! How long! O just and wise!
 These empty hands, these hungry cries?

God's providence is always seen
Through man, in garb of Nazarene:
Man prays to God with up-turned eyes,
While at his feet his brother lies:
 How long! How long, O Pharisee!
 Ere brazen skies will answer thee.

All store of food, all wealth of gold,
Are given to man to have and hold;

To hold at peril, if he dare
Deprive his brother of his share,
 Enough for all by measure just,
 Who holdeth more but holds *in* trust.

The almoner of God is he
Whose hands are filled by destiny.
God's special providence to show
Through man, to man, to lighten woe.
 Relief of needs through human deeds,
 All Heaven waits; all Nature pleads.

Great suffering soul! Humanity!
Father divine,! Humanity!
Mother divine! no more concealed,
Behold the mystery revealed!
 These three in one, and one in three,
 God all in all, Humanity!

The Path

GIVE US ONE FACT — *Nilakant*

Since last I wrote for *THE PATH*, the most distinct call I have heard from many students in the West is found in the cry: "Give us one fact!"

They have acquired the desire to know the truth, but have lingered still around the market places of earth and the halls of those scientific leaders of the blind who are the prophets of materialism. They say that some "scientific" men, while talking of Theosophy, have asked why the Masters have not "given us one fact on which we may begin and from which a conclusion might be reached;" and they — these students — most earnestly ask for that fact for themselves, even though they shall conceal it from the very men who have formulated the question.

Poor children. What are the facts ye desire? Is it some astounding thaumaturgical exhibitions that shall leave no room for doubt? If so, please say whether the feat is to be performed in the sight of thousands, or only in the presence of one postulant and his select circle? If the last, then ye are self-convicted of a desire to retain unto yourselves what belongeth to many. Or perhaps ye wish a statement of fact. But that would of course have to be supported by authority, and we, poor wanderers, have no force of authority in science or art; statements of facts coming from us would therefore be useless to you.

And I must tell you in confidence, as the messengers have before this been directed to do and have not failed therein, that an exhibition of thaumaturgical skill in the presence of a multitude would subvert the very ends the perfected men have in view. Suppose that some of those who know were now to appear in the busy hum of American life, where the total sum of objects

appears, at this distance, to be the gain of wealth, and like the two young princes of Buddha's time were to rise in the air unaided and there emit sheets of fire alternately from their heads and feet, or were to rise again, and float off to a distance in plain sight of all; would that fact demonstrate anything to you? Perhaps in the breasts of some aspiring students might spring up the desire to acquire the power to do likewise. But pause and tell me what would the many do to whom such things are myths? I will tell you. Some would admit the possibility of a genuine phenomenon, seeking ways and means to do it too, so that they might exhibit it for an admission price. Others, and including your scientific fact-seekers, would begin by denying its truth, by ascribing it to delusion, and by charging those who did it, no matter how really spiritual those were, with deliberate fraud and imposture, while a certain section would deny the very happening of the matter and falsify the eye-knowledge of hundreds. (1) Still others would say "It is a God!" or — "It is a devil," with consequence to correspond. No, friends, the true teachers do not begin by laying the foundations for greater error and more fast-bound superstition than those we are trying to destroy.

Then I must tell you in all seriousness and truth that statements of the facts you really wish have been over and over again made in many places, books, and times. Not alone are they to be found in your new theosophical literature, but in that of older times. In every year for centuries past these facts have been given out, — even in English. They were told in the days of the German and English Alchemists, and by the Kabbalists. But greed and wrong motive have ever formed the self-constructed barriers and obscurers.

The Alchemists of the pure school spoke of the gold they could make by means of their powders, and the salt, together with their mercury; and the Kabbalists said that by pronouncing Jehovah's

name not only was the gold formed, but power obtained in all worlds. Very true these statements. Are they not statements of fact? Did they satisfy the mass of seekers? So far from that, the result was to lead them into error. Many patiently sought for the powder and the proper combination of the salt or sulphur and mercury, so that they might make worthless gold metal, which today is exchangeable and tomorrow is useless, and which never could give peace of mind or open the door of the future. Then others went by themselves and tried various modulations of sound in pronouncing the supposed name of their Mighty God, until they today have some two-score sorts. What purblind ignorance this, for God is God and has not changed with the rise and fall of empires or the disappearance of languages; his name was once a different sound in ancient Egypt or India, in Lemuria, Atlantis or Copan. Where, then, are those many sounds of His Holy Name, or has that been altered?

"But where," ye say, "is the *fact* in the pronunciation of the name of God?" The answer is by asking "What and who is God?" He is the All; the earth, the sky, the stars in it; the heart of man; the elemental and organic world; the kingdoms of the universe; the realm of sound and the formless void. Is not the pronunciation of that Name to consist therefore in *Becoming* all those kingdoms, realms, and power, focussing in yourself the entire essence of them, each and all *at once*? Is this to be done by breathing forth "Jehovah" in one or many forms? You easily see it is not. And your minds will carry you on the next step to admit that before you can do this you must have passed through every one of those kingdoms, retaining perfect knowledge and memory of each, commander of each, before you can attempt the pronunciation of the whole. Is this a small task? Is it not the task Karma has set before you, compelling you like children to repeat parts of the word in the varied experiences of repeated lives spent on earth,

bringing you back to the lesson until it is well learned?

And so we are brought to ourselves. Our Aryan ancestors have made the declaration, repeated by thousands since, that each man is himself a little universe. Through him pass *all* the threads of energy that ramify to all the worlds, and where any one of those lines crosses him is the door to the kingdom to which that thread belongs. Listen to the Chandogya Upanishad: "There is this city of Brahman — the body — and in it the palace, the small lotus of the heart, and in it that small ether. Both heaven and earth are contained within it, both fire and air, both sun and moon, both lightning and stars; and whatever there is of the Self here in the world, and whatever has been or will be, all that is contained within it."

Vain it is to make search without. No knowledge will reach you from any where but this small lotus of the heart. Just now ye are binding it so that it cannot burst open. It is with the delusions of the mind ye bind it in a knot. That knot ye must break. Break loose from scholastic error, make of your minds a still and placid surface on which the Lord of the palace in the heart can reflect pictures of Truth, become as little children who are not hindered by preconceptions, and ye will have knowledge.

The only fact I have to offer you is — YOURSELVES.

FOOTNOTE:

1. We can agree with the writer, as we have seen just as wonderful things done by H. P. Blavatsky and next day heard accusations of fraud against her and charges of credulity against those who had seen. — [Ed.] ([return to text](#))

THE TIDE OF LIFE: I — *Charles Johnston*

(Annotated by H. P. Blavatsky)

"Our souls have sight of that immortal sea which brought us hither;

Can in a moment travel thither —

And see the children sport upon the shore,

And hear the mighty waters rolling evermore."

That the book of Genesis is not a homogeneous work, but is composed of several distinct and widely different books, becomes evident from a slight examination. The first thirty-four verses form the first and apparently the most ancient of these. This treatise contains a system of cosmogony closely resembling that of the Puranas and Upanishads. The origin of this ancient tract, and the causes which led to its incorporation with the Hebrew scriptures, we can only guess at. Its source may have been some venerable hieratic manuscript brought by Moses from the temple-libraries of Egypt, where it had lain for thousands of years, from the time when the colonists of Egypt left their early home in ancient India. Or it came, perhaps, from the Chaldaen Magians, the inheritors of the sacred Iranian lore, the younger sister of the wisdom-religion of the motherland of the Aryas. This much we know, that it contains a Divine Cosmogony, of evident Oriental character, and almost identical with the Archaic Sacred theories of the East.

This tract splits off like a flake from the story of Adam and Eve which, from its more vivid colour, has almost cast it into the shade, and a mere preface or pendant to which it has erroneously been considered to be. To make this separation more clearly apparent, a few of the lines of cleavage may be shown. (1) To

begin with, we find two quite different and distinct accounts of the "Creation."

(1.) In the more ancient cosmogony, contained in the first thirty-four verses, the account of the formation of man is similar to, and parallel with, that of the animals. (2)

"The Elohim created man, male and female."

While the second and later account introduces the distinct and peculiar story of the creation of Adam from dust, and of Eve from Adam's rib. Besides this, earlier in the second account, we find that the formation of man as detailed in the first tract is entirely ignored by the words —

"There was not a man to till the ground." (3)

and this nine verses after it had been chronicled that "God created man."

(2.) In the more ancient tract, man and woman are created together, and over them is pronounced the blessing —

"Be fruitful and multiply, and replenish the earth,"

yet in the subsequent story of Adam and Eve, the absence of woman is marked by the words —

"It is not good that the man should be alone:"

and further on, in the story of Eden, the children of Eve are foretold with a curse and not with a blessing,

"I will greatly multiply thy sorrow and thy conception,"

for, in this story, while Adam and Eve remained unfallen they remained childless.

(3.) We read in the first account that —

"The Earth brought forth grass, herb yielding seed, and fruit tree."

This is ignored in the second account, when we read twenty-four verses later,

"No plant of the field was yet in the earth."

Similarly, we have a second and distinct account of the formation of the animal kingdom; which, moreover, comes after the Seventh day "on which God rested from all his work which he had created and made." (4)

(4.) In the first account the order of creation is as follows: —

"Birds; beasts; man; woman;"

In the second, we find the order changed,

"Man; beasts; fowls; woman."

In the one case man is created to rule the beasts; in the other the beasts are created as companions for man.

(5.) In the first account all herbs and fruits are given to man unreservedly —

"I have given you *every* tree, in the which is the fruit of a tree yielding seed"

In the second we read —

"Of the fruit of the tree which is in the midst of the garden, God hath said, Ye shall not eat of it."

(6.) All through the earlier cosmogony the Divine Creative Energy is called "Elohim;" thus in the first verse we read —

"*Berashit bara Elohim.*"

In the story of Adam and Eve this title is replaced by another, "Jehovah" or "Yava." In the English the difference is veiled by translating the former "God," though it is a plural form, while the latter becomes "the Lord God." In other parts of the Bible several other titles of Deity are introduced, "El," "Adon-ai," "El Shaddai."

(7.) The early cosmogony gives to man a Divine dignity from the first: —

"The Elohim created man in their own image; in the image of the Elohim created they him."

In the story of Adam and Eve this likeness to the Divine comes only after the forbidden fruit is eaten, when man has fallen; then it was that

"Jehovah said, The man is become as one of us."

These facts warrant us in considering this Divine cosmogony, contained in the first thirty-four verses of Genesis, separate and distinct from the less orderly and scientific, though more popular, story of Adam and Eve.

At the present time, when the apparent antagonism between modern evolutionary doctrines and the doctrine of the Adamic Creation is perplexing many, it may not be out of place to draw attention to this earlier and more scientific cosmogony, and to point out that not only is it perfectly in accordance with the latest ascertained facts, but that it is probably "more scientific than the scientists," in that it recognised clearly the dual character of evolution, while modern thought manifests too great a tendency to one-sidedness.

The doctrine of this first cosmogony of Genesis is that of the formation of the phenomenal universe by the expansive or emanative power of the great unmanifested Reality, or

underlying Divine Vigor in virtue of which existence is possible. This unmanifested Reality has no name in the West, but it may be called with the Hindu Vedantins, *Parabrahm*. After a period of Cosmic rest called in the East *a Night of Brahma*, the Unmanifested, by its inherent expansive power, sends forth from itself a series of emanations.

The first emanation, the only Divine and eternal one, which is conceived as lasting even through the *Night of Brahma*, is the Logos. The second emanation is what was called by the cabalistic philosophers the "fifth essence," counting "fire," "air," "water," and "earth" as the other four. It may be termed "Spiritual Ether." From Ether proceeded the element called by the cabalists "fire"; from fire proceeded "air"; from air proceeded the element "water"; from water, "earth."

These five — ether, fire, air, water, earth, are the five emanations which, in their various phases and combinations, make up the phenomenal universe, the Logos being considered Divine and subjective, or noumenal. From Earth sprang in order the vegetable and animal kingdoms, and finally Man.

The "elements", as understood in the above classification, are by no means to be confounded with the elements of modern chemistry; they are arrived at by an entirely different though equally scientific course of reasoning.

In the cosmogony of Genesis the Divine Underlying Reality is called GOD. The expansive power by which, after the period of cosmic rest, the phenomenal universe was formed is thus described: —

"In the beginning God created the heaven and the earth."

This "in the beginning," marks off from eternity the point at which the present period of cosmic activity, or *day of Brahma*,

began; when the Universe proceeded from "the everlasting bosom of God" to which it must return when this period comes to an end. Modern scientists are not without some dim perception of this process of emanation and absorption, as may be seen from the speculations in the "Unseen Universe," (5) though the authors of this work confine themselves chiefly to the last emanation, that of physical matter from the emanation which preceded it. Whence the universe emerged, thither also must it return; a truth clear to the pure insight of Shakespeare —

". . . Like the baseless fabric of this vision,
The cloud-capp'd towers, the gorgeous palaces,
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve,
And, like this insubstantial pageant faded,
Leave not a rack behind."

God, the eternal Parabrahm, remains unchanged; with God remains the Logos, the first and eternal emanation —

"The spirit of God. . ."

which, "dove-like, sat brooding on the vast abyss."

This "vast abyss," or, as it is styled in the cosmogony of Genesis —

"The face of the waters,"

is what we have called the elemental Ether, the "Akasa" of the Upanishads. It is of ethereal nature, and is the plane of sound, answering to the sense of hearing; that it is the plane of sound has been taught by the Brahmans and the cabalists, and may be inferred from various considerations, amongst others from the difficulty of locating sounds in their immediate material sources (they having, as it were, an immaterial character), and from their spiritual, ethereal nature.

This element of ether has within it the possibility of innumerable sounds and changes of sound: according to the cabalists the sound becomes apparent to our senses only when it strikes against a material object, such as a vibrating violin-string, which becomes merely a point of reflection for the all-prevading element of sound; just as a beam of sunlight becomes apparent only by reflection from particles of dust floating in the air. (6)

Next in order after the emanation of ether, the matrix of sound, comes the elemental Light, the "fire-element" of the cabalists. It corresponds to the plane of colour and the sense of sight, which should rightly be called the "colour sense," For colour is really the only quality perceived by the eye. "All objects," says Ruskin, "appear to the human eye simply as masses of colour. Take a crocus, and put it on a green cloth. You will see it detach itself as a mere space of yellow from the green behind it, as it does from the grass. Hold it up against the window, you will see it detach itself as a dark space against the white or blue behind it. In either case its outline is the limit of the space of colour by which it expresses itself to your sight. The fact is that all nature is seen as a mosaic composed of graduated portions of different colours." (7) This light, or colour-element, is a pure element containing within itself the possibility of all varieties of colour. After its formation, we find the words —

"The evening and the morning were the first day,"

introducing the element of time first with this emanation. The Logos is, as we have seen, eternal; and the immaterial, semi-physical element of Ether is, as it were, the borderland between the subjective eternal Logos and the objective elements of *fire, air, water, and earth*.

After this light-emanation comes the element called by the cabalists "Air." Its formation in the cosmogony of Genesis is

marked by the words —

"The Elohim said, Let there be an Expanse."

This word, for a long time wrongly translated "firmament," is chosen to express the air-element, because from this element we derive the idea of the extension or expansiveness of a body — its ability to fill a certain quantity of space. The air-element corresponds to the sense of touch, so far as this sense conveys the idea of "expansiveness" or "extension." The sense of touch differs from the senses of sound and sight, in that it is distributed all over the surface of the skin, while they are confined to definite sense-organs, or spaces of localised sensitiveness, and, in proportion as the eye and ear have gained in sensitiveness to light and sound, the rest of the skin has lost its power of responding to these sensations. The whole surface of the body is, on the contrary, still sensitive to touch, as also to the sensation of heat. (8) There is reason to believe that at one time the body's whole surface could respond equally to all sensations; (9) the specialised organs of sense not being then developed, just as the whole surface of the jelly fish still responds to the stimulus of light. An analogy to this condition of unspecialised sensitiveness is furnished by modern experiments in thought transference, from which it appears that the sensations of sound, colour, taste, touch, and smell are all transferred from one mind to another with equal ease. There are some grounds for the belief that when an organ is specialised for some particular sensation it loses the power of responding to other sensations: that the retina, for instance, will be insensible to heat. (10) The sensations of heat and touch are, as we have seen, distributed over the whole surface of the skin; and from this fact, among others, we are led to consider heat as well as touch an attribute of the element "air." Another reason for this conclusion is the fact that we find heat always associated with expansiveness or extension. As elucidating this point we may quote the

researches in the solidification of gases, and speculations on "absolute zero" in temperature, though want of space precludes us from more than merely referring to them. After air comes the element of water, marked in the Genesis cosmogony by the words: —

"The Elohim said, Let the waters be gathered together."

This elemental water corresponds to the sense of taste, and in part to the idea of molecular motion; the motion of masses being one of the ideas attached to the Air-element. It might be thought that the sensation of taste might also be derived from solid bodies; but that this is not so may be inferred from recent scientific researches, which have demonstrated that all bodies, even the metals, and ice far below zero, are covered with a thin layer of liquid, and it is from this liquid layer that we get the sensation of taste from solids. In this element of water are the potentialities of innumerable tastes, every organic body, and even minerals and metals, having a distinctive taste: zinc and steel among the metals for instance, and sugar, vinegar, and wine in the organic world.

This element is followed by the last emanation, the Earth-element of the cabalists, marked in the Cosmogony of Genesis by the words,

"The Elohim said, Let the dry land appear, and it was so, and the Elohim called the dry land Earth."

This emanation corresponds to the extreme of materiality, solidity, and, amongst the senses, to smell. A piece of camphor, for example, throws off small solid particles in every direction, and these, coming in contact with the nerves specialised to this sense, produce the sensation of smell. This Earth-element is the last emanation strictly so-called. To this point the outward expansion

of *Parabrahm* has been tending, and from this point the wave of spirit must again recede.

It must be here stated that these elements, fire, air, water, and earth, are not what we ordinarily mean by these terms, but are, so to speak, the pure elemental or spiritual counterparts of these. Down to this point, Form has been gradually developing, being destined to combine with each of the elements in turn, in the ascending scale.

(To be continued.)

FOOTNOTES:

1. The esoteric teaching accounts for it. The first chapter of Genesis, or the Elohist version, does not treat of the creation of man at all. It is what the Hindu Puranas call the *Primal* creation, while the second chapter is the *Secondary* creation or that of our globe of man. Adam Kadmon is no man, but the *protologos*, the collective Sephirothal Tree — the "Heavenly Man", the *vehicle* (or *Vahan*) used by En-Soph to manifest in the phenomenal world (see Sohar): and as the "male and female" Adam is the "Archetypal man," so the *animals* mentioned in the first chapter are the *sacred* animals, or the zodiacal signs, while "Light" refers to the angels so called. — H. P. Blavatsky. ([return to text](#))

2. *Vide supra* — "The great whale" (v. 21) is the *Makara* of the Hindu Zodiac — translated very queerly as "Capricorn," whereas it is not even a "Crocodile," as "Makara" is translated, but a nondescript aquatic monster, the "Leviathan" in Hebrew symbolism, and the vehicle of Vishnu. Whoever may be right in the recent polemical quarrel on *Genesis* between Mr. Gladstone and Mr. Huxley, it is not *Genesis* that is guilty of the error imputed. The Elohist portion of it is charged with the great zoological blunder of placing the evolution of the birds before the

reptiles (*Vide* — "*Modern Science, and Modern Thought*," by Mr. S. Laing), and Mr. Gladstone is twitted with supporting it. But one has but to read the Hebrew text to find that Verse 20 (Chap. 1) does speak of reptiles before the birds. And God said, "Let the waters bring forth abundantly the (*swimming and creeping*, not moving creatures that hath life, and fowl that may fly" etc. This ought to settle the quarrel and justify Genesis, for here we find it in a perfect zoological order — first the evolution of grass, then of larger vegetation, then of fish (or mollusks), reptiles, birds, etc., etc. Genesis is a purely symbolical and kabalistic volume. It can neither be understood nor appreciated, if judged on the mistranslations and misinterpretations of its Christian remodellers. — H. P. Blavatsky. ([return to text](#))

3. Because Adam is the Symbol of the first *terrestrial* MAN or Humanity. — H. P. Blavatsky. ([return to text](#))

4. *Genesis* being an eastern work, it has to be read in its own language. It is in full agreement, when understood, with the universal cosmogony and evolution of life as given in the Secret Doctrine of the Archaic Ages. The last word of Science is far from being uttered yet. Esoteric philosophy teaches that man was the first living being to appear on earth, all the animal world coming *after* him. This will be proclaimed absurdly *unscientific*. But see in *Lucifer* — "The Latest Romance of Science." — H. P. Blavatsky. ([return to text](#))

5. "The Unseen Universe," by Professors Balfour Stewart and P. G. Tait. — [C. J.] ([return to text](#))

6. While taking this view of sound, we are, of course, perfectly acquainted with modern researches and speculations on the subject. Our standpoint, however, is so widely different from that of modern science that no comparison with its teachings is possible. ([return to text](#))

7. Ruskin, "Lectures on Art," p. 125. ([return to text](#))

8. For speculations on a specialised heat sense we may refer to Mr. E. A. Proctor's ideal visit to Saturn's Satellites. ([return to text](#))

9. Readers will remember the translations which appeared in the PATH some time ago giving the German Mystic Kernning's teachings hereupon. [W. Q. J.] ([return to text](#))

10. *Vide* some experiments with thermal rays in Tyndall's "Heat a Mode of Motion." ([return to text](#))

The Path

A SERVANT OF THE MASTERS — *William Q. Judge*

COL. HENRY S. OLCOTT

A pioneer in a great movement, such as that represented by the Theosophical Society, should be known to the contemporary members of the organization, who ought in justice to have information of the work performed by that pioneer. This is especially the case in our Society, for, although it was started in the United States, Colonel Olcott very soon went to India, and there continued the work begun here. When he left this country there was but one Branch in America, and comparatively few members, but now theosophists are found in nearly every State of the Union. Few of them have had time and opportunity to become acquainted with the facts in respect to Colonel Olcott's connection with the movement, and it is for their information that this statement is especially intended. As his work in India has absorbed most of his time, it has necessarily followed that nearly all new members here were deprived of that attention from him which some of them would perhaps be pleased to receive, and, India being so far distant, he has remained for them almost a stranger. Were that effect of distance not rectified in some way, we might be in danger of taking the position temporarily assumed a few years ago by new members similarly situated in India, who, not concurring in his methods as an American, and feeling that they could perhaps suggest a line of action more suited to the English mind and habits, proposed to the Masters a radical change which would involve his retirement from his then prominent position. The reply from The Brothers is worthy of consideration from every thoughtful theosophist.

Having disposed of personal motives, let us analyze your terms

for helping us to do public good. Broadly stated, these terms are — first, that an independent Anglo-Indian Theosophical Society shall be founded through your kind services, in the management of which our present representatives (Col. Olcott and H. P. Blavatsky) "shall not have any voice." (1) * * And supposing you were thus to come — As Madame B. did and Mr. O. will —, supposing you were to abandon all for the truth, to toil wearily for years up the hard, steep road, not daunted by obstacles, firm under every temptation; were to faithfully keep within your hearts the secrets entrusted to you as a trial; had worked with all your energies and unselfishly to spread the truth and provoke men to correct thinking and a correct life: would you consider it just, if, after all your efforts, we were to grant to Madame B. or Mr. O. as 'outsiders' the terms you now ask for yourselves. Of these two persons, one has already given three-fourths of a life, the other six years of manhood's prime, to us, and both will so labor to the close of their days; though ever working for their merited reward, yet never demanding it, nor murmuring when disappointed. Even though they respectively could accomplish far less than they do, would it not be a palpable injustice to ignore them in an important field of Theosophical effort? Ingratitude is not among our vices, nor do we imagine you would wish to advise it." (2).

What They wanted, and what the Society needs, is a man of intelligence who can and will work for a high and far Ideal regardless of all opposition, unconcerned as to his future reward. In Colonel Olcott such a man has been found, and by knowing what he has done we shall be able to give reasons for our esteem and loyalty.

Colonel Olcott is a lawyer, and for several years practised law in the city of New York. It is a somewhat curious fact that very many of those well known in the theosophical field are lawyers. I might

mention Subba Row and Sreenevasa Row, of Madras. The first is a prominent Hindu pleader; the other is Sub-Judge in Madras. Many Americans have met Mohini M. Chatterji, who was admitted to the Bar in Bengal. A prominent member in Poona, India, is Judge N. D. Khandalavalla, and all over India theosophists are to be found acting as lawyers or judges. In England, a former President of the London Lodge was a well known solicitor, and some of the earnest members there now are in the same profession. In America we of course have a great many members who are lawyers.

When I met Colonel Olcott in 1875, the Theosophical Society had not yet been formed. In October of that year a meeting was held in the apartment of H. P. Blavatsky at 46 Irving Place, New York, at which it was proposed to form a Society for the study of those subjects which have since engaged our attention. In a book now lying before me I have the original minutes of that meeting and of others following it, with the names of all present. So if there be persons anxious to claim the honor of being among the founders of the Society, it will be wise first to be sure that their names are in this book. Possibly such registration will some day be accounted an honor by all, as it now is by advanced minds.

At that first meeting I proposed Colonel Olcott as President of the Society, and was made temporary Secretary myself. A Committee appointed to select a name for the infant met several times after that at Olcott's office, 7 Beekman Street, New York, and decided upon the present name. The objects of the Society had been given to Col. Olcott by the Masters before that; they were adopted and have never been changed. Up to this time Olcott had been a well known Club man, and no one supposed that he would ever show such abnegation as he since has in respect to the things of this world. The wisdom of his selection as President has been vindicated by our history. The Society was unpopular from the

outset, and had indeed so little money that all the first diplomas were engrossed by hand by one of the members in this city.

During the period between October, 1875, and November, 1878, Col. Olcott received many letters from the Masters on the subject of the Society in which no promises were made that have not since been fulfilled. He worked steadily with the Society until 1878, and then, in December, went to India with H. P. Blavatsky. When they arrived there, full as many difficulties had to be met as in America, with the additional disadvantage, to Col. Olcott, of being upon strange ground, but they persevered against all opposition. Among such troubles were those caused by the English police, who for a time suspected H. P. Blavatsky to be a Russian spy, a mistake happily remedied by orders from their superiors. In all I say here, it must not be forgotten that the part played by H. P. Blavatsky can never be rightly given to the world, because it would not be understood. Her service and efforts can never be estimated, but they may be glimpsed by intuitional natures.

In Bombay, in 1878, Col. Olcott hired a bungalow as temporary Headquarters. He had then no help and no acquaintance with Indian methods, but Madame Blavatsky and himself started the publication of the Theosophist, and Masters promised to give certain hints through its pages, a promise fulfilled by the publication of "Fragments of Occult Truth" (since embodied in "Esoteric Buddhism") and other articles. A young Hindu gentleman, Damodar Mavalankar, soon came and cast in his lot with the Founders, to be later called to Tibet by his Master. In these early days enough troubles of all kinds were experienced to bend any ordinary man of soft metal, but Col. Olcott went straight onward, depending upon the help of Masters to enable him to overcome all obstacles. When the project of starting a real Headquarters took shape he removed to Madras, where he was

helped by Iyaloo Naidoo (now of Hyderabad) and others in getting the present building at Adyar. Various Branches had been established and interest was gradually spreading, but nothing could be done anywhere without Col. Olcott, upon whom all the Hindu members had come to rely. This necessitated much travel on his part at a time when his office assistance only comprised Messrs. Damodar, Ananda, and Babajee. Damodar attended to a vast mass of correspondence and worked night and day, snatching his brief rest on skins spread upon the marble floor. Ananda, with similar devotion, gave up a clerkship under Government to work at the accounts and general routine, while Col. Olcott travelled North, South, East, and West, lecturing and stirring up the natives to the truths of ancient philosophy, and, in spite of severe and hurried journeys in a country where all our modern luxury of travel is unknown, his speeches are all excellent, and many of them are thrilling from their exquisite eloquence and diction. He also took complete charge of all Conventions, a step which always resulted in greater unity. Going to Ceylon, he inaugurated a great movement there, and was received into the Buddhist Church by the High Priest, who authorized him to admit others also. He had previously been invested with the Brahminical thread by Brahmins in India, an honor by them considered as the highest possible mark of respect and friendship. The Ceylon movement prospered largely, and now has instituted Sunday Schools, a newspaper, and Headquarters of its own. Each year Col. Olcott makes a tour through India, working with indescribable energy, received everywhere with enthusiasm, lecturing to hundreds in crowded halls, opening schools and other reform societies for boys, and increasing the size and usefulness of Branches in all directions. When he conceived the idea of a grand Asiatic Library at Headquarters in Adyar, he pursued it so vigorously that it soon became a fact, and one of the highest importance. Many palm-leaf

M. S. S. which would otherwise be lost will be preserved there, and many rare and often hitherto unknown books will be presented. The Library already numbers 460 volumes in Sanskrit (inclusive of M. S. S.), 263 volumes in other Indian languages, and about 2,000 volumes in Western languages, including the Classics and Hebrew. The very learned N. Bhashvacharya of Cuddapah has consented to become its Director and Professor. A Permanent Fund was also started by Col. Olcott with the object of providing sufficient income for the maintenance and repair of Headquarters, and, as this Fund is slowly growing, it is hoped that it may also pay the expenses of propoganda in time. Hitherto all excess of expenditure above the small sums received from dues and charters has been met by the private means of the two Founders.

Envious minds may think that Col. Olcott, now known all over India and Ceylon as well as being a name of note in Western countries, knew that he should gain a greater fame and wider acquaintance by resigning all that most men esteem as most pleasant and valued in life, just at a time too when the tendency is to grow fast to the personal centre, and going to a far land, there to pass his days in unremitting and arduous labors for the good of humanity, for a sublime Ideal. This is seen to be wrong when we consider that he had no certainty of success, nothing to go upon but promises made by Masters, who do not mix in public matters. Moreover, he had a wide acquaintance here, and all his American friends thought him foolish to go to a distant country on what they call "a wild goose chase" and an impracticable affair all round that "has no money in it." On the other hand, if they now say that he knew well what he was doing when he thus depended on promises made by the Adepts, there is no escape from the conclusion that those Adepts can be trusted, and on their part know the future and what is best for man. The faith of Col. Olcott

himself in these great Beings has always remained unshaken, as his last act evinces. He has been several times urged by members to promulgate a creed to be accepted, but has always refused to go one step beyond the original lines and objects laid down by Masters, so that he has been thus greatly instrumental in producing an unsectarian and united Society devoted to spiritual things.

The following extract from a letter to the Simla Eclectic Theosophical Society from the Masters, on this subject, sustains him in his position:

"It is time that Theosophy should enter the arena. The sons of Theosophists are more likely to become in their turn Theosophists than anything else. No messenger of Truth, no prophet, has ever achieved during his lifetime a complete triumph, — not even Buddha. The Theosophical Society was chosen as the corner stone, the foundation, of the future religion of humanity. To achieve the proposed object, a greater, wider, and especially more benevolent intermingling of the high and the low, of the alpha and omega, of society was determined upon. The white race must be the first to stretch out the hand of fellowship to the dark nations. This prospect may not smile to all alike. He is no theosophist who objects to the principle. * * and it is we, the humble disciples of the perfect Lamas, who are expected to allow the Theosophical Society to drop its noblest title, '*The Brotherhood of Humanity*,' to become a simple school of philosophy. Let us understand each other. He who does not feel competent enough to grasp the noble idea sufficiently to work for it, need not undertake a task too heavy for him. But there is hardly a theosophist in the whole society unable to effectually help it by correcting the erroneous impression of outsiders, if not by actually

propagating himself this idea."

In this loyalty and faith he has found a power which enables him to go on and on under immense strain, ill at times, often in utter darkness as to the morrow's trials, but ever upheld by a self forgetful enthusiasm, ever devoted and forceful as only those men are who live out their inner convictions, who will throw aside all life seems to hold rather than renounce one of these beliefs, and who have based them upon the holy Cause of Universal Brotherhood and the existence of those Masters Who are sharers in the divine and eternal, Who live but for Humanity.

The Path

PARTISANSHIP IN THEOSOPHY — *Alexander Fullerton*

(A PAPER READ BEFORE THE ARYAN T. S. OF NEW YORK, MARCH 20TH, 1888.)

Theosophy is both a Philosophy and a Religion, and hence springs from the intellectual faculties which nourish thought and from the emotional faculties which nourish piety. The same fact holds of Theology. It, too, is a combination of a theory of the mind with an aspiration of the heart, the theory expounding the human and the Divine, and the aspiration impelling the human to the Divine. Theosophy and Theology are alike, then, in uniting a mental system with a spiritual impulse, and in deriving them from identical constituents of human nature. Moreover, it might be shown that there is a parallelism in their claim to exposition from authority, in their assertion that things seen are temporal while the things which are not seen are eternal, in their avowal that light comes only to those who seek it with singleness of heart, and in their aim to uplift humanity through the consoling, inspiring, invigorating influences of those who generously teach, prompt, strengthen their kind.

With so much that is common to these systems in their nature, structure, and purpose, one may very naturally infer, some likeness in their dangers, if not in their history; and it is therefore in no way surprising that the brief career of Western Theosophy should have already exhibited some of the traits which have been conspicuous in the far longer course of its sister. Missionary zeal, devoted labor, uncounting sacrifice, the moulding power of conviction, — all are there; but so, too, do we see at times a spirit of assertion, natural perhaps to the devotee, though inconsonant with the philosophy he champions. In its full development, a development reached in the embittered contests over doctrinal

questions in the Christian Church, this spirit became so acrimonious and so virulent, so relentless, uncompromising, and savage, that the accepted term for extreme party-hatred is "odium theologicum," a term which for all time should warn the disputatious and cool the eager. No such development has been attained in Theosophy; it hardly ever can be. Two facts may be relied upon for its restraint. One is that the higher plateaux of spiritual achievement are only gained as the mounting soul expands its sense of brotherhood, toleration, and good-will, *pari passu* with which goes on an atrophy of self-insistence and of all traits making vindictiveness possible. The other is that Theosophy, having no visible hierarchical system, offers no external rewards to partisans, — no mitres, no professorships, no prelatial thrones to tempt ambition and compensate zeal. From controversies like the Arian, and from persecutions like the Papal, we are therefore free.

And yet no discreet Theosophist can say that there are not symptoms of the disease and a consequent need of treatment. Sometimes in literature, sometimes in the Theosophical Society, sometimes in private speech or act, we see an attitude expressing a state of mind which may fitly be called *partisan*. And just so far as it is really so, and just as far as its principle, if logically carried out, would result in some measure of repression, does it embody inchoately a Theosophical Ignatius Loyola. And, conversely, if such an inchoate monster is to be effectually slain, it will be by destroying the source from which comes his vitality.

First let us look at some manifestations of the partisan spirit, and then inspect the cause through the killing of which they too will die. Perhaps we cannot do better than take the departments already referred to.

1. *Literature*. In the explication of any doctrine, especially of any

doctrine at variance from that generally held, there of necessity come efforts to show its conformity with admitted facts and that this conformity is not found elsewhere. Both efforts exact argument, and both meet response. Then comes rejoinder, probably excitement, possibly warfare. The argument and the rejoinder are right, the excitement and the warfare wrong. That they are theosophically wrong will appear later on; that they are philosophically wrong may be evidenced now. Coolness is the attribute of him who is sure of his footing, and of him who knows that to allow perturbation through anger is to give advantage to an opponent: dispassionateness belongs to him who knows that opinion is fallible, that truth has many aspects, that no sincere seeker can be wholly wrong, and that there is common ground beneath contentions; calmness marks him who feels that controversies should be impersonal, that right may be trusted to vindicate itself in time, that spectators are repelled by bitter speech. But is it certain that these facts have always had recognition in our polemics? How as to Theosophical treatment of contemporary science? I have been pained, annoyed, revolted even, at the tone of malignant contempt assumed in part of our best literature towards scientific men and books. It may be that they have stopped short of nature's deepest meanings and have attributed to matter the potency which is spirit's; but their learning, their patient search, their tireless determination to fathom facts, their utter self-abnegation when a truth is to be exhumed or a law disclosed, and the countless, immeasurable, priceless blessings with which they have enriched and prolonged the life of man, it is ungenerous to question and senseless to deny. They may be at times dogmatic. But if dogmatism is unseemly in physical science, is it less so in metaphysical science? If curt contempt is the Occultist's portion from the Professor, is stinging speech the Occultist's best reply? What difference is there in principle between arrogance in the realm of matter and

arrogance in the realm of mind?

In less pronounced colors the partisan spirit has sometimes tinged the treatment of Theosophic doctrine. It is understood that the discussion of whether man's nature is susceptible of a four-fold or a seven-fold division has not been without an infusion of gall. No one will claim that comparison of views on exoteric Christendom has always been conducted with judicial placidity. Take, too, the matter of vegetarianism. To say that to certain people, for certain purposes, and at certain times a purely vegetable diet is essential, is to take a defensible, nay, a demonstrable, position. But to say that the killing of animals is minor murder, that beef constitutes an impassible barrier to beatitude, and that the use of vegetables is a dictate of morals, like truth, or honor, or honesty, is really to distort fact into phantasy and to bring ridicule upon religion. Even more than this: by leveling, like the scientist, spiritual matters to a physical basis, it exemplifies the old proverb of the meeting of extremes, for it is as gross materialism to condition the soul's functions upon the stomach as to condition them upon the brain. Almost the first remark once made to me by a warm Theosophist was, "I trust you are a vegetarian." The tone of suspense, of anxiety, of foreboding implied that otherwise my case was hopeless. So in certain Theosophic articles we are told that, if spiritually stationary, it is because we are not leading "the life," and that "the life" cannot be led if we eat meat. Surely this is the note of a partisan. It recalls the ecclesiastical threat that our souls cannot be quickened till our bodies have been baptized.

2. *The Theosophical Society*. This has not as yet been split asunder into sects. But it easily might be if either of the two sect-producing fortes is allowed to work. One of these is the recognition of a body of dogmas, adhesion to which distinguishes orthodox believers from dissenters. The other is unthinking servitude to a spiritual

leader. Both forces may be studied in Church History. Theosophy discountenances both. It distinctly states that Truth is One, and that apprehension of it will become so only as interior vision escapes the perturbing influence of self-assertion; also that Truth has no value except as realized within, any formal, indiscriminating, thoughtless clinging to a system or a man being absolutely worthless. This sternly individual process of enlightenment precludes the sect idea, for it insists that each man must develop on his own lines, and it forbids an objective measure by which all are to be gauged. There have been times when the cries "I am of Paul" and "I of Apollos" have neared an utterance in the Society, and those are the times when the teachings of the Founders should be re-memorized and the records of Church History re-read.

It may be, too, that broad reaches of Theosophic thought, deep experience of Theosophic moulding, rich perception of Theosophic future, have not saved from a somewhat narrow estimate of the Theosophic mission. The profundity and abstractness of Occultism create at first a very natural supposition that its appeal is only to the higher classes. Two facts at once rebut this, — the welcome it receives among the lowly, and the obvious working of Karma in the distribution of social status. Yet the supposition recurs; and if some of our ablest brethren have felt their sympathies limited or their energies curtailed, it may be because of a certain clannishness, a certain partisanship, which they would eject at once if they so read it.

Clearer than daylight is the truth that any factious organization, any covetousness for office, any effort to carry personal preferences through force of votes, is as incompatible with sincere devotion to the Society as with sincere devotion to a Church. And so would be any action, spirit, policy, aiming to use the Body as an agency for a member, the whole for the purposes

of a part.

3. *Private speech or act.* The possibilities here have been largely indicated above. Yet it is entirely conceivable that the most hospitable thinkers among us are not wholly beyond a start at the presentation of new truth, a suspicion that it is unorthodox because unfamiliar. There is required a very wide training outside of Theosophy to secure full acceptance of some very elemental maxims. For instance: The novelty of a thought is no presumption against its correctness; Propositions are not strengthened by their appearance in print; Affirmations by great names do not dispense from judgment the humblest learner; Self-respect requires the confession, not the maintenance, of mistake. In the onward course of an Occultist any one of these maxims may often need recall; for prejudice is a long-lived influence, swaying sentiment pro or con, vitalizing the instinct of party vindication or of personal consistency.

Nor are we private thinkers safe from yet another pitfall, — race prepossession. Much proper discussion goes on over the comparative merits of the Orient and the West. When any one of us has assigned to each what he conceives its due, it is still possible for a partisan spirit to arise. For warm appreciation may be unqualified; it may refuse to allow error or may always condone it. The services of either section may seem so vast as to make criticism impertinent and discrimination a sacrilege. It is just here that the motto of the Society comes in, — "There is no religion higher than Truth." There is no record so shining, no name so eminent, no position so dignified, as to screen from the application of impartial tests. And it would be a sorry day for the Theosophic cause if the concession was ever made that a hemisphere, a race, a class, a man, or a book, was exempt from respectful, but self-respecting, analysis.

Every form of partisanship, however and wherever displayed, and whether by a Theologian or a Theosophist, is traceable ultimately to one single source, — a conviction of infallibility. When any man is dogmatic or sectional, it is because he knows himself to be right. Caution comes from doubt. But no man can really *know* himself to be right. To infallibility there is one essential pre-requisite, — Omniscience. Approaching it there may be a state so closely allied with the Divine, so dissociated from fleshly bonds that the spiritual eye sees Truth without a medium, without an error. And it may be remarked, in passing, that in such a state all contradictions will vanish and all eyes perceive alike; from which fact follows the consequence that, during our era of controversies and of combats, no such state can have been attained. Nor can it ever be attained during incarnations.

Inevitably the ties of matter bind and confine the spirit's range; the vision is not cloudless or serene; influences from the flesh pervert, distort the mind. No man sees truth absolutely, but only as its light is colored by his constitutional environment. Oliver Wendell Holmes has aptly stated this with an illustration from chemistry. We cannot, he says, get the pure article, for that is combined in the mind with our personal qualities: what we get is the *Smithate* of Truth or the *Brownate* of Truth. But every dogmatist, every partisan, assumes virtually the reverse. He really claims, in the particular topic, to be free from error, to have a right to his own way because that way is in itself right, — in other words, to be infallible. Philosophy and the deeper consciousness unite to nullify that claim.

Partisanship in Theosophy is untheosophic. It is this not merely because it contravenes the doctrine of Fraternity, jeopardizes the existence and the expansion of the Society, invites all the evils which ecclesiasticism might teach to shun, disappoints the hopes of those who thought to find a refuge from the strife of creeds,

and paralyzes the functions of the Higher self; but because it impugns the conviction that there is no monopoly of truth to race or caste or man, and because it falsifies the law that we advance only as we abate selfhood and increase docility. Any man can tell whether he is guilty of it by inquiring whether his opinions are soluble. If they are not, he may be a student or a sciolist or a dilettante, but not a disciple, not a Theosophist. And if at any time, for any purpose, or with any motive, he feels the impatient spirit rise within him, he may know that its root is a consciousness of infallibility arid that its perfected fruit would be a devastation of mankind.

The Path

CONVERSATIONS ON OCCULTISM: I

THE KALI YUGA — THE PRESENT AGE.

Student. — I am very much puzzled about the present age. Some theosophists seem to abhor it as if wishing to be taken away from it altogether, inveighing against modern inventions such as the telegraph, railways, machinery, and the like, and bewailing the disappearance of former civilizations. Others take a different view, insisting that this is a better time than any other, and hailing modern methods as the best. Tell me, please, which of these is right, or, if both are wrong, what ought we to know about the age we live in.

Sage. — The teachers of Truth know all about this age. But they do not mistake the present century for the whole cycle. The older times of European history, for example, when might was right and when darkness prevailed over Western nations, was as much a part of this age, from the standpoint of the Masters, as is the present hour, for the Yuga — to use a Sanskrit word — in which we are now had begun many thousands of years before. And during that period of European darkness, although this Yuga had already begun, there was much light, learning, and civilization in India and China. The meaning of the words "present age" must therefore be extended over a far greater period than is at present assigned. In fact, modern science has reached no definite conclusion yet as to what should properly be called "an age," and the truth of the Eastern doctrine is denied. Hence we find writers speaking of the "Golden Age," the "Iron Age," and so on, whereas they are only parts of the real age that began so far back that modern archaeologists deny it altogether.

Student. — What is the Sanskrit name for this age, and what is its

meaning?

Sage. — The sanskrit is "Kali" which added to Yuga gives us "Kali-Yuga." The meaning of it is "Dark Age." Its approach was known to the ancients, its characteristics are described in the Indian poem "The Mahabharata." As I said that it takes in an immense period of the glorious part of Indian history, there is no chance for anyone to be jealous and to say that we are comparing the present hour with that wonderful division of Indian development.

Student. — What are the characteristics to which you refer, by which *Kali-Yuga* may be known?

Sage. — As its name implies, darkness is the chief. This of course is not deducible by comparing today with 800 A. D., for this would be no comparison at all. The present century is certainly ahead of the middle ages, but as compared with the preceding Yuga it is dark. To the Occultist, material advancement is not of the quality of light, and he finds no proof of progress in merely mechanical contrivances that give comfort to a few of the human family while the many are in misery. For the darkness he would have to point but to one nation, even the great American Republic. Here he sees a mere extension of the habits and life of the Europe from which it sprang; here a great experiment with entirely new conditions and material was tried; here for many years very little poverty was known; but here today there is as much grinding poverty as anywhere, and as large a criminal class with corresponding prisons as in Europe, and more than in India. Again, the great thirst for riches and material betterment, while spiritual life is to a great extent ignored, is regarded by us as darkness. The great conflict already begun between the wealthy classes and the poorer is a sign of darkness. Were spiritual light prevalent, the rich and the poor would still be with us, for Karma

cannot be blotted out, but the poor would know how to accept their lot and the rich how to improve the poor; now, on the contrary, the rich wonder why the poor do not go to the poorhouse, meanwhile seeking in the laws for cures for strikes and socialism, and the poor continually growl at fate and their supposed oppressors. All this is of the quality of spiritual darkness.

Student. — Is it wise to inquire as to the periods when the cycle changes, and to speculate on the great astronomical or other changes that herald a turn?

Sage. — It is not. There is an old saying that the gods are jealous about these things, not wishing mortals to know them. We may analyse the age, but it is better not to attempt to fix the hour of a change of cycle. Besides that, you will be unable to settle it, because a cycle does not begin on a day or year clear of any other cycle; they interblend, so that, although the wheel of one period is still turning, the initial point of another has already arrived.

Student. — Are these some of the reasons why Mr. Sinnett was not given certain definite periods of years about which he asked?

Sage. — Yes.

Student. — Has the age in which one lives any effect on the student; and what is it?

Sage. — It has effect on every one, but the student after passing along in his development feels the effect more than the ordinary man. Were it otherwise, the sincere and aspiring students all over the world would advance at once to those heights towards which they strive. It takes a very strong soul to hold back the age's heavy hand, and it is all the more difficult because that influence, being a part of the student's larger life, is not so well understood by him. It operates in the same way as a structural defect in a vessel.

All the inner as well as the outer fibre of the man is the result of the long centuries of earthly lives lived here by his ancestors. These sow seeds of thought and physical tendencies in a way that you cannot comprehend. All those tendencies affect him. Many powers once possessed are hidden so deep as to be unseen, and he struggles against obstacles constructed ages ago. Further yet are the peculiar alterations brought about in the astral world. It, being at once a photographic plate, so to say, and also a reflector, has become the keeper of the mistakes of ages past which it continually reflects upon us from a plane to which most of us are strangers. In that sense therefore, free as we suppose ourselves, we are walking about completely hypnotized by the past, acting blindly under the suggestions thus cast upon us.

Student. — Was that why Jesus said, "Father, forgive them, *for they know not what they do?*"

Sage. — That was one meaning. In one aspect they acted blindly, impelled by the age, thinking they were right.

Regarding these astral alterations, you will remember how in the time of Julian the seers reported that they could see the gods, but they were decaying, some headless, others flaccid, others minus limbs, and all appearing weak. The reverence for these ideals was departing, and their astral pictures had already begun to fade.

Student. — What mitigation is there about this age? Is there nothing at all to relieve the picture?

Sage. — There is one thing peculiar to the present *Kali-Yuga* that may be used by the Student. All causes now bring about their effects much more rapidly than in any other or better age. A sincere lover of the race can accomplish more in three incarnations under *Kali-Yugas* reign than he could in a much greater number in any other age. Thus by bearing all the

manifold troubles of this Age and steadily triumphing, the object of his efforts will be more quickly realized, for, while the obstacles seem great, the powers to be invoked can be reached more quickly.

Student. — Even if this is, spiritually considered, a Dark Age, is it not in part redeemed by the increasing triumphs of mind over matter, and by the effects of science in mitigating human ills, such as the causes of disease, disease itself, cruelty, intolerance, bad laws. etc.?

Sage. — Yes, these are mitigations of the darkness in just the same way that a lamp gives some light at night but does not restore daylight. In this age there are great triumphs of science, but they are nearly all directed to *effects* and do not take away the *causes* of the evils. Great strides have been made in the arts and in cure of diseases, but in the future, as the flower of our civilization unfolds, new diseases will arise and more strange disorders will be known, springing from causes that lie deep in the minds of men and which can only be eradicated by spiritual living.

Student. — Admitting all you say, are not we, as Theosophists, to welcome every discovery of truth in any field, especially such truth as lessens suffering or enlarges the moral sense?

Sage. — That is our duty. All truths discovered must be parts of the one Absolute Truth, and so much added to the sum of our outer knowledge. There will always be a large number of men who seek for these parts of truth, and others who try to alleviate present human misery. They each do a great and appointed work that no true Theosophist should ignore. And it is also the duty of the latter to make similar efforts when possible, for Theosophy is a dead thing if it is not turned into the life. At the same time, no one of us may be the judge of just how much or how little our brother is doing in that direction. If he does all that he can and

knows how to do, he does his whole present duty.

Student. — I fear that a hostile attitude by Occult teachers towards the learning and philanthropy of the time may arouse prejudice against Theosophy and Occultism, and needlessly impede the spread of Truth. May it not be so?

Sage. — The real Occult Teachers have no hostile attitude toward these things. If some persons, who like theosophy and try to spread it, take such a position, they do not thereby alter the one assumed by the real Teachers who work with all classes of men and use every possible instrument for good. But at the same time we have found that an excess of the technical and special knowledge of the day very often acts to prevent men from apprehending the truth.

Student. — Are there any causes, other than the spread of Theosophy, which may operate to reverse the present drift towards materialism?

Sage. — The spread of the knowledge of the laws of Karma and Reincarnation and of a belief in the absolute spiritual unity of all beings will alone prevent this drift. The cycle must, however, run its course, and until that is ended all beneficial causes will of necessity act slowly and not to the extent they would in a brighter age. As each student *lives* a better life and by his example imprints upon the astral light the picture of a higher aspiration acted in the world, he *thus aids souls of advanced development to descend from other spheres* where the cycles are so dark that they can no longer stay there.

Student. — Accept my thanks for your instruction. *Sage.* — May you reach the terrace of enlightenment.

THE SINGING SILENCES (1) — *Nizida*

Rapt in rare dreams one morn I lay
Upon the threshold of the day;
My body, in soft languid sleep,
Releas'd my soul, whose wings might sweep
Through Fancy's bright realm, far and wide.

At length before mine eyes did glide
A vision of a stately Rose.
Within its ruby-vesture close
A dew-drop lay: e'er long it broke.
At once a sound of music woke,
And shudder'd thro' the petals red;
And, wafted wide, afar it sped.
Then in my ear the words below
Were whispered, as I wakened slow.

O Rose, sweet Rose!
Sublime repose
Is thine, self-pois'd in still content:
But Love thy stillness doth resent.
Within the fragrant silence of thy breast
He sends a drop of aqueous light,
Red-blushing, like thy bosom ruby-drest.

And, yielding to a fond delight,
It melteth, for thy love, away.
E'en as its crystal curves evaporate
Harmonious sounds reverberate,
And shiver in their echo-play
Amidst thy waxen petal-walls
Concav'd, to bear the incense-freight
Of thy sweet breath. Soft echo calls

To echo, as they die away,
 Slow swooning in sweet ecstasy;
And all thy round, rose-bosom sways
 Harmonious, — saith my fantasy.

Within life's seeming silence dwell
Soft, mystic sounds, whose whisp'rings swell

 Upon the soul's attentive ear,
 Out-breathing music, far and near.

The Self is hidden in all beings and does not shine forth, but it is seen by subtle seers through their sharp and subtle intellect. —
Katha-Upanishad.

OM.

The Path

THE BHAGAVAD GITA: VII — *William Brehon*

(Continued from March number.)

We are still on the second chapter. If my object were merely to skim through the poem, showing where it agreed with, differed from, or reconciled the various systems of philosophy that were followed in India, we could have long ago reached the end of the book. But we are looking at it in one of its aspects — the one most important for all earnest students — the personal interior view that aids us to reach Moksha. (1) From this standpoint we can easily defer a consideration of the philosophical discussion to a later period.

Let us take up some of the instruction given in the portion of the second chapter just finished. The remainder of the lecture is devoted to a reply from Krishna to Arjuna's question as to what is the description, appearance, carriage, and conversation of the man who has attained to steady meditation.

Krishna says that "the subject of the three Vedas is the assemblage of the three qualities." These three qualities are *Satwa*, *Rajah*, and *Tamo*, and are separately treated in a succeeding chapter. Now *Satwa-guna* (2) is a pure, high quality, the opposite of *Tamoguna* which is darkness and indifference. Yet the remarkable advice is here given, "be thou free from these three qualities." It is a very great wonder that this has not been pounced upon before as showing that Krishna directs his follower to renounce the quality of goodness, and thus directly encourages wickedness, but as that is immediately followed by the direction to "repose upon eternal truth," possible critics have been perhaps deterred by the seeming paradox. It is evident at once that a higher sort of *Satwaa* is referred to in the words "eternal truth."

Satwa is the Sanskrit for *truth*, and is not qualified when its place among the three qualities is given, so that, when the disciple frees himself from this ordinary *Satwa*, he is to take refuge in its eternal counterpart. Further, the instruction is not to *renounce* truth or either of the other two qualities, but to remain freed from the influence or binding force that any sort of quality has upon the human Ego.

It is difficult for a great Being such as Krishna to convey to the inquiring mind these high themes, and so, perforce, language must be used that forever has two meanings, — it continually retreats before us, going from one to the other. "Satwa" — truth — had to be taken to express the highest quality of any being who possesses them, and yet, when we begin to speak of the highest conceivable state in which attributes are absent, we still use the same word, only adding to it *eternal*.

The essence of the instruction given by Krishna is *to become devoted*, as he says, "Therefore give thyself up to devotion." He prepared the way for that by showing, as adverted to in the last article, how erroneous it was to follow even the special ceremonies and texts laid down for the people in the Vedas. Those ceremonies procured either rewards in heaven, or upon the earth during subsequent lives as well as in those in which the ceremonies were performed. We can more easily understand what Krishna meant if we will suppose him to be referring to a doctrine that in those days was precisely similar in its scheme of rewards to the old-fashioned Christian belief that, by following the Scriptures, one secured happiness and prosperity on earth and great bliss forever in heaven with the saints. This is declared by him to be a deluding doctrine. He does not say that the rewards as laid down will not follow the practice, but implies that they will. But as the wheel of rebirth will eternally revolve, drawing us inevitably back to a mortal body, we are continually

deluded and never succeed in attaining to God, — that being the goal for us all.

Heaven, whether it be that of the Christian or of the Hindu, is what Buddha called a thing or state that has a beginning and will have an end. It may, surely, last Aeons of time, but it will come to an end, and then the weary task of treading the world — whether this or some other one — has to be recommenced. Hence Krishna said that men were deluded by those flowery sentences proclaiming a means of reaching heaven, than which there was nothing better.

Doubtless there are many students who, believing in the possibility of reaching heaven, say that they are willing to take the risk of what may happen after the enjoyment for such a long period is ended. But those risks would not be taken were they well understood. They are numerous and great. Many of them cannot be stated, because, in order to be understood at all, more must be known of the power of mind and the real meaning of meditation. But the ordinary risks are found in what we may roughly, for the present, call delayed Karma and unspent affinities.

The power of these two has its root in the vast complexity of man's nature. Such is its complexity that a man cannot, as a complete being, ever enjoy heaven or any state short of union with the Divine. Learned theosophists talk of a man's going to Devachan, and of his being here on earth suffering or enjoying Karma, when as a fact only a small part of him is either here or there. When he has lived out his life and gone to Devachan, the vast root of his being stands waiting in the One Life, waiting patiently for him to return and exhaust some more Karma. That is, in any one life the ordinary man only takes up and exhausts what Karma his bodily apparatus permits. Part of the power of

Karma is in the 'mysterious power of meditation," which exhibits itself according to the particular corporeal body one has assumed. So the man may in this life perform "special ceremonies" and conform to texts and doctrine, attaining thereby the reward of heaven, and still have left over a quantity of that "mysterious power of meditation" unexpended; and what its complexion is he does not know. Its risk therefore is that it may be very bad, and, when he does return from heaven, his next body may furnish the needed apparatus to bring up to the front this mass of unexpended Karma, and his next compensation might be a sojourn in hell.

In reassuming a body, the "mysterious power" spoken of reaches out to numberless affinities engendered in other lives, and takes hold of all that come in its reach. Other beings once known to the man arrive into incarnation at the same time, and bring into action affinities, attractions, and powers that can only act through them and him. Their influence cannot be calculated. It may be good or bad, and, just as he is swayed by them or as his sway the other being, so will work out the Karma of each. Krishna therefore advises Arjuna to be free from the influence of the quality, so that he may obtain a *complete* release. And that freedom can only be attained, as he says, by means of Devotion.

These effects, divergencies and swaying, are well known to occultists, and, although the idea is very new in the West, it is not unknown in India. This law is both an angel of mercy and a messenger of justice, for, while we have just stated its operation as among the risks, it is also a means whereby nature saves men often from damnation.

Suppose in some life long-past I had a dear friend, or wife, or relative, with whom my intimacy was interior and deep. Death separates us, and in subsequent lives he devotes himself to truth,

to wisdom, to the highest in him, while I go on careless of all but pleasure in the present. After many lives we meet again as either friends or acquaintances. At once the old intimacy asserts itself, and my former friend — although maybe neither of us knows it — has a strange power to touch my inward life, and wakes me up to search for truth and my own soul. It is the unexpended affinity, and by its aid nature works my salvation.

Then we should both seek devotion. This devotion is what is inculcated by the Adepts to their Chelas. It involves a mental abnegation not agreeable to our modern mind, but that must be acquired or real progress is impossible. We must by means of this mental devotion to the Divine, which means abnegation of all the rest, dismiss all results of our actions. It is not ours to say what shall be the result of an action; the Law will bring about a result much better, perhaps, than we had imagined. If the results, in the passing daily circumstances, are not those we expected, then by means of Devotion we accept them as just what the Law intended. But if we fix our desire on accomplishing even a seeming good result, we are bound by that desire, no matter whether our wish is accomplished or not.

This exhortation to devotion is at once the most simple and the most difficult. Some deride it because they want powers and "development;" others because they think it too simple; but the wise student, even when he cannot at first grasp its meaning, will revolve it in his mind, strive after it, and make it a thing to be attained by him.

(To be continued.)

THEOSOPHY IN IDYLLS OF THE KING: I — *F. S. Collins*

(A PAPER READ BEFORE THE MALDEN THEOSOPHICAL SOCIETY.)

In Two Parts.

PART I.

Of all of Tennyson's works, the two in which we find the deepest thought and the broadest scope are "In Memoriam" and the "Idylls of the King". In the former the thoughts, the questionings, the hopes of a strong intellect and warm heart in the presence of a great sorrow are clearly written in beautiful verse; one may read, study, and meditate long on it, for it deals with the profoundest problems of life: but one does not have to look for a second meaning hidden beneath the apparent. Quite different is it with the "Idylls," where the external form is that of a collection of legends from the misty past of Britain, from that period between the times of the Roman and the Saxon of which history tell us nothing. And probably the greater part of the readers of these poems, even among those who admire them, see nothing more than this; overlooking the clear statement of the author in the Epilogue: —

"this imperfect tale
New-old, and shadowing Sense at war with Soul,
Rather than that gray king, whose name, a ghost,
Streams like a cloud, man-shaped, from mountain peak,
And cleaves to cairn and cromlech still."

It may be interesting to us to look at this a little more closely; and the first thing we notice is that the Idylls are not so many independent poems, but constitute one organic whole, though written at widely different times.

The idea of a great poem, based on the Arthurian legends, appears to have been a favorite conception of Tennyson at an early date. The fragment "Mort d' Arthur" was published in 1842, but the poet apparently not having received encouragement for the greater work of which this was to be a part, the original plan was forgotten, or at any rate kept back; and four of the idylls appeared in 1859 as separate poems, without indication of belonging to a larger work. But when, in 1870, the four other idylls and the introduction had been given to the public, and the work appeared in the form we now have it, the earlier parts were found to fit perfectly into their places, though these were not at all determined by the order in which they had previously appeared. Only slight verbal alterations had been made in them; but the "Mort d' Arthur" had now the title "The Passing of Arthur," a very significant change; its length was about doubled by the verses prefixed and added to the original, which remained almost unchanged in the midst. As a counterpart to this, an entirely new "Coming of Arthur" was prefixed to the series; and in these two, the Coming and the Passing, we shall find a great part of the occult and symbolical ideas which we are seeking.

As a general statement of the work, nothing that I can say will be so satisfactory as some quotations from an article which appeared in the *Contemporary Review* at the time of the first publication of the complete work. Though in some of the details we may differ from this writer's interpretation, his appreciation of the great motive is certainly striking.

"Our first impression on reading the Idylls is one of simple and complete external loveliness — of a series of gorgeous landscapes taken exactly from nature — of a glittering and splendid revival of the past — of knightly days and doings set to mellifluous music under the shining skies of chivalry. Soon, however, artistic unities begin to emerge and add the charm of purpose and intention, if

only in the sense of aesthetic completeness. We go from the marriage season of *Spring* in the "Coming of Arthur," where the blossom of the May seems to spread its perfume over the whole scene, to the *Early Summer* of the honeysuckle in "Gareth," the quickly following mowing season of "Geraint," and the sudden summer thunder shower of "Vivien"; thence to the "*Full Summer*" of "Elaine," with oriel casement "standing wide for heat;" and later to the sweep of equinoctial storms and broken weather of the "Holy Grail." Then the *Autumn* roses and brambles of "Pelleas," and in the "Last Tournament" the *close of Autumntide* with all its "slowly mellowing avenues," through which we see Sir Tristram riding to his doom. In "Guinevere" the creeping mists of *coming winter* pervade the picture, and in the "Passing of Arthur" we come to the "deep midwinter on the frozen hills," and the end of all, on the year's shortest day, — "that day when the great light of heaven burned at his lowest in the rolling year." The King, who first appears on "the night of the new year," disappears into the dawning light of "the new sun bringing the new year," and thus the whole action of the poem is comprised precisely within the limits of the one principal and ever-recurring cycle of time.

Note also the keeping which exists between the local color in each poem proper to the season, and the dramatic action which is presented in it.

* * * * *

But, by the time we have discovered and followed out such unities as these, we find that the whole series of poems is gradually transforming itself into a moral series and unity, with a significance far greater than any aesthetical one. We come to see, at length, that the high cycle of the *soul* on earth is set before us, as completely by the human actions and passions of the piece as the cycle of the year by its landscapes and seasons.

* * * * * The central figure of the poem appears and reappears, through all the series of events, in a way which irresistibly suggests that more, if not quite clearly what, is meant by his kingship than mere outward kingliness. So that when we are at last plainly told in the Epilogue that he shadows Soul in its war with Sense, a sudden clearance of haze seems to take place, and a sort of diffused and luminous gleaming of which we had been dimly conscious all along "orbs into a perfect star" of meaning.

If now we read the poems by the light of this meaning, we shall find the Soul come first before us as a conqueror in a waste and desert land, groaning under mere brute power. Its history before then is dark with doubt and mystery, and the questions about its origin and authority form the main subject of the introductory poem: "Many, themselves the basest, hold it to be base-born, and rage against its rule." —

"And since his ways are sweet,
And theirs are bestial, hold him less than man;
And there be those who hold him more than man
And dream he dropt from heaven." * * *

The inscrutableness of its origin being thus signified, we see next the recognition of its supremacy, and its first act of knighthood the inspiration of the best and bravest near it with a common enthusiasm for Right. The founding of the Order of the Round Table coincides with the solemn crowning of the Soul. Conscience, acknowledged and throned as King, binds at once all the best of human powers together into one brotherhood, and that brotherhood to itself by vows so straight and high, — "That when they rose knighted from kneeling, some were pale as at the passing of a ghost, some flushed, some dazed," etc. At that supreme coronation moment, the Spirit is surrounded and cheered by all the powers and influences which can ever help it;

earthly servants and allies, and heavenly powers and tokens; the knights, to signify the strength of the body; Merlin, the intellect; the Lady of the Lake, who stands for the Church and gives the soul its sharpest and most splendid earthly weapon; and, above all, three fair and mystic queens, "tall, with bright, sweet faces," robed in the living colors sacred to Love and Faith and Hope, which flow upon them from the image of our Lord above. These surely stand for those immortal virtues which only will abide "when all that seems shall suffer shock," and leaning upon which alone, the Soul, when all else falls from it, shall go towards the golden gates of the new and brighter morning.

As the first idyll seems to indicate the coming and the recognition of the Soul, so the ensuing ones show how its influence waxes or wanes in the great battle of life. Through all of these we see the body and its passions gain continually greater sway, till in the end the Spirit's earthly work is thwarted and defeated by the flesh. Its immortality alone remains to it, and with this, a deathless hope. From the sweet spring breezes of "Gareth" and the story of "Geraint and Enid," where the first gush of poisoning passion bows for a time with base suspicion, yet passes and leaves pure a great and simple heart, we are led through "Merlin and Vivien," where, early in the storm, we see great wit and genius yield; and through "Lancelot and Elaine," where the piteous early death of innocence and hope results from it; to the "Holy Grail," where we see Religion itself, under the stress of it, and despite the earnest efforts of the soul, blown into mere fantastic shapes of superstition. In "Pelleas and Ettare" the storm of corruption culminates, whirling the sweet waters of young love and faith out from their proper channels, sweeping them into mist, and casting them in hail upon the land. Then comes the dismal "autumn-dripping gloom" of the "Last Tournament," with its awful and potent close; and then in "Guinevere" the final lightning

stroke, and all the fabric of the earthly life falls smitten into dust, leaving to the soul a broken heart for company, and a conviction that, if in this world only it had hope, it were of all things most miserable.

Thus ends the "Round Table" and the life-long labor of the Soul.

There remains but the passing of the soul "from the great deep to the great deep," and this is the subject of the closing idyll. Here the "last dim, weird battle," fought out in densest mist, stands for a picture of all human death, and paints its awfulness and confusion. The Soul alone enduring beyond the end wherein all else is swallowed up sees the mist clear at last, and finds those three crowned virtues "abiding" true and fast, and waiting to convey it to its rest. Character, formed and upheld by these, is the immortal outcome of mortal life. They wail with it awhile in sympathy for the failure of its earthly plans; but at the very last of all are heard to change their sorrow into songs of joy, and departing vanish into light."

Looking now at the individual parts of the poem, what strikes us most in the "Coming of Arthur" is the doubt and obscurity that cover the origin of the King, that is, of the soul. No two can agree as to it, and every man's judgment is a standard for determining his own character. Merlin, hearing all their conjectures, laughs at all, and answers in half mocking words that show the impotence of the intellect to trace the origin of the soul;

"Rain, rain, and sun! a rainbow in the sky!
A young man will be wiser by and by;
An old man's wit may wander 'ere he die.

Rain, rain, and sun! a rainbow on the lea!
And truth is this to me, and that to thee:
And truth or clothed or naked let it be.

Rain, sun, and rain! and the free blossom blows;
Sun, rain, and sun! and where is he who knows!
From the great deep to the great deep he goes."

But almost immediately after we have again Merlin's word, as Bellicent tells it;

" Merlin in our time
Hath spoken also, not in jest, and sworn
Tho' men may wound him that he will not die,
But pass, again to come! and then or now
Utterly smite the heathen underfoot,
Till these and all men hail him for their king."

The intellect may not comprehend the soul; whence it came and whither it goes are beyond the range of the intellect; but its supremacy must be acknowledged, its immortality asserted, and its certain victory soon or late, if not in this earth life, then sometime when it returns again, over all that is beneath it. This belief that Arthur cannot die, but only pass to come again, is repeated again and again in the poem.

In the idyll "The Holy Grail" is a description of the great hall of the knights at Camelot, where the King held his court, which seems to me very suggestive.

All the sacred mount of Camelot,
And all the dim, rich city, roof by roof,
Tower after tower, spire beyond spire,
By grove, and garden-lawn, and rushing brook,
Climbs to the mighty hall that Merlin built.
And four great zones of sculpture, set betwixt
With many a mystic symbol, gird the hall;
And in the lowest beasts are slaying man,
And in the second men are slaying beasts,

And on the third are warriors, perfect men,
And on the fourth are men with growing wings,
And over all one statue in the mould
Of Arthur, made by Merlin, with a crown,
And peak'd wings pointed to the Northern Star,
And eastward fronts the statue, and the crown
And both the wings are made of gold, and flame
At sunrise till the people in far fields.
Wasted so often by the heathen hordes.
Behold it, crying, "We have still a King."

Compare with this what the old man says to Gareth of this same city:

"And as thou sayest, it is enchanted, son,
For there is nothing in it as it seems,
Saving the King; tho' some there be that hold
The King a shadow, and the city real."

The Path

THE TIDE OF LIFE: II — *Charles Johnston*

(Annotated by H. P. Blavatsky.)

(*Concluded.*)

"Where the daisies are rose-scented,
And the rose herself has got
Perfume which on earth is not."

Form exists on an ideal plane, as a purely abstract conception; into this region, and the similar one of Number, pure mathematics have penetrated. (1) Modern speculations, (2) as well as the ancient cabalists, have asserted that every geometrical form, as well as every number, has a definite, innate relation to some particular entity on the other planes, to some colour or tone, for instance; and there is good reason to believe that this holds true of all the planes, that the entities on each of them are bound to the entities on all the others by certain spiritual relations which run like threads of gold through the different planes, binding them all together in one Divine Unity. (3) From the standpoint of the terrestrial Globe, the first modifications of the last emanation, Primordial Earth, is the mineral kingdom, in which the primal earthy matter is modified by the element of Form. There is every reason to believe that, if any existing mineral or metal could be reduced to the condition of "primordial earth," it could be re-formed into any other mineral or metal. The specialization of the minerals, or "formation of the mineral kingdom," is perhaps marked in the Genesis-Cosmogony by the words, —

"The Elohim called the dry land Earth,"

Name and Form being cognate attributes of a specialized entity.

As we have seen the gradual evolution of form in the descent from spirit to matter, so the gradual dissipation of form will be seen in the ascent from matter to spirit. The crystal, for example, retains its form always unchanged, and the form of the tree is more lasting than that of the bird or animal. The second modification of the Earth element, still from the standpoint of the world, is the vegetable kingdom, in which to form and substance is added molecular motion, or vitality, called in Brahman cosmologies *Jiva*.

This vitality, or capacity for molecular change, corresponds, as we have seen, to the water element; one of the elements, in ascending order of spirituality, being picked up by each of the successive kingdoms of ascending evolution. The formation of the vegetable kingdom is marked in the Genesis cosmogony by the words —

"The earth brought forth grass, herb yielding seed, and tree bearing fruit,"

words which point to a perfectly natural evolutionary process under the energizing power of spirit — the physical aspect of which is the "Tendency to Evolution" or the Scientists —, and not that violent and unnatural process termed a "creative act."

We may remark, by the way, that the three divisions of the vegetable kingdom in this cosmogony correspond to three perfectly well defined geological epochs, that of the Cryptogams, of the Phaenogams, and of the Fruit-trees, examples of which are respectively ferns, pines, and orange-trees. (4)

These two changes of matter are looked at, as we have said, from the standpoint of the Earth. The cosmogony now pauses, and, in order to make its account of Evolution complete, inserts here the first change of the same element from a different point of view,

that of astronomy. This first change is the congregation of the primal nebulous matter into suns and planets, marked by the words —

"The Elohim said, Let there be Lights in the firmament," the sun, moon, and stars being subsequently particularised. From our previous views of the Elemental Light we shall be fully prepared to infer that, just as what we call sonant bodies seem not to be real sound-creators, but merely sound-reflectors, so these "Lights in the firmament" may not be real light-creators, but merely light-reflectors; and this view is borne out by the fact that in this cosmogony the formation of Light precedes that of the Light-givers. Leaving the astronomical standpoint, let us consider the next step in upward evolution.

To the shape, substance, and vitality of the plant — drawn respectively from the Elements of Form, Earth, and Water — the animal kingdom adds locomotion, corresponding to Air element, one attribute of which we have seen to be that locomotion, or movement as a whole, which distinguishes the animal from the plant. Thus we see another link of the ascending chain of the elements picked up. The earliest representatives of this kingdom are, as modern science has shewn, the *protozoa*, — water-animalcules. Their formation is correctly placed first in the Genesis cosmogony, marked by the words —

"The Elohim said, Let the waters bring forth abundantly the moving creature which hath life."

Here we again find words which distinctly mark a perfectly natural process of development. Just as we had the earth "bringing forth grass" — or "sprouting forth sproutage," to translate it more literally, — we now have the waters "bringing forth the moving creature which hath life," as soon as proper

cosmic and elemental conditions were presented. If the proper cosmic and elemental conditions could be artificially produced, we have every reason to believe the "tendency of Evolution," or the "Downward pressure of spirit," might again cause the waters to produce the "moving creature which hath life" — the *monera*, — in fact, that what is unscientifically termed "spontaneous generation" might take place. After this follows the formation of fish, birds, and beasts, — the vertebrates or "back boned" creatures; the invertebrates being grouped under the two general heads of the "moving creatures in the water" and the "creeping things upon the earth." In the account of the production of the animal kingdom and of the birds, we have terms used which could only apply to a natural process of development, and not to a "creative act."

"The Elohim said, Let the earth bring forth the living creature after its nature, cattle, and the beasts of the earth."

The Animal Kingdom adds to the plant the quality of locomotion under the stimulus of the instincts, — which corresponds, as we have seen, to the air-element. A slight consideration of the nature of this locomotion under stimulus will shew that we are justified in assigning this quality, with its distinctive element, to the principle of *Kama* in certain Eastern classifications. (5) Could this principle — or, rather, the specialised portion of the air-element embodying it — be isolated from the lower elements, we should have a sort of aeriform vehicle, or ethereal body, depending for its form on the attractions specialising it. Of such an isolated air-body we shall speak when we come to treat of the elements.

Three times has the earth *brought forth*, — plants, fishes, animals. But at this point we perceive a change. Evolution so far, from the mineral, through the vegetable, up to the animal, appears as an ascending arc. In this the cosmogony of Genesis agrees with the

sacred theories of the East, as well as with the views of modern science. But in Man we find a turning point, at which the ancient cosmogonies agree in branching off from modern science. The sacred theories of the East teach that man is the result of two converging curves of evolution, the one curve ascending through the vegetable and animal kingdom and marking the evolution of the physical body, while the other curve descends from a superphysical, spiritual race, called by some the "Progenitors" or "*Pitris*," by others the "Planetary Spirits" or "Descending *Dhyān Chohans*." This curve marks the downward evolution of man's spiritual nature, the development of the soul. (6)

As we should expect from the Oriental character and high antiquity of the cosmogony of Genesis, — dating as it does from a time when the "downward evolution of the soul" had not progressed so far as it now has, and when man had not yet lost his spiritual insight — we find this doctrine of man's divine progenitors clearly visible. In the case of the plants, animals, and marine creatures, we found terms applied which could only be used of a regular, unbroken process. When we reach Man, a new and striking expression is introduced —

"The Elohim created man in their image, in the image of the Elohim created they man."

The pressure of the descending evolution of the Planetary Spirits or Elohim — seeking for objective, physical existence — upon the previously formed animal kingdom, caused the evolution of a fitting physical vehicle from the highest representatives of that kingdom. Hence we get physical man as we know him, descended on the one side from the animal kingdom, and on the other from his divine progenitors, the Planetary Spirits. We have compared this dual evolution to two converging curves. A too great attraction towards the material, physical side of man's nature

keeps the modern materialist from seeing more than one of these curves. The modern Scientist is colour-blind to spirit, to him man is merely —

"A quintessence of dust."

But to intuitional minds at the present day, as to our more spiritual ancestors, both curves are visible; besides the physical man they could see the spiritual man

"In action like an angel; in apprehension like a God."

To return to the standpoint from which we viewed the previous kingdoms, we perceive that the introduction of this new factor in evolution corresponds to the addition from above of a new element in the series of ascending spirituality. With man is added the Fire-Element, in its aspect of the divine light of reason. It corresponds to *manas* in Eastern systems. Another aspect of *manas*, considered idealistically this time, by virtue of which it "creates for itself an external world of delight," (7) would correspond to the quality of colour in the fire element. Of the earliest races of men we learn that they were purely frugivorous and perhaps androgyne.

With the formation of man the cosmogony of Genesis closes. We are justified in supposing that, as the union of form with the elements of Earth, Water, Air, and Fire produced the objective Mineral, Vegetable, Animal, and Human kingdoms, so these elements, divorced from Form, should have their appropriate kingdoms of beings, or forms of life, if we can use this term for something so widely different from all ordinary forms of life. These subjective kingdoms of the four elements would correspond to the Rosicrucian conceptions of "primordial earth" and the "Fire, Air, and Water Elementals."

We may go further than this, and, carrying on our inference,

postulate for the spiritual ether, and even for the divine Logos, their appropriate qualities of being. To a conception somewhat similar to what the last of these would involve, the Gnostics gave the name of Eons; for the first — the ether-beings — we have the Indian titles of *gandharva*, — celestial musician, — or *Deva*. But having gone thus far, we are driven a step further. We have already seen all the links in the chain of elements in ascending spirituality picked up one by one by the ascending tide of Evolution, up to the elemental fire; let us advance a step, and postulate that the other two emanations or planes — the Ether-Spirit and the Logos — should ultimately be picked up by the Evolutionary tide. With the resumption of the first, instead of a human being we should have a "Spiritual Man," and from a re-union with the Logos we should have a "Divine Man, Perfected and Eternal," or, giving to these conceptions the names already appropriated to them in the East, we should have in the first case a *Mahatma*, in the second a perfect *Buddha*.

It is now time to point out that the pure elements of Ether, Fire, Air, Water, and Earth are not these bodies as we know them. The five classes of objects (corresponding to these five elements) known to us, being all on the physical plane, all belong properly to a single category, and may be called for the sake of distinction the Mundane Elements. To make this clearer, let us suppose that Mundane Earth — the mineral kingdom in its various forms — is composed of five parts of the element earth, while Mundane Water (everything cognized by the sense of taste) is composed of four parts of the element of earth added to one part of the element of water. Similarly the Air-element known to us on the physical plane (corresponding, as we have seen, to the sense of touch) is composed of four parts of the earth element, with one part of the pure elemental air added; and the Fire and Ether elements as known to our physical or waking consciousness are

each composed of four parts — with one part of fire and ether respectively added.

These considerations will prepare us to believe that the real elements are purer and more spiritual than their representatives on the physical plane, (8) and that they will be represented by different compounds on each plane (or as it is called in some works, *planet*) on the water plane (or planet): for instance, what we may for convenience term Undine Earth will be represented by four parts of the Water element and one part of the earth-element; Undine water will be five parts elemental water; while Undine air will be composed of four parts elemental water, added to one part elemental air, and so on.

The composition of the elements as present on each plane or planet may similarly be deduced by observing carefully the principle which governs these combinations. We should warn our readers that these examples are given by way of illustration, and not as representing accurately and numerically the combined elements as they actually occur; they are really formed on a much more complex principle. (9)

In our illustrations we have, for convenience sake, confined ourselves to the five objective elements, though of course it must not be forgotten that the energising spirit runs through the whole series on every plane.

The pure spiritual or elemental ether is the macrocosmic counterpart of that principle of the microcosm termed *Buddhi* by eastern mystics. (10)

The Logos corresponds to *Atma* in the same speculations.

We have seen that to the four principles — Form or *Linga*, Vitality or *Jiva*, Substance or *Sthula Sarira*, motion under desire or *Kama* — of the animal, Man has added a fifth, — corresponding to the

macrocosmic elemental Fire, — human reason, or *Manas*.

Our speculations as to the two superhuman Kingdoms are also in harmony with these eastern theories; the element of *Buddhi* being added to form the *Mahatma*; and *Atma* completing the *Buddha*, perfected and divine.

The perfect Buddha, though not possessing a physical body, or, indeed, being united to principles on any of the objective planes, will still retain the spiritual counterparts of these principles, corresponding to groups of experiences gained on each plane. It is by these spiritual principles that the *Buddha* is richer than the *AEon*; it is in virtue of them that the *Ascending* excels the *Descending Planetary Spirit*, or *Dhyan Chohan*. These spiritual principles constitute the end and aim of evolution, and justify the cosmic expansion and involution.

The evolutionary tide, in generating the higher kingdoms, has flowed, as we have seen, from the earth-element towards pure Spirit. In obedience to this tendency, man in achieving his apotheosis must, gradually loosing his hold on the world of Matter, add to his treasure in the worlds divine; until humanity becomes ever freer, stronger, and more perfect, and returns at last, refreshed, to his home in the bosom of the perfect God.

FOOTNOTES:

1. It is through the power to see and use these "abstract" forms that the Adept is able to evolve before our eyes any object desired — a miracle to the Christian, a fraud for the materialist. Countless myriads of forms are in that ideal sphere, and matter exists in the astral light, or even in the atmosphere, that has passed through all forms possible for us to conceive of. All that the Adept has to do is to select the "abstract form" desired, then to hold it before him with a force and intensity unknown to the men of this

hurried age, while he draws into its boundaries the matter required to make it visible. How easy this to state, how difficult to believe; yet quite true, as many a theosophist very well knows. The oftener this is done with any one form, the easier it becomes. And so it is with nature: her ease of production grows like a habit. — [H. P. B.] ([return to text](#))

2. "Geometrical Psychology," Miss Louisa Cook. ([return to text](#))

3. Here is the key so much desired by enterprising indeed all — students. It is by means of these correlations of color, sound, form, number, and substance — that the trained will of the Initiate rules and uses the denizens of the elemental world. Many theosophists have had slight conscious relations with elementals, but always without their will acting, and, upon trying to make elementals see, hear, or act for them, a total indifference on the part of the nature spirit is all they have got in return. These failures are due to the fact that the elemental cannot understand the thought of the person: it can only be reached when the exact scale of being to which it belongs is vibrated whether it be that of color, form, sound, or whatever else. — [H. P. B.] ([return to text](#))

4. For further information on this point readers are referred to "The Color-Sense" by Grant Allen. ([return to text](#))

6. There is an important point in the teachings of the Secret Doctrine which has been continually neglected. The above described evolution — the spiritual falling into the physical, or from mineral up to man, takes place only during the 1st of the two subsequent Rounds. At the beginning of the fourth "Round" in the middle of which begins the turning point upward — *i. e.* from the physical up to the spiritual, man is said to appear before

anything else on earth, the vegetation which covered the earth belonging to the 3d Round, and being quite etherial, transparent. The first man (Humanity) is Etherial too, for he is but the shadow (*Chhaya*) "in the image" of his progenitors, because he is the "astral body" or image of his *Pitar* (father). This is why in India gods are said to have no shadows. After which and from this primeval race, evolution supplies man with a "coat of skin" from the terrestrial elements and kingdom — mineral, vegetable, and animal. — [H. P. B.] ([return to text](#))

7. Vide Sankaracharya's "*Viveka Chudamani*." ([return to text](#))

8. This is one reason for calling the objective phenomenal world an "illusion." It is an illusion and ever impermanent because the matter of which the objects are composed continually returns to the primordial condition of matter, where it is invisible to mortal eyes. The earth, water, air, and fire that we think we see are respectively only the effects produced on our senses by the primordial matter held in either of the combinations that bring about the vibration properly belonging to those classes: the moment the combination is entirely broken, the phenomena cease and we see the objects no more. — [H. P. B.] ([return to text](#))

The Path

THE THEOSOPHICAL FIELD — *Jasper Niemand*

After more than a dozen years of theosophical activity the question arises: "Where is the best field for Theosophy?" It is coupled with the admission that Theosophy does not recognize the missionary spirit; it does not believe in what are called "converts" to any great extent. Proclaiming the entire freedom of man, the dignity and sacredness of the human soul. it does not run about attacking the Ideals of others, nor yet thrusting Truth upon the crowd as a huckster bawls his wares. In this Theosophy is preeminently well bred; it teaches one to mind his own affairs. In recognition of this liberality the attitude of theosophical workers is that of persons who stand ready at all times to answer or instruct questioners without going out into the highway to drag them in. They know that only those persons are ready for Theosophy who have grown up to it, who have gradually evolved to it through their inner experience. There is no need to importune such persons; they seek us out.

The Theosophical Society has had, of course, to suffer from the advances of those who want to use it as a stalking horse, or those who think that occultism may for a time afford them a piquante pose; also from that elegant condescension which is the thin enamel to innate vulgarity, worn by persons who imagine that they can confer a service or a prestige upon Universal Truth. This is much as a festoon of attitudinizing monkeys may imagine they lend a lustre to some spreading monarch of the forest. A fond conceit, worthy of our puling civilization, leads these immature individuals to imagine that their money, their touting, or their small names are gifts of price to the Religion of the Ages, and should be gratefully recognized. They may do much for themselves through Theosophy, but for *it* they can do nothing

whatever. Universals have their root in Being, and man can only lift himself to them. He must come to need them; he must feel that the Truth is an imperious, an absolute, necessity in his life, before he is ready to make sacrifices for it. He is inevitably called to sacrifice, in some form or other, as the world uses the word.

When the ploughman rends the wild soil: when the pruner uses the hook or the sculptor smites the redundancy of marble into dust as the fair form emerges, they do not use the word sacrifice at all; neither does the theosophist when he endeavors to break the clay mould and find within it the Magnum Opus. Theosophy is "blind to all the prizes of the world; it has nothing to offer men but the Truth and a search for the Truth, and they must be well out of the nursery and leading strings before they can participate in either; they must be wholly able to stand alone. In the same way the Theosophical Society welcomes all well-intentioned persons, but, whether consciously or not, every member gains more than he or she gives. They share in the magnetic life of a powerful organization, using the word powerful in the sense of real, essential power. If they do not understand the force and value of this privilege they are out of place in the Society: the more they give in sympathy, harmony, or any kind of encouragement, the higher the blessings they receive.

It was supposed, and perhaps naturally, that the best field for theosophical teachings would be found among the cultured classes. The world was to be convinced of error, and an appeal to the intellect seemed in order. Moreover, their influence and example would react upon classes less favored (apparently) by karmic circumstance, and would induce these to follow the lead of their more educated contemporaries. It seemed to some that the leaven would work best from above downward.

Events have not justified this conclusion. Many persons of the highest intelligence and culture have accepted Theosophy. Some

of them are our most valued workers, and he can do the most work who has the most ability to make himself heard by his fellow men. For the worldly plane this holds good incontestably. All that such members have done for Humanity and for themselves cannot be overstated. The heroic and revered Madame Blavatsky stands at their head, but beyond and above our arguments because of her attainments and leadership. Yet the fact that we have found able champions in this class does not controvert that other fact that such members are numerically rare. They are outnumbered by others of their order who content themselves with intellectual appreciation and a watch for flotsam and jetsam in the way of knowledge, ready in a moment to desert.

Theosophy is not a creed, but a new life to be lived, and the question is; "Where shall we find the most persons who are ready to live it?" In the opinion of the writer they are to be found among the working class, so far as the United States is concerned. This belief is based upon radical differences inherent in these classes themselves. The term "working class" may be used for the purposes of this article, and includes all wage earners, especially artizans, mechanics, clerks, and various employees of both sexes. In itself the term is a misnomer, because in the United States we are nearly all workers.

The very first condition of Theosophical progress is the abandonment of the personality. This includes the ability to discard all our preconceptions and ideals for the Truth, for that stands above all human ideals. While searching for the Truth, "the processes of preparation go silently on till the individual, all unconscious, reaches the moment when the one needed force touches him, and then every prepared constituent falls instantly into place and the being is — as it were — reconstructed at once. Conceptions, relations, aims are revolutionized." Until this moment comes, the individual must possess the power of

standing uninfluenced by all external conditions. He must be able to think from and for himself; there must be no attraction for any other aim; he must hold himself fluidic and free.

Apart from educational advantages and a quickened intelligence, the cultured classes have the additional ones of worldly experience, observation, and comparison. But they are like the microscopist who loses the ensemble in the ramification of detail; it is a very transient and small world that they know so well. They eat the fruit, but of the orchard they know less than nothing in their mistaken conceptions of life. They are to some extent cosmopolitan, but only in a surface sense and in limited degree as compared with your occultist, the cosmopolitan *pur sang* who must be equally at home, not only in all lands and spheres, but in all elements. They have reached an infinite perfection of detail; they have an extensive and varied knowledge of effects — such effects as art, science, statecraft, literature, and less noble interests —, but they are too far dazzled by these to think of looking behind them for causes. Their advantages weight them enormously by what the French call "the defects of their qualities." They have so much that they fear to lose! They are bound by the million cobwebs of social prejudice, of public opinion, of their family or personal record. There is nothing so confining as cobwebs. Chains may be broken by native strength, but of cobwebs we are scarcely aware; we think to brush them away, but they cling and obstruct the clear sight. In the very nature of circumstances the position of the cultured man or woman is largely based upon suffrage a la mode. Wealth may command it, but this also traps us with innumerable enticements; the more refined our nature, the more subtle, the more enchanting these pleasures may be made. The intellectual have formed mental habits which they cannot break, or, if they can, they will not. These processes have made them what they are, and

they value what they are. They are encrusted with a growth which seems to them precisely the most desirable in the world. They are the aloe flower of an elaborate although shallow civilization; they have forced themselves with exceeding great care. They have exquisite ideals; their creeds are pure, their code of honor subtle; whether they carry them out or not, there is nothing finer to be found outside of Theosophy. Their personalities are thus their gods; they cannot become self-iconoclasts. They are ready to seek Truth, even, upon accepted lines, but they dare not trust themselves outside of those lines in transgression of that social code by virtue of which they are pre-eminent. They do not see that this pre-eminence is that of a weather cock upon a steeple; their position depends upon prompt subserviency to self-imposed tyrants. It is impossible for them to look at facts in their own light; it is not done; what would people say? You who demand it, you Truth, you are *impractical*: this is the final anathema of the 19th Century, and a great bugbear for conservative souls. If Truth clashes with our present institutions, let us have Truth and build up a better civilization. They demur: no doubt they suspect they would have but little hand in it. The cultured classes are thus prevented by all the tendencies and surroundings of their lives from thinking independently. They have given too many hostages to fortune. Numbers have an intellectual appreciation of Theosophy, but that does not carry one far; they become disheartened for want of personal progress. Like the Prince of fairy tales who climbed the hill of Difficulty for the golden water, they hear the voices of the stones behind them flouting, jeering, calling them back: they falter, turn, and become stones like their predecessors. Others feel an emotional attraction, but heart alone may lead to hysteria quite as well as to sympathy. Their vivid charm, their intelligence, and their virtues are beside the question. They are too preoccupied to have any intuitions of an underlying current of real life. What is needed is

interior conviction, freedom, imagination, elasticity, a superb audacity, perfect fearlessness of all results, confidence in one's own soul as the arbiter of destiny, an entire independence, even of one's own mind: we must be swift to seize the floating clues which drift by us in the darkness; we must have a prescience of the unseen. All this the cultured classes cannot have while they lean upon personages and an arbitrary social system like houses of cards. They would ask what Theosophy has to offer in return for so much effort, and when we answer "The Truth," they would reply courteously that they are satisfied as it is. This is not true; they are not satisfied, but they are epicurean; they dread knowing anything less delightful than themselves. I would not be misunderstood, I who feel their peculiar charm so keenly. When from this hotbed arises a nature capable of freeing itself, capable of self reliance, of accepting Truth without counting any cost, that nature makes itself respected everywhere; it is a centre of energy, and Theosophy has a priceless co-adjutor. The combination is rare because the conditions are unfavorable. We have the statement of Christ for believing that "it is easier for a camel to pass through the eye of an needle than for a rich man to enter the Kingdom of God," — the mystical region which He said is "within us."

With the working classes the case stands otherwise. In the social order they have no traditions, no Molochs they fear to offend. They are not the slaves of their ideals, but with the first dawn of leisure they look about for an ideal, and they test those of other men. They have come into contact with a more brutal phase of error. Materiality has exhibited itself to them in its grossest aspect; they have not seen it sensuously apparelled, or mounted upon a pedestal of Intellectuality with crowds of fame-worshippers at the base. Illusion wears for them a mask of iron instead of an alluring veil. They have been blinded by sorrow

rather than joy. They feel an instant need of Truth. She is within their grasp, who can reach so little else. When she comes to them she is welcomed as Deliverer; their love penetrates her meaning better than the unaided intellect does. They have a more eager gratitude, a sleepless desire to pass the benefit along to others. It seems as if this leaven works best from below upward in American life, where the substratum soon works to the surface and manifests then in power.

The working class are untrammelled by the subtleties of modern thought. They may be tricked, but they take no delight in tricking themselves. Like Alexander, they sever Gordian Knots bluntly: they are able to look squarely at a proposition on its own merits without a sidelong glance at Mrs. Grundy. They have no received and duly-approved yardstick by which they feel bound to measure all things at the risk of the lowered barometer of public opinion. There is not here, as there is in England, an ironclad code of opinions and customs which constitutes the "respectability" of the worker, and which he owes to all the neighbors "in the block." They are moral because they choose to be so, and each feels free to think as he pleases. In fact, next to education they value independence of thought. To them, thinking is a luxury where to the cultured it is often a bore; this because the latter think more tortuously. They are influenced by knowledge; they know that it is power. But they discriminate; they value only that which seems to them to be vital and true; for them there is no fashion in knowledge which changes with the seasons. They are not influenced by the cultured classes, for these are largely recruited every year from their own. They are intensely conscious of their own possibilities. They know that they are the bone and sinews of the country; it has been demonstrated to them by so many of their fellows, now at the head of affairs in all departments, even those of cultured wealth.

A future of power is not a far cry to their ambition. While the other class is occupied in maintaining its consolidation, this one is occupied with becoming, and knows that men raise themselves by independent thought, by qualities fostered within themselves. They yield quickly to the flux of change, and their mental activities remain unstratified. These are conditions eminently favorable to Theosophy.

If Theosophy were a creed with churches, clergy, and charities to support and a prestige to maintain, the patronage of culture per se might be necessary to it. Instead of this, it is, as we said, a life to live. It is the water of life for those who thirst, and for water, not for wine, for strength, not for excitement. It teaches man to look within and beyond himself while relying upon himself: this lesson the worker already comprehends. The greater simplicity of his life is free from the involved complexities, the manifold interests of modern social existence, where these things are forever stifling the natural instincts of men. The majority have an intuitive belief in the reality of the unseen; it arises from the greater impersonality of their life, their identification with popular currents. Many have had occult experiences of various kinds: this will not surprise students who know that such would be far more common if our lives were not passed in a continual whirl of external excitement. The case of Jacob Boehme, the poor shoemaker, illustrates these arguments; indeed it would seem that almost all the great mystics came from the poorer order.

Again, what Theosophy has to offer is more needed by the working class. They feel the inequality of Fortune most; it is they who need that explanation of fate which is found in Karma, that consolation which the law of reaction (or compensation) affords. It is even the poor, the wretched, the sinful who have found the hard side of the professor of religion, found that it is his sense of isolation, of separation, which makes the bread of his charity so

bitter. They have found that the gentlest philanthropist of them all does not believe or follow his Christ in this, — he does not recognize the brotherhood of man. They have found that the deed of love alone relieves. Sorrow has taught them many truths unsoftened by a sympathizing circle of friends. Life is better known to them than to those who only look upon it after it has been upholstered and well aired. They have learned concentration, patience, endurance; they have mastered the body in many ways. They have everything to gain by Theosophy and little to lose. They are too sturdy, too ingenious, too argumentative for worn-out creeds to hold them in their exoteric forms: the esoteric might, — but who hopes soon for that apotheosis? The cultured classes make little impression upon American life at large; it is everywhere the worker who rises and holds his own.

Just as we believe that America is the great field for Theosophy because the momentum of progress is so great here, so we believe that among the laboring classes the largest harvest is to be reaped. I doubt not this holds good in other countries, notwithstanding the weight of the aristocratic classes, because I see everywhere a tendency to Unity, I see the on coming surge of the People and the working of that Principle which determines the Brotherhood of Man.

The Path

CONVERSATIONS ON OCCULTISM: II

ELEMENTALS AND ELEMENTARIES.

Student. — "If I understand you, an elemental is a centre of force, without intelligence, without moral character or tendencies, but capable of being directed in its movements by human thoughts, which may, consciously or not, give it any form, and to a certain extent intelligence; in its simplest form it is visible as a disturbance in a transparent medium, such as would be produced by 'a glass fish, so transparent as to be invisible, swimming through the air of the room,' and leaving behind him a shimmer, such as hot air makes when rising from a stove. Also, elementals, attracted and vitalized by certain thoughts, may effect a lodgment in the human system (of which they then share the government with the ego), and are very hard to get out."

Sage. — "Correct, in general, except as to their 'effecting a lodgment.' Some classes of elementals, however, have an intelligence of their own and a character, but they are far beyond our comprehension and ought perhaps to have some other name.

"That class which has most to do with us answers the above description. They are centres of force or energy which are acted on by us while thinking and in other bodily motions. We also act on them and give them form by a species of thought which we have no register of. As, one person might shape an elemental so as to seem like an insect, and not be able to tell whether he had thought of such a thing or not. For there is a vast unknown country in each human being which he does not himself understand until he has tried, and then only after many initiations.

"That 'elementals may effect a lodgment in the human system, of which they then share the government, and are very hard to get out' is, as a whole, incorrect. It is only in certain cases that any one or more elementals are attracted to and 'find lodgment in the human system.' In such cases special rules apply. We are not considering such cases. The elemental world interpenetrates this, and is therefore eternally present in the human system.

"As it (the elemental world) is automatic and like a photographic plate, all atoms continually arriving at and departing from the 'human system' are constantly assuming the impression conveyed by the acts and thoughts of that person, and therefore, if he sets up a strong current of thought, he attracts elementals in greater numbers, and they all take on one prevailing tendency or color, so that all new arrivals find a homogeneous color or image which they instantly assume. On the other hand, a man who has many diversities of thought and meditation is not homogeneous, but, so to say, parti-colored, and so the elementals may lodge in that part which is different from the rest and go away in like condition. In the first case it is one mass of elementals similarly vibrating or electrified and colored, and in that sense may be called one elemental, in just the same way that we know one man as Jones, although for years he has been giving off and taking on new atoms of gross matter."

Student. — "If they are attracted and repelled by thoughts, do they move with the velocity of thought, say from here to the planet Neptune?"

Sage. — "They move with the velocity of thought. In their world there is no space or time as we understand those terms. If Neptune be within the astral sphere of this world, then they go there with that velocity, otherwise not; but that 'if' need not be solved now."

Student. — "What determines their movements besides thought, — e.g. when they are floating about the room?"

Sage. — "Those other classes of thoughts above referred to; certain exhalations of beings; different rates and ratios of vibration among beings; different changes of magnetism caused by present causes or by the moon and the year; different polarities; changes of sound; changes of influences from other minds at a distance."

Student. — "When so floating, can they be seen by any one, or only by those persons who are clairvoyant?"

Sage. — "Clairvoyance is a poor word. They can be seen by partly clairvoyant people. By all those who can see thus; by more people, perhaps, than are aware of the fact."

Student. — "Can they be photographed, as the rising air from the hot stove can?"

Sage. — "Not to my knowledge yet. It is not impossible, however."

Student. — "Are they the lights, seen floating about a dark seance room by clairvoyant people?"

Sage. — "In the majority of cases those lights are produced by them."

Student. — "Exactly what is their relation to light, that makes it necessary to hold seances in the dark?"

Sage. — "It is not *their* relation to light that makes darkness necessary, but the fact that light causes constant agitation and alteration in the magnetism of the room. All these things can be done just as well in the light of day.

"If should be able to make clear to you 'exactly what is their relation to light,' then you would know what has long been kept

secret, the key to the elemental world. This is kept guarded because it is a dangerous secret. No matter how virtuous you are, you could not — once you knew the secret — prevent the knowledge getting out into the minds of others who would not hesitate to use it for bad purposes."

Student. — "I have noticed that attention often interferes with certain phenomena; thus a pencil will not write when watched, but writes at once when covered; or a mental question cannot be answered till the mind has left it and gone to something else. Why is this?"

Sage. — "This kind of attention creates confusion. In these things we use desire, will, and knowledge. The desire is present, but knowledge is absent. When the desire is well formed and attention withdrawn, the thing is often done; but when our attention is continued we only interrupt, because we possess only half attention. In order to use attention, it must be of that sort which can hold itself to the point of a needle for an indefinite period of time."

Student. — "I have been told that but few people can go to a seance without danger to themselves, either of some spiritual or astral contamination, or of having their vitality depleted for the benefit of the spooks, who suck the vital force out of the circle through the medium, as if the former were a glass of lemonade and the latter a straw. How is this?"

Sage. — "Quite generally this happens. It is called Bhut worship by the Hindus."

Student. — "Why are visitors at a seance often extremely and unaccountably tired next day?"

Sage. — "Among other reasons, because mediums absorb the vitality for the use of the 'spooks,' and often vile vampire

elementaries are present."

Student. — "What are some of the dangers at seances?"

Sage. — "The scenes visible — in the Astral — at seances are horrible, inasmuch as these 'spirits' — bhuts — precipitate themselves upon sitters and mediums alike; and as there is no seance without having present some or many bad elementaries — half dead human beings, — there is much vampirising going on. These things fall upon the people like a cloud or a big octopus, and disappear within them as if sucked in by a sponge. That is one reason why it is not well to attend them in general.

"Elementaries are not all bad, but, in a general sense, they are not good. They are shells, no doubt of that. Well, they have much automatic and seemingly intelligent action left if they are those of strongly material people who died attached to the things of life. If of people of an opposite character, they are not so strong. Then there is a class which are really not dead, such as suicides, and sudden deaths, and highly wicked people. They are powerful. Elementals enter into all of them, and thus get a fictitious personality and intelligence wholly the property of the shell. They galvanize the shell into action, and by its means can see and hear as if beings themselves, like us. The shells are, in this case, just like a sleepwalking human body. They will through habit exhibit the advancement they got while in the flesh. Some people, you know, do not impart to their bodily molecules the habit of their minds to as great extent as others. We thus see why the utterances of these so-called 'spirits' are never ahead of the highest point of progress attained by living human beings, and why they take up the ideas elaborated day-by-day by their votaries. This seance worship is what was called in Old India the worship of the Pretas and Bhuts and Pisachas and Gandharvas.

"I do not think any elementary capable of motive had ever any

other than a bad one; the rest are nothing, they have no motive and are only the shades refused passage by Charon."

Student. — "What is the relation between sexual force and phenomena?"

Sage. — "It is at the bottom. This force is vital, creative, and a sort of reservoir. It may be lost by mental action as well as by physical. In fact its finer part is dissipated by mental imaginings, while physical acts only draw off the gross part, that which is the "carrier" (upadhi) for the finer."

Student. — "Why do so many mediums cheat, even when they can produce real phenomena?"

Sage. — "It is the effect of the use of that which in itself is sublimated cheating, which, acting on an irresponsible mind, causes the lower form of cheat, of which the higher is any illusionary form whatever. Besides, a medium is of necessity unbalanced somewhere.

"They deal with these forces for pay, and that is enough to call to them all the wickedness of time. They use the really gross sorts of matter, which causes inflammation in corresponding portions of the moral character, and hence divagations from the path of honesty. It is a great temptation. You do not know, either, what fierceness there is in those who 'have paid' for a sitting and wish 'for the worth of their money.'"

Student. — "When a clairvoyant, as a man did here a year ago, tells me that 'he sees a strong band of spirits about me,' and among them an old man who says he is a certain eminent character, what does he really see? Empty and senseless shells? If so, what brought them there? Or elementals which have got their form from my mind or his?"

Sage. — "Shells, I think, and thoughts, and old astral pictures. If, for instance, you once saw that eminent person and conceived great respect or fear for him, so that his image was graven in your astral sphere in deeper lines than other images, it would be seen for your whole life by seers, who, if untrained, — as they all are here —, could not tell whether it was an image or reality; and then each sight of it is a revivification of the image.

"Besides, not all would see the same thing. Fall down, for instance, and hurt your body, and that will bring up all similar events and old forgotten things before any seer's eye.

"The whole astral world is a mass of illusion; people see into it, and then, through the novelty of the thing and the exclusiveness of the power, they are bewildered into thinking they actually see true things, whereas they have only removed one thin crust of dirt."

Student. — "Accept my thanks for your instruction."

Sage. — "May you reach the terrace of enlightenment."

The Path

THE BHAGAVAD GITA:VIII — *William Brehon*

(Continued from May number.)

We have seen that Devotion must be attained by that student who desires to reach enlightenment. This is what is meant by Krishna's reply to Arjuna, at the conclusion of the second chapter.

"When he has put away all desires which enter the heart, and is satisfied by the Self in himself, he is then said to be confirmed in spiritual knowledge."

It is not possible to be wholly given up to the dictates of the Spirit while any desires that come into the heart are permitted to engross the attention.

Of course the person described here is one who has gone much higher in development than most of us have been able to. But we ought to set up a high ideal at which to aim, for a low one gives a lower result at the expense of the same effort. We should not put before us an aim less than the highest merely because it seems that our success will not be as great as we think it ought to be. It is not so much the clearly perceived outward result that counts, as the motive, effort, and aim, for judgment is not passed upon us among the things of sense where human time exists, but in that larger sphere of being where time ceases, and where we are confronted by what *we are* and not by what we have done. That which we have done touches us only in mortal life among the delusions of material existence; but the motives with which we live our lives go to make up our greater being, our larger life, our truer self. Do actions we must, for no mortal can live without performing actions: those bring us back to earth for many weary incarnations, perhaps to final failure, unless the lesson is learned

that they must be done with the right motive and the true aim. That stage reached, they affect us no more, for, like Krishna, we become the perfect performers of all action. And in so far as we purify and elevate the motive and the aim, we become spiritually enlightened, reaching in time the power to see what should be done and what refrained from.

Many would-be occultists, as well as some theosophists, leave out of sight this chapter's teaching. Devotion has no charms for them; they leave it to those who would be good men, no matter what their creed or philosophy, and attention is paid to reading books, either new or old, upon magic, upon ceremonial, or any other of the manifold delusions. Nor is this erroneous practice newly risen. It was common among the alchemists, and the result in some cases is that students now waste valuable years in mastering ceremonial, Rosicrucianism, talismanic lore, and what not, as laid down in the books, while all of it is either useless mental lumber or positively dangerous.

I do not mean it to be understood that there never was real Rosicrucianism, or that ceremonial magic yields no results, or that there is no science of talismans. There are realities of which these, as now known, are shadows. But we might as well expect to find the soul by attentively studying the body, as to know the truths behind the influence of talismans or ceremonial magic by studying the books now extant upon those subjects. The mediaeval so-called magicians have left a mass of writings that are now a delusion and a snare for students, theosophical and non-theosophical. In these are minute directions for various sorts of practices, but they are all the attempts of men to enable mortals, by methods altogether outward, to control the astral or natural world. Success did not come to these practitioners, nor will much else save failure be the portion of those of our own day who follow their directions. In most cases of the old European so-

called sorcerers and writers on magic, their published lucubrations are only salves to disappointed vanity; in the rest, mere reduplications of formulae left by their predecessors. Paracelsus positively declares that true magic is within the man — a part of his inner nature, potential at first, active after development, and that ceremonies or formulae are the veriest rubbish unless the person using them is himself a magician.

In the practice of ceremonial magic, where certain geometrical and other figures are to be used with the aid of prayers and invocations, there lies positive danger. This danger is increased if the student follows the practice for the sake of gain or glory or power or mere wonder seeking, — all of these being selfish. In this ceremonial the operator, or self-styled magus, surrounds himself with a circle or an arrangement of triangles, the use and purpose of which are to protect him from whatever sprites he may arouse. Mark that well! It is for *protection*. Protection of this sort would not be needed or thought of unless a fear lurked inside that the shades or demons had power to hurt. So at the outset, fear, the product of ignorance, is fully present. The next important thing to be noted is that a sword has to enter into the conjuration. This is advised because the demons are said to fear sharp steel. Now Jesus said that he who lived by the sword should perish by the sword. By this he meant just what we are talking about. Ceremonial magic involves at almost every step the use of a sword. After the invocator or magus has used the ceremonial, say with success, for some time, he at last creates within his aura, or what Swedenborg called his sphere, a duplicate of what he had previously used and pictured on the floor or walls. In this he is no longer master, for, it being placed in that part of his nature of which he is ignorant, the sword of metal becomes an astral sword with the handle held by the demons or influences he unwisely raised. They then attack him where no defence can be interposed

— on the astral and mental planes, and, just as surely as the wise man's words were uttered, he at last perishes by the weapon he himself used. This danger, thus roughly outlined, is no mere figment of the brain. It is positive, actual, immanent in the practice. No book study will give a man the power to make the constitutional changes, as well as psychical alterations, needed before he is commander of immaterial forces. But these latter may be temporarily evoked and made acquainted with us by pursuing certain methods. That is the beginning. Their turn is sure to come, and, obeying a law of their nature, they take what has sometimes been called their "revenge." For all such practices call only upon the lower, unspiritual part of our nature, and that clothes such beings with corresponding attributes. Their "revenge" consists in bringing on inflammations in the moral character which will eventuate in a development of evil passions, atrophy of concentration, destruction of memory, ending at last in a miserable conclusion to life, an almost total failure to use the opportunities for progress presented by that incarnation. Therefore I said, it is all either useless mental lumber or positively dangerous.

In history and in our own experience there is abundant evidence that the Bhagavad-Gita is right in saying "spiritual knowledge includes every action without exception," and that it is to be attained by means of devotion. Ignorant men who had no access to books have by their inward sense perceived the real truth of things, not only those round about them, but relating to the larger concerns of nature. Jacob Boehme was wholly unlettered, but he knew the truth. His writings show an acquaintance, not to be then gained from books, with the true doctrines found in the Hindu scriptures and secret books. In Germany today are men known to me, who, more unlearned yet than Jacob Boehme was, know many things still mysteries for our learned theosophists who can

boast of college education. The reason is that these men have attained to devotion, and thereby cleared away from before the eye of the soul the clouds of sense whose shadows obscure our view of truth. I do not decry or despise learning: it is a great possession: but if the learned man were also a devoted one in the sense of the Bhagavad-Gita, how much wider would be the sweep of his intellection no one could calculate.

Learning of the human sort is not despised among the highest occultists, even among the Adepts. They use it and acquire it. They accumulate *the record* of the experiences of seers and devoted men of small learning for long periods of time, until a great master of both learning and devotion arises who, by reason of his profound knowledge joined to devotion, can make the wonderful deductions in the possession of The Lodge respecting matters so far beyond us that they can with difficulty be imagined. But this again proves that devotion is the first and best, for these extraordinary Masters would not appear unless devotion had been the aim of their existence.

Without devotion a vast confusion arises within us that has been likened by some to a whirling motion, by others to the inrushing, overpowering flow of turbid waters. Boehme calls it in some aspects "The Turba." It is the delusion produced by the senses. And so Krishna, in closing the second lecture, say:

"Let a man, restraining all these, remain in devotion when at rest, and intent on me alone. For he whose senses are under his control possesses spiritual knowledge.

Attachment to objects of sense arises in a man who meditates upon them; from attachment arises desire; from desire passion springs up; from passion comes bewilderment; from bewilderment, confusion of the memory; from confusion of the memory, destruction of the

intellect; from destruction of the intellect he perishes.

But he who approaches the objects of sense with senses free from love and hate and beneath his own control, having his soul well-disposed, attains to tranquility of thought. In this tranquillity there springs up in him a separation from all troubles. For the mind of him whose thoughts are tranquil soon becomes perfect in concentration."

A very beautiful portion of the Sanatsujativa maybe read with profit here. (1)

"Some say that freedom from death results from action; and others that death exists not. Hear me explain this, O King! have no misgivings about it.

"Both truths, O Kshatriva, have been current from the beginning. The wise maintain what is called delusion to be death. I verily call heedlessness death: and likewise I call freedom from heedlessness immortality. Through heedlessness verily were the demons vanquished; and through freedom from it the gods attained to the Brahman. Death, verily, does not devour living creatures like a tiger; for, indeed, his form is not to be perceived. Heedlessness develops in men as desire, and afterwards as wrath, and in the shape of delusion. And then traveling in devious paths, through egoism, one does not attain to union with the Self. Those who are deluded by it, and who remain under its influence, depart from this world and then again fall down into generation. Then the senses gather round them. And then they undergo death after death. Being attached to the fruit of action, on action presenting itself, they follow after it and do not cross beyond death. And the embodied self, in consequence of not understanding union with the real

entity, proceeds on all hands with attachments to enjoyments. That, verily, is the great source of delusion to the senses: for, by contact with unreal entities, his migrations are rendered inevitable; because, having his inner self contaminated by contact with unreal entities, he devotes himself to objects of sense on all sides, pondering on them only. That pondering first confuses him, and soon afterwards desire and wrath attack him. These lead children to death. But sensible men cross beyond death by their good sense. He who, pondering on the Self, destroys the fugitive objects of sense, not even thinking of them through contempt for them, and who, being possessed of knowledge, destroys desires in this way, becomes, as it were, the death of Death itself, and swallows it up."

The second chapter ends with a declaration of what is the sort of death that results in union with the Divine, preventing absolutely any return to incarnations upon earth. It is found in the sentences:

"That man who, casting off all desires, acts without attachment to results, free from egotism and selfishness, attains to tranquility. This is the condition of the Supreme Being, O Son of Pritha! Having obtained this, one is not troubled; and remaining in it, even at the time of death, he passes on to extinction (or union with) the Supreme Spirit."

Those are the last words of the second chapter.

Any other mental attitude at the time of passing away will surely cause us to acquire a mortal body again.

Krishna's declaration brings up before us, not only the practices previously inculcated, but also the whole subject of death. For, in order to know how to "think of Him at the moment of death," or

to have that tranquility which only perfection of devotion confers, we must find out what death is, and whether it is solely what we see going on at the decease of a human being, or more than can be gauged with the eye. A little reflection shows that what is seen and noted by physicians and spectators is but the withdrawal of the soul and energy from the outer envelope called "body." While that is going on, the person may accept rites of the church or profess adherence to any sort of doctrine whatever, even with his last outward sigh speak of heaven with its bliss awaiting him. But that is only the first step. It leaves his visible features calm and happy, perhaps, in expression; his relatives close his eyes, — they call it death. He, however, has only begun to die. The soul has yet to pass through other envelopes beyond the ken of friends, beyond even the dying man's present control. All now depends upon the whole course and kind of thought in which he indulged during the life of the body. For the soul has to pass along the road by which it came, and that way is lined with the memories of a life-time; as these memories rise up they affect the departing entity, causing it to be either disturbed from concentration on the Supreme Being, or assisting to a greater perfection. If, then, some few years only near the close of life were devoted to the sort of practice inculcated by Krishna, the memories of the years previously spent in following after desires will throw a cloud over the soul and absolutely prevent it from attaining that state from which return to earth is impossible without our consent. It is more perfectly illustrated by considering life as a grand musical movement that is brought to a close by using at once all the tones sounded throughout the whole preceding portion. The result will be a combined sound, expressing neither the highest nor lowest notes, or the sweetest or less sweet, but the resultant of all. And this last sound is the fixed vibration that governs the entity, sounding all through him, and throwing him into the state to which it corresponds or of

which it is the key. Thus it is easily seen that in each thought lie the possibilities of a harmony or a discord for life' conclusion.

"Guided by the clear light of the soul, we have considered thy teachings, O holy sage! They have been efficacious for the removal of the obscurities surrounding Ishwara's abiding place in us; we are delighted and refreshed; may thy words remain with us, and, as a spring refreshes the earth, may we be refreshed by them!"

The Path

**THEOSOPHY IN TENNYSON'S "IDYLL OF THE KING": II — F. S.
Collins**

(A PAPER READ BEFORE THE MALLEN THEOSOPHICAL SOCIETY.)

In Two Parts.

PART II.

While as a whole the poem may perhaps be best held to represent the struggle between the highest in a man and the lower elements of his self, yet it may also indicate the fate of a higher spirit come to earth to help humanity, and whose work is constantly marred and his plans thwarted by the opposition of enemies and the misunderstandings of friends, and who needs must stand alone, none even of those who love him best being able to rise to his level.

In the "Holy Grail" especially, we seem to see the sad results, of undertaking to do another's work, a work for which one is not fitted. At a banquet of the knights in the great hall there suddenly appears a glorious light, breaking through the roof and flashing over them all; the light is so blinding that they cannot see what it is that makes it, but all know that it must be the Holy Grail. And each knight swears a solemn vow that he will ride a twelvemonth and a day, searching for it until he can clearly see it. The King is not with them at the time, but with some of his knights is away, ridding the country of a band of robbers that have been devastating it. On his return he is told of the event and of the vow, and is saddened at hearing it; and as Percivale tells the story: —

"Woe is me, my knights," he cried,
"Had I been here, ye had not sworn the vow."
Bold was mine answer, "Had thyself been here,

My King, thou would'st have sworn." "Yea, yea," said he,
"Art thou so bold and hast not seen the Grail?"
"Nay, lord, I heard the sound, I saw the light,
But since I did not see the Holy Thing,
I swore a vow to follow it till I saw."
Then when he asked us, knight by knight, if any
Had seen it, all their answers were as one:
"Nay, lord, and therefore have we sworn our vows.'
"Lo now," said Arthur, "have ye seen a cloud?
What go ye into the wilderness to see?"
Then Galahad on the sudden, and in a voice
Shrilling along the halls to Arthur, call'd,
"But I, Sir Arthur, saw the Holy Grail,
I saw the Holy Grail and heard a cry —
O Galahad, and O Galahad, follow me.' "
"Ah, Galahad, Galahad," said the King, "for such
As thou art is the vision, not for these.
Thy holy nun and thou have seen a sign —
Holier is none, my Percivale, than she —
A sign to maim this Order which I made.
But ye, that follow but the leader's bill"
(Brother, the King was hard upon his knights)
"Taliessin is our fullest throat of song,
And one hath sung and all the dumb will sing.
Lancelot is Lancelot, and hath overborne
Five knights at once, and every younger knight,
Unproven, holds himself as Lancelot,
Till overborne by one, he learns — and ye,
What are ye? Galahads? — no, nor Percivales"
(For thus it pleased the King to range me close
After Sir Galahad): "nay," said he, "but men
With strength and will to right the wronged, of power
To lay the sudden heads of violence flat,

Knights that in twelve great battles splash'd and dyed
The strong White Horse in his own heathen blood —
But one hath seen, and all the blind will see.
Go, since your vows are sacred, being made:
Yet — for ye know the cries of all my realm
Pass thro' this hall — how often, O my knights,
Your places being vacant at my side,
This chance of noble deeds will come and go
Unchallenged, while ye follow wandering fires,
Lost in the quagmire! Many of you, yea most,
Return no more."

And indeed few return at the end of the year. Galahad, already fit for it, sees the Grail, and after riding far and in its strength fighting bravely for the right, is carried with it to the spiritual city, to return no more to earth. Percivale sees it only at a distance; he sets out on the quest, first glorying in his strength and sure of success, then at the thought of his sins overwhelmed with despair and feeling that this quest is not for him; and in this is the cause of his partial failure, for as the hermit tells him: —

What is this
Thou thoughtest of thy prowess and thy sins?
Thou hast not lost thyself to save thyself
As Galahad."

But even this distant view makes him renounce his knightly career and spend the rest of his days in a convent.

Lancelot, great and noble soul, has yet in him a sin from which he cannot free himself; as he tells the king: —

"in me lived a sin
So strange, of such a kind, that all of pure,
Noble, and knightly in me twined and clung

Round that one sin, until the wholesome flower
And poisonous grew together, each as each,
Not to be pluck'd asunder."

When he makes his vow to seek the Grail, it is with the hope that it will help him to so pluck them asunder; through terrible trials and ordeals he reaches at last to where the Grail is; but the door is closed: madly breaking it open,

"thro a strong glare, a heat
As from a seven-times heated furnace, I,
Blasted and burnt, and blinded as I was,
With such a fierceness that I swoon'd away —
O, yet methought I saw the Holy Grail,
All pall'd in crimson samite, and around
Great angels, awful shapes, and wings and eyes,
And but for all my madness and my sin,
And then my swooning, I had sworn I saw
That which I saw; but what I saw was veil'd
And cover'd; and this Quest was not for me."

Sir Bors alone, good and true knight, has clearly seen the Grail, when, bound and imprisoned by the heathen, he is only thinking of dying like a brave man. All unexpectedly the vision is given him; he returns to his work as a true knight, but, though the glory of the vision is in his heart ever after, he cannot tell it to any one else. Only these four see it at all; the rest have followed vain phantoms, or have early given up the Quest; and only one in ten of those who took the vow returns at all. The closing lines of this Idyll, Arthur's words to the few returning knights, are but an amplification of Krishna's words to Arjuna; —

"Finally this is better that one do
His own task as he may, even though he fail,
Than take tasks not his own, though they seem good."

"And spake I not too truly, O my knights?
Was I too dark a prophet when I said
To those who went upon the Holy Quest,
That most of them would follow wandering fires,
Lost in the quagmire? — lost to me and gone,
And left me gazing at a barren board,
And a lean Order — scarce return'd a tithe —
And out of those to whom the vision came
My greatest hardly will believe he saw;
Another hath beheld it afar off,
And leaving human wrongs to right themselves,
Cares but to pass into the silent life.
And one hath had the vision face to face,
And now his chair desires him here in vain,
However they may crown him elsewhere."

"And some among you hold that, if the King
Had seen the sight, he would have sworn the vow:
Not easily, seeing that the King must guard
That which he rules, and is but as the hind
To whom a space of land is given to plow.
Who may not wander from the allotted held
Before his work be done; but being done,
Let visions of the night or of the day
Come, as they will; and many a time they come.
Until this earth he walks on seems not earth,
This light that strikes his eyeball is not light,
This air that smites his forehead is not air
But vision -yea his very hand and foot-
In moments when he feels he cannot die,
And knows himself no vision to himself,
Nor the high God a vision, nor that One
Who rose again: ye have seen what ye have seen."

After this loss of the knights in the vain quest, all grows worse.
The King himself remains pure and lofty in all his aims, but all the
rest changes His knights no longer keep their vows,

"Such vows, as is a shame
A man should not be bound by, yet the which
No man can keep."

His queen Guinevere, whom he loves wholly and purely, is false
to him, and that with his noblest knight and dearest friend,
Lancelot: even the King, slow to believe evil, must see it, and he
parts from her forever in this life; in his farewell the only hope he
can give her is —

"Perchance, and so thou purify thy soul,
And so thou lean on our fair father Christ,
Hereafter in that world where all are pure
We two may meet before high God, and thou
Wilt spring to me, and claim me thine and know
I am thy husband, — not a smaller soul,
Nor Lancelot, nor another. Leave me that.
I charge thee, my last hope. * * *
* * * Now must I hence.

Thro' the thick night I hear the trumpet blow;
They summon me their King to lead mine hosts
Far down to that great battle in the west,
Where I must strike against the man they call
My sister's son — no kin of mine, who leagues
With Lords of the White Horse, heathen, and knights,
Traitors — and strike him dead, and meet myself
Death, or I know not what mysterious doom."

This battle is told in "The Passing of Arthur," which begins, —

"That story which the bold Sir Bedivere,

First made and latest left of all the knights,
Told, when the man was no more than a voice
In the white winter of his age, to those
With whom he dwelt, new faces, other minds."

This battle is not like those that have been fought before, but is rather the last great struggle through which every man must pass, when all the mortal powers fail one by one until nothing is left but the immortal soul. Every line of this part of the poem, and especially of the part added in the final completion, is full of meaning, so that it is very hard to select for quotation.

"Then rose the King and moved his host by night,
And ever pushed Sir Mordred, league by league,
Back to the sunset bound of Lyonesse —
A land of old upheaven from the abyss
By fire, to sink into the abyss again;
Where fragments of forgotten peoples dwelt,
And the long mountains ended in a coast
Of ever-shifting sand, and far away
The phantom circle of a moaning sea.
There the pursuer could pursue no more,
And he that fled no further fly the King;
And there, that day when the great light of heaven
Burn'd at his lowest in the rolling year,
On the waste sand by the waste sea they closed.
Nor ever yet had Arthur fought a fight
Like this last, dim, wierd battle of the west.

A death white mist slept over sand and sea:
Whereof the chill to him who breathed it, drew
Down with his blood, till all his heart was cold
With formless fear; and ev'n on Arthur fell
Confusion, since he saw not whom he fought.

For friend and foe were shadows in the mist,
And friend slew friend not knowing whom he slew;
And some had visions out of golden youth,
And some beheld the faces of old ghosts
Look in upon the battle; and in the mist
Was many a noble deed, many a base,
And chance and craft and strength in single fight,
And ever and anon with host to host
Shocks, and the splintering spear, the hard mail hewn,
Shield-breakings, and the clash of brands, the crash
Of battleaxes on shattered helms, and shrieks
After the Christ, of those who falling down
Looked up for heaven, and only saw the mist;
And shouts of heathen and the traitor knights,
Oaths, insult, filth, and monstrous blasphemies,
Sweat, writhings, anguish, laboring of the lungs
In that close mist, and cryings for the light,
Moans of the dying, and voices of the dead.

Last as by some one deathbed after wail
Of suffering, silence follows, or thro' death
Or deathlike swoon, thus over all that shore,
Save for some whisper of the seething seas,
A dead hush fell; but when the dolorous day
Grew drearier toward twilight falling, came
A bitter wind, clear from the North, and blew
The mist aside, and with that wind the tide
Rose, and the pale King glanced across the field
Of battle: but no man was moving there,
Nor any cry of Christian heard thereon,
Nor yet of heathen; only the wan wave
Brake in among dead faces, to and fro
Swaying the helpless hands, and up and down

Tumbling the hollow helmets of the fallen,
And shivered brands that once had fought with Rome,
And rolling far along the gloomy shores
The voice of days of old and days to be.

Then spake King Arthur to Sir Bedivere,
And whiter than the mist that all day long
Had held the field of battle was the King:

"Hearest thou this great voice that shakes the world,
And wastes the narrow realm whereon we move,
And beats upon the faces of the dead,
My dead, as tho' they had not died for me?
O Bedivere, for on my heart hath fall'n
Confusion, till I know not what I am,
Nor whence I am, nor whether I be King.
Behold, I seem but King among the dead."

Now at the very last, when only Bedivere is left of all his knights, Arthur sees Mordred, the traitor knight, who has brought back the heathen into the realm, standing unharmed; with the last blow of his sword Excalibur the King strikes him dead, but falls himself grievously wounded by Mordred's stroke. But though all his knights have fallen, though all that was dear to him is gone, though everything on which he leaned has failed him, he cannot die; yet in the mist and uncertainty of the battlefield he knows not where he is to go. His sword Excalibur must be given back to the hand from which it came; the sword which had

"on one side,
Graven in the oldest tongue of all this world,
'Take me;' but turn the blade and ye shall see,
And written in the speech ye speak yourself
'Cast me away!' And sad was Arthur's face
Taking it, but old Merlin counsell'd him,

"Take them and strike! the time to cast away
Is yet far off."

This was at Arthur's Coronation: and now at his command Sir
Bedivere casts the sword far out over the lake, from the water of
which rises

"an arm,
Clothed in white samite, mystic, wonderful,
That caught him by the hilt, and brandish'd him
Three times, and drew him under in the mere."

Then Sir Bedivere carries the King to the margin of the lake,
whence the three Queens bear him in a funeral barge far off from
sight: his last words to Bedivere, —

"But now farewell, I am going a long way
With these thou seest. * * *
To the inland-valley of Avilion;
Where falls not hail or rain, or any snow,
Nor even wind blows loudly; but it lies
Deep meadowed, happy, fair with orchard lawns
And bowery hollows crowned with summer sea,
Where I will heal me of my grievous wound."

As Sir Bedivere sees the black hull moving far off, he cries

"He passes to be King among the dead,
And after healing of his grievous wound
He comes again."

And I think the glory of the return from this world to the true life
of the higher self has seldom been better shown than this: —

"Then from the dawn it seem'd there came, but faint
As from beyond the limit of the world,
Like the last echo born of a great cry,

Sounds, as if some fair city were one voice
Around a king returning from his wars."

Throughout the whole of the poem we feel, even when we cannot distinctly see, deep meanings for the inner consciousness. We cannot make any definite formulas, that this character represents this, and that, that; but everywhere we see that the King represents the highest; fealty to him is the chief duty.

"Strike for the King and live! his knights have heard
That God hath told the King a secret word.
Fall battleaxe and flash brand! Let the King reign.

Blow Trumpet! he will lift us from the dust.
Blow trumpet! live the strength and die the lust!
Clang battleaxe, and clash brand! Let the King reign.

Strike for the King and die! and if thou diest
The King is King, and ever wills the highest.
Clang battleaxe, and clash brand! Let the King reign."

The King is immortal; the lower self may, it must, die, and if it die in obedience to the King's command, it is an honor and glory to it; again and again in the poem, in speaking of the bravery and honor of a good knight, the end is

"and fell at last
In the great battle fighting for the King,"

or like Geraint,

"he crown'd
A happy life with a fair death, and fell
Against the heathen of the Northern Sea
In battle, fighting for the blameless King."

In this sense the King may be considered as the true spiritual self,

of which we various lower selves are but fragments, which can only win unity by giving up the fragmentary personality.

Guinevere, too late for this life, sees how she has been false to her duty and honor;

"Ah, my God,
What might I not have made of thy fair world
Had I but loved thy highest creature here?
It was my duty to have loved the highest;
It surely was my profit had I known;
It would have been my pleasure had I seen.
We needs must love the highest when we see it,
Not Lancelot, nor another."

In the last battle, Bedivere speaks thus plainly: —

"My King,
King everywhere! and so the dead have kings,
There also will I worship thee as King."

And Arthur replies,

"And well for thee, saying in my dark hour,
When all the purport of my throne hath failed,
That quick or dead thou holdest me for King.
King am I, whatsoever be their cry."

At first sight it seems as if, in the failure of the high hopes with which the Round Table was founded, all is lost, that the King's passage "from the great deep to the great deep" has been fruitless. But though earthly plans have failed, the soul bears to its higher realm of rest and joy a strengthened character, which, when he returns once more, will fight a stronger fight, and

"then or now
Utterly smite the heathen underfoot.

Till these and all men hail him for their king."

His knights have fallen, but many, like Sir Bedivere, living or dead, will hold him for their King. Guinevere and Lancelot wronged him worst of all: but Guinevere, deeply repentant, after a holy life,

"past

To where beyond these voices there is peace."

And Lancelot, tearing the poisonous from the wholesome flower, died at last a holy man. The good in Arthur has stirred up the evil around him to sharper, fiercer opposition; but the world is the better for his reign.

"The old order changeth, yielding place to new,
And God fulfils himself in many ways,
Lest one good custom should corrupt the world."

The Path

THINKING VERSUS READING — *Jasper Niemand*

The opinion of theosophical students is divided in respect to reading. There are those who consider that the chief source of learning is study, while others deprecate much reading and urge us to confine our efforts to "living the life." The truth of course is that both methods are to be combined. They serve different departments of the same end. By study — especially of scriptures — we are enabled to form more just ideas of what "the life" may be, and in what way we shall live it. By living it, we correct all mistaken ideas; we shave and prune the excrescences of the mind. The application of spiritual (impersonal) ideas in daily life; the study of how we may hold to them amid the practical routine; the endeavor to discover them within all material conditions and things; the effort to develop them; broaden the nature and enable us, through the spiritual will, to alchemize it into spiritual essences and powers. Nothing is wholly material; if it were it could not exist, it could not cohere for an instant. That mysterious force which is within all things and enables them to "live," or to advance through successive changes, is what we call Spirit. In Bhagavad-Gita we find that Purush and Prakriti, or Spirit (energy) and Nature, are forever conjoined. All the powers existing in the macrocosm having also their various specific seats in man, it follows plainly that, if we wish to evolve more rapidly by means of these powers, as the universe also evolves by them, we must think and think within ourselves. These forces are under the guidance of will, thought, and knowledge; (1) reading will never enable us to reach them; thinking may put us on their track. To examine this question of reading. What is it that we do when we read? It is not reading to repeat, parrot like, words which we instantly forget, like the infant class over its primer. The eye

encounters certain words and an idea is conveyed to the brain. Is this all? For certain persons it is all. They accept this idea as a form, a crystallization representing a certain state of things. If it attracts them, they retain and quote it; otherwise they dismiss it. In either case it is to them a finality. Such persons have their brains stored with such formulas; they have never lived them out, even in the mind; they do not really know the idea represented by this form of words at all. The fancy or the prejudice has been tickled by mere sound. All this is so much useless lumber. Show them what some of their favorite ideas really involve if carried out, and they cast them aside in disgust or dismay. This is the sort of reading which is much to be deprecated, along with that other kind undertaken to "pass time." That an idea is a seed which, once planted, should sprout and grow, they do not see. That all ideas have a specific, energetic life of their own, and that this life is directly proportionate to the vitality (or truth) of the idea, they do not see. That thoughts have a power of self reproduction, bearing a thousandfold for use or misuse, that they have an insidious and tremendous power, none but occultists know. That a part of the vital energy and real being of a writer is diffused throughout every page even of his printed works and more or less affects the reader as a psycho-magnetic entity, is rarely thought of at all. Every thought modifies the mind: it energizes according to the nature of those thoughts, diffusing a pernicious, weak, or beneficent force about us. If they are too rapidly forced upon it, the mind becomes gorged; we have mental dyspepsia and an unhealthy condition, not only in the internal organ called mind, but also in the physical organs which quickly respond to its condition. A habit of the mind is soon formed, and, like the dyspeptic, it craves abnormal quantities of food, alternated with periods of sluggish inertia: moreover, it becomes habituated to certain kinds of stimulus: if we feed it long upon novels or excitement, it will reject more healthy food. A greater reason for

careful choice of reading than all these is found in the fact that something within us, that thing which knows and strives to make us know, takes advantage of the vibration set up in the mental (and through that to the outer) man to transfuse his understanding with more light. This something, this soul, leaps up within us, touched by the current flowing from those thoughts, and asserts of them, "They are true!" or, "They are false!" Thus books may help us to remember, to recall what we have lost. And no man to whom life is sacred will wish to expend those energies of which life consists in any idle fashion, or to develop their lower forms when the higher are equally at his command.

How then shall we read? When we have reason to believe that the writer knows somewhat of his subject, we may assume a receptive attitude. Where such is not the case we cannot usefully read at all. We may not judge our author. He may have found truths unsuited to us now, or teach them in ways which we are unfitted to pursue; this being so, we shall do well to avoid what is at present unhealthy nourishment. Where we feel attracted and do read, we should receive the idea into our minds and, submitting ourselves passively to its influence, note what impression is stamped upon the sensitized plate within. The true character of the idea is *felt* rather than intellectually cognized, and by such a study of the interior impression we receive the verdict of the hidden judge. We need dread no *Vehmgericht* but this; by it all stands or falls. (2) To attain this end we must hold ourselves still. The outer self must maintain an attitude of suspended judgment, or up comes our mere personality with quips, cranks, whims, opinions, and loves, drowning the inner voice with its racket and hubbub.

Another way of utilizing ideas is to assume their merit and to study wherein that merit may possibly consist, what line ray has escaped our grosser sight. For example: I quoted to a comrade

this line; "We must be ready to say at any moment, in whatever circumstances, whether expected or unexpected: 'It is just what I in fact desired'." (3) My comrade replied that this appeared to him hypocritical. If he lost an arm, for instance, he could cheerfully submit, but he could not in truth say that he desired precisely that accident. This objection has a surface correctness. Had he read with an assumption that the line must have some truth in it, and had he examined it in that belief, he would doubtless have found its true bearing, while such personal exertion opens up a mind and nourishes it as no artificial injection can do. That true bearing is that the re-incarnating soul has chosen those circumstances most needed for its evolution; to work out that evolution we must work through our Karma; there is no other way. Hence my Higher Self, my real self, did in fact desire just that body and all its Karmic circumstances and life as a necessary experience for my soul at this juncture, the soul having to pass through all experiences, and though *i* may not desire them, *I* do. No true statements can be based upon the assumption that the personality, or even the lower principles of the soul, is the real ego at all.

There is again another point to be guarded against in reading books other than sacred writings, whose inner meaning we strive to assimilate. It is the reverse of the one above stated, and cautions us against too great mental hospitality. It is the danger of basing our faith upon the personality of the writer. If we do this, were he the Jove of Theosophy himself we may receive injury rather than benefit. We may have good reason to believe him possessed of more or less knowledge. Whether he has himself assimilated that knowledge is again another question. An initiate will have done so, and the real value of his writings for us will consist in the fact of his being himself those truths which he gives out: he is himself the word and the sign of his degree. Only in so

far as he has lived out his knowledge and *become it*, can he impart it beneficially to its readers in turn. Otherwise he runs the risk of presenting partial Truths through the medium of his own personality and tinging them thereby. In this way, with the best will in the world perhaps, he gives to students himself and not the Truth, gives his warped edition of it. As an occult fact, we can only give ourselves and no more; hence to give Truth we must be It. Herein lies the value of the writings of initiates, ending with those of our beloved Madame Blavatsky, who alone has dared to speak plainly to her era. The movement she inaugurated and the well-spring of teachings she opened for us to draw upon have been the means of renown for many writers who, without her initial courage, had never won an audience or a name. Even as one of the very least of these, I say; "May we never forget the debt."

Were all readers forewarned and ready to discount the personality, this danger would be lessened. Such discrimination in these matters is a spiritual quality not as yet generally found among men: it is a power of the soul, a more or less direct perception of Truth. It behooves the writer desirous of serving mankind to look well to his words, to the form in which he imprisons so much of the Truth as he has found, and to strive earnestly only to give forth so much of it as he himself embodies in life, so much as he has become. Great harm is constantly done by the spread of brain and lip knowledge, to be proven false supports by suffering men. And we do better to take the tone of suggestion rather than that of authority. We may have touched upon our higher powers without having fully raised the nature to them. While we are but man we only see by glimpses; then the veil falls again. So I would preface all writings with the request that the reader be guided by his own natural selection to a very great extent.

Many writers, too, have come into this life with a special task to

perform. They have something to say or to give, and when it is done, their usefulness to humanity is over; they seem then to have outlived themselves; long before their bodies pass into the ranks of the unseen, their virility and life-giving power have departed. We often see this fatal high-water mark in the life of the poet, the painter, the leader we followed and loved; see that he can never surpass it, that he has touched his highest state for this incarnation. To remain there is impossible. A law of nature decrees that he must advance or recede; in nature there is no standing still. We ask ourselves who has set this fatal limit, and we see clearly that the man alone has done himself this wrong. It is Karma, but a Karma of his own making. Some there are who pass, indeed, beyond that limit to intellectual greatness, but in doing so they have passed beyond our ordinary sight and have joined the silent workers in the Lodge of Truth. The only indication left us of their progress is the fact that they have never fallen to a lower level than that great one where we saw them standing. They have never followed up their words of power by the impotent babble of senility. Few indeed are these men, for "many are called, but few are chosen." They are those who have a Karmic stock of spiritual energy sufficient to flood them over the crisis, and they use their highest intellectuality as a stepping stone to that which lies beyond intellect and above thought. The lesser men suffer. They have done so much, sacrificed so much, they do not understand why their words are no longer snatched from their lips and passed eagerly along the expectant throng. It is because those words are vain repetitions: they are no longer living, winged things. The speaker has not renewed his thought; he has fallen to worshipping his own methods; he makes an apotheosis of his present knowledge instead of reaching up to the realms of real life for new, vital essences. Thought, however broad, follows a circle at last, and in it he runs like a squirrel turning a wheel with puerile activity.

The mere fact that a man thinks he has done something or sacrificed something should show him his mistake. Deeds have been done through him, not by him. His so-called sacrifice was his opportunity to rise to real greatness, and only his half methods have limited it to a sacrifice. Some cry out in despair that it had been better to do nothing at all. I would not say that. The irresistible waves surge onward and bear us to a certain point: we may lie there long; still this is so much progress which we can never lose. The pity is that we should not arise ourselves and go further without waiting for the next tide.

These considerations show us that disagreements between theosophical writers are often unavoidable, the writers being but men and women. It is to our advantage to use our discriminative powers, to strengthen them by use. So we are not injured by these differences. We are more injured if we stake our faith upon any one or several writers, just because when our idols crumble,—and crumble they must, we are so often found in the dust beneath them, found stunned and wounded by their fall. "Let a man learn to bear the disappearance of the things he was wont to reverence without losing his reverence." A truer word than that Emerson never wrote. We are instruments in mighty hands: if we turn our edge, we must expect to be laid aside. We must then refrain from solidifying our thoughts into a system, our reports of Truth into dogmas. We may not be dazzled even by the highest heavens, but must worship Truth alone.

Thus the whole problem for both writer and reader consists in eschewing mere forms, in looking beyond words to the principles which they represent faintly. A man represents one or more universals; his thought should do the same. He will never mislead while he only gives us these; we shall never misunderstand him while we look for nothing less. All reading is useless, so far as

spiritual progress is concerned, which cannot be conducted upon the above lines. If they limit your reading, they will extend your thinking. So much the better, for thinking is the path toward becoming. "What a man thinks, that he is; this is the old secret," say the Upanishads. There is a way of taking a thought and brooding over it as a bird broods on the nest; by this method the true thought hatches out and itself manifests to us. We must apply these thoughts to the touchstone of our own souls. Reading and thinking are not to be divorced. They should be one act; then each would correct and equilibrate the other.

My last word upon this subject would be this, and I would say it emphatically. Never receive and pass onward a thought which you do not feel and understand. On this point accept no authority other than your own soul. It is better that you seem to lose a ray of Truth than to accept and deflect it by a want of understanding, a want of assimilation of it. If it be yours in the Law, you cannot lose it. It will be sent to you again and again until you do receive it. Take then what your nature selects until you reach a point where you can rise above nature. When this is reached you will not need to read any longer, except from the wonderful book of life and from those blessed Scriptures wherein the Divine has spoken to the ages through men who had attained to some share in His being.

CONVERSATIONS ON OCCULTISM: III

ELEMENTALS — KARMA.

Student. — Permit me to ask you again, Are elementals beings?

Sage. — It is not easy to convey to you an idea of the constitution of elementals; strictly speaking, they are not, because the word *elementals* has been used in reference to a class of them that have no being such as mortals have. It would be better to adopt the terms used in Indian books, such as Gandharvas, Bhuts, Pisachas, Devas, and so on. Many things well known about them cannot be put into ordinary language.

Student. — Do you refer to their being able to act in the fourth dimension of space?

Sage. — Yes, in a measure. Take the tying in an endless cord of many knots, — a thing often done at spiritist seances. That is possible to him who knows more dimensions of space than three. No three-dimensional being can do this; and as you understand "matter," it is impossible for you to conceive how such a knot can be tied or how a solid ring can be passed through the matter of another solid one. These things can be done by elementals.

Student. — Are they not all of one class?

Sage. — No. There are different classes for each plane, and division of plane, of nature. Many can never be recognized by men. And those pertaining to one plane do not act in another. You must remember, too, that these "planes" of which we are speaking interpenetrate each other.

Student. — Am I to understand that a clairvoyant or clairaudient has to do with or is effected by a certain special class or classes of

elementals?

Sage. — Yes. A clairvoyant can only see the sights properly belonging to the planes his development reaches to or has opened. And the elementals in those planes show to the clairvoyant only such pictures as belong to their plane. Other parts of the idea or thing pictured may be retained in planes not yet open to the seer. For this reason few clairvoyants know the whole truth.

Student. — Is there not some connection between the Karma of man and elementals?

Sage. — A very important one. The elemental world has become a strong factor in the Karma of the human race. Being unconscious, automatic, and photographic, it assumes the complexion of the human family itself. In the earlier ages, when we may postulate that man had not yet begun to make bad Karma, the elemental world was more friendly to man because it had not received unfriendly impressions. But so soon as man began to become ignorant, unfriendly to himself and the rest of creation, the elemental world began to take on exactly the same complexion and return to humanity the exact pay, so to speak, due for the actions of humanity. Or, like a donkey, which, when he is pushed against, will push against you. Or, as a human being, when anger or insult is offered, feels inclined to return the same. So the elemental world, being unconscious force, returns or reacts upon humanity exactly as humanity acted towards it, whether the actions of men were done with the knowledge of these laws or not. So in these times it has come to be that the elemental world has the complexion and action which is the exact result of all the actions and thoughts and desires of men from the earliest times. And, being unconscious and only acting according to the natural laws of its being, the elemental world is a powerful factor in the

workings of Karma. And so long as mankind does not cultivate brotherly feeling and charity towards the whole of creation, just so long will the elementals be without the impulse to act for our benefit. But so soon and wherever man or men begin to cultivate brotherly feeling and love for the whole of creation, there and then the elementals begin to take on the new condition.

Student. — How then about the doing of phenomena by adepts?

Sage. — The production of phenomena is not possible without either the aid or disturbance of elementals. Each phenomenon entails the expenditure of great force, and also brings on a correspondingly great disturbance in the elemental world, which disturbance is beyond the limit natural to ordinary human life. It then follows that, as soon as the phenomenon is completed, the disturbance occasioned begins to be compensated for. The elementals are in greatly excited motion, and precipitate themselves in various directions. They are not able to affect those who are protected. But they are able, or rather it is possible for them, to enter into the sphere of unprotected persons, and especially those persons who are engaged in the study of occultism. And then they become agents in concentrating the karma of those persons, producing troubles and disasters often, or other difficulties which otherwise might have been so spread over a period of time as to be not counted more than the ordinary vicissitudes of life. This will go to explain the meaning of the statement that an Adept will not do a phenomenon unless he sees the desire in the mind of another lower or higher Adept or student; for then there is a sympathetic relation established, and also a tacit acceptance of the consequences which may ensue. It will also help to understand the peculiar reluctance often of some persons, who can perform phenomena, to produce them in cases where we may think their production would be beneficial; and also why they are never done in order to compass worldly ends,

as is natural for worldly people to suppose might be done, — such as procuring money, transferring objects, influencing minds, and so on.

Student. — Accept my thanks for your instruction.

Sage. — May you reach the terrace of enlightenment!"

The Path

TO ASPIRANTS FOR CHELASHIP — *William Q. Judge*

Sincere interest in Theosophic truth is often followed by sincere aspiration after Theosophic life, and the question continually recurs, What are the conditions and the steps to chelaship (1); to whom should application be made; how is the aspirant to know that it has been granted?

As to the conditions and the discipline of chelaship, not a little has been disclosed in *The Theosophist*, *Man*, *Esoteric Buddhism*, and other works upon Theosophy; and some of the qualifications, difficulties, and dangers have been very explicitly set forth by Madame Blavatsky in her article upon "Theosophical Mahatmas" in the *PATH* of Dec., 1886. To every one cherishing even a vague desire for closer relations to the system of development through which Masters are produced, the thoughtful study of this article is earnestly commended. It will clear the ground of several misconceptions, deepen the sense of the seriousness of such an effort, and excite a healthy self-distrust which is better before than after the gate has been passed.

It is entirely possible, however, that the searching of desire and strength incited by that article may only convince more strongly of sincerity, and that not a few readers may emerge from it with a richer purpose and a deeper resolve. Even where there is not a distinct intention to reach chelaship, there may be an eager yearning for greater nearness to the Masters, for some definite assurance of guidance and of help. In either of these cases the question at once arises before the aspirant, Who is to receive the application, and how is its acceptance to be signified?

The very natural, indeed the instinctive, step of such an aspirant is to write to an officer of the Theosophical Society. None the less

is this a mistake. For the Theosophical Society is an *exoteric* body, the Lodge of Masters wholly *esoteric*. The former is a voluntary group of inquirers and philanthropists, with avowed aims, a printed Constitution, and published officers, and, moreover, expressly disavowing any power, as a Society, to communicate with Masters; the latter is an Occult Lodge, of whose address, members, processes, functions, nothing is known. It follows, therefore, that there is no person, no place, no address, to which an aspirant may appeal.

Let it be supposed, however, that such an inquiry is preferred to a person advanced in Occult study, versed in its methods and tests and qualifications. Assuredly his reply would be directly to this effect: —

"If you were now fitted to be an accepted chela, you would of yourself know how, where, and to whom to apply. For the becoming a chela *in reality* consists in the evolution or development of certain spiritual principles latent in every man, and in great measure unknown to your present consciousness. Until these principles are to some degree consciously evolved by you, you are not in practical possession of the means of acquiring the first rudiments of that knowledge which now seems to you so desirable. Whether it is desired by your mind or by your heart is still another important question, not to be solved by any one who has not yet the clew to Self.

It is true that these qualities can be developed (or forced) by the aid of an Adept. And most applicants for chelaship are actuated by a desire to receive instructions directly from the Masters. They do not ask themselves what they have done to merit a privilege so rare. Nor do they consider that, all Adepts being servants of the Law of Karma, it must follow that, did the applicant now merit their visible aid, he would already possess it and could not be in

search of it. The indications of the fulfilment of the Law are, in fact, the partial unfolding of those faculties above referred to.

You must, then, reach a point other than that where you now stand, before you can even ask to be taken as a chela on probation. All candidates enter the unseen Lodge in this manner, and it is governed by Laws containing within themselves their own fulfilment and not requiring any officers whatever. Nor must you imagine that such a probationer is one who works under constant and known direction of either an Adept or another chela. On the contrary, he is tried and tested for at least 7 years, and perhaps many more, before the point is reached when he is either accepted (and prepared for the first of a series of initiations often covering several incarnations), or rejected. And this rejection is not by any body of men just as they incline, but is the natural rejection by Nature. The probationer may or may not hear from his Teacher during this preliminary period; more often he does not hear. He may be finally rejected and not know it, just as some men have been on probation and have not known it until they suddenly found themselves accepted. Such men are those self-developed persons who have reached that point in the natural order after many incarnations, where their expanded faculties have entitled them to an entrance into the Hall of Learning or the spiritual Lodge beyond. And all I say of men applies equally to women.

When any one is regularly accepted as a chela on probation, the first and only order he receives (for the present) is to work unselfishly for humanity — sometimes aiding and aided by some older chela — *while striving to get rid of the strength of the personal idea*. The ways of doing this are left to his own intuition entirely, inasmuch as the object is to develop that *intuition* and to bring him to *self-knowledge*. It is his having these powers in some degree that leads to his acceptance as a probationer, so that it is

more than probable that you have them not yet save as latent possibilities. In order to have in his turn any title to help, he must work for others, but that must not be his motive for working. He who does not feel irresistibly impelled to serve the Race, whether he himself fails or not, is bound fast by his own personality and cannot progress until he has learned that *the race is himself and not that body which he now occupies*. The ground of this necessity for a pure motive was recently stated in *Lucifer* to be that 'unless the intention is entirely unalloyed, the spiritual will transform itself into the psychic, act on the astral plane, and dire results may be produced by it. The powers and forces of animal nature can be equally used by the selfish and revengeful as by the unselfish and all-forgiving; the powers and forces of spirit lend themselves only to the perfectly pure in heart.'

It may be stated, however, that even those natural forces cannot be discovered by any man who has not obtained the power of getting rid of his personality in some degree. That an emotional desire to help others does not imply this freedom from personality may be seen by the fact that if you were now perfected in unselfishness in the *real* sense, you would have a conscious existence separate from that of the body and would be able to quit the body at will: in other words, to be free from all sense of self is to be an Adept, for the limitations of self inhibit progress.

Hear also the words of the Master, taken from Sinnett's *The Occult World*. 'Perhaps you will better appreciate our meaning when told that in our view the highest aspirations for the welfare of humanity become tainted with selfishness if, in the mind of the philanthropist, there lurks the shadow of a desire for self-benefit or a tendency to do injustice, even when these exist unconsciously to himself.'

While setting forth these facts, as well as the dangers and difficulties — both those set ones appointed by the laws of the Lodge and the more innumerable ones adjudged by Karma and hastened by the efforts of the neophyte, it should also be stated that the Masters desire to deter no man from entering the path. They are well aware, however, from the repeated trials and records of centuries, and from their knowledge of our racial difficulties, how few are the persons who have any clue to their own real nature, which is the foe they attempt to conquer the moment they become pupils of the occult. Hence They endeavor, so far as Karma permits, to hold unfit individuals back from rash ventures the results of which would recoil upon their unbalanced lives and drive them to despair. The powers of evil, inadequately defied by the ignorant man, revenge themselves upon him as well as upon his friends, and not upon those who are above their reach. Although these powers are not hideous objective shapes coming in tangible ways, they are none the less real and dangerous. Their descent in such instances cannot be prevented; *it is Karma.*

To lose all sense of self, then, implies the loss of all that ordinary men most value in themselves. It therefore behooves you to seriously consider these points: —

1st. What is your motive in desiring to be a chela? You think that motive is well known to you, whereas it is hidden deep within you, and by that hidden motive you will be judged. It has flared up from unseen regions upon men sure of themselves, has belched out in some lurid thought or deed of which they esteemed themselves incapable, and has overthrown their life or reason. Therefore test yourself ere Karma tests you.

2nd. What the place and duties of a true neophyte are.

When you have seriously considered both for 21 days, you may, if

your desire remains firm, take a certain course open to you. It is this. Although you do not now know where you can offer yourself to Masters themselves as a chela on probation, yet, in forming that desire in your heart and in re-affirming it (if you do) after due consideration of these points, you have then to some extent called upon the Law, and it is within your power to constitute yourself a disciple, so far as in you lies, through the purity of your motive and effort *if both are sufficiently sustained*. No one can fix a period when this effort will bear fruit, and, if your patience and faith are not strong enough to bear you through an *unlimited* (so far as you know) period of unselfish work for humanity, you had better resign your present fancy, for it is then no more than that. But if otherwise, you are to work for the spiritual enlightenment of Humanity in and through the Theosophical Society (which much needs such laborers), and in all other modes and planes as you best can, remembering the word of Masters; 'He who does what he can and all that he can, and all that he knows how to do, does enough for us.' This task includes that of divesting yourself of all personality through interior effort, because that work, if done in the right spirit, is even more important to the race than any outward work we can do. Living as you now are, on the outward plane chiefly, your work is due there and is to be done there until your growth shall fit you to pass away from it altogether.

In following this course you work towards a fixed point under observation, — as is, indeed, the whole Theosophic body, which is now, *as a body*, a chela of Masters —, but specialized from other members in the sense that your definite aim and trust are understood and taken into consideration by the unseen Founders and the Law. The Theosophical Society then stands to you, for the time being, as any older chela might who was appointed for you to aid and to work under. *You are not*, understand, a chela on

probation, since no one without authority can confer or announce such a privilege. But if you succeed in lifting yourself and others spiritually, it will be known, *no matter what the external silence may seem to be*, and you will receive your full dues from Those who are honest debtors and ministers of the Just and Perfect Law. You must be ready to work, to wait, and to aspire in *silence*, just as all do who have fixed their eyes on this goal. Remember that your truest adviser is to be found, and constantly sought, *within yourself*. Only by experience can you learn to know its voice from that of natural instinct or mere logic, and strengthen this power, by virtue of which the Masters have become what They are.

Your choice or rejection of this course is the first test of yourself. Others will follow, whether you are aware of them or not, for the first and only right of the neophyte is — *to be tried*. Hence silence and sorrow follow his acceptance instead of the offer of prompt aid for which he looks. Yet even that shall not be wanting; those trials and reverses will come only from the Law to which you have appealed."

The Path

CULTURE OF CONCENTRATION: I — *Ramatirtha*

(A PAPER READ BEFORE THE ARYAN THEOSOPHICAL SOCIETY OF NEW YORK)

PART I.

The term most generally in use to express what is included under the above title is SELF CULTURE. Now it seems to well enough express, for a time at least, the practice referred to by those who desire to know the truth. But, in fact, it is inaccurate from a theosophic standpoint. For the self is held to be that designated in the Indian books as Ishwara, which is a portion of the eternal spirit enshrined in each human body. That this is the Indian view there is no doubt. The Bhagavad-Gita in Ch. 15 says that an eternal portion of this spirit, "having assumed life in this world of life, attracts the heart and the five senses which belong to nature. Whatever body Ishwara enters or quits, it is connected with it by snatching those senses from nature, even as the breeze snatches perfumes from their very bed. This spirit approaches the objects of sense by presiding over the ear, the eye, the touch, the taste, and the smell, and also over the heart"; and in an earlier chapter, "the Supreme spirit within this body is called the Spectator and admonisher, sustainer, enjoyer, great Lord, and also highest soul"; and again, "the Supreme eternal soul, even when existing within — or connected with — the body, is not polluted by the actions of the body."

Elsewhere in these books this same spirit is called the self, as in a celebrated sentence which in Sanskrit is "Atmanam atmana, pashya," meaning, "Raise the self by the self," and all through the Upanishads, where the self is constantly spoken of as the same as the Ishwara of Bhagavad-Gita. Max Muller thinks the word "self" expresses best in English the ideas of the Upanishads on this

head.

It therefore follows that such a thing as culture of this self, which in its very nature is eternal, unchangeable, and unpollutable by any action, cannot be. It is only from inadequacy of terms that students and writers using the English tongue are compelled to say "self culture," while, when they say it, they admit that they know the self cannot be cultured.

What they wish to express is, "such culture or practice to be pursued by us as shall enable us, while on earth, to mirror forth the wisdom and fulfil the behests of the self within, which is allwise and all good."

As the use of this term "self culture" demands a constant explanation either outwardly declared or inwardly assented to, it is wise to discard it altogether and substitute that which will express the practice aimed at without raising a contradiction. For another reason also the term should be discarded. That is, that it assumes a certain degree of selfishness, for, if we use it as referring to something that we do only for ourself, we separate at once between us and the rest of the human brotherhood. Only in one way can we use it without contradiction or without explanation, and that is by admitting we selfishly desire to cultivate ourselves, thus at once running against a prime rule in theosophic life and one so often and so strenuously insisted on, that the idea of personal self must be uprooted. Of course, as we will not negative this rule, we thus again have brought before us the necessity for a term that does not arouse contradictions. That new term should, as nearly as possible, shadow forth the three essential things in the action, that is, the instrument, the act, and the agent, as well as the incitement to action; or, knowledge itself, the thing to be known or done, and the person who knows.

This term is CONCENTRATION. In the Indian books it is called

Yoga. This is translated also as Union, meaning a union with the Supreme Being, or, as it is otherwise put, "the object of spiritual knowledge is the Supreme Being."

There are two great divisions of Yoga found in the ancient books, and they are called Hatha-Yoga and Raj-Yoga.

Hatha-Yoga is a practical mortification of the body by means of which certain powers are developed. It consists in the assumption of certain postures that aid the work, and certain kinds of breathing that bring on changes in the system, together with other devices. It is referred to in the 4th chapter of the Bhagavad-Gita thus: "Some devotees sacrifice the sense of hearing and the other senses in the fires of restraint; some offer objects of sense, such as sound, in the fires of the senses. Some also sacrifice inspiration of breath in expiration, and expiration in inspiration, by blocking up the channels of inspiration and expiration, desirous of retaining their breath. Others, by abstaining from food, sacrifice life in their life."

In various treatises these methods are set forth in detail, and there is no doubt at all that by pursuing them one can gain possession of sundry abnormal powers. There is risk, however, especially in the case of people in the West where experienced gurus or teachers of these things are not found. These risks consist in this, that while an undirected person is doing according to the rules of Hatha-Yoga, he arouses about him influences that do him harm, and he also carries his natural functions to certain states now and then when he ought to stop for a while, but, having no knowledge of the matter, may go on beyond that and produce injurious effects. Then, again, Hatha-Yoga is a difficult thing to pursue, and one that must be pushed to the point of mastery and success. Few of our Western people are by nature fitted for such continuous and difficult labor on the mental and

astral planes. Thus, being attracted to Hatha-Yoga by the novelty of it, and by the apparent pay that it offers in visible physical results, they begin without knowledge of the difficulty, and stopping after a period of trial they bring down upon themselves consequences that are wholly undesirable.

The greatest objection to it, however, is that it pertains to the material and semi-material man, — roughly speaking, to the body, and what is gained through it is lost at death.

The Bhagavad-Gita refers to this and describes what happens in these words: "All of these, indeed, being versed in sacrifice, have their sins destroyed by these sacrifices. But he alone reaches union with the Supreme being who eats of the ambrosia left from a sacrifice." This means that the Hatha-Yoga practice represents the mere sacrifice itself, whereas the other kind is the ambrosia arising from the sacrifice, or "the perfection of spiritual cultivation," and that leads to Nirvana. The means for attaining "the perfection of spiritual cultivation" are found in Raj-Yoga, or, as we shall term it for the present, Culture of Concentration.

When concentration is perfected, we are in a position to use the knowledge that is ever within reach but which ordinarily eludes us continually. That which is usually called knowledge is only an intellectual comprehension of the outside, visible forms assumed by certain realities. Take what is called scientific knowledge of minerals and metals. This is merely a classification of material phenomena and an empirical acquisition. It knows what certain minerals and metals are useful for, and what some of their properties are. Gold is known to be pure, soft, yellow, and extremely ductile, and by a series of accidents it has been discovered to be useful in medicine and the arts. But even to this day there is a controversy, not wholly settled, as to whether gold is held mechanically or chemically in crude ore. Similarly with

minerals. The crystalline forms are known and classified.

And yet a new theory has arisen, coming very near to the truth, that we do not know matter in reality in this way, but only apprehend certain phenomena presented to us by matter, and variously called, as the phenomena alter, gold, wood, iron, stone, and so on. But whether the minerals, metals, and vegetables have further properties that are only to be apprehended by still other and undeveloped senses, science will not admit. Passing from inanimate objects to the men and women about us, this ordinary intellectual knowledge aids us no more than before. We see bodies with different names and of different races, but below the outer phenomena our everyday intellect will not carry us. This man we suppose to have a certain character assigned to him after experience of his conduct, but it is still only provisional, for none of us is ready to say that we know him either in his good or his bad qualities. We know there is more to him than we can see or reason about, but what, we cannot tell. It eludes us continually. And when we turn to contemplate ourselves, we are just as ignorant as we are about our fellow man. Out of this has arisen an old saying: "Every man knows what he is, but no one knows what he will be."

There must be in us a power of discernment, the cultivation of which will enable us to know whatever is desired to be known. That there is such a power is affirmed by teachers of occultism, and the way to acquire it is by cultivating concentration.

It is generally overlooked, or not believed, that the inner man who is the one to have these powers has to grow up to maturity, just as the body has to mature before its organs fulfil their functions fully. By *inner man* I do not mean the higher self — the Ishwara before spoken of, but that part of us which is called soul, or astral man, or vehicle, and so on. All these terms are subject to

correction, and should not be held rigidly to the meanings given by various writers. Let us premise, first, the body now visible; second, the inner man — not the spirit; and third, the spirit itself.

Now while it is quite true that the second — or inner man — has latent all the powers and peculiarities ascribed to the astral body, it is equally true that those powers are, in the generality of persons, still latent or only very partially developed.

This inner being is, so to say, inextricably entangled in the body, cell for cell and fibre for fibre. He exists in the body somewhat in the way the fibre of the mango fruit exists in the mango. In that fruit we have the inside nut with thousands of fine fibres spreading out from it through the yellow pulp around. And as you eat it, there is great difficulty in distinguishing the pulp from the fibre. So that the inner being of which we are speaking cannot do much when away from his body, and is always influenced by it. It is not therefore easy to leave the body at will and roam about in the double. The stories we hear of this as being so easily done may be put down to strong imagination, vanity, or other causes. One great cause for error in respect to these doubles is that a clairvoyant is quite likely to mistake a mere picture of the person's thought for the person himself. In fact, among occultists who know the truth, the stepping out of the body at will and moving about the world is regarded as a most difficult feat, and for the reasons above hinted at. Inasmuch as the person is so interwoven with his body, it is absolutely necessary, before he can take his astral form about the country, for him to first carefully extract it, fibre by fibre, from the surrounding pulp of blood, bones, mucous, bile, skin, and flesh. Is this easy? It is neither easy nor quick of accomplishment, nor all done at one operation. It has to be the result of years of careful training and numerous experiments. And it *cannot* be consciously done until the inner man has developed and cohered into something more

than irresponsible and quivering jelly. This development and coherence are gained by perfecting the power of concentration.

Nor is it true, as the matter has been presented to me by experiment and teaching, that even in our sleep we go rushing about the country seeing our friends and enemies or tasting earthly joys at distant points. In all cases where the man has acquired some amount of concentration, it is quite possible that the sleeping body is deserted altogether, but such cases are as yet not in the majority.

Most of us remain quite close to our slumbering forms. It is not necessary for us to go away in order to experience the different states of consciousness which is the privilege of every man, but we do not go away over miles of country until we are able, and we cannot be able until the necessary ethereal body has been acquired and has learned how to use its powers.

Now, this ethereal body has its own organs which are the essence or real basis of the senses described by men. The outer eye is only the instrument by which the real power of sight experiences that which relates to sight; the ear has its inner master — the power of hearing, and so on with every organ. These real powers within flow from the spirit to which we referred at the beginning of this paper. That spirit approaches the objects of sense by presiding over the different organs of sense. And whenever it withdraws itself the organs cannot be used. As when a sleep-walker moves about with open eyes which do not see anything, although objects are there and the different parts of the eye are perfectly normal and uninjured.

Ordinarily there is no demarcation to be observed between these inner organs and the outer; the inner ear is found to be too closely interknit with the outer to be distinguished apart. But when concentration has begun, the different inner organs begin

to awake, as it were, and to separate themselves from the chains of their bodily counterparts. Thus the man begins to duplicate his powers. His bodily organs are not injured, but remain for use upon the plane to which they belong, and he is acquiring another set which he can use apart from the others in the plane of nature peculiarly theirs.

We find here and there cases where certain parts of this inner body have been by some means developed beyond the rest. Sometimes the inner head alone is developed, and we have one who can see or hear clairvoyantly or clairaudiently; again, only a hand is developed apart from the rest, all the other being nebulous and wavering. It may be a right hand, and it will enable the owner to have certain experiences that belong to the plane of nature to which the right hand belongs, say the positive side of touch and feeling.

But in these abnormal cases there are always wanting the results of concentration. They have merely protruded one portion, just as a lobster extrudes his eye on the end of the structure which carries it. Or take one who has thus curiously developed one of the inner eyes, say the left. This has a relation to a plane of nature quite different from that appertaining to the hand, and the results in experience are just as diverse. He will be a clairvoyant of a certain order, only able to recognize that which relates to his one-sided development, and completely ignorant of many other qualities inherent in the thing seen or felt, because the proper organs needed to perceive them have had no development. He will be like a two-dimensional being who cannot possibly know that which three-dimensional beings know, or like ourselves as compared with four-dimensional entities.

In the course of the growth of this ethereal body several things are to be observed.

It begins by having a cloudy, wavering appearance, with certain centres of energy caused by the incipency of organs that correspond to the brain, heart, lungs, spleen, liver, and so on. It follows the same course of development as a solar system, and is, in fact, *governed and influenced by the very solar system to which the world belongs on which the being may be incarnate*. With us it is governed by our own solar orb.

If the practice of concentration be kept up, this cloudy mass begins to gain coherence and to shape itself into a body with different organs. As they grow they must be used. Essays are to be made with them, trials, experiments. In fact, just as a child must creep before it can walk, and must learn walking before it can run, so this ethereal man must do the same. But as the child can see and hear much farther than it can creep or walk, so this being usually begins to see and to hear before it can leave the vicinity of the body on any lengthy journey.

Certain hindrances then begin to manifest themselves which, when properly understood by us, will give us good substantial reasons for the practicing of the several virtues enjoined in holy books and naturally included under the term of Universal Brotherhood.

One is that sometimes it is seen that this nebulous forming body is violently shaken, or pulled apart, or burst into fragments that at once have a tendency to fly back into the body and take on the same entanglement that we spoke of at first. *This is caused by anger*, and this is why the sages all dwell upon the need of calmness. When the student allows anger to arise, the influence of it is at once felt by the ethereal body, and manifests itself in an uncontrollable trembling which begins at the centre and violently pulls apart the hitherto coherent particles. If allowed to go on it will disintegrate the whole mass, which will then re-assume its

natural place in the body. The effect following this is, that a long time has to elapse before the ethereal body can be again created. And each time this happens the result is the same. Nor does it make any difference what the cause for the anger may be. There is no such thing as having what is called "righteous anger" in this study and escaping these inevitable consequences. Whether your "rights" have been unjustly and flagrantly invaded or not does not matter. The anger is a force that will work itself out in its appointed way. Therefore anger must be strictly avoided, and it cannot be avoided unless charity and love — absolute toleration — are cultivated.

But anger may be absent and yet still another thing happen. The ethereal form may have assumed quite a coherence and definiteness. But it is observed that, instead of being pure and clear, and fresh, it begins to take on a cloudy and disagreeable color, the precursor of putrefaction, which invades every part and by its effects precludes any further progress, and at last reacts upon the student so that anger again manifests itself. This is the effect of envy. Envy is not a mere trifle that produces no physical result. It has a powerful action, as strong in its own field as that of anger. It not only hinders the further development, but attracts to the student's vicinity thousands of malevolent beings of all classes that precipitate themselves upon him and wake up or bring on every evil passion. Envy, therefore, must be extirpated, and it cannot be got rid of as long as the personal idea is allowed to remain in us.

Another effect is produced on this ethereal body by vanity. Vanity represents the great illusion of nature. It brings up before the soul all sorts of erroneous or evil pictures, or both, and drags the judgment so away that once more anger or envy will enter, or such course be pursued that violent destruction by outside causes falls upon the being. As in one case related to me. The man had

made considerable progress, but at last allowed vanity to rule. This was followed by the presentation to his inner sight of most extraordinary images and ideas, which in their turn so affected him that he attracted to his sphere hordes of elementals seldom known to students and quite indescribable in English. These at last, as is their nature, laid siege to him, and one day produced all about the plane of his astral body an effect similar in some respects to that which follows an explosion of the most powerful explosive known to science. The consequence was, his ethereal form was so suddenly fractured that by repercussion the whole nature of the man was altered, and he soon died in a madhouse after having committed the most awful excesses.

And vanity cannot be avoided except by studiously cultivating that selflessness and poverty of heart advised as well by Jesus of Nazareth as by Buddha.

Another hindrance is fear. This is not, however, the worst of all, and is one that will disappear by means of knowledge, for fear is always the son of ignorance. Its effect on the ethereal form is to shrivel it up, or coagulate and contract it. But as knowledge increases, that contraction abates, permitting the person to expand. Fear is the same thing as frigidity on the earth, and always proceeds by the process of freezing.

In my next the subject will be further developed.

The Path

CONVERSATIONS ON OCCULTISM: IV

Student. — Is there any reason why you do not give me a more detailed explanation of the constitution of elementals and the modes by which they work?

Sage. — Yes. There are many reasons. Among others is your inability, shared by most of the people of the present day, to comprehend a description of things that pertain to a world with which you are not familiar and for which you do not yet possess terms of expression. Were I to put forth these descriptions, the greater part would seem vague and incomprehensible on one hand, while on the other many of them would mislead you because of the interpretation put on them by yourself. Another reason is that, if the constitution, field of action, and method of action of elementals were given out, there are some minds of a very inquiring and peculiar bent who soon could find out how to come into communication with these extraordinary beings, with results disadvantageous to the community as well as the individuals.

Student. — Why so? Is it not well to increase the sum of human knowledge, even respecting most recondite parts of nature; or can it be that the elementals are bad?

Sage. — It is wise to increase the knowledge of nature's laws, but always with proper limitations. All things will become known some day. Nothing can be kept back when men have reached the point where they can understand. But at this time it would not be wise to give them, for the asking, certain knowledge that would not be good for them. That knowledge relates to elementals, and it can for the present be kept back from the scientists of today. So long as it can be retained from them, it will be, until they and

their followers are of a different stamp.

As to the moral character of elementals, they have none: they are colorless in themselves — except some classes — and merely assume the tint, so to speak, of the person using them.

Student. — Will our scientific men one day, then, be able to use these beings, and, if so, what will be the manner of it? Will their use be confined to only the good men of the earth?

Sage. — The hour is approaching when all this will be done. But the scientists of today are not the men to get this knowledge. They are only pigmy forerunners who sow seed and delve blindly in no thoroughfares. They are too small to be able to grasp these mighty powers, but they are not wise enough to see that their methods will eventually lead to Black Magic in centuries to come when they shall be forgotten.

When elemental forces are used similarly as we now see electricity and other natural energies adapted to various purposes, there will be "war in heaven." Good men will not alone possess the ability to use them. Indeed, the sort of man you now call "good" will not be the most able. The wicked will, however, pay liberally for the power of those who can wield such forces, and at last the Supreme Masters, who now guard this knowledge from children, will have to come forth. Then will ensue a dreadful war, in which, as has ever happened, the Masters will succeed and the evil doers be destroyed by the very engines, principalities, and powers prostituted to their own purposes during years of intense selfish living. But why dilate on this: in these days it is only a prophecy.

Student. — Could you give me some hints as to how the secrets of the elemental plane are preserved and prevented from being known? Do these guardians of whom you speak occupy

themselves in checking elementals, or how? Do they see much danger of divulgement likely in those instances where elemental action is patent to the observer?

Sage. — As to whether they check elementals or not need not be enquired into, because, while that may be probable, it does not appear very necessary where men are unsuspecting of the agency causing the phenomena. It is much easier to throw a cloud over the investigator's mind and lead him off to other results of often material advantage to himself and men, while at the same time acting as a complete preventive or switch which turns his energies and application into different departments.

It might be illustrated thus: Suppose that a number of trained occultists are set apart to watch the various sections of the world where the mental energies are in fervid operation. It is quite easy for them to see in a moment any mind that is about reaching a clue into the elemental world: and, besides, imagine that trained elementals themselves constantly carry information of such events. Then, by superior knowledge and command over this peculiar world, influences presenting various pictures are sent out to that enquiring mind. In one case it may be a new moral reform, in another a great invention is revealed, and such is the effect that the man's whole time and mind are taken up by this new thing which he fondly imagines is his own. Or, again, it would be easy to turn his thoughts into a certain rut leading far from the dangerous clue. In fact, the methods are endless.

Student. — Would it be wise to put into the hands of truly good, conscientious men who now use aright what gifts they have, knowledge of and control over elementals, to be used on the side of right?

Sage. — The Masters are the judges of what good men are to have this power and control. You must not forget that you cannot be

sure of the character at bottom of those whom you call "truly good and conscientious men." Place them in the fire of the tremendous temptation which such power and control would furnish, and most of them would fail. But the Masters already know the characters of all who in any way approach to a knowledge of these forces, and They always judge whether such a man is to be aided or prevented. They are not working to make these laws and forces known, but to establish right doctrine, speech, and action, so that the characters and motives of men shall undergo such radical changes as to fit them for wielding power in the elemental world. And that power is not now lying idle, as you infer, but is being always used by those who will never fail to rightly use it.

Student. — Is there any illustration at hand showing what the people of the present day would do with these extraordinary energies?

Sage. — A cursory glance at men in these western worlds engaged in the mad rush after money, many of them willing to do anything to get it, and at the strain, almost to warfare, existing between laborers and users of labor, must show you that, were either class in possession of power over the elemental world, they would direct it to the furtherance of the aims now before them. Then look at Spiritualism. It is recorded in the Lodge — photographed, you may say, by the doers of the acts themselves — that an enormous number of persons daily seek the aid of mediums and their "spooks" merely on questions of business. Whether to buy stocks, or engage in mining for gold and silver, to deal in lotteries, or to make new mercantile contracts. Here on one side is a picture of a coterie of men who obtained at a low figure some mining property on the advice of elemental spirits with fictitious names masquerading behind mediums; these mines were then to be put upon the public at a high profit,

inasmuch as the "spirits" promised metal. Unhappily for the investors, it failed. But such a record is repeated in many cases.

Then here is another where in a great American city — the Karma being favorable — a certain man speculated in stocks upon similar advice, succeeded, and, after giving the medium liberal pay, retired to what is called enjoyment of life. Neither party devoted either himself or the money to the benefiting of humanity.

There is no question of honor involved, nor any as to whether money ought or ought not to be made. It is solely one as to the propriety, expediency, and results of giving suddenly into the hands of a community unprepared and without an altruistic aim, such abnormal power. Take hidden treasure, for instance. There is much of it in hidden places, and many men wish to get it. For what purpose? For the sake of ministering to their luxurious wants and leaving it to their equally unworthy descendants. Could they know the mantram controlling the elementals that guard such treasure, they would use it at once, motive or no motive, the sole object being the money in the case.

Student. — Do some sorts of elementals have guard over hidden treasure?

Sage. — Yes, in every instance, whether never found or soon discovered. The causes for the hiding and the thoughts of the hider or loser have much to do with the permanent concealment or subsequent finding.

Student. — What happens when a large sum of money, say, such as Captain Kidd's mythical treasure, is concealed, or when a quantity of coin is lost?

Sage. — Elementals gather about it. They have many and curious modes of causing further concealment. They even influence

animals to that end. This class of elementals seldom, if ever, report at your spiritualistic seances. As time goes on the forces of air and water still further aid them, and sometimes they are able even to prevent the hider from recovering it. Thus in course of years, even when they may have altogether lost their hold on it, the whole thing becomes shrouded in mist, and it is impossible to find anything.

Student. — This in part explains why so many failures are recorded in the search for hidden treasure. But how about the Masters; are they prevented thus by these weird guardians?

Sage. — They are not. The vast quantities of gold hidden in the earth and under the sea are at their disposal always. They can, when necessary for their purposes, obtain such sums of money on whom no living being or descendants of any have the slightest claim, as would appall the senses of your greatest money getter. They have but to command the very elementals controlling it, and they have it. This is the basis for the story of Aladdin's wonderful lamp, more true than you believe.

Student. — Of what use then is it to try, like the alchemists, to make gold? With the immense amount of buried treasure thus easily found when you control its guardian, it would seem a waste of time and money to learn transmutation of metals.

Sage. — The transmutation spoken of by the real alchemists was the alteration of the base alloy in man's nature. At the same time, actual transmutation of lead into gold is possible. And many followers of the alchemists, as well as of the pure-souled Jacob Boehme, eagerly sought to accomplish the material transmuting, being led away by the glitter of wealth. But an Adept has no need for transmutation, as I have shown you. The stories told of various men who are said to have produced gold from base metals for different kings in Europe are wrong explanations. Here

and there Adepts have appeared, assuming different names, and in certain emergencies they supplied or used large sums of money. But instead of its being the product of alchemical art, it was simply ancient treasure brought to them by elementals in their service and that of the Lodge. Raymond Lully or Robert Flood might have been of that sort, but I forbear to say, since I cannot claim acquaintance with those men.

Student. — I thank you for your instruction.

Sage. — May you reach the terrace of enlightenment!

The Path

THE BHAGAVAD GITA: IX — *William Brehon*

CHAPTER THIRD.

The first two verses of this chapter express a doubt arising in Arjuna's mind, and contain a request for its solution and for a method by which he may attain perfect knowledge — salvation. They are:

"If, according to thy opinion, O thou who givest all that men ask! the use of the understanding be superior to the practise of deeds, why then dost thou urge me to engage in an undertaking so dreadful as this?

Thou, as it were, confoundest my reason with a mixture of sentiments; with certainty declare one method by which I may obtain happiness, and explain it unto me."

The doubt arose because the Blessed Lord had declared that Arjuna must reach salvation by the right use of his understanding, and yet also must perform the dreaded act of opposing, perhaps slaying, his friends, tutors, and relatives. The request is the same as is repeated nearly every day in the Theosophical Society, and for which an answer is demanded. (1) It is for *one* single method, *one* practise, *one* doctrine, by means of which the student may obtain that for which he seeks, whether he has formulated it as happiness or only as a thirst for wonderful knowledge and power.

Arjuna's doubt is the one which naturally arises in one who for the first time is brought face to face with the great duality of nature — or of God. This duality may be expressed metaphysically by the words *thought* and *action*, for these mean in this the same as *ideation* and *expression*. Brahma, as the

unmanifested God, conceives the idea of the Universe, and it at once expresses itself in what is called Creation by the Christian and by the Scientist Evolution. This Creation or Evolution is the action of God. With Him there is no difference in time between the arising of the idea and its expression in manifested objects. Coming down to consider the "created" objects, or the planes on which the thought of God has its expression through its own laws, we find the duality expressed by action and reaction, attraction and repulsion, day and night, outbreathing and inbreathing, and so on. When face to face with these, one is first confused by the multiplicity of objects, and we strive to find one simple thing, some law or doctrine, practice, dogma, or philosophy, which being known, happiness can be secured.

Although there *is* one single vehicle, to use a Buddhist term, yet it cannot be grasped in the beginning by the student. He must pass through sufficient experience to give him a greater consciousness before he can understand this one *Vehicle*. Could that unique law be understood by the beginner, could it be possible to lift us by one word to the shining heights of power and usefulness, it is certain that Those who do know would gladly utter the word and give us the sole method, but as the only possible way in which we can get true happiness is by *becoming* and not by intellectually grasping any single system or dogma, the guardians of the lamp of truth have to raise men gradually from stage to stage. It was in such an attitude Arjuna stood when he uttered the verses with which this chapter opens. (2)

Krishna then proceeds to tell Arjuna that, it being impossible for one to remain in the world without performing actions, the right practice is to do those actions (duties of life whether in war or peace) which must be done, with a heart unattached to the result, being satisfied to do what is deemed the will of the Lord within, for no other reason than that it ought to be done. He sums it up in

the words:

"But he who, restraining his senses by his heart, and being free from attachment to the results of action, undertakes active devotion through the organs of action, is worthy of praise."

This he illustrates by referring to those whom he calls "false pietists of bewildered soul" who remain inert with their bodies, restraining the organs of action, while at the same time they ponder on objects of sense which they have merely quitted in form. He thus shows the false position that it is useless to abandon the outer field of action while the mind remains attached to it, for such mental attachment will cause the ego to incarnate again and again upon earth. A little further on in the chapter he refers to a great yogee, one Janaka, who, even while a saint possessed of perfect knowledge which he had obtained while engaged in affairs of state, still performed actions.

These peculiar verses next occur:

"The creator, when of old he had created mortals and appointed sacrifice, said to them, "By means of this sacrifice ye shall be propagated. It shall be to you a cow of plenty. By means of it do ye support the gods, and let these gods support you. Supporting one another mutually, ye shall obtain the highest felicity. For, being nourished by sacrifices, the gods will give you the desired food. He who eats the food given by them without first offering some to them, is a thief indeed."

At the outset I confess that these and succeeding verses do not appear easy to explain to Western minds. Although I have had some acquaintance with Occidental reasoning based on Occidental knowledge, it seems hopeless in the present century to

elucidate much that is in this chapter. There are numerous points touched on by Krishna for which I find no response in Western thought. Among these are the verses on sacrifice. To say all I think about sacrifice would only expose me to a charge of madness, superstition, or ignorance; it certainly would on every hand be received with, incredulity. And while sneers or disbelief have no terrors, it is needless to advert to certain points in the chapter. Yet in passing them by, some sadness is felt that a high civilization should on these subjects be so dense and dark. Although Moses established sacrifices for the Jews, the Christian successors have abolished it both in spirit and letter, with a curious inconsistency which permits them to ignore the words of Jesus that "not one jot or tittle of the law should pass until all these things were fulfilled." With the culmination of the dark age (3) it was, however, natural that the last vestige of sacrifice should disappear. On the ruins of the altar has arisen the temple of the lower self, the shrine of the personal idea. In Europe individualism is somewhat tempered by various monarchical forms of government which do not by any means cure the evil; and in America, being totally unrestrained and forming in fact the basis of independence here, it has culminated. Its bad effects — vaguely as yet shadowing the horizon — might have been avoided if the doctrines of the Wisdom-Religion had been also believed in by the founders of the republic. And so, after the sweeping away of the fetters forged by priestly dogma and kingly rule, we find springing up a superstition far worse than that which we have been used to call by the name. It is the superstition of materialism that bows down to a science which leads only to a negation.

There are, however, many willing minds here who have some intuition that after all there can be extracted from these ancient Hindu books more than is to be found if they are merely studied

as a part of the lisplings of infant humanity, — the excuse given by Prof. Max Muller for translating them at all. It is to such natural theosophists I speak, for, they will see that, even while advancing so rapidly in material civilization, we need the pure philosophical and religious teachings found in the Upanishads.

The peculiar explanation of the Mosaic sacrifices advanced by the mystic, Count St. Martin, (4) needs only a passing allusion.

Students can think upon it and work out for themselves what truth it contains. He holds that the efficacy of the sacrifices rested in magnetic laws, for the priest, according to him, collected the bad effects of the sins of the people into his own person and then, by laying his hands upon the scapegoat (as in one sacrifice), communicated those deleterious influences to the poor animal who in the wilderness exhaled them so far away as not to affect the people. It is suggested that Moses knew something of occult laws, since he was educated by the Egyptians and initiated by them. But St. Martin goes on to say that

"the Jews were directed to kill even the animals in the land because the death of animals infected with the impure influences of those nations preserved the Jews from the poison; whereas in sacrifices the death of clean animals attracted wholesome preservative influences, [and that] pure and regular influences attached to certain classes and individuals of animals, and that *by breaking the bases in which they are fixed* they may become useful to man, and we should thus read Lev. xvii, 2: 'It is the blood that maketh atonement for the soul.'"

He then says that the virtue of sacrifices comes through the rapport that man has with animals and nature; and,

"if the Jews had observed the sacrifices faithfully, they would never have been abandoned, but would have drawn

upon themselves every good thing they were capable of receiving. The extraordinary holocausts at the three great festivals were to bring down upon the people such active influences as corresponded to the epochs, for we see bulls, rams, and lambs always added to the burnt sacrifices. Some substances, mineral, vegetable, and animal, retain a greater proportion of the living and powerful properties of their first estate."

In these views St. Martin had some of the truth. But Moses ordained some sacrifices as a religious duty from sanitary reasons of his own, since the unthinking tribes would perform devotional acts willingly which, if imposed only as hygienic measures, they might omit. (5) The burnt offerings were, however, founded upon different views, very like those at the bottom of Hindu sacrifices, and the law of which is stated in these words from our chapter:

"Beings are nourished by food. Food has its origin from rain. *Rain is the fruit of sacrifice.* Sacrifice is performed by action."

It is not contended by either Brahmins or their followers that food will not be produced except from sacrifice performed according to Vedic ritual, but that *right food*, productive in the physical organism of the proper conditions enabling man to live up to his highest possibilities, alone is produced in that age where the real sacrifices are properly performed. In other places and ages food is produced, but it does not in everything come up to the required standard. In this age we have to submit to these difficulties, and can overcome them by following Krishna's instructions as given in this book. In a verse just quoted the distinction is made between food naturally produced without, and that due to, sacrifice, for he says, "For, being nourished by

sacrifices, the gods will give you the *desired* food." Carrying out the argument, we find as a conclusion that if the sacrifices which thus nourish the gods are omitted, these "gods" must die or go to other spheres. And as we know that sacrifices are totally disused now, the "gods" spoken of must have long ago left this sphere. It is necessary to ask what and who they are. They are not the mere idols and imaginary beings so constantly mentioned in the indictments brought against India by missionaries, but are certain powers and properties of nature which leave the world when the Kali Yuga or dark age, as this is called, has fully set in. Sacrifices therefore among us would be useless just at present.

There is, however, another meaning to the "revolution of the wheel" spoken of by Krishna. He makes it very clear that he refers to the principle of reciprocity or Brotherhood. And this he declares must be kept revolving; that is, each being must live according to that rule, or else he lives a life of sin to no purpose. And we can easily believe that in these days this principle, while admired as a fine theory, is not that which moves the people. They are, on the contrary, spurred by the personal selfish idea of each one becoming better, greater, richer than his neighbor. If continued unchecked it would make this nation one entirely of Black Magicians. And it was to counteract this that the Theosophical Society was founded, with the object of inducing men to once more revolve this wheel of Brotherly Love first set in motion by the "Creator when of old he had created mortals."

Krishna then proceeds to exhort Arjuna again to perform the duties appointed to him, and urges him to do it on the ground that he being a great man should set a good example that the lower orders would follow: saying,

"He who understands the whole universe should not cause these people, slow and ignorant of the universe, to relapse

from their duty."

Knowing that, under the great cyclic laws which govern us, periods arrive even in the worst of ages when good examples of living imprinted on the astral light cause effects ever increasing in intensity until at last the "gods" before referred to begin in distant spheres to feel the force of these good actions and to return again to help mankind on the recurrence of a better age, he implores Arjuna to be the very first to set the good example.

In such an age as this, the ritualistic sacrifice of a different age which has indeed a magical effect becomes a sacrifice to be performed by each man in his own nature upon the altar of his own heart. And especially is this so with theosophists of sincerity and aspiration. Being born as we are in these days, among families with but small heritage in the way of descent from unsullied ancestors, we are without the advantage of great natural spiritual leanings, and without certain peculiar powers and tendencies that belong to another cycle. But the very force and rapidity of the age we live in give us the power to do more now in fewer incarnations. Let us then recognize this, and learn what is our duty and do it. This portion of the chapter ends with a famous verse:

"It is better to do one's own duty, even though it be devoid of excellence, than to perform another's duty well. Death is better in the performance of one's own duty. Another's duty is productive of danger."

(To be continued.)

FOOTNOTES:

1. See *Lucifer* of April and May, 1888, in *Articles Practical Occultism and Occultism and the Occult Arts*. — [Ed.] ([return to text](#))

2. It is to be noticed that Arjuna and Krishna constantly change the names by which they address each other. When Krishna is dwelling on one subject or upon something that has to do with a particular phase of Arjuna's nature, he gives him some name that has reference to the quality, subject, or other matter referred to, and Arjuna changes the name of Krishna whenever he has need. As in these first verses, the name used for the Blessed Lord is *Janardana*, which means "giver of all that men ask," — meaning thereby to refer to Krishna's potency in the bringing to fulfilment all wishes. — B. ([return to text](#))

3. My readers may not agree with me that this is the Dark Age, inasmuch as that is the term applied to a period now past. That time, however, was a part of this; and this is even darker than that, as we think. — B. ([return to text](#))

4. See *Man: His Nature and Destiny* (1802). — B. ([return to text](#))

5. In India there are numerous religious observances having in view sanitary effects. For instance the cholera dance — a religious matter — in which, while disinfecting camphor is burned in heaps, a curious flower-umbrella-dance is engaged in with religious chants and music. — B. The Path

THE THREE PLANES OF HUMAN LIFE — *Eusebio Urban*

JAGRATA, SWAPNA, SUSHUPTI: WAKING, DREAMING,
DREAMLESS SLEEP.

I speak of ordinary men. The Adept, the Master, the Yogi, the Mahatma, the Buddha, each lives in more than three states while incarnated upon this world, and they are fully conscious of them all, while the ordinary man is only conscious of the first — the waking-life, as the word conscious is now understood.

Every theosophist who is in earnest ought to know the importance of these three states, and especially how essential it is that one should not lose in Swapna the memory of experiences in Sushupti, nor in Jagrata those of Swapna, and *vice versa*.

Jagrata, our waking state, is the one in which we must be regenerated; where we must come to a full consciousness of the Self within, for in no other is salvation possible.

When a man dies he goes either to the Supreme Condition from which no return against his will is possible, or to other states — heaven, hell, avitchi, devachan, what not — from which return to incarnation is inevitable. But he cannot go to the Supreme State unless he has perfected and regenerated himself; unless the wonderful and shining heights on which the Masters stand have been reached while he is in a body. This consummation, so devoutly desired, cannot be secured unless at some period in his evolution the being takes the steps that lead to the final attainment. These steps can and must be taken. In the very first is contained the possibility of the last, for causes once put in motion eternally produce their natural results.

Among those steps are an acquaintance with and understanding

of the three states first spoken of. Jagrata acts on Swapna, producing dreams and suggestions, and either disturbs the instructions that come down from the higher state or aids the person through waking calmness and concentration which tend to lessen the distortions of the mental experiences of dream life. Swapna again in its turn acts on the waking state (Jagrata) by the good or bad suggestions made to him in dreams. All experience and all religions are full of proofs of this. In the fabled Garden of Eden the wily serpent whispered in the ear of the sleeping mortal to the end that when awake he should violate the command. In Job it is said that God instructeth man in sleep, in dreams, and in visions of the night. And the common introspective and dream life of the most ordinary people needs no proof. Many cases are within my knowledge where the man was led to commit acts against which his better nature rebelled, the suggestion for the act coming to him in dream. It was because the unholy state of his waking thoughts infected his dreams, and laid him open to evil influences. By natural action and reaction he poisoned both Jagrata and Swapna.

It is therefore our duty to purify and keep clear these two planes.

The third state common to all is *Sushupti*, which has been translated "*dreamless sleep*." The translation is inadequate, for, while it is dreamless, it is also a state in which even criminals commune through the higher nature with spiritual beings and enter into the spiritual plane. It is the great spiritual reservoir by means of which the tremendous momentum toward evil living is held in check. And because it is involuntary with them, it is constantly salutary in its effect.

In order to understand the subject better, it is well to consider a little in detail what happens when one falls asleep, has dreams, and then enters *Sushupti*. As his outer senses are dulled the brain

begins to throw up images, the reproductions of waking acts and thoughts, and soon he is asleep. He has then entered a plane of experience which is as real as that just quitted, only that it is of a different sort. We may roughly divide this from the waking life by an imaginary partition on the one side, and from Sushupti by another partition on the other. In this region he wanders until he begins to rise beyond it into the higher. There no disturbances come from the brain action, and the being is a partaker to the extent his nature permits of the "banquet of the gods." But he has to return to waking state, and he can get back by no other road than the one he came upon, for, as Sushupti extends in every direction and Swapna under it also in every direction, there is no possibility of emerging at once from Sushupti into Jagrata. And this is true even though on returning: no memory of any dream is retained.

Now the ordinary non-concentrated man, by reason of the want of focus due to multitudinous and confused thought, has put his Swapna field or state into confusion, and in passing through it the useful and elevating experiences of Sushupti become mixed up and distorted, not resulting in the benefit to him as a waking person which is his right as well as his duty to have. Here again is seen the lasting effect, either prejudicial or the opposite, of the conduct and thoughts when awake.

So it appears, then, that what he should try to accomplish is such a clearing up any vivification of Swapna state as shall result in removing the confusion and distortion existing there, in order that upon emerging into waking life he may retain a wider and brighter memory of what occurred in Sushupti. This is done by an increase of concentration upon high thoughts, upon noble purposes, upon all that is best and most spiritual in him while awake. The best result cannot be accomplished in a week or a year, perhaps not in a life, but, once begun, it will lead to the

perfection of spiritual cultivation in some incarnation hereafter.

By this course a centre of attraction is set up in him while awake, and to that all his energies flow, so that it may be figured to ourselves as a focus in the waking man. To this focal point — looking at it from that plane — converge the rays from the whole waking man toward Swapna, earning him into dream-state with greater clearness. By reaction this creates another focus in Swapna, through which he can emerge into Sushupti in a collected condition. Returning he goes by means of these points through Swapna, and there, the confusion being lessened, he enters into his usual waking state the possessor, to some extent at least, of the benefits and knowledge of Sushupti. The difference between the man who is not concentrated and the one who is, consists in this, that the first passes from one state to the other through the imaginary partitions postulated above, just as sand does through a sieve, while the concentrated man passes from one to the other similarly to water through a pipe or the rays of the sun through a lens. In the first case each stream of sand is a different experience, a different set of confused and irregular thoughts, whereas the collected man goes and returns the owner of regular and clear experience.

These thoughts are not intended to be exhaustive, but so far as they go it is believed they are correct. The subject is one of enormous extent as well as great importance, and theosophists are urged to purify, elevate, and concentrate the thoughts and acts of their waking hours so that they shall not continually and aimlessly, night after night and day succeeding day, go into and return from these natural and wisely appointed states, no wiser, no better able to help their fellow men. For by this way, as by the spider's small thread, we may gain the free space of spiritual life.

ESCAPE OR ACHIEVEMENT — *B. N. Acle*

"They change their skies, but not their natures, who cross the seas," — so runs the proverb; and doubtless many of us can bear witness that it is as true today as when it fell from the lips of the wise Roman of old.

"What must I do to be saved?" was the cry, when tossed on the stormy and uncharted ocean of orthodoxy: "Where shall I find a pilot?" signals the vessel, hove-to off the entrance to the fair-haven of Theosophy.

One who, while serving his country gallantly on many a hard-fought field, yet strove according to his lights to be loyal to Him whom he regarded as his Heavenly Master, was wont to say that if he "could just squeeze inside of the Golden Gate," he would be entirely content. Before indulging in the smile of superiority at this honest, if lowly, confession, it might be well to examine whether this is not our own real, though possibly unconscious, attitude; whether, when we say "*Must* I give up this?", or, "Is it *necessary* to do that?", we do not really mean "How much of this world's pleasures may I venture to indulge in? how close can I point to windward without being taken aback?" in other words. "Can I do this, or enjoy that, and yet 'just squeeze inside?'"

Assuming, however, that the inquiry is made in sincerity and good faith, it is evident that the answer must depend upon the reply that the seeker makes to the question addressed to him in turn, "What is your object in life — to avoid an imaginary punishment, to obtain in the future a definite and limited reward? or to enter, now and here, upon a path of ever-increasing wisdom, knowledge, and peace, of inconceivable splendour and limitless extent? is your aim negative or positive?"

in a word, is it Escape or Achievement?"

Now from the standpoint of official Christianity, the attitude of the simple-hearted soldier is not only entirely logical, but thoroughly satisfactory: and if we also are of this way of thinking — if, as the Bhagavad Gita says, we prefer "a transient enjoyment of heaven to eternal absorption" — doubtless in Devachan we shall find fulness of joy: "Those who worship the Devatas go unto the Devatas."

But to those strong souls whose passionate longing is to find "the small, old path;" who disdain the gentler slopes which the feeble must needs follow; whose eyes seek the snowy pinnacle rather than the smiling valley, though it were the Land of Beulah itself; who, far from desiring the enjoyment of Devachan, regard it rather as a halt in their progress, a loss of time, so to speak, and would gladly forego its delights in order to re-incarnate at once and continue without interruption in their work for the good of the race; — what answer shall be returned them? Obviously none; since, for them, such questions never arise. They ask not, What *shall* I give up? but, What *can* I?; not, What indulgence *must* I deny myself? but, What encumbrance can I cast aside, that I may the more swiftly and easily mount.

It was said by One of old time, "Ye cannot serve two masters." God and Mammon were the instances cited by the Teacher, but the saying holds true of any given opposite or conflicting aims. And the great trouble is that, although we may be unwilling to admit it even to ourselves, very few of us are really single-hearted: whether from physical infirmity, so-called hereditary tendency, or Karmic environment matters not so far as regards the fact and the inevitable consequences resulting therefrom. Possibly all that many of us can accomplish in this incarnation will be in the nature of a species of compromise, or perhaps, more correctly, a

net result, — a sort of moral diagonal of forces, so to speak, the resultant of the opposing tendencies of our earthly attractions and spiritual aspirations.

But he whose aim is single, whose eye never loses sight of the end, acts on his plane as the successful man of business on his: do we ever hear the latter ask, "*Must* I stay in my office eight hours a day? is it absolutely necessary to miss this race, or forego that dinner, in order to close this contract or elaborate that plan?" Does he not rather work fourteen, or sixteen, hours, give up recreation, literary, artistic, social, even to a great extent the joys of the home circle, tax his ingenuity to the uttermost to devise new openings, find fresh fields for enterprise? and this day after day, year in and year out, until either fortune is won, or health and, perhaps, life itself are sacrificed in the determined effort?

Perhaps it might be laid down broadly that any question prefaced by "must" should be answered in the negative; for the fact of its being put in that form proclaims, louder than any words, that not yet is the seeker able to free himself from attachment; and until he can do this — until, as is said in *Through the Gates of Gold*, he can place the object before him, and clearly, coolly, and dispassionately examine it from all points of view, fully admitting its attractions as well as recognizing its drawbacks, and then calmly, deliberately, without a trace of regret or a sigh of longing, dismiss the very idea from his heart, — until he can do all this, forcible repression by mere strength of will avails nothing: the desire, coerced at one point, returns with accumulated strength at another; if not on the physical plane, then on the mental; if not in this incarnation, then in another. This is the teaching of all the ages, from the Upanishads to *Light on the Path*, of the Bhagavad Gita and the Bible, of Buddha and Jesus alike. Nothing that is done as a penance, as a so-called "mortification of the flesh," or merely out of deference to the feelings, or opinions, or prejudices of

others, can be of any real value to the man himself.

One who makes a virtue of refusing to play cards in the social circle, while still having the desire in his heart, may yet lose money and reputation in Wall street; he who, against his own judgment, is persuaded to deprive himself of the comfort resulting from the rational use of tobacco, may wreck his nerves by inordinate indulgence in strong tea, — and this without incurring the censure of clergymen, reformers, or old women of either sex. In this, as in all things, we may learn from the working of Nature. The tree yields fruit not only after its kind, but in its own due time. There is neither haste nor delay in her evolutionary methods, — first the blossom and then the fruit, is her unvarying rule: and, knowing this, we do not expect to pluck the matured ear of July from the tender shoot of April: we rejoice in the budding sweetness of the vineyard in the joyous Springtide, untroubled by any anxiety lest the golden glory of September should fail to ripen the purple clusters.

So in our daily round and occupation, everything comes in its appointed time and refuses to be hurried: sculptured granite is not more immovable than the Express, a second before its flying wheels begin to turn; as the hand on the dial points to the hour, the ingenious mechanism of the time-lock swings back the massive doors of the vault which, a moment before, would have defied the strength of a hundred men to open.

"And what shall I do with my sword?" asked the brilliant young courtier of George Fox, by whose teachings he had become converted to Quakerism. "Friend;" replied the wise and courteous man of Peace, "wear it, — *as long as thou canst!*" but full soon William Penn counted it all joy to exchange jewelled sword and velvet coat for the simple garb of the people with whom he had cast in his lot. And when the day comes — as come it must, in the

fulness of times — when we are ready, in this spirit, to lay everything on the altar — whether choice possessions or valued opinions, favorite habits or cherished beliefs, our so-called virtues not less than what are termed our vices; when we can do all this, not as a sacrifice, but with joy and gladness, when our songs of deliverance are borne upon the upwreathing incense; then we, likewise, shall be no longer perplexed by the "must" or the "shall", for we shall then be treading the King's Highway of Achievement, and not scuffling along the back alleys of Escape.

Let us then be ever on guard lest aught tempt us from that "Middle Road" which the Lord Buddha pointed out to us, and in which we know our feet to be set; and by following it in all patience and loyalty, with dauntless will and unswerving devotion, we shall in His own time — which is always the best time — come to realize the portion which He has assured us shall be that of all who truly love and serve Him.

"Who wins

To such commencement hath the *First Stage* touched:

He knows the Noble Truths, the Eight-fold Road:

By few or many steps such shall attain

NIRVANA'S blest abode."

The Path

CONVERSATIONS ON OCCULTISM: V

MANTRAMS.

Student. — You spoke of mantrams by which we could control elements on guard over hidden treasure. What is a mantram?

Sage. — A mantram is a collection of words which, when sounded in speech, induce certain vibrations not only in the air, but also in the finer ether, thereby producing certain effects.

Student. — Are the words taken at haphazard?

Sage. — Only by those who, knowing nothing of mantrams, yet use them.

Student. — May they, then, be used according to rule and also irregularly? Can it be possible that people who know absolutely nothing of their existence or field of operations should at the same time make use of them? Or is it something like digestion, of which so many people know nothing whatever, while they in fact are dependent upon its proper use for their existence? I crave your indulgence because I know nothing of the subject.

Sage. — The "common people" in almost every country make use of them continually, but even in that case the principle at the bottom is the same as in the other. In a new country where folklore has not yet had time to spring up, the people do not have as many as in such a land as India or in long settled parts of Europe. The aboriginies, however, in any country will be possessed of them.

Student. — You do not now infer that they are used by Europeans for the controlling of elementals?

Sage. — No. I refer to their effect in ordinary intercourse between human beings. And yet there are many men in Europe, as well as in Asia, who can thus control animals, but those are nearly always special cases. There are men in Germany, Austria, Italy, and Ireland who can bring about extraordinary effects on horses, cattle, and the like, by peculiar sounds uttered in a certain way. In those instances the sound used is a mantram of only one member, and will act only on the particular animal that the user knows it can rule.

Student. — Do these men know the rules governing the matter? Are they able to convey it to another?

Sage. — Generally not. It is a gift self-found or inherited, and they only know that it can be done by them, just as a mesmeriser knows he can do a certain thing with a wave of his hand, but is totally ignorant of the principle. They are as ignorant of the base of this strange effect as your modern physiologists are of the function and cause of such a common thing as yawning.

Student. — Under what head should we put this unconscious exercise of power?

Sage. — Under the head of natural magic, that materialistic science can never crush out. It is a touch with nature and her laws always are served by the masses, who, while they form the majority of the population, are yet ignored by the "cultured classes." And so it will be discovered by you that it is not in London or Paris or New York drawing-rooms that you will find mantrams, whether regular or irregular, used by the people. "Society," too cultured to be natural, has adopted methods of speech intended to conceal and to deceive, so that natural mantrams can not be studied within its borders.

Single, natural mantrams are such words as "wife." When it is

spoken it brings up in the mind all that is implied by the word. And if in another language, the word would be that corresponding to the same basic idea. And so with expressions of greater length, such as many slang sentences: thus, "I want to see the color of his money." There are also sentences applicable to certain individuals, the use of which involves a knowledge of the character of those to whom we speak. When these are used, a peculiar and lasting vibration is set up in the mind of the person affected, leading to a realization in action of the idea involved, or to a total change of life due to the appositeness of the subjects brought up and to the peculiar mental antithesis induced in the hearer. As soon as the effect begins to appear the mantram may be forgotten, since the *law of habit* then has sway in the brain.

Again, bodies of men are acted on by expressions having the mantramic quality; this is observed in great social or other disturbances. The reason is the same as before. A dominant idea is aroused that touches upon a want of the people or on an abuse which oppresses them, and the change and interchange in their brains between the idea and the form of words go on until the result is accomplished. To the occultist of powerful sight this is seen to be a "ringing" of the words coupled with the whole chain of feelings, interests, aspirations, and so forth, that grows faster and deeper as the time for the relief or change draws near. And the greater number of persons affected by the idea involved, the larger, deeper, and wider the result. A mild illustration may be found in Lord Beaconsfield of England. He knew about mantrams, and continually invented phrases of that quality. "Peace with honor" was one; "a scientific frontier" was another; and his last, intended to have a wider reach, but which death prevented his supplementing, was "Empress of India." King Henry of England also tried it without himself knowing why, when he added to his titles, "Defender of the Faith." With these hints

numerous illustrations will occur to you.

Student. — These mantrams have only to do with human beings as between each other. They do not affect elementals, as I judge from what you say. And they are not dependent upon the *sound* so much as upon words bringing up ideas. Am I right in this; and is it the case that there is a field in which certain vocalizations produce effects in the *Akasa* by means of which men, animals, and elementals alike can be influenced, without regard to their knowledge of any known language?

Sage. — You are right. We have only spoken of natural, unconsciously-used mantrams. The scientific mantrams belong to the class you last referred to. It is to be doubted whether they can be found in modern Western languages, — especially among English speaking people who are continually changing and adding to their spoken words to such an extent that the English of today could hardly be understood by Chaucer's predecessors. It is in the ancient Sanskrit and the language which preceded it that mantrams are hidden. The laws governing their use are also to be found in those languages, and not in any modern philological store.

Student. — Suppose, though, that one acquires a knowledge of ancient and correct mantrams, could he affect a person speaking English, and by the use of English words?

Sage. — He could: and all adepts have the power to translate a strictly regular mantram into any form of language, so that a single sentence thus uttered by them will have an immense effect on the person addressed, whether it be by letter or word of mouth.

Student. — Is there no way in which we might, as it were, imitate those adepts in this?

Sage. — Yes, you should study simple forms of mantramic quality, for the purpose of thus reaching the hidden mind of all the people who need spiritual help. You will find now and then some expression that has resounded in the brain, at last producing such a result that he who heard it turns his mind to spiritual things.

Student. — I thank you for your instruction.

Sage. — May the Brahmamantram guide you to the everlasting truth. — OM.

The Path

RESPECTING REINCARNATION

Objections frequently raised against "Reincarnation," and that appear to those who make them to be strong, are some growing out of the emotional part of our nature. They say, "We do not wish to be some one else in another life; how can we recognize our friends and loved ones if they and we thus change our personality? The absorbing attachments we form here are such that happiness would seem impossible without those we love."

It is useless to say in reply that, if Reincarnation be the law, it can and will make no difference what we would like or dislike. So long as one is governed by his likes and dislikes, logical arguments will not dissipate objections, and, if it is coldly asserted that the beloved objects of our affection pass at death forever beyond us, no relief is afforded to the mind nor is a strictly accurate statement made. In fact, one of the miseries of conditioned existence is the apparent liability of forever losing those upon whom we place our hearts. So to meet this difficulty raised by ever present death, the Christian churches have invented their heaven in which reunion is possible under a condition, the acceptance of the dogma of the Redeemer. None of their believers seem to consider that, inasmuch as constantly many of those most closely bound to us by every tie do not and never will meet the prerequisite condition, happiness in that heaven cannot be possible when we constantly are aware that those unbelievers are suffering in hell, for, enough memory being left to permit us to recognize believing friends, we cannot forget the others. Greater than ever, then, that difficulty becomes.

What are these loves? must be asked. They are either (*a*) a love for the mere physical body, or (*b*) one for the soul within. Of

course in the first case, the body being disintegrated at death, it is not possible for us, nor need we wish — unless we are grossly materialistic — to see that in the other life. And *personality* belongs only to the body. Hence, if the soul that we do love inhabits another physical frame, it is the law — a part of the law of Reincarnation not often stated or dwelt on — that we will again, when incarnated, meet that same soul in the new tenement. We cannot, however, always recognize it. But that, the recognition or memory of those whom we knew before, is one of the very objects of our study and practice. Not only is this the law as found in ancient books, but it has been positively stated, in the history of the Theosophical Society, in a letter from an Adept addressed not many years ago to some London theosophists. In it he asked them if they imagined that they were together as incarnated beings for the first time, stated that they were not, and laid down the rule that the real affinities of soul life drew them together on earth.

To be associated against our will with those who lay upon us the claim of mother, father, brother, son, or wife from a previous life would neither be just nor necessary. Those relations, as such, grew out of physical ties alone, and souls that are alike, who really love each other, as well as those who harbor hate, are brought together in mortal bodies as now father and now son —, or otherwise.

So, then, with the doctrine of Devachan we have the answer. In that state we have with us, for all practical purposes and to suit our desire, every one whom we loved on earth: upon being reincarnated we are again with those whose souls we are naturally attracted to.

By living up to the highest and best of our convictions, for humanity and not for *self*, we make it possible that we shall at last

recognize in some earth-life those persons whom we love, and to lose whom forever seems such a dreary and uninviting prospect.

The Path

THE BHAGAVAD GITA: X — *William Brehon*

CHAPTER THIRD.

Krishna having said to Arjuna that a certain class of men, being without faith, revile the true doctrine and perish at last, bewildered even by all their knowledge, Arjuna sees at once a difficulty growing out of a consideration of what, if anything, induces these men to sin as it were against their will. He sees in this the operation of an unknown force that moulds men in a manner that they would not allow if conscious of it, and he says:

"Instigated by what does this man incur sin, even against his will. O descendant of Vrishni, impelled, as it were, by force?"

To this Krishna replies:

"It is desire; it is passion springing from the quality of Tamas (darkness), voracious, all-sinful. Know that it is hostile to man in this world. As fire is surrounded by smoke, and a mirror by rust, (1) as the foetus is involved in the womb, so is this universe surrounded by this quality. Knowledge is surrounded by this, and it is the constant enemy of the wise man — a fire which assumes any form it will, O son of Kunti! and is insatiable. Its empire is said to be the senses, the heart, and the intellect. By means of these it surrounds knowledge and bewilders the soul. Therefore do thou, O best of Bharatas! in the first place, restraining thy senses, cast off this sinful impetus which devours spiritual knowledge and spiritual discernment.

"They say that the senses are great. The heart is greater than the senses. But intellect is greater than the heart, and

that which is greater than intellect is this passion. Knowing that it is thus greater than the mind, strengthening thyself by thyself, do thou O great-armed one! slay this foe, which assumes any form it will and is intractable."

Deep reflection upon this reply by the Great Lord of Men shows us that the realm over which the influence of passion extends is much wider than we at first supposed. It is thought by many students that freedom can be quickly obtained as soon as they begin the study of Occultism or the investigation of their inner being of which the outer is only a partial revealment. They enter upon the study full of hope, and, finding great relief and buoyancy, think that the victory is almost won. But the enemy spoken of, the obstruction, the taint, is present among a greater number of the factors that compose a being than is apparent.

Krishna has reference to the three qualities of *Satwa*, *Rajah*, and *Tamo*. The first is of the nature of truth, pure and bright; the second partakes of truth in a lesser degree, is of the nature of action, and has also in it the quality of badness; the third, *Tamas*, is wholly bad, and its essential peculiarity is *indifference*, corresponding to darkness, in which no action of a pure quality is possible.

These three great divisions — or as it is in the Sanskrit, *gunas* — comprehend all the combinations of what we call "qualities," whether they be moral, mental, or physical.

This passion, or desire, spoken of in the chapter is composed of the two last qualities, *Rajah* and *Tamas*. As Krishna says, it is intractable. It is not possible, as some teach, to bring desire of this sort into our service. It must be slain. It is useless to try to use it as a helper, because its tendency is more towards *Tamas*, that is, downward, than towards the other.

It is shown to surround even knowledge. It is present, to a greater or lesser degree, in every action. Hence the difficulty encountered by all men who set out to cultivate the highest that is in them.

We are at first inclined to suppose that the field of action of this quality is the senses alone; but Krishna teaches that its empire reaches beyond those and includes the heart and the intellect also. The incarnated soul desiring knowledge and freedom finds itself snared continually by *Tamas*, which, ruling also in the heart and mind, is able to taint knowledge and thus bewilder the struggler.

Among the senses particularly, this force has sway. And the senses include all the psychical powers so much desired by those who study occultism. It does not at all follow that a man is spiritual or knows truth because he is able to see through vast distances, to perceive the denizens of the astral world, or to hear with the inner ear. In this part of the human economy the dark quality is peculiarly powerful. Error is more likely to be present there than elsewhere, and unless the seer is self governed he gets no valuable knowledge, but is quite likely to fall at last, not only into far more grievous error, but into great wickedness.

We must therefore begin, as advised by Krishna, with that which is nearest to us, that is, with our senses. We cannot slay the foe there at first, because it is resident also in the heart and mind. By proceeding from the near to the more remote, we go forward with regularity and with certainty of conquest at last. Therefore He said, "In the first place, restrain thy senses." If we neglect those and devote ourselves wholly to the mind and heart, we really gain nothing, for the foe still remains undisturbed in the senses. By means of those, when we have devoted much time and care to the heart and mind, it may throw such obscurations and difficulties in the way that all the work done with the heart and mind is

rendered useless.

It is by means of the outward senses and their inner counterparts that a great turmoil is set up in the whole system, which spreads to the heart and from there to the mind, and, as it is elsewhere said, "The restless heart then snatches away the mind from its steady place."

We thus have to carry on the cultivation of the soul by regular stages, never neglecting one part at the expense of another. Krishna advises his friend to restrain the senses, and then to "strengthen himself by himself." The meaning here is that he is to rely upon the One Consciousness which, as differentiated in a man, is his Higher Self. By means of this higher self he is to strengthen the lower, or that which he is accustomed to call "myself."

It will not be amiss here to quote from some notes of conversation with a friend of mine.

"Our consciousness is *one* and not many, nor different from other consciousnesses. It is not *waking consciousness* or *sleeping consciousness*, or any other but *consciousness itself*.

"Now that which I have called consciousness is *Being*. The ancient division was:

"*Sat*, or Being;

"*Chit*, or Consciousness, Mind;

"*Ananda*, or Bliss.

"These together are called *Satchitananda*.

"But *Sat* — or Being — the first of the three, is itself both *Chit* and *Ananda*. The appearing together in full harmony of Being and Consciousness is Bliss or *Ananda*. Hence that

harmony is called *Satchitananda*.

"But the one consciousness of each person is the Witness or Spectator of the actions and experiences of every state we are in or pass through. It therefore follows that the waking condition of the mind is not separate consciousness.

"The one consciousness pierces up and down through all the states or planes of Being, and serves to uphold the memory — whether complete or incomplete — of each state's experiences.

"Thus in waking life, *Sat* experiences fully and knows. In dream state, *Sat* again knows and sees what goes on there, while there may not be in the brain a complete memory of the waking state just quitted. In Sushupti — beyond dream and yet on indefinitely, *Sat* still knows all that is done or heard or seen.

"The way to salvation must be entered. To take the first step raises the possibility of success. Hence it is said, 'When the first attainment has been won, *Moksha* (salvation) has been won.'

"The first step is giving up bad associations and getting a longing for knowledge of God; the second is joining good company, listening to their teachings and practising them; the third is strengthening the first two attainments, having faith and continuing in it. Whoever dies thus, lays the sure foundation for ascent to adeptship, or salvation."

We have come to the end of the third chapter, which is that upon *Devotion through Action*, or in Sanskrit, *Karma Yoga*. It has in these three chapters been distinctly taught that devotion must be

obtained, sought after, desired, cultivated. The disciple must learn to do every act with the Divine in view, and the Divine in everything. As it is said in the *Brihad Nundekeshwar Purana*: "While taking medicine one should think of Vishnu or the all-pervading; while eating, of Janardana, the All-Giver; while lying down, of Padmanabha; while marrying, of Prajapati, the Lord of Creatures; while fighting, of Chakradhara; while traveling in a foreign land, of Trivikrama; at the time of death, of Narayana; at the time of reunion with friends, of Sridhara; after dreaming bad dreams, of Govinda; at the time of danger, of Madhusudana; in the midst of a forest, of Narsingha; in the midst of fire, of Jalasai, or the one lying on the water; in the midst of water, of Varaha; on the mountain, of Raghunundana; while going, of Vaurana; and in all acts, of Madhava." All these names are the names of Vishnu in his various powers and appearances. It is seeing Krishna in everything, and everything in him. This at last we must do, for Ishwara, the spirit in each of us, is none other than Krishna; therefore let us think of Him and fight: while entangled in this dense forest of existence, let us think of Him, the Lion our guard, the Sage our guide, the Warrior our sure defense and shield.

FOOTNOTES:

1. The ancient form of mirror is here referred to. It was made of metal and highly burnished. Of course it was constantly liable to get rusty. And our own silvered mirror is liable also to cloud, owing to the oxidizing of the coating. — B. ([return to text](#))

A BUDDHIST DOCTRINE — *Eusebio Urban*

英文眞宗教旨

There are twelve principal Buddhist sects in Japan. These are: Ku-Sha-Shiu, Jo-Jitsu-Shiu, Ris-Shiu, Ho-so-Shiu, San-Ron-Shiu, Ke-Gon-Shiu, Ten-Dai-Shiu, Shin-Gon-Shiu, Jo-Do-Shiu, Zen-Shiu, Shin-Shiu, and Nichi-Ren-Shiu. It is of a tenet of the Shin-Shiu that I propose to speak. The student can learn much of the others by consulting the works of Mr. Bunyiu Nanjio, M. A., and other authorities.

The last four of those mentioned may be called the modern ones. Gen-Ku founded the Jo-Do in 1174 A. D.; the Zen-Shiu was started by Ei-Sai in 1191 A. D.; the Shin-Shiu was founded in 1224 A. D. by Shin-Ran; and in 1253 A. D., Nichi-Ren established that one named for him. This last is more frequently called by the founder's name because, although he adopted what is called the Saddharmapundarika as the principal Sutra of it, he altered the substance of the doctrine. For that reason it is called, paraphrastically, "Nichi-Ren's Saddharmapundarika sect."

The essential difference between the Shin-Shiu and the others may be seen by placing its doctrine and that of the Zen-Shu side by side. In the latter the disciple is to see the nature of Buddha by his own thought, free from the influence of the eighty-four thousand different doctrines, while the Shin-Shiu teaches that we attain salvation "*by the power of another*" who is Amita Buddha.

The Zen-Shiu is said to have originated from the incident, well known to Buddhists, of Gotama Buddha's taking from the heavenly king a flower of golden color and holding it in his hand in silence. The disciples could not understand the meaning of this,

except Mahakasyapa, who, although he knew, only smiled and remained also silent. Thereupon Buddha said to him, "I have the wonderful thought of Nirvana." This was called "the doctrine of thought transmitted by thought." Ananda received it from Kasyapa, and so on down a long list of patriarchs in the church. The twenty-eighth patriarch, Bodhidharma, a king's son, crossed over into China. In that country he attempted to teach the Emperor the secret of the doctrine, but the pupil could not understand it, and Bodhidharma entered a monastery where he pursued the practice of sitting in meditation gazing at a wall for nine years, after which he gained disciples. He was called "the wall-gazing Brahmana." A later devotee in 729 A. D, came from China to Japan and established a form of the doctrine of Zen-Shiu. In this school, as distinguished from the Shin-Shiu, the disciple exercises his own thought independent of doctrine, while in the latter a doctrine is relied upon. The words of the Indian poem Bhagavad-Gita may be profitably remembered here, where it says that "he who pursues the unmanifested path has a more difficult task [than any other] to perform." (1)

The other sects, except the Shin-Shiu, have various doctrines for the attainment of the end in view, but the followers of the Shin-Shiu declare that all these are "expedients." They do not exclude the Zen-Shiu, although it would appear perhaps to the aggressive mind of the Englishman or American that to tell a man he can attain Nirvana by his own power is not laying a mere expedient before him.

It is because of these doctrines of expediency in other sects that the Shin-shiu call themselves "the True Sect of Buddhists."

The doctrine of the sect is also called by them "the Doctrine of the Pure Land." The pure land referred to is the Land of Amida Buddha [Amitabha]: the object is to be born into that land, that is,

to obtain salvation. It has been otherwise stated in this manner:

"Among those who follow the doctrine of the Pure Land, there are several different systems of teaching, which are as follows: — 'Some say that we should practise various good works, bring our stock of merits to maturity, and be born in the Pure Land. Others say that we should repeat only the name of Amitabha Buddha in order to be born in his Pure Land, by the merit produced from such repetition.' These doctrines are all considered as yet the temporary expedients. To rely upon the power of the original prayer of Amitabha Buddha with the whole heart and give up all idea of Ji-Riki or 'self-power' is called the truth. This truth is the doctrine of this sect." (2)

The eighteenth of the forty-eight prayers of Amita Buddha is the prayer referred to. It is: "If any of living beings of the ten regions who have believed in me with true thoughts and desire to be born in my country, and have even to ten times repeated the thought of my name, should not be born there, then may I not obtain the perfect knowledge." This prayer was made by him because of his great desire to deliver all beings from suffering. It was a prayer which he first uttered long before he himself obtained salvation, but he continued for ages after that to work to the end that he might be able to make the prayer of force and value to any one who should use it. It follows, of course, that he accomplished his desire, and the Shin-Shin sect accordingly claims that this prayer or vow has a peculiar effect of its own, and has strength to enable whoever uses it to reach salvation.

The claims made for this prayer are in accordance with certain views that are held in the East about the force that resides in the vows of a wise or great saint. They are said to have an actual dynamic effect upon the minds and hearts of all persons who

shall use them, even after the saint has died. It is claimed that the power has to do with magnetism. And it is said by the followers of Shin-Shiu that, when one begins to repeat and rely upon the prayer of Amita Buddha, he at once connects himself with the whole body of real believers, and as well with the power of Amita himself.

In its essence the doctrine is one of salvation by faith, but at the same time the sect does not claim — as the Christian does for his dogma — that there is no other way to be saved. They admit that a person may be saved "by his own power" — if he has the requisite strength to hold out —, but they think that in general men have not the power to resist evil for a time sufficient to permit the accomplishment of the result; and they assert that besides the lack of strength there will be doubt, for, "Faith by one's own power cannot afford rest to the heart. It is said, 'Shall I surely attain salvation or shall I not?' and thus what is called faith is in reality doubt," but "Faith by the power of another affords rest to the heart. It is said —: 'I am born by the power of that vow; I shall certainly attain salvation.' There is not the smallest doubt in the heart." Another Sutra says: "Those who follow the method of 'self power' believe in many other Buddhas; those who follow the method of 'another's power' believe only in the one Buddha, as a faithful servant does not serve two masters."

In a compilation made by direction of the Eastern Hongwanji of Japan it is said

"The appellations 'true' and 'popular' are an important matter. Our sect terms the attaining of the rest of the heart the True System; the observation of the relations of life the Popular System. Our sect has granted the permission to marry. Hence the five relations of life necessarily exist. Where the five relations of life exist, the duties involved in

them must be observed. This is termed 'the popular system.'

"It is said in the Sutra: '*The living beings in the ten regions, be they householders or houseless.*' * * * Shall the holy path be different for them? Although the sins of the unenlightened be many, if these are contrasted with the power of the vow they are not as the millet seed to the ocean. * * * The sins of the unenlightened are heavy; if you precipitate them on the three worlds they inevitably sink; but if you place them on the ship of the vow they assuredly become light. The merit of living beings is full of leaks. Mida's land of reward has no leaks. With the merit which is full of leaks you cannot be born into the land where there are no leaks."

From a later part of the same compilation:

"Our Founder said: '*brothers within the four seas.*' Faith by the power of another proceeds from Mida. Thus Mida is father and mother; all within the four seas are brothers. The Chinese call foreigners barbarians; foreigners call China uncivilized. Both, we consider, are wrong. Those who do not observe the relations of life are the barbarians, without distinction of 'home' or 'foreign.' Throughout all that the heaven covers, wherever sun and moon shine, what is there that we shall call barbarian or uncivilized? When the heart is wide as heaven and earth, the discourse clear as sun and moon, then first is attained the equitable and just. Between heaven and earth there is no one to be disassociated, no spot not to be reached. The kindly relations of intercourse make the friend; two persons the same mind; their spirit is as disseparated gold. One country the same mind; as a golden bowl without defect. All

countries the same mind; then first is attained the perfect equitability. The foundation of the same mind is the calling to remembrance of the one Buddha." * * *

"Zendo has said: 'We are truly like this: unenlightened we are subject to the evil of birth and death; for long Kalpas we revolve, sinking and floating in the sea of existence; there seems no cause of escape' * * * But He, Amida Buddha, long kalpas ago putting forth a heart of great compassion, planning through five kalpas, having accomplished the long kalpas, *perfected his vow.*"

Hence we find the sect without spells or supplications for the avoiding of trouble. They hold that the trouble and misery of our life are due to causes originated either in long past existence or in the present incarnation. These last are to be carefully avoided, and the "popular system" gives the various rules to follow. But the causes that lie rooted in prior incarnations cannot be provided for in any way. This stored-up Karma it is useless to regret or try to avoid. It will have its course. But we must submit cheerfully, knowing that, by relying on the power of Buddha's sublime vow and by joining right practice to it, in time all Karma, good and bad, will be exhausted. Hence there are no spells, talismans, or supplications used by the Shin-Shiu. All its followers must follow and imitate the Buddha in his great love and compassion, and they hold that, if this were the practice in every part of the world, harmony would prevail and prosperity come to all with peace and joy.

The Path

CONVERSATIONS ON OCCULTISM: VI

Student. — A materialist stated to me as his opinion that all that is said about mantrams is mere sentimental theorizing, and while it may be true that certain words affect people, the sole reason is that they embody ideas distasteful or pleasant to the hearers, but that the mere sounds, as such, have no effect whatever, and as to either words or sounds affecting animals he denied it altogether. Of course he would not take elementals into account at all, as their existence is impossible for him.

Sage. — This position is quite natural in these days. There has been so much materialization of thought, and the real scientific attitude of leading minds in different branches of investigation has been so greatly misunderstood by those who think they follow the example of the scientific men, that most people in the West are afraid to admit anything beyond what may be apprehended by the five senses. The man you speak of is one of that always numerous class who adopt as fixed and unalterable general laws laid down from time to time by well known *savants*, forgetting that the latter constantly change and advance from point to point.

Student. — Do you think, then, that the scientific world will one day admit much that is known to Occultists?

Sage. — Yes, it will. The genuine Scientist is always in that attitude which permits him to admit things proven. He may seem to you often to be obstinate and blind, but in fact he is proceeding slowly to the truth — too slowly, perhaps, for you, yet not in the position of knowing all. It is the veneered scientist who swears by the published results of the work of leading men as being the last word, while, at the very moment he is doing so, his authority may

have made notes or prepared new theories tending to greatly broaden and advance the last utterance. It is only when the dogmatism of a priest backed up by law declares that a discovery is opposed to the revealed word of his god, that we may fear. That day is gone for a long time to come, and we need expect no more scenes like that in which Galileo took part. But among the materialistic minds to whom you referred, there is a good deal of that old spirit left, only that the "revealed word of God" has become the utterances of our scientific leaders.

Student. — I have observed that within even the last quarter of a century. About ten years ago many well-known men laughed to scorn any one who admitted the facts within the experience of every mesmeriser, while now, under the term "hypnotism," they are nearly all admitted. And when these lights of our time were denying it all, the French doctors were collating the results of a long series of experiments. It seems as if the invention of a new term for an old and much abused one furnished an excuse for granting all that had been previously denied. But have you anything to say about those materialistic investigators? Are they not governed by some powerful, though unperceived, law?

Sage. — They are. They are in the forefront of the mental, but not of the spiritual, progress of the time, and are driven forward by forces they know nothing of. Help is very often given to them by the Masters, who, neglecting nothing, constantly see to it that these men make progress upon the fittest lines for them, just as you are assisted not only in your spiritual life but in your mental also. These, men, therefore, will go on admitting facts and finding new laws or new names for old laws, to explain them. They cannot help it.

Student. — What should be our duty, then, as students of truth? Should we go out as reformers of science, or what?

Sage. — You ought not to take up the role of reformers of the schools and their masters, because success would not attend the effort. Science is competent to take care of itself, and you would only be throwing pearls before them to be trampled under foot. Rest content that all within their comprehension will be discovered and admitted from time to time. The endeavor to force them into admitting what you believe to be so plain would be due almost solely to your vanity and love of praise. It is not possible to force them, any more than it is for me to force you, to admit certain incomprehensible laws, and you would not think me wise or fair to first open before you things, to understand which you have not the necessary development, and then to force you into admitting their truth. Or if, out of reverence, you should say "These things are true," while you comprehended nothing and were not progressing, you would have bowed to superior force.

Student. — But you do not mean that we should remain ignorant of science and devote ourselves only to ethics?

Sage. — Not at all. Know all that you can. Become conversant with and sift all that the schools have declared, and as much more on your own account as is possible, but at the same time teach, preach, and practice a life based on a true understanding of brotherhood. This is the true way. The common people, those who know no science, are the greatest number. They must be so taught that the discoveries of science which are unilluminated by spirit may not be turned into Black Magic.

Student. — In our last conversation you touched upon the guarding of buried treasure by elementals. I should like very much to hear a little more about that. Not about how to control them or to procure the treasure, but upon the subject generally.

Sage. — The laws governing the hiding of buried treasure are the same as those that relate to lost objects. Every person has about

him a fluid, or plane, or sphere, or energy, whichever you please to call it, in which are constantly found elementals that partake of his nature. That is, they are tinted with his color and impressed by his character. There are numerous classes of these. Some men have many of one class or of all, or many of some and few of others. And anything worn upon your person is connected with your elementals. For instance, you wear cloth made of wool or linen, and little objects made of wood, bone, brass, gold, silver, and other substances. Each one of these has certain magnetic relations peculiar to itself, and all of them are soaked, to a greater or less extent, with your magnetism as well as nervous fluid. Some of them, because of their substance, do not long retain this fluid, while others do. The elementals are connected, each class according to its substance, with those objects by means of the magnetic fluid. And they are acted upon by the mind and desires to a greater extent than you know, and in a way that cannot be formulated in English. Your desires have a powerful grasp, so to say, upon certain things, and upon others a weaker hold. When one of these objects is suddenly dropped, it is invariably followed by elementals. They are drawn after it, and may be said to go with the object by attraction rather than by sight. In many cases they completely envelop the thing, so that, although it is near at hand, it cannot be seen by the eye. But after awhile the magnetism wears off and their power to envelop the article weakens, whereupon it appears in sight. This does not happen in every case. But it is a daily occurrence, and is sufficiently obvious to many persons to be quite removed from the realm of fable. I think, indeed, that one of your literary persons has written an essay upon this very experience, in which, although treated in a comic vein, many truths are unconsciously told; the title of this was, if I mistake not, "Upon the Innate Perversity of Inanimate Objects." There is such a nice balancing of forces in these cases that you must be careful in your generalizations. You may justly

ask, for instance, Why, when a coat is dropped, it seldom disappears from sight? Well, there are cases in which even such a large object is hidden, but they are not very common. The coat is full of your magnetism, and the elementals may feel in it just as much of you as when it is on your back. There may be, for them, no disturbance of the relations, magnetic and otherwise. And often in the case of a small object not invisible, the balancing of forces, due to many causes that have to do with your condition at the time, prevents the hiding. To decide in any particular case, one would have to see into the realm where the operation of these laws is hidden, and calculate all the forces, so as to say why it happened in one way and not in another.

Student. — But take the case of a man who, being in possession of treasure, hides it in the earth and goes away and dies, and it is not found. In that instance the elementals did not hide it. Or when a miser buries his gold or jewels. How about those?

Sage. — In all cases where a man buries gold, or jewels, or money, or precious things, his desires are fastened to that which he hides. Many of his elementals attach themselves to it, and other classes of them also, who had nothing to do with him, gather round and keep it hidden. In the case of the captain of a ship containing treasure the influences are very powerful, because there the elementals are gathered from all the persons connected with the treasure, and the officer himself is full of solicitude for what is committed to his charge. You should also remember that gold and silver — or metals — have relations with elementals that are of a strong and peculiar character. They do not work for human law, and natural law does not assign any property in metals to man, nor recognize in him any peculiar and transcendent right to retain what he has dug from the earth or acquired to himself. Hence we do not find the elementals anxious to restore to him the gold or silver which he had lost. If we were to assume that they

occupied themselves in catering to the desires of men or in establishing what we call our rights over property, we might as well at once grant the existence of a capricious and irresponsible Providence. They proceed solely according to the law of their being, and, as they are without the power of making a judgment, they commit no blunders and are not to be moved by considerations based upon our vested rights or our unsatisfied wishes. Therefore, the spirits that appertain to metals invariably act as the laws of their nature prescribe, and one way of doing so is to obscure the metals from our sight.

Student. — Can you make any application of all this in the realm of ethics?

Sage. — There is a very important thing you should not overlook. Every time you harshly and unmercifully criticise the faults of another, you produce an attraction to yourself of certain quantities of elementals from that person. They fasten themselves upon you and endeavor to find in you a similar state or spot or fault that they have left in the other person. It is as if they left him to serve you at higher wages, so to say.

Then there is that which I referred to in a preceding conversation, about the effect of our acts and thoughts upon, not only the portion of the astral light belonging to each of us with its elementals, but upon the whole astral world. If men saw the dreadful pictures imprinted there and constantly throwing down upon us their suggestions to repeat the same acts or thoughts, a millenium might soon draw near. The astral light is, in this sense, the same as a photographer's negative plate, and we are the sensitive paper underneath, on which is being printed the picture. We can see two sorts of pictures for each act. One is the act itself, and the other is the picture of the thoughts and feelings animating those engaged in it. You can therefore see that you may

be responsible for many more dreadful pictures than you had supposed. For actions of a simple outward appearance have behind them, very often, the worst of thoughts or desires.

Student. — Have these pictures in the astral light anything to do with us upon being reincarnated in subsequent earth-lives?

Sage. — They have very much indeed. We are influenced by them for vast periods of time, and in this you can perhaps find clues to many operations of active Karmic law for which you seek.

Student. — Is there not also some effect upon animals, and through them upon us, and *vice versa*?

Sage. — Yes. The animal kingdom is affected by us through the astral light. We have impressed the latter with pictures of cruelty, oppression, dominion, and slaughter. The whole Christian world admits that man can indiscriminately slaughter animals, upon the theory, elaborately set forth by priests in early times, that animals have no souls. Even little children learn this, and very early begin to kill insects, birds, and animals, not for protection, but from wantonness. As they grow up the habit is continued, and in England we see that shooting large numbers of birds beyond the wants of the table, is a national peculiarity, or, as I should say, a vice. This may be called a mild illustration. If these people could catch elementals as easily as they can animals, they would kill them for amusement when they did not want them for use; and, if the elementals refused to obey, then their death would follow as a punishment. All this is perceived by the elemental world, without conscience of course; but, under the laws of action and reaction, we receive back from it exactly that which we give.

Student. — Before we leave the subject I should like to refer again to the question of metals and the relation of man to the elementals connected with the mineral world. We see some

persons who seem always to be able to find metals with ease — or, as they say, who are lucky in that direction. How am I to reconcile this with the natural tendency of elementals to hide? Is it because there is a war or discord, as it were, between different classes belonging to any one person?

Sage. — That is a part of the explanation. Some persons, as I said, have more of one class attached to them than another. A person fortunate with metals, say of gold and silver, has about him more of the elementals connected with or belonging to the kingdoms of those metals than other people, and thus there is less strife between the elementals. The preponderance of the metal-spirits makes the person more homogeneous with their kingdoms, and a natural attraction exists between the gold or silver lost or buried and that person, more than in the case of other people.

Student. — What determines this? Is it due to a desiring of gold and silver, or is it congenital?

Sage. — It is innate. The combinations in any one individual are so intricate and due to so many causes that you could not calculate them. They run back many generations, and depend upon peculiarities of soil, climate, nation, family, and race. These are, as you can see, enormously varied, and, with the materials at your command now, quite beyond your reach. Merely wishing for gold and silver will not do it.

Student. — I judge also that attempting to get at those elementals by thinking strongly will not accomplish that result either.

Sage. — No, it will not, because your thoughts do not reach them. They do not hear or see you, and, as it is only by accidental concentration of forces that unlearned people influence them, these accidents are only possible to the extent that you possess the natural leaning to the particular kingdom whose elementals

you have influenced.

Student. — I thank you for your instruction.

Sage. — May you be guided to the path which leads to light!

The Path

THE BHAGAVAD GITA: XI — *William Brehon*

CHAPTER FOURTH.

In the third chapter Krishna approached the subject of Yoga — or Union with the Supreme and the method of attainment —, and now in the fourth openly speaks of it. He had told Arjuna that passion is greater than either heart or mind, having power to overthrow them, and advised Arjuna to strengthen his hold on his real self, for by means of that only could he hope to overcome passion.

In the opening of this chapter we come across something of importance — the doctrine that in the early part of a new creation, called Manwantara in Sanskrit, a great Being descends among men and imparts certain ideas and aspirations which reverberate all through the succeeding ages until the day when the general dissolution — the night of Brahma — comes on. He says:

"This deathless Yoga, this deep union,
I taught Vivaswata, the Lord of Light;
Vivaswata to Manu gave it; he
To Ikshwaku; so passed it down the line
Of all my Royal Rishis. Then, with years,
The truth grew dim and perished, noble Prince!
Now once again to thee it is declared —
This ancient lore, this mystery supreme —
Seeing I find thee votary and friend."

Exoteric authorities agree that Vivaswata is a name for the sun; that after him came Manu, and his son was Ikshwaku. The latter founded the line of Solar Kings, who in early times in India were

men of supreme knowledge. They were adepts every one, and ruled the land as only adepts could, for the darker ages had not come on, and such great Beings could naturally live among men. Every one respected them, and there was no rebellion even in thought, since there could be no occasion for complaint. Although "Vivaswata" as a name for the sun reveals nothing to our western ears, there is a great truth hidden behind it, just as today there is as great a mystery behind our solar orb. He was the Being appointed to help and guide the race at its beginning. He had himself, ages before, gone through incarnation during other creations, and had mounted step-by-step up the long ladder of evolution, until by natural right he had become as a god. The same process is going on today, preparing some Being for similar work in ages to come. And it has gone on in the limitless past also; and always the Supreme Spirit as Krishna teaches the Being, so that he may implant those ideas necessary for our salvation.

After the race has grown sufficiently, the Being called "The Sun" leaves the spiritual succession to Manu — whether we know him by that name or another —, who carries on the work until men have arrived at the point where they furnish out of the great mass some one of their own number who is capable of founding a line of Kingly Priest Rulers; then Manu retires, leaving the succession in the hands of the Royal Sage, who transmits it to his successors. This succession lasts until the age no longer will permit, and then all things grow confused spiritually, material progress increases, and the dark age, fully come, ushers in the time before dissolution. Such is the present time.

Up to the period marked by the first earthly King called Ikshwaku, the Ruler was a spiritual Being whom all men knew to be such, for his power, glory, benevolence, and wisdom were evident. He lived an immense number of years, and taught men not only Yoga but also arts and sciences. The ideas implanted

then, having been set in motion by one who knew all the laws, remain as *inherent ideas* to this day. Thus it is seen that there is no foundation for the pride of ideas felt by so many of us. They are not original. We never would have evolved them ourselves, unaided, and had it not been for the great wisdom of these planetary spirits in the beginning of things, we would be hopelessly drifting now.

The fables in every nation and race about great personages, heroes, magicians, gods, who dwelt among them in the beginning, living long lives, are due to the causes I have outlined. And in spite of all the sneers and labored efforts of scientific scoffers to show that there is no soul, and perhaps no hereafter, the innate belief in the supreme, in heaven, hell, magic, and what not, will remain. They are preserved by the uneducated masses, who, having no scholastic theories to divert their minds, keep up what is left of the succession of ideas.

Arjuna is surprised to hear one whose birth he knew of declaring that Vivaswata was his contemporary, and so asks Krishna how that can happen. Krishna replies, asserting that he and Arjuna had had countless rebirths which he saw and recollected, but Arjuna, being not yet perfect in Yoga, knew not his births, could not remember them. As in the poem Arjuna is also called *Nara*, which means *Man*, we here have an ancient postulation of Reincarnation for all the human family in direct and unmistakable words. Then very naturally he opens the doctrine, well known in India, of the reappearances of Avatars. There is some little dispute among the Hindus as to what an Avatar is; that is, whether he is the Supreme Spirit itself or only a man overshadowed by the Supreme to a greater extent than other men. But all admit that the true doctrine is stated by Krishna in the words: —

* * "I come, and go, and come. When Righteousness
Declines, O Bharata! when Wickedness
Is strong, I rise, from age to age, and take
Visible shape, and move a man with men,
Succoring the good, thrusting the evil back,
And setting Virtue on her seat again."

These appearances among men for the purpose of restoring the equilibrium are not the same as the rule of Vivaswata and Manu first spoken of, but are the coming to earth of Avatars or Saviors. That there is a periodicity to them is stated in the words "from age to age." He is here speaking of the great cycles about which hitherto the Masters have been silent except to say that there are such great cycles. It is very generally admitted now that the cyclic law is of the highest importance in the consideration of the great questions of evolution and Man's destiny. But the coming of an Avatar must be strictly in accordance with natural law, — and that law demands that at the time of such an event there also appears a being who represents the other pole —, for, as Krishna says, the great law of the two opposites is eternally present in the world. So we find in the history of India that, when Krishna appeared so long ago, there was also a great tyrant, a black magician named Kansa, whose wickedness equalled the goodness of Krishna. And to such a possibility the poem refers, where it says that Krishna comes when wickedness has reached a maximum development. The real meaning of this is that the bad Karma of the world goes on increasing with the lapse of the ages, producing at last a creature who is, so to say, the very flower of all the wickedness of the past, counting from the last preceding Avatar. He is not only wicked, but also wise, with magic powers of awful scope, for magic is not alone the heritage of the good. The number of magicians developed among the nations at such a time is very great, but one towers above them all, making the rest pay

tribute. It is not a fairy tale but a sober truth, and the present prevalence of self-seeking and money-getting is exactly the sort of training of certain qualities that black magicians will exemplify in ages to come. Then Krishna — or howsoever named — appears "in visible shape, a man with men." His power is as great as the evil one, but he has on his side what the others have not, — spirit, preservative, conservative forces. With these he is able to engage in conflict with the black magicians, and in it is assisted by all of us who are really devoted to Brotherhood. The result is a victory for the good and destruction for the wicked. The latter lose all chance of salvation in that Manwantara, and are precipitated to the lower planes, on which they emerge at the beginning of the next new creation. So not even they are lost, and of their final salvation Krishna speaks thus: —

"Whoso worship me,
Them I exalt; *but all men everywhere*
Shall fall into my path; albeit, those souls
Which seek reward for works, make sacrifice
Now, to the lower gods."

He also declares that the right and full comprehension of the mystery of his births and work on earth confers upon us Nirvana, so that rebirth occurs no more. This is because it is not possible for a man to understand the mystery unless he has completely liberated himself from the chains of passion and acquired entire concentration. He has learned to look beneath the shell of appearances that deceives the unthinking mind.

This brings us to a rock upon which many persons, theosophists as well as others, fall to pieces. It is personality. Personality is always an illusion, a false picture hiding the reality inside. No person is able to make his bodily environment correspond exactly to the best that is within him, and others therefore continually

judge him by the outward show. If we try, as Krishna directs, to find the divine in everything, we will soon learn not to judge by appearances, and if we follow the advice given in this chapter to do our duty without hope of reward and without trimming ourselves with a desired result in view, the end will be peace.

Krishna then adverts to various systems of religious practice, and shows Arjuna that they all lead at last, but after many births, to Him, by reason of the tendency set up. The different schools are taken up in a few sentences. His dictum is that they "destroy sins," meaning that a certain purification of the nature is thus accomplished, which is followed upon death by a longer stay in Devachan, but it is only to one single practice he awards the distinction of being that which will bring about union with the Supreme Spirit. After enumerating all, not only the performance but also the omitting of sacrifice, he shows Arjuna that spiritual knowledge includes all actions and burns to ashes the binding effects of all work, conferring upon us the power to take Nirvana by reason of emancipation from the delusion that the lower self was the actor. The perfection of this spiritual knowledge is reached by strengthening faith and expelling doubt through devotion and restraint. Then occurs a verse, almost the same as one in the New Testament, "the man of doubtful mind enjoys neither this world nor the other, nor final beatitude."

(To be continued.)

The Path

TALES OF THE ANCIENT RAJPUTS — *Charles Johnston*

There is an old tradition, so old that it has almost died from the memories of men, that veils eventful epochs in the archaic history of India.

The Rajputs, afterwards the Kshattriyas, or warrior caste, were, according to this legend, the aboriginal dwellers in the sacred land of India. They had strong cities and powerful dynasties, and had already grown old in the land, when a newer race came to share their inheritance. The newer race were the Brahmans, who crossed the mountains of eternal snow, the Sacred Himavat, from lake Mansarawar the divine, on whose holy shores the Lord first came to Earth and taught to the Seven Rishis the archaic wisdom. The Brahmans had dwelt long by lake Mansarawar; they had learned the secret wisdom from the glowing lips of the children of the Fire-Mist in the Sacred Island.

Their lore was holy; its end was the attainment of spiritual bliss. But the Rajputs, the early dwellers in the land, had learned the darker lore, which bent to their power those subtle and tremendous forces which Nature ever seeks to keep concealed. And the Brahmans came to the Rajputs to learn their wisdom; for the Brahmans were then the pupils of the Rajputs.

Such is the old legend, which Echo has almost forgotten to whisper along the corridors of Time.

But in the Sacred Books of India are still found traces of the time when the Rajputs were greater than the Brahmans, and the Brahmans sat at their feet to learn their wisdom.

These two races have doubtless changed but little since that archaic time, ages ago.

Doubtless even then the Rajputs were, as they are now, "bronze-cheeked, large-limbed, leisure-loving"; while the Brahman was, as now, "tall and slim, with finely modelled lips and nose, fair complexion, and high forehead." But the Rajputs have lost that superiority which the Brahmans have gained.

The Sacred Books of India still preserve traces of Rajput supremacy in might and wisdom, and a few stories from the Scriptures to illustrate this may be collected here. The first is from the Kaushitaki Brahmana Upanishad; it is as follows: (1)

There was a certain Gargya Balaki, learned in the holy Vedas. He dwelt among the Matsyas, the Kurus, and the Videha. This Brahman, coming once to Raja Ajatasatru, a royal Rajput, addressed him thus: "Let me declare to thee divine knowledge, oh king!" The king replied, "We bestow a thousand cows on thee, oh Brahman, for this word of thine." The Brahman, deeply versed in the Vedas, then expounded the doctrines of his religion. But though the Brahman was wise, the Rajput king was wiser than he; and in all things it was seen that the sacred wisdom of the Rajput was greater than the love of the Brahman. Finally the royal Rajput Ajatasatru, perceiving himself to be more wise, thus addressed the Brahman: "Dost thou know only so much, oh Balaki?" "Only so much," he replied. The king rejoined, "Thou hast vainly proposed to me; let me teach thee divine knowledge."

Then the Son of Balaka approached the king with fuel in his hand and said, "Let me attend thee as thy pupil." The king replied, "Contrary to rule is it that a Kshattriya should initiate a Brahman in divine knowledge; nevertheless, approach, I will make thee to know the divine wisdom." The King, taking him by the hand, departed.

Another story is from the Chandogya Upanishad.

Svetaketu came to the assembly of the Panchalas: Pravahana Jaivali asked him, "Youth, has thy father instructed thee?" "He has, sire," replied Svetaketu. "Dost thou know," asked the King, "whither living creatures go, when they depart hence?" "No, sire." "Dost thou know how they return?" "No, sire." "Dost thou know," again asked the king, ""the divergences of the two paths whereof one leads to the gods and the other to the pitris? (2) "No, sire." "And hast thou then said, 'I have been instructed'; for how can he who knows not these things say he has been taught?" The young man returned sorrowful to his father, and said, "Thou saidest 'I have instructed thee,' but this Rajanya (Kshatriya) proposed to me many questions which I was not able to answer."

The father replied, "If I had known the answer to these questions, would I not have told them to thee?" Gautama (3) went to the king, who received him with honor. In the morning he presented himself before the King, who said, "ask, oh reverend Gautama, a boon of human riches." He replied, "To thee, oh King, belongs wealth of that kind. Declare to me the questions thou hast asked of the youth." The King desired him to make a long stay, and at last replied, "As thou hast declared to me, Oh Gautama, that this knowledge has not formerly reached the Brahmans who lived before thee, it has therefore been among all people a wisdom taught by the Kshatriya class alone." He then declared it to him. But the most famous of all these legends of Rajput supremacy is that which tells of the strife between Visamitra the Rajput, and Vasishta the white-robed Brahman. Many of the Rig-Veda hymns are attributed to the seership of the Vasishtas. Visvamitra is also the seer of many Vedic hymns.

In the Mahabharata is found the "ancient story of Vasishta" thus narrated: Visvamitra was the son of the Raja of Kanyakubja (Kanouj), a royal Rajput. Visvamitra, when hunting in the forest, came to the hermitage of Vasishta the Brahman, where he was

received with all honor, entertained together with his followers with delicious food and drink, and presented with precious jewels and dresses obtained by the Sage from his wonder working cow, the fulfiller of all his desires. (4) The cupidity of the Rajput Visvamitra was aroused by the sight of the cow. He offered a million cows in exchange for her, but Vasishta would not part with her, even on promise of a kingdom. Visvamitra was angry; "I am a Kshattriya, a warrior," said he, "have I not more power than thou, a Brahman, whose virtue is submissiveness? I shall not abandon war, the virtue of my caste, but shall take thy cow by force."

Vasishta challenged him to show his power, and Visvamitra seized the wonder-working cow. But she, though beaten with a whip, would not be moved from the hermitage. Witnessing this, Vasishta asks her what he, a patient Brahman, could do.

She asks why he overlooks the violence she suffers; Vasishta replies, "Force is the strength of Kshattriyas, patience that of the Brahmans. As patience possesses me, go if thou pleasest." The cow prays Vasishta not to abandon her; for, till he forsakes her, she cannot be taken away. Vasishta promises he will never forsake her. Hearing these words of her master, the cow tosses her head aloft and assumes a terrific aspect, her eyes become red with rage, she utters a deep, bellowing sound, and puts to flight the whole army of Visvamitra. Being again beaten with a whip, she becomes more incensed, her eyes are red with anger, her whole body, kindled by her indignation, glows like the noonday sun; she discharges firebrands, and creates bands of warriors, — Pahlavas, Dravidas, Sakas, Yavanas, Sabaras, Paundras, Sinhalas, and Kiratas; these warriors defeated Visvamitra's army, and put it to flight. Beholding this great miracle, Visvamitra was humbled at the impotence of a Kshattriyas nature, and exclaimed, "Shame on a Kshattriya's force; the might of a Brahman, this is force indeed!"

Examining what is and what is not force, and ascertaining that austere fervour is the supreme force, he abandoned his prosperous kingdom and all its brilliant regal splendour, and, casting all enjoyments behind his back, he devoted himself to austerity. Having by this means attained perfection and Brahmanhood, he arrested the worlds by his fiery vigour, and disturbed them all by the blaze of his glory: and at length this Rajput drank Soma with Indra. (5)

If one is permitted to speculate on the meaning of this legend, the conjecture may be put forward that Vasishta and Visvamitra stand for the Brahman and Rajput tribes respectively, having their territories probably on the upper waters of the Indus and Ganges. For it is only since 1200 A.D. that the descendants of the Kshatriyas have dwelt in the sandy jungles of Rajputana. Visvamitra probably represents an expedition of Rajputs to the Brahman country typified by the cow of Vasishta, — a "land flowing with milk." This cow, the source of fertility, supplies a wealthy booty to the Rajput if he will consent to be bought off: but the Rajput wants the Brahman's country for himself, and the wealth offered him only stimulates his cupidity. The Brahmans refuse to give up their territory, and the Kshatriyas begin the attack. The Brahmans summon to their aid the non-aryan tribes of Dravidas, Pahlavas, and Sinhalas. By their aid the Rajputs are defeated. This is, perhaps, a not improbable interpretation of the legend.

Let us return, however, to the austerities of Visvamitra, taking up the story in the Ramayana. Visvamitra the Rajput, being utterly vanquished by Vasishta, placed his son on his throne and travelled to the Himalayas, where he betook himself to austerities and thereby obtained a vision of Mahadeva, (6) who at his desire revealed to him the science of war in all its branches and gave him celestial weapons, with which, elated and full of pride, he

consumed the hermitage of Vasishta and put all its inhabitants to flight. Vasishta threatened Visvamitra, and raised on high his Brahman's mace. Visvamitra, too, raised his fiery weapon, and called to his adversary to stand. Vasishta cried out, "What comparison is there between the might of a Kshatriya and the might of a Brahman? Behold, base Kshatriya. my divine Brahmanical power." The dreadful fiery weapon, uplifted by Visvamitra, was quenched by the rod of the Brahman, as water quenches fire. Many other celestial weapons were used by Visvamitra — the discus of Vishnu, the trident of Siva, etc., but the Brahman's mace devoured them all. Finally, to the terror of the gods, the Rajput shot off the terrible Brahmastra, the weapon of Brahma. But it availed not against Vasishta the sage. Vasishta grew terrible in appearance, jets of fire issued from his body, the Brahmanical mace blazed in his hand like a smokeless mundane conflagration, or a second Sceptre of Yama, lord of death. But the devotees besought him, and his vengeance was stayed. Visvamitra cried, "Shame on a Kshatriya's strength; the strength of a Brahman is superior."

This tale is doubtless the echo of a tremendous conflict between the Rajputs — bringing to their aid their darker magic powers and the control of the terrible occult force which they had learned from the Atlanteans of the South — and the Brahmans, strong in the holy wisdom of the Sacred Isle. At first Visvamitra's devotion only obtained, for him the position of Rajarshi, a royal Rishi, while he aspired to the higher rank of Brahmarshi, — divine Rishi.

That he gained great power, however, the following story from the Mahabharata clearly shows.

King Trishanku desired to ascend alive to heaven. He came to Visvamitra to ask his aid. Visvamitra sacrificed, and addressed

him thus; "Behold, oh monarch, the power of austere fervor acquired by my own efforts. I myself, by my own power, will conduct thee to heaven. Ascend to that celestial region, difficult to attain to in an earthly body. I have surely earned some reward of my austerity." Trishanku ascended to heaven in the sight of the assembled saints. Indra ordered him to be gone, and to fall to the earth. Visvamitra again exerted his power, and the king obtained a place amongst the stars. (7)

Yisvamitra, still yearning for Brahmanhood, fasted and took a vow of silence. As he continued to suspend his breath, smoke issued from his head, to the great consternation and distress of the three worlds. The gods and Rishis addressed Brahma: "The great Muni, Visvamitra, has conquered many trials, and still advances in sanctity. If his wish be not granted, he will in wrath destroy the three worlds by his austere fervor. All the regions of the universe are confounded; no light anywhere shines: all the oceans are tossed, the mountains crumble, the earth quakes, the wind blows confusedly. We cannot, oh Brahma, guarantee that mankind shall not become atheistic. Before the great and glorious sage of fiery form resolves to destroy everything, let him be propitiated." The gods, headed by Brahma, addressed Visvamitra thus: "Hail Brahmarshi! we are satisfied with thy austerities; thou hast through their intensity attained to Brahmanhood." The sage, delighted, made his obeisance to the gods, and said; "If I have obtained Brahmanhood and long life, then let the mystic syllable (*omkara*), and the sacrificial formula, and the Vedas recognise me as a Brahman. And let Vasishta the Brahman, the greatest of those who know the Rajput knowledge and the Brahman knowledge, also recognise me." Vasishta, being propitiated by the gods, became reconciled to Visvamitra, and hailed him, though a Rajput, with the title of Brahmarshi. Visvamitra also, having attained the Brahmanical rank, paid all honor to Vasishta. Before

Visvamitra thus attained the pinnacle he had longed to reach, he performed many wonders, recounted in another part of the Mahabharata.

He destroyed Vasishtha's hundred sons by the power of austere fervor; when possessed by anger, he created many demons, fierce and destructive as death; he delivered the son of Richika from being offered in sacrifice; he cursed his fifty sons, and they became outcasts; he elevated Trishanku alive to heaven; he changed a troublesome nymph into a stone.

(To make the meaning of this clear, it should be explained that, when the gods had reason to dread the too great austerity of any saint, they used to send a "troublesome nymph" to disturb his orisons. Kama the love-god, when taking part in one of these expeditions, which had for its object the destruction of Siva's *Samadhi*, through the charms of Uma, daughter of the Himavat, lost his body, which was turned to ashes by Siva's glances, and is thenceforth known as Ananga, the bodiless god.) Besides this, Visvamitra induced Vasishtha to bind and throw himself into a river, though he emerged thence unbound. He also made himself invisible, and caused Rakshasa demons to obsess his enemies. He also incited the demon to destroy the sons of Vasishtha. On hearing of the death of his sons, Vasishtha supported his misfortune as the great mountain supports the earth. He meditated his own destruction, but thought not of destroying the Rajput Visvamitra. He hurled himself from the summit of Mount Meru, but fell on the rocks as if on a heap of cotton. Escaping alive from his fall, he entered a glowing fire in the forest; but the fire, though blazing fiercely, not only failed to burn him, but seemed quite cool. He next threw himself into the sea, with a stone tied around his neck; but the waves cast him up alive on the shore. He sought death from the Sutlej alligators, but they fled from the Brahman, seeing him brilliant as fire. Seeing that death would not receive him, he

returned to his hermitage. But at last Visvamitra attained to Brahmanhood, and Vasishtha was reconciled to him. How many other Brahmans came to the feet of the Kshatriyas to learn wisdom, and how the Kshatriyas triumphed over the Rajputs, and how Parasurama made a mighty slaughter of the Kshatriyas, must here remain untold.

7. This has reference to a very obscure, but not the less important, doctrine "Concerning the Star-Rishis." It has to do with the selfishness and materiality of our nature, and is not explained because dangerous. It will be known, however, quite soon enough. — Ed. ([return to text](#))

KARMA AND PROVIDENCE — *Alexander Fullerton*

Theosophy is reconstructing our conceptions of the universe, and reinterpreting the facts and tendencies and laws of life. When it first appeared on the outskirts of Western thought, an alien in origin and sentiment, it seemed a curious product of Oriental dreaminess, a trifle fantastic as to garb, a little uncouth in its bearing before the wonders of our gifted age, and very far from practical in its ideas of either duty or aspiration; but because of its difference from all familiar figures, and because, too, it held in its hands the Wand of Magic and was known to have used it with most unaccountable results, certainly a subject for interest, perhaps for study. Not very many years have passed, and yet the newspapers are reporting it, the public turns an ear to it, literature is discussing and fiction appropriating it. The eyes which first inspected it with curiosity are now examining it with interest, and the minds which then surmised that it might hold some truth are now reverent as before an oracle. More than this, hearts weary and sad, weary of explanations which did not explain and of consolations which did not console, sad because finding that the ills of existence are not to be salved with arbitrary beliefs or distant hopes, rallied under the influence of that reviving touch, and demanded fuller, richer knowledge. Most of all, the awakened spirit, realizing that conventional tenets were an opiate and not a tonic, hurled them away and arose in the vigor of a definite and intelligible aspiration. And all classes of inquirers, just in proportion as the inquiry was sincere and its pursuit continued, found a singular dwarfing of all other topics, a spontaneous, increasing concentration upon this as the one before which the rest were insignificant.

As Theosophy advanced from the outskirts to the centre of

thought in the West it was confronted, one after another, with the great problems which in every age and in every land have engrossed the energy of the thinker. The meaning and end of existence, the nature and direction of responsibility, our future in the world beyond death, — these and kindred questions lie at the door of the soul and meet it on its first excursion into the universe of inquiry. The primary duty of every religious system has been a reply to them, and if that was unsatisfying, men would have none of it. Theosophy undergoes the same rigid interrogation as the rest, and if it has encroached upon the preserves of other faiths and is giving answers to queries on later subjects, we must believe that this is because its first responses were convincing.

Very early in its course it is brought face to face with the great question of Providence, and must give its own interpretation of it. There is one already on the ground. It may not be logical or even rational, but it has the advantage of being in possession and of calming some of the strongest, if not the most meritorious, solitudes of the soul.

The demand for an active, supervising Deity is almost as universal as a demand for any Deity at all. A Creator withdrawing from care over his creation seems a contradiction in thought. The term "Father" voices the soul's need for a guardianship which shall be both authoritative and paternal. In his "Philosophy of Religion," Morrell found that the last analysis of the religious sentiment is into a sense of dependence. But this almost necessarily implies the converse qualities of provision, oversight, supply. Then, too, the emotional faculty calls for satisfaction. Faith needs a sympathetic ear, a responsive touch, a readiness to use every power of nature for the relief of an appealing sufferer. Thus instinct and devotion unite to cause belief in Providence, and the difficulty of supposing that the Supreme Being looks after

all the petty affairs of each of us is met by the fact that to the Infinite all are practicable, and, indeed, that in such a presence gradations in importance disappear.

There is, hence, a stage of religious experience in which every incident in the world of things and men is supposed to express a Divine purpose. God is present everywhere, acting everywhere, adjusting everywhere. "Even the very hairs of your head are all numbered," said Jesus. But in time comes an inevitable change. It is seen that the actual system, however ordered, by no means provides universal good. There are great wastes of sickening sorrow, vast and recurring areas of destitution, bitter cries from weariness and loss and agony. The intellect follows this up by its discovery of the reign of law. Events are not disconnected revelations of as many Divine intentions, but effects rigorously joined to their antecedent causes. As causation is better and more extensively perceived, the domain of admitted law expands, absorbing steadily the territory of Providence, and displacing the conception of ordering with the conception of order. At last no ground is left. Law is seen to pervade the universe, and to be the condition of all science, all foresight, all business. A life-insurance policy assumes the whole scientific doctrine of the reign of law.

But the sentimental want, though baffled, is not extinct. "There may be truth," it urges, "in the theory of causation and in the belief that the universe is a great machine, wisely contrived, endowed with sufficient impetus, and working automatically along. Yet all machines are liable to disarrangement, and exigencies arise for which the most perfect do not provide. It may very well be, then, that at grave crises, or for particular purposes, or to avert an evil, interposition may be proper. Let it be admitted that the usual administration is by law, if only is made concession that a Providence is sometimes possible." But even this the stern man of science must refuse. He is forced to answer that, whatever

may be true of imperfect machines of human make, no breakdown is conceivable in one of celestial origin; and that, even if we could conceive of a universe conducted partly by law and partly by manipulation, we could never define their limits or foresee which would act.

One more plea remains. "I will not contest," says the sentimental want, "the doctrine of uniformity in physical things. But they are not the whole of life. Moral ends are more important. In the interest of morals, Providence is a necessity. To teach a lesson, to emphasize a warning, to recall from recklessness or frivolity or sin, interpositions are essential. A blind material universe, mechanically turning out its infants and swallowing up its dead, is no fitting expression of a Divine fulness. There must be some higher aim, some better purpose." "There is," replies the thinker, "but not as you imagine it. All nature is crowded with moralities; its very uniformity ensures their exhibition. But even if it did not, if occasional interferences were more impressive, how are you to interpret them? You have not the clue to their meaning, and your prophets expound it differently. They do not even expound it fairly. For, as it would jar on the religious sentiment to attribute to Providence the harsh and bitter things, it is mainly the good things with which they credit it. The sickness overcome, the life saved, the steamer rescued, the boon secured, the peril escaped are providential; not the sickness fatal, the life lost, the steamer wrecked, the boon forfeited, the peril triumphant. But if the one is, the other must be. If it is a Providence which brings one vessel safely through the violence of a tempest, it must be a Providence which abandons another to its fate. If it is a Providence which puts a Washington at the head of one nation, it is a Providence which puts a Louis Napoleon at the head of another. If a skater, breaking through the ice, is saved by Providence, the drowning of his comrade must be by Providence: if Providence accounts for a

fortunate investment, a fulfilled presentiment, a happy marriage, it must also be accountable for the broken bank, the discredited prediction, the annals of the Divorce Court.

Nor have we any clue to the interpretation. It will not do to say "The Moral Lesson," for we do not know what the lesson is, nor whether it is a lesson at all. A boy swimming on Sunday is drowned. "This," urges the religious press, "expresses the Divine displeasure of such mis-use of Sunday." "But," replies the logician, "it can hardly do so unless you are prepared to show that all boys swimming on Sunday are drowned, and none on other days." *Purpose* is the very essence of Providence. If we have no clue to the *purpose* we have no clue to the Providence; for us it does not exist. Nor can you escape the difficulty by saying that it is inscrutable, for that vacates the whole position. If we are unable to scrutinize Providence, we are unable to make assertions about it, much more to expound it. So long as it keeps utterly in the dark, we cannot even prove that it is there,"

Thus, step by step, relentless reason forces back the struggling theory of an interposing power ever at work in manipulation, adjustment, the rectification of error in the machine of its own construction, the insistence on truths which it does not enable us to discover, the mumbling of unintelligible warnings which we have no power to make clear. Baffled, confused, exhausted, the old doctrine is now near its end. But the spirit which has informed it is vigorous as ever. Not a whit depressed, it still asserts the need for the perpetual presence of a moral force, for a Providence outside of which not a sparrow shall fall, not a wrong escape.

And it is right. No such sustained cry of the human heart could well be fallacious. It is one of the vindications, one of the glories, of Theosophy that it gives the frankest, most ungrudging welcome

to every want, intellectual or sentimental, of humanity, and then provides for it. To me it seems that this is peculiarly true in the matter of Providence. The religious instinct will never give up its demand for a Providence. It revolts at the thought that there is no moral order in the world, that good and bad fare alike, that character goes for nothing. An elaborate system in which the Supreme Being has expressed all the qualities but those most strongly called for, is to it a monstrosity and a contradiction. You may wrench away from it its theories and its whimsical or unsatisfying methods of interpretation, but it will construct new ones at once. With what amplitude of recognition Theosophy steps forward to greet this instinct! "You are entirely right," it says. "I am with you in fullest sympathy. You cannot insist more than I that the moralities exact an agency by which their vindication shall be assured. But such an agency must be intelligible and consistent. It must be so comprehensive that not a right or a wrong shall go unrewarded, so impartial that it handles all men with absolute equality, so precise that its equations shall exactly balance. You can never invent such, you can never discover it. But you do not need to. The doctrine of Karma, the treasured possession of the Wisdom-Religion, fulfils all the requirements you insist upon, avoids all the difficulties which embarrass you, and responds to every call of reason, justice, and the moral sense."

The vast superiority of Karma as a substitute for the conventional idea of Providence is evident from every point of view. It is not a negation of Providence, it is an enlarged affirmation of it. Instead of a fitful, capricious, inconstant, purposeless, mysterious, undecipherable force, it is a lucid, inerrant, steady, and meaningful adjuster. For what, after all, is its definition? *The law of ethical causation. Law, not whim: causation, not accident; and this, which the most orthodox now admit in the worlds of physics*

and of mind, extended to the noblest region, that of morals. Not that every incident of every life is to be read as a revelation of immediate desert, for that would be to forget the correlative doctrine of Reincarnation; but that the sum total of experiences in the chain of lives cannot err, and that the significance of the items in any one link may measurably be inferred. The conception of Providence expands till it covers everything. The religious instinct is satisfied, the claims of reason are allowed, the demand of justice is fulfilled.

I think that the devotional books of the future will print "Karma" where they now print "Providence." The concept is so much richer that the poorer one will not long content. The word "Karma" is not as strange as it was formerly. Sometimes we see it in improbable quarters. By and by it will be domesticated into the language, for Theosophists constantly employ it, and though — to transpose Gladstone's definition of a deputation — they do not signify many, they certainly signify much. After it is domesticated people will not be afraid of it. Then they will come to like it, as we all like what is familiar. In time the meaning will filter into them. It will displace the old narrow conception and establish itself as a broad and healthy philosophy of life. And when Karma is recognized, not merely as an ever-acting principle, but as an ever-forming fund, what may not be hoped for in the melioration of mankind?

The Path

CONVERSATIONS ON OCCULTISM: VII

Student. — What principal idea would it be well for me to dwell upon in my studies on the subject of elementals?

Sage. — You ought to clearly fix in your mind and fully comprehend a few facts and the laws relating to them. As the elemental world is wholly different from the one visible to you, the laws governing them and their actions cannot as yet be completely defined in terms now used either by scientific or metaphysical schools. For that reason, only a partial description is possible. Some of those facts I will give you, it being well understood that I am not including all classes of elemental beings in my remarks.

First, then, Elementals have no form.

Student. — You mean, I suppose, that they have no limited form or body as ours, having a surface upon which sensation appears to be located.

Sage. — Not only so, but also that they have not even a shadowy, vague, astral form such as is commonly ascribed to ghosts. They have no distinct personal form in which to reveal themselves.

Student. — How am I to understand that, in view of the instances given by Bulwer Lytton and others of appearances of elementals in certain forms?

Sage. — The shape given to or assumed by any elemental is always subjective in its origin. It is produced by the person who sees, and who, in order to be more sensible of the elemental's presence, has unconsciously given it a form. Or it may be due to a collective impression on many individuals, resulting in the

assumption of a definite shape which is the result of the combined impressions.

Student. — Is this how we may accept as true the story of Luther's seeing the devil?

Sage. — Yes. Luther from his youth had imagined a personal devil, the head of the fraternity of wicked ones, who had a certain specific form. This instantly clothed the elementals that Luther evoked, either through intense enthusiasm or from disease, with the old image reared and solidified in his mind; and he called it the Devil.

Student. — That reminds me of a friend who told me that in his youth he saw the conventional devil walk out of the fire place and pass across the room, and that ever since he believed the devil had an objective existence.

Sage. — In the same way also you can understand the extraordinary occurrences at Salem in the United States, when hysterical and mediumistic women and children saw the devil and also various imps of different shapes. Some of these gave the victims information. They were all elementals, and took their illusionary forms from the imaginations and memory of the poor people who were afflicted.

Student. — But there are cases where a certain form always appears. Such as a small, curiously-dressed woman who had never existed in the imagination of those seeing her; and other regularly recurring appearances. How were those produced, since the persons never had such a picture before them?

Sage. — These pictures are found in the aura of the person, and are due to pre-natal impressions. Each child emerges into life the possessor of pictures floating about and clinging to it, derived from the mother; and thus you can go back an enormous distance

in time for these pictures, all through the long line of your descent. It is a part of the action of the same law which causes effects upon a child's body through influences acting on the mother during gestation. (1)

Student. — In order, then, to know the cause of any such appearance, one must be able to look back, not only into the person's present life, but also into the ancestor's past?

Sage. — Precisely. And for that reason an occultist is not hasty in giving his opinion on these particular facts. He can only state the general law, for a life might be wasted in needless investigation of an unimportant past. You can see that there would be no justification for going over a whole lifetime's small affairs in order to tell a person at what time or juncture an image was projected before his mind. Thousands of such impressions are made every year. That they are not *developed into memory* does not prove their non-existence. Like the unseen picture upon the photographer's sensitive plate, they lie awaiting the hour of development.

Student. — In what way should I figure to myself the essence of an elemental and its real mode of existence?

Sage. — You should think of them as *centres of energy* only, that act always in accordance with the laws of the plane of nature to which they belong.

Student. — Is it not just as if we were to say that gunpowder is an elemental and will invariably explode when lighted? That is, that the elementals knew no rules of either wrong or right, but surely act when the incitement to their natural action is present? They are thus, I suppose, said to be implacable.

Sage. — Yes; they are like the lightning which flashes or destroys as the varying circumstances compel. It has no regard for man, or

love, or beauty, or goodness, but may as quickly kill the innocent, or burn the property of the good as of the wicked man.

Student. — What next?

Sage. — That the elementals live in and through all objects, as well as beyond the earth's atmosphere.

Student. — Do you mean that a certain class of elementals, for instance, exist in this mountain, and float unobstructed through men, earth, rocks, and trees?

Sage. — Yes, and not only that, but at the same time, penetrating that class of elementals, there may be another class which float not only through rocks, trees, and men, but also through the first of the classes referred to.

Student. — Do they perceive these objects obstructive for us, through which they thus float?

Sage. — No, generally they do not. In exceptional cases they do, and even then never with the same sort of cognition that we have. For them the objects have no existence. A large block of stone or iron offers for them no limits or density. It may, however, make an impression on them by way of change of color or sound, but not by way of density or obstruction.

Student. — Is it not something like this, that a current of electricity passes through a hard piece of copper wire, while it will not pass through an unresisting space of air.

Sage. — That serves to show that the thing which is dense to one form of energy may be open to another. Continuing your illustration, we see that man can pass through air but is stopped by metal. So that "hardness" for us is not "hardness" for electricity. Similarly, that which may stop an elemental is not a body that we call hard, but something which for us is intangible

and invisible, but presents to them an adamantine front.

Student. — I thank you for your instruction.

Scwe. — Strive to deserve further enlightenment!

The Path

ANALOGIES — *Alexander Fullerton*

Theosophy being of recent disclosure to the West, and none of us, therefore, having been Theosophists from childhood, almost every one encounters perplexities from the unfamiliarity of the new facts and of the new methods of thought. We may be entirely convinced of their correctness; the demonstration may be conclusive; in fulness, reason, stimulus, and expectation, the new faith is so obviously richer that the deserted one may appear incomparably jejune and poor; we may have become fluent with its ideas and its terms; nevertheless, its whole genius is so diverse from all hitherto habitual to us that we do not as yet think or move quite easily. It is as if an inhabitant of the dry Egyptian plain was transported, to Switzerland. It would not be only a revelation as to scenery, but an induction into a new life, whereof the sights, the sounds, the movements, the habits, the very air breathed and water drunk, had been wholly unknown. Until all these had become familiar, there would be a process of mental remoulding, re-adjustment, modification. And so with the thinker transported from the circumscribed habitat of conventionalism to the stupendous scenery of the Theosophic domain. His Deity has been an enlarged, not always an exalted, Man; his universe ended with the telescope; his chronology went back but 60 centuries; other than animals, he knew of but three kinds of beings, — men, angels, and demons; human life was short, not easily justified, and morally puzzling; its hereafter was hazy, and all but its terrors had been carefully concealed; of its present, nothing could be known except what was disclosed to the eyes, ears, and touch, and any supposition of forces or beings or agencies beyond was probably absurd and certainly false.

Out of these ideas the Theosophist has removed to a realm

practically boundless. Limitations have dropped off in every direction. Anthropomorphic conceptions of Deity vanish at once. Matter expands till it fills space. Existing chronologies have as much real antiquity as yesterday's newspaper. Life multiplies till air, earth, fire, water, the illimitable ether teem with it. Humanity receives a justification and acquires a destiny. Light is poured into futurity. The senses, as sole criteria of fact, are deposed; means are put within reach by which the investigation of the whole universe is made possible. There is no boundary line to knowledge; there is not even an horizon.

Now, of course, our mental capacities cannot instantly enlarge to this. The fresh air is invigorating, but then it is strange. The lungs are inelastic, the muscles torpid, the movements new. We hardly realize our freedom, and at every slight excursion we strike against some old prejudice or error, or feel the cramp which reminds us how long and how closely we had been bound. This is inevitable, but it is also temporary. We shall acquire agility; the cramp will gradually disappear; the errors discarded as beliefs will steadily weaken as hindrances; new habits of thought will form, new powers of perception develop, new vigor of advance arise. Revolutions do not go backwards, nor are the emancipated again enslaved.

In the happy process of enlargement, we are wise, I think, to meet every check or difficulty with whatever means, however humble, may most effectually remove it. And it very often happens, in Theosophic thought, that a perplexity dissolves if we can confront it with some visible, familiar fact in life. The latter, being known to us, if in clear analogy with the former which is *not* known, may dissipate its strangeness and secure for it a welcome. Nor is this an artificial or whimsical procedure. It is but an application of the doctrine of Analogies, which, say the Adepts, pervades the universe. "As above, so below" is one of their constant maxims.

We are quite right to use it in our humbler exercises.

Of the many illustrations possible let us take, this evening, one from each of three planes of life, — that below us, our own, and that above us.

For the conception of a medium of existence diverse from ours, diffused, invisible, yet material, though of a far more tenuous and rarefied nature than our air, science has happily prepared us by its "Undulatory Theory of Light," wherein is predicated a sensitive ether pervading space. We have, therefore, no antecedent difficulty in conceding an unseen world of more delicate texture than this. But science has done nothing to people it, and so the Theosophic doctrine of Elementals is new. We are abundantly accustomed to the word, yet the thing has perhaps for us not wholly lost a fanciful quality and entered the region of fact. Now I have found it to gain reality by thought on this wise. It is difficult to conceive of the direct action of will upon matter. There seems no mode by which an intangible, immaterial purpose can educe obedience from a lifeless, irresponsive block. I see a stick lying 20 feet away. I will it to approach me, but there is in it no consciousness of my will, and there is no apparent link between the distinct kingdoms of mind and matter. I sign to my dog, and he brings it at once. Here, then, is the link supplied, an intermediary agency with sufficient intelligence, on the one side, to apprehend the order, and with the physical power, on the other, to carry it out. The widely-separated kingdoms are connected by a medium uniting some of the features of each. In fact, a very subtle question in thought is promptly solved by one of the most common-place facts in life.

Analogy instantly suggests a similar nature and function in Elementals, and hence a similar naturalness. What is there either improbable or inconceivable in an order of beings lower than our

own, with no more conscience than have some grades of animals and with as much intelligence as have others, quite as controllable by men who understand them as are animals by men who understand *them*, and dwelling in a medium which, though unseen, may be as real as the unseen ether of Light? But Analogy does not stop here. Those of you who have read Sir John Lubbock's remarkable monograph on Earth-Worms know that the whole face of nature is being constantly re-formed through that humble agency. That is to say, an important, an indispensable, condition of agriculture is committed to the charge of a lowly, unprogressive, mindless creature, which lives, perpetuates its species, blindly performs its mission, and expires. Why, then, may not a somewhat higher function in Nature be entrusted to a somewhat higher organism, a still higher function to a still higher organism, and so on, the intelligence and the physical strength increasing, but there being no moral endowment because there are no moral duties? If earth-worms knead the soil and coral-insects erect islands in the ocean, it seems not unreasonable that larger operations in ever-active Nature, less mechanical and more intelligent, may be effected by Elemental spirits. And analogy goes still further. We see in animals instincts and habits which may as well mark Elementals. Secretiveness, playfulness, mischievousness, friendliness or hostility to man, a transmitted tendency to routine, constructive power, conformity to laws in mechanics, — all are illustrated in dogs, kittens, monkeys, beavers, birds, and bees. Why then may they not exist in sylphs and gnomes? In fact, if the perfection and regularity of a bee's honeycomb, which combines the maximum of space with the minimum of material, are due to the action of a conscious being, why may not this be equally true of a crystal? Yet again. The enormous differentiation of animal life in structure and quality, according to its function and its habitat, seems to indicate a corresponding differentiation, for

corresponding reasons, of Elemental life in the various regions and operations peculiar to it. The four classes usually mentioned are doubtless capable of subdivision indefinitely. And once more. No small part of the animal world has been subdued to the will of man. This is, of course, mainly due to his larger intelligence, yet is in measure the result of his ability to impart, record, and transmit observations. The same reasons seem to justify the possibility of his controlling Elementals. Indeed, the theological doctrine that he is to conquer the earth implies that he is to conquer the beings which mould the earth, and any far-reaching vision of human triumph must include a sway over all lower organisms.

It would seem, then, that analogies from very familiar facts around us warrant some vivid conception of the unseen beings no less around us. Our knowledge of the animal kingdom impels to a belief in the Elemental kingdom.

Let us now step up to the plane of man, and attempt a similar process there. Whether we look at the lives of men or at the conventional beliefs they hold, it is equally evident that this present visible existence is considered the normal and important one, its interests being necessarily dominant, and those of the future, invisible world, however to be cared for, being, from the nature of the case, subordinate. More or less of this mode of thought has been so habitual with ourselves that we probably find the opposite, the Theosophic, mode only natural while we are reading Theosophic books or afterwards meditating on their contents. And yet most certain is it that Theosophy affirms the real, permanent, important life to be unseen, that which depends upon a material environment being absolutely transient and relatively mean. As the Adept, St. Paul, expressed it, "The things which are seen are temporal, but the things which are not seen are eternal."

Now if we are to be true Theosophists in either thought or aim, we have to reverse our former conception. The invisible world has to become the true world, and the visible world the deceptive world. And here again analogy is at hand to help us. The simplest incidents or acts disclose the tremendous forces hidden from sight. A leaf falls because of the all-pervading principle of gravitation; I hold this paper because of an inscrutable energy behind the muscular contraction which is its physical expression. You who are listening to these words hear them, indeed, through undulations set up in a material atmosphere and impinging on the tympanum of the ear; but no sense can reach the mysterious force which transmits the vibrations of the material tympanum to the unmaterial mind, still less the force which transmutes mere sound into thought, least of all the force which is mind. Look around you in the world and analyse the causes of the seething activity everywhere apparent. Every sound, every movement in this great city has its source in some desire of the inner being, — ambition, love, acquisitiveness, or other. We can hardly take one step from visible things towards their causes before we are in the realm of the invisible. All roads seem to lead to the unseen. It, not matter, has "the promise and the potency" of every form of life.

But if the mechanics of daily life, if the continuance of vegetation, the conservation of vital powers, the evolution of all terrestrial advance are referable back to impalpable forces, — gravitation, electricity, magnetism, etc., only the effects of which we see; if even our own careers and the very constitution of society itself are but the objective, visible results from subjective, intangible desires; is it too much to say that the unseen is as much vaster than the seen in its resources as it must be in its extent? A pebble, a stick, a leaf has behind it stupendous powers; it is insignificant, but it reveals the immeasurable.

The effect of observation, then, is to belittle the seen in

comparison with the unseen; and herein Theosophy is in complete analogy with science. Yet surely the analogy need not pause at this point, but may proceed to urge that the constitution, the training, and the destiny of Man may justly be based on the same principle. The material elements must be the less important elements, the material life the less important life. Permanency, potency, boundlessness must inhere in a region which is not transient, weak, limited, as is this earth. And, indeed, our confidence in the analogy is strengthened by the fact that, up to a certain point, it is held to vigorously by all men in civilized lands. Cultivation of the mind is considered finer than cultivation of the body; the scholar ranks higher than the athlete. But if it is admitted that spiritual powers are nobler than mental, even as mental are nobler than physical, — which is, in truth, the position of the Theosophist, it follows that there is the same reason for developing the spirit rather than the mind, that there is for developing the mind rather than the body. The same principle which elevates a Herbert Spencer above a Sullivan will, analogically extended, elevate an Adept above a Herbert Spencer. And it follows that, when we read of the training given to secure mastery of self, ascendancy over distraction from discomfort or desire, fixedness of meditation with a view to enlightenment, a distaste for levels of being lower than the highest, we have not encountered something which is chimerical or grotesque, but a sober, logical, scientific method of spiritual education.

The third illustration proposed is from the plane of life above us, — that of Adepts. No doubt there is, among Theosophists, much misconception of the Adept character. For present purposes, however, we may describe him as an advanced man, who, through the expanding of the spiritual principle, has become a Master in mind and over matter, and whose powers are therefore, from the conventional point of view, supernatural. (1)

All this, to the conventionalist, appears nonsense. To us it is a reality. Nevertheless, there is a certain remoteness about it. There is only one conceded Initiate in Western lands, and few of us have been privileged to see her. The East is faraway, and residence even in it by no means ensures approach to a Master. Hence belief is not always without misgivings, and I suppose there are few Theosophists who are not at times staggered by the strangeness of the conception. Still, it too is not without its analogies, and the weak may fortify themselves by recalling them.

All history shows that deeds beyond experience have been pronounced incredible upon hearsay, and pronounced miraculous upon being seen. An astronomer foretells an eclipse to barbarians; he is ridiculed till it arrives, and then he is worshipped. The Adept from whom I have quoted a sentence once healed a cripple in cultivated Greece, and was hailed with the cry, "The Gods have come down to us in the likeness of men." In these days, though apotheosis does not follow phenomena, incredulity lasts till demonstration. It has been so with every great invention of modern times, and it must be so till is pulverized the inveterate habit of judging impossible that which does not square with ordinary observation. The moment we realize — not concede only — the dictum that "there are more things in heaven and earth than are dreamed of in our philosophy," we are unshackled; and the moment we perceive that those things are attainable, our freedom has begun. And why should it not be so? Every new fact in science or invention means that an explorer has been where we have not been, and has brought back something which we have not seen before. Surely we are accustomed to the idea that realms beyond our ken are being daily entered, examined, and sampled. Where, and on what principle, are we to set bounds to them? Is the Astral Light necessarily more impervious than the Space-Ether? If a Tyndall

may reveal the vibrations of the one, is it impossible that a Adept may reveal the photo-pictures of the other? In fact, (one may ask), is an Adept more impossible than a Tyndall? Each represents high ability, developed by specialized training into exceptional power.

We speak now, it is true, of matters on planes lower than the spiritual. But this does not vitiate the analogy. For, 1st, the difference between the lofty spiritual functions of an Adept and the highest attainments of an acute physicist is not any more truly a difference in *kind* than are those attainments of the physicist and the solely-muscular capacities of a burly savage; and, 2nd, if antecedent improbabilities of evolution fail in the one case, they may in the other. Indeed, one may say that the contrast between an Adept and a Tyndall is not any greater than between a Tyndall and a savage.

Moreover, there is yet another consideration. All of us know that our unseen minds may, and do, grow in power of apprehension and in thoroughness of insight. We know, too, that the moral nature, also unseen, expands and strengthens with appropriate exercise. It would seem, then, that the spiritual principle, no less unseen, may no less have capacities as yet feeble. It, too, may evolve, and quicken, and ultimately triumph.

These various analogies indicate that an Adept is not a phantasm, or a chimera, or an ingenious invention of Mr. Sinnett, but an entirely possible flower of a peculiarly rich, a highly cultivated, yet an entirely natural, soil. And, if so, we believers are not only judicially yielding to the burden of testimony, but are rationally following the pathway of logic. Before the sceptic and the scoffer we have only to point to Nature, Analogy, and Fact.

Reverting now to the propositions with which this paper began, it would appear that the means to give reality to the more distinctive features of Theosophy is to perceive their likeness to

those in departments of life better known. While we treat them as eccentric, we are never free from a haunting suspicion that they are doubtful. But if they are merely an extension of principles elsewhere demonstrated, if analogy shows that, so far from being isolated or grotesque, they lie really along the very lines enclosing conceded fact, the only thing needed for greater peace of mind is greater use of mind. The demand is not for more faith, but for more reason. We are not required to apologize, internally or externally, for positions which seem at first odd, but rather to assert that they are quite what might have been expected from the very constitution of being. Given a world enormously transcending that which we can see or hear or touch with our physical senses, its repletion with various forms of life seems inevitable. Given a humanity whose most powerful motives and impulses come from interior desire, and whose development on the material plane is necessarily limited while that on the immaterial plane has no bounds whatever, there can hardly be question as to the true sphere of effort. Given a telescopic look into the realm of Evolution, with some apprehension of what that discloses and means and foretells, and the supposition that Adeptship is incredible becomes infantile. More than this; there awakens a prevision that we ourselves are the proper subjects for all the fulness which analogy assigns to the race, and an assurance that every day of duty wrought and concentration gained is speeding us on to a time when incarnations shall have been completed and destiny shall have been achieved.

FOOTNOTES:

1. The reference, of course, is only to *White Adepts*. ([return to text](#))

THE BHAGAVAD GITA: XII — *William Brehon*

He that, being self-contained, hath vanquished doubt,
Disparting self from service, soul from works,
Enlightened and emancipate, my Prince!
Works fetter him no more! Cut then atwain
With sword of wisdom, Son of Bharata!
This doubt that binds thy heart-beats! cleave the bond
Born of thy ignorance! Be bold and wise!
Give thyself to the field with me! Arise!

These strong words end the chapter. They are addressed to those who can be strong, and not to the ever-doubting one who believes neither his own thoughts nor the words of others, but who is forever asking for more. But there can be no uncertainty about the cause of doubt: as Krishna says, "It springs from ignorance, and all we have to do is to take the sword of knowledge and cut all doubts at once." Many will say that they have been always looking for this that they may have peace, and that so many systems are presented for their consideration they are unable to come to any conclusion whatever. This would seem very true on a view of the thousand and one philosophies placed before us with varying degrees of clearness by the exponents of them. But it has appeared to us that they can all be easily sifted and divided into classes where they will range themselves under two great heads, — those which permit nothing to be believed until the miserable mass of mediocre minds have said that they at last accept this or that, and those which have each a little of what may possibly be true and a great deal that is undeniable nonsense. The doubter is a devotee of the first school, or he is an adherent partly of one and partly of the other; and in the latter case is torn almost asunder by the numberless conventional ideas which bear the

stamp of authority coercing him into an acceptance of that which revolts his judgment whenever he permits it to have free exercise. If you tell him that the much-lauded mind is not the final judge, and that there are higher faculties which may be exercised for the acquirement of knowledge, he disputes on the lines laid down by learned professors of one school or another, and denies the validity of proofs offered on the ground that they are instances of "double cerebration," and what not. To such as these the chapter will not appeal, but there are many students who have sincere doubts, and with those the difficulty arises from ignorance. They are afraid to admit to themselves that the ancients could have found out the truth; and the reason would appear to be that this judgment is passed from a consideration of the merely material state of those people or of the present nations who in any degree follow such philosophies. Our civilization glorifies material possessions and progress, and those who have not these boons cannot be the possessors of either truth or the way to it. But the keepers of truth have never said that we will be neither rich nor civilized if we follow their system. On the contrary, in the days when Krishna lived and taught his system there was more material glory and power than now, and more knowledge of all the laws of nature than every one of our scientists put together have in their reach. Hence if any theosophist teaches that the reign of the doctrines of the Masters of the Society will be the knell of all material comfort and progress, he errs, and sows the seeds of trouble for himself and his friends. Why, then, is it not wise to at once admit that there may be truth in these doctrines, throw away all doubt, and enjoy the light coming from the East?

So long as doubt remains there will be no peace, no certainty, nor any hope of finding it in this world or the lives upon it hereafter, and not even in the vast reaches of other universes on which we may live in future ages; the doubter now will be the doubter then,

and so on while the wheel revolves for the millions of years yet before us.

If we follow the advice of the great Prince, our next step will be to assume, in view of patent facts of evolution, that certain great Beings exist who long ago must have trod the same road, and now possess the knowledge with the power to impart as much as we are able to take. To this Krishna refers in these words;

"Seek this knowledge by doing honor, by prostration, by strong search, and by service; those gifted with this knowledge, who perceive the truth of things, will teach this knowledge to thee."

And such are the exact words of the Masters of our Society. They do not reward or teach merely because we so wish it to be, nor because we value ourselves at so much; our valuation of ourselves is not Theirs; They value us at the real and just rate, and cannot be moved by tears or entreaties not followed by acts, and the acts that delight Them are those performed in Their service, and no others.

What, then, is the work in which They wish to be served?

It is not the cultivation of our psychic powers, nor the ability to make phenomena, nor any kind of work for self when that is the sole motive.

The service and the work are in the cause of Humanity, by whomsoever performed, whether by members of the Theosophical Society or by those outside of it. And all the expectant members of the Society now standing with their mouths open waiting for what they are pleased to call food, may as well know that they will get nothing unless the work is done or attempted.

Let this right attitude be taken, and what follows is described in this chapter:

"A man who perfects himself in devotion finds springing up in himself in the progress of time this spiritual knowledge, which is superior to and comprehends every action without exception."

The fourth chapter is ended. Let all our doubts come to an end!

"What room for doubt and what for sorrow can there be in him who knows that all spiritual beings are the same in kind, differing only in degree."

The Path

TWO SYSTEMS - OF LUST AND SORROW — *A Buddhist*

The great Buddha referred to two systems for the government of life which he said were each ignoble, and one both ignoble and evil. One is the System of Lust, which is devotion to the enervating pleasures of sense; it was said by him to be vile, vulgar, unsound, ignominious, and productive of evil. Yet it is that which governs the lives of most people in these days.

The other extreme is the System of Sorrow. It consists of mortification of the flesh and of self torture in order to acquire knowledge and powers. This was extensively practised by Hindu ascetics in Buddha's time, and is today pursued to some extent. The Indian books are full of stories of the great powers over nature acquired by saints through the practise of austerities. Not ten years ago there died in India a certain Swami — or holy man — who was known as the Swami of Akalkot. He did many wonderful things, and nearly all of them known to young and old in India today. His powers were obtained through the use of the System of Sorrow. In the *Bhagavad-Gita* this practise is spoken of by Krishna, who declares that it is not the best method, although productive of great results.

Both of these systems were known practically to Gautama. As the Prince Siddhartha, he was surrounded by his father's order with every luxury to tempt the senses. There were gardens, flowers, jewels, music, animals, servants, and the most beautiful women. There are so many stories told of the magnificent things collected about him that we must infer for his youth a complete realisation of the System of Lust, or sensation, even if it was of the finer and more noble quality. This at last, pleased him not, and he entered on the practice of the System of Sorrow, which he declared, after

he had obtained Nirvana, to be ignoble and unworthy of a true man. This he continued in until he had tried all the varieties. It was then that he decided on the middle path from which comes attainment to truth and Nirvana.

It is a well-known doctrine in the occult lodges of India that the same result can be obtained in two ways, by one extreme or the other. But in order to reach the end in those ways, great power is required, — more power than men in general possess. The reason is that, from the action of a law which may be roughly called The Law of Tendency, the extreme practice warps the being in such a manner that success is prevented. So, when one follows the System of Sorrow, he will indeed acquire great powers, such as those possessed by Viswamitra, Vasishta, and others, but with the greater number of cases it will all end at last in confusion.

The System of Lust has the same end and with no exception. For its tendency being downward, an impulse is set up that sends the man lower and lower with no hope of salvation.

In pursuing the middle course — that of moderation — Buddha did not ignore any department of his nature, for he says, "By five means have I seen these truths, — by the mental eye, by understanding, by wisdom, by science, and by intuition." Herein he agrees with the teaching of the *Bhagavad-Gita*, which tells us not to eat too much nor too little, not to oversleep nor to refuse proper sleep. Krishna says further, "Do necessary acts, ever remembering me. Fix your mind on me. Treat every creature as my tabernacle. This is the best devotion. In this path there is no ruggedness, no defeat."

The System of Moderation, then, is the best, for it clears the inner eye and strengthens every part of the nature, Theosophists, whether they are Buddhists or not, should remember this. Some are inclined to pursue an extreme course in one direction or

another. Some say that the mental powers only are to be developed; others ignore those and claim that the spiritual alone should have attention. The latter err as well as the former. It is true that the spirit is the greater. But it is also true that the mental plane and powers cannot be obliterated unless we obliterate the Universe in the Night of Brahma. If we do not use the mental eye as Buddha directs, some day we will meet on the mental plane a new experience for which we are unprepared, and defeat shall be our portion. The true practice would prevent this. There are numerous instances of such disasters being thus caused. Ascetics of extraordinary powers have been brought into sin and contempt through experiences which were new to them because they lived forever on a plane where others of a different sort had place. It is only when salvation has been obtained that we can hope to be above the influence of all Karma.

"Such is the Law * * *

The heart of it is love; the end of it

Is peace and consummation sweet. Obey!"

The Path

IS HEREDITY A PUZZLE?

A well known writer in *Harper's Magazine* said lately "Heredity is a Puzzle." He then proceeded, "The race is linked together in a curious tangle, so that it is almost impossible to fix the responsibility.

* * We try to study this problem in our asylums and prisons, and we get a great many interesting facts, but they are too conflicting to guide legislation. The difficulty is to relieve a person of responsibility for the sins of his ancestors, without relieving him of responsibility for his own sins."

This is the general view. Heredity is a puzzle, and will always remain one so long as the laws of Karma and Reincarnation are not admitted and taken into account in all these investigations. Nearly all of these writers admit — excepting those who say they do not know — the theological view that each human being is a new creation, a new soul projected into life on this earth.

This is quite logical, inasmuch as they assert that we are only mortal and are not spirits. The religious investigators admit we are spirits, but go no further, except to assume the same special creation. Hence, when they come to the question of "Heredity," it is a very serious matter. It becomes a puzzle, especially to those who investigate heredity and who are trying to decide on whom responsibility ought to rest, while they know nothing of Karma or Reincarnation. And it is hinted at that there is necessity for legislation on the subject. That is to say, if we have a case of a murderer to consider, and we find that he has come of a race or family of murderers, the result of which is to make him a being who cannot prevent himself from committing murder, we have to conclude that, if this is due to "heredity," he cannot in any sane

sense be responsible. Take the case of the tribes, or family, or sect of Thugs in India, whose aim in life was to put people out of the world. Their children would of necessity inherit this tendency. It is something like a cat and a bird. It is the nature of the cat to eat the bird, and you cannot blame it. Thus we should be driven to pass a law making an exception in the case of such unfortunate persons. Then we should be met by the possibility of false testimony being adduced upon the trial of the criminal, going to show that he came under the law. This possibility is so great that it is not likely such a law will ever be passed. So that, even if the legal and scientific world were able to come to any conclusion establishing the great force of heredity, it would be barren of results unless the truth of Karma and Reincarnation were admitted. For in the absence of these, no law, and hence no remedy for the supposed injustice to be done to irresponsible criminals, could be applied. I am stating, not what I think ought to be done, but what will be the inevitable end of investigation into heredity without the aid of the other two great laws.

If these two doctrines should be accepted by the supposed legislators, it would follow that no such law as I have adverted to would ever be put on the books; for the reason that, once Karma and Reincarnation are admitted, the responsibility of each individual is made greater than before. Not only is he responsible even under his hereditary tendency, but in a wider sense he is also responsible for the great injury he does the State through the future effect of his life, — that effect acting on those who are born as his descendants.

There is no very great puzzle in "Heredity" as a law, from the standpoint of Karma and Reincarnation, although of course the details of the working of it will be complicated and numerous.

I know that some theosophists have declared that it puzzles them,

but that is because it is a new idea, very different from those instilled into us during our education as youths and our association with our fellows as adults.

None of the observed and admitted facts in respect to heredity should be ignored, nor need they be left out of sight by a Theosophist. We are bound to admit that leanings and peculiarities are transmitted from father to son, and to all along down the line of descent. In one case we may find a mental trait, in another a physical peculiarity; and in a great-grandson we shall see often the bodily habits of his remote ancestor reproduced.

The question is then asked, "How am I to be held responsible for such strange inclinations when I never knew this man from whom I inherit them?" As theories go at this day, it would be impossible to answer this question. For if I have come from the bosom of God as a new soul; or if what is called soul or intelligence is the product of this body I inhabit and which I had no hand in producing; or if I have come from far distant spheres unconnected with this earth, to take up this body with whose generation I was not concerned; it would be the grossest injustice for me to be held responsible for what it may do. It seems to me that from the premises laid down there can be no escape from this conclusion, and unless our sociologists and political economists and legislators admit the doctrines of Karma and Reincarnation, they will have to pass laws to which I have referred. We shall then have a code which may be called "Of limitations of responsibility of criminals in cases of murder and other crimes."

But the whole difficulty arises from the *inherited transmitted* habit in the Western mind of looking at effects and mistaking them for causes, and of considering the instruments or means,

through and by means of which laws of nature work, as causes. Heredity has been looked at, or is beginning to be, as the cause of crime and of virtue. It is not a cause, but only the means or instrument for the production of the effect, the cause being hidden deeper. It seems just as erroneous to call heredity a cause of either good or bad acts as it is to call the merely mortal brain or body the cause of mind or soul.

Ages ago the Hindu sages admitted that the body did not produce the mind, but that there was what they called "the mind of the mind," or, as we might put it, "the intelligence operating above and behind the mere brain matter." And they enforced their argument by numerous illustrations; as, for instance, that the eye could not see even when in itself a perfect instrument, unless the mind behind it was acting. We can easily prove this from cases of sleep walkers. They walk with their eyes wide open, so that the retina must, as usual, receive the impinging images, yet although you stand before their eyes they do not see you. It is because the intelligence is disjoined from the otherwise perfect optical instrument. Hence we admit that the body is not the cause of mind; the eyes are not the cause of sight; but that the body and the eye are instruments by means of which the cause operates.

Karma and Reincarnation include the premise that *the man* is a spiritual entity who is using the body for some purpose.

From remote times the sages state that he (this spiritual being) is using the body which he has acquired by Karma. Hence the responsibility cannot be placed upon the body, nor primarily upon those who brought forth the body, but upon the *man himself*. This works perfect justice, for, while the man in any one body is suffering his just deserts, the other men (or souls) who produced such bodies are also compelled to make compensation in other bodies.

As the compensation is not made at any human and imperfect tribunal, but to nature itself, which includes every part of it, it consists in the restoration of the harmony or equilibrium which has been disturbed.

The necessity for recognizing the law from the standpoint of ethics arises from the fact that, until we are aware that such is the law, we will never begin to perform such acts and think such thoughts as will tend to bring about the required alterations in the astral light needed to start a new order of thoughts and influences. These new influences will not, of course, come to have full effect and sway on those who initiate them, but will operate on their descendants, and will also prepare a new future age in which those very persons who set up the new current shall participate. Hence it is not in any sense a barren, unrewarded thing, for we ourselves come back again in some other age to reap the fruit of the seed we had sown. The impulse must be set up, and we must be willing to wait for the result. The potter's wheel continues to revolve when the potter has withdrawn his foot, and so the present revolving wheel will turn for a while until the impulse is spent.

The Path

THE BHAGAVAD GITA: XIII — *William Brehon*

CHAPTER FIFTH.

The name of this chapter in Sanskrit is "Karmasanyasayog," which means "The Book of Religion by renouncing Fruit of Works." It has always seemed to me to be one of the most important in the Bhagavad-Gita. As the poem is divided into eighteen parts, this one is just beyond the first division, for the (.....) to be put into six groups of three chapters each, and we have finished four.

Arjuna is supposed to bring forward the objections raised by, or views belonging to, the two great Indian schools called the Sankhya and the Yoga, one of which advised its votaries to renounce all works and to do nothing whatever, while the other called for the performance of works.

The divergent views naturally caused great differences in practice, for the followers of one would be found continually working, and those of the other continually doing nothing. Hence we find, in India, even at the present day, great numbers of ascetics who remain inert, and encounter on the other hand those who go on making Karma with a view to salvation.

A very little reflection will show the student that the only result of action, as such, will be a continuation of action, and hence that no amount of mere works will in themselves confer Nirvana or rest from Karma. The only direct product of Karma is Karma. And this difficulty rose before Arjuna in the fifth conversation. He says:

Thou praisest, Krishna, the renunciation of works; on the other hand, devotion through them. Declare to me with precision that one only which is the better of these two.

Whereupon Krishna replies:

To cease from works
Is well, and to do works in holiness
Is well; and both conduct to bliss supreme;
But of these twain the better way is his
Who working piously refraineth not.
That is the true Renouncer, firm and fixed,
Who — seeking nought, rejecting nought — dwells proof
Against the "opposites."

The meaning of the teacher has been by some suggested to be that, inasmuch as the life of the ascetic is very hard, almost impossible for the majority of men, it is wiser to now perform good acts in the hope that they will lead one hereafter to a favorable birth in such surroundings that complete renunciation of action — outwardly — will be an easy task, and that the two sorts of practice were not intended to be laid before the student for selection, nor is he put in a dilemma compelling him to choose. I think such is not the meaning, but that, on the contrary, the seemingly easy alternative of performing actions properly is in reality the most difficult of all tasks. And, no matter how much we may wait for a favorable birth, for a much hoped-for environment which will not only permit the new sort of life, but, in fact, urge it upon us, it will never arrive for us until we have learned what is the right performance of action. This learning can never be acquired by a renunciation of works now. Indeed, it may be taken for granted that no person will be able to renounce the world unless he has passed through the other experience in some life. A few may be found who attempt to do so, but if they have not been through all action they cannot proceed. The character of the man himself inwardly is the real test. No matter how many times during countless births he has renounced the world, if his inner nature has not renounced, he will be the same man during

the entire period, and whenever, in any one of his ascetic lives, the new, the appropriate temptation or circumstance arises, he will fall from his high outward asceticism.

That our view as to the extreme difficulty of *right renunciation through action* is correct, we may refer to what Krishna says further on in the chapter.

Yet such abstraction, Chief!

Is hard to win without much holiness.

Krishna praises both schools, telling Arjuna that the disciples of each will arrive at a like end; but he says that right performance of action is the better. Now we must reconcile these two. If one is better than the other and yet both conduct to the same goal, there must be some reason for making the comparison, or hopeless confusion results. Acting upon his apparent equal endorsement, many seekers have abandoned action, thereby hoping to gain salvation. They ignored the sixth verse, which reads: "O thou of mighty arms, it is difficult to attain true renunciation *without right performance of action*; the devotee *rightly performing action attains to true renunciation* before long." Here again is a higher place assigned to performance of action. It seems clear that what Krishna meant was that renunciation of action in any one life, followed by the same conduct in all the subsequent lives thereby affected, would at last lead the renouncer to see how he must begin to stop that kind of renunciation and take up the performance of actions while he renounced the fruit of them. This is thought by many occultists to be the true view. It is well known that the ego returning to regeneration is affected by the actions of his previous births, not only circumstantially in the various vicissitudes of a life, but also in the tendency of the nature to any particular sort of religious practise, and this effect operates for a length of time or number of births exactly commensurate with

the intensity of the previous practise. And naturally in the case of one who deliberately renounced all in the world, devoting himself to asceticism for many years, the effect would be felt for many lives and long after other temporary impressions had worn off. In going on thus for so many births, the man at last acquires that clearness of inner sight which brings him to perceive what method he really ought to follow. Besides also the natural development, he will be assisted by those minds whom he is sure to encounter, who have passed through all the needed experience. Additional support for these suggestions is found in the sixth chapter, in the verses referring to the rebirth of such disciples:

So hath he back what heights of heart
He did achieve, and so he strives anew
To perfectness, with better hope, dear Prince!
*For by the old desire he is drawn on
Unwittingly. (1)*

What we are to endeavor to understand, then, is how to renounce the fruit of our actions, which is what Krishna means when he tells us to perform actions as a renunciation. The polluting effect of an act is not in the nature of the mere thing done, nor is the purifying result due to what work we may do, but on either hand the sin or the merit is found in the inner feeling that accompanies the act. One may donate millions in alms, and yet not thereby benefit his real character in the least. It is very true that he will reap material rewards, perhaps in some other life, but those even will be of no benefit, since he will be still the same. And another may only give away kind words or small sums, because that is all he has to give, and be so much benefited by the feeling accompanying each act that his progress up the ascending arc toward union with spirit is rapid. We find in the Christian Testament Jesus of Nazareth enforcing this view in the parable of

the widow's mite, which he regarded as of more value than all that had been given by others. He could not have referred to the intrinsic value of the coin given, nor to the act as thus measured, for that quantity was easily ascertained; he only looked to the inner feeling of the poor woman when she gave all that she had.

No matter in what direction we see ourselves acting, we perceive how difficult it is to be true renouncers. And we cannot hope to reach the perfection of this better sort of renunciation through action, in the present life, be it the one in which we have begun, or be it the twentieth of such effort. However, we can *try*, and such is our duty; if we persevere, the tendency toward the right understanding will increase with each life more rapidly than would otherwise be possible.

And even in the high aim found in aspiration to discipleship under a master, or even to Adeptship, we encounter the same difficulty. This aspiration is commendable above most that we can formulate, but when we coldly ask ourselves soon after that aspiration has been formed, "Why am I thus aspiring; why do I want to be near in sense to the Master?", we are obliged to admit that the impelling motive for acquiring the aspiration was tinged with selfishness. We can easily prove this by inquiring in the forum of our own conscience if we had the aspiration for ourself or for the great mass of men, rich and poor, despicable and noble; would we be able to feel content were we suddenly told that our deep longing had given the boon to others and that we must wait ten lives more. It is safe to say that the answer would be that we were very sorry. In the twelfth verse we find the remedy for the difficulty, as well as the difficulty itself, clearly stated thus: "The right performer of action, abandoning fruit of action, attains to rest through devotion; the wrong performer of action, attached to fruit thereof on account of desire, remains bound."

These instructions will be very difficult for all who are living for themselves and who have not in some small degree begun to believe that they are not here for their own sake. But when we feel that there is no separation between us and any other creature, and that our Higher Self is leading us through all the experiences of life to the end that we shall recognize the unity of all, then, instead of continually acting contrary to that object of the Higher Self, we try to acquire the right belief and aspiration. Nor need we be deterred, as some are, by the extreme difficulty of eliminating the selfish desire for progress. That will be the task during many lives, and we should begin it voluntarily as soon as it is known, instead of waiting for it to be forced in upon us through suffering and many defeats.

A common mistake made by theosophical students as well as those outside is corrected in this chapter. It is the habit of many to say that, if these doctrines are followed to the letter, the result is a being who cares for nothing but the calmness which comes from extinction in the Supreme Spirit, — that is, the extreme of selfishness. And popular writers contribute to this ridiculous impression, as we can see in the numerous articles on the subject. Among those writers it is the sequence of the "personal aggrandizement idea," which is the bane of the present age, as occultists think, but the chief beauty of it in the eyes of those to whom we refer. Krishna puts it clearly enough in the twenty-fifth verse:

"Effacement in the Supreme Spirit is gained by the right-seeing sage whose sins are exhausted, who hath cut asunder all doubts, whose senses and organs are under control, and *who is devoted to the well-being of all creatures.*"

If the last qualification is absent, then he is not a "right-seeing sage" and cannot reach union with the Supreme. It must follow

that the humblest imitator, every one who desires to come to that condition, must try to the best of his ability to imitate the sage who has succeeded. And such is the word of the Master; for He says in many places that, if we expect to have His help, we must apply ourselves to the work of helping humanity — to the extent of our ability. No more than this is demanded.

The Path

DWELLER ON THE THRESHOLD — *Eusebio Urban*

Has such a being any existence? Has any one ever seen it? Are there many or several, and has it any sex?

Such are the questions asked by nearly all students who read theosophical books. Some of those who all their life believed in fairies in secret and in the old tales of giants, have proceeded to test the question by calling upon the horrid shade to appear and freeze their blood with the awful eyes that Bulwer Lytton has made so famous in his "Zanoni." But the Dweller is not to be wooed in such a way, and has not appeared at all, but by absolute silence leads the invoker to at last scout the idea altogether.

But this same inquirer then studies theosophical books with diligence, and enters after a time on the attempt to find out his own inner nature. All this while the Dweller has waited, and, indeed, we may say, in complete ignorance as yet of the neophyte's existence. When the study has proceeded far enough to wake up long dormant senses and tendencies, the Dweller begins to feel that such a person as this student is at work. Certain influences are then felt, but not always with clearness, and at first never ascribed to the agency of what had long ago been relegated to the lumber-room of exploded superstitions. The study goes still farther and yet farther, until the awful Thing has revealed itself; and when that happens, it is not a superstition nor is it disbelieved. It can then never be gotten rid of but will stay as a constant menace until it is triumphed over *and left behind*.

When Glyndon was left by Mejnour in the old castle in Italy, he found two vases which he had received directions not to open. But disobeying these he took out the stoppers, and at once the room was filled with intoxication, and soon the awful, loathsome

creature appeared whose blazing eyes shone with malignant glare and penetrated to Glyndon's soul with a rush of horror such as he had never known.

In this story Lytton desired to show that the opening of the vases is like the approach of an enquirer to the secret recesses of his own nature. He opens the receptacles, and at first is full of joy and a sort of intoxication due to the new solutions offered for every problem in life and to the dimly seen vistas of power and advancement that open before him. If the vases *are kept open long enough*, the Dweller of the Threshold surely appears, and no man is exempt from the sight. Goodness is not sufficient to prevent its appearance, because even the good man who finds a muddy place in the way to his destination must of necessity pass through it to reach the end.

We must ask next, *WHAT* is the Dweller? It is the combined evil influence that is the result of the wicked thoughts and acts of the age in which any one may live, and it assumes to each student a definite shape at each appearance, being always either of one sort or changing each time. So that with one it may be as Bulwer Lytton pictured it, or with another only a dread horror, or even of any other sort of shape. It is specialized for each student and given its form by the tendencies and natural physical and psychical combinations that belong to his family and nation.

Where, then, does it dwell? is the very natural inquiry which will follow. It dwells in its own plane, and that may be understood in this manner.

Around each person are planes or zones, beginning with spirit and running down to gross matter. These zones extend, within their lateral boundaries, all around the being. That is to say, if we figure ourselves as being in the centre of a sphere, we will find that there is no way of escaping or skipping any one zone,

because it extends in every direction until we pass its lateral boundary.

When the student has at last gotten hold of a real aspiration and some glimmer of the blazing goal of truth where Masters stand, and has also aroused the determination to know and to be, the whole bent of his nature, day and night, is to reach out beyond the limitations that hitherto had fettered his soul. No sooner does he begin thus to step a little forward, than he reaches the zone just beyond mere bodily and mental sensations. At first the minor dwellers of the threshold are aroused, and they in temptation, in bewilderment, in doubt or confusion, assail him. He only feels the effect, for they do not reveal themselves as shapes. But persistence in the work takes the inner man farther along, and with that progress comes a realization to the outer mind of the experiences met, until at last he has waked up the whole force of the evil power that naturally is arrayed against the good end he has set before him. Then the Dweller takes what form it may. That it does take some definite shape or impress itself with palpable horror is a fact testified to by many students.

One of those related to me that he saw it as an enormous slug with evil eyes whose malignancy could not be described. As he retreated — that is, grew fearful —, it seemed joyful and portentous, and when retreat was complete it was not. Then he fell further back in thought and action, having occasionally moments of determination to retrieve his lost ground. Whenever these came to him, the dreadful slug again appeared, only to leave him when he had given up again his aspirations. And he knew that he was only making the fight, if ever he should take it up again, all the harder.

Another says that he has seen the Dweller concentrated in the apparent form of a dark and sinister-looking man, whose slightest

motions, whose merest glance, expressed the intention and ability to destroy the student's reason, and only the strongest effort of will and faith could dispel the evil influence. And the same student at other times has felt it as a vague, yet terrible, horror that seemed to enwrap him in its folds. Before this he has retreated for the time to prepare himself by strong self-study to be pure and brave for the next attack.

These things are not the same as the temptations of Saint Anthony. In his case he seems to have induced an hysterical erotic condition, in which the unvanquished secret thoughts of his own heart found visible appearance.

The Dweller of the Threshold is not the product of the brain, but is an influence found in a plane that is extraneous to the student, but in which his success or failure will be due to his own purity. It is not a thing to be dreaded by mere diletanti theosophists: and no earnest one who feels himself absolutely called to work persistently to the highest planes of development for the good of humanity, and not for his own, need fear aught that heaven or hell holds.

The Path

THE PLANES OF CONSCIOUSNESS — *J. D. Buck*

There are three conditions of consciousness in ordinary daily experience, that of ordinary wakefulness, that of sleep with dreams, and that of dreamless sleep. We have already shown that not memory, but consciousness, is the all-potent factor in man. Consciousness as a fact returns to the individual as well as memory, after deep sleep. Every one will admit that, in sleep where dreams occur, consciousness is on a different plane, or under different conditions, from the waking state, and memory brings into the waking state the subject and the varied experiences of dreams. After dreamless sleep memory may bring nothing back from the subjective world, but it resumes the thread of life just where it was dropped before unconsciousness came on. Now what becomes of consciousness during the dreamless slumber? Either it continues or it does not. If it continues, then it must simply be upon another plane and under different conditions, at least so far as thought and memory are concerned, for the gap is between consciousness and memory in relation to thought. If, on the other hand, consciousness is blotted out and re-created every time we enter dreamless sleep, how does it happen that both consciousness and memory, both new creations, at once take up the thread of life just where they dropped it, and resume the even tenor of their way as though nothing had happened? Such a position is evidently absurd. Nature never does things in that way. Her adjustments require time, her developments and all her varied relations are slow growths. Both consciousness and memory have grown and expanded from the original germ. The true philosophy of dreams, then, is a problem in the conditions of consciousness, while we may fairly assume that consciousness still persists in dreamless sleep, though under different

circumstances. Nothing is more common in daily life than the shifting of the planes of consciousness. Take, for example, the action of anaesthetics. Chloroform changes the consciousness of the real ego. The individual cannot be called strictly unconscious. He is not conscious in the ordinary way. He suffers no pain, and retains no recollection of what occurs while under the influence of the anaesthetic, but the organic consciousness remains undisturbed, muscular motion may occur, but without coordination. The cerebrum, cerebellum, and sensory ganglia are unconscious in dreamless sleep; the medulla, spinal cord, and solar plexus, and the sexual area are wide awake, and sometimes these are super-sensitive. The light of self-consciousness is withdrawn, drawn within, but not quenched. In syncope or an ordinary faint, consciousness is likewise withdrawn, but if one will watch carefully the first return of consciousness in such cases, it will generally be found that consciousness has been by no means dead or idle, for by gently attracting the attention just on the turning point it will be found that a few seconds have been sufficient for the recall of a long forgotten experience, recovered now from the all-pervading ether, or for the weaving of romance, comedy, or tragedy quite sufficient for a good sized novel. But, perhaps, the rather common instances of sleep-walking or somnambulism offer the best illustrations of at least dual consciousness. The literature of the subject is, however, so full and so easy of access that it is unnecessary here to go into details. Persons subject to these attacks from childhood really lead dual lives bearing no direct relation to each other. Individuals walking in their sleep have been known to enter a company where there were strangers, carry on a conversation with those to whom they were introduced, and retain no recollection of the events or of the names of the strangers, or even to have met them. But on the succeeding night, walking again in sleep, meeting the same individuals they recognize them and resume the conversation of

the previous night. One such case is sufficient to show the existence of another than the outer plane of consciousness. Experiments in animal magnetism, and more especially the recent investigations in hypnotism, demonstrate beyond all controversy more than one plane of consciousness, and these may have no direct relation to each other, or, when desired, the connection may be established between the different planes. In many of these cases the extent of knowledge and intelligence of the faculties of the individual in subjective consciousness altogether transcends the ordinary plane. As previously remarked, the difficulty is not in finding illustrations of the different planes and relations of consciousness, but in selecting from the mass of available material. Even the delirium of fever, the intoxication produced by alcohol and many drugs, no less than monomania and insanity, each and all consist largely in either a temporary or a permanent shifting of the planes of consciousness, and aberrations of memory. Take, for example, the delirium caused by opium and alcohol. Consciousness is shifted to a subjective plane, and sometimes to a very low plane. It is a great mistake to assume that the objects seen and the events that occur have no real existence. If all these are to be regarded as the creations of the imagination, whence arises the great uniformity of the objects witnessed from the effects of alcohol? When we get any rational idea of the subjective world, we shall discover that the snakes and dragons witnessed there are as veritable on that plane, to subjective sense, as their living phototypes are on the phenomenal plane to objective sense; for it must be remembered that the universal ether is that infinite ocean whence all creation proceeds, and into whose all-dissolving bosom all things return. Our relation to objects here is largely incidental, determined by location, circumstance, and the like.

On the subjective plane our relations are determined by

attractions and intrinsic conditions, and an individual full of all evil passions, inflamed by alcohol, will attract entities of like degree, and so on to the end of the chapter. To say that all such cases result from pure imagination is not even to make them thinkable. Many persons assume that when they have named a thing they have explained it, and that further questions are an impertinence. Perhaps the most important consideration in regard to the shifting states of consciousness from the objective to the subjective condition regards that vague and varying state known as insanity. As a rule, with the insane this transfer of consciousness is partial, seldom complete. Consciousness is rather out of joint than actually transferred from plane to plane. There is usually an organic lesion, or a functional obstruction that tends to tissue change in some of the nerve centers. The result in many cases is to break down that sharp line of demarcation between the objective and subjective worlds. The individual becomes bewildered, loses his bearings. His experiences are no longer coordinate. The instrument through which consciousness manifested is out of tune, and the result is discord. The great mistake in regard to all these cases of perverted function arises from the fact that no differentiation is made as to planes or states of consciousness. Practically but one state of consciousness is recognized, and the still further mistake is made of looking upon all objects cognized, and all experiences outside the ordinary plane of consciousness, as altogether non-existent, a figment of the imagination. But pray what is imagination? Ask the artist, the poet, the painter; ask genius that is so closely allied to insanity; ask all who create from ideal forms; and they will tell us, one and all, that imagination is the wings of the soul that bear up the lagging fancy, the slow and plodding mind, till it enters the ideal world and gazes there on both beauty and deformity in all their nakedness. They will tell us that what we call the real world is at best but a poor and colorless caricature as compared to the ideals

open to the imagination, and that what the world is pleased to call the work of genius bears but a touch of that transcendent truth and reality that veils its face from every faculty of man on the phenomenal plane. Ask the true scientist what we knew of anything, of matter, space, time, or motion, — of the whole phenomenal world —, and he will tell us, and tell us truly, that we have our own ideas of these, and nothing more. Finally, ask that greatest of all modern philosophers, Schopenhauer, what is imagination? and he will tell us that not only the world, but ourselves included, is reducible to two terms, Imagination and Will; the one, the essence and the creator of all forms in nature; the other, the creative and motive power; and that these powers are as potent on the subjective plane as on the objective; are as active in drunken delirium, in mania, and insanity, as in that other condition of consciousness that we call sanity, but which is often more insane than any other. There is no subject likely to yield more valuable results to the earnest student than the various planes and conditions of consciousness.

The Path

BE IT DONE UNTO THEE ACCORDING TO YOUR DESIRE — *Harij*

Those whose attention has been but recently attracted to Theosophical studies often have considerable difficulty in taking their bearings. These are attracted by the mystery that attaches to Theosophy, and have equal difficulty in estimating their own motives and in understanding the new doctrines. There are, indeed, a few who do not come under this head, those who realise that they have at last found that for which they waited and sought; but these need little assistance, for the momentum gained by long and weary waiting will carry them a long way on the path. The great majority of students belong to the former class, and these are now for the first time brought face to face with themselves. If they mean only to have an amusing and interesting flirtation with occultism, get the reputation of being "a little fast" in the new fad, yet preserve through it all their reputation for virtuous intelligence, they ought to be made aware that they are trifling with very serious matters. It would not be difficult to imagine a man who had been out with boon companions engaged in drunken orgies, and who at midnight had come reeling home, leering and besotted, to find that home in flames, and all he had held most dear and that he had imagined safe being devoured by the cruel flames. Such a one would be sobered in a moment, and in that awful awakening self-reproach and horror would take possession of his soul. He would in that awful moment stand face to face with himself. His own conscience would be his Nemesis, though he might have had nothing directly to do with bringing on the calamity that had overtaken him. Suppose he had returned from a mission of mercy to find the same calamity awaiting him, the difference in the two cases can easily be imagined. He would now be face to face with his calamity, and in either case he would

doubtless do his best to rescue his treasures. What makes the difference in these cases? Is it not all in the man's own soul? Every student of Theosophy will find the subject full of mystery, but that mystery will be but the reflection of his own nature.

If one were to inquire, What is Theosophy anyhow? and what shall I find in it of interest or value?, it might be answered, What are you? and what do you seek in Theosophy? Are you satisfied with your present life and your past achievement? Does it give you zest and satisfaction? If it does, and if you are quite satisfied with things as they are, you had better let Theosophy alone, for it will break your repose and make you the most wretched of mortals; it will place you face to face with yourself, and you will not be pleased with the reflection in the mirror; nor will you ever again find that self-complacent satisfaction you have heretofore enjoyed when thinking of yourself. If you are involved in a round of pleasure, and are rushing from one sensual delight to another, discontented when left to yourself, yet still imagining you are happy if only you can keep up the dizzy dance of life, you will find nothing in Theosophy to compensate you for the lost pleasure; it will break the charm and destroy the illusion. Let it alone. The baby has first to learn that fire will burn its little fingers, before it will learn to avoid the fire. So also with the votary of pleasure; until he has learned the Cheat, and how utterly inadequate are all sensuous enjoyments to satisfy a living soul, he will seek these enjoyments as a child cries for the light or vainly reaches out its frail arms for the moon. You will find in Theosophy just what you desire and just what you find in yourself. It will not satisfy you if you still long for selfish enjoyment; it will repel you, and send you back from its cold embrace to the dizzy whirl of the maddening dance of life, glad that there is warmth *somewhere*.

If, on the other hand, your soul is already filled with a great

unrest; if you have already discovered the cheat and lost the old zest of childhood, and yet been unable to find anything to take its place; and if you are almost ready to despair, and count life as a failure and hardly worth the living, then, my friend, my brother, Theosophy has a message for you. It will again show you yourself, and more, it will show you the meaning of life, and place you face to face with your priceless opportunities, and just in proportion to your present hopelessness and discouragement will it inspire you with zeal and with courage. It will show you the cause of failure, the cause of disease, and the cause of unhappiness, and it will give you the panacea for all these ills of life. It will banish that bane of life, *ennui*, forever. It will enable you to find within yourself the disease and its remedy, and it will put you in possession of a never-failing source of inspiration and of joy. If you desire all this, be it done unto you according to your desire. But do you really desire it? Remember the issues are with your own soul. You are both priest and penitent, and absolution can come only to a clean conscience. There can be no deception practiced. You will be alone with your own soul, and will realize how utterly hopeless, how absurd; it would be to attempt any deception. *There can be none*. Are you afraid to stand face to face thus with yourself? and do you prefer to wait for the midnight hour and the great awakening! Then wait! no human being can say you Nay. Follow the cheat called pleasure! Raise high the orgies of self! Silence the voice within, and wait till all is ready or till death come and the account is closed.

The true Theosophists are not a legion, the ranks are by no means crowded. These are not measured by their occult lore, or by their mysterious power, nor yet by any worldly standard, but solely by their convictions. They are one and all *dead in earnest*, dead to all things else. They may not outwardly yet renounce, but they have inwardly relinquished, and will rejoice at the coming of the time

when incidentals shall vanish and only essentials remain. These have lived in all ages, giving meaning and dignity to life, invincible and immortal.

Think of Epictetus, when tortured for a trifle, saying to his tormentor, his "master!", "If you twist my limb much farther, you will break it, and so deprive yourself of a servant," and, when the bone broke, replying only, "There, I told you you would break it." A poor crippled slave, yet all the masters among besotted kings could not touch his soul, more than a drop of water could reach the heart of volcanic fires. But this was so long ago, and the world is so much wiser and better now! and Epictetus was not only a slave but a heathen! Well, courts of law, masquerading in the name of Justice, at the command of Mammon can still imprison the greatest discoverer of the age, and when they have persecuted Mr. Keely to death they will doubtless ascertain the commercial value of his "secret." Whether power wears a crown, a mitre, a golden helmet, or a cap and bells, 'tis all the same. Power in the throne, in the holy Inquisition, in the seat of Justice, or in the service of mammon, will never comprehend and never master the silent power and invincible courage of one noble soul that knows and loves the simple truth.

Though we persecute truth daily,
Though we plant with thorns her brow,
Scourge her, spit upon, revile her,
And crown error here and now:
Through the cycles of the ages
Truth comes uppermost at last,
And the heroes of the present
Were the martyrs of the past.

THE TEST OF THEOSOPHIC INTEREST — *Harris P.*

The test of Theosophic interest is precisely the test of every other kind of interest, — What one will do to promote it. And here, obviously, two considerations arise.

The first is that no act which is superficial, or perfunctory, or for personal benefit, can at all gauge devotion to a cause which is both impersonal and deep-reaching. It is easy to descant on the glory of a system so elevated as the Wisdom-Religion. It is as easy to proclaim one's own appreciation of its tenets. It is not difficult to attend punctiliously the meetings of a Theosophical Society, and to absorb with readiness, perhaps with profit, whatever of truth may be there disclosed. It may not be easy, but it is entirely possible, to read every Theosophical work of repute, to extract its main thought, and to digest well the learning acquired. And yet, very evidently, the first two are exercises only of the voice, the last two only of the mind. If Theosophy was a matter of the breath or the brains, this participation in it would not only be salutary but ample.

In truth, however, Theosophy gives but a light benediction to either the mere talker or the mere student. It by no means undervalues sincere homage or zealous inquiry, but it is so intent on the work of transferring interest from the lower to the higher levels of being, so eager to excite the unselfish enthusiasm for others' good which, subordinating its own advancement, shall be most thrilled at the chance to advance Humanity, that its ideal is the man who is exerting himself to help others, rather than the man who is exerting himself to get ahead. And, as it believes that the present most efficacious agency for extending truth, vivifying motive, and elevating the race is the Theosophical Society,

Theosophy regards as its best expositors those who are working most for the Society it has founded.

Some man with more impetuosity than perception will at once cry, "But this is only the Church and its motive over again!" Not at all. There is no question of doctrinal triumphs, of sect growth, of rival temples, of missionary comparisons. The elements of social distinction, of clerical rank, of legislative influence are all absent. There is not even the ambition to push the Society into the area of recognized religious organizations, for it not only disclaims competition with Churches, but is disqualified for such competition by its lack of creed, its slight coherency of organism, and its vigorous assertion of individualism in opinion and in training.

Moreover, before assuming the danger of possible ecclesiasticism, one must remember that the standard applied to the Theosophical Society is exactly the same as that applied to a Theosophist, — self-forgetfulness in work for others. If the individual member is held to the doctrine that he best realizes Theosophical aims through the obliteration of ambition and the substitution therefore of an altruistic life, similarly as to the Society. Self-aggrandizement, as a pursuit, might evolve a Black Magician; it might even evolve a Church; but it never could evolve a Theosophical Society.

Of the three objects contemplated in the establishment of the T. S., the first and greatest is the promotion of Universal Brotherhood. But this does not mean merely a sentimental recognition of a general human fraternity; it means an active beneficence towards the rest of the family. And if correct views, loftier ideals, richer motives, finer principles, healthier aspirations are more attainable through the Theosophic system than through other systems of faith or morals, the Theosophist is best serving the

interests of his brother-men by giving that system all the publicity he can. And if, still further, he accepts the fact that the Masters have adopted the Society as their channel for conveying and distributing Truth to the human family, he reaches the conclusion that in laboring for the Society he is conforming most closely to their desires, benefiting most efficiently the race of which he is a part, using most hopefully the best agency for spiritual good. Practically, therefore, the truest Theosophist at the present day is he who is most interested in the Theosophical Society.

And now has been reached the point where the test of Theosophic interest may be applied to a Theosophist. *What is he doing to sustain the Society?* Not how many times does he place F. T. S. after his surname; not how loud his voice in benediction on the Founders; not how warm in praise his letters to active members; not how many meetings he attends, or books he reads, or intricate problems in Occultism he explores; not what food he eats, or clothes he wears, or opinions he proclaims; but *what is he doing to help?* He may be copious in phrases and efflorescent in gracious speech, or, as are some, mysteriously mournful over the faults of others which so impede their own progression; he may fold hands before the needs of the Cause, and piously avow trust in the interposition of Mahatmas, or he may point out that the time is unpropitious, or that a spiritual system has no claim for cash, or that it degrades Theosophy to make a collection; he may suggest that in giving his name he does better than give funds, or that there seems as yet no opening for the expression of his zeal, or that his sympathies are with us and his one aspiration is to be upon the path. And yet the inexorable test, inexorable because in the nature of things and therefore not amenable to cajolery or humbug, stands before him, — *What is he doing to help?*

The second consideration referred to at the outset is that the test of Theosophic interest is not the absolute amount of help given,

but that amount as related to the capacity of the giver. Five cents, five hours, constitute a far larger proportion of one man's available means or time, than five thousand dollars or five months do of another's. Hence it is not the figures, but their fractional value, which determines the extent of the interest. Just so is it in every other human interest. How much one cares for a relation, for a friend, for a philanthropic cause, for a public object, is unerringly shown by the proportion of outlay he devotes thereto. And this does not mean a careless proflusion with superfluous goods, but the cutting-off of personal indulgences, cherished but dispensable, for the better sustentation of a cause, — in other words, *self-sacrifice*. Nor does self-sacrifice mean the sacrifice of other people, as some think; the bearing with great fortitude privations one does not share, the consecration of money or time or effort which really belongs to one's family or entourage. It means the sacrifice of *yourself*, of your own habits and enjoyments and expenses, in order to build up a cause you profess to love. And the extent to which this is done gauges the proportion of your love for that cause to your love for yourself.

Now Theosophy is not unreasonable or captious. It does not advise any man to starve himself, or to wear rags, or to scout at the conditions of life in the civilization wherein he was born and which express the laws of sociology. It does not enjoin monasticism, or seclusion, or parsimony, or want of public spirit, or abnegation of social amenities, or one-sidedness, or bigotry, or folly under any name. We are to be men, rational men, civilized men, cultivated men, and we promote no noble cause, least of all the noblest, if we are unsocial, unpractical, or fantastic. But while all this is true, it is equally true that in one's own private affairs, in that sphere of personal belongings outside the claims of others and wherein absolute freedom is unquestioned, the test of Theosophic interest is directly applicable. It is, as has been shown,

the proportion of time, money, literary or other effort, one is willing to give up for the Theosophical Society.

Not a few sincere readers may honestly ask, What is there for me to do? The answer to this is the showing what there is to be done, and then each may inquire within himself how and to what extent he can aid. First, there is the support of the Theosophical Society itself, its organic action and work. Hardly any one is too poor to become a member-at-large and aid to the extent of \$1.00 a year. If able to contribute more, he can do so with the certainty that its growing needs in printing, postage circulation of documents, advertising, the occasional schemes for Theosophic advance for which direct help is asked, constitute an ample channel for any donation. Then there is Theosophic Literature. Its periodicals need to be sustained, sustained by the subscriptions of those who believe them useful, sustained by those who both take them for their own reading and order them sent to points where they may do good. Pamphlets, tracts, documents may be bought by the zealous and sent to individuals where budding interest is suspected, thus aiding to make possible new ones and giving circulation to those now printed. Theosophical books may be presented to Public Libraries, and, as current facts show, *with the certainty that they will be read*. In private conversations a Theosophical idea or phrase maybe dropped, enough to provoke inquiry, possibly investigation. Openings for the impartation of truth may be judiciously used. Then there is the establishment of a Branch. Every member of the Society in a town without a Branch may well judge its foundation his special mission. In many ways and in many hearts the seed may be sown, confident that time, possibly short time, will bring that harvest. If a member of a Branch, he has before him work in strengthening it, enlarging its Library, enlivening its meetings, helping to feed and not merely feeding, thinking out schemes by which its existence

may be known through the community and it be recognized as a distributing centre of light. If having access to the press, he can secure the insertion of brief items or clippings which will keep the topic before the public. If competent to write, he can present some truth he finds potent or correct some mistake he sees popular.

What is there for me to do? Everything that you *can* do. A word, a hint, a tract, a volume, a subscription. If it costs you nothing, your interest is nothing. If it costs you little, your interest is little. If it costs till you *feel* it, then it is that you feel your interest. And when you yourself, body, soul, and spirit, are devoted to the doing, when you thrill with that topic as with no other topic, when your pleasure is in self-sacrificing efforts for its promotion, when you forget yourself, have lost yourself, in it, then will you have become in measure what are the Founders, — may one not even say, what are the Masters Themselves.

The Path

SPIRITUAL GIFTS AND THEIR ATTAINMENT — *Dies Non*

One of the questions which a Theosophist is apt to ask, and to ask with some earnestness and intensity, is, How can I make progress in the higher life? How can I attain spiritual gifts? For the phrase "spiritual gifts," which is a rather loose-jointed expression, we are indebted to Paul, the Apostle and Adept, who thus wrote to the Corinthian Church: "Concerning spiritual gifts, brethren, I would not have you ignorant." Among the "gifts" which he goes on to enumerate are these, — wisdom, knowledge, faith, healing, the working of miracles, prophecy, discerning of spirits, the speaking of divers tongues, and the interpretation of tongues. And while the Apostle urges the Corinthians to "covet earnestly the best gifts," he yet proceeds to show them a more excellent way, namely the supreme law of love. "Now abideth," he says, "faith, hope, charity (or love), these three; but the greatest of these is charity." Spiritual gifts, then, however desirable their possession may be, are plainly not, in the opinion of this good Adept, on the highest plane, not the supreme object of human attainment, or the most excellent way of reaching human perfection. They may doubtless properly be regarded as evidences of advancement on the higher planes of thought and spiritual life, and may be coveted and used for the benefit of others; but they are not in themselves the chief object of human desire. For man's supreme aim should be to become God, and "God is love."

But let us look at the matter a little more closely. In the first place, what is a "gift"? What is the common acceptation of the word? Clearly something given to or bestowed upon a recipient, not something which a man already possesses, or which he may obtain by a process of growth or development. The latter, strictly speaking, would be a "fruit," not a gift. A tree which has been

producing nothing but leaves and branches for many years finally breaks out into blossom and fruit. No new "gift" has been conferred upon it; it has simply reached a stage of development in its natural growth where certain powers, inherent in the tree from the beginning, have an opportunity to assert themselves. In the same way the transcendental powers possessed by the Adepts are not gifts; but the natural result of growth in certain directions, and the necessary efflorescence, so to speak, of the profound development in their cases of those spiritual potentialities which are the birthright of all men.

Taking this view of the meaning of the word, I think most Theosophists will be ready to admit that the phrase "spiritual gifts" is a misnomer. There are and can be no gifts for man to receive. Whatever the student of the higher life is, he is as the result of his past labors. Whatever he may become in the future will be due to his own efforts. He may develop his latent faculties and in time become an Adept, or he may drift along the currents of life without aim or effort, till he finally sinks into oblivion. His destiny is in his own hands, and is in no way dependent upon "gifts."

Bearing in mind, however, the manifold nature of man, the subject may be looked at from another point of view. For all practical purposes man may be said to consist of body, soul, and spirit, the soul being the true ego, and the spirit one with the Supreme. And regarding these for the time as separate entities, it is perfectly true, as James, another apostle, puts it, that "every good gift and every perfect gift is from above." Even aspiration of the soul for spiritual things, every resolve of the man to lead a purer life, every helping outstretched hand to a weaker brother, every desire for the truth, all hungering and thirsting after righteousness: — these and like yearnings and strivings of the soul have first of all come from above, from the Divine within. In

this sense they may be called "gifts," — gifts from the higher nature to the lower, from the spiritual to the human. And this action of the above upon the below is seen in those humane attributes, or qualities, or virtues — whatever one may be pleased to call them — which Paul in another place enumerates as the "fruits of the spirit, — love, joy, peace, long suffering, gentleness, goodness, faith, meekness, temperance."

Looked at from either of these points of view, how can we attain spiritual gifts? The answer would seem to depend upon what we are really striving for. If the extraordinary powers of the Adepts have captivated our fancy and fired our ambition, then we must possess our souls in patience. Few, if any, of us are at all fitted for a "forcing" process. We must be content to wait and work; to grow and develop; line upon line, precept upon precept, here a little and there a little, till, ages hence perhaps, we come to the full stature of the perfect man. If, however, wisely recognizing our limitations, we strive instead after what may be termed the ordinary manifestations of the spirit, two obvious lines of conduct suggest themselves.

Every impulse from above, every prompting of the Divine within, should meet at once with a hearty welcome and response. If you feel as if something urged you to visit some sick or afflicted neighbor or friend, obey the suggestion without delay. If the wish to turn over a new leaf comes into the lower consciousness, don't wait till next New Year's before actually turning it over; turn it now. If some pathetic story of suffering has moved you, act on the emotion while your cheeks are still wet with tears. In short, put yourself at once in line with the Divine ways, in harmony with the Divine laws. More light, more wisdom, more spirituality must necessarily come to one thus prepared, thus expectant. How can a bar of iron be permeated with the earth's magnetism if it is placed across instead of in line with the magnetic meridian? How

can a man expect spiritual gifts or powers if he persists in ignoring spiritual conditions, in violating spiritual laws? To obtain the good, we must think good thoughts; we must be filled with good desires; in short, we must *be* good.

And this practical suggestion is to fulfil faithfully and conscientiously every known duty. It is in and through the incidents of daily life, in work well done, in duties thoroughly performed, that we today can most readily make progress in the higher life, — slow progress, it may be, but at any rate sure. These are stepping stones to better things. We advance most rapidly when we stop to help other wayfarers. We receive most when we sacrifice most. We attain to the largest measure of Divine love when we most unselfishly love the brethren. We become one with the Supreme most surely when we lose ourselves in work for Humanity.

The Path

MEDITATION AND ACTION: I — *Pilgrim*

It is the fashion nowadays, with those who write about ideas which lie beyond the world of sense, to express opinion in very guarded terms. In contradistinction to the old priestly dogmatism, it has of late years been considered "good form" to handle these subjects in so tentative a manner as almost to imply agnosticism. It is a frame of mind that has eminently suited the time, and was a worthy set-off to the old superstitious intolerance.

But when a new revelation is bursting on the souls of men, when the error and the ignorance, alike begotten of the ancient superstition and the modern incredulity, are so powerful as to defy all but the best aimed shafts of the most cogent Reason, the tentative hesitation of the groper after Truth is no longer an appropriate attitude.

We have no desire to soar into the lofty region of metaphysics, where we are sure to be met with the assertion that truth about these ultimate realities never has been and never can be formulated or uttered by man. Let us content ourselves with the humbler elevation of practical ethics, and acknowledge that Truth is a relative term. To quote from a remarkable letter lately addressed to his Grace the Archbishop of Canterbury, "A religion is true in proportion as it supplies the spiritual, moral, and intellectual needs of the time, and helps the development of mankind in these respects. It is false in proportion as it hinders that development, and offends the spiritual, moral, and intellectual portion of man's nature. And the transcendently spiritual ideas of the ruling powers of the Universe entertained by an Oriental sage would be as false a religion for the African savage as the grovelling fetishism of the latter would be for the

sage, although both views must necessarily be true in degree, for both represent the highest ideas attainable by the respective individuals of the same cosmico-spiritual facts, which can never be known in their reality by man while he remains but man."

With this prelude let us attempt to form some just estimate of a remarkable and interesting book which has recently been published, *Scientific Religion*, by Laurence Oliphant. It is certainly in marked contrast to the style of writing commented on in the opening paragraph, — indeed it is refreshing to listen to such earnest utterances on subjects of the deepest interest. While expressing his sincerest attachment to the true Christian faith, no writer attacking the anti-Christian creeds of the churches could demolish the orthodox conceptions with more powerful or crushing arguments. The 22nd chapter, which deals with the interpretation of part of the Book of Revelation, is one which the orthodox would do well to "read, mark, learn, and inwardly digest." His remarks throughout the volume about the orthodox science of the day (for there is now an orthodoxy in this also!) are equally admirable. The following is a specimen. "But a blind belief in the superficial senses is as unsafe a guide to truth as a blind belief in a book. Science is as mole-eyed as theology, and yet to one or the other the whole civilized world trusts for enlightenment. No wonder that these two sets of blind guides, leading their blind followers, should stumble against each other in the dark and right furiously."

The new vital impulses descending on man are then dealt with. They are supposed to emanate from those inhabiting the Unseen Universe. Whatever opinions may be held on this subject — and opinion is today in a state of flux — the following may certainly be called an ingenious explanation. "Where there is scepticism in the human pneuma or inmost thought of the man, antipathetic atomic combinations are formed in his two external dielectrics,

and interpose a hostile atomic element which encompasses the medium, and forms a barrier that the psychic force of the spiritual agent cannot penetrate. It is for this reason that physical manifestations are successful just in proportion as there is a strong faith-sentiment in the spectators, whose external dielectrics are then co-operating with the spiritual agent."

The remarks on the discoveries claimed by Mr. Keely too are so interesting as to deserve reproduction. "Mr, Keely has discovered that such a change can be effected by vibration, in the atoms of which the atmosphere is composed, that what he terms 'atmospheric disintegration' can be produced, which has the effect of liberating a subtle essence, the nature of which has still to be determined, and which he believes to be 'inter-atomic.' The energy it possesses is so great that it exercises a pressure of 25,000 lbs. to the square inch, and, in the engine which he has just constructed for traction purposes, develops a force of 250 horsepower. All this is achieved without the introduction of any extraneous motive power, the whole apparatus being so constructed that the liberation of this tremendous agency from its atmospheric prison-house can be effected by the vibrations produced by a tuning-fork. Those who are sufficiently unprejudiced to connect the bearings of this discover, of what must be dynaspheric force, with phenomena which have hitherto been regarded as supernatural by the ignorant, will perceive how rapidly we are bridging over the chasm which has always divided the seen from the unseen, and obliterating the distinction between what has erroneously been called matter, and what has no less erroneously been called spirit." Further on in the book it is significantly pointed out that this dynaspheric force with which Mr. Keely can operate on external substance is synonymous with the inter-atomic energy that produces the phenomena of hypnotism, telepathy, mediumship, and all such abnormal

manifestations.

While differing in some points to a marked degree from the recognized theosophic teachings, the author nevertheless demonstrates that the source from which he has drawn his inspiration is conscious of many of the occult facts, — for instance, the androgynous or bisexual nature of primeval man; the highly attenuated character of matter which composed his frame, compared with the fleshly covering we now wear; the esoteric meaning hidden from the vulgar gaze in the Bible as well as in the Scriptures of all religions, and the consequent necessity of initiation in the mysteries; the mistaken notion of the popular mind as to the fundamental difference between spirit and matter: but it is needless to enumerate them further.

We now come to the great subject of which the whole book is a gospel, — the sympneumatic impulse, the descent of the Divine Feminine. Taken in the widest sense, the author's inspiration appeals to our highest reason, and we cannot but give approval to the general proposition that the far-off regeneration of the race will lie (amongst other things) in the reversion to the bisexual type of our prehistoric spiritual ancestors, — in other words, in the absolute quenching of the principle of lust, the double-faced goddess today worshiped, though in varying degrees, by all Humanity — by the votaries alike of marriage and of free-love. This will be an unpalatable way of stating the truth to many, for it is a view from a light which naturally seems to dwarf the difference between the virtuous world and those whom the virtuous world avoids touching with the hem of its garment.

But while assenting to the general proposition, there are details in the working out of the idea which do not appeal to our sense of truth. Writing in chapter 20 of one who is pursuing the upward path, he says, "She will know — not because it is to be found in

the Bible — not because her reason suggests its truth, but because her physical organism forces the fact upon her, that she is the feminine half of a two-fold being, and that her completion consists in union with her masculine complement." And again in chapter 21, interpreting extracts from the Kabbalah, he refers to the sympneumatic descent, "for it will result in the union on earth of the halves hitherto divided, whereby man will regain his lost condition." This is no new idea either. Without going back to Plato (and we should probably err in ascribing to his deeply-veiled utterance the meaning that the words might naturally seem to imply), we find it unmistakably expressed in "Jocelyn," that touching story of Lamartine's, in the stanza which begins —

"Mon coeur me l'avait dit: toute ame est soeur d'uneame;
Dieu les crea par couples et les fit homme ou femme;
Le monde peut en vain un temps les separer,
Leur destin tot ou tard est de se rencontrer."

The completion of the at-present incomplete nature of man or woman by an ideal union must to many be a very fascinating thought, but instead of its being as it here purports to be, the explanation of the mystery of the differentiation of sex, is it not rather a perversion of the truth, the truth being that both man and woman have within each one the potency of both sexes, and in this consists their true equality, — in other words, that the Soul is bisexual, and is therefore capable of assuming and wearing either the male or the female form, and that its true apotheosis consists in its assertion of and its reversion to its real nature and Divine source.

Much that is written in this section of the book on the subject of woman's mission is admirable. Though the author is severe on the colleges for the higher education of women, which, he says, are "attractive to a certain class of the sex, but which are

nurseries of hybrids which turn out an inferior species of man-woman," yet, as he truly points out, the degree in which they (women) compete, with more or less success, with men in the intellectual and executive battles of life is the degree to which they stunt and destroy their own higher faculties.

Of the truth of his inspiration generally, what shall we say? Each man must judge according to his own light which opinion and belief are our guides, and before we have risen to the heights necessary for directly cognising these facts of the Unseen Universe. While leaving those who are able to do so to deal critically with the detailed statements, and to discriminate between the interpretations of symbols and passages, many of which appear to be far-fetched, it seems to us generally that, while the learned and able author has received shreds and fragments of transcendental truth from the Astral World, the knowledge of the primary fact is wanting which would have been capable of discriminating between the teachings and of welding them all into one homogeneous whole, — we mean the doctrine of re-incarnation and the law of Karma, facts which are recognised as the basis of all the great Oriental religions, and which it is the shame and loss alike of Christendom and of Islam to have generally ignored, though traces of the truth are still to be found in the scriptures of the former, and though it is secretly acknowledged by the mystical followers of the latter.

The author also suggests that the attainment of a perfect human state by man while still he bears the body is a realizable possibility. A whole chapter is devoted to the subject of the formation of households which are gradually to realize this perfect state. But let the author speak for himself, though of course no short extract in this or in any other case can do full justice to the gradually elaborated idea of the author in his own work. "For as he labours thus side by side with his fellow-men,

tilling, perhaps, the land, and ploughing deep furrows into his own soul, which are destined in good time to bring forth an abundant crop, he perceives that he is indeed laying the foundations of a reconstructed society; and a vista opens out to his charmed gaze of co-operative industries, harmonious communities, and a political system in which liberty, equality, and fraternity shall develop under the aegis of absolute authority, and in association with a hierarchy composed of such different degrees of rank as correspond to their fitness to enjoy it."

It must necessarily be with regret that criticism is allowed finally to replace approval of a book which contains so much that is excellent, and the lessons in which are so sadly needed by this self-satisfied and self-vaunting age of ignorance and error. But the unwarranted optimism implied in the above calls for comment; and, besides, there is an apparently wilful misunderstanding throughout the volume of some of the deepest and most occult truths, which recalls a similar though much less flagrant example of misunderstanding, viz: the exaltation of woman as the crown of the universe by the late Mrs. A. Kingsford in her and Mr. Maitland's work, *The Perfect Way, or the Finding of Christ*. If it is fair thus to cite a single blemish in a book of such exalted inspiration and remarkable value as the one just named, it may still stand as an example of the error which all psychics are specially liable to, who trust to "spirit-guides" apart from the true intuition of the well balanced nature, as well as from the ancient traditions of revealed authority.

(Concluded in March.)

The Path

REFLECTIONS

When I am annoyed by an ungovernable animal, I am reminded that the brutes would not oppose man if man understood and entered into his true relations with all things. The brutes are unconsciously aware of the general human opposition, which they see focalized in each human being. When I am in harmony with all things, men *cannot* and brutes *will not* oppose me. In underrating instinct, the brute is more true than is the man to the unwritten Law.

The "idle word" condemned by Jesus is inactivity of Being. It is the cessation of the homogeneous resonance, the Logos or Word. The Word in its highest activity is pure spirit; in stagnation it is hell. To each man it is given in trust for all men; if he misinterprets it he is tortured. If he sequesters it, he is condemned to eternal death that it may be free; for it is eternally free. Through misuse, he may learn its use. If he denies it, he is lost; for by it alone he lives.

It is better for a man to sin deliberately against the Law than to chafe under the mandates of conscience. The first is a renegade who chooses another King; the second is coward and slave who rebels but dares not disobey. The energy of direct sin may, by reaction, compel return, but the lethargy of fear bears no fruit.

If you wish to receive, *give*. If you wish to ascend, *descend*. If you wish to live, *die*. If you wish to understand these words, read them by the lamp of the spirit, and reject that of the understanding.

Apparent evil is a necessary result of manifestation or duality. The good alone is *in Time* inactive. Evil is the balance of good: the

Equilibrating power reigns above and is alone eternal.

When the silent Eternal gives birth to the activity of Spirit in Space the worlds are evolved, and, seeking equilibrium, return again to the eternal silence. So with the soul of man.

More saving grace may be found in the society of thieves than in that of fine persons who never reverberate to a true thought. In the first there is rebound; the latter is the negation of life.

Expiation is the kernel of sin. "Evil" containing its own punishment continually defeats itself, and sows the seed of "good" in its own regeneration.

He who would see Perfection must become It. How? By beginning the attempt. Its first step is the full realization of imperfection in himself.

The Path

GET YOUR LUGGAGE READY — *J. Campbell Ver Planck*

One night I seemed to see a great and populous country. It teemed with life and wealth, yet no sound, no motion arose from it. It was a petrified land. Rich harvests turned the earth to gold, but no reapers came forth. Fruits of the purple, the rose, and every splendid hue, weighted the orchard boughs, but not a hand was raised to pluck them. The flowers shone unseen; the dead air could not woo forth their perfume. The waters had no song; the birds, no flight; the clouds, no rain; the sun, no beams in that leaden atmosphere. The march of the seasons was arrested. Never was land more fertile, more beautiful. It needed but the heart and hand of man to continue its prosperity. High mountains, too, were there, where the gods abode, hovering so near to men that I cried aloud, to see these divine opportunities neglected or forgotten.

Pondering upon a sight so mournful, I saw that the inhabitants of this country had all a strange kind of mental atrophy which annulled all efforts, frustrated every activity. Surrounded by everything which could secure usefulness, happiness, and the fullest development of their natures, they did not know how to set about securing these ends. Their minds were under a spell. In an intellectual darkness, they were dimly conscious of their wretched condition, and called for some one to come and remove the torpor of their minds, to tell them how they might enter into this splendid Life and possess it. At times they did what work they must, then sank into quiescence again, while the glory of Life seemed to taunt and mock them. In truth it did not do this. These glorious opportunities were there to urge them on, but could not rouse them.

The anguish of this paralyzed and waiting multitude was so great, that I too began to share their pain and their expectancy as I looked on, and I called aloud anxiously, "Will no one come to help them?"

Some unseen person promptly answered me, "Helpers have already set out for this country, which is called 'The Future.'" "Will they soon arrive?" I asked. My informant replied, "Look, and judge for yourself."

At this I felt impelled to turn around, and saw great masses of clouds breaking open before me, making a rift through which I could look. The view was so misty that I understood, in some mystic way, that I was about to see into the Past. What I perceived was a long railway train starting on a journey to some very distant point. There was great confusion about it. Some of the travellers were leaning out of the slowly moving train, gesticulating towards huge piles of luggage left behind. Others were endeavoring to turn the air brakes. Some had reached the engineer, and were arguing briskly, urging him to stop the train or to go back. Many others slept, and by their feverish rest I could see that their thoughts were on the baggage vans. Meanwhile, back in the station, were travellers absorbed in checking and marking their luggage, or wandering about half dazed, trying to find their personal effects, and to keep them distinct from the rest. People were arriving, too, in a constant stream, belated by their overladen coaches, and, in far homes, I saw others bustling hither and thither, packing and repacking. All of these were so absorbed that they did not know the hour was past, or that the train had set out for the land where they were all bound to go.

"Are these the helpers?" I asked. My unseen friend said that they were.

"But why do they not make haste when they are so sorely

needed?"

"You see they are willing enough, but their luggage detains them."

"Could they not do with less, and arrange it more rapidly! or even discard much of it, which seems to consist of mere personal luxuries fostered by habit?"

"They could indeed, but this they do not understand."

"And, will no one reach that unfortunate country?" I exclaimed.

"Yes; the train will arrive there, but it will be detained. And many of the people in it are so harassed by their thoughts of their lost or strayed luggage, or so preoccupied in keeping it together, that they will not be able to set to work promptly on their arrival. Thus they will not resist the peculiar lethargy which prevails in that land, and they will swell the numbers of the unfortunates, who, like them, originally started out hoping to reach a happy Future."

"Are there, then, no persons of clear and unencumbered minds," I asked, "who can be of use to the rest?"

"Indeed there are, but they are comparatively few, and are swallowed up in that great crowd. There in the train you may see an occasional traveller who is tranquil, whose thought is fixed upon his errand. There are such also in the city, and they are putting forth all their strength. Who shall say whether they can do much? What is needed is that the great majority of men should try with one accord to think of The Future, to prepare to enlighten and free it. They cannot attain the great prizes here and now, but they can do something; they can prepare for it."

This person spoke so quietly that his even tones annoyed me.

"And you," said I, "you appear to take all this suffering and possible disaster very coolly. To think that a land so fertile, one

with such glorious, and even divine possibilities through its Humanity, should lie extinguished in darkness because of the delays of these travellers! It is enough to break any heart."

"I am not 'cool,' as you say, but I am calm. I am obliged to be, for I have seen this sight for many an age; I shall see it for many more. In all time the sad lesson repeats itself, and Time is one. What you have seen is what takes place age after age. The waiting races are always delayed by the impediments of those who start out to reinforce and to help them."

"And what luggage is this that they cherish so much as to let it stand between them and their highest impulses, their noblest endeavor? Why do they not cast it aside?"

"This luggage is needed by every traveller if he would not arrive in that distant country utterly helpless, to be himself a burden to the community. Know the truth, my friend. This luggage which every man and woman carries is *the mind*. They cannot cast it away. What they need to do is to set it in order; to cast all useless thoughts and energies, all personal mental habits aside; to concentrate and strengthen it; above all, to hold it in readiness to start on the journey to the Future, so that when they arrive they may at once begin, without loss of time, to redeem and lift that Age. Then the journey will be more swiftly made; then there will be no such long waits between stations, no obstructing of trains. I and my companions are set apart to endeavor to teach men this; we learned it through our own experience many cycles ago. And in your age as in ours, men are slow to comprehend; slower even, for in yours the darkness has settled down like a pall. Yet Hope is the very nature of Life itself, and hence, we hope." He said no more to me then, and the vision came to an end. I saw how true was all that I had heard, and each day bears fresh witness to its truth.

The mind of man is a tremendous Force, capable of engendering many energies, of various grades, correlating and interacting. The highest of these act on every plane; the lower upon lower planes only, where they tend to beget obstructive consequences by, so to say, intensifying or thickening — condensing too — the one substance of which all things are made, into gross and material strata, which greatly impede the entrance of higher force to our planet and isolate it and us by degrees.

What then determines the quality of a mental energy, so that it becomes of a "high" or "low" order? Its relation to the personal self determines it. The free will of man has its point of departure in the mind. He can generate thoughts which) by concentration upon or relation to the self, tend to contract his sphere (in more senses than one), and to preserve his Being intact in the life of separateness Or he can evolve thoughts which relate to the whole world; which flow out towards the Unity, and, by their action and interaction upon the highest forces, a part of which they are, tend to dissolve his personal life as such, to unite all his principles to their cosmic sources, and reveal the beauty, power, and wisdom of Being to his enraptured soul.

Very many of us can find but little work to do for Humanity, though work is here, pressing enough, tangible enough. But circumstances of iron control many, and these are Karma. What each one can do, however, is to purify the mind, and to develop in it such affinities, such tendencies and habits, as may be drawn up into the higher nature. These, then, will guide our soul's course after death, leading the Ego to reincarnate there where it can at once begin the work for Humanity. The predominating love spun by our nature is like the stray end of the spider's web, cast loose upon the air. It reaches across to some branch to which it instantly adheres, and upon it the Ego, the mysterious weaver of Life's web, crosses the gulf we call Death, and finds each life in

strict continuity with the preceding one.

These few thoughts cannot be better illustrated, or more fitly closed, than by an extract from a private letter written by H. P. Blavatsky:

"What is this about the soldier not being free? Of course no soldier can be free to move about his physical body wherever he likes. But what has the esoteric teaching to do with the *outward man*? A soldier may be stuck to his sentry-box like a barnacle to its ship, and the soldier's Ego be free to go where it likes, and think what it likes best. * * No man is required to carry a burden heavier than he can bear, nor do more than it is possible for him to do. * * If one cannot, owing to circumstances or his position in life, become a full adept in this existence, let him prepare his mental luggage for the next, so as to be ready at the first call, when he is once more reborn. What one has to do before he pledges himself irretrievably, is to probe one's nature to the bottom, for self discipline is based on self knowledge. It is said somewhere that self-discipline often leads one to a state of self-confidence which becomes vanity and pride in the long run. I say, fool is the man who says so. This may happen only when our motives are of a worldly character, or selfish. Otherwise, self-confidence is the first step to that kind of WILL which will make a mountain move.

'To thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.'

"The question is whether Polonius meant this for worldly wisdom, or for occult knowledge; and, by 'own self,' the *false* Ego (the terrestrial personality), or that spark in us which is but the reflection of the One Universal Ego."

It appears, then, that our best course of action is to get our mental luggage ready, and especially to free it from the thought of self, or the "terrestrial personality" living in a dream of separation.

The Path

MEDITATION AND ACTION: II — *Pilgrim*

(Concluded from February)

It is the Utopia of every dreaming Socialist to found a Kingdom of Heaven upon earth, though his means of attaining it may be somewhat different from the peaceful formation of groups of individuals bent on realizing a higher life; but surely more appreciation of existing facts and possibilities is shown even by the religionists who declare that their kingdom is not of this world!

That our race may and will evolve the perfect state is an occult fact, but that evolution will take countless aeons of time, during which the race will inhabit other and more ethereal planets than the present material world, to correspond with the more ethereal bodies which the race will gradually assume, and it will only be after countless weedings-out, during which the great majority will be left behind to carry on such lives as they are fitted for, that the remnant of elect souls will realize the perfect state of terrestrial being (between which and the perfect state of transcorporeal being there will then be but the thinnest veil), the general conditions of which state render it perfectly impossible for us to make any comparison with the present, for, amongst other changes, the sexual passion will then be non-existent, for the Humanity of the sixth and great seventh round will have reverted to the androgynous type of their far-off ancestors of the first round, which today is buried in the depths of prehistoric time, while we of the fourth round, who are wallowing in the very nadir of materiality, are naturally removed by the whole diameter of the circle alike from the first and the seventh.

But we now approach the kernel of the whole question. What is

bred in the bone comes out in the flesh. Like the sportsman who by the most curious perversion of logic (perhaps not altogether to be wondered at in a bucolic intellect), and glorying in his very shame, defends the brutality of slaughter, or the cruelty of hunting an animal to death, on the ground, forsooth, that the courage of the human animal is thereby fed and increased (as if true courage could not be kept up without brutality!), so the man who has been brought up to Western ways of thinking not only fails to realize the very first axiom of true thought, but, with the perverted idea of his race, glories in *his* very shame, for he exalts action above meditation. This is the idea strongly dwelt on in many passages of the book before us. This is the rift in the lute that spoils all the music.

The Western nations having reached what heights they have through action chiefly, it is no great wonder that their representative sons should bow down before the goddess who has ennobled them, but that one who, like the author of *Scientific Religion*, has received so much true inspiration, should not in this also have been rightly guided, is a problem for psychologists to explain.

The right understanding of meditation and action is the great subject with which the *Bhagavad-Gita* — that holy book — begins and ends. Two quotations on the subject of action will demonstrate its scope and object. The first is from chapter VI.

"By works the votary doth rise to Saint.
And Saintship is the ceasing from all works."

The second is from chapter XVIII.

"Better thine own work is, though done with fault,
Than doing others' work, ev'n excellently.
He shall not fall in sin who fronts the task

Set him by Nature's hand! Let no man leave
His natural duty, Prince! though it bear blame!
For every work hath blame, as every flame
Is wrapped in smoke! Only that man attains
Perfect surcease of work whose work was wrought
With mind unfettered, soul wholly subdued,
Desires forever dead, results renounced."

No ordinary man can escape from action, for, while desire of action remains, action is being done, — if not on the material, still on the mental plane. And again it is written in chapter III, verse 4, "A man does not attain to freedom from action by not engaging in action merely, nor is the perfect state gained by simple abandonment of action."

But it is one thing to perform all actions that duty enjoins, looking forward to the time when all earthly actions will have been performed, and when duty will no longer call; it is another and very different thing to glory in the action, to blindly imagine that any action we can possibly perform is the "worthy and laudable service" which is required of us.

The sympathetic relief of physical suffering is well; the teaching by which man's mental horizon is widened and man's moral nature is elevated is better. They both form worthy preludes to the higher goal. But best of all is to *become* part of the spiritual pabulum by which Humanity lives, and the very first step on the path that leads to this stupendous result is meditation; in other words, the detachment from all the ephemeral interests of life, — which detachment displays itself by perfect equanimity in good and evil fortune, the centering of all thought on the Supreme, until thought itself drops off and the soul is face to face with Deity.

It will be apparent in the above that the "service of man" is the

key note throughout, but the "service of man" and what is more or less accurately described as the "Worship of God" must go hand in hand, until they finally become one and identical. It is this final unity which we desire to bring into prominence. Service on the physical plane is good; service on the mental or psychic plane is better; the altruistic effort involved in both requires the impulse of the higher worship as a goal. But with the culmination of worship comes the culmination of service, for they are merged in one. When the self as we understand it is annihilated, when the soul has been able to endure the transcendent vision of Itself as Deity, when difference no longer exists and the one is merged in the All, the store-house of spiritual energy is thereby replenished, and all Humanity receives an impulse that raises them a step nearer the Divine Union also, — nay further, the Divine impulse after passing through man descends to vivify the lower creation. The whole Universe is thrilled by it!

All are capable of the lower service; many are capable of the higher; few are yet fit for the highest. Each one is bound to serve according to his powers, and, following this law, the service which seems worthiest for the writer, who can certainly lay claim to nothing beyond the single-mindedness of an ardent and aspiring but deeply passion-stained man, is to convince if possible an unbelieving world of the existence of that at once highest service and highest worship, which the religious have materialized and degraded, and which the agnostics ignore.

When it is realized that, for the attainment of true meditation, the whole nature requires to be transformed, the Will begins to make the attempt. Though as Matthew Arnold pithily puts it,

"Tasks in hours of insight will'd
Can be through hours of gloom fulfilled,"

it yet seems too much of a miracle to permanently change the

nature, to induce altruism in the selfish man, or purity in the lustful, let alone humility in the proud, for this last (pride) being an attribute of spirit is necessarily far deeper seated than the surface blemishes of the physical nature. The Poet truly wrote, "Pride is the last infirmity of noble minds"; and, indeed, it can be, and often is, used as a means of ennobling the nature, and purging it of the grosser taints of the body.

This permanent change of nature will not likely be effected in an ordinary man in one lifetime, — rather will it require the concentrated energy of many life times on the "Great Quest," but the first step toward it must be the recognition of the truth, the realization of the supreme desirability of the state to which true meditation leads, and the knowledge that action impelled by desire in one life can only eventuate in similar action in the next, and that the only wise action to perform is that which looks for no reward, that which is dissociated from all idea of self, — in fact, such action as is preached from beginning to end of the *Bhagavad-Gita*.

We often hear it stated that a man is better than his creed, and it is a blessed thing for Humanity that the moral nature is sometimes able to withstand the debasing effect of the dire creeds of the churches, but the aimlessness of even the best moral nature which acts without knowledge must be replaced by the distinct realization of the goal to be aimed at. "The first good level is Right Doctrine;" and till the perverted notion of the worthiness in itself of any earthly act disappears from the mind, and some faint conception of the sublime state we aim at takes its place, no further advance seems possible.

He must indeed be a devotee of a very blind optimism who can contemplate the hideous results of action in this vaunted civilization, and can still expect that, without a cataclysm in

which the whole vile thing shall be swept away, any gradual evolution can bring a reformed state. For he sees around him a fair country blackened and marred by belching furnace-fires and the never-ending grind of machinery, the still more awful tumult of the fevered rush of the competing multitudes, and, worse than all, the continually increasing degradation of the lives of the toilers, with every sign that all these evils are steadily on the increase.

The story of Martha and Mary is a standing protest against our deification of action. "Martha, Martha, thou art careful and troubled about many things: but one thing is needful!"; and many other similar sayings of the great Teacher might be quoted, but the churches called after his name, and whose representatives have become as a rule "mere echoes of the world's self-seeking," have been reduced to accept the world's apologetic theory that the teachings of Christ are incapable of practical application, — indeed, as the author of *Scientific Religion* points out, the present state of things in Europe has absolutely made them so.

But though the literal application of Christ's teaching has become an impossibility in the West, there are still spots on the earth's surface where the fever of the modern life has not yet reached, where the lust of wealth and luxury — the Gods or Demons whom the West worships — has no power to quicken the pulses in many a quiet household, whose inmates have at least inherited from their nobler ancestors a juster appreciation than is met with in the West, of the ephemeral character of life, and a worshiping reverence for those who are capable of true meditation.

If the so-called Christian Churches, instead of steeping their hands in the blood of tortured victims and rivaling Princes in the lust of conquest, had taught the Brotherhood of man that Christ believed in, it would not today have become in practice an unthinkable

proposition, and we should not now be looking forward to the possibility of a social catastrophe which is too awful to contemplate. But surely the outcome of our present civilization, the steadily increasing accentuation of both poverty and wealth — which indeed constitutes the source of danger —, makes it apparent that the cup of iniquity is rapidly filling to the brim!

Nay, rather let us avoid adding more than is absolutely enjoined by duty to this fevered rush of existence. Let us remember always that in our true self we are the spectator only and that all action is but the result of the "Qualities"; so let us gradually transcend the "Qualities." And realizing that the Divine inner Self — the goal of our great endeavor — ever abides in the true heaven, "let us in heart and mind thither ascend, and with him continually dwell."

"Only by Soul itself

"Is soul perceived — when the Soul wills it so!
There shines no light save its own light to show
Itself unto itself!"

"None compasseth

Its joy who is not wholly ceased from sin,
Who dwells not self-controlled, self-centred — calm
Lord of himself! It is not gotten else!
Brahm hath it not to give!"

* * * * *

"Meditate!

There shines no light, save the Soul's light, to show!
Save the Soul's light!" (1)

The Path

CULLED FROM ARYAN SCIENCE

RAIN CLOUDS.

In the Vishnu Purana it is said:

"During eight months of the year the sun attracts the waters and then pours them upon the earth as rain;" and,

"The water which the clouds shed upon the earth is the ambrosia of the living beings, for it gives fertility to the plants which are the support of their existence. By this all vegetables grow and are matured and become the means of maintaining life."

JUPITER'S SATELLITES.

In the Vishnu Purana Jupiter is named Brihaspati, and is described as having a golden car drawn by eight pale colored horses. This refers to his satellites.

ORIGIN OF PLANET MERCURY.

The Puranashave a legend that the moon was originally in Jupiter's house but was seduced into living with Tara (the present path of the moon), the result of which was the birth of Mercury, meaning that Mercury was withdrawn from its original orbit into its present one nearer the sun.

THE END OF THE WORLD.

This event is brought about, the Puranas state, by the rays of the sun dilating into seven suns which then burn up the world.

THE EARTH'S SPHERICITY.

The earth, situated in the middle of the heavens and composed of

the five elements, is spherical in shape. *Aryabhattiyam*.

A hundredth part of the circumference of a circle appears to be a straight line. Our earth is a big sphere, and the portion visible to man being exceedingly small, the earth appears to be flat.

Some fancy that those on the other side of the earth have their heads hanging down. Just as we live here, so do the rest, and feel in no way uneasy.

Those at the north have for their zenith the north, and those at the south, the south, pole; the equator forms the horizon for both, and both find the heavens move from left to right and right to left, respectively. *Goladhyaya*.

THE ATMOSPHERE.

The atmosphere surrounds the earth to the height of 60 miles, and clouds, lightning and the like are all phenomena connected with it. *Ibid*.

POLAR DAYS AND NIGHTS.

For the period when the sun is north it is visible for six months at the north pole and invisible at the south, and *vice versa*. *Ibid*.

PLANETARY LIGHT.

The earth, the planets and the comets all receive their light from the sun, that half towards the sun being always bright, the color varying with the peculiarity of the substance of each.

Laghvaryabhattiyam.

CURRENTS IN EARTH AND ITS OCEANS: AND BLOOD CIRCULATION.

Just in the same way as there are arteries for the circulation of blood in the human body, the earth has undercurrents lying one

over the other. *Varahasamhita*. [We find now that the gulf-stream is a well defined current in a great body of water, and in the Mediterranean two currents run out and in over one another. On land are many well defined rivers running all their course underground.]

The Path

THE SEVEN DWIPAS: I – *Charles Johnston*

FROM THE INDIAN PURANAS.

I.

It is the opinion of many at the present day that the almost grotesque myths, and fantastic geographical and astronomical descriptions contained in the religious writings of many ancient faiths, are not, as they have hitherto been too often considered, mere vagaries and extravagances of the youthful imagination of the early races; but are really deliberately contrived and constructed allegories, by which ancient sages sought to veil, and effectually succeeded in veiling, the sacred truths which could only be declared in the secret recesses of the temples.

If this be so, then valuable truths and revelations of ancient history of great and absorbing interest may be laid bare, if we succeed in removing the veil from these venerable allegories. To understand them completely, demands doubtless a knowledge not at the command of ordinary students; but nevertheless, in studying these myths and making ourselves familiar with them, we find a link which binds us by sympathy to a remote past, and to a phase of the human mind which must have its representative in us, ready to vibrate responsive to these old-world stories.

They bring us back to an epoch which knew not the iron which has since entered so deeply into our souls; when man perhaps saw deeper into the mystery of things; and the universe reflected itself more clearly in his yet undarkened soul.

These old myths, if they contain transcendental truths known to us, and which we can recognize, will open up to us an almost limitless vista in the souls of the ancient sages who inwove their

theories therein, and will give us one more proof of the brotherhood of man, wherever born, and in whatever age.

With these reasons in view, we shall try to make our readers familiar by degrees with the great allegories of India, as they appear in the Brahmanas, the Puranas, and the great epics, the Mahabharata and the Ramayana.

In a recent number, we told the tale of the Rajput supremacy, and of the mighty contest between the Brahman and the Kshatriya, and the rivalry of Vashishta and Visvamitra; and at present we shall try to give the history of the seven dwipas, the great divisions of the world in the Puranic cosmogony.

We shall first try merely to reflect faithfully into our pages the picture presented by the Puranas, and afterwards summarise any ideas as to the meaning of the Puranic stories which occur to us.

But there is little doubt that the full import of these stories will not be brought to the light, until they have lain in the minds of mystics for years; until the time when the facts of nature to which they refer reflect themselves again in the minds of men.

The seven dwipas, or divisions of the earth, are said in the Vishnu Purana to have been formed as follows:

Priyavrata distributed the seven dwipas, into which the earth had been divided (by Narayana in the form of Brahma) amongst his seven sons; who are the regents of the seven dwipas. Before this, Priyavrata, being dissatisfied that only half the earth was illumined at once, by the sun, followed the sun seven times round the earth in his own flaming car of equal velocity, like another celestial orb, resolved to turn night into day; the ruts made by his chariot-wheels were the seven oceans: in this way the seven dwipas, or continents were made.

These seven continents are called Jambu dwipa, Plaksha dwipa, Shalmali dwipa, Kusha dwipa, Krauncha dwipa, Shaka dwipa, and Pushkara dwipa.

These continents, which appear to have lain in concentric circles, with Jambu dwipa in the centre, were separated by annular oceans, said to have been formed of salt water, sugar-cane juice, clarified butter, curds, milk, and fresh water, respectively.

Jambu dwipa lay in the centre of all these continents. It fell to the lot of Agnidhara, son of Priyavrata, who again divided it among his nine sons.

In the centre of Jambu dwipa is the golden mountain Meru, 84,000 yojanas high, and crowned by the great city of Brahma.

Then follows a minute description of Jambu dwipa.

Before referring to it, however, let us try to make clear our conception of the Puranic idea so far.

Let thirteen concentric circles be drawn: the inner is Jambu dwipa; the annular space next to it is the salt ocean; the next annular space is Plaksha dwipa; and so on. Outside, we have the sea of fresh water which encircles the whole system.

The subdivision of Jambu dwipa, which is, as we have seen, a circular island, is as follows:

Mount Meru is in the centre.

South of Mount Meru are three mountain ranges; and north of it are three mountain ranges; dividing it into seven strips. These strips are the Varshas, or subdivisions, of Jambu dwipa.

The centre strip is divided further into three parts, a western, central, and eastern division; making in all nine Varshas. Meru is in the centre of this central division of the central strip. This

central Varsha is called Havrita. It is divided from Harivarsha, to the south, by the Nishada range; and from Ramyaka to the north by the Nila range. To the west of Havrita, lies the Varsha of Ketumala; while to the east lies Bhadrasva.

Harivarsha is, we have seen, the Varsha directly to the south of Havrita. South of it lies Kimpurusha, separated from Harivarsha by the Hemaketu range. South of Kimpurusha and separated from it by the Himadri or Himalaya range, lies Bharata Varsha.

These three, Harivarsha, Kimpurusha, and Bharata Varsha, are all to the south of the three central Varshas.

To the north of the three central Varshas lie three other Varshas: Ramyaka, Hiranmaya, and Uttara Kuru. Ramyaka is, as we have seen, separated from the zone containing the three central Varshas by the Nila range.

North of Ramyaka, and separated from it by the Shveta range, lies Hiranmaya; while north of this Varsha, and separated from it by the Shringin range, lies Uttara Kuru.

This will make sufficiently clear the geography of Jambu dwipa; each division of which was under the rule of one of the nine sons of Agnidhara, the son of Priyavrata.

Bharata Varsha seems to be identical with what we know as India, bounded on the north, as it is by the Himadri, or Himalaya, and on the south reaching to the extremity of Jambu Dwipa, which is surrounded by the ocean of salt water.

A description of the other eight Varshas follows:

In these, Kimpurusha and the rest, it is said that the inhabitants enjoy a natural perfection attended with complete happiness gained without toil. There is there no change, nor age, nor death, nor fear; no distinction of virtue and vice, and no difference of

best, medial, and worst; nor any change resulting from the four ages (yugas).

Again it is said: In those eight Varshas, there is neither sorrow nor weariness nor anxiety, nor hunger nor fear. The people live in perfect health free from every suffering, for ten or twelve thousand years.

Indra does not rain on these Varshas, for they have many springs. There is no division of the time into the Krita, Treta, and other Yugas.

In the Aitareya Brahmana it is said of the Uttara Kurus that they are consecrated to glorious dominion; and the following story is told:

Satyaharya declared to Atvarati a great inauguration similar to Indra's; and in consequence Atvarati, though not a king, by his knowledge went round the earth on every side to its ends, reducing it to subjection; Satyaharya then said to him "thou hast subdued the earth in all directions to its limits; exalt me now to greatness."

Atvarati replied, "When I conquer the Uttara Kurus, oh Brahman, thou shalt be king of the earth, and I will be only thy general."

Satyaharya replied, "That is the realm of the gods; no mortal man may make the conquest of it."

The Uttara Kurus are mentioned also in the Ramayana, as "the abodes of those who have performed works of merit," and again "you must not go to the north of the Kurus: other beings also may not proceed further."

In the Mahabharata, Arjuna is thus addressed: "Thou canst not, son of Pritha, subdue this city. He who shall enter this city must be more than man. Here are the Uttara Kurus, whom no one

attempts to assail. And even if thou shouldst enter, thou couldst behold nothing. For no one can perceive anything here with human senses."

And again, in another place, it is said by Kushika, on seeing a magic palace: "I have attained, even in my embodied condition to the heavenly state; or to the holy northern Kurus, or to Amaravati, the everlasting city of Indra."

We shall try to point out further what seems to us to be the great value of these texts, when trying to unravel a little of the Puranic mystery.

To make quite certain our identification of the Bharata Varsha of Jambu Dwipa in this cosmogony with India, we shall quote the following text from the Vishna Purana:

The country to the north of the ocean, and to the south of the Himadri, the snowy mountains, is Bharata Varsha, where the descendants of Bharata dwell.

As all our readers know, it was between two divisions of the descendants of Bharata that the Mahabharata war was fought.

The following qualities of Bharata Varsha are noticed:

In Bharata Varsha, and no where else, do the four Yugas, Krita, Treta, Dvapara, and Kali exist. Here devotees perform austerities, and priests sacrifice. In this respect Bharata is the most excellent division of Jambu Dwipa: for this is the land of works, while the others are places of enjoyment.

In the Bhagavat Purana it is said: Of the Varshas, Bharata alone is the land of works; the other eight Varshas are places where the celestials enjoy the remaining rewards of their works.

This is almost all the information we can collect of the Puranic

idea of the divisions of Jambu Dwipa. We shall afterwards examine some of these texts, with their bearings; first glancing at the accounts of the other dwipas.

The Path

THE FOURTH DIMENSION: I – *Frank S. Collins*

The subject of four dimensional space hardly seems, at first glance, to have much connection with theosophical doctrines; except possibly that most persons would regard both as being vaguely mysterious, and many persons would consider both as arrant nonsense; and I am afraid that if I should claim that there was quite a definite relation between the study of the fourth dimension, and the fundamental principle of the T. S., universal brotherhood, even the members themselves might smile incredulously; but I hope I shall be able to show that such a relation is not preposterous, but quite natural.

We all know that from the very first records that we have of philosophy, especially of esoteric philosophy, there has been a peculiar and mystical virtue assigned to numbers. "All systems of religious mysticism are based on numerals." *Isis Unveiled* II, 407. Pythagoras said that the essence of things consisted in Number, and that the Cosmos was generated out of numbers.

And this mystical virtue has also been attributed, to various geometrical figures. The line, the circle, the triangle, the square, each has been used as a symbol of some great truth; as well as, on a lower plane, a potent instrument in magical ceremonies. Now geometry is the study of dimensions, surfaces and solids; and the study of four dimensional space, if such a thing there be, is merely a higher branch of geometry; and we may perhaps find in its teachings of an order beyond what we can get from a mathematics dealing with space of fewer dimensions.

Of course you will not expect that in the short time I shall use this evening, I can give you much idea of higher space and the laws which work in it; or perhaps a better expression would be, the

forms under which, in higher space, are manifested those universal laws with whose working in our ordinary space we are familiar. To do this would be a long and not very easy task; I can only hope to show that there is something to study and to learn, something that will repay the study. And in what I shall say, I am almost entirely indebted to Mr. C. H. Hinton, whose books "Scientific Romances" and "A New Era of Thought" are most fascinating and instructive studies for any one who cares to look within the surface of things.

To begin at the beginning: — a point, mathematically speaking, has location, but no dimensions. When this point is moved in any direction, we have a line, extending from the point of starting to the point of stopping; and we may call this line space of one dimension, that of length. Suppose this whole line to be moved in a direction at right angles to itself, and we have a surface, a square; space of two dimensions, viz: — length and breadth. Let this square move at right angles to itself, that is, at right angles both to the original course of the point to form the line, and to the course of the line in forming the square; we have now a solid body, *i.e.*, space of three dimensions, length, breadth and thickness. Now just as the line moved at right angles to itself and formed the square; just as the square moved at right angles to itself to form the cube; so if the cube can be moved in a direction at right angles to itself, that is, at right angles to each and every line and surface in itself, we shall get — what? We can't say now, but certainly something quite different from a line, a surface, or a solid.

Suppose the length of the line to be two inches; then the area of the square will be $2 \times 2 = 4$ inches, the contents of the cube 4×2 inches = 8 inches. If we represent the first (the line) by the algebraical expression a , the second (the square) will be a^2 , the

third (the cube) will be a^3 ; so that these three terms can be graphically represented to us. But in algebra the expression a^4 , that is a^3 multiplied by a , is perfectly proper; how shall we represent that graphically? We cannot; we have to stop at a^3 .

The length of the line is 2 inches, the area of the square is 4 inches, the contents of the cube is 8 inches; but these inches are quite distinct from each other. No possible number of inches composing the line will make up one of the inches composing the square; no possible number of the inches composing the square can make up one of the inches composing the cube. So no conceivable number of the solid units composing the cube representing a^3 , can make up that which we mean by a^4 ; the two are incommensurable. So as soon as we try to go beyond a^3 , we come up against a wall, metaphorically speaking; and why should we not say that there *is* nothing beyond it?

The only way here is to apply a famous occult motto, what we might almost call a fundamental axiom of occult science; the words from the emerald tablet of Hermes: "As is that which is above, so is that which is below." We cannot directly perceive that which is above, but if we look at that which is below, we may learn from analogy.

Let us suppose beings existing in space of two dimensions; beings with senses and intelligence, like ourselves, but neither they nor the world in which they exist, having any dimensions but length and breadth; no such thing as thickness. Or, as such beings would be to us, and to our modes of thought, merely abstractions, let us suppose them to be exceedingly thin in the third dimension, say of no greater thickness than a single molecule of matter. In a work on astronomy or physics, when we wish to show how gravitation holds bodies on the earth, on whichever side of it they

may be, we represent the latter by a section of it, a circle, along the circumference of which we place representations of the various bodies on it, which are held firmly to it by the force of gravity, drawing them towards the centre. Now to these beings of the plane world, this circle is their earth, not merely a section of it; they are free to move round it; by an effort opposing the force of gravity they can move from it, as we can by an effort and by suitable appliances rise from the surface of our earth, as by a ladder or for an instant by jumping.

Looking at the corner of this room, we find three lines proceeding from it at right angles to each other; two horizontal and one vertical; now from that corner we can proceed to any point of space in the room by moving on those lines, or lines parallel to them. The plane being, supposing the plane he inhabits to be that of this floor, could reach any point in his space by one or both of the two directions, which proceed from the corner on his plane; to rise from that plane into what we call space, would be as inconceivable to him as for us to pass to some point not to be reached by either of our three lines or lines parallel to them.

Cut out of paper an equilateral triangle, each side say two inches long: cut this in two by a line from one angle to the middle of the opposite side: let the two parts lie on the table without changing their relative position from what it was before the original triangle was divided; you have now two triangles of the same dimensions, their angles and areas just the same: but as long as they lie in the same plane you may move them round and round as much as you like, and you can never make them coincide. But if you lift one of them from the surface on which it lies and turn it over, it will then coincide exactly with the other.

Draw a square on a piece of paper; put a coin on the paper inside the square; can you slide that coin on the paper in any way so as

to bring it outside, without touching the square? No; but you can lift it up and set it down outside.

Now in these two apparently, and to us actually simple operations, we have accomplished what to the two-dimensional being is an impossibility, an actual absurdity; equally impossible and absurd as would be to me to turn round my left hand until it fitted my right glove just as my right hand does: or corresponding to the second example of two-dimensional impossibility, the moving of an object in and out of a closed room or box without any opening being made in the walls. To make the two triangles coincide, we lift one out of the plane in which it lies, and turning it over through the third dimension of space, lay it down on the other triangle, and thus accomplish what never could be done as long as we moved it about in the two dimensions. Now just as the triangle exists in space of two dimensions, so my hand exists in space of three dimensions; the two hands agree in every particular, dimensions the same in every respect, every curve and angle the same; but no possible way that I can move them will make them coincide. As the plane being would say as to the triangle problem, it is impossible. But as the two dimensional impossibilities are very simple things to us, so to a being existing in higher space, if such a being exist, our impossibilities must be equally simple matters.

The Path

THE SEVEN DWIPAS: II – *Charles Johnston*

FROM THE INDIAN PURANAS.

(Concluded.)

Plaksha dwipa, the nearest to Jambu dwipa, is divided into seven provinces. Existence there is always that of the Treta yuga, a perpetual silver age. In the five dwipas, (all except Pushkara dwipa and Jambu dwipa), the people live 5,000 years without sickness. The four castes, with different names, exist on each of them.

In the Bhagavat Parana it is said of the inhabitants of Plaksha dwipa: The four castes, purified from passion and darkness by the touch of the water of the rivers, live a thousand years, and resemble the gods.

It may be noted of this text that the purification of these castes from passion and darkness leaves them only one of the "three qualities," goodness, which is said to be the distinctive mark of the true Brahman; so that the measure of spirituality on this dwipa is much higher than in Jambu dwipa.

An ocean of sugar-cane juice separates Plaksha dwipa from Shalmala dwipa: which is also divided into seven Varshas. It has four castes who worship Vishnu in the form of Vayu, (air.) Here the vicinity of the Gods is very delightful to the soul.

This dwipa is surrounded by an ocean of wine, whose exterior shore is compassed by Kusha dwipa: here the inhabitants are men dwelling with Devas, Gandharvas, and other beings.

In the Mahabharata, it is said: No one dies in Kusha dwipa; the people are fair, and of very delicate forms.

Kusha dwipa is surrounded by a sea of clarified butter, of the same compass as itself: around this sea runs Kramcha dwipa. Vishnu Parana says: In all the pleasant divisions of this dwipa, the people dwell free from fear, in the society of the gods.

A sea of curds encompasses this dwipa, which is of the same circumference as itself. This sea is surrounded by Shaka dwipa, of which the Vishnu Purana says: These are the holy countries whose holy rivers remove all sin and fear. There is among them no defect of virtue, nor any mutual rivalry, nor any transgression of rectitude in the seven Varshas. Here the people are holy, and no one dies, says the Mahabharata. Shaka dwipa is surrounded by an ocean of milk, outside which lies Pushkara dwipa: where men live ten thousand years, free from sorrow and pain. There is no distinction of highest and lowest, of truth and falsehood, — [because all alike are good and true], men are like gods; there are no rules of caste, and happiness dwells with all.

Of the seven dwipas, the Mahabharata says: Each doubly exceeds the former in abstinence, veracity, and self-restraint; in health and length of life.

Prajapati, the lord, governs these dwipas. All these people eat prepared food, which comes to them of itself. To finish its account, the Vishnu Purana says: Pushkara dwipa is surrounded by an ocean of water which envelopes all the seven dwipas.

On the other side of the sea is a golden land of great extent but without inhabitants; beyond that is the Lokalaoka mountain, ten thousand yojanas in height and ten thousand yojanas in breadth.

It is encompassed on all sides with darkness, which is enclosed within the shell of the mundane *egg*.

Thus ends the account of the Seven Dwipas, as told by the Indian Puranas.

The objective point from which this cosmogony starts is Bharata Varsha, or India, bounded southward by the salt ocean, and reaching northward to the Himadri, or Himalaya.

Perhaps the other Varshas, in one of their interpretations, are the lost continents of former races with Meru, the north pole, in their centre.

But it seems to us from what is told of the other Varshas, and, above all, of Uttara Kuru, that these Varshas are not to be found on earth, but represent the various planes rising from the physical to the spiritual, from Bharata Varsha, taken as the type of physical life, or waking consciousness, to the Uttara Kurus, the highest spiritual stage that dwellers on this earth can reach.

We are led to believe that these Varshas which I have described and explained in my last paper are not located in the physical world from what is told of the perfection of their inhabitants; the length of life, which is measured by thousands of years, and, above all, by the specific statement that these Varshas are the abodes of those who are reaping the fruits of their merits, while Bharata is the Varsha where this fruit was earned, the world of works, or physical life.

We observe that these Varshas are nine: though when we mark their position in the circular island of Jambu dwipa according to the directions of the Puranas, we find that while nine Varshas are mentioned they fall into only *seven* strips: and moreover, while a great symmetry reigns among the various dwipas we find it absent in this particular, for five of the other dwipas have only *seven* Varshas.

Perhaps therefore the nine Varshas of Jambu dwipa, or our earth, are only a veil, to conceal the seven, or the real mystic number of the planes.

Perhaps, however, these nine Varshas represent the nine phases of consciousness as explained by Mr. T. Subba Row; this division, which appears in the "Theosophist" for Jan. 1888, being as follows:

Jagrat:

Jagrat 1. waking life.

Swapna, 2. dreaming.

Sushupti, 3. deep sleep.

Swapna:

Jagrat, 4. waking clairvoyance.

Swapna. 5. trance clairvoyance.

Sushupti, 6. Kama loka consciousness.

Sushupti:

Jagrat, 7. Devachan consciousness.

Swapna, 8. Consciousness between planets.[lb]

Sushupti, 9. Consciousness between rounds.

Jagrat, *swapna*, and *sushupti* mean, respectively, waking, dreaming, and deep sleep.

This division falls, as will be seen, into three groups of three each; just as the nine Varshas fall into three groups of three each. The ninth form of consciousness in this division is an *arupa* consciousness; that is to say, a state in which the consciousness does not take cognizance of forms. In connection with this it will be remembered that it was said of the ninth Varsha, Uttara Kuru, that "if thou shouldst enter, thou couldst behold nothing. For no one can perceive anything here with human senses."

But this would hold equally true of the seventh plane of consciousness: if we take the nine to be a veil of seven.

It seems, therefore, that the seven or nine divisions of Jambu

dwipa may mean our physical earth, or the physical life known to us, and its higher planes or principles; the mountain ranges being the points of separation between the planes. If this be so, and if we credit the authors of the Vishnu Purana with adeptship, and transcendental knowledge, which they have imparted in it in a veiled form, it would seem that valuable knowledge of the superior planes might be gained by a careful analysis of what is said in the Vishnu Purana of the other Varshas of Jambu dwipa.

If we are right in identifying Jambu dwipa with our earth, we may conjecture that the salt ocean which surrounds it, besides meaning the sea, may also mean the aura of the earth; that part of the astral light which clings round our planet. If then we are right in considering jambu dwipa to be the earth, what view are we to take of the nature of the other six dwipas?

It is clear that they are connected with our earth, and with the evolution of life on it. It is also said that the dwipas are in an ascending order of spirituality, Jambu dwipa being the lowest, and Pushkara dwipa the highest; while the other five dwipas have many attributes in common, and are classed together.

Moreover, each of these five dwipas has seven Varshas: and if we are right in considering the Varshas of Jambu dwipa as planes, or principles, may we not suppose that the Varshas of the five dwipas are also planes or principles?

Jambu dwipa is said to be a circular island; but there is no doubt that the Hindus knew the earth to be a sphere. Therefore this may simply mean that if Jambu dwipa is a sphere, in that case we are perhaps justified in believing that, when the other six dwipas are represented as annular, they are really spheres, and that the statement that each lies outside the preceding, and separated from it by an ocean, really means that these dwipas are spheres, isolated from each other, but surrounded by some more subtle

medium which serves as a connection between them.

Are we justified then in considering that the seven dwipas mean a system of seven spheres united to each other by a subtle medium, and cooperating in the work of human evolution by furnishing man with a series of dwellings in an ascending scale of spirituality?

It has doubtless already become apparent to our readers that this idea is, in almost every particular, identical with that of the Planetary Chain, as expounded in the Secret Doctrine. A careful review of all the statements we have collected as to the other dwipas will give further indications of the identity of these two ideas, and will elicit many facts of great interest.

What is meant by the oceans of sugar, wine, curds, and milk? Is this a hint of the nature of the auras of these different planets? Are the colours and properties of these liquids taken as symbolizing these auras?

If so, then the ocean of pure water which surrounds the whole system may mean the ether which extends through all space, as distinguished from the aura which is differentiated and condensed around each planet.

The outer darkness which shuts in the golden wall cannot but be the void space between our solar system and the stars, the mundane egg which encloses it being the limit of the life of the system to which we belong.

For the mundane egg is not the boundary of the whole universe, nor does our system exhaust the infinitude of life.

"There are thousands and tens of thousands of such mundane eggs; nay hundreds of millions of millions."

The Path

WHY A GURU IS YET PREMATURE – *Alexander Fullerton*

The first step on the Theosophic path is naturally acceptance of the Theosophic doctrine. But this is by no means a dry and lifeless creed; it is a spirited, vitalizing scheme, so permeated with a final cause that its acceptance almost spontaneously generates some measure of purpose, hope, endeavor. To realize the conception is well nigh to echo it. So noble is the theory of the universe presented, so rich the picture of what human life is and means, so elevated and pure the motive which is everywhere insisted on as the condition of all progress, that natures at all sympathetic with the spiritual respond at once to its disclosures, are fired with its genius, aspire to its privilege. As this impulse develops into a purpose, as larger reading gives shape to the conception and fuller meditation clarifies it, there is born, almost of necessity, a wish for a guide along the intricate and darksome path which has just opened, some better-instructed spirit who knows the way from having trod it, and can save from disappointment and from wasted strength. I suppose that there is no sincere Theosophist, perceiving something of the measureless work before him and yet resolved that it be undertaken and pursued, whose first heart-cry is not for a Guru. Such a teacher seems the imperative, the indispensable, pre-requisite to any advance at all.

Nor, when we look somewhat more closely at the conditions around it, does a demand like this appear unwarranted. Here, let us say, is a genuine aspirant. He has a fairly accurate idea of the goal to be attained, but no idea of the means to its attainment. He desires spiritual illumination. But the faculties thereto, he is told, are as yet dormant in him. He asks how he is to become conscious of their existence, how arouse them to action, how assure himself that their action is normal. There is no reply. He reads that the

first duty of the student is embodied in the maxim "Know thyself." He struggles with the question whether this means to know himself as a specimen of analyzed human nature, peering into the mysteries of biology, physiology, mind, and the psychic nature, — in which case a lifetime would be too short, or whether it means to know himself in his individual peculiarities, tendencies, weaknesses, desires. A mistake here might hopelessly mislead him. Yet the books which give the dictum do not settle the question it excites. He inquires if any particular diet, habit, daily observance is requisite to progress, and hereto, indeed, answers abound, but they are variant, opposite, and contradictory. He peruses the Manual which, both from its title and its teachings, is believed by all Theosophists to throw light upon the path, but much of it is enigmatical, and its explanations have to be explained. Somewhat disheartened, he asks its author, "How am I to eradicate selfishness from my nature?", and receives this reply, — "That is what every man must find out for himself."

These difficulties are largely external. But others quite as serious encompass any attempt at internal action. In the Manual to which I have referred, he is told, among other directions towards "Seeking the Way" to "seek it by plunging into the mysterious and glorious depths of your own inmost being." What is the meaning of this; indeed, has it any: Meditation is also recommended. But meditation must have some topic and be conducted on some plan. Neither is vouchsafed. Most of the prescriptions for developing the spiritual senses, even when intelligibly expressed, presuppose a familiarity with abstruse interior processes which are the very things as to which a beginner, in our land, is particularly ignorant. If he is to reverse his whole mental habitudes, think on different lines, invoke a new set of thought appliances, he must have, it would seem, some hint of the first steps and stages, some competent instructor to start him, some voice which shall be

distinct in either the silence or the Babe — in other words, a Guru. And thus, whether we look at the general fact in regard to beginners, or at the causes producing the fact, it appears that demand for a Guru is the earliest cry of the new-born Theosophist.

On the other hand, however, it is just as certain that no such Guru is provided. In one sense, indeed, it may be said that any one who has more information is Guru to him who has less, and that any author, any friend, any speaker may thus sustain *quad hoc* this relation. But in the specific, technical sense, Gurus, whatever may be our desire for them, are not accorded us: and if there is justification for the desire, there must be justification for the denial to it. It may not be amiss to look into the grounds on which that rests.

A Guru, be it remembered, is not a teacher of general learning, but a teacher of a particular science. His teaching presupposes an adult mind, some educational advantages, and a moderate attainment in principle, self-knowledge, and self-discipline. These things are the preparation, the basis, the needful foundation for his work. It is in this spiritual science as in secular education. A child, it is true, has a teacher from the beginning, but this is because there is nothing to go upon; he has to start with the alphabet, and that must be communicated to him. Through his later Course he has the two resources of ability to read and to reflect — the condition of all advance — and of aid from masters, and with these he completes his general studies. Then comes that specific training which would be impossible without the preliminary. If he is to be a lawyer, a physician, a clergyman, he applies for and receives the distinctly professional instruction he needs, just so, it would seem, is the case in Occult Science. A Guru for a person just devoting himself to Theosophy would be as much out of place as a Professor of Law or Medicine teaching the

alphabet in an infant school. His functions begin where antecedent attainments make them possible, and as we expect to find in a Medical College only such students as have laid the foundation for a specific training in a general training, so we expect to find under Gurus only such natures as have reached the point where their directions would be either intelligible or efficacious. For, obviously, they could not be understood if their terms, their meaning, the line and mode of thought were wholly unfamiliar: nor could they be operative if the faculties addressed, the motives emphasized, the powers incited were yet in abeyance. On the purely intellectual side there must be some reasonable acquaintance with the truths from which the whole system starts; and on the purely spiritual side there must be a facility of apprehension and an incisiveness of intuition which are the result, not of a brief aspiration, but of years of systematic effort. It is noticeable that, in such expositions of Esoteric methods as have been given us, it is distinctly stated that it is the developed faculty of *intuition* in the student upon which his teachers rely. But this is the very faculty of which we beginners know least, and to give us a Guru whose main work would be its employment would be precisely the same thing as to address a syllogism in logic to a child who had no idea what logic meant and who was wholly unable to reason.

But this is not the only consideration. In secular studies the successful instructor is he who most consistently acts upon the meaning of the word "education," — an educating, a drawing-out of what is in the student. Education is not so much a pouring in of information as the eliciting of the aptitudes, forces, vigors, which lie within. Very much of the whole process is in the encouragement to independent action, the cultivation of that spirit of energetic enterprise which does not shirk difficulties but surmounts them, the fortifying of that manly resolve which, not

refusing assistance or disdaining experience, yet feels that the most satisfactory triumphs are those which one wins oneself, and that a gift is not comparable to an achievement. There is a vast difference in *morale* between the classical student who works out a difficult passage and the one who cons a translation, just so in that developing process which, we are given to understand, precedes and constitutes a fitness for Guru guidance. A Theosophist finds himself encompassed by perplexities. It would be comfortable to be relieved by another. But would it be best? The old classic fable of the cartman and Hercules is the answer. No; the ingenuity, the patience, the strength aroused by the need would all be lost if the extrication came from another. We are better men, finer men, stronger men, and we are far more capable of subsequent advance, if we work out these problems for ourselves, getting light by seeking it, not by asking for it, capturing truth, not accepting it. This is the type of men the Masters want for the future custodians of the mysteries, and why should they thwart the supply by spoiling it?

Then, too, there is still another consideration. We most assuredly have no right to demand further privileges till we have exhausted those now given. If any man has fully read, — and not merely read, but digested, — the best attainable literature in the main features of Theosophic truth; if he has a fairly accurate conception of the spiritual philosophy; if he has his carnal nature well in hand and is not seriously disturbed by tumultuous revolts which have now become hopeless; if the personal element, the selfish element, is so far refined away that it but slightly taints his motive and his work; if his duties are as much a matter of principle as his aspirations; if he has overcome mind-wanderings and gained the power to think with intentness and continuity; if he has made all the attainments possible to unassisted zeal; if, in short, he has used up all the material provided and hence can do

no more; — then, surely, he is in a position to claim a Guru. We may surmise, indeed, that in such case the Guru would already have arrived. But if not one of these things is true; if the reading is imperfect, the conception thin, the passions strong, the self vigorous, the duty scant, the concentration poor, the attainment insignificant, the material hardly touched; what possible need for an advanced teacher? And if we can picture to ourselves a disciple thus feebly-equipped accosting a Guru (supposing such an official to be recognizable) and, inviting guidance, is it not inevitable that the Guru should reply, smilingly, that the disciple was not yet ready for him?

This may seem a discouraging state of things. But I do not think that it is really so. We have never been promised Gurus at our very early stage of progress, and, if we expect them, it is because of a misapprehension for which we have only to blame ourselves. To get out of illusions, to correct errors by examining them, is part of our necessary experience, and quite as much so in the department of theoretical development as in the department of practical life. Nor is the deprivation of present hope for Gurus so serious a drawback as might appear. It no doubt throws us more upon ourselves, but this is the very thing which we most need, for it is the arousing of *self-help*, *self-energy*, *self-effort* which is iterated all through the scheme. Nor is it the fact that there is no objective aid except from Gurus. There is plenty of it. In the small Library of the Aryan Society we have enough intelligible direction for more needs than any of us, its members, are likely to feel. I do not say that they are always explicit, or always copious, or always systematized, but perhaps the necessity for extracting the clearness and the fullness and the proportion gives an important exercise to the faculties which we are striving to expand. To illustrate: We are told in *Esoteric Buddhism* that there are seven principles in the composition of a man. Of course it is not claimed

that these are all sharply separated, but there is a distinction and we ought to frame some idea of it. Suppose, then, that a student, having carefully read the chapter thereon, determines to give fifteen minutes to close thought on the difference between the fourth, the Animal Soul, and the fifth, the Human Soul. Here is a definite subject for meditation, and abundant material for the process. If now he turns to Patanjali, he finds that Concentration is the "Hindering of the modifications of the thinking principle," — in other words, a stoppage of wandering thought, or of all thought on other subjects than the one before the mind. What he has to do, therefore, is to check by the will all roaming of his mind, and fasten it simply and solely on the distinction he would realize. The process is twofold, — an exercise in concentration and an exercise in imagery. He will almost instantaneously experience the extreme difficulty of restraining the natural wanderings of the mind, and form some estimate of the task which lies through years before him, — that of making his mind as docile and as manageable by the will as are his hands or his eyes. Before the fifteen minutes have passed, he will perceive, as he never perceived before, the distinction between the mind and the will, and that, before thought can be effected, the mind must be broken in, subdued, put under curb and rein. But also he will have begun to discriminate, though imperfectly because of the yet imperfect process, between the elements making up the fourth, and those making up the fifth principle. He will have taken one step towards disentangling and grouping under their appropriate heads the desires, loves, tastes, qualities, as these have a physical or an intellectual basis. In fact, his introduction into this mere vestibule of Theosophic schooling will have accomplished a triple effect, — some suspicion of the vastness of the curriculum awaiting him, some admission that the matter already furnished for him is most copious, some perception that within him he will find the true, the ever-widening field for his most careful and

persistent effort. I might add a fourth, — resignation to the obvious consequence that a Guru is yet a very long way off.

Take one more illustration, — this time of interpretation. One of the first rules given in *Light on the Path* is — "Kill out desire of comfort." This statement is extreme, and, like all extreme statements, untrustworthy. Theosophy is nothing if not reasonable, and it could not be reasonable if it enjoined the extirpation of an innocent wish as if it were a vice. Moreover, if desire for comfort is to be treated as a vice, its opposite must be treated as a virtue, in which case the desire for discomfort ranks with honor and truth and justice. This is so absurd that some qualified meaning to the words is dictated by common sense. When we think out the topic, observing Patanjali's rule of Concentration, the thought clears up. As conduct is directed by will and will is moved by desire, the main conduct of life follows from the main desire, and if this is for physical luxury, spiritual upliftings and exercises will be subordinated. Nor is this all. So far as the two are antagonistic, the physical should be depressed, and the rule would therefore seem to formulate this principle, — that wherever a bodily craving is incompatible with the growth of spirituality, it must be made to give way. Thus interpreted, it is harmonious with reason and expressive of truth.

It might even be said, and, I fancy, with no little correctness as to most of us, that we are not yet at the stage when so mild a use of the meditative power as that indicated in these two illustrations is needed. There is a consensus of all authority, from the Bhagavad-Gita to *Theosophy, Religion, and Occult Science*, that the very first practical act in Theosophy is the seizing hold of the reins over oneself. If a man is irritable, or mean, or slothful, or censorious, or greedy, or exacting, or selfish, or ungenerous, — qualities which are not crimes, but which are really as fatal to any high standard of character, — he has his Theosophic work at hand. So

long as any one of these or like pettinesses exists, that first work is unfinished. It is far from improbable that some of such blemishes remain on those Theosophists who cry out for a Guru. And yet would there be anything more ludicrous than a Guru for a man who is peevish because the weather is bad, or who gives less to the Theosophical Society than he does for his tobacco?

Looking over the whole subject impartially, I doubt if we should greatly err in stating thus the rule, — that no one has a right to expect a Guru until he has exhausted all other and attainable resources. He certainly cannot demand new powers if neglecting those possessed, and if not new powers, why new opportunities? Similarly as to books, duties, exercises, and privileges. And if this is the fact, then the desire for Guru guidance which so many feel and not a few express, is less an evidence of mature purpose than of immature perception. It needs revision rather than stimulus, correction rather than approval. Should that wholesome process give a chill to Theosophic zeal, such consequence would be the surest proof that the zeal had been but a subtle form of that ambition which we are told is a curse. For, evidently, the desire would not have been for truth or fact, but for a phase of self-importance, for a chance at self-display. And self-love as an element in spiritual development is not favored by Theosophy more than self-love in secular life.

Yet there is a corollary to the rule. Walt Whitman has stated it in one line which we beginners can only trust, but which more advanced students can surely verify, — "When the materials are all prepared and ready, the architects shall appear."

REFRACTIONS — O. E. W.

When pierced hangs the dew-drop's tiny prism
By some minutest needle-ray of light,
A stain of blood or blue betrays to sight
The fervors of that white drop's secret schism;
And were the oceans all one cataclysm
Hung out betwixt the sun and farther night,
The same disparting force would spring a bright,
Wide arch of rainbow o'er the vast abysm.

And I would that the vital beam, far lined
Through space to throw its spectrum sensitive
Of worlds and suns and galaxies upon
The universe's awful wall, may find
My soul a crystal medium fit to give
Its paint of color in the throbbing dawn.

O. E. W.

THE PRACTICAL ETHICS OF THEOSOPHY — *Em'ly*

Let us be practical, my friends; let us be practical, I say. I shall touch today only upon the practical ethics of Theosophy, and in a very simple, colloquial style.

My general experience among the classes interested in and leaning on Theosophy, Mental Science, Christian Science, Mind Healing, — and, indeed, all students of psychics, and of those silent and invisible forces in Nature which move with a solemn stillness, and yet which are invincible, — is that they are too dreamy, too theoretical, too vague, and too hysterical, to meet the trials of this commonplace, work-a-day life.

Many of us who call ourselves Theosophists proceed to repeat the fundamental teachings of this science-religion, without ever troubling ourselves to sift them to the bottom of their meaning, or satisfying ourselves that we apply them to our own lives.

I recall a few cases which illustrate this point, and I may safely relate them as convincing proof of what I have said.

The first is of a lady who believed herself a devoted Theosophist; so did others. But, when a marplot of a dressmaker failed to deliver her new gown while she waited to don it for a dinner party, her impatience grew to such a fume that it boiled over in a flood of petulant tears, while she threw herself, face downwards, on a couch. Now, if a woman's theosophy, superior will, Divine wisdom, or whatever you choose to call it, does not serve her at times of such frivolous disappointment, it is not worth much.

The second is of a lady who became enamored of Mental Science; enamored! mark you. For the time being she was enraptured with the group of ideas represented under this title, as a child is with a

new doll, or a suitor with a fresh sweetheart. These subjects are not matters for amorous jugglery. They are to live by, to study as a science, and to rest on as a companion, in whom you feel a deeper confidence and higher solace day-by-day. She was a gifted elocutionist; coughs, colds, and sore throat had been her mortal dread and worst enemies. After her first few lessons in Mental Science, she boldly and persistently denied the existence of influenza or catarrh; and believed this positive attitude of mind a bulwark against the inheritance of generations and the indiscreet habits of years. But the colds continued to come; crowding thick and fast upon her, making her so hoarse she could hardly speak, while she bravely fired off her ammunition of denials from behind a great fortress of catarrh. Do you not think she would have better shown divine wisdom by keeping out of draughts, changing wet stockings for dry ones, and wearing sufficient clothing? I do.

One more illustration, and I have done. Not long since I was regretting the existence in life of those little, far away, desolate Inlands where a seeming fate hurls us and then leaves us to stand all alone, while we feel the ground slipping away from under our feet: a waste of dark waters around us, and no human help in sight. A friend turned on me and upbraided me severely for not believing in Universal Brotherhood. It was useless for me to protest. By and by an emergency came into my life. I needed twenty-five dollars instantly, to save a near friend from disaster. It was five o'clock in the afternoon, and I sought his aid at his place of business — and it is a large importing house. I explained the grievous circumstances, and that my bank was closed. He simply replied. "I am sorry I can't help you. But you are unnecessarily excited. I guess you can bridge over your worst anticipations tonight. It's not so long to wait until the Bank opens in the morning." Later on a question of moment came up relative

to matters in which we both had an interest. Certain movements of my own had been sat upon in uncharitable judgment by a dozen critics. I had not been present at the assembly; so he wrote me ten pages of gossippy scurrility, trusting "that in spirit life I had advanced beyond the world's superficial judgment", and signed himself a loyal, sincere, and faithful friend. This is an instance of how Universal Brotherhood may be talked most beautifully. But in this sordid, selfish world, cannot each one of us try to form the nucleus of a Universal Brotherhood by practising a material and spiritual philanthropy in our own little circle?

If we are going to drift into the desperate and deplorable cant about our existing as perfect beings emanating from the Divine, and therefore incapable of sickness, sorrow, strife, sin; if we are going to audaciously assert that we today are living in the harmony of a Universal Brotherhood; if we are going to occupy our time straining our spiritual eyes after astral bodies, the joys of DEVACHAN, and the luminous tableaux of NIRVANA; if we are going to find happiness and solace in these thoughts alone; we may as well return to the old and misty creeds of pulpit orthodoxy.

That we are still only sons of God, and not gods unto men, is proved by the fact that we have not shaken off our old conditions of sickness, sorrow, strife, sin. If we were living today a practical universal Brotherhood, we should not have an Alaska St., Philadelphia; a Five Points, New York; a Seven Dials, London; with their struggling, sinning, squalid, starving populations. If we were all awake spiritually, we would gaze clearly, confidently, fearlessly, and without effort, on the astral phenomena crowding the very atmosphere about us; and until the psychic vision is completely unembarrassed, it is as useless to sit in wonder-gazing expectation as to try to read the headlines of the Morning "Press," while the fleshly tissue of the eyelids is still sealed by slumber.

What is Theosophy? Well, Webster and Worcester define it as "Divine Wisdom;" but it is something more. Theosophy appears to me to be that form of philosophy that links God and Nature in man: a human pantheism. If God and Nature be linked in man as the highest expression of Divine power, our work begins with ourselves; that is, the attainment of human perfection through personal effort.

What we want is not to talk Theosophy, but to live it. Live it as the man Jesus did, walking in the ways of Eternal Truth, from which he was surnamed *Christos*.

If Theosophy is to serve any purpose in elevating the ALTER EGO; if Theosophy is to teach man the Divine Wisdom which he may achieve along lines of worldly practice and experience, and so ultimately lift him on to new heights of manhood; then the very beginnings of it are rooted in laws which may apply to the homely worries of every day life, and their practical remedy.

Do not let us regard the argument for the study of cosmogony and the essential nature of man which has come to us under the name of Theosophy, merely as a beautiful poetical picture; not much more than a charming dream of what might be in some intangible state of existence, and in an indefinite, nameless somewhere, quite out of mortal reach.

The Theosophic life is not a mere theoretical speculation. It is neither a species of clap-trap mysticism, nor the dreary scheme of visionary philosophers with the vain hope of delivering themselves from the evils and troubles of life, — from all activity, self consciousness, and personal existence.

The exactions of the Theosophist's life — the *life*, I say, are real. It demands the constant repression of the gross animal passions; the subordinating of fleshly desires and tempers to the higher

spiritual behests: the eradication of selfishness; the fostering of broad, generous sympathies toward our fellow man; the cheerful performance of the duty that lies nearest to us. The Theosophic life requires pure thought, noble aspirations, high and holy ideal for the inner life; it teaches the love of right for righteousness sake; it distinguishes between good and evil by the light that shines within; and it develops the spiritual essence of man by meditation.

You see, it is an arduous, patient, uphill journey that each one must climb for himself; and only by strength of will and grace of holiness may we poor mortal pilgrims hope to attain final glory.

There is no shifting responsibilities; no shirking tomorrow's result of today's action, whether it be good or evil; there are no vicarious atonements. If we would be sound in soul, we must be our own spiritual surgeon and lay the axe to the root of the fungous growth of sin, just as the surgeon of the body lays the scalpel to the cancer on the human breast.

The process of the practical Theosophic life is entirely within ourselves; the motive, the effort, and the consequences being distinctly personal.

If you fail in an undertaking, blame no man. The cause of failure is a deficiency in yourself. Remember the law of the survival of the fittest. All our blunders and suffering in life are the result of our own ignorance or wilful error. For the law of KARMA is the law of life. What ye sow, that shall ye also reap. Byron fully illustrates this order of things when he says, "Love and liquor are both ecstasies; after one the heartache, and after the other the headache." If you plant thistle seeds, are you very surprised if strawberries do not grow? And if you lead a profligate, indolent life, should you be greatly amazed if honor and acclaim do not single you out?

Each one is positively the Truth, the Light, and the Way unto himself. Each one of us is an individual unit, — a fragment of the Great Whole, — travelling over the mountain paths of life, *en route* to the Golden Summit.

The ways are steep and narrow, they are entangled with thorns and thickets and brambles and briars which smart and lacerate. And when we meet a great jagged boulder, which fate seems to have rolled as a test of our strength into our pathway, let us not stand kicking against it, wounding ourselves: it is as useless as when the gentle sea-mist endeavors to caress the cruel rocks, which tear the phantom lover to shreds. Let us not pause in despair before these boulders, and so deter our own progress. Our object is to surmount the obstacle. Climb over it; walk around it; plough through it; only let us be sure to get it behind us.

And let us act. Action is effort, action is growth. Growth is divine pain. All nature travails and groans in growth. Remember, we never stand still; if we do not endeavor to advance, we retrograde. For feelings which end in themselves and do not express themselves by fulfilling a function, leave us feeble and sickly in character, debilitated in mind and soul. Believe me, spiritual excellence and the scheme for human perfection do not come to any one of us in a windfall. Whatever measure of success we may obtain in Theosophic growth is won by unflagging toil and pre-eminent psychic endowments.

Don't be too confident of yourself. Salvation is wrought out in fear and trembling. Seek out the truth; there is no goal higher than truth. But the search is not without its trials; and there are few who are fitted by temperament and research to lift the veil of Isis.

Spirituality is only possible of development by retiring within one's self where lies the higher world of thought, and sympathy,

and instructive culture. The unfoldment of this ineffable life and its marvelous lessons are of gradual growth, but they are everlasting. Spirituality is the culture that issues from discipline, and the courage that springs from the brow of pain, and that dares all dangers.

So we are again brought face to face with the bald fact that the Theosophic life means unshrinking, incessant, untiring desire combined with efficient exercise. Prayer in operation: prayer in operation carried through every movement of our waking day, — every second of our sleeping hours.

You may say this is impossible. I say it is not. You will say it is hard work. Yes! But practical Theosophy wasn't made for lazy people.

When you once come to realize that prayer in operation means only to work for the love of your work, it will not be so difficult. Whatsoever your calling may be, lofty or humble; whether it be to preserve human life or carry a hod; whether you are making the thought of future generations or washing dishes; perform your duty to the utmost measure of your ability, to the glory and satisfaction of your own highest self. There is no such thing as accomplishing great results without work; and spirituality makes no apology for indolence.

Remember:

"The spark divine dwells in thee; let it grow.
That which the upreaching spirit can achieve
The grand and all creative forces know;
They will assist and strengthen, as the light
Lifts up the acorn to the oak tree's height;
Thou has but to resolve, and lo! God's whole
Great universe shall fortify thy soul."

The Path

JUNE — J. C. T.

Theosophy, thou art the truth
 In morning of delightful clay.
Thou art the day itself — thy youth
 Knows no declining nor decay.
Survivor of the vast array
Of creeds in every age and clime,
 Thou dost the centuries survey
In one eternal June of time.

Thou art the universal love
 Which lights and leads men on their way;
Thou art the wisdom from above
 No man may idly disobey.
When Earth in distant lives is gray,
Yet wilt thou rule in golden prime,
 Maintaining thy majestic sway
In one eternal June of Time.

Where Truth's reviving waters play
 And laws of Love and Wisdom chime,
Forever and forever stay
 In one eternal June of Time.

THE FOURTH DIMENSION: II — *F. S. Collins*

(Concluded.)

Suppose a figure of any kind drawn on the plane inhabited by the plane being; all he sees of it are lines and points: and from the number of lines which he can see when he views it from different sides, and from the size of the angle at each point, he determines whether the figure he is considering is a triangle, square, pentagon, etc., etc. He cannot by any possibility see the shape of the figure; we who can do that, do it because we look from another direction. He would say "the only way to get at the inside of a square is to penetrate one of the sides, push it apart, so to say." So we say "you can touch only the surface of a solid: its interior can be reached only by penetrating and pushing apart."

It is well known that clairvoyants can plainly see objects from which they are separated by opaque bodies; and when they are asked to describe how it is they so see, they cannot give any explanation comprehensible to us. They see it, and that is all they can say. Thus a clairvoyant (of course I mean a genuine, and an exceptionally fine clairvoyant) can, on looking at any one's body, see all the interior organs and describe their position, relations, and condition with wonderful accuracy. Must we not conclude this to be by a process similar to that by which we can see and touch a point in the interior of a triangle, without touching or looking through the sides? the simplest of every day operations to us, but one of which no description could give an adequate idea to a plane being.

Suppose a cube is passing through the plane which constitutes the plane being's space: what does he perceive? A square, bounded by the usual four lines and four angles. Suppose this cube to come

from our "above" into his plane, and pass through and below it. To him the process would be this: — a square suddenly appears where before there was none, coming from nowhere in space; it lasts a short time, then disappears as mysteriously as it came. Suppose a cylinder to pass through his plane; he would suddenly see a circle, which after a certain time disappears as the square did. If he saw a point suddenly appear, and then become a minute circle which steadily increased in diameter till it vanished at the time it was the largest, that would mean that a cone had passed through. If the increase in size of the circle was more rapid at first and slower afterward, it would mean a hemisphere; and we might trace in the same way other bodies.

If we have a cylinder around which is traced a spiral line, he would see a circle, around the circumference of which a point revolves, the openness or closeness of the spiral being represented to him by the greater or less speed of the point. A cylinder inscribed with a number of lines would be represented to him by points moving in various ways, at varying rates, about a circle. Some curious features might result from the passage of less regular bodies through the plane. Take a cylinder terminated at each end by a cone; we have a point appearing, then a circle increasing up to a certain size, which persists for a time, then diminishes to a point and disappears. A quite irregular body might give some curious results, as any one can work out at leisure.

Now think what is a human life. We appear in this world, go through various changes in form and place, and then leave this world. Cannot we see an analogy to the last described case? May not the real entity, the true individuality, exist all the time in a higher space of which we know nothing, what we call our life being merely the fleeting appearance produced by its passage through this plane of being, its true existence extending far

beyond. When we compare with our ordinary space and space life the space and life of the plane beings, how insignificant and meagre the latter appear; and the difference is not one of degree, of more or less. No conceivable number of square inches will make a cubic inch; no possible extension of a plane being's experience can give him an idea of space: his universe is a thin film; it and its beings are hardly more than mental conceptions, not realities, to us. The squares, triangles, and other surfaces, which to him are the most absolute of realities, to us are but the surfaces bounding the solid bodies, the only true realities.

So to a being in higher space, our entire universe, all space even beyond the remotest stars, is the merest film on the surface of real being; and our solid worlds no realities, merely mental conceptions of the appearances of real entities.

When a cube rests on a plane, the plane being sees a square and nothing else; by turning the cube in different ways he can be made to see the six squares which bound it, but only one at a time; to him they are separate entities, appearing one after another, and with no connection except that of sequence in time and similarity in size. To us they are the six squares bounding the cube, distinct and independent of each other, but with no independent existence apart from the cube, of which they are but the manifestations. So also, individual human beings appear to us as distinct entities, standing separate and isolated; but seen from the standpoint of the higher life, each is merely a manifestation of the one life. Apart from that one life, each is an unreality, a form of illusion, no more an actually existing thing than is the side of the cube apart from the cube. Yet just as the sides of the cube, considered as squares, are distinct and independent, their unity being not identity one with another but with the cube, so to each human being is given his own individual existence, which only he can fill.

This is no mere fancy, no mere analogy; a little study into higher space laws shows that, once granting the existence of more dimensions of space than are perceived by our five senses, then there *must* certainly be existences, of which all our solid world and its contents are merely partial manifestations, but which existences can be manifested in many other ways, of which we are now totally ignorant. And when we see that our only real being is in a higher one, of which we are but the partial manifestations; that only as our consciousness becomes centred in that higher being has it any real value; that only as we work for the whole has our work any value or permanence; when we once see these things; what more evidence do we need for the fundamental principle of our society, universal human brotherhood?

The Path

THERE IS A TIDE IN THE AFFAIRS OF MEN — J. D. B.

All motion runs in cycles; all creation ebbs and flows. If we listen attentively and observe carefully, we may detect the pulse-beats of the world. The inebriate who waits for his bed to whirl around in order that he may jump in, is, after all, more sane than he who blindly runs counter to destiny, and is forever "kicking against the pricks." He who knows nature's cycles and who waits calmly for the rising tide and takes it at its height, is indeed a magician. Indolence and idleness are like mildew to the soul; and yet is the paradox also true, "He also serves who only waits." Men differ less in the sum of their energy than in their methods of expending and utilizing it. Many persons are both intellectual and spiritual spendthrifts: these far outnumber the parsimonious and imbecile on these two planes of action, the intellectual and the spiritual. In much of the instruction in occultism the word "meditation" should read "concentration." Meditation may lead only to inaction and result in imbecility. Concentration may only give rise to audacity. The one may leave the soul to rust; the other to squandering its energy. Only right knowledge can so blend meditation and concentration, repose and action, as to bring about the highest results.

To act and act wisely when the time for action comes, to wait and wait patiently when it is time for repose, put man in accord with the rising and falling tides, so that, with nature and law at his back and truth and beneficence as his beacon light, he may accomplish wonders.

If these principles are true in the field of action and in the world at large, they are equally true in the life of man and in all private affairs. Ignorance of this law results in periods of unreasoning

enthusiasm on the one hand, and depression and even despair on the other. Man thus becomes the victim of the tides, when he should be their master. The greatest magician, the highest adept, is never divorced from or independent of nature. He steps aside till the tides of evil omen have spent their force and passed; he stoops to conquer, and presently finds his head among the stars, where one ignorant of the signs of the times meets force by force, anger with anger, and is borne away like drift-wood in the swollen tide.

Hundreds of students have started into the study of occultism or theosophy full of enthusiasm. For a time all has gone well with them. They have breathed a new atmosphere, and for a time seemed to inhabit a new-world; but alas! the tides receded, and they have been carried far out on the sea of doubt, blinded by the winds of fate and overwhelmed by the waves of passion. Their enthusiasm was all feeling, their zeal only emotion. The question always arises with those who know these treacherous tides, "*Has he come to stay?*"; and it were well if every seeker would ask of his own soul this question before committing himself to any action. Having once set sail on this ebbing and flowing sea, it would be well to remember that low tide is sure to come. One is apt to imagine at these times of depression that the inspiration is gone forever, and that the rocks thus left bare and the beach strewn with wrecks will never again be covered by the life-giving waves. The searcher must learn to hold steady, and to sit still and wait. Presently he will hear the murmur of the coming tide. It will not meet him far out on the barren shoals and so engulf him all unprepared, for he will have waited its coming, knowing that it responds to law. It is thus that knowledge directs enthusiasm and prevents discouragement. It is thus that the helpless victim of the tides may become indeed their master.

Enthusiasm thus wedded to despair, by real knowledge becomes

intelligent power. Such power is available at all times. It triumphs in the midst of apparent defeat, and in the hour of victory is not puffed up with the winds of pride, but, like a brave ship with the hand of a master at the helm and the compass well in view, baffles both wind and tide.

But for the winds and tides the ocean would be but a stagnant sea of death. Even so with human life. Action without motion would be impossible, and both of these also imply rest. We should not be like dead leaves borne up and down by the tides, but like brave swimmers, borne high by crested wave, grasp firmly the vantage gained and wait patiently the returning tide.

The Path

THE STREAM OF THOUGHT AND QUERIES: I — *Hadji Erinn*

I have watched the stream of thought, the battalions of questions pouring along the channels that reach out from THE PATH and am asked to put a few on these pages with some answers.

WHAT IS RESIGNATION?

"In what way are we to understand this word, as it is used, for instance, on p. 35 of May PATH? If it is used in a special sense, that should be made clear."

This word was not used in a special sense. Theosophists should strive not to strain speech or specially allot terms. The English language has quite enough words to meet most of our present wants. The intention was to give the deepest meaning possible to the term. *Resignation* was used in the sense of a total mental resignation, not a mere appearance or pretence. We must do as commanded by Krishna, resign all interest in the event of things, and be able to say that any event whatever that comes to us is our just due. This is perfect resignation: it is difficult and yet easy to reach. We reach it by reflecting that the object of the soul is union with the Supreme Soul, and that all our desires grow out of our bodily nature alone. It is really the first step: as the author in the May PATH said, it is the one seldom thought of by students.

IS KARMA ONLY PUNISHMENT?

Karma is action. The law of Karma operates to bring about rewards as well as punishment. The man who is now enjoying a life of ease and wealth has obtained it through Karma; the sage who has attained to great knowledge and power reached them through Karma; the disciple drinking the bitter drops from the cup of failure mixed the draught himself through Karma:

Buddha's great disciple Mugallana — greater than any other — was suddenly killed, apparently in the height of his usefulness, by robbers: it was Karma: the happy mother seeing all her children respected and virtuous dies the favorite of Karma, while her miserable sister living a life of shame in the same city curses God by her life because she knows not that it is Karma. The world itself rolls on in its orbit, carried further and further with the sun in his greater orbit, and grows old through the cycles, changes its appearance, and comes under laws and states of matter undreamed of by us: it is the Karma of the world; soon or late, even while revolving in its orbit, it will slowly move its poles and carry the cold band of ice to where now are summer scenes, — the Karma of the world and its inhabitants.

How then shall Karma be applied only to reward or punishment, when its sweep is so vast, its power so tremendous?

PICTURES AND SYMBOLS IN THE ASTRAL LIGHT.

"I have seen pictures and symbols of wonderful beauty in the Astral Light. A beautiful face surrounded with light a head with wings which soon seemed to sink into my brain. Were these seen through the action of manas and buddhi?"

I do not think so. These beautiful things belong to a lower plane and are seen by several senses and departments of senses. Many different causes might have produced them. Today you might see the face of a woman or a child whom you will not meet for the next ten years and have never yet seen; or a long-forgotten and slightly-noticed object in the past of the present life may be suddenly opened to clairvoyant sight; again, there may be deeply laid in your nature mental deposits from long past lives, and these may tinge your visions. I cannot answer individual cases: such is the work of a vulgar fortune teller. Each one must with patience study his own experience through many years, carefully

noting and verifying and eliminating as time goes on. Each person who has clairvoyance has his other own special phase — and there are millions of phases; hence five separate clairvoyants may see five different pictures or symbols, all produced by one and the same cause; or four of them may see four different pictures while the fifth sees the result of a combination of his own with the other four phases.

HOW DID THE SYMBOLS GET INTO THE ASTRAL LIGHT?

The world is so old that man's acts and thoughts for many millions of years have stamped the Astral Light full of pictures. But the Astral Light itself has cycles, tides, and changes, so those must be allowed for; it is useless to try to explain this, but in the changing of the cycles the symbols sometimes are mixed and interblended. When a class of elementals is fully developed and ready to run its appointed course from the beginning of an Age, there is a symbol for it that can be used until the complete decadence or extinction of that class, but at the change of certain cycles the symbol ceases to have power because that to which it once applied has altered and we know not the new symbol. You ask to know more about these symbols? It is not useful or necessary.

ABOUT THE CYCLES.

"I have heard and read much about cycles and their changes. I believe in cyclic law, and in the greater and lesser cycles, although I know them not. But are the cycles definite in limit, or are they shadowy?"

Much that has been said on this subject is vague except as regards the number of years included in certain cycles. The lunar cycle and some others are known, but it is well to clear up some of the shadows. Many persons think of one cycle beginning, say today,

just as another has ended. This, however, is not correct, for the cycles overlap each other, and before one has really closed another has begun. The best way to understand it is to draw two circles intersecting each other thus.

Now No. 1 is ending within No. 2. Call the beginning of No. 2 at B, and it is seen that it had its inception while No. 1 was finishing. The real point of ending for one and commencement for the other is probably at a point found by drawing a line through where the circles touch at top and bottom, and let the spaces on either side of that line be called the dawn and twilight.

Then, again, there are some important cycles which begin and end wholly within the limits of larger ones, and, in fact, it is these smaller cycles that we notice most, for they are more quickly felt. All of this relates to physical cycles; there are others of a higher and more spiritual nature very difficult to trace and comprehend. It may be partially understood by any one who has observed a man working for several years at some occupation in itself not particularly elevating, but who at the end of the period has altered his mental attitude in such a degree as to vastly change his entire life and development. In his case the occupation represented a cycle of debasement or expiation, and all the while another cycle of a higher character was running its course in his mental and moral nature quite unknown to anyone else and perhaps also to himself. There are also great cosmic cycles that proceed slowly to our comprehension because they cover such stupendous periods, but they powerfully affect mankind and can only be faintly imagined by students.

The ancient Egyptian civilization illustrates the power of one of the greater cycles long since run down. That brilliant civilization

rolled on through a vast stretch of years with no appearance of diminishing glory, but gradually the change took place. We can imagine the hopeless and frantic efforts of her sages to counteract the decay. But they were powerless, and Egypt gradually sank to the place where we find her blazing in the records so far discovered and yet then in her decline; and at last all that remains are sand heaps and degraded ignorant Copts.

But the sweep of that mighty cycle merely moved on to other spheres, and when Earth again meets the same impulse the old civilization will return, the old force revive within a better body. To me the cyclic laws are full of hope and eminently just.

ABOUT BLACK AND WHITE MAGICIANS.

"How is one to recognize a black magician, and how to treat such an one?"

It has been well said by H. P. Blavatsky that "each one has a potential black magician within." The black magician is the fruit and perfection of selfishness; selfishness is the triumph of the lower nature. The black magician is the opposite pole in human development to the white Adept, and the latter is the fruit and perfection of the highest qualities in man conjoined with entire communion with spirit; this is the triumph of all that is best in the human being; it is the conscious union with the divine. The black magician stands for self alone, and therefore for discord, separation, and destruction; the white one is the embodiment of union, harmony, and love. In the words of *Bhagavad-Gita* the white adept "is the perfection of spiritual cultivation," and it must follow that the black one is the perfection of material cultivation. In this question, "black" represents self and "white" the spiritual whole.

The query then arises, "Why are there now only white magicians

and merely embryo black ones?" We think there are but few black adepts existing today, but of the white school there are many. The age and the cycle have not yet come to that point where the black magician has blossomed, and it is easy to understand why there are perfect white ones. The question is answered in *Bhagavad-Gita* where it says, "At the night of Brahma the Jivanmukhtas are not absorbed nor destroyed, but all others are; and at the coming forth of the new creation those Jivanmukhtas (white adepts) come forth intact and conscious." (1) This means that at the preceding pralaya — or dissolution — all the black adepts were destroyed; and as now but the first 5,000 years of Kali Yuga have elapsed, there has not yet been time to evolve enough full black magicians to make a sensible impression upon us. The first part of the question, therefore, — "How are we to treat a black magician" — is premature.

Each one of us may become a black magician if we let selfishness have its course, and hence we should ask ourselves, "How may we prevent the possibility of our becoming black magicians in some future age?"

As to the latter part of the question regarding the treatment to be accorded to these as yet mythical beings, it also is very far ahead of time. If such an adept were to appear to you now, he would laugh your threats to scorn. But the sole and sovereign protection against such things and persons is a pure heart and right motive.
