In reading an article in *Lucifer* the other day, I was struck by a quotation from Elihu Burritt which ran in part thus: "There is no sequestered spot in the universe, no dark niche along the disk of non-existence, from which man can retreat from his relations to others, where he can withdraw the influence of his existence upon the moral destiny of the world; everywhere his presence or absence will be felt, everywhere he will have companions who will be better or worse for his influence. Thousands of my fellow-beings will yearly enter eternity, with characters differing from those they would have carried thither had I never lived."

The thought ran parallel with the remarks of our President last Tuesday upon the multiplied force of concerted action, in showing that, side by side with what we are *doing*, runs the hidden current of our *being*, slow-moving, perhaps, but nevertheless sweeping on with a resistless force, none the less great for being unsuspected. It is one of the most difficult things in the world to realize, — this force of passive existence, if I may use the expression. To speak, to act, — we can all appreciate as bearing largely upon the character of others; we can all realize the inspiration of a great deed, a noble sentence, but simply to *be*, — what can that do for the world? How far can the *nature* of a man, apart from words and actions, affect the great purpose of the Teachers, how much can *being* help to form the nucleus of Universal Brotherhood? It is the first impulse always to ask What shall I *do* to be saved, and yet what is right action but the fruit of right thought, as that is the blossom of the character from which it depends, as the flower hangs from the tree. The gardener does not try to improve his roses by pulling open the buds and trying to stretch the crumpled leaves to a broader growth, but he turns

his attention to the bush on which they grow, grafts it, waters it, enriches the soil around it, exposes it to the light and air, and the more perfect flowers follow as a natural sequence. And as we cannot think of the perfect rose without its fragrance, so the perfect character cannot be thought of without its *influence*, that perfume of the soul which is as subtle and as powerful as thought itself.

For, after all, what is this influence of which we speak but the aggregate of the man's thoughts and deeds, the real personality which all his tricks of speech and graces of action cannot hide? This is why we are constantly taught that thought is better than action; it is so (as one of the sages has told us) because a man becomes that on which he resolutely and persistently thinks. He puts himself into an attitude of receptivity to a particular influence, and, as the law of force is the same on all planes, that force follows the line of the least resistance, and enters the channel he has prepared for it. We receive those influences that we consciously or unconsciously seek; we give out those influences which are the result of what we have sought. It is useless to forego indulgence in pleasure or in sin while the desire for that pleasure or that sin is still strong in our hearts, because in that case it is but the outside of the sepulchre that is whitened. Kill out the desire for the sin, purify the heart itself, and the body of that sin dies, and its sepulchre, like the fabled tomb of the Virgin, is found full of fragrant roses.

In Longfellow's beautiful poem of Santa Filomena he says:

"Whene'er a noble deed is wrought,
Whene'er is spoken a noble thought,
Our hearts, in glad surprise,
To higher levels rise.
The tidal wave of deeper souls

Into our inmost being rolls,
And lifts us unawares
Out of all meaner cares.

This is the *active* influence, the power we are all ready to recognize, all eager to work for. But there is also the *passive* influence, the "atmosphere" of a person, of which we are all more or less conscious, and which, being a continuous thing and ever abiding with that person, has an even more powerful though less apparent effect. To influence others by the voluntary force of speech or action is comparatively easy, for it is a momentary effort; we poise ourselves for an instant on the topmost heights of our being, and our fellow-men, kindled at the sight, strive, for another moment, to emulate our altitude. But how much harder the task so to inform our inmost souls that they can give out nothing but nobility, nothing but love! It was said of Lady Elizabeth Hastings that to love her was a liberal education, and we have all known men and women whose presence was a benediction, and made the brightest vision of Universal Brotherhood seem a thing to be realized tomorrow. So true it is that, as Burke once said, "Virtue as well as vice can be caught by contact."

For it is precisely by this influence, this tremendous power which we all possess and which we handle as carelessly as children do gunpowder, that that nucleus of Universal Brotherhood is to be formed which, in the language of Walt Whitman, is "to saturate time and eras." We are all occasionally startled by being confronted with some word or deed of our own that we had entirely forgotten, but that, like a chance-sown seed, has borne fruit in some other mind, and now we are told to gaze upon the harvest. It is these occasional glimpses of the far-reaching influences we wield that startle our reluctant souls out of their lethargy, and bring them face to face with the unalterable

realities of their past, the glorious possibilities of their future. This again is the *active* influence of the spoken word: but who confronts us with the results of that other influence that never ceases, that weight of character, that force of personality that is continually creating for the soul "the garment that we know it by"? "The words that a father speaks to his children in the privacy of home," says Emerson, "are not heard by the world, but, as in whispering galleries, they are clearly heard at the end, and by posterity."

But how much more power over the destinies of our fellowmen has the perpetual influence of our nature than the strongest of our spoken words! That which we *say* for good in the course of our lives is very little, that which we *do* still less, but that which we *are* affects every human being with whom we come in contact as we move about the world, and draws within our sphere all the highest forces of the universe to co-operate with us.

This is not a good to be gained by one effort, not a victory to be decided by one battle. It is a long, slow building-up of character, thought by thought, as the coral-insect builds the reef grain by grain. And the work must be done with the good of others as our steadfast aim, with the idea of Universal Brotherhood ever before us as we toil. There is no need that we should sigh for wider fields of action while we wield such possibilities for good or evil as this power breathing from us unawares; but he who works for such a purpose, for the purification of his own soul that others may be benefited, will see ever farther and farther into the heavens. And the task of self-purification will bring with it that beautiful transparency of spirit that enables all men to see and bless the light that shineth from within and enlighteneth all the world.

THEOSOPHY — C. Calhoun

Theosophy and its Philosophy include all the philosophies pertaining to all life and existences, material, moral, and spiritual. Mankind as they stand between two eternities — past and future — commencing to think towards eternal principles — must start from where they stand. We can look back, cannot go back; for good or ill, on we must go towards that one eternal ocean of Divine Essence of which all tangible, thinkable things are but a breath; unthought, unthinkable, the one eternal, incomprehensible whole, the That; however expressed inexpressible which we call God, Deus, Jehovah, Allah, Lord, Omnipotence, Omniscience, Omnipresence, OM. The embodiment of the eternal principles. Yet these principles may be divided and subdivided *ad infinitum*. One God or many Gods, underlying all systems of religious or scientific thought; none wholly right, none wholly wrong, yet upon the whole right, for what is, is right, for it is the legitimate result of a cause, or an eternal chain of causes; positive and negative, objective and subjective; attraction and repulsion, formation and transformation, creation and destruction. Yet in the economy of nature not one atom is lost. Ordination and foreordination, these eternal principles permeate every living, moving thing, each in its degree. "Mean tho' they be, not wholly so, since created by 'That' breath." Even the very insects have these attributes of deity; they are positive and negative, objective and subjective, attract and repel, form and transform, create and destroy, ordain and foreordain.

Will these attributes of Deity be annihilated? In the economy of nature not one atom is lost. This Ego going the eternal rounds of all existences, through its numberless personalities, builds up its individuality, character, Karma. Mankind how fearfully and

wonderfully made; looking up, comparative atoms; looking down, Gods. "Know ye not that ye are Gods?", searching out and laying hold of the secret forces of nature, commanding them to obey and serve. This too on the low material plane, and plane succeeding plane in one eternal chain, with our powers, capabilities, and possibilities enlarging and expanding; most wonderful thought.

And as our knowledge and powers enlarge, in just proportion our responsibilities enlarge. "Let him that thinketh he standeth take heed lest he fall." Is this not an exemplification of the fable of the fallen angels? Surely in this philosophy there is no profitable room for disputation. It should be considered a privilege to help our fellow creatures. To do another a wrong is to wrong ourselves more. To be just, kind, and charitable is the only evidence of a noble soul. Although but an individual atom in the universe, that individuality is everything to us. Having an existence carries with it the right to exist and a duty to preserve and better that existence. To have the power of thought carries with it the right to think and the responsibilities of these thoughts. Having the power of action carries with it the right and duty to act, with its attendant responsibilities. Neglect of duty is a crime. Knowledge and power, void of responsibilities, lead to conflict and confusion, misery and destruction. For good or evil this is Karma. But the most important thought of all to bear in mind is, strict honesty of purpose. Be just in all things, get knowledge and understanding, learn to discriminate. The power of discrimination also carries with it its duties and responsibilities. All actions bring with them their natural and legitimate results, hence the necessity to act honestly and wisely. Cultivate the gift of appreciation; learn to appreciate the sublime, the beautiful, the noble and useful; with appreciation there is no value. Despise not little things.

The moral law is the great governing force of the universe; it demands the most intelligent action with the strictest justice

without the least jot or tittle of allowance. All natural or divine laws are necessary to our existence, consequently blessings. All laws must carry with them their penalties, or they are null and void, therefore these laws with their penalties are blessings. Sin is the violation of laws or the abuse of blessings; the greater the blessing, more subject it is to the greatest abuse. Everything must be considered in degree, for these laws or principles being eternal, must hold good through the eternal planes of existence. All things exist from necessity; this being true, we must always have had an existence somewhere in the eternal chain of existences in the past, and necessarily must continue to exist somewhere in the eternal chain of planes of existences in the future and return to that eternal ocean of Divine Essence from whence we emanate.

The Path

ONE TOUCH OF NATURE — *K. H.*

In the famous speech of Ulysses in the third act of Shakespeare's *Troilus and Cressida* occurs the often-quoted line, "One touch of nature makes the whole world kin." It is a curious fact, and one on the whole redounding to the credit of humanity, that the line is *never* quoted in the sense in which Ulysses uses it. He is speaking of the readiness of mankind to forget past benefits, and to prize the glitter of a specious present rather than the true gold of that which has gone by. "The present eye praises the present object," says the wise old Greek, and there is *one* touch of nature that makes the whole world kin, that is, men's fondness for praising that which is new, though it be gilded dust, rather than that which is ancient, though it be gold that is somewhat dusty. "Then marvel not," he says to Achilles, "that all the Greeks begin to worship Ajax."

Curiously enough, the line is always quoted as exemplifying the sympathy that, once awakened, makes men feel their close relationship to each other. (1) "Nature" is taken as meaning fellow-feeling, one touch of which makes us all brothers. This unconscious misinterpretation, or rather misapplication, of the great poet's words shows us how innate the conviction is of the fact of our universal brotherhood.

We recognise it as our *nature*, and one throb of fellow-feeling brings the truth home to our awakened consciousness. The touch of sympathy, like the spear of Ithuriel, instantly dispels the illusion of the senses; it lifts us from the purely terrestrial plane, the life of every day, with its apparent gulfs and abysses of worldly circumstance set between soul and soul, to that higher region where we see the non-reality of these separations; where

we *feel*, in all those moments that call out the deeper nature of every human being, that the one great pulse of the universe throbs through all our veins. An intellectual conviction of the necessary identity of spirit will never go half so far towards convincing us of the reality of universal brotherhood, as the sudden flush of enthusiasm that follows the words of some great orator, the thrill with which we hear of some noble action, the grief with which we witness another's pain. We read in *Light on the Path* "Kill out all sense of separateness," because "Nothing that is embodied, nothing that is conscious of separation, nothing that is out of the eternal, can aid you." We may endeavor to realize this truth with all the mental power we can bring to bear upon it, meditate upon it for hours, and the sudden swaying of a crowd by some one mighty impulse, or the unexpected revelation of the depths of some human heart, will bring it home to us with a force that makes our intellectual conviction seem a pale and shadowy thing. There was a great spiritual truth in the old myth of the giant Antaeus, who regained his strength whenever he touched his mother Earth. To sway the souls of men the poet must fall back upon our common humanity, must make men feel that he is one with them, must give voice to the inarticulate cry of the masses, must speak *from* the people and not *to* the people. It is this working from a common basis, this appeal from one man to his comrades, that makes the inspiration of Walt Whitman's poetry so great and so far-reaching, the intense conviction, in short, of universal brotherhood, that makes him say, in his *Leaves of Grass*:

"Recorders, ages hence!

I will tell you what to say of me;

Publish my name and hang up my picture as that of the tenderest lover, who was not proud of his songs, but of the measureless ocean of love within him — and freely poured

it forth;" and who wrote to "Him who was crucified:"

We all labor together, transmitting the same charge and succession;

We few, equals, indifferent of lands, indifferent of times;

We, inclosers of all continents, all castes — allowers of all theologies:

We walk silent among disputes and assertions, but reject not the disputers nor anything that is asserted;

We hear the bawling and din — we are reached at by divisions, jealousies, recriminations on every side,

They close peremptorily upon us to surround us, my comrade,

Yet we walk unheld, free, the whole earth over, journeying up and down, till we make our ineffaceable mark upon time and the diverse eras,

Till we saturate time and eras, that the men and women of races, ages to come, may prove brethren and lovers, as we are."

And here the great poet strikes the same note touched upon by our President the last time he spoke to us. Because the realization of this dream of universal brotherhood must needs be a thing of the *future*, because we see how far from this true concentration we are, and must be for many centuries to come, perhaps, therefore there is this need that we should "saturate time and eras," as Walt Whitman puts it, that we should "make our ineffaceable mark" upon the age. For this we come together in societies, that each may have his modicum of power reinforced by contact with others; that the reviving breath of another's inspiration may quicken the flame in our own hearts; that the individual atoms, by their union and common intensity of purpose, shall make up the little mass of leaven that shall one day leaven the whole lump.

But, as was said in one of the papers the other evening, a society can only accomplish what its individual members *will* and *carry out*, and to inspire us to this individual effort I know of nothing more effective than the words of "the good gray poet," among others, these —

"Is reform needed? Is it through you?

The greater the reform needed, the greater the personality you need to accomplish it.

Do you not see how it would serve to have such a Body and Soul that when you enter the crowd, an atmosphere of desire and command enters with you, and every one is impressed with your personality?

Whoever you are! claim your own at any hazard!

These shows of the east and west are tame compared to you;

These immense meadows, these interminable rivers, — you are immense and interminable as they;

These furies, elements, storms, motions of Nature, throes of apparent dissolution, — you are he or she who is master or mistress over them,

Master or mistress in your own right over Nature, elements, pain, passion, dissolution."

FOOTNOTE:

1. Shakespeare wrote: "*One* touch of nature makes the *whole* world kin." We read instead: "One touch of *nature* makes the whole world *kin*." ([return to text](#))

The Path

REINCARNATION AND MEMORY: I — *Harij*

The question is often asked: If the theory of reincarnation be true, why have we no recollection of any previous life?

It may easily be conceived as possible that we have lived before on this earth, and that memory of the events of that existence has been blotted out. This lapse of memory is a frequent experience of every-day life; in fact, of all our varied experiences from youth to old age we really remember only a few of the most vivid, and can never recall all the details of even these. Indeed, we forget far more than we remember of the details of this present life, and the wonder is not so much how we can remember the few things that are partially retained, but how we can forget so much of experience that passes beyond all possible recovery. There is, no doubt, an absolute registration of every incident and experience in life, but nothing known to us as memory can possibly constitute that registry. The essence of what we designate as memory consists in our ability to recall into the sphere of consciousness past conditions and events, and this ability is seldom in any instance more than partial, and is always fleeting and uncertain. There are, indeed, flashes of memory where an event long forgotten is revived with unusual vividness, and we get the impression that nothing is really lost but that a latent or a passive memory contains them all, waiting only the touch of circumstance to recall them into being. So far as any legitimate function of memory is concerned, this is a fallacy. The absolute registration of events already referred to involves far more than can be assigned to the function of memory. This must be borne in mind, and we must accurately apprehend just what the word memory means, before we can intelligently discuss the real question under consideration. In other words, when we have

carefully considered the fact, the function, and the phenomena of memory, we can easily understand why that which but partially records passing events, and never is able to recall them entire, should be unable to bridge the chasm of perhaps a thousand years and recover the incidents of a previous incarnation. It may, moreover, appear presently that all that escapes memory, all that memory appears temporarily to retain but in time loses, is nevertheless retained elsewhere and carried on from incarnation to incarnation. Let us bear constantly in mind that nothing exists without a cause, and that nothing is ever really lost. If this principle, recognized as everywhere true in physics, be true also in metaphysics and in all human experience, then each human being represents in himself and carries with him all previous experience, and is at any moment of his existence an epitome of all his past. It is, however, quite evident that nothing known to us as memory answers to this epitome, even for the present life.

The experiments in hypnotism have shown that consciousness and experience may exist independent of what we know as memory. An act to be performed at a future time and an exact date is fixed in some way on the sensorium, and the act is performed automatically at the exact time, although memory bears no record of the experience that led to the act. In another case memory may be impressed and confined to definite limits, thus showing that memory is relatively free from experience. Such illustrations might be multiplied indefinitely, to show that memory is not commensurate with all human experience, even in the present life.

As an element in man's being, consciousness is far broader and deeper than memory. Consciousness represents the fact of experience; memory the form and the details. Hence, while the fact remains and an experience once had can never be destroyed, the form and details in which it first appeared may pass away.

This fact of experience remains as a precipitated result, and, divested of memory, *i. e.*, of form and details, relations and sensations, constitutes the basic element in Karma. Add to the foregoing considerations the ethical element, or relation to other individuals, giving thus the element of motive, and we have the law of Karma deduced from the elements. In the first instance we have the individual as related to himself; in the second, as related to his fellows.

(To be continued.)

The Path

THE STREAM OF THOUGHT AND QUERIES: II — *Hadji Erinn*

PRACTICING FOR OCCULT DEVELOPMENT.

Several questions have been received on the subject of the best method to be pursued by members of the Theosophical Society for the development of occult powers.

This desire for such development cannot be commended. Such a desire, standing by itself, while seeming to the questioners to be of great importance, is really of the very least consequence for beginners or to the present state of the theosophical movement. The Society was not organized for the purpose of teaching the practise of occult arts, and it has been distinctly stated in a letter from one of the Masters, who are themselves fully acquainted with all the laws of occultism, that our body was never intended to be a hall of occultism or for the training of aspirants to chelaship. But in the face of that declaration and in spite of all that has been said and written in the magazines of the Society, there are numbers of members still thinking that they will be helped in such sort of study and practice, and who have for some time used what leisure they had in endeavoring to cultivate their psychic powers to the exclusion of work upon the lines laid down by the founders of the Society.

Further than this, some of these devoted students have been reading such works upon practical yoga — or Hatha Yoga — as they could procure, and trying to follow the rules laid down, notwithstanding the distinct caution in all such books that the practices should not be pursued by the student unless he has a competent guide and teacher to help and protect him on the way. Now as there are no such guides in the United States — but all here being alike mere tyros, students, or probationers — it is

evident that the very first rules have been violated.

All these practices and studies, so long as they are pursued merely for the powers to be developed, will lead to trouble only and greater ignorance. This is not because there is no truth in practical yoga, but solely from the method adopted and the pure selfishness of the aim before the mind.

WHAT, THEN, IS A SINCERE THEOSOPHIST TO DO? SHALL HE OR NOT PRACTICE YOGA?

We answer by saying that the sincere study of the philosophy and rules of Patanjali's Yoga System may be taken up by any theosophist — on one condition. That is that he shall, as a theosophist, try to carry out the fundamental object of the Society — Universal Brotherhood. In no other way can he receive assistance from any source. Altruism must be made the aim of life, or all practices are absolutely void of lasting effect. We do not speak from a mere theory but from experience; nor do we claim to have perfected altruism in ourselves, but only that, as far as possible, we are trying to make altruism the rule of life.

THE OCCIDENTAL MIND IS NOT FITTED FOR YOGA.

This may be stoutly denied, but what matters it? The fact remains patent to all that among western people there are few persons masters of any part of occult practice. Partial concentration of mind, even — the first step for any practical use of the recondite laws of nature, — is conspicuously absent from our people. Altruism has been for so many centuries a dead letter, and individualism has been so much cultivated, that the soil has become almost barren. Western peoples are not even fitted to attain perfection in Black Magic, which is supposed to be easy to pursue, though in fact not so; but we are able to lay the seeds in this incarnation for further development upon the evil side of our

nature in future lives. The practice of altruism as far as we can is the only way in which to avoid suffering; in the future.

IF STUDENTS BELIEVE THAT ADEPTS ARE BEHIND THE SOCIETY, THEY SHOULD FOLLOW THEIR ADVICE.

Those aspirants for whom these words are written have been laboring under a mistake. They have entered a society formed by Beings in whose existence they profess belief, and have not acted upon the instructions given, but have selected such portion of those as suited them. The Adepts have distinctly said that occult powers can be obtained, but They have also said that the Society, *which has Their protection and assistance*, is not for occult development, and that the latter cannot be forwarded by Them unless members will preach, teach, and practice Altruism. There is therefore no sort of obligation upon either the Adepts, or the disciples who do know, to help members whose chief aim is occult development. We must deserve before we can desire.

While we are endeavoring to understand and practice altruism, and while spreading broadcast the doctrines given out by the Adepts respecting man, his status, future fate, and light way of living, each theosophist can devote some of his time to daily meditation and concentration, and all of his time to extirpating his faults and vices; when he has made some progress in this, the good karma he may have acquired by working for the cause of Humanity, which is the same as Universal Brotherhood, will help him to get ready to begin occult practices.

WHAT IS THE "DAILY INITIATION"?

It is supposed by some that initiation is always and in every case a set and solemn occasion for which the candidate is prepared and notified of in advance. While there are some initiations surrounded by such solemnities as these, the daily one, without

success in which no aspirant will ever have the chance to try for those that are higher, comes to the disciple with almost each moment. It is met in our relations with our fellows, and in the effects upon us of all the circumstances of life. And if we fail in these, we never get to the point where greater ones are offered. If we cannot bear momentary defeat, or if a chance word that strikes our self-love finds us unprepared, or if we give way to the desire to harshly judge others, or if we remain in ignorance of some of our most apparent faults, we do not build up that knowledge and strength imperatively demanded from whoever is to be master of nature.

It is in the life of every one to have a moment of choice, but that moment is not set for any particular day. It is the sum total of all days; and it may be put off until the day of death, and then it is beyond our power, for the choice has then been fixed by all the acts and thoughts of the lifetime. We are self-doomed at that hour to just the sort of life, body, environment, and tendencies which will best carry out our karma. This is a thing solemn enough, and one that makes the "daily initiation" of the very greatest importance to each earnest student. But all of this has been said before, and it is a pity that students persist in ignoring the good advice they receive.

Do you think that if a Master accepted you He would put you to some strange test? No, He would not, but simply permitting the small events of your life to have their course, the result would determine your standing. *It may be a child's school, but it takes a man to go through it.*

LEAD, KINDLY LIGHT! — G. E. W.

Ineffaceably stamped upon the memory are those scenes of childhood connected with religious instruction. The infant on its mother's knee listens not only to the old fashioned lullaby, but now and then to snatches of church hymns and Sunday School songs, and thus, as it were, absorbs their familiar airs among its first recognized impressions. Later, the child goes to church and learns to sing the same tunes and to repeat the same words, which thus acquire that depth of root in the brain enabling them to outlast years of carelessness or wicked living and to come back sooner or later as gentle reminders of the past or monitors of the future. Have we not all read stories of men steeped in crime, to whom have risen up at some supremely critical moment visions of sainted mothers and happy days of infancy, and whose hardened souls have been touched even to tenderness by the recollection of long ago church bells on peaceful Sundays in quiet country places, and the singing of the old, simple, long-forgotten hymns? Such an awakening is not by any means improbable. We must acknowledge the existence in almost every human being of some good impulses. A long course of worldly life, sordid or violent, will go far towards banishing the higher principles and degrading the soul to a lower level, but it is only in rare cases that the spiritual spark is extinguished entirely. Illustrations of the former are all around us. There are plenty of gamblers who are model husbands; there are thieves who love their children; there are drunkards who are otherwise moral; there are swindlers who are honorable in their dealings with their partners; and all of these and others equally reckless and abandoned are quick to respond to charitable appeals. What do these facts teach? That none are so far gone in depravity as to be beyond the reach of the

good; that all — the exceptions are so rare as to be hardly worth noticing — possess some traits that are praiseworthy; that the good impulses, no matter how obscured by disuse, may be reached if only the right chord be touched and the proper moment seized.

The value of early religious training can hardly be over-estimated. There is no question here of creed or form. We might look out from our advanced standpoint of theosophy and say that is better to rear a child outside the church, in order that the child may not become imbued with erroneous opinions. But how many children are there that could comprehend the subtle distinctions of mentality found in the theosophic works? Not one. Children's minds require the simplest ideas clothed in the plainest language. The strongest of mature brains find perplexities in the involved theories of Karma, Reincarnation, and the Planetary Chain. But the mind of a child can grasp the problems of good and evil and of life and death as propounded by the Christian churches. It would seem, in fact, as if the founder of Christianity reasoned from analogy when he preached the gospel first, and, likening the human race to children, adapted his teachings to the comprehension of infancy. Theosophists who have dipped into the lore of ages can, of course, put Christianity aside as being puerile in its dogmatic form, and can demand a scheme of the universe that is more satisfactory and in accordance with the known aspects of science. The least we can do is to separate the original kernels of truth from the outer husk of creed, reserving the former for our use and condemning the latter.

But all this does not give us the right to scoff at Christianity or to revile it as many theosophists are in the habit of doing. Christianity may be likened to a bridge which has carried part of the world over from an epoch of infancy, or at least of ignorance, to an epoch of knowledge. It should therefore not be made the

target of abuse. What if it has been the vehicle of tremendous cruelty and oppression? Nobody denies it — except, possibly, a few prejudiced priests. Let us admit that from the age of Constantine to the age of Victoria the church has only one long record of blood-shed and injustice. The mistake we are apt to make is to charge those crimes to Christianity, when, as a matter of fact, the fault lay in the darkness and degradation of the race. Religion in any other form would probably have evoked the same spirit of malevolence and persecution.

Or, if we were even to admit that the church is as bad as any one has ever claimed it to be, and if we charge all the crimes of the Inquisition directly to the church, that is, as a result of the church's teaching; still we find that these evils have largely corrected themselves with time, and that now a more liberal spirit pervades all denominations. All Theosophists who have examined the various religions must admit that Christianity stripped of dogma is truthful, even to as great an extent as Mohammedanism, Hinduism, and Buddhism are true when deprived of their external forms. It so happens that we in America are brought up in and surrounded by Christianity. It is the religion of all classes without exception, save Jews. If we were living in Constantinople it would be fitting for us to be Mohammedans, and doubtless we would be; if we were in Bengal we would be bound in the chains of caste which the Hindus have forged; if we were in Ceylon we would be followers of Buddha. Thus our external form of religion is determined, as it should be, by the circumstances of birth. Our real religion is what we make it in our daily lives. But I think it most appropriate that, as we are dwelling in a Christian country, we should be to a certain extent Christians. As there are Buddhist Theosophists, as there are Moslem Theosophists, so there can be and are Christian Theosophists. It must be admitted, however, that some members

of the Society have become so irritated against the creeds of the Christian churches that they have lost all patience and continually expend most of their vitality in open abuse of Christianity. Now, it is true that there are many objectionable features to the dogmas — in fact, all are objectionable — but is it not a waste of energy to be crying out against the churches all the time? Does not such a course really obstruct the progress of the truth by arousing the hostility of the church members? If we go out to battle with the sword, immediately the sword is drawn in defense of long-cherished theories, even though erroneous, and they out-number us a thousand to one. Would not far greater success be achieved by exercising a larger spirit of forbearance, by dwelling more upon the words of Jesus and less upon the quarrels of the apostles? A Theosophist of renown has written a book to prove that there was no such person as Jesus Christ, but what has he accomplished by it? Nothing except to induce some Theosophists to quote this imaginary work as a real authority and to excite the sneers of Christians. But the worst feature of this and other such attacks is that they are all the time placing Theosophy in direct antagonism to Christianity. They are giving the enemies of Theosophy weapons to use against us. Admitting the abuses that have crept into the churches, admitting even the exoteric nature of their religion as now taught, admitting all the crimes of the past and the ignorance of the present era, there is still no reason why we should not endeavor to reform Christianity. And to do any effectual work in this direction requires more discreet treatment of the church, or at least of the religion of Jesus, than has been accorded to it from many quarters in the last few years. Does any one expect to convert people from Christianity to Theosophy? The idea is absurd. Can you convert a barn-door into a barn? No, but one can so fit the barn and barn-door that they can henceforth work together in harmony.

But, after all, there is a more important aspect which this question assumes, or should assume, to faithful theosophists. A no small part of duty is to exercise charity towards everybody, not to judge harshly, and to observe the Golden Rule. Our lot is cast in the midst of Christianity. In every city and village the spires denote the devotional tendency of the people. What if many individuals are imperfect and hypocritical? Is it not our duty to endeavor to see their better sides? Should we not exert ourselves to think kindly of these neighbors and friends of ours, even if they may be cherishing beliefs which we have found to be wrong? We admit that all religions are true at bottom, and no exception is made of Christianity. Is it not therefore our part to dwell upon this esoteric side of the national religion, and to think with kindness and charity of its errors, and by so doing and thinking shall we not achieve greater results than by deliberately separating ourselves from the church, and then attacking it as a foreign and hostile power?

The Path

REINCARNATION AND MEMORY: II — *Harij*

II.

In a previous paper certain relations of experience to memory were considered, and Karma was shown to be a resultant of action. These are elementary considerations, yet none the less important. They are derived from the commonest every-day experience, and hence everyone can test them for himself. It might be profitable to observe, in passing, that this deduction of knowledge from experience is the only way of learning. We have within ourselves the elements and conditions of superior knowledge and illumination, but so long as these elements are latent and inactive they are of no practical value. They make a grave, often a fatal, mistake who imagine that those possessed of supreme wisdom can bestow it upon the ignorant as a gratuity or a favor. They have not so received it, neither can they so impart it. The law never changes, and is the same for Adept and neophyte. Most truly says Hadji Erinn in the last *PATH*, "*It may be a child's school, but it takes a man to go through it.*"

This digression seemed necessary in order to show the importance of the simpler primary propositions, and the manner in which they are to be received and tested. We are not dealing with Reincarnation as a dogma, but strictly as a scientific hypothesis. For any intelligent person now-a-days to accept the special-creation theory, with birth into the present life as the beginning of man, is to confess the whole problem of life to be incomprehensible and all its mysteries incapable of solution. With shaded eyes and bated breath all such continually ask, "*What does it all mean?*" The most salient point, the most common objection to the theory of reincarnation, is the lapse of memory. If

we could remember distinctly any existence previous to this, the problem would at once be solved. It would then be a matter of common experience, and no one would doubt it. Therefore memory becomes the point of interest in examining the theory. If we are to estimate with any degree of certainty what memory may or may not do, what it may or may not have done, we must first determine by our own daily experience just what memory is now doing. Every reader, therefore, should pause after every statement, and inquire after every proposition — "Is this true? Is it in accordance with my own experience?" If he does this, and is careful as to the use and exact meaning of words, he will find the latent stores of knowledge beginning to unfold within his own soul, and the meaning of life will begin to appear. This knowledge of the true meaning of life will not depend on his acceptance of the theory of reincarnation as a dogma, though even in that way it is infinitely superior to any other, but the real benefit to the student will come from the fact that he is beginning to *know himself*, and to read correctly the lessons of his own experience. Those who oppose the reincarnation theory almost invariably show utter ignorance of these primary considerations, the very alphabet of the whole subject. The questions involved are so deep, so broad, and in their final application so abstruse, that an error in the beginning leads to endless complications and misconceptions further on. This is because human experience covers such a wide area, and human relations are so complicated; and any theory capable of meeting these experiences at every point must be equally potent and applicable. If, therefore, reincarnation be true, and be thus involved in human experience and capable of explaining the mysteries of life, it must be capable of logical deduction from these same experiences. Its ground of operation is our legitimate ground for investigation. Those who are unable or unwilling to study the subject in this way may accept the theory as a dogma, or deny it altogether, as they please;

though at this point a great deal may be said as to motive and result on human action. From the stand-point of dogma the principle of *Justice*, both human and divine, overwhelmingly supports reincarnation; while every other theory known to modern times is horribly *unjust*; thus favoring priest-craft and king-craft, and rendering the essential Brotherhood of man impossible.

"Man's inhumanity to man
Makes countless millions mourn."

The essence of humanity is justice; the essence of all inhumanity is injustice. Wherever exact justice reigns, divine Charity glorifies life with the halo of Divinity.

These preliminary considerations may help to set our subject in its true light, and serve in divesting it of all prejudice. Only in this way can we examine any subject dispassionately, with any probability of arriving at the simple truth.

We may now return to our original inquiry: If the theory of reincarnation be true, why have we no recollection of any previous life? Passing by all those cases where such reminiscence is claimed by certain individuals like Apollonius of Tyana, and certain experiences difficult of explanation on any other ground in the life of many persons, passing by such considerations as favor belief in reincarnation on the ground of Justice, let us consider memory in relation to experience. From the known character of memory deduced from daily experience, is there any reason to expect it to bridge the chasm between two incarnations, provided more than the present incarnation has existed for the individual? If not, why not? Put in another form, our thesis may be stated in this way: Is the absence of memory of a previous life any bar to the acceptance and rational application of the theory of reincarnation?

The terms cause and effect are related to phenomena. The essence of phenomena is motion, or action. Every so-called cause is involved in its effect, and every so-called effect becomes in its turn a cause of further action to be involved in all succeeding effects. Man has sometimes been called "a creature of circumstance." This is a half-truth. Man is also a creator of circumstance. In other words, man bears the same general relation to cause and effect as does every object in nature. If we observe any object in nature we discover it giving rise to or the theatre of phenomena. If we find it acting, we may trace the so-called causes of its present activities. If we find it apparently quiescent, we may discover what activities it will presently give rise to. There is thus a period of activity followed by a period of repose, and this followed by renewed activity. All nature is thus instinct with life, for life is essential action. Thus "the out-breathing and in-breathing of Brahm" involves every atom and every object, no less than every organism.

Life's pulses quiver everywhere,
A solemn rhythm reigns;
A measured tread is in the air,
The ocean throbs with pain.
The solid earth its pulses keeps
While shadows come and go;
Deeps answer always unto deeps,
Glow answers unto glow.
Back of all action there is rest;
Behind all rest the flame
Of life but smoulders in Brahm's breast,
Ready to glow again.

A SONNET TO NIGHT — T. H.

The spicy fragrance of the skies
Falls through the night air on my soul,
From depths where constellations rise,
From depths where suns unnumbered roll:
From star-laid strata—star o'er star
Where God's great lanterns swing and sway,
Behind the "Gates of Light" ajar;
Behind the Barrier of the Day:
And swing, and sway;—and flash their light
Through every crevice of the night.

T. H.

UNIVERSAL APPLICATIONS OF DOCTRINE — *William Q. Judge*

During the last few years in which so much writing has been done in the theosophical field of effort, a failure to make broad or universal applications of the doctrines brought forward can be noticed. With the exception of H. P. Blavatsky, our writers have confined themselves to narrow views, chiefly as to the state of man after death or how Karma affects him in life. As to the latter law, the greatest consideration has been devoted to deciding how it modifies our pleasure or our pain, and then as to whether in Devachan there will be compensation for failures of Karma; while others write upon reincarnation as if only mankind were subject to that law.

And the same limited treatment is adopted in treating of or practising many other theories and doctrines of the Wisdom Religion. After fourteen years of activity it is now time that the members of our society should make universal the application of each and every admitted doctrine or precept, and not confine them to their own selfish selves.

In order to make my meaning clear I purpose in this paper to attempt an outline of how such universal applications of some of our doctrines should be made.

Before taking up any of these I would draw the attention of those who believe in the Upanishads to the constant insistence throughout those sacred books upon the identity of man with Brahma, or God, or nature, and to the universal application of all doctrines or laws.

In *Brihadaranyaka Upanishad* it is said: (1)

"Tell me the Brahman which is visible, not invisible, the

atman who is within all?

"This, thy Self who is within all. He who breathes in the up-breathing, he is thy Self and within all. He who breathes in the down-breathing, he is thy Self and within all. He who breathes in the on-breathing, he is thy Self and within all. This is thy Self who is within all."

The 6th Brahmana is devoted to showing that all the worlds are woven in and within each other; and in the 7th the teacher declares that "the puller" or mover in all things whatsoever is the same Self which is in each man.

The questioners then proceed and draw forth the statement that "what is above the heavens, beneath the earth, embracing heaven and earth, past, present, and future, that is woven, like warp and woof, in the ether," and that the ether is "woven like warp and woof in the Imperishable." If this be so, then any law that affects man must govern every portion of the universe in which he lives.

And we find these sturdy men of old applying their doctrines in every direction. They use the laws of analogy and correspondences to solve deep questions. Why need we be behind them? If the entire great Self dwells in man, the body in all its parts must symbolize the greater world about. So we discover that space having sound as its distinguishing characteristic is figured in the human frame by the ear, as fire is by the eye, and, again, the eye showing forth the soul, for the soul alone conquers death, and that which in the *Upanishads* conquers death is fire.

It is possible in this manner to proceed steadily toward the acquirement of a knowledge of the laws of nature, not only those that are recondite, but also the more easily perceived. If we grant that the human body and organs are a figure, in little, of the universe, then let us ask the question, "By what is the astral light

symbolized?" By the eye, and specially by the retina and its mode of action. On the astral light are received the pictures of all events and things, and on the retina are received the images of objects passing before the man. We find that these images on the retina remain for a specific period, capable of measurement, going through certain changes before fading completely away. Let us extend the result of this observation to the astral light, and we assume that it also goes through similar changes in respect to the pictures. From this it follows that the mass or totality of pictures made during any cycle must, in this great retina, have a period at the end of which they will have faded away. Such we find is the law as stated by those who know the Secret Doctrine. In order to arrive at the figures with which to represent this period, we have to calculate the proportion thus: as the time of fading from the human retina is to the healthy man's actual due of life, so is the time of fading from the astral light. The missing term may be discovered by working upon the doctrine of the four yugas or ages and the length of one life of Brahma.

Now these theosophical doctrines which we have been at such pains to elaborate during all the years of our history are either capable of universal application or they are not. If they are not, then they are hardly worth the trouble we have bestowed upon them; and it would then have been much better for us had we devoted ourselves to some special departments of science.

But the great allurements that theosophy holds for those who follow it is that its doctrines are universal, solving all questions and applying to every department of nature so far as we know it. And advanced students declare that the same universal application prevails in regions far beyond the grasp of present science or of the average man's mind. So that, if a supposed law or application is formulated to us, either by ourselves or by some other person, we are at once able to prove it; for unless it can be

applied in every direction — by correspondence, or is found to be one of the phases of some previously-admitted doctrine, we know that it is false doctrine or inaccurately stated. Thus all our doctrines can be proved and checked at every step. It is not necessary for us to have constant communications with the Adepts in order to make sure of our ground; all that we have to do is to see if any position we assume agrees with well-known principles already formulated and understood.

Bearing this in mind, we can confidently proceed to examine the great ideas in which so many of us believe, with a view of seeing how they may be applied in every direction. For if, instead of selfishly considering these laws in their effect upon our miserable selves, we ask how they apply everywhere, a means is furnished for the broadening of our horizon and the elimination of selfishness. And when also we apply the doctrines to all our acts and to all parts of the human being, we may begin to wake ourselves up to the real task set before us.

Let us look at Karma. It must be applied not only to the man but also to the Cosmos, to the globe upon which he lives. You know that, for the want of an English word, the period of one great day of evolution is called a Manwantara, or the reign of one Manu. These eternally succeed each other. In other words, each one of us is a unit, or a cell, if you please, in the great body or being of Manu, and just as we see ourselves making Karma and reincarnating for the purpose of carrying off Karma, so the great being Manu dies at the end of a Manwantara, and after the period of rest reincarnates once more, the sum total of all that we have made him — or it. And when I say "we", I mean all the beings on whatever plane or planet who are included in that Manwantara. Therefore this Manwantara is just exactly what the last Manwantara made it, and so the next Manwantara after this — millions of years off — will be the sum or result of this one, plus

all that have preceded it.

How much have you thought upon the effect of Karma upon the animals, the plants, the minerals, the elemental beings? Have you been so selfish as to suppose that they are not affected by you? Is it true that man himself has no responsibility upon him for the vast numbers of ferocious and noxious animals, for the deadly serpents and scorpions, the devastating lions and tigers, that make a howling wilderness of some corners of the earth and terrorize the people of India and elsewhere? It cannot be true. But as the Apostle of the Christians said, it is true that the whole of creation waits upon man and groans that he keeps back the enlightenment of all. What happens when, with intention, you crush out the life of a common croton bug? Well, it is destroyed and you forget it. But you brought it to an untimely end, short though its life would have been. Imagine this being done at hundreds of thousands of places in the State. Each of these little creatures had life and energy; each some degree of intelligence. The sum total of the effects of all these deaths of small things must be appreciable. If not, then our doctrines are wrong and there is no wrong in putting out the life of a human being.

Let us go a little higher, to the bird kingdom and that of four-footed beasts. Everyday in the shooting season in England vast quantities of birds are killed for sport, and in other places such intelligent and inoffensive animals as deer. These have a higher intelligence than insects, a wider scope of feeling. Is there no effect under Karma for all these deaths? And what is the difference between wantonly killing a deer and murdering an idiot? Very little to my mind. Why is it, then, that even delicate ladies will enjoy the recital of a bird or deer hunt? It is their Karma that they are the descendants of long generations of Europeans who some centuries ago, with the aid of the church, decided that animals had no souls and therefore could be

wantonly slaughtered. The same Karma permits the grandson of the Queen of England who calls herself the defender of the faith — of Jesus — to have great preparations made for his forthcoming visit to India to the end that he shall enjoy several weeks of tiger-hunting, pig-sticking, and the destruction of any and every bird that may fly in his way.

We therefore find ourselves ground down by the Karma of our national stem, so that we are really almost unable to tell what thoughts are the counterfeit presentments of the thoughts of our forefathers, and what self-born in our own minds.

Let us now look at Reincarnation, Devachan, and Karma.

It has been the custom of theosophists to think upon these subjects in respect only to the whole man — that is to say, respecting the ego.

But what of its hourly and daily application? If we believe in the doctrine of the One Life, then every cell in these material bodies must be governed by the same laws. Each cell must be *a life* and have its karma, devachan, and reincarnation. Every one of these cells upon incarnating among the others in our frame must be affected by the character of those it meets; and we make that character. Every thought upon reaching its period dies. It is soon reborn, and coming back from its devachan it finds either bad or good companions provided for it. Therefore every hour of life is fraught with danger or with help. How can it be possible that a few hours a week devoted to theosophic thought and action can counteract — even in the gross material cells — the effect of nearly a whole week spent in indifference, frivolity, or selfishness? This mass of poor or bad thought will form a resistless tide that shall sweep away all your good resolves at the first opportunity.

This will explain why devoted students often fail. They have waited for a particular hour or day to try their strength, and when the hour came they had none. If it was anger they had resolved to conquer, instead of trying to conquer it at an offered opportunity they ran away from the chance so as to escape the trial; or they did not meet the hourly small trials that would, if successfully passed, have given them a great reserve of strength, so that no time of greater trial would have been able to overcome them.

Now as to the theory of the evolution of the macrocosm in its application to the microcosm, man.

The hermetic philosophy held that man is a copy of the greater universe; that he is a little universe in himself, governed by the same laws as the great one, and in the small proportions of a human being showing all those greater laws in operation, only reduced in time or sweep. This is the rule to which H. P. Blavatsky adheres, and which is found running through all the ancient mysteries and initiations.

It is said that our universe is a collection of atoms or molecules — called also "*lives*"; living together and through each the spirit struggles to reach consciousness, and that this struggle is governed by a law compelling it to go on in or between periods. In any period of such struggle some of these atoms or collections of molecules are left over, as it were, to renew the battle in the next period, and hence the state of the universe at any time of manifestation — or the state of each newly-manifested universe — must be the result of what was done in the preceding period.

Coming down to the man, we find that he is a collection of molecules or *lives* or cells, each striving with the other, and all affected for either good or bad results by the spiritual aspirations or want of them in the man who is the guide or god, so to say, of

his little universe. When he is born, the molecules or cells or lives that are to compose his physical and astral forms are from that moment under his reign, and during the period of his smaller life they pass through a small manvantara just as the lives in the universe do, and when he dies he leaves them all impressed with the force and color of his thoughts and aspirations, ready to be used in composing the houses of other egos.

Now here is a great responsibility revealed to us of a double character.

The first is for effects produced on and left in what we call matter in the molecules, when they come to be used by other egos, for they must act upon the latter for benefit or the reverse.

The second is for the effect on the molecules themselves in this, that there are lives or entities in all — or rather they are all lives — who are either aided or retarded in their evolution by reason of the proper or improper use man made of this matter that was placed in his charge.

Without stopping to argue about what matter is, it will be sufficient to state that it is held to be co-eternal with what is called "spirit." That is, as it is put in the *Bhagavad-Gita*: "He who is spirit is also matter." Or, in other words, spirit is the opposite pole to matter of the Absolute. But of course this matter we speak of is not what we see about us, for the latter is only in fact phenomena of matter: even science holds that we do not really see matter.

Now during a manvantara or period of manifestation, the egos incarnating must use over and over again in any world upon which they are incarnating the matter that belongs to it.

So, therefore, we are now using in our incarnations matter that has been used by ourselves and other egos over and over again, and are affected by the various tendencies impressed in it. And,

similarly, we are leaving behind us for future races that which will help or embarrass them in their future lives.

This is a highly important matter, whether reincarnation be a true doctrine or not. For if each new nation is only a mass of new egos or souls, it must be much affected by the matter-environment left behind by nations and races that have disappeared forever.

But for us who believe in reincarnation it has additional force, showing us one strong reason why universal brotherhood should be believed in and practised.

The other branch of the responsibility is just as serious. The doctrine that removes death from the universe and declares that all is composed of innumerable lives, constantly changing places with each other, contains in it of necessity the theory that man himself is full of these lives and that all are traveling up the long road of evolution.

The secret doctrine holds that we are full of kingdoms of entities who depend upon us, so to say, for salvation.

How enormous, then, is this responsibility, that we not only are to be judged for what we do with ourselves as a whole, but also for what we do for those unseen beings who are dependent upon us for light.

1. III Adh.. 4th Brab. ([return to text](#))

SOME NOTES ON THE MAHATMAS: I — K. H.

In accordance with the suggestion of our President last Tuesday evening, I have tried to collect such evidence as to the nature of the Mahatmas as I could from the Theosophical books I had in my own library, not having had time to go elsewhere. If I rightly understood Mr. Judge on the occasion referred to, he defined *Mahatma*, or *the great souled*, as a purely spiritual existence, and therefore only to be properly spoken of in the singular, as pure spirit is necessarily undifferentiated and therefore one and the same. I have not yet succeeded in finding any definition of "the Mahatma" that implies quite so impersonal an entity. The nearest approach to this idea is in an anonymous article on page 92 of *Five Years of Theosophy*, entitled "Mahatmas and Chelas," which begins thus: "A Mahatma is an individual who, by special training and education, has evolved those higher faculties and has attained that spiritual knowledge which ordinary humanity will acquire after passing through numberless series of reincarnations during the process of cosmic evolution," (provided, of course, that it moves in the right direction). Such a person having, by proper training in successive incarnations, gradually purged himself of the lower principles of his nature, there arrives a time when the entity consists solely of "that higher *Manas* which is inseparably linked to the *Atma* and its vehicle" (the sixth principle). "When, therefore," continues the writer, "people express a desire to see a Mahatma, they really do not seem to understand what it is they ask for. How can they, with their physical eyes, hope to see that which transcends sight? Higher things can be perceived only by a sense pertaining to those higher things; whoever therefore wants to see the real *Mahatma* must use his intellectual sight. The Mahatma has

identified himself with that Universal Soul which runs through Humanity, and to draw his attention one must do so through that Soul."

This definition makes of the Mahatma a purely spiritual existence, and therefore part and parcel of the Divine element of which we all to some extent partake.

But the *Glossary* of the book quoted (*Five Years of Theosophy*) defines "*Mahatma*, a great soul: an adept in occultism of the highest order," and other papers in the book by Ramaswamier, Damodar, and Mohini speak of "the living physical body of the Mahatma" (p. 452), of "the Himalayan Brothers as living men, and not disembodied spirits" (p. 45S), and of the Mahatma Koothoomi "as a living person like any of us."

Mrs. Sinnett's *Purpose of theosophy* (p. 70) says that "the custodians of the secret Knowledge are variously called Mahatmas, Rishis, Arhats, Adepts, Guru Devas, Brothers, etc. The majority of them now live in Tibet. They can defy matter, distance, even death itself, and have in the routine of their training arrived at such perfection that the real spiritual man is independent of and altogether master of the material body. Far above the best of the Yogis stand the Mahatmas. Their existence as human beings has been questioned, but, on the other hand, hundreds of people have not only seen and spoken with them, but some have even lived under the same roof with their own Mahatmas for years together." Mrs. Sinnett also says that it is well-known that "in the formation of the T. S. the founders were acting under the direct wishes of certain of the Mahatmas," and that the Hindus had to be convinced "not of the actual existence of the Mahatmas as living men, *for of this they had ample proof* but that the visible founders of the Society were really their agents."

According to Mr. Sinnett, Arhat, Mahatma, Rishi, are interchangeable terms. (Esot. B. p. 49 *et seq.*) "The Arhats and the Mahatmas are the same men. At that level of spiritual exaltation, supreme knowledge of the esoteric doctrine blends all original sectarian distinctions. By whatever name such *illuminati* may be called, they are the adepts of occult knowledge, sometimes spoken of in India now as the Brothers. The Tibetan Brotherhood is incomparably the highest of such associations. The Mahatmas themselves are subordinate by several degrees to the chief of all" (in the Tibetan organization).

In the book called "Man," we are told that "the Adept hierarchy was established by the Dhyán Chohan to watch over and protect the growing race. That there are seven classes of Adepts, of which five alone are ordinarily spoken of; the last two are understood only by the higher initiates. The heads of the five classes are known in Tibet as the *Chutuktu* or jewels of wisdom."

On the next page the authors tell us that "there are nine grades of Adepts, each grade having seven subdivisions. In the Brahmanical system, the nine-grades are referred to as the nine jewels (*nava nidhi*)."

"Unlike the ordinary man, the Mahatmas live wholly in the spirit. The Mahatmas do not ignore the conditions of daily life; they fully sympathize with the struggling masses of humanity, but the higher cannot stoop to the lower; the lower must see the heights above, and scale them if it will. It must never be thought that the Mahatmas are creators: they are only inspirers and educators. They have undoubtedly a human side to their characters, but it is so inseparably blended with their higher spiritual nature that no one who tries to dissociate the two parts of their being will ever understand either correctly."

In the PATH, Vol. I, No. 9, there is an article on "The Theosophical

Mahatmas" by Mme. Blavatsky, in which she says, "Our MASTERS are not a 'jealous god'; they are simply holy mortals, nevertheless, however, higher than any in this world, morally, intellectually, and spiritually. However holy and advanced in the science of the mysteries, they are still men, members of a Brotherhood, who are the first in it to show themselves subservient to its time-honored laws and rules." In the same article H. P. B. speaks of "the *Paraguru*, my Master's MASTER." I have been unable to find any other article in the first volume of the PATH on the subject, except one on "The Reticence of the Mahatmas," which does not enter into any definition of their nature. In No. 3, vol. II, a letter signed "Julius" says that "the beings spoken of by Edwin Arnold as Mahatmas are not considered '*men*' in the East."

In Vol. II, No. 4, in an article signed "S. B." on the "Reincarnations of Mahatmas," we read: "While the personality of the reincarnated Master is a human being, with all the attributes which make up any other human being, its constitution is naturally of a finer order, so as to make it an instrument adapted to the work for which it has been brought into the world. This idea, that the finer soul naturally falls, in re-incarnating, into a finer body, is expressed in the Wisdom of Solomon, 8:20, "Being good, I came into a body undefiled."

In the *Secret Doctrine*, Vol. I, p. 46, Mme. Blavatsky defines *Dangma* as "a purified soul, one who has become a Jivanmukta, the highest adept, or rather a Mahatma so-called." In Vol. II, p. 173, she says that the Third Race "created the so-called Sons of Will and Yoga, or the 'ancestors' (the *spiritual* forefathers) of all the subsequent and present Arhats or Mahatmas." And on p. 423 she speaks of "the great Mahatmas or Buddhas, these *Buddhas* representing, as we are taught, once living men, great Adepts and Saints, in whom the 'Sons of Wisdom' had incarnated, and who were therefore, so to speak, minor Avatars of the Celestial

Beings."

Patanjali tells us in his 3rd Book, Aph. No. 46, that "the ascetic who has acquired complete control over the elements obtains certain perfections: to wit, the power to project his inner-self into the smallest atom, to expand his inner-self to the size of the largest body, to render his material body light or heavy at will, to give indefinite extension to his astral body or its separate members, to exercise an irresistible will upon the minds of others, to obtain the highest excellence of the material body, and the ability to preserve such excellence when attained." And in Aphorism 39 we are told that "the inner-self of the ascetic may be transferred to any other body and there have complete control." The ascetic who has acquired the perfection of discriminative power possesses the "Knowledge that saves from re-birth." That Knowledge "has all things and the nature of all things for its objects, and perceives all that hath been and that is, without limitations of time, place, or circumstance, as if all were in the present and in the presence of the contemplator." This can only mean the virtual annihilation of time and space, and such an ascetic, Mr. Judge informs us, "is a *Jivanmukta*, and is not subject to reincarnation. He, however, may yet live upon earth, but is not in any way subject to his body, the soul being perfectly free at every moment. And such is held to be the state of those beings called in theosophical literature Adepts, Mahatmas, Masters."

Jivanmukta means literally a "liberated life"; Arhat, a "worthy one"; Rishi, "a revealer"; Mahatma, "a great soul." We see that all or any of these appellations may easily be applied to those Beings we also call "the Masters," although the terms themselves may have an individual and distinct meaning. That they *are* thus promiscuously used, the above extracts sufficiently show. They show also, it seems to me, that "the garment that we see him by" is *not* the Mahatma, any more than the Othello we may see upon

the stage this week is the real Salvini. To have obtained that lofty pinnacle of spiritual perfection known as "the great soul" is to have become independent of human conditions, and those who speak of the Masters as "men exactly like ourselves" can only refer to the special personality which for special needs they have chosen to assume for the moment. As well identify a man with his coats, as a being who can "transfer himself to any other body and there have complete control" with *any* form, however perfect in beauty, under which he may make himself visible to our purblind eyes. At the same time, if we are to believe Mme. Blavatsky, they are still individuals, and not pure spirit, for she says "they are simply holy mortals, nevertheless, however, higher than any in this world, morally, intellectually, and spiritually."

The Path

THE LINING OF THE HAND — G. E. W.

An interesting bit of history is found in the word "lining," one of the simplest in the English language. Its origin is strictly occult. And yet how little would anyone suspect a mystic flavor in such a well-worn term, used in every-day conversation in reference to our clothes and household utensils. And in even its daily use it is always applied to the inner, as distinguished from the outer, side of any given object. One might quote a thousand applications of this term, all appropriate and all referring to the inner, as distinguished from the outward, side of any given object.

The origin of this very common English noun may be sought for, and correctly, in the Latin-derived word "line." But what connection is there between a "line" and a "lining"? Apparently none. The latter might have been construed, once upon a time, as a participle of the former, but that does not afford any explanation of the entirely different meanings of the two words as now used. We have seen what a lining is in the popular acceptance of the term, and we are aware that the geometrical definition of a line is that which has length but neither breadth nor thickness. One might search forever for a rational explanation of the variation in the two significations, and would never find it without referring to occultism. In that branch of science known as cheiromancy the lines traced by Nature upon the palm of the hand are discovered to possess certain senses indicative not only of past events but of the probabilities of the future. It may be supposed that in the Middle Ages, when the English tongue was being gradually evolved from the Norman, Norse, and Saxon, and when palmistry was carried across the channel by the gypsies, the lining of the hand was often referred to, strictly within the original meaning of the *lines* of the hand.

Afterwards the same term was applied to other objects, referring to the entire inner side. Later the first sense was forgotten, and would not be readily revived in this exoteric age, — not, at least, by any of the school-men or theologians.

Concerning the lining of the hand there is a great deal to be said and much to be yet learned, notwithstanding the exhaustive labors of John Indagine, Albertus Magnus, Bartholomew Codes, le Sieur de Peruchio, J. Fricasso, and, more than any other, that enthusiastic Frenchman, Adrien Desbarolles. For, whatever may be claimed of cheiromancy, and there is no doubt but that it occupies an important field, it cannot yet be classed as an exact science. In this opinion I am aware that I am going contrary to the dicta of Heron-Allen, Rosa Baughan, and other recent English writers who say that all the important events in the life of any individual can be accurately determined. But it appears to me, after some years of careful investigation and comparison, that it is only rarely that events are so strongly portrayed on the palm as to be seen at a glance and boldly announced. My own experience is that the story of a life is much more intricate. The lines are generally so modified by one another and so inter-related that even a very careful inspection will frequently fail to bring out facts with any degree of exactness. I do not deny that the hieroglyphics are there and that they are mathematically correct, but our knowledge of them is still so limited as to render an interpretation frequently unjust and almost always incomplete. The reason for this must be found in the fact that, as all men and women are different in character and disposition, so much so that no two persons are alike, just in the same manner are all lives different in their details, so that each individual's career is unlike that of any one else. There are millions of contingencies that may happen, and Nature must write the romance of each life on the limited space assigned to her. Our rules of cheiromancy are

derived from the personal observations of a few students. Can it be for a moment supposed that they have seen and recognized more than a mere fraction of the signs taken from Nature's wide vocabulary? It is, of course, the fashion for professional cheiromants to claim everything. Especially is the fashion prominent in the works of recent writers on this subject. The elder authors were more modest, however, and interjected many pious disclaimers and humble confessions of ignorance into their folios. And yet they were men of deep learning — the quintessence of their times.

To illustrate the influence of modifiers on the lining of the hand, the instance might be quoted of a gentleman known to the writer who, according to the lines, should have been divorced, but who is living happily (or was at last accounts) with his family. In his case the divorce line, after standing out with great distinctness for several years, was finally continued up to the mount of Saturn and took on an altogether different signification. I recall also the case of a gentleman who has written several books on occult subjects, and who, according to all the laws of cheiromancy, should have been dead these twenty years past, but who is still enjoying excellent health. There is also another, a physician, whose career ought to have terminated last year, but who awkwardly persists in clinging to this earthly sphere and retaining his "clothes of skin." In the second of these cases there is no apparent modifier, and yet it must be somewhere on the palm to indicate Nature's reprieve. The last-mentioned instance may be simply a case of wrong measurement on the life-line, but more probably there is a modifier, if it could be discovered. Certainly there is no square of protection anywhere near the fatal epoch. It must be some other character employed by Nature than the ones known to modern cheiromants.

In the face of these and similar apparent exceptions to the rules, it

is better not to press too closely the claim for cheiromancy of being an exact science. Let us put it on its proper footing. We may suppose that the Atlanteans were versed in palmistry among other magic arts. Undoubtedly some vestiges of it descended to the Aryans along with the Zodiac and the rudiments of astrology. In that most ancient occult work known as the Book of Job, both astrology and palmistry are clearly indicated. The English priests mistranslated all such passages as much as possible, in order to prevent them from being understood by the masses. In the Vulgate, on the contrary, the sense was very nearly preserved, as in chapter 37, verse 7, where it reads: "*Qui in manu omnium hominum signat ut noverint singuli opera sua*". (He places signs in the hand of every man in order that all may know his works). In connection with this, how ridiculous is the reading of the English Version: "He sealeth up the hand of every man; that all men may know his work!" But this is on a par with other false renderings of the Old Testament, as, for instance, the first word in the first chapter of Genesis.

However, there is no doubt that cheiromancy was known among the earliest tribes of the present human race. If the later initiated were ever more guarded in referring to it than they were in speaking of astrology, the reason is not hard to find. It was comparatively safe for the ancients to compute astrologic directions with some degree of publicity, because by its very nature astrology was so difficult that ordinary minds were totally incapable of comprehending it or its rules. The Chaldean seer had no fear in calculating nativities, because the common people could not rise to his level. Cheiromancy, on the other hand, was simple and could be easily learned, the rules requiring only an effort of memory. Hence it had to be more sacredly guarded from the public, and the candidates for initiation into the mysteries might have been specially cautioned against writing or saying

anything about it publicly. One of the lower caste tribes of India, having fled to escape the atrocities committed by Timour Beg in 1408 A. D., passed through Egypt and reached Europe in 1417. From the circumstance of their having come from Egypt they were mistakenly called Egyptians, which name has since clung to them through nearly 500 years of wanderings. The gypsies appear to have had some leaders who instructed them in the secret art of palmistry. It was the one bequest to them from their progenitors, who may perhaps have derived it from Enoch himself. Among the gypsies there were never any written rules of palmistry, — in fact, there are none even at the present day. The indications were carefully transmitted from mother to daughter, — as the fortune-telling was always monopolized by the females of this nomadic race. Many of these rules have from time to time passed into the possession of curious outsiders, but it is believed that even now the gypsies have a knowledge of certain important hieroglyphs which have never been given to the public, and which are unknown to the writers of our latest works on cheiromancy. After indulging in some criticism on palmistry, based upon a knowledge of what it will not do, there is great pleasure in recognizing the services which it really performs. By the shape of the hand the expert cheiromant at once determines the disposition, character, and probable occupation of the owner of that hand. Physiognomy betrays the ruling planet, although the same result can be attained by an examination of the mounts of the palm. It is thus possible for one sitting in a window on a busy street of a great city to tell at a glance the leading characteristics of every individual in the passing throng, as well as the planet under which each one may have been born. This of itself is no ordinary feat, and borders closely upon the magical.

D'Arpentigny's interpretation of the thumb and fingers comes the nearest to reducing this branch of the art to exactitude of any authority, ancient or modern. In fact, so far as the mere

disposition and capacity of any person are concerned, this may be set down as certainly exposed to the trained eye of the disciple of D'Arpentigny. Cheirognomy is therefore to all intents and purposes an exact science. But when we come to the particular events, past, present, and future, of a particular career, then the honest cheiromant must pause and examine his ground with the utmost circumspection. (1) No doubt there are some people whose lives have been so influenced by one great single passion or purpose as to cause the nature of that leading motive to be infallibly stamped upon the palm. Such fortunes are seen at a glance. But, speaking from experience, I have found that in the great majority of instances the subjects have been living an uneventful career, — that is to say, a career uneventful as seen by an outsider; for to the individual his own career is never uneventful. To the blacksmith in a country village, for instance, every occurrence is of as much importance, apparently, as are the experiences of a soldier in battle, or of a financier in a great city. But the cheiromant is compelled to establish a standard by which all lives are impartially measured. The most difficult fortunes to tell are those of mediocrity, and they are the most common. Given the hand of a talented actress, of a great soldier, of a statesman or poet, and that is most interesting and easy for the practised cheiromant to read. In stupidity and stagnation he is more often confounded.

Some recent writers on palmistry have attempted to separate it from astrology, and in so doing their arguments are as absurdly incongruous as are the efforts of Christian writers to reconcile the two opposing dogmas of free-will and predestination. No unprejudiced thinker can for a moment entertain their ridiculous sophisms. To accept palmistry and reject astrology is simply to accept a limb while rejecting the whole body, or to believe in a part while denying the whole. Cheiromancy is merely a branch of

astrology. As the latter shows us how the careers of men may be indicated by the place of the planets at birth, so the lines of the hand are simply the written word of Nature in corroboration of the astral positions. Or, to be more explicit, they are the direct results of the planetary influences. Whether brought down to earth by the rays of light penetrating space, or whether transmitted through a more incomprehensible medium, there is no doubt that the subtle forces are always at work. The signature of Nature is invariably stamped upon the hand of the infant at birth, as if the child were a coin fresh from the mint. The physiological cheiromants claim that the tendencies of a man's nature are the result of his ante-natal and ancestral circumstances, instead of direct astral influences, and that it is these tendencies that mould the formations of his hands, and that the events of his life may be explained and foretold by a careful study of these causes, based upon experiences which, in these cases, do duty for experiments. (2) But what shall we say of the constant changing of the lines during life-time, or how account for the actual presence of the lines themselves on any such theory? The argument is altogether too weak and unsupported by other circumstances. The full extent of heredity in this science may be easily found to consist in the shape of the palm and fingers. Here Nature performs another of her miracles which would be remarkable if not an every-day occurrence. Just as the features of the face resemble the parents, so does the shape of the hand in many respects resemble that of the parent. And it must do so, of course, in all instances where the child inherits the disposition of its parents, thus proving the law of signature. But the lines on the palm are always different, and never bear any resemblance to the lining of the parent's hand. Here again the law is proved, for the career of the son is seldom or never a duplicate of that of his father. No heredity can possibly influence the lines. In fact, there is no possible escape for us, in seeking a natural

explanation of the causes of the lines, except in the plain logical and *astrological* deductions of ancient cheiromancy.

REINCARNATION AND MEMORY: III — *Harij*

III.

In the further discussion of this subject we need a few terms with definite meanings such as every one can understand. We are looking at the doctrine of re-incarnation from a single standpoint, and for this one view a comprehensive philosophy and exhaustive classification are not necessary. We need only to appeal to common experience and to logical deductions drawn therefrom. The self-conscious center in man we call the *ego*. Experience is the varied relations existing between the ego and all its surroundings or environment resulting in action. Action implies reaction. If the ego in man acts upon his environment, so environment re-acts upon the ego. This action and re-action constitute man's experience. The law of this action, that is, the direct relation between action and re-action, is that of all force, all attraction, all motion everywhere, viz., quantity and quality are both mathematical and rhythmical. Circular motion begets circular motion, like attracts like. For every given impulse sent out a like impulse is returned, both as to form and as to intensity or quantity. The self-conscious center in man, the *ego*, the "I," stands in the center of his "sphere of life," is the center of his environment, and it therefore actually stands between two worlds; the seen and the unseen; the world of action and the world of thought; the world of effects and the world of causes. Now the unseen world of causes, whence come our thoughts, our impulses, the "within" to all of man's outer world, or the center of his sphere, is also the *noumenal* or spiritual world, as contrasted with his phenomenal or physical world. Man's experience, therefore, whether he is aware of it or not, is drawn constantly from these two worlds, though seldom in equal degree. We say of

one, "he is a man of action"; of another, "he is a man of thought." We say of one, "he is spiritually minded"; of another, "he is carnally minded." We say of one, "he lives on a low plane"; of another, "he is high-minded." It may thus be seen that both our observation and common experience have become stereotyped in forms of common expression. The logical deduction thus drawn from common experience and observation leads to the conception that man is a conscious center between an upper and a lower world, or, if you please, that the "sphere" of man's life, of which the *ego* is the conscious center, is composed of two semi-spheres. A perfect sphere is an ideal in nature. It is the design drawn by the *Architect* upon the phenomenal trestle-board of nature. In outer nature the sphere is always imperfect. Every fruit, like an apple, for example, has an actual center just as an ideal sphere which it represents has an ideal center. These ideals only are perfect. The core, or seed-pit of the apple, is its center of life, but the two halves made by cleavage through the core are neither equal nor symmetrical, hence they are imperfect. The design of nature is its ideal. Without this ideal there could be no persistence of form, no such thing as species, no correspondences, no harmony.

Now to return to the life of man, let us observe that, relatively independent of nature's ideals, he has also his own ideals, and that these ideals or aims more or less shape his life. Man's ideals are a compound derived from his appetites, passions, or desires, on the one hand, and his aspirations, hopes, and disappointments, on the other. All these make up the round of his experience, and constitute his sphere of life. As to symmetry man's sphere is thus distorted. With the *ego* as the center, if man's sphere of life is to be rounded to perfection, his experience should be so adjusted that it shall pertain equally to the two worlds of which his consciousness takes equal cognisance. His thought shall inspire

his action, and his action shall again give rise to thought. He will thus act consciously and designedly, rather than impulsively or passionately. Man would thus have a rounded experience and a range of consciousness that would be both extended and clear, and by so adjusting his experience of the two worlds in which his ego abides, by checking one set of experiences with the other, he would have real knowledge of both.

As a matter of fact, there are individuals who in one short life have well-nigh exhausted physical sensuous experience. The aged Faust was exactly in this condition. But in such cases, the development being altogether one-sided and the experience pertaining so largely to the gross and material, the range of consciousness is really very narrow indeed. The vehicle of this experience, the physical body, is cast off at death, and the ego thus released and rounding up its experience on the higher or spiritual plane would find itself confined to very narrow dimensions. With little conscious experience in the higher realm which now constitutes the theatre of its being, and its familiar channels destroyed, with no organ of physical memory like the physical brain, there could remain but a confused precipitate in consciousness by which even the recent experiences of earth-life could be retained, and this must soon fade away. The ego now enters on a new phase of existence, in the world of causes, but where it has to work out, or "experience", the effects of its recent life on earth. When these have run their course and become exhausted, let us say that it returns to life on earth. Nothing remains of its former life save only precipitated results. The former body is destroyed, and the senses of its former life changed beyond recognition. In other words, nothing remains of the former personality. The precipitated results as impulses to new activities belong to the individual life, or to the real ego. Thus the personal and the individual memory differ as do the elements

of a compound from the precipitated result in life's alembic.

The Path

BROTHERHOOD — *J. D. Buck*

A great deal has been recently written in regard to the Brotherhood of Man. It is a frequent theme in many directions, and is liable to repeat the experience so often seen, so seldom understood. "Liberty, Equality, Fraternity" is as good a slogan for the mob, the priest, and the gibbet as any other. "Brotherhood" may serve as the slogan of the devil. There is a brotherhood of thieves, of assassins, of *thugs*, no less than of humanity. There is thus both a true and a false meaning to the word "brotherhood," just as there is to every other word. It would perhaps be more accurate to say that there is one true meaning, and that all others, all uses and applications other than that, are false.

Sometimes great reluctance is shown in admitting the fact that all mankind are brothers, and even when a tacit assent is given there are certain explicit qualifications and exceptions. As though the assent or the denial of puny man could alter a fact in nature. Though every being in the universe turned Cain; and though every man's hand were raised against every other, till the earth steamed with blood and rotted with gore; the last survivor of the race in the holocaust of humanity would have to face the fact that every silent victim was and is his brother.

Not only is every human being thus akin, but this kinship is a basic and universal principle in nature, and extends to all life, to every thing that breathes, that walks, or flies, or crawls. Indeed, there is nothing else but life; it is diffused everywhere, and it is *One*.

A mere intellectual assent to this broadest and clearest fact in nature is but the beginning of wisdom. Such assent marks a degree of intelligence, but is in no sense meritorious. It hence

follows that the profession of belief in the Universal Brotherhood of man carries with it no necessary virtue, any more than profession of Christianity makes one necessarily Christ-like. In fact, there is a close similarity in these two cases both as regards nature and results.

The first and only binding principle of the present T. S. is said to be the Universal Brotherhood of man without the least qualification or reservation. "To form a nucleus of Universal Brotherhood" summarizes the entire object and aim of the Society. It is not the mere announcement of the universal fact already referred to that constitutes the motive of the T. S., nor does the admission of the fact by the individual on joining the society constitute him a theosophist. A true theosophist is one who recognizes the fact of brotherhood and who aims continually without the least pretense or self-deception to conform to the principle and requirements of Universal Brotherhood. The measure in which different individuals may succeed in this constant conformity in thought, word, and act will necessarily differ. No one who makes a sincere and determined effort can altogether fail, no matter how great his natural selfishness may be, and no one can make the least honest effort in that direction without being bettered by just so much.

To profess belief in the universal brotherhood of man, therefore, by any fair and intelligent construction involves two things. First, an intellectual assent to brotherhood as a fact; and second, a determined effort to act in accordance with the implied relation at all times and in all circumstances. It does not imply that any one professing such belief has reached the point of perfection; that he is always reasonable, just, and charitable; but it does imply that he is using his best endeavor to become so; and such an one will learn from his own failures and lapses into passion and selfishness how difficult a task he has undertaken. Self-

conquest alone can satisfy the ethical claims of the Brotherhood of Humanity. As a rule, the members of the T. S. understand this principle and exercise it to a far larger degree than a certain class of their critics. Brotherhood does not imply that falsehood may not be exposed, or misstatements denied, for herein lies a large part of the advocacy of truth. It does, however, imply charity toward the faults and mistakes of individuals, even of our enemies and traducers. All that has been said relating to the T. S. and the Brotherhood of man equally applies to Christianity. Pure Theosophy is but another name for genuine Christianity; self-conquest and altruism being the aim in each, and being equally the basis whence arise the regeneration of man and the true illumination of the understanding.

The Path

THE SOCIETY AND ITS OBJECT — *Arthur Gebhard*

The three objects of the Theosophical Society are: 1st., to form a nucleus of Universal Brotherhood without distinction of race, creed, or color; 2nd, the study of religions and the finding of the basic unity underlying them all; 3rd, the development of the inner senses in man.

In reality these three objects are one, *viz.*, Universal Brotherhood; and the longing to attain it constitutes the sole requirement to become a member. If the Society was a mere copy of such societies as the Odd Fellows or the Free Masons, its coming in the world would indeed have been worse than useless. The Theosophical Society must be able to show some inherent superiority, to have any claim for its existence. I think this can be easily shown. Leaving aside the underlying truth of the masonic ritual, we are well aware that all occult vitality long ago left this august body. It is just the claim of occult *life* which makes the Theosophical Society superior to all the rest. If all the members of the Theosophical Society were practical occultists, that is, men whose sole aim was with self-abnegation to develop the inner senses, and through their development to discover the basic unity of all religions and thence to attain to a comprehension of Universal Brotherhood, then indeed nothing farther need be stated than the three objects of the Society. But the founding of the Theosophical Society had evidently a greater scope in view than to be merely a band of the men who had already found the way. It was evidently intended as a nursery for those who, dissatisfied with the explanations from pulpit or professor, were seeking the more deeply-hidden truth. The forming of rules and by-laws, institutions like President, Secretaries, Councillors, and the like, plainly show that the infant occultist has to keep his toys

in order to find the nursery at all attractive. Looking back on myself and on those who joined the Society about the same time with me. I readily admit that, if the Society or its publications had had nothing but true occultism to give, I, like the rest of my friends, would have refused it with scorn. It is to me a renewed proof of the wisdom of those glorious beings who are supposed to be in connection with the Theosophical Society, that they did not throw pearls before swine, for it is the nature of swine to rend. Swine cannot do otherwise, for the pearls are antagonistic to every fibre of their being.

The superiority of the Theosophical Society, then, lies in the fact that it welcomes every seeker, from the infant up to the man who has found the way. It is expressly stated that the third object is not obligatory, which clearly shows that a nursery was intended for the infant; not a nursery as some thought, where crude, antagonistic to truth, full of conceit and self-love, they would be shown the way by which they could attain to the fulfilment of their desires. No! for such, truly, the Theosophical Society never proved a nursery. Those who entered with the short-comings above stated and a thousand others, yet who had a spark of Truth within them, for those the Society has truly proved a nursery, inasmuch as the experience therein gathered brought to them the first degree of self-knowledge, viz., that what they had been seeking was not the Truth, but an idol of the worst sort, which from their judgment-seat they had declared to be the Beautiful, the Good, and the True.

Universal Brotherhood is a spiritual condition. Its realization would be equal to "I and the Father are one;" and that such realization cannot be brought about by a body which needs modern institutions such as voting, etc., seems very clear. Yet in the Theosophical Society there is room for all, from the man who thinks that Universal Brotherhood can be slowly brought about or

even approximated by raising the ethical standard of the community, or the man who sees in charity the fulfilment of the command "Thou shalt love thy neighbor as thyself", up to him who knows that Universal Brotherhood can be attained alone by the practical road of a mystic or yogi. Just so the second object gladly embraces all seekers, from the student of comparative mythology up to the mystic or yogi who finds that God has in all times expressed but one thought, the salvation of man, *i.e.*, to lead the soul to those heights of boundless peace to which it was destined from the beginning, before the Spirit of God moved upon the face of the waters; — those heights which awe forbids thought to contemplate.

"He beat me, he defeated me, he robbed me; hatred in those who harbour such thoughts will never cease." —

Dhammapada

"Seek in your heart the source of evil." — *Light on the Path.*

I will now venture to speak to those of my brothers who after some years of ardent work have become dissatisfied, as I *was*, with the Theosophical Society. Their hopes and their dreams were not realized. They find that this or the other act of the officers of the Theosophical Society is not to their liking or conflicts with their standards of ethics and morality. They have studied and searched, they have taught others the new doctrines with the conviction and enthusiasm of converts, yet in a day of disappointment and inward examination they find themselves as empty and ignorant as in the first moment when they started. Some, perhaps, have fared even worse. They may feel that their most sacred feelings have been outraged, that where they asked for bread they have received a stone. To these I should like to say, Be of good cheer! Go deeper yet; you have worked well, otherwise you would not have been rewarded with this tribulation.

Examine yourself; was it really a sacred feeling which has been outraged, or was it a pull at the giant weed — the self-will in your heart? My brother, you will have first to learn that the divine Truth is in no way even like your *ideal* of Truth, to say nothing of your *idea* of her; and so long as you pursue the Truth as the madman pursues the goddess Fortune, so long as you pursue the Truth with the intent of possessing her, so long as you pursue Truth with the smallest conception of what she is, by virtue of the spark of divine love within you which is struggling for life, you must be brought to disappointment and pain.

I find this clearly and beautifully expressed in the note to the first rule of *Light on the Path*, where it is said, "The pure artist who works for the love of his work is sometimes more firmly planted on the right road than the occultist who fancies he has removed his interest from self, but who has in reality only enlarged the limits of experience and desire, and transferred his interest to the things which concern his larger span of life." In this simile of an artist we have a very good guide towards understanding what our attitude ought to be. In art as well as in occultism we find three classes represented. The first class is the priest. He is born a priest, his mission is to be a priest, and his influence will be that of a priest, whatever may be the eccentricities or the shortcomings of the visible man. The second class is that of the devotee. He loves his art; he longs to make every act and every breath of his being a sacrifice at its altar. That this is an impossibility for the human creature is a matter of course, but love covers a multitude of sins, and in proportion as his love is great will he advance in his devotion; his self-sacrifice for the sake of its glory will gain strength daily. The outsider may not perceive much advance; he will cavil and criticize as the personality of the devotee is unsympathetic or disagreeable. But the Goddess, who sees the heart, will reward her devotee with

such insight into her glorious beauty as is incomprehensible and in conceivable to the outsider. Such men often pass away unrecognized or die of hunger in a garret, if their talent is not sufficient to allow them to gain a livelihood. But the spark of love which was allowed to be kindled has gained life eternal, and while shedding at mortal death its force over a barren world, it is surrounded by light which darkness cannot comprehend. The third class care for art as a man fancies a dog. They call it love, but they have not a spark of love. Its ranks are generally recruited from those who have great talent, but who seek, through the manifestation of their talent, either riches or the satisfaction of their vanity. They work hard, probably harder than the devotee, and are courted and thought much of by the world, but their work and their energy do not spring from the fountain of love but from the giant weed. So it is with occultists. There are few, if any, of the so-called devotees, certainly none of the disappointed ones, who will not find by self-examination that they have belonged to the third class. And if they have so found, let them go down on their knees and thank their Creator for the first glimpse of self-knowledge, the gift of that spark of love buried in the grave of self.

The Path

POPULAR MISCONCEPTIONS ABOUT THE FOURTH DIMENSION —

H. T. Edge

In referring to an article on the Fourth Dimension in the April and June numbers of the *PATH*, I give the writer full credit for the able way in which he has expounded Mr. Hinton's views. But I must at the same time point out some fallacies in the usual course of reasoning adopted on this subject. The first mistake is to regard "space" as capable of existing independently of matter. Occult Science teaches that "space" (better called "Extension") is one of the several properties of matter, and cannot exist without it. Three-Dimensionality is an attribute of "extension," and is essential to it, so that there can be no extension except in three directions. Mr. Hinton starts with the assumption that matter is three-dimensional, but if the view of occult science be right as above given, it is not matter, but extension, that has this quality. His inquiry may be translated in two ways: "Are there beings possessing extension in two directions?", or, "Are there beings without the property of extension at all?" The answer to the first question is, No; it is essential to extension that it be in three directions. Mr. Hinton's ideal square is impossible, for who can conceive of a square which has only one side and cannot be turned over?

The answer to the second is, There probably are entities without extension, but they are not matter as we know it, and cannot be visualized in any way.

Mr. Hinton's reasoning is very specious, and his deductions from his premises are very correct; but it must be borne in mind that forms are merely symbolical and not real, and should be relegated to the same category as algebraical expressions. Nobody

regards quadratic or cubic equations as actually existing entities, but simply as symbolical conceptions, and all reasoning with regard to forms should be treated in the same way. One of his deductions is that to a four-dimensional being all points of a solid are equally accessible. This is an attribute of the astral man with his astral senses, and is coexistent with the abolition of extension, not with the presence of a more developed form of it, as Mr. Hinton holds. Certainly, on reading *A New Era of Thought* one is impressed with the conviction that the author has arrived at important occult truths by the application of his method, among which is the idea of the unity of the higher self in all men; but I venture to suggest that by means of this arduous system of mental discipline he is developing his astral senses, and that, instead of being able to travel mentally in four directions, he will find that there is no necessity to travel in any direction at all, extension having been entirely abolished.

In conclusion I will quote *Secret Doctrine*, Vol. 1, p. 251, which your readers will find very suggestive: —

"To begin with, of course the superficial absurdity of assuming that Space itself is measurable in any direction is of little consequence. The familiar phrase ('fourth dimension of Space') can only be an abbreviation of the fuller form — the fourth dimension of *Matter* in Space! But it is an unhappy phrase even thus expanded, because, while it is perfectly true that the progress of evolution may be destined to introduce us to new characteristics of matter, those with which we are already familiar are really more numerous than the three dimensions. The faculties, or what is perhaps the best available term, the characteristics of matter, must clearly bear a direct relation always to the senses of man. Matter has extension, colour, motion (molecular motion), taste, and smell,

corresponding to the existing senses of man, and by the time that it fully develops the next characteristic — let us call it for the moment Permeability — this will correspond to the next sense of man — let us call it 'Normal Clairvoyance'; thus when some bold thinkers have been searching for a fourth dimension to explain the passage of matter through matter, and the production of knots upon an endless cord, what they were really in want of was a *sixth characteristic of matter*.

The three dimensions belong really to but one attribute or characteristic of matter — extension; and popular common sense justly rebels against the idea that under any condition of things there can be more than three of such dimensions as length, breadth, and thickness. These terms, and the term 'dimension' itself, all belong to one plane of thought, to one stage of evolution, to one characteristic of matter. So long as there are foot-rules within the resources of Cosmos to apply to matter, so long will they be able to measure it three ways and no more; and from the time the idea of measurement first occupied a place in the human understanding, it has been possible to apply measurement in three directions and no more. But these considerations do not in any way militate against the certainty that in the progress of time — as the faculties of humanity are multiplied — so will the characteristics of matter be multiplied also. Meanwhile, the expression is far more incorrect than even the familiar one of the 'Sun setting and rising.'"

REINCARNATION AND MEMORY: IV — *Harij*

IV.

Memory as a faculty of man is one of the normal functions of the human brain. It is the record of the process of events, external objects in relation to sensations and feelings occurring in consciousness, instigated by will or desire, or passively experienced or submitted to. The brain is the organ of memory, the physical basis within or upon which is recorded this moving panorama of events. The pictures of memory are associated incidents, brought to consciousness through the channels of perception, feeling, or emotion. In the exercise of the faculty of memory, "recollection," we re-collect these experiences by suggestion; the order of association of events enables us to gather again the links of the chain. Memory is the faculty, re-collection its function, and the brain is the centre to which aggregate and from which radiate this group of experiences. These brain pictures are moving panoramas and concern events, and they can no more be repeated than any two other objects in nature can be duplicated. They may, however, be approximately recovered. Such recovery is at best but a faint, disjointed, and imperfect echo of their originals. The external objects have changed or disappeared: the feelings and emotions have changed or cannot be again experienced. An idea wakens the echo of past experience, and the result is *remembrance*. If by an effort of the will we recover the chain of experiences or emotions, it is *re-collection*. Memory, remembrance, and recollection are all phenomenal in character, that is, they are moving events occurring in time. The brain and its function belong to the same category. Therefore repetition is impossible, and recovery is never more than partial or approximate. All these belong to the

physical side of memory. But memory has another side, viz., the *noumenal*. To illustrate. Let us suppose certain events occurring in time and brought to the individual consciousness, and let us number these 1, 2, 3, 4, 5. Sensation experiences these events, and memory records within the brain both the facts and their *order of occurrence*. An idea by association spontaneously wakens the echo of the former events, and we approximately *remember*. We search for these events consciously by an effort of the will and we approximately *re-collect*, always however, with missing links, either as to order or strength of details. Now let us group our numbers 1, 2, 3, 4, 5, =15. We have now the *sum* of the previous experience, the details of which have disappeared. The will can no longer recover the details 1, 2, 3, 4, 5, and the sum of these, 15, bears a different relation to consciousness. We have "*forgotten*" the details past all recovery, but an experience once had can never be *as though it had not been*. It has wrought its effect, and if it is ever in any way recovered or recalled it is a *reminiscence*. Physical memory is to reminiscence what the elements of a mixture are to a compound. In one we have separate details, and an orderly sequence of relations. These belong to *time*. In the other we have the precipitate occurring in life's alembic, and this belongs to "*eternity*." The first is phenomenal; the second *noumenal*, upon which time has ceased to act, for it has become part of our very selves. Memory belongs to the personality of time and sense. Reminiscence belongs to the permanent individual. Memory is the field-notes in the realm of thought. Reminiscence is the permanent record in the realm of intuition, the title-deed of the permanent possessions of the soul (*ego*). (See *The Key to Theosophy*, pages 124 & 125.)

Our illustration from the well-known facts of chemistry carries us still further. Reminiscence as compared with physical memory is in no sense a loss, but a far higher result. No knowledge that

could possibly be derived from the study of the uncombined elements oxygen and hydrogen could ever pre-suppose water, and nothing short of analysis would show that water is a union of these two substances. Oxygen and hydrogen seem to have disappeared altogether, and something entirely different to have taken their place. Definite association seems to have brought to light latent properties hitherto unsuspected. They have passed from the plane of elements to that of compounds. Even so are memory and reminiscence related. The details of experience as the result of sensation and consciousness, when precipitated as resultants, become motives, causes, instead of results, and so color all future experiences. These having become part of the ego, are carried along with it; not as accretions, but as essences. Here is the logical basis of intuition, as rational as anything we know of physical memory. In the long journey of the soul, even during one incarnation, it is not lumbered up and loaded down with the accretions of memory. In place of the carloads of ore we have the portable ingots of bright metal. We learn by experience; not by the mere record of its facts, but by the potency of its results. If the record were all, it would soon become, indeed, a lost record of a dead language, a shadow upon a wall, leaving its own trace, but presently so overlaid by other shadows, so confused and blended, as to be past all recovery. Reminiscence is to memory what the spirit is to the physical body, — that which alone gives it life and renders it immortal. Are not these facts and relations common experiences in our present life? Let us see.

The Path

CYCLES — *William Q. Judge*

In advancing these few observations upon the doctrine of cycles, no claim to an exhaustive study of the matter is made. This paper is merely by way of suggestion.

The subject was brought before my mind by our discussion some evenings ago, when the question of the descent upon earth, or ascent from it, of celestial beings or progressed souls engaged our attention. It seemed certain that such ascent and descent were governed by cyclic laws, and therefore proceeded in regular periods. Some sentences from the *Wisdom of the Egyptians* by Synesius in matter furnished me by Bro. Chas Johnston, now of India, read:

"After Osiris, therefore, was initiated by his father into the royal mysteries, the gods informed him * * that a strong tribe of envious and malignant daemons were present with Typhos as his patrons, to whom he was allied and by whom he was hurled forth into light, in order that they might employ him as an instrument of the evil which they inflict on mankind. For the calamities of nations are the banquets of the evil daemons. * * *

"Yet you must not think that the gods are without employment, or that their descent to this earth is perpetual. For they *descend according to orderly periods of time*, for the purpose of imparting a beneficent impulse in the republics of mankind. But this happens when they harmonize a kingdom and send to this earth for that purpose souls who are allied to themselves. For this providence is divine and most ample, which frequently through one man pays attention to and affects countless

multitudes of men.

"For there is indeed in the terrestrial abode the sacred tribe of heroes who pay attention to mankind, and who are able to give them assistance even in the smallest concerns. * * This heroic tribe is, as it were, a colony from the gods established here in order that this terrene abode may not be left destitute of a better nature. But when matter excites her own proper blossoms to war against the soul, the resistance made by these heroic tribes is small when the gods are absent; for everything is strong only in its appropriate place and time. * * But when the harmony adapted in the beginning by the gods to all terrene things becomes old, they descend again to earth that they may call the harmony forth, energize and resuscitate it when it is as it were expiring. * * When, however, the whole order of mundane things, greatest and least, is corrupted, then it is necessary that the gods should descend for the purpose of imparting another orderly distribution of things."

And in the Bhagavad Gita it is said by Krishna:

"When Righteousness
Declines, O Bharata! when Wickedness
Is strong, I rise, from age to age, and take
Visible shape, and move *a man with men*,
Succoring the good and thrusting the evil back,
And setting Virtue on her seat again,"

And

"At the approach of Brahma's day, which ends after a thousand ages, all manifested objects come forth from the non-developed principle. At the approach of Brahma's night they are absorbed in the original principle. This

collective mass of existing things, thus coming forth out of the absolute again and again, is dissolved at the approach of that night; and at the approach of a new day it emanates again spontaneously."

In the foregoing quotations two great aspects of cyclic law are stated.

The latter has reference to the great cycle which includes all cycles of every kind. All the minor cycles run their course within it. When it begins a new creation is ushered in, and when it ends the great day of dissolution has arrived. In Arnold's translation of the Bhagavad Gita the beginning of this great cycle is beautifully called by him "*this vast Dawn*," and of the close he reads:

"When that deep night doth darken, all which is
Fades back again to Him who sent it forth."

The real figures expressing the mortal years included in this period are not given. Each Manwantara, according to the Hindus, is divided into the four Yugas or Ages, with a certain number of years allotted to each. Speaking on this subject in the "Key to Theosophy" (page 83), H. P. Blavatsky gives us a clue thus:

"Take as a first comparison and a help towards a more correct conception, the solar year; and as a second, the two halves of that year, producing each a day and a night of six months' duration at the North Pole. Now imagine, if you can, instead of a solar year of 365 clays, eternity. Let the sun represent the universe, and the polar days and nights of six months each — days and nights lasting each 182 trillions and quadrillions of years instead of 182 days each. As the sun rises every morning on our objective horizon out of its (to us) subjective and antipodal space, so does the Universe emerge periodically on the plane of objectivity,

issuing from that of subjectivity — the antipodes of the former. This is the 'Cycle of Life.' And as the sun disappears from our horizon, so does the Universe disappear at regular periods when the 'Universal Night' sets in. * * "

This is about the best idea we can get of it. It is impossible for the human mind to conceive these periods. No brain can grasp 182 trillions of years, much less if quadrillions are added. Few if any persons can mentally traverse the full extent of even *a million*. But we can make an approximation to the idea by using her suggestion of dividing the year and calling six months a day and six months a night, and then extending each into what is equivalent to infinity with us, since it is impossible to seize such immense periods of time.

And carrying out the correspondence suggested by her, we have at once a figure of the inclusion of all the minor cycles, by calling each day when we rise and night when we sleep as the beginning and ending of minor cycles. Those days and nights go to make up our years and our life. We know each day and can calculate it, and fairly well throw the mind forward to see a year or perhaps a life.

A quotation from Vol 1., at 31 of *Isis Unveiled* will give us the Indian figures. She says:

"The Maha Kalpa embraces an untold number of periods far back in the antediluvian ages. Their system comprises a Kalpa or grand period of 4,320, 000,000 years which they divide into four lesser yugas running as follows:

Satya Yug	1,728,000 years.
Treta Yug	1,296,000 "
Dwapara Yug	864,000 "
Kali Yug	432,000 "

Total 4,320,000

which makes one divine age or Maha yuga; seventy-one Maha Yugas make 306,720,000 years, to which is added a sandhi, or twilight, equal to a Satya yuga or 1,728,000 years, to make a manwantara of 308,448,000 years.

Fourteen manwantaras make 4,318,272,000 years, to which must be added a sandhihamsa or dawn, 1,728,000, making the Kalpa or grand period of 4,320,000,000. As we are now (1878) only in the Kali Yuga of the 28th age of the 7th manwantara of 308,448,000 years, we have yet sufficient time before us to wait before we reach over half of the time allotted to the world."

Further H. P. Blavatsky clearly states that the other cycles are carried out within this greater one, as at 34, vol. 1.

"As our planet revolves once every year around the sun and at the same time once in every 24 hours upon its own axis, thus traversing minor cycles within a larger one, so is the work of the smaller cyclic periods accomplished and recommenced within the great Saros."

Leaving the region of mathematics, we find this great period represents the extension of pigmy man into the vast proportions of the great man, whose death at the close of the allotted period means the resolving of all things back into the absolute. Each of the years of this Being embraces of our years so many that we cannot comprehend them. Each day of his years brings on a minor cataclysm among men; for at the close of each one of his days, metaphorically he sleeps. And we, as it were, imitating this Being, fall asleep at night or after our diurnal period of activity.

We are as minor cells in the great body of this Being, and must act obediently to the impulses and movements of the body in which

we are enclosed and take part.

This greater man has a period of childhood, of youth, of manhood, of old age; and as the hour arrives for the close of each period, cataclysms take place over all the earth. And just as our own future is concealed from our view, so the duration of the secret cycle which shows the length of life of this Being is hidden from the sight of mortals.

We must not, however, fall into the error of supposing that there is but one of such great Beings. There are many, each being evolved at the beginning of a new creation. But here we touch upon a portion of the ancient philosophy which is fully explained only to those who are able to understand it by virtue of many initiations.

The Sandhya and Sandhyahamsa referred to in the quotation taken from *Isis Unveiled* are respectively the twilight and the dawn, each being said to be of the same length and containing the same number of years as the first or golden age — *i.e.* 1,728,000. It is in strict correspondence with our own solar day which has its twilight and dawn between day and night.

In going over the figures of the four ages, a peculiarity is noticed to which I refer at present as merely a curiosity. It is this:

The digits of Satya Yug 1. 7. 2. 8. added together make 18; those of Treta Yug 1. 2. 9. 6 make 18; those of Dwapana Yug 8. 6. 4 make 18; while those of Kali Yug 4. 3. 2 sum up only 9; but if those of the grand total of 4,320,000 be added together they make 9, and that with Kali give 18 again. 18 is a number peculiar to Krishna in the Bhagavad Gita, and the poem has 18 chapters in it. If the three 18's and one 9 found as above be added together, the result will be 63, and $3 \times 6 = 18$, and if added make 9, and 18 added gives nine. If we multiply the three 18's and 9 produced from the different

ages, we get 5. 8. 3. 2. which, if treated as before, give 18 again. And in the process of thus multiplying we discover a recurrence of the three eighteens and one 9, only inverted, as: The first 18 multiplied by the second one gives 3. 2. 4, which added results in 9; 324 multiplied by third 18 gives 5. 8. 3. 2, which being added gives 18; and the product of the multiplication of 5,832 by 9, which is the result of adding the figures of Kali Yuga, is 5. 8. 4. 1, which on being added gives 18 again. Now, as the last of these apparently fanciful operations, let us add together the results gained by multiplying the figures which were obtained during the various steps we have gone through and then adding the results.

The first figures are $1 \times 8 =$	8.
The second $3 \times 2 \times 4 =$	24.
The third $5 \times 8 \times 3 \times 2 =$	240.
The fourth $5 \times 8 \times 4 \times 1 =$	160.
These added together give	4.3.2,

which are the digits of Kali Yuga.

Now turning to *Isis Unveiled* at p. 32 of Vol. 1, we find this remarkable paragraph:

"Higgins justly believed that the cycle of the Indian system, of 432,000, is the true key of the secret cycle."

But in the following paragraph she declares it cannot be revealed. However, we may get some clues, for we see in the figures of Kali Yuga, 432,000, and in the great total (leaving out the Sandhis), 4,320,000. What this secret cycle is, I, however, am not competent to say I only desire to throw out the hints.

Having thus glanced over the doctrine of the great cycle which includes all others, let us now devote a little consideration to the cycle referred to in the passages from the *Egyptian Wisdom* first quoted.

This cycle may be called for the present purpose *The Cycle of Descending Celestial Influences*. By "descending" I mean descending upon us.

Osiris here signifies most probably the good side of nature, and his brother Typhos the evil. Both must appear together. Typhos is sometimes called in the Egyptian books the opposer, and later with us, is known as the Devil. This appearance of Typhos at the same time with Osiris is paralleled in the history of the Indian Krishna who was a white Adept, for at the same time there also reigned a powerful Black magician named Kansa, who sought to destroy Krishna in the same way as Typhos conspired against the life of Osiris. And Rama also, in Hindu lore the great Adept or ruling god, was opposed by Ravana, the powerful Black magician king.

In instructing Osiris after the initiation, the gods foresaw two questions that might arise within him and which will also come before us. The first is the idea that if the gods are alive and do not mingle with men to the advantage of the latter and for the purpose of guiding them, then they must necessarily be without any employment. Such a charge has been made against the Beings who are said to live in the Himalayas, possessed of infinite knowledge and power. If, say the public, they know so much, why do not they come among us; and as they do not so come, then they must be without employment, perpetually brooding over nothing.

The instructor answered this in advance by showing how these Beings — called gods — governed mankind through efficient causes proceeding downward by various degrees; the gods being perpetually concerned in their proper sphere with those things relating to them, and which in their turn moved other causes that produced appropriate effects upon the earth, and themselves only coming directly into earthly relations when that became

necessary at certain "orderly periods of time," upon the complete disappearance of harmony which would soon be followed by destruction if not restored. Then the gods themselves descend. This is after the revolution of many smaller cycles. The same is said in Bhagavad-Gita.

But frequently during the minor cycles it is necessary, as the *Egyptian Wisdom* says, "to impart a beneficent impulse in the republics of mankind." This can be done by using less power than would be dissipated were a celestial Being to descend upon earth, and here the doctrine of the influence among us of Nirmanakayas (1) or Gnanis is supported in the Egyptian scheme in these words:

"For there is indeed in the terrestrial abode the sacred tribe of heroes, who pay attention to mankind, and who are able to give them assistance even in the smallest concerns."

"This heroic tribe is, as it were, a colony from the gods established here in order that this terrene abode may not be left destitute of a better nature."

These "heroes" are none other than Nirmanakayas — Adepts of this or previous Manwantaras — who remain here in various states or conditions. Some are not using bodies at all, but keep spirituality alive among men in all parts of the world; and others are actually using bodies in the world. Who the latter are it would of course be impossible for me to know, and if I had the information, to give it out would be improper.

And among this "sacred tribe of heroes" must be classed other souls. They are those who, although now inhabiting bodies and moving among men, have passed through many occult initiations in previous lives, but are now condemned, as it were, to the penance of living in circumstances and in bodies that hem them in, as well as for a time make them forget the glorious past. But

their influence is always felt, even if they themselves are not aware of it. For their higher nature being in fact more developed than that of other men, it influences other natures at night or in hours of the day when all is favorable. The fact that these *obscured adepts* are not aware now of what they really are, only has to do with their memory of the past; it does not follow, because a man cannot remember his initiations, that he has had none. But there are some cases in which we can judge with a degree of certainty that such adepts were incarnated and what they were named. Take Thomas Vaughan, Raymond Lully, Sir Thomas More, Jacob Boehme, Paracelsus, and others like them, including also some of the Roman Catholic saints. These souls were as witnesses to the truth, leaving through the centuries, in their own nations, evidences for those who followed, and suggestions for keeping spirituality bright, — seed-thoughts, as it were, ready for the new mental soil. And as well as these historical characters, there are countless numbers of men and women now living who have passed through certain initiations during their past lives upon earth, and who produce effects in many directions quite unknown to themselves now. They are, in fact, old friends of "the sacred tribe of heroes", and can therefore be more easily used for the spreading of influences and the carrying out of effects necessary for the preservation of spirituality in this age of darkness. We find in our present experience a parallel to this forgetting of previous initiations. There is hardly one of us who has not passed through circumstances in early life, all of which we have forgotten, but which ever since sensibly affect our thoughts and life. Hence the only point about which any question can be raised is that of reincarnation. If we believe in that doctrine, there is no great difficulty in admitting that many of us may have been initiated to some extent and forgotten it for the time. In connection with this we find in the 2nd volume of the *Secret Doctrine*, at page 302,

some suggestive words. The author says:

"Now that which the students of Occultism ought to know is that the third eye is indissolubly connected with Karma.

* * In the case of the Atlanteans, it was precisely the spiritual being which sinned, the spirit element being still the 'Master' principle in man in those days. *Thus it is that in those days the heaviest Karma* of the fifth race was generated *by our Monads.* * * *

Hence the assertion that many of us are now working off the effects of the evil Karmic causes *produced by us in Atlantean bodies.*"

In another place she puts the date of the last Atlantean destruction as far back as 11,000 years ago, and describes them as a people of immense knowledge and power. If we allow about 1,000 years for our period in Devachan, we will have only passed through some eleven incarnations since then; and supposing that many more have been our lot — as is my opinion, then we have to place ourselves among those wonderful though wicked people at the height of their power. Granting that we were guilty of the sinful practices of the days in which we then lived, and knowing the effect of Karma, it must follow that since then we have passed through many very disagreeable and painful lives, resembling by analogy dreadful situations in the years between youth and maturity. No wonder, then, if for the time we have forgotten outwardly what we then learned.

But all these historical personages to whom I have referred were living in a dark cycle that affected Europe only. These cycles do not cover the whole of the human race, fortunately for it, but run among the nations influenced for the allotted period, while other peoples remain untouched. Thus while Europe was in darkness,

all India was full of men, kings and commoners alike, who possessed the true philosophy; for a different cycle was running there.

And such is the law as formulated by the best authorities. It is held that these cycles do not include the whole of mankind at any one time. In this paper I do not purpose to go into figures, for that requires a very careful examination of the deeds and works of numerous historical personages in universal history, so as to arrive by analysis at correct periods.

It is thought by many that the present is a time when preparation is being made by the most advanced of the "sacred tribe of heroes" for a new cycle in which the assistance of a greater number of progressed souls from other spheres may be gained for mankind. Indeed, in *Isis Unveiled* this is plainly stated.

Writing in 1878, Madame Blavatsky says in vol. 1 of *Isis*:

"Unless we mistake the signs, the day is approaching when the world will receive the proofs that only ancient religions were in harmony with nature, and ancient science embraced all that can be known. Secrets long-kept may be revealed; books long-forgotten and arts long-time-lost may be brought out to light again; papyri and parchments of inestimable importance will turn up in the hands of men who pretend to have unrolled them from mummies or stumbled upon them in buried crypts; tablets and pillars, whose sculptured revelations will stagger theologians and confound scientists, may yet be excavated and interpreted. Who knows the possibilities of the future? *An era of disenchantment and rebuilding will soon begin — nay, has already begun. The cycle has almost run its course; a new one is about to begin*, and the future pages of history may contain full proof that

"If ancestry can be in aught believed,
Descending spirits have conversed with man,
And told him secrets of the world unknown."

Now the way to get at the coming on of the period or close of a larger cycle without wandering in the mazes of figures, is to regard the history and present state of mankind as known.

Thus in the darker age of Europe we find India almost unknown and America wholly so. That was a period when cycles were operating apart from each other, for men were separated from and ignorant of each other. In these continents there were great and powerful nations ruling in both North and South America, but they were not in communication with Europe or India.

Now, however, China knows of and communicates with England and America, and even dark Africa has constant visitors from all civilized nations, and to some extent is affected by us. Doubtless in the greater number of towns in Africa the white man and his doings are more or less like fables, but we with larger knowledge know that those fables rest upon the *fact* of our explorations there.

Judging, then, from the appearances in the affairs of men, we can conclude that now some great cycle is either ending or beginning, and that a number of minor circles are approaching each other.

At the same time with these social or material cycles, there are corresponding ones on a higher plane. One is quite easy to trace. It is the influence of Eastern metaphysics upon the Western mind. This higher cycle had been revolving for many years among the Orientals before we came within its power. Our falling under it is due to a physical cycle as a means. That one which is represented in the progress of trade, of science, of means for transportation. In this way the philosophical system of India and Tibet has begun

to affect us, and no man can calculate its course.

Taking into account the spiritual cycles all so intimately connected with Karma and reincarnation, one would be compelled to conclude that this cycle will not be slow or weak. For, if we in Europe and America are the reincarnations of the ancients who formulated this philosophy, we must certainly be powerfully affected upon having it presented to our notice in this life. And as the very air is getting filled with theosophical ideas, and children are growing up every day, the conclusion is irresistible that as the new generation grows up it will be more familiar with theosophical terms and propositions than we were in our youths. For in every direction now, children are likely to hear Karma, Reincarnation, Buddhism, Theosophy, and all these ideas mentioned or discussed. In the course of twenty-five years, then, we shall find here in the United States a large and intelligent body of people believing once more in the very doctrines which they, perhaps ages ago, helped to define and promulgate.

Why not, then, call one of our present cycles the cycle of the Theosophical Society? It began in 1875, and, aided by other cycles then beginning to run, it has attained some force. Whether it will revolve for any greater length of time depends upon its earnest members. Members who enter it for the purpose of acquiring ideas merely for their own use will not assist. Mere numbers do not do the work, but sincere, earnest, active, unselfish members will keep this cycle always revolving. The wisdom of those who set it in motion becomes apparent when we begin to grasp somewhat the meaning of cyclic law. The Society could have remained a mere idea and might have been kept entirely away from outward expression in organization. Then, indeed, ideas similar to those prevalent in our Society might have been heard of. But how? Garbled, and presented only here and there, so that perhaps not for half a century later would they be concretely

presented. A wise man, however, knows how to prepare for a tide of spiritual influence. But how could an everyday Russian or American know that 1875 was just the proper year in which to begin so as to be ready for the oncoming rush now fairly set in? To my mind the mere fact that we were organized with a definite platform in that year is strong evidence that the "heroic tribe of heroes" had a hand in our formation. Let us, then, not resist the cycle, nor, complaining of the task, sit down to rest. There is no time for rest. The weak, the despairing, and the doubting may have to wait, but men and women of action cannot stand still in the face of such an opportunity.

Arise, then, O Atlanteans, and repair the mischief done so long ago!

"Roll on, O Wheel, roll on and conquer;
Roll on forevermore!"

FOOTNOTES:

The Path

THE WHEEL OF THE LAW — *J. Campbell Ver Planck*

I.

When the great King of Glory saw
The heavenly treasure of The Wheel;
The living splendors of the Law
Which all its blazing spokes reveal,
 He stood, as one
 With awe struck dumb;
Then reverently bent his head
And, sprinkling it with water, said;
"Roll onward; oh, my Lord the Wheel!
My Lord! Go forth and overcome."

II.

Roll onward! Worlds shall come and go;
Races arise, and so depart;
The forces ebb, the forces flow
And Thou alone unchanging art.
 Within thy thrall
 The cycles fall
Till, in the dark and central Space
My Lord shall veil his glorious face.
"Roll onward; oh, my Lord the Wheel.
My Lord! Go forth and conquer all."

YOGA AND COMMON SENSE — *J. H. Connelly*

Simple, straightforward, and beguilingly easy as seems the knowledge presented in the "*Yoga Aphorisms*" of Patanjali — in their American version at least, — it is in solemn fact a pathway of intensest difficulty, indeed almost impracticability, for all but the exceptional few of Western students. Ages of deeply devotional habit, metaphysical training, and passive abandonment to such speculative reflection as Western minds are prone to deem the very antithesis of practicality, have given to the men of the Orient a capacity for such pursuits that we are hardly able to comprehend and certainly cannot emulate. To them, that capacity is an inheritance; for us, it must be a slow and painful acquisition. Our very understanding of the significance of the words employed in conveying that knowledge must be remodelled. "Concentration" does not at all mean, to us, what it does to the Hindu philosophers.

A wise man here and there among us — though knowing nothing of Yoga — has comprehended the advantage of "hindering the modifications of the thinking principle" as an essential to the successful pursuit of knowledge or application of mental energy in scientific or professional labors. Hence the study of mathematics and the game of chess have been highly recommended as means to that end in disciplining the minds of the young. But the purpose entertained, in such artificial development of the power of concentration of mind, has not gone beyond controlling application of the entire mental force to a particular subject — generally upon the material plane, — and those most proficient in this art have had no conception of the possibility of development, through it, of such psychic and spiritual powers as are contemplated by Patanjali, and would, in

all probability, view as extremely undesirable, and perhaps as suggestive of mental alienation, the state which that great philosopher designates as "meditation without a seed." The pressure and thrill of vigorous activity in the physical and mental life surrounding us, and of which we are necessarily a part, tends to cultivate in us a habit of diffuseness of thought, or at best an abnormally vivid perceptivity and a capacity for synchronous pursuit of entirely disconnected and different trains of thought, the very opposite of the "one pointedness" sought in the practice of Yoga. At the same time, if to the observation and comprehension of the mental and psychic results of such "concentration" as has been unconsciously accomplished by our thinkers, as much intelligent effort had been applied as has been bestowed upon the study of the infusoria or calculation of the laws of chance governing recurrence of "hands" at cards, we should generally have recognized, long ere this, how very diaphanous are those barriers to the unseen world through which some of us have been involuntarily stumbling, and perhaps would have sought light for a purposeful direction of our steps thitherward, such as Yoga affords. Ever since Luther, looking up from his deep pondering, saw the devil in his room and hurled an inkstand at him, opinions have been divided as to his action upon that occasion. The credulous devout have said, "he really saw the devil." It is true that beyond that point there has been a still further difference, good Protestants saying "the arch-enemy was properly repulsed," and good Catholics averring "it was a most ungracious reception of his friend," — but the actuality of the devil is denied by neither. Materialistic sceptics, however, who are in the majority, respond "Nonsense! A plague on both your houses! The man was bilious. The "bilious" theory is by far the most popular in these later days of "light and knowledge." Physicians, as a rule, upon that theory treat cases akin to Luther's coming within the range of their practice and — if possessed of a

fair degree of skill — are sufficiently successful to feel confirmed in the hypothesis. In so doing they are like one who, being annoyed by the persistent ticking of a clock, stops it, — by plugging up his ears. He ceases to hear, but the clock goes on ticking all the same. So they accomplish their end of putting a stop to the psychic impressions, at least while the patient is under treatment, and do not trouble themselves with reflection upon the possibility that they have simply interfered with the conditions through which demonstrations of super-sensual realities were practicable.

A case recently brought to my knowledge is happily illustrative of the psychic effects of unconsciously-applied "concentration", and as such I deem it worthy of mention. A gentleman who is a highly accomplished mathematician and accustomed to such intent application in mathematical operations, in conjunction with astronomical studies, that he at such times quite loses consciousness of his surroundings, became annoyed and finally alarmed by finding that from time to time, when he was so applying himself, pictures of persons, events, and landscapes — not reproductions from memory — forced themselves upon his consciousness and seemed to be vividly apparent to his corporeal sight. He also observed that, in what seemed to him an astounding way, he at times had clear perceptions of the contents of letters before he opened them, and knowledge — subsequently proved accurate — of the personalities of their writers, who were wholly strangers to him. He had sense enough to know that he was not bilious, and the alarming alternative presenting itself to him, by way of explanation, was that his mind was becoming affected. The thought of the astral light did not occur to him, but if it had he would probably have contemptuously dismissed it as a mere fantasy unworthy of serious consideration; for he is a very positive, hard-headed, big fellow, with not much respect for

things that are not susceptible of mathematical demonstration. He carried his trouble to his doctor. Most physicians, upon hearing a statement of his case, would have said: "You need rest and tonics: Take vigorous open-air exercise, abundance of highly nourishing food, and regular doses of iron: Let up altogether on mathematics, and pretty much on all mental effort of an engrossing nature, for a time: try to become as far as you possibly can a perfectly healthy animal, and you will be all right." That treatment would probably have speedily banished the pictures and the psychometric impressions, and he would always afterward, when the remembrance of the affection recurred to him, have congratulated himself upon his narrow escape from "losing his mind." But, as it happened, he went to a physician possessed of the unprofessional and iconoclastic habit of thinking; one who ventured to believe there were things affecting man that had not been taught in his school. And that man, having heard him, replied complacently: "Yes; I guess you are all right. Your mind is in no danger from that cause. I have kept the fact to myself, as a majority of people are asses and would probably think me crazy if it were known — which might interfere with my practice, — but I have had plenty of such experiences myself and happen to know a good deal about them." That physician, by years of "concentration" upon his favorite studies, had achieved the same results as had been attained by the mathematician, and was fortunately capable of recognizing the cause and the true character of the consequent state of being.

While there are undoubtedly many such cases, they are in the aggregate but an infinitely small minority in society, and can only be looked upon as mere indications of the possibilities attainable by even unconsciously-applied and consequently ill-directed "concentration;" and it may not be too pessimistic a view to take of the situation, to believe that few men entering upon this

practice — however purposefully and intelligently directed — are justified in expecting much more than such indications, mere outcroppings of the inexhaustible mine to be developed hereafter. For the vast majority of us, particularly such as have reached middle age and established mental habits that are, to say the least, not conducive to rigidly restricted abstract meditation on the radiations of the unthinkable and the like, there is little hope that we will achieve any appreciable success in real "concentration", on the Yoga basis, during our present incarnations. Happily, however, we know that we are not limited to our present earth-lives, and that every step of progress we take in this corporeal existence will be so much positive gain in our next. However long it may take us to reach the goal, our opportunities will not cease until it is attained, and, if our endeavor is earnest, each successive stage on the way will be easier and the advance proportionately greater than in that preceding. And the prize to be won is worth continuous effort through a long series of personal existences, being nothing less than enfranchisement of the Ego; liberation from "the wheel of life."

This reflection is a reminder of another difficulty confronting the Western student of Yoga. Although Patanjali does not so explicitly and emphatically as Sankaracharya or the Bhagavad-Gita enjoin renunciation of desire for the legitimate fruits of good works, yet that is here also expressed with sufficient clearness to be understood as a necessary requirement. But the Western mind, which is nothing if not practical according to its lights, says; "What is the use in doing anything if there is no object in view? and, if the object in view is desirable, how is it possible to intelligently work for its attainment without desiring it?" Comprehension of the sublimely paramount requirement of conformity to duty for its own sake, and unquestioning

acceptance of the truth that *all desire is hindrance*, must necessarily be stumbling blocks for most of us in a long time to come, but, like many another hard lesson, must be learned. That renunciation is one of the most important elements of Yoga, one that by its inherency of pure devotion elevates the soul beyond the psychic to the spiritual plane of consciousness.

"Hindering the modifications of the thinking principle," though far short of that Dispassion which is "indifference regarding all else than soul," will confer much greater power than the average man possesses — both in mental labors and such glimpses of another plane as have already been spoken of as attained by the mathematician and the physician, — and that is comparatively easy. One does not need to be very good, or even to have good ends in view, but only a strong will and capacity for sustained effort, to reach that point. Indeed, there are those who, by reason of their peculiar organization, without any particular will or much endeavor, may readily attain the astral plane through self-hypnotization, but their ability is by no means desirable. That plane abounds in real dangers for the untrained and unguided explorer, and can afford little real gratification to one in such a state, since his consciousness is only upon that plane and lacks the permanency of retention as knowledge attainable by the concentrated mind of the Yogin, which does not lose its continuity of consciousness upon any plane that he is able to reach.

It is to be hoped that no member of the Theosophical Society is cultivating strabismus by concentrated contemplation of the tip of his nose, in the vain hope of speedily attaining the superhuman powers spoken of in the third book of Patanjali; or fancying that the adumbrations of his own conceits in the luculent depths of some crystal ball are true visions on the planes of super-sensuous existence. Let us "make haste slowly" If in our present lives we learn to walk firmly in the first four "good levels" of the "eight-

fold path," we will do much; all, indeed, that we can reasonably expect. So far as we may, without illusive hopes and self-deceivings, let us follow the guidance of Patanjali, but with the ever-present remembrance that we are, in our present incarnation, only planting seed that Karma will develop into blossom and fruit in more propitious existences hereafter.

The Path

ZODIACAL CHRONOLOGY — G. E. W.

Among the Chinese a knowledge of astronomy existed at a very early date. The Shoo King or the Historical classic is justly regarded as being the most ancient authentic record of the annals of the Chinese Empire. This was compiled by Kung-fu-tze (Confucius) about the year 500 B.C. from materials which existed in the temples in his time. In the year 220 B.C. during the reign of Che-hwong-te, all the books in the empire were ordered to be burnt and the literary men buried alive, a proceeding which caused as great a loss to the Chinese civilization as the destruction of the Alexandrian library several centuries later caused to the West. Fortunately this sanguinary monarch was succeeded by one of a different character. In 178 B.C. Wan-te ascended the throne, and his first effort was to restore learning. As no copy of the Shoo King was to be found, he had recourse to an old man of ninety years, who in the reign of Che-hwong-te had been one of the chief literati, and who to escape death had put out his own eyes and feigned idiocy. (1) This sage had the Shoo King so firmly imprinted upon his memory that he was able to repeat it word for word. A scribe was appointed by the emperor to take it down, and thus the sacred book was recovered. A remarkable confirmation of the accuracy of Fuh-Sang occurred a few years later, when the residence of Confucius was pulled down and a copy of the Shoo King was found hidden in the wainscot, written in the ancient character, which copy was almost literally the same as the book then in use.

The Shoo King is an authentic history of China, commencing with the reign of Yaow, B.C. 2356. It is a sober, careful narration of events, and bears internal evidence of its truth. According to this, Yaow was a wise and meritorious sovereign. He appointed two

officers of state named He and Ho to superintend the calendar and astronomical instruments and make known the time and seasons. In the words of the text, "he then commanded He and Ho in reverent accordance with the motions of the expansive heavens to arrange by numbers and represent by instruments the revolutions of the sun and moon and stars with the lunar mansions, and then respectfully to communicate to the people the seasons adapted for labor. He then separately directed He's younger brother to reside at Yue, where he might respectfully hail the rising sun, adjust and arrange the eastern or vernal undertakings, notice the equalization of the days, and whether the star culminating at nightfall was the middle constellation of the Bird in order to hit the center of mid-spring. He further commanded He's third brother to reside at the southern border and to notice the extreme limit of the shadow when the days attain their utmost length and the star in the zenith is that denominated Fire, in order to fix the exact period of midsummer. He also commanded Ho's brother to dwell in the West and notice the equalization of the night, and see whether the culminating star was Emptiness (Beta in Aquarius) in order to adjust mid-autumn. And he directed Ho's third brother to dwell in the north and see whether, when the days were at the shortest, the culminating star was the White Tiger (Pleiades), in order to adjust mid-winter."

It has been estimated that the Bird (or Cor Hydra) really did appear on the horizon at night-fall of the vernal equinox in the time of Yaow, and that by the precession of the equinoxes something more than 4000 years would be required to bring this star into its present position, thus verifying the accuracy of the Shoo King. The close of Yaow's reign was B.C. 2254, which added to 1889 would be 4,143 years.

Without going into further details, of which a great deal more is

given in the Shoo King and other Chinese canons, sufficient has doubtless been given to prove that astronomy was actually in use at as early a date as 2350 B.C. The lunar zodiac of 28 houses is often referred to in the classics. (2)

It may also strike the investigating reader that these astronomical references in the Shoo King are given, not as something new at that epoch, but as something that was well understood, as already existing, and as a part of the ordinary business of the realm. If that be so, and we find astronomy already brought to some degree of perfection in China two thousand years before Christ, the question naturally arises, — how long previously was the human race in discovering the principles that govern the heavenly bodies? How many thousands of years were passed in acquiring even that degree of knowledge, in growing up from savagery and absolute ignorance to a condition of comparative civilization? These are questions which are necessarily embarrassing to the bigot. Formerly it was customary for religious writers to claim that Man was endowed with scientific knowledge by the Deity which made him, but the discovery and subsequent adoption by intelligent people generally of the law of evolution rendered that assertion no longer valid as an argument. The disposition now among the clergy is to ignore all chronology, or to treat it as a non-essential. They certainly will not discuss it with any degree of fairness or honesty, I will therefore only add, in passing, that the period comprised in the books of the Shoo-King, commencing B.C. 2,356 and running down to B.C. 769, covers the time to which is generally referred the Flood of the Hebrew Scriptures. Assuredly there is no mention of the Flood in the Shoo-King. And all passages which have been quoted by Christian writers as corroborating the Biblical narrative are certainly references to what were merely local inundations.

Hence there is only one conclusion: that the generally accepted

date of the Flood 2348 B.C. is erroneous. There is one other reflection that inevitably occurs to every thinking mind in this connection, and that is that, at this date, besides the presumably ante-diluvian nomadic tribes mentioned in the book of Genesis, there were vast empires, densely populated and brought to a fair degree of civilization, which appear to have already run their cycle of greatness and to have begun their decline. These nations were all proficient in many features of the science called astronomy, and certainly they all employed the symbolic figure of the heavens known to us as the Zodiac.

Hindu astronomy has found numerous commentators, mostly critical, in the West, but it can afford to wait in patience for a recognition of its just claims. Perhaps the best example of the Hindu Zodiac is that one found in the vault of the pagoda of Salsette (Elephanta), the construction of which dates back to 1192 B.C. The Zodiac itself, however, far antedates the temple, and although numerous attempts have been made by European astronomers to discredit its antiquity, none of these have yielded satisfactory proofs. There is no denying the stubborn fact that the summer solstice is marked as occurring in Virgo, which by easy calculation can be shown to have been the case nearly 20,000 years ago. (3)

From time immemorial the Brahmins have been acquainted with the precession of the equinoxes, and even calculated the rate at 54 seconds per annum, which was very close. And as for the Zodiac itself, they even gave the signs the same names which we now employ, and arranged them in exactly the same order. But that is no more surprising than the fact that the Hindus have the same period of the week that we have, divided into seven days, dedicated to the same planets, and in the same order as ours. When these awkward coincidences were discovered some years ago, it was claimed that the Hindus had copied from the Greeks,

and much ado was made over the claim that Alexander the Great had carried astronomy into India at the time of his invasion. Now, however, there are few Western scientists, even among the professed champions of orthodox religion, who care to repeat that threadbare tale. The lunar zodiac of 28 mansions undoubtedly gave rise to the division of time which we call the week, or one-quarter of the moon's journey, and the lunar zodiac is universally allowed to have preceded the solar zodiac by many ages. Although there may be no means of knowing just what tribe of the human family first produced the zodiac, it is a fair hypothesis to suppose that the Aryans were the inventors, as they and their descendants, even down to the Americans of the nineteenth century, have always shown the greatest versatility and capacity for progress. Let us now turn to Chaldea, where, according to Josephus, the wandering Sheik Abraham was instructed in astronomy and astrology, which he subsequently taught to the Egyptians. Here we are on even more solid ground. The labors of George Smith, Layard, Lenormant, Rawlinson, and others have opened up to us a long vista of history which was formerly classed as prehistorical. Following is the text of one of the creation tablets as given in the "Beginning of History:"

"Excellently he made the mansions, twelve in number, of the great gods.

He assigned them stars, and he established fixedly the stars of the great Bear.

He fixed the time of the year and determined its limits.

For each of the twelve months he fixed three stars

From the day when the year begins until its end.

He determined the mansions of the planets to define their orbits by a fixed time

So that none of them may fall short and none be turned aside.

He fixed the orbits of Bel and Ea near his own.
He opened also perfectly the great gates of heaven,
Making their bolts solid to right and to left:
And in his majesty he made there himself steps.
He made Nanna the moon to shine, he joined it to the night.
And he fixed for it the seasons of its nocturnal phases
which determine the day, etc."

The above tablet, according to a further inscription, was the property of Asser-bani-pal, the Sardanapalus of the Greeks, who reigned 670 B.C. It was undoubtedly a copy of an earlier inscription, probably Accadian, which descended along with other legends of the Creation, from the most remote times. It is sufficient to show that astronomical knowledge existed among the Chaldeans at a vastly ancient period. Many of these cuneiform inscriptions date back to more than 2,000 B.C., and they show a surprising degree of knowledge to have been common long previous to that period. In George Smith's "Chaldaean Account of Genesis" it is stated that, judging from the fragments discovered, there were in the Royal Library at Nineveh over 10,000 inscribed tablets, treating of almost every branch of knowledge existing at the time. These inscriptions, being traced upon clay tablets which were then baked, formed a record which outlasted all other methods except monumental, of perpetuating human thought. The letters could not be effaced by time, although, as unfortunately happened, the tablets were liable to be broken.

About 2,000 B.C., there was a famous monarch in Babylon called Sargon. He was a patron of learning as well as a conqueror. He established a great library at Agane, and caused a work in astronomy and astrology to be compiled which remained the standard authority on the subject up to the end of the Assyrian Empire. It was called the "Illumination of Bel," and was in 72 books. The Izbudor Legends, containing the story of the Flood and

the history of Nimrod, were probably written at least as early as 2,000 B.C. These legends were in 12 parts corresponding to the 12 signs of the Zodiac, and, in fact, are supposed to have described allegorically the passage of the sun through the Zodiac, just as the adventures of Osiris in Egypt and the labors of Hercules in Greece depicted the same idea. At any rate it is a natural question for us to ask; if the Chaldaeans 2,000 years B.C. were so enlightened and amassed such enormous libraries, how many thousand of years before that were they employed in laboriously achieving this literary eminence? Knowing how gradual were the changes in national thought in those earlier ages, we can hardly estimate too long a time for that process of self-evolution.

Among other interesting mementoes of long by-gone ages, there is preserved in the British Museum the fragment of a celestial planisphere whereon may be read "Month of arahshannan, star of the Scorpion." Not less positive evidence is the astronomical inscription which makes the "star of the Goat" preside over the month of tobit, and the "star of the Fishes of Ea" over the mouth of Addar. (4) Macrobius is authority for the statement that, according to the Chaldee astrologers, at the very day and hour when the motions of the heavenly bodies began the Sun was in Leo. Now, the very latest date when the position was attained at the vernal equinox was 10,000 years ago, and the entire circle of precession might have been travelled around many times previously for all that we know. Whether or not the chronology of the Chaldean priest Berosus was correct cannot of course be determined. He enumerates the following:

Antediluvian period	432,000	
	years.	
Reigns of Evechvos and Chomasbelos	5,100	"
First Chaldaean dynasty	34,080	"

Latan dynasties

1,758 "

472,938 "

The planisphere at Dendera, Egypt, has been much discussed, and many astronomical writers who should know better have claimed it as a comparatively recent production. Yet here is the translation of the inscription on the temple: "King Thothmes III has caused this building to be erected in memory of his mother, the goddess Hathor, the lady of An. The great ground plan was found in the city of An, *in Archaic drawing on a leather roll*, of the time of the successors of Horus; it was found in the interior of the brick wall on the south side of the temple in the reign of King Pepi."

It is evident from this inscription that the zodiacal architecture of the Dendera temple originated in the remotest antiquity, as it was only unearthed in the reign of King Pepi of the sixth dynasty, being at that time an object of antiquarian interest. Subsequently in 1600 B.C. Thothmes III restored the temple, and Ptolemy in 120 B.C. again restored it, and doubtless at that time introduced the Greek characters which have proved such a stumbling-block to modern investigators. (5) Regarding Egyptian history Dr. Brugsch, one of the most careful of commentators, says: "Only of late have the monuments, once again brought to light and awakened to new life, torn aside the deceitful veil revealing the truth, and furnishing the evidence, that in the times of classic antiquity the history of the ancient Egyptians was already an uncomprehended book like that of the seven seals. The "table of Kings" of Saggiarah and Abydus, both containing a selection of the Egyptian monarchs from the first Pharaoh, Mena, onwards, give us the most authoritative evidence, now no longer to be doubted, that the primeval ancestors of the Egyptian dynasties, the Pharaohs of Memphis, must be recognized as real historical personages, and that King Ramses II, about 1350 B.C. the Sesostris of the Greek

falulous history, was preceded by at least 76 legitimate sovereigns; that is to say, in other words, there were so many generations of men who lived during a space of time which was greater than the sum total of the years that have elapsed from Ramses II down to the present day." (6)

Nor does this include the dynasty of the gods which preceded the Kings. Previous to the reign of Menes, the Papyrus of Turin and other documents assign a period of 5613 years to twenty-three reigns, to which is prefixed a still further period of 13820 years during which the later Egyptian gods figured as rulers.

Gerald Massey says: "When first seen, Egypt is old and gray, at the head of a procession of life that is inimitably vast. It is as if it always had been. There it stands in awful ancientness, like it own pyramid in the dawn, its sphinx among the sands, or its palm amid the desert. (7)

Bunsen, in his great work, "Egypt's Place in Universal History," arrived at the conclusion that the earliest zodiac in use in Egypt was at the time when the sun was in Scorpio at the vernal equinox. By a simple computation we learn that that position was occupied by the sun about 17,000 years ago.

He also gives the following table as representing the first cycle of history:

Appearance of mankind in Central Asia	20,000 B.C.
Inorganic language formed	15,000 "
Catastrophe in Central Asia	10, 000 "
Separation of East and West Asia	5,000 "
Era of Babylonia Empire	3,784 "
Era of Uenes	3,059 "

Lest all the above evidence be rejected too hastily by those people

who are inflexible in their determination to record the year 4004 B.C. as the date of Creation, I will close this necessarily brief summary with a reference to the geological testimony of the antiquity of man. In an interview held only a few weeks ago with Sir Richard Owen, that distinguished scientist is reported to have said: "My own opinion is that the oldest evidence that bears upon the question of man's antiquity dates back his existence to the Tertiary period, 18,000 years ago. Weapons and the like have been found. There is no method of authoritatively interpreting what might seem to be older evidence. I have spared no pains to justify this opinion by personal inspection." We see here the effort of the scientific writer to be conservative in his statements. He regards the date of 18,000 years ago as settled by satisfactory evidence; beyond that there are many indications of man's existence, but the exact data are still wanting. Sir Charles Lyell in his "Antiquity of Man" hesitated to name any exact dates: he assigned his specimens of human bones and weapons to certain geological periods in the remote past. Yet in regard to the Natchez skeleton he admitted that it might lead to the conclusion that America was peopled more than a thousand centuries ago by the human race. In another work he remarked that "if all of the leading varieties of the human family sprang originally from a single pair, a much greater lapse of time was required for the slow and gradual formation of such races as the Caucasian, Mongolian, and Negro, than was embraced in any of the popular systems of chronology." (8)

Prof. Agassiz estimated the age of the skeletons found in the coral reef of Florida at 10,000 years. The skeleton beneath the fourth cypress forest of New Orleans must, it is said, have been buried there at least 50,000 years ago. (Dowling). Works of Egyptian art have been dug up from soils which must have been submerged 30,000 years ago, and bricks are found 60 feet deep under layers

which would require 14,000 years to cover; yet, says Lesley in his "Origin of Man," "these are mere modern matters in comparison with the diluvium of Abbeville. My own belief," he says, "is but the reflection of the growing sentiment in the whole geological world, that our race has been upon the earth for hundreds of thousands of years." In his chapter on "Early Races of Mankind," Edward Clodd estimates the rate of growth of the stalagmites in the Torquay caverns to be one foot in 44,640 years. As some of these are five feet in thickness, they would require 223,200 years to acquire their present state of formation. Yet underneath those, there is a layer of charred wood, called the "black band," which yielded hundreds of flint tools, a bone needle, burnt bones, remains of hyenas, oxen, bears, etc. There is the cave-earth with relics of a like kind, and then we come to the lower bed of stalagmite, which contained bones of the cave-bear only, and which is in some places more than double the thickness of the upper bed, and requiring at least 500,000 years for its formation. It is underneath these that in the solid mass called breccia there were found, mingled with immense numbers of teeth and bones of the cave-bear, Hint implements which without doubt were shaped by the hand and skill of man."

In the light of these astounding results of scientific investigation, the chronologies of Berosus and Syncellus in Chakkea, and of Simplicius, Laertius, and Capello in Egypt do not appear so mythical as they have been heretofore generally supposed.

And if we take an enlightened view of the subject, we must see that hundreds of thousands, if not millions, of years must have been required by the human race in the process of its evolution from the lower types to even the most ancient of civilized races, even if only to the point where a knowledge of the motions of the planets through the Zodiac was first acquired. And we know that many thousands of years have since then elapsed.

FOOTNOTES:

1. The Shoo King, Translated by W. H. Medhurst, Shanghae, 1846. ([return to text](#))

2. Note — It is fully established that the Chinese possessed a lunar year which they regulated by the solar year of $365\frac{1}{4}$ days (Ideler, 214). Regarding their mythology, the tradition is that Pu-an-Ku, the primeval man, came out of the mundane egg and lived 18,000 years. Then came the reigns of heaven, the reigns of earth, the reigns of man during myriads of years; and it is said that Sui-Shin, one of these old rulers, discovered fire, took observations of the stars, and investigated the five elements. (Bunsen, Vol. IV.) ([return to text](#))

3. Note — The process of calculation is as follows: We know that at the present day the sun is in the constellation Pisces at the spring equinox (March 21). As there are twelve signs of the Zodiac comprising the entire circumference of the heavens, and the sun makes the whole circuit in one year (viz: the earth goes round the sun in that time), it follows that he apparently passes through one sign each month. Hence he must be in the constellation Gemini at the summer solstice (June 21) corresponding to the sign Cancer, which is usually given in the almanacs. But in the Salsette Zodiac the sun is represented as being in Virgo, which is three signs distant, and, according to the rate of precession of one sign in 2156 years, there would be required 6,480 years to arrive at this position. ([return to text](#))

4. Cuneiform Inscriptions of Western Asia, Vol. III. ([return to text](#))

5. Note. — Sir William Dummond made a minute examination of the zodiac at Esne, Egypt, and calculated from the vernal equinox being between Gemini and Taurus, and therefore giving a

retrogression of three signs from their present places, that the age of this zodiac would be 6450 years from the time he wrote or 6528 years from the present time. ([return to text](#))

The Path

TO THOSE WHO SUFFER — *Jasper Niemand*

Last night I saw in dream, a man. He was weak, poor, an exile; his feet were torn, his wounds bled, his heart bled also. He cried out to heavens that were brass; they sent forth a dull reverberation, a sullen thunder, in reply. Around him was blackness; in his soul was a grim despair. This wretched, hunted, abandoned creature gazed wildly about him, finding nothing upon which Hope might rest, not even Death, for he knew he could not die before his time. All Life passed before him as he stood at bay, and mocked him in every tongue.

I heard a sigh as if some one beside myself grieved at this piteous spectacle and, turning, I saw One who seemed to be a guide of the country, and to whom the sufferer appeared to be known. Of him I made inquiry.

"Can no one help that man?"

"Oh yes. There is one who can help him."

"Who is that?"

"Himself!"

"Why does he not help himself, then?"

"Because he suffers so much. His suffering engages all his attention."

"What, then, is the cause of this great suffering?"

"Himself," said the guide, and smiled. This smile revealed a divine pity, more tender than tears. It opened my heart, so that I said:

"Teach me more of this strange Self which is at once his persecutor and his Savior."

"Nay," replied that guide; "thou shalt ask thyself that question, for that self is thee also, and every other man as well."

Then I awoke, understanding very well that we suffer from ourselves, And I could see, too, how each man was the sharer of the experience of others, for is there not that rare, tenuous aether in which every human sphere is suspended, feeling every current, every thought, every struggle of all its neighbors, of the whole vibrating mass, and translating every vibration into thoughts of its own quality in the wonderful mechanism of the human brain? Could I not see well how these thoughts, in their dynamic and formative energy, moulded that aether into pictures which lived, moving along currents that were baleful or beneficent in their action upon other spheres, according as they caught the tone of the mass, or failed to reach it? This tone was given by the Great Law Itself as the appointed chord to and by which all spheres should be regulated, in order to vibrate in unison, and, where any sphere failed to do so, vibrating at its own choice and out of time and tune, the whole aether was violently agitated, its current of light rendered turbid, its melody disturbed, destroyed. Well I saw that what was mainly required for the restoration of harmony was that each human sphere should accept without resistance the great currents of the Law as these impinged upon it. Of course at first, many of them would suffer internal confusion from this sudden change of motion; they would experience Pain, and even disintegration in some parts. Let those who had the courage so to suffer for the restoration of general harmony would soon find a new and higher form of organization crystallizing within themselves, just as the music of the master's bow causes the sand particles to thrill and to range themselves in ordered patterns of beauty, or as at the magnet's mysterious message iron filings range themselves in the same polarized lines as those of the human brain. Yes; what was imperatively needed was that every

human creature should stand still long enough to feel the currents of Law sweeping through his life, and then think with and obey them. In other words, the first step is Resignation.

In the year whose last sands slip by as I write, many cries have fallen upon my heart. That heart suffers like every other. This truth gives to each heart the divine right to understand all the rest. We hear the cry of the exile, and out of our own experience we respond to him. There are so many cases. There are the comrades who wish much to do and to be. They desire greatly to work in the Altruistic Cause. Karmic circumstance fetters them. So they devise plans whereby they may be made richer, or stronger in body, or more free from care and duty, or to gain more ample time in which to work. But that Karma which they themselves have made, and which is their only judge, refuses them these things. Then a deep sadness falls upon them with the failure of their plans; their energies are sapped and wasted by the thousand allies of doubt and despair. They forget that their plan is not needed. What is greatly needed is Harmony. This is only attained by submission. When we accept Karmic Environment and go calmly to work to take an inventory of ourselves as we now are, both externally and internally, in all our mental states and Ever Changing Motives, and then ask earnestly what such a man, in such a given condition of life, can do, just where he stands and as he is, to help Humanity, we do find an answer somewhere. We do find some work to our hand. It may be only in Right Thought that we can help, but in that dynamic power we work silently along with silent nature and the Great Vibration, whose melodies are real, are profound, and heard by the inner ear alone. In thus spreading the fluidic far reaching energies of harmonious thought upon the ambient aether, we create currents in accord with those of that Universal Mind whose grand totality is "Angels and Archangels and all the Powers of Heaven." Is this a

small power? Not so. By its means we change our whole mental environment; and that in turn will order future Karmic circumstance so that in the next life, or perhaps even in this, we shall be placed where we can help our fellows more. That help is their due and our privilege. But I think we place undue stress upon material help. The heart of man is at the bottom of every circumstance. It moulds every event, builds up all societies, determines the character of every age. Reforms that do not reach that strange and hidden heart are built upon the sand. Nothing can reach it but Right Thought, and it is in the gift of every person to turn that reconstructive power loose upon the wild turmoil of our time. This is the Light that stills the waves. Instead of chafing at our limitations and our failures, let us then accept them with harmonious serenity and use them as our instruments. Thus I know a sick person who uses the sympathy, evoked by that sickness as a means of gaining the attention of others to higher thoughts. I know a comrade in great poverty who realizes that this very poverty gains the ear of those likewise suffering, and of those too who think much of the material gifts they can bring, and so this brave soul drops a true brave word here and there on the thorny way. By acceptance of Karma we learn great and wonderful things, and a master has said: "Karma is the great teacher. It is the wisest of guides and the best."

This does not mean that we should sit down supinely and think only. It means that we should accept the inevitable in material life, and gather what spiritual riches we can find, in order to give them all away.

Then, again, come the sufferers through Love, the hearts that cling to the personal sweetness, the strong human ties, the thousand endearing tendencies often cemented by a long, though unknown, Past. Death, separation or Life, sweeps between. Or the Beloved suffer, and we cry out. We cry in ignorance. Our Love is

never lost. Every Universe makes for Love: that Love is Harmony, is Justice. Not one vibration of it is ever lost. Out of our deep spiritual nature this yearning Love comes pouring, an eternal fountain. Our personal mind translates its meaning in many perverse ways. We take it to mean all kinds of personal desire or hope. That we belie our nature is evident because, when these desires are gratified, the heart is never content with that, but goes on to new desire. It is the sacred truth that, in the very ground of our natures, a spark burns ever in the vibration of the highest Love. All our small personal affections are simply the straying tendrils of this one great root, and ought to draw us inward to it. Our Love rests in the highest bond. We do really desire the highest fulfilment of the loved one's Being. We can, if we will and if we seek, find ourselves consciously reaching up in hope to the perfection of those beloved natures. It is really the Higher Self, the great Ideal One, that we love. The man or woman, Its faint reflection, is there to lead us to this blessed Truth. Alas! We find self far too much in so called love, but I believe, — in all conscience I can attest it — that once we get a glimpse of this truth, that our inner natures yearn to help our Beloved to greater heights, we will make a mighty effort to continue in that higher, holier hope. From thus loving one, to loving all, we proceed gradually through the pure overflow, or the natural gravitation of Love, until we know nothing of Separation. For all starved natures there is then this hope. We are not to love less, but to love more. To expand to fuller conceptions; to realize deeper meanings; to find within the self of flesh and sense, and all the selfish corruption of our natures, these germs of living truths; these meanings we have indeed perverted, but which we are powerless to destroy, because they are germs of that Truth which is One and indestructible, the "Law which makes for Righteousness", the Harmony which is Love.

Those who suffer will find at the very root of their suffering, no matter of what kind, some revolt against this Eternal Law of Love. We have only to turn round and obey it. We have only to cease desiring to put it to personal use, or to grind personal comforts out of it, and all its blessings and powers are ours. It lives in every heart; it gilds and glorifies every atom; it "stands at the door and knocks;" it is Life, it is Light, it is Peace, for it is Eros, the one Ray, it is universal, divine Love. Oh! My suffering comrades; accept it, embrace it! Live by it, at any cost; die by it if needs be, for so only shall we find Life eternal, only by receiving and acknowledging the Law: only by living in the thought of all beings, in harmony with all and with Love.

The Path

VELOCITY AND MOTION — *E. A. Williams*

The modern student of physics, when asked what is meant by velocity, answers from his prompt memory, "Velocity is space divided by time." The answer is quite characteristic of the present age of science. "Take that to the calculators", was the contemptuous reply which Faraday made when somebody proposed a question for him to solve which called for no discernment of any hidden principle but was merely one of quantitative determination. The practical aspect, the quantitative aspect, the material aspect, — that is what the world is now chiefly concerned with. But to come to a right way of looking at things is an exercise in which this age does not show much talent; it has not quite been able to realise the value of so doing. Perhaps in its future development science will become a little more metaphysical and a little less materialistic. Surely the purely physical mania has fairly had its turn by this time; it has long been in possession, and might now well give place to something better. It is time for people to recognize that what is abstract and invisible is not therefore unreal, but on the contrary a degree more real and substantial than what is outward and palpable.

The teaching given to a science student whence springs the reply cited above is of a simple kind, and such as may be explained to all comers in a few words. Velocity, so termed in technical phraseology, is the same thing as speed, and is said to be the relation between *space* or distance traversed by the moving object and the *time* occupied in so doing. The relation between *one mile* of space or distance and *one minute* of time is accordingly the velocity of an express train going, as they say, "a mile a minute". Sixty miles an hour would be just the same ratio otherwise expressed. But the express train making ahead at full

speed is not the only type of motion and velocity. There the speed is regular, uniform, and unvarying; at least it is so as far as we can perceive. But the motion of a stone dropped from the roof of a house has quite a different character; in this case the motion is not uniform and unvarying, and the only element of regularity in the movement is the way in which it becomes continually *faster and faster*. This being so, to ask "What was the speed or velocity of that falling stone?" would be an unreasonable question unless some particular instant were denoted to which the question should apply. It would, however, be quite an intelligent question if one asked, "At what velocity was it moving *at the instant when it struck the ground?*"

Now let us reflect a little upon the foregoing considerations. An instant is to time exactly what a geometrical point is to space; indeed an instant is often called a *point of time*. Like the geometrical point, it has "no parts or magnitude"; all notion of *how long* is entirely foreign to it. How is it, then, that we can speak of the velocity of a falling stone *at that instant* when it touches the ground? Assuredly, *at any instant*, no actual motion whatever takes place; no space is passed through, neither is any time occupied. The difficulty before us is this. The scientist declares that velocity is "the space divided by the time", and yet here is a case in which we are forced to recognize velocity though neither space nor time (in that sense) enters into the question at all. This is what Dr. O. Wendell Holmes called "sticking a fact" into the lecturer; and it is a very sharp-pointed fact too. It shows that amid the enlightenment of this age (to the wise it is notorious as the Dark Age) there exists some want of reflection among scientists on the subject of velocity and motion; it shows that the philosophy of the modern scientist is of a sort that does not go to the bottom of things.

There are some persons, generally of the number of the learned

whose heads are "replete with thoughts of other men", who have great difficulty in grasping this idea of an absolute instant, simple as it is in itself. These people give one a great deal of trouble in discussion; they insist on regarding an instant as an "infinitesimally short *period*" of time. It is as bad as if they told the geometer that his mathematical point was not an element of *no* magnitude, but an element of *infinitesimal* magnitude. But in truth a geometrical point is absolutely devoid of magnitude, and similarly an instant is not a "period" of any sort or description. To sum up this parenthesis, an instant is not anything *during* which either motion or any other change can occur. "*During* an instant" would be a self-contradictory phrase; an instant does not endure.

Let us now pause to review the position and examine the conclusions with which we are confronted. From the case of the falling stone it is made evident that a moving object has a velocity *at* an instant (when such elements as distance traversed and time occupied can have no existence); and also, in this example at least, it is found that velocity cannot be conceived of at all *except* as existing at this or that instant. For the velocity of the stone changes within the smallest fraction of a second; whatever it is at one moment, it will not be that at any succeeding moment. What, then, is to be the next step in our reasoning? If it has been established that velocity does exist at an instant, shall we imagine that it has a different character in the case of the express train maintaining an even speed? Or would it not be much reasonable to hold that velocity was the same sort of thing in all moving objects, whether their movement was uniform or accelerated? Surely nobody can hesitate to accept this latter view together with its consequence, *viz.*, that velocity is *not* "the space divided by the time", but has an existence where these two elements are altogether excluded. In other words, velocity is an inherent condition of the moving object itself, and is not in any sense a

dependency of motion. Indeed, this is borne out by the use of language; for we discuss the velocity *of a bullet* (not that of a bullet's *motion*.)

Here perhaps some more subtle representative of the age will tell us that he would never make the assertion that velocity was identically the ratio of the space traversed to the time occupied; he would prefer to say that velocity was *measured by* this ratio. That certainly would be an accurate statement. But it leaves an empty gap; because now we have no prescribed answer (for the student to learn by heart) upon the question, What *is* velocity in itself? Do examiners never ask the question, "What is velocity?" Or do professors never explain how such a question should be answered? It is very odd if they do not, because velocity is such an elementary topic; and it is the boast of the really able professor, as opposed to the charlatan, that he thoroughly understands the very roots of his subject, and lays the foundations of knowledge in his pupils so that the vast superstructure shall not totter.

Another scientist might say, perhaps, that velocity was a quality, attribute, or property of motion; for motion may be quick or slow.

Would anyone have the courage to say that velocity was the *principle* of motion, the *cause* of motion? Will anyone dare to say that velocity is something internal and hidden, of which motion is the outward and visible sign? If present science does not say so, peradventure future science, more metaphysical than its predecessor, will have the boldness.

Physical science, emphatically physical and non-metaphysical, cares too little for that *INSTANT* in which no change ensues, but in which some thing *is* and *tends*. Paradoxical as the statement may seem, that instant is a better realisation of eternity than the most gigantic sweep's-brush of centuries jointed together within the

imagination. But apart from this, it is the right aim of science to pass from effects to the recognition of their hidden causes; and the scientist who aspires to a higher wisdom should make a study of an instant, to find in it what is causal. A wonderful theme, in truth, is that instant, planted in the midst of time and yet itself no portion of time, a zero containing in itself the principle and cause of what passes in time. Assuredly we have not yet come to an end of man's store of meditable matter.

The Path

OF STUDYING THEOSOPHY — *William Brehon*

It is often asked: How should I or my friend study theosophy?

In beginning this study a series of "don'ts" should first engage the student's attention. Don't imagine that you know everything, or that any man in scientific circles has uttered the last word on any subject; don't suppose that the present day is the best, or that the ancients were superstitious, with no knowledge of natural laws. Don't forget that arts, sciences, and metaphysics did not have their rise with European civilization; and don't forget that the influence of Socrates, Plato, and Aristotle of ancient Greece is still imposed upon the modern mind. Don't think that our astronomers would have made anything but a mess of the zodiac if the old Chaldeans had not left us the one we use. Don't forget that it is easy to prove that civilization of the highest order has periodically rolled around this globe and left traces great and small behind. Don't confuse Buddhism with Brahmanism, or imagine that the Hindus are Buddhists; and don't take the word of English or German Sanskrit scholars in explanation of the writings and scriptures of eastern nations whose thoughts are as foreign in their form to ours as our countries are. One should first be prepared to examine with a clear and unbiased mind.

But suppose the enquirer is disposed at the outset to take the word of theosophical writers, then caution is just as necessary, for theosophical literature does not bear the stamp of authority. We should all be able to give a reason for the hope that is within us, and we cannot do that if we have swallowed without study the words of others.

But what is study? It is not the mere reading of books, but rather long, earnest, careful thought upon that which we have taken up.

If a student accepts reincarnation and karma as true doctrines, the work is but begun. Many theosophists accept doctrines of that name, but are not able to say what it is they have accepted. They do not pause to find out what reincarnates, or how, when, or why karma has its effects, and often do not know what the word means. Some at first think that when they die they will reincarnate, without reflecting that it is the lower personal I they mean, which cannot be born again in a body. Others think that karma is — well, karma, with no clear idea of classes of karma, or whether or not it is punishment or reward or both. Hence a careful learning from one or two books of the statement of the doctrines, and then a more careful study of them, are absolutely necessary.

There is too little of such right study among theosophists, and too much reading of new books. No student can tell whether Mr. Sinnett in *Esoteric Buddhism* writes reasonably unless his book is learned and not merely skimmed. Although his style is clear, the matter treated is difficult, needing firm lodgment in the mind, followed by careful thought. A proper use of his book, *The Secret Doctrine*, *The Key to Theosophy*, and all other matter written upon the constitution of man, leads to an acquaintance with the doctrines as to the being most concerned, and only when that acquaintance is obtained is one fitted to understand the rest. Another branch of study is that pursued by natural devotees, those who desire to enter into the work itself for the good of humanity. Those should study all branches of theosophical literature all the harder, in order to be able to clearly explain it to others, for a weak reasoner or, an apparently credulous believer has not much weight with others.

Western theosophists need patience, determination, discrimination, and memory, if they ever intend to seize and hold the attention of the world for the doctrines they disseminate.

The Path

CULTURE OF CONCENTRATION: II — *Ramatirtha*

PART II.

[PART I APPEARED IN JULY, 1888, PATH, p. 116.]

It is now over one year since I sent in Part I to the Editor of the PATH. Since then I have heard that some students expressed a desire to read Part II, forgetting to observe, perhaps, that the first paper was complete in itself, and, if studied, with earnest practice to follow, would have led to beneficial results. It has not been necessary before to write No. II; and to the various students who so soon after reading the first have asked for the second I plainly say that you have been led away because a sequel was indicated and you cannot have studied the first; furthermore I much doubt if you will be benefited by this any more than by the other.

Success in the culture of concentration is not for him who sporadically attempts it. It is a thing that flows from "a firm position assumed with regard to the end in view, and unremittingly kept up." Nineteenth Century students are too apt to think that success in occultism can be reached as one attains success in school or college, by reading and learning *printed words*. A complete knowledge of all that was ever written upon concentration will confer no power in the practice of that about which I treat. Mere book knowledge is derided in this school as much as it is by the clodhopper; not that I think book knowledge is to be avoided, but that sort of acquisition without the concentration is as useless as faith without works. It is called in some places, I believe, "mere eye-knowledge." Such indeed it is; and such is the sort of culture most respected in these degenerate times.

In starting these papers the true practice was called Raj Yoga. It discards those physical motions, postures, and recipes relating solely to the present personality, and directs the student to virtue and altruism as the bases from which to start. This is more often rejected than accepted. So much has been said during the last 1800 years about Rosicrucians, Egyptian Adepts, Secret Masters, Kaballah, and wonderful magical books that students without a guide, attracted to these subjects, ask for information and seek in vain for the entrance to the temple of the learning they crave, because they say that virtue's rules are meant for babes and Sunday-schools, but not for them. And, in consequence, we find hundreds of books in all the languages of Europe dealing with rites, ceremonies, invocations, and other obscurities that will lead to nothing but loss of time and money. But few of these authors had anything save "mere eye-knowledge". 'Tis true they have sometimes a reputation, but it is only that accorded to an ignoramus by those who are more ignorant. The so-called great man, knowing how fatal to reputation it would be to tell how really small is his practical knowledge, prates about "projections and elementals", "philosopher's stone and elixir", but discreetly keeps from his readers the paucity of his acquirements and the insecurity of his own mental state. Let the seeker know, once for all, that the virtues cannot be discarded nor ignored; they must be made a part of our life, and their philosophical basis must be understood.

But it may be asked, if in the culture of concentration we will succeed alone by the practice of virtue. The answer is No, not in this life, but perhaps one day in a later life. The life of virtue accumulates much merit; that merit will at some time cause one to be born in a wise family where the real practice of concentration may perchance begin; or it may cause one to be born in a family of devotees or those far advanced on the Path, as

said in Bhagavad-Gita. But such a birth as this, says Krishna, is difficult to obtain; hence the virtues alone will not always lead in short space to our object.

We must make up our minds to a life of constant work upon this line. The lazy ones or they who ask for pleasure may as well give it up at the threshold and be content with the pleasant paths marked out for those who "fear God and honor the King." Immense fields of investigation and experiment have to be traversed; dangers unthought of and forces unknown are to be met; and all must be overcome, for in this battle *there is no quarter asked or given*. Great stores of knowledge must be found and *seized*. The kingdom of heaven is not to be had for the asking; it must *be taken by violence*. And the only way in which we can gain the will and the power to thus seize and hold is by acquiring the virtues on the one hand, and minutely understanding ourselves on the other. Some day we will begin to see why not one passing thought may be ignored, not one flitting impression missed. This we can perceive is no simple task. It is a gigantic work. Did you ever reflect that the mere passing sight of a picture, or a single word instantly lost in the rush of the world, may be basis for a dream that will poison the night and react upon the brain next day. Each one must be examined. If you have not noticed it, then when you awake next day you have to go back in memory over every word and circumstance of the preceding day, seeking, like the astronomer through space, for the lost one. And, similarly, without such a special reason, you must learn to be able to go thus backward into your days so as to go over carefully and in detail all that happened, all that you permitted to pass through the brain. Is this an easy matter?

But let us for a moment return to the sham adepts, the reputed Masters, whether they were well-intentioned or the reverse. Take Eliphas Levi who wrote so many good things, and whose books

contain such masses of mysterious hints. Out of his own mouth he convicts himself. With great show he tells of the raising of the shade of Apollonius. Weeks beforehand all sorts of preparations had to be made, and on the momentous night absurd necromantic performances were gone through. What was the result? Why only that the so-called shade appeared for a few moments, and Levi says they never attempted it again. Any good medium of these days could call up the shade of Apollonius without preparation, and if Levi were an Adept he could have seen the dead quite as easily as he turned to his picture in a book. By these sporadic attempts and outside preparations, nothing is really gained but harm to those who thus indulge. And the foolish dabbling by American theosophists with practices of the Yogis of India that are not one-eighth understood and which in themselves are inadequate, will lead to much worse results than the apochryphal attempt recorded by Eliphas Levi.

As we have to deal with the Western mind now ours, all unused as it is to these things and over-burdened with false training and falser logic, we must begin where we are, we must examine our present possessions and grow to know our own present powers and mental machinery. This done, we may proceed to see ourselves in the way that shall bring about the best result.

The Path

OUR SUN AND THE TRUE SUN — *Mattanda*

Considering how little is known of the sun of this system, it is not to be wondered at that still more is this the case respecting the true sun. Science laughs, of course, at the mystic's "true sun," for it sees none other than the one shining in the heavens. This at least they pretend to know, for it rises and sets each day and can be to some extent observed during eclipses or when spots appear on it, and with their usual audacity the 19th century astronomers learnedly declare all that they do not know about the mighty orb, relegating the ancient ideas on the subject to the limbo of superstitious nonsense. It is not to the modern schools that I would go for information on this subject, because in my opinion, however presumptuous it may seem, they really know but little about either Moon or Sun.

A dispute is still going on as to whether the sun *throws out heat*. (1) On one hand it is asserted that he does; on the other, that the heat is produced by the combination of the forces from the sun with the elements on and around this earth. The latter would seem to the mystic to be true. Another difference of opinion exists among modern astronomers as to the distance of the sun from us, leaving the poor mystic to figure it out as he may. Even on the subject of spots on our great luminary, everything nowadays is mere conjecture. It is accepted hypothetically — and no more — that there may be a connection between those spots and electrical disturbances here. Some years ago Nasmyth discovered (2) objects (or changes) on the photosphere consisting of what he called "willow leaves," 1000 miles long and 300 miles broad, that constantly moved and appeared to be in shoals. But what are these? No one knows. Science can do no more about informing us than any keen sighted ordinary mortal using a fine telescope. And

as to whether these "willow leaves" have any connection with the spots or themselves have relation to earthly disturbances, there is equal silence. To sum it up, then, our scientific men know but little about the visible sun. A few things they must some day find out, such as other effects from sun spots than mere electrical disturbances; the real meaning of sun spots; the meaning of the peculiar color of the sun sometimes observed — Such as that a few years ago attributed to "cosmic dust", for the want of a better explanation to veil ignorance; and a few other matters of interest.

But we say that this sun they have been examining is not the real one, nor any sun at all, but is only an appearance, a mere reflection to us of part of the true sun. And, indeed, we have some support even from modern astronomers, for they have begun to admit that our entire solar system is in motion around some far off undetermined centre which is so powerful that it attracts our solar orb and thus draws his entire system with him. But they know not if this unknown centre be a sun. They conjecture that it is, but will only assert that it is a centre of attraction for us. Now it may be simply a larger body, *or a stronger centre of energy*, than the sun, and in turn quite possibly it may be itself revolving about a still more distant and more powerful centre. In this matter the modern telescope and power of calculation are quickly baffled, because they very soon arrive at a limit in the starry field where, all being apparently stationary because of immense distances, there are no means of arriving at a conclusion. All these distant orbs may be in motion, and therefore it cannot be said where the true centre is. Your astronomer will admit that even the constellations in the Zodiac, immovable during ages past, may in truth be moving, but at such enormous and awful distances that for us they appear not to move.

My object, however, is to draw your attention to the doctrine that there is a true sun of which the visible one is a reflection, and that

in this true one there is spiritual energy and help, just as our own beloved luminary contains the spring of our physical life and motion. It is useless now to speculate on which of the many stars in the heavens may be the real sun, for I opine it is none of them, since, as I said before, a physical centre of attraction for this system may only be a grade higher than ours, and the servant of a centre still farther removed. We must work in our several degrees, and it is not in our power to overleap one step in the chain that leads to the highest. Our own sun is, then, for us the symbol of the true one he reflects, and by meditating on "the most excellent light of the true sun" we can gain help in our struggle to assist humanity. Our physical sun is for physics, not metaphysics, while that true one shines down within us. The orb of day guards and sustains the animal economy; the true sun shines into us through its medium within our nature. We should then direct our thought to that true sun and prepare the ground within for its influence, just as we do the ground without for the vivifying rays of the King of Day.

FOOTNOTES:

1. Among great scientists such as Newton, Secchi, Pouillet, Spaeren, Rosetti, and others, there is a difference as to estimated heat of the sun shown by their figures, for Pouillet says 1,461° and Waterston 9,000,000° or a variation of 8,998,600°! ([return to text](#))

IS KARMA ONLY PUNISHMENT? — *Hadji Erinn*

The following query has been received from H. M. H.: "In August PATH Hadji Erinn, in reply to the above question, stated that 'those who have wealth, and the happy mother seeing all her children respected and virtuous, are favorites of Karma'. I and others believe that these apparent favors are only punishment or obstacles, and others think that the terms *punishment* and *reward* should not be used."

I cannot agree with this view, nor with the suggestion that punishment and reward should not be used as terms. It is easy to reduce every thing to a primordial basis when one may say that all is the absolute. But such is only the method of those who *affirm* and *deny*. They say there is no evil, there is no death; all is good, all is life. In this way we are reduced to absurdities, inasmuch as we then have no terms to designate very evident things and conditions. As well say there is no *gold* and no *iron*, because both are equally *matter*. While we continue to be human beings we must use terms that shall express our conscious perception of ideas and things.

It is therefore quite proper to say that an unhappy or miserably circumstanced person is undergoing punishment, and that the wealthy or happy person is having reward. Otherwise there is no sense in our doctrine.

The misunderstanding shown in the question is due to inaccurate thinking upon the subject of Karma. One branch of this law deals with the vicissitudes of life, with the differing states of men. One man has opportunity and happiness, another meets only the opposite. Why is this? It is because each state is the exact result bound to come from his having disturbed or preserved the

harmony of nature. The person given wealth in this life is he who in the preceding incarnation suffered from its absence or had been deprived of it unjustly. What are we to call it but reward? If we say *compensation*, we express exactly the same idea. And we cannot get the world to adopt verbosity in speech so as to say, "All this is due to that man's having preserved the cosmic harmony."

The point really in the questioner's mind is, in fact, quite different from the one expressed; he has mistaken one for the other; he is thinking of the fact so frequently obtruded before us that the man who has the opportunity of wealth or power oft misuses it and becomes selfish or tyrannous. But this does not alter the conclusion that he is having his reward. Karma will take care of him; and if he does not use the opportunity for the good of his fellows, or if he does evil to them, he will have punishment upon coming back again to earth. It is true enough, as Jesus said, that "it is difficult for the rich man to enter heaven," but there are other possessions of the man besides wealth that constitute greater obstacles to development, and they are punishments and may coexist in the life of one man with the reward of wealth or the like. I mean the obstruction and hindrance found in stupidity, or natural baseness, or in physical sensual tendencies. These are more likely to keep him from progress and ultimate salvation than all the wealth or good luck that any one person ever enjoyed.

In such cases — and they are not a few — we see Karmic reward upon the outer material plane in the wealth and propitious arrangement of life, and on the inner character the punishment of being unable or unfit through many defects of mind or nature. This picture can be reversed with equal propriety. I doubt if the questioner has devoted his mind to analyzing the subject in this manner.

Every man, however, is endowed with conscience and the power to use his life, whatever its form or circumstance, in the proper way, so as to extract from it all the good for himself and his fellows that his limitations of character will permit. It is his duty so to do, and as he neglects or obeys, so will be his subsequent *punishment or reward*.

There may also be another sort of wealth than mere gold, another sort of power than position in politics or society. The powerful, wide, all-embracing, rapidly-acting brain stored with knowledge is a vast possession which one man may enjoy. He can use it properly or improperly. It may lead him to excesses, to vileness, to the very opposite of all that is good. It is his reward for a long past life of stupidity followed by others of noble deeds and thoughts. What will the questioner do with this? The possessor thus given a reward may misuse it so as to turn it, next time he is born, into a source of punishment. We are thus continually fitting our arrows to the bow, drawing them back hard to the ear, and shooting them forth from us. When we enter the field of earth-life again, they will surely strike us or our enemies of human shape or the circumstances which otherwise would hurt us. It is not the arrow or the bow that counts, but the motive and the thought with which the missile is shot.

The Path

REINCARNATION AND MEMORY: V — *Harij*

(*Concluded.*)

"Time is but the space between our memories; as soon as we cease to perceive this space, time has disappeared. The whole life of an old man may appear to him no longer than an hour, or less still; and as soon as time is but a moment to us, we have entered upon eternity. Time is, then, the successive dispersion of being."

— (*Auriet's Journal page 2*).

From birth to prime the faculties of man unfold; from prime to old age the faculties wane. In the natural order this unfolding and waning are really a transmutation. In early life the sensuous sphere predominates, and both the intellectual and spiritual are in abeyance. In adult and more advanced life the sensuous sphere wanes and the higher faculties take control. This is the natural order, and it is seldom seen, for there are few natural lives. The follies of youth are more often the harvest of age, dead-sea apples in place of the ripe fruit of the tree of life, while repentance and remorse embalm the living corpse of a wasted life and slighted opportunities. These are unnatural lives, and the real faculties of man are never thus realized. Mediocrity — the slumber of the soul — is, at best, the result of unnatural lives, and old age even, when reached, is miserable beyond description. What is called talent is usually a partial and unsymmetrical awakening of the soul from the dominion of the senses. Talent does with ease that which mediocrity accomplishes with great difficulty if at all. In the ordinary life of the world nothing short of real genius carries man out of himself and suggests the real nature of his being. Genius does with ease that of which mediocrity never even

dreams, and of which no mere talent is capable. Genius dreams of the true, and gets glimpses of the essential being. Mediocrity follows; talent commands; genius knows and seldom stops to reason; it is beyond reason. "Time is the supreme illusion." "To escape by the ecstasy of inward vision from the whirlwind of time, to see oneself *sub specie eterni*, is the word of command of all the great religions of the higher races."

Mediocrity has little of either reminiscence or intuition, but may develop physical memory very largely. Talent has flashes of intuition, but is rather bias than illumination, a withdrawal of perceptions and faculties from other realms, to concentrate them on one sphere. Genius is another name for reminiscence, an ecstasy of inward vision, the essence of many memories, the synthesis of former experiences.

Physical memory is the record of passing events, but it is not the preserver of experience. Physical memory is but the outer husk of experience. Experience relates to feeling and consciousness; memory to time and sense. Memory relates solely to the past, to that which was, or rather seemed, and is not; and is, at best, the record of an illusion. Past, present, and future, — what illusions! The past is dead, the future is not, and these constitute the present as a fleeting unreality. Never until consciousness is severed from time and liberated from sense, does man realize that he *is*. In the outer sphere of man's life his faculties are related to the panorama of events, and these he perceives only in detail and in succession. In the inner sphere of man's being he knows *all at once*. This is true even in dreams, where the events of years pass in review in a moment of time. Memory grasps at the days and attempts to hold the slow-plodding years. Reminiscence has dissolved all these in the waters of oblivion, only to preserve their essence as motors, intuitions for future guidance. These are but logical deductions from our present experience, without

assuming any future life. If, however, in the present life man is able to free his consciousness from the illusions of sense and time, he comes to know of essential being, and only then does he begin to correctly interpret the things of time.

All that we know of the brain shows it to be the organ of physical memory, and shows, moreover, that any change of its structure or perversion of its function impairs or obliterates memory. Cases of disease have been known from which individuals have recovered with complete oblivion of nearly all the past. Adults previously well-educated have forgotten even how to read, and have had to begin all over again like children. In some cases there has been a slow and gradual recovery of the past. In others there has been little recovered of the past. The normal function of the brain has been arrested in the middle of a sentence, memory has been thus entirely suspended, and insanity or imbecility has supervened; after the lapse of months memory and consciousness have returned, perhaps from a surgical operation, and the broken sentence has been completed. Similar cases often occur in the annals of surgery.

The forgetfulness of old age is proverbial. The tablets of memory first refuse to record new impressions. The things of yesterday are forgotten, and the memories of youth return, mere glimpses of a summer day or a night of sorrow. These also in turn disappear, and insensibility and imbecility often supervene. The man again becomes a helpless child leaning toward the great mother's breast, longing for rest and sleep.

If this is so often the record of the life of man whom "three score years and ten" reduce to imbecility, and with memory already departed, how can it be possible that, when the brain is decomposed and resolved back to its original dust, it should still perform a function which it so often loses before death? If

memory fades as the brain decays, and consciousness displays itself on an entirely different plane after death, and for a thousand years, as we count time, lives a subjective life, the former records of memory are not only barred by "death," but even the bias given to consciousness must fade also. If, therefore, reincarnation should occur, there would not be the least reason to suppose that the memory that derived its form and experience from the contour and development of the brain and the circumstances of its environment, and that has been decomposed a thousand years previously, should adhere to the ego now embodied in another race and time with a new brain and a renewed consciousness. So far as memory is concerned, this is a new creation; and so far as individual consciousness is concerned, the former personality has been annihilated.

What we call memory, therefore, as a function of the organized brain perishes with the body.

If memory is the temporary record of passing events, and both the events and the record belong to time, is there not something in man that records memory itself, thus bridging the chasm of "death" and anchoring every experience of the soul to the real *ego*? This is precisely the nature of experience of which memory is the matter side, related to sense and time, and of which reminiscence is the spirit side related to essential being. And here again it is unnecessary to assume a life beyond the present, for our present experiences prove this to be so. It is but the subjective side of our present every-day experiences, and belongs to our *mode of consciousness*. In order to realize this in any large degree, it is only necessary to withdraw our consciousness gradually and persistently from the illusion of the senses to the ecstasy of inward vision, that is to gradually elevate the plane of consciousness. Man may thus come to *know* the super-sensitive world precisely as he knows the things of sense and time, viz. by

experience. He may furthermore realize that the latter are pure illusions, while the former are the only realities. The evidence of things unseen will end thus in fruition; the unseen and the unknown become the things seen and known. Human experience on this superior plane is also fortified by analogy and by the orderly processes of nature. If we assume the continued existence of the soul (*ego*), we have also to assume the continuance of its *method of knowing*, else we annul consciousness itself. The consciousness of the ego and its real method of knowing, viz. by experience, are all that enable us to predicate continued existence. If consciousness is now displayed on both the objective plane through the medium of the senses, and on the subjective plane through intuition, reminiscence and the like, then the ego having already experience on both planes in unequal degree, often almost exclusively here on the lower plane, may display itself almost exclusively on the subjective plane, and this often occurs in trance and related conditions. This is the key to the higher consciousness and the diviner life.

One third of our present life is practically divested of memory. When the plane of consciousness is shifted in sleep, memory reveals its true character as belonging to matter and time, and as in no sense essential to existence, experience, or consciousness.

Man's immortality is therefore within his grasp, his destiny is within his own hands, and he may recover the substance of all his past while he realizes his birth-right even now.

"He who has not even a knowledge of common things is a brute among men: He who has an accurate knowledge of human concerns alone is a man among brutes: But he who knows all that can be known by intelligent energy is a god among men."

The Path

MAHATMAS — K. P. Mukkerji

A HINDU'S VIEW.

I have read with great interest in November *PATH* the article headed "Some Notes on the Mahatmas." The word *Mahatma* is but roughly translated "a great soul"; it means literally "High Self" — that is, our Higher Self. In the *Key to Theosophy* you will find that this Higher Self is called "Manas taijasi", our three higher principles, or Atma-Budhi-Manas, which are yet undeveloped in us. Every one of us has therefore the germ of the Mahatma in him.

As an individual, we Hindus call only him a Mahatma who, having brought his lower self completely under control, has transferred his individual consciousness to the Divine consciousness. He acts in unison with it, and can therefore commit no sin. He may or may not have a body (physical or astral); in the former case we call him "Jivan Mukta", meaning literally "Living Liberated", in the latter case "Nideha Mukta", or "Bodiless Liberated".

Mukti with us does not necessarily mean Nirvana, which is but its highest aspect. A Mukta Purusha, or liberated individual, therefore can and often does remain in our Loka or sphere to assist us morally and spiritually until the last particle of his Karma or Vasana is exhausted, when he goes into Nirvana.

It is written that there are seven ways or seven Paths for an Upasaka; the first (or lowest and most primary) is the intellectual appreciation; the second is self restraint (self sacrifice); the third is a Spirit of humility and veneration for those who have reached the goal; the fourth is a feeling of nearness, close connection, or

friendliness; the fifth, a feeling of attraction (compared to the attraction of a mother to her son); the sixth is love; the seventh (last and greatest) is one-ness — " Soham." Upasaka! choose for thyself and proceed.

The Path

SOME NOTES ON THE MAHATMAS: II — K. H.

(See *PATH* for Nov., 1889.)

After collecting the notes printed in the paper referred to above, I came across some more extracts on the same subject which seemed to me to throw some additional light upon the matter. The first of these was taken from the "Seclusion of the Adept", part of the commentary on the *Light on The Path*, published in *Lucifer*, (Vol. I. p. 380) and reads as follows:

"Here in London, as in Paris and St. Petersburg, there are men high in development. But they are only known as mystics by those who have the power to recognise; the power given by the conquering of self. Otherwise, how could they exist, even for an hour, in such a mental and psychic atmosphere as is created by the confusion and disorder of a city? Unless protected and made safe, their own growth would be interfered with, their work injured. And the neophyte may meet an adept in the flesh, may live in the same house with him, and yet be unable to recognise him, and unable to make his own voice heard by him. For no nearness in space, no closeness of relations, no daily intimacy, can do away with the inexorable laws which give the adept his seclusion. No voice penetrates to his inner hearing till it has become a divine voice, a voice which gives no utterance to the cries of self. Any lesser appeal would be as useless, as much a waste of energy and power, as for mere children who are learning their alphabet to be taught it by a professor of philology. Until a man has become, in heart and spirit, a disciple, he has no existence for those who are teachers of disciples."

Here the adept is referred to as still capable of growth, while in the same volume of *Lucifer*, p. 257, we read: "The occult idea of

Mahatmahood is a soul of higher rank in the realms of life, conceived to drink in the wealth of spiritual power closer to the fountain-head, and to distil its essence into the interior of receptive souls. In harmony with this idea, Emerson writes: "The will of the pure runs down from them into other natures, as water runs down from a higher into a lower vessel; this natural force is no more to be withstood than any other natural force. A healthy soul stands united with the Just and the True, as the magnet arranges itself with the pole, so that he stands to all beholders like a transparent object betwixt them and the sun, and whoso journeys towards the sun, journeys towards that person."

In the *Key to Theosophy*, lately published, Mme. Blavatsky again uses the terms *Adept*, *Initiate*, *Master*, and *Mahatma* in the same sense. She says (p. 289) that "the word *Mahatma* means simply 'a great soul' great through moral elevation and intellectual attainment. We call them *Masters* because they are our teachers. They are men of great learning, whom we call *Initiates*, and still greater holiness of life." And on p. 293 she continues: "They have no right, except by falling into Black Magic, to obtain full mastery over any one's immortal Ego, and can therefore act only on the physical and psychical nature of the subject, leaving thereby the free-will of the latter wholly undisturbed. Hence, unless a person has been brought into psychic relationship with the Masters, and is assisted by virtue of his full faith in and devotion to his Teachers, the latter, whenever transmitting their thoughts to one with whom these conditions are not fulfilled, experience great difficulties in penetrating into the cloudy chaos of that person's sphere."

This extract suggests that all communication with the Masters must be upon higher planes than that of the purely physical, and explains why we cannot expect to make them hear till we too speak with "a divine voice." Nevertheless, there is nothing in it to

lead one to interpret the word *Mahatma* (at least as it is ordinarily used) as meaning only "*the* great soul," and therefore rendering it impossible to speak of "*a* Mahatma." There still remains the idea of individuality. While it is very possible to think of *Mahatma* as the great Soul with whom all spiritual existences are at one, in that sense it becomes a condition rather than an individuality, and all sense of human relations dependent upon that individuality is lost. Considered in the abstract, light is one and indivisible, but to our physical eye is individualised in every star of the firmament, every lamp of the earth. No matter how lofty our idea of "*a* Mahatma" may be, it must have limitations and qualifications, and cannot therefore be the same as the idea of *the* Great Soul, which is the Infinite and Unlimited. When the ascetic has arrived at the point spoken of by Patanjali in the Aphorisms quoted in the former paper, he stands even then upon the threshold only of that higher state called *Isolation* or *Emancipation*. Till then his individuality persists, as we may see by the 4th and 5th Aphorisms of *Book IV*, where the *mind* or *ego* of the ascetic is spoken of as controlling the various minds acting in the bodies which he voluntarily assumes.

In an article on the "Sevenfold Principle in Man," by Mme. Blavatsky, (*Five Years of Theosophy*, p. 153) she tells us that from the first appearance of life up to the state of Nirvana, the progress is, as it were, continuous and by imperceptible gradations. But nevertheless four stages are recognised in this progress, where the change is of a peculiar kind:

1. Where life makes its appearance.
2. Where the existence of mind becomes perceptible in conjunction with life.
3. Where the highest state of mental abstraction ends, and *spiritual consciousness* begins.

4. Where spiritual consciousness disappears, leaving the 7th principle (Atma) in a complete state of *Nirvana* or nakedness; (defined further on as the condition of final negation, negation of individual, or separate, existence, or, in other words, complete identification with the Absolute.) *Atma* is here used as the emanation from the Absolute called "the seventh principle," but, properly speaking, no principle, being identical with the Absolute.

It seems, then, that until spiritual consciousness disappears in *Nirvana*, we have a right to consider that the individuality persists, and, while that continues, the highest adept is not yet lost in the Universal Soul. So that the phrase "a Mahatma," used as an equivalent to the expression "a Master," is the use of a word in a restricted sense, which might be kept, as the Aryan Society has suggested, to its higher meaning as a condition rather than an entity, but which, *in its general acceptance*, has no such restricted signification. We might as well refuse to say "Bring me a light," because light is an abstract and general term and cannot be individualised.

It certainly would be a good thing if the terminology of Theosophy were more accurate and well-defined, and especially that the many Sanskrit terms which have no exact English equivalents should be officially defined, once for all, and then accurately employed. Theosophy has the advantage over all other metaphysical systems, of the possession of a vocabulary drawn from the subtlest of languages; and it is a pity to lose this advantage through our own ignorance or carelessness. Any discussion, therefore, which tends to throw light upon the precise meaning of an important word, cannot be considered as lost time.

THE ALLEGORICAL UMBRELLA — *William Brehon*

In the Buddhist stories there are numerous references to umbrellas. When Buddha is said to have granted to his disciples the power of seeing what they called "Buddha Fields," they saw myriads of Buddhas sitting under trees and jewelled umbrellas. There are not wanting in the Hindu books and monuments references to and representations of umbrellas being held over personages. In a very curious and extremely old stone *relievo* at the Seven Pagodas in India, showing the conflict between Durga and the demons, the umbrella is figured over the heads of the Chiefs. It is not our intention to exalt this common and useful article to a high place in occultism, but we wish to present an idea in connection with it that has some value for the true student.

In the Upanishads we read the invocation: "Reveal, O Pushan, that face of the true sun which is now hidden by a golden lid." This has reference to the belief of all genuine occultists, from the earliest times to the present day, that there is a "true sun," and that the sun we see is a secondary one; or, to put it in plainer language, that there is an influence or power in the sun which may be used, if obtained by the mystic, for beneficent purposes, and which, if not guarded, hidden, or obscured by a cover, would work destruction to those who might succeed in drawing it out. This was well known in ancient Chaldea, and also to the old Chinese astronomers: the latter had certain instruments which they used for the purpose of concentrating particular rays of sunlight as yet unknown to modern science and now forgotten by the flowery land philosophers. So much for that sun we see, whose probable death is calculated by some aspiring scientists who deal in absurdities.

But there is the *true centre* of which the sun in heaven is a symbol and partial reflection. This centre let us place for the time with the Dhyan Chohans or planetary spirits. It is all knowing, and so intensely powerful that, were a struggling disciple to be suddenly introduced to its presence unprepared, he would be consumed both body and soul. And this is the goal we are all striving after, and many of us asking to see even at the opening of the race. But for our protection a cover, or umbrella, has been placed beneath IT. The ribs are the Rishees, or Adepts, or Mahatmas; the Elder Brothers of the race. The handle is in every man's hand. And although each man is, or is to be, connected with some particular one of those Adepts, he can also receive the influence from the *true centre* coming down through the handle.

The light, life, knowledge, and power falling upon this cover permeate in innumerable streams the whole mass of men beneath, whether they be students or not. As the disciple strives upward, he begins to separate himself from the great mass of human beings, and becomes in a more or less definite manner connected with the ribs. Just as the streams of water flow down from the points of the ribs of our umbrellas, so the spiritual influences pour out from the adepts who form the frame of the protecting cover, with out which poor humanity would be destroyed by the blaze from the spiritual world.

The Path

ASTRAL AND PHYSICAL LAW — *H. S. B.*

This article was suggested by reading "To Those Who Suffer," in the January number of the *PATH*, and an article on "Physical Fields," in *Science* for Dec. 27th, 1889.

The writer in *Science*, one of the leading scientists in the matter of physical research, formulated a common law governing the different classes of "fields." The article referred to reads as follows:

"When the physical state of a body re-acts upon the medium that surrounds it so as to produce in the medium a state of stress or motion, or both, the space within which such effects are produced is called the "field" of the body. When a body is made to assume two or more physical states simultaneously, each state produces its own state independent of the existence of the others; hence two or more fields may co-exist in the same space. For instance: if a magnet be electrified, both the magnetic and the electric fields occupy the same space, and each as if the other did not exist.

PROPERTY OF VARIOUS FIELDS.

I. *The Electric Field.* — Suppose a glass rod be electrified with silk or cat skin. It is experimentally known that other bodies in its neighborhood are physically affected by its mere presence without contact, and various motions result which are commonly attributed to electric attraction and repulsion. The phenomena are explained as due to the stress into which the neighboring ether is thrown by the electrified body, the stress re-acting upon other bodies, and moving them this way or that as the stress is

greater here or there. Suppose an electrified mass of matter remote from any other matter, in free space. The field, or the stress that constitutes it, is found to vary in strength inversely as the square of the distance from the body in every direction about it, which shows that the effect upon the ether is uniform in all directions, and that for such a stress under such conditions the ether is isotropic. If this assumed electrified mass of matter were the only matter in the universe, then its electric field would be as extensive as the universe, and any electric change in the mass would ultimately re-act upon the whole of space, and be uniform in every direction. If, however, there be another mass of matter in proximity to the first, the disposition of the stress is altogether different; for instead of being disposed radially, as in the first case, the field is distorted by the re-action of the stressed ether upon the second body. The so-called "lines of force" bend more or less toward the second body, and the field stress becomes denser between the bodies at the expense of the field more remote. If this advancing stress in the ether from an electrified body be called radiation, and it seems to be an action of this kind, then it appears that the direction of such radiation depends upon the existence of other bodies in the ether. It is truly rectilinear no further than the shortest distance between the two bodies.

The electric field thus produced, and thus re-acting upon another body, develops in the latter an electrical condition, that is to say, it electrifies it; and the process we call "electric induction," to distinguish it from the transference of the electrification by contact, which is called "conduction." In the process called induction there are two transformations: in conduction there is simply a transference, and no transformation. The experimental fact is this: an electrified body sets up in the ether a stress of such a nature that, by its re-action upon another body, the latter is brought into a condition similar to that of the first; that is, it

electrifies it."

II. The author then describes a *magnetic field*, and says; "A magnet then sets up such a condition in the ether that its re-action upon another body brings the latter into a condition similar to that of the first; that is, it magnetizes it."

III. Of a *thermal field*, he says that "in a similar way the first body heats the second."

IV. Of an *acoustic field*, he remarks that "a sounding body sets up in the medium about it such a physical condition as, by its re-action upon another body, brings the latter into a state like the first." He concludes with the generalization, "when a mass of matter acts upon the medium that is about it, the latter is thrown into such a physical condition or state that its re-action upon another body always induces in the second body a state similar to that of the first body. This has a much wider application than most physical laws; for it embraces phenomena in mechanics, heat, light, electricity, and magnetism."

To these four examples, why not add a fifth; the *Psychic Field*? While not so tangible, nor so readily observed by the students of modern physical science, it seems none the less to follow the same law.

V. *The Psychic Field*. — Suppose a person's psychic organism is in a state of Love, in the higher sense, or else of Anger. It is experimentally and otherwise known that other psychic organisms in its neighborhood are psychically affected by its mere presence without contact, and various emotions result which are commonly attributed to attraction or repulsion. One often hears the phrase "such a person attracts me," or *vice versa*. These phenomena may be explained as due to the stress into which the neighboring ether (Astral Light) is thrown by the acting

organism, the stress re-acting upon other organisms and moving them this way or that as the stress is greater here or there. Suppose such an organism to be alone in space. The field, or stress that constitutes it, would extend uniformly in every direction and occupy the whole of space. *If*, however, another organism be brought into proximity with the first, the "lines of force" are distorted as in the case of an electric field. This would offer an explanation of why, as sometimes stated in occult works (see "Occult World"), persons communicating psychically often find such communication difficult, or even impossible for a time; the radiation is no longer rectilinear, but twisted, or even interrupted.

The point in view is; that a psychic organism always sets up such a condition in the surrounding ether (Astral Light), that its reaction upon another organism brings the latter into a state similar to that of the first, that is, it psychologizes it.

By extending the same considerations to the behavior of the Spiritual Organism in the Celestial Light, we have a sixth field; that is the *Spiritual Field*. Many other points of coincidence will suggest themselves, and it is not difficult to recognize a fragment of the Great Law of the Universe — the Unity of all Beings.

The Path

APPARENT FAILURE — *Katharine Hillard*

There is no sentiment more constantly re-iterated in the poetry of Robert Browning than the deceptiveness of that illusion that we call success, or of that other illusion that we call failure; and I think one of the great causes of Browning's triumph as a poet of humanity has been his ability to inspire courage in other men, not only to teach them, but to make them realise that there are other elements in every struggle than those the world sees, and that what our short-sighted eyes call defeat is very often to the vision of the Gods a victory. To fail in the pursuit of an ideal is the common portion of humanity; why then should any one of us be exempt? So in "The Last Ride Together," the poet comforts himself with this thought:

"Fail I alone, in words and deeds?
Why, all men strive and who succeeds?
We rode; it seemed my spirit flew,
Saw other regions, cities new,
As the world rushed by on either side.
I thought, All labour, yet no less
Bear up beneath their unsuccess.
Look at the end of work, contrast
The petty Done, the Undone vast,
This present of theirs with the hopeful past!"

And in the next verse he hints at one reason of this failure.

"What hand and brain went ever paired?
What heart alike conceived and dared?
What act proved all its thought had been?
What will but felt the fleshly screen?"

Here he seems to realise how hard it is for the physical man to carry out the dictates of the spiritual man. It is the same lesson that Patanjali teaches when he says that the obstacles in the way of him who desires to attain concentration, or union with the Divine, are sickness, languor, doubt, carelessness, laziness, and so forth. It is easy to account for most of our failures in the little struggles of every-day life by one of the obstacles just mentioned without going on to the end of the list. The greatest obstacle of all is the one from which all our evils spring, Ignorance. The little things of life present themselves so often in a disguise that we fail to penetrate; we realize only when the opportunity is past that it was an opportunity, and then we say "If I had only known!" It is only experience that can teach us, only repeated stumbles that can teach us how to walk, only losses from oversight that can teach us how to see. When the trumpets sound for battle we gird up our loins and are ready for the fight; but when the enemy steals upon us in friendly guise and we have but to shut the door upon him, how often we are betrayed!

The only way to treat failure is to make it a stepping-stone to success.

"I hold it truth with one who sings
To one clear harp in divers tones,
That men may rise on stepping-stones
Of their dead selves to higher things."

And what are "our dead selves" but our failures to be or to do what we ought to be or to do? Every time that we fail, whether from ignorance or from carelessness or from any other cause, we should have learned at least this lesson, never to do *that* again. And so we may painfully stumble through the alphabet of life, and though we never get beyond our letters, yet if our progress be always in the right direction, we shall yet hear, when the end

comes, the Voice of the Silence saying "Well done, thou good and faithful servant."

Nor can we always measure failure and success. The conditions are so complex that only omniscient eyes can read them aright. The very thing we are most proud of may prove to have a secret flaw; the task we had despised may turn out to be a glorious achievement. The soldier who fights and dies on the losing side is as brave as he who falls on that of the victors, and the losing side is sometimes the right side in the eyes of Truth. It was of such as these that Walt Whitman was thinking when he wrote his stirring hymn to the vanquished.

"With music strong I come — with my cornets and my drums; I play not marches for accepted victors only — I play great marches for conquered and slain persons. Have you heard that it was good to win the day? I also say that it is good to fall — battles are lost in the same spirit in which they are won. I beat and pound for the dead; I blow through my embouchures my loudest and gayest for them. Vivas to those who have failed!

And to those whose war-vessels sank in the sea!

And to those themselves who sank in the sea!

And to all generals that lost engagements! and all overcome heroes!

And the numberless unknown heroes, equal to the greatest heroes known!

In an article on "Awakening" in the last number of *Lucifer* the writer has italicised these words: "*Never is the aspirant in such danger of falling as the moment after he has successfully resisted temptation.*" And here we see the greatest danger of success, in

that spiritual pride that blinds our eyes and makes us lose our balance, that inspiring us with confidence causes us to relax our guard and renders us a easy prey to the thousand insidious evil influences that hover about us.

We must take courage, then, and learn that it is not for us to judge of the measure of our successes or our defeats; that must be left for wiser intelligences than ours. And if we cannot make a right estimate of our own victories, how much less can we do so in the case of our neighbor, of whose real nature and of whose real temptations we are so hopelessly ignorant. The man we think fallen among the slain may be really mounting to a higher sphere, whence he can survey our harsh judgment with the pitying eyes of a wider knowledge; the conqueror we see flushed with victory may have gained the whole world to lose his own soul. So, to quote Browning again:

 "Not on the vulgar mass
 Called "work" must sentence pass,
Things done that took the eye and had the price;
 O'er which, from level stand,
 The low world laid its hand,
Found straightway to its mind, could value in a trice;

 But all the world's coarse thumb
 And finger failed to plumb,
So passed in making up the main account;
 All instincts immature,
 All purposes unsure,
That weighed not as his work, yet swelled the man's
amount:

 Thoughts hardly to be packed
 Into a narrow act,
Fancies that broke through language and escaped;

All I could never be,
All, men ignored in me,
This I was worth to God, whose wheel the pitcher shaped.

We certainly cannot judge of the comparative success or failure of others; we can hardly judge of our own; but we can take courage when we seem to be beaten, and try to discover the flaw in our armor that we may be better prepared for another fight. And we can study that lesson which is set us every day, but which we so often fail to learn, that in the little things of every day life are our opportunities for conquest over ourselves. If we neglect these tasks, how can we expect to have harder lessons set us?

"Would- but some fairy lend to me her charm!"

Lately I cried, in a despairing hour;

"Some mighty spell to nerve my weary arm,
Some Open Sesame of magic power!

Or, better still, show but the time and place
Where a brave heart might win itself a name,
And fall, perchance to benefit the race,
Winning the blossoms of a deathless fame!"

Then as I mused a beldame crossed my way,
Tottering along, with shrouded, earth-bent brow;
She stretched a lean hand from her mantle gray,
And said, in shaking whispers, "Here, and now!"

"O poor delusion!" then I cried in scorn;
"Not thus are godlike powers to mortals given;
The Helpers come clad in the strength of morn,
Bright with the ling'ring radiance of heaven!

Nor this the place or hour for mighty deeds,
On this lone way, beneath this tranquil sky;
No foe is here, no hapless victim bleeds;

We are the only passers, thou and I!"

Silent she tottered on, but having past,

A sudden glory seemed to light her way;

White angel-wings sprang from her shoulders vast,

And fair she shone as shines the god of day.

A noble scorn shot lightnings from her eyes,

As fleeing still she turned her lovely head;

"The gods sent me in answer to thy cries,

But once repulsed, I am forever fled!

Learn to know Fortune ere she pass thee by;

Seize on her coming, for she will not wait!

And know by all thy ways divine things lie,

And every place and hour holds thy fate!"

The Path

**THE IMPOSSIBILITY OF A UNITARY RULE OF CONDUCT IN THE
MANIFESTED WORLD OF DUALITY — *J. M Pryse***

The inquiry so frequently made in the Theosophical Society as to what constitutes the duty of a Theosophist in any particular instance, as, for example, when he encounters the victims of poverty and suffering, shows a peculiar lack of apprehension of the higher Theosophical teachings. A call for a simple rule of action that may be applied in every case at once shows that the person from whom the call emanates has not grasped the fundamental teaching of Occultism, that everything in the manifested world is necessarily dual in its nature. A unitary rule of conduct is no more possible than a stick with only one end. In all things we perceive duality, the "pairs of opposites", as the Hindus say; thus we speak of subject and object, cause and effect, pleasure and pain, light and darkness, spirit and matter, good and evil, etc. In seeking by any intellectual process to resolve even the most abstruse philosophical or ethical questions into their ultimates, we can go no farther than the "pairs of opposites." Take, for an instance, the doctrine of karma. It includes both free-will and predestination, the "pairs of opposites" for that subject. For if each individual reaps only the effects of causes set in motion by himself, and thus may create his own future, he evidently has perfect freedom of will, and his destiny is held in his own hands. But, again, since each thought and motive he has is the result of preceding thoughts and motives, and these again of others, he is evidently proceeding inevitably upon a line marked out in the beginning. If we inquire when was this beginning, we come to a consideration of time and eternity — another "pair of opposites". Could we penetrate this duality and realize the underlying unity of nature, we would thereby escape

the curse of reincarnation and pass from the world of illusion into the realm of reality; but so long as we are *Baddhas*, souls in the bondage of illusion, and not *Jivanmuktas*, souls emancipated, this duality forever confronts us, and nowhere is it more apparent than in the subject under discussion this evening — the application of Theosophy to daily life.

No system of thought attaches less importance to physical existence than does Theosophy, which declares it to be only a passing illusion, a shadow thrown upon a screen. The Neoplatonists spoke of their bodies as "images"; and the Theosophists of the present century attach far less importance to the physical organism and the actions of the material plane than they do to the mental attitude and intellectual activities. As said in a private letter of H. P. B., "To yield to personal *physical* weaknesses and passions is a lesser crime in Occultism than to yield to mental and intellectual weaknesses. To prostitute one's body is to desecrate only an old rag, an evanescent principle. To prostitute *one's thought*, even the *lower* Manas, connected with and emanating from the Higher Manas or Ego, is to pollute *that which is immortal*." Constantly we are urged to estrange ourselves from the objects of sense, and to attain to such freedom from all worldly desires that they will awaken in us only a feeling akin to disgust.

To attempt to put in practice these teachings only, disconnecting them from the whole body of Theosophical doctrines, would result disastrously; and for a majority of any race to do so would bring about an era of ignorance, filthiness, laziness, and depravity such as Europe was plunged into during the Dark Ages from the same Cause. For, mark well, this is but one of the "pairs of opposites", and the other is even more distinctly inculcated in Theosophical teachings, which insist rigorously upon the performance of every worldly duty, upon active participation in

the world's work, and upon the most scrupulous moral and physical purity. Theosophy holds out no hopes of advancement to those who do not work for the cause of Humanity right here in this work-a-day world, and regards as a species of imbecility the mental condition of those who seek "interior illumination", or "soul unfoldment" as they term it, by abandoning their worldly duties and devoting themselves to psychic rhapsodies and visionary speculations, yielding, in fact, to their mental and intellectual weaknesses, and thereby, as H. P. B. declares, polluting immortal *thought*.

It is therefore no contradiction in theosophical doctrines that all things are declared illusory, unreal, and yet a course of action insisted upon seemingly making this the world of reality. It is but a recognition of the duality of manifested life, the polarity of existence or being, and the further recognition of the fact that it is not by following either pole alone that we can pass beyond the confines of duality and illusion to the realm of unity and truth, but by diligently considering both poles of existence we may make of the duad a unit, pass from time to eternity, from mortal to immortal, from being into be-ness. Consequent upon this duality, the life of a man is a process of unfoldment from within, and also of infoldment, or adjustment, from without. No unitary rule of action can be framed for a being who is himself a duad; for, being thus dual in his nature, he must follow a dual course, and in a question of action he must while acting remain inactive. One part of his nature acts, the other remains inactive; and when the lower and higher nature of man become one, then action and inaction must also become one. Says the *Bhagavad-Gita*, "He who perceives action in inaction, and inaction in action, is wise among mankind." And in that old book, itself an equilibrium of opposites, so profound in its simplicity, so homely in its grandeur, so ancient in its newness, as applicable to the care-worn Western man of

modern times as it was to the quiet Eastern people of olden days, — we find no single rule of action, but this dual course of action laid down clearly and with exactness. Perform conscientiously every duty encountered in this busy world, but have no interest in the results, leaving them to the Supreme; as said in Christian Scriptures, "Render unto Caesar that which is Caesar's, and unto God that which is God's." And the more a man separates the two worlds, that of the material from that of the spiritual, the more closely they come together, tending to merge into one, the light of the spiritual shining down into the material, so that even in the personality of the man may be seen a shimmering of the divine light, making his every action nobler and truer; whereas he who ignorantly seeks to confound the two worlds, rendering unto God that which is Caesar's, and unto Caesar that which is God's, say, by healing his body through the powers of his soul, as some do in this age, or tortures his body as a sacrifice to his soul, as do some Eastern zealots, finds the two worlds grow wider and wider apart. This is no contradiction; it is the necessary polarity and duality of manifested life.

The Path

THE SEVENFOLD DIVISION — *Eusebio Urban*

WHY NOT CHANGE THE DESIGNATION?

Mr. Sinnett's book *Esoteric Buddhism* has done a great deal towards bringing before the West the Eastern philosophy regarding man and his constitution, but it has also served to perpetuate the use of a word that is misleading and incorrect. In that work on p. 61 he states, "Seven distinct principles are recognized by Esoteric Science as entering into the constitution of man", and then gives his scheme of division thus, The *body*, Vitality, Astral Body, Animal Soul, Human Soul, Spiritual Soul, and seventh, Spirit or Atma. Now if Spirit be, as the whole philosophy declares, in all and through all, it is erroneous to call it one of the series. This very early led to the accusation that we believed in seven distinct spirits in man. It always leads to misconception, and directly tends to preventing our understanding fully that the Atma includes, and is the substratum of, all the others. In India it caused a protracted and, at times, heated discussion between the adherents of the rigid seven-fold classification of *Esoteric Buddhism* and several learned and unlearned Hindus who supported a four-fold or five-fold division. During that debate the chief Hindu controvertor, while holding to a different system, admitted the existence of "a real esoteric seven-fold classification," which of course cannot be given to the public. Mr. Sinnett also evidently made a mistake when he said that the first mentioned division is the esoteric one.

Now it would seem that many of these misconceptions and differences could be prevented if a word were adopted and invariably used that would clearly express the idea intended to be conveyed. As the prime declaration of theosophy is that all these

so-called bodies and appearances are for the purpose of enabling the ONE — the Atma — to fully comprehend nature and "bring about the aim of the soul", why not denominate all that it uses for that purpose as *vehicle*? This name is strictly in accord with all parts of the philosophy. It is in effect the same as *Upadhi*, or basis, foundation, carrier. By its use we make no error when we say that theosophy declares there is Atma, which works with and through six *vehicles*. Strictly, the body is a vehicle for the astral body, it for the next, and so on up to Atma, which is therefore seen to be all and in all, as is clearly declared in *Bhagavad-Gita*.

This change, or to some other than "principles," should be adopted by all theosophists, for every day there is more inquiry by new minds, and theosophists themselves, indeed, need to use their words with care when dealing with such subjects. Or if greater clearness is desired, let us say that there is *one principle* which acts through *six vehicles*. The scheme will then stand thus: *Atma* (spirit), one principle, indivisible.

Its vehicles are,

- Buddhi*.....Spiritual Soul
- Manas*.....Human Soul
- Kama Rupa*.....Animal Soul
- Linga Sharira*.....Astral Body
- Prana or Jiva*.....Vitality
- Rupa*.....The Body

Names have power, and if we go on talking of 7 principles when in truth there is but one, we are continually clouding our conception of theosophic truth.

RESPONSIBILITY FOR RIGHT AND WRONG ACTION — *Exeter*

Look not mournfully into the Past. It comes not back again.
Wisely improve the present. It is thine. Go forth to meet the
shadowy Future, without fear, and with a manly heart. —
Hyperion.

A fundamental teaching of Theosophy is man's responsibility to himself alone for his actions, good, bad, or indifferent. It is at once a wise and truthful teaching, and calculated to inspire one with lofty thoughts and higher aspirations. It presupposes a positive knowledge on the part of man of the difference between good and evil in their relative capacities. Even the lower strata of humanity, surrounded by every form of vice and wickedness, *know* from observation and intuition that there is a higher degree or form of life on the plane of humanity, although they may choose to walk in the path of animalism and wrongdoing. The dulled life they lead is theirs from choice; it cannot be said, however, that by a superhuman effort the criminal, the debauchee, or the self-imposed outcast from society may not lift himself by degrees from his low station to one of truth, refinement, and spirituality.

Because of the teachings of Theosophy on this point Theosophists are perhaps more than any others, unusually receptive to the voice of the Higher Self. The study of Theosophy is well calculated to lend to the individual an enlargement of comprehension in respect of humanity that is unattainable through any other process of reasoning. Individual opinion as to what is right and what is wrong will ever be the rule, and the *intention* the guide of judgment. A man may, with the hope of future reward, do right; a man may, because of some apparent timely advantage of right

over wrong, do right; or he may be a passive doer of right for the sake of appearances and because right action is reputable and the aim of the majority. But the Theosophist, provided always that he is consistent, will look upon the question of right and wrong from a higher standpoint, — from the standpoint of Universal Brotherhood. For the good of humanity: for an example; because right is right, not because it is customary, will the Theosophist walk in the higher round.

Now, because of this teaching of responsibility, the idea arises of a still equally important phase of the question, and that is, every man is a law unto himself. Taken as it stands, this conception is, it must be admitted, startling; but it is nevertheless true. The laws of Karma and reincarnation demonstrate its truthfulness:

* * * * each man's life

The outcome of his former living is;
The bygone wrongs bring forth sorrows and woes,
The bygone right breeds bliss.

That which ye sow ye reap. See yonder fields!
The sesamum was sesamum, the corn Was corn.
The silence and the darkness knew!
So is a man's fate born.

He cometh, reaper of the things he sowed,
Sesamum, corn, so much cast in past birth;
And so much weed and poison-stuff, which mar
Him and the aching earth.

If he shall labor rightly, rooting these,
And planting wholesome seedlings where they grew,
Fruitful and fair and clean the ground shall be,
And rich the harvest due.

If he who liveth, learning whence woe springs,

Enduring patiently, striving to pay
His utmost debt for ancient evils done
In Love and Truth always;

If making none to lack, he thoroughly purge
The lie and lust of self forth from his blood;
Suffering all meekly, rendering for offense
Nothing but grace and good;

If he shall day by day dwell merciful,
Holy and just and kind and true; and rend
Desire from whence it clings with bleeding roots,
Till love of life have end:

He — dying — leaveth as the sum of him
A life-count closed, whose ills are dead and quit,
Whose good is quick and mighty, far and near,
So that fruits follow it." (1)

To draw a line of demarcation between right and wrong will not be a difficult task for the student of theosophy; and if the faculty of closely distinguishing the spurious from the true is latent in the student, the still smooking ember may be set a flame by a touch from the torch of Karma. The doer of good for the sake of good itself — he who sees wherein good may be evolved from presumptive evil, (for the two are at times closely allied); he who, for the sake of the good that is embedded therein, walks boldly into the monster's lair, caring nothing for physical or mental scars and unheeding the scoffings of the super-holy in order to extract the true and put away the false, is surely working on the Theosophic plane.

When men are led to a conception of responsibility to self, when men come to see *by the light of future events* that he who sows shall surely reap — not a vicarious reward or punishment, but —

a just proportion of praise or blame consistent with his present life, then will come *to him* the crowning day of theosophic effort. When the millions of rich and poor realize that man is *a law unto himself* in respect of spiritual things, then will Universal Brotherhood become a universal factor in the mundane sphere.

But the world moves. The progress of the past few years in the theosophic arena shows sense of increase an hundred fold before the cycle is ended. Man's spiritual nature is slowly but surely developing in a degree in proportion to the development of the race. It is with no pessimistic eye that the members of the Theosophical Society need view the future. Theosophy is an accepted fact, and the practice of altruism is forming a light in the background that will eventually envelop humanity in one grand brotherhood for the glorification of good and the deification of man.

The Path

MEANS TO THE END — *J. H. Connelly*

An esteemed correspondent makes a suggestion that is doubtless good, concerning practical aids in purifying the lower nature, which, as he justly observes, is "easier said than done." He recommends that each one truly desirous of such purification should, for himself, jot down in convenient form for frequent reference such passages from books and articles that he reads, bearing upon what he knows to be his especial faults, as will be helpful in knowing and overcoming them.

It is perhaps hardly necessary that a conscientious Theosophist shall load up his diary with such entries for daily reference as: — "Monday: *Mem.* Mustn't lie, steal, get drunk, commit adultery, or kill anybody today." The great laws of abstention from overt acts of conspicuous evil will doubtless be so firmly fixed in his innermost being that a special mnemonic device concerning them will be superfluous. But grievous faults, working woe not only to the doer but to others, lie deeper than manifestation in wicked deeds, and are perhaps oft-times productive of more far-reaching ill effects than what the penal code recognizes as crimes. And against these, by every means, he will do well to guard himself, who wishes to walk in the right path.

They are evil thoughts, the seeds sown by Desire, that soon or late bear fruit objectively in proportion to the energy of their conception; and they are deeds also, the wanton speech, the inconsiderate unkind act, the customary seeking of one's selfish gain and personal good even at others loss, and indifference to the weal or woe of our fellow-creatures. But not even when these are abstained from is duty done. Good consists not in the negative virtue of refraining from evil. Purposeful thoughts for the

betterment of existence for all that suffer life, and the concretion of such thoughts into action to the utmost of our individual abilities, are no less demanded of us than avoidance of positively evil deeds, and will have a beneficial effect, even upon this material plane, well worth all the sacrifice that may be involved in such thinking and doing. Man, for himself, makes benign or malign the astral photosphere surrounding him, and the basis of a true wisdom in the ordering of his relations to the Universe must be an altruism that impels him to right action without regard to his personal harvesting of the fruits thereof.

If the Theosophist finds in his reading passages that so impress themselves upon his mentality as to direct, encourage, and strengthen him in such realization of duty in both its negative and positive phases, of course he will do well to fix those excerpts in his mind and, by meditation upon them, make their thoughts a part of his own being.

One good way for this, doubtless, the correspondent has adopted. He makes up a page of such apposite selections for each day of the week, and devotes a specified time each morning to reading and contemplation upon one of those pages. Others may find superior advantages in different methods, according to their mental training, natural perceptivity, occupation, and personal requirements, and certainly each must make his selections for himself. The same words do not always mean the same things to different persons, or equally impress each of even those minds that have a common comprehension of their meaning.

Well worthy of constant remembrance by those who seek "the perfect way" is the opening of the sixteenth chapter of the *Bhagavad-Gita*, thus beautifully presented in Edward Arnold's metrical translation of that inspired work:

"Fearlessness, singleness of soul, the will

Always to strive for wisdom; opened hand
And governed appetites; and piety
And love of lonely study; humbleness,
Uprightness, heed to injure nought which lives,
Truthfulness, slowness unto wrath, a mind
That lightly letteth go what others prize;
And equanimity, and charity
Which spieth no man's faults; and tenderness
Towards all that suffer; a contented heart,
Fluttered by no desires; a bearing mild,
Modest, and grave, with manhood nobly mixed
With patience, fortitude, and purity;
An unrevengeful spirit, never given
To rate itself too high; such be the signs,
O Indian Prince! of him whose feet are set
On that fair path which leads to heavenly birth!
Deceitfulness, and arrogance, and pride,
Quickness to anger, harsh and evil speech,
And ignorance, to its own darkness blind, —
These be the signs, My Prince! of him whose birth
Is fated for the regions of the vile."

Another golden excerpt, from the second chapter of the same book, is also worthy of firm regard as a law of life:

"Find full reward
Of doing right in right! Let right deeds be
Thy motive, not the fruit which comes from them.
And live in action! Labor! Make thine acts
Thy piety, casting all self aside,
Contemning gain and merit; equable
In good or evil: equability
Is Yog, is piety!"

The Path

NOTES ON DEVACHAN — X.

Devachan is not, cannot be, monotonous; for this would be contrary to all analogies and antagonistic to the laws of effects, under which results are proportionate to antecedent energies.

There are two fields of causal manifestations: the objective and the subjective. The grosser energies find their outcome in the new personality of each birth in the cycle of evolving individuality. The moral and spiritual activities find their sphere of effects in Devachan.

The dream of Devachan lasts until Karma is satisfied in that direction, until the ripple of force reaches the edge of its cyclic basin and the being moves into the next area of causes.

That particular one *moment* which will be most intense and uppermost in the thoughts of the dying brain at the moment of dissolution, will regulate all subsequent moments. The moment thus selected becomes the key-note of the whole harmony, around which cluster in endless variety all the aspirations and desires which in connection with that moment had ever crossed the dreamer's brain during his lifetime, without being realized on earth, — the theme modelling itself on, and taking shape from, that group of desires which was most intense during life.

In Devachan there is no cognizance of time, of which the Devachanee loses all sense.

(To realize the bliss of Devachan or the woes of Avitchi you have to assimilate them as we do.)

The a priori ideas of space and time do not control his perceptions; for he absolutely creates and annihilates them at the

same time. Physical existence has its cumulative intensity from infancy to prime, and its diminishing energy to dotage and death; so the dream-life of Devachan is lived correspondentially. Nature cheats no more the *devachanee* than she does the living physical man. Nature provides for him far more *real* bliss and happiness *there* than she does *here*, where all the conditions of evil and chance are against him.

To call the devachan existence a "dream" in any other sense than that of a conventional term, is to renounce forever the knowledge of the esoteric doctrine, the sole custodian of truth. As in actual earth life, so there is for the Ego in Devachan the first flutter of psychic life, the attainment of prime, the gradual exhaustion of force passing into semi-consciousness and lethargy, total oblivion, and — not death, but birth, birth into another personality, and the resumption of action which daily begets new congeries of causes that must be worked out in another term of Devachan and still another physical birth as a new personality. What the lives in Devachan and upon earth shall be respectively in each instance is determined by Karma, and this weary round of birth must be ever and ever run through until the being reaches the end of the seventh round, or attains in the interim the wisdom of an Arhat, then that of a Buddha, and thus gets relieved for a round or two, having learned how to burst through the vicious circle and to pass into Para-nirvana.

A colorless, flavorless personality has a colorless, feeble devachanic state.

There is a change of occupation, a continual change in Devachan, just as much and far more than there is in the life of any man or woman who happens to follow in his or her whole life one sole occupation, whatever it may be, with this difference, that to the Devachanee this spiritual occupation is always pleasant and fills

his life with rapture. Life in Devachan is the function of the aspirations of earth life; not the indefinite prolongation of that "single instant", but its infinite developments, the various incidents and events based upon and outflowing from that one "single moment" or moments. The dreams of the objective become the realities of the subjective existence. Two sympathetic souls will each work out their own devachanic sensations, making the other a sharer in its subjective bliss, yet each is dissociated from the other as regards actual mutual intercourse; for what companionship could there be between subjective entities which are not even as material as that Etherial body — the Mayavi Rupa?

The stay in Devachan is proportionate to the unexhausted psychic impulses originating in earth life. Those whose attractions were preponderatingly material will sooner be drawn back into rebirth by the force of Tanha.

The reward provided by nature for men who are benevolent in a large, systematic way, and who have not focused their affections on an individual or speciality, is that if pure they pass the quicker for that thro' the Kama and Rupa lokas into the higher sphere of Tribuvana, since it is one where the formulation of abstract ideas and the consideration of general principles fill the thought of its occupant.

The Path

HYPNOTISM — MESMERISM — *Rodriguez Undiano*

SCIENCE TAKES A STEP

The encyclopaedias are not yet out of print which have classed mesmerism among the foolish superstitions of the ignorant played upon for profit by the quick-witted impostor, nor are the learned doctors dead who have published articles in support of the encyclopaedias, yet today the most eminent physicians in Europe declare that Mesmer was right and that mesmerism is not a superstition, but that it is necessary for reputations to adopt a new name, — so mesmerism is rechristened Hypnotism. In this way those doctors who laughed at and derided what has long been known to the common people may now learnedly discuss phenomena which some years ago they ignored under its old name. In the March number of *Scribner* Dr. William James writes upon this subject under the name of the "Hidden Self", and the April *Forum* admits an article by the eminent Dr. Charcot upon "Hypnotism and Crime."

This step, though taken late, is in the right direction. But the eminent physicians who make this advance cannot claim to be the leaders of the people, for the latter have for generations known quite as much about the matter as the licensed practitioners, except that they used no high-sounding name to call it by. It is well known to many members of the Theosophical Society that there are perhaps thousands of people in the United States who forty years ago pursued the same investigations and made similar experiments to those of Dr. Charcot and others. In the year 1850 a certain Dr. J. B. Dods gave lectures about the country and taught what he called *Electrical Psychology*. This was then so well known that it attracted the attention of certain U. S.

Senators, among them Daniel Webster, John Hale, Theodore Rush, Sam Houston, Henry Clay, and others, who invited Dr. Dods to lecture before them in Washington. He delivered his lecture, went on with his experiments, and published a series of Lectures upon the subject. In these are to be found, together with other things, the directions so loudly proclaimed and appropriated now by physicians who would have hooted at Dr. Dods. And even on the point of the necessity of precaution and of keeping hypnotism out of the hands of unprincipled persons, Dods was not silent. In 1850 he said in his Introduction that, although he had taught more than one thousand individuals whom he had put under solemn pledge not to reveal his methods to impure or immoral persons, yet some were so unprincipled as to violate their pledge and hawk the "science" about everywhere.

Dr. Charcot in the April *Forum* pleads for legislation that will prevent just such unprincipled persons from dealing with subjects, not solely on the ground that crime may be easily and safely committed with the aid of hypnotism, but rather that sensitive persons may be protected from the recurrence of hysteria or catalepsy, and ventures the opinion that crime will probably not find any aid or safeguard in hypnotism. While we thoroughly agree with Dr. Charcot as to the need for placing safeguards around this budding science, it is from a conviction that crime can be aided and hidden by the use of such a practice, and is today thus aided and hidden. We do not care to commit hypnotism solely to the doctors, as he asks, just for their sake, but we would wish to place restrictions upon even those gentlemen, and to limit the number of them who may be allowed to use it.

The chief value to the Theosophist of this new step of the schools is not, however, in the likelihood that rules and methods may be published, but that before long time the erstwhile materialist who can be convinced of a fact only when an Academy endorses it will

be the more easily convinced that there is a soul. In the March *Scribner* article above spoken of, we have a public admission that the facts of hypnotism prove a Hidden Self. Dr. Charcot does not go as far as this, but the variety and peculiarly occult character of numerous facts daily brought to light by other investigators will raise such a mountain of proof that hardly any one will be able to overcome it or deny its weight. Once they begin to admit a Hidden Self, — using, indeed, the very words long adopted by many Theosophists and constantly found in the ancient Upanishads, they allow the entering wedge. And so not long to wait have we for the fulfilment of the prediction of H. P. Blavatsky made in *Isis Unveiled* and repeated in the *Secret Doctrine*, "* * * and dead facts and events deliberately drowned in the sea of modern scepticism will ascend once more and reappear upon the surface".

The Path

THEOSOPHY IN RELATION TO OUR DAILY LIFE — *Katherine Hillard*

TRIFLES

When Mr. Judge spoke on this subject some weeks ago, I was forcibly impressed by the truth of what he said as to the minor opportunities of life to the most of us.

There are few to whom come chances for grave decisions, for great sacrifices, for evident heroism; most of us have to learn that difficult lesson, not to despise the day of small things. What we need is, to learn to apply theosophy to the *trifles* of our daily life, to find nothing too small to be done in the best possible way; and as the Christian would say, "do all things to the glory of God", so we must do all things to the glory of that higher Self that represents to us the Deity. If old George Herbert felt it not beneath his clerical dignity to assert that

"Who sweeps a room as by God's laws,
Makes that and th' action fine",

certainly we need not be behind him in humility. And however humble our duties, however small our temptations, however narrow our sphere, there are at least three things which we can all ponder upon; things wherein we may perhaps find something to improve. Faithfulness in our work, helpfulness of others, and the preservation of a cheerful and gracious mood, are three things which concern everybody, women as well as men. There is a beautiful old story of a lady who said that she knew her servant had experienced religion, and when asked why, replied "Because she sweeps under the mats!" Now *that* is the sort of thing that George Herbert was thinking of when he spoke of "sweeping a

room as by God's laws;" it is not only doing a thing and doing it at the proper time, but doing it with the thoroughness of divine law itself, not superficially and slightly, but with all the perfection that we are able to give it, for then alone can it be said to us, "*Well done, thou good and faithful servant.*" It is not too much to say that every task, no matter how trivial, wrought out conscientiously and with a sense of duty, with not a detail neglected or slurred over, reacts upon the character with a power that it is difficult to estimate. Aristotle defined virtue as a habit of doing the right thing; and every time that we not only do the right thing, but do it in the right way, we increase the strength of that habit, and make it so much the easier to do it again. The men who have succeeded (I do not mean in the eyes of the world, but in the attainment of some lofty ideal) have been men who did things *thoroughly*, who obeyed the Scripture injunction, "Whatsoever thy hand findeth to do, do it with all thy might," not half-heartedly, nor passably, but "with *all* thy might." Such conduct carries its reward with it, not only in the sense of satisfaction that follows when we have done our very best (and then alone), but also in the *unconscious* uplifting of our faculties to a higher plane. Let us never indulge ourselves with thinking "It does not matter *how* we do this, provided it is done"; it *does* matter, and most of all to ourselves; *we* are the ones upon whom the carelessness will fall most heavily, even though it seem to come upon others.

And most of all we need to feel that nothing done with the desire to help another is a trifle. It is impossible for us to estimate the far-reaching consequences of our lightest word, nor to tell how what seems to us a little thing, to another may be fraught with the gravest consequences. A child of twelve, whom I know, had her life saved by a little bunch of purple hyacinths. A long and severe illness had brought her to that point of apathy where she was slowly drifting out of life into death, when a friend brought her in

these flowers. Their beauty and sweetness roused her fainting spirit and won her back to life, and she knew it herself, child as she was, for she said, "I think those hyacinths have cured me." No one was more astonished than the friend who did the little kindness; "such a trifle", she thought. There is no better rule, it seems to me, than Charles Reade's favorite maxim, "Put yourself in his place," to teach us how to treat our neighbor. There are so many little courtesies that we omit, so many little acts of kindness that we leave undone, because we *don't* put ourselves in his place. In the hurry of our daily life, we neglect many little graces that, if practised, would make the wheels move much more smoothly. The first thing that one notices after returning home from a residence in Italy, for instance, is the roughness of everybody, the want of courtesy in high and low. In Italy, if you enter a shop, you are greeted with a pleasant smile and a cheerful "good morning," you are waited upon with attention, but without servility, and saluted as you go out with another "good morning," and a hope that you will come again. Here, if you say "good morning" on entering, as perhaps you do from force of habit, the much befrizzed and be-decorated shop-girls stare at you as if you had just escaped from a menagerie of curious animals, and hardly deign to give you what you ask for, they are so busy talking to each other of tonight's ball or yesterday's wedding. If you are travelling in Italy, the commonest man will beg your pardon, or ask your permission, if he has occasion to pass you in a railway carriage, and no one gets out without wishing "a pleasant journey" to those who remain. All these things are trifles, but then we know that trifles make up the sum of daily life. I noticed in an "Elevated Railway" car the other day, a young man rise to give a lady his seat, but instead of doing it as most gentlemen do, with a bow and a smile, and thus paying her a compliment in resigning his place, he rose with a sulky expression, turned his back on her, and strolled up the car. The lady looked uncomfortable; — she

could not shout "thank you" to his back, and she was thus placed in a false position, and made unable to return a courtesy. Not far off was "a gentleman of the old school" (as we somewhat scornfully say), who gave up his seat over and over again, but always with such a gracious and beaming courtesy that every lady felt personally complimented by the deference paid her sex.

There are few women, as there are few men, who do not have an opportunity every day of imitating the ideal of James Russell Lowell, of whom he wrote —

"She doeth little kindnesses
That most leave undone or despise;
For naught that sets one heart at ease,
Or giveth happiness and peace,
Is low esteemed in her eyes."

The trouble with American life is its *hurry*; we are so afraid that these minor courtesies will consume a little of the time that is so precious to us all; — but that is a mistake, if we could only bring ourselves to think so. Everything that saves friction expedites motion, and the engineer that had no time to oil his machine would soon find that he had to take time to have it mended.

And when we have exhausted the possibilities of putting ourselves in the place of another, and thereby seeing what we should do for him, when we have lubricated the wheels of life to the best of our ability, there still remains the power to cultivate in ourselves that serene and unperturbed cheerfulness of mood that "makes a sunshine in a shady place." Such a mood spreads itself like oil upon the troubled waters, and insensibly the ruffled waves sink to rest. If we keep our minds fixed upon the eternal verities, of what consequence to us are the little irritations and vexations of our daily lives? They are mere straws upon the stream, to be swept past us in a moment, not worthy to ruffle its

placid surface, not capable of breaking its serenity if it move with any strength and volume upon its destined way. Remember the saying of the Eastern sage, which was of equal power to admonish in prosperity and counsel in adversity: — "All these things pass away!" When I was a little girl of seven, my old English nurse used to say to me, when I hurt myself and bemoaned the pain to her, "Never mind, it will be all well before you're twice married": and I remember that a certain sense of the vastness of time struck my childish imagination so forcibly that I cheered up at once. And what a little child can do, we ought to be able to do too; to realize the smallness of our daily vexations compared with the great sweep of the years, and learn to smile serenely at our passing troubles. Cheerfulness is something we can all practice, even when we find no other chance to help others, and when all our duties have been well and faithfully done. A teacher once told me of a pupil of hers who wrote a composition on "Perseverance," which recounted the experiences of a little girl who "persevered and persevered, until she came to the end of that virtue," and it would be well if we could treat cheerfulness in the same way.

And now, to give this paper a little value, I should like to add some words of John Morley's, spoken at Manchester Town Hall. In speaking of the *average* individual, he says that the chances for the gifted few are highest where the *average* interest, curiosity, capacity, are highest. "The moral of this for you and for me," he adds, "is plain. We cannot, like Beethoven or Handel, lift the soul by the magic of divine melody into the seventh heaven of ineffable vision and hope incommensurable; we cannot, like Newton, weigh the far-off stars in a balance, and measure the heavings of the eternal flood; we cannot, like Voltaire, scorch up what is cruel and false by a word as a flame; nor, like Milton or Burke, awaken men's hearts with the note of an organ-trumpet;

we cannot, like the great saints of the churches and the great sages of the schools, add to those acquisitions of spiritual beauty and intellectual mastery which have, one by one, and little by little, raised man from being no higher than the brute to be only a little lower than the angels. But what we can do — the humblest of us in this hall — is by diligently using our own minds and diligently seeking to extend our own opportunities to others, to help to swell that common tide, on the force and the set of whose currents depends the prosperous voyaging of humanity. When our names are blotted out, and our place knows us no more, the energy of each social service will remain, and so too, let us not forget, will each social dis-service remain, like the unending stream of one of nature's forces."

The Path

MISLEADING TERMS — *N. & Alexander Fullerton*

I. THE SOUL

In studying the complex nature of man, nothing has created greater confusion in my mind than the loose use of terms, and particularly the use of one word or phrase to express different things or ideas. And probably no word has been more perplexing than *Soul*. In ordinary language *Soul* is generally used as synonymous with *Spirit*. Sometimes it stands for the *Higher Self*, and at others for the *Ego*. In Sinnett's classification we find it in three forms, as Animal Soul, Human Soul, and Spiritual Soul; and yet there are not — as the Athanasian Creed would probably put it — three Souls, but one Soul.

The word *Ego*, too, is almost as confusing. Thus we read of a *Personal Ego*, an *Immortal Ego*, a *Reincarnating Ego*, and the like, till the word is so altered and qualified that one's conception of what *an Ego* or *the Ego* really is, is extremely vague and misty. This confusion is partly due to poverty of the language in metaphysical terms, and partly, I imagine, to our own inability to grasp abstruse metaphysical concepts.

So far as I have been able to comprehend them, the terms *Soul*, *Ego*, and *Manas* represent exactly and identically the same thing or idea. The lower *Manas*, the *Personal Ego*, and the *Animal Soul* are different expressions for that consciousness which is limited to the physical body and perishes with it. *Buddhi-Manas*, the *thinking Ego*, and the *Spiritual Soul* seem also to be equivalent phrases. *Atma*, *Spirit*; and the *Higher Self* express one and the same idea.

The *Soul*, *Manas*, or *Ego*, being an entity intermediate between

Spirit on one hand and the physical body on the other, necessarily has two aspects, and ultimately, at the death of the ordinary man, divides into two, the Kama-Manas sharing the fate of the lower quaternary, and the higher Manas uniting with Atma-Buddhi to form the reincarnating Ego.

This intermediary entity — the Soul — seems to have been created or evolved by the interaction of Spirit and gross matter extending through long periods of time on this plane. The first races of men were mindless or soulless, (1) and even now it is only the lower Manas that has been developed in humanity. Our Spiritual consciousness or Higher Manas is yet dormant, and will not be fully awakened before the Fifth Round — ages hence.

These brief statements are not offered, however, in any dogmatic spirit, but may serve to elicit discussion which may clear up some of the perplexities and difficulties that encounter the student of theosophic literature in the use of these frequently recurring words. — N.

II. "PRINCIPLES"

I unhesitatingly agree with our President that the term "Principles" applied to the 7 constituents of man's compound nature is not only incorrect but misleading. Some other and more accurate term should certainly be used. Yet one may well doubt whether "Vehicles," though free from some of the objections to "Principles," and though more precise in one respect, is really satisfactory. If we are to make a change, let it be to a word rigorously correct.

If each constituent is to be regarded as the "vehicle" for the one above it, the new objections soon appear. The Body is no doubt the vehicle of Prana or Jiva, the life-force which animates and conserves it. But surely it cannot be said that Prana is the vehicle

for the Astral Body; if anything, the Astral Body is the vehicle for it. The difficulty may be met by making the Astral Body rank next above the Physical Body and Prana above both. Then Prana would vitalize the Astral Body, and the Astral Body, thus a vehicle, would transmit influence to the outer form. But how can Prana be a vehicle for the Animal Soul? Logically and chronologically, life-force must precede the desires, passions, etc. which presuppose a living body as their seat and source. This consideration pushes Prana up above the Animal Soul. But at once two difficulties arise. The first is that the Animal Soul having thus become the vehicle for Prana, the Astral Body has become vehicle to the Animal Soul. But how can the Animal Soul transmit life-power to the Astral, when both the Astral and the Physical Bodies must have preceded the Animal Soul to make its existence possible? The other difficulty is that this order makes Prana the vehicle of the Human Soul, and it surely is inconceivable that reason, memory, and will can find a channel in a mere life-force. With Prana as the 4th in the series, the look-up or the look-down is fatal to the new term. We must then either demote Prana to its old station, thus reviving all the perplexities which pushed it upwards, or else concede an absolute hiatus between the Human Soul and Prana, and this is fatal to the vehicular theory. From this stage upwards all is reasonable enough. The Human Soul may very well be the vehicle for the Spiritual Soul, and that again for Spirit. But a theory which works correctly enough half-way up or half-way down, but which will not go all the way through, is almost as bad as its rival which makes of the Physical Body a "Principle".

It, may, indeed, be said that the vehicles are not to be considered as vehicles to each other, but only as vehicles to the one primal and persistent force — Spirit. But here again we are in trouble, for this would make the different vehicles independent of each

other. Besides, the word "vehicle" implies a transmission of something to something else, and, if there is no transmission, there is no "vehicle". Whether, therefore, we adopt this theory, which makes the term "vehicle" meaningless, or the former, which makes it inaccurate, we are as badly off as if we adhered to "principle".

I should say, then, that we have not yet discovered the true word. "Constituent" is not bad, though a trifle long. What is the objection to "Component"? It is no longer than "principle" or "vehicle"; it allows a certain individuality to each part, while not disconnecting them from each other; it does not necessarily reduce Spirit to the same rank as the other "components" associated with it; and its meaning etymologically expresses with some accuracy the union of several elements in one combination. Why not give it a hearing? — Alexander Fullerton

MAN'S ORIGIN — N.

The subject for this evening's discussion is The Sevenfold Nature of Man. But before we place him upon the table and make way for the Doctors to operate upon him with their dissecting knives, suppose we pause for a moment and ask where the subject came from. What is the origin of earthly man? How came he upon this planet? And the enquiry may possibly help to throw some light upon his composite nature.

Of course of ourselves we know nothing of the origin of the human race, and can only appeal to the "law and the prophets" — to the authorities on the subject, so to speak — to those outgivings which have from time to time come to us from the East, and particularly to the teachings of the *Secret Doctrine*. Taking this volume alone as our guide, what do we find?

Now at the outset it is proper to say that, although a vast flood of light is thrown in the Second volume of *The Secret Doctrine* upon Anthropogenesis or the origin of man, the information is still very fragmentary, and careful reading and sifting are necessary to get at anything like a straightforward connected story. Hints only are often given where we would like plain statements; details are purposely omitted, and much is everywhere left to the reader's imagination and spiritual intuition. All this was perhaps unavoidable. I don't refer to it in any spirit of criticism, but solely to illustrate the difficulty of getting at the truth, and to explain in a general way why there is often such a lack of harmony and fullness in our views on many of the topics we are in the habit of discussing.

From my own reading of the *Secret Doctrine*, I have been led to this conclusion: — that man made his first appearance on this

planet as a lunatic or idiot. This may seem a harsh and extreme way of putting it; but it is abundantly justified by our authority. For what is a lunatic? Literally, one affected by the moon; more commonly, one whose mind is affected; one "out of his mind", as the phrase is; while an idiot is a being without any mind. Now the *Secret Doctrine* tells us that the first man on this globe, the first personalities of our race, came from the moon. They were the lunar Pitris or fathers. They are our ancestors; they are in fact ourselves, and we would be strictly bone of their bone and flesh of their flesh, only it happened that they didn't have any bone or flesh to transmit. They were lunar beings and only had astral bodies. They were semi-divine entities travelling on the downward curve into matter, and appear to have consisted of two groups — one group of three classes very ethereal and incorporeal, without even astral bodies; the other of four classes, possessing greater corporeality and endowed with astral bodies. It was this second group that, coming over in the process of evolution to our planetary chain, passed during the first three rounds through the mineral, vegetable, and animal kingdoms, and at the beginning of the fourth round became men — not the gross physical being that man is today, but ethereal astral entities in human form yet of immense size.

But this lunar man was an idiot; the first race was mindless, says the *Secret Doctrine*. And he was without a mind because the lunar fathers themselves, our ancestors, were mindless. They gave man all they had to give, — his lower principles, but, having no "manas" or mind themselves to bestow, the early human races were practically animals in human form.

Perhaps some one will ask: How is it that the lunar Pitris who were semi-divine and godlike entities were mindless? Can we conceive of a god-like being without a mind? Now I shall not attempt to answer a question of this kind. But here is a

suggestion. What is "mind?" What are its functions? I may be wrong in my view of it, but to me "mind" seems to be the connecting link between the spiritual monad — the Atma-budhi — and the lower personality. If a being is all spirituality, the lower personality having vanished, what necessity is there for mind? What is the use of a connecting link when there is nothing to connect? So if an entity consists solely of the lower quaternary, the higher principles being in absolute abeyance, mind again would be a useless superfluity. Just, then, as we know animals to be mindless, so we can conceive of a mindless god. And this seems to have been the condition of the lunar fathers to whom we owe our physical existence. True, the whole septenary principles were there, germinally or otherwise; but as the fathers had not yet passed through human experiences and imperfections, manas was still wholly latent. And the shadows or projections of the fathers were equally mindless.

In this mindless, idiotic condition early man long remained. He lived and died and propagated his kind in strange fantastic ways, but for ages was only an animal still. The first race gave place to the second, and the second to the third, each becoming more and more gross and material. And the second race having absorbed the first, man, so-called, had then not only an astral but a physical body, yet he still continued mindless. About the middle of the third race, however, a change took place. In obedience to cyclic law the gods with minds, variously known as the Solar angels, Sons of wisdom, Kumaras, Agnishwattas, Dhyanis, Pitris, breaths, fires, flames, thrones, essences, intelligences, and the like, incarnated in these animal lunar shells, and man as we now know him was the result. Where the shell was so far ready that it could receive the full incarnation of the essence, the man thus endowed became an Arhat or sage. But in the majority of cases only a spark of the divine flame was projected into the shell, and

this spark quickening into activity the germ of the manas, or fifth principle, latent in it from the beginning, produced the average human being as we now find him. Thus man has a two-fold line of descent, and, as it were, a dual being. On the lower or physical side he comes from the Moon his Mother; on the higher or spiritual, from the Sun his father. On the one side he is a physical entity; on the other a divine ego; the union or blending of the two constituting the complete man.

But it may be asked, and very naturally: If man has this double origin, if he is a combination of lunar and solar elements, does he not really consist of two monads instead of one? And which then is the real human monad — the original lunar germ or the incarnating solar angel? To this the *Secret Doctrine* says: "No; — there are not two monads, only one." But the passage in which this statement occurs is a very interesting one, and an extract from it may fittingly close this brief paper:

"We now come to an important point with regard to the double evolution of the human race. The Sons of Wisdom, or the Spiritual Dhyanis, had become intellectual through their contact with matter, because they had already reached, during previous cycles of incarnation, that degree of intellect which enabled them to become independent and self-conscious entities *on this plane* of matter. They were reborn only by reason of Karmic effects. They entered those who were ready, and became the Arhats or sages alluded to above. This needs explanation.

It does not mean that Monads entered forms in which other monads already were. They were "Essences," "Intelligences," and *conscious spirits*; entities seeking to become still more conscious by uniting with more developed matter. Their essence was too pure to be distinct from the universal essence; but their "Ego" or *Manas* (since they are called *manasaputra*, born of *Mahat*, or

Brahma,) had to pass through earthly human experiences to become *all-wise*, and be able to start on the returning ascending cycle. The *Monads* are not *discrete* principles, limited or conditioned, but rays from that one universal absolute Principle. The entrance into a dark room through the same aperture of one ray of sunlight following another will not constitute two rays, but one ray intensified. It is not in the course of natural law that man should become a *perfect* septenary being before the seventh race in the Seventh Round. Yet he has all these principles latent in him from his birth. Nor is it part of the evolutionary law that the Fifth principle (*Manas*) should receive its complete development before the *Fifth Round*. All such prematurely developed intellects (on the spiritual plane) in our race are abnormal; they are those whom we call the "Fifth Rounders." Even in the coming Seventh Race at the close of this Fourth Round, while our four lower principles will be fully developed, that of manas will be only proportionately so. This limitation, however, refers solely to the spiritual development. The intellectual on the physical plane was reached during the Fourth Root-Race. Thus those who were "half ready", who received "but a spark", constitute the average humanity which has to acquire its intellectuality during the present manvantaric evolution, after which they will be ready in the next for the full reception of the Sons of Wisdom."

The Path

OCCULTISM WHAT IS IT? — *Eusebio Urban*

Not only in the Theosophical Society, but out of it, are tyros in Occultism. They are dabblers in a fine art, a mighty science, an almost impenetrable mystery. The motives that bring them to the study are as various as the number of individuals engaged in it, and as hidden from even themselves as is the center of the earth from the eye of science. Yet the *motive* is more important than any other factor.

These dilletanti in this science have always been abroad. No age or country has been without them, and they have left after them many books — of no particular value. Those of today are making them now, for the irresistible impulse of vanity drives them to collate the more or less unsound hypotheses of their predecessors, which, seasoned with a proper dash of mystery, are put forth to the crowd of those who would fain acquire wisdom at the cost-price of a book. Meanwhile the world of real occultists smiles silently, and goes on with the laborious process of sifting out the living germs from the masses of men. For occultists must be found and fostered and prepared for coming ages when power will be needed and pretension will go for nothing.

But the persons now writing about occultism and competent to do any more than repeat unproved formulae and assertions left over from mediaeval days, are few in number. It is very easy to construct a book full of so-called occultism taken from French or German books, and then to every now and then stop the reader short by telling him that it is not wise to reveal any more. The writings of Christian in France give much detail about initiations into occultism, but he honestly goes no further than to tell what he has gained from Greek and Latin fragments. Others, however,

have followed him, repeated his words without credit, and as usual halted at the explanation.

There are, again, others who, while asserting that there is magic science called occultism, merely advise the student to cultivate purity and spiritual aspirations, leaving it to be assumed that powers and knowledge will follow. Between these two, theosophists of the self-seeking or the unselfish type are completely puzzled. Those who are selfish may learn by bitter disappointment and sad experience; but the unselfish and the earnest need encouragement on the one hand and warning on the other. As an Adept wrote years ago to London Theosophists: "He who does not feel equal to the work need not undertake a task too heavy for him." This is applicable to all, for every one should be informed of the nature and heaviness of the task. Speaking of this tremendous thing — Occultism — Krishna in the *Bhagavad-Gita* says: "During a considerable period of time this doctrine has been lost in the world . . . This mystery is very important." We do not think that the doctrine has yet been restored to the world, albeit that it is in the keeping of living men — the Adepts. And in warning those who strive after occultism with a selfish motive he declares: "Confused by many worldly thoughts, surrounded by the meshes of bewilderment, devoted to the enjoyment of their desires, they descend to foul Naraka . . . and hence they proceed to the lowest plane of being."

In what, then, does the heaviness of the Occultist's task consist? In the immensity of its sweep as well as the infinitude of its detail. Mere sweet and delightful longing after God will not of itself accomplish it, nor is progress found in *aspiring* to self-knowledge, even when as a result of that is found partial illumination. These are excellent; but we are talking of a problem whose implacable front yields to nothing but *force*, and that force must be directed by *knowledge*.

The field is not emotional, for the play of the emotions destroys the equilibrium essential to the art. Work done calling for reward avails not unless it has produced knowledge.

A few examples will show that in Occult Science there is a vastness and also a multiplicity of division not suspected by theosophical Occultists in embryo.

The element of which fire is a visible effect is full of centres of force. Each one is ruled by its own law. The aggregate of centres and the laws governing them which produce certain physical results are classed by science as laws in physics, and are absolutely ignored by the book-making Occultist because he has no knowledge of them. No dreamer or even a philanthropist will ever as such know those laws. And so on with all the other elements.

The Masters of Occultism state that a law of "transmutation among forces" prevails forever. It will baffle any one who has not the power to calculate the value of even the smallest tremble of a vibration, not only in itself but instantly upon its collision with another, whether that other be similar to it or different. Modern science admits the existence of this law as the correlation of forces. It is felt in the moral sphere of our being as well as in the physical world, and causes remarkable changes in a man's character and circumstances quite beyond us at present and altogether unknown to science and metaphysics.

It is said that each person has a distinct mathematical value expressed by one number. This is a compound or resultant of numberless smaller values. When it is known, extraordinary effects may be produced not only in the mind of the person but also in his feelings, and this number may be discovered by certain calculations more recondite than those of our higher

mathematics. By its use the person may be made angry without cause, and even insane or full of happiness, just as the operator desires.

There is a world of beings known to the Indians as that of the Devas, whose inhabitants can produce illusions of a character the description of which would throw our wildest romances into the shade. They may last five minutes and seem as a thousand years, or they may extend over ten thousand actual years. Into this world the purest theosophist, the most spiritual man or woman, may go without consent, unless the knowledge and power are possessed which prevent it.

On the threshold of all these laws and states of being linger forces and beings of an awful and determined character. No one can avoid them, as they are on the road that leads to knowledge, and they are every now and then awakened or perceived by those who, while completely ignorant on these subjects, still persist in dabbling with charms and necromantic practices. It is wiser for theosophists to study the doctrine of brotherhood and its application, to purify their motives and actions, so that after patient work for many lives, if necessary, in the great cause of humanity, they may at last reach that point where all knowledge and all power will be theirs by right.

The Path

MUCH READING, LITTLE THOUGHT — *William Brehon*

The wise man sagely said that of making books there is no end. If true in his day, it is the same now. Among members of the Theosophical Society the defects are widespread, of reading too many of the ever coming books and too little thought upon the matter read. Anyone who is in a position to see the letters of inquiry received by those in the Society who are prominent, knows that the greater number of the questions asked are due to want of thought, to the failure on the part of the questioners to lay down a sure foundation of general principles.

It is so easy for some to sit down and write a book containing nothing new save its difference of style from others, that the pilgrim theosophist may be quickly bewildered if he pays any attention. This bewilderment is chiefly due to the fact that no writer can express his thoughts in a way that will be exactly and wholly comprehended by every reader, and authors in theosophic literature are only, in fact, trying to present their own particular understanding of old doctrines which the readers would do much better with if they devoted more time to thinking them out for themselves.

In the field of every day books there is so much light reading that the superficial habit of skimming is plainly everywhere apparent, and it threatens to show itself in theosophical ranks.

So well am I convinced there are too many superfluous books in our particular field, that, if I had a youth to train in that department, I should confine him to the *Bhagavad-Gita*, the *Upanishads*, and the *Secret Doctrine* for a very long time, until he was able to make books for himself, out of those, and to apply the principles found in them to every circumstance and to his own

life and thought.

Those theosophists who only wish to indulge in a constant variety of new theosophical dishes will go on reading all that appears, but the others who are in earnest, who know that we are here to learn and not solely for our pleasure, are beginning to see that a few books well read, well analysed, and thoroughly digested are better than many books read over once. They have learned how all that part of a book which they clearly understand at first is already their own, and that the rest, which is not so clear or quite obscure, is the portion they are to study, so that it also, if found true, may become an integral part of their constant thought.

The Path

THE SEVENFOLD CONSTITUTION OF MAN — *K. Hillard*

In the second volume of the *Secret Doctrine*, p. 81, Mme. Blavatsky bids us remember that to some extent even the esoteric teaching is allegorical, and that to make the latter comprehensible to the average intelligence, symbols cast in an intelligible form must be used. And in *Esoteric Buddhism* Mr. Sinnett warns us against thinking of the higher principles as of a bundle of sticks tied together, or, in another view, of considering the different principles as being like the skins of an onion, to be peeled off one by one till we get to the innermost and best. It is said that one of the favorite topics of discussion in the medieval Church was as to the number of angels that could find standing room on the point of a cambric needle. Human nature is the same always, and in every age of the world we have found it difficult to dispossess our minds of concrete conceptions and come down to abstract thought. We instinctively cling to some form of expression which materialises our idea, so to speak, and enables us to make a picture of it in our mind's eye; and then, almost before we know it, we have accepted that picture as the thing it tried to symbolise. Men are always making to themselves graven images, and then bowing down and worshiping the images instead of the gods they endeavored to represent.

So it seems to me that our difficulty in getting at a clear idea of the seven-fold constitution of man lies mostly in the way we go to work; that we fail to recognise, in the first place, that we are dealing with spiritual things, and that those things cannot be seen with the physical, nor even the intellectual eye, and that the more we divide and subdivide, the more we define and consequently materialise our subject. This is most certainly a case where we need to generalise, and not to particularize, until we have arrived

at the point where we are quite sure we are conscious that we are dealing with symbols and not with entities.

If we wish to get a general idea of Man, we may think first of the body, as a thing which upon this material plane whereon we live we may call a tangible reality. Now a "tangible reality", though it can easily be proved to be the greatest of all illusions, is also the most material thing about us and the most widely removed from spirit; therefore we can set it aside, as do the Vedantin schools spoken of in the *Key*, p. 117, as not part of the spiritual man, or we can call it the lowest "principle" of our being. The material at one end of the scale involves the spiritual at the other, and we find on page 101 and 119 of the *Key*, *Atma* described as the Divine essence, which "is no individual property of any man", but "only overshadows the mortal; that which enters into him and pervades the whole body being only its omnipresent rays or light". "This ought not to be called a human principle at all" (p. 119).

We have, then, the body and the Spirit accounted for, — what remains is Consciousness, in its different phases. Upon p. 100 of the *Key* we read: "The 'principles' (save the body, life, and the astral eidolon, all of which disperse at death) are simply *aspects* and *states of consciousness*."

We realize a mood of intense desire or passion as something apart from our spiritual nature, and more akin to the physical; and we sometimes speak even of our "physical consciousness" as a thing that we do not therefore perceive with our senses. This is the lowest aspect of our consciousness, and is called in Sanskrit *Kama-rupa*, or "the body of desire." This is, of course, a highly figurative expression.

Then comes our intelligent consciousness, the Mind itself, the thinking part of us, which differentiates us from the brute; and we all realise that this aspect of our consciousness has a dual

nature, and may drag us down to the level of the animal or raise us to the height of the god. Therefore we speak of the higher and lower *Manas*, or mind.

The physical body, its passions, and that lower aspect of mind which tends to gravitate downward and which belongs to the physical brain, are dependent upon *life*, or the vital principle, a form of the Divine Energy within us. So also is that phantom body, the shadow of the real one, which disperses after death like the light of a distant star, that to us appears to be still shining, although in reality long ago fallen from its sphere.

If we can imagine the lower aspect of our intelligence or mind tending downward, we can also realise its higher phase aspiring to unite itself to our spiritual consciousness or *Buddhi*, the vehicle of the Divine, of that Universal Spirit which makes us one. Our highest intelligence and our spiritual consciousness, overshadowed by the radiation of the Absolute, form the *Monad* or re-incarnating Ego.

Of this Madame Blavatsky says on p. 92 of the *Key*, that it alone can be thought of as the highest "principle in man". Because, as she explains it is always the predominating element in man that counts, and in one man passion is the ruling and foremost phase; in another, intellect; in another, spirituality.

But however we choose to arrange these phases in our minds, let us remember always that they are not entities, and that, as Mme. Blavatsky says, "There is but one *real* man, enduring through the cycle of life and immortal in essence, if not in form, and this is *Manas*, the Mind-man or embodied consciousness." (*Key*, p. 100.)

REMEMBERING THE EXPERIENCES OF THE EGO — *Eusebio Urban*

To many it seems puzzling that we do not remember the experiences of the Higher Self in sleep. But as long as we ask "Why does not the lower self remember these experiences", we shall never have an answer. There is a contradiction in the question, because the lower self, never having had the experiences it is required to remember, could not at any time recollect them.

When sleep comes on, the engine and instrument of the lower personality is stopped, and can do nothing but what maybe called automatic acts. The brain is not in use, and hence no consciousness exists for it until the waking moment returns. The ego, when thus released from the physical chains, free from its hard daily task of living with and working through the bodily organs, proceeds to enjoy the experiences of the plane of existence which is peculiarly its own.

On that plane it uses a method and processes of thought, and perceives the ideas appropriate to it through organs different from those of the body. All that it sees and hears (if we may use those terms) appears reversed from our plane. The language, so to say, is a foreign one even to the inner language used when awake. So, upon reassuming life in the body, all that it has to tell its lower companion must be spoken in a strange tongue, and for the body that is an obstruction to comprehension. We hear the words, but only now and then obtain flashes of their meaning. It is something like the English-speaking person who knows a few foreign words entering a foreign town and there being only able to grasp those few terms as he hears them among the multitude of other words and sentences which he does not understand.

What we have to do, then, is to learn the language of the Ego, so that we shall not fail to make a proper translation to ourselves. For at all times the language of the plane through which the Ego nightly floats is a foreign one to the brain we use, and has to be always translated for use by the brain.

If the interpretation is incorrect, the experience of the Ego will never be made complete to the lower man.

But it may be asked if there is an actual language for the Ego, having its sound and corresponding signs. Evidently not: for, if there were, there would have been made a record of it during all those countless years that sincere students have been studying themselves. It is not a language in the ordinary sense. It is more nearly described as a communication of ideas and experience by means of pictures. So with it a sound may be pictured as a color or a figure, and an odor as a vibrating line; an historical event may be not only shown as a picture, but also as a light or a shadow, or as a sickening smell or delightful incense: the vast mineral world may not only exhibit its planes and angles and colors, but also its vibrations and lights. Or, again, the ego may have reduced its perceptions of size and distance for its own purposes, and, having the mental capacity for the time of the ant, it may report to the bodily organs a small hole as an abyss, or the grass of the field as a gigantic forest. These are adduced by way of example, and are not to be taken as hard and fast lines of description.

Upon awakening, a great hindrance is found in our own daily life and terms of speech and thought to the right translation of these experiences, and the only way in which we can use them with full benefit is by making ourselves porous, so to speak, to the influences from the higher self, and by living and thinking in such a manner as will be most likely to bring about the aim of the soul.

This leads us unerringly to virtue and knowledge, for the vices and the passions eternally becloud our perception of the meaning of what the Ego tries to tell us. It is for this reason that the sages inculcate virtue. Is it not plain that, if the vicious could accomplish the translation of the Ego's language, they would have done it long ago, and is it not known to us all that only among the virtuous can the Sages be found?

The Path

THE MODERN INQUISITION — *Edward Maitland*

In view of the attempt of European physiologists to debauch the people of India by introducing among them the practice of Vivisection — as instanced by the recent experiments of the British Chloroform Commission at Hyderabad, — the time seems opportune for a special appeal to the conscience of the West in regard to this practice. And there is no quarter from which such appeal can so fitly proceed as that which represents the higher nature of man as implied in the term Theosophy. Hence the presence of this appeal in these pages.

As is generally well-known, Vivisection consists in the employment of living animals for the purpose of physiological and biological research. To such extent and in such manner is that research carried on, that Christendom — so-called for its once veneration of a humanity which, for the voluntary sacrifice of its own lower nature to its higher and of itself for others, was recognized as divine — has of late years become from end to end studded with torture-chambers, under the name of physiological laboratories, wherein unceasingly myriads of innocent, healthy, and otherwise happy creatures, of the keenest sensibility, are made to undergo sufferings the most excruciating and protracted which scientific skill can devise. (1)

The plea for this state of things varies with the class to whom it is addressed; but it is in all cases a selfish one. With the general public it is the advancement of medical knowledge for their own benefit. With the physiologist, it is his own professional advancement.

With respect to the former of these pleas, it does not come within the scope of this paper to do more than state that it is in no way

sustained by the results obtained: For this we have the positive assurance of the most eminent experts in medical science, — some of them in their day noted experimentalists, — that, so far from that science being promoted by the practice, it has been seriously hindered and injured. And this in three different ways, (1) By its misleading nature, through the untrustworthiness of the conclusions based upon it. (2) By its being made a substitute for sound and legitimate methods of observation. And (3) by its tendency to repel from the study of medicine the finest minds and noblest characters, and to hand it over to the hardest hearts and dullest consciences. In support of one of these allegations it will suffice to state that some of its most ardent practitioners have been known to warn their friends against accepting aid, medical or surgical, from men whose knowledge or skill has been obtained in the laboratory. (2)

And in support of another, that in places where the practice prevails the poor are notoriously in danger of repairing to the hospital only to find it a laboratory and themselves the subjects of agonizing and murderous experimentation performed for ends in which they have no manner of concern. (3) All this is but as would confidently be anticipated by intelligent students of Nature who have learnt to look within the veil, and represents the Nemesis which inevitably attends on the violation of her laws, whether physical or moral. For, as these know absolutely, Nature is no mere mechanism, inscient and insensible to defiance and outrage. Like her own children, she is a Soul, having a body. For we can have nothing that she has not. And she is very woman, whose real law is sympathy, whatever to shallow and loveless observation it may appear to be. For she reflects to each one who approaches her precisely the image he presents to her. Wherefore to those, and those only, who court her with reverence, humility, patience, and tenderness, does she open her heart and disclose

her secrets. But the attempt to ravish these from her by violence — how mean soever the subject of the assault — she vehemently resents, and avenges by smiting with impotence the intellect of the offender, so that he can in no wise discern the significance even of that which with his outer eyes he may behold. From this it comes — as is demonstrated by all the records of the practice — that, like the witness stretched upon the rack, Nature — put to the question by torture — answers with a lie. Through a creature crucified alive to a plank, cut into with knives, torn with saws, burnt with acids or hot irons, pierced through and through with nails, scalded inside or outside with boiling water, wetted with spirits and set on fire, whose eyes and organs and limbs are dissected out bit by bit, whose nerves and sinews are wrung to their utmost tension with hooks, whose whole circulation is deranged and whose frame is writhing throughout with agony — Nature permits no trustworthy revelation to be made; so that the very "facts" obtained by a vivisectioning science are not truths but falsehoods. And if instances be demanded in token whether of the futility of the method or of its paralysing influence upon the minds of its followers, we have these two typical ones, (1) Physiologists were, unknown to the general public, vivisectioning not only animals but men and women — criminals from the prisons of Egypt and Italy being delivered to them in hundreds for the purpose — for nearly two thousand years, before that most probable and obvious of natural phenomena was discovered, the circulation of the blood. And so far were they even from suspecting the fact, that the discovery, when at length it was made, was received by the profession at large with incredulity and derision. The discovery, moreover, though made by a vivisectioner, was neither due to vivisection, nor could have been made through vivisection. (2) To this day it is a question — real or pretended — among physiologists, whether animals are capable of feeling pain. (4) It is not, however, on the ground of its

uselessness or its mischievousness that this protest against vivisection is based, but on that of its cruelty, injustice, and selfishness, and, therein, of its immorality and wickedness. (5)

For, constituting as it does, the extremest conceivable instance of seeking one's own advantage regardless of the cost to others, it is so hopelessly and desperately wrong as to warrant the assertion that if vivisection is right then nothing is wrong. For there is no principle of morality to which it is not in direct opposition. To approve it, we must hold that the end justifies the means; that might is right, and that the strong and crafty do no wrong when for their own selfish ends they ruthlessly torture the weak and simple; that mankind can be benefited by that which is subversive of humanity; that kingship is tyranny, and the right to rule involves the right to torture; that the way to make earth a heaven is to establish human society upon the ethics of hell, and people the world with fiends in place of beings really human; that there are pursuits to which there are no moral limits; and that man has no duties either towards his own best, or towards those who are unable to enforce their own rights: that the universe, so far from proceeding from one and the same source, or having any unity of substance, impulse, method, or design, proceeds from opposites so extreme that good is to be got by doing evil and divine ends are to be attained by infernal methods; that force is all, love nothing; that sense is all, conscience nothing; that head is all, heart nothing; that the form is all, the character nothing; that the body is all, the soul nothing: that inhumanity is humanity; and that the physical self is the beginning and end of existence, and the care of that self the fulfilling of all rational law.

Such are the principles which, at the bidding of a wholly materialistic science, the society at large of Christendom accepts, the legislatures protect and endow, the literatures and press uphold, the churches by silence consent to or, by implication,

sanction; and practically imbued with which its youth come forth from its centres of education to propagate by precept or example on entering the world as men. And so great is the prevailing hardness of heart and dullness of perception, that the perpetrators of the most dreadful atrocities can openly publish their horrible records without risk legal or social, and pose on platforms and in senates as authorities on education and morals, and rebuke people for such scruples as they may still retain, without finding a public sentiment to be shocked at the anomaly. And, to crown all, there are not wanting women so lost to all sense of tenderness and beauty, and with the womanhood in them so dead, as to consort as wives with the torturers, and even with their own hands to exercise their foul art, and to send their daughters to classes in "experimental physiology"! And meanwhile all really human lives are made intolerable by the consciousness that such horrors are being enacted, such principles recognised, and humanity unspeakably degraded, under the sanction of the laws and the protection of the police. So that it is a question of torturing men and women as well as animals. For all really human beings are tortured through the knowledge of what is being done in their midst, and can with full truth declare to the torturers, "Inasmuch as ye have done it to the least of these our brethren, ye have done it unto us."

It is a very real and serious danger with which modern society is confronted, the danger which arises from the demands of certain scientific classes to exercise supremacy over it, and the readiness of the generality to concede it to them. History shows that there is always a disposition on the part of Specialists of some sort to get themselves erected into an oligarchy and invested with a universal dictatorship, in the exercise of which they trample under foot every principle and sentiment that stands in their way. History shows also that it depends upon what people most dread,

what class of specialists gets the upperhand. Thus, when the danger is anarchy or invasion, then the specialists in military science — the soldiery — bear sway. When people most fear for their souls, or believe their worldly welfare to be endangered by supernatural causes, then the specialists in religion — the priests — become the rulers, they being credited with a monopoly of the arts of saving souls and propitiating the powers above. And now that peace and security are sufficiently assured to enable us to dispense with a military domination; and people are for the most part persuaded either that there are no such things as souls to be saved and super-natural powers to be propitiated, or that priests possess no special faculty in the matter, and that the body is all in all, their concern is all for their bodily welfare, and they are ready to give a free hand to the specialists of medical science, and to invest the doctors with the authority formerly wielded by soldiers and ecclesiastics. And in this way it has come that the professors of the cure of souls have been superseded by those of the cure of bodies.

Now, of specialists in any department, this is indisputably true. Be they eminent as they may in their own department — and, indeed, by reason of such eminence — they are in the highest degree liable to be correspondingly deficient in respect of departments other than their own; so that the converse of the adage "General knowledge means particular ignorance" holds good of them, and their particular knowledge means general ignorance. This is because their habit of exclusive concentration upon one subject or class of subjects renders them non-percipient in respect of others, and incapacitates them for estimating their relative values. For this reason it is necessary that society at large keep a strict watch on specialists, and particularly on that class which the circumstances of the time bring most into vogue, in order that other interests may not suffer.

To this rule the class of specialists now to the front, that of medical science, is no exception, and the interests to which it is blind are precisely those which, for all who have taken pains to obtain knowledge both general and particular, are the most important of all interests, seeing that upon them it depends whether life be worth living at all, and humanity be something worth belonging to. These are the interests of that part of man's nature which so far transcends the sphere of physiology and medicine as wholly to escape recognition by the exclusive followers of those branches of knowledge, use what instruments they may, — the part moral and spiritual in the human system. Not, be it observed, that these studies by any means necessarily incapacitate the mind for the discernment and appreciation of higher things. To one duly percipient and reflective, to one capable of thought really free, every natural object is suggestive of an informing idea the pursuit of which, if carried far enough, uplifts the mind to the divine source of all Truth; while the very inadequacy of the physical organism to account for the facts of consciousness suggests the necessity of something vastly transcending the organism to complete and interpret the man. That this is notoriously not the case with the physiologist of the period is, then, no fault of the study itself. Rather does it show that medical science has for the most part fallen into the hands of men whose minds are not duly percipient and reflective; of men, that is, who are, in respect of the higher regions of man's nature, rudimentary and undeveloped, and who, accordingly, instead of supplementing and correcting the senses by the mind, subordinate and suppress the mind in favor of the senses, and make these their sole criterion of truth. This is to say that they who claim to represent the medical science of the day, and — as shown by their insistence on vivisection — to dictate to society its code of religion and morals, are, in respect of all matters transcending the merely physical, exactly in the condition of

those who deny the diurnal revolution of the earth on the ground that they *see* the sun and stars go round it every twenty-four hours, and *feel* it stationary beneath their feet, and who recognize as trustworthy nothing but the bodily senses. Now, it is at the bidding of men precisely such as these that we are called on, by the toleration of vivisection, to renounce the soul, or higher ego, and all those sentiments which, being of the soul, alone make and ennoble Humanity.

But it is said that the doctor is necessarily, by the very nature of his vocation, so humane as to render *a priori* incredible the items of this indictment against him. Never was there a greater fallacy; or one more ridiculed and scoffed at, and this by the subjects themselves of it. And the marvel is how, in the face of history and its awful records of the doings of those who, being priests and claiming to be ministers of the gentle religion of Jesus, were responsible for the horrors of the Inquisition and multitudinous persecutions, such a plea can find utterance. As well might we credit the soldier with more courage than other men on account of his vocation; the policeman with more civic virtue; the ecclesiastic with profounder piety; the lawyer with a greater love of justice; as the doctor with more humanity than other men on account of his vocation. He is but as others, as he himself knows and freely admits. And being so, he is no less liable to ignore right principles in favor of evil methods where his material interest, or the exaltation of his order, is concerned. And it is precisely through its persistency in doing this that the medical profession of our day has become guilty of the most dire conspiracy ever contrived against the human race, in that it has for its object the destruction of the *character* of mankind, present and to come. No less tremendous than this is the issue involved in this question. And that people have failed so to discern it is because, under the prevailing materialistic *regime*, they are so wholly given to

idolatry as altogether to ignore the substance for the appearance, and to worship this accordingly, believing that it is the form, and not the character, which makes and *is* the man. Whereas the human form, to be valid, must, like any other form, *be filled up*. It must have the MAN inside it.

As history shows, every age has its sanguinary orthodoxy claiming a vested interest in some barbarous wrong. But, as history also shows, it was not by tamely submitting to the dictation of Specialists that our forefathers procured for us the possibilities of such advance as has been made. Wherefore, as they abolished, one after another, such horrors as bloody sacrifices, human and animal, prisoner-killing, witness-torturing, gladiatorial and other brutal sports, heretic burning and racking, and persecution generally for conscience sake, witch-baiting, press-ganging, and negro slavery, — so let us in our turn abolish the peculiar barbarism of our time. Thus doing, we shall set ourselves and our children free to follow with unstained hearts and hands those knowledges whose lawfulness or unlawfulness, whose power to bless or to curse, depend no less on the method of their acquisition than on that of their application.

We who seek to smite down vivisection are the true descendants and successors of those who smote down the corresponding inquiries of the past, and who live again in us, for the spirit is the same. And they who uphold vivisection are the true descendants and successors of those who upheld the corresponding iniquities of the past, and who live again in them, for the spirit is the same. Then, just as now, abolition was denounced as dangerous to religion, morals, and the best interests of society. Historians tell us that the decline of the taste for human sacrifices — a practice once universal as the world has never regretted the abolition of such things in the past, so — we may be well assured — it will never regret the like abolition now; but rather will it evermore

rejoice in its recognition, though tardy, of the self-evident propositions that true science, like true religion, neither needs, nor can be sustained by, torture; and that, come what may, it is better to die men than to live fiends. In the words of *The Perfect Way*, "In vivisection the human is abandoned for the infernal."

FOOTNOTES:

1. According to published returns the number of victims used at Prof. Schiff's laboratory at Florence in ten years exceeded 76,000, of which over 14,000 were dogs, and the minimum annual demand for the same purpose at Geneva is stated at 10,000. There are hundreds of such institutions.

The notion that the suffering is prevented or mitigated to any appreciable extent by means of anesthetics is altogether fallacious. Both the duration and the nature of the vast majority of the experiments are such as to preclude the use of anaesthetics. For their effect would be either to kill the animal or to vitiate the result. Their chief use in the matter has been to lull the public conscience. And in this view anesthetics have been pronounced by a *quondam* experimenter to be "the greatest curse of vivisectionable animals." The inventive genius of the Americans, as applied to this department, has procured for the physiologists of the United States the evil reputation of surpassing all others in the cruelty of their experiments. ([return to text](#))

2. The late celebrated French experimental physiologist, Prof. Claude Bernard, said shortly before his death in regard to the results then obtained, "Our hands are empty." And of M. Pasteur's system — to which the experimentalists cling as their last hope, that bubble not having yet burst for the public, it has been shown by Luteau and others that, while there is abundant evidence to show that it has caused many deaths, there is no evidence to show that it has saved any lives.

Among those who have given the above warning was the late Prof. Majendie, one of the most hardened of French experimentalists. It is a common thing in the Paris medical schools for students under examination to be rebuked for founding their answers on vivisectional experimentation, on account of the eminent untrustworthiness of the method. ([return to text](#))

3. See, among other works, *St. Bernard's*, by a London Physician, and the key to it. ([return to text](#))

4. Among others Prof. Huxley has tried to show that animals are little more than non sensitive automata. On the other hand, Prof. Mantegazza of Milan — whose experiments were especially contrived for the production of pain, in order that he might observe its phenomena — divided the pain produced by him into four degrees, which he named respectively "great pain", "intense pain", "cruel pain", and "most atrocious pain". ([return to text](#))

5. It is precisely on the ground of its immorality and impiety that French physiologists, while admitting its uselessness, insist on it as constituting a fitting protest against any attempt of religionists and moralists to interfere with science. See *XLXth Century*, Feb., 1882, Art. "The Uselessness of Vivisection," by Dr. Anna Kingsford. ([return to text](#))

TRUE PROGRESS — *Bryan Kinnavan*

IS IT AIDED BY WATCHING THE ASTRAL LIGHT?

Perhaps those who have engaged in discussions about whether it is more advisable to become acquainted with the Astral Plane and to see therein than to study the metaphysics and ethics of theosophy, may be aided by the experience of a fellow student. For several years I studied about and experimented on the Astral Light to the end that I might, if possible, develop the power to look therein and see those marvellous pictures of that plane which tempt the observer. But although in some degree success followed my efforts so far as seeing these strange things was concerned, I found no increase of knowledge as to the manner in which the pictures were made visible, nor as to the sources from which they rose. A great many facts were in my possession, but the more I accumulated the farther away from perception seemed the law governing them. I turned to a teacher, and he said:

"Beware of the illusions of matter."

"But," said I, "is this matter into which I gaze?"

"Yes; and of grosser sort than that which composes your body; full of illusions, swarming with beings inimical to progress, and crowded with the thoughts of all the wicked who have lived."

"How," replied I, "am I to know aught about it unless I investigate it?"

"It will be time enough to do that when you shall have been equipped properly for the exploration. He who ventures into a strange country unprovided with needful supplies, without a compass and unfamiliar with the habits of the people, is in

danger. Examine and see."

Left thus to myself, I sought those who had dabbled in the Astral Light, who were accustomed to seeing the pictures therein every day, and asked them to explain. Not one had any theory, any philosophical basis. All were confused and at variance each with the other. Nearly all, too, were in hopeless ignorance as to other and vital questions. None were self-contained or dispassionate; moved by contrary winds of desire, each one appeared abnormal: for, while in possession of the power to see or hear in the Astral Light, they were unregulated in all other departments of their being. Still more, they seemed to be in a degree intoxicated with the strangeness of the power, for it placed them in that respect above other persons, yet in practical affairs left them without any ability.

Examining more closely, I found that all these "seers" were but half-seers — and hardly even that. One could hear astral sounds but could not see astral sights; another saw pictures, but no sound or smell was there; still others saw symbols only, and each derided the special power of the other. Turning even to the great Emanuel Swedenborg, I found a seer of wonderful power, but whose constitution made him see in the Astral world a series of pictures which were solely an extension of his own inherited beliefs. And although he had had a few visions of actual everyday affairs occurring at a distance, they were so few as only to be remarkable.

One danger warned against by the teacher was then plainly evident. It was the danger of becoming confused and clouded in mind by the recurrence of pictures which had no salutary effect so far as experience went. So again I sought the teacher and asked:

"Has the Astral Light no power to teach, and, if not, why is it thus?"

And are there other dangers than what I have discovered?"

"No power whatever has the astral plane, in itself, to teach you. It contains the impressions made by men in their ignorance and folly. Unable to arouse the true thoughts, they continue to infect that light with the virus of their unguided lives. And you, or any other seer, looking therein will warp and distort all that you find there. It will present to you pictures that partake largely of your own constitutional habits, weaknesses, and peculiarities. Thus you only see a distorted or exaggerated copy of yourself. It will never teach you the reason of things, for it knows them not.

"But stranger dangers than any you have met are there when one goes further on. The dweller of the threshold is there, made up of all the evil that man has done. None can escape its approach, and he who is not prepared is in danger of death, of despair, or of moral ruin. Devote yourself, therefore, to spiritual aspiration and to true devotion, which will be a means for you to learn the causes that operate in nature, how they work, and what each one works upon."

I then devoted myself as he had directed, and discovered that a philosophical basis, once acquired, showed clearly how to arrive at *dispassion* and made *exercise* therein easy. It even enables me to clear up the thousand doubts that assail those others who are peering into the Astral Light. This too is the old practice enjoined by the ancient schools from which our knowledge about the Astral Light is derived. They compelled the disciple to abjure all occult practices until such time as he had laid a sure foundation of logic, philosophy, and ethics; and only then was he permitted to go further in that strange country from which many an unprepared explorer has returned bereft of truth and sometimes despoiled of reason. Further, I know that the Masters of the Theosophical Society have written these words: "Let the

Theosophical Society flourish through moral worth and philosophy, and give up pursuit of phenomena." Shall we be greater than They, and ignorantly set the pace upon the path that leads to ruin?

The Path

THE KALI YUGA IN HINDU CHRONOLOGY — G. E. W.

Several weeks ago a communication was read at a regular meeting of this Branch, in which some references to the Kali Yuga were quoted from the *Secret Doctrine*, and some questions asked concerning them. In order to understand what the difficulties were which this writer found in his studies of the subject, I will take the liberty of repeating part of his letter.

"Allow me to ask a few questions about Kali Yuga; but it is necessary to preface a few references, so that the question may be understood. The references are to Vol. II. *Secret Doctrine*.

Page 434, 'There are seven rounds; this is the fourth; we are in the fifth root-race. Each root-race has seven sub-races.' Page 435, 'The fifth root-race has been in existence about 1,000,000 years; hence each of the four preceding sub-races has lived approximately 210,000 years; thus each family race has an average existence of about 30,000 years.' Page 395, 'The Aryans were 200,000 years old when the first great Atlantean island was submerged, about 850,000 years ago.' Page 147, 'All races have their own cycles. The Fourth sub-race of the Atlanteans was in its Kali Yuga when destroyed, whereas the Fifth was in its Satya Yuga. The Aryan Race is now in its Kali Yuga, and will continue to be in it for 427,000 years longer, while various family races are in their own special cycles.' So far preliminary. The questions are: 1. If the Aryan race has gone through its Krita, Treta and Dvapara ages in about 1,000,000 years, can its Kali Yuga be literally 432,000 years? 2. If the entire earth is in the Kali Yuga of some great cycle, may not we of this country still be in the Krita age of some smaller cycle?"

The writer of the foregoing, a respected member of the

Theosophical Society, is not alone in his perplexity regarding the divisions of time, as established by the Hindus. There are very many exoteric Oriental students, as well as members of the society, who have been unable to reconcile the various statements made concerning the Yugas by different authorities. I think, however, that upon a careful examination of the subject, most of these difficulties will vanish, and the truth will be made plain in a manner to reflect credit instead of discredit upon the Hindu cosmogony and upon the subtle Aryan mind that conceived this wonderful chronological theory.

Before proceeding to this branch of the subject it will be necessary to examine the earliest references to the yugas in the Hindu Books, in order not only to understand the difference between the various divisions of time as there employed, but to discover, if possible, when they were first brought into common use. There is a wide divergence of opinion among Oriental scholars as to the date of the *Manu Smriti*, or *Laws of Manu*. Max Muller and his followers, who apparently bend all their energies to the task of proving that everything in Hinduism is of comparatively recent origin, claim that the *Laws of Manu* were compiled in the fifth century of our era. Their arguments are based solely upon certain passages which allude to customs and religious rites known to be modern. But it can easily be shown that all such passages may have been later interpolations of the Brahmins, while, on the other hand, the bulk or greater part of the work is undoubtedly archaic in character. Prof. Monier Williams, of Oxford, says: "Sir William Jones held that Manu's book was drawn up in about the year 1280 B. C. Mr. Elphinstone placed it 900 years B. C. Possibly some parts of it may represent laws and precepts which were current among the Manayas at the later date, but no one would now assign so early a date to the actual compilation of the Code. Nor can it, I think, reasonably be

placed later than the fifth century B.C." (1)

There is here a trifling difference of a thousand years in the estimates of two such good authorities, even, as Max Muller and Monier Williams, to say nothing of the earlier writers quoted, who affirm a still higher antiquity for Manu.

But let us see what the Hindus themselves claim. Manu, according to Brahminical authority, was literally the first man in the present manvantara or man-period. He taught the code of laws to his son Bhrigu, who promulgated them to the Rishis. Concerning the divisions of time he used the following language:

68. — But hear now the brief description of the duration of a night and a day of Brahman, and of the several ages of the world according to their order.

69. — They declare that the Krita age consists of four thousand years of the gods; the twilight preceding it consists of as many hundreds, and the twilight following it of the same number.

70. — In the other three ages with their twilights preceding and following, the thousands and hundreds are diminished by one in each.

71. — These twelve thousand years which thus have just been mentioned as the total of four human ages are called one age of the gods.

72. — But know that the sum of one thousand ages of the Gods makes one day of Brahman, and that his night has the same length.

73. — Those only who know that the holy day of Brahman, indeed, ends after the completion of one thousand ages of the gods, and that his night lasts as long, are really men

acquainted with the length of days and nights.

79. — The before mentioned age of the gods or twelve thousand of their years, being multiplied by seventy-one, constitutes what is here named the period of a Manu, or a Manvantara.

80. — The Manvantaras, the creations and destructions of the world, are numberless; sporting, as it were, Brahman repeats this again and again.

81. — In the Krita age justice is four-footed and entire, and so is truth; nor does any gain accrue to men by unrighteousness

82. — In the other three ages, by reason of unjust gains justice is deprived successively of one foot, and through the prevalence of theft, falsehood, and fraud, the merit gained by men is diminished by one-fourth in each.

83. — Men are free from disease, accomplish all their aims, and live four hundred years in the Krita age, but in the Treta and in each of the succeeding ages their life is lessened by one-quarter.

84. — The life of mortals mentioned in the Veda, the desired results of sacrificial rites, and the supernatural power of embodied spirits are fruits proportioned among men according to the character of the Age.

85. — One set of duties is prescribed for men in the Krita age, different ones in the Treta and in the Dvapara, and again another set in the Kali, in proportion as those ages decrease in length.

86. — In the Krita age the chief virtue is declared to be the performance of austerities, in the Treta divine knowledge,

in the Dvapara the performance of sacrifices, and in the Kali liberality alone. (2)

In the Vishnu Purana we find the same scheme of cosmogony. After stating the duration of the yugas, this ancient book adds:

Seven Rishis, certain secondary divinities, Indra, Manu, and the Kings his sons, are created and perish at one period, and the interval, called a Manvantara, is equal to seventy-one times the number of years contained in the four yugas with some additional years; this is the duration of the Manu, the attendant divinities and the rest, which is equal to 852, 000 divine years or to 306,720,000 years of mortals, independent of the additional period. Fourteen times this period constitutes a Brahma day. At the end of this day a dissolution of the Universe occurs, when all the three worlds, earth, and the regions of space are consumed with fire. (3)

We see from the foregoing extracts that the Hindu theory of the four yugas is of immense antiquity. It is not something that has been evolved out of modern thought and speculation. Back even of Manu and the Puranas the same idea may be traced, as frequent references to the Kalpas are found in the Upanishads and Mahabharata. In fact, the latter devotes an entire chapter to an explanation of this subject. (4)

Let us now see how the figures are obtained upon which the calculations of the yugas are based. Following the directions as given in Manu, we have the following table:

Krita Yuga	4,000
Sandhya (twilight)	400
Sandhyamsa (dusk)	400
	4,800

Treta Yuga	3,000
Sandhva	300
Sandhvamsa	300
	3,600
Dvapara Yuga	2,000
Sandhva	200
Sandhvamsa	200
	2,400
Kali Yuga	1,000
Sandhva	100
Sandhvamsa	100
	1,200
Total	12,000 divine years.

According to Brahminical computation a year of men is equal to a day of the gods; hence, to convert the preceding figures into mortal years we multiply by 360. Thus:

4,800 x 360 = 1,728,000 years of the Krita age.

3,600 x 360 = 1,296,000 years of the Treta age.

2,400 x 360 = 864,000 years of the Dvapara age.

1,200 x 360 = 432,000 years of the Kali age.

Total 4,320,000 years.

The sum of the four ages constitutes a Mahayuga or divine age, and 1,000 of these ages make a day or night of Brahma. Now it is distinctly stated that it takes seventy-one of these maha yugas, with some additional years, to make one Manvantara, and there are fourteen Manvantaras in the day of Brahma.

In order to locate ourselves, or rather our present time, in this comprehensive scheme, we may first divide the Kalpa mentally into fourteen parts, one for each Manvantara. That is certainly a

simple proposition. We find that each one of the fourteen Manvantaras has its own leader or Manu, and we find furthermore that Avayambhara Manu, the leader of the present wave of humanity, was the seventh Manu, thus fixing our location at about the middle of the Kalpa. But my present object is to still further define our location; hence we will endeavor to analyze the present or seventh Manvantara.

We learn from the above that it takes seventy-one maha yugas, or sum totals of our four ages, together with some additional years, to make one manvantara. The "additional years" spoken of are in the nature of a grand sandyha or twilight which is added to the maha yugas, just as the smaller twilights are intercalated in the minor yugas to make up a maha yuga. Of these seventy-one maha yugas, which is the one in which our race is located? This question the exoteric teachings of Brahmanism and Buddhism alike fail to answer. It was and has always been behind the veil. Neither the Puranas nor the Sutras utter a word upon the subject. But of late years a large part of the secret doctrine of the Hindu and Buddhist priests has been given to the Western public through the Theosophical Society. The revelations of Sinnett and of Madame Blavatsky recently have given us an insight into these hitherto sacredly guarded traditions. We are told in *Esoteric Buddhism* that there are seven rounds in every Manvantara and that this one is the fourth. As there are about seventy-one maha yugas and just seven rounds, each round must include about ten maha yugas, and as this is the fourth round, it follows that we are in the vicinity of the fortieth maha yuga, 172,800,000 mortal years after the beginning of the Manvantara. It will be observed that we are near the middle of the Manvantara — somewhat past the middle, to be more exact — the total number of years in the manvantara being about 306,000,000. There are seven root-races in each manvantara, and seven sub-races to each root-race. But

the limits of existence of the various races are not identical with the divisions of time; hence we find ourselves, or at least we are told that we find ourselves, in the fifth root-race and the fifth sub-race, the latter having already been in existence about a million years.

The question is asked: "If the Aryan race has gone through its Krita, Treta, and Dvapara ages in about 1,000,000, can its Kali yuga be literally 427,000 years?" I will answer this briefly by saying that the four ages, as applied to particular races, are only used metaphorically. Strictly speaking, they are grand general limitations of time. To speak of the Krita age of the Aryan race is a metaphorical way of alluding to the origin of that race, which, however, as a matter of fact really developed on earth in the latter portion of the Treta yuga. The second question is: "If the entire earth is in the Kali yuga of some great cycle, may not we of this country still be in the Krita age of some smaller cycle?" Practically the same answer can be given to this as to the preceding. I think the use of the names of the yugas in this sense is misleading. We might just as well speak of this morning, for instance, as the Krita age, or this evening as the Kali age, of this particular Saturday.

Now, while all this sounds perplexing to one who has not studied the subject, and no doubt seems foolish to those who are accustomed to the ordinary Biblical chronology, there is really a great truth conveyed in these gigantic estimates of time. It does not appear that the Hindus or Buddhists accept the figures given as intended to be literally exact. In a general way they indicate vast periods of time, and allow ample scope for the development of the physical earth, as well as of the human race according to the now everywhere accepted law of evolution. And it must be said that the latest discoveries in science tend to confirm very many of the Hindu theories. Geology especially is unfolding daily

new and startling developments in corroboration of what may be termed Ions chronology. It is true that many men of science still make a bid for popular approval by condemning or ridiculing the chronological systems of India and Chaldaea, but such time-servers are happily growing fewer each year, and it now seems as though it cannot be long before there will be no profit in advocating the exploded time-scale of the Hebrews. When there is no longer any money in it, perhaps the 4000 B.C. scheme will be abandoned. Already a few scientists are lifting their voices in behalf of the truth. The most notable contribution to recent literature in this direction is a book entitled *The Origin of the Aryans*, by Isaac Taylor, published in the Scribners' "Contemporary Science Series", 1890. The author admits that within the last ten years conclusions that had prevailed for fifty years in philology have had to be abandoned. He says:

"First among the causes which have led to this change of opinion must be placed the evidence as to the antiquity and early history of man, supplied by the new sciences of geology, anthropology, craniology, and prehistoric archaeology. The assumption that man was a comparatively recent denizen of the earth. . . . and the identification of the Aryans with the descendents of Japhet had to be reconsidered when it was recognized that man had been an inhabitant of Western Europe at a time anterior to the oldest traditions, probably before the close of the last glacial epoch. . . . to which Dr. Crall and Prof. Geikie assign on astronomical grounds an antiquity of some 80,000 years."

But, to return to the yugas, the question is often asked how the four ages happened to acquire their names. Literally they are the Ace-age, the Deuce age, the Trois or Third age, and the Quad or Fourth age, being named after the first four sides of the dice used

in gambling. The natural arrangement, however, is reversed, and the Krita or Fourth age represents the first or golden age. The Treta or Third age stands second, the Dvapara or Second age comes third, and the Kali age, that in which we live, and which is equivalent to the Ace age or lowest throw possible at dice, is fourth. These appellations, however, are subject to grave misapprehension. It is true that in the archaic ages in India gambling with dice was extremely common, and there is no doubt of the yugas having been named after the four first numbers on the ivory cubes; but, as in many other instances, this nomenclature was only an exoteric blind. Not to have veiled their meaning would have been to expose one of the seven keys to the Brahminical mysteries. We know that Pythagoras found a great part of his philosophy in India, and we are also aware that the basis of his philosophy was mathematical.

"Pythagoras considered a point to correspond in proportion to unity; a line to two; a superficies to three; a solid to four; and he defined a point as a monad having position and the beginning of all things; a line was thought to correspond with duality because it was produced by the first motion from indivisible nature and formed the junction of two points. A superficies was compared to the number three because it is the first of all causes that are found in figures; for a circle, which is the principal of all round figures, comprises a triad in centre, space, and circumference. But a triangle, which is the first of all rectilinear figures, is included in a ternary, and receives its form according to that number; and was considered by the Pythagoreans to be the creator of all sublunary things. The four points at the base of the Pythagorean triangle correspond with a solid or cube, which combines the principles of length, breadth, and thickness, for no solid

can have less than four extreme boundary points." (5)

Here, then, we have the origin of the nomenclature of the yugas. It was not astronomical, as might, as a hasty glance, be expected in such circumstances. Perhaps it antedated astronomy, as the science of numbers must have antedated the science of the stars.

There can be no accurate astronomy without mathematics; astronomy presupposes exact methods of calculation. Hence the naming of the ages from the science of numbers instead of from the science of the stars is a proof of the extreme antiquity of the Hindu theory of cosmogony.

As, according to Brahminical calculation, the present Kali yuga began in the year 3102 B. C. and as the yuga is expected to last 432,000 years, we have still over 427,000 years to look forward to before the end of the maha yuga. Some people, even members of the Theosophical Society, appear to think that the end of the maha yuga will be the end of the world. All such will please take notice that, according to the Hindu scheme, there are yet thirty more maha yugas to come, or about 129,600,000 years before the close of the present manvantara, and there are then seven more full manvantaras, or 2,160,000,000 years, to elapse before the day of Brahma is completed. In other words, the gradual process of evolution upon the solar system is only about half-way upon its course, and we can thus see how mankind in its cycle is now very nearly at the lowest point, and will in some thousands or millions of years begin to show traces of spiritual improvement.

Let no one smile contemptuously at the simplicity of the Puranic prophecy any more than at the complexity of the Hindu system of cosmogony. We must bear in mind that these Brahmins are a picked race. For almost endless thousands of years they have devoted themselves to metaphysical studies, religious contemplation, and intellectual and physical improvement. From

generation to generation they have carefully observed the Brahminical rules of health as well as of morality, and the result, according to the Darwinian law of selection, can not fail to have been the development of a class of men far superior to the mixed races. Among the ignorant in America there is an impression that the Hindus are enervated, weak in mind and body, cowardly and abject, and fit subjects only for the missionary. It is true that India has been during the past century ground down beneath the heel of British despotism, but the Empress of India rules only by the sheerest brute force. The pretended superiority of the British to the Hindus is a superiority of physical muscle. As well set up the claim that Sullivan, the prize-fighter, is superior to Whittier, the poet. Among the low-caste natives of India there is doubtless much abjectness, but they are no less obsequious to their own Brahmins than to the English conquerors of the soil. The Brahmins themselves are highly cultivated and possess great powers of thought. Their belief in the archaic system of the yugas is not one of blind faith, but has stood the test of investigation by thousands of the most subtle minds produced among a race that is and has always been intensely metaphysical. Here is what Max Muller says in his introductory lecture to the civil service students at the University of Cambridge:

"If I were to look over the whole world to find out the country most richly endowed with all the wealth, power, and beauty that nature can bestow — in some parts a very Paradise on earth — I should point to India. If I were asked under what sky the human mind has most fully developed some of its choicest gifts, has most deeply pondered on the greatest problems of life, and has found solutions of some of them which well deserve the attention even of those who have studied Plato and Kant — I should point to India. And if I were to ask myself from what literature we, here in

Europe, we who have been nurtured almost exclusively on the thoughts of Greeks and Romans and of one Semitic race, the Jewish, may draw that corrective which is most wanted in order to make our inner life more perfect, more comprehensive, more universal, in fact more truly human, a life not for this life only, but a transfigured and eternal life — again I should point to India." (6)

THE SACRED VEDIC VERSES

VEDA JANANI — THE MOTHER OF THE VEDAS.

"Aum, — the light of the Universe, the omniscient and omnipresent; the all containing, in whose womb move all the orbs of heaven; the self-effulgent, from whom the sun and stars borrow their light; whose knowledge is perfect and immutable, whose glory is superlative; who is deathless, the life of life and dearer than life, who gives bliss to those who earnestly desire it, and saves from all calamities his genuine devotees, and gives them peace and comfort; the all intelligent, who keeps in order and harmony all and each by permeating all things, on whom is dependent all that exist, the creator and giver of all glory, the illuminator of all souls and giver of every bliss, who is worthy to be embraced; the all-knowledge and all-holiness, — we contemplate and worship that He may enlighten our intellect and conscience."

STUMBLING BLOCKS IN WORDS — *Cadi*

A fellow student came to me the other day and asked, "What is the relation of 'space' to 'sat'? Is there any difference? In the *Secret Doctrine* I find that H. P. B., quoting from the disciples' catechism, says that 'space is that which is and ever was and is not created.'"

There is as much stumbling on mere words by students of Theosophy as on anything else. A simple word will often keep out the truth, and not only cause us to reach wrong conclusions, but frequently to enter upon disputes which sometimes end in quarrels. But in the question asked about "space" and "sat" there is an error in postulating "relation" for things which are without relation. "Sat" means being or *beness*, so it must be indivisible and unrelateable; "space" must be the same as "sat" because it is everywhere, being the one thing or aspect of things from which there is no escape. The moment we speak of "sat" or *beness*, we are forced to say that it exists somewhere, using the word "somewhere" in the abstract sense, and that "somewhere" is space. They cannot be dissociated from each other. So when I met the extract from the disciples' catechism in the *Secret Doctrine*, I at once came to the conclusion that "sat" is the word to metaphysically express the same idea as we have in mind when we think of space, the one being abstract existence and the other abstract locality in which to place the existence.

At one time some Theosophists were discussing the true sort of life and practice for a Theosophist. And one said that he thought that the body ought to be "cultivated". The rest at once entered into a discussion which lasted some time, during which the various arguments and illustrations of each were brought

forward, when at the end it was suddenly discovered that there was not, in fact, any disagreement. The whole misunderstanding grew out of the one word "cultivation", which should have been "purification".

We should all be careful not only to use the right word to express the idea intended to be conveyed, but also to accurately understand what is the idea the other person is trying to express, and to do this regardless of what words may have been used. In doing so it is absolutely necessary to remember what aspect the terms are being used in. Take "Jiva" for instance. It means life, and may be made to mean soul or ego. Mr. Sinnett has adopted Jiva to designate the mere life-principle of the human organism. But all through the metaphysical writings of the Hindoos we can find the word used to describe the immortal self. And there is no more confusion in these writings than there is in those of English speaking nations. Napoleon used to say that he paid attention to find out what idea might be behind anything that was said to him, and did not listen so much to the words as to the ideas which they were used to shadow forth. Words do no more than shadow forth the ideas, and a great deal depends upon the mental touch, taste, and power of smell of the person to whom the words are addressed. Remembering that there are such stumbling blocks as these in the way, the wise Theosophist will not be made to fall.

The Path

EVOLUTION — *W. Q. Judge*

The word "evolution" is the best word from a theosophical standpoint to use in treating of the genesis of men and things, as the process which it designates is that which has been always stated in the ancient books from whose perusal the tenets of the wisdom religion can be gathered. In the *Bhagavad Gita* we find Krishna saying that "at the beginning of the day of Brahma all things come forth from the non-developed principle, and at the coming on of Brahma's night they are resolved into it again", and that this process goes on from age to age. This exactly states evolution as it is defined in our dictionaries, where it is said to be a process of coming forth or a development. The "days and nights of Brahma" are immense periods of time during which evolution proceeds, the manifestation of things being the "day" and their periodical resolution into the Absolute the "night".

If, then, everything is evolved, the word creation can only be properly applied to any combination of things already in existence, since the primordial matter or basis cannot be created.

The basis of the theosophical system is evolution, for in theosophy it is held that all things are already in *esse*, being brought forth or evolved from time to time in conformity to the inherent law of the Absolute. The very next question to be asked is, What is this inherent law of the Absolute? as nearly as can be stated. Although we do not and cannot know the Absolute, we have enough data from which to draw the conclusion that its inherent law is to periodically come forth from subjectivity into objectivity and to return again to the former, and so on without any cessation. In the objective world we have a figure or illustration of this in the rising and setting of the sun, which of all natural objects best

shows the influence of the law. It rises, as H. P. Blavatsky says, from the (to us) subjective, and at night returns to the subjective again, remaining in the objective world during the day. If we substitute, as we must when attempting to draw correspondences between the worlds, the word "state" for locality or place, and instead of the sun we call that object "the Absolute", we have a perfect figure, for then we will have the Absolute rising above the horizon of consciousness from the subjective state, and its setting again for that consciousness when the time of night arrives, — that is, the night of Brahma. This law of periodicity is the same as that of the cycles, which can be seen governing in every department of nature.

But let us assume a point of departure so as to get a rapid survey of evolution theosophically considered. And let it be at the time when this period of manifestation began. What was projected into the objective world at that time must have been life itself, which under the action of the law of differentiation split itself up into a vast number of lives, which we may call individual, the quantity of which it is not possible for us of finite mind to count. In the Hindu system these are called Jivas and Jivatman. Within these lives there is contained the entire plan to be pursued during the whole period of manifestation, since each life is a small copy of the great All from which it came. Here a difficulty arises for studious minds calling for some attention, for they may ask "What then do you do with that which we call 'matter', and by and through which the lives manifest themselves?"

The reply is that the so-called matter is an illusion and is not real matter, but that the latter — sometime known in Europe as primordial matter — cannot be seen by us. The real matter is itself only another form of the life first thrown out, but in a less perfect state of differentiation, and it is on a screen of this real matter that its inner energies project pictures which we call

matter, mistaking them for the real. It may then be further asked, "Have we not been led to suppose that that which we supposed was matter but which you now say is an illusion is something absolutely necessary to the soul for acquiring experience of nature?" To this I reply that such is not the case, but that the matter needed for the soul to acquire experience through is the real unseen matter. It is that matter of which psychic bodies are composed, and those other "material" things all the way up to spirit. It is to this that the *Bhagavad Gita* refers where it says that spirit (purusha) and matter (prakriti) are coeternal and not divisible from each other. That which we and science are accustomed to designate matter is nothing more than our limited and partial cognition of the phenomena of the real or primordial matter. This position is not overturned by pointing to the fact that all men in general have the same cognitions of the same objects, that square objects are always square and that shadows fall in the same line for all normal people, for even in our own experience we see that there is such a thing as a collective change of cognition, and that thus it is quite possible that all normal people are merely on the single plane of consciousness where they are not yet able to cognize anything else. In the case of hypnotizing everything appears to the subject to be different at the will of the operator, which would not be possible if objects had any inherent actuality of their own apart from our consciousness.

In order to justify a discussion of the Theosophical system of evolution, it is necessary to see if there be any radical difference between it and that which is accepted in the world, either in scientific circles or among Theologians. That there is such a distinction can be seen at once, and we will take first that between it and Theology. Here, of course, this is in respect to the genesis of the inner man more especially, although Theology makes some claim to know about race descent. The Church either

says that the soul of each man is a special creation in each case or remains silent on the subject, leaving us, as it was once so much the fashion to say, "In the hands of a merciful Providence", who after all says nothing on the matter. But when the question of the race is raised, then the priest points to the Bible, saying that we all come from one pair, Adam and Eve. On this point Theology is more sure than science, as the latter has no data yet and does not really know whether we owe our origin to one pair, male and female, or to many. Theosophy, on the other hand, differs from the Church, asserting that *Paramatma* alone is self-existing, single, eternal, immutable, and common to all creatures, high and low alike; hence it never was and never will be created; that the soul of man evolves, is consciousness itself, and is not specially created for each man born on the earth, but assumes through countless incarnations different bodies at different times.

Underlying this must be the proposition that, for each Manvantara or period of manifestation, there is a definite number of souls or egos who project themselves into the current of evolution which is to prevail for that period or manvantara. Of course this subject is limitless, and the consideration of the vast number of systems and worlds where the same process is going on with a definite number of egos in each, staggers the minds of most of those who take the subject up. And of course I do not mean to be understood as saying that there is a definite number of egos in the whole collection of systems in which we may imagine evolution as proceeding, for there could be no such definiteness considered in the mass, as that would be the same as taking the measure of the Absolute. But in viewing any part of the manifestation of the Absolute, it is allowable for us to say that there are to be found such a definite number of egos in that particular system under consideration; this is one of the necessities of our finite consciousness. Following out the line of our own argument we reach the conclusion that, included within

the great wave of evolution which relates to the system of which this earth is a part, there are just so many egos either fully developed or in a latent state. These have gone round and round the wheel of rebirth, and will continue to do so until the wave shall meet and be transformed into another. Therefore there could be no such thing as a special creation of souls for the different human beings born on this earth, and for the additional reason that, if there were, then spirit would be made subservient to illusion, to mere human bodies. So that in respect to theology we deny the propositions, *first*, that there is any special creation of souls, *second*, that there is, or was, or could be by any possibility any creation of this world or of any other, and *third*, that the human race descended from one pair.

In taking up the difference existing between our theory and that of science we find the task easy. Upon the question of progress, and how progress or civilization may be attained by man, and whether any progress could be possible if the theories of science be true, our position is that there could be no progress if the law of evolution as taught in the schools is true, even in a material sense. In this particular we are diametrically opposed to science. Its assumption is that the present race on the earth may be supposed to belong to a common stock which in its infancy was rude and barbarous, knowing little more than the animal, living like the animal, and learning all it now knows simply by experience gained in its contest with nature through its development. Hence they give us the paleolithic age, the neolithic age, and so on. In this scheme we find no explanation of how man comes to have innate ideas. Some, however, seeing the necessity for an explanation of this phenomenon, attempt it in various ways; and it is a phenomenon of the greatest importance. It is explained by theosophy in a way peculiar to itself, and of which more will be said as we go on.

The Path

TWO LOST KEYS — *William Brehon*

THE BHAGAVAD-GITA — THE ZODIAC.

It has never been admitted by orientalists that there existed a key to the *Bhagavad-Gita*, other than a knowledge of the Sankrit language in which it is written. Hence our European translators of the poem have given but its philosophical aspect.

But it is believed by many students of theosophy — among them such an authority as H. P. Blavatsky — that there are several keys to the noble poem, and that they have been for the time lost to the world. There has been no loss of them in the absolute sense, since they are preserved intact in many rolls and books made of polished stones hidden and guarded in certain underground temples in the East, the location of which would not be divulged by those who know. No search has been made by the profane for these wonderful books, because there is no belief in their existence; and for the sincere student who can project his mental sight in the right direction, there is no need for such discovery of the mere outward form in which those keys are kept.

There is also a key for the Zodiac. The modern astrologers and astronomers have lifted up their puny voices to declare regarding the probable origin of the Zodiac, giving a very commonplace explanation, and some going so far as to speak of the supposed author of it, not that they have named him or given him a distinct place in history, but only referred to the unknown *individual*. It is very much to be doubted if these modern star-gazers would have been able to construct anything whatever in the way of a Zodiac, had they not had this immemorial arrangement of signs ready to hand.

The *Bhagavad-Gita* and the Zodiac, while differing so much from each other in that the one is a book and the other the sun's path in the heavens, are two great storehouses of knowledge which may be construed after the same method. It is very true that the former is now in book shape, but that is only because the necessities of study under conditions which have prevailed for some thousands of years require it, but it exists in the ideal world imbedded in the evolutionary history of the human race. Were all copies of it destroyed tomorrow, the materials for their reconstruction are near at hand and could be regathered by those sages who know the realities underlying all appearances. And in the same way the Zodiac could be made over again by the same sages — not, however, by our modern astronomers. The latter no doubt would be able to construct a path of the sun with certain classifications of stars thereon, but it would not be the Zodiac; it would bear but little relation to the great cosmic and microcosmic periods and events which that path really has. They would not apply it as it is found used in old and new almanacs to the individual human being, for they do not know that it can in any way be so connected, since their system hardly admits any actual sympathy between man and the Zodiac, not yet having come to know that man is himself a zodiacal highway through which his own particular sun makes a circuit.

Considering how laughable in the eyes of the highly-educated scientific person of today the singular figures and arrangement of the Zodiac are, it is strange that they have not long ago abolished it all. But they seem unable to do so. For some mysterious reason the almanacs still contain the old signs, and the moon's periods continue to be referred to these ancient figures. Indeed, modern astronomers still use the old symbology, and give to each new asteroid a symbol precisely in line with the ancient zodiacal marks so familiar to us. They could not abolish them, were the

effort to be made.

The student of the *Bhagavad-Gita* soon begins to feel that there is somewhere a key to the poem, something that will open up clearly the vague thoughts of greater meanings which constantly rise in his mind. After a while he is able to see that in a philosophical and devotional sense the verses are full of meaning, but under it all there runs a deep suggestiveness of some other and grander sweep for its words. This is what the lost key will reveal.

But who has that key or where it is hidden is not yet revealed, for it is said by those who know the Brotherhood that man is not yet in the mass ready for the full explanation to be put into his hands. For the present it is enough for the student to study the path to devotion, which, when found, will lead to that belonging to knowledge.

And so of the Zodiac. As our acquaintance, through devotion and endeavor, with the journey of our own sun through our own human zodiac grows better, we will learn the meaning of the great pilgrimage of the earthly luminary. For it is impossible in this study to learn a little of ourselves without knowing more of the great system of which we are a copy.

For Atman is the sun,
The moon also it is;
And the whole collection of stars
Is contained within it.

The Path

THE LION IN THE PATH — *Jasper Niemand*

At a certain era of theosophical study and practice, we reach a point of pause, of silence. The mind appears saturated with the new and wonderful teaching; insensible to fresh impressions, it can take in no more. The heart that once bounded so elately in all the vigor of renewed life and stimulus has resumed its normal beat under the pressure of daily trial, to be met, as it was not heretofore met, with self forgetfulness and altruistic endeavor. Slowly we seem to fall into a deadness, a lethargy of all the nature. We act, we plan, we fill the groove of circumstance, but we do it as though we walked in sleep. A blank wall rises before us seeming to bar further progress, and a pall falls over the inner life.

When this point of pause is reached, students say in their hearts that their progress is stopped, that they can advance no more. They have met a lion in the path, and fall back before its grim aspect. What causes this stop, this silence? First; we have learned more, intellectually, than we can use up in practical daily life. Head and heart have not kept pace. We know, in large part, what we should be in all relations of life, and why we should be it, but we have not attained the power of acting always and at once upon the lines of altruistic endeavor. And by a law of nature the brain cannot assimilate and digest the mass of knowledge received until it has been used up, to some extent at least, in the experience, any more than the stomach can receive and digest fresh food before the assimilative processes have been undergone with respect to food previously taken in. All the teachings we receive on the line of natural law (or spiritual law; the terms are one) are based upon the fact that motive determines energy and the value of energy, in a way touched upon by an adept in *The*

Occult World. There is "good and evil in every point of the universe", and the motive for which force is evolved, and in which it is used, must then qualify it. "Kundalini" may make or may kill. Apply the same rule to concentration. The *passive* fixation of the empty mind produces a passive magnetic condition of the physical body, well indicated by the sign —, and facilitates the entrance of adverse lower astral influences and entities; these are helped also by the quickened activity of the inner body under the said concentration. The *positive* fixation of the mind upon some worthy object, such as a high Ideal, the Higher Self, the image of an Elder Brother if one is known, renders the outer body positive, or magnetically +, and reduces the activity of the inner body by casting it into the mould of the mind occupied with this image. The doors are barred to all lower influences; a vibration far above their own effectually excludes them. In the one case we have lowered our spiritual vitality; in the other, we have raised it. To the aphorism, "A medium is an open door", might be added this, — "The positive idealist is a closed temple." "The image of the Master is the best protection against lower influences; think of the Master as a living man within you", says an M. S. S. This refers to the mental image of that master, who may be either an adept or the Higher Self. Patanjali says that the mind flows out and moulds itself upon the object seen; mind makes form.

In these brief hints may be found some explanation of our clogged mental processes. Those who participate so actively in theosophical work as to have little, if any, time for study, do, to my personal knowledge, make greater progress than other more learned F. T. S. Unconsciously (sub-consciously is a better term) they draw upon the Source for whose greater diffusion they work; they empty themselves and are filled, through the unfailing regularity of natural processes. Their motive predetermines the quality of the fresh energetic supply received. I do not pretend to

constitute myself a judge of progress, but that must be advance which sweetens, regulates, and clarifies the nature; absence of these and presence of harshness and disturbance must imply some degree of retardation.

Even such workers do not escape the point of pause. The Lion confronts them; upon his forehead is branded the grim name of Doubt. Despair is the lair to which he conveys his victim.

In using the word Doubt, I do not restrict it to its conventional meaning, but apply it to all phases of mind that are in opposition to a wholesome and calm confidence in the reign of Law, to a full assurance that all is as well, with us and with the world, as it can possibly be at this moment. The evolutionary wheels never stop; we all progress as particles of air are said to do, through advance and recoil; and as sound is propagated along their line by just that motion, so the life wave, with its currents of progress, runs through individuals and through worlds in the same rise and fall. Progress is *always* being made at some point of our greater and of our individual being, so long as we try at all, so long as we do not deliberately retard the methods of nature.

Why, then, should we yield to this despondency? If I have anything to say upon the subject at all, it is because I have passed along that road: I have reached the point of pause and confronted the Lion. At first there seems no escape. We can only close the mind, throw ourselves into a vortex of practical altruistic work, and hold on, with stern determination, to the ideal now behind the clouds. We cannot lift our hearts to it; we are too dead-tired for that; but we can insist that it still shines behind the darkness and will reappear. Habit is the parent of Doubt. We have some special failing, some specific trial, some rock closing our path. That is what we think, laboring desperately to remove it, squandering all our strength upon the one obstacle. We mistake.

No one thing has power to bar advance in all our being, on all its many planes. There are other causes, operative as obstacles, of which we are unconscious. Let us, then, accept our selves just as we are, and work on, trusting to work for others and to the influx of light which that brings for better comprehension of the lower self. To use up all our thoughts and most of our strength upon some personal failing is a fatal mistake. We do not kill our faults. We outgrow them. This growth can only be had by a study of spiritual law through the inner nature of things, and by its application to all the issues of life, above all, to the tendencies of the lower self. A clearer idea of philosophy and more theosophical work are what we most need.

It is not to be supposed that our faults are to be wholly ignored. But they are to be viewed without emotion, calmly, as an excrescence upon a tree, a blight in the midst of nature. No student should ever forget to look at things in that aspect which they wear on the plane of force. Anxiety, there, is an explosive: fear contracts, hope expands. The affection which trembles for its object, however legitimately to the outward sense, acts there as a disintegrating force. The thinker may increase the list for himself. Consequently, the agonizing repentance of the sinner is a deterrent if it continues longer than is necessary to the first stirring up of the inner nature. What we should do is more scientific. We should practice the substitution of mental images. Make deliberately in the mind an image opposed to the habit, or the desire, or the too influential person, whenever the idea which you desire to expel shall arise. You do not even need to *feel* this new form at first; just bring it up and consider it; hold it as long as you can. You will come to feel it. You will react to it.

In the very hour of defeat is the germ of victory. All things go on to a climax; then reaction sets in. We are generally exhausted when this natural impulse arises; we fail to grasp it, to encourage

and increase it. We can bring it about more speedily by increasing the momentum of any given feeling or course, so that the climax shall be more speedily reached, but such is not often the action of the wise. They await the proper hour. A caterpillar's nest caused ravages in my garden. The wind was high, the vermin active and spread abroad. I could do nothing then. I cultivated other parts of my garden. When night came, and the wind fell, and the vermin collected in the nest, I burned it. He who waits quietly, patiently, studiously, working for others where he can and substituting higher mental images for low ones in every idle hour, consciously making these etheric forms and clothing them with ever increasing energy; he who calmly waits the crisis and then vigorously, promptly takes the reactionary current, — he will know what is meant when the Voice of the Silence enjoins us: "Chase all your foes away * * even when you have failed."

Create your own reactions. It is done by thought. "If thou wouldst not be slain by them, then must thou harmless make thy own creations, the children of thy thoughts, unseen, impalpable, that swarm around humankind, the progeny and heirs to man and his terrestrial spoils." You have stamped those thoughts upon energetic centres in the astral light until they have become your habits; they inform, propel, and nourish the Lion in the path. Efface the old impressions; bathe the sensitized centres in the biting acid of Will; create new thoughts daily, automatically if you cannot do it with love at first; love will follow; all things follow Will. Ruskin says: "Do justice to your brother — you can do that whether you love him or not — and you will come to love him. But do injustice to him — because you don't love him, and you will come to hate him." Justice primarily demands that we cease to poison the *milieu* in which men live, which souls exhale and respire, with our personal fears, desires, and all the haunting shapes of self. Man legislates against poisoning of the air, but nature prohibits

the infection of the soul atmosphere, the ether. "Doubt is Self," she cries. "Thou art the Lion in thy brother's path; destroy it, and it will not bar thine own."

The Path

HIT THE MARK — *William Brehon*

"Having taken the bow, the great weapon, let him place on it the arrow, sharpened by devotion. Then, having drawn it with a thought directed to that which is, hit the mark, O friend,—the Indestructible. OM is the bow, the Self is the arrow, Brahman is called its aim. It is to be hit by a man who is not thoughtless; and then as the arrow becomes one with the target, he will become one with Brahman. Know him alone as the Self, and leave off other words. He is the bridge of the Immortal. Mediate on the self as OM. Hail to you that you may cross beyond the sea of darkness." — Mundaka Upanishad.

Archery has always been in vogue, whether in nations civilized or among people of barbarous manners. We find Arjuna, prince of India, the possessor of a wonderful bow called Gandiva, the gift of the gods. None but its owner could string it, and in war it spread terror in the ranks of the enemy. Arjuna was a wonderful archer too. He could use Gandiva as well with his right as with his left hand, and so was once addressed by Krishna in the Bhagavad Gita dialogue as "thou both-handed." The bow figures in the lives of the Greek heroes, and just now the novelist Louis Stevenson is publishing a book in which he sings the praises of a bow, the bow of war possessed by Ulysses; when war was at hand it sang its own peculiar, shrill, clear song, and the arrows shot from it hit the mark.

Archery is a practice that symbolizes concentration. There is the archer, the arrow, the bow, and the target to be hit. To reach the mark it is necessary to concentrate the mind, the eye, and the body upon many points at once, while at the same time the string

must be let go without disturbing the aim. The draw of the string with the arrow must be even and steady on the line of sight, and when grasp, draw, aim, and line are perfected, the arrow must be loosed smoothly at the moment of full draw, so that by the bow's recoil it may be carried straight to the mark. So those who truly seek wisdom are archers trying to hit the mark. This is spiritual archery, and it is to this sort that the verse from the Mundaka Upanishad refers.

In archery among men a firm position must be assumed, and in the pursuit of truth this firm position must be taken up and not relaxed, if the object in view is to be ever attained. The eye must not wander from the target, for, if it does, the arrow will fly wide or fall short of its goal. So if we start out to reach the goal of wisdom, the mind and heart must not be permitted to wander, for the path is narrow and the wanderings of a day may cause us years of effort to find the road again.

The quality of the bow makes a great difference in the results attained by the archer. If it is not a good bow of strong texture and with a good spring to it, the missiles will not fly straight or with sufficient force to do the work required; and so with the man himself who is his own bow, if he has not the sort of nature that enables him to meet all the requirements, his work as a spiritual archer will fall that much short. But even as the bow made of wood or steel is subject to alterations of state, so we are encouraged by the thought that the laws of karma and reincarnation show us that in other lives and new bodies we may do better work. The archer says too that the bow often seems to alter with the weather or other earthly changes, and will on some days do much better work than on others. The same thing is found by the observing theosophist, who comes to know that he too is subject from time to time to changes in his nature which enable him to accomplish more and to be nearer the spiritual

condition. But the string of the bow must always be strung tight; and this, in spiritual archery, is the fixed determination to always strive for the goal.

When the arrow is aimed and loosed it must be slightly raised to allow for the trajectory, for if not it will fall short. This corresponds on its plane with one of the necessities of our human constitution, in that we must have a high mental and spiritual aim if we are to hit high. We cannot go quite as high as the aim, but have to thus allow for the trajectory that comes about from the limitations of our nature; the trajectory of the arrow is due to the force of gravity acting on it, and our aspirations have the same curve in consequence of the calls of the senses, hereditary defects, and wrong habits that never permit us to do as much as we would wish to do.

Let us hit the mark, O friend! and that mark is the indestructible, the highest spiritual life we are at any time capable of.

The Path

PERSONALITIES — *A. P. Ril*

It cannot be said that the members of the Theosophical Society are yet free from the trouble which the study of and delight in personalities are always sure to bring about. We should not be the imperfect human beings that we know we are, had we reached such perfection. But surely some effect ought to be produced upon all earnest members in this direction by the philosophy they study, as well as from a sincere attempt to carry out the objects of the organization.

Looking into the rules laid down for the pledged disciples, there is to be met an absolute prohibition against their talking to each other either about what happens to them, or the experiences they are having, or the progress they are making. With them there are two reasons for this, one the tendency to make trouble, and the other that vanity is certain to follow upon one's talking much to others about what he has done or experienced in the theosophical field of investigation, especially if there have been any abnormal phases to it. Long experience has shown that for the beginner vanity is a most insidious foe lurking everywhere, and which is as likely to attack the earnest as those who are neither earnest nor sincere, and its immediate action is to throw a veil over the mental sight, making things appear to be what they are not, tending to make the victim centre more and more in himself, and away from that tolerance for and union with others which it is the aim of theosophical study to bring about.

The civil law has always held that there is a wide distinction between a discussion or criticism of a person's work and of that person himself. It is permitted to say as much as one pleases regarding or against what another has said or written, but the

moment the individual is taken up for consideration we have to be careful not to commit libel or be guilty of slander. In the theosophical life this excellent rule should be extended so that there could be no criticism of persons, no matter how much is said about their writings or the ideas they give out; and, in addition, another rule well to observe is to avoid as much as possible the retailing of what may be called gossip about the doings and goings to and fro of other members.

All those who are personally acquainted with H. P. Blavatsky and who have not been blinded by their devotion to personalities know that during all the years she has worked in the Society her constant goal has been to so educate those who were willing to listen that they might be able to think for themselves upon all points and not be led away by the personality of any leader or writer. Many have thought that in the Society her word is law, but no one denies this more than herself, she always insisting that we must accept and believe only that which we have decided is true after a careful study. Here the mistake should not be made of supposing that because one is told to have regard for what she says, therefore he is believing on her authority in place of accepting an idea from its inherent truth. Others again, carried in the opposite direction by their very fear of relying upon any person, have thought it right as a general rule to oppose whatever she says. But this is as great a mistake as the other. Respect for a leader of thought means that, as we have come to have belief in the general soundness of that leader's views, so when any come from that source we naturally give them more consideration than those uttered by persons of small repute and known paucity of knowledge. This readiness to give attention to a leader's views is not belief in any idea because such and such a person has put it forth, but solely a natural protection against waste of time in analyzing worthless notions.

I have known a great many of the theosophists who were prominent in the Society's work in India in its early history, and have been privileged to meet many more in England and be present at several so-called crises in our progress, and have noticed that in almost every case the whole trouble has been never about ideas but always about persons. Persons may foolishly think that either they or others may rule the world or some small section of it, but as fixed as fate is it that never persons but always "ideas rule the world." Persons are transitory, moving over the field of mortal view for a few brief years and then disappearing forever, but ideas persist through all these changes, and rule the different personalities as they flit out from the unknown into the objective sky and plunge soon again into the darkness of the beyond. So long as there remain in our ranks the devotees of the personal, just so long will we have to struggle, but as soon as we flee from all consideration of persons the entire Society will escape into the free upper air where every effort will have its perfect work.

The Path

DEVACHAN — *W. Q. Judge*

A letter to the editor from Holland upon this subject deserves reply, as it must give utterance to the questions of many other students.

The complaint in this letter is that when one goes to Devachan much time is lost away from earth life, where otherwise unselfish work for others might be continued by instantly returning to it after death. The reason given is that Devachan is an illusion, while the so-called illusions of earthly existence are in such a sense real that they are preferable to those of Devachan. In illustration of this, the supposed case is given of a parent in Devachan imagining that the beloved child is also there, when, in fact, the child not yet physically dead remains on earth perhaps in misery or leading a life of vice. This is the root of the objection — the supposed illusionary character of Devachan as compared to earth-life.

Now these feelings are always due to the thirst for life in the form which presently is most known to us, — that is, in a physical body. We cannot argue Devachan away any more than we can the necessity of incarnation upon this earth; the one is as philosophically necessary as is the other. A very easy way out of the difficulty — which arises almost wholly from our feelings — would be to calmly accept the law as it stands, being willing to take whatever may be our fate, whether that be in Devachan or in this earth-life. Our likes and dislikes can have no effect on the course of nature, but they may have an effect on ourselves which will be far from beneficial. For the dwelling upon pleasure or the constant desire to fly from "pain not yet come" will inevitably create Karmic causes which we would wish to avoid.

But perhaps there are some considerations on the subject of Devachan which may be of use. In the first place, I have never believed that the period given by Mr. Sinnett in *Esoteric Buddhism* of fifteen hundred years for the stay in that state was a fixed fact in nature. It might be fifteen minutes as well as fifteen hundred years. But it is quite likely that for the majority of those who so constantly wish for a release and for an enjoyment of heaven, the period would be more than fifteen hundred years. Indeed, the Hindu Scriptures give many special ceremonies for the attainment of heaven, or the regions of Indra, which is Devachan; and those ceremonies or practices are said to cause a stay in Indraloka "for years of infinite number."

The first question, however, must be "What is the cause for passing into Devachan?" Some have said that it is good Karma or good acts that take us and keep us there, but this is a very incomplete reply. Of course, in the sense that it is happiness to go into that state, it may be called good Karma. But it does not follow that the man whose life is good, passed in constant unselfish work for others without repining, and free from desire to have somewhere his reward, will go to Devachan. Yet his Karma must be good; it must act on him, however, in other lives, for the earth life is the place where such Karma has its operation. But if at the same time that he is thus working for others he wishes for release or for some place or time when and where he may have rest, then, of course, he must go to Devachan for a period which will be in proportion to the intensity of those desires.

Again, it should not be forgotten that the soul must have some rest. Were it, before becoming bright as the diamond, hard as adamant, and strong as steel, to go on working, working through earth-life after earth-life without a break between, it must at last succumb to the strain and come to nothing. Nature therefore has provided for it a place of rest — in Devachan: and that we should

thankfully accept if it falls to our lot.

But does Devachan suffer in the comparison made between it and this life on earth? To me it seems not. Human life is as great an illusion as any. To the sage Ribhu, Vishnu said it was the longest-lived reign of fancy. To say that it is a terrible thing to think of a mother in Devachan enjoying its bliss while the child is suffering on earth, is to prefer one illusion over another, to hug a philosophical error to the breast. Both states are not of the true, while the Ego, who is the real witness, sees the lower personality struggling with these phantoms while it, whether the body be living or its other parts be in Devachan, enjoys eternal felicity. It sits on high unmoved, immovable. The great verse in the Isa-Upanishad settles this matter for me in these words: "What room is there for sorrow and what for doubt in him who knows that all spiritual beings are the same in kind, though differing in degree." Therefore if I believe this, I must also know that, no matter whether I and my best beloved are in Devachan or on earth, they and I must forever partake of the highest development attained by the greatest of sages, for, as they and I are spiritual beings, we must have communion forever on the higher planes of our being.

Then, again, the fact seems to be lost sight of that each night we go into a sort of Devachan — the dream state or sleep without dream. The loving mother, no matter how unfortunate or evil her child, must sleep, and in that state she may have dreams of her loved ones around her in just the very condition of mind and body she would have them enjoy. If Devachan be objectionable, why not also rebel against our necessary sleep which acts on our physical frame to give it rest, as Devachan does upon our more ethereal parts?

Lying unnoticed at the foot of this matter is the question of time. It goes to the very root of the objection, for the aversion to the

stay in Devachan is based upon the conception of a *period of time*. This period — given or supposed as 1,500 years — is another great illusion which can be easily proved to be so. What we call time, measured by our seconds and minutes and hours, is not necessarily actual time itself. It is not the ultimate precedence and succession of moments in the abstract. For us it depends on and flows from the revolutions of our solar orb, and even with that standard it can be shown that we do not apprehend it correctly. We speak of seconds, but those are such as our watchmakers give us in the watch. They might be made longer or shorter. They are arrived at through a division of a diurnal solar revolution, the observation of which is not necessarily mathematically accurate. If we lived on Mercury — where we must believe intelligent beings live — our conception of time would be different. From our childhood's experience we know that even in this life our appreciation of the passage of time rises and falls, for in early youth the 12 months from one Christmas to another seemed very, very long, while now they pass all too quickly. And from watching the mental processes in dreams we know that, in the space of time taken for a bell to drop from the table to the floor, one may dream through a whole lifetime, with all the incidents of each day and hour packed into such a limited period. Who can tell but that in a Devachanic state of three months the person may go through experiences that seem to cover thousands of years? If so, why not say for him — since time as we know it is an illusion — that he was in Devachan for those thousands?

Devachan, however, is not a meaningless or useless state. In it we are rested; that part of us which could not bloom under the chilling skies of earth-life bursts forth into flower and goes back with us to another life stronger and more a part of our nature than before; our strength is revived for another journey between deaths. Why shall we repine that nature kindly aids us in the

interminable struggle; why thus ever keep the mind revolving about this petty personality and its good or evil fortune?

The Path

PRINCE TALLEYRAND CAGLIOSTRO — *J. Quilter*

A good deal for and against Cagliostro has been said since the time when he disappeared from the scene, and so much has been written against him by his enemies, especially the members of the order of Jesus, that the ordinary run of people have come to think of him as no more than an impostor, and a very cheap one at that. This has been pushed so far that his name in the encyclopaedias stands for one of the great charlatans who from time to time are said to appear for the delusion of mankind and their own profit. The same sort of reputation has been given also to our honored fellow student Helena P. Blavatsky, and for similar reasons, with just as little basis.

Indeed, there seems to be little doubt but that in time to come her enemies, like his, will delight to call her a great impostor, as has been done already by a little-minded so-called investigator who went all the way to India to look into matters theosophical.

If Cagliostro was in fact an impostor, it is a strange thing that so much attention was paid to him by the very best men and women of Europe. That fact will always call for explanation, and, until it is given due weight, the unbeliever in encyclopaedias will be likely to think a good deal of the Count. There are some persons now of quite bright minds and wide acquaintance with men who say they believe he is still living, not under his old name but with another, and that he is engaged in a great work which embraces the whole human family. This may or may not be true, since it calls for a very great age on his part, but the student of the occult knows that we are neither old nor young, but ever immortal.

The great Prince Talleyrand has left us something regarding Cagliostro which is of weight. It is to be found in a book published

in London in 1848, containing the Memoirs of the Prince by his private secretary M. Colemache, in chapter four. It there appears that the Prince was asked to give the incidents of his visit to Cagliostro, and did so at some length. He had heard so much about the Count that he resolved to pay him a visit and see for himself the man about whom nearly every one was talking. An appointment was made, and at the time set Talleyrand called and was ushered into the presence, where he found the strange figure — a woman dressed in black and whose face was veiled — of whom much has also been said on the ground that she was alleged to be the confederate of Cagliostro or else a very good sensitive or medium. The Count appeared to be busy, and gazed into the eyes of the Prince with such a peculiar stare that the latter was not able to collect his thoughts, obliging Cagliostro to remind him of the many people waiting for an audience who could not be kept waiting if there was nothing to be said.

Thereupon, as the Prince says himself, being utterly confused he failed to recollect the posers he had prepared, and was forced to ask Cagliostro if he could tell him anything about a certain Countess. The reply he received to this was that she would be at the theatre that night and would wear a certain dress and certain ornaments. Then Talleyrand asked if he could have a remedy for headaches she often had, and Cagliostro reaching down took up a jug and gave the Prince what looked like water. It was directed to be applied to her forehead, and the strict injunction given that no one else was under any circumstances to handle the bottle or touch the water. Talleyrand then went off, the Countess appeared at the theatre exactly as was said, and after the play the party, including Talleyrand, went to a supper. The meal had progressed almost to the coffee when some one asked for the result of the visit to the supposed impostor. The Prince produced the bottle, but, contrary to the directions, allowed every one of the company to smell it and handle it. It was then proposed to apply the water

to the fair forehead of the Countess, but there was some hesitation, until at last a quantity of the liquid was poured in the hand of one of the guests and placed on her forehead. Immediately she screamed with pain, but the hand could not be easily withdrawn; it had to be pulled off with violence, and with it came a large patch of the lady's skin. The next day the police were sent after Cagliostro, and the jug of liquid was taken to an official analyst who made report that it was water and nothing else, just the same as what was in the bottle. This could not be explained by the Prince, but on the examination Cagliostro said it was indeed water which he had strongly magnetised, and that if the Prince had followed directions no harm would have come; he, however, had permitted a lot of roysterers to handle and smell it, and they had turned the immensely strong magnetism into the violent agent it turned out to be. Of course the manufacturers of hypotheses will say that it was not water but "some" acid or the like, not being able, though, to tell what they mean exactly. The incident is well attested and made a deep impression on the Prince, who gives evidence thus to facts and not to disputable theories.

The Path

TRUE OCCULTISM

AS FOUND IN THE THIRTEENTH CHAPTER BHAVAGAD-GITA.

There are nowadays many professors of occultism, just as years ago there was a numerous brood of those who pretended to know about the philosopher's stone. Both, however, were and are learned chiefly in repeating what they have heard of as occultism, with no substance or reality underneath all the profession. Now as then the mere incidentals of the true occultist's practice are thought of, spoken about, and pursued. Phenomena or the power to produce them constitute the end and aim of these searchers' efforts. But seek as we may, we will not find among them real knowledge, real experience, true initiation. Being on the wrong path, deluded by false light, they cannot do aught but mystify, annoy, and deceive those who put their trust in them. During the days of Rosicrucian fame there was some excuse for the mass of seekers, but since the old Hindu works have become gradually known to everyone, that exculpation is at an end; for on every hand the note of warning is sounded, and everywhere are signs that show in what direction lies the true path. Particularly is this so in that wonderful book, the *Bhagavad-Gita*. In it, however void of phenomena, however unattractive in respect to bait for psychic emotion, it points out the way, declares the mystic science, true devotion, right action. We therefore print an important chapter entire.

CHAPTER XIII. (1)

DEVOTION BY MEANS OF THE DISCRIMINATION OF THE
KSHETRA FROM KSHETRAJNA.

Krishna. This perishable body, O son of Kunti, is known as

Kshetra; those who are acquainted with the true nature of things call the soul who knows (2) it, the Kshetrajna. Know also that I am the knower in every mortal body, O son of Bharata; that knowledge which through the soul is a realization of both the known and the knower is alone esteemed by me as wisdom. What that Kshetra or body is, what it resembleth, what it produceth, and what is its origin, and also who he is who, dwelling within, knoweth it, as well as what is his power, learn all in brief from me. It has been manifoldly sung by the Rishees with discrimination and with arguments in the various Vedic hymns which treat of Brahma.

This body, then, is made up of the great elements, Ahankara — egotism, Buddhi — intellect or judgment, the unmanifest, invisible spirit; the ten centres of action, the mind, and the five objects of sense; desire, aversion, pleasure and pain, persistency of life, and firmness, the power of cohesion. Thus I have made known unto thee what the Kshetra or body is with its component parts.

True wisdom of a spiritual kind is freedom from self esteem, hypocrisy, and injury to others; it is patience, sincerity, respect for spiritual instructors, purity, firmness, self-restraint, dispassion for objects of sense, freedom from pride, and a meditation upon birth, death, decay, sickness, and error; it is an exemption from self-identifying attachment for children, wife, and household, and a constant unwavering steadiness of heart upon the arrival of every event whether favorable or unfavorable; it is a never-ceasing love for me alone, the self being effaced, and worship paid in a solitary spot, and a want of pleasure in congregations of men; it is a resolute continuance in the study of Adhyatma, the superior spirit, and a meditation upon the end of the acquirement of a knowledge of truth; — this is called wisdom or spiritual knowledge, its opposite is ignorance.

I will now tell thee what is the object of wisdom, from knowing which a man enjoys immortality; it is that which has no beginning, even the supreme Brahma, and of which it cannot be said that it is either Being or Non-Being. It has hands and feet in all directions; eyes, heads, mouths, and ears in every direction; it is immanent in the world, possessing the vast whole. Itself without organs, it is reflected by all the senses and faculties; unattached, yet supporting all; without qualities, yet the witness of them all. It is within and without all creatures animate and inanimate; it is inconceivable because of its subtlety, and although near it is afar off. Although undivided it appeareth as divided among creatures; and while it sustains existing things, it is also to be known as their destroyer and creator. It is the light of all lights, and is declared to be beyond all darkness; and it is wisdom itself, the object of wisdom, and that which is to be obtained by wisdom; in the hearts of all it ever presideth. Thus hath been briefly declared what is the perishable body, and wisdom itself, together with the object of wisdom; he, my devotee, who thus in truth conceiveth me, obtaineth my state.

Know that Prakriti or nature, and Purusha the spirit, are without beginning. And know that the passions and the three qualities are sprung from Nature.

Nature or *prakriti* is said to be that which operates in producing cause and effect in actions (3); individual spirit or *Purusha* is said to be the cause of experiencing pain and pleasure. (4) For spirit when invested with matter or *prakriti* experienceth the qualities which proceed from *prakriti*; its connection with these qualities is the cause of its rebirth in good and evil wombs. (5) The spirit in the body is called *Maheswara*, the Great Lord, the spectator, the admonisher, the sustainer, the enjoyer, and also the *Paramatma*, the highest soul.

He who thus knoweth the spirit and nature, together with the qualities, whatever mode of life he may lead, is not born again on this earth.

Some men by meditation, using contemplation upon the self, behold the spirit within, others attain to that end by philosophical study with its realization, and others by means of the religion of works. Others, again, who are not acquainted with it in this manner, but have heard it from others, cleave unto and respect it; and even these, if assiduous only upon tradition and attentive to hearing the scriptures, pass beyond the gulf of death. (6)

Know, O chief of the Bharatas, that whenever anything, whether animate or inanimate, is produced, it is due to the union of the Kshetra and the Kshetrajna — body and the soul. He who seeth the Supreme Being existing alike imperishable in all perishable things, sees indeed. Perceiving the same lord present in everything and everywhere, he does not by the lower self destroy his own soul, but goeth to the supreme end. He who seeth that all his actions are performed by nature only, and that the self within is not the actor, sees indeed. And when he realizes perfectly that all things whatsoever in nature are comprehended in the ONE, he attains to the Supreme Spirit. This Supreme Spirit, O Son of Kunti, even when it is in the body, neither acteth nor is it affected by action, because, being without beginning and devoid of attributes, it is changeless. As the all moving Akasa by reason of its subtlety passeth everywhere unaffected, so the Spirit, though present in every kind of body, is not attached to action nor affected. As a single sun illuminateth the whole world, even so doth the one spirit illumine every body, O Son of Bharata. Those who with the eye of wisdom thus perceive what is the difference between the body and Spirit and the destruction of the illusion of objects, (7) go to the Supreme.

Thus in the Upanishads stands the thirteenth chapter, by name — Devotion by means of the discrimination of the Kshetra from Kshetrajna.

FOOTNOTES:

1. This rendering of Chap. 13 is from the advance sheets of the new PATH edition of the *Bhagavad-Gita*, of which a notice will be found on another page. ([return to text](#))
2. That is, the true Ego, the real witness and spectator. ([return to text](#))
3. Prakriti, matter or nature, is the cause of all action throughout the Universe, as it is the basis by which action may take place; and herein are included all actions, whether of men, of gods, powers, or what not. ([return to text](#))
4. Purusha is the aspect of the individual spirit in every human breast; it is the cause of our experiencing pain and pleasure through the connection with nature found in the body. ([return to text](#))
5. Here *purusha* is the persisting individual who connects all reincarnations, as if it were the thread, and has hence been called the "thread Soul". ([return to text](#))
6. This last sentence means that they thus lay such a foundation as that in subsequent lives they will reach the other states and then to immortality. ([return to text](#))
7. This refers to what has previously been said about the great illusion produced by nature in causing us to see objects as different from spirit, and it agrees with Patanjali, who says that, although the perfectly illuminated being has destroyed the illusion, it still has a hold upon those who are not illuminated — they will have to go through repeated rebirths until their time of

deliverance also comes. ([return to text](#))

The Path

EVOLUTION AND INVOLUTION AS SYNTHESIZED IN MAN — *William Main*

Evolution is an unfolding of that which is within, the development of a potentiality. Involution is an infolding of that which is without.

I wish to show briefly that from the simpler affinities of the mineral world to the highest planes of existence, there is a continuous evolution of will and consciousness, of idea and intellect, and that this evolution takes place through a series of vehicles which are successively built up and cast aside.

A potentiality is a tension or tendency toward the production of a result, meaning also the power of effecting that result under suitable conditions. A grain of gunpowder has the potentiality of explosion, of evolving suddenly a quantity of gas due to the chemical combination of the elements mixed together. These elements had been separated from combination, and the return to that condition is like the release of a spring.

This is an example of the evolution of a few simple combinations due to the potentialities or chemical affinities of so-called elements. In chemical evolution weaker combinations perish, being torn apart by the more powerful attractions of the atoms for new mates, while a large amount of mechanical energy is made manifest. In the gunpowder, for instance, the saltpeter or nitrate of potassium disappears or perishes as such, yielding its different elements to form new compounds with the carbon and the sulphur. The saltpeter molecule is like a package in which a considerable amount of oxygen is compactly put up, held together by two other elements, the nitrogen and the potassium, which serve as binding material.

By a "molecule" the chemist means a definite group of atoms, or combination of elements. An atom is an exact and still simpler relationship of force and space, the real nature of which is not understood. It is the unit portion of an element and beyond this cannot be described.

All commercial transactions are exchanges of packages, using this word in its broadest sense, and all packages are made up of retaining or binding elements and those retained or held together in more or less permanent relationship.

The package consists of the case and the goods contained. The case after serving its turn passes back to the plane of being from which it was temporarily evolved, while the goods taken from it are made the vehicles of higher uses to perish in their turn.

Strange as it may seem, we will find upon reflection that there is absolutely nothing which has any value in itself. Value is based wholly on an estimate of that for which the article valued can be exchanged. The idea of exchange must not be limited to its narrow commercial sense; for an article used is at some time worn out or decays, exchanged for whatever its use or existence has brought, whether this be material or otherwise.

This result again is valued in like manner for what it can produce, but always in a direction toward the unevolved portion of our being. Whether by few steps or many, each of us must reach, somewhere within, the boundary of that shadowy land of vague aspiration and unrest.

Some men will reach this region at lower levels than others, according to their evolutionary stage.

A packing box is broken up, used as fuel or decays, passes into ashes and gases, to be again absorbed by growing plants or trees to furnish material for future boards, string, or paper.

The goods contained may be food, clothing, books, or pictures.

The food, which is but packages of energy, derived from the affinities of the mineral kingdom through vegetable or animal vehicles, is quickly consumed in the construction and maintenance of that most perfect of packing cases, the human body. The clothing is worn out in encasing it. The books and pictures are but the shells of ideas which form the nutriment of the mind, which itself is but the shell, medium, or vehicle of the higher spiritual ego with its transcendent faculties. Of what this again is the vehicle, we cannot tell, except by repeating vague words, which to those on higher spiritual planes may be full of meaning, but to the ordinary man convey only the impression that there are cycles of being far above, or rather within, our present conceptions.

We have, then, a series of vehicles, sheaths, or packing cases, grade above grade, the contents of each being utilized in the fabrication or evolution of the next higher, so that the production of the highest summarizes the uses of all.

The mineral or purely chemical kingdom, with its affinities, with its crystalline, liquid, and gaseous states, is the simplest manifestation of form and tendency, of energy and direction. By the mineral kingdom, it must be remembered, is meant not merely crystals, rocks, and ores, but all unvitalized matter, whatever its temporary condition.

This department of nature has been considered by most, even of non-materialists, as purely mechanical or machine like, with no trace of the self-centered will so evident as we go higher. The certainty with which the mineral Will (otherwise known as chemical affinity) is exercised has given rise to this impression.

In the vegetable kingdom the sub-consciousness of nature

manifests itself most clearly.

The plant gives all the evidence of a consciousness of its own that its structure and its fixed condition allow. Its tendrils follow and entwine lines of support. Its shoots, and even individual leaves, will constantly readjust themselves towards the light, no matter how often displaced. Potatoes in a dark cellar will send their sprouts for yards toward the knot hole or crevice through which a solitary ray finds entrance. Roots nose out nutriment and will grow straight toward some dainty morsel; when it is reached they will follow its outlines closely. On the other hand, a wind-shaken tree on a crag hooks its roots over every ledge and into each crevice, no matter how barren, and thickens its bark on the side most needing protection.

At night plants sleep, and if deprived artificially of rest give signs of exhaustion. Sensitive and insect-catching plants have distinct rudiments of a nervous system which is affected by anaesthetics. Sensitive plants sometimes become so much excited by violent winds as to lose sleep for several nights afterward.

The animal, having powers of locomotion, is able to give evidence of consciousness that cannot be questioned. The development of intellectual consciousness, or what is commonly called reason, is the object and highest attainment of the animal kingdom.

In the human kingdom intellectual consciousness reaches higher levels, and spiritual consciousness is developed.

In the evolution of the whole series, destruction and creation, disintegration and integration, go hand in hand and are opposite faces of the same thing. One looks toward the past, the other to the future. Each operation both of nature and art will appear under one aspect or the other, as interest or habit makes us look on the side facing the past or on that which looks toward the

future. Each structure, whether natural or artificial, is a factory or tool which elaborates material for the uses of a higher grade, and wears away in this production; or, it is a package. In other words, each structure is a vehicle, a maker of vehicles, or both.

This may be illustrated by the destructive and constructive operations involved in building a house.

Trees are cut down and destroyed that boards, mouldings, and the elementary forms of wood work may be constructed. These are sent from the saw mill and await the further operations of the carpenter, who, as he saws and chisels would be looked upon, from the stand point of the boards, as a destroying angel, but from that of the master builder as a subordinate creative power.

The crystalline structure of the mineral is destroyed in the smelting furnace, that bars and sheets of iron or other metal may be formed. These again are destroyed in the manufacture of nails, screws, locks, and other hardware. These elements of construction are delivered in neat packages by the hardware merchant to the builder. The packages are broken up and the contents distributed as required.

In these operations we find destruction less and less radical as we ascend the scale, until the higher elements of construction are simply fitted into place after being divested of an enclosing case. The apt Scriptural illustration of "living stones" will occur to some.

We must turn to the living world for fuller illustration. The hard and crystalline rock is split and crumbled, destroyed as rock and crystal, under the influence of vegetable life. Its soluble elements are absorbed by roots; others as soil form a medium for nutriment. The gases of the air disappear as such, lose their mobility, and become parts of the solid structure; fluids are

imprisoned in cells and sap vessels. The white sunbeams sink into the leaves, and the green rays only are rejected. What has become of all the energy conveyed by these vehicles?

A seed that a sparrow might devour evolves the giant red-wood tree, heaving a hundred tons of timber into mid air, withstanding the blasts of centuries.

It would be folly to suppose that the small germ contained this immense amount of energy, to say nothing of the annual crops of seeds produced by the same tree, each of equal capacity. The seed of the tree contained barely enough raw material, stored-up capital, so to speak, to form the first tiny pair of leaflets and a thread-like root.

It held something far mightier than the greatest store house of crude forces could contain; it held the idea of the great tree, a directive and guiding principle, which, though invisible and imponderable, was in touch with the material world through a point of matter. This idea by multiplication or reflection of itself could fill a continent with similar trees.

The idea or astral type creates neither energy nor matter, but directs the mindless energies of matter so that they seem to our material eyes to build up of themselves those great living temples in the construction of which "neither the sound of axe nor hammer is heard". How clumsy our machine and hand-made houses seem in comparison.

Animal life must depend upon plant forms and plant principles as food, for no substance unorganized by plant life is nutritious in the smallest degree. The consumption of flesh comes to the same thing, except that the labor of turning over and selecting from a considerable amount of vegetable matter has been performed by another set of digestive organs.

The mineral forms are altered or destroyed by the plant that the imprisoned forces may be stored and turned to account in its own structure. The animal kingdom, including man in his animal aspects, stands in the relation to the vegetable kingdom that the vegetable does to the mineral. At each transference there is a selection and rejection; finer forces are stored up and less crude material as we ascend the scale. New wants and affinities develop. The animal is content to feed, reproduce its species, and die. Many men are content with the same routine, or feel but vague and faint impulses for anything higher. A more advanced type of humanity spends body and life in the pursuit of ideas; the hunger of a growing something within directs the actions and experiences of the body and absorbs such of the results as accord with these higher affinities.

Let us go back to the grain of gunpowder which was taken as a familiar type of compactly-stored energy. This mixture, like other explosives, derives its peculiarity simply from the fact that the stored-up energy when let loose by combustion is expended suddenly; not that it contains more, or even as much as, hundreds of other substances; much of our food, for example. The affinities of most things cannot be let loose suddenly. There is a great difference between the bursting of a reservoir and the slow trickling away of its contents; but the same amount of horse power is expended in the end.

The tree slowly digesting mineral matter obtains the power which lifts its bulk and spreads its leaves. It creates none. Gunpowder used as a fertilizer will furnish some of the elements needed in plant food, and the same energy usually expended in sudden disruption and destruction may be slowly used in suitable channels of construction.

Let us look more closely and we will find at each stage a triad or

threefold aspect of the one. The affinities of matter are not blind. They are selective in the most exact and literal sense. Each element is but the working of an idea. The idea is *one* in all space; its multitudinous kaleidoscopic reflections give us the countless atoms distributed throughout space.

The will force guided by this idea is the energy of which so much has been said.

This abstract or ideal form and quality, and this will or energy, are both lodged in and manifested through something we call matter. Matter without these would be not only inert but unmanifested, therefore imperceptible and even unthinkable. No one of the three can be conceived to exist without the other two.

The Sanskrit terms for these three elements of existence are Prakriti, Purusha, and Fohat; the latter being the manifesting energy.

On all the planes of being we find this threefold unity. Each atom of matter has something corresponding to body, soul, and spirit.

Its selective affinities or ideal characteristics are its Purusha or Spirit, the basis of its being is Prakriti, its Body. The soul of the atom is the Fohatic force linking the dual or polar opposites of its being.

We marshal an army of atoms and call it a battery; the collective will-energy of this army, directed through a channel, is called an electric current.

Through all Nature the scheme of evolution must be threefold, corresponding with its triple unity. One part of it relates mainly to the physical side of existence, another to the spiritual, and the third or linking intermediate stream is the intellectual or Fohatic.

As said in the *Secret Doctrine*, "Each of these three systems has its

own laws, and is ruled and guided by different sets of the highest Dhyani or Logoi. Each is represented in the constitution of man, the Microcosm of the great Macrocosm; and it is the union of these three streams in him which makes him the complex being he now is."

Most students of evolution seek an explanation of its phenomena from the materialistic stand-point. Ascent of structure and intelligence appears to them due rather to a push from below than a pull from above. Some are forced above the heads of a struggling mob of life forms, or, in scientific language, "Evolution is due to the survival of the fittest in the struggle for existence among many spontaneous variations."

This idea, although of value in a limited way, cannot alone cope with the great problem.

If for the word "spontaneous," with its suggestion of accident, we substitute the word "Karmic", signifying cause and effect due to the free will of organism, this expression of the law of survival and progress is true in a far wider and less material sense than ever Darwin dreamed, and yet is not half the truth.

It will be found that the Eastern idea of Pralaya and Manvantara, of the periodic emergence of the universe from the potential and subjective condition to the actual and objective, gives a clue to a more complete philosophy, and will be accepted in time by many who now push it aside as a dream of the Oriental imagination.

The evolved and perfected men of a previous Manvantara, those who have survived the struggles and temptations of many material lives, have climbed heights that to us seem cold and shadowy, laden with the rich sheaves of knowledge and experience. Faithful in few things, they have been made "rulers over many things". The white ray of the Absolute manifesting

through them in their realms of light and power is divided into prismatic beams of creative intelligence. They are the brothers gone before, whose "footprints on the sands" of a previous manvantara have encycled a great Round of existence.

We have seen that construction and destruction are opposite faces of the same thing. So are evolution and involution; the evolving creature feels more clearly the influence of higher planes as it rises. As its nature expands and *unfolds* it *involves* or builds *into* itself the higher strength and light, becoming fit for still further progress. In its turn it becomes the transmitting agent to those lower than itself.

As self-conscious will develops, the being becomes responsible. The law of cause and effect reacting upon a responsible being is termed Karma. Even the shining Hierarchies of creative intelligence are linked to us by Karmic bonds, as we are to each other and to lower forms of life.

It is not as the survivor in a selfish struggle for existence that man becomes the crown of visible creation, nor is his intellect simply an envolved and superlative cunning which has enabled him to get the better of tooth and claw, and with club or rifle for a scepter make his throne upon the apex of a heap of combatants.

He does stand the highest visible representative of that chain or ladder of intelligence which above us is a path of light and below rests upon dull earth.

He is himself the way, the path, that ladder. Its rounds are man that has been, is, and will be.

Evolution, according to the Huxleys and Spencers of today, is but a jarring and aimless medley, without definite theme or movement.

As its truths reach us through the Theo-Sophia it becomes the true "music of the spheres," a majestic symphony, whose complex and perfect harmonies thrill through the cycles of eternity.

The Path

JAPANESE BUDDHIST SECTS: I — *Kyo-Ryo-Ya-Sha*

In Japan there are twelve principal Buddhist sects, all of them having different names and with different reasons for their inception. The chief priests of these met with Col. Olcott last year in friendly union for the purpose of seeing what could be done in the way of healing the differences which exist between the two great divisions of the church, and a short account of them it is thought will be of interest and value to the American theosophists.

I will name them in order and then tell of their different ideas in small space. They are:

The Ku-sha-shu, the Jo-jitsu-shu, the Ris-shu, the Hosso-shu, the San-ron-shu, the Ke-gon-shu, the Tendai-shu, the Shingon-shu, the Jo-do-shu, the Zen-shu, the Shin-shu, the Nichi-ren-shu. Many of these rely upon a certain book or books which give them their names.

The Ku-sha-shu is so called from the Book of the treasury of metaphysics which was composed by Vasubandhu or Se-shin. They have several other books, among which may be mentioned one which it is said was composed by five hundred Arhats or perfect men and is by name Dai-bi-ba-sha-ron. The various divisions of the inner man are given, and among them is a very peculiar property assigned to him and called Mu-hyo-shikin, which means "unapparent form". Though it is said to be formless, yet it is called form, and it means that when an action is done something relating to it is formed in the actor. The analysis of the faculties and other parts of man is very detailed. They say that all things are brought about by Karma except two, which are Space and Nirvana. It is also said that those who wish to be enlightened

fully may be so in three births if they are assiduous, but if not, then it will take them sixty kalpas.

The Jo-jitsu-shu has a book entitled "The perfection of the truth". It has explanations of the Tripitaka as preached by Buddha, and is said to have been written by a Hindu who was a disciple of Kumarila Bhatta. The book is said to unite the best of many other schools of Buddhism. One peculiar view which deserves notice is that the past and future are unreal, but that as to things the present only is real. By meditation on the unreal character of things, even including the person himself, one obtains enlightenment upon the destruction of passion. They have many books, and of these there is one commentary of 23 volumes and another in two.

The Ris-shu was founded about 617 A.D., it is said, by Do-sen from China. Its basis may be understood from a quotation taken from one of the works of the founder. He says, "If a man does not practise the Dhyana and Samhadi, that is, meditation and contemplation, he cannot understand the truth".

The Hosso-shu divides the whole mass of the doctrines of the Buddha into the following: "existence, emptiness, and the middle path," and they say that the doctrines of the Mahayana school to the number of 80, 000 can be put in these divisions. The sect is said to study as to the real nature of things, and its divisions are so very numerous as not to be admitted here. According to them a man has to live for countless kalpas in the right way before he can become a Buddha.

The San-ron-shu is named from their having three shastras or books which cover the whole teachings of Buddha during his life. They think that, as the object of Buddha was to teach people according to their several and different abilities to take the truth, therefore any shastra that will teach them may be preached from.

But of course they only use the Buddhist shastras.

Next comes the Ke-gon-shu, and it like some others takes its name from a book, the Ke-gon-gyo. They think their sutra was preached by Buddha soon after his enlightenment, and that by right thought on perfect enlightenment a man will reach it. Other rules are those common to all Buddhism. The name of the sect may be also Great-square-wide-Buddha-flower-adornment.

Ten-dai-shu, or the sect founded on the mount of TENDAI in China, preaches the doctrine of "completion and suddenness". This of course sounds singular to ears not accustomed to these terms, but it means the completion of enlightenment and the immediacy of that state to all men. They say that if the disciple properly understands the secrets as to form and reason, he will become Buddha in this life even.

Shin-gon-shu sect also teaches that a man may reach to perfect enlightenment even in this life if he follows their doctrine, which is called the secret mantra. This latter is in respect to body, speech, and thought. A very notable method of this sect is this: if the doctrines are read lengthwise from top to bottom as in the writing of that country, then the apparent doctrine is known; but if the table of doctrines be read across the lines of writing, then the secret doctrine becomes known. This seems to be a very peculiar sort of cipher. This hidden doctrine is communicated to the disciples by the teacher. Lengthwise the gradual improvement of thought is explained, and crosswise the circle of the state of things is fully explained, and this is the secret doctrine. Without going into this it may be said to be a method of teaching very like that of Patanjali, in which the several sorts of thought are classified and directed to be got rid of, one by one, until the state of pure thought is reached. Thus the apparent doctrine drives away the dust of outer thought, and the secret one shows the

inner truth. The final object is to know the source and bottom of one's thoughts, and thus to be able to reach the state of Buddha. There are many secret and curious things in the doctrine of this sect which it would be impossible to set down here from their great length.

(To be continued.)

The Path

WHICH IS VAGUE, THEOSOPHY OR SCIENCE? — *Eusebio Urban*

It is commonly charged against the exponents of Theosophy that they deal in vague generalities only. A lecture is given or paper read by a Theosophist, and the profane hearer laughs, saying, "All this is metaphysical absurdity; these are mere abstractions; let us have something like that which science gives us, something we can grasp".

A great many persons imagine, knowing but little in reality about science, that it is sure, certain, and fixed in the vital premises which underlie the practical outcome seen in many branches of life's activity. Why is this so? An inquiry into the question discloses the fact that some, if not all, the basic postulates of science are the purest abstractions, and that many statements from which deductions of fact are drawn are themselves the merest hypotheses. We will also find that the commonest of people unconsciously use in every work-a-day acts the most abstract and indefinite premises without which they could do but little.

Take navigation of the ocean, by which we are able to send the largest ships carrying the richest of cargoes from shore to shore of any sea. These are guided in their course by men who know little or nothing of Theosophy and who would laugh at metaphysics. But in order to safely carry the ship from departure to destination, they have to use the lines of longitude and latitude, which, while seeming very real to them, have no existence whatever, except in theory. These lines must be used, and, if not, the ship will strike a rock or run upon the shore. Where are the parallels of longitude and latitude? They are imagined to be on the earth, but their only visible existence is upon the chart made

by man, and their real existence is in the mind of the astronomer and those who understand the science of navigation. The sea captain may think they are on the chart, or he may not think of it at all. Where do they stop? Nowhere; they are said to extend indefinitely into space; yet these abstractions are used for present human commercial needs. Is this any less vague than Theosophy?

In the latter we have to guide the great human ship from shore to shore, and in that immense journey are obliged to refer to abstractions from which to start. Our spiritual parallels of latitude and longitude are abstractions, indeed, but no more so than those laid down upon the seaman's chart. The scientific materialist says: "What nonsense to speak of coming out of the Absolute!" We may reply, "What nonsense for the mariner to attempt to guide his ship by that which has no existence whatever, except in fancy; by that which is a pure abstraction!" Again he laughs at us for assuming that there is such a thing as the soul, "for", he says, "no man has ever seen it, and none ever can; it cannot be demonstrated". With perfect truth we can reply: "Where is the atom of science; who has ever seen it; where and when has its existence been demonstrated?" The "atom" of science is today as great a mystery as the "soul" of Theosophy. It is a pure hypothesis, undemonstrated and undemonstrable. It can neither be weighed, nor measured, nor found with a microscope; indeed, in the opinion of many Theosophists it is a far greater mystery than the soul, because some say they have seen that which may be soul; which looks like it; and no man has been, at any time, so fortunate or unfortunate as to have seen an atom. Further, the scientific materialist says, "What do you know about the powers of the soul, which you say is the central sun of the human system?" And we answer that "it is no more indefinite for us than the sun is for the astronomers who attempt to measure its heat and estimate its distance. As to the heat of the sun, not all are

agreed that it has any heat whatever, for some learned men think that it is a source of an energy which creates heat when it reaches the earth's atmosphere only. Others, celebrated in the records of science, such as Newton, Fizeau, and many other well-known astronomers, disagree as to the quantity of heat thrown out by the sun, on the hypothesis that it has any heat, and that difference is so great as to reach 8,998,600 degrees. Thus as to the central sun of this system, there is the greatest vagueness in science and no agreement as to what may be the truth in this important matter. In Theosophy, however, on the other hand, although there is some vagueness with mere students as to the exact quantity of heat or light thrown out by the sun, those who have devoted more time to its study are able to give closer estimates than any which have been given by scientific men in respect to the sun of the solar system. Yet all these generalities of science are the very things that have led to the present wonderful material development of the nineteenth century.

But let us glance for a moment at the subject of evolution, which engages the thought of materialist and theosophist alike; let us see if theosophy is more vague than its opponents, or more insane, we might say, in ability to lay wild theories before intelligent men. The well-known Haeckel in his *Pedigree of Man* says, in speaking of Darwin's teachings and lauding them: "Darwin puts in the place of a conscious creative force, building and arranging the organic bodies of animals and plants on a designed plan, a *series of natural forces working blindly*, or we say, *without aim, without design*. In place of an arbitrary act we have a necessary law of evolution. * * * *A mechanical origin of the earliest living form* was held as the necessary sequence of Darwin's teaching." Here we have blind, undesigning forces, beginning work without design, haphazard, all being jumbled together, but finally working out into a beautiful design visible in

the smallest form we can see. There is not a single proof in present life whether mineral, vegetable, or animal, that such a result from such a beginning could by any possibility eventuate. But these scientific men in those matters are safe in making hypotheses, because the time is far in the dark of history when these *blind*, undesigning acts were begun. Yet they ought to show some present instances of similar blindness producing harmonious designs. Now is this not a wild, fanciful, and almost insane statement of Haeckel's? Is it not ten times more absurd than theosophical teachings? We begin truly with Parabrahmam and Mulaprakriti and Hosts of Dhyan Chohans, but we allege design in everything, and our Parabrahmam is no more vague than motion or force, pets of science.

So I have found that a slight examination of this question reveals science as more vague than Theosophy is in anything. But some may say results are not indefinite. The same is said by us, the results to be reached by following the doctrines of theosophy, relating, as they do, to our real life, will be as definite, as visible, as important as any that science can point to.

The Path

RECOGNITION AFTER DEATH — *Katharine Hillard*

Does Theosophy provide for the recognition and re-union of friends after death? is a question frequently asked by those who find it hard to free themselves from the conceptions of a material philosophy. Unconsciously they still cling to the present, and to the illusions of this world, and while imagining that they are thinking of a spiritual life, are, in reality, formulating only a sort of etherealised physical existence. To gain anything like a true view upon the subject, we must consider *what* it is that persists, and *how* it persists, and the question will answer itself.

In the first place, let us take for granted the sevenfold constitution of man, as divided in the *Key to Theosophy* into a fourfold nature. This gives us *1st, The Higher Self, i.e., "Atma, the inseparable ray of the Universal and ONE SELF, the God above, more than within us."* This we instantly recognize as necessarily apart from any idea of mortality or personality.

Then we have as *2nd, The Spiritual Divine Ego, i.e., "The Spiritual Soul or Buddhi in close connection with Manas, or the mind principle. Without Manas, Buddhi is no Ego, but only the atmic vehicle; that is, we must have the self-consciousness of the intellect before we can formulate the idea of "I" at all. Here we have, therefore, simply the union of spirit and intelligence, an abstract consciousness, again impersonal.*

No. 3 is the Inner or Higher Ego, i.e., Manas or the intellect, independent of Buddhi, or the Spiritual soul. This is the permanent Individuality, or the re-incarnating Ego. Here, then, we have individuality, a separation from other egos, but not yet the personality, or that "which weaves for man the garment that we know him by".

No. 4 of this division is the *Lower* or *Personal Ego*, i.e., the physical man in conjunction with his animal instincts, desires, passions, etc., and the *lower Manas*, or baser half of the mind. These operate through the physical body and its astral double, and constitute altogether that which we call John Smith, but which clearer-sighted eyes know as the "false personality" of John Smith.

This fourfold division includes all the seven so-called "principles," except *Prana*, or the vital principle, which is, strictly speaking, the radiating force or energy of Atma, and permeates the whole of the objective Universe.

We have, then, two divisions only of which we can predicate *individuality*, and of these the first one has merely the individuality of the drops that compose the ocean, to our eyes without distinction, though we can think of them as separate drops. But if we had several bottles of sea water, each tinged with a different color, we could recognise one drop of each tint as it fell, and say to which bottle it belonged. Nevertheless it would not be the *water* that was different, but only the color, which enabled us to recognise the contents of the various vials. The bottles may stand for the physical body, the color for the Lower Ego, that is, the *personality* made up of the animal instincts and passions, and the lower half of the mind, those faculties that the higher animals share with us. If we once gain a clear idea of these distinctions, we must recognise that the change which we call Death can have nothing to do with the *Higher Self*, or God within us, nor with that abstract consciousness we call the *Spiritual Ego*, but that it severs the chain binding the *Higher Ego*, or the Intellectual Consciousness, the highest faculties of the mind, to the *Lower Ego*, or the lower faculties and passions belonging to and operating through the physical body.

What survives this change, then, can only be the highest and most

spiritual part of our being, not those qualities which are inherent in the physical nature and must perish with it. There can be nothing left of that entity we knew as John Smith, for instance, but the inmost and highest side of his nature, a side, indeed, that perhaps he had never shown to us. His physical body *must* return to the elements which composed it, and with it all those passions and emotions, those idiosyncracies of taste and manner which were its offspring, and which together composed the visible being of our friend. This being dwelt with us upon our physical plane, and the trammels of matter, indeed, often prevented our realising that he was other than the character we loved and thought we knew. Perhaps some touch of deeper thought, some flash of insight, may have come to us at some time, and for one brief instant we may have realised that the true individual belonged to a higher plane, and that only there we met his actual self, a self quite independent of all that bundle of physical characteristics that passed for the real man in the ordinary walks of life.

How possible it is even here to lose the sense of individuality, we can easily prove to ourselves by recalling some moment of deep emotion in a crowd — the one great burst of feeling that made the multitude shout "like one man," as the popular phrase is. They *were* one man, for the limitations of personality were swept away for those who, for the moment, had soared above the physical. There was no question of you or me, only the throb of one heart, the response of one mind

So when John Smith leaves this world, he lays down forever the limitations of that personality he had worn for awhile, just as the actor leaving the theatre drops the "inky cloak" and sombre philosophising of Hamlet, and becomes his real self. He leaves the mimic stage to take up his true part in the great drama of life. John Smith, like the actor, goes into another world, and we, for the present, stay in ours.

And we long to know whether, when our turn comes to pass through the dark portal, we shall recognise our friend upon the other side, forgetting all the time that then we too shall have left our temporary selves behind. As well might Horatio wonder if he shall know and love Hamlet tomorrow. Tomorrow he shall not be Horatio, but the man who played Horatio, and tomorrow night he shall be Cassio, and his friend Othello, and yet the *men* shall be the same. The difficulty is that we think of ourselves after death as we are *now*, not as we shall be then. We forget that it is not Jones in the body who is to meet Smith in the spirit, but that both will be on the same plane. We project our physical selves into the spiritual world, and expect to remain unchanged in the presence of "a new heaven and a new earth". The friend who knew and loved John Smith passes, like him, beyond the bounds of personality and the limits of time and space. It is two freed intelligences that encounter, not two mortal men. When the Sadducees asked Christ whose wife after death should be that woman who had married seven husbands, they were told that in heaven is neither marrying nor giving in marriage, but there we are as the angels. That is, not only far above any question of sex, but existing as spiritual beings, whose intercourse depends upon no formulated speech, nor even flash of eye, but is that direct communion of mind with mind and soul with soul which marks the highest moments of the highest friendship here, when for a brief instant we dwell with realities and not with illusions.

The John Smith who has finished his brief day of life lies down to the sweet sleep of death, the night of pleasant dreams. The laborer shall be worthy of his hire, and, having earned his rest, there shall come to him a season of repose interrupted only by happy visions, in which, unconscious of having died, he sees himself surrounded by all his dearest ones, and carries out his brightest dreams for the advancement of himself and his fellows.

And as the actor who has played his part earnestly and with all his might finds some trace of it lingering about him as he leaves the theatre, and perhaps plays it over again in his dreams, so the being we call John Smith finds something of his last personality clinging to him during the rest of Devachan and coloring all his visions. Meanwhile, as we read in the *Key*, p. 150, love beyond the grave has a *Divine* potency which re-acts on the living. The love of the man for his wife, of the mother for her children, will continue to be felt by them, because "pure divine love has its roots in eternity". It will show itself in their dreams, and often as a protection in times of danger, "for love is a strong shield, and is not limited by space or time".

And having in the rest of that quiet night beyond the grave enjoyed the reward of all the good deeds done in that brief day we call life, the inner or Higher Ego of the being we knew here as John Smith takes up the burden of his Karma again in some new part, a part assigned to him by no arbitrary selection, but the inevitable consequence of the way he has played the former ones entrusted to him.

Meantime we must remember what Mr. Sinnett has so well said in his paper on "The Higher Self," v. *Key*, p. 173. "The process of incarnation is not fully described when we speak of an *alternate* existence on the physical and spiritual planes, and thus picture the soul as a complete entity slipping entirely from the one state of existence to the other. The more correct definitions of the process would probably represent incarnation as taking place on this physical plane of nature by reason of an efflux emanating from the soul. The Spiritual realm would all the while be the proper habitat of the Soul, which would never entirely quit it; and that non-materializable portion of the Soul which abides permanently on the Spiritual plane may fitly, perhaps, be spoken of as the "HIGHER SELF." (Or *Atma*, not to be confused with the

Spiritual Divine Ego, which is *Buddhi* — *Manas*, or the *Higher Ego*, which is *Manas*.)

So, behind the different parts he plays, abides the actor's real self, watching what he does as Hamlet or Othello, and as unaffected thereby as a man upon a mountain top bathed in sunshine is by a thunderstorm rumbling below.

This is the broad outline merely of the theosophic teaching on the subject of re-union after death. That the common idea of a recognition of a physical being by a physical being cannot stand a moment before the test of logical analysis, can easily be proved. An *embodied* spirit it must be to be recognised, and an embodied spirit, however ethereal that body may be, is still linked to matter, is not yet free from the bondage of this death. And a body, moreover, involves the conceptions of space and time, both incompatible with the idea of pure intelligence.

Then again we are inevitably confronted with this dilemma. Either the personality is arrested at the moment of death, or it is not, and in either case a great gulf ever widens between the dead and their beloved ones. A young mother passes away leaving behind her a new-born infant, and that child, who has never known his mother, grows up to enter the spirit-world, perhaps as an old decrepit man, far older than the mother who bore him.

Or if we hold with the majority of our spiritualistic friends that the spirits of the departed continue to grow in the next life, and to keep pace with us here, the proposition is even more unthinkable. To grow implies accretion until disintegration, and accretion and disintegration imply matter, subject to decay and death. They imply more; some process of assimilation akin to that of earth, as far as regards the body; as regards the mind, some process of accumulated experience, registered facts, mental attrition. Again the concrete enters; conceptions of space, of time, of motion are

involved. Nor, granting these, would the results of such a theory be really satisfactory. The mother who loses her baby wants that baby back again: she does not want, after *long years of waiting*, to be confronted by that child grown to manhood. And then where is that growth to stop? And by what strange process of reversion are the decrepit to become young again? And why should our conceptions of time, founded on the revolutions of our sun and moon, hold good in a spiritual world, "where there is no need of the sun, neither of the moon, to shine in it, for the glory of God doth lighten it." Those conceptions of time are proved to us here and now to be absolutely false, a mere illusion of our senses, as we know by the experiences of our dreams and of all strong feelings and earnest thought: why, then, should we predicate them of a higher sphere than ours?

And, moreover, with time our desires change; because born of the physical nature, they alter with its alterations. The friends that left us when we were children and they were children, could not be our friends today. Should they return to us, we should realise that our memory of them is the child's memory of a child, and not the image we hold dear. It is only the immortal that changeth not, in whom is no variableness neither shadow of turning.

There is a deeper meaning in the story of Rip Van Winkle than we ordinarily see therein. When the old man wakes from seeming death to return to his home, he can recognise nothing: all the old landmarks are swept away, all the familiar faces gone, and the only thing that has survived the years is the love in the heart of his child. "For love never faileth; but whether there be prophecies, they shall fail; whether there be tongues, shall cease; whether there be knowledge, it shall vanish away. But when that which is perfect is come, then that which is in part shall be done away. Then shall I know even as also I am known."

And if even now, in rare and noble moments, we catch glimpses of those higher spheres in which our spiritual selves perpetually abide and hold communion with each other,

— "meet

Above the clouds, and greet as angels greet,"

if even now we know that all of good, all of true, all of beautiful in those gone before is with us still and ever shall be, can we not learn to realise that, once set free from these physical limitations, this consciousness shall but deepen and intensify? This is the true recognition, this is the union not to be broken by distance or by death, of which Christ said: "At that day (when the Spirit of Truth cometh) ye shall know that I am in my Father, and ye in me, and I in you."

The Path

THE REINCARNATING PART OF US — *Alexander Fullerton*

It hardly seems possible for an ordinary student, one who has not closely inspected or received special instruction in Theosophic lore, to contribute any valuable material to a discussion of the "Seven Principles", or, indeed, of any topic of which no more is known than has been disclosed in books equally accessible to all. In such cases, perhaps all that can be done is to show probability through analogy, or to cancel a difficulty by proving that it inheres equally in every other theory, or to analyze some one section more closely than has been done in books, or to make suggestions tending to simplify the teaching.

I think that one of our greatest puzzles is to form a clear conception as to what part of us it is which reincarnates. The difficulty is found in the middle region, if we range the Principles in a line. On the supposition that pure Spirit is the 7th, it is seen to be everywhere and all-enduring, and not therefore entering into this question. Several Principles at the other end of the line are as readily disposed of. The body is evidently an affair of one incarnation, disintegrating at the end of it, and its elements scattered through Nature. The Life-Principle — Prana, Jiva, call it what you will — is understood to flow through all substance, and is not a constituent element of any individuality. The Astral Body is material, and, like the physical body, ultimately dissolves. No one of these three lasts over till, or is reproduced in, a later birth. Nor is it difficult to perceive that the Animal Soul has a transient endurance, at all events in part. So far as it represents purely physical desires — hunger, lust, and the like, it has no existence apart from a body. The bodily needs seem thrown back upon it, as it were, inciting it to action and thus reinvigorating the carnal forces. After the separation in death takes place, the immediate

stimuli are absent, and then only memories of enjoyment can remain. Even these, so far as a physical brain is essential to conserve them, must abate. All, therefore, that is rooted in, or conditioned upon, or attached to a fleshly body must vanish with it.

And now we come to the 5th Principle, the Human Soul, described by Mr. Sinnett as "the seat of reason and memory". Scientific men agree that memory is an indestructible faculty. If this be so, it would seem that the Principle wherein it has its seat must likewise be indestructible. We are told, however, by some Theosophical writers that memory is a perishable faculty, and that reason is only a minor, temporary gift, the tool of a higher endowment which is to obscure and succeed it. One finds difficulty in each of these propositions. If memory, however suspended or in abeyance as to previous incarnations, is not an inherent part of the Ego. an Adept, surveying his past, can find it only in impressions made upon the Astral Light. But how, without memory, could he connect such pictures with himself, and what value would they have to him if destitute of that connection? One may go even farther. Memory is what practically constitutes identity, for we only know ourselves as being the same person born long ago through the successive incidents and eras which we recall. Obliterate these, and we should be as unable to identify ourselves with the personality of 10, 20, 30 years back, as we now are to do so with the personality of a past incarnation. What, too, would become of the knowledge, the experience, the mental skill garnered through life, if there was no permanent faculty to conserve them? It is not enough that their essence be extracted in Devachan: our nature, higher than any semi-material ether, can hardly be less gifted than an Astral Light. It would seem that there must be in this 5th Principle a power of permanent conservation of all events and processes, and a further power of reproducing

them under the appropriate conditions; and this agrees with the three-fold analysis of memory by nomologists, for they give as its third element "reproduction". The contents of memory might be kept intact, even if the reproductive power was at anytime suspended or inoperative.

Nor does it seem probable that reason is but a transient and imperfect tool. We know it only in its earlier stages and in its human manifestations. And yet Holmes suggests that from the contemplation of a pebble an Archangel might infer the whole inorganic universe as the simplest of corollaries. What limits can we put to intelligence? Some of us have read the editorials of country newspapers, have undergone sermons from young divines, have overheard the babble of shop girls in a street car, have been tortured with drivel in private life, and yet have heard lectures from Prof. Tyndall, thus realizing the possibility of antipodes in human thought; but shall we say that there are not intelligences as much in advance of his as is his beyond those? The truth is that all human powers are yet little more than embryonic. Marvellous as they are to us, they must be trivial to beings of unbroken growth, beings to whom our little lives of 70 years seem utterly ephemeral. And where is this to stop? Radiating from the Supreme Spirit, All-wise, All-knowing, and All-powerful, there must be rank upon rank of intelligences, infinitely varied in capacity and strength. The two elements in wisdom are information and judgment, and from that combination in its perfection must come a descending scale, the lowest terminus whereof we see, but how slight a distance above it! As we ascend it in our own evolution, we shall doubtless drop many processes that are clumsy and dispense with many aids that we have outgrown, and yet the original faculty may still persist, not discarded, but amplified and enriched, freed from limitations and stimulated by exercise. What should we be without reason;

what would it be without memory?

Evidently, however, the immortal part of man is not to be found in intelligence alone. An undying intellect might of itself be mischievous or evil. Its complement must be in the moral or spiritual nature, which, still immature now as is the mind, may expand to equal proportions and make the whole symmetrical. Thus the intellect becoming more strong, and the moral sense becoming more fine, each correcting and guiding the other, the human soul and spirit, the mind and the higher nature, the brains and the heart, the God-given and the God-seeking, may in conjunction develop along the way to which there is no end. Perhaps this is what is meant by the Theosophical injunction to "unite the Manas with the Buddhi"; — at all events it is an intelligible interpretation.

If these two, united in whatever proportion and in whatever degree of evolution, constitute the Ego of any particular man, the combination is that which reincarnates. But it does not follow that the new incarnation exhibits the combination in all its fulness or with all its phases. Sometimes the intellectual element may be dominant, or even only a part of it; as where a genius arises in some special field, or one intellectual gift is more marked than the rest. This would account for a Macaulay in letters or a Verdi in music. Sometimes the moral element is in the ascendant, and then we see a Howard in philanthropy or a Paul in missionary ardor. Sometimes the spiritual nature so dwarfs all else that life is but one long aspiration, as with the mystics. But all the round must be traversed, or the Ego would have a development incomplete. If this is the true view of the reincarnating part of us, one important consequence seems to follow. Theosophical authorities have been somewhat cautious in defining ultimate destiny, intimating, indeed, that there is a state known as Paranirvana — "beyond Nirvana", but not usually

saying more than that Nirvana is not eternal, since it ends with a Manvantara, and that human spirits absorbed into the Divine fulness pass with it into Pralaya until the reawakening. Two questions at once arise: Do they lose consciousness during that era, and, Do they begin a new round of embodiments after it? If they begin a new round of embodiments, the implication is that there is no finality in that mode of evolution; and while the improbability of such a theory, and the strong repugnance all of us must feel to an eternity of incarnations, do not constitute more than an *a priori* argument against it, its force is very strong. If they do not, as would seem far more likely, how is Paranirvana attained? And what about the loss of consciousness during Pralaya? The "sleep of Brahm" may be a mere metaphor to indicate a suspension of world formation, and it is quite conceivable that a purely spiritual sphere of thought and action would meet all needs of a perfected being. But if it means, as its use generally seems to, a cessation of all interior as well as exterior function, a Theosophist may well demur. A comatose God is not an inspiring conception, even if one is able to contemplate it with entire gravity. Unconsciousness in the Supreme Being of a universe in which every other being was conscious would be strange enough during a Manvantara; but if you predicate it during a Pralaya, you make the Pralaya unending, for what is there to rouse up the Unconscious and induce a new Manvantara? It will not do to say "The Law of Cycles", for "Law" implies a law-maker, and what law-maker can be above the Supreme and impress his will thereon? Periodicity of manifestation may be, and probably is, a Law, but it is a law only frameable by the Supreme, and if the Supreme has Himself lapsed into unconsciousness, how is the Law to be made operative? One cannot escape from these difficulties by metaphysical juggles, or by terminology, or by mere appeals to authority; and, indeed, it is hardly worth while. I regard this as

one of the many cases where discrimination is one of the most valuable tools in a Theosophical equipment, and where a Theosophist will be all the better for making use of it. In fact, a measure of eclecticism is healthful to an adherent to any system, for without it he is apt to lose sense of proportion and to become a partisan where he should be a freeman.

But what other conception of the distant future is preferable?, one may ask. I should say, a conception which preserves all the results of reincarnations, and forbids a suspension of conscious, intelligent life to either Divinity or to human spirits made Divine. Worlds and systems may wax and wane, yet the Great Architect of the Universe be unaffected by their changes. Numberless egos, having advanced through repeated incarnations beyond the limits of human imperfection, reach and are pervaded by that unlocalized, impersonal Being whom we may style the Central Sun. The self-element purged away, yet the individuality preserved; consciousness no longer imprisoned, but free like the ether; the dew-drop restored to the shining sea after its wanderings over the earth, yet in some strange way its identity unsacrificed; these Egos, made a portion of the Divine, have not attained all knowledge or found an end to the endless. Like the asymptote to the hyperbola, they may be continually approaching a finality, yet never reach it. No number of Manvantaras can exhaust the resources of infinity, and these tireless intelligences, one as considered from without, many as seen from within, may forever find scope and action. What need have they of a Pralaya, a periodical state of coma, required neither by logic nor by languor? They depend on no material worlds for their interests and being, and in the long eras when formative powers are in abeyance have still the Divine life which never slumbers or wanes. Time, as all other limitations. has passed away, and there has succeeded to it a being which is unconditioned, unbroken,

and Eternal!

You may say that these thoughts are only a speculation. Certainly; as must be every other theory concerning the mode of the Divine existence or the nature of human life after its restoration to its source. These topics lie beyond the reach of finite faculty: the finite cannot possibly apprehend the Infinite. No better preparation can possibly be given to any student of spiritual things, be he Eastern or Western, than a careful reading of Mansel's famous *Limits of Religious Thought*. Herein is shown with unanswerable logic that we hardly enter upon examination of Divinity before we are confronted with hopeless and endless difficulties. The terms "Infinite" and "Absolute" contradict each other; every process essential to an inspection of the Divine brings us to a dilemma, each prong of which is an absurdity or a contradiction or both; we are beaten back, confused, paralyzed at every new step. There is perhaps no more lucid portrayal of the limitations of human thought. And it is simply because the finite is incompetent to grasp the Infinite. This must be equally true of all grades of the finite, for all fall short of infinity. A Mahatma is just as powerless to analyze the Supreme Being as you or I; not because he is not vastly greater than we, but because he as truly lacks the one essential to define God, — Godhood. He is still finite, that is, with a limit or end: God has no limit, no end. His conceptions are grander and fuller than ours, yet not herein more accurate, for no accuracy is possible. Hence of this region there can be no teacher, for a teacher who does not know is a contradiction. We may reverently accept the vast stores of knowledge acquired by those revered souls in Their aeons of development, and learn invaluable truths of the constitution of the universe, the earth, and ourselves; but the nature of the Supreme Being and the method of life within must ever be speculative, and we owe no allegiance to speculation. All that can

be done is to present in symbolical or analogical form some thought which reflects a possibility of the reality, but if that is unsatisfactory or objectionable, neither reverence nor duty exacts our acceptance of it. Mahatmas, Adepts, chelas, students, all here stand on common ground, for all are dwarfed to likeness in the presence of the Infinite.

Perhaps for that very reason we all can give our views without presumption. And so it comes to pass that the same evening at the Aryan Society which witnesses a quotation from the *Secret Doctrine* witnesses also a free discussion on the seven-fold division of man and a paper on his continuing essence and its eternal progress.

The Path

JAPANESE BUDDHIST SECTS: II — Kyo-Ryo-Va-Sha

To continue about the sect of Shin-gon. It would not be possible to fully explain their doctrines in one book, much less in one article. These are merely notes. They speak of three secrets and call them those of "body, speech, and mind," that is, the actions of those. The apparent form of all things is that of the five elements, and that is the secret of body. In the Hindu school of Patanjali we find an aphorism relating to the disappearance of the body, or, more properly, of the power to make another unable to see it, and this comes when one has found out the secret of form. (1) The Shin-gon-shu say that this secret is only understood by a Buddha.

Nichi-ren-shu was founded by Nichi-ren, who gave out for his followers the doctrines found in the Suddharma-pundarika. They believe that Buddha taught people gradually by expedients and different methods, although he had all the time but one means or vehicle. They have three great secret laws which have reference to the three great bodies of Buddha. and those are by name, Dharmakaya, Sambhogakaya, and Nirmanakaya. (2) The chief object of worship is the great Mandala of the ten worlds, and it represents the original Buddha of remote times. The wisdom, virtue, and knowledge of all men and sages of every region are the powers of this Buddha, who dwells in every place, is free from birth and death, and is the Buddha of permanence. Sakyamuni said he was this original Buddha and also that we ourselves are the same, and thus we are to meditate on this chief object of worship for our salvation. (3) A man should remember that his own body is that of the original Buddha, that his dwelling place is the Pure Land of constantly calm light, and his thought the Good law. The weak man may enter on the path by this teaching. (4)

The Shin-shu calls itself the True Sect of the Pure Land. The object is to be born in the pure land of Amitabha, a Buddha who in the very remote time made a vow and prayer like this: " If any of the living beings in the ten regions who have believed in me with true thoughts and desire to be born in my land and have even to ten times repeated the thought of my name should not be born there, then may I not obtain the perfect knowledge." With this prayer in view he lived for many kalpas for the purpose of perfecting his merit, so that any one who made use of his name might be thereby eventually saved. It is held that men in general have not enough power of their own to enable them to reach over death, yet at the same time it is allowed that there are some such men out of whom at last come the Buddhas. The common man who repeats this name will at last be led to virtue, and from that to wisdom and finally perfection.

The Jo-do-shu is also a sect of the pure land, and I cannot perceive much difference between it and the other of the same view, as the differences which exist between them are small. They had a teacher who taught about the belief in Amitabha, and Ryu-ju said that "in the great sea of the law of Buddha faith is the only means to enter."

Zen-shu is the sect of contemplation, and is thought to derive its name from the Sanscrit word Dhyana, or contemplation. They think that besides all the various and great doctrines there is as well another which may be called the secret doctrine, and that comes through one line of transmission and is not dependent on any one's utterances. This must mean that the truth comes to one as the result of his own thought.

After all this it must be plain to anyone who may read this that there is in fact very little difference between any of the sects of which I have been permitted here to speak, and that their

existence is due to the fact that Buddha did, as all know well, teach in many different ways, so that he might make an entry into the many different kinds of minds which men possess. For one man will have a mind that by nature is always in the state of contemplation, and another will not be able to do more than have great longing for the things of the spirit, and hence this latter sort of man would not be able to understand the abstruse parts of the doctrines of the great Lord. And so in the history of the life of Buddha we find that the time came when he made up his mind that he would tell the disciples that there was really only one way in which to look at the problems of life, although he had taught them in many another way for many years. Then some of the disciples who were not able to understand this rose, and, after saluting him, left the assembly. The learned Buddhist knows that it is karma which makes these differences, working together with the law of reincarnation, so that one man has only reached to a certain place in his spiritual learning and is not in any way able to understand those things that relate to a longer practise of right thought in other lives. Other men, however, have gone through all of this and are fitted to clearly grasp even the most abstruse doctrines of the Master. And yet, indeed, there is a great mystery here which will be apprehended by some, and that is that there is no man in any region who may not, if he will, grasp even the more difficult part of the law, but he has to have a faith which is perfect and live a life which is pure in all its parts.

The doctrine of the Pure-Land Sect is one that is meant to help all the common men, for it looks like a way of being freed from sin by the virtue of another being, yet it also is capable of another interpretation, and it is only one of the expedients of the great Lord to make men take advantage by an easy way of their own hidden natural powers. It is quite true that if any one will call on the name of this Buddha he will be saved, for the act of so calling

and aspiring has the effect of bringing to the surface the whole spiritual life and experience of the man from out of the dim and almost forgotten past. So even with this doctrine the man does in fact save himself, which is the true law of the Buddha and the one that underlies his whole teachings. As the years roll by and as the Kali yuga rushes further on, it will be found that the teachings of Buddha are great, wide, square, full of adornment, all comprehending, easy to understand, capable of taking us out of the ocean of rebirth in any of the ten different ways, and that in the course of time the Buddha will come again and will make perfect the imperfect renderings of his law which he alone is able to give to the world in a perfect state.

Let us remember the mystery of body, speech, and thought!

FOOTNOTES:

1. On page 705 of the 2nd vol. of the Secret Doctrine is this: "till our human form came into being, in which all things are comprised and which contains all forms," and in the note to it: "this sentence contains a dual sense and mystery which if and when known confer tremendous powers upon the adept to change his visible form." (Ed.) ([return to text](#))
2. See the Voice of the Silence where these are explained. (Ed.) ([return to text](#))
3. In the Bhagavad Gita the same is said in effect. (Ed.) ([return to text](#))
4. This sect certainly preaches the doctrine of non-separateness. (Ed.) ([return to text](#))

SHALL WE TEACH CLAIRVOYANCE? — *William Q. Judge*

A NOTE OF WARNING.

My attention has been arrested by the address delivered in the Adyar course by Dr. Daly and reported in the September *Theosophist*. It is entitled "Clairvoyance."

Coming out in the Adyar course, it has a certain flavor of authority which will appeal to many members of the Society and may cause them to adopt the suggestions for practice given in the latter part of the address. Yet at the same time it is very true that the Theosophical Society is not responsible for the utterances of members in their private capacity.

The fact that clairvoyance is a power sought after by many persons cannot be disputed, but the questions, Is it well to try to develop clairvoyance? and Shall we teach it? have not yet been definitely decided. Hence I may be permitted to give my views upon them.

At the outset I desire to declare my personal attitude on these questions and my beliefs as to facts. In using the term "clairvoyance" I intend to include in it all clear perception on that plane.

1. I have for many years been convinced by proofs furnished by others and from personal experience that clairvoyance is a power belonging to man's inner nature; and also that it is possessed by the animal kingdom.
2. This faculty is either inherited or educed by practice.
3. Those who have it by birth are generally physically diseased or nervously deranged. The cases where clairvoyance is shown by a perfectly healthy and well-balanced person are

rare.

4. The records of spiritualism for over forty years in America conclusively prove that clairvoyance cannot be safely sought after by persons who have no competent guide; that its pursuit has done harm; and that almost every medium to whom one puts the question "Am I able to develop clairvoyance?" will reply "Yes."
5. There are no competent guides in this pursuit to be found here or in Europe who are willing to teach one how to acquire it without danger.
6. The qualifications such a guide should possess render the finding of one difficult if not impossible. They are: the power to look within and see clearly the whole inner nature of the student; a complete knowledge of all the planes upon which clairvoyance acts, including knowledge of the source, the meaning, and the effect of all that is perceived by the clairvoyant; and last, but not least, the power to stop at will the exercise of the power. Evidently these requirements call for an adept.

Who are the teachers of clairvoyance, and those who advise that it be practised? In the main, the first are mediums, and any investigator knows how little they know. Every one of them differs from every other in his powers. The majority have only one sort of clairvoyance; here and there are some who combine, at most, three classes of the faculty. Not a single one is able to mentally see behind the image or idea perceived, and cannot say in a given case whether the image seen is the object itself or the result of a thought from another mind. For in these planes of perception the thoughts of men become as objective as material objects are to our human eyes. It is true that a clairvoyant can tell you that what is being thus perceived is not apprehended by the physical eye, but beyond that he cannot go. Of this I have had

hundreds of examples. In 99 out of 100 instances the seer mistook the thought from another mind for a clairvoyant perception of a living person or physical object.

The seers of whom I speak see always according to their inner tendency, which is governed by subtle laws of heredity which are wholly unknown to scientific men and much more to mediums and seers. One will only reach the symbolic plane; another that which is known to occultists as the positive side of sound; another to the negative or positive aspects of the epidermis and its emanations; and so on through innumerable layer after layer of clairvoyance and octave after octave of vibrations. They all know but the little they have experienced, and for any other person to seek to develop the power is dangerous. The philosophy of it all, the laws that cause the image to appear and disappear, are *terra incognita*.

The occult septenary scheme in nature with all its modifications produces multiple effects, and no mere clairvoyant is able to see the truth that underlies the simplest instance of clairvoyant perception. If a man moves from one chair to another, immediately hundreds of possibilities arise for the clairvoyant eye, and he alone who is a highly trained and philosophical seer — an adept, in short — can combine them all so as to arrive at true clear-perception. In the simple act described almost all the centres of force in the moving being go into operation, and each one produces its own peculiar effect in the astral light. At once the motion made and thoughts aroused elicit their own sound, color, motion in ether, amount of etheric light, symbolic picture, disturbance of elemental forces, and so on through the great catalogue. Did but one wink his eye, the same effects follow in due order. And the seer can perceive but that which attunes itself to his own development and personal peculiarities, all limited in force and degree.

What, may I ask, do clairvoyants know of the law of prevention or encrustation which is acting always with many people? Nothing, absolutely nothing. How do they explain those cases where, try as they will, they cannot see anything- whatever regarding certain things? Judging from human nature and the sordidness of many schools of clairvoyance, are we not safe in affirming that if there were any real or reliable clairvoyance about us now-a days among those who offer to teach it or take pay for it, long ago fortunes would have been made by them, banks despoiled, lost articles found, and friends more often reunited? Admitting that there have been sporadic instances of success on these lines, does not the exception prove that true clairvoyance is not understood or likely to be?

But what shall theosophists do? Stop all attempts at clairvoyance. And why? Because it leads them slowly but surely — almost beyond recall — into an interior and exterior passive state where the will is gradually overpowered and they are at last in the power of the demons who lurk around the threshold of our consciousness. Above all, follow no advice to "sit for development". Madness lies that way. The feathery touches which come upon the skin while trying these experiments are said by mediums to be the gentle touches of "the spirits". But they are not. They are caused by the ethereal fluids from within us making their way out through the skin and thus producing the illusion of a touch. When enough has gone out, then the victim is getting gradually negative, the future prey for spooks and will-o'-the-wisp images.

"But *what*" they say, "shall we pursue and study?" Study the philosophy of life, leave the decorations that line the road of spiritual development for future lives, and — practise altruism.

The Path

THEOSOPHY AND THE THEOSOPHICAL SOCIETY

Underlying the Doctrines of Theosophy is one fundamental proposition, namely, "the essential Unity of all life and being." Manifestation of life is differentiation of this unity, the purpose of differentiation is evolution, and the destiny of evolution is the return of all manifestation into its source and original unity.

Of the manifestation of life there are two phases, poles, or aspects, the descent of Spirit into matter and the ascent of matter into Spirit. The infinite variety of gradation in development between these two poles marks the degree of differentiation from the *Unity*, in its downward or upward course. This universal truth of the essential unity of all life and being throughout nature was the basis upon which the ideal undertaking was grounded of providing a vehicle for its dissemination; therefore the T. S. was founded for the purpose of establishing a practical working centre for the exposition of these doctrines, but foremost with the object of the amelioration of human affairs, to point out the identity of interest, the common source of origin, the relative position in life to the rest of nature, and the probable destiny of the human being in the grand scheme of evolution. Besides this primary purpose of thus forming the nucleus to a Universal Brotherhood of humanity, its other objects are to promote the study of Aryan and other Eastern Literatures, Religions, and Sciences and to draw attention to and investigate unexplained laws of nature and the psychic powers of man.

Theosophy is not a new invention, but the essential underlying truth of all philosophies; it is a body of doctrine in philosophy, science, and ethics, principally derived from the *Eastern archaic sacred Theories*, which were worked out by a brotherhood of

devotees and initiates who used every method of scientific investigation known to us, as well as their own highly developed practises of observation, experiment, concentration, and meditation to reach the truth. They traced all phenomena by every possible means from their significance to their source, and by comparison of their independent searches and observations recorded their conclusions and accepted such results only as could stand the test of applicability and verification from every point and in every conceivable direction.

This slowly accumulating body of facts furnished the basis for these great universal doctrines, and the psychic development of these devotees and students gave them great power over nature and insight into the mystic side of the universe and man.

These doctrines were handed down from generation to generation since time immemorial, and were guarded by the most sacredly pledged disciples, who had devoted their whole lives to the development of their psychic and spiritual faculties. The reason why these doctrines had been so strenuously guarded from the profane and unripe is because the possession of their knowledge gives great power for use or abuse. It embraces the science of the finer forces in nature, their relation and correspondences in themselves, and the knowledge of their uses and application for the benefit or destruction of humanity.

Although this transcendental knowledge was accessible at all times to those who were ripe and who felt the craving for it strong enough to make the unremitting sacrifice, it would be acquired only by those whose supreme intensity of excitement and enthusiasm made it possible in those times to incur the self-denial and renunciation of worldly concerns necessary to initiation. For is it any different now, and never will be, except that portions of the doctrine are given out from time to time, such

as may be safely trusted to an advancing age, because to penetrate into the mystery of nature requires a state of the greatest purity and perfection, and this final perfection is not a gift to be expected from without, but is to be worked for by those who desire it.

It is often queried why this grand philosophy has existed for so long a time and yet so little of it has reached our all-conquering civilization.

This is due to the fact that our civilization has mainly occupied itself with material and intellectual progress, refusing to even recognize the superior faculties of intuition and man's capability of spiritual culture. These higher faculties have been allowed to remain dormant during the race for material aggrandizement and personal recognition.

Though it was hoped that the mystery of life and the power over nature could be obtained in our time by mere intellectual development, very little indeed has been accomplished, but instead we find ourselves — as the result of misdirected energies — in the abyss of modern materialism.

The abolition alone of these tendencies, and the *insight* into the inability to find the secret into the mystery of the all-pervading and unerring law of nature by physical means, — the abolition and destruction of these tendencies is the bridge over which alone we may arrive at the enlightened shore of transcendental wisdom.

At this present restless stage of discontent and the fruitless search for peace, the T. S. appeared with truly altruistic motives, reminding the perplexed age of the mistaken course it had taken in its illusion of separateness and in its denial of man's better nature.

It is the aim of the T. S. to bring to the notice of those who are inclined to admit the spiritual nature of man and his progressive evolution, that on another plane of existence, a plane which partakes of a wider field of consciousness and which lies within the capability of development in every individual, that on that higher plane there is a spiritual unity, a universal brotherhood of mankind, and on that plane of being there is no separateness from homogeneous existence; and further that no permanent progress is possible through fostering the illusion of separateness, and that man's true duty at all times and in all circumstances is the love of his kind and the preservation of harmony around him. It is with the endeavor to learn something concerning our position in life and our spiritual relation to each other that we come together weekly, some of us daily, to exchange our observations and experiences.

It is premised that man is the product of an advanced stage of evolution, which is demonstrated by his possession of the more developed faculties of perception and consciousness compared with other organisms, his capability of analysis of physical nature, his inherent sense of moral duty, and his aspirations to know his relative position in cosmic evolution.

The spiritual unity of mankind is the basis of our moral life. Regard, consideration, love, kindness are qualities which are exhibited and practiced intuitively during the greatest part of daily life; the voice of conscience which meddles in every thought and act is indicative of a brotherhood founded upon the sympathy of man for man, which is a fundamental fact of *human* nature.

When we observe the great intelligence and justice with which the minutest object in nature is governed, we can draw inference by analogy and apply to the human being. The same conditions

prevail; the great universality of government, embracing all and moving all with inexorable certainty in obedience to one law and design, the *interdependence* of everything, suggest the unity of all.

Unity of life and being means brotherhood of all the units which make up that unity of life and being, and it is the conscious realization of this unity, the universal, all-pervading principle of brotherhood, that lends a basis and meaning to the phenomena of life and existence.

Besides, the degree of relative brotherhood of mankind to itself must be closer than to anything else, because humanity is composed of one kind of units (more or less), and in the same stage or degree of development, at least as compared to other kingdoms in nature.

This essential unity of all being, however, becomes only realizable in the ratio in which consciousness on a higher plane is awakened, and this superior consciousness regards our present conception of all separateness apart from the whole as an illusion, because there it is no separation in reality; it only appears so to us on our present plane of consciousness. Therefore this tenet, although it is a fact in nature, is not so easily demonstrable on physical lines, because the problem itself transcends perception on this lower physical plane; in other words, it cannot be seen or heard, felt, smelt, or tasted, nor sensed with any physical instrument; still it is a fact which is at once plausible by conceding to the human being spiritual life at all, and perfectly realizable to those who have penetrated beyond the veil which surrounds gross matter.

Although the consciousness beyond the veil of matter may be very limited for us at present, cultivation of the mystic side of our nature will open vistas undreamed of, and widen our consciousness.

For instance, the investigation of the significance of our consciousness during the dream state and that in dreamless sleep. Our ideal life is derived from the state of dreamless sleep.

During that time of the entire oblivion of our self-consciousness we are quite on another plane.

Intelligent and persistent scrutiny and searching into the dreamless sleep will soon reveal, first, the fact that it is a state of great purity, entirely uninfluenced by good or bad actions which we may have performed during the day; and second, that we receive ideal impulses during our daily life which come to our perception quite unawares and are, as we think, perfectly natural, but which are in reality reflections in the physical brain from the dreamless sleep.

Man leads a dual life even in the waking state. In every thought and deed is a dual aspect. The first and most pressing one in our day is that which concerns our personality, the second how it affects our relations with the world at large.

The process itself is so automaton-like that it eludes notice, but to these two aspects all our activities are subjected.

If the predilections of the personality predominate, the result will be correspondingly selfish; if, on the other hand, the ideal aspect is duly regarded, the act will be corresponding to and means better intuition. This latter is the ideal side of man's dual life, a state of higher consciousness, the exploration of which will greatly expand the conception of the part man is playing in the drama of life, and that "*Ideal Unity*" or "*Universal brotherhood of mankind*" is a "*fact*" and the notion of the separateness of humanity is an illusion.

CONSOLATION — J. D. B.

The mountain paths seem rough and steep,
 With cypress overgrown,
The valleys where the lilies weep
 Are oft obscure and lone.

The breath to which the vale responds
 With music and delight,
Blows wild and tree through waving fronds
 Far up the mountain height.

The lilies crowd the valley's zone,
But he who climbs must stand alone.

The lotus vales are warm and sweet,
 The mountain paths sublime;
We linger with unwilling feet
 O'er things of sense and time;
The touch of some familiar hand,
 The voice that thrills the sense;
The music of the Lotus-land
 The heart's sweet recompense:
Where lilies pale and zephyrs moan,
And souls fear most to stand alone.

Ah! not alone: no zephyr bends
 The head of lily fair,
But slightest breath for aye portends
 The sweep of mountain air.
Souls sicken where the languor grows
 And faint ere flush of even;
'Till rough winds blow with breath of snow
 Borne from the purer heaven.

The zephyrs sleep in wild wind's moan
Nor breath nor gale e're throbs alone.

The voices of the vale ascend:

The sweeping breath comes down,
While grief and joy together blend,
Hope lightens fate's dark frown.
Dear heart, be brave! no joy is lost;
Fate brings thee all thine own;
The flower that blossoms in the frost
Is in the valleys sown.

List for the voice from starry zone
Nor think to live or grieve alone.

We stand alone, yet not apart,
Save when self intervenes;
The griefs and joys that try the heart
Are only Maya dreams.

As soldiers mount at bugles blast
To brave the battle shock,
So gird thine armor to the last;
Dear heart! be firm as rock.

We climb together, zone on zone;
Together most, when most alone.

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 1 to p. 67, Vol. I.)

A PROPHECY. In the 20th century — 1900 — the scholars of our era will begin to recognize that the *Secret Doctrine* has neither been invented nor exaggerated, but simply outlined — Vol. 1, p. xxxvii Intro. In other places the author hints at surprises in store in the way of manuscripts, etc. It would seem that by 1900 some "discoveries" will be made by scholars that will support our author. "Once the door permitted to be kept a little ajar, it will be opened wider with every new century. The times are ripe for a more serious knowledge than hitherto permitted." *Vol. I, p. xxxviii Intro, note.* "We have not long to wait, and many of us will witness the Dawn of the New Cycle at the end of which not a few accounts will be settled and squared between the two races." *V. I, Intro, xliv.*

AN ARCHAIC MANUSCRIPT. Some of the doctrines given out are found by her in a collection of palm-leaves made impervious to the elements by some unknown process, *Proem V. I, p. 1.* It is well known that some of the most ancient eastern manuscripts are on palm-leaves which are cut in oblong, narrow form and tied with a string. How is this seen by her? Either in the astral light or objectively, being brought to her table. By whom or what?

CONTINUITY OF PLAN FROM ONE MANVANTARA TO ANOTHER. In this old MS. it is said (*Proem*) that during the pralaya the plan for the next manvantara slumbers until the dawn of the next evolution, when its potential power goes forth to action. There is, therefore, a continuity from manvantara through pralaya to succeeding manvantara. Continued on pp. 4 and 5 of V. I.

THE BASIS OF AFFINITY, hence for all correlations of force. It is stated that Leucippus taught an occult law when he declared, 500 B. C., that the *lateral motion of atoms* is the root for affinity and correlation of force. *p. 2, V. I.*

EACH PERIOD OF EVOLUTION IS *sui generis*. "Yet at each new manvantara its organization — speaking of the cosmos — may be regarded as the first and the last of its kind, as it evolutes every time on a higher plane." *V. I, p. 3.*

A NEW ELEMENT AT THE END OF OUR 4th ROUND. "Occult science recognizes seven cosmic elements, four entirely physical, the fifth — ether — semi-material, *as it will become visible in the air* toward the end of our 4th round, to reign supreme over the others during the whole of the 5th Round." *Vol. I, p. 14.*

AKAS AND MANAS CORRESPOND. *See note p. 13, Vol.1.* "That A'kas-a, the fifth universal cosmic principle — to which corresponds and from which proceeds human *Manas* — is, cosmically, a radiant, cool, diathermal, plastic matter, creative in its physical nature, correlative in its grossest aspects and portions, immutable in its higher principles." It must therefore follow, under the law of correspondences, that *manas* in the seven-fold division is creative, correlative, and immutable in the same way and portions as stated for Akasa.

MANAS IN THE 5th ROUND. By following out the correspondence we find that as Ether, the lower form of Akas, now semi-material, will become visible in the air at the end of this Round — the 4th — so *manas*, now only semi-developed in this race, will be further evolved in the 5th Round at the same time with the parent source, and as the form of Ether spoken of will then be the superior element in nature, so at the same time the superior principle reigning in the septenary constitution of man will be *manas*. The full development of *manas* imposes full responsibility on the race,

and thus we see how the turning point is reached and what it may mean, and also what is the meaning of the "moment of Choice". With full responsibility the choice must be made by the race which thus has perfect *manas*. It is for and towards that period that the Masters of Wisdom are now working so as to prepare the present Egos for the momentous days when the choice of the good or evil path must be intelligently made.

And as in many places in the *Secret Doctrine* the author says that we are the same egos who were in the Atlantean bodies, and that they had a very weighty karma, we may perceive why it is that we are those who will be compelled to make the great choice for good or evil destiny in the next Round.

DIFFERENCE BETWEEN EFFECT OF GREAT AND MINOR PRALAYA. The question "What happens to the planets during a minor pralaya or dissolution?" is answered in *footnote p. 18, V. I.* They are dead, as it were, but not dissolved, for, as she says, "they remain intact as a huge animal caught and imbedded in the polar ice remains the same for ages." After the great Pralaya no planets remain *in corporibus*, but all are dissolved, their akasic "photographs" alone remaining. This must be taken metaphorically, or else we will again make objective, that which is subjective. But in a minor pralaya the "dead planets" are objective in space, but with all their active life and energy gone.

DHYAN CHOANS NOT THE ONLY TERM FOR THE HIGHEST BEINGS. "Each of the various groups has its own designation in the Secret Doctrine." *V. I., p. 22, lines 8, 9.* Nor are they personifications of powers in nature. *Vol. I, p. 38, line 18.*

EACH ROUND has its special class of Dhyanis to watch over it. The same for races, *p. 42, Vol. I (a).* The present round is watched especially by the Fourth Class of Dhyanis.

THE ABSOLUTE NOT UNDERSTOOD by the Dhyan Chohans. *p.51, Vol. I, line 16.* And yet some theosophists ask to have definitions or explanations of the Absolute. We heard of one who claimed to have "communed with the Absolute."

THE BREATH OF BRAHMA. This may be said to be the same as "The Eternal Breath" spoken of in the *Secret Doctrine*. It is motion, and proceeds through space ceaselessly. It does not stop during the pralayas. *p. 55, vol. I, line11.*

IDEALS AND TYPES IN THE ASTRAL LIGHT. The prototype is present in an ideal form in the Astral Light from dawn to night during the manvantaric period — everything from man to mite, from giant trees down to the tiniest blade of grass, *p. 63, vol. I, 1st para.* There is a clear correspondence here with the formation of the astral man, which is the copy, plan, or prototype on which the corporeal man is formed.

THE PRIMORDIAL FORM of every manifested thing is like that of an egg. *p. 65, vol. I.* A *paramahansa* once wrote for *the Theosophist* an article in which he said that theosophy was that Branch of Masonry which showed the universe in the form of an egg.

THE VERBUM, OR WORD, AND ITS FORCE. All religions speak of "the Word." The Jews, from whom the Christians get their religion, say that the all-powerful name of God if pronounced will shake the Universe; the Freemasons speak of the lost word; the Hindus tell of the great word; it is the Greek *logos*. The question is often raised, "Supposing there be such a word, wherein is its force?" H. P. B. says it is in *motion* and not in number. *Note I, p. 67, vol. I.* The Hebrew Kaballah leans more to *number*, as being the force of power of this word.

THE PURPOSES OF SOUL — *Jasper Neimand*

One night, I watched with my dead.

This comrade was smitten in departing; his soul cried out through the body, "*Oh! my wasted life*" Silence followed, for him the silence of high spheres; for us, the silence of the grave in that dark hour above which exhausted faith could not lift us. It was an hour of bleak despair, and, beneath that, an icy blank.

Yet other hours dawn for the student when a voice out of negation cries, "Look in thy heart and write." In such an hour, the cry of the departed one was illumined as by the awful torch of Truth. For there is terror for the human soul in that great glory; it blinds as with tempest and pain.

"Oh! my wasted life." Yet he had worked, striven, done, apparently, all. But the high soul knew well indeed that all had not been done; the conscience-stricken mind confessed its failure.

I wish, my comrades, that we could live our lives, as it were, upon the slopes of death, trying their issues by the light of the new dawn of consciousness. Think you we should not find, by that test, that these lives are full of small issues, tortuous, involved, guided by the opinions of the mass and the needs — not so much of our own bodies and minds, but of those of a complex civilization? The unseen currents pour upon us, through us; the pictures and suggestions thrown upon us by them, as upon a screen, are mistaken for "our own" thoughts and wishes. These are the traps of nature to detain us, as matter attracts and detains spirit. Can we not wish and think what we *will*, from our own centres, in accordance with the impulse of our higher mind? Is it not our first duty to do this; our duty to mankind and to ourselves; to the

Law above all? What avails it, think you, to creation or to ourselves, if we allow so-called consideration for others to imbed us more deeply in the material life? Is it not for the higher good of all that we should remain apart from it, even while in it? Apart in thought, in heart. To yield to another is sometimes to assist that other in encumbering his higher soul and our own with details the mind should outgrow, but to which, lacking strength, it still clings. It clings for fear of loss, forgetting that it cannot lose its own. Could we not simplify, think you, if we saw death drawing near, a sheaf of wasted years in his hands? In the death moment, when those years flash across the abnormally quickened brain; when the evolutionary purpose stands clearly forth; when the life result is tested by that purpose and we see that the intent and impulse of the reincarnating ego have been crushed under innumerable petty details of a life foreign, for the most part, to the *real needs* of souls, how is it with us then? A dread accountant appears, the scales of justice in his hands, a look of alienated majesty on his brow. It is the Master, the Higher Self, denied, outraged, to whom we cry: "I have sinned before heaven and against thee, and am no more worthy to be called thy son."

What, then, is this evolutionary purpose? Listen! *We are the Sons of God*. May we reverently consider the Deity.

There are things too mysterious, too awful for expression. Therefore when speech is attempted, others say, "But I know that." They do not know it, for to know it is to be and do it. Therefore they only know some minor differentiation, which they still neglect.

Consider with me the One Life. "The One Ray multiplies the smaller rays. Life precedes form, and life survives the last atom of form. Through the countless rays proceeds the Life-Ray, the One, like a thread through many jewels." This Ray is the Mystery. It is a

conscious Flame. It vibrates in the Dark Centre; it arises; it flashes forth; it is the Knower; it swallows up the merely human consciousness and sets itself on high, the Crest jewel of Wisdom.

There is only one way of study. It is this. We must permit that Power to set the lower mind aside. It is ready, every hour of our lives, to declare the evolutionary purpose, the next step; our part is to listen. How then shall we listen and how attract the voice of the Power?

The first step is Resignation. That we know. It is the instant, unceasing acceptance of all results, as fruits of the Law. The next step is Devotion. It evolves causes of a nature sufficiently selfless and pure to ensure higher results. They are higher, insomuch as they make nearer approach to the universal. This Devotion is the interior preparation of a ground in which the spirit can freely act. By it we hold the mind in concentration upon the Supreme. We encourage it to remain there. Surface waves come and go, but the deep inner attitude invites the Power. Even in the outward it acts, as such thought directs the attractive and assimilative processes of bodies and organs. The myriad atoms, each a life, which we absorb every instant, are for or against the evolutionary purpose as our thought is with it or withdrawn from it.

A formula cannot be given, but we can make an approach to one. Krishna said: "With all thy heart place all thy works on me; prefer me to all things else; depend upon the use of thy understanding and think constantly of me; for by doing so thou shalt, by my divine favor, surmount every difficulty which surroundeth thee." Even in the tumult of our lives this can be done. We must treat our bodies and minds as weak places to be strengthened and upheld. Therefore religious observance is useful. Begin the day with an instant of devotion, and end it so. Standing, with reverential attitude of body and mind, repeat aloud some verse of

the scriptures, the mind fixed on the Higher Self, or on the One Life, the aggregate of these selves. Such texts have a life of their own; their spoken word will quicken ours. "The ever unknowable and incognizable *Karana* alone, the *Causeless* Cause of all causes, should have its shrine and altar on the holy and ever untrodden ground of our heart — invisible, intangible, un-mentioned, save through 'the still small voice' of our spiritual consciousness. Those who worship before it ought to do so in the silence and sanctified solitude of their Souls, making their spirit the sole mediator between them and the Universal Spirit".. (1) It is useless to say that we must take others with us. "The soul goes alone to The Alone." Having thus set the vibrations for the day, let the student consider the One Life in all life. Let him study every event, referring all to the action of the currents of that Life, and not to the centres through which it speaks. Men are but ganglionic centres, repeating the nerve-auric impulse and passing it along. That is to say, they are this for the most part: there are souls who have achieved their higher being. The student should form the habit of observing the Life waves, the manifestations of Life, as one. Consider the action of the Life principle in all things. In food, in air, light, sound, persons, events, the human heart; let him refer all things back to it, back to the plane of force, and try to sense them on that plane, to see Krishna in all. This service is no sinecure. But the Lord will repay. Strange lessons will be learned. Life will be seen as made up, not of persons and events, but of manifesting currents, some of which may be rejected and some accepted at the bidding of the inner voice. It alone should command, and not probabilities, eventualities, or temporizing. He who asks, of every crisis, but the simple question, "What is my duty?", and does that regardless of events, to that man the gods appear. He will often find that we do many things because the Life impulse is checked by some counter current of sympathetic attraction, which, by contrary vibration in specific centres, blocks

its way. Then the general current urges the accomplishment of the thought or action, in which accomplishment the counter current finds equilibrium, is neutralized, and the main current is re-established. This is the impulse of Nature. If we recognize the counter attractions as Karmic illusion, and do not pour our mind into their moulds, the attractions disappear because we have fallen back upon the higher one, the Universal Life, whose flow in us we have increased until it sweeps all obstacles away.

Thinking thus always of the One Life in the outer circumstances of our days, there is still another thing we can do. The Deity is always manifesting in us, as everywhere. It impels us by means of impulses springing deep within us and registered upon the consciousness; registered further upon the brain in the proportion in which that brain is prepared to receive it. This preparation consists in keeping the thought turned expectantly toward The One. We need to keep watch for its commands; to learn to distinguish these from lower impulses, suggestions from without, so to say. Above all, we need to obey them. Increase and continuance come from use. While we fulfill the real duties of external life (which are fewer than we think), this interior watch can be kept up. We can be observant of all the impulses arising in us. Who has surprised the swift Will upon its hidden throne, or Motion, the power behind the throne? Only the man who has waited upon the gods. We are here for the purposes of soul.

At first we shall make mistakes in action, but soon an uneasy, subtle undercurrent of warning or dissatisfaction will accompany action which has not been suggested by the true Source. In practical occultism, regular chelas of a group set down all the events of each day; these are compared, and a guiding current is soon seen. Soon they distinguish this from every other *by its tendency*; in the unencumbered field it manifests in glory and power. This course must be followed by him who desires to avoid

the death cry of a wasted life. He must also give a fixed time daily, were it but five minutes, to the consideration of The One. He must hold this ground sacred against every invasion. If he be so fortunate as to know the face of a Master, let him bring that before him as an embodiment of the Deity, trying to see it clearly before him in every free moment. "If it be a real Master, he will send his voice. If not, it will be the higher self that will speak." This subconsciousness, this undercurrent of fixed attention, of revolution around the One Life, can be cultivated and enlarges our orbit.

The true student will not speak of the Unknown One. He will be devotional in attitude and in manner when studying high themes. Such habits train the body and free the mind. The place of study should be as simple as possible, and due regard should be had to the making or breaking of currents, for these are *the messengers of the gods*. At such times all externalities should be firmly set aside, and a place cleared in life for the use of the Deity, nor should others be permitted to overrun this place, whether in opposition or in love. Example is our highest duty. We must point out the Star of the Law. If we allow the pain of another — pain unrighteous — to draw us from our duty to that other and to all, we have in so far helped him along the path of future despair. True Love is Wisdom. Is not my best goal that of my comrade also? Then I am not to linger in delights of self with him, but to draw him up to the light. Will he not come? Then I must go on and do my duty. His pain is resistance to Law,

It is a sad truth that the love of friends and associates often binds them and ourselves. A true lover of humanity says to the Beloved: "The Soul is free. Be free, Beloved! Wait upon the inner impulse; follow it alone. If thou art mine, I cannot lose thee. Spiritual gravitation makes for us. If not mine, I relinquish thee to thine own ray. Even so, thou art mine, as all are myself and thee in the

One. I question not thine impulse, thine act. Come; go; do; abstain. The same law is mine." Rich rewards, revelations unguessed await him who loves thus. It is the only right Love. For if I tell another he is free to do as he will, and yet question the wisdom of his impulse or display my pain, is the liberty real? Not so. If I feel pain, it is my service to conquer that ignorance. If he errs, then he learns that lesson. Oh! for a wider trust in the Law. Then the Deity would speak. The life would not be overlaid with material shapes and forms of fear. It congests in these moulds. Obeyed every hour, the evolutionary law would manifest. Alas, my comrades! These friends cling to old observance and diurnal habit because in them they know us; they take these to be our established character, the guarantee of our love, and fear to lose us by losing these. And we do the same thing.

I make a great call for Freedom. I raise this standard reverently. Not license attracts me, but Freedom under Law. Freedom to clear a spot where we may listen, hear, obey. That spot Arjuna was told to sit upon because it was his own. Freedom to lop off the excrescences of life; errors of action, errors of thought. Freedom to speak the real mental fact now present to us, without encountering the wounds of affectional habit. Freedom to accept facts as they are, without personal tincture or emotion, so that we may study their meaning with our comrades, accomplishing thus a higher bond, with hearts that accept the freedom of soul. If any others are pained by the Soul's obedience to the laws of her Being, it is our slavery and not our souls they love. Each should see and desire to unveil the higher nature of the other, that God may become manifest in him. The Power only manifests in the free. A soul denied essential freedom, in escaping at death, appeals to the great ones to witness its wrongs, and the Lipika record the penalties of the Law. Mistakes made through "Love" (too often mere attraction or synchronous vibration on one or several

planes, without root in the highest bond) do not save us from Karmic retribution. True Love is Cohesion. The One Ray is known also as Eros, because it expands freely to all; freely expands, freely obeys the impulse given by the Eternal. No Love is worthy of the name which is not a sub-ray or copy of That, and "perfect Love casteth out fear." No life so environed that it cannot prepare for the Power. We say we desire the Light and the Path, but we do not use the keys given us, while yet we ask for more, for other ways. There is only one way, and it will be harder to take in each successive life after man has been offered the keys and refrains from using them. We can never break away from the Material, to turn upward, without a shock. It will never be easier than it now is, to cut our way through. Thus in the death-watches spoke a voice to me. The eloquence of wasted lives cries aloud to all the nights of Time. It has cost others blood and tears to learn these things. May you learn at less cost. May the One Ray shine upon us. May we know our whole Duty. AUM.

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 67 to p. 128, Vol. I.)

MATTER DURING PRALAYA. It is in a state of great tenuity seen only by Bodhisatvas. When evolution begins again it appears like curds in space. *V. I, p. 69.*

ELECTRICITY AN ENTITY. *V. I, p. 76, line 6;* it is an emanation from an entity of power, p. 111 in note; and is coexistent with the one life, *p. 81:* it is primordial matter of a special nature, *p. 82.*

PULSATION OF THE HEART AND THE TIDES. Probably due to the universal expanding and contracting of the atoms, which in turn are caused by the expansion and contraction of matter of space. *V. I, p. 84.* "There is heat internal and heat external in every atom" *id.*

TWO SORTS OF FIRE OR HEAT. One in the central Sun and the other in the manifested universe and solar system. *V. I, p. 84, 87.*

MAGICAL POTENCY OF WORDS is in the vowel sounds and not in the numbers. *94, V. I.*

THE TERM "HUMAN" is not to be Confined to this Globe. It must be applied to all entities who have reached the fourth stage of development on any planet in space in its fourth round in any chain of planets. *V. I, p. 106, 2nd para.*

BUDDHI AS COMPARED WITH SPIRIT is material, although for us and the highest conceptions we can form it is wholly beyond materiality. *V. I, p. 119, line 7.*

THE HUMAN MONAD is the union of the ray from the absolute with the soul. *V. I, p. 119, para 1.*

SYMBOLISM AND NUMBERS. They are intimately connected with the

hosts of the Dhyān-Chohans. The basic numbers refer each to distinct groups of ideas which vary according to the group of Dhyān Chohans referred to. In other places the author says that, as the Dhyāni are connected with evolution in all its intricacies and mysteries, it follows that symbolism is of the highest importance. *V. I, p.119, (b).*

THE ONE FUNDAMENTAL LAW OF OCCULT SCIENCE is the radical unity of the ultimate essence of each constituent part of compounds in nature from star to atom and from the highest Dhyān Chohan to the smallest infusoria. And this is to be applied spiritually, intellectually, and physically. *V. I, p. 120, last para.*

KARMA NEEDS MATERIAL AGENCIES to carry out its decrees. *V. I, p. 123, line 2.* The material agents spoken of here are not merely those that we class as such, but many others which are generally conceived of by us as spiritual. For, as said above, even Buddhi is material when compared with Atman of which it is the vehicle. The clue here given is in regard to the operations of Karma through the atoms that are used by the egos in their various incarnations. But in following this out it must not be forgotten that there is no particle or point of materiality which is not at the same time mixed with or in company with another particle — if the word may be used for this purpose — of spirit or the one life.

THE THREE GROUPS OF BUILDERS. These are as follows: The first is the group which constructs the entire system as a whole and which includes more than this globe system; the second is the group of builders who come in when the system as a great whole is ready and form the planetary chain of this earth; and the third is that group which builds or projects Humanity, as they are the great type of the microcosm — man. *V. I, p. 128, second para.*

THE LIPIKA AS COMPARED WITH THE BUILDERS are the great Spirits of the universe as a whole, the builders being of a special nature. The

Lipika, like the others, are divided into three groups, but it is asserted that only the lowest of these three groups has to do with this system of ours and that the other two cannot be known, and also that those two are so high that it is doubtful if even the highest of the Adepts know about them. It may therefore be supposed that for the Adepts the Lipika of the higher degrees are as great a mystery as the Mahatmas are for us, and that this ascending scale of greatness ever gives to the soul something still higher, no matter how far it may progress, to which to look and aspire. V. I, see whole of page 128.

But as each of the three groups is divided into seven others (*p. 127*), it may be the 21st sub-group which has to do with this globe; and it is said that as to the highest of the groups it is directly connected with our karma. *V. I, p. 128, last line*. Now as Karma rules the entire universe, it must follow, in order to make and keep harmony, that the "highest grade of Lipika" referred to on page 128 is not the highest of the last series of 21 sub-groups, but the highest of the whole three great groups.

Note Well. Whenever an "entity" is spoken of among the various, "hosts" it is to be known as composed of many entities, just as man himself is similarly constituted, his total consciousness being that of the whole mass of beings who go to make up his intricate life.

The Path

PLUCK AND PATIENCE — *Katharine Hillard*

The famous English artist, Leslie, once painted upon his easel as a motto, "Pluck and Patience". Pluck is but a familiar name for courage, yet it seems, like most familiar names, to bring the quality down from its heroic heights to the level of every-day life, and that is where we need it. For courage is not only to be thought of as comprising physical and moral courage, but also as being divided into active and passive courage, and the latter borders so closely upon patience that the English artist's motto seems upon reflection, almost tautological. Active courage takes the initiative, rushes into the fight, leaps into the gulf, executes some brilliant feat, some deed of heroism, is like a leaping flame, one splendid flash and then — darkness. Passive courage is the quality of endurance, that stands quiet and suffers unmoved, like the rock buffeted by many waves, but unshaken by all the tempests. In the words of Dante, it

"Stands like a tower firm, that never bows
Its head, for all the blowing of the winds."

Active courage, to be true courage, must be distinguished from hardihood or recklessness. Real courage will ever go hand in hand with reason, not in defiance of it. That action which is of no advantage to any man, being done, but a simple flinging of the gauntlet in the face of death, is no act of courage, but of foolish hardihood. Sir Philip Sidney, who was one of the bravest of the brave, once said that "courage ought to be guided by skill, and skill armed by courage. Neither should hardiness darken wit, nor wit cool hardiness. Be valiant as men despising death, but confident as unwonted to be overcome." It is this confidence that is the secret of success; we are never afraid to do what we know

we can do well. But let a man once admit the traitor Doubt within the citadel, and the gates are soon flung open to the foe and the city surrendered. True courage is ever sure of itself, not from overweening vanity, but from a reasonable confidence that a brave heart, strong in the right, *must* win the field. The first step to victory is the conviction that it belongs to us, because we are on the side of right and truth. The head must second the heart, judgment must confirm impulse, and then we are full-armed for any battle. When Paul wrote to the Thessalonians and called them "the children of day and of the light", he exhorted them to put on the breastplate of faith and love, and to take for a helmet the hope of salvation. Was it an intentional distinction that when he wrote to the Ephesians they were told to put on the whole armor of God, that, having overcome all, they should *stand*? "Stand, therefore," which surely indicates *passive* courage, or endurance, "having your loins girt about with truth, and having on the breastplate of righteousness" (which is equivalent to right-thought, right-speech, and right-action), "and having your feet shod with the preparation of the gospel of peace" (which surely means love to man), "and, above all, the shield of faith, the helmet of salvation, and the sword of the Spirit," or faith, hope, and the Divine word, to complete the heavenly panoply. Possibly Paul intended to imply that to resist, the soul needed more preparation than to attack. It is far easier to nerve the energies to one swift onslaught in some moment of trial, than to stand firm beneath the pin-pricks of successive tiny arrows. The crudest torture known is the Chinese punishment that lets water fall drop by drop upon the culprit's head. It is passive courage, the faculty of endurance, for which women are especially noted, as it is the form that they are especially required to exert. The faculty of resisting persistent pain without a murmur, of continuing the same wearisome tasks from day to day cheerfully and uncomplainingly, of ministering from hour to hour to the needs of others without a thought of self,

this is what many of our sisters are doing all the time, and we call it patience, but it seems to me that we should call it courage, and of the noblest kind. To take up, day after day, the same task, one that never can be accomplished and ever remains to be done, is an heroic achievement, not merely an effort of patience. In the *Voice of the Silence* patience is the key to the third of the seven portals, but it is explained to be the gate of *fortitude* that that key unlocks; then comes: "indifference to pain and pleasure", and then "the dauntless energy that fights its way to the supernal truth".

"Beware of trembling," says the *Voice*. " 'Neath the breath of fear the key of *patience* rusty grows: the rusty key refuseth to unlock. — The more one dares, the more he shall obtain. — Fear, O disciple, kills the will and stays all action. — If thou hast tried and failed, O dauntless fighter, yet lose not courage; fight on and to the charge return again, and yet again. — Remember, thou that fightest for man's liberation, each failure is success, and each sincere attempt wins its reward in time."

Perhaps, then, we may define pluck or courage as that which inspires us to act, and patience as that which helps us to repeat the action, even if apparently a failure. And it is here that reason comes to the help of courage, for the wise man will study the causes of that failure that he may avoid them in his next attempt. Then there is ever one obstacle the less in the way of his progress.

There is another phase of patience, that sweet unruffled serenity which nothing can disturb. One of the most beautiful passages of the old English drama is Dekker's description of it:

"Patience! why, 'tis the soul of peace:
Of all the virtues, 'tis nearest kin to heaven;
It makes men look like gods. — The best of men
That e'er wore earth about him was a sufferer,

A soft, meek, patient, humble, tranquil spirit;
The first true gentleman that ever breathed."

However one may dilate upon the subject, when we have said "Pluck and Patience," we have summed up in two words the manner of our duty in life, and the lesson is for every day as well as for those heroic moments that come but occasionally. We have but to remember that every mountain-road, however steep and arduous, is climbed step by step, that every year, however long and tedious, is made up of successive minutes, and that they come to us one by one, however we may loiter or hasten. So thinking, we shall find that courage and patience are two strong-winged angels to bear up the fainting spirit in its progress through life: courage to strengthen it to light and to endure, patience to keep its serenity as undisturbed as "a lamp well guarded in a spot free from all wind".

The Path

LOSS OF THE SOUL: I — *Harij*

"The *Karana Sarira* may become so contaminated and so unfit to reflect the light of the Logos as to render any further individual existence impossible; and then the result is annihilation, which is simply the most terrible fate that can befall a human being." — *Notes on the Bhagavat Gita* by T. Subba Row.

The Secret Doctrine, Ancient Philosophy, and the Christian Scriptures all advance the idea of the possible destruction of the human soul as the penalty for certain transgressions. This is indeed a very old doctrine. In the Christian Scriptures it is referred to as "the sin against the Holy Ghost", "the unpardonable sin"; and devout and bigoted Christians have been driven to insanity by the belief that they had committed this "unpardonable sin". While it is far from the present purpose to revive such a degrading superstition on the one hand, on the other hand there is a law of retribution following perversions of the human will, altogether obscured and rendered of no account by the conflicting wrangles of the Christian theology. That one should go insane in seeking to reconcile freedom of the will with predestination and the idea of the sin against the Holy Ghost creates very little surprise today; but as the result is to obscure the principle of Eternal Justice as applicable to human conduct and the results of human action, and, as a further result, many individuals seem unconsciously embarking on the journey that must inevitably lead to destruction unless arrested, the real philosophy and rationality of the subject need pointing out.

If a swift and sure destruction could be predicated of the voyagers on this Stygean sea, if painless death were immediate

annihilation, further comment would be unnecessary, for that would indeed be an easy way of balancing accounts. But Karma as the Law of Retributive justice provides otherwise. The road through selfishness, cruelty, vice, and crime is long before one reaches the dividing line and plunges down the steep descent. Step by step "the Spirit" — the Higher Self — strives with man, and when at last he has "sinned away the day of grace" and his conscience has ceased to struggle against his animal self, a prey to Karma-Nemesis, every evil thought and deed returning to him who sent it out, the demons of his own creation seize upon his soul and slowly devour him. Man rises or falls by his own act. This is often stated, but seldom logically applied. Karma is the necessary and invariable condition of individual existence. Individual conscious existence without action is inconceivable. This action tends always in one of two directions. It is either consonant with the Creative Will and Intelligence of Nature, or it runs counter to Nature and is personal and selfish. The evil and selfish will of man creating a world of his own begetting, becomes himself the center of that world, Thus "good Karma" runs along nature's lines and is beneficent, while evil Karma is a debt due unto nature for which she exacts the last farthing by the necessary conditions of the law of action. The selfish and vicious are therefore at war with nature because they build to themselves, looking to results, while the unselfish, seeking no reward, but doing the good and following the right *because it is right*, presently destroy Karma altogether by at-one-ment with nature.

"* * * Differentiated conscious existence is evolved out of the one current of life which sets the evolutionary machine in motion." * * *
* this very current of life gradually gives rise to individual organisms as it proceeds on its mission. Furthermore it begins to manifest what we call conscious life, and, when we come to man,

we find that his conscious individuality is clearly and completely defined by the operation of this force. In producing this result, several subsidiary forces which are generated by the peculiar conditions of time, space, and environment cooperate with this one life. What is generally called *Karana Sarira* is but the natural product of the action of these very forces that have operated to bring about this result. When once the plane of consciousness is reached in the path of progress that includes the voluntary actions of man, it will be seen that those voluntary actions not only preserve the individuality of the *Karana Sarira*, but render it more and more definite, as, birth after birth, further progress is attained, and thus keep up the continued existence of the *Jiva* as an individual monad." — Notes by T. Subba Row, p. 26-7.

"* * It is only through a vehicle (*Upadhi*) of matter that consciousness wells up in us as '*I am I*', a physical basis being necessary to focus a ray of the Universal Mind at a certain stage of complexity." — S. D.

Now these *Upadhis*, or vehicles in which the one life focalizes and consciousness wells up, may be in one case the physical body, in another the astral body, and again it may be the *Karana Sarira*. It is in the last named that the higher individuality of man exists. To illustrate these *Upadhis* and their relations to the *Logos* and to each other, Mr. Subba Row makes use of the following. "Suppose, for instance, we compare the *Logos* itself to the sun; suppose I take a clear mirror in my hand, catch a reflection of the sun, make the rays reflect from the surface of the mirror — say upon a polished metallic plate — and make the rays which are reflected in their turn from the plate fall upon a wall. Now we have three images, one being clearer than the other, and one being more resplendent than the other. I can compare the clear mirror to *Karana Sarira*; the metallic plate to the astral body; and the wall to the physical body." (*Ibid.*)

It must be remembered that it is the Light of the Logos that shines upon the clear mirror. The Logos itself is unmanifested. We see not the Logos, but its manifested light. Furthermore, it is the same light that is manifested or reflected from the mirror, from the metallic plate, and from the wall. The increasing dullness or feebleness of the light is due solely to the character of the reflecting surface, and not to any change in the light itself.

Applying this illustration to the complex and composite nature of man we find it has exceeding force. But first we must get a starting point in the nature of man, some point within the range of universal experience in order to make our subject practical and apprehensible. This basis is very clearly given in the quotation from the *Secret Doctrine* already made. Consciousness is the basis of all personality, and of all individual life. It is the continuity of consciousness in some form that constitutes the thread of existence running through all personalities. Whenever the *Upadhi* (Vehicle of matter) which directly receives the light of the Logos or divine ray, viz. the *Karana Sarira*, has reached the plane of self-consciousness — "I am I" — it has then started on the line of evolution from which there is no escape, and all subsequent experience along the evolutionary chain involves personal responsibility. The light of the Logos "welling up in us" having evoked individual self-consciousness, must eventually emerge again in its original source, bearing with it the self-consciousness of its immediate vehicle, the higher ego, or it must finally separate from the vehicle and return alone. Contaminated and degraded it can never be. No principle of Atavism can ever apply to it. Just here lies the great fallacy of the doctrine of Metempsychosis. The light of the Logos never evokes self-consciousness below the human plane, and having evoked it on that plane it can never be carried lower, or dragged down to the animal plane.

Whenever man descends to the animal plane and loses his human birthright, he does so at the sacrifice of his higher ego, or the *vehicle* of self-consciousness. This descent is never a matter of accident or misfortune, but of *conscious will*. Nature is patient and beneficent. The journey is long and painful in either direction, because it concerns the progressive evolution of full and complete self-consciousness through the whole range of human experience, culminating in at-one-ment of individual consciousness with universal divine consciousness. This is the meaning of human life and the responsibility of self-consciousness, and never until man has stifled the voice of the Higher Self, the divinity within him, by his own deliberate acts can he encounter this "second death", or "sin against the Holy Ghost".

How, it may be asked, can man retain consciousness and suffer throughout his long descent, if he has alienated the vehicle of consciousness, the *Karana Sarira*? The *Karana Sarira* being the immediate vehicle of the light of the Logos, consciousness is reflected from one vehicle to another, as shown in the illustration of the mirror, till it reaches even the physical body and manifests in its lowest form as physical sensation through the "body of desire" (*Kama rupa*). The consciousness in these lower vehicles has never any permanency of its own, and is only renewed and retained by continual renewal from the primary vehicle. When, therefore, that becomes alienated and finally separated, it can no longer be renewed.

It may now be seen that the word "Soul", as ordinarily used, has a vague and very indefinite meaning, and it would be well that it should become entirely obsolete. Western people are, however, so unfamiliar with the philosophy lying back of all the world's great religions, not excepting the Christian religion, that the word

"soul" is likely still to be retained, together with all its confusion and obscurity.

To all students of Eastern Metaphysics, and certainly this must include at least all members of the T. S., this term *Karana Sarira*, the vehicle that directly receives the light of the Logos, and in and through which self-consciousness "wells up in us", becomes a matter of great interest. Bearing in mind the seven-fold division of the composite human being, as given in the *Key to Theosophy* and the *Secret Doctrine*, it may be said that the Logos proper (unmanifested) corresponds to *Atman*. The *light* of the Logos — its immediate vehicle — corresponds with *Buddhi*: while those endowed with self-consciousness in man at the dawn of his evolution receive the endowment of *Manas*. The "Higher Self" would be the Atman-Buddhi. The Higher Ego, Atma-Buddhi-Manas. Here the use of the terms "Self" and "Ego" has led to confusion in the minds of students, though this is unnecessary if they will carefully consider the bearings and relations of consciousness and its vehicle. *Karana Sarrra*, then, is a generic term, meaning vehicle of the immediate light of the Logos, or Atman; generic, because it may be either separated from or conducted with manas, its next vehicle, and thus be the basis of self-consciousness in man. Atman as related to man corresponds with Parabrahm as related to Cosmos; Buddhi as related to man corresponds to Mulaprakrita as related to Parabrahm, its "veil", from which matter and force endowed with intelligence, Akas-Fohat-Mahat, emanate.

It may thus be seen that a substantial basis lies back of every manifestation in nature, and that what we term matter and force on every plane of nature are inseparable from intelligence, thus giving the *raison d'etre* of Law. In all manifestations of life it is the light of the Logos welling up in and manifesting through its vehicle or *Upadhi*, that constitutes the main-spring or fountain of

life.

On every plane of nature where life takes form and consciousness manifests, such manifestation occurs through a vehicle. In man these vehicles are several because his life is not confined to a single plane. These vehicles are related in concrete degrees, and while the physical body is the lowest vehicle, the life force manifesting in each interpenetrates all. The more compact or the grosser the physical body through its appetites and passions, the weaker the life current in all the other vehicles. In other words, the more man lives on the animal plane, the less he manifests the human and the divine. These are self-evident propositions, axiomatic, drawn from common experience in every-day life.

The germ of self-consciousness residing in the Higher Ego progressively expands and unfolds with the varied experience of life. This germ furnishes the light of reason and the guiding principle of conscience. Each successive embodiment in matter furnishes its fund of experience, and thus progressively unfolds Manas. Manas is thus the adjustment of experience to the laws and processes of Eternal Nature, the incomplete and imperfect personal Kingdom of man. The basis of consciousness in man is *Mahat* — cosmic intelligence — "welling up in man" through its immediate vehicle, *Karana Sarira*. The expansion and range of unfolding of consciousness in man occurs through Manas, the *active* aspect of consciousness; while its passive aspect is conscience, the "*Voice*" of the higher self. Most persons get confused in regard to *memory*, the *steps of man's progress*, the details of his varied experience; and these can never be fully retained even for a single day except as a precipitate or general result of experience. In this regard nothing is ever lost, or lived in vain. We may now deduce some idea of the "Soul", or what is meant by the immortal part of man, and its permanent possession by the individual or its final loss. The problem turns on the point

of *consciousness*, and its expansion through experience. The battle ground is the central factor in man's composite life, viz. Manas: and by the Higher and the Lower Manas is meant the *direction* in which man's experience tends under guidance of his will. He may crown his life experience by leading it up through the higher manas till he anchors it in its immortal vehicle, *Karana Sarira*, and thus merge his life in the Higher Self; or he may lead it downward, toward the animal plane, till at a certain point he cuts the slender thread and thus alienates his Higher Self, when his lower "vehicles", drawn originally from the physical and animal planes, gradually descend, consciousness slowly fading out, till at last his being dissolves. This is the "second death". 'Tis not the *fact* of annihilation, but its horrible details, its blank despair, its terrible retribution, that appall us: the Karmic details of Eternal Justice, the opportunity and the rewards or penalties of Human Self-consciousness. No one need fear being tripped unconsciously into this "eighth Sphere" this hopeless doom. Neither is it to be incurred from impossible intellectual belief of irrational dogmas. It is as far removed from priestly anathema as is any Higher Self from an anathematizing priest. It is the penalty for all uncleanness; for wilful sacrifice of all other interests to the animal self; and finally, to the love of evil *for its own sake*. Many pitiable degraded human beings are on their way to it, and yet not beyond hope. Hypnotism, Necromancy, and other forms of "black magic" lead directly towards it. One may be unconscious that such practices are black magic, but no one can be unconscious of their own utter disregard of the rights and the best interests of others, and when they consciously and deliberately disregard these and seek an imagined good for themselves regardless of the pain and degradation of others, they should be reminded that sure destruction lies that way, by a law that has no variableness or shadow of turning, a law that never forgets and never forgives till the last jot and tittle be fulfilled.

The materialism of the age tends in this direction, with its vivisection and hypnotism, with its selfish haste to get rich, and its disregard of the great hungering, toiling, suffering mass of humanity. And it is not the toiling millions that tend toward destruction, but the selfish, favored, greedy few, whose broader intelligence and larger opportunities serve only to increase the unhappiness of others now, and make sure their own destruction hereafter. Step by step in future incarnations must these retrace their way: measure for measure will it be meted to them again, Dante's *Inferno*, and Margrave and Mr. Hyde are no idle dreams of depraved imaginations, but tragedies of self-destruction, being enacted all around us by the intrinsic selfishness of man. The sacrifice of all to self leads inevitably to self destruction.

(To be continued.)

The Path

REWAD FOR UNMERITED SUFFERING — *A Student*

KARMA AS JUDGE, GUIDE, AND REWARDER.

In the *Key to Theosophy*, on page 161, the author uses a phrase which has been objected to on the ground that a strict construction of it overthrows the whole doctrine of Karma. The words referred to and the contiguous sentence are:

"Our philosophy teaches that Karmic punishment reaches the Ego only in its next incarnation. After death it *receives only the reward for the unmerited sufferings endured during its past incarnation.*"

The italicised portion is the part objected to, and the objection raised is that, if all that happens to us so happens because it is our Karma, then it cannot be *unmerited*: hence, either the statement is incorrect or Karma is not the law of justice, but there must be some other one governing man and the vicissitudes of his life.

Let us go further down the same page and see if some sentences in the same paragraph do not bear upon the meaning of the author. She says: "If it may be said that there is not a mental or physical suffering in the life of a mortal which is not the direct fruit and consequence of some sin in a previous existence; on the other hand, since he does not preserve the slightest recollection of it in his actual life and feels himself not deserving of such punishment, and therefore *thinks* he suffers for no guilt of his own, this alone is sufficient to entitle the human soul to the fullest consolation, rest, and bliss in his *post-mortem* existence. Death comes to our spiritual selves ever as a deliverer and friend."

All students of theosophy known to me believe that Karma is the great governing law, that all suffering and reward come from and through Karma; and, as I understand from the published and

unpublished views of H. P. Blavatsky, she holds the same opinion. Therefore, such being the case, what we have to enquire into is the meaning intended to be conveyed by the passages cited. There is no doubt whatever that the author of the *Key* agrees, except perhaps about hell, with the Buddhist priest who, writing several years ago in the *Theosophist* (1) upon this subject, said:

"In this light Karma may be defined as * * that irresistible force which drags the criminal into the hell fire amidst his loud lamentations, the powerful hand that rescues the wretch from the merciless hands of the infernal angels and takes him to a happier place for the amelioration of his miserable condition, or the heavenly angel *who bears away, as it were, the enraptured soul to the blissful abodes above* and takes it back after a very long course of heavenly enjoyments to this world, or to hell itself, paying little or no attention to the sorrowful tales of the reluctant soul."

Construing together the sentences in the paragraph from the *Key to Theosophy*, we find that she says, in effect, in the later sentences on the same page, that all suffering is the direct fruit and consequence of some sin committed in a previous existence, but that as the *personality* in the life when the suffering comes has no recollection of the cause which brought it about, the punishment is *felt* by that personality to be undeserved, and another cause is thus set up which has its action in the *post mortem* condition. The difficulty raised by the objection put is that the whole matter has been made objective, and Karma has been looked upon as a material or objective law, and the *post mortem* state placed in the same category. The true Ego neither suffers nor enjoys, and is not bound at any time by Karma; but as *Devachan* is a subjective condition in which the Ego therein creates for itself out of its own thoughts the surroundings fit for

it, so we may say, without at all interfering with our conceptions of Karma, that after death this Ego receives the reward for the sufferings which *thought* were unmerited in the life just quitted. The word "unmerited" as written in *The Key* is not to be construed as being used by any Karmic power, but as the conception formed by the Ego during life of the propriety or impropriety of whatever suffering may have been then endured.

For, as we have seen in other studies, Devachan — the *post mortem* state under consideration — is a condition wherein no objective experiences are undergone by the Ego, but in which the thoughts of a certain sort had during life act in producing about it, or rather within its sphere, the blissful subjective experiences necessary for the resting of the soul. Hence if when in the mortal frame it considered itself unjustly treated by fate or nature, it set up then and there the causes for bringing about a so-called reward for the suffering which to it seemed unmerited, just so soon as it would be released from the body and the causes be able to act in the only place or state which will permit their action.

This blissful state, as intimated in the quotation made from the *Theosophist*, is Karmic reward in the plane of Devachan. The "Karmic punishment" referred to in the *Key* is not the opposite of this, but is the opposite of Karmic reward acting on the plane of objective earth life. For the opposite of devachanic reward or bliss must be on a similar plane, such as the "hell" spoken of by the Buddhist priest, or Avitchi. If these distinctions are clearly borne in mind, there cannot be much difficulty with any of these questions.

To me Karma is not only judge, it is also friend and deliverer. It is essentially just. The conditions are laid down. If I comply, the result inevitably follows. It is my friend because it will, just as inevitably as life and death, give me a rest in devachan where the

tired soul which needs recuperation as well as the body will find what is best for it. And a mere phrase like "unmerited suffering" invented by me in my ignorance here upon earth will be one of the factors used by this very Karma to bring about my peace and joy, albeit that still again inexorable Karma awaits me at the threshold of Devachan to mete out in my next appearance upon this terrestrial stage my just deserts. And thus on and ever on and upward we shall be led from life to life and stage to stage, until at last the conviction has become an inherent portion of our being that Karma is not only just but merciful.

STUDIES IN THE UPANISHADS — F. T. S.

These notes are not technical studies of forms of speech, but simply attempts to discover the true meaning underlying the words of the Upanishads. These ancient works are full of food for reflection; they should be studied with a view of finding the inner meaning, and without being influenced by the fact that they are cast in a form which is strange to us. This caution is especially needful in the case of Hindu books, because the Indian is fond of expressing himself in a form totally different from that of his Western brother.

In 1886 I made a few references in these pages to the *Mundaka Upanishad*, which is often known as the one which shaves off error so that the truth may shine or be apparent, and shall now proceed a little further in the same direction. This Upanishad is divided into chapters or sections which are called "mundakas" and "khandas," the last being the smaller divisions included in the former: a "khanda" would therefore be something like our "section".

Thus we have:

FIRST MUNDAKA, SECOND KHANDA.

1. This is the truth: the sacrificial works which they saw in the hymns of the Veda have been performed in many ways in the Treta age. Practise them diligently, ye lovers of truth; this is your path that leads to the world of good works."

From the first verse to the end of the sixth there are statements and descriptions relating to the flames from the sacrifice and about the effects of good works, ending with these words:

"This is thy holy Brahma world — swarga — gained by thy good works."

All of these mean to inculcate that *swarga* or heaven will be gained by good works, which are here also called sacrifices or the attentive following of the Brahmanical law. Both in the fifth and sixth verses heaven or devachan is referred to, in the one as the place "where the one lord of the devas dwells", and in the other as "swarga". Indra is "the one lord of the devas", and his place, known as "Indra loka", is devachan or the land of the gods.

Indra's heaven is not eternal. The only loka admitted by the Hindu sacred books to be nondestructible is "Goloka" or the place of Krishna. Those who go to devachan have to emerge from that state when the energies that took them there are exhausted. In the Bhagavad Gita this is thus put; "When the reward is exhausted after having dwelt in the heaven of Indra for years of infinite number, they return to the world of mortals". But even if one should become Indra himself, who is the regent of this sphere, the reward would not be eternal, for the reason that Indra as a power comes to an end at the close of the manvantara. The Khanda under consideration touches upon the transitory nature of the reward for good works without knowledge in the seventh and other verses:

7. But frail indeed are these boats, the sacrifices, the eighteen in which this lower ceremonial has been told. Fools who praise this as the highest good are subject again and again to old age and death.

8. Fools dwell in darkness, wise in their own conceit and puffed up with a vain knowledge, go round and round, staggering to and fro, like blind men led by the blind.

9. Children when they have long lived in ignorance consider

themselves happy. Because those who depend on their good works are improvident, owing to their passions, they fall and become miserable when their life in the world which they have gained by their good works is finished.

The fall spoken of in these and also in the tenth is the death in devachan and rebirth into this life. Both life here and life in devachan are illusionary, and hence there is a continual rise and fall, fall and rise, from the one to the other until the time arrives when the man, by adding knowledge to good works is able to mount above the illusion and prevent himself from being drawn into the gulf of death in either this world or the world of the devas. It must follow from this that such a perfected man may, while living among men, have the experiences of devachan, if that be his wish; in Buddha's life it is said that he entered nirvana and carried on his mission upon earth afterwards.

Verse 11, referring to those hermits called Sannyasis who have left all concerns of this world behind, has this significant sentence:

"(those) depart free from passion, through the sun, to where that immortal person dwells whose nature is imperishable".

I am very much inclined to read this as meaning that even in their case what might be called absolute immortality is not gained.

The Hindu philosophy is full of fine distinctions, and, indeed, so is occultism. To say that "they go to that place where the highest person dwells" is not the same as saying they become that person himself. In the Bhagavad-Gita Krishna says that only a certain sort of devotion causes the devotee to become the highest person, or, to put it in other words, to be absorbed in the highest. In the

present case the Sannyasi goes to the place but does not become that highest person. And in saying "absolute immortality" I have in view the immense periods of time covered by the cycles of the Hindus, which are so long that they seem the same as eternity to us, and are often construed to have that meaning, giving to the term a shorter or lesser significance than we give it. This can be noticed in the sentence quoted from the Bhagavad Gita in the use of the word "infinite", as there it does not mean never-ending, but only an enormous period of time, so immense that the human mind is not able to conceive it and therefore has to call it eternal. The "departure through the sun" is a reference to that part of the hidden-teachings of the Hindu initiates which deals with the practical part of yoga, the ways and means for developing the higher powers and faculties, all of which are governed and affected by certain forces and centres of force in the system of which this globe is a part. Even this has its counterpart in the Bhagavad Gita in that chapter where it is said that the devotee who dies when the sun is in its northern course goes away never to return, and that the one who dies when the moon is waxing goes but to return again, ending with the statement that these two ways of white and black are eternally decreed in this world. This has been commented on by Europeans as being nonsense, but when we know that reference is meant to be made to the eternal unity of the great tides in human affairs and the adjustment of all things to universal laws, it does not seem so foolish. Of course if it be taken to apply to all men indiscriminately, then it would be the talk of children; but it is well known to all those who have had a glimmer of the inner meaning of these holy books that the persons who come under the influence of this law in the manner above given are only those devotees who follow the practices enjoined and thus bring into operation upon themselves different forces from those that bear upon the ordinary man.

In the next verse directions are given for finding the truth as:

12. Let a Brahmana (1) after he has examined all these worlds which are gained by works acquire freedom from all desires. Nothing that is eternal (or not made) can be gained by that which is not eternal (or made). Let him in order to understand this take fuel in his hands and approach a guru who is learned and dwells entirely in Brahman, and that teacher tells the truth to him.

Verse 13 ends this khanda leading to the second Mundaka wherein the truth about these matters is to be found.

FOOTNOTE:

1. "A Brahmana" here does not exclude non-brahmins, but means the man who is on Brahma's path, who is studying the wisdom of or about Brahma or spirit. ([return to text](#))

The Path

THE WAY, THE TRUTH, AND THE LIFE — *R. A. Campbell*

AN ACROSTIC.

Dedicated to H. P. B.

However clear our intellects,
Pure though our aspirations are,
Beside our souls the truth will shine
Like noon-day sun beside a star,
And when the inner realms of life —
Vacuity to outward eyes —
Are studied, seen, and fairly known,
The inner truth still onward lies.
Seek then the living truth to know;
Keep in the path; go sure though slow;
You thus to Higher-self will grow.

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 128 top. 160 Vol. I.)

NIRMANAKAYAS. First reference to these on p. 132, *note*, where they are called "the surviving spiritual principles of men", and in the text they are those who *reincarnate for the good of the world* if they choose.

ELECTRICITY AGAIN is mentioned as *Life*, p. 137, 4th line; also p. 139, line 17; also a form of "Fohat"; also p. 145, (b).

ETHER only partially manifested, and not to be fully so until the 5th round, p. 140.

THAT ENTITIES ARE CONSTITUTED of many units, each an entity. Thus that "Fohat", elsewhere called "an Entity", is not one undivided entity but is made up of others; and that there are as many Fohats as there are worlds. *Note 2*, p. 143, and p. 145 (b).

ELIXIR OF LIFE. A hint thereupon. *Note 2*, p. 144.

ELEMENTALS CONCERNED in all forces, *e. g.* that electricity, magnet-ism, cohesion, and the like are made up of elementals. These, of course, are not all of one class, but of several, p. 146. Near the end of this page it is inferentially stated that elementals are generated in millions by other beings. This must be, in fact, a transforming process in the atoms. By referring to p. 143 a broad hint will be found as to this in the remarks upon the "fate of an atom" once caught into any world sphere, and the means of getting out through "a current of efflux". Is this *efflux* through the transforming being?

THE MOON. In what sense dead? Only as to her inner principles Her physical principles are not dead, but have a certain activity, p.

149, note 1. And her spiritual principles have been transferred to this earth, p. 155, note, and p. 156, line 6.

DISAPPEARANCE OF THE MOON will have occurred before this earth has passed through her 7th human round, p. 155 note.

ARCHETYPAL MAN ON GLOBE A. p. 159, last para. Here is a most interesting hint not often referred to and opening up a vista of thought. In the 1st round of the monads in this chain of planets, the monads from the preceding chain of words — say the moon's chain — *become human beings* on Globe A. But in the 2d round the process alters, and it is in the 4th round that man appears on this earth, the 4th Globe. To quote: "on globe A man rebecomes a mineral, a plant, an animal, on globe B., C, etc. The process changes entirely from the 2d round, but —" This abruptness is to give the hint to intuitional investigators, and opens up as great a problem as the 8th sphere seemed once to be and still perhaps is. But we may ask if on Globe A — unseen by us — the archetypal process does not obtain?

The Path

TRANSMIGRATION OF SOULS — *Hadji Erinn*

"Is there any foundation for the doctrine of transmigration of souls which was once believed in and is now held by some classes of Hindus?" is a question sent to the *PATH*.

From a careful examination of the Vedas and Upanishads it will be found that the ancient Hindus did not believe in this doctrine, but held, as so many theosophists do, that "once a man, always a man"; but of course there is the exception of the case where men live bad lives persistently for ages. But it also seems very clear that the later Brahmins, for the purpose of having a priestly hold on the people or for other purposes, taught them the doctrine that they and their parents might go after death into the bodies of animals, but I doubt if the theory is held to such an extent as to make it a national doctrine. Some missionaries and travelers have hastily concluded that it is the belief because they saw the Hindu and the Jain alike acting very carefully as to animals and insects, avoiding them in the path, carefully brushing insects out of the way at a great loss of time, so as to not step on them. This, said the missionary, is because they think that in these forms their dead friends or relatives may be living.

The real reason for such care is that they think they have no right to destroy life which it is not in their power to restore. While I have some views on the subject of transmigration of a certain sort that I am not now disposed to disclose, I may be allowed to give others on the question "How might such an idea arise out of the true doctrine?"

First, what is the fate of the astral body, and in what way and how much does that affect the next incarnation of the man? Second, what influence has man on the atoms, millions in number, which

from year to year enter into the composition of his body, and how far is he — the soul — responsible for those effects and answerable for them in a subsequent life of joy or sorrow or opportunity or obscurity? These are important questions.

The student of the theosophic scheme admits that after death the astral soul either dies and dissipates at once, or remains wandering for a space in Kama Loka. If the man was spiritual, or what is sometimes called "very good", then his astral soul dissipates soon; if he was wicked and material, then the astral part of him, being too gross to easily disintegrate, is condemned, as it were, to flit about in Kama Loka, manifesting itself in spiritualistic *seance* rooms as the spirit of some deceased one, and doing damage to the mental furniture of mortals while it suffers other pains itself. Seers of modern times have declared that such eidolons or spooks assume the appearance of beasts or reptiles according to their dominant characteristic. The ancients sometimes taught that these gross astral forms, having a natural affinity for the lower types, such as the animal kingdom, gravitated gradually in that direction and were at last absorbed on the astral plane of animals, for which they furnished the sidereal particles needed by them as well as by man. But this in no sense meant that the man himself went into an animal, for before this result had eventuated the ego might have already re-entered life with a new physical and astral body. The common people, however, could not make these distinctions, and so very easily held the doctrine as meaning that the man became an animal. After a time the priests and seers took up this form of the tenet and taught it outright. It can be found in the *Desatir*, where it is said that tigers and other ferocious animals are incarnations of wicked men, and so on. But it must be true that each man is responsible and accountable for the fate of his astral body left behind at death, since that fate results directly from the man's

own acts and life.

Considering the question of the atoms in their march along the path of evolution, another cause for a belief wrongly held in transmigration into lower forms can be found. The initiates could teach and thoroughly understand how it is that each ego is responsible for the use he makes of the atoms in space, and how each may and does imprint a definite character and direction upon all the atoms used throughout life, but the uninitiated just as easily would misinterpret this also and think it referred to transmigration. Each man has a duty not only to himself but also to the atoms in use. He is the great, the highest educator of them. Being each instant in possession of some, and likewise ever throwing them off, he should so live that they gain a fresh impulse to the higher life of man as compared with the brute. This impress and impulse given by us either confer an affinity for human bodies and brains, or for that which, corresponding to brutal lives and base passions, belongs to the lower kingdoms. So the teachers inculcated this, and said that if the disciple lived a wicked life his atoms would be precipitated down instead of up in this relative scale. If he was dull and inattentive, the atoms similarly impressed travelled into sticks and stones. In each case they to some extent represented the man, just as our surroundings, furniture, and clothing generally represent us who collect and use them. So from both these true tenets the people might at last come to believe in transmigration as being a convenient and easy way of formulating the problem and of indicating a rule of conduct.

The Path

LOSS OF THE SOUL: II — *Harij*

(Continued from March No.)

Students are often puzzled and greatly exercised over the question as to how occult power comes with a knowledge of the laws of occultism. Theoretical knowledge of spiritual things, no matter how correctly and completely given out, is altogether barren in most minds, for the reason that they see no connection between the spiritual truth and its practical application and effect on the physical plane. Many have formally accepted the doctrine of Universal Brotherhood, but how that principle can really work toward the unfolding of their own higher principles and powers, except as this unfolding is a direct reward conveyed to them by the interposition of a Mahatma, they seldom see. Most persons can see in the spirit of altruism a sufficient basis of ethics, and yet fail to see in this same altruistic spirit the occult law that leads to very high powers when honestly held and intelligently apprehended. Many members of the T. S. seem to think that they are held to the practice of altruism, while advancement in occult knowledge is indefinitely, if not unnecessarily, postponed. Expectancy thus leads often to disappointment, and finally to apostacy — not to the Society, or to its Great Teacher, but to their own Higher Self. Volumes have been written just at this point, aiming to show that if the *motive* be sincere and unselfish, and if all ulterior aims are lost sight of, the reward comes with the motive. The *Bhagavad-Gita* makes this very clear in what it says regarding devotion to the supreme spirit, and the relinquishing of the reward of action; and this as the final destruction of Karma.

This same principle is involved in the problem now under discussion. Just as the mystical *Aum* is the potential epitome of all

forces and activities in man — the rhythm and the melody, the singer and the song — even so with this divine spirit of altruism; it is potential on all planes, and by no means confined to the ethical. It involves power no less than conduct: wisdom no less than beneficence.

Let us look upon man as an expanded germ, the "*dark nucleoli*" being still, as in the original germ, the evolving and involving center (*laya-center*). Let us also make thinkable, if not tangible, man's sphere of influence, the "atmosphere" he carries with him, that magnetic sphere that all feel who touch it and are consciously attracted or repelled. Dr. Sibley summarizes this and gives a beautiful illustration in his *Occult Sciences* as the "invisible perspiration", that vapory and invisible emanation containing in solution or suspension all essences or potencies of the man. This emanation, then, is definite in power, in density, in form, and in extent. Let us call it man's *personal atmosphere*. The physical body of man, then, is *suspended* between this *laya-center* within and the "personal atmosphere" without; and here are the play and inter-play of forces, the evolution or out-flow of forces from center to environment, the involution from the universal fountain to the *laya-center*. At any moment of his life man is a focalized adjustment, a *suspended life*, between these inner forces and outer conditions. The *laya-center* is the seat of self-consciousness in man; the motor, the generator, the focalizer of his conscious life. The "personal atmosphere" is the field of differentiation, and it penetrates to the *laya-center* as the very warp of life, in which man weaves the pattern of his aims and ideals. These ideals are either personal or universal. The predominating currents are either concentric, drawing all things to itself (contractile), or they are excentric, emanations toward the universal (expansive). If the life currents expand, the field of consciousness grows, and the stream from the One Life expands

and increases also. The laya-center becomes more and more a channel of the Infinite life, and the "personal atmosphere" expands and becomes more pure and more powerful. The individual approaches the universal; the finite pushes toward the infinite; the limitations of the personal expand toward the impersonal; the temporal approaches the eternal. But suppose the predominating currents are concentric, and, as Bohme calls them, "astringent and bitter", the personal atmosphere becomes more and more dense, like a stagnant pool, or, rather, malarious like a foul morass. Man thus contracts the laya center, shuts up the windows of his soul, and differentiates downward, becoming more and more driven toward and anchored upon the animal plane. He lives in his senses and appetites till they become cloyed and turn to bitterness and pain. The laya center becomes atrophied because it has failed to expand by use, failed to draw from the fountain and to pass on that healing stream. He has, thus burned out the oil in his lamp of life, and contracted the holy vessel, the divine *Upadhi*, till it no longer "reflects the light of the Logos." He has, in short, alienated his Higher Self, and at last cut the golden thread that united his self-consciousness with the Divine *Mahat*. The light of the Logos still shines on as before, but he has defaced the mirror that reflected it down into the planes and principles of his complex being. He has sought to stem the evolutionary wave, that all-compelling breath of Brahm; and seeking the line of greatest resistance, pitting his puny personality against the Universal, he is wrecked on the sea of time and quenches his light in darkness.

That which renders man's journey through matter, sense, and time so long and so painful is his vacillation, his indecision. His wavering will is that "Satan" that "goes to and fro". Seeking continually all for self, and yet unable to silence the divine "voice" that dwells within his laya-center, he continually "sins" against

this "Holy Ghost", and as continually "repents". Incarnation after incarnation he feeds on the dead-sea apples that turn at last to dust and ashes in his grasp. He tries every avenue of escape, knock at every door of the senses, seeking happiness that way.. Unwilling to relax his hold, and trying to drag through the Golden Gates of eternal life the dead carcass of his desires, he at last either despairs or *determines*; and his final determination sets his life-currents squarely toward the eternal sea of life or toward the Stygean pool. He at last comes consciously to "the place where two ways meet", and signs the compact with his soul. It is either altruism or egotism; all for humanity, or all for self. If he inflicts pain without compunction, seeks his own desires at whatever cost to others, and thus stifles the cry of humanity, his brother's blood is upon his hands, and the *love of evil for its own evil sake* marks the last station at which he alienated his divinity and sacrificed his humanity. People have been lulled to sleep over the very fumes of this Stygean pool, by the theological juggling of vicarious atonement and the special favor or anger of a Jewish tribal deity that was made to depend, not on character, not on the altruism of Jesus, but on the orthodoxy of the Church, the judgments of men regarding intellectual belief. These intellectual and theological jugglers have oft inflicted torture without compunction, and sought power and aggrandizement at whatever cost to humanity; and they have thus glorified the apotheosis of selfishness. If one wishes to find the sum of all villainies, let him read the anathemas of the Pope promulgated against the Masons or the Spiritualists; and yet these ravings of diabolism are published in secular journals with only mild reproof! The orthodoxy of Protestantism has been no better than a timid duplicate of popery, till the masses repudiated the whole brood, only to deify selfishness in their own way and follow their several roads to destruction. Can any thing be further from the Sermon on the Mount and the altruism of Jesus? Religions thus

degenerated become, not savers of souls, but as mill-stones around the necks of all humanity to drag them to destruction. And yet even some members of the T. S. are disposed to criticize that Brotherhood that have kept for ages the Secret Doctrine from such horrible degeneracy; criticized and condemned them because they do not follow the very lead of Constantine and the "Holy See". Had this Wisdom Religion once been lost and its last custodian departed, what power in the three worlds could have helped humanity? Century after century it is filtered into corrupted religions and intuitive souls from its unseen source, where, pure as the snows of the Himalayas, it dwells from age to age. It is voiced by every one who in sincerity and in truth preaches and practices Universal Brotherhood, for in that one principle is embodied all the "law and the prophets", the Keys of Knowledge, and the sign of power. Without this, there will never be within the T. S. a "school of magic or a hall of occultism", over which a Master will preside. With it, honestly held and intelligently applied, all wisdom, truth, and power will follow. If we see one given over to cruelty, regardless of the rights of others, hypnotizing another soul into imbecility and nonentity for fame or gain to self, we may justly conclude that he is nearing the gates of destruction, and when he delights in torture, knows no mercy, and loves evil for its own sake, he has alienated the divinity which could strive no longer within the temple altogether defiled. Vivisection and hypnotism are the newest and surest roads to this horrible consummation, for their inspiring motive is the demon of CRUELTY.

The Path

IS THEOSOPHY A PESSIMISTIC PHILOSOPHY? — *Bandusia Wakefield*

I shall not discuss the question as to whether Buddhism is a pessimistic philosophy, but simply say that Theosophy is not Buddhism, neither is it any other particular religion, but the truth underlying all religions.

In answer to the question, "Is Theosophy a pessimistic philosophy," I say *no*.

Consulting the dictionaries, I find the substance of the definitions of pessimism to be (a) "Pessimism is the doctrine that this world is the worst possible." (b) Pessimism holds that the universe sprang from nothingness and is tending toward nothingness, which it may ultimately reach; this doctrine being associated with the feeling that existence is an evil, (c) "Pessimism is a tendency to look on the dark side of life and exaggerate its evils."

(a) The worst conceivable world would be one that is continually *growing worse*. Theosophy does not look upon our earth as such a world, but as a stage in the evolution of a part of the Universe, an evolution which tends ever to something higher and better, though not in a straight line but a spiral; that is, a cyclic evolution progressing through alternate periods of activity and rest, and on each renewal of activity after rest proceeding toward perfection onward from the point last attained. There is nothing of true progress lost during rest that has been previously gained during evolutionary activity. That cannot justly be called a pessimistic philosophy which teaches that things are growing better instead of worse.

(b) Theosophy does not hold that the universe sprang from

nothingness, or that it is tending toward nothingness. Neither does it count existence an evil. Theosophy teaches that the Universe sprang from One Absolute and Eternal Reality, Spirit, one of whose aspects is Substance, whose lowest manifestation is matter. While the limitations of Spirit by matter bring about what we call evil, still these limitations are necessary for the individualization of spirit. The experiences which come through these limitations, the temptations, the struggles, the failures and the triumphs, all have their part in the development of the individual soul. These are necessary to the attainment of virtue, the growth of a strong, heroic, purified soul. The antagonism of evil is essential to the manifestation of good. We need to know darkness to thoroughly appreciate the light. The soul loses nothing that it has gained through its experiences, but carries its spoils with it. So Theosophy does not consider existence an evil, but an essential condition to the attainment of the highest good.

(c) Theosophy is not "a tendency to look on the dark side of life and exaggerate its evils", for it teaches the reign of justice. It holds that each individual has his own destiny in his own hands, that his present is the result of his past, and that his future will be what he makes it, that he reaps what he sows. This is the law of Karma. Hence no Theosophist has any reason to complain of either fate, Providence, or the law of heredity; for he has inherited according to his deserts, being drawn by a law of attraction to that parentage, that home and those conditions, for which his past lives have fitted him. So, instead of complaining, he has simply to sow the seed of good, and a harvest of good will follow; but as all humanity is linked together, he must help to lift the race in order to lift himself.

KARMA — *J. Campbell Ver Planck*

The Law of Karma, or Action, is one of the chief teachings of oriental philosophy. It is stated to be a universal Law, having its root or basis in the outbreathing (action) and inbreathing (reaction) of the Brahm, the Great Breath or Unseen Mover, from whose motion in matter (substance) all things are evolved.

There is one thing which we may predicate of Action; that is, Reaction. This fact indicates the method of Karma. Karmic Law manifests on or in various planes of life, and differs with that plane wherein it acts. Newton expressed one mode of Karma upon the physical plane when he formulated his first law of Motion; viz. "Action and Reaction are equal and opposite in direction." Physiologists and psychologists tell us that this rule holds good in Emotion, and in nervous action and reaction also. The Western bible expresses Karma for the moral plane when it says: "Be not deceived; God is not mocked. What ye have sown, that shall ye reap." This ethical causation, this moral reaction, this conservation and intercorrelation of mental, moral, and psychic energy, is also Karma.

We can imagine that when a man does a selfish deed or thinks a selfish thought, it goes forth into the swift and subtle aetheric world as a specific vibration, colored, so to say, with his mental and moral coloring, bearing his stamp, as it were, in that vibratory ratio which is his own. We can fancy it issuing, a tireless energy, into that aether which powerfully responds to the tremor of a thought, and thus affecting, modern Science tells us, the far stars with its dynamic palpitation. On the confines of a system this energy must return, and it does thus react, naturally along the line of least resistance, to the sphere or base from

which it emerged and which powerfully attracts it, bringing with it all that it has gathered to itself in the course of that long journey, and taking effect in manifold ways upon the doer, the creator, to whom it has returned. Nor is this return always made in the same brief human life. Hence we have Reincarnation as the companion or extension of Karma. The soul is drawn back to earth life again and again by the return or re-awakening of its dormant energies, self-engendered and responsive to material planes of being. The one Substance, Akasa, Mulaprakriti, *Aether* — call it as you will — that from which all things are evolved, is, by virtue of its atomic constitution and magnetic laws, the great Agent of Karma. Through it, all things and beings, in it immersed and by it saturated, become the minor instruments of the Law.

Karma is, in fact, Action and Reaction, as we have said. All that is, has been, or will be done occurs by virtue of this Law of Cause and Effect; all Action is the result of previous Action. Its justice is perfect, its equilibrium unshaken. It provides that all things shall return to their source. Amid myriad tangential causes its delicate adjustments and readjustments are unerring, because every action has its due balance and effect.

Imagine the reverse of the case above stated, and conceive an unselfish man, acting only from a sense of duty, and in accord with the progressive tendency of evolutionary Law. As by its light he sees that mankind are one and inseparable, his acts will have no personal coloring. They create no specific self-condensed and contrary currents or discords in the aetheric medium, but pass out into the harmonious ocean of life about us, in waves as universal as its own. Bearing no personal impress, they have no cause to return to his sphere, which then pulsates with the surrounding harmony and broadens into the eternal.

Some persons say that Karma is "cruel", because it "punishes

those who do evil without knowing of this Karmic Law". But Karma does not punish. That is incorrect and slovenly speech. How can Action punish? Action reacts; that is all. A selfish action cannot react as a good one, any more than an apple seed can bring forth a fig tree. We must expect to receive back our action in kind. When the unconscious child puts its hand into the fire, we do not say fire is cruel because it burns the child. We recognise here the action of a Law of the physical plane. We respect it as such. But Karma is equally a Law of many planes, and cannot be bribed or bought off any more than fire can be so dissuaded. The burnt adult suffers more than the child, for his imagination enters into the matter. So he who knowingly does a selfish deed, defying Karma, suffers, in its reaction, upon moral and mental planes; whereas he who has done evil in ignorance of Karma, probably has only the lower forms of reaction to bear.

All action is Karma and causes new Karma. Deeds of men and of nations; social conditions; mental limitations, joy, sorrow, life, death, health, disease, rapture and pain; all are the effects of previous action, whether of individual men, of nations, or of races. We bear our part in national Karma, and suffer, as units of that nation, for deeds not committed by our individual selves. But Karma — our past actions — brought us into that place and nation, and to such consequences, while also in Devachan there is compensation for the individual for such trials as he has not merited in his single individual capacity.

We hear talk of "interfering with Karma", but this is absurd, impossible. If to one is awarded penance or suffering, to another it may be given to relieve that suffering. It may be your Karma to be menaced by dire consequences, and mine to avert those consequences. Suffering, too, is one means of the soul's expansion and advance, so that it may be "good" Karma, while a place amid earthly ease and immunity from sorrow is often contractive and

disastrous to the soul. More disastrous still is that repression of sympathy and help when chilled by the reasoning faculties, which forbid us to "suffer with all that lives". We cannot swerve Karmic Law. It may be retarded, but returns with compound interest.

The Law is divine. We do not make it. We only set in motion causes which this pre-existent Law of Action and Reaction returns to us as effects. We engender these causes, and, in regard to them, we exercise free will, at least until the innumerable causes, reacting, stultify that will.

In action alone is the registration of all deeds and thoughts; their impress upon the One Substance constitutes the true book of Judgment. Thus Karma is the only rightful Judge. It alone can fitly punish and reward, for in it alone is full discernment. As true Love consists in perfect Justice, *impartial to all alike*, so is this Law one of universal Love. It alone impels the soul, through experience of the misery of Self, to expansion into the Selfless and the Universal.

Yet there is one escape from Karma. That is, by Becoming it. Duty done for its own sake, regardless of results (for Duty alone is ours; the consequences are in the Great Brahm), acting or refraining from action because it is right to do so, we do thus, by our inward devotion, become one with that Law obeyed by us. No longer its unconscious instruments, we are its conscious agents, parts of itself, hearers and doers of its first great injunction.

"Inaction in a deed of mercy becomes an action in a deadly sin."

The Path

THE MASTER OF COMPASSION — *Elliott B. Page*

"To don Nirmanakaya's humble robe is to forego eternal, bliss for self, to help all man's salvation." Voice of the Silence.

He on whose shoulders falls this robe,
No more of Self shall know;
All unperceived of man and earth,
He shall through Kalpas go;
Unknown, unheeded, disbelieved,
While ages ebb and flow.

The biting wind, the cruel frost,
The blasts of fiendish hate;
The heartbreak of a wretched world,
The cruelties of Fate;
The salt, salt tears of Sorrow's sea
For the Unselfish wait.

No pause for rest, no thought of bliss,
Nor taste of heavenly joy;
Unceasing toil, unceasing pain,
Woe, woe without alloy
Must recompense that stainless one
For all his sad employ.

The Guardian Wall by such is built,
With hearts instead of stones,
By blood and tortures made secure;
Impelled by human groans,
These saintly ones for us forego
All bliss while Mis'ry moans.

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 160 to p. 184, Vol. I.)

MARS AND MERCURY bear an occult relation to the earth which will not be explained. *V. I. p. 163*. This is not because no explanation exists, but because, as said (*p. 164 footnote*), these explanations belong to high grades of initiation.

FIGURES AND NUMBERS the key to the whole system; *V. I. p. 164, last line*. This has often been stated. Among the Jewish cabalists it is said that the Universe is built by number, weight, and measure, and that harmony is the law reigning over all. Now if the hint given be true, that figures and numbers *will not* be given for the above reasons, then it is useless for students to bother their minds about the occult meaning of numbers, as so many now do; for this occult meaning cannot be found without assistance.

VENUS IN HER 7TH ROUND. See italicised para, *on p. 165*, where it is said that that planet is in her last round. This must be her 7th. Hence the men there are as gods to us, and, if the argument from analogy is to be relied on, some of her great light must emanate from those beings and not all be from the sun.

MARS WITH TWO MOONS NOT HIS OWN. See *p. 164, ital. para*. This is taken from the letter by a Master who, replying to the query as to why Mercury and Venus have no satellites, says: "It is because Mars has two to which he has no right and—for other reasons". That is, we infer that Mars absorbed these moons or dragged them off into his orbit at some time enormously distant and still keeps them. They cannot therefore stand to him in the same relation as our moon does to us. One of the "other reasons" may be that, Venus being in her 7th round, all vestiges of old moons

have been sublimated and absorbed into her atmosphere.

ESOTERIC METAPHYSICS must be understood. *V. I. p. 169 last para.* This rule is laid down by the Adepts and is therefore of greater weight than if formulated by a student. It is useless to attempt to master the system on the lines of modern research, which at best are empirical, very faulty, and leading almost always to a materialization of the whole scheme. Meta-physic deals with the real because the ideal, and physical science with the phenomenal and therefore illusory and changeable.

EVOLUTION OF THE MONAD A BASIC PRINCIPLE. *P. 171, 1st line, V. I.* This is laid down with extreme clearness and should not be forgotten. It is not expanded so that inattentive minds may get it through much repetition, but it is postulated once for all. It is still altogether too customary for students to separate the Monads, first from the globes and then from the beings thereon. They cannot be thus divided off. All the globes and their objects are and ever will be monads in stages of evolution, just as we who now study the question are monads ourselves in other stages. The false notion should at once be discarded that there was a time when there were no monads on the globe but that there was here in waiting this ball of earth coming from no one knows where, and that later on monads arrived to occupy it.

If we carry out the principle laid down, then the globe is the creation of the monad; and when the globe is evolved, at once monads needing that experience enter into its corporeality to continue its existence. These later monads are those far behind in the race who will, in some succeeding period of evolution, be in a position to evolve on their own account some new-globe in ages yet far distant, for the carrying on of the same process eternally. For, as a material object cannot spring out of nothing, neither can education or knowledge or ability to plan arise out of nothing, but

must be based upon and flow from some prior experience or education. So it must be that even now there are monads encased in the mineral, vegetable, and animal kingdoms which have never been farther than that, and will during the remainder of the race evolution continue their education in those lower kingdoms until their time shall come when, the door opening for their exit, they will pass out and higher to make room for others.

LIMIT TO NUMBER OF MONADS. Although there can be no such thing as a metaphysical limit to the monads, yet practically, for the purposes of any one manvantara, there must be a limited number of monads included within its evolutionary sweep. Since a manvantara, however vast and inconceivable by us, is wholly a finite period, it sets its own limit—within the illimitable absolute—for the monads attracted to it. This of necessity must be, since the natural world which makes experience possible, being finite because material, sets the limit by reason of its capacity being bounded. *See 1st para. p. 171, V. I.*

THE FATE OF THE ANTHROPOID APES. This interesting question is raised first on pp. 173 and 175 V. I. and not disposed of. There, in describing the course of the evolution of the monad, it is said that the laggards will not be men at all in this cycle *save one exception*. *On p. 184, 2d para*, it seems to be answered. "In this Round * * the anthropoids destined to die out in this our race when their monads will be liberated and pass into the astral human forms, or the highest human elementals, of the sixth and the seventh Races, and then into lowest human forms in the fifth Round." These descendants of men through union with animals will thus be karmically rewarded in the next round after this, instead of having to wait until another manvantara.

ONE WOMAN'S VISION — *Jasper Niemand*

One who had read a legend somewhere repeated it to me thus from memory:

"There was a Greek woman who, being visited by spirits in the guise of two Chaldeans, was dowered by them with transcendent powers and superhuman knowledge, and she was able to behold at once all the deeds that were done in all lands beneath the sun, and was raised high above all human woes and human frailties, save only Love and Death. The woman dwelt alone with the stars and the palms and the falling waters, and was tranquil and at peace, and she was equal to the gods in knowledge and in vision, and was content. Then one day a tired wanderer came and asked her for a draught of water to slake his thirst and lave his wounds, and she gave it, and, giving, touched his hand, and one by one the magic gifts fell from her, and the Chaldeans came no more! In all the vastness of the universe she only hearkened for one voice; her eyes were blind to earth and heaven, for they only sought one face. She had power no more over the minds of men or the creatures of land and air, for she had cast her crown down in the dust and had become a slave, and her slavery was sweeter than had ever been her strength — sweeter far — *for a space*. Then the wanderer, his wounds being healed and his thirst slaked, wearied. He arose and passed away; she was left alone in the silence of the desert — but never more came the Chaldeans.

Thus ran the tale; it seems unfinished and I am moved to finish it.

When the woman had made fair progress and attained into power, it was her right to be tested by the gods. Now we are most tested by Love and by Death.

So, as the tale runs, she was left mourning in the desert. She called upon the Chaldeans and their power, which she had shared; but power comes not at call; we must seize it and make it our own. She cried then to death; but death comes not quickly to those to whom he comes as a friend. It is only as dread warrior and foeman that his approach is swift and terrible. She could not die. In all the world there was left to her only her love; this she could not slay, though now she strove to cast the burden off, and then she clasped it to her burning heart. She could not lie forever thus in the desert. Her great love impelled her, and she arose, thirsting for one more sight of that distant face, determined to follow through the world that she might once more look upon it. She passed from the palms and limpid waters over the burning sands, and, all unseen, her guardian spirit and the spirit of her Ray went with her.

Thus she came into the world, and seeking saw on every hand sin, misery, disease, death, shame, and bitterness, and all the wrong man heaps on man, and all the joys of sense and soul that are the wombs of future pain. Failing to find him whom she sought, she asked herself, "What if he be wretched as these?" And, as her heart swelled with pity at the thought, she strove more and more to help the suffering, to clasp the imploring hands that clutched at her gown, — all for his sake. Learning to love them so, she hoped to forget that master love for one, and hoped in vain, for human love, is strong and tests us as a sword. At last she cried to all the gods. "Let me see him once, and die." So strong the cry, the inner heavens rang with her demand; on it she staked her all, and drew from Karmic powers, in that one gift, all that they held as treasure for her in many a life to come. Her guardian spirit hid its face and trembled, but the spirit of the Ray, the Watcher, saw unmoved.

So she beheld her lover. The man had changed. The fret of life had worn him. His sphere was dimmed by a dark, inpouring tide

that colored all his deeds, impeded his higher aspirations, and mysteriously sapped his life, by him unseen, unknown.

"Call back that evil tide!", she said. And then again, "What is it?"

Her guardian spirit could not answer for tears.

"It is thy love, whose strong barrier resists and impedes the law. Hark to the discord of his sphere," said the Watcher, the spirit of the Ray.

The woman uttered a moan of pity and of shame.

"He is changed. Dost thou love him still?" asked her guardian spirit.

"Better than ever I love and long to comfort him," she answered.

"Behold," said her guardian to the Watcher, "how strong is this love, now purified by pain. Shalt thou not deliver the woman?"

The unmoved Watcher spoke. "When the man came to her in the desert, did she speak to him of the starry Truths of the darkness? Aye, I know that she spoke, but her words were forms devoid of life while her voice — their carrier — cooed the notes of love. Aye, I know that she taught and tended him in tenderness and pity, but did she not ask reward, the reward of his love? What free gift asks a great gift in return? She only asked to serve, sayest thou? Know, Spirit, that in heaven's high hosts are thousands who wait through the passing of cycles for permission to serve, and sometimes ask in vain. Accepted service is the gift of gifts in the power of the Divine. Saw she his soul-spark yearning for freedom from personality and separation? Under that crust which is the outer man, saw she his inner self, the radiant, imprisoned, emmeshed in the web of matter, awaiting a deliverer? No. She saw but her own reflection, the mirrored flame of her own desire. Her image she projected towards him. Her glamour she cast

about him; her own fond yearning, it was that she loved. The imprint she stamped upon him faded, for his guardian spirit stood near. Then the radiant one within impelled him from her. Life bore him away. He passed on to other scenes, dragging after him, unknown but not unfelt, the dark and ever-lengthening chain of her recalling thought. The woman loved herself, so loving love; she to whom power was entrusted by the gods cast it, for self aside."

"Ah! say not so!" the guardian spirit cried. "Was no pure flame behind the smoke; no living germ within the husks of love?"

"Look!" answered the Watcher.

As the woman gazed, spellbound, she saw, above her lover, a shape of superhuman beauty, glorious and full, one of a band of mighty ones, filling the world, strong to aid and to save, interlinked, interdependent, all in one and one in all, the immortal hosts, the higher selves, the higher self of man. Seeing the loved one thus transfigured, thus translated, a cry of joy broke from her lips. "He is free!" she cried.

Then the Watcher bent above her, while the guardian spirit held his breath.

"Shall he become as one of these and pass beyond thee?"

"Oh! take him to that blessed place," the woman said.

"That place is one which men themselves attain. By fortitude; by duty; by self sacrifice; by entire acceptance of the law; he may attain. Or wilt thou — O caviller at the law, constructive of thine own desire, destructive of the universal trend of things — wilt thou detain him on the way?"

"Why may he not go there with my love?" she asked.

"With thy *love*, yes; for *love* makes free what it loves. But not with thy *desire*. The law has parted you in the flesh; who shall withstand that law and not be broken? But love coheres, inheres, and knows not space nor time."

The woman bent her head. From her heart a wild complaint arose. But she had seen the glorious vision; she longed to see her beloved on that way, the path of law. "Set him free", she said.

"But if thy desire recall him —?"

"Hast thou forgotten, Stainless One, or hast thou never known, that true love loves the better self, the shining ideal? I was blind, but now mine eyes are opened. I give him to his higher life, that life which is the law. And I — I bless that law, though it deny me, because it sets him free."

As she spoke, something seemed to break in her heart. Before her swept the great, blinding, glorious vision of a freed humanity, lifted upon the sorrows of such as she, lifted by very force of woe endured, into that shining host. The world that suffered and the world that conquered were one, and all, above, below, were types of souls freeing and set free by higher Love.

"I love the world," she cried, "for all is one."

Upon the face of the guardian spirit there shone a great joy. "Thou hast conquered by love," he said. "There remains only death for thee to meet and to subdue."

The Watcher spoke, "Nay; death is overcome. The only true death is the death of self. She lives for all, her powers reclaimed, restored, for the power of powers is universal love."

Thus runs the tale of truth. If woman knew her power to uplift, before the eyes of man, the splendid ideal, knew her power to nourish and sustain it, she, loving thus, would teach man how to

love, and, freeing him, retain him forever in the higher bonds that knit all souls to Soul.

The Path

IS SELF ANNIHILATION THE END AND AIM OF LIFE? — *Bandusia Wakefield*

No. According to Theosophy our earth-lives are for the purpose of acquiring through experience an education and development which we could not acquire without such experience. Here in the flesh, with the lower self at war with the higher, we must learn to conquer the lower, to sacrifice it to the higher. He who thus loses his life shall find it. This is no small task to accomplish, and one short life is not sufficient for it; hence the necessity for more, if we are to complete our development. We can conquer selfish desires and temptations to do wrong only in the realm where these enemies assail us, in the realm of matter and the body of flesh.

Theosophy does not teach the annihilation of the individuality, either in what is known as Devachan, the rest between earth-lives, or in Nirvana, the rest which comes after a great cycle of development. Those who are not in sympathy with the doctrine of Reincarnation look upon re-entering earth-life as being equivalent to a destruction of the individuality; but such is not the case. The Individuality, or Higher Ego, which consists of the higher mind and the spiritual soul, is that which continues; and it carries with it whatever of each personality is worthy to be preserved; but the present condition of matter in most organisms is too dense for the Higher Ego to impress its knowledge upon the lower mind of each personality, though sometimes in dream and trance states it does this, and there are people who in their normal state believe that they remember past lives. Pythagoras was such an one. When matter becomes more spiritualized in the upward curve of the cycle, and we inhabit more finely organized bodies than our present ones, then will our Higher Ego be able to

impress our lower mind with the memory of the past. Nirvana, which is "conscious rest in Omniscience", or union with the Divine, is not loss but gain. It is entrance upon a larger life, a fuller consciousness, a higher bliss, an ineffable peace. The length of this period of rest corresponds to that of the previous period of activity, and when it is over, then from out the bosom of the Infinite emerge again the Universe and all beings to enter upon another cycle of still higher evolution.

The Path

ATTITUDE TO KARMIC LAW — *Alexander Fullerton*

The consciousness of being under Law affects different minds in different ways. With some it arouses bitter, indignant revolt, a dim sense of helplessness making that spirit more intense. With others there is a feeling of despair: "What matters it how we struggle, since the Law will have its way, caring nothing for tears or agony or desolation?" Others treat the matter with indifference: "As the machinery of the universe is confessedly not in our hands, and as we are anyhow the product of a system of evolution, we might as well act conformably to that stage we have reached, letting the Law look after us, which, indeed, it is its business to do."

Any one of these attitudes would be justifiable if the Law was arbitrary, or one-sided, or imperfect, or mechanical, or heartless, or merely punitive, As a piece of cold mechanism, or as a purely disciplinary force, it certainly can evoke neither good-will nor glad compliance. Some perception of this has influenced the preaching of the modern pulpit. Jonathan Edwards's famous sermon on "Sinners in the hands of an angry God" would be as impossible today as a mediaeval harangue upon the Devil. Priest and layman have alike come to see not only that terrorism will not produce piety, but that penalties which are remote, factitious, and evadeable do not permanently influence conduct. Consequently all modern preaching assumes a different hue. Hell and the Devil are not formally abolished, but are locked up in ecclesiastical museums, where they are treated with great respect, indeed, but whence they are not permitted to emerge. The present appeal is to the Goodness of God, the Power of Motive, the Development of Character, the Christ Principle within, the essential Divinity of Man, and the like. There is less pungency,

but more reality; the lurid has given place to the sunful.

Still, no change of mental tone will abolish facts. If the theological outlook is more good-natured, as well as more hopeful, it has in no wise more clearly perceived either the omnipresence or the wisdom of the great Law of Karma, the fundamental truth in any system which purposes to take men as they are and make them what they should be. And therefore it is that Theosophy proclaims every other system as mistaken and misleading, offering palliatives or nostrums instead of the only remedy which goes direct to the seat of the evil and effects a genuine cure. *Law* is emphasized as unflinchingly as by an Edwards or a Calvin, but it is not imaginary or brutal, it is as replete with rewards as with punishments, and it embodies the perfection of Justice and Wisdom.

A perception of this perfectness, this all-roundedness, is the antidote to every feeling towards Law other than that of cordial homage. Nobody will venerate a power which is ever on the alert for peccadilloes and sins, but passes by good deeds as without its scope. To be really fair, it must be as open-eyed to every worthy act as to the opposite, and recompense right as unfailingly as wrong. Once perceived as utterly just, it can be respected, trusted, obeyed. Men will esteem a record which is photographically accurate, and confide in an administration which they know is honest. Why should they not, when they realize that a high thought, a gentle word, a kind act is as sure of its result as a meanness, a selfishness, or a brutality?

When Law is felt to be absolutely fair, resentment towards it ceases. This is on the same principle as is exhibited in schools where the teacher is seen to be invariably just. Boys do not ask for *no* rule, for the total abolition of all control or oversight, but only that the rule shall be reasonable and right, the control

impartial and judicious. A teacher who is as quick to see merit as shortcoming, who has no favorites and never vacillates, is the one who evokes respect, confidence, and obedience. And in the great Karmic field, the perception that Karma has no distinction of persons or qualities, notes every thought or act of every kind, is beyond all influence and above all cajolery, is spotless in its impartiality and rectitude, brings about confidence, confidence evokes respect, and respect arouses friendship.

It puts an end, too, to despair. The Law cares nothing, indeed, for tears, since dislike to discipline is no reason for withholding it; but as sorrow comes only as effect, never spontaneously, there is no question of a sullen submission to evils arbitrarily inflicted and impossible of escape. When a man knows that there is nothing whatever to prevent his own abolition of suffering, the very consciousness of his resources suffuses him with hope.

Indifference also is cured. True we are evolving. But equally true that we are evolving along the line we prefer. If that line crosses the normal order, and if we are content, for the sake of present satisfaction, to accept all the consequences which *must* follow selfish opposition, the way is certainly open. But, then, neither those consequences nor the contrary ones from enlightened obedience are mere experiences of a stage in development: they are the fitting results of what was a choice. No man is unconcerned over a choice wherein he himself is entirely free, and whereof he himself receives the returns.

Concede the Law of Karma, vindicate its complete pervasiveness and its utter impartiality, show it as full in its notice of good as in its notice of wrong, and you strike the note to which human nature will respond. Men crave Justice from the Higher Powers. They do not ask for unlimited licence, but for fair and equitable treatment. Make them see that Karma, and it alone, supplies this,

and they are content. The moral sentiment is met, the claim to liberty is allowed, the motive to reverence is stirred. And as the grandly generous nature of that Law is disclosed, its copious reward blessing the worthy and its very inflictions tender with reform, it assumes the countenance of a friend, a friend who may be implicitly trusted and should be unswervingly served.

The Path

IF METHUSELAH EXISTED, WHY SO SHORT OUR LIVES? — F. T. S.

At a Theosophical Society meeting the other day, it was stated that in the early races, say the second and third, referred to in the *Secret Doctrine*, man had a much more ethereal body, which lived many more years than Methuselah, the aged. In elaborating this, the objection was advanced that the body of man is now much more compact and stable than it was in those early races, because the atoms of which it is composed know their business better now than then, have greater affinity for certain combinations and for each other, and are not so readily scattered and disintegrated; and, if so, how is it explained that the length of human life now is only threescore and ten years, against several hundred in primitive times?

At first sight this seems to be perhaps a strong objection, but a careful consideration will dissipate it.

In the first place, when the human body was in a nebulous state the friction between the particles was much less than when they had drawn closer together. If the theory of ultimate atoms is admitted, we must also assent to the law that there is friction between them which will develop heat or tend to reduce the cohesive power. The heat evolved will have a tendency to destroy the intervening medium, or at least to so alter its state as to make it useless as a medium for cohesion to act.

Further, if we suppose, as is perfectly justifiable, that there are large and small combinations of atoms in each of which the units are closer to each other, the heat evolved will destroy the constitution of the element, whatever it may be, that is between that combination of atoms and the adjoining one. And, still further, the friction between any two such bodies will also tend to

rub off or draw off atoms from either of two to unite with the stronger, or be thrown entirely out of both collections.

Such a process as described will in the end bring about the disintegration of the entire mass of atoms. Thus at first, the atoms being farther removed, the destructive means can only act at intervals or more slowly than when the union is more intimate, and from this we reach the reason why the age of the combination of atoms would be greater in the one case than in the other.

Coming down to the present period we find that, in addition to the closer association of atoms in the physical frame, there is also another disturbing element tending to destruction of the union, that is, the force of the mind and the emotions.

It is well known that as man increases his brain use and power and the play of his emotions he is able to affect his physical frame thereby. Today many hold that the American people are becoming too nervously organized. This reacts upon the atoms in the body, and must make the average age less than those ancient races when the mental and emotional natures did not have such sway over the human being.

This is perfectly in accord with the *Secret Doctrine*, as it is shown that in the early ages everything went slower in all departments and that now in Kali Yuga all things move with great rapidity.

So it may be properly concluded that the great law of conservation of energy, of correlation of forces, makes it now out of the ordinary for men to live to the age of Methuselah.

H. P. B — *William Q. Judge*

A LION-HEARTED COLLEAGUE PASSES.

"On the shore stood Hiawatha,
Turned and waived his hand at parting;
On the clear and luminous water
Launched his birch canoe for sailing,
From the pebbles of the margin
Shoved it forth into the margin,
Shoved it forth into the water;
Whispered to it, "Westward! Westward!"
And with speed it darted forward.
And the evening sun descending
Set the clouds on fire with redness,
Burned the broad sky, like a prairie,
Left upon the level water
One long track and trail of splendor,
Down whose stream, as down a river.
Westward, Westward Hiawatha
Sailed into the fiery sunset,
Sailed into the purple vapors,
Sailed into the dusk of evening.

Thus departed Hiawatha,
Hiawatha the beloved, * *
To the Islands of the Blessed."

That which men call death is but a change of location for the Ego, a mere transformation, a forsaking for a time of the mortal frame, a short period of rest before one reassumes another human frame in the world of mortals. The Lord of this body is nameless;

dwelling in numerous tenements of clay, it appears to come and go; but neither death nor time can claim it, for it is deathless, unchangeable, and pure, beyond Time itself, and not to be measured. So our old friend and fellow-worker has merely passed for a short time out of sight, but has not given up the work begun so many ages ago — the uplifting of humanity, the destruction of the shackles that enslave the human mind.

I met H. P. B. in 1875 in the city of New York where she was living in Irving Place. There she suggested the formation of the Theosophical Society, lending to its beginning the power of her individuality and giving to its President and those who have stood by it ever since the knowledge of the existence of the Blessed Masters. In 1877 she wrote *Isis Unveiled* in my presence, and helped in the proof reading by the President of the Society. This book she declared to me then was intended to aid the cause for the advancement of which the Theosophical Society was founded. Of this I speak with knowledge, for I was present and at her request drew up the contract for its publication between her and her New York publisher. When that document was signed she said to me in the street. "Now I must go to India".

In November, 1878, she went to India and continued the work of helping her colleagues to spread the Society's influence there, working in that mysterious land until she returned to London in 1887. There was then in London but one Branch of the Society — the London Lodge — the leaders of which thought it should work only with the upper and cultured classes. The effect of H. P. B.'s coming there was that Branches began to spring up, so that now they are in many English towns, in Scotland, and in Ireland. There she founded her magazine *Lucifer*, there worked night and day for the Society loved by the core of her heart, there wrote the *Secret Doctrine*, the *Key to Theosophy*, and the *Voice of the Silence*, and there passed away from a body that had been worn out by

unselfish work for the good of the few of our century but of the many in the centuries to come.

It has been said by detractors that she went to India because she merely left a barren field here, by sudden impulse and without a purpose. But the contrary is the fact. In the very beginning of the Society I drew up with my own hand at her request the diplomas of some members here and there in India who were in correspondence and were of different faiths. Some of them were Parsees. She always said she would have to go to India as soon as the Society was under way here and *Isis* should be finished. And when she had been in India some time, her many letters to me expressed her intention to return to England so as to open the movement actively and outwardly there in order that the three great points on the world's surface — India, England, and America — should have active centres of Theosophical work. This determination was expressed to me before the attempt made by the Psychological Research Society on her reputation, — of which also I know a good deal to be used at a future time, as I was present in India before and after the alleged *expose* — and she returned to England to carry out her purpose even in the face of charges that she could not stay in India. But to disprove these she went back to Madras, and then again rejourneyed to London.

That she always knew what would be done by the world in the way of slander and abuse I also know, for in 1875 she told me that she was then embarking on a work that would draw upon her unmerited slander, implacable malice, uninterrupted misunderstanding, constant work, and no worldly reward. Yet in the face of this her lion heart carried her on. Nor was she unaware of the future of the Society. In 1876 she told me in detail the course of the Society's growth for future years, of its infancy, of its struggles, of its rise into the "luminous zone" of the public mind; and these prophecies are being all fulfilled.

Much has been said about her "phenomena", some denying them, others alleging trick and device. Knowing her for so many years so well, and having seen at her hands in private the production of more and more varied phenomena than it has been the good fortune of all others of her friends put together to see, I know for myself that she had control of hidden powerful laws of nature not known to our science, and I also know that she never boasted of her powers, never advertised their possession, never publicly advised anyone to attempt their acquirement, but always turned the eyes of those who could understand her to a life of altruism based on a knowledge of true philosophy. If the world thinks that her days were spent in deluding her followers by pretended phenomena, it is solely because her injudicious friends, against her expressed wish, gave out wonderful stories of "miracles" which cannot be proved to a skeptical public and which are not the aim of the Society nor were ever more than mere incidents in the life of H. P. Blavatsky.

Her aim was to elevate the race. Her method was to deal with the mind of the century as she found it, by trying to lead it on step by step; to seek out and educate a few who, appreciating the majesty of the Secret Science and devoted to "the great orphan Humanity", could carry on her work with zeal and wisdom; to found a Society whose efforts — however small itself might be — would inject into the thought of the day the ideas, the doctrines, the nomenclature of the Wisdom Religion, so that when the next century shall have seen its 75th year the new messenger coming again into the world would find the Society still at work, the ideas sown broadcast, the nomenclature ready to give expression and body to the immutable truth, and thus to make easy the task which for her since 1875 was so difficult and so encompassed with obstacles in the very paucity of the language, — obstacles harder than all else to work against.

REINCARNATION — *Katherine Hillard*

In Mr. Judge's remarks on Reincarnation last week, he reminded us of the necessity of distinguishing clearly what it *is* that re-incarnates. At the risk of repeating much that has been said already, I should like to say once again, for it can hardly be said too often, that a right understanding of the more abstruse teachings of Theosophy depends upon our being able to free ourselves from materialistic conceptions of spiritual things. The tendency of the human mind is always towards the embodiment of abstract ideas in a concrete form, particularly in the Western World, where the intellect has not been trained in the subtleties of Eastern metaphysics for countless generations. The ordinary intellect, plunged into the sea of abstract ideas, is like a man who does not know how to swim, and is distractedly baffling with the waves. It is in vain to tell him that the human body is lighter than water, and *must* float, if he will but put himself in the proper position and keep still; he clutches wildly at the smallest plank, and feels that only a rope or an oar, or something tangible that he can grasp with his hands, can possibly be of any use to him. Not even when Peter *saw* Jesus walking upon the water, was he able to follow his example.

So the Western mind, launched upon the sea of Oriental metaphysics, grasps eagerly at an image, a metaphor, a diagram, anything that can be seen with the eye and leave a definite trace upon the memory. It is certainly better to have a life-preserver when we are compelled to jump over board, than to be drowned, but we must be very careful that the life-preserver keeps its proper place, and does not hold our heels above water instead of our head. There are certain truths that can be impressed upon the mind by means of images and metaphors, but there are others

that only the intuition can apprehend, and where that is silent, it is in vain to force the intelligence, which is as incapable of the higher insight as Peter was of treading the waves over which his Master passed so lightly.

We are often warned in the *Secret Doctrine* and other books against the danger of accepting as a fact what is meant to be an allegory, but we need to have that warning repeated at frequent intervals. The moss of concrete conceptions will gather on the walls of the temple of Truth, and needs to be scraped away again and again, if the beautiful marble is to be seen in all its purity.

It is impossible to take a right view of the doctrine of Re-incarnation unless we have, to begin with, a proper conception of man's nature. We may talk glibly of the seven-fold constitution of man, and name the seven so-called "principles" in proper order, but let us beware of thinking of them as seven *things*. We might as well try to construct a rainbow by repeating the names of its seven colors. Every day almost, we hear some one say: "I can't bear the idea of Re-incarnation; I don't want to come back to this weary world; when I leave it, I long to have everlasting rest; better annihilation than a return to such a life."

When you ask such a person *what* they think is to return, you will invariably find that it is the *personality*, the man of today, thickly incrusting with a weight of bodily ills, mental fatigues, and physical accumulations of every kind, whims, idiosyncracies, fixed habits. It is the John Smith who stands before you, tired out beneath his earthly load, which he cannot dissociate from his real Ego. He expects to return as John Smith behind the mask of a new body, nothing changed but the flesh; the memory in abeyance, to be sure, but perhaps to revive occasionally in dreams, or in shifting, half-caught glimpses of a former existence;

"Some vague emotion of delight,

In gazing up an Alpine height,
Some yearning towards the lamps of night."

But were the constitution of man as taught in theosophy properly understood, that weary mortal would realize that with death he will lay down *all* the burdens of this life, and that with the body must pass away every thing but the thinking principle, the consciousness, that real entity, whose intelligence, passions, desires, all the lower faculties of mind, in fact, are but aspects of the immortal being within. "There is but one real man", says the *Key to Theosophy*, "enduring through the cycle of life, and immortal in essence if not in form, and this is *Manas*, the mind-man, or embodied Consciousness."

It is difficult indeed to realise the idea of unembodied Consciousness, of immortal mind; perhaps the best way is to recall our own experiences in our highest moments, to recollect how independent of all *personality* was the soul at such moments; how we might have been a King or a beggar for aught we knew or cared when absorbed in the higher existence, even though it were only on the intellectual plane that our freed soul disported itself, and all the mysteries of the Spirit were still far beyond our ken. But such moments of keen thought, of intense feeling, of deep affection, give us glimpses of a state of pure consciousness apart from personality, and this is the reincarnating Ego.

So that the tired mortal may lie down to his last sleep, safe in the thought that he has done with *all* his personal incumbrances, and that not a trace of the existence he has left behind will remain in the being who returns. Not a trace of the *personality* that is, but Karma waits for the reincarnating soul, and as it has sown in this life, the harvest will be reaped in the next.

The farmer may fix his mind upon results, and work purely for the sake of the bushels of grain that he will garner in the fall, but

we must learn, while making every effort to sow the seed of better harvests for the future, to keep our eyes fixed upon the duty nearest us, and give ourselves no concern for consequences. To do the right because it is the right, not because it will be better for us in this life or another, is the true principle.

"Whoever in acting dedicates his actions to the Supreme Spirit and puts aside all selfish interest in their result, is untouched by sin, even as the leaf of the lotus is unaffected by the waters," says the Bhagavad Gita. Let us then devote ourselves to working, each in our own place, for the benefit of all, secure in the knowledge that so eternal Justice and eternal Law shall work with us, for Duty is their child.

"I slept, and dreamed that life was Beauty:
I woke, and found that life was Duty.
Was then my dream a shadowy lie?
Toil on, sad heart, courageously,
And thou shalt find thy dream to be
A noonday light and truth to thee."

The Path

LOSS OF THE SOUL: III — *Hadji Erinn*

(Continued from April No.)

In the study of the occult science and philosophy one is continually coming upon paradoxes, and these at first seem irreconcilable. They seem like flat contradictions, and sometimes so remain for the individual student for two reasons. First: because he is unable through lack of knowledge to apprehend the broad and complex relations involved, and thus to view the subject from opposite grounds or points of observation, and so to reconcile the paradox. A second reason for the obscurity remaining in many minds is the fact that nothing short of a full explanation from the esoteric point of view is capable of reconciling the apparent contradiction; and this the teacher is not at liberty to give; is, in fact, solemnly bound not to give except under strict rules and conditions, and here is the reason why the leader of the present T. S. movement in the visible world, H. P. B., has often been misunderstood and severely criticized. Not even all members of the T. S. seem to have understood the difference between a reconcilable paradox, provided one has the requisite knowledge, and a falsehood. Cases under the first class are too numerous to mention, where lack of knowledge or of ability to apprehend has allowed the paradox to remain a seeming contradiction. As a case under the second class, the discussion in *Theosophist* on the classification of the "principles" in man by a learned high caste Brahmin and H. P. B. may serve as an example.

The idea that all human beings spring from one common root, that all are nourished from one common and eternal fountain of life, and that this common root and this living fountain inhere also in all lower forms of life, seems irreconcilable with that other

idea, that human beings exist in every possible degree of power and of unfolding, and that some are even souless, having lost the divine element, while others are far advanced in the line of the higher evolution and the divine consciousness. It is from the first idea, that of a common inheritance, that the Universal Brotherhood of man logically flows; while it is from the second idea, that of degrees of development and inherent power, that the "sin of separateness" seems logically to arise. With no distinct memory on the part of the individual of any previous state of existence, here *seems* to be an irreconcilable paradox. Children of one common "Father" and heirs of one common life-inheritance are unequal.

Let us suppose that the inheritance was originally equal, and that the difference now seen is the result of profit made by *use* of the original capital; and let us suppose that the law is so framed that he who has given away the most, who has done most to help his weaker brother, has now the most valuable possession. The paradox is thus explained, the law of action thus revealed. The original inheritance was indeed equal, and while the pains and penalties of the poorer brother have been self-inflicted, the more fortunate proves himself a worthy son of his "Father" by dividing his inheritance again and again with his poorer brother. The rich and fortunate, is therefore, not he who selfishly accumulates and tenaciously holds, but he who generously and continually gives. This is, indeed, quite the opposite of the worldly standard, where people honor the rich and despise the poor, and where the intelligent and the powerful despoil the ignorant and the weak. All real, and even all apparent, differences among individuals are the work of their own lives, the issue of their own hands. Man reaps as he has sown, and the problem of individual existence could only be solved through the efforts of the individual himself in working out either his own salvation or his own damnation.

The true doctrine of the vicarious atonement has been misinterpreted and misapplied. "*Christos*" (Buddhi-Manas) suffers not *for us*, but has suffered *like unto us*; has reached the state of at-one-ment through like passions and trials, and through overcoming evil as we must also overcome it. How else could he be our "elder brother"? The sympathy and helpfulness of *Christos* dwell in the "man of sorrows" who *remembers* the poor and the afflicted, the sinning and the sorrowing *which he once was*. *Christos* must have been at one with humanity through suffering, before he could be at-one with divinity through participating in the divine nature.

The elements of weakness, of sin, and of possible failure are then due to man's own efforts; these possibilities are the very terms upon which both personal and individual existence are based. Were it otherwise, were man made perfect and incapable of falling, or diabolical and incapable of rising, he could be nothing in and of himself.

The question was recently asked, "Do you *really* believe in the existence and immortality of the soul?", and the reply was, "Do you *really* question or deny it?" Here both question and answer proceeded from the plane of consciousness. Certain teachings, and even certain forms of intellectual belief that induce certain habits of thought and modes of life, may undoubtedly modify consciousness itself. One may contract or expand, cultivate or destroy, certain forms of consciousness. When the monad reached the human plane and became endowed with self-consciousness, that consciousness involved that divine light from which the higher consciousness springs. This is man's human inheritance, involving also his divine birthright. Then begins the struggle for the Kingdom, for dominion and power, the elements of man's lower animal nature drawing him back, and the powers of his diviner nature drawing him upward toward his immortal

destiny.

Thus the price of self-consciousness is the necessity of conflict; and the experience of conflict is suffering; while its reward is divinity restored to full consciousness in man. The penalty for final failure is not being born in the bodies of animals (metempsychosis), but descent to the animal plane and the final loss of self-consciousness, or the human birthright.

The double inheritance of man from the Lunar Pitris and the Manasa Putras (see *Secret Doctrine*), giving to the original monad Form, Desire, and Mind, constitutes him a complex being. Form and desire ascend from the lower plane; they are evolved. Mind descends from the higher plane; it is involved. Man in his present life is therefore anchored to all below him and heir to all above him. He is up-borne and overshadowed. Were it otherwise, the "germ" — that "*dark nucleole*" — could never expand and become incorporated in full consciousness with Eternal Nature. Man, the microcosm, is potentially Adam Cadmon, the heavenly man or microcosm. Man, therefore, as we know him in the present life, is a potency, a possibility, rather than an actuality. The actuality must be a Power, at one with its creative source, Divinity; otherwise there must eventuate two supreme powers and these antagonistic, which is an absurdity.

Man's present environment and narrow limitations hedge him about like a wall that he cannot overpass; and the more he dwells in his appetites and passions that spring from matter and belong to his animal ego the more closely press the walls about him.

Suppose we consider the planes of man's consciousness as the Spiritual (higher manas), Mental (lower manas), Sensuous (Kama rupa), and the Physical (prana or jiva). Every one is familiar with these planes by experience; hence they may serve to illustrate our subject.

Consciousness in man is derived from Mahat, the universal principle of cosmic intelligence; the foundation principle of all law, proportion, relation, number, form, etc. This principle is what Plato calls "the world of divine ideas". This is the *basis* of consciousness in man, and it is *diffused* throughout all the planes of consciousness in man; the spiritual, the mental, the sensuous, and the physical, as already named. While, therefore, Mahat is *the basis* of consciousness in man, it is not his self-consciousness *per se*. Something more is necessary, viz. a *laya center*. This laya center is the monad, the incarnating ego, that "dark nucleoli" whose impenetrable essence is a "spark" of the one absolute Life and Light. To and from this nucleole ebb and flow the tides of life, of feeling, of thought, and of desire. The under-lying principle, Mahat, gives to these ebbing and flowing tides rhythm, form, proportion; in other words, their Law of Action and modes of expression *potentially*. Their *actual* expression comes from man's desire, his *motive* of action. Through his diffused consciousness man senses, "tastes" experience of action on all the planes named, and from this varied experience he must *choose*. The laya-center holds the *light* to his understanding so that he is not left without a "witness".

Now while the Mahatic principle is diffused through all planes in man as it is diffused through all planes of nature, giving shape to his body as it gives form to the crystal and proportion to chemical compounds, this diffusion occurs in regular order and in concrete degree, because it is coupled with that "spark" of the one life which is the dark and impenetrable center of the "monad". It is the relation and interaction of this center and the Mahatic principle that constitutes *self-consciousness* in man. Each of the "planes of consciousness" in man is a field for the display of his *self-consciousness*, his *field of battle*, and on each plane the "light of the Logos", *i. e.* the radiance from the spark of divine life in the

heart of the monad, is *focalized*. There would thus arise a series of self-consciousnesses, so to say. Each plane, in other words, becomes a vehicle (Upadhi) for the light of the Logos. The Monad or real ego is alone self-existent. It alone *directly* receives the light of the Logos. The "planes" can receive the light only by reflection from the monad. The "planes" of consciousness, therefore, are not self-existent. They have no life of their own, so they receive no light of their own. It thus follows, logically, that if the monad containing the laya-center be separated, alienated, or destroyed, no further light can reach the planes thus separated from the "Father". Their dissolution would thus be only a question of time.

If now it can be shown by experience that a certain mode of life inspired by certain motives or desires tends to expand the laya-center and diffuse its light through all lower planes, and thus ministers to growth, expansion, and permanency, and that the opposite mode of life tends as inevitably to contraction, decay, and death, the consequent salvation or destruction of man's personal consciousness will have been shown to be a *matter of choice*. At every act called death, a separation of elements, and consequently of planes of consciousness, occurs. The physical and sensuous dissolve, leaving only the mental and spiritual, according to our classification of planes. If, therefore, the personal experience has been largely confined to these two lower planes, when the separation occurs at death such experience can have no conscious permanency. If the two higher planes, the spiritual and mental, have been dwarfed during earthly life from lack of use, and been starved by the encroachments of the lower planes, then, although they may accompany the monad into the next stage of existence, they cannot be supposed to convey or to retain the personal self-consciousness, *because they had none or so little to retain*. All of this pertains to the ordinary experience without considering the loss or final alienation of the soul, or

divine spark, the "monad". There can be no *memory* of experience on the physical and sensuous planes because they have no permanent vehicle or Upadhi.

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

From p. 184 to p. 192, Vol. I.)

THE IMPULSE OF EVOLUTION is found in the force of the spiritual breath. It is not to be supposed because "human monads" cease to come into this chain of globes that therefore there is no impulse. The term "human monad" means that *monad which having been through all lower experiences is fitted to inform the so-far perfected human body.*

MAN FIRST IN THE 4TH ROUND *p. 187.* The flow of human monads is at an end, except that those still incarcerated in the anthropoids have yet to come in. Full blown — or rather those that have been through all lower experiences — must proceed in their order through the strictly human evolution. The necessities of evolution demand this, and the turning point is reached in the fourth round which represents the square figure or number, and all monads in the lower kingdoms have to go on with the work of evolution in those until the next manvantara. At that time the monads now in human forms will have progressed beyond, thus leaving room for those below to come up higher.

OUR NATURES FROM WHAT. *p. 189.* In the note it is distinctly pointed out that the quotation from Shakespeare about our *natures* being marvellously mixed refers to the part which the Hierarchies of progressed souls throughout the system to which this globe belongs play in giving us our different combinations.

CORRESPONDENCE OF HUMAN EVOLUTION with the nebular evolution and condensation is to be found on these last lines of *p. 191*: "as the solid earth began by being a ball of liquid fire, of fiery dust, and its protophasmic phantom, so did man."

ORIGIN OF WHITE AND BLACK MAGIC. See note *on p. 192*, where it is stated that at the highest point of development of the Atlantean Race — the fourth — the separation into right and left-hand magic, or consciously good and evil thoughts, took place. Under the action of Karmic law and by the reincarnation over and over again of those engaged in these thoughts, the thoughts were preserved in the realm of mind in the double form of mental deposits and astral impressions. The mental deposits were brought back again and again to earth life, and the astral impressions affected all others who came under their influence. In this way not only were seeds sown in individual minds through their own thoughts, but a vast reservoir of good and bad impressions or pictures has been created in the ethereal medium about us by which sensitive persons are impelled to good and bad acts. And all repetitions of evil thoughts have added to the stock of evil thus remaining to affect and afflict mankind. But as the good also remains, the earnest friends of mankind are able to produce good effects and impressions which in their turn are added to the sum of good. There need be no feeling of injustice on the ground that sensitive persons are affected by evil pictures in the astral light, because such possibility of being thus impressed could not have arisen except through sympathetic attractions for them set up in former lives.

The Path

IS POVERTY BAD KARMA? — *William Brehon*

The question of what is good Karma and what bad has been usually considered by theosophists from a very worldly and selfish standpoint. The commercial element has entered into the calculation as to the result of merit and demerit. Eternal Justice, which is but another name for Karma, has been spoken of as awarding this or that state of life to the reincarnating ego solely as a mere balance of accounts in a ledger, with a payment in one case by way of reward and a judgment for debt in another by way of punishment.

It has been often thought that if a man be rich and well circumstanced it must follow that in his prior incarnation he was good although poor; and that if he now be in poverty the conclusion is that, when on earth before, his life was bad if rich. So it has come about that the sole test of good or bad Karma is one founded entirely upon his purse. But is poverty with all its miseries bad Karma? Does it follow, because a man is born in the lowest station in life, compelled always to live in the humblest way, often starving and hearing his wife and children cry out for food, that therefore he is suffering from bad Karma?

If we look at the question entirely from the plane of this one life, the personality, then of course what is disagreeable and painful in life may be said to be bad. But if we regard all conditions of life as experiences undergone by the ego for the purpose of development, then even poverty ceases to be "bad Karma". Strength comes only through trial and exercise. In poverty are some of the greatest tests for endurance, the best means for developing the strength of character which alone leads to greatness. These egos, then, whom we perceive around us

encased in bodies whose environment is so harsh that endurance is needed to sustain the struggle, are voluntarily, for all we know, going through that difficult school so as to acquire further deep experience and with it strength.

The old definition of what is good and what bad Karma is the best. That is: "Good Karma is that which is pleasing to Ishwara, and bad that which is displeasing to Ishwara." There is here but very little room for dispute as to poverty or wealth; for the test and measure are not according to our present evanescent human tastes and desires, but are removed to the judgment of the immortal self — Ishwara. The self may not wish for the pleasures of wealth, but seeing the necessity for discipline decides to assume life among mortals in that low station where endurance, patience, and strength may be acquired by experience. There is no other way to implant in the character the lessons of life.

It may then be asked if all poverty and low condition are good Karma? This we can answer, under the rule laid down, in the negative. Some such lives, indeed many of them, are bad Karma, displeasing to the immortal self imprisoned in the body, because they are not by deliberate choice, but the result of causes blindly set in motion in previous lives, sure to result in planting within the person the seeds of wickedness that must later be up rooted with painful effort. Under this canon, then, we would say that the masses of poor people who are not bad in nature are enduring oftener than not good Karma, because it is in the line of experience Ishwara has chosen, and that only those poor people who are wicked can be said to be suffering bad Karma, because they are doing and making that which is displeasing to the immortal self within.

ABOUT "SPIRIT" MANIFESTATION — *William Q. Judge*

SOME EVIDENCE FROM SPIRITUALISM.

An examination of the records of the past forty years of what is known as the spiritualistic movement discloses a strange state of things, revealing a blindness on the part of that unorganized body of people to the just and logical conclusions to be drawn from the vast mass of facts in their possession. They have been carried away wholly by the pleasures of wonder-seeking and ghost-hunting to such an extent that nearly all of them wish for and seek out only that which they are pleased to call the spirits of the departed. In a former article in this magazine this has been called "the worship of the dead"; and that it justly is.

It is not the worship of those who have died, such as the Hindu and other eastern nations have in their ceremonies for the spirits of the fathers, but it is the running after that which is really dead to all intents and purposes — corpses in fact. For these people stand on the brink of the grave and call for those who have passed away, who are still living in other states, who do not return; and in response to the cry the seekers are rewarded by the ghosts, the ghouls, the vampires, the senseless, wavering shapes, the useless images and reflections of human thoughts and acts of which the vast reservoir of the astral light is full. This and this alone is their worship. It is the seeking after dead images, senseless and conscienceless, moved by force alone and attracted solely by our passions and desires that give them a faint and fleeting vitality.

Yet from the remotest days of the past down to the present time the loudest and clearest warnings have been given against such practices. It is what was called necromancy in the old time,

prohibited in the Christian Bible and the pagan mysteries alike.

Moses, educated among the Egyptians, told his people that they must not run after these things, and the Hindus, warned by centuries of sorrow, long ago declared against it, so that today these so-called "spirits" are known to them as devils. The literature of the Theosophical Society is full of these warnings from the very first book issued by H. P. Blavatsky to this present article. But the spiritualists and their leaders, if they have any, persistently ignore not only the experience of the past but also the cautions now and then given by their own "spirits". For, as is well known to the thoughtful theosophist, mediums, being passive and open to any and every influence that may come their way, often do give out the knowledge in the possession of living men on these subjects.

Many times have learned living occultists entered into the sphere of mediums and compelled them to tell the truth, which has been sometimes recorded and preserved so that it may be inspected afterwards when found in the mass of their history as printed in their journals. To some of this I purpose to refer, for no spiritualist can say with propriety that the evidence given through their own mediums and purporting to come from the "spirit land" is not to be relied upon. If they reject any such testimony from mediums who have not been shown to be frauds, they must reject all. Enough has been given out by those who say they are controlled by spirits to prove the case made by the theosophists, or, at the least, to throw doubt upon the assertions of spiritualists about the summer land and the returning of spirits.

In October, 1887, beginning on the 13th, the *Religio-Philosophical Journal* began a series of interviews with a medium in Chicago in which questions were put to the control by the reporter of that

paper. This "control" was called Jim Nolan, and the medium was Mrs. M. J. Hollis Billing. Her reputation has never been assailed, nor has she ever been accused of lying or fraudulent practice. The place where the interviews took place was 24 Ogden Avenue.

The first question was whether Nolan understood the process of spirit materialization. He, replying from the "spirit world", said he did, and proceeded in substance thus:

"The electrical particles in a dark room are in a quiet condition; they are collected by us and laid upon one another until we have made an electrical form (still unseen). We then take magnetism from the medium or from the sitters in the circle and with it coat this electrical form. After that the form is used by the "spirit", who steps into it and uses it as a form."

This of course proves from the side of the spirits that no materialized form is the form of any spirit whatever, for certainly electrical and magnetic particles are not spiritual. Nolan then proceeds:

"Another way is this: We gather these particles to which I have referred, and, going into the astral light, we reflect upon them the face of some spirit and thus a reflected image of a spirit is seen. Or, again, we collect these particles into a sheet or plane surface, take chemicals from the atmosphere with which to coat them over, and then (at the request of the sitters) reflect upon this surface a face, and you see the features of the deceased or other person."

From this it follows inevitably that no real face of any spirit is seen, and as the images are taken from the astral light the whole thing is full of deception. At the request of the sitter the operating "spirit" finds in the astral light any desired face, and then goes through the form of reflecting it upon the prepared surface. Now

all of this on the part of Jim Nolan is very scientific, much more so than the mass of nonsense usually heard from "spirits", yet it has passed unnoticed because it is a deathblow out of their own camp to the claims of spiritualists that the dead return or that spirits can materialize, and raises up the horrid suspicion that they do not know, never can know, who or what it is that speaks and masquerades at their *seances* and behind the forms said to be materializations of spirits. It at once opens the door to the possibility that perhaps the theory of the theosophists is right, that these spirits are only shells of dead people and that nothing is heard from them except what may be found on the earth and in the earthly lives and thoughts of living people. But the second question was in regard to the identity of "spirits" among many materialized forms, and the reply was:

"It is very rarely in cases of materialization that over two or three forms are used for the whole number of reporting spirits. Really, what would be the use in building house after house for every one who wishes to go into it for some special purpose?" What use, truly, except to prove that spirits do come back in the way claimed by spiritualists? But what he says upsets the identity of any materialization. If two forms have been used by five or more spirits to show themselves in, it of course results that none of them have shown themselves at all, but that some force or intelligence outside the circle or inside the medium has done all the talking by means of access to the astral light where all the pictures and all the images are forever stored up.

Nolan. "The materialized form shown never belonged to the physical part of that spirit. It consists of chemical, electrical, and magnetic particles or elements from the atmosphere." At the sitting of October 27th in the same year he said:

"The Astral Light spoken of by ancient men is what we call

magnetic light. All the acts of life are *photographed in the astral light of each individual*; the astral light retains all those peculiar things which occur to you from day to day." And again, on the 12th of January, in reply to the sixth question, the same "spirit" said: "We gather these electrical particles together and with them form a house, as it were, into which we step; they are no more a part of the spirit than the chair on which you sit."

Nothing could be plainer than this. Out of the mouth of the "spirit" who has never been charged with being untruthful it is proved that the astral light exists, that it contains all images of all our acts and of ourselves, and that these images are reflected from that other side to this, and are mistakenly taken by the ghost hunter for the faces, the bodies, the acts, the speech of those who have gone the great journey. So, then, just as we have always contended, all these sittings with mediums and these materializations prove only the existence, powers, and functions of the astral light. As the frequenters of *seances* are not behind the scenes, they cannot say who it is or what it may be that operates to produce the phenomena exhibited. It may be good spirit or devil; more likely the latter. And therefore the great Roman Catholic Church has always insisted that its members should not run after these "spirits", accounting them devilish and asserting that all these powers and forces are under the charge of the fallen angels.

It is seldom, perhaps not once in a century of materializations, that a spirit such as that called Jim Nolan would be so foolish as to give out correct information as he has done in the sittings referred to; for the nature and habit of the elements who work at most of these *seances* is to bring about and continue delusion. But going a step farther, I say that in the case of Jim Nolan it was no "spirit" of dead man and no elemental that spoke and acted, but the spirit, soul, and intelligence of a living man who chose to take

the name of Nolan as being as good as any other, in order that the evidence might be recorded for the benefit of the spiritualists in their own camp and in their special investigations, of the truth of the matter, as an offset to the mass of stuff gathered by the elementals from the brains and confused thoughts of mediums and sitters alike. This evidence cannot be razed from the record, although so far it remains unnoticed. It must stand with all the rest. But while the rest will fall as not being in accord with reason, this will remain because it is the truth as far as it goes.

The Path

THE SOLIDARITY OF THE THEOSOPHICAL SOCIETY — *Alexander Fullerton*

The one-ness in any association must result from a common conviction enlivened by motive. Unless men have something in common they will not associate, and that something is what prompts the association. But mere abstract beliefs are inadequate to cause cohesion: only when they are vitalized by a purpose does magnetism set in.

Such is the genesis of all unions. A stock company expresses visibly the facts that certain individuals are convinced that a certain business department may be profitably exploited, and that they desire to secure the gain. A Public Library means that various citizens believe in literature as ennobling and wish to bring it within their own reach. A Charity Hospital presupposes that its founders felt unrelieved suffering to be an evil, and were anxious to aid in its cure. So in every other organization of units. There is first a belief, then a motive, then a combination to effectuate it.

It is obvious also that when either the belief clouds or the motive weakens, the association is abandoned. The stockholder sells out if he scents failure in his Company, the reader resigns from the Library when he has lost interest in books, the subscriber to the Hospital withholds his subscription as his philanthropy abates. Persuasion is hopeless unless the belief is restored or the motive revived.

The Theosophical Society exemplifies the facts exemplified in every other Society. Men do not enter it, any more than other bodies, without a reason, nor amalgamate with it without an impulse, nor remain in it when these expire. There must have

been some inducement to its formation, and the same inducement must recruit its membership.

As to mere condition to entrance, nothing could be simpler, — belief in the doctrine of Universal Brotherhood, beyond which there is no exaction. But this is an abstraction, not of itself prompting to membership. Even the wish to express it would alone hardly influence a man to join, he being already a member of the Universal Brotherhood, Humanity, and not particularly needing to say so. If he joins, it can only be because he has further convictions and desires to give them practical force. If we scrutinize the motion resulting in our own entrance into the Society — a surer disclosure than dry speculation, we shall find it, I think, in the assurance that some finer truth is contained in the term "Theosophy" than is discerned elsewhere and without, and in the wish to ascertain it for our own benefit and to promulgate it for that of others. Just what that truth may be, how many or how defined its departments, what its range or certainty or value; how strong the purpose to acquire it; how vigorous the desire to extend it; may as yet be indeterminate. But that Theosophy holds truth, that some portion of it commends itself to our intelligence and moral sense, that we crave further light and fuller action, — these seem the combined facts which moved us to seek admission.

Very varied are the degrees and nature of this primary experience. Sometimes it is little more than curiosity, weariness of unsatisfying systems suggesting that this novel field may promise better. Sometimes there is an instinctual grasp of the fact that a whole region of thought and motive, so decidedly a revelation to Western eyes and so evidenced from history and literature and physical marvels, *must* contain pearls of great price. Sometimes a particular doctrine instantly evokes assent as eminently rational in itself and as solving difficulties hitherto

hopeless, and the inference arises that a philosophy so satisfying on one point may be equally so on others. But whatever the amount of life in the germinal thought, the very slightest life produces interest, and the thought and the interest point to union with the Theosophical Society.

As a member identifies himself with the studies and the work of the Society, and in exact proportion as he does so, there come a light into his mind, an assurance into his heart, a transformation into his life. The spark spoken of in *Light on the Path* enlarges, swells into a gleam, a flame, warming and shining through every part of his being. His perplexities abate, his doubts dwindle, his perception becomes more acute, and his knowledge expands. Conscience softens, sympathy grows, intelligence strengthens. Life has a new meaning, a rich purpose, as the decaying notions of earlier days are supplanted by the now developing vitalities of a real Nature. If with steady hand he represses the habits which tie him down to animal routine, and if he encourages the higher nature to every flight, and if he consecrates his means to that great aim of spreading broadcast the truths which are saving him and may save the world, — thus living the life and dispensing it, he daily frees himself more and more from the limitations which distress and thwart, and revels in that sunny liberty which only they enjoy who are in harmony with the Universe and its Law. Theosophy has not only convinced him, it has emancipated him: the Society is more than an association, it is the almoner of blessings to a world.

There is, of course, a converse process. It is where the original interest has died down, the more tangible affairs around it displacing it, and so Theosophical thought fades away, Society meetings lose charm and are deserted, membership becomes distasteful and is silently dropped or formally repudiated. As the doctrine has no longer vitality, neither has the impulse to

promulgate it, and the lack of sympathy with the Society very properly leads to retirement from it.

The real cohesiveness of members, the magnetic force which draws them together and overcomes all tendencies to disunion, is the conviction of certain truths, coupled with the desire to extend them through the world. This is the case also with a Church. But a great distinction separates the two. The Theosophical Society does not hold to a collection of doctrines as revealed by God, but as ascertained by man with the powers God has given him; nor as transcending reason and to be received with unreasoning faith, but as demonstrated by reason and verified better as it enlarges; nor as remote from practical human life, but as exemplified throughout it and in every item of it. The Society does not missionize because ignorance of doctrine loses the favor of the Almighty, but because it imperils the well-being of men; nor does it attempt to proselyte or to threaten or to persuade, but only to make known that all may examine; nor even to make known as a perfunctory duty, but because it perceives that only through knowledge of the Laws of Life can life ever be corrected and made happy and progressive. It points out evil and the cure for evil precisely as a sanitary engineer expounds the conditions to healthy homes and bodies; not at all as a policeman who enforces an arbitrary proclamation from his Chief. Hence its spirit and its motive and its method have no ecclesiastical analogy, and it is as far from a Creed as it is from a Ritual.

This distinction made, the solidarity of the Theosophical Society is evidently in the tenacity with which its members hold to Theosophy, and the self-forgetful zeal with which they disseminate Theosophy abroad. Solidarity is not in numbers. Mere formal membership creates no strength, excites no effort, produces no result. Belief in Universal Brotherhood is a dead belief until it prompts exertion for the benefit of that

Brotherhood, and the exertion is aimless if it has no definite purpose, and fruitless if the purpose be unintelligent or ill-considered. Study of Aryan religions or psychic powers gives cohesion only so long as a student for selfish objects thinks he gains by union, and will never lead to large or generous altruism. If the members of the Society are to be welded into compact strength, a strength to withstand attack from without and dissension from within, it can only be as they are pervaded with the great warmth of a common conviction and a common mission. The conviction is that Theosophy is a truth, that it expresses the actual facts in the universe and the actual mode of man's spiritual advance, that as a philosophy and a religion it is not speculative but demonstrated. The mission is that this truth shall be so proclaimed that every ear may hear and every willing heart respond, that ignorance shall be everywhere dispelled and the way thrown open to intelligent choice, that no one shall continue in darkness and mistake and progressive misery through any causes but his own will. Such union is the counsel of our Elder Brethren. In the MSS. of an Adept it is written: "Have solidarity among yourselves like the fingers on one hand. Each member should strive to feel so towards the other". Filled with Theosophic doctrine and burning with Theosophic purpose, the members of the Society will have a solidarity no antagonisms can overcome; and as their own assurance deepens with larger knowledge and more copious experience, and as their consecration becomes more heartfelt, more intense, more unreserved, they will see in limitless measure the triumph which is as yet but partial, and rejoice that the treasure they have best valued by straining to dispense has become the delight of all humanity, the common patrimony of the Universal Brotherhood.

SOLIDARITY AT ANY COST — *Jasper Niemand*

The motto of the faithful student should be: "SOLIDARITY *at any cost.*"

For when in the impersonal he sinks the personal:

When to the union of the many he subordinates the limitations of the few:

When for the centralizing instinct of the personality, he substitutes the centrifugal intuition of the individuality:

When, with Thought fixed upon the homogeneity of all, he has forgotten the attractions of his separated mind:-

When, regarding his lodge as one body and his fellow students as each necessary to the functions of that body, he cares for the right thought and right action of each unit as if it were himself:

Then he has mounted the first step of that ladder which leads to the Eternal, and has entered upon the fulfilment of the saying:

"Tis from the bud of Renunciation of the Self that springeth the sweet fruit of final Liberation."

Learning thenceforward to look upon his lodge, not as a thing physical and separate, but as an entity existing in the spiritual world only by virtue of its perfect unity, he regards thought as the essential condition from which all right action and true Being proceed, and purifying his mind he realizes that as the real battleground whereupon he and his comrades must succeed or fail.

We Always Help — *Jasper Niemand*

"INGRATITUDE IS NOT ONE OF OUR FAULTS." WE ALWAYS HELP THOSE WHO HELP US. TACT, DISCRETION, AND ZEAL ARE MORE THAN EVER NEEDED. THE HUMBLEST WORKER IS SEEN AND HELPED. ∴

To a student theosophist, serving whenever and however he could, there came very recently — since the departure from this plane of H. P. Blavatsky — these words of highest cheer from that Master of whom H. P. B. was the reverent pupil. Attested by His real signature and seal, they are given here for the encouragement and support of all those who serve the Theosophical Society — and, through it, humanity — as best they can; given in the belief that it was not intended that the recipient should sequestrate or absorb them silently, but rather that he should understand them to be his only in the sense that he might share them with his comrades, that his was permitted to be the happy hand to pass them on as the common right, the universal benediction of one and all. The Divine only give to those who give. No greater cheer could well be vouchsafed to earnest workers than the assurances of which these sentences are full. Not a sincere helper, however obscure or insignificant in his own opinion, is outside the range of that watchful eye and helping hand. Not one, if he be sincere, fails to commend himself to the "gratitude" of the highest of the hierarchy thus far revealed to us. Every deed is noted; every aspiration fostered; every spiritual need perceived. If in some dark hour the true helper imagines himself forgotten, supposes his services to be slight in value or too frail for remembrance, these sentences reassure him in all their

pregnant significance; they send him on his arduous way refreshed and strengthened with the knowledge that he can "help" Those who help all. Nothing but ourselves can shut us away from Them. Our own deeds are our Saviors.

How, then, can we best help? Another and much beloved Master — He who first communicated with the western world through Mr. Sinnett — once wrote that there was "hardly a member unable to help" by correcting prevailing misconceptions of Theosophy and by clearly explaining its teachings to outsiders. There are comparatively few of our members yet able to do this, and reasoning along this line we see that the great want in the theosophic ranks today is

A THEOSOPHICAL EDUCATION.

At the present juncture the theosophical movement exhibits, both in England and the United States, an astonishing activity, a tenacious and all-embracing vitality. Never before in its history has numerical growth been so rapid: one hundred applicants in ten weeks in the dull season here, and four new branches already since the "death" of H. P. Blavatsky. The moment of depression upon the departure of our great Leader from the objective world was so brief as to be scarcely noticeable. Then, all at once, as if inspired by gratitude, by fidelity, by all the promptings of full and loyal hearts, the Society made a bound forward, impelled by the efforts of its individual members towards Solidarity and increased usefulness. The tide of popular opinion is turning. Press comment has become more favorable and more reasonable in the better newspapers; more virulent and extreme in the lower ones, sure sign of our steady — and to them irritating — advance. Each day a swifter momentum is discernible. And on all sides theosophists are found saying and writing, "What can I do for the Cause?" This question is put forward out of lives hampered by

care, limited in opportunity, wherein ease is scant and leisure brief, yet it comes so earnestly, so frequently, that reply must be made.

The pressing need of our Society today is a theosophical education, a sound grounding in theosophical teaching. Our members require clearer comprehension of theosophic truth. They lack, in large part, ability to explain the groundwork of the theosophic scheme in simple, direct language to inquirers. They are not able to give a terse, plain account of the faith that is in them, nor their reasons for holding it. Dazzled by the vastness of the universal plan which theosophic works reveal in glimpses only, they have not realized the desirability, the necessity, in fact, that they should be able to give a clear account of our belief, to themselves in first place, and afterward to others. The composite nature of man, for example, in itself so explanatory of the problems of life, they do not wholly grasp and cannot expound. They are vague, — and Theosophy is considered vague. They are tongue-tied, — and theosophical thought is believed to halt. Their shortenings are all attributed to Theosophy. Most of our students read discursively. Many are unable to present a few fundamental ideas to the understanding of the average man, who inquires or listens, on the trains, or on the streets, at the close of a hard day and with brains already weary with headwork, a man whose life of fevered haste and effort at money getting is so crowded that he has not ten minutes to give to eternal salvation itself, if it were offered to him, while he is often as unconscious as a child to the importance of his thought as affecting his future destiny. Nor can we dispel this unconsciousness, or arrest his attention, until we are able to set before him a few well-digested and apposite facts. Practical, applied Theosophy appeals to him. Basic truths he is ready to understand. He does not yet aspire, perhaps. His devotion slumbers; his mental need is stifled: but give him plain

facts, and he listens. The unity of Religion, the Law of Action and Reaction, the necessity for Reincarnation along the line of the persistence of Energy — here are things he will grasp, retain, augment, if they are explained in their bearings upon daily life and its inexplicable, haunting sadness and misery.

Here is a service more needed than any other, which any student can render. The study of the *Key to Theosophy*, as one studies a grammar, the mastery of some one given subject, followed by an effort to write it out, or to speak it, in one's own language for one's self only at first, would assist the student to fix the chief points in his own mind, as well as to express them clearly. A few moments of such study daily, even weekly, would be of immense use to all. We do not need to read so widely, to think so discursively, to have knowledge so profound, or to run so far afield after occult mysteries and laws. We do need, and that urgently, to simplify our thought, to express it lucidly, briefly; to clarify our knowledge *and to live what we know*.

The opportunity thus afforded for doing good is incalculable. All about us are persons straining at the tether of their creeds, eager to break away to pastures of living Truth. Before the great mysteries of Life they stand dumb as the brute, but with enlarged capacity for suffering; endowed with the reason which in the brute is lacking, but which in the man of today receives little support, scant sustenance from all that he has been taught heretofore. If such a man be met, at the critical moment, by a theosophist willing and able to explain and give reason for what he believes; to indicate the bearings of theosophical truths upon the mental, social, and other conditions of the present time; to point out the relations of Karma and Reincarnation to universal law as partly known to the average mind; the value of the service rendered thus becomes evident, the need of self-education among our members is perceived.

The subject must be studied as we study any other. One branch after another may be taken up, each being the object of meditation and reading until we can render a clear account of it to ourselves in our own words, illustrated by our own experience. It is better to know a little very thoroughly, and to frankly say that we know no more (which always placates an inquirer and inspires confidence in our sincerity), than to seek to impress others by the wide range of our thought. We may incite wonder but we shall not convince or aid. It may seem an insignificant path to point out when one says, "Educate yourselves." It is, in fact, an initial step which is also the final step, for it never ends. And if the enlargement of our own minds, the amplification and serenity of our thought, the clarification of the nature, the knowledge that we have helped others towards these priceless advantages were not sufficient reward for the faithful lover of his kind, reward for labor, inducement for further endeavor, then surely the greatest, the final incentive comes when he remembers that he can help Those who "build the wall" to protect humanity, that he may become Their co-laborer, himself a part of that living wall. The truest way to help is by clearly learning and clearly imparting theosophic truths. It is only done by not straining too far, by educating one's self gradually and thoroughly from the root up, with frequent trials of our own definiteness of idea. Classes may be formed wherein the members examine each other: there are many ways when the wish and will are strong. Hand in hand with this effort goes the higher Education. It is Patience. With Patience and knowledge he develops his full power of helpfulness; he becomes great by becoming a greater servant of his fellow-men.

"Life is a sheet of paper white
Whereon each one of us may write

This word or two — and then comes night.

Greatly begin! Though thou have time

But for a line, be that sublime:

Not failure, but low aim, is crime"

Duty is the proper use of the present hour. This calls upon us to train ourselves that we may come to the assistance of our fellows who founder in quagmires of thought, in the musty accumulations of centuries. If we would help them, we must show ourselves masters of our ideas and ourselves. There is a way to it: — that way is in steady self-education.

The Path

ARE WE DESERTED? — *William Q. Judge*

Following on the departure of H. P. B. from the scene of action, some weak voices in the Society have asked, "Have the Adepts deserted us?" This question has also come from those who are not weak in character, but who certainly do not understand very clearly what the Adepts are or how They work. And in the use of the term "Adept" are included also "Mahatmas", "Brothers", "Masters".

That these beings exist we have no manner of doubt, since for those who have studied in the right way plenty of proof has been offered; for others the proofs exist within themselves. The former class has had tangible evidence in the way of letters and appearances of the Adepts before their eyes; the latter long ago concluded that the Masters are necessities of evolution. Those who received proof palpable were those whose karma and past work entitled them to it; the others, having in previous lives gone through the experience and the argument, now quickly decided that, inasmuch as there are grades of intelligence and wisdom and power below ourselves, so there must beyond us be still other grades, all leading up, *ex necessitate rei*, to the Adept or Master of whatever degree.

Now in the Society's ranks there have always been three mental positions held in respect to the question whether or not the Adepts — once admitted as existing — have anything in particular to do with the Theosophical Society. These are, *first*, that they have; *second*, that they have not; *third*, sometimes doubt about it, at others surety that they have, — in fact, wavering.

Those who think that the T. S. movement is merely a natural development of thought cannot be affected by the present

discussion; the first and third classes are interested in the matter. To those it should at once occur that in the West the idea of the existence of the Adepts and of Their connection with our movement was first brought forward in this century and in our Society by H. P. Blavatsky, who, consistently throughout her career, has declared that the Adepts — whom she was pleased to call her Masters — directed her to engage in this work and have always helped and directed her throughout. That They should so direct her and then desert the Society she founded merely because her body came to its dissolution seems so illogical as to be unthinkable. Many persons have affirmed to the reception of messages in writing from the same Masters, in which They said that some of Their efforts were for the benefit of the T. S. Among these persons we may mention Mr. A. P. Sinnett, who has never abandoned that position, and who today possesses a great number of such letters. Why should the unseen founders withdraw Their help when the work of the Society has but just begun to have its due effect upon the age? There seems to be no reasonable reply.

Once that we admit the existence of the Adepts and that They have adopted the T. S. as one of Their agents in this century for disseminating the truth about man and nature, we are bound to suppose that ordinary common-sense rules would govern as to the continuance of help or its withdrawal. Now one of the most obvious conclusions is that the Society should not be deserted until it had accomplished its mission or had utterly failed. Sixteen years of steady work show an enormous effect produced upon the thought of America, Europe, and Asia; but that portion of the work has been in the line of fighting against odds and breaking down of opposition, with a beginning in this sixteenth year of an interest in the doctrines brought to the attention of the West by the efforts of our members. From that we must, as reasonable and

foresighted beings, deduce the necessity for continuance of assistance. It is plain that our work of clear promulgation and wise building-up is still before us. Why then should the Adepts desert us? Still no reasonable reply can be found.

But considering what we know of the motives and methods held and pursued by the Adepts, we cannot for a moment suppose our real founders and constant helpers could yet leave us to fight alone. In letters and messages from Them we read that Their motive is to help the moral — and hence external — progress of humanity, and Their methods to work from *behind the scenes* by means of agents suited for the work. Those letters and messages also say that the agency is not restricted to one person, but that all sincere lovers of truth are used to that end, whether they know of it or not. The departure of H. P. B. does not remove the other sincere lovers of truth from the scene, nor does it prevent the Adepts from sending messages if needed. Such messages have been received before H. P. B's departure by persons in no way connected with her, and have since that sad event also come to encourage those who are entitled to such encouragement. The contents of these are not for the public, nor indeed for any one save those to whom they have come.

Yet even if no such messages had been received, there is ample evidence, for those who are not blind, of the help of the Masters. For, as They said long ago that the work would be helped, so it has been; no other reason can be given for the increase of the work in America, since the personal effort put forth by the members will not account for the spreading of the movement. And now let it stand as a prophecy made in the messages spoken of, that in the kingdom of Great Britain and in Europe there will in five years be seen a similar spreading of Theosophy. Let no one of us, then, be in any way cast down. As the Masters exist, so They help us; and as we deserve, so will They repay.

The Path

A HISTORICAL PARALLEL — *Rev. W. E. Copeland*

A comparison between the Christian Church during the first sixteen years of its existence and the Theosophical Society during the same period of its existence, with special reference also to the next five or ten years in each case, may bring some encouragement to those who feel that the death of Madame Blavatsky has taken the life out of the Theosophical Society.

During the first sixteen years of the Christian Church, including in that period the three years during which tradition reports that Jesus was with his disciples, the progress was slow; a few churches were formed in Asia Minor, and that was all. Twenty or thirty churches, whose membership was largely confined to the least influential people in the large cities, was all that could be shown as the fruit of much earnest work. These churches were established among people all speaking the same language and living the same lives. They were all to be found in a territory not much larger than one of the great Western States of this Republic. No one outside the membership knew much about them, and they had absolutely no influence in moulding the thought of the communities in which they were established. Their place of meeting was concealed from the public gaze. No more unpromising beginning for a great religion could well be imagined.

Consider now what has been done in Theosophy since Madame Blavatsky organized the Society in New York in 1875, just sixteen years ago. There is no civilized nation on the earth where there is not a branch of this society. In the New World and in the Old, among Buddhists, Brahmins, Parsees, Mahomedans, and Jews, as well as among Christians, it has been established. The movement

in America keeps pace with the movement among the people of India. It has succeeded in doing what Christianity in 1800 years has not done; it has organized a Universal Brotherhood into which come people of every nationality and of every religion. It has overstepped the caste distinctions of India, which have heretofore absolutely separated one caste from another.

Theosophy has taken hold of people of all degrees of intelligence, and many of the most brilliant thinkers of the world have enrolled themselves as members. In sixteen years theosophy has reached a place which Christianity had not attained in six hundred years, partly, of course, in consequence of the modern means of rapid communication and of rapid diffusion of knowledge.

Not only are these Branches of the Theosophical Society established in all parts of the earth, but true truths which make the value of the Wisdom Religion have modified the thought of the world. Newspapers and magazines devote columns to Theosophy; writers of fiction base their novels on Theosophical truths; even the priests of different religions, slowest of all to be affected by new truth, are profoundly influenced by Theosophical thought. Reports of Theosophical meetings find a welcome in the great dailies of Europe and America. There has been through the effect of Theosophic thought a great reaction from that gross materialism into which the so-called civilized nations were sinking deeper every year. Science has been compelled to modify some of her most positive affirmations, and ideas received from the Wisdom Religion are now not only tolerated but welcomed by teachers of Science who once taught only materialism. Theosophy has compelled the thoughtful people of Asia, Europe, and America to consider its claims and give a fair discussion to its prominent doctrines. All this, indeed, largely through the wonderful genius of Madame Blavatsky. That genius can work for us no longer, but

what has been gained through her prodigious efforts and marvellous self-denial will never be lost.

When Jesus died it seemed to the little band of Christians that all was over, that the seed which their loved Master had planted was doomed to die without bringing forth a single flower. But the reverse proved to be the fact. While Jesus lived the disciples leaned upon him, they did no thinking for themselves, they were content to listen to his ever new expositions of truth. After his death, when they were awakened to the value of the truth which he had entrusted to their charge, they began to think for themselves, and there appeared a missionary zeal which would content itself with nothing less than the conversion of the world. Timid Galilean fishermen became all at once bold proclaimers of the truth; men of no education enthused by the truth which had been given them travelled and preached and organized. While Jesus lived, the truths of Christianity were confined to the disciples and the small audiences which Jesus addressed. After his death these truths were promulgated to the world at large, and were listened to by people in various parts of Asia Minor and along the Mediterranean.

Now with the departure of the founder of the Theosophical Society will come a similar experience to the members of that Society. The truths of Theosophy are identical with the truths of Christianity as taught by Jesus, which were the same as had given life and power to the religions before the time of Jesus. These truths will arouse among all members an enthusiasm such as prevailed among the early Christians. No longer able to depend on the chosen instrument of those who know, Theosophists must depend upon themselves, and, devoting more time to study and contemplation, they will make rapid progress, and there will soon be quite a body of men and women able to assume the office of teacher. Even should we have no additions to the truth already

received, we shall digest that truth and make it such a part of our lives that, truth-inspired, we shall be able to do a work impossible to perform while we were always in the expectant attitude waiting for something more from our leader.

Judging from what was accomplished by Christianity in the ten years following the death of Jesus, we may expect a prodigious advance in Theosophy and nothing less than the conquest of the intellectual world, nay more, of the whole world, whether intellectual or not. When we see what has already been done, and note what progress the truths of Christianity, the same as the truths of Theosophy, made after the teacher had gone from among his pupils, we may look for a genuine conversion of the world; and what seems to many an injury will prove the greatest of blessings.

The Path

THE ALLEGORY OF THE CUP — *Katharine Hillard*

When Rabelais' hero, Pantagruel, has completed the long and toilsome voyage of discovery that he makes for the benefit of his friend Panurge, the two arrive at last at the shrine of the Divine Bottle, to which they are guided by the illustrious Lantern, emblem of the light of Truth. The whole description of their progress through the underground region in which the temple they seek is built, is full of the symbolism of initiation, through whose manifold tests the travellers are obliged to pass. The mystical seven planets, with their appropriate jewels and metals, are represented here, and the twelve signs of the zodiac, with other astronomical figures, are painted upon the dome over the fountain, which is itself shaped like a heptagon within a perfect circle. From this temple the neophyte, specially arrayed for the ceremony, is conducted to the inner shrine, a round chapel built of transparent stone of richest workmanship. Within it is another seven-angled fountain, in the midst of which stands the Divine Bottle, a pure, oval crystal. The hymn of invocation having been sung, the oracle pronounces the one word "DRINK!"

And the priestess dismisses the seekers with these words: "Here below, in these circumcentral regions, we establish as the sovereign good, not to take and receive, but to impart and give; and we reckon ourselves happy, not in taking much of others' goods, but in imparting and giving of our own to our fellows. Go, friends, in the protection of that intellectual sphere of which the centre is everywhere and the circumference nowhere, that we call God. All philosophers and ancient sages, the more surely and pleasantly to accomplish the road of divine knowledge and the pursuit of wisdom, have esteemed two things necessary — the guidance of God and the love of mankind. Now go, in the name of

God, and may He be your guide!"

It is easy to see the identity of this Divine Bottle with the sacred cup or consecrated drink of all nations. The Greek and Roman gods drank from the cup of Hebe or Ganymede (two personifications of the same idea), and the priestesses of their oracles also drank deep draughts of the sacred beverage before they prophesied, as in India the Soma juice still inspires the Brahmin at the altar. In the second Book of Esdras, ch. XIV, Esdras is commanded by a vision to re-write the burnt books of the law, and to prepare him for the task he is told by the Voice, "Open thy mouth, and drink that I give thee to drink." "Then opened I my mouth," says Esdras, "and behold, he reached me a full cup, which was full as it were with water, but the color of it was like fire. And I took it and drank: and when I had drunk of it, my heart uttered understanding, and wisdom grew in my breast, for my spirit strengthened my memory."

In the 2nd volume of *Isis*, p. 560, we are told that in the sacred rites of Bacchus (from which the ceremony of the Eucharist was derived) the hierophant-initiator presented symbolically before the final *revelation* wine and bread to the candidate, who partook of both in token that the spirit was to quicken matter, that is, that the divine *Wisdom* was to be revealed to him. And in a note to p. 228, Vol. I, of the *Secret Doctrine*, we read that "Soma is with the Hindus the father, albeit illegitimate, of Buddha Wisdom," that is, that occult knowledge comes from a thorough understanding of lunar mysteries, or, taking Soma as the sacred beverage, that wisdom, "albeit illegitimate," follows the drinking of it.

With the ceremony of the Eucharist and its sacred vessels is closely connected the symbolism of the Holy Grail, the principal *motif* in the legends of King Arthur.

The stories of the Holy Grail are all to be traced back to the legend

of St. Joseph of Arimathea, who was said to have brought to Britain from the Holy Land the sacred vessel of the Last Supper. In the French prose romance of the *Saint Grail*, it is said that St. Joseph, having obtained leave from Pilate to take down the body of Jesus from the cross, first went to that upper room where the Last Supper was held, and found there the shallow bowl from which Christ was said to have eaten the paschal lamb with his disciples. And into this cup, as the body was lowered from the cross, fell many drops of blood from the still open wounds. "According to Catholic theology, where the body or the blood of Christ is," (points out Mr. Thomas Arnold)," there, by virtue of the hypostatic union, are His soul and His divinity." The Grail therefore becomes a divine marvel and mystery, a worker of miracles and wonders. By the Grail, St. Joseph's life was sustained in prison for forty-two years without food, and from it he imbibed also the food of spiritual wisdom. Wherever we find the symbol of the bowl, the bottle, or the cup, the idea, is expressed or implied of divine wisdom as its contents. So in Hermes Trismegistus, as translated into French by Menaro, we read: "God did not create all men with Intuition, because he wished to establish it in the midst of the souls of men as a prize to strive for. He filled a great bowl with it, and sent it by a messenger, ordering him to cry to the hearts of men: 'Baptise ye, ye who can, in this bowl; ye who believe that you will return to Him who has sent it, ye who know wherefore you are born!' And those who answered the call, and were baptised in this Intuition, these possess the *Gnosis*, and have become the initiated of the Spirit, the perfect men. Those who did not understand the call possess reason but not Intuition, and know not wherefore and by whom they were formed. Composed alone of passions and desires, they do not admire that which is worthy to be contemplated, but give themselves up to the pleasures and appetites of the body, and believe that this is the end of man. But those who have received

the gift of God, judging by their works, O Tat, are immortal, and no longer mortal. They embrace, by intuition, all that is in the earth and in the heavens, and all that there may be above the heavens. Disdaining all things corporeal and incorporeal, they aspire towards the One and the Only. This is the wisdom of the Spirit, to contemplate Divine things, and to know God. This is the blessing of the Divine Bowl."

Sometimes the symbol of the *cup* is transmuted into that of the *well* or *the fountain*. In a note to p. 551 of *Isis Unveiled*, V. II, H. P. B. says: "The 'well,' in the kabalistic sense, is the mysterious emblem of the Secret Doctrine." "If any man thirst, let him come unto me and drink," says Jesus (John vii, 38), and therefore Moses, the adept, is represented sitting by a *well*, to which the *seven* daughters of the Priest of Midian come for water. And in the story of the woman of Samaria Jesus sat by a well, and used it as the symbol of spiritual wisdom. "Whosoever drinketh of this water shall thirst again," said Jesus, "but whosoever drinketh of the water that I shall give him shall never thirst; but the water that I shall give him shall be in him a well of water, springing up into everlasting life." (John iv, 13-14.)

As the fountain of Moses had seven priestesses, the fountain of Rabelais seven angles, so the mystic fountain of Boccaccio (in the *Ameto*) is surrounded by seven nymphs, for "Wisdom has rested her house upon *seven* pillars." Prov. ix, 1.

When we come down from the symbolism of the Middle Ages to that of modern times, we find the story of the Holy Grail most beautifully retold by Tennyson. If he has omitted the incident of the drops of blood that fell from the figure upon the cross into the Cup, he has restored another point in the old legends of King Arthur quite as significant, the story of the "Siege perilous" of Merlin, that magic chair that always stood vacant, for Merlin had

declared that therein

"No man could sit but he should lose himself."

But Sir Galahad, the maiden knight, burning with desire to find the Holy Grail, caught the true meaning of the oracle, and crying "If I lose myself, I save myself!", sat down in Merlin's chair.

"And all at once, as there we sat, we heard
A cracking and a riving of the roofs,
And rending, and a blast, and overhead
Thunder, and in the thunder was a cry.
And in the blast there smote along the hall
A beam of light seven times more clear than day:
And down the long beam stole the Holy Grail
All over covered with a luminous cloud,
And none might see who bare it, and it past.
But every knight beheld his fellow's face
As in a glory,"

and then it was that all the knights present swore a vow to ride for a year and a day in search of the Holy Grail, because they had seen not itself, but only the cloud that covered it. But Sir Galahad, having "lost himself, to save himself", had seen the Holy Grail descend upon the shrine, and move before him like a blood-red star, to guide his steps. Sir Percival comes up with him as he is nearing the end of his quest, and Sir Galahad bids his friend come with him to watch his departure to the spiritual city. And Sir Percival went, and saw, stretching out across a great morass, an ancient way

"Where, link'd with many a bridge,
A thousand piers ran into the great Sea.
And Galahad fled along them bridge by bridge.
And every bridge as quickly as he crost

Sprang into fire and vanish'd, tho' I yearned
To follow; and thrice above him all the heavens
Opened and blazed with thunder such as seemed
Shoutings of all the sons of God: and first
At once I saw him far on the great Sea,
In silver-shining armor starry-clear;
And o'er his head the holy vessel hung
Clothed in white samite or a luminous cloud.
And with exceeding swiftness ran the boat,
If boat it were — I saw not whence it came.
And then the heavens opened and blazed again
Roaring, I saw him like a silver star —
And had he set the sail, or had the boat
Become a living creature clad with wings?
And o'er his head the Holy Vessel hung
Redder than any rose, a joy to me,
For now I knew the veil had been withdrawn.
Then in a moment when they blazed again
Opening, I saw the least of little stars
Down on the waste, and straight beyond the star
I saw the spiritual city and all her spires
And gateways, in a glory like one pearl —
No larger, tho' the goal of all the saints —
Strike from the sea: and from the star there shot
A rose-red sparkle to the city, and there
Dwelt, and I knew it was the Holy Grail,
Which never eyes on earth again shall see."

In *Lucifer*, for Oct., 1888, Mr. Ashton Ellis had a fine article on the *Parsifal* of Wagner, whose hero is identical with Tennyson's Sir Percival. Speaking of the Holy Grail, Mr. Ellis says: "Is not this the Divine Wisdom of the ages, the *theosophia* which has been ever jealously-guarded by bands of brothers, and to which, in the

words of the drama, there leads no path, nor can any one find it unless it guide his footsteps?" (as Sir Galahad was guided). . . "Sought by no earthly paths, found by no course of learned study, set in a spot whence Time and Space have fled away, this is the eternal well of changeless truth." And as Mr. Ellis points out, "when the spirit of Love and divine Compassion has conquered the world, then the command shall be 'Unveil the Grail, open the shrine!'"

And so we come back to the teachings of that great, but grossly-misinterpreted soul, Rabelais, to find that his priestess also declares that the two things necessary to the pursuit of Divine Wisdom are the guidance of God and the love of man. The oracle of the Divine Bottle has but one word to say to the listening soul, — "Drink!"; but is not this one word equivalent to the saying of Jesus, "If any man thirst, let him come unto me and drink"? Both oracles imply the same thing, an effort on the part of the applicant. The water of Wisdom is to be had for the asking; but that "asking" is not a mere formula; it is labor as well as prayer. "To reach Nirvana one must reach self knowledge," says the *Voice of the Silence*, "and self-knowledge is the child of loving deeds." Before a man can become a vessel of honor fit for the Master's use, he must have purified himself from all sin, and then the Divine Wisdom will fill his soul.

In studying the words of the seers upon the subject of Intuition, or Spiritual Wisdom, we must remember that the spirit has to do with things of the spirit, not with the concerns of every-day life. When Rabelais' hero first set out in search of the oracle, the question upon his lips related only to the advisability of marriage, but to such queries the oracle gave no response. When Laurence Oliphant felt that "intuition" bade him follow another man as a god, he mistook the nature of intuition, which is not active upon this plane and could take no cognisance of individuals. That is the

property of *instinct*, and is but an extension of that faculty of the animal soul that we see developed to such an extent in the likes and dislikes of dogs, for instance. Give to Caesar the things which are Caesar's; do not expect the Divine Spirit to do your fortune-telling, or to direct your daily comings and goings.

There is another source of confusion, sometimes, in the fact that wisdom, or intuition, is spoken of in both an active and a passive sense, as a process and as the result of that process. So we may think of intuition as the clear light that shines in upon the soul and enables us to see truth, or we may think of it as the sense of vision by which we apprehend that truth. In the teachings of theosophy we speak of *Buddhi* as a passive principle, the vehicle of Atma, or as an active principle whose vehicle is Manas. All depends upon the point of view; upon whether we begin at the top or at the bottom of the scale. But though, in thinking of the prism, we may think of the yellow as following the green or preceding the orange, we cannot place it between the violet and the red. Instinct may guide the reason, but intuition enlightens the soul. For intuition is one with that Wisdom which is "privy to the mysteries of the Knowledge of God," and "in all ages entering into holy souls, she maketh them friends of God and prophets."

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 192 to p. 200, Vol. I)

THE ASTRAL LIGHT is not in its nature truth revealing or "good". *Note 2, p. 197.* "It stands in the same relation to Akasa and *Anima Mundi* as Satan stands to the Deity. They are one and the same thing *seen from two aspects.*" It may be said that the astral light is the next step above material concerns. It is the first field into which the seer steps in his progress, but it is dangerous because misleading, and misleading because it reverses all things, as well as being the chief reservoir for the bad or material deeds and thoughts of men. Because it is strange, new, and extraordinary, it influences those who see in it, since it presents images of a weird character, and just from its newness and vividness those who see in it are apt to consider it to be of consequence. It is to be studied but not depended upon. Somewhat as the brain has to accustom itself to the reversed image on the retina — turning it straight by effort — so the inner senses have to become accustomed to the reversals made by the Astral Light.

THE FALL INTO GENERATION is explained from p. 192 to p. 198, *Stanza VI.* Necessarily this raises the question "Why any fall whatever?" The author says: "It was the Fall of Spirit into generation, not the fall of mortal man." Hence, if this be true, man has not fallen, but is, for this period of evolution, on the way upward. Spirit in order "to become self-conscious must pass through every cycle of being culminating in its highest point on earth in man. * * It is an unconscious negative abstraction. Its purity is inherent, not acquired by merit; hence, to become the highest Dhyān Chohan it is necessary for each Ego to attain to full self-consciousness as a human, that is, a conscious, being — Man." (192-193) So the

question, why any fall if it was pure originally, is based on the assumption that to remain in a state of unconscious abstraction is better. This cannot, however, be so. When a period of evolution begins, with spirit at one end of the pole and matter at the other, it is absolutely necessary for spirit to proceed through experience in matter in order that self-consciousness may be acquired. It is a "fall" into matter so far as the fact is concerned, but so far as the result and the object in view it is neither fall nor rise, but the carrying out of the immutable law of the nature of spirit and matter. We ignorantly call it a fall or a curse, because our lower consciousness does not see the great sweep of the cycles nor apprehend the mighty purpose entertained. Following the lines of the philosophy elsewhere laid down, we see that at the close of each grand period of evolution some Egos will have failed to attain the goal, and thus some spirit — if we may say — is left over to be again at a new period differentiated into Egos who shall, helped by Egos of the past now become Dhyān Chohans, once more struggle upward. Such is the immense and unending struggle.

STATES AND PLANES OF CONSCIOUSNESS in Kosmos and Man. *p. 199, 2nd and 3rd paras.* It is here stated that of the seven planes of consciousness three are above the entire chain of globes to which the earth belongs, and that the earth is in the lowest of the lower four. But in man, as said here, there are seven *states* of consciousness which correspond to these seven *cosmical planes*. He is to "attune the three higher states in himself to the three higher planes in Kosmos." Necessarily he must have in him centres or seats of energy correspondingly, and, as the author points out, he must awaken those seats to activity, to life, before he can attune them to the higher planes. They are dormant, asleep as it were.

FIRST AND SEVENTH GLOBES of the chain are in the Archetypal plane. *Page 200, note to diagram.* That is, that on the first globe of the chain — A — the whole model of the succeeding globes is made or laid down, and upon that evolution proceeds up to the 7th, where, all having reached the highest stage of perfection after seven rounds, the complete model is fully realized. This is distinctly hinted in the note, for she says: "not the world as it existed in mind of the Deity, but a world made as a first model to be followed and improved upon by the worlds which succeed it physically — though deteriorating in purity." The reader will remember that in another place it is plainly said that on Globe A man appears, but that in the second round the process changes. If we assume, as we must, conscious Beings at work in the scheme of evolution, they have to create the mental model, as it were, of the whole planetary chain, and this has to be done at the time of the first globe. The plan is impressed on all the atoms or particles which are to take part in the evolution, and is preserved intact in that plane. The seventh globe is the receiver of the entire result of evolution in each round, and transfers it once more to Globe A, where it proceeds as before, and again the whole mass of evolving beings is impressed with the original plan. This is repeated for every round.

THE THREE HIGHER PLANES OF CONSCIOUSNESS spoken of in *second note to diagram on page 200* as being inaccessible to human consciousness as yet, does not involve a contradiction. For the attuning of our three higher *states* of consciousness to the three higher *planes* is possible, although attainment to those planes is impossible for ordinary human consciousness. The attempt has to be made so as to come into harmony in ourselves with those planes, so that the potentialities may be made active and development of new faculties made possible.

The Path

LOVE — *E. T. S.*

It is to those who show dislike to us that we must make constant effort in sympathy, patience, and self-sacrifice. Towards all those who love us these things flow from us spontaneously; they are the natural return for what we receive. Yet in their case also constant effort must be made to excel all our previous experiences in unselfishness.

These highest standards attainable by us, with those who love and trust us, and whom we in our turn can love and trust, become bright beacons, guiding us in our efforts towards attaining the same attitude to all mankind.

There is no limit to love; that is to say, the divine, unselfish love which we may have for our fellows: its intensity towards one does not limit it in regard to another; rather does this fervor stimulate us to further effort to stand in this high regard towards as many of our fellow creatures as possible.

And this also is the test whereby we may know divine from human affection; the former has no jealousies, no exclusiveness; its intensity towards one individual, *whether of the same or opposite sex*, does not draw off attention from our constant duty in seeking the weal of all other persons with whom we may come in contact.

In him who is lighted with this divine love we do not find the one theme, the one form, constantly in mind, and causing abstraction from other surroundings which should also claim the attention, but it burns deeply and calmly, is ruffled by no anxieties, questions not whether it is returned by the one or many upon whom it is bestowed: takes ingratitude or deep appreciation with

equal satisfaction. It is complete in itself, and is its own perfect reward to him who knows it.

We often deceive ourselves in this love towards individuals, mistaking the human for the divine; we have to sit aside with ourselves and answer many searching questions before we can know ourselves upon this point. The more especially is this a danger where the person in question may be of the opposite sex. There the self-deception is deepest. What true human lover but falls under the marvellous glamour of believing that the object of his devotion is partly divine, and in some direction is exalted above all other women!

Apart from the fascination of sex, where this factor has not to be considered at all, we have to ask ourselves whether it is not with some special cast of mind, even of feature and expression, with which we are in love, which conforming with our ideal earns our admiration and devotion. Or whether, again, it is not because we have received some strong proof of the individual's interest in *us*, and which thus stimulates to a return; or again, through having been able to help, have we not raised feelings of affection and gratitude within that person, which finding and liking we again reciprocate.

The combinations are endless, and these are but elementary studies in regard to the question — Towards whom, of all those we meet, do we express a love which is wholly unselfish and divine?

We shall probably find that to no individual do we hold a love which is unalloyed, but that it has always something of the human element in it, and this signifies a selfish element. It is a sad discovery to make, yet we surely find this if we sink deep enough into ourselves. It is a discovery which when proclaimed makes many people, who think on the surface, very indignant.

Human love being founded upon selfishness, upon possession, upon exclusiveness, is the exact reverse of the divine element: hence it follows that the transmutation of human into divine love is a long work.

It is *the* work of humanity.

The road from one to the other of these opposites in love is covered with snares and pitfalls, with sophistries of the most subtle kind, and few there are who discern them. Innumerable have been the earnest men, founders often of sects which had much of good in them, who have come to grief themselves and led astray their followers upon this point.

Calm and critical indeed must be the mind which delving down into itself can separate the wheat from the chaff, the divine selfless love from the human and selfish.

The Path

LOSS OF THE SOUL: IV — *Harij*

(Concluded from June No.)

What is meant, then, by the loss of the soul is the alienation of that "mediator", that *Upadhi* or vehicle which stands between our personal consciousness and the divine source of all life. This vehicle, we may say, is only lent us. It is our priceless birthright, our "pearl of great price". It becomes ours only as we become merged in it and at one with it. It suffers no decay, undergoes no deterioration, cannot possibly be degraded, but it can be separated from us. We may lose it. The process by which this may be brought about is one of slow deliberate suicide, and while it may have begun long ago it may be completed during the present life, or it may have been completed during a previous existence, and the remnant, after the separation, may have been re-born "soulless" in the present life. This soulless condition does not preclude a large degree of intelligence, we are told; for *manas*, though originally derived from the higher vehicle, manifests only its lower aspect, as shrewdness, cunning, and particularly that lower intelligence that manifests as *self-interest*. The original source of this *lower manas* is a reflection from the higher *manas*, as that is a reflection of *Buddhi*, and that again of *Atman*, or the divine spark. The most potent mark of this soulless condition is supreme selfishness, with utter disregard of the rights or the suffering of others, for as we approach the higher planes their characteristic sign is gentleness and consideration for others. "The Buddha of compassion" is he who has attained full consciousness in the higher *manas*, and upon whom *Buddhi* shines (*Augoeides*) in full light and glory. (*Augoeides* = shining brightness.)

If the life experience of the individual is a progression in selfishness, rapacity, and cruelty, that person is engulfed in a maelstrom of destruction. He cannot possibly injure anyone so much as he is injuring himself. He may, indeed, cause pain and suffering beyond all expression, but even this is of brief duration and may in the end serve a beneficent purpose to his victim. Furthermore, his evil deeds may become an *embodied evil* before the final separation occurs. He may give form and impulse to certain elementals, they furnishing the substance, and he thus invokes a demon indeed; and yet one largely attached to himself, its creator. This is the "Dweller of the threshold", the antithesis of his *Augoeides*, the reflection and embodiment of his own evil deeds in the mirror of Isis, the astral light.

How strange that these plain truths could ever have been so obscured, and the soul-paralyzing dogma of vicarious atonement and the forgiveness of sin put in their place.

"There is a fountain filled with blood
Drawn from Emanuel's veins;
And sinners plunged beneath that flood
Lose all their guilty stains."

What is this but the lullaby of destruction, when we are plainly told that we must "work out our own salvation with fear and trembling"? No spasm of sensuous emotion that leaves innate selfishness unrebuked and heartless cruelty unredeemed can be anything but blinding, paralyzing, and destructive to man. And yet how many hard-hearted, selfish old sinners have gone into ecstasies over that old hymn!

It is high time that this terrible truth should be understood. The mission of Jesus sinks into a shameless farce if *Christos* be either ignored or denied. *Christos* is Buddhi-manas, the altruistic motive and consciousness of man united with the Father *Atman*. Yet this

very altruism has been degraded into a mere sentiment, and people have wept over the sufferings of Jesus who had no compassion for their fellowmen. These sentimentalists have passed as they have posed for "Orthodox Christians", and do still, if they be only rich and observe a fair degree of the "proprieties". If the earnest Christian clergyman really desires to know why people shun the churches and why "sinners" remain "unconverted", here is the reason. The longer they shut their eyes to these plain truths the more the churches go to pieces, and presently it will be too late to recover the lost ground. Nothing would so help these real Christians to bring the church back to its pristine purity and really saving power as the truths of Theosophy, and yet there is nothing in which they seemingly have less interest. Very well; the issues are drawn, and the Eternal Truth is no respecter of persons. The new age is marching on with the strides of a mighty giant, and the effort to instill into the measure a little of the old leaven is not in vain. The seed has been planted, and not all on stony ground, and when the crash comes and the churches tumble the seed will have grown into a tree, and many a weary bird will fold its wings in its branches. The church mummeries may vie with mammon and materialism to crush out the higher life of the soul, and yet it shall not altogether die.

Nowhere in the world today except in the doctrines of Theosophy is the real nature of man taught, so that his origin, his destiny, and the principles that determine his weal or woe may be apprehended. When, in answer to the question "Is the soul of man immortal?", the reply has been made "*That depends*", people have often turned away solacing themselves with the sophistry, "God is so good that he would not create any soul for destruction". Neither has he. But when the composite nature of man becomes fully apprehended, and a more definite and rational meaning is applied to the word "Soul", the question narrows itself down. Will

I, John Smith, preserve in after life the consciousness of my present personality? That depends on whether the said John Smith exercises his consciousness and employs his powers in those elements or on those planes of his complex being that have in themselves any permanency, or whether they are exercised only in the things that perish. It is not a question of sentiment, but a question of *fact*, easily deduced by philosophy and justified by analogy. If man lives solely in his body, and his body perishes, so perishes also the consciousness of that man. The monad may be again incarnated, or it may be so separated from its former associations as to begin again in the sub-human planes the long ascent toward human self-consciousness. The theosophical doctrines alone show in what sense and to what extent man is his own creator and his own savior, and equally his own destroyer. These doctrines are not the sole property of the present T. S., nor did they originate with its organization. This is what our Teacher, H. P. B., has been asserting from the beginning. They are old as the world, and have been lost to and recovered by the world again and again. In these brief and disjointed papers the attempt has been made to call attention to this Christian and pre-Christian doctrine of the possible loss of soul, with the hope of inciting inquiry and investigation. Until very recently the true doctrine in this regard was held secret and sacred in the pledge of the initiate: possibly because the Christian dogma of vicarious atonement and the forgiveness of sin had obtained such a hold on the Christian world that no other explanation would be for a moment tolerated. Since the true doctrine has now been given to the world by *those who know*, the present writer, a humble student, has availed himself of the permission thus accorded of illustrating its transcendent import by way of a few illustrations and suggestions. Those who care to examine it in detail will find many references to it in the writings of Madame Blavatsky, and may become fully informed if they choose. Again I say, if the

question were one of immediate and complete annihilation it need not so much concern us, for that were painless and easy. But if this slow decay of the soul must occupy perhaps many lives and involve untold misery before the law of Karma or Divine Justice is satisfied, the question then becomes one of transcendent import. Not an "endless torment in the fires of hell", but suffering, degradation, and despair here on this earth, either in this or in succeeding incarnations.

The Path

THE CRITERION OF MORALITY OR BASIS OF BROTHERHOOD — V. *C. Lonakar*

In *Bhagavad Gita* II. 45, Krishna says to Arjuna: "O Arjuna, rise above the three qualities to attain the pure satvic and higher consciousness — the consciousness of Higher Self, for the ordinary and lower consciousness, including even the exoteric knowledge of the Vedas, is an admixture of three qualities, *i.e.*, a mixture of pure and impure elements of good and evil tendencies."

In this single verse of *Bhagavad Gita* we find the whole development of philosophic thought contained as in a nut shell. Rightly understood, it embraces all moral science and philosophy; it is the keystone of the arch of morality as well as its criterion, and is expressed and embraced by the first object of our Society, — Universal Brotherhood.

Modern science divides itself into two schools as regards the test of moral sentiments. These schools are (a) the intuitive: (b) the experimental. The first points to conscience, or the inner moral sense, as criterion; the other relies upon the experience of this material plane; each takes cognizance of certain definite phases of consciousness and omits others: hence both classes of thinkers must be regarded as having a vague and incomplete method.

Bhagavad Gita, or Aryan philosophy, mentions, in this regard, three menial modifications which it calls prakritija or mayavic gunas (mental qualities). After the differentiation of Sat and Asat, Purush and Prakriti, Spirit and matter, from the undifferentiated Sat, we have two cosmic forces or centres of energy, *viz.*, Spirit and matter, working together. This combination of two forces may be said to work in three different ways, *viz.*, the two separate

and combined, so that we may say we have three distinct forces working together in what are called prakritijagunas or qualities produced from Prakriti by the contact of Purusha. These three gunas, Satva, Rajas, and Tamas, are three modifications of cosmic mind, which point to three attributes of the divine manifestation, namely, the creative, the preservative, and the destructive powers. By careful study of Bhagavad Gita we find that the terms Satva, Rajas, and Tamas are used in three different senses. 1st. They are used for the modifications of the cosmic mind alone. 2nd. For modifications of all minds from cosmic to human minds of various grades, and planes. 3rd. For modifications of the human mind on this material plane only. In this case they correspond to three ordinary states of the human mind known as the right, the erroneous, and the vicious states. Of these, the first is a moral state; the other two are immoral. The point which determines the morality of any given state is the feeling of non-separation. This consciousness of unity, of undividedness, distinguishes the true moral sentiment, and that of personality, of separation, indicates immoral sentiment, as taught by Aryan philosophy. (1) Shre-Shankaracharya defines right thought as undivided thought.

We shall now endeavor to test this idea in its application to daily life and see whether it serves as a test of true morality. We must then ascertain what the moral and unmoral sentiments are as facts of human nature, and then point out the difference between them. *Moral sentiment* is a term of mental and moral science indicating the fact of human nature, of life and mind, known as the feeling of universal altruism or love; this feeling regards the interests of all as one whole. Feeling is a mental fact. What an event is to external nature, feeling is to mental nature. *Unmoral sentiment* is another term of mental science expressive of a converse fact of human nature, which is the feeling of selfishness,

the tendency to regard the interests of one or a given number of personalities to the exclusion of others. In the one fact, we find a tendency to represent all: in the other, a prevalent representation of one to the exclusion of others. One represents the universal republic of Thought: the other sets up a single soul as absolute arbiter and judge.

In this latter consists an usurpation, to that extent, of divine authority, and this is done whenever a man thinks that his view is alone the right view and that his duty is to convert the world to that view. This is his inner attitude, his latent spirit, called by Bhagawatgita "Asuri-Prakriti" when applied to this plane. (XVI, 7-22.) Moral feeling manifests itself in equanimity, impersonality: concern for the interests of all as one whole: acceptance of personalities as part and parcel of the whole; and preservation of the functional balance of the universal Organism in every movement of thought and life. The immoral feeling is the direct reverse of this, and disturbs the functional balance of the universal Organism by the undue stress laid upon personality, by actions arising from a fixed sense of separateness. The line of cleavage between the moral and the immoral lies along the question of Separation and Non-Separation; the former leads in every injustice, deceit, and aggression; the latter preserves from them all. The modern tendency to personality in thought and action, whether business or social, destroys the universal order of "give and take". In forming a nucleus of Universal Brotherhood we have pledged ourselves to sustain the integrity of this divine order; to keep up the criterion of moral activity: to stop, so far as we can, the division and separation of interests arising from personality and competition: and to maintain that natural position which is one of synthesis and not of analysis. Our Universal Reformer and Teacher of Theosophy, H. P. B. (whom time may prove to be *the prophet of the 19th century*), has

followed the method of occult wisdom, or Gupta Vidya of the ancient Aryans, by bringing within the brief compass of the first object of the T. S. the spirit of the whole of universal philosophy. "Universal Brotherhood" is the expression of all philosophy in occult symbolical language. The second object of T. S. is instrumental to the first, and the third is the natural outcome of the first.

This first object is the highest object known to man, for its development and full realization lead to the expansion of individual consciousness into universal consciousness: this is the chief duty of man on this earthly plane of action and duty. This conclusion is that of all Religions, of all true Science and Philosophies, of Rishis and eminent thinkers of all ages and nations. Viewed in its totality it is *Paramarth*, it is *Dnyan* or *Yoga*. it is the Sat. The Yoga and ordinary life are two opposite poles of Thought and Action. To examine more closely these two sets of ideas and to prove that the Yoga attitude of Non-Separation is the true attitude, we must ascertain where lies the point of badness or evil in selfishness and desire of aggrandizement over other personalities. The factors of personal power are Force and Deceit. There is also a difference to be made between the selfishness of error and the selfishness of vice. The former shows more aggressiveness: the other, less. This aggressive tendency of personal force is *Ahankara*; it is shown in the two-fold aspect of authority and flattery, indicated in the man of power and the man subservient to power. The feeling of Non-Separation is Satvic; that of Selfishness is Tamasic; the Rajasic or erroneous state is the connecting link between the two, and has a qualitative and quantitative admixture of both. The right, the erroneous, and the vicious feelings may be called respectively the Sat, the Sadasat, and Asat states of mind, or Theosophic, Mixed, and Untheosophic states. Commonly, we find a mixture of these three

together, and in occultism, or Theosophy proper, we have the Satvic feeling alone (Bhagavad Gita II. 45.) The first step in occultism is to cease to do evil to others; the second step is to do good to others; the third is to have universal consciousness. As in ordinary life this mixed or two-fold division of state exists, and now good, now evil predominates, by keeping to the right direction we destroy this two-fold division, and the main force of our organism, instead of being separated into two branches and acting in opposite directions, thus neutralizing the effects of both, now works in a single direction, and its full strength is utilized as an undivided force. This is what we do in Yoga or Samadhi. To define:

Occultism is a mode of working in thought and life sphere towards the preservation of purity and universal justice and equilibrium. It is the symbol of spirituality and ancient civilization.

Ordinary Life is the direct opposite of occultism. It is the symbol of materiality and modern life.

The first step can only be taken when the nature of our evil tendencies their causes and effects, are studied theoretically and then mastered practically. "It is our duty to know the soul of good in evil, and the soul of evil in good, as we have a mixture of them in ordinary life" (Bhagavad Gita). By such study several secrets of occultism could be better revealed to many, and it is our duty to master scientifically these three states of mind. Both good and evil tendencies must be mastered; the study of one alone leads to error, and all our great Teachers tell us not to neglect any, as the mastering of all the gunas prepares one to place his foot in the sacred precincts of the sanctuary of occultism. Therefore these three mental states must be studied in all their details side by side, the good as well as the evil and the mistaken.

Vice, in the form of deceit of all kinds in particular, has almost become an ethical and commercial trade of modern times, and the phenomena of vice have come to occupy a place side by side with the higher intellectual phenomena, both in ethical importance and multiplicity of details: they even pass for wisdom, tho' of a false order. Sham and false authority are at the root of modern life. The study of the character of our present humanity, in its totality, requires the study of wisdom in its true and false aspects. The phenomena of vice, error, and deceit have their own laws and have to be studied in ourselves and in others with scientific observation. This idea of their study on a scientific basis and for guidance in the opposite and true direction first came to me from noticing the reverse course of some Indian people, with whom the study of the phenomena of egotism and vice is pursued for purposes of black magic. I have observed especially that in vicious phenomena words and deeds have no accord, while the constant search after truth, and of seeing the soul of truth in untruth (which is, in evil, to know the exact point which is evil and why it is so), unifies the thoughts, speech, and action. This process of constant mental and ethical analysis forms one of the principal factors of Dnyan, or occultism proper, as said in Bhagavad Gita XIII, I-II.

There is no part of the world where this study can be so well prosecuted as in the East, for there only do we find the highest spirituality and a most glorious past, side by side with the lowest vices and present degeneration. There are several classes of people in India who make a special and scientific study of vice for selfish and vicious ends as family and class pursuits, just as yogis are also to be found there. Many of us believe that India has paid the price of her present degeneration for indulgence, by some of her peoples, in the former vicious extreme. Only the persistent study and pursuit of Universal

Brotherhood through the elimination of selfishness and the mastery of the gunas can help our material civilization, by supplying it with a spiritual motor power.

FOOTNOTES:

1. And Emerson defines virtue as being the adherence, inaction, to the true nature of things. [Ed.]. ([return to text](#))

The Path

A MONUMENT — *Lily A. Long*

The Teacher was dead.

This was the news that spread quickly one stormy evening through the little western village, where, a few days before, he whose quiet would nevermore be broken had been a sharer in the keenest life of the place. The calls of Death in a small community are more than a matter of statistics. They touch the public interest even when made upon the humblest, — and the teacher had been the most widely known, the best loved, and best hated man in the town. Friends and detractors alike dropped their careless talk as the word "Dead!" went from lip to lip, and among those who had sought shelter from the storm in the bar-room, as among those who, driven by anxiety for their homes, had gathered in groups along the dark banks of the dangerously full river, stories of the dead man were rife.

Some told how he had come, no one knew whence or why, to take up his abode in this unknown corner of the world and fulfil the humble calling of a district school-teacher. He was a queer teacher, to be sure, and if there had been money in the township to pay for a qualified instructor he would not long have been tolerated, but as he gave his services for next to nothing and the treasury was empty, the board had been constrained to overlook his eccentricities. It was quite his habit to carry the children off into the woods on a bright day and talk to them for hours about bugs and bird when they should have been learning the kings of England, and many a morning had he spent in telling them wonderful stories of knights and heroes that did them no good instead of keeping them on their tables. There were others who could tell of long, strange talks had with him during some lonely

tramp through the woods or at night over his fire, — talks that had never been forgotten. Queer, impracticable ideas he had about the meaning of life and the things worth striving for, but there was no denying that a man was the better for talking with him. His thoughts were uplifting and bracing as mountain air. Still others told of some quiet deed of helpfulness, and were surprised to have their accounts matched by many others, all unknown before.

But not all the stories were laudatory. His tongue had had power to lash as well as to inspire, and there were not wanting victims ready to take verbal revenge. The tales told in the bar-room were mostly of this color, for the frequenters of that popular but demoralizing place had more debts of this sort to settle with the sharp old man than they had scores with the bar-keeper himself. Who was the teacher, after all, they questioned, and what reason had he had for burying himself here? It was very clear that he possessed a degree of learning which would have won him honor and companionship in the centers of culture. Why did he surrender both to fill an ill-paid and unrecognized post among people who were not of his kind? According to these practical philosophers, the reasons which prompted so anomalous a course of conduct could not be creditable ones. They could understand that a man might give his life to accumulating wealth if it chanced that money stood to him for the most desirable thing in the world, or that he might give it up to the pursuit of happiness by way of the whisky-glass if he had a correct appreciation of good whisky. Of such devotion they were themselves living examples. They could even understand that an artist might choose to paint visions in a garret rather than to waste divine days in drudgery that he might spend his sleeping hours in a palace. Such whimseys were inborn. But to maintain that a man might be born with a controlling inclination and talent for helpfulness and that he

might select his home for the same reasons that would influence a merchant in selecting a favorable location for his business was to set at naught the wisdom of the world, which holds that a man is to be considered guilty of self-seeking even when he is proven innocent. Oh, they were not to be caught by such chaff as that. It was some shameful secret, undoubtedly, that had driven him into hiding.

But if the majority of his little public brought to his coffin pitying wonder or insult, there were a few (as there are in the larger world, thank Truth) who recognized simple honesty and felt the reality underlying his unconventional life. Four of these friends, three men who had known his purposes most intimately and a youth who had come under the inspiration of his teaching, were now gathered in a little room adjoining the chamber where the body had been laid awaiting the morrow's interment. They had been talking quietly of his uncommon character and the unusual course of life which he had chosen until far into the night.

"The pity of it is that it should all be forgotten," said one restlessly. He was an eager-faced man, whose every feature and attitude, even in his present quiet mood, suggested repressed activity. "Years and years of work for others, and then, — the door swings to and not even a memory remains."

"It is always so. Why expect anything different here? There may once have been a race of men who held gratitude in honor, but if so the very tradition has been lost." The speaker swept a melancholy glance toward the silent form of his dead friend, and, with a gesture expressive of resignation and sorrow, crossed the room and threw open the door to the night. The muttering of the dying tempest was still in the air, and the tall forest trees that overshadowed the little house sighed an echo to the hopeless words. There was a moment's hush in the room, and then the

third watcher crossed to his side.

"That may be true enough in general," he said sturdily, "but there are ways to make people remember. If we want it done we can do it. We can give the town a monument that will keep his name and his memory alive as long as there is a man here to see it."

"That is a good idea," exclaimed the first. "Not a pile of marble or granite — that wouldn't suit a life like his — but some institution to help the people and so continue his work in a way."

"That is better. What do you suggest?"

The man with the melancholy eyes shook his head slightly at the question and pointed to a star in the west which a break in the riving clouds had just revealed. It seemed to tremble on the edge a moment, and then the black, rolling masses swept over it relentlessly.

The boy, who had not spoken, turned sharply away in impetuous protest.

"I shall remember," he whispered under his breath.

At that moment the echoing sound of a horse's feet at full gallop broke upon the night, and while they waited in suspense the horseman dashed into sight.

"The breakwater is down" he shouted to the men clustered in the doorway, and then he was swallowed up again in the darkness.

The breakwater down! That meant destruction to the lower part of the town. The men looked at each other in dismay for a minute, and then sprang for their hats.

"We must be needed there. Boy, watch here till we come back!"

The teacher's lonely house was a full mile from the village proper

which clustered by the river bank, but the three men ran the distance in silence. The ominous rush of the water grew louder and louder, and when they reached the main street they found that it formed the channel of a new stream which was sweeping tumultuously about the foundations of the buildings on the riverside and bearing upon, its surface the wreckage of accomplished disaster. The stouter houses withstood the onset, but already several wooden structures had been whirled away and others were tottering.

The three friends had been separated in the crowd, and the foremost found himself pushed to the edge of the torrent. The rush of the water was deafening and men were shouting hoarsely on every side, when suddenly a thrill of horror swept through the responsive people. From the upper window of a threatened house directly across the way a child's face was looking down with piteous bewilderment. Frontiersmen have many faults to answer for, but indecision and cowardice are not among them. There was not a man in the crowd who would not have risked his life without a second thought in answer to that mute appeal, and it was no mark of exceptional virtue when the last man to join the throng fastened about his body the long rope tossed to him and plunged into the mad stream. The torrent caught him and carried him out, but, swimming when possible, yielding to the current when necessary, now swept under the surface and now tossed helplessly out, he fought the infuriated water as though it were a conscious antagonist. Breathless but triumphant he reached the opposite side and in a moment had the child in his arms. Then the battle again, sharp and hard, but with the steady pull of friends standing waist deep in the water it was over, and the child, trembling and terrified but *alive*, lay on the breast of the father, while the crowd cheered till the crash of the falling house as it went at last was overpowered and lost.

The father lifted his face at last and his rough features were working with emotion.

"How can I make it square?" he asked hoarsely. It was the barkeeper. The rescuer started with astonishment as he recognized him, and then a gleam of gay triumph shot into his eyes. It was the opportunity he would have coveted!

"Take her life as the gift of the teacher," he said in a low voice.

There was a questioning look, a meaning glance in reply, and the two men clasped hands over the form of the child.

But death as well as life was abroad that night. When the three friends were separated, one of them had been hurried off by a man who recognized him in the crowd.

"Gabriel Done is dead — killed by a falling timber. I've been trying to find a priest, for though Done wasn't a churchman his wife is stanch, and she is going on now enough to make a man shiver. Can't you come and talk to her? She thinks that because Gabriel was killed in his sins, as sir says, he has gone straight to hell. It would be lucky for the rest of us if we had no more sins to answer for than he, poor fellow!"

They hurried up the deserted street to the house where Done had been carried, but at the door the guide quailed.

"You go in alone. I don't think I can stand much more of it."

His companion might have truly pleaded equal helplessness, but when he entered the room and saw the widow in silent, dry-eyed despair beside her dead, he wholly forgot himself in a desire to bring help to her, and his melancholy face lightened with a look of sympathy that saved the need of words.

She recognized his presence without greeting.

"It is not that Gabriel is dead," she said at once with a nervous insistence. I could bear that, — I could learn to bear it in time. But to think that he is lost —" Her lips stiffened and she leaned back rigidly in her chair.

He took her hands in his and forced her eyes and her thoughts to himself.

"But Gabriel was a good man."

"He did not believe!"

"But he was a *good* man."

She quivered under the pressure of his words, but something like a gleam of hope came into her strained eyes.

"If a man like Gabriel, — honest and true and kind, — can be lost, then I have no reason for believing that the spring sunshine will bring joy to the earth, or that the fruit of the apple-blossoms yonder will not prove deadly. Do you believe that goodness rules the universe, or evil?"

She caught the thought beneath his words as a drowned man catches his first breath of air. The mental habits formed by a lifetime of clerical instruction might have withstood all unenforced argument, but the anguish of the hour had lifted her above her own level, and the perception that came to her overmastered her dogmatic loyalty as dawn conquers night. She laid her hand upon her heart for a moment, and then she moved to the side of the dead with a composed and lofty air and uncovered his face.

"Forgive me, Gabriel, that I could have doubted. I know it is well with thee," she murmured. Then nature conquered and she sank on her knees beside him in a burst of saving tears.

"Come away now. You have done all that could be done in giving her that hope. Let us leave her," whispered a new voice. It was the third of the three friends. "Tomorrow I shall see her," he continued when they were outside, "and take care of affairs until they are settled. She will be left pretty poor, I am afraid, and the boy ought to be at school."

"She will not heed any other trouble much, I fancy, if she can be rid of her greatest fear. How can people believe such irreligious atrocities?"

"Because they were so taught when they were young. But how did you think of just the right thing to say to her?"

"Why, the teacher used those words one day, and they came back to me now."

His friend smiled. "And yet you said his influence would pass away and be forgotten!" After a moment he added: "I shall see about the schooling of Done's boy. That shall be my part. "

And his friend answered his smile.

In the little house under the trees the youth had watched alone through the night by the beloved form of the teacher. To him more than to the others the loss had been a personal bereavement, and his sorrow was like the sorrow of a son. So beloved, so needed, so rare a nature, why had death claimed it? Bitterly he questioned thus during those lonely hours, and then his thought widened out to all the sorrow that the wide world holds. Was it all necessary and right? Was that what life meant, — the life that lay before him and which he had so eagerly yearned for? Was it all a delusion of enchantment to hide an unquenchable pain which lurked at the foundation of all things?

Baffled and heart-weary, he went out into the night. The storm

had passed, and only a low, spent sighing in the forest depths recalled the tempest that had tossed the trees a few hours before. Overhead the sky was serenely clear. Folding his arms upon his breast he gazed silently into those depths of peace. The clouds that had rolled across had not dimmed their purity or ruffled their calm. A word of the teacher's came back to him suddenly, — "Lift your thought above the storm level." Ah, he understood it now. Climbing by that he found the answer to his passionate pain, and as he stood watching while the flooding dawn crept up to the stars, a percipience of the meaning of living came to him which somehow illuminated the backward-stretching years of the teacher and those which lay before himself. It transcended words as the day-dawn did. But when the three friends returned and found him there, he turned to meet them with a new light in his face and a new strength in his words.

"You were speaking of a monument to keep his memory alive. Let *us* be the monument. Let us carry on ourselves his mission of helpfulness." And the three men, remembering the events of the night, bowed their heads in silent acceptance of the trust.

The tablet over the teacher's tomb reads simply; —

"Here lies one
whose life was consecrated to service,
and whose influence
has been a consecrating chrism to others.

KARMA AND FREE WILL — A. Keightley

Every student of Theosophy is aware that the meaning which is ordinarily given to the Sanskrit word Karma is "Action". Further there is attached to it the kindred idea of "Reaction", and these two meanings, when sufficiently expanded, give a very wide and logical explanation of the action of the Law of Karma as affecting the general life of man. It is only, however, when study is carried deeper that students begin to perceive that men seem to be bound by a "circle of necessity" from which there appears to be no escape; while others declare at first sight that the Law of Karma is but another expression for the Mohammedan "Kismet", and a more or less plausible pleading for the adoption of "fatalism" as affecting mankind. No amount of discussion will serve to convince such persons that the flaw which they think that they have found is no flaw at all, and this is, it would seem, because they have never yet realised that the Law of Karma or "Action" applies not merely to man but to the whole Universe of which man is but a small and insignificant part. Moreover, there arises in the mind of the student another idea which is mistaken. As Mme. Blavatsky has long ago pointed out, Karma is not only Karma-Nemesis or the reaction following upon evil conditions, but it also bears with it the reward for efforts towards good actions. Thus, then, if we regard the Law of Action in its true proportion, we see that it governs the whole Universe, ordering the stars in their courses as well as men in theirs; that, in reality, if we carry the consideration from the moral and physical planes of action to the metaphysical, the statement of the Law of Karma in its entirety is but another expression for the great Law or Principle of which we neither know nor can know anything save that three of its expressions or manifestations are Life,

Consciousness, and Motion or action. Consequently the Law of Karma or the Law of Action is also the Law of harmonious action in which action and reaction are balanced and equal. In other words, the Law of Karma is the Law of Harmony in the Universe.

It is only when the Unity of Harmony is separated into its component parts of Tune and Discord or Action and Reaction that we are then able to appreciate the fact of differentiation, and then, being able to choose and therefore responsible, we become the subjects in place of the allies of the great law of harmony divided into its component parts of action and reaction.

Thus Karma is not really opposed to "Free-Will" when Karma is properly understood. It is also true that Free-will has not really received its full meaning. Generally it is understood to mean that a man is absolutely free to choose between two courses of action or the possession of certain qualities in himself, and in fact is a law to himself in every particular. Such a view can and does proceed from selfish, self-centered individuals alone, the product of this age of denial and materialism. It is, however, opposed by all religious systems, and is actually opposed by the practical social work of the most advanced materialist thinkers. It is only one of those attempts which selfish man makes to realise his idea that he is the sum and crown of all nature, and that, if he chooses, everything in nature must be subservient to him. In other words, the one man who follows this idea may be free while all others who come in contact with him must be his slaves. Even if this were possible, there is one enemy which such a man would have to conquer before he became all-powerful, and that enemy is the law of change, and he would have to conquer the great change called death. Therefore, since the laws of nature are stronger than the will or desire of individual, or, rather, personal man, freedom of will is only possible for man when he is in close alliance with nature and her laws.

If we regard nature we can plainly see that, however much we may be able to modify our surroundings, we commence with a certain capital in hand, as does everything from a planet in its orbit to the stone of which that planet is formed. In other words, everything in nature is within what is called the "Circle of Necessity". Everything has had its origin in the one universal principle and acts according to the laws which are inherent in that Principle. These are the natural laws which are universally applicable, and therefore may be called universal or natural law. Upon them depends the very nature of existence, and, whatever may be the appearance which we see, the real nature and essence of everything in the universe depend upon and conform to these laws. Therefore it follows that this "circle of necessity" is the necessity for manifestation arising in the great principle, which, from being unmanifested, becomes manifested during the great periods of time which are called Manvantaras in the Orient. Within this "circle of necessity" — this great general scheme of evolution and development — there are other possibilities. One of these possibilities is that the products of evolution can diverge from the general line; in other words, that while the general manifestation of will and purpose arising in the one great principle is fixed and determined for a certain progress during a certain time, the units of evolution manifesting such will, can, and do vary in the rate of manifestation. That this is the case is particularly seen with the evolution of mental processes. When this point is arrived at in the general scheme, the divergences from the general law become more and more marked. In fact, in the evolution of the animal world the entity known as man has arrived at the age of responsibility, and, having become self-conscious of his relation to his surroundings, has chosen to act for himself and deal with his own actions as seems best to him. He has had the choice before him of either slowly following the

general line of the evolution of the animal races strictly according to the line of evolution in the "Circle of Necessity", or he may go beyond and outside of it in a measure by retreating into the more subtle region of his own nature, and so quicken up the processes of manifestation. In the end, however, he finds that this means acting more and more strictly according to the laws of nature. Still, as with light passed through a convex lens, the nearer the approach to the lens or the source of light the less time is found to be required to go over all the rays, and the nearer together they are found to be, so with man's nature. The nearer he gets to the origin of his own being, the greater the intensity of action and reaction resulting from divergence.

Further, through the choice which has been made to quicken up the processes, or by reason of mistakes arising through ignorance or through deliberate errors because they are found to be more pleasing to the external nature of the animal man, habits and customs have sprung up which have an ever-increasing tendency to repeat themselves. Further than this, these habits and customs blind men to the real nature of the customs, and, because they are found to exist in large numbers in common, they are therefore thought to be right. In fact, men bind themselves by these habits and customs, and in this way they limit their free-will. They have made for themselves a false "Circle of Necessity" from which they neither can nor do desire to free themselves. But at the same time a feeling of pride causes them to assert that they are free, and therefore this question of free-will and fatalism causes them to revolt against the Law of Karma. There are many who insist that they are free, and feel themselves to be so until they are brought face to face with nature. By this I do not mean to say that they are swept away in a storm or by any other natural convulsion, but they are brought face to face with facts within their own nature which they are unable to control. They then find that with all

their boast of power they are but puny mortals after all, and that the immortal powers exist in nature and themselves in spite of all they can say or do to the contrary.

Thus there is the choice before man in his present existence. Either he has to choose a course of action which is in harmony with the real true laws of nature, or he has to take the opposite course. As a general rule it may be said that the growth of the habits and customs which cause man to take this opposite course is due to ignorance of his own true nature and therefore of nature at large. A slight divergence from the general and natural line of harmony will have a tendency to widen more and more until it is scarcely possible to trace the line in all its windings and deviations. Thus when man finds himself face to face with the retributive and restorative action of the harmonious law, he is apt to be so short-sighted as to cry out against it and say that he has not deserved the punishment. He, as a rule, is totally ignorant of the larger sphere of life provided by the law of moral compensation working through Reincarnation. He is unable and at times unwilling to perceive the dictates of his own real nature, and depends entirely upon external conditions. Therefore his will — his natural will — is fettered by ignorance, and it is his own will that punishes him. The personal man is not free, but the individual man is free to follow the laws of nature, and does so follow them that it places the personal man in the position in which he can correct the faults and error from the law which he has caused. In short, will which is eternally free is identical with Karma, each having its rise in the one great Eternal principle of the Universe. As the *Bhagavad Gita* states it in Chap. VIII,

"Karma is the emanation which causes the existence * * * of creatures."

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 200 to p. 212, Vol. I.)

FUNCTION OF COMETS. Comets are the wanderers who, in the great struggle and rush of matter in any place where a system of worlds is to come into existence, act as aggregators or collectors of the cosmic matter until at last sufficient collections are made to cause the beginning of globes. *Italics on p. 201, v. I.*

CYCLES. There is always much discussion respecting this vast and interesting subject, not only in theosophical circles but outside as well. Indeed, the discussion was begun ages before our T. S. was formed. It will hardly be finished in our life. The dispute or difficulty has not been as to whether there are cycles governing men and affairs, for the most materialistic are wont to talk of the cycles of recurrence of diseases, wars, and the like, but about when any cycle begins, and especially the larger ones. One of the Moon's cycles is known, and that of the great sidereal vault is approximated, but when we come to such as the latter there is considerable vagueness as to what was the state of things 25,000 years ago. On page 202 of Vol. I. the hint is given that the fundamental basis controlling number and ground-work of the cycles is laid in the very beginning of the cosmic struggle anterior to the aggregation of matter into globes and suns. For (*at foot p. 202*),

"This is the basic and fundamental stone of the secret cycles. The assertion that all the worlds (stars, planets, &c.) as soon as a nucleus of primordial substance in the *laya* (undifferentiated) state is informed by the freed principles of a just *deceased* sidereal body — become first comets, and then suns, to cool down to inhabitable worlds, is a teaching as old as the Rishis."

Now in each system to "struggle" is different from every other, a different proportion arises, and, the percentage of loss or remainder being variable, the cyclic bases in each system differ from others. It is very plain, then, that our present-day scientists can know nothing of these original differences and must remain ignorant of the true cycles. Only the eagle eye of the high Adept can see these numbers as they are written upon the great screen of time, and in the whispers that reach us from the ancient mysteries can be found the information we are seeking. Who shall hear aright?

THE VERY BEGINNING. Definitely as to the very beginning of manifestation — not of this little system of ours, but of the one vast whole — it is not possible nor permissible to speak. But a hint of seductive nature is thrown out on *p. 203, 3rd para.*, where, taking us back to the first act in the great drama of which our puny play is but a short sentence, H. P. B. says that the secret science declares that when the one great all has been thrown out into manifestation seven special differentiations of IT appear, and from those seven all the countless fires, suns, planets, and stars are lighted and go forth. So that, although in various systems of worlds the cycles and the numbers and bases may differ and be any whole number or fractional number, the great and perfect number is still *seven*. But no man now among us can understand that great *seven* when it includes all numbers the mind may reach by chance or by calculation.

The Path

THE IDEAL AND THE PRACTICAL — *Pilgrim*

It must be admitted that to be of any use in the world the ideal must be capable of being proved practical, but from this it does not follow that the self-dubbed practical people of today are the fittest judges of the practicability of any ideal theory; indeed, their very nature disqualifies them from judging of the wider fields of vision.

The charge of being unpractical is often made against the idealist who deals with the higher ethics by those who trudge along the well-worn track of daily duty, but though the latter may be incapable of soaring beyond the well-beaten way, the study of history in all departments of life might teach them that the visionary's dreams of one age may form the basis of practical work in the next. What good thing is there that the race has ever achieved that was not in the first instance shadowed forth by one whom the practical workers of his day regarded as an idealistic dreamer? The poets and prophets of all ages stand in advance of their time, but a modesty of demeanor in face of a revelation they are incapable of grasping would be a more appropriate attitude for the practical workers than the assumption of omniscience which their ignorant criticism implies.

It is also beside the point to dwell on the fact that the idealist's life may not be on a par with his teachings; it may indeed fail to come up to the level of the conscientious duty-performer without in the least detracting from the value of such teachings. And it must also be remembered that "man is not, according to any analogy, observation, or experience, a straight line. Would that he were, and that life, or progress, or development, or whatever we choose to call it, meant merely following one straight road or another.

The whole question, the mighty problem, would be very easily solved then." Man's nature is as complex as the Universe of which he is the microcosm. To instance two of the parallel lines of advance, the awakening of his spiritual perception is quite as important a part of his development as the progress of his moral nature towards altruistic thought and action. But all the force of the nature is required to effect real advance on either plane. Alternate life-times may be so consumed, with the apparent result that the one or the other is taking precedence in the development of the individual man. It ill becomes any, therefore, to belittle the results that are being achieved because they may not be on the particular lines on which they themselves are advancing.

It is also a fact in Occultism that the attainment of knowledge as to the real facts of existence and the ultimate possibilities of the soul produce great Karmic results. "That is because it is impossible to give any attention to occultism without making a definite choice between what are familiarly called good and evil. The first step in occultism brings the student to the tree of knowledge. He must pluck and eat; he must choose. No longer is he capable of the indecision of ignorance. He goes on either on the good or on the evil path, And to step definitely and knowingly even but one step on either path, produces great Karmic results. The mass of men walk waveringly, uncertain as to the goal they aim at: their standard of life is indefinite; consequently their Karma operates in a confused manner. But when once the threshold of knowledge is reached the confusion begins to lessen, and consequently the Karmic results increase enormously, because all are acting in the same direction on all the different planes; for the occultist cannot be half-hearted, nor can he return when he has passed the threshold. These things are as impossible as that the man should become the child again. The individuality has approached the state of responsibility by reason of growth: it

cannot recede from it." The outcome of all this is that the evil in the Occultist is more rapidly brought to the surface than in the case of ordinary men. This is of course due to the greater intensity of purpose in the former, and it also requires a greater intensity of purpose to rid himself of the evil, but while that process is going on it is only natural that the evil which lay deep seated in his nature, and which has been brought to the surface, should be very apparent to the eyes of men. The initiatory stages of occultism — that short cut to Perfection — may therefore easily appear to the eyes of the ignorant as a descent instead of an ascent.

A vivid illustration of the high ideality of a very material conception may be found in Mr. Edward Bellamy's novel *Looking Backward*. But to the majority of readers it will also stand as an illustration of the impracticability of an ideal theory. It must indeed be a trumpet call to action to one who can so shut his eyes to facts that he is capable of believing such an organization of Society as there pictured could by any possibility be realized by humanity as now constituted. Whether realizable or not, it should be to all of us a beautiful picture to which it is a delight to turn from the hideous reality of today. Though severed from all the spiritual aims that could alone give it great value, it is in some sort of way a vindication of the higher Socialism, the Socialism taught in the life of Jesus Christ, whose animating motives are love and charity, and whose end is justice — a contrast truly to the socialism whose animating motives are greed and envy and whose end is plunder!

Writing on (1) Christianity and Socialism in an article which breathes the atmosphere of sound common sense, and also that of an enthusiastic sympathy such as may well quicken the pulses of the reader with a like hope, Dean Plumptre points out that Socialism's real antagonist is not Christianity but the terrible

culmination of Individualism which we are now reaching — individualism which finds its utterance in the question "May I not do what I will with mine own?," and which is summarized in the motto of universal competition, "Every man for himself and devil take the hindmost".

There are so many false notions prevalent about Socialism that his description is worth repeating. "The ideal of Socialism", he writes, "is just the opposite of this (Individualism). It assumes as the result of experience that there is in every man, either inherent in his nature or as the result of the environment by which his character has been fashioned, an evil selfishness which needs control; that the struggle for existence implies a fierce warfare of class with class and man with man — bellum omnium contra omnes — and is productive of an immense amount of evil. It holds that it is the function of the State to moderate this warfare and to remedy these evils. It insists on the principle that the rights of the individual are subordinate to the well-being of the whole Society; that right to freedom of action and to property is the creation of the State, and may therefore be limited and controlled by it. Even the Socialist theories which postulate the natural rights of man both to freedom and to a share of the land look to the collective action of Society as the means of asserting and perpetuating them. It lies in the nature of things that this may be the ideal of any form of government — Monarchic, Aristocratic, Democratic. It is found in the theocracy of Israel under its judges or its kings. It may be represented in ideal pictures of a patriot king, such as we find in Dante's *De Monarchia*, Fenelon's *Telhnaque*, or Ken's *Edmund*, or of government by the wisest, as in Plato's *Republic*, the *Utopia* of Sir T. More, the *New Atlantis* of Bacon. The language of the late Emperor Frederick in his rescript to his Chancellor was altogether that of one who desired to be a patriotic, and therefore Socialist,

King; ready to "support every movement towards furthering the economical prosperity of every class of society and reconciling their conflicting interests".

But to return to Mr. Bellamy's book. An Utopia where every desire of the senses should receive instant gratification is an ideal which will no doubt satisfy many men. To the poor of this world who are able to satisfy so few of their desires, it may indeed seem an Eldorado, but even granted that state to be attained which Mr. Bellamy so ably pictures, what advance towards any permanent bliss will man have made? Life must still be a struggle, blinded with ignorance and bounded by the grave. There will still remain the whole vast infinitude between the unrest of conditioned existence and the Nirvana of pure Being, between the pain-goaded and pain-causing struggles of man and the unutterable Peace of God. "Teach the people", says one who stands on the very threshold of that Peace of God, or who, indeed, may have renounced it in order more effectually to succour Humanity, "teach the people to see that life on this earth, *even the happiest*, is but a burden and an illusion". While the solution, one by one, of the varied problems of the hidden life may be practically attained by every individual, the Socialistic dream of material perfection, though it may become practical in some modified form to the Humanity of a far-off future, remains today in the realm of the beautiful ideals that are utterly impracticable.

While no real comparison can be made between the fanciful story we have been discussing and a great ethical work, it is a satisfaction to turn to such a book as Dr. Buck's *Study of Man and the Way to Health*. Though it may not be given to man to mould outward circumstance in accordance with his ideas of divine justice, the betterment of his own inner nature, the conquest of self, and the gradual enlargement of his sympathy are in the highest degree practical.

The *Study of Man* is undoubtedly a valuable addition to the Theosophical literature of the age, inasmuch as, while barely mentioning the word Theosophy and hinting only in a vague way at the fundamental doctrines of Karma and reincarnation, it yet appeals to the general reader, and more particularly to the scientific one, in terms which, if the train of thought suggested be carried out, are likely to lead to some apprehension of the divine Wisdom, which alone can offer to men, capable of reason, any adequate explanation of the mystery of existence.

It is, however, in some ways a disappointing book to lay down, particularly after the expectations raised by the laudatory notices with which it was ushered in. Perhaps too much stress must not be laid on the fact that for the general reader — indeed for all save those who are versed in the medical science of the day, many passages in the book would require further analysis to render them intelligible. But this, after all, is a minor point.

All able exposition of ethical doctrine must doubtless find readers whom it will benefit, but for those who only respond when the highest key is struck this book must be considered a failure.

To inculcate the love of one's neighbor, or, in a word, Altruism, has been one of the objects of all teachers of morality, and only praise can follow the perusal of any work devoted to such an end. But some efficient cause must exist. Without the highest sanction Altruism is impossible. "No man can be good without God", writes Seneca in his 14th Epistle; "God is nigh unto thee, He is with thee, He is within thee. If thou shalt see a man unappalled by dangers, untouched by illicit desires, happy in adversity, calm in the midst of tempests, looking on men as from a higher place, on gods as from an equal place, will there not enter into thee a reverence for such a one? Wilt thou not say, there is here something greater, something higher than can be believed to be of mere kin to the

mortal body in which we behold him with our eyes? And such there is: that power within him hath come from God."

(To be concluded.)

FOOTNOTE:

1. "Christianity and Socialism" by E. H. Plumptre, Dean of Wells, in the *Contemporary Review* of November, 1889. It argues well for the Church of England to find in its ranks so worthy a successor of such Christian Socialists as Robertson, Maurice, and Kingsley.

The Path

THE NATURAL LAW OF ALTRUISM — *Archibald Keightley*

Is such a conception possible, and, if so, is it equivalent to Atheism? The whole question depends on the meaning attached by each individual to the idea of Deity. In the very attempt to give definition and say what the idea of Deity means to him, each man puts a limit to Deity by confining it to the terms of his understanding. It then becomes for him personally a God, but it is not Deity for any other man, since there is no perfect identity to be found between two human minds. Therefore one essential aspect of Deity is to the finite human intellect incomprehensible. From this point, if the various attributes of Deity are considered, it is seen that all the attributes end in becoming a personal or individual God to the individual mind which considers them. Finally, Deity surrounded by all these attributes becomes an aggrandized personal God anthropomorphized in terms of the human understanding, and thereby loses its essential character of Deity. In short, beyond the fact that "in it we live and move and have our being," Deity as such is not related to the manifested Universe.

But Deity in itself is Absolute, and its Absoluteness of energy and consciousness is incomprehensible to us, and therefore to us is latent and unconscious. But none the less is there activity and consciousness which, by processes incomprehensible to man, render themselves into manifestation. Unity becomes polarised and diversified: energy and consciousness become interaction, guided by intelligence. In other words, there is proceeding from Unity a Trinity of Cosmic Substance, Cosmic Ideation, and Cosmic Energy. By some they are called Matter, Force, and Intelligence, and by others Spirit, Matter, and Force. But in reality these three have — by a process unintelligible to *our* consciousness —

become in space and time the aspects of Absoluteness unconditioned by space and time. Thus it may be said that there are three stages in the passage of the concealed Deity into manifestation. It is not until the third stage — the differentiation of Cosmic Substance under the Energy guided by Cosmic Ideation — that the "Creative Powers" of the various religions are found. It is by these powers or forces interacting and differentiating that the manifested universe was formed. These are the Hierarchies of Archangels, Amshaspends, Elohim, &c, which collectively personify the attributes of Deity but are not Deity itself. In thus dealing with religion by basing it on a conception of Abstract Deity, a Unity manifested in an infinity of creative powers, it becomes evident that these creators are the instruments through which the workings of Universal Law are made manifest, and that there can be no question of caprice, such as we find in the sacred scriptures of many nations. It is plain that the creative powers are the ministers of that which is mind, will, and righteousness. In this way order is evolved from "Chaos", and the mind dwelling on the workings of its origin — the Universal Mind — is eminently reasonable because adjusted to the most permanent conditions of the manifested Universe.

The Hierarchy of Being is incessantly engaged in the process of its own evolution, and within the Universe it might be said that, following the lines of universal evolution, there is an analogous Hierarchy for each Solar System and also for each Planet. Thus for the period of planetary existence within space and time there is an in-breathing after an out-breathing of cosmic energy as applied to this earth. In other words, the relative unity as applied to this earth emerges into diversity and then returns again to unity after accomplishing its evolution within a "world-period". It may, then, well be that powers hitherto unrecognised as natural powers may lie within the reach of those who press forward

more eagerly than others in the line of evolution, and it would indeed be unfortunate for the general average of mankind if there were no restriction on the exercise of these powers. But as we see that self-denial leading from the assertion of the individual to the rights of mankind as a whole is one of the conditions of the involution from diversity to unity, the very fact of the acquisition of such powers carries with it the safe-guard. Such is the law, it would seem, of natural evolution. Thus supposing that some outstripped their fellow-men and, acquiring these powers, used them for selfish purposes and to gratify their own ambition, does it not also follow that nature, being mightier than the individual man (even though he be possessed of such extended powers), will inevitably put an end to the individual strength of such a man as opposed to the fixed line of her general evolution? In this way the power of the evolutionary Hierarchy of the Earth personified as Nature irresistibly follows the Law of its being, and so becomes a "providence" to those within its operations.

Thus those men who are spurred on to follow with the utmost forces of their being the law of evolution find the love of humanity entailed upon them, and in place of tyrants become the servants of nature and therefore of humanity. The higher they rise in the human hierarchy, the more they have to serve, until, as regards the total progress to be accomplished within a "world-period," they reach the limit of attainment. They may then be said to be on the threshold of Nirvana and to have returned from the evolution of individual self-consciousness to the unity of divine consciousness. Thus Nirvana is not the annihilation of self-consciousness, but it is union with the divine in nature, and rest from the labors of evolution. The work is accomplished, but there are those who, according to oriental philosophy, sacrifice this Nirvana and return to their labors, thus giving up their rest in

order to become the quickeners and saviors of men who endanger themselves through delay in their evolution.

This very briefly is an outline of a religion with Deity and many Gods. It is a manifested Pantheism based on a concealed Unity, and its inconsistent with itself. As such, for the benefit of a large number of men it solves a number of difficulties both from the materialistic and the theological standpoints. It at least demonstrates why altruism and the love for humanity is a law which has its origin in the very foundation of Being, and the ethics of altruism therefore become a logical necessity. This is a feeble rendering of the Theosophy which Mme Blavatsky brought before the world, the said Theosophy being, as she repeatedly declared, no new idea, but older than humanity itself.

The Path

THE SYNTHESIS OF OCCULT SCIENCE: I — William Q. Judge

The impassable gulf between mind and matter discovered by modern science is a logical result of the present methods of so-called scientific investigation. These methods are analytical and hypothetical, and the results arrived at are necessarily tentative and incomplete. Even the so-called "Synthetic Philosophy" of Spencer is, at best, an effort to grasp the entire method and modulus of nature within one of its processes only. The aim is at synthesis, but it can hardly deserve the name of philosophy for it is purely speculative and hypothetical. It is as though the physiologist undertook to study the function of respiration in man through the single process of expiration, ignoring the fact that every expiratory act must be supplemented by inspiration or respiration cease altogether.

Taking, therefore, the facts of experience derived from the phenomena of nature and viewing both cosmic and organic processes purely from their objective side, the "missing links", "impassable gulfs", and "unthinkable gaps" occur constantly. Not so in Occult Science. So far as the science of occultism is concerned, it is both experimental and analytical, but it acknowledges no "missing links", "impassable gulfs", or "unthinkable gaps", because it finds none. Back of occult science there lies a complete and all-embracing Philosophy. This philosophy is not simply synthetical in its methods, for the simplest as the wildest hypothesis can claim that much; but it is *synthesis itself*. It regards Nature as one complete whole, and so the student of occultism may stand at either point of observation. He may from the stand-point of Nature's wholeness and completeness follow the process of segregation and differentiation to the minutest atom conditioned in space and

time; or, from the phenomenal display of the atom, he may reach forward and upward till the atom becomes an integral part of cosmos, involved in the universal harmony of creation. The modern scientist may do this incidentally or empirically, but the occultist does it systematically and habitually, and hence philosophically. The modern scientist is confessedly and boastfully *agnostic*. The occultist is reverently and progressively *gnostic*.

Modern science recognizes matter as "living" and "dead", "organic" and "inorganic", and "Life" as merely a phenomenon of matter, Occult science recognizes, "foremost of all the postulate that there is no such thing in Nature as *inorganic* substances or bodies. Stones, minerals, rocks, and even chemical '*atoms*' are simply organic units in profound lethargy. Their coma has an end, and their inertia becomes activity". (S. D. Vol. I. p. 626.)

Occultism recognizes ONE UNIVERSAL, ALL-PERVADING LIFE. Modern science recognizes life as a special phenomenon of matter, a mere transient manifestation due to temporary conditions. Even logic and analogy ought to have taught us better, for the simple reason that so-called "inorganic" or "dead" matter constantly becomes organic and living, while matter from the organic plane is continually being reduced to the inorganic. How rational and justifiable, then, to suppose that the capacity or "potency" of life is latent in all matter!

The "elements", "atoms", and "molecules" of modern science, partly physical and partly metaphysical, though altogether hypothetical, are, nevertheless, seldom philosophical, for the simple reason that they are regarded solely as phenomenal. The Law of Avogadro involved a generalization as to physical structure and number, and the later experiments of Prof. Neumann deduced the same law mathematically from the first principles of the mechanical theory of gases, but it remained for

Prof. Crookes to perceive the philosophical necessity of a primordial substratum, *protyle*, and so, as pointed out in the S. D., to lay the foundations of "*Metachemistry*"; in other words, a complete philosophy of physics and chemistry that shall take the place of mere hypothesis and empiricism. If one or two generalizations deduced as logical or mathematical necessities from the phenomena of physics and chemistry have been able to work such revolutions in the old chemistry, what may we not expect from a complete synthesis that shall grasp universals by a law that compasses the whole domain of matter? And yet this complete synthesis has been in the possession of the true occultist for ages. Glimpses of this philosophy have been sufficient to give to minds like Kepler, Descartes, Leibnitz, Kant, Schopenhauer, and, lastly, to Prof. Crookes, ideas that claimed and held the interested attention of the scientific world. While, at certain points, such writers supplement and corroborate each other, neither anywhere nor altogether do they reveal the complete synthesis, for none of them possessed it, and yet it has all along existed.

"Let the reader remember these 'Monads' of Leibnitz, every one of which is a living mirror of the universe, every monad reflecting every other, and compare this view and definition with certain Sanskrit stanzas (*Slokas*) translated by Sir William Jones, in which it is said that the creative source of the Divine Mind. . . . 'Hidden in a veil of thick darkness, formed *mirrors of the atoms* of the world, and *cast reflection from its own face on every atom.*' " — S. D., Vol. I, p. 623.

It may be humiliating to "Modern Exact Science" and repugnant to the whole of Christendom to have to admit that the Pagans whom they have despised, and the "Heathen Scriptures" they long ridiculed or ignored, nevertheless possess a fund of wisdom never dreamed of under Western skies. They have the lesson,

however, to learn, that Science by no means originated in, nor is it confined to, the West, nor are superstition and ignorance confined to the East.

It can easily be shown that every real discovery and every important advancement in modern science have already been anticipated centuries ago by ancient science and philosophy. It is true that these ancient doctrines have been embodied in unknown languages and symbols, and recorded in books inaccessible to western minds till a very recent date. Far beyond all this inaccessibility, however, as a cause preventing these old truths from reaching modern times, has been the prejudice, the scorn and contempt of ancient learning manifested by the leaders of modern thought.

Nor is the lesson yet learned that bigotry and scorn are never the mark of wisdom or the harbingers of learning; for still, with comparatively few exceptions, any claim or discussion of these ancient doctrines is met with contempt and scorn. The record has, however, been at least outlined and presented to the world. As the authors of the *Secret Doctrine* have remarked, these doctrines may not be largely accepted by the present generation, but during the twentieth century they will become known and appreciated.

The scope and bearing of philosophy itself are hardly yet appreciated by modern thought, because of its materialistic tendency. A complete science of metaphysics and a complete philosophy of science are not yet even conceived of as possible; hence the ancient wisdom by its very vastness has escaped recognition in modern times. That the authors of ancient wisdom have spoken from at least two whole planes of conscious experience beyond that of our every-day "sense-perception" is to us inconceivable, and yet such is the fact; and why should the modern advocate of evolution be shocked and staggered by such

a disclosure? It but justifies his hypothesis and extends its theatre. Is it because the present custodians of this ancient learning do not scramble for recognition on the stock exchange, and enter into competition in the marts of the world? If the practical outcome of such competition needed illustration, Mr. Keely might serve as an example. The discoveries of the age are already whole centuries in advance of its ethical culture, and the knowledge that should place still further power in the hands of a few individuals whose ethical code is below, rather than above, that of the ignorant, toiling, suffering masses, could only minister to anarchy and increase oppression. On these higher planes of consciousness the law of progress is absolute; knowledge and power go hand in hand with beneficence to man, not alone to the individual possessors of wisdom, but to the whole human race. The custodians of the higher knowledge are equally by both motive and development almoners of the divine. These are the very conditions of the higher consciousness referred to. The synthesis of occult science becomes, therefore, the higher synthesis of the faculties of man. What matter, therefore, if the ignorant shall scout its very existence, or treat it with ridicule and contempt? Those who know of its existence and who have learned something of its scope and nature can, in their turn, afford to smile, but with pity and sorrow at the willing bondage to ignorance and misery that scorns enlightenment and closes its eyes to the plainest truths of experience.

Leaving, for the present, the field of physics and cosmo-genesis, it may be profitable to consider some of the applications of these doctrines to the functions and life of man.

"The intellect derived from philosophy is similar to a charioteer; for it is present with our desires, and always conducts them to the beautiful."

— DEMOPHILUS.

(*To be continued.*)

The Path

THE FORGOTTEN ARTICLE OF THE APOSTLE'S CREED — W. E. Copeland

Jesus says "I and my Father are One", and again prays that his disciples may be one in him as he is one in the Father. In the proem to John's Gospel it is written, "And the Word was with God and the Word was God; and the Word was made flesh and dwelt among us, full of grace and truth". And again it is said, "John was not that Light; but that was the true Light which lighteth every man who cometh into the world". In this remarkable chapter of the New Testament the "Light" is used as the equivalent of "Word", Light of God and Word of God meaning the same thing. All this proem to the Fourth Gospel seems at first very mystical, and we cannot understand it, but as we appreciate the real meaning of the words and connect them with other words used by Jesus, as reported in the same Gospel, we begin to comprehend their full meaning and find that the passage reveals more of truth than any other chapter in the whole Bible. Only, however, when you possess the key does it give any information; to most persons it is the blindest part of the Sacred Writings. But to Christianity in America as to Buddhism in Ceylon, Theosophy brings the key which will unlock the long-closed doors and reveal the inner meaning.

This Proem to the Fourth Gospel, which is so much of a puzzle to most persons, even to Theologians, accords entirely with the general teaching of Jesus, and, whether written by the Apostle John or not, was certainly composed by one who had comprehended the full significance of the oft-times mystical language used by Jesus, and who must have been in very close communion with him, receiving the full instruction imparted only to the inner circle of brothers who were deemed worthy to

understand the meaning of the parables used for the multitude, since "it was not fitting," Jesus said, "to cast pearls before swine".

What Jesus wished to teach was the Deity of Man, an idea common to all the Mysteries and taught by all the Great Masters, but entirely forgotten by the Jews when Jesus came to lead the world from darkness to light. Except the students of the Kabala, who were usually men living apart from the world, the Jews in the time of Jesus had forgotten their origin and the fact, once known, that they possessed a divine nature. So immersed were they in materialism and the external that Jesus tells them that their father is the Devil, that is, the man of the earth, material and earthly. "Ye claim Abraham as your father, but ye are children of the Devil". The same would be said today to the Christian church, were Jesus to appear again; the same must be said by the successors of Jesus and the other Adepts who lived in the Spirit. The Jews had lost their life and had joined the children of darkness over whom, according to the Magians, Ahriman or the principle of darkness presided. When the light shined into the darkness men did not understand that it was the light and would have none of it. In precisely the same condition stands the Christian Church. Theosophy, the same light which Jesus placed before the Jews and for bringing which they caused him to die, is now offered to the Christian Church, which, immersed in materialism and the worship of the Mammon of Unrighteousness, rejects it with scorn. And the central thought of Theosophy is that humanity is divine; God and Man are one, or Man is God; which was also the central thought of the message which Jesus presented at the beginning of the Christian Era.

In the *Pistis Sophia* (1), said to have been written by one of the Apostles and accepted by all of the Gnostic and many of the Orthodox Christians as directly inspired by God, we find the following passage which shows how man was regarded during

the second and third centuries. "And the Spirit of the Savior was moved within him, and he cried out and said, 'How long shall I bear with you, how long shall I suffer you? Know ye not and do ye not understand that ye are all Angels and all Archangels and Lords and Gods? Cease not to seek day and night, and stay not yourselves until ye have found the purifying mysteries which shall cleanse you and make you pure Light, that ye may inherit the Light of My Kingdom. Now therefore, thou Andrew and thy brethren, because of your Renunciations and all the sufferings and peril which ye have undergone, and your Reincarnations in different bodies, and your afflictions, and that after them all ye have received the Fructifying Mysteries and have become exceedingly pure Light, and shall be Kings in the Kingdom of Light forever.'"

In further proof that this was the position of the early Christian Church I will quote the words of Justin Martyr, A. D. 139.

"One article of our faith, then, is that Christ is the first begotten of God and we have already proved him to be the very Logos (universal reason) of which mankind are all partakers; and therefore those who live according to the Logos are Christians, notwithstanding they may pass with you for Atheists. Such among the Greeks were Socrates, Heraklitos, and the like; among the barbarians were Abraham, Elias, and many others. Those who have made the Logos or Reason the rule of their action are Christians and men without fear."

Theosophists have no difficulty in saying with the Catholic Church "Christ is God", or "Jesus is God", but we must also say, as did Jesus, "Ye too are Sons of God". When Jesus is called in the New Testament "God", allusion is always made to the Christ, or the Logos, or the Higher Self. Jesus was God: we have no quarrel with the Church over that doctrine; but we call attention to the

long forgotten doctrine which lies at the base of Esoteric Christianity, "All men are God", unless they have altogether driven away the God part, have divorced the Higher and Lower Selves, and, like the Jews in the time of Jesus, have the Devil for father. The all-important doctrine of Theosophy, as it seems to me, which overtops all others, or, rather, on which all others are founded, is "Man is God". All men are Sons of God, for in all dwells the Light, in all is incarnate the Word; else are we not men at all, only bodies having the appearance of men, from which the Higher Self has departed. This is the forgotten doctrine which was made the most important part of that Esoteric Christianity which was imparted by Jesus to his disciples and by them to the brothers, until the time when the Church and the State were united under Constantine and every one was admitted among the brothers with no proper instruction. After the Union the secret meaning of the parables was forgotten, for the Church, married to the Mammon of Unrighteousness, could neither see the Light nor hear the Word. Consider the ever-famous parable of the Prodigal Son, in which the Prodigal after wasting his substance in riotous living "comes to himself and straightway hastens to return to his Father's House, just as all men will do when they also come to themselves. I need write no more in proof of the fact that the Deity of Man was a central doctrine with Jesus and the early Christian Church.

But it is one thing to affirm a doctrine and believe in it, quite another to know the truth which is expressed by the doctrine. What Jesus taught his disciples, what the Great Masters of all time taught their disciples, what "Those who know" are through Theosophy teaching all who will devote themselves to the study, is that Men are God. In olden time, such was the effect of teaching this great truth that, when imparted in the Eleusinian Mysteries, men came forth from the initiation entirely changed. It seemed,

indeed, as though they had been baptized with the Holy Ghost and born from above. Knowing that we are God, all things are possible; as Jesus told his disciples, "Greater things than these shall ye do." Moses said to the Israelites that God had revealed himself in the burning bush as "I am that I am": a better translation for individual man is, "I am that I will to be". Then, if we are God, we can be what we will to be and do what we will to do, and can do greater things than the Nazarene. Until the year 300 A. D. the faithful did do greater things than the Master, but when they forgot that they were God, the power departed. Theosophy proposes to restore to men this power which belongs to them. Now have we indeed stepped from darkness to light. Before we were blind, now we see; before we were deaf, now we hear; God speaking to us, not in a Bible written long ago, but in a Bible being written today, and, better than in any Bible, speaking in the closet where, having entered, we close the door and hear the Voice of the Silence.

When we remember the effect of this divine knowledge among the so-called heathen and among the early Christians, among the disciples of all the Great Teachers, may we not expect that when men and women of today through the influence of Theosophy come to know that they are God, may we not expect a genuine conversion of the world and the coming upon the earth of a grander race of men than have yet dwelt upon it, even of a people who know that they are God and to whom all things are possible?

DEATH — *Alexander Fullerton*

Theosophists who were not brought up under "Evangelical" influences have no adequate perception of the change Theosophy makes in the view of death. To an orthodox, death is a penal infliction indicative of Divine wrath, the close to all hope of change or reformation, mysterious and awful and terrifying in every aspect, but especially because it introduces into the immediate presence of God a soul which is then to receive assignment of woe or bliss. Which shall be assigned can never be foreseen, for, as not character but faith is the determining factor, and as no one can say whether the faith of the deceased was sufficient to "justify", there must be painful uncertainty in every case short of conspicuous saintliness. The harrowing fears, the agonies of doubt and misgiving undergone by pious relatives over every open grave, no arithmetic can ever compute.

But the conception keeps also the living in terror. St. Paul most justly describes those who "through fear of death were all their lifetime subject to bondage". Not knowing when it would come, but only that it was horrible in its details and incalculably momentous in its consequences, with no security as to its outcome beyond a sentiment known to be fickle and avowed to be deceptive, is it any wonder that orthodoxy kept them shuddering along every step of the way towards the open tomb at which it ceaselessly pointed?

It is one of the measureless blessings of Theosophy that this odious libel on God and Nature is demolished, the whole demoniacal conception obliterated, and the aspect of death completely revolutionized. With an indignant sneer Theosophy shatters the terrorizing image, and substitutes for it a benignant,

rational, and kindly figure.

The notion that death is a punishment for sin is the basis for the orthodox erection, and this is blasted to atoms by proof that death is a natural step from lower to higher planes, the necessary transfer from scenes one has exhausted to those still in store. It is no more arbitrary, no more terrific, than birth. But, in itself, it is not even a calamity. Far worse would be the fate of one doomed never to die, ever to pass centuries of wearied disappointment without hope of relief or change. Even the orthodox have occasionally sensed this, and, momentarily blind to the slight on the Divine judgments, have sung, "I would not live always; I ask not to stay".

Having thus removed the ground-work of the misrepresentation of death, Theosophy proceeds to erect a true conception. As death is but a door, a transit from earth-life to life beyond earth, all must turn on the view of each. Now earth-life, says Theosophy, is that era during which an incarnate individuality undergoes experience, forms character, and suffers whatever evil its demerits demand; life beyond earth is the era during which the individuality, no longer incarnate, digests the results of that experience, reposes in the wealth of that character, and enjoys whatever good its merits deserve. Here, in this mixture of right and wrong, and turbulence and serenity, and peace and warfare, we have our partial reward and also our copious discipline: there, in the calm sunlight of subjective existence, sorrows have passed away and heavenly rest comes to soothe and refresh the one who has ceased from his labors. But when that rest has fulfilled its needs, when full reward has been given and the time has come for another pilgrimage, the individuality returns to earth-life, assumes a different personality, and begins again the formation of its character.

Observe, says Theosophy, the contrast between earth-life and the other, and so the new view we must take of death. There is no "Day" of Judgment, for Judgment is daily and unceasing. There is no nearer presence of God, for, whether with bodies or without them, "in Him we live and move and have our being". There is no "final doom", for no finality is possible while character is forming, and "doom" has no meaning apart from desert. "Hell" is not a future and outside torment into which sinners shall be dropped when the loss of their bodies makes it possible to get at them, but a present and interior state which they create for themselves through their passions and wrongs. "Heaven" is not a remote and exterior scene where saints are to congregate in resurrected bodies and imperfectly disciplined souls, but a condition of the internal man, realizable on earth so far as his development has made it possible, and off the earth in a measure unattainable while en fleshed. Punishment is not future, but present; not there, but here; not beyond the earth, but on the earth. And happiness, though found here too, is there without alloy.

This being so, we see at once the different aspect Theosophy gives to natural death. Not the introducer to an uncertain future, with the chances greatly in favor of woe, but to certain, assured peace and happiness. Never the stern avenger, he is ever the kind friend who opens the door to bliss. No pain enters the unseen world, and we, with knowledge that only bliss is ever found within it, can lose all fear as we contemplate that door afar or see it opening for our approach. For where is the pain, where the discipline and sorrow that we know must follow our many faults? In *life*. Birth, not death, is what introduces us to sorrow and ensures that every sin shall meet its recompense. If we are to be terrorized at any of Nature's processes, it must be the cradle, not the grave. If any one is free from either danger or uncertainty, it must be that which ushers only to joy and peace.

What an unspeakable boon has Theosophy thus given to men appalled with the horrors of a mistaken creed! As true conceptions of life and death make their way throughout the land, what wretchedness will they dispel, what agony of spirit for self and loved ones, what hardness and coldness towards the Author of all good. If Theosophy did nothing to uplift higher motive and finer endeavor, if it disclosed no better ground for human fraternity and mutual help, if it solved no mysteries and lighted no gulfs and cleared no doubts, if it gave no rational interpretation to existence and furnished no adequate impulse to development — and it has done all these; yet it would have conferred this incalculable blessing, — emancipation from imaginary but bitter terror, the transformation of Death from an enemy to a friend, the resurrection, not of a disintegrated carcass, but of a rational belief.

The Path

THE IDEAL AND THE PRACTICAL — *Pilgrim*

(*Concluded.*)

Altruism truly will have to be realized and expressed in action during our journey to the great goal, but it cannot be called the great goal itself. It may be a means, a necessary means, but it is not the only means. The very word, too, has a ring of coldness in it, and there must be many who require to light the flame of their love and devotion at a more fervent centre than any thought of Humanity can kindle! Indeed, is the Humanity of today either in the individual or in the mass such as to elicit either our love or our worship? Scorn, loathing, and pity seem more like the emotions raised in contemplating alternately its meanness, its vice, and its suffering. True it is that none are so fitted as the Occultist to return the world's scorn with princely interest, for none are lifted so immeasurably above the world with its bounded vision and its trivial aims, but though scorn may only be the reflex action which would make it exactly commensurate with the intensity of worship in the soul, it is of the very essence of separateness, and it must be remembered that all sense of separateness has to be killed out. The scorn must be replaced by an infinite compassion. But how is this to be done? The divine alone provides a bridge for the scattered fragments. It is only through the Deity — the Perfect — the All-pervading — the Unutterable Essence of our own inmost Being — that man can truly become one in love and worship with his fellow-man. Yoga is the watchword, Yoga is the means, Yoga is the end. It is written. "Counsels of perfection are the aliment of all strenuous souls," and one who in this bitter and arid desert of illusion has once seen the vision of the holy grail can never cease to thirst for its draught of sacramental wine.

Union being, then, our watchword and our aim, we must not be too much cast down at the apparent disunion which seems to precede the attainment of each stage in the progress. It is sad beyond expression, the feeling of disunion when the ardent affections of childhood and youth are gradually dissipated through the failure of the old friends to respond to the newer ideals before us. The closest earthly union of all — that of the married souls — would indeed so fill the whole horizon of life with bliss that it would far more than compensate for the sad severance of the other ties, but when this also is denied, there often rises in the heart a feeling of loneliness and homelessness so accentuated as to be almost too bitter to bear. But is not this merely the prelude to the heart's greater expansion? to the soul's wider vision of its object and its end? It is long indeed before the "great orphan" Humanity can claim its own in us! before we are capable of giving birth even to the germ of that world-wide sympathy which so infinitely transcends all personal claims, and which, when grown to full stature, is the very blotting out of self, is the very gate of Heaven!

The practical person may here step in and say that this identification of self with Humanity can only be achieved by practical work for the race in every-day human life. Doubtless the race needs its champions and deliverers today as of old. Let Hercules again step forth, girded to cleanse the Augean stables! Let the troubled and careful Martha continue her work of service! There are many laborers wanted in God's vineyard. But let not the hands that work say to the brain that guides them "We have no need of thee." The practical person has work to do in the world: let him do it! but "counsels of perfection" were not written for him! It is the same old problem of (1) "Meditation and Action" which so few of the western people are yet fit to grasp, — within the quietistic term meditation being embraced all the battles of

the hidden life, including the "great battle."

A pointed illustration of Europe's incapacity for right thought may be found in Draper's great work, *The Intellectual Development of Europe*. Words are of course mere counters which may bear different significations in different ages, or to different individuals in the same age, but no mere juggling with the counters will account for a fundamental difference of conception as to the thing, and when a writer (and the point is only accentuated when the writer is so distinguished for ability and wide-mindedness) uses the word quietism as synonymous with apathy, it is similar to mistaking the top rung of a ladder for the bottom one — an absolute perversion of vision. A little knowledge of the Vedic philosophy teaches that the active emotional nature of one lit with the fire of Passion ("Rajas") is greatly superior to the apathy of one sunk in the ignorance of Sloth ("Tamas"), but far above the passionate nature stands the one who has transferred his energy from the outer on to the inner plane, and has thereby attained some amount of equilibrium, some amount of self-control. When the inner struggle is continued with such intensity — aided and guided by the concentration on the Supreme — that all outer things lose their importance, a stage of "quietism" is reached which in external appearance may resemble the debased apathy of the ignorant boor, but does it not imply absolute perversion of vision to mistake the sublime heights of Serenity ("Satwan") for the depths of ignorant sloth? It must be apparent that the above misunderstanding is no mere verbal difference, and can only be accounted for by the fact that a material-minded race is incapable even of believing in the existence of states of spiritual exaltation.

Before the battles of the inner life all else truly sinks into unreality, and the great teacher whom the Western people honor has in the story of Martha and Mary left a record of his thought

on the subject of "Meditation and Action" which may be summarized in the lesson that it is greater and nobler and better *to be* than *to do*, that the race is ultimately more benefited by the thinking of the thoughts and the living of the life than by all the actions of all the philanthropists. The real battle has to be fought within, and any finding of external spheres of energy or beneficence is a mere postponement of, though it may be a necessary preliminary to, that awful struggle.

It is only by slow degrees that the lesson contained in each pregnant paradox of *Light on the Path* is painfully learned through payment of heart's blood. First in the book but last in realization comes the rule (No. 5) "Kill out all sense of separateness." When the disciple has learned this in its entirety he is one with Humanity, for he is one with God. But the painful process is described in the antithesis, "Yet stand alone and isolated, because nothing that is embodied, nothing that is conscious of separation, nothing that is out of the Eternal can aid you." It is this standing alone that is the hard task, but it must surely be the prelude to the greater expansion of the whole nature, it must surely be a step nearer to the merging of the self in the All! Bitter beyond description is the learning of the lesson, when the whole passion of the passionate nature is concentrated in the cry — the unavailing cry — for the sympathy of the friend, for the love of the lover. It is poor consolation to say that to find content in these things would be to satisfy the immortal hunger upon husks. It is a very mortal and human hunger that cries out. Nevertheless it is but reasonable to admit that only by such means can the mortal hunger be replaced by the immortal, that only by such terrible strangling of our personal human desires can man attain to the wider sympathy, the greater wisdom, and the all-embracing love of the God.

Many, O weary pilgrim, may be thy journeys back to earth, many

thy tortures on the ever-recurring wheel of life, many thy shrinkings of soul from the terrors of the "dire probations." But take courage, Lanoo, and keep the fire burning, the fire that burns within, for its light must grow and must increase, until when the last great battle shall be won, "its light will suddenly become the infinite light," and then to thee may be addressed the words — words that may even convey to our still earth-bound understanding some faint description of that indescribable achievement — the realization of the loftiest conceivable *ideal* as an absolute *practical* fact: "Behold! thou hast become the light, thou hast become the sound, thou art thy Master and thy God. Thou art *Thyself* the object of thy search: the Voice unbroken that resounds throughout eternities, exempt from change, from sin exempt, the seven sounds in one, the Voice of the Silence." (2)

The Voice of the Silence is beyond all praise. It is more light on the path to those capable of understanding it. — Pilgrim. ([return to text](#))

The Path

HYPOCRISY OR IGNORANCE — *Eusebio Urban*

There are some members of the Theosophical Society who expose themselves to the charge of indulging in hypocrisy or being ignorant about their own failings and shortcomings. They are those who, having studied the literature of the movement and accepted most of its doctrines, then talk either to fellow-members or to outsiders as if the goal of renunciation and universal knowledge had been reached in their case, when a very slight observation reveals them as quite ordinary human beings.

If one accepts the doctrine of Universal Brotherhood, which is based on the essential unity of all human beings, there is a long distance yet intervening between that acceptance and its realization, even in those who have adopted the doctrine. It is just the difference between intellectual assent to a moral, philosophical, or occult law, and its perfect development in one's being so that it has become an actual part of ourselves. So when we hear a theosophist say that he could see his children, wife, or parents die and not feel anything whatever, we must infer that there is a hypocritical pretension or very great ignorance. There is one other conclusion left, which is that we have before us a monster who is incapable of any feeling whatever, selfishness being over-dominant.

The doctrines of Theosophy do not ask for nor lead to the cutting out of the human heart of every human feeling. Indeed, that is an impossibility, one would think, seeing that the feelings are an integral part of the constitution of man, for in the principle called *Kama* — the desires and feelings — we have the basis of all our emotions, and if it is prematurely cut out of any being death or worse must result. It is very true that theosophy as well as all

ethical systems demands that the being who has conscience and will, such as are found in man, shall control this principle of *Kama* and not be carried away by it nor be under its sway. This is self-control, mastery of the human body, steadiness in the face of affliction, but it is not extirpation of the feelings which one has to control. If any theosophical book deals with this subject it is the *Bhagavad Gita*, and in that Krishna is constantly engaged in enforcing the doctrine that all the emotions are to be controlled, that one is not to grieve over the inevitable — such as death, nor to be unduly elated at success, nor to be cast down by failure, but to maintain an equal mind in every event, whatever it may be, satisfied and assured that the qualities move in the body in their own sphere. In no place does he say that we are to attempt the impossible task of cutting out of the inner man an integral part of himself.

But, unlike most other systems of ethics, theosophy is scientific as well, and this science is not attained just when one approaching it for the first time in this incarnation hears of and intellectually agrees to these high doctrines. For one cannot pretend to have reached the perfection and detachment from human affairs involved in the pretentious statement referred to, when even as the words are uttered the hearer perceives remaining in the speaker all the peculiarities of family, not to speak of those pertaining to nation, including education, and to the race in which he was born. And this scientific part of theosophy, beginning and ending with universal brotherhood, insists upon such an intense and ever-present thought upon the subject, coupled with a constant watch over all faults of mind and speech, that in time an actual change is produced in the material person, as well as in the immaterial one within who is the mediator or way between the purely corporal lower man and his Higher divine self. This change, it is very obvious, cannot come about at

once nor in the course of years of effort.

The charge of pretension and ignorance is more grave still in the case of those theosophists guilty of the fault, who happen to believe — as so many do — that even in those disciples whose duties in the world are *nil* from the very beginning, and who have devoted themselves to self-renunciation and self-study so long that they are immeasurably beyond the members of our Society, the defects due to family, tribal, and national inheritance are now and then observable.

It seems to be time, then, that no theosophist shall ever be guilty of making pretension to any one that he or she has attained to the high place which now and then some assume to have reached. Much better is it to be conscious of our defects and weaknesses, always ready to acknowledge the truth that, being human, we are not able to always or quickly reach the goal of effort.

The Path

THE VISION OF HORIL — *Stanley Fitzpatrick*

Horil awoke in the morning an hour before the dawn. It seemed to him that some one had been standing close beside his couch and he had been listening to a long discourse. Also it appeared as though his physical senses had awakened suddenly and he had caught, with both inward and outward ear, the last sentence spoken.

But as had happened on former occasions, the moment he was fully awake to outward things he could not recall the sentence, nor any word of all that he had heard. He was troubled at this, desiring greatly that he might remember all that had been shown to him in dreams. But this he could not do, and, as he lay pondering on these things, suddenly he heard a voice close beside him, though he saw no man. Yet a vision was opened to his sight. Then the Voice said unto him:

"Look and behold, O Horil! thou disciple whose feet are at the entering of two ways."

And as Horil gazed, a beautiful green valley between high mountains lay spread out before him. Through the midst ran a gently winding path, and there were purling streams and flowering shrubs. Tall trees rose up here and there, and the smooth green turf was studded with blossoms. As Horil looked he thought how easy such a path would be for tired feet, how grateful the coolness and the quiet to a heart pierced by the world's cruel stings, and faint and weary with the conflict of life.

"But thou would'st walk alone, unknown, unthought of by the world," said the Voice.

"For the world I care not," replied Horil; "I have drunk deep of its

bitterest cup; and its praise I would willingly forego that I might walk my own way untroubled."

"That thou could'st in this path. Thine own life might be blameless, and lead thee on to rest. But for others thy voice would be silenced. The torch of Truth thou could'st not uphold; and as its light would not fall on thee, thou would'st not become a mark for the envy, hatred, and malice of those who would destroy Truth and its light-bearers. This path thou mayst choose; but look first at the other."

Then Horil turned his eyes to the right, and lo! a great mountain rose up before him. A path wound up its side, but it was steep and in many places the feet would find nothing upon which to rest but sharp points of stone. But the pathway, even from the beginning, was covered by a clear, white light, which as it ascended grew ever brighter and brighter until far up the mountain side it appeared like tongues of leaping flame. Then the heart of Horil burned within him and he said:

"Nay, but better still is the upward path. That will I choose."

"Decide not in haste," answered the Voice. "Bethink thee how cool and pleasant is the valley. Thy feet are bruised with life's journey and thy heart sore with its conflict. There thou canst rest. Here thou must renew the strife. Here thou wilt bear a torch flaming high above thy head and its light will illumine thy form, and thus thou wilt become a fairer mark for the missiles of the foe than thou hast ever been before."

Then the heart of Horil sank down in his breast, cold and heavy with dread. And he thought: "How can I walk in that path? How can I bear the finger of scorn, the laugh of derision, the speech that is sharper than the sword, that burneth like fire? I that am already faint and worn with life's battle, I am not strong enough."

And he turned slowly and sadly toward the valley.

"It is well," said the Voice. "Thou hast chosen. But give me now the torch thou bearest in thy right hand."

"Nay," replied Horil, "that was given to me by One, even the Master. That will I not yield up."

"But the torch is only for those who pass over the mountain. There, as thou ascendest and the air becomes clearer, it will burn with a brighter, purer flame. But in the valley the atmosphere is too dense. It will be quenched. Yet may'st thou walk pleasantly, in the sunlight by day, and under the moon and stars by night, and having no torch to distinguish thee from another, none will molest or make thee afraid."

Then was Horil greatly troubled, and his soul was rent within him. And he cried out in his anguish, even to the Master, saying:

"Lord! if it be possible let this cup pass from me. My enemies hate me with a cruel hatred. They lie in wait for me. When I hold up my torch they will assail me with fury. Fear taketh hold on me. Nevertheless, O Master! thy gift I cannot quench. I may not turn into the pleasant valley. Strengthen thou mine hands to bear aloft thy torch to light the children of men who faint and stumble in darkness and despair."

Then fell upon his soul words not uttered in speech — the Voice which speaketh in Silence — from the viewless it came.

Then was Horil greatly comforted, and though fear had not altogether departed, nor the dread of what his enemies might do unto him, he turned resolutely away from the pleasant path, and grasping his torch more firmly in his right hand he set his face toward the mountain.

The Path

THE FIRST OBJECT OF THE THEOSOPHICAL SOCIETY — *Katharine Hillard*

The three principal objects of the Theosophical Society as laid down in the books are: *First*, "To form a nucleus of a Universal Brotherhood of Humanity without distinction of race, color, or creed." *Second*, "To promote the study of Aryan and other Scriptures, of the world's religions and sciences, and to vindicate the importance of old Asiatic literature, namely of the Brahminical, Buddhist, and Zoroastrian philosophies." *Third*, "To investigate the hidden mysteries of Nature under every subject possible, and the psychic and spiritual powers latent in man especially."

The three divisions are but three roads leading to one goal, but as St. Paul, in enumerating the theological virtues, declared that "the greatest of these is charity," so of the three objects of the Theosophical Society the greatest of these is Universal Brotherhood, the others but side-paths leading into it. The study of Oriental literatures and religions will enlighten the intellect, and the study of the hidden mysteries of Nature will develop the psychic powers, but the endeavor to promote Universal Brotherhood will assist more directly the growth of that altruism which alone can affect the spirit, and which is, indeed, the "charity" of which Paul spoke.

The outside observer who inquires as to the objects of Theosophy, as soon as he hears "Universal Brotherhood" mentioned immediately objects that there is no need of a Theosophical Society to teach us this, that Christianity has always taught it, that even agnostics and Jews and Mohammedans practise it, and that, in fact, it is a great piece of presumption for theosophists to

suppose they can make anything original out of so threadbare a doctrine. To which we would reply, in the first place, that truth never can be new, that the poet spoke of her with absolute assurance when he said "The eternal years of God are hers", and that that eternity stretches as far into what we short-sighted mortals call the Past, as into what we are pleased to term the Future, and when we learn to know the eternal verities, we shall realise that upon the dial of the Absolute there are no figures, because beyond the realm of Illusion there is no Past, no Future, only one everlasting Present.

The power and weight of truth are in its *age*, not in its newness; in the way that it appeals to our hearts as something that we have always known but somehow have unaccountably lost sight of; something that we greet like a dear friend we rejoice to see again after long absence. Therefore we will not try to claim novelty as a characteristic of the doctrine of Universal Brotherhood.

But we may claim a certain freshness in the method of our teaching. Universal Brotherhood as taught by the churches has too often far too much of the "elder brother" element in it, of a certain virtuous condescension of the truly good towards those so far beneath them in physical and moral qualities that they can afford to demonstrate the height of their own position by the amount of effort they make to stretch a helping hand towards those whom they acknowledge as their "brethren in the Lord". Outside of this rather indefinite location, the brothers occupy the usual uncomfortable position of poor relations.

Brotherhood as taught in the churches is founded generally upon a physical basis. It implies equality, but not identity; men are brothers because they have similar organs, passions, capabilities, a common lot; because they share the great experiences of birth and death and a possible immortality. They are a collection of

similar units, an agglomeration of shells upon the shore of Life. But they are not *one thing*; each has his personality which shuts him out from his kind by inclosing him within the limits of self; and between man and man that barrier of personality is ever firmly set; come as near as they can, the consciousness of the *I* and the *Thou* is ever between them.

But in Theosophy the fundamental doctrine is that of absolute identity. These outward shows of things are but illusion, a deception of our senses, themselves but a fleeting image on the screen of Time. As life departs, our bodies fade and crumble into dust, our mental faculties fail and disappear, our desires and our passions perish with the organs that gave them birth; — what remains? Only the Spirit of man, which is the Spirit of God. And Spirit — however inadequate our conceptions of it must necessarily be — we all acknowledge to be one and indivisible, the Great Reality, the Everlasting Truth; Infinite, and therefore formless and identical, whether it send its pulsating life through man or crystal, through zoophyte or star.

Only by recognizing this absolute Unity of Spirit can we possibly understand the real meaning of the doctrine of Universal Brotherhood, and realise that it means, not the equality of *men*, but the *identity of MAN*. Only when we learn to think of man as a whole, as a collective being, of which, each one of us forms a more or less insignificant part, as the separate cells in our bodies make up that physical machine which we think of as our own, only when we can grasp this idea of *identity* instead of equality, shall we begin to see what "The first object of the Theosophical Society" really implies.

It implies a common association for a common good, it implies subordination of the individual to the whole, and it implies the annihilation of self, the breaking down of the limitations of the

physical, mental, and psychic Egos that the SPIRIT may be all in all. When these barriers are at last thrown down, and the soul realises that the limitations which have hampered her never had a real existence, but were painfully built up by herself out of one false conception after another, then indeed she realizes her freedom, and knows herself as one with the Divine. And when the lover of mankind has learned (as in Jellaleddin's poem) that in the house of the Spirit "there is no room for *Me* and *Thee*", but that his brothers are *himself*, then in that soul has been attained the first great object of the Theosophical Society. He has learned his lesson, learned to feel the great heart of the universe beating in his own breast, learned to rejoice in the joys of others and to bear their sorrows as his own, learned that he is but one cell in that great Being called Humanity, and that the functions of that one cell improperly discharged will ruin the harmony of the whole organism. The doctrine of Universal Brotherhood, then, teaches us at once a great moral and a great spiritual lesson. It defines our position not only as part of a great working community, but as part of the Divine Spirit that animates that organisation. So closely linked is every part and parcel of the mighty whole called Man, that no one of us can afford to neglect our small portion of the great work, the bringing of harmony out of chaos, of perfection out of imperfection. For the law of analogy holds good throughout the universe, and as the object of our individual existence is to return, a glorified and perfected consciousness, to that great Fount of Being whence we sprang, so Humanity as a whole must purge away the evil, dominate the physical, and become a God. To this end we must all work, and as each of us recognises more fully the identity of Man, each year as it closes will bring nearer the end of the Dark Age, and the time when the Divine Voice can say in the highest, "Let there be light." Then indeed that time shall come upon earth that the poet has described as the Golden Year, and then

"Shall all men's good
Be each man's rule, and universal Peace
Lie like a shaft of light across the land,
And like a lane of beams athwart the sea,
Thro' all the circle of the golden year."

The Path

THE PLAGUES OF OUR PUBLIC MEETINGS — K. W.

A friend of mine who claims to be an earnest Theosophist, but is, in fact, a rather criticising, fault-finding, and uncharitable fellow, is nevertheless very dear, and very near, to me. This chap writes a funny letter to me concerning our public meetings, a letter which I will read to you because the object of his disaffection is also our own adversary, and we thus have common cause with him this time.

"Dear brother," he writes, "what you say concerning your meetings is very familiar to me. We have ours in good running order and well attended now, but we had to go through the same experiences as you have to at present. Your meetings will never thrive until you have found the method to get rid of their never-tiring enemy who is the same everywhere.

As the Colorado-bug is the plague of the potato, tomato, and egg plants, and even kills the young settlings at once, and has not met yet his conqueror, so public meetings of whatever kind have a foe who is apt to kill the tender and young ones among them, so that sometimes they have to be set anew, — if that is possible at all. This monster is the Crank. I have given some study to this loathsome creature and discovered that it exists in three distinct species, which I am going to describe scientifically for the instruction and warning of the unwary meeting-culturer.

The three species have these common properties: 1, they belong as members to no society; 2, they are recklessly selfish; 3, they invade whatever meeting gives opportunity for questions and remarks from the audience. The reason why they do not belong to any communities of their own is their murderous loquacity that drives every one away from them, or that they are too conceited

to agree or work in sympathy with anybody, or that they are too stingy to make any sacrifice, or all three reasons together.

The least harmful of the three species of the meeting-killer is the one I called Mr. Shallow simple. The elemental that runs him only wants his tongue to have a good time a couple of hours every week, wherever there is an opportunity, irrespective of any other consideration whatever. Shallow is everywhere but at home at meeting-hours in the city.

In such hours Shallow goeth around as a roaring lion wagging his tongue and seeking whom he may devour. No meeting is safe. Some new society — for instance, the 'Presbyterian Old Men's Progressive Union,' advertise their inauguration meeting, and you are very glad of the opportunity, and do *not* go there; for you are sure Shallow will.

He knows by long experience that his water is too shallow to be swallowed by the audience to any length of time satisfactory to himself; he also feels that he has nothing refreshing and healthful to soul and mind to give them. Therefore he flavors his speech with the sulphuric acid of opposition and irritation, and thinks they will take it for lemonade.

'My dear friends' he says to the Reformers, in the tone of the most fatherly benevolence (1) why are you so dissatisfied with your conditions? your wages are not so bad. Why do you not, each of you, save, say, a quarter a day for the rainy day? Wouldn't you have eighty dollars in a year, and eight thousand dollars, each of you, in a hundred years,— would not each of you be a capitalist?' 'Shut up! sit down! who is that fool?' they shout, and poor Shallow has again to leave the floor.

Another time he tries his luck in the young Abheachabhrahayana Branch of the Theosophical Society, and, imagining that they are

Buddhists, thus addresses them with the already-mentioned fatherliness: 'My dear friends! Why will you go back into the darkness of the by-gone ages, and dig up the dead teachings and sayings of Paganism? This is no progress, friends, it is retrogression! If you want to improve the ethical conditions of mankind, why not study and expound the sublime doctrines of our Christian Gospel? Is not our whole grand civilization based just on this moral code of Christianity? What other age can boast of such glorious attainments as ours in all departments? Have under the ethical teachings of the Hindoos such things been seen as the steam-engines, locomotives, steamship, telegraph, telephone, phonograph, gunpowder, printing-press, dynamite, firearms, breachloaders, ironclads; and all those charitable institutions as hospitals, poorhouses, almshouses, workhouses, Sunday morning breakfast and Saturday evening soup associations, houses of refuge, penitentiaries, and lunatic asylums .." Here the chair ventures to state that the gentleman's mind is wandering, that he is off the subject and had better retire.

Now, on the whole, Mr. Shallow does not so much harm; you can get done with him in about ten minutes.

More dangerous is the second species whom I call *Mr. Hobbyrider*. This one is very often the Elijah or Jesus of the 'new dispensation,' one of the bashful kind, namely of those who try to keep their mission secret,— in vain, however, for it oozes out everywhere, especially in their countenances. But usually Hobbyrider is an ordinary mortal who only labors with a philosophy of his own, because he has no chair to teach it from. His system is based on some idea that any average thinker might conceive and entertain for a while, but then would either discard as wrong, or file somewhere in his memory as an old matter of inferior order. But Hobbyrider is in love with this idea and wants his bride to be recognized. If this world of ours were ruled half-way by such a

thing as reason, he would be a professor of metaphysics at one of our universities. Under the actual circumstances, however, he has to hunt for an audience where he can get it; and it is a hard job too, indeed ! For the old societies are too smart and too much on their guard against starved tongues. They know they might as easily stop a waterfall as his flow of speech once let loose. They therefore use all kinds of tricks and have got up special contrivances to keep him off their rostrums. That is why he has set his eyes on innocent and inexperienced young 'Branches', whom he captures and then taps at an awful rate, once he has them in his grip.

The third and most insidious form of the meeting-bug is the one I called the '*Man with the Puzzle*'. Suppose he is attending at the 'Metaphysical Society's' Weekly Meditating Meeting. He has taken note of the subject of the introductory paper that is to be read, and provided himself with a dozen of puzzling questions for all cases. He says, for instance: 'The gentlemen who read the paper used the word 'nature' several times. What do you understand by the term nature?' Some one answers as best he can. But, satisfactory or not, the Man with the Puzzle has a definition of his own, and politely begs leave to give it,—which cannot be properly denied. And now—he has got you!!!—He is the one who defines the things before he talks of them! and in order to define 'nature' he defines half a dozen of other terms. He takes his time. This being done, he also *talks* about nature and the six other things,—under three heads and two subheads each.

Now those of the attendants who are theosophists of old standing know at once what to do in such an emergency. Whilst apparently listening to the Man with the Puzzle, they seize with rapture the grand opportunity of subduing, by taking position in the higher ego, the flames of impatience, indignation, and anger that are arising from the depths of their Kama Manas; and they are very

successful in this exercise. But how about the rest of the audience who know nothing of this theosophical stratagem? They are ablaze with rage at the lamb-like meekness of the chair and the members of the society, and mentally swear by Mars and Saturn never to attend any more. But everything ends in this world of change. The chair looks at her watch and discovers that the hour has struck for adjournment, under useless attempts of Mr. Hobbyrider 'to make a few remarks.' The Man with the Puzzle is triumphant, but the former cannot go home of course in this explosive condition, and gives vent to it in a private controversy with some of the leading members; the result of which is an epistle received by the secretary on the next day in which the whole Society is taxed with ignorance, dogmatism, and Blavatsky-worship. And this end is speedy and fortunate enough; but sometimes these fellows have much perseverance, cunning, and moderation, and then—they kill you! In such contingencies you have to suspend the right of questioning entirely, until the last crank is starved out.

Now although aware of the danger which a crank is to a theosophical branch, I always felt attracted to some of them, understanding by the term simply a man who insists upon his own philosophy in spite of any other. Perhaps the hope of bringing them round was at the bottom of my intercourse with them. If it was, it was a mistake. Such a man will read himself through *Isis Unveiled*, the *Secret Doctrine*, and a dozen of other books to find whether they do not teach anything concerning his hobby. If they do not, as they in fact do not, he scornfully rejects them as chaff. Therefore, since I feel the value of time more keenly now than before, I make it a rule to 'head off' each bore as quickly as possible, and to warn new Branches of the dangers which beset them. Truly yours,

The Path

THE IMPRUDENCE OF MODERN PHILOSOPHERS — *William Brehon*

In Herbert Spencer's new book *Justice*, he defines that principle thus: "Every man is free to do that which he wills, provided he infringes not the equal freedom of any other man," and then goes on to say in his appendix that for more than thirty years he was the first to recognize this "equal freedom" as the summing up of justice in the abstract. But not till 1883 did this modern philosopher discover that Kant had made the same formula. He does not appear to know or recognize the French method of putting it in the Declaration of the Rights of Man, nor the attempt to insist upon it in the American Revolution, nor, indeed, in the thousands of declarations made long before the birth of Spencer.

We have nothing to say against Mr. Spencer's motives, but a great deal against the impudence, perhaps of an unconscious kind, of the schools of modern philosophers of which he forms one. Laboriously for years they write books and construct systems of thought called new by themselves, but as old as any Egyptian pyramid. These systems and formulas they make up in the most refreshing ignorance of what the ancients said about the same things, for "surely", they seem to be saying, "what could the ancients have known of such deep matters?" The theory that no energy is lost was not for the first time known in the world when our moderns gave it out, nor is Mr. Spencer's theory of evolution, nor even his statement of it, his invention or discovery. All these were known to the Ancients. They are found in the *Bhagavad-Gita* and in many another eastern philosophical book.

If these modern philosophers confined themselves to their studies and had no influence in the world and upon the minds of young

men who make the new nation, we would not have a word to say. But since they influence many minds and have enormous weight in the thinking of our day, it seems well to point out that it savors of impudence on their part to ignore the development of philosophy in the East, where nearly all the mooted philosophical questions of the day were ages ago discussed and disposed of. If Herbert Spencer could be so blind as he confesses himself to be as to suppose that he was the first to recognize the abstract formula of justice, only to discover that Kant had hit upon it before him, then of course we are justified in presuming that he is equally ignorant of what has been said and decided in the six great schools of India. If such minds as Spencer's would acquaint themselves with all human thought upon any doctrine they may be considering, then they might save valuable time and maybe avoid confusion in their own minds and the minds of the vast numbers of men who read their books.

Our position, clearly stated by H. P. B. long ago, is that the present day has no philosophy and can have none that will not be a copy or a distortion of some truth or long-discarded notion once held by our superiors the Ancients, and that modern philosophers are only engaged in reproducing out of the astral light and out of their own past-lives recollections that which was known, published, declared, and accepted or rejected by the men of old time, some of whom are now here in the garb of philosophers turning over and over again the squirrels' wheels they invented many lives ago. For "there is nothing new under the sun."

The Path

DOGMATISM IN THEOSOPHY

The Theosophical Society was founded to destroy dogmatism. This is one of the meanings of its first object — Universal Brotherhood. And Col. H. S. Olcott in his inaugural address in 1875, at Mott Memorial Hall, New York, said that such was the object in view, citing the bad effect that intolerance had had in the past. That address was read by Mme. H. P. Blavatsky before its delivery, or its contents were communicated to her, so that it had her assent, for she was present when it was delivered.

In *The Key to Theosophy*, in the "Conclusion," H. P. B. again refers to this subject and expresses the hope that the Society might not, after her death, become dogmatic or crystallize on some phase of thought or philosophy, but that it might remain free and open, with its members wise and unselfish. And in all her writings and remarks, privately or publicly, she constantly reiterated this idea. Of this the writer has direct evidence as to her statements in private.

If our effort is to succeed, we must avoid dogmatism in theosophy as much as in anything else, for the moment we dogmatise and insist on our construction of theosophy, that moment we lose sight of Universal Brotherhood and sow the seeds of future trouble.

There is a great likelihood that members of the Society will insist on a certain orthodoxy in our ranks. They are already doing it here and there, and this is a note of warning to draw their attention to the danger. There is no orthodoxy in our Society. Even though nine-tenths of the members believe in Reincarnation, Karma, the sevenfold constitution, and all the rest, and even though its prominent ones are engaged in promulgating

these doctrines as well as others, the ranks of the Society must always be kept open, and no one should be told that he is not orthodox or not a good Theosophist because he does not believe in these doctrines. All that anyone is asked to subscribe to is *Universal Brotherhood*, and its practice in the search for truth. For the efforts of those who are thus promulgating specific ideas are made under the sanction of the second object of the Society, which any one is free to follow or to refuse to follow as he sees fit. One may deny — undogmatically — reincarnation and other doctrines, or may assert belief in a personal or impersonal God, and still be a good member of the Society, provided Universal Brotherhood is subscribed to and put into practice.

If a member says he must formulate a God, or cannot believe in Reincarnation, none other should condemn or draw comparisons, or point to the writings of H. P. B. or any one else to show that such a member is untheosophical. The greatest minds on earth are puzzled by great ideas such as these, and yet, holding them, can still search for truth with others in a perfect spirit of toleration.

But at the same time it is obvious that to enter the Society and then, under our plea of tolerance, assert that theosophy shall not be studied, that the great body of thought and philosophy offered in our literature shall not be investigated, is untheosophical, unpractical, and absurd, for it were to nullify the very object of our organization; it is a dogmatism that flows from negation and indifference. We must study the philosophy and the doctrines offered to us before we are in a position to pass judgment and say that they are not true or that they shall be rejected. To judge or reject before examination is the province of little minds or prejudiced dogmatists.

And as the great body of philosophy, science, and ethics offered

by H. P. Blavatsky and her teachers has upon it the seal of research, of reasonableness, of antiquity, and of wisdom, it demands our first and best consideration in order that we may with fitness conclude upon its acceptance or rejection.

So, then, a member of the Society, no matter how high or how low his or her position in its ranks, has the right to promulgate all the philosophical and ethical ideas found in our literature to the best ability possessed, and no one else has the right to object, provided such promulgation is accompanied by a clear statement that it is not authorized or made orthodox by any declaration from the body corporate of the T. S. Our Society must be kept free and open, no matter if, because we refuse to formulate beliefs as a Society, we remain small in number, for we can always be strong in influence.

The Path

A PARABLE OF REINCARNATION — *M. M. Phelon*

Out of the garden of the earth grew a pair of leaves. As they rose slowly from the surface, other leaves were added with stem and twigs, and at last, when the summer drew to a close, a well-developed shrub showed itself. It grew strong also in the various woody parts, from the putting forth of many leaves. Otherwise no sign appeared of what its purpose was, whether blossom or fruit. So the summer passed and the autumn came. When the early frosts of winter touched it with their blighting fingers the leaves disappeared, but the resistance of concentrated fibre in that which remained became more and more apparent. The snows fell, covering entirely all that had accrued of acquisition and assimilation.

Time, the recorder of the interweaving cycles of the Universe, stands not still. In due season the voice of the spring made itself heard. From out the disappearing snows the shrub once more shows itself, the same in the outer as when it disappeared from view. But not the same in the inner, for there had been a change by which the wood itself had ripened both for resistance to attacking force or influence from the outer, and for the perfecting of the power of receiving that which might be offered for its acceptance. Under the genial, kindly touch of the sun's rays, and the moisture of the showers, stirred the impulses of sequence, to fashion out of the forces hitherto stored up the buds, those indices of the renewed flow of life. They grew until the confining sheaths gave way, and that which had been concealed was revealed. Once more in the former fashion the shrub rejoices in the glory of stalk, twigs, and leaves. As the season wore on, to the watcher appeared, from one of the strongest centers of growth, a new formation. To the nourishment and development of this, all the

energies of the rest of the plant seemed to be drawn. Still, this in the outer was but a stem and leaves, but upon the summit, as if crown-borne, rose a bud, quite different from the buds from which the leaves were unfolded. It was a bud of promise, of hope, of creative energy, of power, of possible unfoldment.

Looking at it from the outside, none could tell from either its size or the greenness of its covering what might be within it. Little by little it approached its maturity. The twisted points of the outer sheaths of the bud gradually loosened their hold one upon another, and as they fell apart a faint color flushed the edges. Still they loosened yet a little more, until at last, as if suddenly shaken out, the glorious beauty of the soft material of the flower revealed to the eye of the passer-by all the splendor of its coloring, and permeated the whole atmosphere with its fragrance. There is now no further question as to the contents of the bud.

Yet a little longer, and that which was so beautiful, appealing to the sense of touch, sight, and smell, finishes its mission. One by one the petals fall away, and in their place is developed a calyx or capsule. In this, securely sealed from light and from the curious eye of the meddling investigator, in darkness the wonderful transmutation takes place, by which the transmission of life in direct sequence from the plant to the seed occurs.

No human eye nor even human knowledge can say when, or where, or how there first falls upon the seed the impinging shadowing of the One, by which in years to come, under favoring circumstances, it shall produce after its kind. No one can tell the precise moment when the Omnipotent finger places within the tiny receptacle the condensation of the future shrub, enclosing it within its casket, locks the door and flings away the key. But man is familiar with the result. He knows that seed-time and harvest exist, that they always come, and will so continue to come, so long

as the present race shall continue to live upon the earth.

This, O man! is a symbol of all individualized life, more perfect, perhaps, than any other, the type of reincarnating lives among the earth-born.

In the coming and the going of the seasons, in the disappearing and reappearing of new foliage to the shrub, which constantly gathers strength during its passing struggles with wind and weather, we see the incarnating ego putting itself into a new outer covering. This is temporary, because limited by the years of the incarnation; but always sure to be discarded when the purposes for which it was needed are finished.

As the stems and twigs absorb through the leaves the force, energy, and magnetic qualities needed to maintain equilibrium in growth, so do the bodies of the incarnation furnish the ego with whatever is needed for its strengthening and growth. As the incarnations are thus typified, so also is foreshadowed the spiritual unfolding and expansion by the blossom.

No man knows nor can tell what shall be the outcome of a life, measured in soul growth. But borne aloft as the crowning work of a life, all that is absorbed is spiritualized, and formed and molded into the highest perfection of form, color, fragrance, and sound. The sounds of the blossom rarely reach the corporeal sense of hearing, but that does not in any sense prove their non-existence.

As the blossom finally bursts into full bloom in all its perfected loveliness, so at last, having gathered and assimilated to itself everything possible from its incarnation, the soul also suddenly blossoms: mortals call this action death. As the flower seemingly has no connection with the rest of the shrub and leaves, simply because it is on a different stalk or plane, so the soul at the moment of dissolution is transferred to the spiritual plane. Then,

as in the formation of the seed capsule, part of the outermost coverings are sloughed off, so that which is not necessary to the soul's unfoldment is left heaped up nearest to the earth plane. When separated into their ultimate elements, they can again be of use in the creation of new forms.

But as in the seed capsules new processes of assimilation and formation go forward, so in Devachan, within the soul, there must also take place assimilation, adaptation, and quickening of all the intensity of impulse, until, like the coiling up of a spring, the desire to still further pursue its journey through the immeasurable spaces of the Universe increases to such a point that reincarnation is once more inevitable.

Thus is typified by the growing shrub the whole cycle of the incarnating ego, and the soul life, as it passes from incarnation to incarnation, through all the revolving aeons of the endless ages. As below, so above.

The Path

OF "METAPHYSICAL HEALING" — *William Q. Judge*

The time for temporizing or for silence in respect to what are severally styled "Mind Cure", "Mental Science", "Christian Science", and the like has now come to an end, and the moment has arrived when something definite should be said on these as well as some other subjects. The first note was sounded at the theosophical convention for 1890, (1) when in the message sent by H. P. Blavatsky she wrote that some of these practices were of the nature of black magic as explained by her in that message. She says "In other words, whenever the healer interferes — consciously or unconsciously — with the free mental action of the person he treats, it is Black Magic". At that time many persons were hurt, some on their own account and others on account of the feeling they had that people of the class who believe in and practise these so-called sciences would be thus driven away from the Society. Several members accordingly studiously refrained from mentioning the matter, and in many quarters it fell into silence absolute.

In the first place, it cannot be said that no cures have ever been accomplished by means of the practices referred to. There have been cases of cure. For, indeed, one would have to be blind to the records of the medical profession to say that the mind has no part to play in the cure of diseases. That it does have, as any physician knows, for if the patient continues to be depressed in mind there may be a failure or even a death. But this is not "mind cure" nor "mental cure". It is an assistance to the regular treatment. And as very many of the troubles of people are imaginary, sometimes in the acute form because of imagination, it does happen in those cases that a cure may be effected by the schools we are speaking of. Some nervous derangements may be thus cured. And if that is

brought about by directing the mind of the patient to high thoughts, there can be no objection to it. But if the mind is filled with wrong philosophy, or if the affirmations and denials found in these "sciences" are used, or the "construction of the divine and spiritual form" be gone into, the whole thing is bad.

And here it is well to state our position about the cure of bodily ailments. It is that inasmuch as they are of and in the body, those that come from a wrong attitude of mind will disappear when we are contented and self-centred, while those that are chronic, being mechanical and physical, ought to be treated by such means and not by an attempt to drag the spiritual and divine down to this plane of being. In none of the ancient schools was it permitted to one to use for himself, or to sell, the divine or spiritual powers. Furthermore we see that the savages are the most healthy of men. Yet they know none of these things and do not care for such ideas. Yet although the Red Indian of the early days did much murder and lived not righteously, he was a fine specimen of physical health. This shows that health may be maintained by attention to the ordinary laws of nature on the material plane by attending to hygiene and exercise. Yet again, looking at the prize-fighter and the athlete, it is plain that they, by attending to the same rules and wholly disregarding the fine theories of the mental healers, become well and strong and able to bear the greatest fatigue and hardship. It was the same in the days of the athletes of Rome and Greece.

A number of fallacies have to be noticed in these systems. Using the word "thought", they say that our diseases are the product of our thought, but they ignore the fact that young children of the tenderest age often have very violent diseases when no one will say they have had time or power to think. Babies have been found to have Blight's disease and other troubles. This is a fact that looms up before the arguments of the mental healer and that

never will down.

But regarding it from the theosophical side, we know that the thoughts of the preceding life are the causes for the troubles and the joys of this, and therefore those troubles are now being exhausted here by the proper channel, the body, and are on the way *down and out*. Their exit ought not to be stopped. But by the attempt to cure in the way of the healer they are stopped often and are sent back to the place they came from, and thus once more are planted in the mind as unexpended causes sure at some other time to come out again, whether in this or in another life. This is one of the greatest of dangers. It will in many instances lead to insanity.

The next fallacy is in the system of affirmations and denials. To assert as they do that there is no matter, that all is spirit, and that there is no evil but that all is good, and that "this my body is pure and sweet and free from trouble", is philosophically and as a mere use of English false in every respect. "Spirit" and "Matter" are terms that must exist together, and if one is given up so must the other disappear. They are the two great opposites. As the Bhagavad-Gita says, there is no spirit without also matter. They are the two eternities, the two manifestations, one at one pole and one at the other, of the absolute, which is neither matter nor spirit but wholly indescribable except as said — it is at once spirit and matter. Likewise Good and Evil are two opposites mutually existing, the one necessary in order to know the other, for if there were no evil we should not know what to call the good. One might as well say that there is no darkness but that all is light. By these foolish affirmations all relativity is abolished, and we are asked to abandon all proper use of words in order to satisfy those who wish to show that optimism in all things and at all times is the right position. The "Christian Scientist" goes further and says God is all good, the argument being in fact nothing at all but a play on

the word god. It would not work in Spanish, for there good is *bueno* and god is *dios*. This assertion calmly refuses any admission of the patent fact that if God exists he must be evil as well as good, unless we revert to the old Catholic idea that the devil is as strong as God. And even if we say that God made the devil and will one day stop him, the evil is a part of God unless in some respects he is not responsible for the world and beings. But the last affirmation, that one's body is sweet and pure and free from disease, is degrading as well as false. It may be true that bodies are illusions, but they are not the illusions of single individuals but of the great mind of the race, and therefore they are relatively real — as they are now constructed — for the minor beings who make up the race. No one has the power to escape from this great illusion of the total mind until he has risen to an actual conscious realization of that mind in all its departments. The affirmation has its refutation in itself, for if one person can thus destroy this relativity so far as he is concerned by merely affirming against it, how is it that the illusion still remains for and has sway over the remaining millions? Still more we know that the body is a mass of things that are not good nor pure, and that in the abstract sense of these affirmations the most unnoticed physiological operations are actually disgusting.

The line of demarcation between black and white magic is very thin, but it is quite plain when one sees the art of healing by means of such high forces as are claimed by these schools practised for purely selfish ends or for money in addition. There is danger in it, and all theosophists ought to look well that they do not fall themselves or cause others to.

The great danger is from the disturbances that are brought about by the practise. It is a sort of yoga without any right knowledge of method; it is blind wandering among forces so subtle and so violent that they are liable to explode at any moment. By

continuing in the way taught a person actually from the first arouses latent currents of the body that act and re-act on the astral and physical and at last bring about injury. I have in mind several cases, and some of them those of actual insanity due wholly to these practises. Of these I will say more at another time, and may be able to present a record that will astonish those who, merely to cure some ailment that medicine is fully able to deal with, go aside instead and play with forces they have no knowledge of, and put them also into the hands of others still more ignorant, all the while deluding themselves with the idea that they are dealing with high philosophy. The philosophy has nothing to do with it except to act as a means to centre the thought so that inner currents may come into play. The same result might be brought about by any system of talk or thought, no matter how erroneous.

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 212 to p. 252, Vol. I.)

From p. 212 to 221 the reader can for himself find all that the author of the *Secret Doctrine* desired to give out in those pages.

WHAT ARE ELEMENTALS? In describing the groups of the Hierarchies the 6th and 7th groups are touched on at *page 221*, where it is said that elementals are a part of the numberless side groups "shot out like boughs of a tree from the first group of the four." And they are all subject to Karma (19th line, p. 221), which they have to workout during every cycle. As it is said, lower on the page, "A Dhyān Chohan has to become" such, it must follow that even a Dhyān Chohan was once at work in the planes of being where elementals are, and from that rose up to the higher place; this must be under the laws of evolution, of Karma, of Reincarnation.

MAN'S GREAT DESTINY. Following the argument hinted at about elementals, on p. 221, it is said that the celestial Hierarchy of this Manvantara will be transferred in the next cycle of life to higher, superior worlds, in order to make room for a new hierarchy, of the same order, which will be composed of the elect ones of our own human race. Such is our destiny, and such the path up which we climb; and when that point is reached, we must work still on for the benefit of those below us. This is the basis of altruism, and without altruism the consummation cannot be reached.

THAT HIGH SPIRITS WORK ON EARTH in bodies of men, while those spirits are still in the highest spheres, see *V. I, p. 233-234 and notes*, also *note p. 235*. On p. 233 it is clearly explained that the author does not mean that which is called among the spiritualists "control" of mediums by a spirit, but the actual continuance of the

status and functions of the incarnated spirit in the supersensuous regions, while actually using as its own and working in a mortal envelope on earth. So that, according to her, there are certain persons on this earth, living and working as ordinary human beings and members of society, whose informing divine part is so immeasurably high in development that they as such high beings have a definite status and function in the "supersensuous regions." We should say — assuming the correctness of the author's statement — that she herself was such a case, and that "H. P. B.," whether hourly in the day or at night when all around was still, had a "status and function" in other spheres where she consciously carried on the work of that high station, whatever it was. There were many events in her daily life known to those who were intimate with her that this hint may unravel, or at least shed much light upon. And in one of her letters this sentence appears — in substance — "The difference between you and me is that you are not conscious except at day, while I am conscious day and night, and have much to do and to endure in both of these existences from which you, being thus half-conscious, are happily saved."

In the Hindu books and teachings there is a reference to this when they speak of high *gnanees* — that is, persons full of knowledge and spiritual power — being attracted to this earth by certain acts and at certain times in the history of nation, race, or city.

LOSS OF THE SOUL. The possibility of the abandonment of the body by the soul is outlined on *page 234, V. I.* thus: "The soul could free itself from and quit the tabernacle (of the body) for various reasons, such as insanity, spiritual and physical depravity, etc." And at the end of the note on p. 235 it is hinted broadly that such freeing of the soul from the body, leaving the latter to run out its course, is not confined to the case of those who are insane or

depraved, but may occur with those who make great advance in knowledge and such consequent alteration in the constitution of the soul, as it were, that they no longer can dwell on earth, using the old body. It does not appear, however, that this subject, is carried any further than this hint, found, as is so usual with H. P. B., in a note. In this the words are; "For this occurrence is found to take place in wicked materialists *as well as in persons 'who advance in holiness and never turn back.'* " From my knowledge of her methods I regard this note as a deliberate reverse of sentence, in which the object of it is found in the words which are used in the underlined part.

THE NECESSITY FOR INDIVIDUAL EFFORT. This is very emphatically put, and in precisely the style of H. P. B., in the 3rd paragraph on *page 244*, in the parallelisms, where *Atma* is spoken of. Here she shows that *Atma* is not subject to change or improvement, but is the "ray of light eternal which shines upon and through the darkness of matter — *when the latter is willing*" [Italics are mine.] If matter, in the human being, the personal self, the body, and the astral body, with passions and desires, is not willing to be fully informed by the Spirit, then *Atma* will not shine through it because it cannot, inasmuch as matter then does not submit itself to the Divine behests. The willingness can only be shown by individual effort toward goodness and purification. It would seem that this ought to do away with that negation and supineness indulged in by even theosophists who talk of "not interfering with Karma".

ONLY THREE DIMENSIONS OF MATTER. The "fourth dimension" is combatted *on pages 251-232 et seq.*: "So long as there are foot-rules within the resources of Kosmos, to apply to matter, so long will they be able to measure it in three ways and no more." [p. 254.]

LESSONS ON THE STANZA OF THE SECRET DOCTRINES

These lessons are examples of work which has been done by the Branch in Sioux City, Iowa, and they have been sent to THE PATH by Miss Bandusia Wakefield who is their author. They are printed in the hope that other Branches may find them as useful as they proved at Sioux City, and also with the view of giving out lessons of the same kind from the General Secretary's office if the plan seems good. As Miss Wakefield says, the Branch prepared itself by some previous study. Lesson 3 was also sent, but lack of space forbids its appearance in this issue. Branches are asked to communicate with the General Secretary about this matter and to report results if any. There is no doubt that the T. S. at Sioux City will be glad to aid any Branch in the study in advance of anything that the Gen. Sec. may do.

The plan pursued was that the questions were given out in advance of the answers, and the members of the Branch asked to learn the Slokas and try to find answers to the questions. After they had done what they could the Answers were given them, not as conclusive, but as aids. [Ed.]

ABBREVIATIONS.

S. D.=The Secret Doctrine.

I. U.=Isis Unveiled.

T. B. L.=Transactions of the Blavatsky Lodge.

L.=Lucifer.

V. S.=The Voice of the Silence.

W. G.=The Working Glossary.

LESSON I.

1. Of what do the Stanzas of the first volume of the *Secret Doctrine*

treat? [S. D., I., pp 13 and 151. T. B. L., 2. p. 6.] Define Pralaya
Maha-Pralaya, Manvantara, and Maha-Manvantara. [W. G.]

2. How may these Stanzas be interpreted? [T. B. L., 2, p. 6.]

3. What is the first of the three fundamental propositions which
the Secret Doctrine teaches? [S. D. I., p. 14.]

4. Under what aspects is the Causeless Cause, or the Absolute,
symbolized? [S D. I., pp. 14 and 43.]

5. Absolute abstract motion is symbolized by what term? [S. D. I.,
p. 14.]

6. Does this ever cease? [S. D. I., p. 55.]

7. What is the second fundamental proposition of the Secret
Doctrine? [S.D. I. p. 17.]

8. What is the third fundamental proposition of the Secret
Doctrine? [S. D. I., p. 17].

9. Why is the pilgrimage of every soul through the cycle of
Incarnation said to be *obligatory*? [S. D. I. p., 17.]

10. Of what does the first stanza treat? [S. D. I., p. 21.]

Define Sloka. [I. U. I., p. 585. Five years of Theosophy, pp. 567.
Theos., Rel., and Occult Science, p. 374.]

11. What is the first Sloka of the first Stanza?

*Ans. — The Eternal Parent, wrapped in her ever invisible robes, had
slumbered once again for seven eternities.*

12. What one word is used to symbolize the Eternal Parent? [S. D.
I. p.35.]

13. In what sense is this word used? [S. D., I. pp. u and 14.]

14. What other terms refer to the same thing or different aspects of it? [S. D. I., pp. 17, 48, 256,332, 458, 460, 534.]

15. What are the "invisible robes"? [S. D. I, p., 35.]

16. Why is the feminine used in referring to the Eternal Parent? [T. B. L. I., p. 4-]

17. When is space, or the Eternal Parent, called "Mother," and when "Father-Mother"? [S. D. I, p.18.]

18. What is meant by the "Seven Eternities"? [S. D. I., p. 53.]

LESSON II.

19. What is Sloka 2 of Stanza 1?

Ans, — Time was not, for it lay asleep in the infinite bosom of duration.

20. What is time? [S. D. I., pp. 37, 43, 44. L. IX. p. 146.]

21. What is the difference between time and duration? [T. B. L. I., p.10, 11.]

22. Why was time not? [S. D, I. p. 37.]

23. What is Sloka 3 of Stanza 1?

Ans. — Universal Mind was not, for there were no Ah-hi to contain it.

24. What is meant by "mind"? [S. D. I., p. 38.]

25. What is meant by saying "Universal Mind was not"?

26. In what sense *is it* during Pralaya? [S. D. I., p. 38.]

27. Why is it not manifest?

28. What is the vehicle of manifestation called in the Sloka?

29. What are the Ah-hi? [S. D. I, p. 38.]

Review Lesson I.

ANSWERS TO LESSON I.

1. The Stanzas of the first Volume of "The Secret Doctrine" treat mostly of the evolution of our own Solar System after a Solar Pralava.

"The first Stanzas treat of the awakening from Maha-Pralaya, and are not concerned with the Solar System alone." [Tr. B, L. 2. p. 6.]
"Sloka4 of Stanza VI. ends that portion of the Stanzas which relates to the Universal Cosmogony after the last Maha- Pralaya." [S. D. I, p 151.]

Pralaya is a state of rest or dissolution, where all is in a condition of latency or potentiality. *Maha* means great, and a *Maha Pralaya* is a great period of this character.

A *Manvantara* is a period of evolution or "reconstructive activity on the objective planes of the universe intervening between two pralayas."

A *Maha Manvantara* is a great period of this character, including a number of smaller manvantaras and pralayas.

2. These Stanzas "may be interpreted on seven different planes, the last reflecting, by the universal law of correspondences and analogy, in its most differentiated, gross, and physical aspect, the process which takes place on the first or purely spiritual plane." [Tr. B. L., 2, p. 26.]

3. The Secret Doctrine teaches as the first of three fundamental propositions that the Causeless Cause of all is "an Omnipresent, Eternal, Boundless, Immutable Principle" which "transcends the power of human conception." [S. D. I., p. 14.]

4. It is symbolized under the aspect of "Absolute Abstract Space representing bare subjectivity," and "Absolute Abstract Motion representing unconditioned consciousness." [S. D. I., p. 14.]

Duration is also an aspect of the Absolute. [S. D. I., p. 43].

5. Absolute Abstract Motion is symbolized by the term: "The Great Breath." [S. D. I., p. 14.]

6. "The Great Breath" never ceases, not even during Prayala. [S. D. I. p. 55]

7. The second fundamental proposition of the Secret Doctrine "is the absolute universality of the law of periodicity, of flux and reflux, ebb and flow." [S. D. I., p. 17.] We have illustrations of this law in the succession of day and night, winter and summer, sleeping and waking, etc.

8. As the third fundamental proposition, "the Secret Doctrine teaches the fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul — a spark of the former — through the Cycle of Incarnation in accordance with Cyclic and Karmic law, during the whole term." [S. D.I., p. 17.]

9. This pilgrimage is said to be obligatory, because in order to attain independent conscious existence it is necessary that "the spark which issued from the pure Essence of the Universal Principle, or the Over-Soul," should pass "through every elemental form of the phenomenal world of that Manvantara," and acquire "individuality, first by natural impulse, and then by self-induced and self-devised efforts." [S. D. I., p. 17.]

10. The first Stanza describes in symbols "the state of the *One All* during Pralaya, before the first flutter of re-awakening manifestation." [S. D. I., p. 21.]

11. A Sloka is a distich, or a couple of poetic lines making complete sense, not in the translation but in the original stanzas. [I. U. I., p. 585.]

[Stanza 1, Sloka 1.] *The Eternal Parent, wrapped in her ever invisible robes, had slumbered once again for seven eternities.*

12. The Eternal Parent is symbolized by "Space."

13. The word is not here used in its ordinary meaning, but in the sense of "Absolute Abstract Space representing bare subjectivity."

14. The following terms are also used as synonymous with "The Eternal Parent" or with each other: Akasa, Mulaprakriti, Universal Soul, Over-Soul, Sixth Principle of the Universe, Aditi, Pradhana, Ether [of the ancient Greek philosophers], Alaya, Waters, Great Deep, Celestial Virgin Mother, and Primordial Ocean of Space. [See S. D. 1., pp. 17, 48, 256, 332, 458, 460, & 534.]

15. "The 'Robes' stand for the noumenon of undifferentiated Cosmic-Matter. It is not matter as we know it, but the spiritual essence of matter, and is co-eternal and even one with Space in its abstract sense." [S. D. I., p. 35] Hence the "invisible robes" are but an aspect of the Eternal Parent. This "mystic root of all matter" the Hindus call Mulaprakriti. "It is the Soul, so to say, of the *One* infinite Spirit." It is the source from which Akasa radiates." [S. D. I., p. 35.]

16. "Though it is impossible to define the Causeless Cause, yet once that we speak of the first something that can be conceived, it has to be treated as a feminine principle. In all Cosmogonies, the first differentiation was considered feminine." [T. B. I., p. 4.] It is sexless, but has in it the latent potentiality of both sexes.

17. "Space is called 'Mother' before Cosmic activity, and 'Father-Mother' at the first stage of re-awakening." [S. D. I., p. 18.]

18. By "Seven eternities" is meant seven periods of rest equalling the seven periods of activity. " 'Seven Eternities' is made to apply both to the *Maha-Kalpa* or the (great) Age of Brahma and to the Solar Pralaya and subsequent resurrection of our Planetary System on a higher plane." [S. D. I, p. 53]

The Path

IRELAND — *Brian Kinnavan*

Erin's Isle has always been somewhat of a mystery. Its people are so different from the English just across the channel that one who spends some time in London and then crosses over to Dublin will at once see the vast gulf that in the matter of temperament separates the two peoples.

And any one who studies the Irish, especially on the West Coast, and lives among them, will soon discover a deeply-seated belief in what is commonly called the supernatural that can only come from some distant past. Even the educated Irish are not free from this.

There is a willingness in the peasant to express belief in fairies, ghosts, and the like, which in the better classes is covered up from sight but still there. In the country districts the people will stone the lights out of the windows of a newly-vacated house, and in the city the educated man may frequently be found who will say, when his attention is called to such an occurrence, "And why shouldn't they? Do you want the devil to stay in the house?" The theory of course is that the elementals of the departed tenants can only escape through the broken window panes unless they have been used — as is not always the case — to open doors.

Belief in fairies is the old Hindu belief in the "devas" or lesser gods. I know many educated people who have declared they often heard fairy talking and singing. In fact, unless we take in the northern Irishman — who is not truly of that blood — we will never find a native of that land who is not born with a slight or greater touch upon the borders of the unseen or with a belief in it.

It is called the Isle of Destiny, and its hill-men will tell you that it has always been a "saintly island". It teems with tales exactly duplicating those of Hindu yogis; the very grass seems to whisper as with the footfalls of unseen beings. One tradition is that in very ancient times, before the island of Albion rose from under the water, there was an ancient college — or *Ashram* as the Hindus would call it — on the island, where great adepts lived and taught disciples who from there went out to all lands. They stayed there until a certain great cataclysm, and then migrated to * * * *. In connection with this the following quotation from some remarks by H. P. Blavatsky in *Lucifer* will be of interest, in reading which one can also profitably remember the Greek tradition that near Britain there was an island called Ierna to which men went in order to learn more about the secret mysteries. She says: (1) "It is a tradition among Occultists in general, and taught as an historical fact in Occult philosophy, that what is now Ireland was once upon a time the abode of the Atlanteans, emigrants from the submerged island mentioned by Plato. Of all the British Isles, Ireland is the most ancient by several thousands of years. Inferences and 'working hypotheses' are left to the Ethnologists, Anthropologist, and Geologists. The Masters and Keepers of the old science claim to have preserved genuine records, and we Theosophists — i. e. most of us — believe it implicitly. Official Science may deny, but what does it matter? Has not Science begun by denying almost everything it accepts now?"

The Path

HIDDEN HINTS IN THE SECRET DOCTRINE — *William Q. Judge*

(From p. 252 to p. 260, Vol. I.)

ORDER OF THE ELEMENTS ESOTERICALLY is, *Fire, air, water, earth*. (2nd para). Counting up from the earth, the order for the elementals, or the nature spirits in the elements, is: earth elementals, water elementals, air elementals, fire elementals. And it has always been said that those of the fire are the wisest and most distant so far as cognition of or by us is concerned, that the airy ones are also wise, and those of the water dangerous. Those of the earth have been described by seers in the form of gnomes sometimes seen by clairvoyant miners in the depths under us, and of this class also are those that have given rise to the superstition among the Irish respecting the fairies.

FIRE IN THE PRECEDING ROUNDS. She says (p. 253), "For all we know, fire may have been pure akasa, the first matter of the builders". The phrase "For all we know" is sometimes to be translated "Thus it was".

THE FIFTH ELEMENT IN THE FIFTH ROUND. This, as said before in these notes, will be "The gross body of akasa" (257), and "by becoming a familiar fact in nature to all men as air is familiar to us now, will cease to be hypothetical".

WHAT IS THE SIXTH SENSE TO BE? In the first paragraph of page 258 she says that at first there will be a partial familiarity with a characteristic of matter to be known then as permeability, which will be perceived when certain new senses have been developed, and after that this singular characteristic will be fully known, as it will be developed concurrently with the sixth sense. We may therefore argue that she means to describe the sixth sense as one

which will (among other things) give to us the power to permeate matter with ourselves. Let some one else now carry this idea further, as it is no doubt correct. It would seem that both the matter-characteristic and the power in man are being here and there exhibited, or else some of the phenomena seen at spiritualistic seances could never have happened; but alas! we need not look for aid there so long as the beloved "spirits from the summerland" continue to hold sway over their votaries.

THE EARTH IN ITS EARLY PERIODS. Some students have thought that this globe in its early times when, following the statements in *Esoteric Buddhism*, the human life-wave and so on had not come, there was no life on it, supposing in a vague way that there was, say in the fire-mist time, a mass of something devoid of life. This is contradicted and explained on page 258 in the second para, for: "Thus Occultism disposes of the Azoic age of science, for it shows that there never was a time when the earth was without life upon it". This is asserted for no matter what form or sort of matter thus, "Wherever there is an atom of matter, a particle or a molecule even in its most gaseous state, there is life in it, however latent or unconscious".

OF SPIRIT AND MATTER. In the commentary on p. 258 the author plainly writes, "Spirit is the first differentiation of and in space; and matter is the first differentiation of Spirit". This is a clear statement of what she desired to teach respecting spirit and matter, and as in other places it is said that spirit and matter are the opposite poles of the One — the Absolute — an agreement has to be made between the two. There is no real disagreement, since it is evident that differentiation must proceed in a definite order, from which it results that there must be always one state, plane, place, power, and idea in nature that is above and different from and beyond all others. And when we go beyond spirit, the highest we may speak of is the Absolute, which is the container of the

next two — spirit and matter, the latter following the first in order of differentiation. These are said to be coeternal, and, indeed, are so, as far as our minds are concerned, for the reason that we cannot grasp either the first or the second differentiation of the absolute. But because this doctrine of the coeternalness of spirit and matter has been taught, there never being the one without the other also present, some students have fallen into a materialistic view, probably because matter is that which being near to us is most apparent, and others, remaining somewhat vague, do not define the doctrine at all. Spirit and matter are coeternal because they exist together in the absolute, and when the first differentiation spoken of above takes place, so does the second immediately. Hence, except when we are dealing with metaphysic, they must be regarded as the two poles of the one absolute. And the *Bhagavad Gita* does not support the contrary, for it only says there is no spirit without also matter, as it is dealing through the words of Krishna with things as they are *after* the differentiation has taken place.

There is another class of theosophists who speak of the "superpersonal god", asserting at the same time that they do not mean "a personal God", and they are opposed by still another class who point to the well-known denial by H. P. B. of the existence of a personal god. It is in the sentence quoted that both of these may come to an agreement, for the believers in the superpersonal deity can without doubt find support in the lines on p. 258. For if spirit is the first, then matter is a grade below it, however fine and imperceptible that distinction maybe.

If further we say, as many of us do, that the great inherent ideas of man were given to him by the first great teachers whose descendants and pupils the Adepts are, then we here also see how it is that there is such a wide and universal belief in a God. It must also be the origin of that universal optimism which may be found

also in the ranks of the theosophists, who, while for present days are pessimistic, must be called the greatest optimists on the face of the earth. There are many other matters in this sentence. Many a student has puzzled his head very often in trying to discover from where come the impulse and the plan as well as the idea of perfection, for it must as a first thing reside somewhere, whether abstractly or concretely. Perhaps it is here; those students can look here at any rate.

A MYSTERIOUS PRINCIPLE MENTIONED. After going for a little space into the formation of this globe by the first builders, she speaks (page 259) of a certain *akasic* principle to which no name is given but left in hiatus. But in the note on that page we see, and I am violating nothing in referring to it, that very clearly it is pointed out that the primordial substance of which she then writes "is the very body of those spirits themselves and their very essence". Now in many places in her writings, and also in those of other knowing ones through all time, this primordial substance is said to be one that, once controlled, gives him who has power over it the most transcendent abilities, — sway alike over mind and matter.

She and all of us are quite safe in speaking of it, since there are but few indeed who will see anything in it at all. Yet the few can have the hint if they never got it before. This, however, should always remain as a hint, and there ought to be no attempt to make it clear to science, for nothing will be gained except ridicule and maybe worse.

THE SYNTHESIS OF OCCULT SCIENCE: II — *William Q. Judge*

(Continued from November No.)

"In reality, as Occult philosophy teaches us, everything which changes is organic; it has the life principle in it, and it has all the potentiality of the higher lives. If, as we say, all in nature is an aspect of the one element, and life is universal, how can there be such a thing as an inorganic atom!" (1) Man is a perfected animal, but before he could have reached perfection even on the animal plane, there must have dawned upon him the light of a higher plane. Only the perfected animal can cross the threshold of the next higher or the human plane, and as he does so there shines upon him the ray from the supra-human plane. Therefore, as the dawn of humanity illumines the animal plane, and as a guiding star lures the Monad to higher consciousness, so the dawn of divinity illumines the human plane, luring the monad to the supra-human plane of consciousness. This is neither more nor less than the philosophical and metaphysical aspect of the law of evolution. Man has not one principle more than the tiniest insect; he is, however, "the vehicle of a fully developed *Monad*, self-conscious and deliberately following its own line of progress, whereas in the insect, and even the higher animal, the higher triad of principles is absolutely dormant." The original *Monad* has, therefore, locked within it the potentiality of divinity. It is plainly, therefore, a misnomer to call that process of thought a "Synthetic Philosophy" that deals only with phenomena and ends with matter on the physical plane. These two generalizations of Occult philosophy, endowing every atom with the potentiality of life, and regarding every insect or animal as already possessing the potentialities of the higher planes though these powers are yet dormant, add to the ordinary Spencerian theory of evolution

precisely that element that it lacks, *viz.* the metaphysical and philosophical; and, thus endowed, the theory becomes synthetical.

The *Monad*, then, is essentially and potentially the same in the lowest vegetable organism, up through all forms and gradations of animal life to man, *and beyond*. There is a gradual unfolding of its potentialities from "Monera" to man, and there are two whole planes of consciousness, the sixth and the seventh "senses," not yet unfolded to the average humanity. Every monad that is enclosed in a form, and hence limited by matter, becomes conscious on its own plane and in its own degree. Consciousness therefore, no less than sensitiveness, belongs to plants as well as to animals. Self-consciousness belongs to man, because, while embodied in a *form*, the higher triad of principles, Atma-Buddhi-Manas, is no longer dormant, but active. This activity is, however, far from being fully developed. When this activity has become fully developed, man will already have become conscious on a still higher plane, endowed with the sixth and the opening of the *seventh* sense, and will have become a "god" in the sense given to that term by Plato and his followers.

In thus giving this larger and completer meaning to the law of evolution, the Occult philosophy entirely eliminates the "missing links" of modern science, and, by giving to man a glimpse of his nature and destiny, not only points out of the line of the higher evolution, but puts him in possession of the means of achieving it.

The "atoms" and "monads" of the Secret Doctrine are very different from the atoms and molecules of modern science. To the latter these are mere particles of matter endowed with blind force: to the former, they are the "dark nucleoles", and potentially "Gods", conscious and intelligent from their primeval embodiment at the beginning of differentiation in the dawn of the

Manvantara. There are no longer any hard and fast lines between the "organic" and the "inorganic"; between the "living" and "dead" matter. Every atom is endowed with and moved by intelligence, and is conscious in its own degree, on its own plane of development. This is a glimpse of the *One life* that —

"Runs through all time, extends through all extent,
Lives undivided, operates unspent."

It may be conceived that the "Ego" in man is a monad that has gathered to itself innumerable experiences through aeons of time, slowly unfolding its latent potencies through plane after plane of matter. It is hence called the *"eternal pilgrim."*

The *Manasic*, or mind principle, is cosmic and universal. It is the creator of all forms, and the basis of all law in nature. Not so with consciousness. Consciousness is a condition of the monad as the result of embodiment in matter and the dwelling in a physical form. Self-consciousness, which from the animal plane looking upward is the beginning of perfection, from the divine plane looking downward is the perfection of selfishness and the curse of separateness. It is the "world of illusion" that man has created for himself. "Maya is the perceptive faculty of every Ego which considers itself a Unit, separate from and independent of the One Infinite and Eternal Sat or 'be-ness.'" The "eternal pilgrim" must therefore mount higher, and flee from the plane of self-consciousness it has struggled so hard to reach.

The complex structure that we call "Man" is made up of a congeries of almost innumerable "Lives". Not only every microscopic cell of which the tissues are composed, but the molecules and atoms of which these cells are composed, are permeated with the essence of the "One Life." Every so-called organic cell is known to have its nucleus, a center of finer or more sensitive matter. The nutritive, all the formative and functional

processes consist of flux and re-flux, of inspiration and expiration, to and from the nucleus. The nucleus is therefore in its own degree and after its kind a "monad" imprisoned in a "form". Every microscopic cell, therefore, has a consciousness and an intelligence of its own, and man thus consists of innumerable "lives." This is but physiological synthesis, logically deduced no less from the known facts in physiology and histology than the logical sequence of the philosophy of occultism. Health of the body as a whole depends on the integrity of all its parts, and more especially upon their harmonious association and co-operation. A diseased tissue is one in which a group of individual cells refuse to co-operate, and wherein is set up discordant action, using less or claiming more than their due share of food or energy. Disease of the very tissue of man's body is neither more nor less than the "sin of separateness". Moreover, the grouping of cells is upon the principle of hierarchies. Smaller groups are subordinate to larger congeries, and these again are subordinate to larger, or to the whole. Every microscopic cell therefore typifies and epitomizes man, as man is an epitome of the Universe. As already remarked, the "Eternal Pilgrim", the Alter-Ego in man, is a monad progressing through the ages. By right and by endowment the ego is king in the domain of man's bodily life. It descended into matter in the cosmic process till it reached the mineral plane, and then journeyed upward through the "three kingdoms" till it reached the human plane. The elements of its being, like the cells and molecules of man's body, are groupings of structures accessory or subordinate to it. The human monad or Ego is therefore akin to all below it and heir to all above it, linked by indissoluble bonds to spirit and matter, "God" and "Nature." The attributes that it gathers, and the faculties that it unfolds, are but the latent and dormant potentialities awaking to conscious life. The tissue cells constitute man's bodily structure, but the order in which they are arranged, the principle upon which they are

grouped, constituting the human *form*, is not simply an evolved shape from the lower animal plane, but an *involved* principle from a higher plane, an older world, viz. the "Lunar Pitris". "Hamman the Monkey" antedates Darwin's "missing link" by thousands of millenniums. So also the *Manasic*, or mind element, with its cosmic and infinite potentialities, is not merely the developed "instinct" of the animal. *Mind* is the latent or active potentiality of *Cosmic Ideation*, the essence of every form, the basis of every law, the potency of every principle in the universe. Human thought is the reflection or reproduction in the realm of man's consciousness of these forms, laws, and principles. Hence man senses and apprehends nature just as nature unfolds in him. When, therefore, the Monad has passed through the form of the animal ego, involved and unfolded the human form, the higher triad of principles awakens from the sleep of ages and overshadowed by the "Manasaputra" and *built into* its essence and substance. How could man epitomize Cosmos if he did not touch it at every point and involve it in every principle? If man's being is woven in the web of destiny, his potencies and possibilities take hold of divinity as the woof and pattern of his boundless life. Why, then, should he grow weary or disheartened? Alas! Why should he be degraded, this heir of all things!

"The peculiarity also of this theology, and in which its transcendency consists, is this, that it does not consider the highest God to be the principle of beings, but the *principle of principles*, i. e., of deiform processions from itself, all which are eternally rooted in the unfathomable depths of the immensely great source of their existence, and of which they may be called supersensuous ramifications and super-luminous blossoms."

— *Introduction to Mystical Hymns of Orpheus.*

The Path

REINCARNATION A PHYSICAL NECESSITY — *J. D. Buck*

Some further considerations have occurred to me as not only supporting the doctrine of reincarnation, but from a scientific stand-point rendering it a necessity. These points are often referred to in the *Secret Doctrine*, but it may be well to group them together as a single concept. Spirit and Matter represent the two poles of *one eternal Nature*, the subject and object, the energy and the form, of all things. "Matter" refined and purified through plane after plane till it reaches the sixth plane, the plane of the absolute, becomes "pure spirit", and disappears "behind the veil" of the absolute; is absorbed in it. "Spirit" precipitated, differentiated, condensed through plane after plane, becomes on the lowest plane that which we call matter. That which we call "solid", "real", "substantial" is thus the most illusionary of all conceivable things. Its very existence depends on ceaseless change. Thus we may complete the paradox, and say that it is because it is not. The One rootless-root, the potency that lies back even of what we *call* Spirit, and that never manifests itself *as such*, the Nameless, the Unknown and forever Unknowable, the *Logos*, reflects its image, or manifests always through a vehicle (*upadhi*). The divinity in man is a *ray* from this *Logos*. It is not "a part" of this ever-concealed Divinity, because there can be no partition or division in that which is forever *One*; but a "ray" or "beam" or "spark" may emanate from an Eternal Light, and the Light remain unchanged and its real source be still unrevealed, Now the principle is everywhere stated in the *Secret Doctrine* that this *Logos* always manifests through a vehicle, and that of the six planes into which Spirit descends and manifests in relation to man, and on each of which the *Ego may become* conscious, the physical is not only the lowest reached, but the lowest, the very

dregs of the possible descent of spirit into objectivity. This is the earthly plane of our present humanity, incarnated in fleshly bodies.

It can hardly be conceived that what we call man is concerned with anything outside of that solar system of which the earth is one of the lesser orbs, and for our present purpose we need not take into account any other members of our planetary chain than our Earth.

We have then the following propositions.

1st. Spirit manifests only through a vehicle of matter. "Pure spirit" is a latent potentiality, and as such never manifests.

2nd. The "Laya-center", or "Divine Ego", in man is a ray from the *One* which *is*; and is beyond both Spirit and Matter.

3rd. This Divine Ego, called also the "Eternal Pilgrim", being connected with the Earth and its planetary chain or solar system, can have no conscious or experimental (through participation in experience) connections with other solar systems during the life cycle of our planetary chain, or during our present *manvantara*.

4th. The present physical embodiment of man in sense and matter is the lowest in the planes of consciousness of the descent of spirit into matter, for the experience of the Immortal Ego, Below this lowest human plane the Ego does not attain self-consciousness, and is therefore not yet human. These elements of humanity and divinity are descents from spirit, and not ascents from matter and physical form.

5th. Consciousness on any plane for man means

adjustment of man's complex attributes to experiences on that plane: a consensus of his faculties with rhythmic vibrations consonant to and with the vibrations incident to that plane. "The chord of the mass" in man, and on the plane of matter, are synchronous; and consciousness involves the quality, pitch, intensity, and amplitude of all vibrations, according to the eternal law of harmony.

6th. The next plane of consciousness above the present physical or "fleshly" is the astral. In certain individuals of the present race there is already manifest the dawn of the supra-physical or astral consciousness. These persons are known as "psychics" or "mediums". This consciousness is in no sense "spiritual", except that it is one remove from the material toward the spiritual pole of the life-current. One who had entirely mastered the lowest physical plane, exhausted its experiences, and withdrawn its consciousness to the supra-physical, would have no need of embodiment in flesh, because all its-vibrations would have become synchronous with the next higher plane. The *vehicle* of the Ego would necessarily be drawn from the higher and not the lower plane, and such an ego could not logically be conceived as having a body of flesh belonging to the lowest plane.

The conclusion is obvious. The Ego that has not exhausted or risen by actual experience above the physical plane of flesh, sense, and animal passion *must manifest still on that plane or not manifest at all*. The fact that the Ego is still on the lowest plane is proved by its now inhabiting and by its attachment to the body of flesh. The most advanced individuals known to the present time are those who have most nearly exhausted and withdrawn from the sense plane, and who, at the same time, show through their altruism and diviner unfolding the dawning consciousness of the

higher planes. Even these would still be, on the next higher plane, weak, enervated, and in no sense fully *conscious* or "alive" on that plane, because the threads of former life would still be entangled in and not yet withdrawn from the lower plane. They would be like the "still-born" in physical bodies, and fall back into the negative or unconscious state. Therefore is it both a scientific and philosophical necessity that the great majority of persons of the present race of humanity will be again and again reincarnated.

By great and persistent personal effort, by self-denial, and by wise instruction and training, man may work out his own salvation, and even in the present life rise to higher planes of consciousness and so escape reincarnation.

The Path

THE SYNTHESIS OF OCCULT SCIENCE: III — William Q. Judge

(Continued from February No.)

It has often been thought a strange thing that there are no dogmas and no creed in Theosophy or Occultism. Is theosophy a religion? is often asked. No, it is *religion*. Is it a *philosophy*? No, it is philosophy. Is it a science? No, it is *science*. If a consensus of religion, philosophy, and science is possible, and if it has ever been reached in human thought, that thought must long since have passed the boundaries of all creeds and ceased to dogmatize. Hence comes the difficulty in answering questions. No proposition stands apart or can be taken separately without limiting and often distorting its meaning. Every proposition has to be considered and held as subservient to the synthetic whole. Really intelligent people, capable of correct reasoning, often lack sufficient interest to endeavor to apprehend the universality of these principles. They expect, where they have any interest at all in the subject, to be told "all about it" in an hour's conversation, or to learn it from a column in some newspaper; all about man, all about Nature, all about Deity; and then either to reject it or to make it a part of their previous creed. These are really no wiser than the penny-a-liner who catches some point and turns it into ridicule, or makes it a butt for coarse jest or silly sarcasm, and then complacently imagines that he has demolished the whole structure! If such persons were for one moment placed face to face with their own folly, they would be amazed. The most profound thinker and the most correct reasoner might well afford to devote a life-time to the apprehension of the philosophy of occultism, and other life-times to mastering the scientific details, while at the same time his ethics and his religious life are made consistent with the principle of altruism and the Brotherhood of

man. If this be regarded as too hard a task, it is, nevertheless, the line of the higher evolution of man, and, soon or late, every soul must follow it, retrograde, or cease to be.

Man is but a link in an endless chain of being; a sequence of a past eternity of causes and processes; a potentiality born into time, but spanning two eternities, his past and his future, and in his consciousness these are all one, *Duration*, the *ever-present*. In a former article man was shown to be a series of almost innumerable "Lives", and these lives, these living entities called "cells", were shown to be associated together on the principle of hierarchies, grouped according to rank and order, service and development, and this was shown to be the "physical synthesis" of man, and the organic synthesis as well. Disease was also shown to be the organic nutritive, or physiological "sin of separateness". Every department of man's being, every organ and cell of his body, was also shown to possess a consciousness and an intelligence of its own, held, however, subordinate to the whole. In health every action is synchronous and rhythmical, however varied and expanded, however intense and comprehensive. Enough is already known in modern physics to justify all these statements, at least by analogy. The principle of electrical induction and vibration, the quantitative and qualitative transmission of vibration and its exact registration, and their application to telegraphy, the telephone, and the phonograph, have upset all previous theories of physics and physiology. "A metallic plate, for instance, can that talk like a human being? Yea or nay? Mr. Bouillard — and he was no common man — said No; to accept such a fact were to upset all our notions of physiology. So said Mr. Bouillard, right in the face of Edison's phonograph in full Academy, and he throttled the luckless interpreter of the famous American inventor, accusing it of ventriloquism." (1)

Occultism teaches that the Ego both precedes and survives the

physical body. The phenomena of man's life and the process of his thought can be apprehended and explained on no other theory. Modern physiology teaches in detail certain facts regarding the life of man. It, moreover, groups these facts and deduces certain so-called principles and laws, but such a thing as a synthesis of the *whole man* is seldom even attempted. "Psychology" is mere empiricism, represented by disjointed facts, and these, of course, but little understood, and more often misinterpreted.

Ask the modern physiologist if man can *think* when unconscious, and he will answer No; and if asked if man can be conscious and not think, he will as readily answer No. Both answers will be based on what is known, or supposed to be known, of memory. The idea that the real man, the Ego, is always conscious on some plane, and that it "thinks", as we ordinarily use the term, only on the lower plane through the physical brain, in terms of extension and duration, or space and time, is seldom in the least apprehended by the modern physiologist. If, however, one grasps the idea of the ego as the real man dwelling in the physical body and using it as its instrument through which it is related to space and time, perception, sensation, thought, and feeling, the gaps in physiology and psychology begin to disappear. Here again it should be particularly borne in mind that this doctrine of the ego must be considered in the light of the complete synthesis of occultism, and just to the extent that this is intelligently done will the significance of the ego appear.

The brief and concise outline of the philosophy of occultism given in the Introduction to the *Secret Doctrine* is therefore very significant, and the student who desires to apprehend that which follows in these two large volumes ought to study this outline very carefully. No subsequent proposition, no principle in the life of man, can be correctly understood apart from it. The subject-matter following is necessarily fragmentary, but the outline is

both inclusive and philosophical, and if one reasons logically and follows the plainest analogies he can never go far astray. The relation of mind to brain, of thought to consciousness, of life to matter, and of man to Nature and to Deity, is there clearly defined; not, indeed, in all its details, but in a philosophical modulus, to be worked out in reason and in life. The all-pervading Life, the cyclic or periodical movements, the periods of action and of repose, and the intimate relations and inter-dependences of all things apply to Cosmos, and equally to every atom in its vast embrace.

Students sometimes complain that they cannot understand, that the subject is so vast, and so deep and intricate, and not made clear. It is because they do not realize what they have undertaken. Occultism can neither be taught nor learned in "a few easy lessons". The "object lessons" sometimes given by H. P. B., almost always misunderstood and misapplied, though often explained at the time, served as often to excite vulgar curiosity and personal abuse as to arrest attention and study. If, before the advent of the T. S. in the face of the creeds of Christendom, the materialism of science, the indifferences and supercilious scorn of Agnosticism, and the babel of spiritualism, it had been proposed to begin at the foundations and reconstruct our entire knowledge of Nature and of man; to show the unity and the foundations of the world's religions; to eliminate from science all its "missing links"; to make Agnosticism gnostic; and to place the science of psychology and the nature and laws of mind and soul over against "Mediumship"; it would have been held as an herculean task, and declared impossible of accomplishment. Now that the thing has virtually been accomplished and this body of knowledge presented to the world, people think it strange that they cannot compass it all, as the poet Burns is said to have written some of his shorter poems, "while standing on one leg"!

Again, people complain at the unfamiliar terms and the strange words imported from foreign languages. Yet if one were to undertake the study of physics, chemistry, music, or medicine, quite as great obstacles have to be overcome. Is it a strange thing, then, that the science that includes all these, and undertakes to give a synthesis of the whole realm of Nature and of life, should have its own nomenclature?

Beyond all these necessary and natural obstacles, there is another, *viz.*, that contentious spirit that disputes and opposes every point before it is fairly stated or understood. Suppose one ignorant of mathematics were to proceed in the same manner and say, "I don't *like* that proposition", "I don't see *why* they turn a six upside down to make a nine", "Why don't two and two make five?", and so on, how long would it take such a one to learn mathematics? In the study of the Secret Doctrine it is not a matter of likes or dislikes, of belief or unbelief, but solely a matter of intelligence and understanding. He who acknowledges his ignorance and yet is unwilling to lay aside his likes and dislikes, and even his creeds and dogmas, for the time, in order to see what is presented in its own light and purely on its merits, has neither need nor use for the Secret Doctrine. Even where a greater number of propositions are accepted or "believed" and a few are rejected, the synthetic whole is entirely lost sight of. But, says some one, this is a plea for blind credulity, and an attempt to bind the mind and the conscience of man to a blind acceptance of these doctrines. No one but the ignorant or the dishonest can make such an assertion in the face of the facts. Listen to the following from p. XIX. Introduction to the *Secret Doctrine*. "It is above everything important to keep in mind that no theosophical book acquires the least additional value from pretended authority." If that be advocating blind credulity, let the enemies of the T. S. make the most of it. If any authority pertains to the *Secret*

Doctrine, it must be sought inside, not outside. It must rest on its comprehensiveness, its completeness, its continuity and reasonableness; in other words, on its *philosophical synthesis*, a thing missed alike by the superficial and the contentious, by the indolent, the superstitious, and the dogmatic.

"O wise man: you have asked rightly. Now listen carefully. The illusive fancies arising from error are not conclusive."

"The great and peaceful ones live regenerating the world like the coming of spring, and after having themselves crossed the ocean of embodied existence, help those who try to do the same thing, without personal motives."

— Crest Jewel of Wisdom.

The Path

SOME HINDU LEGENDS — J. S.

A ROMANCE OF SITA.

Perhaps in the whole range of moral allegories which honeycomb the ethical and religious literature of Hindustan there is nothing more elevating, more inspiring to the mind of the Hindu than the narrative of the recovery of Sita from the hands of the giant Ravanna, by Rama, as an incarnation of Vishnu the Deity Absolute.

It is said that in one of her past lives Sita was the only daughter of the great Rishi (Sage) Bhrgu, and then went by the name of Bhargavi. She passed the prime of her life in stern asceticism with a view to obtaining complete union with the Deity in her next incarnation. One day while she was walking alone in the forests, Ravanna the giant king of Lanka, (Ceylon), of the ancient race of giants mentioned in the *Secret Doctrine*, came upon her, and was so much ravished by her enchanting beauty that he wanted to make her his bride.

At this proposal Sita was so incensed that she, there and then, prepared a pyre into which she threw herself, uttering an indelible curse upon the giant that during his whole lifetime, which covered 150,000 years, he would not be able to touch a single woman, a curse which was literally fulfilled.

Bhargavi's curse worked itself out in a most wonderful manner.

Centuries upon centuries rolled away, and the giant Ravanna, the most long-lived of God's creatures, still ruled Lanka with an iron hand.

Lapped by the limpid waters of a lake in Southern India, there

stood in its very midst a Lotus-flower whose sun-kissed bosom bore the noble form of a gentle being of angelic innocence. It was the daughter of Bhrigu come to life again in this strange watery cradle. A couple of fishermen who had been one morning angling on the margin of the lake brought the Lotus out. Admiring the glorious image of the sleeper inside, they took it to their King Ravanna, the monster who had cost Sita her life in her last incarnation. Astonished at the infant so peacefully reclining on the Lotus, the King called his soothsayers and asked them, as is customary with the Hindus, to consult the stars about the future of that mysterious being. On being informed that the girl was destined to bring ruin and desolation on him and his kingdom, Ravanna ordered that she be shut up in an air-tight box and drowned in the deep sea.

The future Sita remained for years a sojourner of the sea, till one day the furious waves washed the box ashore. The sands covered it and kept it long unseen by human eyes. Janaka, the king of Videhnagar, one morning, intent upon performing a sacrifice to the gods (*yagna*), came to the sea-shore with his retinue of priests and courtiers. In *yagna* it is very necessary that the ground should be consecrated before the ceremony. When the beach was being made ready, the share of a plough that was uplifting the ground struck against a hard substance, which being dug out turned out to be the well-secured box holding the woman who was to bring about the downfall of the house of Ravanna. Delighted with this acquisition, considered to be a god-send for his life, Janaka took the child home and brought her up as his own daughter. From her foster-father Janaka she received the patronymic Janaki. She was called Sita because she was first brought to light by a plough whose Sanskrit equivalent is *Sita*.

Valmiki relates that she was afterwards married to Rama, an incarnation of the Deity, was carried off to Lanka by Ravanna,

and there kept by him in captivity. Rama then pursued the enemy to the Southern shore of India, and was helped by the monkey god, Hanuman, who made war with him against the giant, calling to his aid the elemental forces of Nature. Here Hanuman represents not only the ancient ape-like men of the early races, but also the elementals of all degrees of power. The armies arrived at Lanka, besieged the place, and finally overthrew the giant, recovering Sita. In other words, the new cycle and the new race overcame the old and took their place.

VALMIKI, THE WRITER OF RAMAYANA.

In one of the wilds of India, a Brahmin youth of obscure parentage in a vagabond company used to waylay travelers, and lead a life remarkable for its lawlessness and avarice. For years the boy trafficked in unrighteousness, till one fine summer morning Narada, the messenger of the gods, the Mercury of the Aryans, with his tuneful lute (*Vina*) hymning forth praises to Vishnu to kill the tedium of his march, came upon the brigand so early up for his daily human hunt. On being threatened with his life Narada remonstrated with the brigand to spare it, as his death would not give him any money, and asked the chief motive which led him to commit such crimes. On being told that he had a large family to maintain, which, as he could not do by fair means, he had to fall upon foul ones to keep them well fed and clothed, Narada begged him hard, before being put to the sword, to run to his own house and ask his wife and children, for whose sake he was heaping sins on his own head, if any one amongst them was willing to exchange with him the penalty of hanging which was inevitably destined for him at no distant date. Utterly dejected and downcast did the Brahmin return to Narada and complained most bitterly to him of the ingratitude of his own kith and kin for whom he had dipped his hands so deep in blood, since they cared not for him to desist though he should die. He fell upon his knees

and requested the divine messenger to save his soul. Taking pity on his abandoned plight, Narada told him to sit under a banyan tree hard by and mutter incessantly the word MARA.

In the Canarese language this word means "a tree", and the illiterate youth, who had never heard the name of God until now, very soon, by repeated anagrams, began to pronounce *Rama*, *Rama*, the name of the Deity amongst the Hindus. For a thousand years, the legend runs, the Brahmin in his yoga trance kept the word Rama ceaselessly on his lips, at the end of which Narada once more happened to pass that very way, and found in his would-be murderer a regenerated ascetic whose body was altogether enveloped with white ants, Nearing him he recalled him from his trance and gave him the name of Valmiki, or he whose body was covered with *Valmik* or white ants. Inspired by him this Valmiki, the former highwayman, wrote that glorious monument of human genius held so sacred by the Hindus, the Ramayana, in which he recounts the love of God towards man, and how He tries to alleviate the sufferings and woes of Humanity.

Among other things the story is intended to show how the soul even of the most abandoned may be swayed, and how an impulse in the direction of a better life will lead to good Karma. The sage, whether appearing as Narada or not, knows how to touch the chord that shall vibrate so strongly as to change a life, as in this case he appealed to the bandit on a point that would show him how ungrateful were those for whom he did evil. And so, too, only by previous good Karma could this youth have met a benefactor in that life; thus all along the road we meet those who help us and those whom we must help. As we do not recognize them, the only way is to help everybody.

THE MUNGALGIRI TEMPLE.

About six miles from the town of Bezwada, the ancient Vijayawada so famous for the religious austerities of Nijaya or Arjuna, there is a high mountain called Mungalgiri. On the top there is a very celebrated temple whose chief wonder is that near its "Holy of the Holies" there is a small opening known as Narsihma Vakira, or the mouth of the God Narsimah, the Fourth Avatar of Vishnu. The votaries who come to the shrine are in the habit of bringing a potful of *jaggery* mixed with water, as a libation to the god. The contents are emptied by means of a conch shell into the small orifice just mentioned. Only just half of what is offered is taken in; the other half, even if poured, is not received, but thrown out as often as the conch throws it in. This is considered as a token of love and regard of the Deity towards helpless Humanity.

There is a perpendicular crevice in the same mount which is supposed to communicate with the Patala — known as the nether world by some and in *Secret Doctrine* identified with America.

In the *Kreta* Yuga this mountain was called Muktradari, or the Mount of Salvation; in the *Treta* Yuga, Jotadari, or the Mount of Protection; in *Dwapara*, Niladari, or the Blue Mount; and in *Kali*, the present age, it is known as Mungalgiri, or the Auspicious Mount.

The spire over the temple is some 1,320 feet high, and was built by a Raja named Venkatradari at a cost of 400,000 rupees in order to expiate the crime of murdering some robbers whom he had invited to his house really for that purpose but on the ostensible plea of hospitality.

India is a land of mysteries truly, but although many of these folk tales arise out of natural phenomena, they show the deeply-seated religious feeling of the race. Religion there enters indeed into everything. But these tales are not despicable, for many great

writers of authority know that under the folk tales of all nations are concealed truths hidden from the materialist's gaze. Oil on the sea to still it was long held a superstition, but now nearly every well appointed ocean vessel is equipped with oil-bags to accomplish this end in accord with ancient "superstition".

The Path

AFFIRMATIONS AND DENIALS — *William Q. Judge*

In the *PATH* of January a discussion on the subjects of "Mind Cure" and the like was begun. Since then we have had some letters from and conversations with those who think that the article is not right, or that it takes a wrong view, or that it does not state all the views of all the schools, and when we referred the enquirers to publications of "professors" of these schools we were told that they do not represent the thing properly, and so on. In this article it is purposed to refer to some of these published utterances of the said professors, so that they may be examined.

In a journal called "Christian Science" for the month of January, published in Boston apparently under the auspices of a college of the cult, is the following from an article entitled "My Healing Message," by Minna Peckham;

"I now declare all pain, sickness, or death to be nothing — nothing. There is no sickness. I deny that there ever was any sickness. I do not believe in poverty; I know there is no poverty; there never was any poverty; there never will be any poverty. We have great stores of wealth; every man, woman, and child is rich. They want for nothing. I do not believe in storms. I know there are no storms. There never were any storms; there never will be any. I deny the reality of storms henceforth and forevermore. I do not believe in accidents, I know there never were any accidents and there never never shall be any."

And all this raving is uttered in serious earnest, winding through many more paragraphs, and ending as follows: "I am a messenger of God's love and a bearer of good tidings of what is true."

But we are told by some that this sort of thing "is not the Simon

pure straight; it is not representative". The difficulty is that the different "metaphysicians" say the same of each other, and when they are cornered by something like this they say "O that is not the proper thing". But a still greater difficulty is that the folly just quoted is the exact outcome of the other systems, for they all have a system of affirming and denying that must, if carried to its logical conclusion, lead to just what Miss Peckham says. She is evidently not afraid to boldly go to the end and reduce herself and all other things and beings on this plane to nothing. Indeed, it is quite proper to *go* still further than her "message" in order to carry out the line of argument laid down, in this way: "There is nothing: I do not think, I never did, I never will, and the thoughts I have just uttered have no existence, and therefore all that I have said is nothing, and hence all that I have denied is just the opposite". This is quite logical and proper, and reduces the whole matter to its right position. The whole set of affirmations and denials reminds one of the passages in the writings of the great Seer Swedenborg, where he describes those souls who affirm and deny anything at all and reduce any statement to the very opposite of what may have been said. We are not joking, but are in sober earnest and call on all forms of argument and all schools of real literature to support our position. Of course some will not agree, but we are willing to rest the case with those who have been educated to understand the true course of an argument. There are rules of logic which must be followed unless we are come upon an age when all these things have passed away. And the "Healing Message" has been taken up now because the publication appeals to theosophists and advertises theosophical books.

RELATIVITY

As soon as the Absolute began to manifest itself, or, if you like, immediately that Almighty God created things and beings,

relativity begins, and all minds are caught in its net and are obliged to look at things relatively. And so it comes about that we have to say "good" and "evil", as well as all the other words that connote these relative things and ideas. If there were no matter there would be no spirit, and also if there no evil there would be no good. It is therefore wrong in logic and common sense to say there is no evil. It is only the desire of the optimist, who will not look at things as they are, that causes people to affirm that all is good or that there is no evil. It is all relative, and there is both evil and good, just as light and darkness exist. For if there were not the one we would never know anything about the other, since these ideas arise from contrasts.

In the so-called metaphysical arts or "sciences" the relativity of things and ideas is constantly ignored from the desire to have everything right and *just as we want it*. But how can these optimists know they are right when they sweep away relativity? and how shall any of us say that sorrow and poverty do not exist? Poverty is a fact- — the fact of being without means or the things that can be bought with means, and this is so whether the general wants of the nation you live in are small or large. It is in no sense a sentiment or due to imagination. Hence poverty here will be riches for the man in India, and so on, but all the time there is poverty in any land, no matter how the relativity in respect to that sort of poverty alters in another.

So it is against the experience of all to say there is no poverty, and it is also contrary to logic. But it is not wrong to say that the *effect on your mind* may alter as you look at the matter; and so you may be poor yet at the same time be contented. This, though spiritual or moral richness, is none the less actual poverty. But proper contentment does not come from violations of logic and fact, but from a right view of this universe of relativity. And such right view will never be attained by denials that can not be sustained.

Many of the objections made to the views in the January article were wide of the mark, for they took the ground that the writer held, as they said other members of the Society do, the opinion that we should go on thinking we are sick when we are not, and that we are miserable when it is only a result of morbidity of mind. Such is not the position at all. Much of our misery is due to discontent and to selfishness, and will disappear as we grow contented and whole-souled. Many of our bodily complaints fade away when we have restored the mind to normal action. But this normal action is not secured by bad logic and worse statistics. It is done by recognizing the fact that "the mind is its own place, and can make a hell of heaven, a heaven of hell." As we see that one set of circumstances make one man happy and another the very opposite, we know that much depends on the way in which we look at our surroundings; but this is an old idea, one always held by the most ancient of the ancients. What right have the "metaphysicians" to arrogate it to themselves? All good physicians have said that much depends on the mind of the patient, but that does not do away with the necessity for good physicians; it only calls for more sense on the part of the patients.

Let us suppose a nation imbued from birth to death with the absurd denials and affirmations we have quoted, and try to imagine what would be the effect on the next incarnation of such a people. Probably Miss Peckham does not believe in reincarnation, but, if she did, might say the effect would be good. But would all the poverty and the storms and earthquakes have come to an end? Hardly, since in the case of the natural throes of mother Earth what thoughts may cause them are beyond our purview and unaffected by our denials. Would the contrasts that really constitute poverty, no matter what the sphere of being, cease to have existence? We think not, unless everything by the remarkable process outlined in the paper quoted from had been

reduced to one dead level. But we know at least this, that evolution is the law of nature in all departments and that no dead level is possible, and under the law of evolution there must be these contrasts, no matter how high we go or how long continue in the great stream. Hence if these affirmations and denials should have the effect of removing us from this sphere to another, there the deniers and affirmers would have to begin the weary process over again of plunging themselves into a sea of illusionary thought devoid of logic and merely optimistic. If this picture be correct, is it wise to continue the system or in any way to give it moral support?

The Path

THE FUTURE AND THE THEOSOPHICAL SOCIETY — *William Brehon*

In 1888 H. P. Blavatsky wrote: (1)

"Night before last I was shown a bird's eye view of the theosophical societies. I saw a few earnest reliable theosophists in a death struggle with the world in general and with other — nominal and ambitious — theosophists. The former are greater in number than you may think, and *they prevailed* — as you in America *will prevail*, if you only remain staunch to the Master's programme *and true to yourselves*. And last night I saw. . . The defending forces have to be judiciously — so scanty are they — distributed over the globe wherever theosophy is struggling with the powers of darkness."

And in the *Key to Theosophy*:

"If the present attempt in the form of our Society succeeds better than its predecessors have done, then it will be in existence as an organized living and healthy body when the time comes for the effort of the twentieth century. Not only so, but besides a large and accessible literature ready to men's hands, the next impulse will find a numerous and united body of people ready to welcome the new torch-bearer of truth. He will find the minds of men prepared for his message, a language ready for him in which to clothe the new truths he brings, an organization awaiting his arrival which will remove the merely mechanical material obstacles and difficulties from his path. Think how much one to whom such an opportunity is given could accomplish. Measure it by comparison with what the Theosophical Society actually has achieved in the last fourteen years without any of these advantages and surrounded by hosts of hindrances which would

not hamper the new leader."

Every member of the Society should be, and many are, deeply interested in the above words. The outlook, the difficulties, the dangers, the necessities are the same now as then, and as they were in the beginning of this attempt in 1875. For, as she has often said, this is not the first nor will it be the last effort to spread the truths and to undertake the same mission as that taken up by Ammonius Saccas some centuries ago — to lead men to look for the one truth that underlies all religions and which alone can guide science in the direction of ideal progress. In every century such attempts are made, and many of them have been actually named "theosophical". Each time they have to be adapted to the era in which they appear. And this is the era — marked by the appearance and the success of the great American republic — of freedom for thought and for investigation.

In the first quotation there is a prophecy that those few reliable theosophists who are engaged in a struggle with the opposition of the world and that coming from weak or ambitious members will prevail, but it has annexed to it a condition that is of importance. There must be an adherence to the program of the Masters. That can only be ascertained by consulting her and the letters given out by her as from those to whom she refers. There is not much doubt about that program. It excludes the idea that the Society was founded or is intended as "a School for Occultism", for that has been said in so many words long ago in some letters published by Mr. Sinnett and in those not published.

Referring to a letter received (1884) from the same source we find: "Let the Society flourish on its moral worth, and not by phenomena made so often degrading." The need of the west for such doctrines as Karma and Reincarnation and the actual Unity of the whole human family is dwelt upon at length in another.

And referring to some of the effects of certain phenomena, it is said (2) "They have to prove. . . constructive of new institutions of a genuine practical brotherhood of Humanity, where all will become co-workers with Nature." Speaking of present materialistic tendencies, the same authority says:

"Exact experimental science has nothing to do with morality, virtue, philanthropy — therefore can make no claim upon our help until it blends itself with metaphysics. . . . The same causes that are materializing the Hindu mind are equally affecting all western thought. Education enthrones scepticism, but imprisons spirituality. You can do immense good by helping to give the western nations a secure basis on which to reconstruct their crumbling faith. And what they need is the evidence that Asiatic psychology alone supplies. Give this and you will confer happiness of mind on thousands. . . . This is the moment to guide the recurrent impulse which must soon come and which will push the age towards extreme atheism or drag it back to extreme sacerdotalism, if it is not led to the primitive soul-satisfying philosophy of the Aryans."

This is the great tone running through all the words from these sources. It is a call to work for the race and not for self, a request to bring to the west and the east the doctrines that have most effect on human conduct, on the relations of man to man, and hence the greatest possibility of forming at last a true universal brotherhood. We must follow this program and supply the world with a system of philosophy which gives a sure and logical basis for ethics, and that can only be gotten from those to which I have adverted; there is no basis for morals in phenomena, because a man might learn to do the most wonderful things by the aid of occult forces and yet at the same time be the very worst of men.

A subsidiary condition, but quite as important as the other, is laid

down by H. P. B. in her words that we must "remain true to ourselves". This means true to our better selves and the dictates of conscience. We cannot promulgate the doctrines and the rules of life found in theosophy and at the same time ourselves not live up to them as far as possible. "We must practise what we preach, and make as far as we can a small brotherhood within the Theosophical Society. Not only should we do this because the world is looking on, but also from a knowledge of the fact that by our unity the smallest effort made by us will have tenfold the power of any obstacle before us or any opposition offered by the world.

The history of our sixteen years of life shows that our efforts put forth in every quarter of the globe have modified the thought of the day, and that once more the word "Theosophy", and many of the old ideas that science and agnosticism supposed were buried forever under the great wide dollar of present civilization, have come again to the front. We do not claim to be the sole force that began the uprooting of dogmatism and priestcraft, but only that we have supplied a link, given words, stirred up thoughts of the very highest importance just at a time when the age was swinging back to anything but what the reformers had fought for. The old faiths were crumbling, and no one stood ready to supply that which by joining religion and science together would make the one scientific and the other religious. We have done exactly what the letter quoted asked for, led the times a step "to the primitive soul-satisfying philosophy of the Aryans".

But we can never hope to see the churches and the ministers coming over in a body to our ranks. It would be asking too much of human nature. Churches are so much property that has to be preserved, and ministers are so many men who get salaries they have to earn, with families to support and reputations to sustain. Many "houses of worship" are intimately connected with the

material progress of the town, and the personal element would prevent their sinking the old and glorious identity in an organization like to ours. Congregations hire their priests at so much a year to give out a definite sort of theology, and do not like to be told the truth about themselves nor to have too high a standard of altruism held up to them in a way from which, under the theosophical doctrines, there would be no escape. They may all gradually change, heresy trials will continue and heretical ministers be acquitted, but the old buildings will remain and the speakers go on in new grooves to make other reputations, but we may not hope to see any universal rush to join us.

Our destiny is to continue the wide work of the past in affecting literature and thought throughout the world, while our ranks see many changing quantities but always holding those who remain true to the program and refuse to become dogmatic or to give up common-sense in theosophy. Thus will we wait for the new messenger, striving to keep the organization alive that he may use it and have the great opportunity H. P. B. outlines when she says, "Think how much one to whom such an opportunity is given could accomplish."

ABOUT KILLING ANIMALS

A correspondent asks: "Will you kindly explain why, if you think it wrong to kill a water bug, that you should consider it right to slay larger animals for food?"

I do not remember having said it was *wrong* to kill a water bug; hence there is no conclusion to be made from that to the question of feeding on animals, so far as I am concerned.

The questions of right and wrong are somewhat mixed on this subject. If one says it is morally wrong to kill a water bug, then it follows that it is wrong to live at all, inasmuch as in the air we breathe and the water imbibed there are many millions of animals in structure more complicated than bugs. Though these are called *infusoria* and *animalculae*, yet they are living, moving beings as much as are bugs. We draw them in and at once they are destroyed, slain to the last one. Shall we therefore stop living? The whole of life is a battle, a destruction and a compromise as long as we are on this material plane. As human beings we have to keep on living, while in our destructive path millions of beings are hourly put to death. Even by living and earning a living each one of us is preventing some one else from doing the same, who, if we were dead, might step into our shoes. But if we abandoned the fight — were we, indeed, able to so do — then the ends of evolution could not be attained. Hence we have to stay and endure what Karma falls from the necessary deaths we occasion.

So the true position seems to me to be this, that in certain environments, at certain stages of evolution, we have to do an amount of injury to others that we cannot avoid. So while we thus live we must eat, some of flesh and others of the vegetable. Neither class is wholly right or wrong. It becomes a wrong when

we deliberately without actual need destroy the lives of animals or insects. So the man who was born in a family and generation of meat-eaters and eats the meat of slaughtered animals does less wrong than the woman who, though a vegetarian, wears the feathers of slaughtered birds in her hats, since it was not necessary to her life that such decoration should be indulged in. So the epicure who tickles his palate with many dishes of meats not necessary for sustentation is in the same case as the woman who wears bird's feathers. Again as to shoes, saddles, bridles, pocketbooks, and what not, of leather. These are all procured from the skins of slain animals. Shall they be abolished? Are the users of them in the wrong? Any one can answer. Or did we live near the north pole we would be compelled to live on bears' and wolves' meat and fat. Man, like all material beings, lives at the expense of some others. Even our death is brought about by the defeat of one party of microbes who are devoured by the others, who then themselves turn round and devour each other.

But the real man is a spirit-mind, not destructible nor destroying; and the kingdom of heaven is not of meat nor of drink: it cometh not from eating nor refraining — it cometh of itself. — Ed.

The Path

SEVEN STEPS FORWARD

With this issue *PATH* starts on the seventh year of life, and the seven past years have been full of action, of work, and of results. We began without an office or capital: it might be said that the business was carried on in a hat at first. Then it moved into a cell or den on Park Row, where no man could enter by the door if the occupant within did not rise to make room for the portal to swing. Subsequently a larger room — cramped in fact — was hired and exultingly then called "commodious" by the *factotum*. Later back again to Park Row and even more commodious, as the quarters of a bee might seem so, by comparison, to an ant. Then again to larger quarters on Nassau street, until now it expects to move into the Society's permanent house.

So to signalize the event it puts on a new cover, and were subscribers more numerous it might enlarge the number of its pages. But the penalty of independence in business conduct is frequently lack of support from a world that acts on convention and delights in pandering and being pandered to. But it may as well be known that the *PATH* will pander to nothing.

Once more, too, the editor declares he sees no excuse for the existence of this or any other magazine. He wearies of the eternal printing that goes on, for there is nothing new under the sun and we are like squirrels repeating the words spoken by bodies long since dead which were inhabited by ourselves whom now we fail to recognize. But since this is the age of black on white impressed by machinery, we are compelled to publish so that the opportunity of saying the same thing once more to a rebellious and stiff-necked generation shall not be neglected.

The Path

METAPHYSICAL HEALING ONCE MORE — *Ellice Kortright*

BY ONE WHO HAS TRIED IT

The opening sentence of Mrs. Gestefeld's article in February PATH entitled "Another View of Metaphysical Healing" leads those in the Theosophical ranks who *have* "examined the subject sufficiently to arrive at an understanding of the principles involved" to come forward with such knowledge as a disclaimer of the assumption that only those who are ignorant of the matter will share the opinion of the PATH's Editor.

An early inquirer into the theory that now enjoys the diversified nomenclature of "Divine Science", "Mind Cure", "Mental Science", "Metaphysical Healing", and "Christian Science", may claim to know something of its rise, its progress, and its present proportions, having been from the first intimately associated with one of the leading exponents of the art, and having examined thoroughly the *modus operandi* of the said art's acquisition and practice under the guidance of one who is conceded by even her opponents to be a past master of the Healing Gospel. With friends, in addition, who are ardent believers in the system of metaphysical healing, some of whom are regular practitioners of the cult, and with the cheerful admission that in some instances great temporary alleviation of suffering has been effected by the use of this agency, — and in one solitary case what might even have proved a permanent cure had not death intervened from another disease, it will presumably be granted that the writer knows whereof he speaks, and that the following is in no antagonistic spirit, but is the result of a full knowledge of the "principles involved", from a long and dispassionate observation of the facts, together with some personal experiences in the

methods employed. All which tend to the unbiased conclusion that the opinion of the PATH's Editor is in no wise unfair to either the body of teaching known as Metaphysical Healing, or to its defenders and practitioners. The remarkable unanimity — seen, alas! on this point alone — with which all adherents of every shade of the "Divine" and the other allied sciences condemn any and all examples chosen by an outsider for remark, renders it extremely difficult to handle the subject at all; yet it will probably be conceded that certain basic statements are used alike by all branches of the several denominations, and even by every free-lance of a "healer" who is considered infallible by her own following.

These are, in substance, that "All is One", that "One is Reality", that the "Reality is Good or God", that "God is Spirit", etc: while in a text-book open at the First Lesson there is a list of the qualities of this God or Spirit, which is defined as both Principle and Person, and also as a "Unit and Person, *i.e.*, that which cannot be separated". A great deal is further said in the book in question about Love and Life and Light, and of Reality, which is explained to be "a thing that exists in the Mind of God", and we are gravely told that "all expressions of Reality are real, but that there are expressions of Reality which are false because they exist in man's mind independently of God's Mind", these unrealities among others being sickness, sorrow, sin, and death.

To escape the discomforts of this quadruple-headed hydra we are to bask in thought on Love and Light, which is God or Good, whereby we will be made sound, joyful, holy, and deathless.

Now of all this, the conscientious student of Theosophy as opposed to the mere believer in Theosophy, according to Mrs. Gestefeld's distinction, recognizes naught as familiar save the first proposition that All is One, and *that* One is the Real.

So far from Theosophy, as affirmed, being alike in essence with the "Divine Science" as expounded from the metaphysical healer's viewpoint, nothing could well be more dissimilar; nor can Theosophy be restricted in its definition to that presentment of truth alone which "appeals to and engages the intellect in contradistinction to "Divine Science" which "appeals to and engages the soul or self-consciousness", for according to the revelations of the partial and one-sided presentment of this Science known as Metaphysical Healing, it might properly be termed that which "appeals to and engages" the physical consciousness exclusively, judging from the disproportionate part the material body and its sensations are made to play in the scheme of regeneration, — for it is nothing less than this which is the aim of the cult. That Theosophy with its many sidedness of appeal, now to the higher mentality, then to the soul principle, and finally to the Higher Self and pure Spirit, is here limited in its sphere of action to the narrow bounds of the intellectual faculty, shows a want of appreciation of the fundamental teachings of our philosophy which inclines one to the view Mrs. Gestefeld takes of us, *i.e.*, that special attention has been diverted from a right understanding of the Wisdom Religion in favor of what is covered by the term "Divine Science".

All who have become familiarized with the operation of the great law of adjustment known as Karma, realize that whatever of suffering is our lot, here and now, has had its origin in some previous life, ourselves having been the creators by thought-action of the causes whereof the effects are made presently visible. Now Mrs. Gestefeld's contention is that, if Theosophists admit thus much, it follows logically that the further admission must be made that, since past wrong thinking has produced a bodily disease, present right thinking should be the only means employed for its eradication, instead of allowing it, in Mr. Judge's

words, "to work its way down and out by the proper channel, the body", her argument losing sight of the fact that, though the attitude of right thought will doubtless favorably affect the bodily conditions of a subsequent incarnation, it would be inconsistent with our views to look for such results in the present life so long as old reckonings are not fully wrought out to the last decimal.

It is again urged against us that if Karma should not be interfered with by thought processes, no more should it be checked by physical applications, such as medicaments and other palliatives; to which we may reply that such measures are not employed as cure, but as a perfectly legitimate means of alleviation, inasmuch as they pertain to the same plane as the physical trouble, *i.e.*, the material, and that appliances and correctives appropriate to the sphere of matter to which the distemper belongs are in no sense an infringement upon the field wherein the invisible law operates. When mental force is brought to play upon bodily disease it is, according to Mr. Judge's position, thrust back again by the mind current to the sphere in which it had its source in a past embodiment, thence again to work its way down and out, — for such end it is infallibly doomed to effect sooner or later. Hence it is maintained as the wiser course, to allow it to work itself out in its chosen field of action now, — since we know what tenfold and irrepressible force is acquired by any pent-up power that is denied a natural vent, — we the while devoting our thought-action to higher issues than the rectification of what are not infrequently exceedingly trivial abnormal states of the physical system.

By this it is not meant that the object to be attained in amelioration of health will not be greatly advanced by a well equilibrated mind and a cheerful, hopeful temper, which every physician and every sick-nurse knows to be an invaluable aid to quick recovery. But this well-established fact has not waited ages

for recognition till the advent of the mental healers, as they would have us believe.

That the objection urged against the mental practice of metaphysical healers does not hold equally good against the advocates of mesmeric and magnetic methods of alleviating physical infirmity, lies in the fact that animal magnetism by its very name proclaims itself on the same plane of matter to which the present expression of bodily disease is akin, thus making its application no more injurious to the mind than are such drugs as quinine in malarial fever, nor, in fact, than bread is to the hungry in health. The standing contention, however, of those who deprecate all mind-cure practice of every variety in disease is, that such lamentably false standards of thought and of the relativity of things are thus engendered, making so universal a topsy-turvydom that we are bewildered at the spectacle, and are ready wildly to call on all upholders of sound philosophy and framers of stable canons of speech to aid in re-establishing the reign of rational language, and the law and order of common sense once more.

Of more serious import than even the strange medley of religion and philosophy with which the literature of "Mental Science" is adorned, is the claim of a boasted ability to affect the conditions, either external or internal, of other persons through the channel of their minds. Only a dense ignorance of, or a wilful blindness to, the extraordinary achievements of the last two decades due to the painstaking researches of eminent psychologists abroad, such as Bichet and Janet of France, and of the scientific medical fraternity, such as Siefert of Nancy and Forel of Zurich, can fail to recognize in much of the mental-science practice in this country a kindred art to the hypnotic methods now being exhaustively investigated by the aforesaid authorities at various centres.

It is true, indeed, that with the mental-healers no trance is induced in their practice, but none the less does the mind of the operator assume a dominant attitude towards that of the patient, and we know from a study of the means advocated by the Nancy School in particular that "suggestive therapeutics" — a term long anterior to mental healing — are not always dependent for success upon the hypnotic state when once the stronger will has established its right of supremacy over the weaker one. (1) The mere fact that the patient is ailing in body renders his will-fibre of poor resistance; indeed his very act in soliciting aid for his sufferings at the hand of the operator denotes the ease with which his open, receptive attitude of mind may be influenced to any extent by even the unconscious thought of the other. Those familiar with the detailed accounts of experiments of the kind made at different schools in Europe will need no confirmation of this statement. The literature of the subject is ample and easily accessible to all interested sufficiently to pursue a thorough examination of its somewhat intricate records. Therein it will be seen how impossible it is to guarantee an immunity of influence save on the one subject adopted for suggestion, the extreme susceptibility of the weaker sphere to even the unconscious thought of the stronger one being a factor that has to be reckoned with, making it idle for the practitioner to allege that he will "*never* interfere with another's free mental action", or that he "*never* holds a mind in bondage, but only directs it" — a distinction, be it observed, worthy of a Jesuit Father-Confessor.

The subtle persistency of these little-known forces, thus tentatively and ignorantly evoked, renders them beyond measure harmful in their after effects, months and years being oftentimes required to shake off the last traces of their baneful influence.

Case after case might be cited from an intimate acquaintance

with the dealings of Metaphysical Healers of the disastrous effects in certain instances of disease; one, notably, where a woman of fine mind, of finished attainments, and of originally strong will and pronounced individuality much reduced by long years of invalidism, was persuaded to put herself under the care of a noted "healer", one of those to whom even Mrs. Gestefeld would accord the meed of a right comprehension of the "Divine Science", but a woman of less intellectuality and possessed of fewer advantages of education than her patient, though extremely intelligent and quick of apprehension, which was supplemented by a will of indomitable power.

The patient had had for years an organic heart trouble, had been unable to walk at all, and had led a life of extreme carefulness. Under the new *regime* in less than a week the "healer", in defiance of the patient's own better sense, and directly counter to the warnings of a friendly medical attendant who had watched her case assiduously, had her walking about the streets, and unaccompanied, a thing the poor woman had not ventured upon in years, as the prospect of dropping down dead at any moment was inevitably before her. During a period of some five or six weeks an utter revolution took place in the woman's habits, and apparently also in her physical strength and general well-being, at the end of which time, the "healer" being called off in another direction, the patient was suddenly left without what had now become a daily and necessary stimulus, with the consequence that she almost immediately broke down with utter prostration of mental and physical power, and died a few years after without having ever regained the comparative ease of her condition previous to her recourse to this system of cure.

All the while she was undergoing this treatment she confessed herself to be conscious of the performance of foolish acts that her better sense told her at intervals were rife with future penalties,

but something outside of herself, as she expressed it, seemed to urge her on to the result recounted.

If this be not Black Magic in the deed, however white the intent may have been, we confess an utter inability to cope with any suitable characterization, in accordance with the usual signification of terms.

Many another instance of the like kind might be adduced, but this one will suffice for the present purpose. A minor consideration in the treatment of the whole question under review is that of the droll inconsistencies of theory and action that the professors of Metaphysical Healing Science are not above indulging in when need sorely assaults them in their own proper persons. For instance, we were on a time gravely assured by a practitioner of the art that mental force was equal to the cure of every disease, whether internal, organic, or incurable, and the statement was followed by the stout and not-to-be-shaken assertion that renal calculi were solvable under a well-directed and continuous thought current; but it was noticeable that when some time thereafter a hard mass of wax formed in the external meatus of the same person's ear, recourse was instantly had to syringes, soap, and hot water, and these proving inefficacious a speedy pilgrimage to the surgeon was undertaken for relief from his more perfect apparatus. When questioned why the powerful thought current could not have been as readily and as successfully applied to the ear's secretion as to that of the other organ in the body on an even harder substance, it was explained, in delightful defiance of all fact, that this was a "mechanical obstruction whereas the other was not", and all argument proved wholly powerless to establish the similarity of the two cases.

Such contradictions only compel our amused indulgence, and we experience the same lenient satisfaction as we are conscious of

towards the innocent cross-statements of a diverting child comrade. But the more serious aspect of the matter is not unfortunately thereby lessened, as it has been our endeavor to prove above.

FOOTNOTE:

1. Bernheim maintains in his treatise, *De la, Suggest ion, ect*, that the "*hynoptic state need not be one of actual unconsciousness,*" that by the methods of the Nancy School "*real therapeutic effects are obtained when the patient does not fall into sleep or trance and when the patient recalls perfectly what has occurred after the seance is over.*" The same authority defines hypnotism as "*the provocation of a peculiar mental state which augments suggestibility. All the phases of the state have the common character, not of sleep or trance, but of suggestibility.*" ([return to text](#))

The Path

THE SEVEN PRINCIPLES — *Alexander Fullerton*

PERHAPS some additional light may be thrown upon this subject supposed to be so complex if we reason backward instead of forward, inquiring what the constitution of man would seem of necessity to be, and not merely investigating what it in fact is. And this may be done by thought upon the "final cause" of his evolution.

A final cause is the end or object of an action, that for the sake of which anything is done, this purposeful aim having therefore the force of causality. The final cause of a man's evolution is the production of a being perfect in knowledge and experience. Hence, very evidently, the knowledge and experience must be in every quarter, on every plane, through every function. Now there are three ways whereby knowledge is acquired, — sensation, perception, and intuition. Sensation is the way through use of the bodily organs, as when information of the nature of a table or chair is gained by touch and sight. Perception is the way through use of the mental and reasoning faculty, as when information of facts in geometry is gained by reflection on the necessary properties of figures. Diagrams may aid to comprehension, but the fact that the three angles of a triangle are equal to two right angles exists independently of any drawing which may be used to illustrate it. Intuition is the way through use of the higher, supersensuous faculties, by which supersensuous truth is directly, without the medium of ratiocination or inference, seized at once.

If we can imagine a purely spiritual, unembodied being, such a being as is suggested by the word "angel", it is clear that his only avenue to truth would be through intuition. Without physical organs, and raised above the plane whereon argument and

induction range, intuition would be his one resource. Of life and movement in his own sphere, of methods of communication in thought and sympathy, he would have copious knowledge. But there it would stop. Of the gradual processes of reflection and reason used in lower fields, much more of such experimental tuition as comes through bodily life with bodily organs, not the remotest conception would be possible. Not only would matter, with all its sensations and restrictions, be foreign to him, but he would be a stranger to such emotions as result from the relations and casualties of social existence on earth, — sorrow, pity, sympathy, self-forgetfulness, self-sacrifice. That is to say, he would be ignorant of a vast range of instructive experiences, and incapable of a large group of refining emotions.

If such a being is to supplement his apprehension of the cosmos by an understanding of that part of it which has consolidated into gross matter, he must incarnate, must dwell in and learn of the section he does not know. He has within him a spark from the Divine Essence, and that is enshrined in a spiritual nature removed the one step from pure Divinity which makes possible an individuality distinct from it. To these he is to add a physical body.

But put a spiritual being into such a body, and no junction results. There is no connecting tie, nothing to bridge over the chasm between two entirely unlike natures. There must be something to enable the spiritual to act upon the physical, and the physical to send messages to the spiritual. Mind does this. On its higher side it reaches up to and affiliates with spirit; on its lower it grasps and influences subtle matter. Though these opposite functions constitute really two entities, they are so interlaced that they blend into each other and permit the passage of thought and will. Thus we have five principles.

Still there is a gap. Intangible mind cannot directly act on gross matter, being still too ethereal for immediate influence. A transmissive medium between mind and flesh is as needful as one between spirit and matter. There is required a body so constituted as to touch at the same time both mind and flesh, supplying a connection for vibrating influences. The astral body does this. The real seat of the organs manifested in those of our five physical senses, it can catch from the physique the sensations they receive and then transmit them to the intelligence above. For it is this astral body which is as to this plane the real seer, hearer, taster, toucher, smeller, and which mediates between gross flesh and subtle mind. And thus we have six principles.

But what would an organism of flesh and bones be without the vitalizing force to conserve and move it? Simply an inanimate mass. So to energize it for action there must be a pervading life, a life of respiration and digestion and circulation and reproduction. The everywhere-distributed vivifying element in Nature supplies this. Vibrating in each atom it thrills through the system and makes it a part of the great whole, transforming a mere apparatus into a living, functioning, active animal. And thus we have seven principles.

If, then, a pure spirit is to incarnate for experiential knowledge, the necessities of the case appear to exact precisely that sevenfold nature which Theosophy asserts of man. *A priori* considerations conduct to the conclusion otherwise demonstrable as fact.

On the supposition that there are these various elements in man, what would naturally be their behavior when the life-principle is withdrawn from the physical body at what we call "death"? This leaves as the enclosure of the five remaining principles an inanimate form, insusceptible of influence to or from, and already beginning to disintegrate. This not only dispenses from

their longer union for experiential purposes, but directly prompts to a severance. For the spirit enshrined in a spiritual nature no longer needs the link connecting it with a body now worthless, and presumably would retire till ready for another incarnation. But its close union with the Higher Mind has suffused the latter with something of its own pure nature, imparting to it an immortal life. On the other hand, the close union of the Lower Mind with the physical body through the astral has tainted it with the corruption which bespeaks mortality. So the interfacings naturally drop apart, the mortal separates from the immortal. The three higher principles pass on.

Why should the Lower Mind and the astral form cohere? The latter is no longer a vehicle for transmission of sensation upwards or volition downwards. It, too, with the body, has lost its vitality by the withdrawal of the Life-principle, and must drop away from the Lower Mind for the same reason that the Lower has dropped from the Higher Mind and both from the body itself. The second principle having departed, the first, third, and fourth fall separately into gradual dissolution, while the fifth, sixth, and seventh, of undying nature, can have no further touch with what are soon to end.

And here again, what would antecedently seem probable is declared a fact by the teachings of Theosophy. Those who know affirm the conclusions of those who think. The opposite processes of reason and revelation coincide in the result of vindicating the Seven-fold Principle in Man, both as to the necessity of his construction and the method of his dissolution.

THE LIGHT OF EGYPT

In several quarters there has been of late a persistent attempt to push the sale of this book, particularly among Theosophists, and this attempt, combined with the enquiries reaching the *PATH* respecting its character, make important a recalling to F. T. S. of the facts given in *PATH* of July and August, 1889. In the former the book was reviewed and its inadequacy — outside of plagiarisms — shown, as also its denial of Karma and Reincarnation as applicable to this earth! At that time the author was understood to be Mrs. E. H. Britten, but proof as to the real authorship was immediately sent the *PATH*, and in the following number correction was made, the right name given, and the history of the publication disclosed. The author was Mr. T. H. Burgoyne.

Briefly, these are the facts. A spurious Occult Society, known as the "H. B. of L.", was started about 1884, and pretended to give to its members occult teaching *free*. In August, 1887, Mr. Burgoyne, styling himself "Private Secretary", issued to the members a secret circular, the essence of which was that he had studied Chaldean Astrology for eighteen years, but could not communicate the "lessons" in it and Occultism without a payment to him of \$60; that his teachings had the full approval of the Masters; and that the \$60 subscription was a necessity to Initiation. A synopsis of the course accompanied the circular. When *The Light of Egypt* was published, a subscriber placed in the hands of the Editor of the *PATH* the instructions, "lithographs of the original produced by the Autocopyist", and examination showed that the book was mostly a reprint at \$3.00 of "secret teachings" for which \$60 had been exacted!

The present edition of the book states it to be by an "Initiate".

Even without H. P. B.'s assertions as to the "H. B. of L." and her statement (in *Lucifer*) as to the author, no instructed Theosophist should need assurance that Initiates do not proclaim themselves such; that they do not deny doctrines which are pivotal to the whole Theosophic scheme; that they do not *sell* Esoteric teachings — much less in books at a fraction of the rate charged privately till the latter demand ceased; and that no man can enjoy instruction from or approval of Masters whose life and character would exclude him from Their presence and far more from Their endorsement. Hence they should perceive that *The Light of Egypt* is an impudent fraud.

The Path

PERTINENT REFLECTIONS — *Auriga P. Starr*

OPPOSITION OR EXPLANATION, WHICH?

It has been my good or evil fortune to hear some members of the Society say on this wise: "If the Masters who are said to have founded the Society and now watch over it also engage in other works and movements among men, why do Theosophists oppose other developments of thought, such, for instance, as Metaphysical Healing, Christianity, and so on?" The question at the end is a misconception as I read what Theosophists have said. H. P. Blavatsky has been accused of great violence against Christianity, but a careful reader of her books knows that her opposition was directed to dogmatism and not to the true teachings of the founder of that now extinct religion. She tried to explain, to revive the truth, since, as she declared, it was her opinion that but one truth lies under all religions. Indeed, the series of papers that gained for her the Subba Row medal in India was entitled "The Esotericism of the Gospels." And so also with the writers in *PATH* whom I have read on Metaphysical Healing. They deal with explanations in the course of which some unwarranted assumptions are demolished. This is not opposition. But we know that sometimes, if you cannot agree with the Metaphysical Healer or dogmatic Christian on points of logic and history, you are said to oppose.

In the sense that one is not on exactly the same side, he might be said to be in opposition, just as the moon is often in opposition to the sun. But some devotees of the various Mind Cures, holding up before themselves the optimism that first declares all things are good, making a weak play on the English word "God", and then decides that a continually flourishing health is the most

important of the good, dislike logical explanations or the pointing out of disagreeable facts, and call it opposition.

Theosophy opposes nothing but dogmatism, cant, evil action. It is a foe, open or declared, to the dogmatism which has chased Christianity away, but it explains to the sincere where the truth is hidden. So it points out in Old and New Testaments the same truths taught by other religions that borrowed naught from us. Thus while it may in that process dispose of the claim for exclusive revelation asserted for the Christian books, it shows all nations as not deserted by a jealous God, but all alike possessing several forms of the one thing. And that is neither Jewish, nor Presbyterian, nor Hindu, nor Mohammedan, but simply the one system of scientific religion called Theosophy.

Theosophy, then, draws all philosophical and religious ideas to a focus by its synthesis of all. Embracing all, it throws the concentrated light obtained by thus bringing all together, upon the many cherished forms and rituals which obscure reality beneath.

THE T. S. SHOULD NEVER HAVE A CREED.

It is only within the pale of a creedless body that investigation of religions will reveal the truth. If it were a Buddhist or Hindu Society, then every effort of its members would run on those lines. If the one, then only revivals of Buddhism would be sought; if the other, then the spreading of present-day Hinduism. If even it had adopted Reincarnation as its creed, so as to cause us all to be called "Reincarnationists", no right progress could ensue. As Reincarnationists we could not all fully agree with Karma, and, indeed, many varieties of reincarnation would be insisted on. But our body being without a creed, any man who is not a fierce dogmatist may join to help the work which cooperation always enlarges and accentuates.

So our history and present composition declare against a creed. We had Brahmins from the first, with several Parsees. Mr. Judge told me that among the first diplomas he sent to foreign lands in the early days were several to Parsees in Bombay and to Hindus elsewhere; with a few to some Greeks in Europe. And today the rolls in the different sections disclose the names of Hindus, Buddhists, Mohammedans, Christians, and agnostics.

SIZE NO MEASURE OF POWER.

The desire for a large membership is entertained by some. A few years ago a member, in changing the rules so as to have no dues, thought thereby to call in everybody, but soon found that small fees bring no one in and large dues keep few out. We are a leavening movement, and, like leaven, we act silently but surely upon the whole mass. Human nature will not permit us to hope that men will abandon the fame of a congregation and an expensive church to become members of a Society whose ideals necessarily destroy separate distinction and increase general good by rooting out selfishness. The small speck of leaven disturbs the whole mass of dough, and the tiny fungus can lift the heavy stone. In the same way the small band of devoted Theosophists, though never growing much in numbers, has power to keep the thought of the day turned in such a direction that the prospect of causing a union in the search for truth increases. For the mind of this and next century is evolving more and more, demanding answers to the questions which present theology fails to solve, and in Theosophy only is the final solution. If, then, the small band of true devotees ever persists, and each hour increases the ability of each to explain the really simple theosophic system, our Society can be content to remain a force which is mighty for effect though small in appearance.

IS THERE IDOLATRY OF H. P. B.?

This question has been raised. There may be on the part of some an intense respect for the words of our deceased friend which comes within the charge. But such people are generally those who do not think for themselves. They live on the thoughts of others. But as a whole it is otherwise. More members can be found who do not make an idol of H. P. B. than the other kind. Her words, of course, especially about occult subjects, command respect, but in the same way a student of astronomy would give room in his thoughts for the views of a great astronomer when the vague opinions of a unlettered person ought to be rejected. But this is not idolatry. H. P. B. herself spoke against such worship; yet that does not mean we are to give no attention to her writings or to listen to her detractors. I have heard much eulogy of her wonderful work, of her learning, her research, and also of her occult insight, but very little has cropped up of idolatry. The charge seems to arise from the known love, respect, and admiration entertained for our departed leader by several well-known Theosophists. But over and over again I have myself heard these same persons assert the right of others to reject H. P. B. if they please on questions of theosophic interest. Is one to give up his respect and admiration and love for her merely because other people fear that idolatry among weak brethren will result? I think not. But as the fear has been expressed, all we have to do is to continue to use H. P. B. as guide and friend, seeing to it meanwhile that idolatry does not creep in. It can be kept out by the use of what is known as common-sense.

PROBATION: I — *Lily A. Long*

In a certain country there once lived a youth whose name was Ernest. The mountains closed about the little village which was his home, and the beauty and mystery that dwell on the mountains had folded him in from his childhood. When the sun rose he knew it first by the pale gleam that grew into light on the highest peaks, and when it set at the day's end it wrapped those peaks again in purple and violet mists through which the level rays pierced like spears of gold. Far below lay the valley, where the herdsmen took their droves in winter-time, and beyond that again lay the great world of cities and ships and palaces. Sometimes travelers, crossing the mountain, would bring some word of how life went in that other world. Now it was a war, and now it was a famine, and now it was a great rejoicing or a wonderful triumph. Ernest listened and wondered, till wild longings came into his heart to be himself a sharer in that keener life, and then the rock-bound steeps of his home seemed like prison walls to him. But chiefly he loved to hear the tales that came with others of how some man had arisen to right the wrongs of the people or to sacrifice himself for the salvation of his country.

"Who was the man? His name?"

The answer was always the same.

"He was one of the Brothers of the Silence. We did not know his name."

"But who are the Brothers of the Silence? Tell me more of them."

And the answer was always:

"Who they are no one knows unless he is one of them. They keep their secret bond. It is said that men about the king, in the very heart of the court, belong to the Brotherhood, but no one knows who they may be. And it is certain that humble artizans are of the brotherhood also, and scholars and travelers and artists and men who toil with their hands. They work together for a common end, but they work in secret and each in his own way. Only this marks them all, that they work not for themselves. They have vast wealth, but it is used for the furtherance of their common aim; and great learning, but no display is made of it; and power greater than a monarch's, yet it is never shown save when there is need."

"But why are they unknown, and why do they work in secret?"

"Because they work against the king," was the guarded answer.

"The king does not rule righteously. Evil is done and suffered, and wrong is uppermost. Those who serve the king seek to break their power. Therefore they have banded themselves together in secret and do their work so no man knows it. But a time will come, and then the king will learn his weakness and the people will learn their friends. They can wait as well as work."

And Ernest would wander off into the solitary places of the mountains and look out over the level land that stretched away before him, with his heart so full of passionate ardor to share the work of those unknown men that he could not put it into words, — hardly into thoughts.

But the travelers with their tales came more and more seldom, for the mountain pass was dangerous and men mostly chose to take the long way that led past the foot-hills. In the gorge above the village ran a swift stream that had never been bridged, and more than one adventurer, essaying the passage in the rude skiffs of the mountaineers, had been caught in the fierce current and

carried down helplessly over the precipice below. Often the villagers talked together of throwing a bridge across the torrent, but they were men of many little cares, and each season was too full of its own work to leave room for a larger task. But one spring, when the melting fields of snow upon the mountains had made the gorge impassable for weeks, they agreed that the work should be no longer delayed. Each man must bring his share of timber, and Ernest, who was skilful and strong, would construct the bridge. Soon tall trees were hewn to solid beams and lay ready piled on either bank. Pins for fastening, and planks and framework, were made ready. One day, as Ernest worked, a stranger stood beside him. It was long since he had seen a man from the outer world, and he questioned him eagerly.

"What of the king? Does evil still have power in his kingdom?"

"It still has power, alas."

"But the Brotherhood? The men who live for the good of their fellows! Do they still work?"

"Yes, and ever will while there is need."

"I dreamed once of joining them," Ernest said wistfully.

The stranger gave him a kindly glance.

"Well, why not?"

"Could I?"

"Why not?"

"But no one knows where to find them."

The stranger smiled oddly.

"They are never far. One of them was even today at the foot of this mountain of yours."

He waved his hand in farewell, but long after he had passed out of sight the youth sat pondering over his words. One of the Brothers had been at the foot of the mountain that day! Then he could not yet be far away. Ernest flung his axe to the ground and took the path towards the valley from which the stranger had come.

He wandered far and long. Wherever he went there were rumors of the men he sought, but nothing more. One who might have been of the brotherhood was here a fortnight since. It was said another was even now in the next village. Nay, they had all gone to the war on the borders. Or, their secret places of meeting had been discovered by the king, and they had all been scattered or buried in dungeons. Well, it was not so certain that they had ever existed. There had been much talk, but who could make proof? So the rumors flew, and Ernest's zeal blew hot and cold as he listened. It would have been well worth living, truly, if one might have lived and worked as one of such a brotherhood, but if the Brotherhood were chimerical, — why, it was worth living still in a world which held such wonders as the palaces and pageants and festivals he saw. The months came and went, and ever as he traveled some new wonder put the last out of mind. The first object of his search had almost been forgotten when one day a stranger accosted him in the streets of a city.

"You have traveled far."

"I do not recollect you," Ernest said.

"A year ago you were building a bridge over a dangerous gorge in the mountains. You asked about the Silent Brothers then."

"True. And I left the mountains to seek them."

"Have you found them?"

"No. Tales fly about, but many are idle and some are false and all are fugitive. It is impossible to find the Brothers."

"It is not impossible," said the stranger, with a searching glance, "but vague desires bear no fruit unless they grow into will and blossom into action." He lingered a moment as though he would have added more, then turned and was lost in the crowd.

But his words had vividly recalled to Ernest the hopes and purposes with which he had left his home, and in a rush of passionate self-reproach he blamed himself for losing sight of that aim in the allurements of novelty. Faithless and vacillating, how could he hope to be trusted with the work of those who first of all were faithful and steadfast?

Someone touched him on the shoulder.

"Well, will you join us?"

"Who are you?" Ernest asked, drawing back in astonishment.

"Do you not know. We know you. We are men who work to overthrow the power of the king. Will you join us?"

"Are you then the Brothers of Silence?" Ernest demanded eagerly.

"Who knows anything of them? Have you found them?"

"No."

"Yet you have been seeking a whole year! You are a fool if you trust such shadows. There must be a revolution. It will be a thousand years before the Brothers bring it about with their cautious measures. We know a shorter way. We shall bring it to pass ourselves, and then we shall govern instead. Come, are you with us?"

"Yes," cried Ernest. "Why should I wait?"

He plunged at once into a labyrinth of plots and conspiracies which grew day by day more inextricable. There were secret meetings and goings to and fro and mysterious ambassadors on mysterious errands, all of which at first seemed the signs of a most ardent activity in the cause he had at heart. But gradually, as he became more familiar with the details, an uncomfortable doubt came into his mind and lodged there. It was a revolution they contemplated, — true; and the government was evil. But was the object of the conspirators to establish a better rule? Little by little he came to see with fatal clearness that they only sought to overthrow the established order to place themselves in power. Not for the sake of their country, not for the sake of better laws or for the good of the oppressed people were they banded together, but only that they might drain their country of wealth for themselves and make laws that would protect them in their rapine and oppress the people still more bitterly. It grew upon him like a horror, and as he came to feel himself bound with them, entangled in their plots and smirched with their baseness, he loathed himself and hated all who had had part in leading him into these underground ways. A year had gone by when one day the stranger whom he had met twice before sought him out.

THE SYNTHESIS OF OCCULT SCIENCE: IV — *William Q. Judge*

(*Concluded*)

In the foregoing articles, necessarily brief and fragmentary, a few points have been given to show the general bearing of the *Secret Doctrine* on all problems in Nature and in Life.

Synthesis is the very essence of philosophy, — "the combination of separate elements of thought into a whole", — the opposite of analysis, and analysis is the very essence of science.

In the "Outline of the Secret Doctrine" by "C. J.", now running through the pages of *Lucifer*, this philosophy or synthesis of the whole is made very clear.

There have been many *philosophizers* in modern times, but there can be but one philosophy, one synthesis of the *whole* of Eternal Nature. With the single exception of the writings of Plato, no one in modern times had given to the Western world any approximation to a complete philosophy, previous to the appearance of H. P. Blavatsky's *Secret Doctrine*. The writings of Plato are carefully veiled in the symbolical language of initiation. The *Secret Doctrine*, coming more than two millenniums later, and in an age of so-called Science, is addressed to the Scientific thought of the age, and hence considers the whole subject largely from the stand-point of Science. The present age is as deficient in philosophy as was the age of Plato in knowledge of science. It follows, therefore, that while the Secret Doctrine itself apprehends equally both philosophy and science, in addressing itself to the thought of an age it must recognize here, as it does everywhere, the *law of cycles* that rules in the intellectual development of a race no less than in the revolutions of suns and

worlds, and so address the times from that plane of thought that is in the ascendant. It is just because analytical thought is in the ascendant, because it is the *thought-form* of the age, that the great majority of readers are likely to overlook the broad synthesis and so miss the philosophy of the Secret Doctrine. The only object of these brief and fragmentary papers has been to call attention to this point.

We are now in a transition period, and in the approaching twentieth century there will be a revival of genuine philosophy, and the Secret Doctrine will be the basis of the "New Philosophy". Science today, in the persons of such advanced students as Keely, Crookes, Lodge, Richardson, and many others, already treads so close to the borders of occult philosophy that it will not be possible to prevent the new age from entering the occult realm. H. P. Blavatsky's *Secret Doctrine* is a store-house of scientific facts, but this is not its chief value. These facts are placed, approximately at least, in such relation to the synthesis or philosophy of occultism as to render comparatively easy the task of the student who is in search of real knowledge, and to further his progress beyond all preconception, provided he is teachable, in earnest, and intelligent. Nowhere else in English literature is the Law of Evolution given such sweep and swing. It reminds one of the ceaseless under-tone of the deep sea, and seems to view our Earth in all its changes "from the birth of time to the crack of doom". It follows man in his triple evolution, physical, mental, and spiritual, throughout the perfect circle of his boundless life. Darwinism had reached its limits and a rebound. Man is indeed evolved from lower forms. But *which* man? the physical? the psychical? the intellectual? or the spiritual? The Secret Doctrine points where the lines of evolution and involution meet; where matter and spirit clasp hands; and where the rising animal stands face to face with the fallen god; for *all natures* meet and mingle in

man.

Judge no proposition of the Secret Doctrine as though it stood alone, for not one stands alone. Not "independence" here more than with the units that constitute Humanity. It is *interdependence* everywhere; in nature, as in life.

Even members of the T. S. have often wondered why H. P. B. and others well known in the Society lay so much stress on doctrines like Karma and Reincarnation. It is not alone because these doctrines are easily apprehended and beneficent to individuals, not only because they furnish, as they necessarily do, a solid foundation for ethics, or all human conduct, but because they are the very key-notes of the higher evolution of man. Without Karma and Reincarnation, evolution is but a fragment; a process whose beginnings are unknown, and whose outcome cannot be discerned; a glimpse of what might be; a hope of what should be. But in the light of Karma and Reincarnation evolution becomes the logic of what *must* be. The links in the chain of being are all filled in, and the circles of reason and of life are complete. Karma gives the eternal law of action, and Reincarnation furnishes the boundless field for its display. Thousands of persons can understand these two principles, apply them as a basis of conduct, and weave them into the fabric of their lives, who may not be able to grasp the complete synthesis of that endless evolution of which these doctrines form so important a part. In thus affording even the superficial thinker and the weak or illogical reasoner a perfect basis for ethics and an unerring guide in life, Theosophy is building toward the future realization of the Universal Brotherhood and the higher evolution of man. But few in this generation realize the work that is thus undertaken, or how much has already been accomplished. The obscurity of the present age in regard to genuine philosophical thought is nowhere more apparent than in the manner in which opposition

has been waged toward these doctrines of Karma and Reincarnation. In the seventeen years since the Theosophical movement has been before the world there has not appeared, from any source, a serious and logical attempt to discredit these doctrines from a philosophical basis. There have been denial, ridicule, and denunciation *ad nauseum*. There could be no discussion from such a basis, for from the very beginning these doctrines have been put forth and advocated from the logical and dispassionate plane of philosophy. Ridicule is both unanswerable and unworthy of answer. It is not the argument, but the atmosphere of weak minds, born of prejudice and ignorance.

The synthesis of occultism is therefore the philosophy of Nature and of Life; the full — or free — truth that apprehends every scientific fact in the light of the unerring processes of Eternal Nature.

The time must presently come when the really advanced thinkers of the age will be compelled to lay by their indifference, and their scorn and conceit, and follow the lines of philosophical investigation laid down in the *Secret Doctrine*. Very few seem yet to have realized how ample are these resources, because it involves a process of thought almost unknown to the present age of empiricism and induction. It is a revelation from archaic ages, indestructible and eternal, yet capable of being obscured and lost; capable of being, again and again reborn, or like man himself — reincarnated.

"He who lives in one color of the rainbow is blind to the rest. Live in the Light diffused through the entire arc, and you will know it all." — *The Path*.

"He who knows not the common things of life is a beast among men. He who knows only the common things of life is a man among beasts. He who knows all that can be learned by diligent

inquiry is a god among men." — *Plato*.

The Path

MESMERISM AND THE HIGHER SELF — *William Brehon*

Recently a book on the subject of the "Rationale of Mesmerism" having been published in London, written by Mr. A. P. Sinnett, I read in it some astounding statements about the relation of the higher self to Mesmerism. He says that it is the higher self that acts in the ease of those mesmerized subjects who show clairvoyance, clairaudience, and the like, of a high order. That is to say, the views expressed amount to the doctrine that pure spirit, which the Higher Self is, can be acted on and affected by the gross physical power of mesmerism. This idea seems to be quite contrary to all that we have read in Theosophical literature on the philosophy of man and his complex nature. For if there is anything clearly stated in that, it is that the higher self cannot be affected in this manner. It is a part of the supreme spirit, and as such cannot be made to go and come at the beck of a mesmerizer.

It is a well known fact that the more gross and physical the operator, the stronger is his influence, and the easier he finds it to plunge his subject into the trance state. Seldom do we find the very delicate, the nervous, or the highly spiritualized able to overcome the senses of another by these means. For when we have thus spiritualized our bodies, the means by which we can affect others and make them do what we wish are such as pertain to a finer plane of matter than the one with which mesmerism deals, and the particular instruments used are of an order that must not be described in these pages, since they are secret in their nature and must not be given out too soon. They can be discovered by those who look the proper way, and have been given out by way of hint many a time in the past decade, but discretion is to be observed. And even these means, fine and subtle as they are, do not act on the higher self, but upon exactly

the same parts of our inner nature as those reached by ordinary mesmerism. Not only does the whole of our philosophy sustain the contention that the higher self is not acted on, but we have also the eminent writer H. P. Blavatsky saying that the human spirit — and that is the higher self — cannot be influenced by any man.

Mesmeric force is purely material, although of a finer sort of materiality than gas. It is secreted by the physical body in conjunction with the astral man within, and has not a particle of spirituality about it further than that spirit is immanent in the whole universe. And when it is brought to bear on the willing or unwilling subject, the portion of the nature of the latter which is waked up, or rather separated from the rest, is the astral man.

Probably the reason why Mr. Sinnett and others make the mistake of confounding this with the higher self is that the utterances of the one entranced seem so far to transcend the limits of ordinary waking consciousness. But this only makes the possible horizon of consciousness wider; it does not prove we are hearing direct from the spirit. The vast powers of memory are well known, and when we add to the worldly estimate of its powers the knowledge of the ancient esoteric schools, we can see that the uncovering of the subconscious memories will give us much that a spiritualist might attribute to a denizen of the summerland. Thus in the famous case of the ignorant servant of the pastor who was in the habit of walking up and down in her hearing and repeating aloud verses from the Latin and the Greek, we know that when she fell sick with fever her constant repetition of those Latin and Greek verses was an act of the under memory which had caught and retained all, though she was, in her usual health, too ignorant to say one word in either of those languages. These illustrations can be multiplied a thousand fold from the records of clairvoyants of all sorts and conditions. When

the barrier to the action of the subconscious memory is removed, whether by sickness, by training, by processes, or by natural change of the body, all the theretofore unperceived impressions come to the surface.

Clairvoyance and similar phenomena are explicable by the knowledge of the inner man, and, that being so, it is straining a point and degrading a great idea to say the higher self is involved. For the inner astral man has the real organs which partially function through the one we know. The real eye and ear are there. So what happens in mesmeric trance is that the outer eye and ear are paralyzed for the time, and the brain is made to report what is seen and heard by the inner senses.

These, it is well known, are not limited by time or space, and so give to the operator very wonderful things when viewed from the ordinary level of observation.

And at the same time it is well known to those who have experimented strictly on the lines laid down by the masters of occultism that the sight and hearing and ideation of the mesmerized subject are all deflected and altered by the opinions and thoughts of the operator. And this is especially the case with very sensitive subjects who have gone into the so-called *lucid* state. They are in a realm of which they know but little, and will give back to him who has put them into that state answers on such subjects as the inner constitution of man and nature which will be enlarged copies of what the operator himself has been thinking on the same subject, if he has thought definitely on them. From the tenor of parts of the book I mentioned, it seems clear that the ideas as to the higher self there expressed emanated from sensitives who have in fact merely enlarged and confirmed the views expressed by the author of that work some years ago in "Transactions of the London Lodge" on the subject of the higher

self, as maybe seen from reading the latter. A simple subject of the mesmeric influence, no matter how far in advance of other sensitives, is not by any means a *trained seer*, but in the opinion of the esoteric schools is untrained, for training in this means a complete knowledge on the part of the seer of all the forces at work and of all the planes to which his or her consciousness gains entry. Hence one who merely goes into that condition by the force of the mesmeric fluid is a wanderer wholly unfit to guide any one. It is different in the case of the previously trained seer who uses the mesmeric fluid of another simply as an aid toward passing into that state. And the assertion can be made with confidence that there are no seers so trained in the western world yet. Hence no operator can have the advantage of the services of such, but all investigators are compelled to trust to the reports from the state of trance made by men or women — chiefly women — who never went through the long preliminary training and discipline, not only physically but also mentally, that are absolute prerequisites to seeing correctly with the inner eyes. Of course I except from this the power to see facts and things that take place near and far. But that is only the use of inner sight and hearing; it is not the use of the inner understanding. But on this subject I should like to say a little more at some future time.

The Path

YOGA: THE SCIENCE OF THE SOUL: I — G. R. S. Mead

*Samatvam yoga ucha ate. (Equal-mindedness is called Yoga.)
— Bhagavad-Gita.*

Tadviddhi pranipatena pariprashnena sivaya
upadekshyanti te jnanam janinastattvad arshinah.

(Seek to know it (yoga) by humility, by question, and by service. The truth-seeing wise will (then) communicate this knowledge to thee.) — *Ibid. iv. 38.*

So shalt thou be in full accord with all that lives and
breathes; bear love to men as though they were thy brother
pupils, disciples of one Teacher, and sons of one sweet
Mother. — *The Voice of the Silence.*

I wish to tell you as simply as may be of the most important science in the world — the science of the soul — called Yoga in Sanskrit. Perhaps some of you may not know that the present restricted meaning of the word "science" has only been in fashion for a very brief season in the time-periods of the ages, and that "science" with the ancient forefathers of our Aryan race meant something more than only a careful and intelligent use of our five senses, aided by mechanical instruments.

In the West today the assertion that knowledge is obtainable otherwise than by the five senses is regarded as ignorant impertinence by the popular high priests of science and their trustful votaries; but ready as we all perforce must be to give due honor to the admirable patience and painstaking scrutiny which has rescued the West from the clutches of an ecclesiastical nightmare, we have yet to learn that the newly-established papacy of modern science is the guardian of our souls and dictator of our spiritual existence. In opposition to the ever-

growing negation that is obscuring the ideals and paralyzing the intuitions of the men, women, and children of today, the present Theosophical movement, by its very title, asserts in no uncertain tones that real knowledge is to be obtained; that on the one hand man is something more than a five-sense animal, and on the other that he is under no necessity of waiting until death closes the doors for the assurance of spiritual things.

The immemorial science of the soul asserts that man is an immortal, divine, and spiritual being, whose fleshly tabernacle is but a temporary inn or prison-house; that his physical senses, so far from being his only means of knowledge, are almost invariably the self-imposed bonds that chain him in his narrow dungeon, where, indeed, he would most miserably perish did not sleep, death's younger brother, mercifully release him by night and bear him for a space back to his home of freedom. But he who has begun to long for release from this thralldom, at the same time begins to see the illusive nature of the prison and chains of the body; how they deprive us of our sanity and make us think the prison a palace and the bonds wreaths of sweet-scented flowers. Lunatics in the asylum of the senses that we are, few of us ever contemplate the fact that the magic wand of sleep turns a third of our lives into an impenetrable blank, and that death, the great conductor of souls, may at any instant touch our shoulder.

In most cases, if a man thinks at all, he regards sleep with wonder and death with awe. Sleep and death guard two portals. Through one, man daily passes and repasses in a swoon; through the other, he passes to return no more. So at any rate it *seems* to us. True, it *seems* to be so; but the soul-science does not deal with seemings, it leaves appearances to the dominion of the five senses and the brain mind, and consecrates its study to realities and direct knowledge. The Yoga denies that sleep is a blank and death the end of existence; it asserts the possibility of knowledge of the

mysteries of sleep in waking and of the mysteries of death in life; and tells us that the doors of sleep and death may be passed and repassed in full consciousness. This Yoga, or the science of the soul, is as precise and exact in its procedure as the most rigid of our scientific methods; but whereas physical science deals with physical phenomena, psychic science deals with the soul of things. Masters of Yoga assert most definitely and unhesitatingly that the existence, nature, life, and history of the soul have been and can be as rigidly and exactly demonstrated and proved in its own dominion as the best known scientific fact, so-called, in the natural universe. The negation of those ignorant of the subject, and the howling of the thoughtless for objective physical proof of that which is in its very nature immaterial and subjective, can have no real weight with the student. Intellectual vulgarity and cheap wit can no more weaken the eternal fact of man's immortal spiritual nature than spitting at the sun affect the god of day.

And now, what is the meaning of Yoga? Many definitions have been given, and of course this same science has been called by other names, at various times, by various nations, in divers tongues. The subject is one replete with technicalities, for there is a very large literature treating of it distinctly and in a most technical manner, and, in a wider sense, all the Scriptures of the world are text-books of this science.

In the present paper, however, all technicalities will be avoided, and I therefore hazard the definition of Yoga as the science of the union of man with the source of his being, with his true Self. You will at once see that the claim of our science is one of direct knowledge. That does not mean to say that the student is at once to become omniscient, or that he will by a sudden leap obtain full knowledge of things in themselves. By no means. The way of pure knowledge is a long and thorny path of stern self-discipline and of ungrudging and unflagging effort. But the path leads up a

mountain, and the view so extends that each successive point of vantage gained is of the nature of direct knowledge as compared with the lower stages. We are at present like men who persistently keep their eyes fixed on the ground at their feet, who as yet have not looked at even the visible universe as it really is. There are manifold stages of soul-knowledge, immeasurable degrees of union with the Self, for ultimately this Self is the One SELF of all that was, is, and will be.

It would be presumptuous in me to imagine that anyone else will entirely agree with my definitions, and naturally all are free to find better and more appropriate words to clothe the ideas according to their ability. There is, however, a longing that comes upon all men in their repeated wanderings on earth, "a longing of the soul to go out to the infinite", as it has been phrased, and the freezing cold of negation cannot quench the fire of that divine desire, nor can the perfunctory performance of any lip-religion satisfy its ardor.

In endeavouring to give some idea of what the practical science of Yoga is, I am at a loss to convey my meaning because of the poverty of our ordinary language in fitting terms. We all readily talk of the soul, and mind, and consciousness, but few of us have any conception of the infinity of ideas that each of these terms connotes. In this paper, the soul must be understood to stand for the whole of man's nature apart from his physical body, the mind for the thinking principle, and consciousness for man's whole containment, his whole being. The mind is the thinker, the self-conscious principle in man, the means of his knowledge. It is this principle, therefore, which is both the scientist and his instrument in Yoga.

This mind is usually distinguished into two aspects for clearer comprehension. Perhaps these may be most easily understood as

the "I am" and the "I am I" in man, ideas which it is usual with Theosophical writers to distinguish as the individuality and personality. The personality is the sum of all those impressions, as they are called in the East, which make up our consciousness of being such-and-such a particular person, of being the actor and sufferer in all the affairs of life. Everything we do, or say, or think leaves an impression on our character, whether we are conscious of it or not; and an impression once induced into our plastic-nature tends to repeat itself mechanically and to form habits which, as we know, become second nature. If the impressions are bad, a vicious habit is formed. The sum of all these impressions is called the personality, or, to use another simile, the vibrations set up by our acts, words, and thoughts inhere in our plastic nature, in an ascending scale of subtlety and rapidity, according to their plane of action, up to that of the rarest substance we are at present capable of conceiving, and which perhaps may be spoken of as thought-stuff, for this lower aspect of the mind is substantial, though not material.

The higher aspect of the mind, on the contrary, the individuality, that which I have called the "I am", is of a divine and spiritual nature. It is not substantial, but a pure spiritual essence, divine, immortal, immemorial; it dies not, nor comes into being, but is throughout the ages.

Now the lower mind is ever fitful and changeable, going out to things of sense; it is a Mazeppa bound hand and foot on the horse of passion and desire. In the East, it is called the internal organ to distinguish it from the external organs, and we have first to learn to free it from its bonds before we can put our foot on the first rung of the ladder of true knowledge.

The ceaseless changes which take place in this lower mind are called the modifications of the internal organ; and these have to

be held in the firm grip of the awakened spiritual will and rendered motionless, if any success is to be attained in the science of Yoga.

Imagine to yourself a sheet of paper with writing upon it, crumpled up into a ball, and whirling tumultuously down a mill-race. Such is the lower mind in each one of us. And if we want to read the writing which tells of the mystery of life, we must first rescue the ball of paper from the mill-race of the passions, and then carefully smooth out the paper so as to erase the impressions which prevent our reading the writing, that so at last we may learn the whence and whither of our pilgrimage.

A simile often used in the Eastern books, with regard to the upper and lower mind, is that of the moon reflected in the waves of a lake. So long as the surface is disturbed, the moonlight will be seen only as a broken and unsteady reflection, and not until every ripple is gone will a true image of the divine man be reflected into our souls.

Again, the lower mind is as a metal mirror covered with dust and rust; and until this is removed no image will be seen; or, again, the mind must be as steady as the flame of a lamp in a place sheltered from all wind.

(To be continued)

The Path

WHAT IS ELECTRICITY — *J. H. Connelly*

ORIENTAL IDEAS ON THE SUBJECT.

The fact may seem rather queer that something exists which we know how to produce and how to utilize in such an infinity of effective ways that it is today one of the greatest factors in the world's progress, and yet we do not know what it is. But it is a fact, nevertheless. Not one of our scientists can tell us what electricity is. The latest and perhaps the best definition of it is: "Electricity, the name given to the unknown thing, matter, or force, or both, which is the cause of electric phenomena". Not much satisfying knowledge is offered in that pairing and compounding of alternatives. And the International Dictionary is scarcely more conclusive in pronouncing it "a power in nature, a manifestation of energy", with a long succedent statement of its qualities and conditions of manifestation which are properly evidences of its presence but by no means expositions of what it is. And Stormonth says it is "a highly subtile power. . . one of the forms of energy exhibited in lightning, etc." Really, we do not seem, for all our familiarity with its manifestations in late years, to have got at much more positive knowledge of its being than was possessed by an author who as long ago as 1799 defined it thus: "Electricity, a natural agent or power, generally called the electric fluid, which, by friction or other means, is excited and brought into action". Bain says: "The most recent theory of electricity is that it is a mode of ether. In order to establish this theory, it is necessary to transfer the question of the existence of ether from speculative philosophy to that of absolute reality". And he concludes that "electricity is a condition, an effect of matter, and it is not peculiar to any material. This condition in a state of equilibrium pervades all matter and all space, ready to produce

an effect when its equilibrium is disturbed."

The theory of its etheric origin, which Bain is disposed to reject as undemonstrable, and his conclusions lie closer together in the Oriental concept of the subject than he has yet, perhaps, recognized, and are by no means antagonistic. The philosophers of the East have taught, for thousands of years it is averred, that there are in nature six primary forces or *Saktis*, which may be looked upon as rates of vibration, having their origination in the super-sensuous ether, and manifesting, according to their respective attributes, in matter. Of the six, only three have been partly investigated by our western science — neither one in its totality, but only in certain of its special manifestations — and one of these is the *Kundalini-sakti*, thus defined by the eminent Hindu *pundit*, T. Subba Row:

"Literally, the power or force which moves in a serpentine or curved path. It is the universal life-principle which everywhere manifests itself in nature. This force includes in itself the two great forces of attraction and repulsion. *Electricity and magnetism are but manifestations of it.* This is the power or force which brings about that continuous adjustment of internal relations to external relations which is the essence of life according to Herbert Spencer, and that continuous adjustment of external relations to internal relations which is the basis of transmigration of souls of *punarjanam* (re-birth) according to the doctrine of the ancient Hindu philosophers."

The two other *saktis* in part known to our scientists are *Para-sakti* — literally, the great or supreme force or power. It means and includes the powers of light and heat. *Gnana-sakti* — literally, the power of intellect or the power of real wisdom or knowledge.

It will be observed that the powers of light and heat are thus

attributed to one *sakti*, and electricity to another, which at first blush would seem to differ from the conclusions of our western scientists generally, who, observing the interconvertability of heat, light, energy, magnetism, electricity, and chemical effect, esteem them all modes of manifestation of one and the same energy. But a better understanding of their coordinate and conjoint manifestations under the control of the great synthesizing *sakti*, the seventh — about which the wise men of the East are chary of affording exoteric teaching — will perhaps demonstrate and explain harmony where difference now appears to exist. It is more than probable that the *saktis* blend their action, each partaking of all the others in infinitely various degrees when in manifestation, just as the "states of consciousness" overlap and mingle, in the same teachings.

Suggestions of importance toward demonstration of the reality of the ether, and perhaps eventually of their inter-etheric *akasa*, are afforded by Tesla's recent experiments. From these it appears that electric energy, properly applied and of sufficiently high potential, will render rarified air self-luminous. Whether the energy manifests itself as heat or light depends upon the velocity of the etheric vibrations induced, those of the latter being much the higher.

Modern science now generally recognizes what the Eastern sages have taught for hundreds of thousands of years, that the various colors and tones are objective evidences of measurable rates of vibration. A step or two further and our wise men will learn that all the forces of nature, the entire universe, not simply the material within our consciousness but the supersensuous planes beyond, are manifested rates of vibration — "differentiated aspects of the Universal Motion". From that "Universal Motion" as the seventh *sakti* — centred, according to the Kabalists, in the "central sun" — all originate and to it all must return. All the

minor *saktis*, springing from a common origin, have definite and ascertainable characteristics in common, or correspondences, and none manifests alone on our material plane, without admixture of some qualities or attributes of others. But it will be as hopeless for man to attempt comprehension of the mysteries of those awful forces and the laws in conformity to which they act upon the plane of matter, studying them from the wholly material standpoint, where only their lowest and weakest manifestations can be cognized, as it would be for a bug perched upon the periphery of a fly-wheel to understand, from his observations there, the laws and properties of steam originating in an engine the motion communicated to his wheel.

It will be found of curious and suggestive interest, in connection with this subject, to learn with what broad comprehensiveness, viewed in the light of our most modern science, the Hindu philosophers have taught for ages past the field of the power styled the *Gnana-sakti*. The pundit already cited (T. Subba Row) says:

"(i) The following are some of its manifestations when placed under the influence or control of material conditions. (a) The power of the mind in interpreting our sensations. (b) Its power in recalling past ideas (memory) and raising future expectation. (c) Its power as exhibited in what are called by modern psychologists the 'laws of association', which enables it to form persisting connections between various groups of sensations and possibilities of sensations, and thus generate the notion or idea of an external object. (d) Its power in connecting our ideas together by the mysterious link of memory, and thus generating the notion of self or individuality.

(ii) The following are some of its manifestations when

liberated from the bonds of matter: (a) Clairvoyance, (b)
Psychometry."

The Path

PROBATION: II — *Lily A. Long*

(Concluded.)

"You have allowed yourself to be deluded", the stranger said with grave directness. "You must free yourself once and forever from these entanglements if you hope to ever share in the work pursued by the Brothers of the Silence."

"The Brothers of the Silence!" Ernest exclaimed bitterly. "It is because I sought them that I am where I am now."

"No, it is because you sought them in the wrong way."

"Tell me, then, do they exist?"

"Yes. I am one of them."

"Then why did you not set me right?"

"Because each member must earn his own entrance."

"I may be misled again."

"Why? The test is a very simple one. The Brothers do not work for self-interest, but for the good of humanity. That is the beginning and the end of their mission. Yet each one has a task of his own to perform, and each must find it by searching his own heart. Use your clearest judgment, your highest ideals, and the best of your faculties, for the work deserves all. In a year I will seek you again."

The year went by. Ernest had cut himself free from his old associations and joined the army that was fighting on the frontier. He had fought bravely, for the words of his unknown guide remained with him, and the thought that in serving his country he was surely doing the work of the Brothers gave him courage.

He had a hope too that his probation might at last be done, for had he not won distinction as a soldier and more than once saved the field from disaster? All the land was ringing with his praise. He waited impatiently for the day when his friend had promised to return. It came.

"Have I won entrance yet?" Ernest demanded confidently. He could hardly credit the gravely spoken answer.

"No."

"How then? Is not the work I have done good work?"

"It is good work and deserves a reward. You will have it. But you have not won entrance to the Brotherhood. That does not come to those who seek it for themselves, even though they seek it by the path of service. There may be selfish ambition even in self-sacrifice, and the Brothers, remember always, are not concerned with the advancement of themselves, but with the good of the whole. Yet, — courage for another trial!"

The reward came, for the king was graciously pleased to recognize Ernest's heroism on the battlefield by making him governor over a small province. He entered upon his duties with high hopes. Here at last was a fitting opportunity! He would govern his people so well that poverty and ignorance and wrongdoing should be banished from his province, and the Brothers should know that in one corner of the country at least there was no need for their oversight. But he found that the task was harder than he had thought. There had been bad governors before him, and the abuses could not all be corrected at once. The people were ignorant and cunning, and thwarted his efforts for their own welfare. He was inexperienced, and measures which he designed for good sometimes proved so ill-advised that their effect was worse than the old. When the end of the year came and

he looked back at the great things he had planned and the small things he had accomplished, it seemed to him that his work had been all a failure. He stood with downcast eyes when the stranger who had grown his watchful friend found him again.

"What of the year past?" the Brother asked, and his voice was kinder than before.

"You know," said Ernest moodily. "At least you know what I have done. You cannot know what I meant to do."

"Why have you failed?"

Ernest paused.

"Because of my own ignorance, largely," he said at last. "I did not know how to deal with the conditions I had to meet. I see it now."

"Then do you see, too, why you have not yet gained entrance to the Brotherhood?" he asked gently. "In their work a mistake may be fatal. Well-intentioned effort is not enough. It must be wisely directed."

"Yes, I see," Ernest said patiently. "Well, I will study and wait."

His friend smiled as though well-content.

Ernest gave up the governorship of his province to plunge into study. With a mind disciplined and strengthened by the work of the last ardent years, he applied himself to assimilating the knowledge that is stored in the wise books of the world. He studied with humility, for his errors had revealed to him his own lack of wisdom, and he worked with ardor, for he felt that a greater undertaking awaited him when he should be fit. In the outside world the old throbbing life beat on, and ever and anon calls came to him to join in it as before. Some upbraided him with indifference in thus shutting himself apart, but he knew the scope

of the task before him and followed it without pause or faltering. Then one morning, when the first rays of the sun put out the light of his lamp, he lifted his eyes from his books and remembered that the year of study he had set for himself had gone by. What had he gained? New ideas of life in many ways; new ideals and firmer judgment and deeper reverence for the men who in the past had thought their way into the deep places of nature. Strange that so few should come to share it! Strange that the world should go on and men live and die as though this legacy of wisdom from the greatest of earth's sons had been forgotten of all!

"Knowledge stored away and unused is like grain sealed in a granary," said his friend, who, unseen, had come to stand beside him. "The millions on the plain outside may starve for lack of it, and the grain itself will mildew — if it be not unsealed."

"I understand," said Ernest with a smile. "That, then, shall be my further task."

He shut up his books, left his room and returned to the world, this time as a teacher. Here a disappointment awaited him at the outset, for the people, busy with their own interests and quite content with their own ideas, were not as eager to listen as he to teach. Some laughed and some doubted, and of all that heard few heeded, but the burden of speech was laid upon him and he dared not keep silence. Sometimes the children listened, and in their earnest eyes he read a reassurance that the coming years might see the fruit from the seed he planted. And sometimes a youth who reminded him of what he had been in earlier years came and listened and went away with a new purpose. And sometimes old eyes, ready to close wearily upon a world that had yielded many cares and little content, brightened with a gleam of comprehension as he spoke. "Ah, that then was the meaning of the riddle!" Yet when the year had gone by the results seemed

meager.

"I had hoped to bring to all men the truths I had found," he said to the friend who came as before," but they do not heed them."

"They will in time, and your efforts will bring the time nearer," was the serene answer. "One who works for humanity must never lose faith in the ultimate triumph of good. Yet he may not cease to work as though the salvation of all rested with him alone."

"Am I fitted yet to do the work of the Brothers?" Ernest asked after a pause.

The other gave him a kindly look.

"One task remains. I leave you to find it."

Six years had gone by since, an eager boy, he left his home in the mountains, and a yearning came into his man's heart to rest again in the high, pure solitudes where he had dreamed as a child. All places are alike to him who holds himself ready for service, so he turned toward the mountains. Steadfast and tranquil as of old, the white peaks lifted themselves above the purple mists as he had always seen them in memory. The dawn softened but could not melt them; the sunset illumined but could not stain them. Down the gorge as of old the mountain torrent tumbled in foamy wrath, and the little village beside it was no older than on the day he had turned his back upon it to seek the world. He went to the pass above where the bridge was to have been. The hewn timbers lay heaped on either bank as he had left them, only that a creeping vine with gay blossoms had twined about the beams which were gray with the weather and green with moss. His unfinished work reproached him, and with a blush for the impatient boy he had been he set himself to complete it. The villagers were busy as of old, therefore he worked alone. Through

fair weather and foul he kept to the task, planting the foundations deep and making each part strong and true. The summer went by while the work was yet unfinished. The winter fettered the wild stream and on the ice he crossed from shore to shore, still carrying the work forward. The spring came and it was done, and when the freshets came down from the ice-fields above, the bridge stood firm and unshaken above the whirlpool. In the absorption of his work he had forgotten what day it was till all at once he saw the stranger of that old spring morning, the guide and friend of all the years between, standing on the bank.

"You found the task."

"This?"

"It was yours. No other could do it."

They stood in silence a moment gazing at it, and then the Brother spoke again.

"Do you see now how the way has led through all the years? First steadfastness, for without that no effort can avail. Then clearness of vision, to prove all things and hold to the good. Then the conquering of passion, and the devotion of all faculties to the service of man and the training of self to the end that others may be enlightened. Lastly, to crown all, the simple duty that lay at your hand at the beginning."

"Is it done?" asked Ernest doubtingly. "Am I worthy to become one of you?"

The smile of the other was an illumination.

"You *are* one of us".

HOW SHE MUST LAUGH

Since the demise of H. P. Blavatsky's body, a little over a year ago, mediums in various parts of the world have reported her "spirit" as giving communications like what follows:

- In Paris in May, 1891, that she objected to the cremation of her body and had changed her views. Yes indeed, how her views must have changed! *Nota bene*: this was from a Catholic medium.

In America in September, 1891 that she had absolutely changed all her views and was now sincerely sorry she had promulgated Theosophy at all. Again later, in the United States, that she desired to have materializing and picture-daubing mediums represent her theories and her teachers to the world, and to carry on her work.

About October, 1891, that her old ideas regarding "spooks" had altered, and that now she wished it to be known as her teaching that the cast-off astral remnants of a human being are in fact spirits, and may be taught in the after life! And further, she is at present — presumably in Kamaloka — desirous of seeing all her books burnt so that her old teachings, now pernicious in her sight, may be forgotten as speedily as possible.

Those who communicate these extraordinary reports from H. P. B. are not accused by us of malice or any improper motive. The first "message" came privately from one who had known her in life but whose views were always quite in line with the message. The others represent the different private opinions of the medium or clairvoyant reporting them. Such is nearly always the case with these "spirit messages". They do, indeed, come from psychic planes, and are not strictly the product of the medium's

normal brain. But they are the result of obscure thoughts of the medium which color the astral atmosphere, and thus do no more than copy the living. In one case, and that was the hugest joke of all, the medium made a claim to at once step into H. P. B's shoes and be acknowledged the leader of the Society!

How she must laugh! Unless mere death may change a sage into an idiot, she is enjoying these jokes, for she had a keen sense of humor, and as it is perfectly certain that Theosophists are not at all disturbed by these "communications", her enjoyment of the fun is not embittered by the idea that staunch old-time Theosophists are being troubled. But what a fantastical world it is with its Materialists, Spiritualists, Christians, Jews, and other barbarians, as well as the obscure Theosophists!

The Path

YOGA: THE SCIENCE OF THE SOUL: II — *G. R. S. Mead*

(Continued from June.)

You must not, however, suppose that the science of Yoga has always retained its purity; like everything else it has become corrupt. Methods of a mechanical and physical nature have grown up around it, and as the mind of man is more prone to error and materialism than to truth and spirituality, these bastard methods are more eagerly studied than the more difficult processes of the true science. Especially is this the case in our own times, when a growing number of enquirers are once more beginning to turn their attention to the subject.

According to the Esoteric Philosophy, the lower part of man's nature, which he shares in common with the animal, has four aspects, viz.: (1) A physical body; (2) a subtile body, invisible to our physical senses; (3) a body, vehicle, or center, or system of centers, of sensation and desire; and (4) the life-principle.

The physical body need not here be further referred to, for although our modern science knows comparatively little of the functions of a number of the most important organs, yet its minute and exact classification of the physical structure of man's 'coat of skin' — as it is allegorically called in the *Bible* and elsewhere — is beyond all praise. The constitution of the subtile or astral body and of the passional and sensational system, however, is of a nature and extent immeasurably transcending that of the physical frame.

The Hindu books on Yoga, known as the *Yoga-Shastras*, contain elaborate treatises on the anatomy and physiology of these "principles". We may get some hazy notion of their nature by a

study of the nervous system and functions of the physical body, but we must remember that in reality they are a complete system of force-centers and force-tracts, so to speak, and that they bear the same relation to the physical body as the electrical current does to its physical conductors. The latest so-called discoveries of electrical science assert that an electrical current can be transmitted from one point of space to another without the conduction of wires, and the Yoga has from time immemorial asserted that man can act independently of his physical body.

We all of us know the tremendous power of electricity, and many of us know the astounding forces which can be brought into play by the agency of mesmerism. Yoga teaches us that every power in the universe has its corresponding power in man, and that not only the life-principle or vital electricity, and the mesmeric and magnetic forces, correspond to identical forces in the universe, but that man can so increase these powers in himself that he can raise them to the same rate of motion as that of the forces of nature. Moreover, as he brings these forces into play, his consciousness gradually and proportionally transcends that of normal mankind and progressively opens up new vistas of life and existence previously undreamed of.

All this may seem very wonderful and incredible to many of us, but the *real* science of Yoga is so transcendent that I have only entered into these explanations in order to tell you that these powers and practices, wonderful and extraordinary though they may be, are no part of true Yoga, and are deprecated as material, inferior, and most dangerous by spiritually-minded teachers of the true Divine Science.

Even when this lower Yoga is recommended by those who have practical knowledge of such things, the learner is told that in no case should any experiment be made except under the direct

superintendence of an experienced teacher. In the East this advice is understood and acted on by all but the most foolhardy and ignorant, for the Orientals know the terrible results that come from ignorantly meddling with forces they cannot control.

In the West, however, the spirit of independent research, which is so admirable in many respects, has produced among the unreflecting a false bravado and a fretful and childish impatience that lead to recklessness rather than sober enquiry, especially in matters of an occult nature.

I know that the vast majority of people in the West will look on the position I am laying down as a silly crying of "wolf" where there is no wolf, or as an impudent series of falsehoods resting on nothing but assertions; and that among this majority there are men and women of intelligence and reputation that I can never hope to emulate. But the most ignorant bearer of Stanley's expedition knows more of the center of the Dark Continent than the wisest who have never read the account of that expedition, or even than the average number of intelligent readers.

When the majority have studied the theory of Yoga, their opinion will be entitled to respect; when they have essayed its practice, their views will claim the right of consideration, but not one instant before.

Let me try to explain to you why the dangers I have spoken of are real and terrible dangers. Morality is not a sentiment; ethics are not mere poetical rhapsodies. Ethical axioms are definite scientific formulae which describe certain facts and laws in nature. Vicious desires, vicious thoughts, vicious tendencies disease and atrophy the subtle body and organs of man by the alchemy of nature; they turn his vital fluids, so to speak, and his inner forces into poisonous and corrosive solvents, although the reaction in the physical body may not be detected by our

scientists who persistently shut their eyes to the major part of man's nature.

A corroded and cracked boiler may be patched up to hold cold water, but once turn the water into steam and the result is an explosion that not only destroys the vessel itself but also brings destruction both to things of its own nature and also to higher organisms. I have told you that the lower form of Yoga consists in increasing the rapidity of certain vital currents which attract to themselves corresponding currents of a like rapidity in nature. Woe to the man or woman who tries to confine such forces in a damaged vessel! Disease, madness, death will quickly follow such foolhardy experiments! I have just told you that we may be diseased within and yet our physical body may be apparently in perfect physical health; it is equally true that we may be physically diseased and yet be pure and healthy within.

Please remember that I am writing about a consciously used science, a definite and determined method of experiment which, even in its lower aspects, is a matter of great effort and difficulty. I am not talking of unconscious and irresponsible mediumship which pertains to a different method, or, rather, want of method, although some of the lower phenomena produced or experienced by either process are identical. And this is the reason why the lower form of Yoga is so largely sought after; the results, though difficult to obtain compared with mediumship, are still immeasurably more easy of acquirement than the results of pure Spiritual Yoga.

Physical phenomena and astral visions, both of a very remarkable nature, can be obtained, especially when a teacher gives the practical links which are invariably omitted in written or printed books. But, unless the lower nature has been purified, no real and permanent good or attainment can ever be achieved.

On the other hand, when the lower nature is purified the lower forms of Yoga will not even be attempted, for then the spiritual nature of man seeks union with its transcendent and divine Self, and has no desire for material attainments, even though they may utterly surpass our wildest imaginations, and have to do with matter by innumerable degrees more subtle and extended than the matter we are acquainted with through our five senses.

Further, it is impossible for us to understand the true science of Yoga unless we admit the truth of reincarnation as one of the fundamental facts in nature. This doctrine teaches that what I have referred to as the individuality, the "I am", persists throughout the whole cycle of rebirths, whereas the personality, the "I am I", the John Smith or Mary Jones of one short life, is immortal only in such thoughts and aspirations as are of the nature of the divine individuality. Now this lower mind, together with the animal part of man's nature, is the only factor at work in the lower Yoga I have been describing. Therefore, whatever attainment may be reached by such practices — astral clairvoyance or clairaudience, the projection of the double as it is called, and a thousand and one other psychic powers that, as yet, the profane world has not even heard of — all such acquirements pertain to the personality. They are no permanent property of the reincarnating entity, and can never be so as long as that divine Ego is debarred from sharing in them by the selfish ambitions and desires of the personal man. On the other hand, pure spiritual Yoga seeks to quell the stormy waves of the lower mind; to purify the dull red, smoky flames of passion; to make the lower mind the submissive and purified vehicle of the higher spiritual mind and Self. The results thus achieved by this moral training and stern mental exercise remain permanently with the individuality, and are an assured possession in succeeding rebirths which nothing but a lapse into materiality and a willing

servitude to the passions can take away.

The above is the reason why the mere possession of physical or astral clairvoyance and the rest is sternly refused the title of "spiritual" by students of Theosophy. Clairvoyance is not a "spiritual gift" in itself; although it is true that there is a spiritual clairvoyance which sees and yet sees not, and which renders its possessor a power in the world for good beyond all cavil. But they who have this divine vision are, by the very fact, unable to assert its possession, for any such claim would mean its instant loss, unless, indeed, the claim were an impersonal one.

(To be concluded.)

The Path

DELUSIONS OF CLAIRVOYANCE — *M. More*

Some years ago it was proposed that psychometry should be used in detecting crime and for the exposing of motive in all transactions between man and man. This, the alleged discoverer said, would alter the state of society by compelling people to be honest and by reducing crime. Now for those who do not know, it may be well to say that when you psychometrize you take any object that has been in the immediate vicinity of any person or place of any action, or the writing of another, and by holding it to your forehead or in the hand a picture of the event, the writer, the surroundings, and the history of the object, comes before your mental eye with more or less accuracy. Time and distance are said to make no difference, for the wrapping from a mummy has been psychometrized by one who knew nothing about it, and the mummy with its supposed history accurately described. Letters also have been similarly treated without reading them, and not only their contents given but also the unexpressed thoughts and the surroundings of the writers. Clairvoyants have also on innumerable occasions given correct descriptions of events and persons they could never have seen or known. But other innumerable times they have failed.

Without doubt if the city government, or any body of people owning property that can be stolen, had in their employment a man or women who could declare beyond possibility of ever failing where any stolen article was, and who stole it, and could in advance indicate a purpose on the part of another to steal, to trick, to lie, or otherwise do evil, one of two things would happen. Either criminals or intending offenders would abide elsewhere, or some means of getting rid of the clear-seer would be put into effect. Looking at the alluring possibilities of clairvoyance so far

as it is understood, many persons have sighed for its power for several different reasons. Some would use it for the purposes described, but many another has thought of it merely as a new means for furthering personal ends.

Its delusions are so manifold that, although mystical and psychical subjects have obtained in the public mind a new standing, clairvoyance will not be other than a curiosity for some time, and when its phenomena and laws are well understood no reliance greater than now will be placed upon it. And even when individual clairvoyants of wonderful power are known, they will not be accessible for such uses, because, having reached their power by special training, the laws of their school will prohibit the exercise of the faculty at the bidding of selfish interest, whether on the one side or the other.

If it were not always a matter of doubt and difficulty, natural clear-seers would have long ago demonstrated the unerring range of their vision by discovering criminals still uncaught, by pointing out where stolen property could be recovered, by putting a linger on a moral plague-spot which is known to exist but cannot be located. Yet this they have not done, and careful Theosophists are confirmed in the old teaching that the field of clairvoyance is full of delusions. Coming evil could in the same way be averted, since present error is the prelude and cause of future painful results.

The prime cause for delusion is that the thought of any thing makes around the thinker an image of the thing thought about. And all images in this thought-field are alike, since we remember an object by our thought-image of it, and not by carrying the object in our heads. Hence the picture in our aura of what we have seen in the hands of another is of the same sort — for untrained seers — as our ideas on the subject of events in which we have not participated. So a clairvoyant may, and in fact does,

mistake these thought-pictures one for the other, thus reducing the chances of certainty. If an anxious mother imagines her child in danger and with vivid thought pictures the details of a railway accident, the picture the seer may see will be of something that never happened and is only the product of emotion or imagination.

Mistakes in identity come next. These are more easily made in the astral plane, which is the means for clairvoyance, than even upon the visible one, and will arise from numerous causes. So numerous and complex is this that to fully explain it would not only be hopeless but tedious. For instance, the person, say at a distance, to whom the clairvoyant eye is directed may look entirely different from reality, whether as to clothing or physiognomy. He may, in the depths of winter, appear clad in spring clothing, and your clairvoyant report that, adding probably that it symbolises something next spring. But, in fact, the spring clothing was due to his thoughts about a well-worn comfortable suit of this sort throwing a glamour of the clothing before the vision of the seer. Some cases exactly like this I have known and verified. Or the lover, dwelling on the form and features of his beloved, or the criminal upon the one he has wronged, will work a protean change and destroy identification.

Another source of error will be found in the unwitting transfer to the clairvoyant of your own thoughts, much altered either for better or worse. Or even the thoughts of some one else whom you have just met or heard from. For if you consult the seer on some line of thought, having just read the ideas on the same subject of another who thinks very strongly and very clearly, and whose character is overmastering, the clairvoyant will ten to one feel the influence of the other and give you his ideas.

Reversion of image is the last I will refer to. It has been taught

always in the unpopular school of Theosophy that the astral light reverses the images, just as science knows the image on the retina is not upright. Not only have the Cabalists said this, but also the Eastern schools, and those who now have studied these doctrines along Theosophical lines have discovered it to be a fact. So the untrained clairvoyant may see a number or amount backwards, or an object upside down in whole or in part. The reliance we can place on the observations of untrained people in ordinary life the scientific schools and courts of law have long ago discovered; but seekers after the marvellous carelessly accept the observations of those who must be equally untrained in the field of clairvoyance. Of course there are many genuine cases of good clear-seeing, but the mass are not to be relied on. The cultivation of psychic senses is more difficult than any physical gymnastics, and the number of really trained clairvoyants in the Western world may be described by a nought written to the left.

The Path

HINDU DIETIES AND THEIR WORSHIP — *K. P. Mukherji*

FROM A HINDU VIEW-POINT

The letters of the Sanskrit alphabet are named Aksharas; the word *Akshara* means undecaying. The letters are said to be undecaying because they are the symbols of the Devas, who are undecaying in their Essence. Thus we find in the *Bhagavad-Gita* the letter which stands first in the alphabet, viz. A, symbolizes Sree Krishna, or the Logos, or Vishnu. Now Vishnu is derived from the root *Vis*, to enter or energize; Vishnu therefore means the spiritual power which energizes, or the spiritual aspect of Life. Vishnu is the Active Manifested Will or *Iccha Sakti* — "Iccha Kriya and Gnanam are Gour (yellow), Brahini (red), and Vaishnavi (indigo)", says a Sanskrit Sloka. It seems the Logos first divided itself in manifestation into three, corresponding to the three planes of waking, dreaming, and sushupti states of consciousness. They are the evolving or creating energy (colored red), the sustaining or preserving energy (colored indigo), and the involuting energy (colored yellow). The body of Vishnu is also said to be golden or shining like gold. He is always "clothed in yellow", and has four hands which symbolize the four Vargas, viz.: Dharma (the Law), Artha (physical necessity), Kama (desire), and Moksha (final emancipation). In their manifested aspect every Deva, or god, of whatever grade is considered as finite, but in their Atmic Essence they are eternal and one!

The worship of these deities is enjoined in our *Shastras*, but one must fit himself to be a true *Upasaka* or worshipper. The first step is Karma, the second Upasana, the third Gnanam. Karma here means self-purification and serving humanity; self-sacrifice must be the guiding principle of this step. The second step is Upasana

or Bhakti, the guiding principle of which is Love. All Upasakas, worthy to be so called, must be of this stage of progress. The third is Gnanam, or true Knowledge; it is at this stage that the individual begins to lose his own identity and is finally merged in Atma. The connection established at the beginning of the second stage becomes stronger and broader till the barrier of *Maya*, or illusion, dividing the two, disappears and the two become one. Then knowing me according to (my) tattwa, (he) *enters* at last", says the *Gita*.

So long, then, as one cannot realize the essential unity of the subject and the object, one must proceed by the old old path of the Rishis, the path of Misery, (*Durga*), the path of difficulty, pain, and trouble, the path of Karma and Upasana. He must be sustained by Love or he is bound to fail; for no man can proceed in that most difficult of all things without love to cheer him up and sustain his drooping spirits.

This Upasana or worship, or rather the occult practical part which leads direct to soul development, has been kept a profound secret; some of our *Shastras* profess to reveal it, but they are mere blinds, or at best but fragmentary hints which appear absurd and indecent on their very face. The theoretical part is, however, systematically and most beautifully treated in many books, and is called *Bhakti-Yoga*, or the Yoga of Love.

Nothing can, however, as I have said, be done without self-purification, self-sacrifice, and serving humanity. *Bhakti*, tainted with selfishness and animal propensities, cannot develop itself, cannot lead one to spiritual advancement, as there can be no true brotherhood of selfish or immoral men. With such defects one cannot grasp the very idea of it.

The practical part of Upasana enjoins *Dhyanam* or concentration of mind on the Deva to be worshipped; the whole Puja (1)

ceremony has a deep occult signification, dealing as it does with colors and rhythmic sounds and burning of incenses. Our forefathers were far more cognizant of the unseen psychic influences acting in man than their modern critics (2), and arranged matters so as to counteract them. Even the placing of a particular flower on the top of the worshipper's head is not without meaning, *Brahmarandhra* (3) (the hole-like path of Brahma the Spirit) being the locality beneath which the spiritual senses act.

The present Hindu worshippers, however, having lost their *Guru-Parampara* (4) no longer understand what they are about and do everything mechanically, which produces no effect. The whole ceremony of worship is so complicated and demands such concentration of mind, among other things, that it would be better for ordinary persons to leave it alone — but what would then become of the mercenary priests and Gurus?

FOOTNOTES:

1. *Puja* means worship, the act of worship. — [Ed.] ([return to text](#))
2. Or their descendants also. — [Ed.] ([return to text](#))
3. A subtile psychic current supposed to have its exit at the top of the head. — [Ed.] ([return to text](#))
4. *Guru-Paraampara*, the true chain or succession of Gurus. The "succession" from St. Peter in the Christian church is the same idea. — [Ed.] ([return to text](#))

PLAIN THEOSOPHICAL TRACES — *William Brehon*

In the *Key to Theosophy* the author says that at the last quarter of each century there is always a distinct movement partaking of the nature of the present Theosophical one, and this opinion is held by many Theosophists. Can these efforts be traced? Did any people call themselves by the name "Theosophist" one hundred years ago? Is it necessary that all such movements should have been called in the past "Theosophical"? And if the claim that such movements are started by the Adepts be true, is the present Society the only body with which those beings work? Taking up the last question first, we may turn to H. P. B. for authority. She often said that while the T. S. movement of today was distinctly under the care of the Adepts, it was not the only one through which effect was sought to be made on the race-thought and ethics, but that in many different ways efforts were constantly put forward. But still, she insisted, the T. S. wears the badge, so to say, of the Eastern and Ancient Schools, and therefore has on it the distinctive mark — or what the Sanskrit calls *lakshana* — of the old and united Lodge of Adepts. Inquiring further of reason and tradition, we find that it would be against both to suppose that one single organization should be the sole channel for the efforts of the Brotherhood. For if that Brotherhood has the knowledge and power and objects attributed to it, then it must use every agency which is in touch with humanity. Nor is it necessary to assume that the distinct efforts made in each century, as contradistinguished from the general current of influence in all directions, should be called Theosophical. The Rosicrucians are often supposed not to have existed at all as a body, but deep students have come to the conclusion that they had an organization. They were Christian in their phraseology

and very deep mystics; and while they spoke of Holy Ghost, Sophia, and the like, they taught Theosophy. They were obliged by the temper of the time to suit themselves to the exigencies of the moment, for it would have been extreme folly to destroy the hope of making any effect by rushing out in opposition then. It is different now, when the air and the thought are free and men are not burned by a corrupt church for their opinions. In one sense the T. S. is the child of the Rosicrucian Society of the past. H.P. B. often said this, and inquiry into their ideas confirms the declaration. The Rosicrucians were Christian in the beginning and descendants afterwards of Christians. Even today it is hinted that in one of the great cities of this new Republic there is a great charity begun and carried on with money which has been given by descendants of the Rosicrucians under inward impulse directed by certain of the Adepts who were members of that body. For blood does count for something in this, that until an Adept has passed up into the seventh degree he is often moved in accordance with old streams of heredity. Or to put it another way, it is often easier for an Adept to influence one who is in his direct physical line than one who by consanguinity as well as psychic heredity is out of the family.

Looking into Germany of 200 years ago, we at once see Jacob Boehme. He was an ignorant shoemaker, but illuminated from within, and was the friend and teacher of many great and learned men. His writings stirred up the Church; they have influence today. His life has many indications in it of help from the Masters of Wisdom. A wide-spread effect from his writings can be traced through Germany and over to France even after his death. He called himself a Christian, but he was also named "Theosopher", which is precisely Theosophist, for it was only after his day that people began to use "ist" instead of "er". Long after his death the influence lasted. In the sixties many hundreds of his books were

deliberately sent all over the world. They were given free to libraries all over the United States, and prepared the way for the work of the Theosophical Society in an appreciable measure, though not wholly.

One hundred years ago there was such a movement in France, one of the agents of which was Louis Claude, Count St. Martin, whose correspondence was called "Theosophical correspondence". He refers to Boehme, and also to unseen but powerful help which saved him from dangers during the Revolution. His books, *L' Homme de De'sir* and others, were widely read, and there are hints of a Society which, however, was compelled to keep itself secret. At the same date almost may be noted the great American Revolution influenced by Thomas Paine, who, though reviled now by ignorant theologians, was publicly thanked by Washington and the first Congress. This republic is a Theosophical effort, for it gives freedom, and fortunately does not declare for any particular religion in the clauses of its Constitution. Hints have been thrown out that the Adepts had some hand in the revolt of the Colonies in 1775. In replying to Mr. Sinnett some years ago, it was written by his Teacher that the Brotherhood dealt with all important human movements, but no one could arraign the body at the bar and demand proofs.

Bro. Buck wrote in 1889: "I have a volume entitled *Theosophical Transactions of the Philadelphian Society*, London, 1697, and another dated 1855, entitled *Introduction to Theosophy or the Science of the Mystery of Christ*, and in 1856 *Theosophical Miscellanies* was issued."

About 1500 years ago Ammonius Saccas made a similar effort which was attended with good results. He had almost the same platform as the T. S., and taught that the aim of Jesus was to show

people the truth in all religions and to restore the ancient philosophy to its rightful seat. It is not at all against the theory we are dealing with that the various efforts were not dubbed with the same name. Those who work for the good of humanity, whether they be Adepts or not, do not care for a mere name; it is the substantive effort they seek, and not a vindication in the eyes of men of being first or original or anything else.

But we have only considered the Western World. All these centuries since A. D. 1, and long before that, Theosophical efforts were put forth in Asia, for we must not forget that our theories, as well as those of Ammonius Saccas, are Eastern in their origin. However much nations may at first ignore the heathen and barbarian, they at last came to discover that it is frequently to the heathen the Christian owes his religion and philosophy. So while Europe was enjoying the delights of rude and savage life, the Easterns were elaborating, refining, and perfecting the philosophy to which we owe so much. We who believe in the Adepts as Brothers of Humanity must suppose that ignorance did not prevail in the Brotherhood as to the effect sure to be one day produced in Europe whenever her attention could be diverted from money-making and won to the great Eastern stores of philosophy. This effect came about through England, Germany, and France. Frenchmen first drew attention to the *Upanishads*, Germans went in for Sanskrit, and England conquered India, so that her metaphysical mines could be examined in peace. We have seen the result of all this more and more every year. There is less ignorant, narrow prejudice against the "heathen", the masses are beginning to know that the poor Hindu is not to be despised in the field of thought, and a broader, better feeling has gradually developed. This is much better than the glorification of any Brotherhood, and the Lodge is always aiming at such results, for selfish pride, arrogance, and the love of personal dominion

have no place therein. Nor should they in our present
Theosophical Society.

The Path

YOGA: THE SCIENCE OF THE SOUL: III — *G. R. S. Mead*

(Concluded)

Now the object of all religion seems to me to be the union of man with Deity, by whatever means and in whatever sense we understand these terms. The most important part of religion, and the part most easily comprehended by all men, is its ethical teaching. Why this should be so we have hitherto been mostly in ignorance; in fact scepticism has run to such lengths in these latter days that some men of great ability and intelligence deny that there is any scientific basis of ethics, and most assert the impossibility of our ever knowing why we should carry out any particular ethical precept. These teachings are for the most part merely dogmatic commands, or the reasons given are not of an explanatory nature, but rather of the nature of promises or threats. Do this, for otherwise you will not obtain an inheritance in the kingdom of light, and so on.

Now the higher science of the soul is rich in manifold compelling reasons for living a purer and more unselfish life. Asserting, as it does, the possibility of rolling up the dark curtain of sleep, and rending in twain the veil of death while still we live, in the very statement of the method whereby these things are to be accomplished, and of the instruments which man has to use to effect this purpose, it shows that morality is the indispensable preliminary training. Man has to look his own nature squarely in the face before he can look in the face of Nature. If he would tread the solitary path of Yoga whereby he steps out from the ranks of his fellow-beings and becomes a self-appointed pioneer of humanity, he must equip himself with fit instruments and, as the Scripture says truly, "gird himself with the breastplate of

righteousness". Without these requisites it is useless to volunteer for this pioneer work.

The track to be followed leads through strange lands, peopled with strange inhabitants, an inner path that, at the beginning, passes mostly through the country of our own creations that we have at each moment been busily bringing into existence ever since we have had bodies and minds. If we attempt to enter this country unarmed, that is to say, before we have prepared ourselves by a most careful scrutiny into the very recesses of our moral nature, and by a most rigid discipline that never relaxes its vigilance for a moment, then we are like a general in a fort at the head of a mutinous army in league with the enemy outside, and we shall find that in very truth our foes are "they of our own household" and that like attracts like by an unavoidable law of nature.

There is much talk among certain religionists about "conversion", and there is a great truth hidden under the strange externals that so often clothe the idea. Perhaps some of you do not know that the Greek word for repentance, found in the *New Testament* and in the writings of the many mystical schools of the early years of Christianity, means, literally, a change of mind. The theory of this change and the history of its mystical degrees are elaborately treated of by some of these schools, and that which takes place unconsciously in a lower stage of the ordinary conversion, takes place consciously in a higher stage in Yoga. This is the real new birth spoken of by Christian mystics, and this is why Brahmins (which really means those who are at one with Brahma, the Deity) are called the twice-born. You will understand by what I have said about the importance of the mind in Yoga what this change of mind or repentance means. Now this repentance is of a very mystical nature and one difficult to comprehend. Suppose we look upon the whole series of lives of an individual as a

necklace of pearls. The one that hangs lowest in front will represent this turning-point in the whole cycle of births, when the great change of mind occurs which shows that the soul is beginning to shake off the attractions of matter. In each succeeding birth this change will repeat itself on a smaller scale, and those may rejoice to whom it comes early in life. Only let us remember that there is no respect of persons, no aristocracy, no privileges, no monopoly. The path of self-knowledge, self-conquest, and self-devotion is open to everyone of us at every moment of time. It is idle to say: "What you tell me is very fine, but it is not for me!" There is no time but the eternal present. It is idle to put off to the future when none of us know what our past has been. How are we to be sure that we may not have gone some portion of the way before, and that the incidents we have lived through in our present birth are only the representation on a small scale of the lives we have lived before; that once we have reached the turning-point we shall again repeat all those strivings upwards which have characterized those of our past lives which have been on the ascending path of our soul pilgrimage?

No man can say what power for good may not lie latent in those who are commonly supposed to be most distinctly vicious, once the force of their character is turned in the right direction.

There is nothing historical in religion nor in Yoga. "Choose ye this day what gods ye will serve" is applicable to every moment of our lives. There is no time but the present, and only the ignorant pin their faith to historical events.

Of course this is no new thing to hear. It is very old, very ancient, but what I wish to insist upon is that it is practical and scientific in the best sense of the word; not, however, that I by any means believe that a thing must needs be scientific in the ordinary sense to be true, but because Yoga can claim everything that is best in

the scientific method and at the same time immeasurably transcend it. It is necessary to state and restate this, for people are beginning to go in fear and trembling at the term "scientific".

And now if any one asks whether I recommend him to study Yoga, the answer is: If a person honestly tries to live a moral, clean, and unselfish life, he is unconsciously training himself for the practice of this science, and he will thus gradually develop a consciousness of his spiritual nature which will grow into direct cognition, if not in this birth, at any rate in a succeeding incarnation. But I would also go beyond this, for I believe that neither goodness alone nor knowledge alone makes the perfect man, but that the two must join hands to bring him to perfection. I would therefore add: By all means study the theory of Yoga, and as for the practice of it, subject yourself continually to the most searching analysis in order to discern the secret of your motives of action; watch your thoughts, words, and acts; try to discover why you do this or that thing and not another; be ever on your guard. I do not mean to say, use your head only. By no means: use your heart also to its full capacity. Learn to sympathize with all, to feel for everyone; but to yourself be as hard as steel, never condone a fault, never seek an excuse. We need none of us retire from the world to do this; we need not shun association with others; we need not even make a "Sunday in the day", as we make a Sunday in the week, in which to turn our thoughts to higher things and for the rest of the time be off our guard. But at the same time it is a most salutary daily practice to try and definitely concentrate the mind on some thought, or on some imaginary object in order to learn how to steady it, and to cultivate at the same time a continual aspiration towards and contemplation of the highest ideal we can in any way conceive. Perhaps some of you may think this the advice of a mere mystical platitudinarian, and that you could hear something very much resembling it from

the nearest pulpit. Maybe; but my answer is still, Try! Try to find out why you do any particular action, or think some thought; try to fix your mind even for sixty seconds; and try to meditate on some high ideal when you are quiet and alone, and free from all hatred and malice; believe me, you will not repent the endeavor.

Perhaps you have noticed that I have said nothing of the farther practices of the higher Yoga. My reason for the omission is that the subject is too lofty and too sacred for any student like myself to attempt. Its practices are so marvellous and its attainments so stupendous that they absolutely transcend all words and all descriptions; and this is why they are invariably treated of in symbolical and allegorical language. But I need hardly tell students of Theosophy that the Yoga is the most important key to the interpretation of the world-scriptures, a key that even our teacher H. P. Blavatsky refrained from giving. But none of us need feel surprise or resentment at this omission if we reflect that it has been the immemorial custom to withhold the key until the pupil is ready to receive it. It is not withheld for any caprice, for it cannot be kept back when the pupil is ready, and they who hold the key are such as give their life-blood to guard mankind from even greater misery and sorrow than they are at present plunged into — though, indeed, mankind knows not of their ceaseless sacrifice.

It is easy to see that the subject I have dealt with is one of enormous difficulty; I could have presented you with a long treatise, full of technical terms gleaned from difficult works in a vast library of literature, but my purpose has rather been to try and show that in itself the science of the soul is not beyond the reach of any, and that it is the most practical and important branch of knowledge that man is heir to.

In conclusion, it is well to remember there is one indispensable

condition of success in this science, without which our efforts will be as Dead Sea fruit. It must be undertaken solely for the service of others; if it is attempted for ourselves, it will prove nought but an illusion, for it will pertain to the "I am I", to the personal human animal, whose characteristic is selfishness, whereas the nature of true spiritual Yoga is that of devotion to all beings, of love to all that lives and breathes, and the duty of the disciple becomes like that of the stars of heaven who "take light from none, but give to all".

Companions, may we all tread the path of peace!

The Path

THOUGHTS ON KARMA — *Eusebio Urban*

EVERY day in life we see people overtaken by circumstances either good or bad and coming in blocks all at once or scattered over long periods of time. Some are for a whole life in a miserable condition, and others for many years the very reverse; while still others are miserable or happy by snatches. I speak, of course, of the circumstances of life irrespective of the effect on the mind of the person, for it may often be that a man is not unhappy under adverse circumstances, and some are able to extract good from the very strait lines they are put within. Now all this is the Karma of those who are the experiencers, and therefore we ask ourselves if Karma may fall in a lump or may be strung out over a long space of years. And the question is also asked if the circumstances of this life are the sum total result of the life which has immediately preceded it.

There is a little story told to a German mystic in this century by an old man, another mystic, when asked the meaning of the verse in the Bible which says that the sins of the father will be visited on the children to the third and fourth generation. He said: "There was once an Eastern king who had one son, and this son committed a deed the penalty of which was that he should be killed by a great stone thrown upon him. But as it was seen that this would not repair the wrong nor give to the offender the chance to become a better man, the counsellors of the king advised that the stone should be broken into small pieces, and those be thrown at the son, and at his children and grandchildren as they were able to bear it. It was so done, and all were in some sense sufferers yet none were destroyed". It was argued, of course, in this case that the children and grandchildren could not have been born in the family of the prince if they had not had

some hand in the past, in other lives, in the formation of his character, and for that reason they should share to some extent in his punishment. In no other way than this can the Christian verses be understood if we are to attribute justice to the God of the Christians.

Each Ego is attracted to the body in which he will meet his just deserts, but also for another reason. That is, that not only is the body to give opportunity for his just reward or punishment, but also for that he in the past was connected with the family in which the body was born, and the stream of heredity to which it belongs is his too. It is therefore a question not alone of desert and similarity, but one of responsibility. Justice orders that the Ego shall suffer or enjoy irrespective of what family he comes to; similarity decrees that he shall come to the family in which there is some characteristic similar to one or many of his and thus having a drawing power; but responsibility, which is compounded of justice, directs that the Ego shall come to the race or the nation or the family to which its responsibility lies for the part taken by it in other lives in forming of the general character, or affecting that physical stream of heredity that has so much influence on those who are involved in it. Therefore it is just that even the grandchildren shall suffer if they in the past have had a hand in moulding the family or even in bringing about a social order that is detrimental to those who fall into it through incarnation. I use the word responsibility to indicate something composed of similarity and justice. It may be described by other words probably quite as well, and in the present state of the English language very likely will be. An Ego may have no direct responsibility for a family, national, or race condition, and yet be drawn into incarnation there. In such an event it is similarity of character which causes the place of rebirth, for the being coming to the abode of mortals is drawn like electricity along the path of

least resistance and of greatest conductivity. But where the reincarnating Ego is directly responsible for family or race conditions, it will decide itself, upon exact principles of justice and in order to meet its obligations, to be reborn where it shall receive, as grandchild if you will, physically or otherwise the results of its former acts. This decision is made at the emergence from Devachan. It is thus entirely just, no matter whether the new physical brain is able or not to pick up the lost threads of memory.

So today, in our civilization, we are all under the penalty of our forefathers' sins, living in bodies which medical science has shown are sown with diseases of brain and flesh and blood coming in the turbid stream of heredity through the centuries. These disturbances were brought about by ourselves in other centuries, in ignorance, perhaps, of consequences so far-reaching, but that ignorance lessens only the higher moral responsibility and tends to confine the results to physical suffering. This can very well lead, as it often does, to efforts on the part of many reincarnating Egos in the direction of general reform.

It was through a belief in this that the ancients attempted to form and keep up in India a pure family stream such as the highest caste of Brahmin. For they knew that if such a clean family line could be kept existing for many centuries, it would develop the power of repelling Egos on the way to rebirth if they were not in character up to the standard of that stream of life. Thus only teachers by nature, of high moral and spiritual elevation, would come upon the scene to act as regenerators and saviors for all other classes. But under the iron rule of cyclic law this degenerated in time, leaving now only an imitation of the real thing.

A variation of the Eastern story told above is that the advice of the

king's counsellors was that the broken stone should be cast at the prince. This was done, and the result was that he was not killed but suffered while the pieces were being thrown. It gives another Karmic law, that is, that a given amount of force of a Karmic character may be thrown at one or fall upon one at once, in bulk, so to say, or may be divided up into smaller pieces, the sum of which represents the whole mass of Karmic force. And so we see it in life. Men suffer through many years an amount of adverse Karma which, if it were to fall all at once, would crush them. Others for a long time have general good fortune that might unseat the reason if experienced in one day; and the latter happens also, for we know of those who have been destroyed by the sudden coming of what is called great good fortune.

This law is seen also in physics. A piece of glass may be broken at once by a single blow, or the same amount of force put into a number of taps continuously repeated will accomplish the same result and smash the glass. And with the emotions we observe the same law followed by even the most ignorant, for we do not tell bad news at once to the person who is the sufferer, but get at it slowly by degrees; and often when disaster is suddenly heard of, the person who hears it is prostrated. In both cases the sorrow caused is the same, but the method of imparting the news differs. Indeed, in whatever direction we look, this law is observed to work. It is universal, and it ought to be applied to Karma as well as to anything else.

Whether the life we are now living is the net result of the one just preceding is answered by Patanjali in his 8th and 9th aphorisms, Book IV.

"From these works there results, in every incarnation, a manifestation of only those mental deposits which can come to fructification in the environment provided. Although the

manifestation of mental deposits may be intercepted by unsuitable environments, differing as to class, place, and time, there is an immediate relation between them, because the memory and the train of self-reproductive thought are identical", and also by other doctrines of the ancients. When a body is taken up, only that sort of Karma which can operate through it will make itself felt. This is what Patanjali means. The "environment" is the body, with the mind, the plastic nature, and the emotions and desires. Hence one may have been great or the reverse in the preceding life, and now have only the environment which will serve for the exhaustion of some Karma left over from lives many incarnations distant. This unexhausted Karma is known as stored-up Karma. It may or may not come into operation now, and it can also be brought out into view by violent effort of the mind leading to such changes as to alter the bodily apparatus and make it equivalent to a new body. But as the majority of men are lazy of mind and nature, they suffer themselves to run with the great family or national stream, and so through one life make no changes of this inner nature. Karma in their cases operates through what Patanjali calls "mental deposits". These are the net results stored from each life by *Manas*. For as body dies, taking brain with it, there can be no storage there nor means of connecting with the next earth-life; the division known as *Kama* is dissipated or purged away together with astral body at some time before rebirth; astral body retains nothing — as a general rule — for the new life, and the value or summation of those skandhas which belong to *Kama* is concentrated and deposited in *Manas* or the mind. So, when the immortal being returns, he is really *Manas-Buddhi-Atma* seeking a new environment which is found in a new body, *prana*, *Kama*, and astral double. Hence, and because under the sway of cyclic law, the reincarnation can only furnish an engine of a horsepower, so to say, which is very much lower than the potential energies stored in *Manas*, and thus there

remain unexhausted "mental deposits", or unexhausted Karma. The Ego may therefore be expending a certain line of Karma, always bringing it to similar environments until that class of Karma shall be so exhausted or weakened as to permit another set of "mental deposits" to preponderate, whereupon the next incarnation will be in a different environment which shall give opportunity for the new set of deposits to bring about new or different Karma.

The object that is indicated for life by all this is, to so live and think during each life as to generate no new Karma, or cause for bondage, while one is working off the stock in hand, in order that on closing each life-account one shall have wiped off so much as that permits. The old "mental deposits" will thus gradually move up into action and exhaustion from life to life, at last leaving the man in a condition where he can master all and step into true consciousness, prepared to renounce final reward in order that he may remain with humanity, making no new Karma himself and helping others along the steep road to perfection.

The Path

MODERNISED UPANISHAD

THE TALAVAKARA UPANISHAD

THE TEACHING OF BRAHMAN

CHAPTER FIRST (1)

The Master was asked by the pupil to tell at whose wish the mind of man, when sent forth for any act, proceeds on its errand, by whose command the first breath goeth forth, and at whose wish do men utter speech. He was also asked to tell what intelligent power directs the eye or the ear in the performance of natural functions.

The reply given by the Master, thus approached by the pupil, was that in respect to the ear, the brain, the speech of man, the breathing, and the eye, the other organs are of themselves wholly unable to act, but are the means whereby the real, but unseen, inner organs of sight, speech, hearing, seeing, and breathing obtain touch with nature, make themselves manifest, and become able to cognize outside objects.

The perfectly trained man, one fully grounded in philosophy, who has gained control of these organs both within and without, and who can locate his consciousness in the inner being, becomes really immortal when death releases him from the connection with the body. But the ordinary man, by reason of his being fully entrapped and deluded by the outer senses which are always intimately connected with the inner ones, is compelled after death to go into the Devachanic state and to return again to earthly life where he takes up a fresh set of material organs and sense connections.

But there is another sort of consciousness which cannot be

expounded to one who has not himself gained an experience of it. It is beyond description in words used on this plane. For it is different from the known, above what we suppose to be the unknown, and not that which people here adore as their highest conception of being.

Know, therefore, that the basis for the operations of the mind, of the senses, of the organs is Brahman alone. Without that we could neither taste, smell, hear, see, nor think.

SECOND CHAPTER

Then to the pupil the Master said, so as to impress it on his mind, "If thou thinkest I know the form of Brahman well, thou art not wise; but perhaps thou knowest it thyself; if so, then tell me."

To this the pupil replied that we cannot know or describe Brahman, the substratum of all, in the ordinary manner by connecting him with some things already known to us, but at the same time we are not able to say that we do not know him. We feel the actuality of Brahman, but cannot enter into a description of it as we would of an object, by giving its known characteristics, or of a piece of land by its metes and bounds, its quality and its vegetation. The knowing of it at last, its full realization, is a species of awakening out of the present state, and then the knowledge bursts upon us. By the real Self we gain and keep strength in the interior nature, and by knowledge we become able to destroy the bonds of material reincarnation, thus attaining conscious immortality. And by knowing this, one has discovered the true aim of life. If this is not understood while a man is existing here on earth in a body, then he will be compelled to reincarnate until he does comprehend it. But the wise, who have directed their thoughts to all things, and have at last come to recognize the real Self within themselves, are possessors of conscious immortality and pass unfettered out of this life never to

return.

THIRD CHAPTER

The elemental spirits of all grades that work in nature on every plane, in air, water, earth, and fire in all their correlations and combinations, were evolved from lower and less conscious states through aeons of effort by the highest mind. This was a constant struggle between the informing power of mind and the heavy non-conscious material base which alone existed before what we now call matter had been differentiated from primordial cosmic substance. It was in ages long passed away, while the elemental model of all material things was under construction. Without the informing power, which was itself brought over from previous and incalculably distant periods of evolution, the elemental spirits would not have come into existence, as they had no power of their own to stir the depths of cosmic matter. Hence their evolution is called the "Victory of Brahman".

They were evolved on many planes, each in a different degree, (2) and among them were the higher order related to fire, air, and nascent mind. These being the highest were in possession of a consciousness peculiar to their own plane of existence, and were destined to become the conscious human beings of the future. But it seemed to them that they had themselves obtained the victory over cosmic substance and brought about their own evolution.

And in order to raise these cosmic spirits by gentle steps to a higher state of development, the highly progressed entities from other *Manvantaras* appeared to them on their own plane and in their own sphere of consciousness, but were not comprehended. Then the ruling spirits of fire were unable to burn, and those of air unable to move, a straw that was created before them. Next, Indra, representing the nascent power of mind and imagination, advanced toward those who came to teach, but instead of them

perceived only the primordial root and basis of matter. (3) For spirit as distinguished from matter cannot be perceived. It is from spirit — the eternal *purusha* — that matter is emanated, and together they form the two phases of the one Absolute and Unknowable.

FOURTH CHAPTER

The elemental spirits had to fall down into material existence, suffer in its toils, and at last by experience gain further development through evolution.

But the principles of fire and air, and the thinking man, are nearest to Brahman in the eternal scheme of nature's evolution.

And as Brahman flashed forth only to at once disappear from the sight of the gods, so in like manner a knowledge of the elemental spirits in this manvantara is evanescent and fitful. And in respect to the psychological being called Man, he perceives the truth either directly or by reflection. When he has perceived it by reflection, his imagination keeps the images together through the means of the eternal base which is Brahman itself. After repeated experiences of these reflections of truth he is at last able to look directly on it, and then he may become consciously immortal.

A name of Brahman is expressed by the words "The desire of it", and by that name it may be pondered upon. He who has discovered what the true aim of life is should meditate upon it and make all his desires bend to it. And as he progresses toward a knowledge of it, so all beings are insensibly impelled to aid him in the search, because there exists in all the desire to know the root of all things.

Thus you have been told the teaching of Brahman. It stands upon penance, restraint of self, and sacrifice; the Holy books are its limbs and the True is its abode. He who comprehends in their

entirety and subtle connection these teachings, and has shaken off all evil, has become conscious of the endless, unconquerable world of spiritual knowledge.

FOOTNOTES:

1. In the original this is called *Khanda* instead of *Chapter*. ([return to text](#))
2. They are called *devas* or gods in the original. ([return to text](#))

The Path

CONSCIENCE — *Katharine Hillard*

In listening to a conversation upon "Conscience" the other day, I was struck by the apparent confusion in the minds of many of the speakers between the instinct itself and the opinions which we formulate upon its promptings. A desire was shown by nearly all to base an absolute ethical rule upon this inward voice, and to decide beforehand certain vexed questions in morals by an appeal to its jurisdiction. But surely this is to consider conscience as equivalent to a well-considered and carefully balanced *opinion* upon a given course of action, instead of the swift unreasoning impulse that impels to action. In other words, should we not consider conscience as of another nature than reason, or at least as acting upon a different plane?

The instinct that deters us from doing wrong is an intuition, and is quite independent of all formulas. It is not necessarily based upon such ethical knowledge as we may have acquired, because it often acts under conditions that are entirely novel, and in circumstances that we have never anticipated.

The old conundrum compares it to an omnibus strap, as being "an inward check to the outward man", and this is precisely what it is, an inward check. It gives no direction, it formulates no law, it simply stings. Thereupon reason steps in and says to us; "Conscience forbids you to do this thing, therefore it must be wrong, and it is wrong because it is contrary to such and such received ideas of morals". And before we realize the fact, we have gone through this mental process, and are ready to declare that our conscience told us that we must not vote illegally, for instance, whereas it has told us nothing of the kind, but we have felt its prick and have translated it into our own opinion as to

what is wrong; we have transferred an impression upon the spiritual plane into an expression upon the mental and moral plane.

We can call conscience the divine light in the soul of man, burning in each one of us with different degrees of brightness according to the nature of the lamp that holds the light. If the lamp be neglected, the wick untrimmed, the oil unreplenished, the glass coated with dust and dirt, the light will burn dim and low, and its rays be of little service, nay, often invisible to the careless eye. And then we go stumbling along the dark and stony road, often bruising ourselves against obstacles that another would avoid, enlightened by a clearer ray of the Divine wisdom. And as men's natures vary in quality, so in one the lamp may be of tinted glass, and throw a lurid or a ghastly light on all around, and in another be of crystal clearness, without imperfection or distortion to obscure or to divert the ray within.

But whatever be the character of the lamp, so formed by our own Karma, which has built its many-sided form and wrought its purity or its foulness out of the work of our own hands, nevertheless within every lamp most surely burns that Divine ray. If we would have our conscience, then, to be in very truth "a lamp unto our feet and a light unto our path", we must purify the medium through which it shines, and so order our lives that we may become transparent to that heavenly light. It will never formulate for us a code of ethics that will enable us to decide beforehand upon difficult questions in morals, but the more we listen to its voiceless promptings the more clearly we shall hear them, and the more we shall find these problems of our imagination to be indeed "the baseless fabric of a vision", that shall dissolve at the first touch of reality.

How often, in sailing up a winding river, our way seems suddenly

shut in by hills; some great mountain-shoulder thrusts itself across our road, and there seems no outlet through which our boat can pass. "Thus far shalt thou go and no farther" the unrelenting hills seem to say, and we can see no possibility of further progress. But still the boat goes on, until all at once a sudden turn takes us round what seemed an impassable barrier, and the river still stretches out before us.

And so with these puzzles that we make for ourselves and call "problems of conscience". When we really get to the tight place, a way that we never dreamed of opens out before us. There is no such thing, actually, as "a problem of conscience". Conscience simply says "Halt!" or "March!": it is ours to reason why, and instead of obeying to befuddle ourselves with questions of casuistry.

No one can decide for another what is right for that other to do, because, however wise and good he may be, it is impossible for him to understand all his brother's nature and circumstances, to say nothing of the unseen influences which his Karma heaps about him. Therefore none may be the keeper of his brother's conscience, nor, for the same reasons, can he be his brother's judge.

Each must be content to manage his own lamp, and to keep it so clear and clean that the light from it shall not only guide his own feet, but shine out upon the world, so that they who walk in darkness shall be helped to find the way.

THE CURE OF DISEASES — *William Q. Judge*

Mortal ills and the needs of the stomach rank next after the instinct of self-preservation among all the subjects which engage the attention of the race. If we do not go on living we cannot do the work we think there is to do; if we remain hungry we will lose the power to work properly or to enjoy, and at last come to the door of death. From bad or scanty food follows a train of physical ills called generally disease. Disease reaches us also through too much food. So in every direction these ills attack us; even when our feeding is correct and sufficient it is found that we fall a prey because our Karma, settled by ourselves in some previous life, ordains that we enter on this one handicapped by the hereditary taint due to the wickedness or the errors of our fathers and mothers. And the records of science show that the taint in the blood or the lymph may jump over many lives, attacking with virulence some generation distant very far from the source. What wonder, then, that the cure of disease is an all-absorbing subject with every one! The Christian knows that it is decreed by Almighty God that He will visit the sins of the fathers upon the children even to the third and fourth generation, and the non-believer sees that by some power in nature the penalty is felt even so far.

All of this has given to the schools of mental and so-called "metaphysical" healing a strong pull on the fears, the feelings, the wishes, and the bodies of those to whom they address themselves, and especially in the United States. That there is more attention given to the subject in America seems true to those who have been on the other side of the Atlantic and noticed how small is the proportion of people there who know anything about the subject. But in the United States in every town many can be found who

know about these schools and practise after their methods. Why it has more hold here can be left to conjecture, as the point under consideration is why it has any hold at all. It is something like patent medicine. Offer a cure to people for their many ills, and they will take it up; offer it cheap, and they will use it; offer it as an easy method, and they will rush for it under certain conditions. Metaphysical healing is easy for some because it declares, first, that no money need be paid to doctors for medicine; second, that medical fluids and drugs may be dispensed with; and third, that it is easily learned and practised. The difficulties that arise out of the necessities of logic are not present for those who never studied it, but are somewhat potent with those who reason correctly; — but that is not usual for the general run of minds. They see certain effects and accept the assumed cause as the right one. But many persons will not even investigate the system, because they think it requires them to postulate the non-existence of that which they see before their eyes. The statements quoted from the monthly *Christian Science* in March PATH are bars in the way of such minds. If they could be induced to just try the method offered for cure, belief might result, for effects indeed often follow. But the popular mind is not in favor of "mind cure", and more prominence is given in the daily papers to cases of death under it than to cures. And very full reports always appear of a case such as one in March, where "faith curers", in order to restore life, went to praying over the dead body of one of the members of a believing family.

During a recent tour over this country from the Atlantic to the Pacific and back, I had the opportunity of meeting hundreds of disciples of these schools, and found in nearly all cases that they were not addicted to logic but calmly ignored very plain propositions, satisfied that if cures were accomplished the cause claimed must be the right one, and almost without exception they

denied the existence of evil or pain or suffering. There was a concurrence of testimony from all to show that the dominant idea in their minds was the cure of their bodily ills and the continuance of health. The accent was not on the beauty of holiness or the value to them and the community of a right moral system and right life, but on the cure of their diseases. So the conclusion has been forced home that all these schools exist because people desire to be well more than they desire to be good, although they do not object to goodness if that shall bring wholeness.

And, indeed, one does not have to be good to gain the benefit of the teachings. It is enough to have confidence, to assert boldly that this does not exist and that that has no power to hurt one. I do not say the teachers of the "science" agree with me herein, but only that whether you are good or bad the results will follow the firm practice of the method enjoined, irrespective of the ideas of the teachers.

For in pure mind-cure as compared with its congener "Christian Science", you do not have to believe in Jesus and the gospels, yet the same results are claimed, for Jesus taught that whatever you prayed for with faith, that you should have.

Scientific research discloses that the bodies of our race are infected with taints that cause nearly all of our diseases, and school after school of medicine has tried and still tries to find the remedy that will dislodge the foulness in the blood. This is scientific, since it seeks the real physical cause; metaphysical healing says it cures, but cannot prove that the cause is destroyed and not merely palliated. That there is some room for doubt history shows us, for none will deny that many a pure thinking and acting pair have brought forth children who displayed some taint derived from a distant ancestor. Evidently the pure

individual thoughts had no power over the great universal development of the matter used by those human bodies.

Turning now to medicine, we find the Italian Count Mattei promulgating a system of cure by the homoeopathic use of subtle vegetable essences which may well give pause to those who would make universal the curing by faith or mind alone. Some of his liquids will instantly stop violent pain, restore sight, give back hearing, and dissipate abnormal growths. His globules will make a drunken man sober, and, given to the nurse who suckles a babe, will cure the child who takes the milk. The drunkard and the child do not think about or have faith in the remedies, yet they cure. Is it not better to restore health by physical means and leave the high teachings of the healers, all taken from well known sources, for the benefit of our moral nature?

And if Christian healers read these lines, should they not remember that when the prophet restored the widow's son he used physical means — his own magnetism applied simultaneously to every member of the child's body, and Jesus, when the woman who touched his garment was cured, lost a portion of his vitality — not his thoughts — for he said "virtue" had gone out from him? The Apostle also gave directions that if any were sick the others should assemble about the bed and anoint with oil, laying on their hands meanwhile: simply physical therapeutics following a long line of ancient precedent dating back to Noah. Moses taught how to cure diseases and to disinfect places where contagion lurked. It was not by using the high power of thought, but by processes deemed by him to be effectual, such as sprinkling blood of animals slaughtered in peculiar circumstances. Without declaring for or against his methods, it is very certain that he supposed by these means subtle forces of a physical nature would be liberated and brought to bear on the case in hand.

The mass of testimony through the ages is against healing physical ills by the use of the higher forces in nature, and the reason, once well known but later on forgotten, is the one given in the article of January, 1892, — that diseases are gross manifestations showing themselves on their way out of the nature so that one may be purified. To arrest them through thought ignorantly directed is to throw them back into their cause *and replant them in their mental plane.*

This is the true ground of our objection to metaphysical healing-practises, which we distinguish from the assumptions and so-called philosophy on which those methods are claimed to stand. For we distinctly urge that the effects are not brought about by any philosophical system whatever, but by the practical though ignorant use of psycho-physiological processes.

The Path

SPIRITUALISM OLD AND NEW: I — *An Embodied Spirit*

I am a spirit myself, but in some respects different from those spoken of at modern *seances*. I have a body and a brain to work with, while they have not; I can prove and feel my identity as son of my father, while they are not able to do so; and, more important than all, I have my due proportion of experience in the trinity of body, soul, and spirit — or in material, intellectual, and universal nature — while they, being deprived of material nerves, sensory organs, brain, blood, and flesh, are confined to a plane of consciousness where they are devoid of those organs of action and sensation which are necessary if one is to come in contact with matter and nature, with human personal experience, or with the great resounding heart-strings of the man who is made in the image of the gods.

The Chinese books called *King*, the Fireworshippers' *Zend Avesta*, the Egyptian mysterious monuments and papyri, the grandly-moving Aryan books of India, the Greek religions, the Roman records, and the Christian scriptures new and old, speak of spiritualism, write of it, explain it, symbolize it. As we see it in the olden times it is grand and philosophical, scientific and religious; but today, in Europe and America, spiritualism is deadly commonplace, bent upon nothing, without a philosophy as confessed by its leaders, piled all round with facts of many years' collection, but wholly undigested, marred with fraud and a daily pouring forth of platitudes for wonder-seekers. It is a revolt from Christianity, and yet with nothing to replace an unjust heaven but an illogical and materialistic summer-land. In the olden times its seers and vestals neither touched money nor engaged in the vulgar strife of competition for private advancement and personal pleasure; in these modern times the mediums, left

unprotected by their leaders, offer to sell the spirits and the spirit-land for a dollar or two to any customer. It is a trade for a living, and not the pursuit of the things of the spirit. Such are the differences. Is the case improperly stated?

The sort of spiritualism which now prevails in the West was well known in the older days, but it was called necromancy and existed under prohibition. The history of the Jewish King Saul, and especially the 28th chapter of 1st Samuel, show this to be so. Saul was a medium of the obsessed kind. His particular variety of devil required music to still him, music furnished by David, but even then he broke out sometimes, on one occasion flinging a javelin at the player, who barely missed instant death. And that mediums flourished is proven in the chapter of Samuel I mentioned: "And Saul had put away those who had *familiar spirits*, and the witches, out of the land," but he retained the higher spiritualism of the Urim and Thummim, of the High Priest, and of the inspired utterances of prophets who were men of austerity working without pay. Saul fell upon evil times, and needed ghostly counsel. He consulted Urim and the prophets in vain. "And when Saul enquired of the Lord, the Lord answered him not, *neither by dreams, nor by Urim*, nor by the prophets." So he asked his servants to seek him a woman who had a familiar spirit, and they mentioned one — who was not called a witch — living at Endor. It is to be noted that only a few verses above an account of Samuel's death and burial at Ramah is given; hence Samuel had not been long buried, and, as Theosophists know, his astral remains were probably not disintegrated. Saul, medium as he was, added fasting to his practise that day, and sought out the woman at Endor for the purpose of calling up the shade of Samuel. When the materialized astral form of the recently-deceased prophet arose, the woman was frightened and discovered the identity of Saul. Her clairvoyance was aroused,

and, as she said, she "saw gods ascending from the earth". Here were two powerful mediums, one Saul and the other the woman. Hence the materialization of the spook was very strong. Saul had come full of the wish to see Samuel, and the strong combination brought on a necromantic evocation of the Shade, by which — reflecting through the clairvoyance of both mediums and drawing upon Saul's mind and recent history — the king was informed of his easily prognosticated defeat and death. Quite properly Moses had interdicted such *seances*. This one, repeating Saul's fears and indecision, weakened further his judgment, his conscience, and his resolution, precipitated his defeat, finished his reign. That the shade was merely Samuel's astral remains is very plain from its petulant inquiry as to why Saul had disquieted it to bring it up. The whole story is an ancient description of what happens every month in America among our modern necromancers and worshippers of the dead. When Moses wrote his Codes, the "voice of Bath-Col" — modern, *independent voice*, as well as many other mediumistic practises, prevailed, and those who could evoke the shades of the dead or give any advice from *familiars* were so well known to the people that the law-giver framed his oft-followed "them shalt not suffer a witch to live" which his religious descendants obeyed to the letter in Salem, Mass., in England, in Scotland, many centuries after. In the temple erected in the wilderness, as also in the permanent structure attributed to Solomon at Jerusalem, there was the Holy of Holies where the chief medium — the High Priest ringing the bells around his robe — communed with the controlling spirit who spoke from between the wings of the Cherubim. And in the Talmudic stories the Jews relate how Jesus obtained and kept the incommunicable name, although he was roared at by the animated statues that guarded the portal. All through the Old Testament the various prophets appear as inspirational mediums. One falls down in the night and the Lord, or spirit, speaks to him;

another fasts for forty days, and then his controlling angel touches his lips with fire from the altar; Ezekiel himself hears the rushing of waters and roaring of wheels while his inspired ideas are coming into his amazed brain. All these duplicate our modern styles, except that the ancient inspirations have some sense and loftiness. But none of these old mediums and seers and inspired speakers — except the necromancers — took money for what they saw and said. That constituted the difference between a prophet, or one with a god, and a contemned necromancer. Could it be possible that the ancients made these distinctions, permitting the one and condemning the other, without any knowledge or good reason for such a course?

The great oracles of Greece and other places had their vestals. These were mediums through whom the "controls", as Spiritualists would say, made answer to the questions put. It is true that money and gifts were poured into the establishments, but the officiating vestals were not in the world; they received no money and could not fix a fee; they accumulated no property; they were unfettered by ambitions and petty daily strifes; but their lives were given up to the highest spiritual thought the times permitted, and they were selected for their purity. And, still more, the Oracle could not be compelled by either money or gifts. If it spoke, well and good; if it remained silent, the questioner went sorrowfully and humbly away. There was no expressed or hidden demand for the worth of the money. In fact, very often, after the Oracle had spoken and a large gift had been made, another utterance directed the entire gift to be given back.

This is another difference between the old and new spiritualism, as shown in the attitude of the attendant upon mediums. Ask any of the latter and you will find how strong is the demand for a compensating return for the money paid beforehand for the privilege of a sitting. It presses on the unfortunate creature who

offers to be a channel between this plane and the next one. If no results are obtained, as must often be the case, the seeker is dissatisfied and the medium hastens to offer another sitting, somewhat on the principle of the quacks who promise to return the fee if there is no cure of the disease.

Turning to India, living yet although once, without doubt, contemporary with the Egyptians from whom the Jews obtained their magic, necromancy, and spiritualism, we have the advantage of studying a living record. The Hindus always had spiritualism among them. They have it yet, so that there it is both old and new. They made and still make the same distinction between the higher sort and the modern necromantic perversion. Through ages of experience their people have discovered the facts and the dangers, the value of the higher and the injury flowing from the lower. It is very true that we have not much to learn from the simple lower classes who with oriental passivity cling to the customs and the ideas taught by their forefathers. But that very passivity brings up before us as in a gigantic camera the picture of a past that lives and breathes when the philosophy which is the foundation of the present beliefs is studied. Women there, just as here, often become obsessed. "Controlled" would be the word with our spiritualistic friends. But they do not hail with joy this *post-mortem* appearance of immediate or remote ancestor. They abhor it. They run to the priest, or pursue a prescription physical or psychical, for exorcising the obsessor. They call it a *bhuta*, which with the vulgar means "devil", but among the educated class means "elemental remains". They neither fail to admit the fact and the connection of the obsession with the deceased, nor fall into the other error of supposing it to be the conscious, intelligent, and immortal centre of the one who had died. Just as the ancient philosophy universally taught, so they assert that this spook is a portion of the psychic clothing the

departed soul once wore, and the thing is as much to be respected as any old suit of clothes a man had discarded. But as it belongs to the psychic realm and has a capability of waking up the lower elements in man's being as well as mere mechanical hidden forces of nature, and is devoid of soul and conscience, it is hence called a devil, or rather, the word *elementary* has acquired with them the significance of devil from the harm which follows in the wake of its appearance.

In following papers I will carry the enquiry into present spiritualistic phenomena, their dangers, their use and abuse, as well as reviewing the ancient higher spiritualism and the possibility of its revival.

The Path

A CONVERSATION ON MAHATMAS — *William Main*

BETWEEN SMITH, AN INQUIRER, AND JONES, AN F. T. S.

Smith. — I have been dipping a little into Theosophy lately and have become quite interested. Some persons of ability seem to be taking part in the movement, and I like many things that they say, but many others seem to me to be fanciful, either unproved, or in their very nature wholly unsusceptible of proof.

Jones. — To what points do you especially refer?

S. — Well, for instance, I have read and heard a good deal about Mahatmas; the authority of these real or imaginary beings seems to count for a great deal, but I have yet to come across any real proof of their existence.

J. — What kind of proof do you want?

S. — Any proof. I should like to see one. That would be the best kind of proof.

J. — Why would it? What would he look like?

S. — Like a Mahatma of course.

J. — What does a Mahatma look like?

S. — How should I know, never having seen one? If I had, of course I would be less skeptical.

J. — Very logical: but I am really trying to put myself in your frame of mind so as to understand you, so I will change the form of my question. What have you decided a real Mahatma should look like, if merely seeing one is to be proof to you of the existence of such a being?

S. — [After a little thought.] I see what you are driving at. I was speaking off-hand when I said that seeing a Mahatma would prove that he was one. I should not expect to see a monster; he would have to look like any other man of course, except that his face might show some evidence of nobility and power. That alone I know would not prove anything, but what was really in my mind was the exhibition of some powers transcending those of common men.

J. — What would you expect him to do?

S. — I don't know exactly; some miraculous thing such as floating in the air, making gold, dematerializing something, himself for instance, and again reappearing, doing all this, of course, under test conditions so that I could be sure that there was no fraud.

J. — What would be the use of his taking so much trouble?

S. — To prove to me and through me to others that he was a Mahatma, and that consequently if there was one there might be more of them.

J. — Would these performances prove that he was a Mahatma?

S. — It seems to me that they would.

J. — What is your idea of a Mahatma?

S. — I am told that the word means "great soul". If so, it should refer to one who has overcome all animal and selfish passions and ambitions, whose knowledge and wisdom extend far into the unseen world, and who is therefore able to give tangible proof of this wisdom.

J. — I will not criticize your definition; but the proof you demand, apparently considered by you so exacting, would seem to me wholly inadequate. I should be more skeptical, and you, on the

other hand, would be more credulous than I take you to be, if the production of these phenomena, genuine and remarkable as they might be, would be sufficient to convince you of the wisdom and purity of the producer.

S. — Perhaps I may still be a little off; but what are you driving at?

J. — If you lived in India, a half-naked juggler might come into your court yard, and on your own ground, surrounded by your own friends and servants and in broad daylight, produce phenomena as remarkable as anything you have named. You might see the floating of heavy bodies in the air, the production and disappearance of solid objects, even of living persons, without any possibility of stage machinery, the visible growth of plants, even of trees reaching a height of fifty feet or more, solid and tangible, yet vanishing into thin air at the close of the performance. These and many similar things are exhibited by these strolling performers, who receive your coins with a thankful salaam and depart like an organ-grinder to repeat the performance elsewhere. Would you call these men "great souls"? Mr. Crookes, the eminent English scientist, made many experiments in the phenomena of so-called materialization, and was nearly turned out of the Royal Society for saying that he believed in occult forces, although specially organized committees of experts were unable even to suggest an explanation. Would you say that the ignorant school-girl through whom many of these phenomena were produced was a "great soul"? Mr. Home, the celebrated medium, has floated in the air scores of times, in many places, and in presence of many competent and critical witnesses. Other phenomena, if possible still more extraordinary, have been produced either by or through him under the most exacting test conditions, yet his life was one long exhibition of petty jealousy and ill-temper, and not a sentence of his has left the world wiser or better. Would you call

him a "great soul"?

S. — Hold on there. I will come down of my own accord, like the coon, so you need not load again. I see that phenomena alone are insufficient, although I confess I had not fully realized it before; but still I think you will admit that the Mahatmas need not make themselves so scarce. They might show *some* phenomena, just enough to attract and interest people, and then having arrested attention might proceed to explain the phenomena and give some of their higher wisdom to the world.

J. — What would you have them say?

S. — Jones, seeing that it is you I do not mind telling you that you have a most exasperating and disagreeable way of asking questions when I am trying to get some solid information, or at least some points from you, yet I don't suppose you intend it in that way.

J. — I certainly do not, and am glad you do not really misunderstand me. Even a single question will often clear up an issue amazingly, so with your leave please consider my question repeated.

S. — Of course I don't know what they would say, for if I did it would be because I knew these things myself: you must see that. But I should expect them to tell us things that were wise and true, susceptible of verification and tending to the elevation of mankind.

J. — How would you know that they were wise and true?

S. — Why, because some things we might know to be true, and others we would feel *must* be true, and others again if they seemed strange and incredible ought to be capable of verification.

J. — Very good. Now let me analyze your answer. It involves no

wisdom to tell us things that we already know to be true; this alone would be mere repetition and platitude, although a starting point from the well-known is necessary. Other truths which are new we feel to be true because the elements of this new experience are already in our minds, although not brought to the surface or combined before. New truths are truths relatively only to a certain number of persons, those who are ready to receive them. The simplest geometrical demonstration would sound like nonsense to a savage; a lecture on calculus would be unintelligible to a class of school-boys. This would be because the elementary conceptions of abstract form and of indiscrete and simultaneously varying qualities exist in but a rudimentary stage in undeveloped minds. An Adept's power of explaining consciousness and modes of existence on other planes would be limited by the capacity of the listeners and could compel the attention of but very few. You say also that statements seeming strange and incredible ought to be capable of verification. That of course is true, broadly speaking, but wholly untrue if coupled with the tacit assumption that the verification must of necessity be an easy thing, convenient to the idly curious. We may listen to a lecture from an astronomer, but to verify his statements would require a telescope like his own, to say nothing of the skill to use it and the mathematical knowledge involving long years of patient study. If there are Adepts, their powers are the results of lives of constant effort, carried on under the most favorable circumstances. How many are there who will even enter upon the rough and rugged road that leads to adeptship, and even of these few how many will follow it for any great distance?

S. — I appreciate the force of your remarks, but still it appears to me that the Adepts or Mahatmas, without going wholly into incomprehensible profundities, could give to the world some of their wisdom in a form that would be partly understood by the

more intelligent or intuitional, could at least indicate the lines of research that would lead most directly to new discoveries. They might smooth the path that leads to higher knowledge and better life, hard enough for common humanity, even if it be less rugged and dangerous than that which leads more directly to adeptship. They might tell us something of the past of our own race and this globe, and of its probable future; something of the unseen world and its forces, even if language could not be found to make it all very plain.

J. — Suppose that they did so and that people were not interested enough to read or to listen.

S. — You are making a very foolish supposition. I do not overrate the numbers of the really thinking portion of the community, for I know them to be relatively small, but still if such knowledge was put in book form the printers would hardly be able to work fast enough.

J. — Are you quite sure of that? I will venture to say that it would be a long time before it would be read by any considerable proportion of the members of the Theosophical Society, still longer before the majority would really study it.

S. — You astonish me. You seem to place a very low estimate upon the intelligence of your fellow members. I should have rated them more highly, although I am not a member of the Society.

J. — I do not underrate them. On the contrary, I consider them a body of men and women of more than average intelligence; but I do rate the proportion of really independent opinion in any community at a very low figure. People are not so hungry for the higher knowledge as they think they are.

S. — I do not agree with you, and should like to see the matter put to the test.

J. — It has been put to the test. The knowledge you are so eager for has been published in book form.

S. — When, where? Is it in English or any language I can learn?

J. — You will not have to study Sanskrit. You know all about the book and have looked into it. It is called the *Secret Doctrine*.

S. — What, that book! Why yes, I have seen it and looked into it a little bit here and there, but then you know there is so much of it, and it seemed rather dry, and you have no idea how busy I have been.

J. — I don't suppose I have.

S. — Besides, I thought Madame Blavatsky wrote that book.

J. — Suppose she did; some human fingers had to be employed, whether those of an Adept or an agent. She drew almost wholly upon the wisdom of the Masters, unless she lies. That book goes straight to the center of every great question in science, religion, and metaphysics, with a boldness of statement and clearness of thought for which there is no parallel in the history of literature. Setting aside its philosophy and history drawn from occult records, no single writer ever equalled its wealth of learning, illustration, and quotation; drawn from the most varied and often recondite sources, from history, theology, and comparative mythology, from science in all its branches and from the philosophical writings of all ages. It is well known and can be amply proved, that this great work was written rapidly and without library or references; yet its quotations and statements are accurate and there is food for profound thought on every page. H. P. Blavatsky was a woman of remarkable intellect, it is true, but neither scholarly nor systematic. During her life of travel and adventure she had no opportunity of evolving this

wonderful philosophy or accumulating this enormous mass of literary and philosophical learning, nor did she ever make any pretense of having done so. In my judgment she could no more have composed that work from her own resources than she could have built the pyramids of Egypt. If after reading it with more attention you still find no evidence of the existence of more highly evolved men, call them what you will, further search would be a waste of time.

You must excuse me, Smith, for I have an appointment elsewhere and am overdue.

Come and see me if you think I can help you at any time.

S. — [Soliloquizing.] Now that is the way with these Theosophical people. I have an independent mind and have attended several of their meetings and asked a good many questions with a view of finding things out for myself without so much studying. They seem to answer you, but have an annoying way of throwing a man back upon himself that I don't like.

I wish I knew whether there are any Mahatmas, without reading all of that big book.

I don't much believe there are, perhaps shouldn't know when I got through. [Exit Smith with a puzzled and somewhat disgruntled air.]

The Path

SPIRITUALISM OLD AND NEW: II — *An Embodied Spirit*

II

Some of the commands of Moses — speaking for Jehovah — given to the Jews on the subject of spiritualism are not without interest. As they enter into no description of the various phases included in the regulations, it is certain that the whole subject was then so familiar it could be understood as soon as referred to without any explanation. And if Moses and his people ever were really in Egypt in bondage or as inhabitants of the land of Goshen, they could not have been there without learning many of the spiritualistic and necromantic practices of the Egyptians. In Exodus ch. 22, v. 18, he directs "Thou shalt not suffer a witch to live". The witch spoken of was a different person from the others who had familiars and the like; they were not destroyed. But a witch must have been a malevolent practitioner of occult arts either for money or for mere malice. In Deuteronomy the lawgiver, referring to the land the people were soon to occupy, said: "There shall not be found among you anyone a consulter with familiar spirits, or a wizard, or a necromancer." Hence these varieties of occult practices are mentioned and prohibited. There is not much doubt that the very powerful spirit calling himself "Jehovah" issued these directions not only to protect the people in general, but also to preclude the possibility of any other equally powerful tribal God setting up communication with the Jews and perhaps creating confusion in the plans of Jehovah.

The "consulters with familiar spirits" were those who had in one way or another — either by training or by accident of birth — opened up intercourse with some powerful nature-spirits of either the fire or air element, from which information on various

matters was obtainable. These elementals are difficult to reach, they are sometimes friendly, at others unfriendly, to man. But they have a knowledge peculiar to themselves, and can use the inner senses of man for the purpose of getting him answers beyond his power to acquire in the ordinary manner. This is done somewhat in the way the modern hypnotiser awakes the inner person, to some degree disengaged from the outer one, and shows that the hidden memory and perceptive powers have a much wider range than the healthy person usually exhibits. These familiar spirits were well known to the ancients, and Moses speaks of them so simply that it is very evident it was a matter of history at that period and not a new development. The same kind of "familiar" is also mentioned in the Acts of the Apostles (1). Paul and his companions came to Macedonia — if the confused statements as to places are to be relied on — and there "It came to pass as we went to prayer a certain damsel *possessed with a spirit of divination* met us, which brought her Masters much gain by soothsaying." Paul drove the possessing spirit out of the woman, thus depriving her masters of gain and probably herself of support. This was not a mere case of ordinary mediumship where the astral garments of some departed soul had possession of the girl, but was a genuine elemental of the divining kind which Paul could drive out because of the power of his human will.

The "familiar" is not our higher nature giving us useful information, but is always an entity existing outside of and not belonging to the human plane. They are known of to day in the East, and communication with them is regarded there as dangerous. This danger arises from the fact that "familiar spirits" are devoid of conscience, being of a kingdom in nature which is yet below the human stage and therefore not having Manas and the spiritual principle. They act automatically, yet by the uniting to them of the reason and other powers of the person whom they

afflict there is a semblance of reason, judgment, and intelligence. But this appearance of those qualities is equally present in the modern phonograph, which is certainly devoid of them in fact. Being of such a nature, it is natural that the influence exerted by them upon the human being is directed only to our lower nature to the exclusion of the higher, and thus in time the moral qualities are paralyzed. Other results ensue in certain cases where what might be styled "astral dynamite" is liberated through the disturbance in the human being's nature as well as in the other plane, and then destruction arrives for others as well as for the person who has engaged in this intercourse. For these reasons the wise all through the past have discouraged dealing with a familiar spirit.

The next class mentioned by Moses is the wizard, who was on a grade higher than the first and corresponding to the witch. The failure to mention wizards in the verse directing the death of a witch may mean that witches were more common than wizards, just as to-day the "voodoo women" are far more plentiful than "voodoo men".

The last spoken of, and called an abomination, is the necromancer. This one corresponds exactly to any modern spiritualist who calls upon the dead through a medium, thus galvanizing the astral corpse which ought to be left in quietness to dissipate altogether. Moses received his education in Egypt and Midian as a priest of the highest order. In those days that meant a great deal. It meant that he was fully acquainted with the true psychology of man and could see where any danger lurked for the dabbler in these matters. It is not of the slightest consequence whether there ever existed such a man as Moses; he may be a mere name, an imaginary person to whom these books are ascribed; but the regulations and prohibitions and occult lore included in what he did and said make up an ancient record of

great value. When he prohibited necromancy he only followed the time-honored rules which vast experience of many nations before he was born had proved to be right. An ancient instance of necromancy was given in the first article from, the history of King Saul.

I propose therefore to call what is now miscalled spiritualism by another name, and that is *necromancy*. This is the worship of the dead. It has put itself in the position of being so designated, and the title is neither an invention nor a perversion. The journals supported by those who practice it and the books written by some of its best advocates have declared year after year that the dead were present — as spirits — at *seances*; the mediums have said they were under the control of dead white men and women, long dead red Indians, or babies, as the case might be; and at the time when materializing *seances* were common the ancient dead or the newly dead have been made to appear, as in the case of Samuel to Saul, before the eyes of the sitters, and then, as the latter looked on in astonishment, the apparition has faded from sight. Nor has this been confined to the ordinary unscientific masses. Men of science have practiced it. Prof. Crookes certified that in his presence the "Katie King spook" materialized so strongly as to give as much evidence of density of flesh and weight of body as any living person. It is therefore necromancy pure and simple, and the next question to be determined is whether, as said by Moses, it is an abomination. If it leads to nought but good; if it proves itself to be communication with spirit — the word being used in its highest sense; if it gives no evidence of a debasing effect; if it brings from the world of spirit where the spiritualist declares all knowledge exists, that which is for the enlargement of human knowledge and advancement of civilization; if it has added to our information about the complex nature of man as a psychological being; if it has given either a

new code of ethics or a substantial, logical, and scientific basis for the ethics declared by Buddha and Jesus, then it is not an abomination although still necromancy.

For forty years or more in Europe and America there has been a distinct cultivation of this necromancy, a time long enough to show good intellectual results by any two men in other departments. What does the history of these years give us? It presents only a morbid sort of wonder-seeking and a barren waste of undigested phenomena, the latter as unexplained today by "spirits" or spiritualists as they were when they took place. Such is the general statement of the outcome of those forty years. Before going further into the subject as outlined above, I will close this paper by referring to a first prime defect of the modern necromancy, the defect and taint of money-getting on the part of mediums and those who consult with them.

There was formed not ten years ago in Chicago and New York a syndicate to work some silver mines under the advice of the "spirits". A medium in each city was consulted and paid a pittance for the sittings. The controlling spook directed the investments and many of the operations. Shares were issued, sold, and bought. The familiar result of the enterprise coming to nought but loss for the investors has here no great bearing, though under another head it is important. But before the concluding crash there was a certain amount made by sales and purchases. Very little was paid to the poor medium, and it is to be doubted if any more than the regular price per day would have been paid even had the golden promises of the "spirits" been fully realized. All this has been repeated dozens of times in other instances.

There have been a few isolated cases of a so-called medium's giving in relation to business a long course of directions which came to a successful conclusion. One of these related to

operations in the stock market in New York. But they were all cases of "consulting a familiar", and not at all the same as the work of an ordinary medium. If they were the same as the latter, then we should expect to find such successes common, whereas the opposite is the fact in the history of mediums. The extent to which even at this day mediumship is devoted to giving assumed rise and fall of railroad stocks and the grain market in New York and Chicago at the request of brokers in those cities would surprise those who think they are well acquainted with these gentlemen.

This is the great curse of the American cult called spiritualistic, and until it is wholly removed, no matter at what individual cost, we shall not see the advent of the true spiritualism. St. Paul was right when he dispossessed the girl in Macedonia of her familiar, even if thereby she lost her employment and her masters their gains. If spiritualists will not eliminate the money element from their investigations, it would be well if some St. Paul should arise and with one wave of his hand deprive all public mediums in the land of the power to see visions, hear from dead or living, or otherwise pursue their practises. The small amount of individual suffering which might ensue would be more than compensated for by the wide immediate as well as future benefit.

1. Acts, ch. 16. ([return to text](#))

The Path

REPLANTING DISEASES FOR FUTURE USE — *William Q. Judge*

The ills I wish to speak of now are those of the body. Our moral nature will be purified and ennobled, widened and strengthened, by attention to the precepts of the saints and sages who through all the ages continue speaking for our benefit. And I refer to these with a view to "mind-cure" and "metaphysical healing".

In the article on the "Cure of Diseases" I stated our real ground of objection to the practices demonstrated variously as the practitioners have been Theosophists, Christians, or followers of mind healers, to be directed to methods which in fact introduce a new sort of palliative that throws back into our inner, hidden planes of life diseases otherwise *passing down and out* through the natural gateway, our bodily frame.

A consideration of this subject requires that we enquire awhile into the complete nature of man. This inquiry has been made before by much greater minds than mine, and I only hand on what they have found and what I have corroborated for myself. Mind-healers and Spiritual Scientists and the rest do not make any reference to this subtle nature of ours except to admit thought to be powerful and to say that the "spiritual body is pure and free from disease." Mind itself is not described by them, nor is it stated that the "spiritual body" has any anatomy possible of description. But the field of Theosophic research is not devoid of an anatomical enumeration, so to say, of the parts of the inner body — the "spiritual body" of some of these schools — nor of the "mind" spoken of by them all.

The mind is *manas* of the Hindus. It is a part of the immortal man. The "spiritual body" is not immortal. It is compounded of astral body with the passions and desires. *Mind* is the container of the

efficient causes of our circumstances, our inherent character and the seeds that sprout again and again as physical diseases as well as those purely mental. It is the mover who is either voluntary in his motion, free if it will, or moved hither and thither by every object and influence and colored by every idea. From life to life it occupies body after body, using a new brain instrument in each incarnation. As Patanjali put it ages ago, in mind lie planted all seeds with self-reproductive power inherent in them, only waiting for time and circumstances to sprout again. Here are the causes for our diseases. Product of thought truly, but thought long finished and now transformed into cause beyond our present thought. Lying like tigers by the edge of the jungle's pool ready to spring when the hour arrives, they may come forward accompanied by counteractions due to other causes, or they may come alone.

When these seeds sprout and liberate their forces they show themselves in diseases in the body, where they exhaust themselves. To attack them with the forces belonging to the plane of mind is to force them again to their hiding place, to inhibit their development, to stop their exhaustion and transfer to the grosser levels of life. They are forcibly dragged back, only to lie waiting once more for their natural expression in some other life. That natural expression is through a body, or rather through the lowest vehicle in use in any evolutionary period.

This is a great wheel that ever revolves, and no man can stop it. To imagine we can escape from any cause connected with us is to suppose that law and order desert the manifested universe. No such divorce is possible. We must work everything out to the last item. The moment we evolve a thought and thus a cause, it must go on producing its effects, all becoming in turn causes for other effects and sweeping down the great evolutionary current in order to rise again. To suppose we can stop this ebb and flow is

chimerical in the extreme. Hence the great sages have always said we have to let the Karmic effects roll on while we set new and better causes in motion, and that even the perfect sage has to endure in his bodily frame that which belongs to it through Karma.

The inner anatomical structure should also be known. The ethereal body has its own currents — nerves, for want of a better word, changes and method of growth and action, just as the gross body has. It is, in fact, the real body, for it seldom alters throughout life, while the physical counterpart changes every moment, its atoms going and coming upon the matrix or model furnished by the ethereal body.

The inner currents emanate from their own centers and are constantly in motion. They are affected by thoughts and the reflection of the body in its physiological changes. They each act upon the other incessantly. (Every center of the inner body has its appropriate correspondent in the physical one, which it affects and through which it is in turn acted upon.) It is by means of these subtle currents — called vital airs when translated from the Sanskrit — that impressions are conveyed to the mind above, and through them also are the extraordinary feats of the *seance* room and the Indian Yogi accomplished.

And just as one may injure his body by ignorantly using drugs or physical practices, so can the finer currents and nerves of the inner man be thrown out of adjustment if one in pride or ignorance attempts, uninstructed, to deal with them.

The seeds of disease being located primarily in the mind, they begin to exhaust themselves through the agency of the inner currents that carry the appropriate vibrations down upon the physical plane. If left to themselves — aside from palliations and aids in throwing off — they pass out into the great crucible of

nature and one is free from them forever. Therefore pain is said to be a kind friend who relieves the real man of a load of sin.

Now the moment the practises of the mind-curer are begun, what happens is that the hidden inner currents are violently grasped, and, if concentration is persisted in, the downward vibrations are thrown up and altered so as to carry back the cause to the mind, where it is replanted with the addition of the purely selfish desires that led to the practice. It is impossible to destroy the cause; it must be allowed to transform itself. And when it is replaced in the mind, it waits there until an opportunity occurs either in this life or in the next rebirth.

In some cases the physical and psychological structures are not able to stand the strain, so that sometimes the return of the downward vibrations is so great and sudden that insanity results: in other cases disease with violent characteristics sets in.

The high tone of thought enjoined by some schools of healers has the effect of making the cause of trouble sink deeper into hiding, and probably adds to concentration. But any thought would do as well, provided concentration is persisted in, for it is the concentration that makes the effect, and not the philosophy. The system of affirming and denying makes concentration easier.

For when the practitioner begins, he immediately brings to play certain inner forces by virtue of his dwelling on one thing. The veriest savages do the same. They have long taught it for various purposes, and their ideals go no higher than food and sleep, fetishes and superstitions.

When one is thus operating on another who is willing, the change of inner nerve currents is brought about by sympathy, which in these cases is the same as the phenomenon so well known in physics by the name of *induction*. When a person is operated on

— or against, I call it — the effect is either repelled or produced. If produced, it is by the same induction brought about without his knowledge and because he was not stronger than the operator.

Here is the danger again. The schools of hypnotists are teaching how to do it. The mind-curers and "metaphysicians" are doing the same. An army of possibilities lurks under it all: for already there are those practitioners who deliberately practise against their opponents, sitting day after day to paralyze the efforts of other people. It is like dynamite in the hands of a child. Some day it will explode, and those who taught it will be responsible, since instead of being taught it ought to be warned against. The world could get along with what disease there is, if it only turned attention to high ethics and altruistic endeavor. For after a few centuries of right living the nations would have purged themselves and built up a right moral building well founded on the rocks of true philosophy, charity, and love.

The Path

SALVATION BY FAITH — *Alexander Fullerton*

The making safe by faith defines the popular idea that a human soul is to escape punishment for evil, not through a reformation of character, or through the cancellation of evil by a subsequent effectuation of good, but through gratuitous pardon made possible because the one believed in has already suffered to an extent which the law will regard as a vindication. Beyond trusting wholly to the merits and work of a Savior, the culprit has nothing to do in the procurement of salvation. It is an act of reliance, not a process of relief. Later reformation attests the reality of the faith, but does not constitute it.

There are many grave objections to this scheme, logical, ethical, and moral. It is eminently artificial, it is in harmony with nothing else in nature, it enthrones unreality in Heaven. By making punishment a mere matter of debt, it voids it of its other two aspects — disciplinary and deterrent, and by making it transferable the connection between it and offense is lost. Nor is the suffering congruous. It is resolved wholly into physical pain. But this is a different thing from compunction, sorrow, remorse, which mentally follow transgression. The poignant shame of repentance cannot be recast in terms of bleeding flesh and agonized nerves.

Then, too, moral sentiments are unbalanced. The shock at seeing the innocent suffer and the guilty escape may be to some extent checked by urging that the suffering was voluntary and from love of the guilty, but a question then arises as to the sacrifice of justice. Surpassing love can hardly supplement defective justice, for in a Divine and therefore perfect system all moral qualities are equally exhibited. And the supposed effect is circuitous. If a

man is aroused to consciousness of guilt by perceiving what some one else has undergone on his behalf, the stimulants are sympathy and gratitude. Yet these do not demonstrate that the broken law was right in itself, or that he ought not to have disregarded it, or that an arrangement made without his consent binds him in honor to future obedience. Indeed, if the debt of all humanity has been paid, it cannot properly be exacted a second time, and therefore the inducement to obedience is to that extent logically lowered. Moreover salvation by faith has but a partial operation. It deals only with the sentimental side of man. It is not educative nor reformatory; still less does it take hold of the several elements in our composite nature and make each evolve to the ideal of perfection.

These are but a few of the logical objections to the doctrine. Historically and individually its consequences are what might be expected from the disconnecting of character from retribution, and from the use of any other factor than desert in determining destiny. Substitute a mechanism for a simply-acting law, and you are sure to have not only complication but disaster. And so the consequence of displacing Karma for Faith has been to set religion apart from morals, and to relieve from responsibility at the very point where it needs the sternest enforcement. The test of character has become not merit but belief, and the gauge of acceptability is not the degree to which self-discipline has attained, but the degree in which self-discipline is renounced and the spiritual interests handed over to another.

And yet here, as in so many other theologizings, there is a root of truth beneath the perversion and distortion. It is in the fact that a real faith in spiritual law must precede any actual attempt at improvement. Men will not greatly exert themselves to secure that which is hazy or dubious. If a thing is uncertain or ill-defined, there can be no heart in the pursuit of it. If evil is not

seen to be real, salvation will not appear to be valuable. Before there can be any wish, much more any effort, to attain security from the penal consequences of wrong, the wrong must be sensed, the consequences apprehended, and the security assessed. Only as the solemn reality of these spiritual facts is felt acutely by the soul standing in their presence, will it rouse itself to act thereon. And so salvation must come by faith.

The same faith must attend any true salvation, any scientific salvation, at every step of its progress. As the steady discipline by which ordinary man is transformed from a vacillating, inconstant tool of prejudice and passion to the calm, collected master of himself and Nature goes on through incarnation after incarnation, there is not an action of the will without its background of assured certainty in the correctness of the training. The human constitution, the method of its evolution, the possibilities it enshrines, the laws regulating the seen and the unseen spheres, the validity of the process, the certitude of its outcome, the existence of Those who have attained, the assurance of Their sympathy and aid, — all these must be truths to the advancing soul or there can be no advance at all. It is not a blind faith, for it has evidence sustaining it; yet it is not entire vision, for much is still unseen. But the faith grows. Its inception is only partial and may be feeble. It was enough for the first step. As each increment of vision verified the prophecy, the faith was confirmed. Things it took on trust are now portions of consciousness; much that was confidence has now become certainty. Still, the same condition to advance persists. The new step must be made because it is believed to lead to greater heights, and if there was no such belief the soul would pause and droop. Doubt would check, not as criminal but as weakening. And if faith is "the substance of things hoped for, the evidence of things not seen", it is because as a scientific fact there can be no

pressing forward into the region of the as yet experimentally unknown without an inward certainty that we shall find it as represented and shall rejoice when there.

And so we are saved by faith. Not faith in another's merits, but in the possibility of evolving our own; not faith in another's atoning work, but in our ability to so work that atonement shall be needless; not faith in a visionary mechanism of substitution, but in the universal scheme of Law; not faith in ecclesiastical systems, but in Divine order; not faith in a revelation *from* God, but in a revelation *of* God. Braced with such a faith, salvation progresses steadily to its end. It is a salvation from ignorance and paucity and feebleness, a salvation of the Divine in man from the animal.

The Path

SCIENTIFIC SALVATION — *Alexander Fullerton*

Salvation means "the making safe". But safe from what? In the usage of contemporary religionism, safe from future punishment for sin. If we inquire further as to the means to safety, we find it to be reliance upon another who has purchased the right to save by having himself undergone the punishment. The popular conception therefore considers the safety as from suffering, its date the hereafter, and its reception a gift.

But this whole operation is evidently external to the cause which once produced the liability to punishment and may produce it again. Punishment is the result of breaking of law; law is broken because the individual's sympathies are with the thing prohibited; and if still with the thing prohibited, they will continue to violate the prohibition. Hence law will be broken and penalties incurred just so long as the law is distasteful, and the only way to ensure obedience and a consequent immunity is a reversal of sympathy from the thing prohibited to the prohibition.

Now the springs of this sympathy are in the physical appetites, the intellectual convictions, and the moral sense. The state of the body, the mind, and the soul dictates the attitude towards law, and if the attitude is to be changed, that state must be changed because its cause. If a man who loves drunkenness, for instance, is to become sober by preference, it must be through his body's loss of craving for stimulant, his mind's conviction of the good of sobriety, and his soul's repugnance to the evil of indulgence. In other words, the *whole* man must face about, — not his taste merely, or his judgment, or his morals, but all in their totality. Only then is he "safe", for he has no inducement to offend, no conviction to oppose, no impulsion to resist. All unite in

producing harmony with the law, conformity to its injunction, immunity from its penalty.

In such a change, furthermore, each section of the composite being must receive distinct treatment. A cancellation of the physical appetite will not alter the mental status or affect the moral sense. Intellectual beliefs will not cure a disordered physique or reverse the pose of the soul. Revolution in moral sentiment will not effect corresponding revolution in the body and the mind. A radical change — "conversion", from *con*, together, and *verto*, to turn — can come only as each is turned, and each can only be turned as the handling appropriate to it is given.

If, then, a man is to be made safe from sin and from its penal effects, it can be by nothing short of such a physical treatment of physical state, mental treatment of mental state, and moral treatment of moral state as shall transform him from a hater of law to a lover of law. He now obeys from preference, and is therefore free both from temptation and from punishment.

Yet freedom from suffering in the pilgrimage of an Ego no more exhausts its evolutionary demands than would a like freedom in one incarnation. Who would consider a life perfect if guaranteed from all risk of disease or accident? Irrespective of such negative good, there is a whole cycle of positive and progressive development. The body has to be trained to such dexterity as is demanded by its avocation; the mind has to be fed with fact from many separated areas and its powers educated to their highest potency; the soul has to be nurtured with truth from above, and its voice in conscience grow clear and regnant. Each component of man needs its copious expansion if it is to fulfil the law of being and mount to the heights designed for it by the Supreme. Every separate incarnation in the chain is to contribute something to

the attainment of the ideal, until that ideal is complete and incarnations needless. So long as any element is deficient must incarnations be repeated, and he only can be "safe" from the hamperings of rebirth who has surmounted its necessity.

Considered as immunity from either violation of law or imperfection of existence, "salvation" must, then, be achieved through the perfecting of each component of the being, and that perfecting must be through the specific training required for each. In other words, it must be *scientific*. Now what does this mean?

It means, negatively, that the accomplishment is not by a pious sentiment or a generous sympathy or a spasmodic aspiration. It means, positively, that it is a systematic education of every faculty under the laws impressed by Nature thereon, and after the experience which the most enlightened practitioners have accumulated during aeons of action. Evolution of the whole man beyond the danger-limit is as much a matter of formulated knowledge as is the training for athletic sport or a college examination. Neither is done by an emotion or a spurt or a faith: nor is it. Under accepted rules, crystallizing ancestral wisdom, the physical nature is so disciplined that it becomes pliant to the will; the mind is so broadened and vivified that it educes dormant faculty and ranges over areas previously unknown; the spiritual nature secures uninterrupted action and harmonizes the whole being with the highest truth. Nothing is left to haphazard or to impulse. All parts are developed in accord with law, and the several faculties, fully ripened and in entire coordination, work without jar or an approach to friction. As wisdom and goodness together advance, cognate powers appear, and when the whole nature has reached the point of complete identification with the consciously-perceived scheme of the universe, it is at one therewith in knowledge, character, and function. Thus identified,

it is an integral part. It has no discordant efforts, for its purposes are the same; it has no isolated interests, for it is one with the All; it has no risks from broken law, for it is fused with law. Possibilities of deflection are forever at an end. There is no danger of fracture, for not a spot is weak. Having been harmoniously developed in every department after the ideal mode, it is symmetrical and perfect. It exhibits the design of the Great Architect; it reflects His will. It has no need of salvation. There is nothing to be saved from. It is scientifically safe.

The Path

WHAT SHALL WE CALL OURSELVES? — *M. Loring Guild*

I do not know how widespread is the tendency, but I have been noticing among many of our best and most thoughtful members a reluctance to style themselves "Theosophist". Instead, the unwieldy title, "a member of the Theosophical Society", is used. To this is usually added "and I am trying to become a Theosophist". The reason given for this course is that to them a Theosophist is, or more truly would be, a being of perfect virtue and perfect wisdom.

With this meaning attached to the title it is entirely comprehensible that they disclaim it for themselves. But it is a meaning which, to me, seems to have been needlessly and arbitrarily assigned. Needlessly, because we have many other words which will better serve the purpose, as "altruist" from the European terminology, and, in the rarely rich vocabulary which has come to us from the East, a series of titles for the whole hierarchy of spiritually-striving beings, from the lowly Chela to the Buddha of Compassion; arbitrarily, for the etymology implies no such meaning.

In most words of like formation the suffix implies only "one who labors at", while in words such as realist and materialist it means still less, merely "one who believes in". We do not refuse to term a man "geologist" because he is not an Agassiz; we call many a man, and rightly, an artist, although between him and Michael Angelo there be degrees which it must take him ages to climb.

According to all analogy, then, a Theosophist is not one who has attained, but one who labors to reach, Divine Wisdom. To make perfection a necessary qualification for bearing the title would be, in Kali Yuga, to put that title out of use.

Fortunately, whatever the struggle of individuals, the world in general will not be content to use a phrase when it can find a word: and a word it must and will find to express that a man is not merely "a member of the Theosophical Society", but that he recognizes the truth of its chief teachings, that he believes in the Universal Brotherhood of Humanity, in Karma and Reincarnation, and — in H. P. B.

Since, then, to raise the word to its highest is to debar ourselves from using it, and since there is a need which in its lower meaning it well fills, let us accept this lower meaning and call ourselves Theosophists. The title may be borne in all humility; to say "I strive" is but to confess the goal unreached. In so using the word we cannot belittle it, for not the achievement but the effort that makes it possible is truly great.

The Path

CITIES UNDER CITIES — *Bryan Kinnavan*

The theory that the remains of ancient cities exist under those of the present is not a new one. Dr. Schlegel held it, and working upon the clues found in Homer unearthed the buried Troy. Some have held it in respect to London, asserting that St. Paul's stands over the ruins of an old Pagan temple, and Roman ruins have been excavated in different parts of England. In India there is a mass of traditions telling of many modern cities said to stand over ancient ones that lie buried intact many feet below the present level. *Lucifer* for September noticed the "find" of an Amorite fortress sixty feet below the surface, with walls twenty-eight feet thick. It is well known to those who enjoyed intimate conversations with H. P. Blavatsky that she frequently gave more detailed and precise statements about great cities being built on the exact spots where others had stood long ages ago, and also about those over which only villages stand now. And as the constant explorations of the present day — reaching almost to the North Pole — give promise that perhaps soon the prophecies about revelations from mother Earth made by her will be fulfilled, I am emboldened to give the old theory, very likely known to many other students, to account for this building and rebuilding of cities over each other after such intervals that there can be no suspicion of communication between present and past inhabitants.

As man's civilization has traveled around the globe many times, filling now one country and now another with populous places, creating an enormous metropolis here and another there, his influence has been left on nearly every spot upon the earth, and that as well upon lands now beneath the seas as on those above them. If we can imagine the first coming of a population to a

place never before inhabited, the old theory asks us to believe that certain classes of elementals — called *devas* generically by the Hindus — are gathered over the place and present pictures of houses, of occupations of busy life on every hand, and, as it were, beckon to the men to stay and build. These "fairies", as the Irish call them, at last prevail, and habitations are erected until a city springs up. During its occupation the pictures in the astral light are increased and deepened until the day of desertion arrives, when the genii, demons, elementals, or fairies have the store of naturally impressed pictures in the ether to add to their own. These remain during the abandonment of the place, and when man comes that way again the process is repeated. The pictures of buildings and human activity act telepathically upon the new brains, and the first settlers think they have been independent thinkers in selecting a place to remain. So they build again and again. Nature's processes of distributing earth and accumulating it hide from view the traces of old habitations, giving the spot a virgin appearance to the new coming people. And thus are not only cities built in advantageous positions, but also in places less convenient.

Evidence is accessible and plentiful in every country to show that the winds, the trees, birds, and beasts can in time cover over completely, while leaving them intact, the remains of roads and buildings once used and occupied by men. In Central America there are vast masses of ruins among which trees of considerable girth are now growing. In other districts the remains of well-made roads are sometimes found creeping out from tangled underbrush and disappearing under a covering of earth. At Elephanta near Bombay, and in other places in India, the earth has been blown gradually under pillars and gateways, rendering entrance impossible. On the Pacific Coast, in one of the Mexican States, there is old and new San Bias, the one on the hill, deserted

and almost covered with trees and *debris* of all sorts which is surely constructing a covering that will ere long be some feet in thickness. So without regard to volcanic eruptions or landslides, which of course suddenly and forcibly overlay a city, it is quite possible for Nature through her slower processes to add to thickness of earthy covering at any place abandoned by man, and the very best illustration of this is in the coral islands which rise out of the ocean to be soon covered with earth and trees.

But, our ancient theory says, no process of a mechanical or physical kind has any power over the pictures impressed in the retentive ether, nor over those classes of elementals which find their natural work in presenting pictures of cities and buildings to the receptive brain of man. If he is materialistic he will recognize these pictures only subconsciously. But the subconscious impressions will translate themselves into acts just as hypnotized subjects respond to a suggestion they have no memory of. When, however, these elementals encounter a race of men who are psychically developed enough to see not only the pictures but also those entities which present them, it will then result that a conscious choice will be made, leading to a deliberate selection of one place for building on and the rejection of another.

I present this interesting old theory without proof except such as can be obtained by those few persons who are themselves able to see the devas at work on their own plane.

The Path

ILLUSION — *E. Kislisbury*

If man were capable of receiving and assimilating the whole of Truth, pure and undiluted, he would no longer be man, but a god. The whole of evolution throughout every kingdom of nature seems to be carried on by a series of illusions, the proportion of Truth or reality concealed under each process, or evolved by its means, being infinitesimally small in proportion to the bulk of its evolutionary veils or garments. Indeed, the lower we descend in the scale of being, the greater the disproportion — the less of spirit, the more of matter, as in the stone, the rhinoceros, and the prizefighter. That which to the purely outward observer seems the essential portion in the flower, the exquisitely tinted petals of the rose, the gorgeous rays of the sunflower or the dahlia, plays a comparatively unimportant part in the economy of nature, whose intention is fruit, seed, reproduction. The increase of the ornamental, such as doubling or trebling the petals of the rose or cherry, is at once resented by the cessation of fruit-bearing, which would seem to imply that, though illusion is in the scheme of nature, it is yet only useful when directed toward a certain end. So long as this is the case, illusion, even when perceived to be such, is never unbeautiful or ridiculous; on the contrary, it can only be pleasing, for it possesses one of the truest essentials of beauty, that of the perfect adaptation of means to an end. Thus the play of the little child, the one with her dolls and her imitations of domestic life, the other with his soldiers, horses, ships, or fortresses, is never unpleasing, though even the child itself is conscious of the illusion; it is one of nature's educative processes. The play of fancy of the poet, the painter, and the sculptor, even the effort of the actor, illusive and transitory though these may all be, are not in their best aspects mere

pastimes and foolishness, but beautiful, inasmuch as they subserve their true end, as they are capable of producing fruits in the minds or hearts of others. Yet if the idea behind the form had been presented bare and devoid of the beautiful imagery and language in which it was clothed, would it have produced the same effect on the minds of the majority? A few would have appreciated and cherished it, but what of the many? Shall they not be ministered unto, and is not all the beauty of the external world for this purpose, illusion though it be?

The same rule applies to religions in their ceremonial and externals generally. To the Sage the words "Know thyself" may be the core of all philosophy, may suggest endless possibilities of victories to be gained over the lower nature, of the final triumph of good over evil, of the true place of man in the universe, of his potentiality for godhood. But for those of lesser mould, myth and allegory, ritual and ceremonial must shadow forth the deeper truths, some rule of life must be imposed by authority on those who cannot steer their course in safety alone, some easily comprehended theory must account for the riddle of existence, some consolation must be attainable for those who cannot yet bear the burden of sorrow unaided, or face the fierce light that is reflected from the pure rays of naked truth. And it seems to lie in the nature of things that such illusions must appear and be received as truth so long as the necessity of each mind requires it; even after its illusiveness is perceived, it is scarcely possible to dispense with it at once, without danger of excessive re-action and a fall into blank despair or a denser superstition. To ask people to abandon a creed or even a church which has served them through many years of life as the garment by means of which they have clung to the Infinite, is to assume a responsibility from which the pious would refrain, and which the wise man would scarcely dare to arrogate to himself.

It is doubtful whether the conception of the Eternal is or can be received by any man at second-hand from priest or minister. Each one must surely image to himself the Divine after some fashion of his own, based partly perhaps on the suggestions of book or teacher, still thrown into new form by every separate mind, whether it be as Light Illimitable, as Love Unspeakable, or even as a Man of Sorrows, forgiving the sins and compassionating the woes of a tortured humanity. It would be a sacrilegious hand that would tear away the crucifix from the heart of one who had given up every worldly tie to serve those whom she regarded as the poor of Christ, and tried to substitute for this "illusion" the triangle, the square, and the circle. The husk which covers the ripening fruit must be left to the compelling power of nature to open gradually and at its proper time; those who tear away the protecting calyx will never see the bud expand into the blossom. The child deprived of toys and fun, of the merry voices of companions and of healthy romping exercise, who instead of devouring John Gilpin was fed at five years old on Greek verbs, might develop into a John Stuart Mill, but the man who had missed the illusions of youth fell into a far more lamentable one in his old age.

Not less inevitable to gradual evolution are the illusions of motherhood. Is it not partly the belief that the new-born child is her own, her "very own", fresh from the hand of God, that is the spring of the mother's tender, ceaseless, and self-sacrificing care through all the years of its helplessness and the waywardness of its youth, before blind affection ripens into a reasoning friendship? Were prospective motherhood to learn that the offspring so patiently and hopefully expected would be the reincarnation of a former murderer, would she love and cherish it at the expense of her own life, and give up her best years to its upbringing and education? The whole question of love and

marriage with its results, including as it does some of life's greatest illusions, is one of the deepest problems with which Theosophic thought will have to deal in the future.

Many persons skip the preface of a book, and in so doing miss the whole drift of the author. When we can afford to smile at our own illusions, we need not forthwith seek to deprive others of theirs, so long as the charm lasts and they are satisfied.

The poet's warning is not without significance:

"Lift not the painted veil
Which those who live call life.

The Path

ICONOCLASM TOWARD ILLUSIONS — *A. T. Mana*

A disposition not to interfere in any way with beliefs which are illusions prevails with many who dislike the pain caused by such tearing away of the veil. And the argument that illusionary beliefs, creeds, and dogmas should not be done away with so long as the believer is happy or good has been used by the Christian Church — and more especially by the Roman Catholic branch of it — as a potent means of keeping the mind of man in an iron chain. They are accustomed to add that unless such creeds and beliefs shall stand, morality will die out altogether. But experience does not prove the position to be correct.

For numerous examples exist in the dissenting or Protestant form of Christianity showing that the important doctrines of the Church are not necessary for the prevailing of good morals; and, on the other hand, immorality, vice, and crime in places high and low coexist with a formal declaration of belief in the church dogmas. In many parts of Italy the grossest superstition and murderous vengefulness and crooked hearts are found side by side with an outwardly pious compliance with the ordinances of the Church and a superstitious belief in its dogmas. The whole Christian assembly of nations officially violates the commands of Jesus every day and hour.

Shall it be worse or better, or kind or harsh, to tear away the veil as quickly as possible? And if the iconoclastic attack should be made, for what reason ought one to hesitate because the operation and the attack may result in mental pain?

The only reason for hesitation lies in this fear to give pain; there can be nothing but good result from the change from an untrue and illogical, and therefore debasing, creed, if a system that is

complete and reasonable be furnished in its place.

Were we dealing with children or with a race mind which though dwelling in an adult body is but that of a child, then, indeed, it would be right to lead them on by what may be entirely an illusion. But the day of man's childhood as an immortal being has passed away. He is now grown up, his mind has arrived at the point where it must know, and when, if knowledge be refused, this violation of our being will result in the grossest and vilest superstition or the most appalling materialism. No child is born without the accompanying pains, and now the soul-mind of man is struggling for birth. Shall we aid in preventing it merely for the avoidance of preliminary pain? Shall we help a vast brood of priests to refasten the clamps of steel which for so many centuries they have held tightly on the race-mind? Never, if we see the great truth that we are preparing for a cycle when reason is to take her place beside the soul and guide the pilgrim to the tree of life eternal.

Be not beguiled by the argument that 'tis unwise to tell the truth. It is but the song of the siren, intended to lure the traveler to his doom.

Tell the truth, but do not force it. If even a pious soul should lose the historical Jesus Christ and see instead the glorious image of the Self in every man, that were a gain worth all the pain the first rude shock might give. The danger of lifting the veil of Isis lies not in the doctrines of Unity, Reincarnation, and Karma, but in untaught mysteries which no Theosophist is able to reveal. The change from dogma or creed to a belief in law and justice impartial will bring perhaps some tears to the soul, but the end thereof is peace and freedom.

That "great orphan Humanity", now grown up, no longer needs the toys of a thousand years ago, but requires, and with a voice

like the rush of mighty waters demands, that every veil shall be lifted, every lie unveiled, and every light be lighted that can shed a ray upon the remainder of its toilsome road.

The Path

PROBLEMS IN PSYCHOLOGY — *J. D. Buck*

The materialist will claim the eternity of Matter, the eternity of Force, the universality of Law, and therefore the Eternity of Nature. Eternal Nature is, therefore, an expression with which the intelligent materialist has no reason to quarrel. A ceaseless Evolution takes the place of the old idea of Creation. All Time, past, present, and future, is involved in this ceaseless Evolution. Matter exists in many forms, and differs very widely in density, mobility, etc. So also with force, which manifests in an endless variety of modes. We use the generic terms matter and force so as to include all forms, and these generic terms have been admitted by many leading scientists of the present day to imply a common substratum, a universal substance from which all forms of matter have differentiated, and a universal energy appearing in many forms. A very considerable portion of modern investigation proceeds from these general concepts of Eternal Nature. When, however, it is proposed also to use the generic terms Universal Spirit, Universal Mind, Universal Consciousness, and Universal Life, the average materialist protests, because of the Mechanical Theory of modern science which undertakes to reduce all problems to mass and motion.

Without stopping to show the absurdity of such a position, we may simply remark that there is precisely the same justification for the idea of Universal spirit, mind, consciousness, and life as for matter, force, and law. In any last analysis we know as much of the one as of the other. Neither is any one less justified by sound reason than another. The materialist without greatly changing his idea has simply to enlarge his thought and improve his methods. We might add that universal spirit, mind, consciousness, and life are latent and potential in Eternal Nature,

though manifesting under certain definite conditions, in certain definite forms, and always under the dominion of universal law. The ability to recognize any of these multitudinous manifestations depends on the point gained in the evolution of the individual. We are compelled by logic and analogy to admit that manifestations may be continually occurring around us of which we are entirely unconscious, and as a higher consciousness is evolved in us these manifestations may become known to us. These are logical deductions from common experience, and warranted by the known laws of evolution. In other words, man is capable of recognizing and apprehending universal evolution, according to the degree and extent of his own evolution.

Now the common factor in Eternal Nature and in man by which, while involved in and evolving with nature, man is enabled to know both nature and himself, is *Consciousness*. All of manifested nature has been designated as embodied consciousness. The relation of universal consciousness and individual consciousness is as logical and apprehensible as universal and individual life, or as universal matter and force, and any special differentiation of matter and force occurring either in man or in nature. What consciousness may be *per se*, we know as little as we know the ultimate nature of matter and force. Nearly all of the leading scientists of the day admit that in the last analysis we know really nothing of matter and force. It may, therefore, be logically claimed that our knowledge of mind, life, and spirit is of precisely the same character, derived in the same way as is our knowledge of matter and force, *viz.*, through conscious experience in the process of evolution. Beyond this is simply a war of words, empty and profitless. In the Theosophical classification of the seven-fold principles or planes of eternal nature we find *Mahat*, or Cosmic Ideation. It is the principle of all forms, universal mind, the phenomenal aspect of universal spirit, or consciousness.

Universal consciousness manifests only as universal mind, and this universal mind is the origin of consciousness in man. Universal consciousness is latent, potential, unmanifested. It is the "rootless root". Universal mind or cosmic ideation is the phenomenal aspect of universal consciousness, is its differentiation, while this root from which it springs remains potential and forever concealed. Cosmic Ideation, therefore, manifests that eternal potency which is itself forever concealed, and by differentiation throughout the universe gives form and law to all phenomena, while sinking its roots into that which is itself rootless, because it is the universal, unknown, and forever unknowable source of all. However widely differentiation proceeds, even down to the lowest plane of matter, there is through every manifestation, in every atom of matter, and in every element of force, the endless thread or root connecting the latest differentiation with its primal source. Out from this unknown source of all nature, all being and all life, have all things come, and back into it must all things return.

Here, then, we have the metaphysical basis and the sound philosophy for all psychological problems. Man is an epitome of eternal nature. Mind in man is related to his own consciousness, as cosmic ideation or universal mind is related to universal consciousness. The known, the manifested, the phenomenal is differentiated from the unknown, the unmanifested, the *noumenal*. Observe the logical sequence. Consciousness in man is the root of mind; universal mind is the root of man's consciousness: universal consciousness is the root of universal mind. In the outbreathing of Brahm, or the one life, an unbroken chain runs through all being and all creation, connecting all with the ever concealed "Principle of Principles". Nature and man evolve on lower and still lower planes by virtue of their continually involving their original source or potency, and their

continual differentiation of the original substance and energy. Man is thus at one with eternal nature, and his consciousness is but one remove from its original source. Beyond this the problem in man's evolution is his Manasic development, or the differentiation and phenomenal display through his varied experience of his states of consciousness. Amid all of man's varied experiences, in all mental states, in delirium, hallucination, hypnotization, insanity, even down to imbecility and idiocy, the substratum of mind, *i.e.*, consciousness, remains the same. In sleep, in dreams, and in dreamless sleep, consciousness still remains. That which so continually and so greatly changes is the relations and manifestations of mind to its root, consciousness. Mind is the basis of man's experience, the theater of his evolution, the battle-ground wherein is fought out his triumph or his defeat as a self-conscious, rational individuality.

All that I am is the result of what I have thought. It is composed of my thought, it is made up of my thoughts.

The potency of all that I may yet be lies concealed in my consciousness, as the source of the fountain lies concealed in the bosom of mother earth. The plane of all illusions is in my mind. If I control and suppress thought and sink back into consciousness, silencing the voice of the many, I shall hear the voice of the *One*, the Eternal.

The Path

REINCARNATION IN THE BIBLE — *William Brehon*

An exhaustive paper on this subject is not contemplated in this article, but even a sketch will show that the Christian Bible has in it the doctrine of Reincarnation. Of course those who adhere only to what the church now teaches on the subject of man, his nature and destiny, will not quickly accept any construction outside of the theological one, but there are many who, while not in the church, still cling to the old book from which they were taught.

In the first place, it must be remembered that the writers of the biblical books were Jews with few exceptions, and that the founder of Christianity — Jesus — was himself a Jew. An examination of his own sayings shows that he thought his mission was to the Jews only and not to the Gentiles. He said, "I am not sent but unto the lost sheep of the house of Israel". This clearly referred to the Jews and as clearly excluded the Gentiles. And on one occasion he refused for some time to do anything for a Gentile woman until her importunity at last compelled him to act: and then too he referred to his mission to the Jews. So in looking into these things we must also look at what were the beliefs of the day. The Jews then most undoubtedly believed in reincarnation. It was a commonly accepted doctrine as it is now in Hindustan, and Jesus must have been acquainted with it. This we must believe on two grounds: first, that he is claimed by the Christian to be the Son of God and full of all knowledge; and second, that he had received an education which permitted him to dispute with the doctors of divinity. The theory of reincarnation was very old at the time, and the old testament books show this to be so.

"Proverbs" gives the doctrine where Solomon says he was with the Creator from the beginning and that then his (Solomon's)

delights were with the sons of men and in the habitable parts of the earth. This disposes of the explanation that he meant he existed in the foreknowledge of the Creator, by the use of the sentences detailing his life on the earth and with men. Then again Elias and many other famous men were to actually return, and all the people were from time to time expecting them. Adam was held to have reincarnated to carry on the work he began so badly, and Seth, Moses, and others were reincarnated as different great persons of subsequent epochs. The land is an oriental one, and the orientals always held the doctrine of the rebirth of mortals. It was not always referred to in respect to the common man who died and was reborn, but came up prominently when the names of great prophets, seers, and legislators were mentioned. If readers will consult any well educated Jew who is not "reformed", they will gain much information on this national doctrine.

Coming now to the time of Jesus, all the foregoing has a bearing on what he said. And, of course, if what he said does not agree with the view of the church, then the church view must be given up or we will be guilty of doubting the wisdom of Jesus and his ability to conduct a great movement. This, indeed, is the real position of the Church, for it has promulgated dogmas and condemned doctrines wholly without any authority, and some that Jesus held himself it has put its anathema upon.

When there was brought into the presence of Jesus a man who was born blind, the disciples naturally wondered why he had thus been punished by the Almighty, and asked Jesus whether the man was thus born blind for some sin he had committed, or one done by his parents. The question was put by them with the doctrine of reincarnation fully accepted, for it is obvious the man must have lived before, in their estimation, in order to have done sin for which he was then punished. Now if the doctrine was wrong and pernicious, as the church has declared it to be by

anathematizing it, Jesus must have known it to be wrong, and then was the time for him to deny the whole theory and explode it, as well as definitely putting his seal of condemnation upon it for all time. Yet he did not do so; he waived it then and said the blindness was for other reasons in that case. It was not a denial of it.

But again when John the Baptist, who had, so to say, ordained Jesus to his ministry, was killed by the ruler of the country, the news was brought to Jesus, and he then distinctly affirmed the doctrine of reincarnation. Hence his waiving the matter in the case of the blind man is shown to have been no refusal to credit the theory. Jesus affirmed the doctrine, and also affirmed the old ideas in relation to the return to earth of the prophets by saying that the ruler had killed John not knowing that he, John, was Elias "who was for to come".

On another occasion the same subject arose between Jesus and the disciples when they were talking about the coming of a messenger before Jesus himself. The disciples did not understand, and said that Elias was to come first as the messenger, and Jesus distinctly replied that Elias had come already in the person called John the Baptist. This time, if any, was the time for Jesus to condemn the doctrine, but, on the contrary, he boldly asserts it and teaches it, or rather shows its application to certain individuals, as was most interesting and instructive for the disciples who had not enough insight to be able to tell who any man was in his real immortal nature. But Jesus, being a seer, could look into the past and tell them just what historical character any one had been. And so he gave them details about John, and we must suppose more particulars were gone into than have come down to us in the writings naturally incomplete and confessed to be but a partial narrative of the doings and sayings of Jesus.

It must now be evident that there is a diametrical disagreement between the church and Jesus. The church has cursed the doctrine he taught. Which is right? The true believer in Jesus must reply that Jesus is; the church will say it is right by acting on that line. For if the doctrine be taught, then all men are put on an equal basis, and hence the power of the human rulers of heaven and earth is at once weakened. Such an important doctrine as this is one that Jesus could not afford to pass over. And if it is wrong, then it was his duty to condemn it: indeed, we must suppose that he would have done so were it not entirely right. And as he went further, even to the extent of affirming it, then it stands with his seal of approval for all time.

John the Revealer believed it of course, and so in his book we find the verse saying that the voice of the Almighty declared that the man who overcame should "go out no more" from heaven. This is mere rhetoric if reincarnation be denied; it is quite plain as a doctrine if we construe it to mean that the man who by constant struggle and many lives at last overcomes the delusions of matter will have no need to go out into life any more, but from that time will be a pillar, what the Theosophist knows as "Dhyan Chohan" forevermore. And this is exactly the old and oriental doctrine on the point.

St. Paul also gives the theory of reincarnation in his epistles where he refers to the cases of Jacob and Esau, saying that the Lord loved the one and hated the other before they were born. It is obvious that the Lord cannot love or hate a non-existing thing, and that this means that Jacob and Esau had been in their former lives respectively good and bad and therefore the Lord — or Karma — loved the one and hated the other before their birth as the men known as Jacob and Esau. And Paul was here speaking of the same event that the older prophet Malachi spoke of in strict

adherence to the prevalent idea. Following Paul and the disciples came the early fathers of the church, and many of them taught the same. Origen was the greatest of them. He gave the doctrine specifically, and it was because of the influence of his ideas that the Council of Constantinople 500 years after Jesus saw fit to condemn the whole thing as pernicious. This condemnation worked because the fathers were ignorant men, most of them Gentiles who did not care for old doctrines and, indeed, hated them.

So it fell out of the public teaching and was at last lost to the Western world. But it must revive, for it is one of the founder's own beliefs, and as it gives a permanent and forceful basis for ethics it is really the most important of all the Theosophical doctrines.

The Path

INTERFERENCE BY ADEPTS — *Alexander Fullerton*

When things are palpably going wrong in any department of life, and it is known that men deeply interested therein have both the power and the skill to effect correction, they are naturally expected to apply them. To abstain seems a denial of either the interest or the ability. And so when the bitter sorrows of a vast humanity, or calamitous mismanagement in national affairs, or the ills of a locality pain a philanthropic heart, and when it ejaculates a wish that it was mighty enough to arrest the whole evil and dry away the tears from every face, instinctively it wonders why Those who are do not. What is the use of prerogative if it lies motionless when most needed; of what real value are superior knowledge and power if they do not avert catastrophe and abate suffering? And, indeed, what are we to think of the claim that They are tender and sympathetic and beneficent, if on the face of things They appear wholly indifferent and inactive? Masters would seem a superfluity in Nature if, while able to cure evil and establish good, They let each work itself out untouched.

We shall never solve this anomaly unless through the principle of analogy. Do we instantaneously rectify every evil where we have the power? Every parent and employer can answer this question, every teacher and guardian. All intelligent education is based on the doctrine that truth is real to a mind only as it is realized, and that the realization comes through experience. Guidance, suggestion, warning may be proffered, but, if defied, no amount of coercive restraint can vindicate their wisdom to the recipient: he must learn it only through the results of defiance. A muscular father could always hold back a son from games or projects involving risk, but only at the sacrifice of his own time and the

boy's experience. A teacher could always interpose when a pupil was at bay over a problem in mathematics or translation, but what would become of the patience, the resolution, the persistence, the mental dexterity which are the fruit only of self-effort? And what, too, of the healthy glow from conquest which is sweeter far than a relief conferred? It is by undergoing all the processes which lead from inexperience to maturity that a mind becomes developed in its own powers, and that it sees the reason for things and the reality underlying form. This never arrives through the dictum of another, or his enforcement of counsel however wise. The governments known as "paternal" are fatal to self-reliance, and foster a childishness of spirit and judgment which results in national decay. It is as men and nations work out their own problems that they reach wise and enduring issues.

Nor is this the only reason why Adepts are not interposing powers. Ordinary men, being less enlightened, must necessarily have other convictions, and the less the enlightenment the more positive the adherence to them. Any different course would therefore have to be secured through sheer coercion, and the violent subjection of another's will is a thing repugnant to the universal Law, to Justice, Right, and the very initial principles of Occult training. An Adept's nature would preclude the wish for any pressure beyond currents of intelligence and good feeling, and, if it could so far reverse itself, it would be held in check by Law.

And then there is the deep conviction of the sacredness of Karma. To wrest forces from their natural course would do much more than introduce confusion and disorder into the moral world: it would be to create new forces to re-act on their authors. Thus the two-fold result would follow, that the normal order would be disarranged and its ordained good be lost, and the created forces would rebound into the sphere which, because of its occultly-

acquired harmony with Law, has surpassed the range of Karmic influence. Illegal interference by Adepts would therefore not only make things worse for men, it would put an end to Adeptship.

But how, then, it may be asked, can Adepts act at all? Why is not suggestion, influence, thought-impression as much an interference as restraint? Simply because it is in accordance with Law and not in contravention of Law. Here again analogy illustrates. We point out to a less experienced person a better way than his own, we suggest to our fellow-men more sagacious plans and easier methods. The bringing of more light is ever a gracious and worthy act. It proffers, it does not insist; it aids, it does not coerce. The choice, and therefore the responsibility, still rest on the one approached. There is no subversion of will, no restraint of freedom. No counter-forces are aroused, and no Karmic reaction excited. The gentle influences of a kind cooperation steal peacefully over the mind addressed, and what would be resentment at dictation is gratitude for assistance. There is health in help: there would be palsy in prescription.

And so, it would seem, the policy of Adepts finds its vindication in our own. When we wish to change the course of a neighbor or a nation, we know that it can effectively be done only as the conviction prompting to that course is changed, and so we expound the contrary considerations and suggest such facts as may operate on reason. Absence of dogmatic method is the first requisite to tact. The plastic material of the human mind is moulded by manipulation, not by blows. Thus the Adepts work. On the flowing currents They let loose a thought which shall be borne along to a harbor where it will be welcomed; They put a motive within the attractive range of a vigorous soul; They gently feed an aspiration which is weakening or a force which has declined. Ever alert for that beneficence of which They are the embodiment, They see with eagerness every glance towards

higher possibilities, every motion to a loftier plane. And then They aid it. They know how They were aided as They struggled on to Their present sphere, and They pay the debt by passing on that given strength. It may not be possible to obliterate human misery, for nothing can do that save obliteration of the human ignorance and folly which produce misery, but it is possible to prompt a wish for its obliteration, and then to help each philanthropist attempting it. And however silent the Masters may seem, and however remote and listless, no man who deeply feels the call to altruistic effort need doubt that it comes from that hidden Brotherhood, and no man who responds to it need imagine that They who have reached him with Their voice will not reach him with Their help.

The Path

ROUNDS AND RACES — *Alpha*

A fundamental axiom in Theosophy is that no one should accept as unquestionably true any statement of fact, principle, or theory which he has not tested for himself. This does not exclude a reasonable reliance upon testimony; but only that blind credulity which sometimes passes for faith. As we understand the rule, it is that we should at all times keep a clear and distinct boundary between what we know, and what we only accept provisionally on the testimony of those who have had larger experience until we reach a point of view from which we can see its truth. We owe it to ourselves to enlarge the sphere of clear knowledge and to push back as far as possible the boundary of opinion and hypothesis.

The realm of knowledge has various departments. Our physical senses furnish us one class of knowledge; our intellectual powers investigate another field on mathematical lines; and yet another faculty enables us to apprehend ethical teachings and to trace them to their true basis in Karma. That we have other faculties, now largely latent, which when developed will enable us to enter other fields of observation and investigation, is beginning to be seen and appreciated. Among the subjects which man may thus in the future examine for himself is a large block of truth concerning evolution, the out-breathing of the Great Breath, the birth and development of a chain of globes, and of human life thereon, some part of which has been imparted to us by those who claim to know, and which is chiefly useful, perhaps, for the light which it throws on our surroundings, our destiny, and our duty.

The grander sweeps of this block of truth are given to us in the

barest outline, and not until our present physical earth is reached do we find anything like detailed information. From the hints given out, however, and reasoning according to the doctrine of correspondences, "as above, so below", we may plausibly infer many things in regard to other globes and other systems; but such flights can hardly be taken with much profit or advantage until we become thoroughly familiar with the things that are revealed in regard to our immediate surroundings.

The planetary chain consists of seven companion globes, which for convenience of reference are named from the first seven letters of the alphabet, A, B, C, D, E, F, and G. We occupy globe D, the fourth in the chain. The course of evolution begins on globe A, and proceeds by regular stages through globes B, C, D, E, etc. In the beginning, globe A was first evolved, and life received a certain degree of development upon it; then globe B came into existence, and the life-wave removed from globe A to B, where it went forward another stage; then globe C was evolved and received the life wave for a still further stage in its progress; and so on, until at the end of the first round globe G was evolved and furnished the field for the highest development attainable in that round.

The first round — the first tour of the life-wave through the seven globes from A to G — having been completed, the monads — the life wave — passed again to globe A, and commenced the second round, or the second tour through the chain. Without following out details, it is enough to say that three such rounds have been completed, and the fourth round has commenced its sweep and is still in progress; and that we now occupy globe D in this fourth round. Three times the life-wave has passed from globe A to globe G; and has now reached globe D in its fourth tour through the chain.

Now, leaving entirely out of sight for the present what has happened during the former three rounds, and on globes A, B, and C in this fourth round, let us consider what has happened on globe D since the life-wave reached it this fourth time; prefacing, however, the general statement that this globe will be exhausted and the life-wave be ready to pass from it to Globe E when seven root-races shall have finished their course here. Each root-race is divided into seven sub-races; and each sub-race into seven family-races; and so on; these divisions and subdivisions following each the other, and not coexisting, except as an earlier race or division of a race may survive its time and overlap a subsequent race or division. Since the life-wave reached globe D in this fourth round, four root-races have run their course upon it, and the fifth root-race has reached its fifth subdivision or sub-race, of which we are part. This fifth sub-race is said to be preparing in America for transition or transformation into the sixth sub-race: it is not entirely clear whether we in the United States today belong to the seventh family-race of the fifth sub-race, or to the first family race of the sixth sub-race. It seems certain that we are near the transition point, unless there must be an intervening pralayaic period.

The sixth and seventh sub-races of the fifth root-race must run their course, and these must be followed by the sixth and seventh root-races with their various subdivisions, before the life-wave passes from our present globe D and begins its further evolution on globe E. From analogy we may infer that seven great races, with their sub-races, etc., will be necessary to complete the work of that globe; and the same for globes F and G, before the fourth round shall be concluded and the life-wave be ready to pass to globe A for the beginning of the fifth round.

Thus the planetary chain consists of seven globes; the life-wave makes during the existence of the chain seven complete tours of

the chain from globe A to globe G, these tours being called rounds; the life-wave remains on each globe after reaching it in each round, until it completes seven root races, divided into forty-nine sub-races and into three hundred and forty-three family-races.

It should be remembered that the flow of the life-wave is not continuous: it has its ebb as well as its flood. There is a period of rest or pralaya after the close of each round before another is commenced: a pralaya after each globe in the round; similarly each race, sub-race, etc., is preceded and followed by its pralayaic rest. The purpose of this paper is not to develop the entire scheme in all its completeness, even if that were possible; but to bring out as sharply as may be the general outlines, and especially to note the distinction between rounds and races, the seven rounds being seven circuits of the entire chain, while the seven root-races are seven life-waves (or seven repetitions of the same wave) which consecutively flow and ebb on each globe before leaving it. There are seven root-races on each globe; forty-nine root-races in each round; three hundred and forty-three root-races in the seven rounds which complete the life of the planetary chain.

In studying this subject, it must be borne in mind that, while numerous passages in the *Secret Doctrine* refer to universal cosmogony and the evolution of the solar system and of our planetary chain, still the bulk of that work is devoted to the evolution of humanity on globe D in the fourth round only. It must also be remembered that the groups of monads discussed in "Theosophical Gleanings" in vol. vi of *Lucifer* are not to be taken as identical with the seven root-races through which the monadic host passes on each globe in each round.

The foregoing outline of the course of evolution through the SEVEN ETERNITIES of a maha-manvantara is mechanical and clumsy; it is

only a skeleton, which must be clothed upon with muscles and sinews by reading between the lines before its true relations and proportions can be understood. The following quotations from *The Secret Doctrine* will perhaps throw a ray of light upon the connection of the globes of the chain: "It only stands to reason that the globes which overshadow our earth must be on different and superior planes. In short, as globes, they are in CO-ADUNITION but not IN CONSUBSTANTIALITY WITH OUR EARTH". (The capitals are in the text). Vol. I, p. 166.

"When 'other worlds' are mentioned . . . the Occultist does not locate these spheres either *inside* or *outside* our earth . . . for their location is nowhere in the space *known* to and conceived by the profane. They are, as it were, blended with our world, interpenetrating it and interpenetrated by it". Vol. I, p. 605.

In a foot note to page 265 of Walker's work on Reincarnation, (Lovell's edition), the opinion is expressed that the figures (seven planets, seven rounds, seven races, etc.), are only symbols; even so: if they are symbols, they must no less be clearly apprehended before the truths symbolized can be grasped.

The Path

IMAGINATION AND OCCULT PHENOMENA — *William. Q. Judge*

The faculty of imagination has been reduced to a very low-level by modern western theorists upon mental philosophy. It is "only the making of pictures, day-dreaming, fancy, and the like": thus they have said about one of the noblest faculties in man. In Occultism it is well known to be of the highest importance that one should have the imagination under such control as to be able to make a picture of anything at any time, and if this power has not been so trained the possession of other sorts of knowledge will not enable one to perform certain classes of occult phenomena.

Those who have read Mr. Sinnett's *Occult World* will have noticed two or three classes of phenomena performed by H. P. Blavatsky and her unseen friends, and those who have investigated spiritualism will know that in the latter have been many cases of similar phenomena done by so-called "controls". Others who made no such investigations have, however, on their own account seen many things done by forces not mechanical but of a nature which must be called occult or psychical. In spiritualism, and by the Adepts like H. P. Blavatsky and others, one thing has excited great interest, that is the precipitating on to paper or other substances of messages out of the air, as it were, and without any visible contact between the sender of the message and the precipitated letters themselves. This has often occurred in *seances* with certain good mediums, and the late Stainton Moses wrote in a letter which I saw many years ago that there had come under his hand certain messages precipitated out of the air. But in these cases the medium never knows what is to be precipitated, cannot control it at will, is in fact wholly ignorant of the whole matter and the forces operating and how they operate. The elemental

forces make the pictures through which the messages are precipitated, and as the inner nature of the medium is abnormally developed, acting subconsciously to the outer man, the whole process is involved in darkness so far as spiritualism is concerned. But not so with trained minds or wills such as possessed by Madame Blavatsky and all like her in the history of the past, including the still living Adepts.

The Adepts who consciously send messages from a distance or who impress thoughts or sentences on the mind of another at a distance are able to do so because their imagination has been fully trained.

The wonderworker of the East who makes you see a snake where there is none, or who causes you to see a number of things done in your presence which were not done in fact, is able to so impress you with his trained imagination, which, indeed, is also often in his case an inheritance, and when inherited it is all the stronger when trained and the easier to put into training. In the same way but to a much smaller degree the modern western hypnotizer influences his subject by the picture he makes with his imagination in those cases where he causes the patient to see or not to see at will, and if that power were stronger in the West than it is, the experiments of the hypnotizing schools would be more wonderful than they are.

Take the case of precipitation. In the first place, all the minerals, metals, and colored substances any one could wish for use are in the air about us held in suspension. This has long been proved so as to need no argument now. If there be any chemical process known that will act on these substances, they can be taken from the air and thrown down before us into visibility. This visibility only results from the closer packing together of the atoms of matter composing the mass. Modern science has only a few

processes for thus precipitating, but while they do not go to the length of precipitating in letters or figures they do show that such precipitation is possible. Occultism has a knowledge of the secret chemistry of nature whereby those carbons and other substances in the air may be drawn out at will either separately or mixed. The next step is to find for these substances so to be packed together a mold or matrix through which they may be poured, as it were, and, being thus closely packed, become visible. Is there such a mold or matrix?

The matrix is made by means of the trained imagination. It must have been trained either now or in some other life before this, or no picture can be precipitated nor message impressed on the brain to which it is directed. The imagination makes a picture of each word of each letter of every line and part of line in every letter and word, and having made that picture it is held there by the will and the imagination acting together for such a length of time as is needed to permit the carbons or other substances to be strained down through this matrix and appear upon the paper. This is exactly the way in which the Masters of H. P. B. sent those messages which they did not write with their hands, for while they precipitated some they wrote some others and sent them by way of the ordinary mail.

The explanation is the same for the sending of a message by words which the receiver is to hear. The image of the person who is to be the recipient has to be made and held in place; that is, in each of these cases you have to become as it were a magic lantern or a camera obscura, and if the image of the letters or if the image of the person be let go or blurred, all the other forces will shoot wide of the mark and naught be accomplished. If a picture were made of the ineffectual thoughts of the generality of people, it would show little lines of force flying out from their brains and instead of reaching their destination falling to the earth just a few

feet away from the person who is thus throwing them out.

But, of course, in the case of sending and precipitating on to paper a message from a distance, a good many other matters have to be well known to the operator. For instance, the inner as well as the outer resistance of all substances have to be known, for if not calculated they will throw the aim out, just as the billiard ball may be deflected if the resistance of the cushion is variable and not known to be so by the player. And again, if a living human being has to be used as the other battery at this end of the line, all the resistances and also all the play of that person's thought have to be known or a complete failure may result. This will show those who inquire about phenomena, or who at a jump wish to be adepts or to do as the adepts can do, what a task it is they would undertake. But there is still another consideration, and that is that inasmuch as all these phenomena have to do with the very subtle and powerful planes of matter it must follow that each time a phenomenon is done the forces of those planes are roused to action, and reaction will be equal to action in these things just as on the ordinary plane.

An illustration will go to make clear what has been said of the imagination. One day H. P. Blavatsky said she would show me precipitation in the very act. She looked fixedly at a certain smooth piece of wood and slowly on it came out letters which at last made a long sentence. It formed before my eyes and I could see the matter condense and pack itself on the surface. All the letters were like such as she would make with her hand, just because she was making the image in her brain and of course followed her own peculiarities. But in the middle, one of the letters was blurred and, as it were, all split into a mass of mere color as to part of the letter.

"Now here," she said, "I purposely wandered in the image, so that

you could see the effect. As I let my attention go, the falling substance had no matrix and naturally fell on the wood any way and without shape."

A friend on whom I could rely told me that he once asked a wonderworker in the East what he did when he made a snake come and go before the audience, and he replied that he had been taught from very early youth to see a snake before him and that it was so strong an image everyone there had to see it.

"But," said my friend, "how do you tell it from a real snake?"

The man replied that he was able to see through it, so that for him it looked like the shadow of a snake, but that if he had not done it so often he might be frightened by it himself. The process he would not give, as he claimed it was a secret in his family. But anyone who has made the trial knows that it is possible to train the imagination so as to at will bring up before the mind the outlines of any object whatsoever, and that after a time the mind seems to construct the image as if it were a tangible thing.

But there is a wide difference between this and the kind of imagination which is solely connected with some desire or fancy. In the latter case the desire and the image and the mind with all its powers are mixed together, and the result, instead of being a training of the image-making power, is to bring on a decay of that power and only a continual flying to the image of the thing desired. This is the sort of use of the power of the imagination which has lowered it in the eyes of the modern scholar, but even that result would not have come about if the scholars had a knowledge of the real inner nature of man.

A COMMENTARY ON THE GAYATRI — *An Obscure Brahman*

Unveil, O Thou who givest sustenance to the Universe, from whom all proceed, to whom all must return, that face of the True Sun now hidden by a vase of golden light, that we may see the truth and do our whole duty on our journey to thy sacred seat. — *The Gayatri*.

I have adopted a translation as above, which is excellent in its giving of the meaning of this verse. What is the Gayatri? It is the sacred verse of the Hindus and begins with Om, their sacred word and letter. Its first words are: *Om, Bhur, Bhurvah!*

The first word contains in it a declaration of the three periods of a Manvantara and the three powers of that great Being who alone Is. Of a manvantara it is the beginning, the middle, and the end, and the three powers are Creation (or manifesting), Preservation (or carrying on), and Destruction. The three first words, Om, bhur, bhurvah, draw attention to and designate the three worlds. The whole verse is an aspiration in the highest sense. Every Brahman at his initiation is further instructed in this verse, but from giving that I am necessarily excused, as I cannot give it in a way in which I have not received it.

Unveil is the cry of the man who is determined to know the truth and who perceives that something hides it from him. It is hidden by his own Karmic effects, which have put him now where the brain and the desires are too strong for the higher self to pierce through so long as he remains careless and ignorant. The cry is not made to some man-made god with parts, passions, and attributes, but to the Self above who seeth in secret and bringeth out to light. It is directed to that on which the Universe is built and standeth, — no other than the Self which is in every man and

which sitteth like a bird in a tree watching while another eats the fruit.

From this the whole Universe proceeds out into manifestation. The ancients held that all things whatsoever existed in fact solely in the idea, and therefore the practitioner of Yoga was taught — and soon discovered — that sun, moon, and stars were in himself, and until he learned this he could not proceed. This doctrine is very old, but today is adopted by many modern reasoners. For they perceive on reflection that no object enters the eye, and that whether we perceive through sight or feeling or any other sense whatever all objects are existing solely in idea. Of old this was demonstrated in two ways. First, by showing the disciple the actual interpenetration of one world by another. As that while we live here among those things called objective by us, other beings were likewise living in and among us and our objects and therein actually carrying on their avocations, perceiving the objects on their plane as objective, and wholly untouched by and insensible to us and the objects we think so material. This is no less true today than it was then. And if it were not true, modern hypnotism, clairvoyance, or clairaudience would be impossible. This was shown by a second method precisely similar to mesmeric and hypnotic experiments, only that to these was added the power to make the subject step aside from himself and with a dual consciousness note his own condition. For if a barrier of wood were erected in the sight of the subject which he clearly perceived and knew was wood, impervious to sight and an obstacle to movement, yet when hypnotised he saw it not, yet could perceive all objects behind it which were hidden in his normal state, and when he pressed against it thinking it to be empty air and feeling naught but force, he could not pass but wondered why the empty air restrained his body. This is modern and ancient. Clearly it demonstrates the illusionary nature of

objectivity. The objectivity is only real relatively, for the mind sees no objects whatever but only their idea, and at present is conditioned through its own evolution until it shall have developed other powers and qualities.

The request made in the verse to *unveil the face of the True Sun* is that the Higher Self may shine down into us and do its work of illumination. This also spreads forth a natural fact unknown to moderns, which is that the Sun we see is not the true sun, and signifies too that the light of intellect is not the true sun of our moral being. Our forefathers in the dim past knew how to draw forth through the visible Sun the forces from the True one. We have temporarily forgotten this because our evolution and descent into the hell of matter, in order to save the whole, have interposed a screen. They say in Christian lands that Jesus went into hell for three days. This is correct, but not peculiar to Jesus. Humanity is doing this for three days, which is merely the mystical way of saying that we must descend into matter for three periods so immense in time that the logarithm of one day is given to each period. Logarithms were not first known to Napier, but were taught in the pure form of the mysteries, because alone by their use could certain vast calculations be made.

Which is now hidden by a vase of Golden Light. That is, the light of the True Sun — the Higher Self — is hidden by the blood contained in the vase of the mortal body. The blood has two aspects — not here detailed — in one of which it is a helper to perception, in the other a hindrance. But it signifies here the passions and desires, *Kama*, the personal self, the thirst for life. It is this that veils from us the true light. So long as desire and the personality remain strong, just so long will the light be blurred, so long will we mistake words for knowledge and knowledge for the thing we wish to know and to realize.

The object of this prayer is that we may carry out our whole duty, after becoming acquainted with the truth, while we are on our *journey to thy Sacred Seat*. This is our pilgrimage, not of one, not selfishly, not alone, but the whole of humanity. For the sacred seat is not the Brahmanical heaven of Indra, nor the Christian selfish heaven acquired without merit while the meritorious suffer the pains of hell. It is that place where all meet, where alone all are one. It is when and where the three great sounds of the first word of the prayer merge into one soundless sound. This is the only proper prayer, the sole saving aspiration.

The Path

THE ADEPTS — *William Brehon*

SOME OBJECTIONS AND ANSWERS TO THEM.

In this I purpose to give but the condensed form of some objections made to the theory of the existence of the Adepts, and of the answers which might be made. The objections are variously founded, applying as well to the names Masters and Mahatmas as to other designations.

"MASTERS" IS OBJECTIONABLE because contrary to Republicanism or Democracy or Individualism.

But *master* comes from *magister*, who is a teacher, an expounder as well as applier of the law; hence *magistrate*. Every one, in fact, has a master, whether it be physically, mentally, or morally; and this objection is but the old and foolish exhibition of contempt for regulations of a government from which America escaped long ago.

THE OBJECTOR HAS NEVER SEEN AN ADEPT. This would apply equally to the assertion of the existence of Napoleon or any other character one has not seen, and with more force. For there was but one Napoleon, while there have been and are many Adepts. The ancients all relate histories of Adepts; the Hindus of today do the same; many of the writers of the middle ages and the traditions of the same period speak of them as accepted facts; the traditions of all countries not so new as this give similar testimony; the Chinese, Tibetans, Burmese, and other Oriental people tell of such personages, while Chinese, Buddhist, and Hindu literature teems with testimony. Hence to support the doctrine there is a mass of human testimony larger than that which declares that Buonaparte once dominated Europe. Lastly, several reputable

Europeans and Americans, members of the Theosophical Society, affirm on their own knowledge the existence of these Adepts.

THE MODERN CRITIC SAYS: *First*, why do not these Adepts come out to satisfy curiosity if they are men? This question is out of the same spirit that creates the sensational, vulgar, and prying newspaper which spreads before the public, because it is called for by the public, the private details of everyone's existence. *Second*, why not appear and destroy evil if they have great powers? The Adepts have replied that there is no power to destroy the evil man has produced but in the efforts he himself makes for purification. *Thirdly*, why not come and wipe out abuses? *Fourthly*, why not multiply food in famine time?

Other replies to these may be thus tabulated:

(a) The nature of humanity at present is the product of evolution, and only evolution conducted in an orderly manner can alter by perfecting, refining, and purging.

(b) It is ridiculous for the Western nations to demand that the Adepts shall multiply food when every one knows there is at all times enough food in hand, either unused or locked up by the men of greed, to feed all the hungry.

(c) If food were multiplied thus in the Western world, those who did it would be imprisoned and classed as criminal, for inevitably either the food would be said to be stolen or else the charge of interfering with trade would follow. In Berlin in 1892 the starving people took bread from the shops and were punished for theft. The moral and conclusion are obviously against the objector.

(d) No one can disprove the claim made that Adepts have multiplied food in famine times in Eastern lands where condemnation and persecution do not follow that act.

(e) Admitting that the Adepts have great powers, they have disclaimed the power to alter human nature in any other way than through the processes of evolution and always strictly under a rigid law of justice.

(f) The Adepts do not yet appear publicly and proclaim themselves to the world for reasons found in the above replies, and also because the cycle must run its course, since, if they proclaimed themselves out of time, a wrong result would be produced, just as a note, good in itself, is a producer of discord when sounded out of time, place, or tune. This reason is the reason deduced from the law of cycles.

WHAT, THEN, ARE THE ADEPTS DOING? Not possibly could all their work be stated. But, for a part:

(a) Assisting all good movements by acting on men from behind the scenes through mental influence.

(b) Preparing as many men and women who are fit for it so that they may, in their next incarnation, appear in the world as active devotees to the good of the Human Family.

(c) Spreading now, through impulses given in many places which must not be mentioned, a philosophy of life which will gradually affect the race mind, and in particular the active, conquering Western peoples, thus preparing the whole people to change and evolve yet further and further until evils disappear and better days and people reappear.

FRIENDS OR ENEMIES IN THE FUTURE — *Eusebio Urban*

The fundamental doctrines of Theosophy are of no value unless they are applied to daily life. To the extent to which this application goes they become living truths, quite different from intellectual expressions of doctrine. The mere intellectual grasp may result in spiritual pride, while the living doctrine becomes an entity through the mystic power of the human soul. Many great minds have dwelt on this. Saint Paul wrote:

Though I speak with the tongues of men and of angels and have not charity, I am become as sounding brass or a tinkling cymbal. And though I have the gift of prophecy and understand all mysteries and all knowledge, and though I have all faith so that I could remove mountains, and have not charity, I am nothing. And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing.

The Voice of the Silence, expressing the views of the highest schools of occultism, asks us to step out of the sunlight into the shade so as to make more room for others, and declares that those whom we help in this life will help us in our next one.

Buttresses to these are the doctrines of Karma and Reincarnation. The first shows that we must reap what we sow, and the second that we come back in the company of those with whom we lived and acted in other lives. St. Paul was in complete accord with all other occultists, and his expressions above given must be viewed in the light Theosophy throws on all similar writings. Contrasted with charity, which is love of our fellows, are all the possible virtues and acquirements. These are all nothing if charity be absent. Why? Because they die with the death of the uncharitable

person; their value is naught, and that being is reborn without friend and without capacity.

This is of the highest importance to the earnest Theosophist who may be making the mistake of obtaining intellectual benefits but remains uncharitable. The fact that we are now working in the Theosophical movement means that we did so in other lives, must do so again, and, still more important, that those who are now with us will be reincarnated in our company on our next rebirth.

Shall those whom we now know or whom we are destined to know before this life ends be our friends or enemies, our aiders or obstructors in that coming life? And what will make them hostile or friendly to us then? Not what we shall say or do to and for them in the future life. For no man becomes your friend in a present life by reason of present acts alone. He was your friend, or you his, before in a previous life. Your present acts but revive the old friendship, renew the ancient obligation.

Was he your enemy before, he will be now even though you do him service now, for these tendencies last always more than three lives. They will be more and still more our aids if we increase the bond of friendship of today by charity. Their tendency to enmity will be one-third lessened in every life if we persist in kindness, in love, in charity now. And that charity is not a gift of money, but charitable thought for every weakness, to every failure.

Our future friends or enemies, then, are those who are with us and to be with us in the present. If they are those who now seem inimical, we make a grave mistake and only put off the day of reconciliation three more lives if we allow ourselves today to be deficient in charity for them. We are annoyed and hindered by those who actively oppose as well as others whose mere looks, temperament, and unconscious action fret and disturb us. Our

code of justice to ourselves, often but petty personality, incites us to rebuke them, to criticise, to attack. It is a mistake for us to so act. Could we but glance ahead to next life, we would see these for whom we now have but scant charity crossing the plain of that life with ourselves and ever in our way, always hiding the light from us. But change our present attitude, and that new life to come would show these bores and partial enemies and obstructors helping us, aiding our every effort. For Karma may give them then greater opportunities than ourselves and better capacity.

Is any Theosophist who reflects on this so foolish as to continue now, if he has the power to alter himself, a course that will breed a crop of thorns for his next life's reaping? We should continue our charity and kindnesses to our friends whom it is easy to wish to help, but for those whom we naturally dislike, who are our bores now, we ought to take especial pains to aid and carefully toward them cultivate a feeling of love and charity. This adds interest to our Karmic investment. The opposite course, as surely as sun rises and water runs down hill, strikes interest from the account and enters a heavy item on the wrong side of life's ledger.

And especially should the whole Theosophical organization act on the lines laid down by St. Paul and *The Voice of the Silence*. For Karmic tendency is an unswerving law. It compels us to go on in this movement of thought and doctrine; it will bring back to reincarnation all in it now. Sentiment cannot move the law one inch; and though that emotion might seek to rid us of the presence of these men and women we presently do not fancy or approve — and there are many such in our ranks for every one — the law will place us again in company with friendly tendency increased or hostile feeling diminished, just as we now create the one or prevent the other. It was the aim of the founders of the Society to arouse tendency to future friendship; it ought to be the

object of all our members.

What will you have? In the future life, enemies or friends?

The Path

A REMINISCENCE — *One of the Staff*

The interesting series of historical papers now running in the *Theosophist* entitled "Old Diary Leaves" by Col. Olcott naturally recalls to the mind various small events of the early years of the Theosophical Society, but nearly all the first members have disappeared from sight, some wholly uninterested in our work, others gone over to the other side of death. But some remain who do not concur in all the details written by Col. Olcott.

The origin of our seal is one of the things yet to be cleared up, and which will be at the proper time. The cut here shown is from the original electroplate made in 1874 or '75 or even earlier from a wood-cut produced at the same time. The wood-cut would have been used in this printing but that the impression might destroy it. Both, the plate and the wood-cut, have been many years quietly resting in a drawer. Very plainly this cut is substantially our seal. The omitted portion is the Egyptian cross in the centre. In place of that cross the letters "E. B." appear, and those letters mean "Elena Blavatsky", the initial E being aspirated. Above is the coronet of a Countess. Added within the circle are astrological and cabalistic signs referring to the owner who used it. That owner was H. P. Blavatsky. It has been used often by her for stamping letter paper, and a quantity of the same letter-paper she used is in the drawer with the wood-cut.

Who, then, is the person from whom came the idea of our seal? Is it H. P. B. or some one else? If not H. P. B., how is it that she was using this design for her paper so many years ago? Several persons have claimed to be the founders of the Society, or designers of its seal, or first movers in its early years. A Philadelphia Doctor some years ago had the hardihood to write to the New York Headquarters saying that he was the one who designed our seal. Since then he has passed away. The plain unvarnished truth, which hurts no one save the man who denies it, is that H. P. Blavatsky was the head, front, bottom, top, outskirts, past and future of the Theosophical Society. We were all but pawns on the chessboard. What is the use of permitting vanity to influence us toward denying the facts?

No game, no battle, no diplomacy can go forward without agents, subordinates, generals, privates, but there is always a moving head without whom there would be no success. Not only was H. P. B. predominant with us in 1875, but she is yet. The very organization was suggested by her in a letter which will be published in facsimile if any one feels disposed to deny the foregoing assertion. She wrote that we ought to model our Society on the United States, which is a collection of sovereign bodies united in one aim.

In the "Diary Leaves" Col. Olcott says that it was proposed to make the Theosophical Society an extra-Masonic degree. The impossibility of this may be seen when we reflect that such a thing — out of the question in itself — would leave out H. P. B. But, you say, he refers to letters from William Q. Judge and Gen. Doubleday asking for the ritual. This is but one of the little errors that creep in after lapse of years. An examination of the correspondence shows that Brothers Judge and Doubleday wrote — often — that if there was to be a ritual for the initiation into the Theosophical Society, then it should be sent, or the whole

initiation abandoned. And many members recollect how much was said *pro* and *con* about abolishing initiation and accompanying ritual altogether, until at last it so came about. Masonic degrees were not once talked of, unless Col. Olcott may have said he would have wished us to be affiliated with Masons. This item in the "Diary Leaves" is clearly *lapsus calami*. In the same number of the "Leaves" there is a reference to G. H. Felt and a long draft of a letter of his as to which Col. Olcott is not clear. This is easy to settle. The letter was drafted by William Q. Judge and copied out by Felt, and the person he speaks of in the letter as experimenting with is Brother Judge. These things I state advisedly and with permission. It was intended for use at a meeting of the T. S. in 1876, but instead of using that a paper was read by Bro. Judge embodying the facts and including many other records of different experiments.

Other flitting scenes will recur later. Some embrace the funeral of Baron de Palm and what led up to it, others the making of our early diplomas by hand, and so on. But however the facts may come out, it remains a fact that the T. S. stands or falls by H. P. Blavatsky. Give her up as an idea, withdraw from the path traced by her under orders, belittle her, and the organization will rot; but remember her and what she represented, and we triumph.

The Path

PLANETARY INFLUENCES — G. E. W.

Some writers, in order to avoid what seems like fatalism or predestination in astrology, have denied that the planets possess any inherent influence or exercise it upon the human race. They do not question the main features of astrology, nor do they, like many materialistic and scientific authors, dismiss it as visionary and unworthy of examination. They admit that the directions at which the planets arrive with regard to each other seem to tally with certain events which happen in the life of the native. But they claim that this coincidence is due to the fact that the planets are only markers, and that they indicate things which occur without their active interposition. They are thus merely recorders of Karmic effects. At first sight there appears to be much weight to this argument, since none can deny that we fashion our own selves and by our own actions bring upon ourselves certain results either good or evil. To deny volition would be to deny the law of Karma. We must insist upon a certain amount of free-will; without it, existence has no reason and humanity no hope.

We are, however, brought face to face with the perceptible facts of astrology; and these will not down even to save a theory. It is evident that the sun and moon exercise a direct influence upon the material world. It would be absurd for us to attempt to explain the tides of the ocean by saying that the moon did not cause them, but was only an indicator; or to say that the sun's heat did not produce the summer, but was only a coincident record of that season. How much simpler is it for us to imagine that each of these orbs of the solar system is continually pouring down upon us its astral waves, just as it sends down upon us its ethereal rays of light! And then, moving on in endless procession, as it were, new angles are constantly being formed, new positions

are momentarily being developed, and consequently new effects are being produced.

This is the natural view to take. It is the one adopted by all astrologers that have ever lived. But how is it to be reconciled with the law of Karma, which says that all actions are the result of other actions, and good and evil conditions are caused by good or evil conduct? This seems a perplexing question, and no doubt it has puzzled many young students, especially those who have never given much attention to the subject of astrology and who do not have any clear idea of its relation to the Theosophic philosophy. In order to understand that relation, however, it is only necessary to obtain a just understanding of the principles of astrology so far as fatalism, or determination, is concerned.

Let us see what is meant by fate. In Zadkiel's *Grammar of Astrology*, chapter 10, entitled "To judge the future fate by the figure of the heavens at the moment of birth", occurs the following remark:

The word fate does not here imply *inevitable* fate; for though the planets produce a certain influence on the native's affairs, yet that influence is capable of being opposed by the human will, and may by that means be entirely or greatly mitigated. If, however, it be not attended to, but allowed its full scope, it will then certainly produce its full effect; and the reader must remember that astrologers in predicting events always presuppose that the last circumstance will be the case.

We see here that there is no absolute fatality. On the contrary, each person is given an instrument known as the human will, with which he may oppose the evil influences and may take advantage of the good. To be explicit, the planets are continually shedding down their astral rays upon us, and according as they

make certain angles in the course of their revolutions, so do their influences become good or malefic. But there is no necessity, no absolute law, that we should succumb to those influences. It is, on the contrary, our duty to oppose them when evil, just as it is our duty to turn away from every temptation. And the human will is all-powerful. When well developed, it can avert evil equally as well as it can magnify good.

We thus see that there is no fatality, but only a tendency in certain directions which, when evil, we have to combat. Let us now try to learn how this may be reconciled with Karmic law. The latter supposes certain acts as a result of previous acts. But no explicit time is given by any authority on the subject as being the date when Karma takes effect. There is an old Hindu aphorism saying that Karma acts after two days, two fortnights, two years, or two lives, which is equivalent to saying that it has no stated season, but comes whenever the occasion is ripe. We can, then, very easily suppose that Karmic action takes effect in accordance with the principles of planetary motion. In other words, if a given result is to take place, it will wait until in their regular revolutions the spheres have reached a certain combination answering to or corresponding with the event. The planets are not markers; they influence. But they only exercise that influence in accordance with the law of Karma.

Now, as to the extent of that influence, it may be said that it is limited. Some people are much less affected by planetary positions than others. This, as has been previously suggested, is due to the extent to which they have cultivated the will. Most people, it is true, respond promptly to their astrological directions. Some succeed in opposing evil influences to which the majority succumb. There are a few — a very few — who have risen above the planetary suggestions, and whom evil does not harm. Such have evolved themselves beyond the astral plane, and

are no longer subject to Saturn. For it should be known that astrology acts only through the astral form and upon the astral plane. It is therefore only concerned with humanity in its lower stages. It is exoteric and base to that extent. Whenever we can as a race pass beyond the limitations of the flesh, astrology can no longer be a science. It teaches us at present very much about our organization, and is indeed one of the keys to a knowledge of the universe. Rightly understood, it is of inestimable value. Wrongly looked at or used for evil ends, it is worse than ignorance. No doubt it has been in the past very often employed for selfish ends. Let us hope that the students of the future will have a better aim, and will turn astrology into a means for helping and enlightening the race rather than to employ it as a mere money-making agency.

It is not generally known that there are three sets or kinds of astrological directions, each producing certain effects, yet all dependent to a considerable extent upon each other. They may be described briefly as primary directions, secondary directions, and local transits. The latter are extremely simple and are generally employed by professional astrologers. They are based upon the direct motion of the planets around the sun. While to the observer of the heavens night after night the planets which are visible appear to retain about the same relative position to each other, in reality they are moving onward at varying rates of speed, and each night take a slightly different position. While our earth completes the circuit of the sun in one year, it takes about thirty years for Saturn to finish its orbit. Each planet has a different motion. Hence the combinations of position that arise daily are practically infinite. The local transits are the transits of one planet over the place of another in any nativity. They produce the minor events of life, the daily cares, annoyances, triumphs, and joys which every one has, but which do not as a

rule produce any lasting effect. If, however, there is a coincidence of several evil transits at about the same time, particularly if the primary and secondary directions are also bad, then serious results may be expected. It is said that even primary directions cannot take effect without having transits of a similar nature to work through, and on this many professional astrologers ignore primary directions altogether, claiming that the local transits furnish all the data required for making predictions. In reality the reason for such omission is the difficulty of computing such primary directions. Local transits, on the other hand, require no mathematical skill or labor. The positions of the planets from day to day are given in every ephemeris or almanac that is published.

Secondary directions are also comparatively easy to compute, although it is difficult to explain the nature of their influence. They are said to be "merely the aspects formed by the Sun or Moon within a few weeks after birth by their proper motion, in longitude, in the heavens". But this definition fails to convey any meaning to the ordinary reader. I would therefore add that in astrology each day is but a micro-cosmic aspect of a longer period, and in a nativity each day succeeding birth is regarded as equivalent to a year of life. Thus the tenth day after birth will show events that will happen in the tenth year, the twentieth day the twentieth year, and so on. Most astrologers use the secondary directions; and, in fact, it is said that the old Arabian astrologers used nothing else for their prognostications. Certain it is that, however inexplicable it may appear, the secondary directions are generally reliable. Their effects are short-lived, not lasting over two or three weeks at most.

Primary directions are what prove the stumbling-block for nearly all would-be students of astrology. They require very complicated and abstruse computations, and one must be acquainted with logarithms and sines and tangents in order to make any progress

whatever. Hence most modern professional astrologers discard them altogether, and even speak slightly of them. In fact, Raphael openly advises against their use in his latest *Guide to Astrology*. But all the older astrologers considered primary directions as being of primary importance. They bring about the great events of life. Marriage, death of parents, bankruptcy, professional success, are all denoted by them. Sometimes the influence of a primary direction is so great that it will last through several years. Hence these directions should not be ignored. It is no doubt true that a primary direction cannot act until there is a suitable combination of local transits for it to act through, but that does not give us sufficient ground for depending entirely upon the transits or even upon secondary directions.

The principle upon which is based the doctrine of primary directions is the same macro-cosmic and micro-cosmic idea which underlies the secondary directions. The earth turns upon its axis every twenty-four hours. In that time each planet apparently travels completely around us, making a circuit of 360 degrees. As in 24 hours there pass over the meridian 360 degrees, in one hour there will pass over 15 degrees, and one degree, being equal to one-fifteenth of an hour, is therefore equivalent to four minutes. Hence an error of four minutes in the time of birth will cause an error of one degree in right ascension, or of one whole year in the life of the native. It should be explained, however, that there are two methods of computing time. By the Ptolemaic system one degree equals a year of life. The Placidian theory, while more complex, has much to recommend it in the way of exactitude. As there are only 360 degrees in a circle, and as there are 365¼ days in a year, it follows that to take a degree for a day or for a year is not, strictly speaking, correct, although much more convenient. According to the Placidian rule, the right ascension of the sun is added to the arc of direction, and then to this-are added the actual

degrees and fractional parts thereof, in proportion as the days are actually longer or shorter. By this method a degree is sometimes greater and sometimes less than a year of life, but it is always proportional to the exact length of the day as shown by the ephemeris. Zadkiel and most modern astrologers employ the Ptolemaic system of measurement. The difference between the two is so slight that it does not cut much of a figure either way. . There is one fact, however, about astrology which cannot be too strongly dilated upon, and that is the necessity for ascertaining the exact time of birth. Astrologers who pretend to set up horoscopes, merely guessing at the hour of birth (in the absence of definite information), know very well that their predictions are extremely precarious. While the difference of a few hours does not affect materially the local transits — and it is from these that they draw their deductions — the difference of *one minute* in the time of birth will cause an error of three months in the time of any subsequent primary event, and an error of four minutes will throw a prediction out an entire year. Hence it cannot be too strongly urged that the first and greatest necessity in the casting of nativities is the determination of the exact time of birth.

Fortunately rules are laid down in the astrological books by which the true time of birth may be obtained. Without that knowledge astrological prediction is futile, striking here and there perhaps a few unimportant details, but leaving out all of the main and determining events. With a knowledge of the exact minute of birth the astrologer may confidently set forth all the leading and minor occurrences of life, may warn of impending danger and prepare people to take advantage of fortunate incidents and epochs in their careers.

THE EARTH CHAIN OF GLOBES: I — *William Q. Judge*

Although H. P. B. gave out to several of those who met her during the period from 1875 to 1878 the very same teachings in respect to the nature of man and of the "worlds" he evolves in as were afterwards publicly expounded in *Esoteric Buddhism* by Mr. Sinnett upon letters received by him through her from her Teachers, the credit of thus publishing those teachings, if such credit is desired, must be granted to that author. But at the time he began his publications, we who had known the doctrines so many years before wrote to H. P. B. complaining that the method adopted would lead to confusion on the one hand and to a materializing of the doctrines on the other, while, of course, no objection was made in general to the divulgement of what at a prior date had been given us in confidence, for he could not and would not have given the teachings to the public at all unless he had been permitted to do so. And after all these years the confusion to which our letters adverted has arisen among Theosophists, while there has been an apparent lack of attempt to clear it away. In respect to the "Earth Chain of Globes", the materializing of the doctrine and the confusion in the minds of students have been greater than in regard to any other of the teachings. This cloudiness I will now attempt to dissipate, if possible, with the help of some of H. P. B.'s own words in her book, the time having arrived and permission being granted, and access being also had to certain plain statements thereupon from the original sources.

In *Esoteric Buddhism*, 6th ed., p. 77, we find in reference to the "Chain of Globes":

Separated as these are in regard to the grossly mechanical

matter of which they consist, they are closely and intimately bound together by subtle currents and forces. ... It is along these subtle currents that the life elements pass from world to world. . . . The most ethereal of the whole series. ... As it passes from world Z back again to world A.

Then follows, for illustrative purposes, the figure of a series of tubs to represent the various globes of the whole series, one filling up from the overflow out of the preceding tub. Further, that the life wave *reaches* Globe A or B, and so on.

All this, in the absence of other explanations, and naturally consequent upon modern habits of thought, has fixed the idea in minds of many that the seven globes through which the evolution of man is carried on are in fact separated from each other; that they have between each other spaces along which currents flow to and from; and although the illustration of the series of tubs might be very well used for even the most metaphysical of problems, it had the effect of additionally deepening the idea of the actual separation from each other of the seven "globes". It has been thought that they were as much apart from each as any visible planet, although connected by "subtle currents and forces."

But the fact is otherwise. The seven globes of earth's chain are not separated at all, and are interblended and mixed with each other. To make it clearer, if we were to develop inner sight so as to perceive on the plane of the next globe, the fifth, it would not appear as a definite ball in the sky or space. Whether it be smaller or larger than this earth — a fact not yet cleared up — it would be seen to possess the earth as the earth holds it.

It may be asked, Why was this not told in the beginning? Because it was useless to tell, no one being at hand to understand it; and also because if insisted on — and it was not of enough importance

to require insistence — the consequence might have been that even Mr. Sinnett would not have published his invaluable and extremely useful book. He confessed in that work that the doctrines propounded were new to him, and seemingly opposed to modern ideas of nature. In great part this was true, though there were very many who did not find them new but who were not sufficient in number to risk then an insistence on a point that might too far violate the materialistic conceptions prevalent. Since then, however, times have altered, and a large and daily increasing number of minds are ready for the destruction of the idea contained in these words from the above quotation:

"Separated as these are in regard to the grossly mechanical matter of which they are composed." Strike out this statement, and the rest of the explanation can be construed to agree with the facts as laid down by those who inspired the book.

The globes of the earth-chain are not "separated in regard to the grossly mechanical particles", but their particles are interblended. When we pass on to the plane of life which Globe 5 or E represents, it will be and appear to our then senses as gross, while the particles of this one will not be visible although still interblended with the other. It was to this very sentence that we objected in 1875, because it contains the statement of a fallacy growing out of materialistic conception.

On this very subject the teachers of H. P. B. wrote, *Secret Doctrine*, v. 1, p. 166:

Were psychic and spiritual teachings more fully understood, it would be next to impossible to even imagine such an incongruity. . . . In short, as globes, they are in COADUNITION but not in CONSUBSTANTIALITY WITH OUR EARTH, and thus pertain to quite another state of consciousness."

This should be clear enough, and, as if to draw special attention to

it, the very words which give the correct doctrine about our "fellow globes" were printed in capital letters.

"Consubstantiality" means *the state of being the same substance*. This is negatived in respect to the globes; but it is asserted that they, *being of different substances, are united in one mass*, for such is the meaning of "co-adunition". If this be the case, as must be on the original authority, it then follows that the "seven globes of earth's chain, while differing from each other as to what is commonly called substance, are united together in a single mass. And when one is asked to shake off the dense veil of matter which beclouds the sight so as to perceive another of the globes, it is by no means meant that the companion globe, or globes as the case may be, would be seen rolling in space all by itself:" — and this is from another explanatory letter from the first authority. In the paragraph from *Secret Doctrine* attention is called to the fact that just because the seven globes are in co-adunition but not in consubstantiality with each other they pertain to a state of consciousness quite other than that we are compelled to be in now.

As H. P. B. used a diagram in which the globes are set down as separated, it only requires to be remembered that the system could not, on a flat surface by mere lines, be illustrated in any other way and be at all clear. Besides, all the diagrams and illustrations must be construed with the quotation on p. 166 in view, as well as the numerous pages of similar explanations.

Every student should make inquiry of himself to see what his ideas are on this subject, and revise them if they are found not to be in accord with what was so clearly explained in the words above quoted. For this lies at the root of many other difficulties. Materialistic conceptions on this will lead to materializing, localizing, and separating of states such as Devachan, and to

perhaps dogmas about places that do not exist, when states of consciousness should be dwelt upon. For, as was written in a letter quoted by H. P. B.:

Unless less trouble is taken to reconcile the irreconcilable — that is to say, the metaphysical and spiritual sciences with physical or natural philosophy, "natural" being a synonym to them [men of science] of that matter which falls under the perception of their corporeal senses — no progress can be really achieved.

And on page 169 of vol. 1 of *Secret Doctrine* is a sentence not printed as a quotation, but which is really one from one of the same teacher's letters, reading:

To be fully realized [the evolution of the monads on the globes] both this process and that of the birth of the globes must be examined far more from their metaphysical aspect than from what one might call a statistical standpoint.

Although the Lodge has declared through the mouth of H. P. B. that the complete truth on these matters is the heritage of future generations, yet we who are working in the movement now, believing in reincarnation and knowing the force of Karmic tendencies, must not forget that we are destined to return in future years once more to the same work. We should therefore study the pure spiritual, psychic, and metaphysical aspects of the doctrines, leaving disputes with the changing science of the day to those who are amused by it. For those disputes are wholly unimportant, since they will all pass away; but the spirit of truth will not pass, nor shall we who endeavor to find her and to understand what she says to us.

APHORISMS ON KARMA — *William Q. Judge*

The following, among others not yet used, were given to me by teachers, among them being H. P. Blavatsky. Some were written, others communicated in other ways. To me they were declared to be from manuscripts not now accessible to the general public. Each one was submitted for my judgment and reason; and just as they, aside from any authority, approved themselves to my reason after serious consideration of them, so I hope they will gain the approval of those my fellow workers to whom I now publish them. — William Q. Judge.

APHORISMS.

- (1) There is no Karma unless there is a being to make it or feel its effects.
- (2) Karma is the adjustment of effects flowing from causes, during which the being upon whom and through whom that adjustment is effected experiences pain or pleasure.
- (3) Karma is an undeviating and unerring tendency in the Universe to restore equilibrium, and it operates incessantly.
- (4) The apparent stoppage of this restoration to equilibrium is due to the necessary adjustment of disturbance at some other spot, place, or focus, which is visible only to the Yogi, to the Sage, or the perfect Seer: there is therefore no stoppage, but only a hiding from view.
- (5) Karma operates on all things and beings from the minutest conceivable atom up to Brahma. Proceeding in the three worlds of men, gods, and the elemental beings, no spot in the manifested universe is exempt from its sway.

(6) Karma is not subject to time, and therefore he who knows what is the ultimate division of time in this Universe knows Karma.

(7) For all other men Karma is in its essential nature unknown and unknowable.

(8) But its action may be known by calculation from cause to effect; and this calculation is possible because the effect is wrapped up in and is not succedent to the cause.

(9) The Karma of this earth is the combination of the acts and thoughts of all beings of every grade which were concerned in the preceding Manvantara or evolutionary stream from which ours flows.

(10) And as those beings include Lords of Power and Holy Men, as well as weak and wicked ones, the period of the earth's duration is greater than that of any entity or race upon it.

(11) Because the Karma of this earth and its races began in a past too far back for human minds to reach, an inquiry into its beginning is useless and profitless.

(12) Karmic causes already set in motion must be allowed to sweep on until exhausted, but this permits no man to refuse to help his fellows and every sentient being.

(13) The effects may be counteracted or mitigated by the thoughts and acts of oneself or of another, and then the resulting effects represent the combination and interaction of the whole number of causes involved in producing the effects.

(14) In the life of worlds, races, nations, and individuals, Karma cannot act unless there is an appropriate instrument provided for its action.

(15) And until such appropriate instrument is found, that Karma related to it remains unexpended.

(16) While a man is experiencing Karma in the instrument provided, his other unexpended Karma is not exhausted through other beings or means, but is held reserved for future operation; and lapse of time during which no operation of that Karma is felt causes no deterioration in its force or change in its nature.

(17) The appropriateness of an instrument for the operation of Karma consists in the exact connection and relation of the Karma with the body, mind, intellectual and psychical nature acquired for use by the Ego in any life.

(18) Every instrument used by any Ego in any life is appropriate to the Karma operating through it.

(19) Changes may occur in the instrument during one life so as to make it appropriate for a new class of Karma, and this may take place in two ways: (*a*) through intensity of thought and the power of a vow, and (*b*) through natural alterations due to complete exhaustion of old causes.

(20) As body and mind and soul have each a power of independent action, any one of these may exhaust, independently of the others, some Karmic causes more remote from or nearer to the time of their inception than those operating through other channels.

(21) Karma is both merciful and just. Mercy and Justice are only opposite poles of a single whole; and Mercy without Justice is not possible in the operations of Karma. That which man calls Mercy and Justice is defective, errant, and impure.

(22) Karma maybe of three sorts: (*a*) Presently operative in this life through the appropriate instruments; (*b*) that which is being

made or stored up to be exhausted in the future; (c) Karma held over from past life or lives and not operating yet because inhibited by inappropriateness of the instrument in use by the Ego, or by the force of Karma now operating.

(23) Three fields of operation are used in each being by Karma: (a) the body and the circumstances; (b) the mind and intellect; (c) the psychic and astral planes.

(24) Held-over Karma or present Karma may each, or both at once, operate in all of the three fields of Karmic operation at once, or in either of those fields a different class of Karma from that using the others may operate at the same time.

(25) Birth into any sort of body and to obtain the fruits of any sort of Karma is due to the preponderance of the line of Karmic tendency.

(26) The sway of Karmic tendency will influence the incarnation of an Ego, or any family of Egos, for three lives at least, when measures of repression, elimination, or counteraction are not adopted.

(27) Measures taken by an Ego to repress tendency, eliminate defects, and to counteract by setting up different causes, will alter the sway of Karmic tendency and shorten its influence in accordance with the strength or weakness of the efforts expended in carrying out the measures adopted.

(28) No man but a sage or true seer can judge another's Karma. Hence while each receives his deserts appearances may deceive, and birth into poverty or heavy trial may not be punishment for bad Karma, for Egos continually incarnate into poor surroundings where they experience difficulties and trials which are for the discipline of the Ego and result in strength, fortitude, and sympathy.

(29) Race-Karma influences each unit in the race through the law of Distribution. National Karma operates on the members of the nation by the same law more concentrated. Family Karma governs only with a nation where families have been kept pure and distinct; for in any nation where there is a mixture of family — as obtains in each Kali yuga period — family Karma is in general distributed over a nation. But even at such periods some families remain coherent for long periods, and then the members feel the sway of family Karma. The word "family" may include several smaller families.

(30) Karma operates to produce cataclysms of nature by concatenation through the mental and astral planes of being. A cataclysm may be traced to an immediate physical cause such as internal fire and atmospheric disturbance, but these have been brought on by the disturbance created through the dynamic power of human thought.

(31) Egos who have no Karmic connection with a portion of the globe where a cataclysm is coming on are kept without the latter's operation in two ways: (*a*) by repulsion acting on their inner nature, and (*b*) by being called and warned by those who watch the progress of the world.

The Path

DEVACHAN — *William Q. Judge*

A correspondent writes to say that there seems to be some confusion or contradiction in theosophical literature and among theosophical writers in respect to the length of time a person stays in Devachan, and cites the statement by Mr. Sinnett that the number of years is 1500, while I am quoted as giving a shorter time. Two things should be always remembered. First, that Mr. Sinnett in writing on Devachan in *Esoteric Buddhism* was repeating his own understanding of what Mme. Blavatsky's teachers had communicated through her to him — a copy of each letter being kept and now accessible, and he might very easily make an error in a subject with which he was not at all familiar; second, that only the Adepts who gave out the information could possibly know the exact number of years for which any course of life would compel one to remain in the Devachanic state; and as those Adepts have spoken in other places on this subject, the views of Mr. Sinnett must be read in connection with those superior utterances.

There is in reality no confusion save in the way different students have taken the theory, and always the mistakes that have arisen flow from hastiness as well as inaccuracy in dealing with the matter as a theory which involves a knowledge of the laws of mental action.

In *Key to Theosophy*, p. 143, 158, H. P. B. says, "The stay in Devachan depends on the degree of spirituality and the merit or demerit of the last incarnation. The *average* time is from 1000 to 1500 years". . . "Whether that interval lasts one year or a million."

Here the average time means "the time for the average person who has any devachanic tendencies," for many "average persons"

have no such tendencies; and the remark on p. 158 gives a possible difference of 500 years. This is exactly in accord with the theory, because in a matter which depends on the subtle action of mind solely it would be very difficult — and for most of us impossible — to lay down exact figures.

But the Adept K. H., who wrote most of the letters on which Mr. Sinnett's treatment of Devachan was based, wrote other letters, two of which were published in *THE PATH*, in Vol. 5 in 1890, without signature. The authorship of those *Notes on Devachan* is now divulged. They were attributed to "X." He says:

"The 'dream of Devachan' lasts *until Karma* is satisfied in that direction. In Devachan there is a gradual exhaustion of force.

"The stay in Devachan is *proportionate to the unexhausted psychic impulses* originating in earth life. Those whose attractions were preponderatingly material *will be sooner brought back* into rebirth by the force of Tanha."

Very clearly in this, as was always taught, it is stated that the going into Devachan depends upon psychic (which here means spiritual and of the nature of soul) thoughts of earth life. So he who has not originated many such impulses will have but little basis or force in him to throw his higher principles into the Devachanic state. And the second paragraph of his letter shows that the materialistic thinker, having laid down no spiritual or psychic basis of thought, is "sooner brought back to rebirth by the force of Tanha," which means the pulling or magnetic force of the thirst for life inherent in all beings and fixed in the depths of their essential nature. In such a case the average rule has no application, since the whole effect either way is due to a balancing of forces and is the outcome of action and reaction. And this sort of a materialistic thinker might emerge to rebirth out of the Devachanic state in about a month, because we have to

allow for the expending of certain psychic impulses generated in childhood before materialism obtained full sway. But as every one varies in his force and in respect to the impulses he may generate, some of this class might stay in the Devachanic state one, five, ten, twenty years, and so on, in accordance with the power of the forces generated in earth life.

For these reasons, and having had H. P. B.'s views ever since 1875 on the subject, I wrote in *PATH*, V. 5, 1890, p. 190, "In the first place I have never believed that the period given by Mr. Sinnett in *Esoteric Buddhism* of 1500 years for the stay in that state was a fixed fact in nature. It might be fifteen minutes as well as 1500 years. But it is quite likely that for the majority of those who so constantly wish for a release and for an enjoyment of heaven, the period would be more than 1500 years." This contradicts nothing unless Mr. Sinnett shall be shown as saying positively that every man and woman is bound by an arbitrary inflexible rule to stay 1500 years — no more nor less — in the Devachanic state; and this it is quite unlikely he could say, since it would involve a contradiction of the whole philosophy of man's nature in which he has faith. And what was said in vol. 5 of *PATH* accords with the views of those Adepts who have written on the subject, as well as with the very ancient teachings thereupon in the *Bhagavad-Gita* and elsewhere.

In everyday life many illustrations can be found of the operation upon living men of the same force which puts disembodied man into Devachan. The artist, poet, musician, and day-dreamer constantly show it. When rapt in melody, composition, color arrangement, and even foolish fancy, they are in a sort of living Devachanic state wherein they often lose consciousness of time and sense impressions. Their stay in that condition depends, as we well know, on the impulses toward it which they have amassed. If they were not subject to the body and its forces they

might remain years in their "dream." The same laws, applied to the man divested of a body, will give us exactly the results for Devachan.

But no one save a trained mathematical Adept could sum up the forces and give us the total number of years or minutes which might measure Devachan. On the Adepts, therefore, we have to depend for a specific time-statement, and they have declared 1000 to 1500 years to be a good general average.

This will therefore result in giving us what may be known as the general *Cycle of Reincarnation* for the average mass of units in any civilization. By means of this a very good approximation may be made toward forecasting the probable development of national thought, if we work back century by century, or by decades of this century, for fifteen hundred years in history.

The Path

THE MAHATMAS AS IDEALS AND FACTS — *Eusebio Urban*

A visitor from one of the other planets of the solar system who might learn the term *Mahatma* after arriving here would certainly suppose that the etymology of the word undoubtedly inspired the believers in *Mahatmas* with the devotion, fearlessness, hope, and energy which such an ideal should arouse in those who have the welfare of the human race at heart. Such a supposition would be correct in respect to some, but the heavenly visitor after examining all the members of the Theosophical Society could not fail to meet disappointment when the fact was clear to him that many of the believers were afraid of their own ideals, hesitated to proclaim them, were slothful in finding arguments to give reasons for their hope, and all because the wicked and scoffing materialistic world might laugh at such a belief.

The whole sweep, meaning, and possibility of evolution are contained in the word *Mahatma*. *Maha* is "great," *Atma* is "soul," and both compounded into one mean those great souls who have triumphed before us not because they are made of different stuff and are of some strange family, but just because they are of the human race. Reincarnation, karma, the sevenfold division, retribution, reward, struggle, failure, success, illumination, power, and a vast embracing love for man, all these lie in that single word. The soul emerges from the unknown, begins to work in and with matter, is reborn again and again, makes karma, develops the six vehicles for itself, meets retribution for sin and punishment for mistake, grows strong by suffering, succeeds in bursting through the gloom, is enlightened by the true illumination, grasps power, retains charity, expands with love for orphaned humanity, and thenceforth helps all others who remain

in darkness until all may be raised up to the place with the "Father in Heaven" who is the Higher Self. This would be the argument of the visitor from the distant planet, and he in it would describe a great ideal for all members of a Society such as ours which had its first impulse from some of these very *Mahatmas*.

Without going into any argument further than to say that evolution demands that such beings should exist or there is a gap in the chain — and this position is even held by a man of science like Prof. Huxley, who in his latest essays puts it in almost as definite language as mine — this article is meant for those who believe in the existence of the *Mahatmas*, whether that faith has arisen of itself or is the result of argument. It is meant also for all classes of the believers, for they are of several varieties. Some believe without wavering; others believe unwaveringly but are afraid to tell of their belief; a few believe, yet are always thinking that they must be able to say they have set eyes on an Adept before they can infuse their belief into others; and a certain number deliberately hide the belief as a sort of individual possession which separates them from the profane mortals who have never heard of the Adepts or who having heard scoff at the notion. To all these I wish to speak. Those unfortunate persons who are ever trying to measure exalted men and sages by the conventional rules of a transition civilization, or who are seemingly afraid of a vast possibility for man and therefore deny, may be well left to themselves and to time, for it is more than likely they will fall into the general belief when it is formed, as it surely will be in the course of no long time. For a belief in *Mahatmas* — whatever name you give the idea — is a common property of the whole race, and all the efforts of all the men of empirical science and dogmatic religion can never kill out the soul's own memory of its past.

We should declare our belief in the Adepts, while at the same

time we demand no one's adherence. It is not necessary to give the names of any of the Adepts, for a name is an invention of a family, and but few persons ever think of themselves by name but by the phrase "I am myself." To name these beings, then, is no proof, and to seek for mystery names is to invite condemnation for profanation. The ideal without the name is large and grand enough for all purposes.

Some years ago the Adepts wrote and said to H. P. B. and to several persons that more help could be given to the movement in America because the fact of their existence was not concealed from motives of either fear or doubt. This statement of course carries with it by contradistinction the conclusion that where, from fear of schools of science or of religion, the members had not referred much to the belief in *Mahatmas*, the power to help was for some reason inhibited. This is the interesting point, and brings up the question "Can the power to help of the *Mahatmas* be for any cause inhibited?" The answer is, It can. But why?

All effects on every plane are the result of forces set in motion, and cannot be the result of nothing, but must ever flow from causes in which they are wrapped up. If the channel through which water is meant to flow is stopped up, the water will not run there, but if a clear channel is provided the current will pass forward. Occult help from Masters requires a channel just as much as any other help does, and the fact that the currents to be used are occult makes the need for a channel greater. The persons to be acted on must take part in making the channel or line for the force to act, for if we will not have it they cannot give it. Now as we are dealing with the mind and nature of man, we have to throw out the words which will arouse the ideas connected with the forces we desire to have employed. In this case the words are those which bring up the doctrine of the existence of Adepts, Mahatmas, Masters of wisdom. Hence the value of the declaration

of our belief. It arouses dormant ideas in others, it opens up a channel in the mind, it serves to make the conducting lines for the forces to use which the *Mahatmas* wish to give out. Many a young man who could never hope to see great modern professors of science like Huxley and Tyndall and Darwin has been excited to action, moved to self-help, impelled to seek for knowledge, by having heard that such men actually exist and are human beings. Without stopping to ask if the proof of their living in Europe is complete, men have sought to follow their example. Shall we not take advantage of the same law of the human mind and let the vast power of the Lodge work with our assistance and not against our opposition or doubt or fear? Those who are devoted know how they have had unseen help which showed itself in results. Those who fear may take courage, for they will find that not all their fellow beings are devoid of an underlying belief in the possibilities outlined by the doctrine of the existence of the Adepts.

And if we look over the work of the Society we find wherever the members boldly avow their belief and are not afraid to speak of this high ideal, the interest in theosophy is awake, the work goes on, the people are benefited. To the contrary, where there are constant doubt, ceaseless asking for material proof, incessant fear of what the world or science or friends will think, there the work is dead, the field is not cultivated, and the town or city receives no benefit from the efforts of those who while formally in a universal brotherhood are not living out the great ideal.

Very wisely and as an occultist, Jesus said his followers must give up all and follow him. We must give up the desire to save ourselves and acquire the opposite one, — the wish to save others. Let us remember the story in ancient writ of Arjuna, who, entering heaven and finding that his dog was not admitted and some of his friends in hell, refused to remain and said that while

one creature was out of heaven he would not enter it. This is true devotion, and this joined to an intelligent declaration of belief in the great initiation of the human race will lead to results of magnitude, will call out the forces that are behind, will prevail against hell itself and all the minions of hell now striving to retard the progress of the human soul.

The Path

THE EARTH CHAIN OF GLOBES: II — *William Brehon*

No. II.

In February PATH the subject of the *coadunition* but *non-consubstantiality* of the seven globes of the Earth-chain was opened up slightly and discussed in view of certain expressions from the Adepts themselves on the same matter. Since then questions and doubts have arisen, as it seems that — as was suspected — the fundamental principles underlying this doctrine have not been clearly defined in the minds of all. And, indeed, before such clear definition is arrived at most if not all of the naturalistic and materialistic doctrines and modes of thought of the day will have to be abandoned. The true theory of the companion globes of our earth is one which cannot be fully comprehended if we are influenced, as many are, by the education which for centuries has been imposed upon us. When the Adepts say that these doctrines must be examined from a metaphysical standpoint, the nineteenth century person thinks that therefore it must be so vague and unreal as not to constitute an inclusion of facts, since "facts" are hard and visible things, so to say.

The first question, coming from one who grasps to a great extent the theory broached in the paragraph from the Master's pen quoted in *Secret Doctrine*, is whether we will be able to see but one globe at a time as we change our centre of consciousness? That is to say, seeing that we now can perceive the earth with the eye and none of the other companions, does it follow from this that, when the race ceases to function on the earth and has taken up evolution on the next globe in order, we shall see then but that globe and none of the others of the chain among which will then

be included this earth? It by no means follows that we then shall be able to see but one, but to what extent our then vision will be stretched or how many other globes we shall be able to see has not been given out publicly by the Masters, and it is held that alone in the keeping of the Lodge is the knowledge on this detail of the doctrine. We are left therefore to our own deductions, to be drawn from known facts. No very substantial benefit could be derived from exact knowledge about it, as it relates to matters and states of life removed from us inconceivably far both as to time and consciousness. Nor would a full explanation be comprehended. One of the teachers has written:

You do not seem to realize the tremendous difficulties in the way of imparting even the rudiments of *our* science to those who have been trained in the familiar methods of (modern science). You do not see that the more you have of the one the less capable you are to instinctively comprehend the other, for a man can only think in his worn grooves, and unless he has *the courage to fill up these and make new ones for himself* [italics are mine] he must perforce travel on the old lines. . . . Such is, unfortunately, the inherited and self-acquired grossness of the Western mind, and so greatly have the very phrases expressive of modern thought been developed in the line of practical Materialism, that it is now next to impossible either for them to comprehend or for us to express in their own languages anything of that delicate, seemingly ideal, machinery of the occult cosmos. To some little extent that faculty can be acquired by the Europeans through study and meditation, but — that's all. And here is the bar which has hitherto prevented a conviction of the Theosophical truths from gaining currency among Western nations — caused Theosophical study to be cast aside as useless and

fantastic.

As implied in the foregoing, the reason for not telling all about it is that it would not be comprehended, and not that the Lodge desires to keep it back from the world. The same difficulty has often been encountered by ordinary clairvoyants who have tried to give an account of the little they know of the "occult cosmos" to hearers whose modes of thought were purely materialistic or tainted by that kind of education. And I have met estimable theosophists who said to me that if they really were convinced that I believed certain things which I hinted to them they would be forced in sadness to conclude I was a most superstitious person — meaning of course that their ignorance and inability would constitute my superstition.

But as we now reside in a physical body perfectly visible to us, and as the astral body is sometimes seen by certain persons, it follows most surely that some persons can now see another body or form of matter while functioning in their little earth. The fact that all do not see the astral body only proves that as yet the seeing of it is not normal for the whole human race. And looking at the other side of the matter, we know that sometimes persons escaped temporarily from the physical body and functioning wholly in the astral have been able to see the physical one as it slept in trance. From this we may conclude that when the race has gone to some other centre of consciousness called a globe, it may possibly be able to see another of the companions in the sky. This is made more probable from the fact that the Earth is the lowest or at the turning of the circle, and for that reason it is on its own plane and not in company as to plane with any other one. The others might be two at a time on the one plane and then visible to each other.

The next point raised is that if the article of February is accepted,

then it results that we consider the companion globes to be only "phases of the Earth." The letter from the Master above quoted is pertinent here, for this objection arises solely and wholly from a materialistic education leading the objector to give the first place of importance to the earth, just as if it were not possible to say that earth is a phase of the other globes.

The globes are not in any sense phases of each other, but are "phases of consciousness." The consciousness alters and we function in another state of matter, in the same place, but not able to see the state of matter we have left. And as now the whole race is bound up by its total form and quality of consciousness, the units of it are compelled to remain in the general state of consciousness until the race progress permits an advance or change to another. In the evolution of the race it develops new senses and instruments for perception, but these proceed along with the changing centre of consciousness, and are not the causes for the latter but are effects due to the operation and force of that inner power of perceiving which at last compels nature to furnish the necessary instrument. When the new instruments are all perfected, then the whole race moves on to another plane altogether.

All this supports and enforces the doctrine of universal brotherhood upon which the Adepts have insisted. For the changing of consciousness as to centre is not for the benefit of the individual, but is permissible and possible when the whole mass of matter of the globe whereon the beings are evolving has been perfected by the efforts and work of the most advanced of the whole number, and that advanced class is man. If it were otherwise, then we should see millions upon millions of selfish souls deserting the planet as soon as they had acquired the necessary new senses, leaving their fellows and the various kingdoms of nature to shift for themselves. But the law and the

Lodge will not permit this, but insist that we shall remain until the lower masses of atoms have been far enough educated to be able to go on in a manner not productive of confusion. Here again we trench upon the materialism of the age, which will roar with laughter at the idea of its being possible to educate the atoms.

The doctrine of the interpenetration of the planes of matter lies at the root of clairvoyance, clairaudience, and all such phenomena. Clairvoyance would be an impossibility were it not the fact that what for the ordinary sense is solid and an obstacle to sight is in reality for the other set of senses non-existent, free from solidity, and no obstacle. Otherwise clear seeing is impossible, and the learned doctors are right who say we are all deluded and never did any one see through a solid wall. For while the faculty of imagination is necessary for the training of the power to see through a solid wall, we could not so perceive merely by imagination, since objects must have a medium through which they are to be seen. This again strikes against materialistic conceptions, for the "objective" usually means that which can be seen and felt. But in the machinery of the "occult cosmos" the objective is constantly changing to the subjective and *vice versa*, as the centre of consciousness changes. In the trance or clairvoyant state the subjective of the waking man has become the objective. So also in dreams. There, clothed with another body of finer texture, the perceiver finds all the experiences objective as to their circumstances and subjective as to the feelings they produce on the perceiver who registers the sensations. And in precisely similar manner will the race see, feel, and know when it has changed all and begins to function on another globe.

AUTHORSHIP OF SECRET DOCTRINE — *One of the Staff*

A good deal has been said about the writing of *Isis Unveiled*, and later of the *Secret Doctrine*, both by H. P. Blavatsky. A writer in the spiritualistic journals took great pains to show how many books the first work seems to quote from, and the conclusion to be arrived at after reading his diatribes is that H. P. B. had an enormous library at her disposal, and of course in her house, for she never went out, or that she had agents at great expense copying books, or, lastly, that by some process or power not known to the world was able to read books at a distance, as, for instance, in the Vatican at Rome and the British Museum. The last is the fact. She lived in a small flat when writing the first book and had very few works on hand, all she had being of the ordinary common sort. She herself very often told how she gained her information as to modern books. No secret was made of it, for those who were with her saw day after day that she could gaze with ease into the astral light and glean whatever she wanted. But in the early days she did not say precisely to the public that she was in fact helped in that work by the Masters, who gave from time to time certain facts she could not get otherwise. The *Secret Doctrine*, however, makes no disguise of the real help, and she asserts, as also many of us believe, that the Masters had a hand in that great production. The letters sent to Mr. Sinnett formed the ground for *Esoteric Buddhism*, as was intended, but as time went on it was seen that some more of the veil had to be lifted and certain misconceptions cleared up; hence the *Secret Doctrine* was written, and mostly by the Masters themselves, except that she did the arranging of it.

For some time it was too much the custom of those who had received at the hands of H. P. B. words and letters from her

Masters to please themselves with the imagination that she was no more in touch with the original fount, and that, forsooth, these people could decide for themselves what was from her brain and what from the Masters. But it is now time to give out a certificate given when the *Secret Doctrine* was being written, a certificate signed by the Masters who have given out all that is new in our theosophical books. It was sent to one who had then a few doubts, and at the same time copies were given from the same source to others for use in the future, which is now. The first certificate runs thus:

I wonder if this note of mine is worthy of occupying a select spot with the documents reproduced, and which of the peculiarities of the "Blavatskian" style of writing it will be found to most resemble? The present is simply to satisfy the Doctor that "the more proof given the less believed". Let him take my advice and not make these two documents public. It is for his own satisfaction the undersigned is happy to assure him that the *Secret Doctrine*, when ready, will be the triple production of [here are the names of one of the Masters and of H. P. B.] and most humble servant," [signed by the other.]

On the back of this was the following, signed by the Master who is mentioned in the above:

If this can be of any use or help to —, though I doubt it, I, the humble undersigned Faquir, certify that the *Secret Doctrine* is dictated to [name of H. P. B.], partly by myself and partly by my brother —".

A year after this, certain doubts having arisen in the minds of individuals, another letter from one of the signers of the foregoing was sent and reads as follows. As the prophecy in it has come true, it is now the time to publish it for the benefit of those

who know something of how to take and understand such letters. For the outside it will all be so much nonsense.

The certificate given last year saying that the *Secret Doctrine* would be when finished the triple production of [H. P. B.'s name], , and myself was and is correct, although some have doubted not only the facts given in it but also the authenticity of the message in which it was contained. Copy this and also keep the copy of the aforesaid certificate. You will find them both of use on the day when you shall, as will happen without your asking, receive from the hands of the very person to whom the certificate was given, the original for the purpose of allowing you to copy it; and then you can verify the correctness of this presently forwarded copy. And it may then be well to indicate to those wishing to know what portions in the *Secret Doctrine* have been copied by the pen of [H. P. B.'s name] into its pages, though without quotation marks, from my own manuscript and perhaps from —, though the last is more difficult from the rarity of his known writing and greater ignorance of his style. All this and more will be found necessary as time goes on, but for which you are well qualified to wait.

The Path

THE EARTH-CHAIN OF GLOBES: III — *William Brehon*

No. III.

The Editor has handed me a communication from a reader upon this subject which I insert here, as it on the one hand shows a very common defect of students — inaccuracy of reading, thought, and reference, and on the other will serve as a question which arises in other minds. It reads:

Please state in reference to the *Earth Chain of Globes* whether it is meant to be conveyed on page 159 of *S. D.* Vol. 1 that the "seven globes from the 1st to the 7th proceed in seven Rounds", that *each globe revolves seven times around the World Chain with its own particular development* [say *the Mineral Kingdom*], before the next in order [say the Vegetable Kingdom] appears on Globe A? Or does the Mineral Kingdom only go *once* around the World Chain from 1 to 7? In *Esoteric Buddhism*, Page 91, it is stated that the several kingdoms pass "*several times* around the whole circle as minerals, and then again *several times* as vegetables", but there is no distinct statement of this in *S. D.*
— Yours, Ignotus.

Inaccuracies like those in the foregoing are not uncommon. They are constant and all-pervading. It is probably the fault of modern education, accentuated by the reading of a vast amount of superficial literature such as is poured out day by day. Any close observer can detect the want of attention displayed in metaphysical studies in contrast with the particular care given to matters of business and practical affairs of life. All those who are studying Theosophy ought to make themselves aware of this national defect, and therefore give the strictest attention to what

they read upon metaphysics and devote less attention to the amount of such reading than to thinking upon what is read.

In the first place, the *Secret Doctrine* does not say on the page quoted, nor any where else, what "Ignotus" writes. Instead of reading as quoted, the passage is:

1. Everything in the metaphysical as in the physical Universe is septenary [p. 158]. . . . *The evolution of life proceeds on these seven globes or bodies from the first to the seventh in Seven Rounds or Seven Cycles* [p. 159].

I insert in italics the omitted words, the word *proceeds* having been put out of its place by "Ignotus". The error makes a completely new scheme, one unphilosophical and certainly not given out by the Masters. But though some may wonder why I notice such a false assumption, it is right to take it up because it must have arisen through carelessness, yet of such a sort as might perpetuate an important error. It follows from the restoration of the passage that the Globes do not "revolve around the world chain". The supposition of the correspondent is not peculiar among the many hurried ones made by superficial readers. He first assumed that the various globes of the Earth-Chain revolved, in some way which he did not stop to formulate, in seven rounds — I presume in some imaginary orbit of their own — in what he called the "world chain", and then he went on adapting the rest of the evolutionary theory to this primary assumption. By reading the *Secret Doctrine* and the former articles on this subject in the PATH, the point in question will be made clear. Evolution of the monad, which produces and underlies all other evolutions, proceeds on the seven planetary bodies of any chain of evolution. These seven places or spheres for such evolution represent different states of consciousness, and hence, as written in the *Secret Doctrine* and attempted to be shown in these articles, they

may and do interpenetrate each other with beings on each. Therefore all such words as "round", "around", "chain", and the like must be examined metaphysically and not be allowed to give the mind a false notion such as is sure to arise if they are construed in the material way and from their materialistic derivation. "To go around" the seven globes does not mean that one passes necessarily from one place to another, but indicates a change from one condition to another, just as we might say that a man "went the whole round of sensations".

As to the other questions raised, *Esoteric Buddhism* is right in saying that the monads pass *several* times around the globes as minerals and vegetables, but wisely does not make the number and order very definite. In the *Secret Doctrine* one of the Masters writes that at the second round the order of the appearance of the human kingdom alters, but the letter goes no farther on that point except to say, as is very definitely put in the *Secret Doctrine* on p. 159, para. 4;

The Life Cycle . . . arrived on our Earth at the commencement of the fourth in the present series of life-cycles. Man is the first form that appears thereon, being preceded only by the mineral and vegetable kingdoms — even the latter *having to develop and continue its further evolution through man.*

This states quite distinctly (a) that after the second round the order alters, and (b) that in the fourth round, instead of animals appearing as the first moving forms for the monads to inhabit, the human form comes first, preceded by mineral and vegetable, and followed by the brute-animal.

This change always comes on at any fourth round, or else we never could have evolutionary perfection. Other monads come originally from other spheres of evolution. In a new one such as

this the preliminary process and order of mineral, plant, animal, human must be followed. But having in two or three rounds perfected itself in the task, the monad brings out the human form at the turning point, so that man as the model, means, guide, and savior may be able to intelligently raise up not only humanity but as well every other kingdom below the human. This is all made very clear and positive by repeated statement and explanation in the *Secret Doctrine*, and it is a matter for surprise that so many Theosophists do not understand it.

For fear that the present may be misunderstood I will add. Although the order of appearance of the human form alters as stated, this does not mean that the whole number of natural kingdoms does not make the sevenfold pilgrimage. They all make it, and in every round up to and including the seventh there are present in the chain of globes elemental, mineral, vegetable, animal, and human forms constituting those kingdoms, but of course the minerals and vegetables of the seventh round and race will be a very different sort from those of the present.

But as what a Master has said hereon is far better than my weak words, I will refer to that. Thus:

Nature consciously prefers that matter should be indestructible under organic rather than inorganic forms, and works slowly but incessantly towards the realization of this object — the evolution of conscious life out of inert material.

SPIRITUALISM (1) — *William Q. Judge*

The subject of spiritualism brings us face to face with the history of the Theosophical Society and the true progress of the human soul. When Mme. Blavatsky came to this country in obedience to the orders given her by those she called her Masters and who are known to us as the Mahatmas and Adepts, it was with spiritualism here that she began. It was seen by the Masters that the new wave of inquiry had begun in those ranks but had been deflected into the channel of materialism miscalled by the high name of "spiritualism", and it was sought at first to give the spiritualists a chance to do what they might and ought for the sake of the western races. But the opportunity was not availed of at all: instead, ridicule and hate were thrown by them at H. P. B. Anyone who reads the published letters of the Masters can see the attention paid at first to this. One said that he was engaged in looking over the utterances of the mediums at their camp meetings, and H. P. B. often wrote her views as if she wanted to get into their ranks. She did wish to get there for the purpose of reform, but they would not let her in, and thus missed the greatest chance of the age. Letters were written by her to many people to have them help a new paper in Boston called the *Spiritual Scientist* as one that would give the right views about these matters, and she and Olcott wrote for the paper and gave money to it. It, however, died out soon. I knew the editor, and personally knew what H. P. B. and Olcott were then doing in that particular instance. She wanted to reform such abuses as paid and public mediums, and all the mass of wrong notion and wrong dealing with the whole subject, and especially she wished, as we do also, that things should be called by their right names, and that certain facts should not be accepted as proofs for theories

advanced by mediums, and especially by A. J. Davis, as to the state after death and the power and nature of the forces that come to and about mediums. So it may be justly said that at first she had in mind to carry a reform in spiritualism at a time when the cycle permitted vastly more phenomena than now. And a student in Theosophy will see in this her knowledge of facts and laws of which so many are ignorant to this day. For it is the fact that then more psychic power was loose in the country than there now is, and also that it was bound, as years rolled on, to fade out to some extent. This is borne out by history, for it is hard today to find many good physical mediums, while then it was very easy and they were quite common. The world thinks that the reason that they have now grown rare is because of many exposures, but the real reason is that the *force* has for the time diminished. Her desire, in fact her haste, was to take advantage of time before all was too late. And so when she found no acceptance among the spiritualists, she and Olcott began the Theosophical Society.

We are brought by the subject face to face with the problem of the nature and destiny of the human soul, because the facts of spiritualism are the facts of the soul's own life and of the various vehicles it uses for its experience of Nature. Spiritualists look at this subject in a material way and go at it blindly, endangering all who have anything to do with it. They speak of the life after death, and give details as to the facts of that life which are to the spiritually minded the grossest form of materialism, for they but deify and enlarge in the most sensuous manner the life supposed to be led after death, a life modeled entirely on this poor mean existence of ours and not at all resembling what soul-life ought to be. They have merely made the old Christian heaven a little more definite and gross.

The Theosophist must accept the facts of spiritualism or be accused of ignorance and bigotry. But his philosophy gives to

those facts an explanation which takes in the real nature of man, without sentiment, wonder, or amazement. He looks for the right meaning at all hazards. It is folly and waste of time to go day after day to a medium and hear over again that which excites wonder. And the careful Theosophist knows it is also dangerous to seek mediums; it is better to stay away and try to understand philosophy first of all. Not a single thing seen at a *seance* but can be found in smaller measure elsewhere if you but choose to look, for the world is full of wonders every day, and each one's life has in it much that gives the explanation for what the spiritualist claims as exclusively his own. If you will watch your own life in its three stages of waking, deep sleep, and dream, you will find the key to all the mysteries of mind and even to the mysteries of the whole of nature. So in considering spiritualism you must not set it in a compartment by itself, but must examine every part of the subject with reference to the living man and the philosophy of that living man's constitution. If you do not do so, but go on looking at these phenomena by themselves, you will be all the time on the wrong road and sure to come at last to wrong conclusions about the whole matter. It is hence important for us to keep clearly in mind the sevenfold constitution of man as explained in Theosophical literature. Our septenary nature must be known if we are to know all that the psychical phenomena mean, and we must also remember that what we are really considering is not the body but the action of the soul itself in the use of its various sheaths sometimes called "principles". And also it is essential, if you wish to know the truth, that you should accept, and try to understand, the impermanent nature of all that is usually called "material", and "matter", and "objective". The dense may at once become the fluid, and the objective turn into the subjective; in the same way also the subjective may, by the operation of natural laws, become the objective, and the unseen is more permanent than the seen. If this is not accepted and

realized, then there will be no hope of the enquirer's really knowing anything but the outside of all these strange phenomena. Set it down very carefully in the mind, then, that thoughts and ideas make shapes of their own which have the power under certain conditions of affecting our senses in such a way as to seem objective to our waking-cognition. This often happens in the realm of the psychic nature, and has deluded hundreds into thinking that to be spirit which was not spirit, but was of the very grossest part and essence of matter. And this brings us to the root of it all, which is that matter *in its essence* is invisible but at the same time far more gross than the matter we talk of daily. Almost to this conclusion such men as Tyndall and Huxley have been led when they tell you that it is impossible for us to really know anything of the essential or ultimate nature of matter.

In looking over spiritualism it resolves itself, so far as distinguishing it from other matters, into those phenomena called the coming back of the spirits of the dead, the materialization of forms said to be those of the dead and hence called "materialized forms", the carrying through the air of objects or the bodies of mediums, the writing of messages or the giving of them, and the precipitation of such messages in the style and handwriting of the deceased. Trance speaking, messages delivered in trance or not, speaking by inspiration, clairvoyance, and clairaudience, and all such phenomena are not distinctively the property of present-day spiritualism, as they have all been known for ages. But what I have laid aside as distinctive is quite wonderful to the ordinary lay mind, as we do not know how it may be possible for a tangible form to come out of the air, nor how a woman sitting in a trance may be able to tell many facts such as the name, the circumstances, and all such details about a dead man whom she never knew. And just here is the point of departure between the

Theosophist and the Spiritualist. The latter says this proves that the dead man's spirit is present, but the theosophist denies it and says it is all done by some or all of three agencies, excluding kama-loka entities. The *first* is the astral remainder of the dead man, devoid of his soul and the conscience; the *second* is the astral body of the living medium; and the *last* the minds and astral bodies of those present. In these three agencies is the explanation of every one of the phenomena; the elemental sprites being included in all the three, as they take part in every movement in nature and man all over the globe and around it. That is why I have not given them a separate part in the matter. Our every thought stirs up and uses these elementals, and the motion of the wind, the rays of the sun, and the fluids of the body, with the motions of the organs, all do the same thing. These elementals are the nerves of nature, and not a thing can happen or be done in any department of life that does not involve and use the sprites of the elements. By their aid, acting only under law, do our thoughts fly from place to place. They galvanize the deserted astral bodies of the dead, and thus, giving them a brief and wholly artificial life, cause them, like machines, to utter sounds, to repeat what they had been concerned in, to imitate the once active and ensouled person. This is about all the "spirit" there is in the communications from the dead. We might as well say that a lot of educated parrots left in a deserted house were the souls of the persons who had once lived there and owned the birds. Indeed, the illustration of the parrot is perfect, for a good parrot behind a screen could make you think that an intelligent man was hidden from view but speaking in a voice you hear and words you understand.

Take now the case of a "materialized form". Here you see, rising out of the floor or coming from the cabinet, an apparent human form which you can touch and feel, and which, in the very best

case, utters some words. What is this? Is it real? Is it a spirit?

It is not a spirit. It is made from the astral body of the medium, and often from astral matter sucked out of the sitters who may be present. The medium furnishes the natural chemical laboratory in which the astral particles are added to the loose physical atoms of the persons near, so as to make a dense form from the subjective that becomes for a time objective, but which cannot remain. It will fade away. A framework of magnetic and astral particles is first made, and then is condensed by adding the physical particles from the bodies of those present. Then it becomes visible. But it has no organs. It could not be dissected. And did it last long enough to be sawed in two you would find that it was solid all through, or ethereal as you please, for the dividing line between those two conditions would be constantly changing. It certainly would not be the heavenly form of your departed dead. More likely it is made up by the great force of some person of a very bad and utterly depraved nature lingering in the sphere of the earth and unable to get out of it, but constantly desiring to gratify its old lusts.

This is the ancient explanation, and the same solution has been given by one or two mediums under what they call control. Once, some years ago, a medium in Chicago reported that one Jim Nolan, long dead but said to be a very learned spook, came to her and said that materializations were just as I have told you, and added, "Why do you suppose it useful or necessary for us to make a new form for every new spirit that comes to you? We use the same old form over and over again, and we just reflect upon it from the astral light the face of those who are dead whom you wish to see." (2) He might have added that if the callers persisted in asking only for those who were still alive, the forms and faces of the living would also materialize from the cabinet. This experiment has not been tried by the spiritualists, but it would

inevitably result in proving that others than the dead would appear, and would cover with doubt the question of the dead returning. For if a spirit materialized, which after all turned out to be the *simulacrum* of a living person, what proof would one have that all the other spooks were not also alive? This is just what Theosophy says. They *are* all alive, and are one and all fraudulent representations of those whose names are taken in vain. And until this crucial experiment has been tried and well tried, the spiritualist cannot properly assert that the dead come back and make themselves visible.

The imagination of both sitters and medium is also very potent. Not in making them see what is not there, but in giving the shape or form to what does come. I have seen by the side of a medium of weak picture-making power the forms of so-called spirits that looked as if made by an amateur, as if cut out roughly from some substance. This was because the medium had no ability to draw or picture a thing to himself, and so, the elementals having to follow the natural model in the medium's mind, had perforce to produce just what shape was there. But others there are who have good picturing-power, and so with them the spook is well formed.

This brings me to the precipitation or writing of messages; and here it does not make any difference about the ability of the medium to write or draw, as the model or matrix of writing or picture is fixed in the astral light, or ether, and makes it easy for the natural forces to produce an exact imitation of the writing of those who have died. As I have seen the writing of the *living* thus imitated in precipitation, I know that this is the process, and that the matrix or model is independent of the medium.

The laws governing the production of a precipitation of matter from space on to a surface so as to become fixed and visible on

the paper or other material are the same in every case, whether done unconsciously by a medium or consciously by an Adept in the art.

The medium acts as the controlled and ignorant means; the Adept is the master, and at his own will, using the same laws, brings about the same end. The difference between the two is just that which exists in the case of the person who throws a mass of paint at a canvas and produces, by an accidental combination of color, a sunset or other scene, and the artist who with knowledge and skill deliberately paints a picture. Other illustrations will occur to you of the same kind. In the realm of psychic force, however, the laws act with greater certainty and power, thus showing results more astonishing. So we may not say that the medium uses any of the laws consciously, but we can assert that the inner body, the astral one, of the medium may use these laws and forces in a manner not understood by the waking sense of the person.

Now when the Adept makes a precipitation he constructs with the developed imagination or picture-making power of the mind an image, exact in every detail, of the words or figures to be precipitated, and then, using the force of his will, draws from the air the carbon or other matter for the color. This falls like rain, condensed from the air, and is unerringly drawn into the limits of the picture thus made by the mind. The drawing force being continued, it gradually condenses on the paper, and you have the message or the picture. Of course there are some other details I have not given, but they are not now necessary for the explanation. The medium is the means for the same action helped on by the elementals.

The cases of slate-writing are not usually precipitation, but are the actual rubbing of the pencil on the surface of the slate, and this is always done by the astral hand of the medium urged on by

the elemental forces and the vivified astral shells of the dead. The explanation of the resemblance to handwriting and so forth is as adverted to above, from the pictures in the astral light, the pictures in the aura of the sitters, and also those in the aura and mind of the medium. There is no spirit present but those enclosed in living bodies, and none of the messages will be any higher or better than the education and nature of medium and sitters and the sub-conscious impressions in the medium's astral body.

Objects have been carried through the air and even through walls in the presence of some mediums, and also sometimes the bodies of mediums have been levitated. How is this done? If you go to India you can see, by searching, the bodies of yogees levitated and objects sent flying through space. I have seen both there, as well as in the presence and by the conscious force of Mme. Blavatsky. In levitation of the human body the thing is done by altering the polarity of the body so that it is of the opposite kind of electricity to the spot of earth beneath. The distance it will levitate depends on the force and strength of the polar change. This is not contrary to gravitation, for that law is but one half of the great law which should be called attraction and repulsion, or, in other words, sympathy or its opposite. Gravitation, in the opinion of Occultism, depends entirely on electrical law, and not on weight or density.

Carrying of objects through the air by no visible means is a feat of the elementals or of the astral hand of the medium. And hence we have to know all about the astral body. One of the powers of the astral body is that of stretching out to a distance of a great many yards.

The sending of a hard object through a wall is done with small objects, and then a portion of the wall equal to the size of the object selected is disintegrated, so that the small object may pass through. It cannot be done with very large things, nor with the

human organized frame, except by the exertion of a vast amount of force not in the control of any one save a Master. I have seen H. P. B. push out her astral arm and hand for a space of over ten feet and draw into her physical hand an object at the other side of the room, and this is what she meant by "psychological frauds", as you did not perceive the arm and hand and were filled with wonder to see inanimate things move of their own accord, so far as you could tell. The medium does the same thing most of the time, and in very few cases are they aware that it is their own member that does it. But of course there are instances when the elemental sprites do it also.

Other phenomena belong to other fields. For all of them have been long before the world, and all that really distinguishes spiritualism from the rest is that it amounts to no more than the worship or following of the dead. It is not the worship of spirits at all. It is dealing with the dead shells of once living men and women. We hold that at death the soul flies to other states and leaves its coats of skin and of astral matter behind it. These should be let alone, as there is danger in them. They belong to other planes of nature, and if we wake them up, brutes and devils as they really are, we then subject ourselves to their influence and power. I say they are brutes and devils because the best of us knows that a part of our nature is not divine but is related to the earth and to brute matter, and is full too of all the passions and desires we have had in life. The soul being gone, there is no director to guide and prevent, and so we deal only with the gross dregs of man when we attend *seances* or let ourselves become mediums. In sleep we see a slight but convincing evidence of this. Then we are gone for a time, and the body, left to itself, throws itself into unbecoming attitudes, snores, throws itself about, and may strike another: I have read of cases where a man in sleep has leaned over and killed the person lying beside him. "Oh," you say,

"that was a nightmare". Precisely; it was; but it was the body of the man not controlled by his soul that did the act. It is the same with these spooks. They are devoid of soul, no matter who may have been the owner in life, and it is better to leave them alone and try on the other hand to develop and educate the living soul while it is in the body and is the real trinity, through which alone in any life real knowledge may be gained.

In a short paper it is impossible to fully treat this subject, as it brings up the whole of dynamics and science of psychic forces. But I have indicated the solution to all the problems that arise. For the present, until you have carefully studied the sevenfold constitution and the nature of mind with its powers, you may have difficulty with the matter except so far as concerns the historical and analogical arguments. These, together with the improbability deduced from absurdities of speech and action shown by the alleged spirits, should sustain the position taken so many years ago by H. P. Blavatsky and outlined above. And no one surely can doubt but that no truthful spiritual utterances — other than as to mere facts — can come out of the practice of sordid money dealings between mediums and enquirers. This is the bane of spiritualism, and should be eliminated at whatever great or painful cost. Until that is done no good can come out of that Nazareth.

A VIEW OF GRECIAN MYTHOLOGY (1) — E. B. Rambo

In the study of Grecian Mythology or the religion of the ancient Greeks and Romans, we have no living professors or exponents of this belief, as is the case with most of the religions of the world. Yet as a system of religion and thought, and that one existing at the birth of the Christian religion and immediately preceding its advent, it is most important as a system. It is not only without living exponents, but it has no great bibles, vedas, shastras, or puranas as other religions have, and we must judge it by the few poems of the ancient Greeks, those of Hesiod, Homer, and the Orphic poems, and as we may find the powers and attributes of the various Gods symbolized in the statuary and gems of ancient times preserved or brought to light in these latter years, dumb yet speaking witnesses. It is an error to call the religion of our forefathers a mythology and attach to this word the meaning we usually attach to the word Myth or Fable, — that of something mythical, that is, untrue, imaginary, having little or no basis in fact, of the fancy. Quite the reverse is the truth; that there is no myth but what there is behind it and for it a true basis in fact. Myth is not of the imagination, no more than is the image or the shadow without the original producing the shadow, the image. Myths and fables in all ages have concealed the whole truth, and have been the external husk, generally made attractive, for covering and keeping the deeper truths and secrets of Nature.

In all ages it seems to have been necessary for the greater part of mankind to look upon knowledge veiled, both because he could not understand the whole of the deeper truths of Nature, and because he could not be trusted with the knowledge. If possessed, he would destroy himself and all others with the power conferred.

Myth and Allegory were the code, the cypher, in which the initiated transmitted to each other and their successors their own deep and perfect knowledge. We are told that these myths, legends, and allegories are to be read in at least seven different ways, and that as many correct readings may be had, all depending upon the key taken to unlock the hidden mysteries. According to the understanding, there is that for the plodding ignorant and for the most spiritual philosopher.

In a study of ancient Mythology we may take only one of these keys and may use it for only a very partial glimpse into the deep past. In this study we cannot take the interpretation of any one translator or student, for we see each one biased to a considerable degree by his previous thought, his education, moral and religious, and by what he desires to prove. It is only by taking many interpretations and comparing these with the silent carvings of the sculptor, observing the love and passion, the hate or tenderness expressed, dress, implements, attitude depicted by those who chiseled a religion into stone, that we may approach a correct understanding of the religion of our Grecian forefathers.

It is well to remember that Philology now proves that with few exceptions our present civilization is descended from the Aryan Race, the Fifth Race of the Fourth Round of Theosophy, and that it is well proven that the Greek and Roman people by their language were closely connected with the Aryan race and one of its direct sub-races, coming from that land of Northern India whence have traveled by slow marches many sub-races as they scattered westward from that land where the Masters keep their watch today. Why should They not live in the original home of our Race? This intimate connection shown between the Grecian and Aryan Races, we should expect to find traces of the earlier Secret Doctrine in Grecian Mythology, and as names of Gods and

heroes are shown to have a common derivation, we are warranted in using that which is known of one in explanation of the other and more obscure.

As in all other religions, we find the later expression of Grecian Mythology far removed from its earlier grandeur and simplicity. In the most ancient, we must seek the clearer and purer ideas.

The limit of time assigned to this subject this evening will only permit pointing out in a general and assertive way on one or two lines the deep and pure Theosophy to be found in the religion we are considering.

We read most of Zeus and Jupiter, of Father Jove who alone had power over all men and mortals, but Zeus was by no means the beginning of Grecian Mythology, although worshipped as the All-Father.

As in Theosophy, the first fundamental proposition is that of an Omnipotent, Eternal, Boundless, Immutable Principle on which all speculation is impossible, an Infinite and Eternal cause which cannot be described, but is the Root, the Container, and Essence of All, so we find with the Ancients, before all else, Chaos, — not Chaos in the usual sense of a heterogeneous mass, or a mixed state of matter in which manifested things exist in a disordered state, but as that state which contains all that is unmanifested, that which can only be described by negatives, and as the Absolute, holding and being itself Absolutely All. From Chaos are born all later manifestations, and as in all religions the one becomes the Trinity, or Three, so in the earliest Grecian cosmogony we find a primeval Trinity, Chaos, Gaea and Eros, answering to the Boundless All. In the unmanifested Universe, for while in later times Gaea becomes the physical earth, it originally is that aspect of the Absolute which we must think of as matter, and while Eros later becomes the brilliant winged Cupid, or

passionate love and desire, in the first awakening out of Chaos he is that propelling force, the active power which causes the One to divide and to appear on the Cosmic plane of Manifestation. From this first primeval Trinity is said to be born Erebus and Nux, or, in other words, over all is Darkness and Night, and from Darkness springs the light, or Aether, the superior light, and Hemera, the light of the terrestrial regions. With light, Heaven is made manifest, and over all is Heaven, or Ouranos. From Ouranos with his consort Gaea, or matter, are born first the Twelve Titans, six male and six female. Now these, while named, were not personages, but stand for various elementary forces in Nature, and we see their correspondences described in Theosophy as aspects of the one Fohat, the Universal force.

From Ouranos and Gaea are also born the Cyclops, three in number, — Brontes, thunder; Steropes, lightning; Arges, sheet-lightning; and three Centimanes, the Hundred Handed: Coltus, the earthquake; Briareus, the tempestuous sea; Gyes, the storm wind; other manifestations of this one same force prevailing and co-existing with Matter and Consciousness. Still, we have not come to the Gods over mortals, and we find that the earlier manifestations retire into darkness and silence, while from one pair of the Titans, Chronos (Time) and Rhea (Succession), are brought forth again six children, five of whom as they are born are swallowed by Chronos, this myth standing for the Ancients as expressing the fact that as all manifestation was in time and as all things which have a beginning also have an ending in time, Chronos may be said to devour his own offspring. The sixth child, or Zeus, is saved by the mother, Rhea, and becomes in time the slayer of his father, Chronos, taking away from him the creative power, after first compelling him to give up or reincarnate his first-born children.

We now have Zeus, the Sky Father, or Father over All; and in the name itself we have a proof of the descent of the Grecian people

from the Aryan race, carrying with them the ancient and original religion, for the Sanskrit word Dayus meaning Sky becomes the Zeus of the Greeks, as fully shown by Prof. Max Muller, and with the addition of another Sanskrit word, Pitar or Father, becomes Zeus Pater, or Jupiter of the Romans.

We cannot consider the entire Grecian pantheon, but we take up one line only, and in a rapid way will endeavor to show how the idea of Karma of Theosophy is most fully incorporated in Mythology. Zeus had at different times several wives. He is united with Themis, one of the Titans, and her statue is familiar to all of us as the figure of the noble, majestic woman with bandaged eyes, balance and sword in hand, standing for Justice and Law.

She is more than administrative law. Themis is the source of all Law as Karma is Law and action of every kind and on every plane. Themis represents the reign of law among Gods and Men, and from her union with Zeus are produced deities and gods, which are but aspects of the one Great Law, acting on different planes, cause and effect in their inter-action. First may be mentioned that group of their children called the Horae, whose office it was to promote Equity and Justice, whose stand was about the throne of Zeus, and who were as well the Seasons, representing the regular and orderly march of Nature in the changes she ever effects. While they stand for the higher workings of Universal Law, they also preside over law and order in human affairs.

A second group of the children of Zeus and Themis was the Moirai, or Parcae, by some called the Daughters of Night. The sacred Three, the Fates, dark and inexplicable powers of fate, and yet they are represented as beautiful females spinning and singing the song of the Sirens. As we have Karma, past, present, and future, so the Parcae represented these divisions of time, yet all

three are represented as seated together, connected with the one thread of Life passing through each of their hands, first Clotho spinning the thread, the action taking place, while Lachesis with parchment made the record, and Atropos with balance and shears determined and assigned the result.

While they were Fate, yet they really denote the boundary of Man's own making as well as that portion of his life which is determined by his birth, for this is but the expression of his former life or lives.

Another daughter of Zeus and Themis born of Law was Nemesis, and when we look upon that aspect of Karma which is retributive justice on this our plane, we have the idea pervading the minds of most persons of Nemesis. She was not only this, but more. Harsh, cruel only when Karma demanded it; equally she was loving, just, giving true deserts, and specially adjusting all that which was not deserved. She was the Goddess of Equality, as Karma is, watching over the equilibrium of the moral universe, seeing that happiness and misfortune are allotted to man according to merit. From this arose the idea of Nemesis as an avenging deity, visiting punishment upon the crimes of mankind. As such avenger she is shown with wings, in a chariot, with sword and whip.

Again, however, she is the just judge, a kindly, gentle Goddess who dispenses that which he is entitled to who has sown wisely, and again as a young woman of grave and thoughtful aspect, holding in her hand the cubit, the bridle, and rudder, emblems of control, as Karma calls her to act as the one who controls, for Karma rewards and controls all action and effects of action. . . .

To the student of Theosophy there seems to be but one truth underlying Grecian Mythology, and this truth is the jewel hidden in the Secret Doctrine, that Divine Wisdom which appears on every hand, in every religion, in every age.

He who would be a better occultist will study the loves and hates of the Gods and Goddesses, and underneath the chaff will be found the rich kernel of true spiritual knowledge.

RISHEES, MASTERS, AND MAHATMAS (1) — *Lakshman*

Dear Brother: — I am a Hindu, and though in essence — in my inner man — the same as your fellow workers in the West, it happens through the subtle action of karma I now have a body born of the Hindus, with Hindu blood and all the history of the Hindus behind me. I do not regard this as any more than an "accident of birth", as they say, but of course due to law and order, as we never admit any accidents in reality, and look on that word as one which designates for the time something which we cannot just for the moment explain. But being as I am it is easy for me to look at life, at man, at nature from quite another point of view than that which I see is often taken by the Western mind. And that other point of view will surely add something to the stock of general experience and knowledge.

From my stand and station it has seemed strange to me that in your West so many people have doubts of the existence of the personages who have been called by many appellations but all meaning the same. We call them Rishees, sometimes Mahatmas, sometimes Gurus, at other times Guru devas, and again Sadhus. But what of all these names: they all point to the same thing, the same end, the same law, and the same result. Looking over the old numbers of the *Theosophist* in our library here, I find now and then seeming protests from fellow-countrymen of mine against the use of the names of the Mahatmas, but never any protest contrary to declaring the existence of such beings. I remember one when the very wise and wonderful H. P. B. was at Adyar, in which the writer of it takes her severely to task for letting out any names, but all through it you can read if you wish, and as I can see plainly, the attempt to once more declare for the existence of those beings. We think it very queer the West should

doubt the existence of men who must in the order of nature be facts or nature is a lie, and we sometimes wonder why you all have so many doubts. No doubts are in our minds. Perhaps some of us may now and then doubt if such and such a Rishie or Mahatma was the Guru of so-and-so, but the general fact of their existence we do not question; they must be, and if they be, then there must be a place for them on the earth. Now I know myself of some, and have conversed in private with some of my friends who have given up the world and are what you call yogis and bramacharis, who have told me of seeing and meeting others of the same class and all telling the same story and declaring the existence of their order. So many proofs of that sort exist for any sincere observer, we have no hesitation in our belief.

Once I thought the Westerns never had any record of such beings among themselves, and I excused them, as their karma seemed hard to have crowded out such noble men and women, or rather such noble souls. But after my Guru-deva told me to read certain works and records of the Western people, I discovered you had almost as much testimony as ourselves, allowing for the awful materiality of your civilization and the paralyzing power of priestcraft. You have a Paracelsus, the Rosicrucians, Boehme, Cagliostro, St. Germain, Apollonius, Plato, Socrates, and hosts of others. Here is a vast mass of testimony to the fact of the existence of a school or schools and of persons sent out by them to work in the world of the West. Looking further I hit on the Rosicrucians, an order now extinct evidently, and imitated by those who now carry on so-called orders that might be called in fact bazaars or shops. But the real order once existed, and I am sure some one or two or more of the old companions are on the earth. They were taught by our older Masters, and carried the knowledge home from the old eastern journies of the Crusaders. If you look you will find no trace of the order before that time. It

is then another testimony to the Adepts, the Rishees, those known as Mahatmas. So karma did not leave the West without the evidence.

I have also with sorrow seen writings by men in literature who should never be guilty of the crime of falsification, wherein it was said in derision that the Mahatma is not known in India, that the word is not known, and that the name given out of one is not even Indian. All this is mere lie. The word Mahatma is well known, as well as Rishee; even the name attributed to one of the Masters of H. P. B. is known in India. I took the trouble to look it up in European sources at a time one of these scholars uttered the lie, so as to have the proof that the West had the information, and I found in an old and much used book, a dictionary of our Indian names, the name of the Mahatma. Such lies are unpardonable, and beyond doubt karma will give these men many lies to obstruct their progress in another life, for what you give you get back.

Some of us have objected to the giving out of the names of the Masters because we have a very great feeling of the sacredness of the name of such a person and do not wish to give it out to the ordinary man, just as a good man who has a good wife does not like to have her name thrown about and used by a lot of wicked or beastly men. But we never objected to the fact of the existence of the Rishees being discussed, for under that belief lies the other of the possibility of all men reaching to the same condition.

Lastly, it appears to me that the reason the West so much lays stress on the fact that the Masters do not come out to help them is, that the West is proud and personal, and thinks that any man who will not come forth and ask for their judgment and approval must by that mere fact be proven a myth or a useless and small person. But we know to the contrary, and any man can prove for

himself that our humble fakirs and yogis do not want the approval of the West and will not go to it to procure any certificate. When one does go there, it is because his powers are on the wane and he has but little good to live for.

I hope your friends will not doubt the great fact under the existence of the Masters, but will feel it and put it into action for the good of the race.

FOOTNOTE:

1. This letter is published as a contribution on the question of the existence of the "Masters" so often spoken of in the literature of the T. S. and especially by H. P. B. The writer is a reader of this magazine and doubtless also of all the others throughout the Society. — Ed. ([return to text](#))

The Path

THE FINAL CHOICE — *W. Scott Elliot*

It must necessarily be with the greatest diffidence that any one can presume to utter one thought about the final choice that awaits at infinite distance the emancipated soul.

To the writer the very fact that such a choice would have to be made came as a revelation of the most awful import, for it points to what is but vaguely hinted at in the most mystic works, but which nevertheless we feel must be the outcome of all that we know of evolution, *viz.*: that there is no final or never-ending-bliss; that the great law of duality pervading the Cosmos is effective not only in the limited period open to our view, but that the alternation of the day's activity and the night's rest has through all space and all eternity its correspondence; and thus though the periods of Nirvanic or Para-nirvanic bliss are of such stupendous duration as to merit the term eternity, that even these eternities have an end when activity again takes the place of rest.

Hints, no doubt, lie scattered through the mystic writings of all ages as to this ultimate choice, but in the *Voice of the Silence* is the fact as bearing on each of us individually stated with a definiteness that must at once attract attention. Nothing in the realm of fiction inspires the mind with a more vivid awe than the passages descriptive of the sustained warfare waged by the pilgrim who dares to attempt the passage of the "seven portals".

This warfare is waged in a field of which man as yet has but the dimmest consciousness — the infinite field of "self", bristling as it does with all the terrors of an unknown world. The world of the senses is now well explored; oft has experience tasted its pleasures and its pains; but the world within is to most of us a yet unopened book. And when the former has been experienced *ad*

nauseam, who can stay the explorer from fresh fields of knowledge and of conquest? But it is an exploration that needs the courage of a hero: "The path that leadeth on is lighted by one fire — the light of daring burning in the heart." And this expression is used with reference to the passage of the third gate only, the gate of Kshanti. When it is passed thy body is thy slave.

Now for the fourth prepare, the portal of temptations which do ensnare the inner man. "Ere thou canst reach that goal, before thine hand is lifted to upraise the fourth gate's latch, thou must have mastered all the mental changes in thyself and slain the army of the thought-sensations that, subtle and insidious, creep unasked within the soul's bright shrine. If thou would'st not be slain by them, then must thou harmless make thine own creations, the children of thy thoughts, unseen, impalpable that swarm round humankind, the progeny and heirs to man and his terrestrial spoils. Thou hast to study the voidness of the seeming full, the fulness of the seeming void. O fearless aspirant, look deep within the well of thine own heart, and answer. Knowest thou of self the powers, O thou perceiver of external shadows? If thou dost not — then art thou lost. For on Path Fourth the lightest breeze of passion or desire will stir the steady light upon the pure white walls of Soul. The smallest wave of longing or regret for Maya's gifts illusive — a thought as fleeting as the lightning flash, will make thee thy three prizes forfeit — the prizes thou hast won. For know, that the Eternal knows no change.

When such language is used with reference merely to the fourth, the "gate of balance", what unthinkable heights of Being must be revealed by the passage of the further portals! And yet at the end there lies the choice — on the one hand the well-earned reward — Nirvana — the glorious state of Absoluteness, the Bliss past

human thought; on the other the "Great Renunciation" — the "Path of Woe" through countless Kalpas; Nirvanas gained and lost from boundless pity and compassion for the world of deluded mortals. What can man think or say about a choice to be made by beings who have passed the threshold of Divinity! Contemplation stands awe-struck in amazement, and the man can but bow his head in worship before the God.

The use of such utterly inappropriate terms as selfish and unselfish with reference to the choice seems to be a blot on the otherwise faultless expression of this marvelous little volume, for it must be recognized that a renunciation and a selflessness such as is absolutely inconceivable by ordinary men has already been attained by the aspirant, whatever may be his final choice.

Nevertheless it is very apparent which is the greater and the nobler choice. The Bodhisattva who has won the battle, who holds the prize within his palm, yet says in his divine compassion. "For others' sake this great reward I yield", accomplishes the greater Renunciation. A Saviour of the world is he.

What terrible possibilities too for Humanity are hinted at in the following description of what the self-immolation implies for one who chooses the Path of Woe.

Self-doomed to live through future Kalpas, unthanked and unperceived by man; wedged as a stone with countless other stones which form the "Guardian Wall" — such is thy future if the seventh gate thou passest. Built by the hand of many Masters of Compassion, raised by their tortures, by their blood cemented, it shields mankind, since man is man, protecting it from further and far greater misery and sorrow.

A similar passage in *Light on the Path* points to the same awful

possibility.

Give your aid to the few strong hands who hold back the powers of darkness from obtaining complete victory.

The thought at once arises, What are these powers of darkness? Nothing, we may be sure, that exists outside our own Karma, nothing that has not been created by our own thoughts or acts, that is, by the thoughts and acts of Humanity since its evolution, for we cannot separate ourselves from the race. To the unthinking this explanation may seem to — though it does not by one iota — detract from the awfulness of the situation. Creations of humanity though they are, how terrible must they be in their semi-conscious hostility, and whatever elemental forms they may assume, it is doubtless such as they who act as guardians of the entrance of the path of knowledge.

Stress has recently been laid in some Theosophic writings on the awful nature of this journey whose stages we have been considering and which by some is called Occultism, compared with which the mere acceptance of the Theosophic teachings is an easy thing — including, though it may, the strenuous endeavor to make the life correspond with the teachings. It has been stated as an axiom that — "we may all become Theosophists, not one in ten thousand can become an Occultist". In some respects this is quite true, and it is very desirable in an address to the general public that stress should be laid upon the great gulf that separates Occultism from Theosophy. Nevertheless from another standpoint the two merge into one, and the path of Occultism is but a continuation of the Ethics of Theosophy. The former does not necessarily need a gateway of external ceremony or initiation. These will come in due time when the neophyte is ready. Even now, though he may be quite unconscious of it, the hand of a Master may be upon him, guiding him through the

anguish his own Karma has merited and educating him for a higher service. And however terrible may appear to us the stages of that awful journey, there are some to whom no other path is open, for when it is felt that every phase of the ordinary life of man has been realized, until no mystery is left to probe, the unsatisfying and impermanent character of all earthly bliss is itself the finger of destiny pointing to the great attempt.

A thorough transformation of character in one life-time is doubtless a rare and a difficult achievement, but when the one central desire that alone gave life any color or meaning has been completely abandoned, the transformation may at least be said to have begun. With heart rending and in absolute despair is destiny's decree accepted — that is the first step of renunciation, and the second is like unto it save that the anguish is tempered by a subtle sense of exaltation. But when the whole nature can with the equanimity of entire dispassion and in the calm of matured conviction repudiate all desire for earthly union, may not the desire be then considered dead?

Assuredly it is a great achievement. The growing knowledge of Soul has wiped out another of the Sense-illusions, and the peace of serenity has taken the place of the vague unrest. Union — the real union — is still, as ever, the lode-star of our effort and desire, but the false and the fleeting is now replaced by the real and the abiding, for how should any earthly bridal still satisfy our longing when the heavenly bride — the soul — has once begun to lift the veil concealing her divine perfections?

By unexpected means too may the result above described be reached. Words can scarcely convey to those who have not yet passed through the battle, the awful tempest of emotion in which the first two stages are achieved, but the final one may be the result of an apparently intellectual conviction. It is, in fact, the

attainment of knowledge. And this is but another illustration of that great truth so often dwelt on by the old Greek sages, — that ignorance is the prime curse on man, and that only with the attainment of wisdom will his sin and misery depart.

A great achievement it undoubtedly is, even this first little fight with the hydra-headed monster of desire, for it implies a conscious increase of strength. Concentration is strength, and when the restless diffusion of energy caused by desire is replaced by the serene survey over the fields of life, a step at least is made towards that perfect concentration which is the key to all real power.

A glorious achievement truly, if only we could be sure that the snake was slain beyond reanimation, for, as it is written, "the enemies he slew in the last battle shall not return to life in the next birth that shall be his". But remember, O Lanoo, this also is written, "Kill out desire, but if thou killest it take heed lest from the dead it should arise again". To further emphasize the terrible possibility of falling back even from the threshold, a very mystical passage, pregnant with deep meaning, may here be quoted from the *Secret Doctrine*. It is about the "Nameless One", also called the "Great Sacrifice", who holds spiritual sway over the initiated Adepts throughout the whole world.

For sitting at the threshold of Light, he looks into it from within the circle of Darkness, which he will not cross; nor will he quit his post till the last day of this life-cycle. Why does the solitary Watcher remain at his self-chosen post? Why does he sit by the fountain of primeval Wisdom, of which he drinks no longer, as he has naught to learn which he does not know — aye, neither on this earth, nor in its heaven? Because the lonely, sore-footed pilgrims on their way back to their home are never sure to the last moment

of not losing their way in this limitless desert of illusion and matter called earth-life. Because he would fain show the way to that region of freedom and light, from which he is a voluntary exile himself, to every prisoner who has succeeded in liberating himself from the bonds of flesh and illusion. Because, in short, he has sacrificed himself for the sake of mankind, though but a few elect may profit by the Great Sacrifice.

To the great majority of men the life of action and sensation must necessarily appear to cover the field of reality; their consciousness of an inner life at all is but occasionally galvanized into spasmodic activity. To such the use of realistic language about the subjective life of thought and emotion must inevitably convey a feeling of reality. It is no doubt a far-off day when humanity generally will have transferred its energy to the field of the deeper consciousness, but there are some to whom the inner life is daily becoming the more real of the two, and to whom therefore this attempt to describe "the fierce fight between the living and the dead", culminating in the final choice, may not be without meaning.

When dealing with the higher ethics it seems impossible to state the whole question except in paradox. According to the teachings, renunciation is the watchword all up the line, but for us mortals to whom renunciation is unmixed pain there must be another side of the shield, and surely that can best be formulated by stating that nothing that we can dream of bliss but will be more than realized on the "great journey". The stages of that journey may, indeed, bring "terrible toil and profound sadness, but also a great and ever-increasing delight", and the delight to the aspirant must surely outweigh the toil and the sadness. To think otherwise seems a stultification of all evolution.

True, the thought that now has hold of us is the impossibility of our ever soaring to such heights of self-sacrificing devotion as to choose the path of woe. But there are correspondences on all the planes of nature, and very valuable inferences may be drawn from such correspondences. Most of us must look forward with some sort of satisfaction to the blissful rest that follows the strife of earth, and few would be ready at once again to begin the weary round. Nevertheless there are some who feel that they are prepared to forego the bliss of heaven and to accept immediate reincarnation for the sake of shortening the journey, though, as is well known, this is a possibility outside the ordinary course of evolution and only realizable by those who have progressed so far as to be under the direct guidance of a Master.

To choose the pathway of the great renunciation may indeed be impossible for thee now. Nevertheless hope still — what is beyond thee today may be within thy reach tomorrow. Many life-times must elapse ere the final choice has to be made. Meantime content thee to prepare for the great journey, and though every attainment of knowledge may only seem to make the mystery of thy own being a little harder to ravel, remember that the light that can illumine comes only to the bosom passionless. To reach that light the "higher carelessness" of the Sage must have been practised, the serenity of the Sage must be attained. And here is his picture from the *Mahabharata*.

"For richest, greatest, that one is
Whose soul, indifferent to bliss
Or misery, to joy or pain,
To past or future, loss or gain —
Sees with calm eyes all fates befall
And, needing nought, possesseth all."

THE THEOSOPHICAL SOCIETY — *William Q. Judge*

AS RELATED TO BRAHMANISM AND BUDDHISM

The subjoined circular has been sent by me to as many Brahmins as I could reach. I have purposely used the words "Brahmins of India" in the title because I hold to the view of the *Vedas* and the ancient laws that the Brahmin is not merely he who is born of a Brahmin father. In America lack of accurate knowledge respecting Indian religions causes a good deal of misapprehension about Brahmanism and Buddhism, as very many think Buddhism to be India's religion, whereas in fact it is not, but, on the contrary, the prevailing form of belief in India is Brahmanism. This necessary distinction should be remembered and false notions upon the subject dissipated as much as possible. Buddhism does not prevail in India, but in countries outside it, such as Burma, Japan, Ceylon, and others. The misconception by so many Americans about the true home of Buddhism if not corrected may tend to cause the Brahmins to suppose that the T. S. here spreads abroad the wrong notion; and no form of religion should be preferred in the T. S. above another. — W. Q. J.

TO THE BRAHMINS OF INDIA.

144 Madison Ave, New York, *April 5, 1893,*

MY FRIENDS: —

In the English Theosophical magazine, *Lucifer*, for the month of February, 1893, is an admirable article by Rai B. K. Laheri of Ludhiana, Punjab, in which he asks his fellow Theosophists to remember that no religious form of belief should be prominently

brought forward or disparaged by members of the Theosophical Society, and his words appeared at the very time I was contemplating a fraternal letter to you to show you that that Society is not engaged in any attempt to bring forward the Buddhist religion. I was the pupil and intimate friend of H. P. Blavatsky who founded the Theosophical Society; I took part with her in its first organization; I was conversant with her sleepless devotion and untiring zeal in the work she wanted that Society to do, which was to follow out the plan laid down for it by some of your own Indian Rishies, the Mahatmas who were her Gurus; I was told by her in the very beginning of that work that her object as directed by her Guru was to bring to the attention of the West the great truths of philosophy contained in the old books and thought of India; I know that her first friends in the work in your country, even before she left this one, were Indians, Brahmins, sons of Aryavarta: hence my sensitiveness to any misapprehension by you of its purposes or of its supporters can be easily understood by you. I am not a Christian nor a member of any religious body; as I was born out of India in this incarnation I could not be a Brahmin under your present laws; but if I am anything I am a follower of and believer in the *Vedas*; I have therefore a peculiarly deep interest in the philosophic and religious literature of the Indian Aryans, am in strong sympathy with its convictions and spiritual quality, and have in all ways, but especially for the last seven years in my own magazine, the *Path*, labored constantly to bring its treasures to the attention of students in this Western World.

Having, then, this triple devotion, — to the teaching of Indian sages, the ideals of the Messenger of your own Rishies, and the welfare of the Theosophical Society, it will be evident to you why the evil so strongly felt by my honored Brahmin co-worker, Bro. Laheri, and by myself should lead me, as an individual and as

Vice-President of the T. S., to address as many of you as these words can reach. The evil is this: that a suspicion is spreading through the Brahmin community that the Theosophical Society is losing its impartial character as the equal friend to all religions and is becoming distinctly Buddhistic in its sympathies and affiliations. And the evil is not a mere mistake as to fact: it is evolving the practical consequences that interest in the Society diminishes among its natural friends in Brahminism, that they hesitate to enter its membership or cooperate in its work, and that they withhold the aid without which the priceless treasures of their literature, so indispensable to the efforts we Theosophists are making to throw light upon the great problems of existence now agitating the Western mind, and thus unite East and West, cannot be used in the spiritual mission the ancient Rishis have approved. In brief, Brahmins will not sustain the Theosophical Society if they believe it a Buddhistic propaganda; nor can they be expected to. No more could Christians, Mahomedans, or Parsees.

Although, as I am unreservedly convinced, this evil is due to misapprehension, it must none the less have had some cause to originate it. I believe this cause to have been threefold. First, the name *Esoteric Buddhism* given to one of our books. This book, as many of you know, was the first important attempt to bring the truths of real Indian spiritual philosophy to the knowledge of Europe and America. But it was not Buddhism. It was first named *Fragments of Occult Truth*, and might just as properly have been published with the title *Esoteric Brahmanism*. Its enormous circulation and influence, both on a constant increase, show the readiness of the Western mind for just this teaching. But its title, adopted from lack of a more accurate term at the time, has naturally led many to suppose it an exposition of mere Buddhism, although its author, Mr. Sinnett, has been at pains to explain the

contrary and Madame Blavatsky has also pointed out the mistake.

Second, the well-known membership in the Buddhist Church of Col. Olcott, President of the Theosophical Society, and his earnest efforts to unite the two schools of Buddhism, as well as to popularize their teaching and to restore the temple at Buddha-Gaya. And yet you must remember that Col. Olcott was himself invested by Brahmin authorities with the Brahminical thread, the highest possible evidence of confidence in his character, and that he has recently lectured with enthusiasm on the essential unity of the inner teachings of Buddha with your own religion. Nor should any of us forget that any personal predilections for his own faith are as much the right of the President as of any private member of the Society; and that the very Constitution of that Society, the Constitution he himself was active in shaping, forbids the identification of the Society by any officer or member with his personal beliefs in either politics or religion. Those of you who know Col. Olcott must be aware how utterly he would repudiate any wish, or even willingness, to thus abuse his official station.

Third, the incautious remarks of Buddhist members of the Society. No doubt such have at times been made, and in the warmth of personal zeal or in momentary forgetfulness of the scrupulous impartiality a true Theosophist owes to all other lovers of truth, our Buddhist friends have occasionally used comparisons which were unwise. Yet even here we need remembrance that absolute fidelity to the highest ideal, ceaseless prudence in speech and pen, total faultlessness as to tact and wisdom, are not vouchsafed to any body of religionists or to any individual of them: In this, as in other departments of human conduct, there will be lapses of discretion, and it would be unfair to refuse to an inconsistent F. T. S. the allowance we concede to an inconsistent citizen or an inconsistent moralist. Certainly it would be unfair to antagonize the Society because some of its

members proved defective in its spirit.

It is my conviction, then, that the suspicion which has thus interfered with the Society's work and impaired your own interest in it has no real basis. And I think you will share it if you recall such additional facts as these: — the explicit statements of the Society in its Constitution; the absolutely unsectarian spirit and proclamations of its great Head, Madame Blavatsky; the total freedom from sectarian affiliation exhibited in the actual conduct of the Society; the whole-souled devotion to its mission of many, both in East and West, who are not Buddhists in belief; the eager effort by many after all the light and truth your invaluable literature contains; the unqualified welcome given by Western Theosophists to such of your co-believers as they have been privileged to meet in their own lands. And possibly you may give weight to the unreserved assurance from myself, who have been close to Madame Blavatsky from the first and in constant conference and cooperation with her, an active worker in the Society and familiar with its history and genius, that it has not been, is not, and is most unlikely to become the organ of any sect or faith, the thing essential to its operations, nay, even to its existence, being the most absolute catholicity of thought and sympathy and respect. And I may go further, assuring you also that no one would more immediately, sternly, uncompromisingly, ceaselessly resist the contrary policy than would I. I use these words in their fullest significance.

And so the purpose of this letter is to invite a revival of your confidence in the Theosophical Society. In many of you it has never declined. Where it has done so I would restore it. In my own country and in Europe the interest in the work of the Theosophical Society and in Indian philosophy and thought has had an expansion in the last few years which is simply amazing. I can hardly give you adequate idea of the change in the press, in

public sentiment, in private study. The Society itself is growing steadily. In America we have seventy-three Branches and shall have seventy-five before this reaches you. Only one is really moribund. This means an increasing zeal for Oriental truth. More expositions of Eastern philosophy are demanded. The three editions I myself published of the *Bhagavad-Gita* have been exhausted, and a fourth is just coming out. Ancient Aryan ideas and views of life are permeating the land and moulding the convictions of its people. We need help to increase and fix them. Much of this can come only from yourselves and others in India. By your own identification with the Society you can strengthen it for its local work, aiding it to dissolve the barriers between religions and sects and to enliven fraternal feeling through all, assisting in the attempt to uplift higher ideals among your countrymen. And if you cannot join the Society, you can help it by countenancing its work. On our behalf you can transmit those valued treatises which throw light on the great problems of destiny which concern us and you alike, and can thus take part in the truly philanthropic work of giving truth to those who need and ask it. We who are, with you, fellow-seekers after light and aspirants after progress know the joy of sharing our treasures with the sincere, and we invite you to give us more towards such sharing. Like you we are workers in the Rishees' cause, and we seek the most efficient aids in that work. If you do not give this aid or if you continue to rest under the wrong impression I have spoken of above, you will interfere with a work that is for the direct benefit of India and of your religion. For our work is meant also to bring the attention of the West to the philosophical and religious truths of the Sacred Books of India, to the end that India may be helped to lift itself up once more to spiritual heights of power and thus in its turn benefit the whole race of man. It is only by teaching the West the soul-satisfying philosophy of the ancient Aryans that we can lead them on as parts of the human

family, and as, indeed, perhaps the very nations where some of you may be drawn by Karma to incarnation in some future life. By having a wrong impression of the work of the Society you will be led to speak against it and to throw your powerful influence in the scale opposite to it, and thus very materially hold it back.

I invite you to communicate freely with me in answer to this letter, and to give the letter itself the widest circulation possible among Brahmins. I shall arrange for its translation into a native tongue. And so with respect and sympathy and fraternal spirit, and with the hope that these words may avail to correct an error which has distressed and alarmed me, I am

Your friend, however distant,

WILLIAM Q. JUDGE

The Path

MASTERS, ADEPTS, TEACHERS, AND DISCIPLES — *William Q. Judge*

This article is meant for members of the T. S., and chiefly for those who keep H. P. B. much in mind, whether out of respect and love or from fear and envy. Those members who believe that such beings as the Masters may exist must come to one of two conclusions in regard to H. P. B.: either that she invented her Masters, who therefore have no real existence, or that she did not invent them but spoke in the names and by the orders of such beings. If we say she invented the Mahatmas, then, of course, as so often was said by her, all that she has taught and written is the product of her own brain, from which we would be bound to conclude that her position on the roll of great and powerful persons must be higher than people have been willing to place her. But I take it most of us believe in the truth of her statement that she had those teachers whom she called Masters and that they are more perfect beings than ordinary men.

The case I wish to briefly deal with, then, is this: H. P. B. and her relations to the Masters and to us; her books and teachings; the general question of disciples or chelas with their grades, and whether a high chela would appear as almost a Master in comparison to us, including every member from the President down to the most recent applicant.

The last point in the inquiry is extremely important, and has been much overlooked by members in my observation, which has extended over the larger part of the T. S. An idea has become quite general that chelas and disciples are all of one grade, and that therefore one chela is the same as another in knowledge and wisdom. The contrary, however, is the case. Chelas and disciples

are of many grades, and some of the Adepts are themselves the chelas of higher Adepts. There is therefore the greatest difference between the classes of chelas, since among them has to be counted the very humblest and most ignorant person who has devoted himself or herself to the service of mankind and the pursuit of the knowledge of the Self. On the other hand, there are those chelas high in grade, actual pupils of the Masters themselves, and these latter have so much knowledge and power as to seem to us to be adepts. Indeed, they are such when one compares them with oneself as a mere product of the nineteenth century. They have gained through knowledge and discipline those powers over mind, matter, space, and time which to us are the glittering prizes of the future. But yet these persons are not the Masters spoken of by H. P. B. So much being laid down, we may next ask how we are to look at H. P. B.

In the first place, every one has the right to place her if he pleases for himself on the highest plane, because he may not be able to formulate the qualities and nature of those who are higher than she was. But taking her own sayings, she was a chela or disciple of the Masters, and therefore stood in relation to them as one who might be chided or corrected or reproved. She called them her Masters, and asseverated a devotion to their behests and a respect and confidence in and for their utterances which the chela has always for one who is high enough to be his Master. But looking at her powers exhibited to the world, and as to which one of her Masters wrote that they had puzzled and astonished the brightest minds of the age, we see that compared with ourselves she was an Adept. In private as in public she spoke of her Masters much in the same way as did Subba Row to the writer when he declared in 1884, "The Mahatmas are in fact some of the great Rishees and Sages of the past, and people have been too much in the habit of lowering them to the petty standard of this age". But with this

reverence for her teachers she had for them at the same time a love and friendship not often found on earth. All this indicates her chelaship to Them, but in no way lowers her to us or warrants us in deciding that we are right in a hurried or modern judgment of her.

Now some Theosophists ask if there are other letters extant from her Masters in which she is called to account, is called their chela, and is chided now and then, besides those published. Perhaps yes. And what of it? Let them be published by all means, and let us have the full and complete record of all letters sent during her life; those put forward as dated after her death will count for naught in respect to any judgment passed on her, since the Masters do not indulge in any criticisms on the disciples who have gone from earth. As she has herself published letters and parts of letters from the Masters to her in which she is called a chela and is chided, it certainly cannot matter if we know of others of the same sort. For over against all such we have common sense, and also the declarations of her Masters that she was the sole instrument possible for the work to be done, that They sent her to do it, and that They approved in general all she did. And she was the first direct channel to and from the Lodge, and the only one up to date through which came the objective presence of the Adepts. We cannot ignore the messenger, take the message, and laugh at or give scorn to the one who brought it to us. There is nothing new in the idea that letters are still unpublished wherein the Masters put her below them, and there is no cause for any apprehension. But it certainly is true that not a single such letter has anything in it putting her below us; she must ever remain the greatest of the chelas.

There only remains, then, the position taken by some and without a knowledge of the rules governing these matters, that chelas sometimes write messages claimed to be from the Masters when

they are not. This is an artificial position not supportable by law or rule. It is due to ignorance of what is and is not chelaship, and also to confusion between grades in discipleship. It has been used as to H. P. B. The false conclusion has first been made that an accepted chela of high grade may become accustomed to dictation given by the Master and then may fall into the false pretense of giving something from himself and pretending it is from the Master. It is impossible. The bond in her case was not of such a character to be dealt with thus. One instance of it would destroy the possibility of any more communication from the teacher. It may be quite true that probationers now and then have imagined themselves as ordered to say so and so, but that is not the case of an accepted and high chela who is irrevocably pledged, nor anything like it. This idea, then, ought to be abandoned; it is absurd, contrary to law, to rule, and to what must be the case when such relations are established as existed between H. P. B. and her Masters.

The Path

OCCULT VIBRATIONS — *William Q. Judge*

A FRAGMENT OF CONVERSATION WITH H. P. B. IN 1888

The following was written by me at the dictation of H. P. B. in 1888 with the purpose of printing it at that time. But it was not used then, and as I brought it home with me it is now of interest. — W. Q. J.

Ques — It has struck me while thinking over the difference between ordinary people and an adept or even a partly developed student, that the rate of vibration of the brain molecules, as well as the coordination of those with the vibrations of the higher brain, may lie at the bottom of the difference and also might explain many other problems.

H. P. B. — So they do. They make differences and also cause many curious phenomena; and the differences among all persons are greatly due to vibrations of all kinds.

Q. — In reading the article in the *PATH* of April, 1886, this idea was again suggested. I open at p. 6, vol. I. "The Divine Resonance spoken of above is not the Divine Light itself. The Resonance is only the outbreathing of the first sound of the entire Aum. ... It manifests itself not only as the power which stirs up and animates the particles of the universe, but also in the evolution and dissolution of man, of the animal and mineral kingdoms, and the Solar system. Among the Aryans it was represented by the planet Mercury, who has always been said to govern the intellectual faculties and to be the universal stimulator." What of this?

H. P. B. — Mercury was always known as the god of secret wisdom. He is Hermes as well as Budha the son of Soma. Speaking

of matters on the lower plane, I would call the "Divine Resonance" you read of in the PATH "vibrations" and the originator, or that which gives the impulse to every kind of phenomena in the astral plane.

Q. — The differences found in human brains and natures must, then, have their root in differences of vibration?

H. P. B. — Most assuredly so.

Q. — Speaking of mankind as a whole, is it true that all have one key or rate of vibration to which they respond?

H. P. B. — Human beings in general are like so many keys on the piano, each having its own sound, and the combination of which produces other sounds in endless variety. Like inanimate nature they have a key-note from which all the varieties of character and constitution proceed by endless changes. Remember what was said in *Isis Unveiled* at p. 16, vol. I, "The Universe is the combination of a thousand elements, and yet the expression of a single spirit, — a chaos to the sense (physical), a cosmos to the reason" (manas).

Q. — So far this applies generally to nature. Does it explain the difference between the adept and ordinary people?

H. P. B. — Yes. This difference is that an adept may be compared to that one key which contains all the keys in the great harmony of nature. He has the synthesis of all keys in his thoughts, whereas ordinary man has the same key as a basis, but only acts and thinks on one or a few changes of this great key, producing with his brain only a few chords out of the whole great possible harmony.

Q. — Has this something to do with the fact that a disciple may hear the voice of his master through the astral spaces, while

another man cannot hear or communicate with the adepts?

H. P. B. — This is because the brain of a chela is attuned by training to the brain of the Master. His vibrations synchronize with those of the Adept, and the untrained brain is not so attuned. So the chela's brain is abnormal, looking at it from the standpoint of ordinary life, while that of the ordinary man is normal for worldly purposes. The latter person may be compared to those who are color-blind.

Q. — How am I to understand this?

H. P. B. — What is considered normal from the view of the physician is considered abnormal from the view of occultism, and *vice versa*. The difference between a color-blind signal man who mistakes the lamps and the adept who sees is that the one takes one color for another, while the adept sees all the colors in every color and yet does not confuse them together.

Q. — Has the adept, then, raised his vibrations so as to have them the same as those of nature as a whole?

H. P. B. — Yes; the highest adepts. But there are other adepts who, while vastly in advance of all men, are still unable to vibrate to such a degree.

Q. — Can the adept produce at his will a vibration which will change one color to another?

H. P. B. — He can produce a sound which will alter a color. It is the sound which produces the color, and not the other or opposite. By correlating the vibrations of a sound in the proper way a new color is made.

Q. — Is it true that on the astral plane every sound always produces a color?

H. P. B. — Yes; but these are invisible because not yet correlated by the human brain so as to become visible on the earth plane. Read Galton, who gives experiments with colors and sounds as seen by psychics and sensitives, showing that many sensitive people always see a color for every sound. The colorblind man has coming to him the same vibrations as will show red, but not being able to sense these he alters the amount, so to say, and then sees a color corresponding to the vibrations he can perceive out of the whole quantity. His astral senses may see the true color, but the physical eye has its own vibrations, and these, being on the outer plane, overcome the others for the time, and the astral man is compelled to report to the brain that it saw correctly. For in each case the outer stimulus is sent to the inner man, who then is forced, as it were, to accept the message and to confirm it for the time so far as it goes. But there are cases where the inner man is able to even then overcome the outer defect and to make the brain see the difference. In many cases of lunacy the confusion among the vibrations of all kinds is so enormous that there is not correlation between the inner and the outer man, and we have then a case of aberration. But even in some of these unfortunate cases the person inside is all the time aware that he is not insane but cannot make himself be understood. Thus often persons are driven really insane by wrong treatment.

Q. — By what manner of vibrations do the elementals make colors and lights of variety?

H. P. B. — That is a question I cannot reply to though it is well known to me. Did I not tell you that secrets might be revealed too soon?

MARS AND MERCURY — *William Q. Judge*

In the June *PATH* there was printed a review of a pamphlet issued by the London Lodge T. S., and this magazine may perhaps be construed as committed to an approval of everything contained in the pamphlet, although the private initials of the reviewer were annexed to the remarks. The pamphlet referred to brings up an old dispute which we had thought was settled by what is found in *The Secret Doctrine*, Vol. I, running from page 162 to 168.

"Gratification of curiosity is the end of knowledge for some men", wrote H. P. B.'s teacher, and this curiosity led to a question being put some years ago to the Adepts, who furnished the main body of *Esoteric Buddhism* and all the important matter in *The Secret Doctrine*, in respect to other visible globes. The author of *Esoteric Buddhism* then construed the reply to mean that Mars and Mercury are two of the seven planets of the earth-chain of globes. H. P. B., the only person in actual and constant communication with the Masters, corrected the mistake made by Mr. Sinnett in the pages of *The Secret Doctrine* to which I have referred, saying on page 164: "But neither Mars nor Mercury belongs to our chain; they are, along with the other planets, septenary units in the great host of 'chains', and all are as visible as their upper globes are invisible". Her correction of the misconception was made upon the written authority of the same Masters who sent through her the letters on which *Esoteric Buddhism* was written.

On the ground of authority in respect to this question, about which none of the Theosophical writers have any information independent of what the Masters have written, we must conclude that the statement in *The Secret Doctrine* is final. If no other point were involved, there would be no necessity for going further with the matter, but as the consistency of the entire philosophy is

involved, it is necessary to advert again to this subject.

The two Masters who had to do with *Esoteric Buddhism* and *The Secret Doctrine* have distinctly said: — *first*, that none of the other globes of the earth-chain are visible from its surface; *second*, that various planets are visible in the sky to us because they are in their turn fourth-plane planets, representing to our sight their own septenary chains; *third*, that the six companion globes of the earth are united with it in one mass, but differ from it as to class of substance; *fourth*, that Mr. Sinnett misunderstood them when he thought they meant to say that Mars and Mercury were two of the six fellow globes of the earth, — and this correction they make most positively in *The Secret Doctrine*; *lastly*, they have said that the entire philosophy is one of correspondences, and must be so viewed in every part. We do not understand that Mr. Sinnett has said that H. P. B. was not reporting the Masters when she wrote the above in *The Secret Doctrine*, or that the Masters have denied that they hold the above views.

If we admit that Mars and Mercury are two visible planets of the seven-fold chain belonging to the earth, then the consistency of the philosophy is destroyed, for as it is with planets, so it is with man. Every planet, considered for the moment as an individual, is to be analysed in the same way as a single human being, subject to the same laws in the same way. Hence, if two of the principles of the earth are visible, that is, Mars and Mercury, then why is it that two of man's seven principles are not visible, in addition to his body? In his seven-fold constitution his body represents the earth in her septenary chain, but he cannot see objectively any other of his principles. The philosophy must be consistent throughout. If it is inconsistent at one point it fails at every other. The same Masters who have communicated through H. P. B. with Mr. Sinnett for the purpose of having *Esoteric Buddhism* written, have over and over again positively stated that the law of

correspondence rules throughout in this philosophy.

The earth is a fourth-plane planet. The beings upon it are now in the fourth stage, and for that reason cannot see objectively any planet that is not on the same plane of development, and every planet which they see is for that reason a fourth-plane planet. If this be correct, then Mars and Mercury must be fourth-plane planets, and hence not in the earth's chain of globes.

If we assume with the writer of the pamphlet referred to that Mars and Mercury are two out of the whole seven of which the earth is a third, then the question arises, To what principle do these two planets correspond?, for they must correspond to either *prana*, *kama*, astral body, *Manas*, *Buddhi*, or *Atman*. Any attempt at an answer to this question will show the confusion in the assumption; for it is admitted that Mars is in obscurity, and the natural question then would be, Which of the earth's principles is correspondingly in obscurity? In attempting to answer this from the assumption started with, we have the statement that Mars is the planet we have last been in, hence it must represent a disused faculty or principle, and not one which we are about to develop. As *Manas* is the next principle to be fully developed, it would follow that Mars does not represent it, and hence the whole matter falls into confusion, because the first four principles have been already developed and are not in disuse. Following this on the false assumption, then Mars would represent an eighth principle.

Mars is in a state of obscurity at the present time, as stated by the Masters and H. P. B. This is because, in that chain of development, the Egos have finished their fourth round, or because the fourth round has not yet commenced, except in respect to the planet itself as a place of habitation, the Egos having passed on to the next globe of that chain, quite as invisible

from the surface of Mars as our next globe in order is invisible from our surface. The same may be said for Mercury, except in respect to obscurity, since the information vouchsafed about it declares that it is beginning to get out of the obscurity caused by the absence of Egos.

A reference to the pages of the *Secret Doctrine* referred to above will be found helpful on this point. It is also stated on page 163 of that book, Vol. I, on the authority of the Masters, that "No companion planet, that is, no upper globes of any chain in the solar system, can be seen." I may say that the relation borne by Mars and Mercury to the earth will not be spoken of or explained by the Masters. Furthermore, one of the Masters wrote to the author of *Esoteric Buddhism* in respect to this matter, stating, "You are putting me questions pertaining to the highest initiation. I can give you only a general view, but I dare not, nor will I, enter upon details."

It is not necessary for us to know the relation between Mars, Mercury, and the Earth, especially, nor to know whether Mars and Mercury are in any particular state; all that is necessary is to know, do they or not belong to our chain? And that they do not has been distinctly stated, both from the position of authority and upon the ground of consistent philosophy. Upon authority, because in no other way can we solve this riddle; upon philosophy to show the reasonableness of the authoritative statement. All such difficulties can be solved by remembering and working upon the law that, as it is in respect to man and his principles or vehicles, so it is in respect to any planet whatever.

REGARDING ISLAMISM — *Hadji Erinn*

The conversion to the religion of the Prophet Mohammed of Alexander Russell Webb, F. T. S., and his establishing in New York a paper devoted to Islamism, together with his lectures on the subject, have caused a great deal of attention to be given to Mohammedanism. Bro. Webb is still a member of the Society, with an interest in its progress, and this is another illustration of the broadness of our platform. But he says that it has surprised him to find the members in general paying slight regard to the life of the Prophet, his sayings and his religion, as one of our objects calls for the study of all religions. In India he found many followers of the Prophet in our Branches, and among them much knowledge of formerly so-called esoteric doctrines, which are common to all religions. That such would be the case must have long ago been evident to those who have read the admirable articles which were printed some years ago in the *PATH* upon Sufi poetry, as the Sufis really preserve the inner doctrines of Islam. But it is natural that the religion of Mohammed has not received from Western people very great consideration. They judge it in the mass, and not from some of its teachings. The West has developed its social system and its religious belief on its own lines, and having seen that many of the followers of the Prophet are polygamists, which is contrary to Western notions, the entire Islamic system has been condemned on that ground, both in a social and religious sense.

The best Mohammedans say that the Prophet did not teach polygamy, but only permitted it in case a man could treat many wives in exactly the same way in every respect that he could one. Although over against this the Prophet himself had but one wife, and was in fact a celibate, it was quite natural that his followers

should liberally construe what he said on the subject and take unto themselves as many wives as their means permitted. This is human nature, and would probably be the result today in the West if our people placed reliance on the words of a Teacher who had made a similar statement.

The words of the Koran upon the subject of polygamy, as given by Mr. Webb, are:

"And if ye are apprehensive that ye shall not deal fairly with orphans, then of other women who seem good in your eyes, marry but two, or three, or four; if ye still fear that ye shall not act equitably, then one only. — *Koran, Sura IV, verse 3.*"

The next prominent conception held by Western people about the Mohammedans is that they have forced an acceptance of their doctrines. We have such stories as that they carried sword in one hand and the Koran in the other, compelling people to accept the book under threat of the sword; that they burned books containing matter other than that in the Koran, on the ground that if it was in the Koran the books were unnecessary, and if it was not in the Koran the books were wrong and should be burned. But the disciples of the Prophet assert that he never taught any such thing, and point to much learning on the part of the Mohammedans in the past. Doubtless these disciples are right, but we know that many Mohammedans tried to coerce people, and that there is some foundation for the story in respect to destruction of that which was not found in the Koran. For these reasons the West has been opposed to Islamism without really knowing much about it. The religion has been judged by the proceedings of its followers. Similar charges might be made against Christian peoples, who notoriously both individually and as nations are in the habit of going directly contrary to the commands of their Founder.

A student of these subjects, then, comes to consider lastly the claims of Islamism on philosophical and religious grounds, and naturally asks the question whether it has any better philosophy than any other religion, and if its religion is supported by a correct philosophy. If it be found that the truths given out by the Prophet were known and written down before his time, then why should the Western student turn to the later religion, the product of a more or less undeveloped people, when he may go to the original from which it undoubtedly came. And if in that original we can find broader and more definite expositions of cosmogenesis and anthropogenesis, we may very properly use Islamism to illustrate the Theosophic truism that one single truth is the basis upon which all religions stand, but we are not necessarily obliged to adopt it to the exclusion of anything else.

Islamism seems to many to exact a belief in *a* God and the conception of *a* God demands that that being shall be separate from those who believe in him. This view does not appeal to many Western Theosophists, because they assert that there can be no God different or separate from man. In the *Rig Veda* of the Brahmans there are as grand, and some think grander, conceptions of God and nature, as can be found in any Islamic book. If the two are equal in this regard, then the *Rig Veda*, being admittedly the elder, must have the first place by reason of age; but if the *Rig Veda* and the philosophy growing out of it are broader and grander than the other, then for that reason it must be more acceptable.

The five fundamental precepts of Islam are given in the *encyclopaedia Britannica*, as follows:

First, Confession of the Unity of God; *second*, stated prayer; *third*, almsgiving; *fourth*, the fast of Ramadan; *fifth*, observance of the festival of Mecca.

In the latest English publication on the subject, Mr. Webb says:

Orthodox Mohammedanism may be divided into six heads: *First*, faith in God, the one God, the creator of all things, who always was and ever will be, the single, immutable, omniscient, omnipotent, all-merciful, eternal God; *second*, faith in angels, ethereal beings perfect in form and radiant in beauty, without sex, free from all gross or sensual passion and the appetites and infirmities of all frail humanity; *third*, belief in the Koran as a book of Divine revelation, given at various times to Mohammed by God or through the Angel Gabriel; *fourth*, belief in God's prophets, the most preeminent of whom were Adam, Noah, Abraham, Moses, Jesus, and Mohammed; *fifth*, belief in the resurrection and final judgment, when all mankind shall appear before God, who will reward or punish them according to the deeds they have done on earth; *sixth*, belief in predestination, or the inability of man to avoid, by any act of his own, the destiny irrevocably predetermined by God and written down in the eternal book previous to the creation of the world.

The religion of the Prophet contains, in common with all other religions, a secret doctrine which is the same as that found in those differently named. As referred to above, the Sufis taught a very high kind of mysticism, but not any higher than that of the Hindus, nor any different from the mysticism of the Christians, both of early and later times. They taught union with God; so do the Hindu and the Christian. They spoke of their wife and their mistress and their concubines or houris; so do mediaeval alchemists, and many of the Indian Yogis speak in a similar strain; so that in whatever direction we turn it is found that there is no substantial difference between Islamism and any other religion except in respect to age, and it is really the youngest of

all, excepting perhaps the later Christian development found among the Mormons of America or Latter-day Saints. In fact, some Western Theosophists have said that it would be just as well to accept Mormonism as Islamism, since the teachings are identical and the practices are also. The Mormons say that polygamy is not taught, but they practice it; they have their mysticism, their prophecy, their various kinds of frenzy, and among them are many extraordinary examples of prevision, notably with Brigham Young, the second prophet.

Americans might be inclined, if they were about to make a change, to accept their own natural product in preference to an Arabian one. Certainly in regard to morality, honesty, thrift, temperance, and such virtues, the Mormons stand as well as the followers of the Prophet Mohammed. But as we know little about true Islamism, a careful consideration of it will no doubt add to our knowledge and broaden our conceptions, since it must end in our seeing once more that none of the religions of the day are true ones, but that a single body of truth underlying them all must be the religion of the future.

The Path

RIG-VEDA ON GAMBLING

The following excellent remarks are probably the oldest in the world upon the vice of gambling. They are found in *Rig Veda*, x, 34. It is admitted that these Vedic hymns are anterior to the time of Homer and Hesiod. The Hindus claim an antiquity for them which carries us back thousands upon thousands of years prior to the oldest date allowed by European Orientalists. Those who have a theosophical acquaintance with the *Vedas* will incline to the estimate of the Hindus, inasmuch as European opinion is constantly altering on the subject, and besides has not had quite a century of experience in which to form itself. Muir says these hymns were composed certainly 1,000 years before our era, but that is too ridiculously low an estimate and will have ere long to be revised upon further proofs and discoveries. The present hymn is given as showing what was then thought of gambling.

The tumbling airborne products (1) of the great Vibhidaka tree delight me as they continue to roll upon the dice-board. The exciting dice seem to me like a draught of the soma-plant growing on Mount Miyavat. My wife never quarrelled with me nor despised me; she was kind to me and to my friends. But I for the sake of the partial dice have spurned my devoted spouse. My mother-in-law detests me, my wife rejects me. In my need I find no comforter.

I cannot discover what is the enjoyment of the gambler any more than I can perceive what is the happiness of a worn-out hack horse. Others pay court to the wife of the man whose wealth, is coveted by the impetuous dice. His father, mother, brothers cry out, "We know nothing of him; take him away bound!"

When I resolve not to be tormented by them because I am abandoned by my friends who withdraw from me, yet as soon as the brown dice, when they are thrown, make a rattling sound I hasten to their rendezvous like a woman to her paramour. The gamester comes to the assembly glowing in body, asking himself "Shall I win?" The dice inflame his desire by making over his winnings to his opponent. Hooking, piercing, deceitful, vexatious, delighting to torment, the dice dispense transient gifts and again ruin the winner; they appear to the gambler covered with honey. Their troop of fifty-three disports itself, itself disposing men's destinies like the God Savatri whose ordinances never fail. They bow not before the wrath of the fiercest. The king himself makes obeisance to them. They roll downward, they bound upward. Having no hands they overcome him who has. These celestial coals when thrown on the dice-board scorch the heart though cold themselves.

The destitute wife of the gamester is distressed, and so too is the mother of a son who goes she knows not whither. In debt and seeking after money the gambler approaches with trepidation the houses of other people at night. It vexes the gamester to see his own wife and then to observe the wives and happy homes of others. In the morning he yokes the brown horses — the dice; by the time when the fire goes out he has sunk into a degraded wretch. He who is the general of your board, the first king of your troop, to him I stretch forth my ten fingers to the east in reverence. I do not reject wealth, but I declare that which is right when I say:

Never play with dice; practice husbandry; rejoice in thy prosperity, esteeming it sufficient. Be satisfied with thy

cattle and thy wife, the god advises.

O dice, be friendly to us and no more bewitch us powerfully with your influence. Let your wrath and hostility abate: let others than we be subject to the fetters of the brown ones, the dice.

THE ADEPTS AND MODERN SCIENCE — *William Q. Judge*

Modern science is a bugbear for many a good Theosophist, causing him to hide his real opinions for fear they should conflict with science. But the latter is an unstable quantity, always shifting its ground, although never devoid of an overbearing assurance, even when it takes back what it had previously asserted. The views of scientific men have frequently been brought forward as a strong objection to the possibility of the existence of Adepts, Masters, Mahatmas, perfected men who have a complete knowledge of all that modern science is endeavoring to discover. Many trembling members of the Society, who do not doubt the Masters and their powers, would fain have those beings make their peace with science, so that the views of nature and man put forward by the Mahatmas might coincide with the ideas of modern investigators. It will be profitable to try to discover what is the attitude of the Adepts towards modern science. The question was raised quite early in the history of the Society in the correspondence which Mr. Sinnett had with the Adept K. H. in India, and there is in the answers published by Mr. Sinnett in the *Occult World* enough to indicate clearly what is the attitude of such beings to modern science. That book will often have to be referred to in future years, because the letters given in its pages are valuable in more senses than has been thought: they ought to be studied by every member of the Society, and the ideas contained therein made a part of our mental furniture.

It is evident from the remarks made in the *Occult World* that the persons to whom the letters were written had a high respect for modern science; that they would have liked to see science convinced of the machinery of the occult Cosmos, with all that that implies; that they thought if modern scientific men could be

convinced by extraordinary phenomena or otherwise about the Masters and Theosophy, very beneficial results to the Society would follow. There can be no doubt that if such a convincing were possible the results would have followed, but the hope of convincing our scientists seemed vain, because no way exists to alter the attitude of materialistic modern science except by a complete reform in its methods and theories. This would be a bringing back of ancient thought, and not agreeable to modern men. To pander in any way to science would be impossible to the Masters. They hold the position that if the rules and conclusions of nineteenth century science differ from those of the Lodge of the Brothers, then so much the worse for modern conclusions, as they must all be revised in the future. The radical difference between occult and modern materialistic science is that the former has philanthropy as its basis, whereas the latter has no such basis. Let us now see what can be discovered from the letters written by K. H. to Mr. Sinnett and another.

Mr. Sinnett writes, "The idea I had especially in my mind when I wrote the letter above referred to was that, of all tests of phenomena one could wish for, the best would be the production in our presence in India of a copy of the London *Times* of that day's date. With such a piece of evidence in my hand, I argued, I would undertake to convert everybody in Simla who was capable of linking two ideas together, to a belief in the possibility of obtaining by occult agency physical results which were beyond the control of modern science". To this he received a reply from K. H., who said: "Precisely because the test of the London newspaper would close the mouths of the sceptics it is inadmissible. See it in what light you will, the world is yet in its first stage of disenfranchisement, hence unprepared. . . . But as on the one hand science would find itself unable in its present state to account for the wonders given in its name, and on the other the ignorant

masses would still be left to view the phenomenon in the light of a miracle, every one who would be thus made a witness to the occurrence would be thrown off his balance and the result would be deplorable." In this is the first indication of the philanthropic basis, although later it is definitely stated. For here we see that the Adepts would not do that which might result in the mental confusion of so many persons as are included in "ignorant masses". He then goes on to say: "Were we to accede to your desires, know you really what consequence would follow in the trail of success? The inexorable shadow which follows all human innovations moves on, yet few are they who are ever conscious of its approach and dangers. What are they then to expect who would offer to the world an innovation which, owing to human ignorance, if believed in will surely be attributed to those dark agencies that two-thirds of humanity believe in and dread as yet?"

Here again we see that Adepts will not do that which, however agreeable to science, extraordinary and interesting in itself, might result in causing the masses once more to consider that they had proof of the agency of devils or other dreaded unseen beings. The object of the Adepts being to increase the knowledge of the greater number and to destroy dogmatism with superstition, they will not do that which would in any way tend to defeat what they have in view. In the letter quoted from, the Adept then goes on to show that the number of persons free from ignorant prejudice and religious bigotry is still very small. It is very true that such an extraordinary thing as the production of the *Times* in India across several thousand miles of ocean might convince even hundreds of scientific men of the possibility of this being done by a knowledge of law, but their belief would have but little effect on the immense masses of uneducated persons in the West who are still bound up in religious bigotry and prejudice. The Adept hints that

"the inexorable shadow that follows all human innovations" would be a sudden blazing forth again of ignorant superstition among the masses, which, gaining force, and sweeping all other men along in the immense current thus generated, the very purpose of the phenomenon would then be negated. On this the Adept writes a little further on, "As for human nature in general, it is the same now as it was a million years ago, prejudice based upon selfishness, a general unwillingness to give up an established order of things for new modes of life and thought — and occult study requires all that and much more — proud and stubborn resistance to truth if it but upsets the previous notion of things: such are the characteristics of the age". "However successful, the danger would be growing proportionately with success", that is, the danger would grow in proportion to the success of the phenomenon produced. "No choice would soon remain but to go on, ever crescendo, or to fall, in this endless struggle with prejudice and ignorance, killed by your own weapons. Test after test would be required and would have to be furnished; every subsequent phenomenon expected to be more marvelous than the preceding one. Your daily remark is that one cannot be expected to believe unless he becomes an eye-witness. Would the lifetime of a man suffice to satisfy the whole-world of sceptics? ... In common with many you blame us for our great secrecy. Yet we know something of human nature, for the experience of long centuries, aye of ages, has taught us. And we know that so long as science has anything to learn, and a shadow of religious dogmatism lingers in the hearts of the multitudes, the world's prejudices have to be conquered step by step, not at a rush." These simple remarks are philosophical, historically accurate, and perfectly true. All spiritualistic mediums know that their visitors require test after test. Even the dabbler in psychic matters is aware that his audience or his friends require a constant increase of phenomena and results, and every earnest

student of occultism is aware of the fact that in his own circle, there are fifty unbelievers to one believer, and that the believers require that they shall see the same thing over again that others report.

Proceeding with this matter to another letter, the Adept says. "We will be at cross purposes in our correspondence until it has been made entirely plain that occult science has its own methods of research as fixed and arbitrary as the methods of its antithesis, physical science, are in their way. If the latter has its *dicta*, so also has the former." He then goes on to show that the person desiring to know their science must abide by their rules, and taking his correspondent as an illustration, he says: "You seek all this, and yet, as you say yourself, hitherto you have not found sufficient reasons to even give up your modes of life, directly hostile to such communication". This means of course that scientific men as well as other inquirers must conform to the rules of occult science if they wish to know it, and must themselves change their modes of thought and action. He then goes on to analyze the motives of his correspondent, and these motives would be the same as those impelling science to investigate. They are described to be the desire to have positive proofs of forces in nature unknown to science, the hope to appropriate them, the wish to demonstrate their existence to some others in the West, the ability to contemplate future life as an objective reality built upon knowledge and not faith, and to learn the truth about the Lodge and the Brothers. These motives, he says, are selfish from the standpoint of the Adepts, and this again emphasizes the philanthropy behind occult science. The motives are selfish because, as he says, "The highest aspirations for the welfare of humanity become tainted with selfishness if in the mind of the philanthropist there lurks a shadow of a desire for self-benefit, or a tendency to do injustice, even where these exist unconsciously

to himself. Yet you have ever discussed but to put down the idea of a universal brotherhood, questioned its usefulness, and advised to remodel the Theosophical Society on the principle of a college for the special study of occultism".

The Adept makes it very clear that such a proposition could not be entertained, showing once more that the Brotherhood, and not the study of secret laws of nature, is the real object the inner Lodge has in view. Brotherhood as an object is the highest philanthropy, and especially so when connected with science.

In another letter, written after consultation with much higher Adepts, who have never been mentioned and who are utterly unknown even to Theosophists, being too high to be encountered, he takes up the same subject, saying, "In conformity with exact science you define but one cosmic energy, and see no difference between the energy expended by the traveller who pushes aside the bush that obstructs his path and the scientific experimenter who expends an equal amount of energy in setting the pendulum in motion. We do; for we know there is a world of difference between the two. The one uselessly dissipates and scatters force; the other concentrates and stores it; and here please understand that I do not refer to the relative utility of the two, as one might imagine, but only to the fact that in the one case there is brute force flung out without any transmutation of that brute energy into the higher potential form of spiritual dynamics, and in the other there is just that. . . . Now for us poor unknown philanthropists no fact of either of these sciences is interesting except in the degree of its potentiality for moral results, and in the ratio of its usefulness to mankind. And what, in its proud isolation, can be more utterly indifferent to every one and everything, or more bound to nothing but the selfish requisites for its advancement, than this materialistic science of fact? May I ask, then, what have the laws of Faraday, Tyndall, or others to do

with philanthropy in their abstract relations with humanity, viewed as an intelligent whole? What care they for man as an isolated atom of this great and harmonious whole, even though they may be sometimes of practical use to him? Cosmic energy is something eternal and incessant: matter is indestructible: and there stand the scientific facts. Doubt them and you are an ignoramus; deny them, a dangerous lunatic, a bigot: pretend to improve upon the theories, an impertinent charlatan. And yet even these scientific facts never suggested any proof to the world of experimenters that nature consciously prefers that matter should be indestructible under organic rather than inorganic forms, and that she works slowly but incessantly towards the realization of this object — the evolution of conscious life out of unconscious material. . . . Still less does exact science perceive that while the building ant, the busy bee, the nidifacient bird, accumulates each in its own humble way as much cosmic energy in its potential form as a Hayden, a Plato, or a ploughman turning his furrow. . . . The hunter who kills game for his pleasure or profit, the positivist who applies his intellect to proving that *plus* multiplied by *plus* equals *minus*, are wasting and scattering energy no less than the tiger which springs upon its prey. They all rob nature instead of enriching her, and will all in the degree of their intelligence find themselves accountable. . . . Exact experimental science has nothing to do with morality, virtue, philanthropy — therefore can make no claim upon our help until it blends itself with metaphysics. Being a cold classification of facts outside of man, and existing before and after him, her domain of usefulness ceases for us at the outer boundary of these facts; and whatever the inferences and results for humanity from the materials acquired by her method, she little cares. Therefore as our sphere lies entirely outside of hers, — as far as the path of Uranus is outside the earth's, — we distinctly refuse to be broken on any wheel of her construction. . . . The truths and mysteries of

Occultism constitute, indeed, a body of the highest spiritual importance, at once profound and practical for the world at-large, yet it is not as an addition to the tangled mass of theory or speculation that they are being given to you, but for their practical bearing on the interests of mankind."

We have in these extracts a clear outline of the exact position of the Adepts towards modern science, together with the statement of the reasons why they do not come forth by astounding phenomena to convince the world of their existence. The reason for the refusal is that the world is not ready, but is in such a condition that the end would be obstructed and damage be the result. Their attitude to modern science is that they accept the facts of science wherever they prove the truths of Occultism, but they consider modern science to be materialistic and also devoid of philanthropy. This we must admit to be the case, and as the student who has had experience in these matters knows for himself that the Adepts have the truth and possess a knowledge of nature's laws, he approves of their refusing to come down to science and of their demand that science must rise to them. He also knows that in the course of the cycles the mass of men will have been educated and developed to such a position that a new school, at once religious and scientific, will have possession of the earth and rule among all men who possess civilization.

The Path

AN INCIDENT WITH MADAME BLAVATSKY — *Marian B. Lull*

I had not the felicity of knowing Madame Blavatsky so intimately and familiarly as I would have liked, nevertheless I beg to add my tribute to the memory of that illustrious woman.

In 1878 or 1879 I called at the rooms occupied by Madame Blavatsky in West Forty-Seventh Street. She was holding an informal reception, many people being present. I was received with that charming cordiality which won every fair-minded and disinterested individual who approached this wonderfully gifted woman. We chatted for a few moments when she greeted me, and then walked slowly to one of the windows, lingering there together for a moment or two, when she left me to give her attention to other guests.

I remained alone in this window for perhaps fifteen minutes. I was fully conscious of the assembly, conscious of the hum of conversation, the sound of gentle mirth fell upon my ears, the coming and going of the people were plainly perceptible to my senses, all the incidents of time, place, and circumstances were palpably apparent, real, and in every respect in conformity with the receptions held by any hostess who dispenses hospitality; all the routine of life in the thoroughfares without passed before my eyes in the usual manner, and yet — I knew that "I" stood upon the margin of a stream that flowed freely past where I stood; the ripple of the waters was continuous, soothing, and placid; grasses waved in unison with the murmur of the river: the under-current of insect life mingled with the sighing of the wind: birds twittered and fluttered in the luxuriant foliage; all the voices of nature blended in a harmonious melody that seemed the very soul of silence breathing through a musical cadence that was attuned to

sacred themes. All appeared familiar to "myself", and I enjoyed the sensations produced precisely as any individual enjoys any naturally pleasurable sensation. How long my consciousness of this "Soul Sense" continued I know not, possibly fifteen minutes.

Madame returned, smiling, to my side, and I greeted her with "What is it?" She simply replied, in the most matter of fact manner, "That is sacred music. You are on the banks of the Ganges."

While I am of Anglo-Indian origin, my grandmother having been a Hindu, Madame Blavatsky had not been advised of that fact, and I am fully convinced that I was not hypnotized. I attribute the circumstance to her intuitive knowledge of those with whom she came in contact, although I do not doubt that the Indian blood in my composition made me more *en rapport* with her than I might otherwise have been.

We had a short, pleasant conversation, and she told me, among other things, that I would return to my own. I have become a member of the Theosophical Society, and have indeed returned to my own, as Madame Blavatsky predicted I would; for no sooner had I read the philosophy of the Theosophical doctrine than I recognized that it was what I had believed all my conscious life.

Whenever I visited New York City I sought Madame Blavatsky and found a new charm in each visit. I could not fail to see and appreciate the extraordinary character which she possessed and I believe her to have been thoroughly in earnest, thoroughly honest, unwaveringly truthful, single-minded, clean of heart, high souled, and of spotless purity.

ASTRAL BODIES AND ASTRAL VOYAGINGS: I — *Jerome A. Anderson*

The term "astral body" is very loosely used by the ordinary writer upon occult subjects, and sometimes Theosophists who ought to be better informed in the same manner. Astral body is indifferently applied to the Linga Sarira, or the model upon which the physical body is constructed; to the "thought forms" in which the Adept makes his journeys when he prefers not to use the physical; to the kamic "shells" formed after death from the wreckage, so to speak, of the dead personality; and to all the many varieties of dream-forms, "wraiths", or apparitions. A brief study of these different bodies, such as will be attempted in this paper, will not only serve to urge a more accurate use of their distinguishing names, but will also assist to a better comprehension of the septenary nature of man in some of its aspects.

A good starting-point for analysis will be to remember the theosophic postulate that Consciousness is One, and that the appearance of separate states which it manifests in Nature is caused by the lucidity or density, as it were, of the matter with which it is associated as its vehicle, just as a ray of white light will be colored, or rendered more or less dim, by the color, transparency, or opaqueness of the medium through which it is transmitted.

The Ego of man may be said to represent a unit of consciousness, a vortical or atomic center in the Logos, or Thinking Principle of the Universe, which has evolved to Self-consciousness. This is the result of long and varied experiences in many material bases, which have enabled it at length to realize that its present state

differs from past ones, as well as from the consciousness of other entities by which it is environed in Nature. In other words, it has acquired consciousness of consciousness — which constitutes self-consciousness. But in the processes of the evolution of this self-consciousness it has long since passed the point or possibility of directly functioning in the molecular matter of this material plane, because self-consciousness is not possible in a vehicle so dense. Consciousness is too deeply buried in matter to exhibit self-consciousness; therefore this remains a potentiality only, a dim future possibility, to be only fully realized when the Ego, the Pilgrim through the Cycle of Necessity, reaches the Manasic plane with its appropriate substance. This our (Higher) Egos or real Centers of Consciousness have done, and it is for the reason that they are unable to relate themselves directly to matter upon this earth that fleshly bodies and a reflection of themselves, or the Lower Manas, are interposed.

The Higher Ego, the Thinker, the real "I am I", is, then, entirely unrelated to and unable to function upon the Material Plane except through and by means of its reflection in the physical brain, the Lower Manas. But being thus related, it is not only capable of creating for its use a body on the physical plane of matter, but bodies as well upon any of the several planes through which it must pass to reach the physical. This it does by virtue of the creative or constructive force it possesses because of its emanation from the Monadic Source of all creative construction upon any plane of Nature. It is not, therefore, limited to its material form, but can and does create finer, more subtle or ethereal, ones on any of the planes between the physical and that upon which it has its own proper habitation. And it is, then, these various bodies created by it which we have to classify and study in this paper.

The lowest of these, and standing next to the physical in point of

grossness or heterogeneity, is the Linga Sarira. or astral double of the body. This is nothing more than a senseless counterpart of the latter which serves as a model in and upon which the physical molecules are aggregated. It can hardly be said that the Higher Ego consciously constructs the Linga Sarira. Its attraction to and brooding presence, under the law of karmic affinities, over the parents at the moment of conception, calls into activity the "lower Builders", or those forces in Nature whose consciousness does not rise to the self-conscious plane. These construct the astral body known as the Linga Sarira, and build within it the physical one under the play of two opposing influences. First there is that of the Higher Ego again seeking incarnation, and bringing with it in the form of "skandhas", or kinetic psychic energy, tendencies to construct a body calculated to best give them expression. But these are met by another karmic stream of purely physical and lower psychic tendencies or impressions derived from the parents under the law of physical heredity. This force unmodified would exactly repeat the form of the parents, as is done so accurately and constantly in the kingdoms below man, and would be hard indeed to overcome were it not already divided against itself by the impossibility of exactly repeating the form of both parents because of their dissimilarities. So a compromise must be the outcome; the form desired by the Higher Ego being modified by the physical line of evolutionary forces, and *vice versa*.

The Linga Sarira, thus constructed then, is as senseless as far as any higher consciousness is concerned as are the molecules of the physical body when the Lower Manas retires from its active supervision either in sleep or death. During the life of the body it acts as a medium between this and the Life Principle upon one hand, and the Kamic Principle upon the other. For the Universal Life Principle, like the Thinking Principle, is much too subtle to act directly upon physical matter. It first encounters the Linga

Sarira and is reflected by this medium into the coarser matter of this plane, being changed by this very reflection and dissociation from the Universal JIVA into the terrestrial Prana, the Vitality or Life upon the material plane. In like manner is the purely spiritual, or direct, or intuitional perception of the Higher Ego changed by its reflection through the Linga Sarira to the physical plane into Sensation, or perception by means of the physical senses. At death its functions of course become nil, and it fades out as the physical body decays. It is the "wraith" often seen in graveyards, for it may exude out of the body either in life or after death. In the latter case it is utterly senseless; no more than a shadowy wisp of vapor; in the former, which often occurs at so-called "spirit" seances, it may become the vehicle for a sort of intelligence reflected into it by the medium from whom it has exuded, or from some of the "sitter" present. In either case it cannot go very far from the body, owing in life to its so largely depriving this of its vitality — of which, as we have noted, it is the vehicle — and in death, to the attraction still exerted by the decaying form.

So intimate is its connection with the body that an injury inflicted upon it is often "repercussed" upon the person from whom it has exuded, thus explaining a seemingly mysterious phenomenon of spiritualism. It is also the agent in another large class of these so-called "spirit" manifestations, such as table-tipping, slate-writing, object-moving, etc. Under the stress of the intense desire for these things, the "medium" will extrude his own Linga Sarira and do them all without the faintest suspicion that it is himself and not some denison of the spirit world anxious to make his presence known. This, of course, is only possible in those natures who, by cultivating their astral faculties at the expense of both the physical and the truly spiritual, have so loosened the attachments between this and the physical body that such separations, in

whole or in part, become quite easy of performance. But in the case of the ordinary medium this is done entirely upon the sub-conscious planes of his being, under the stress of his will, and so, being quite unaware of their source, he jumps at the conclusion that the "spirits" are the agents in their production. He is confirmed in his opinion because science refuses to recognize any super-physical intelligences or forces, and answers his demands for an explanation of those which he knows are veritable facts by pooh-poohing their existence, while intimating to the unfortunate but thoroughly honest "medium" that he is a knave, a fool, or a promising candidate for a lunatic asylum. Theosophy alone offers a reasonable and logical explanation for these phenomena, more of which will be reached and accounted for when we take up a class of higher "astral" bodies. The Linga Sarira is universal in nature; everything, whether "organic" or inorganic, has its astral counterpart — its medium for relating it more or less closely with Prana.

The next astral man with which, taking them in an ascending scale, we have to deal has been termed the Kama Rupa, or Body of Desire. Unlike the Linga Sarira, it is only formed after death, and arises in the following manner. The reincarnation of man's spiritual Triad in a new, purely animal body sets up in the latter a distinct Thinking Principle, possessing potentially all the powers, creative and constructive, appertaining to the True Thinker, the Higher Manas. This, known in Theosophical literature as the Lower Manas, becomes united to Kama, or the lower sensual desires, in its efforts to elevate these to its own plane, for the whole scheme of evolution is viewed by Theosophy as elevating to their own plane of the consciousness of entities "crucified" in matter below them by Hierarchies consciously and intelligently acting from above. It is the direct outcome of an Infinite, Intelligent, and Divine Compassion, and not the result of blind

force seeking unconsciously the lines of least resistance, as modern science would fain have us believe. This imparting of its own qualities to Kama enables the latter to create for itself an astral body of greater or lesser vitality and durability according to the degree to which it has received and *conquered* the Manasic Essence. For, if Manas have conquered in its association with the sensuous desires of Kama, the latter is so weakened by the consequent elevation and transmuting of its essence to Manasic planes that the Kama Rupa will be but a faint, short-lived will-o'-the-wisp; but if Kama conquer, then does the Manasic essence become degraded or "fallen" from its plane, and the Rupa will be proportionately vigorous. But, although possessing enough borrowed or stolen force to construct subconsciously a body, this Rupa has no Thinking Principle, or "I am I" center of consciousness, within it, and at once sinks to the animal condition of consciousness, even below the higher animals. It drifts helplessly about on the astral plane, drawn hither and thither by currents of desires generated by men. Hence it is a constant element at spiritual seances, and a most dangerous one. For it is but a vile, conscienceless bundle of desires and unsatisfied passions, unconsciously seeking expression upon the material plane, the only one capable of affording this. Drawn to a "circle", it may have a spurious semblance of self-consciousness reflected upon it by the minds of those present, just as a physical corpse may for a time be galvanized into a semblance of life by electricity. Or, perhaps, its condition is more like that of a hypnotized person whose consciousness is also deprived of its synthesizing center by the force of the hypnotizer's will, and who therefore simply reflects whatever is projected into his mind as though it had originated there.

It will at once be apparent how undesirable is traffic with these Kama Rupas in seance rooms. Nothing pure, unselfish, or aspiring

can come from such a source, while it is quite possible for a person, and especially so weakly an organized one as a "medium" must be, to have one or more of such entities attach themselves permanently to him. Especially is this to be feared when there is a strong bond of magnetic attraction between the "spook" and the kamic nature of the personality to which it has been thus attracted by similar impure desires.

(To be concluded)

The Path

SOME LOST CHORDS: OR ESOTERIC CHRISTIANITY — H. W. Cragin

The Prince of Peace was said to have come to bring peace on earth and good-will to men; but since he toiled in agony centuries ago up the steeps of Calvary hill (or rose to the Higher Self) it has been, in the main, one long tragedy. Something the future will greatly mourn and wonder at. In the name of Christ thousands upon thousands have been slaughtered or terrorized, countless treasure has been expended in wars or proselyting, the human family has been full of enmities, and the mind of man dragged in the dust behind the chariot of ignorance and superstition.

Hence today a civilization exists in which the precepts of Christ cannot be fully carried out, as even the church admits; and all this has resulted because the letter and not the spirit of his teachings has been followed: or, in other words, because esoteric Christianity has not been comprehended or practiced. The early Christians had been fully warned, for Paul says, *II Corinthians*, ch. iii, v. 5-6:

Not that we are sufficient of ourselves to account anything as from ourselves, but our sufficiency is from God; who also made us sufficient as ministers of a *new covenant*; not of the letter, but of the spirit; for the *letter killeth*, but the *spirit giveth life*.

And beginning at the twelfth verse of the same chapter, he contrasts the teaching of Moses thus:

Having therefore such a hope, we use great boldness of speech, and are not as Moses, who put a *veil* upon his face, that the children of Israel should not look steadfastly on

the end of that which was passing away; but their minds were hardened; for until this very day at the reading of the old covenant the same veil remaineth unlifted; which veil is done away in Christ. But unto this day whensoever Moses is read, a veil lieth upon their heart. But whensoever it [man, or manas] shall turn to the Lord, the veil is taken away. Now the Lord is the Spirit: and where the Spirit of the Lord is, there is *liberty*.

In ch. iv, v. 3. he says:

But and if our gospel is veiled, it is veiled in them that are perishing: in whom the god of this world hath blinded the minds of the unbelieving, that the light [illumination] of the gospel of the Glory of *Christ*, who is the *image of God*, should not dawn upon them.

Again in *II Timothy*, ch. vi, v. 3-4, he says:

For the time will come when they will not endure the sound doctrine; but, having itching ears, will heap to themselves teachers after their own lusts; and will turn away their ears from the truth, and turn aside unto fables.

No Christos, whether Buddha or Jesus, ever committed his teachings to writing. This may have been done by certain of his followers, but their works are valuable only in proportion to their spiritual advancement. The disciples of Jesus, with the exception of Paul, were admittedly ignorant men, having a mixture of the carnal and the spiritual, and Paul himself confessed that he did not have the full knowledge. It therefore follows that the books of the *New Testament*, even if written by the persons to whom they are ascribed, must contain imperfections and call forth the attack of scientific, historical, and literary criticism. A few of the books are fragmentary and unworthy of serious notice, but the others

contain a mixture of exoteric and esoteric teaching. The former is of no value to us as Theosophists, and, if we have no comprehension of the latter, or esoteric teaching, the whole is a stumbling-block, and we can understand why so many cast aside the *New Testament* as of no value. A man may have a great intellect, yet be as a child so far as intuition is concerned. To him certain books are sealed up.

I do not purpose here to discuss an historical Christ, or the authenticity of the *New Testament*, but will briefly consider a few of teachings therein as laid down in the books as they now are.

Jesus was born of a holy virgin, Mary, or matter; went into Egypt (the allurements of the physical body); and, having put them under his feet, returned as *Christ* — "that it might be fulfilled which was spoken of the Lord through the prophet, saying 'out of Egypt (the body) did I call my Son.'" Being now free from the passions and disturbances of the carnal body and the lower mind, he taught from Jerusalem and round about. His teachings, stripped of the forgeries and conceits of men, were few and simple. He declared, mystically, that he was the Son of God, and that all men were or could become so. He taught in the Sermon on the Mount and elsewhere the doctrine of meekness, purity, and altruism to its fullest extent. The Sermon on the Mount was not delivered until he had fasted and been tempted by the Devil (or lower mind). During this temptation he refused at the promptings of the Devil to show phenomena for unworthy purposes, or lest he should seemingly gratify his own vanity, nor did he later ever show phenomena for the mere love of them. He openly said the people could not understand esoteric truths, so he veiled many of them in parable. To his disciples he said (*Mark*, iv, v. 11):

Unto you is given the mystery of the kingdom of God; but unto them that are without all things are done in parables.

It did not, however, follow that the disciples always grasped the esoteric meaning, for we find them asking him to explain the parable of the tares of the field (*Matthew* xiii, v. 36). I conclude from the text that the Sermon on the Mount was given both to the disciples and the multitude. The latter could understand the simple teachings set forth, but they were astonished and could not carry them out, any more than modern society can. The admonition, "Give not that which is holy unto the dogs, neither cast your pearls before swine", etc., was obviously for the ears of the disciples, and referred to arcane truths. Paul affirms this in *I Corinthians*, ii:

But we speak God's wisdom in a mystery, even the wisdom that hath been hidden. . . . But unto us God revealed them through the spirit. . . . For who among men knoweth the things of a man, save the spirit of the man which is in him? Even so the things of God none knoweth save the Spirit of God. . . . Now the natural man receiveth not the things of the Spirit of God; for they are foolishness unto him; and he cannot know them, because they are spiritually judged.

And in the next chapter he continues:

I fed you with milk, not with meat, for ye were not yet able to bear it: nay, not even now are ye able.

And in chapter vii, v. 7, he asserts that all men are not on the same plane, thus:

Yet I would that all men were even as I myself. Howbeit each man hath his own gift from God, one after this manner and another after that.

When Christ stood before the Pharisees and was questioned by an intelligent man, a crafty lawyer, as to the great commandment, he condensed his teaching into a few words.

Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind. This is the great and first commandment. And a second like unto it is this, Thou shalt love thy neighbor as thyself. On these two commandments hang the whole law and the prophets.

Paul says, *Romans*, xiii, 9:

And if there be any other commandment, it is summed up in this word, namely, Thou shalt love thy neighbor as thyself.

And in *Galatians*, v, 14:

For the whole law is fulfilled in one word, even in this, Thou shalt love thy neighbor as thyself.

If the two commandments of Christ are exoterically and esoterically followed, they will be found to comprehend and lead to all things.

Of God Christ says there is one God, a Spiritual God, whom no man (the physical senses) hath seen. Paul in *I Timothy*, vi, 16, speaks of a God "who only hath immortality, dwelling in light unapproachable; whom no man hath seen, nor can see". Neither Christ nor His disciples anywhere speak in favor of the anthropomorphic God of the *Old Testament*.

Where is God? In His kingdom. Where is His kingdom? "The kingdom of God is within you", says Christ (*Luke*, xvii, 21). In *Romans*, x, 8, Paul says:

But what saith it? The word is nigh thee, in thy mouth and in thy heart, that is, the word of faith, which we preach.

And in *I Corinthians*, iii, 16-17, he says:

For we are God's fellow-workers; ye are God's husbandry, God's building. . . . Know ye not that ye are a temple of God, and that the Spirit of God dwelleth in you? If any man destroyeth the temple of God, him shall God destroy; for the temple of God is holy, which temple ye are.

Reading again Christ's answer to the lawyer, we shall see that he meant that we should love the Lord within us, or aspire to our seventh principle, Atma, and practice altruism, or regard all men as brothers, in our relations with our fellows. The worship of an anthropomorphic God is limiting and illogical, and the worship of an impersonal power, on the other hand, is something the mind cannot grasp.

As to prayer, Christ did not condemn it, but he enjoined, *Matthew*, vi:

When thou prayest, enter into thine *inner chamber*, and having shut the door [to the external senses] pray to thy Father which is in *secret*, and the Father which is in secret shall recompense thee.

In the *Key to Theosophy* it is fully shown that He meant by prayer an aspiration or desire unto the highest principle in man, the spiritual spark, the Atma. The passage quoted has been misconstrued by the orthodox for centuries, for they have built costly palaces to pray in, and even pray on the street corners, just as the hypocrites and Gentiles did in the time of Christ.

Christ taught reincarnation in the case of the man born blind and in his reference to John. Paul taught Karma in *I Corinthians*, iii, 8:

Now he that planteth and he that watereth are one; but each shall receive his own reward according to his own labor.

And in *Colossians*, iii, 25, where he says:

For he that doeth wrong shall receive again for the wrong that he hath done, and there is no respect of persons.

See also *Galatians*, v, 7:

For whatsoever a man soweth that shall he also reap.

Nothing has been so much adduced to the world at large to show the divinity of Christ as the alleged fact that he performed miracles, or contravened the laws of nature. That he did so Theosophists will respectfully deny, and assert that anyone who has become a Christos has such powers, entirely within the laws of nature, as to perform acts which seem to the ordinary eye wonderful or miraculous. Things which years ago would have been called a miracle, or sorcery, are today commonplace: for instance, our great power over the forces of nature, which is as nothing to what will be. The border-line of the mysterious is being daily passed and its field becoming more and more limited, and today the scientific or metaphysical mind pays no attention to the word "miracle" in a literal sense. For one, I believe that the so-called miracles of Christ have a spiritual explanation, if the events took place. He never boasted of them, and said of those alleged to be dead that they were not dead. In all ages miracles have been declared, and are said today to be performed at the shrines of Roman Catholic saints, etc. The miracles of Apollonius of Tyana, in a gross sense, are as well, if not better proven than those of Christ; and wonderful things are done by Indian Yogis and by Adepts, but they are all within the law of nature. If Christ performed miracles, others did in his day. (See *Mark*, ix, 38.)

John said unto him, "Master, we saw one casting out devils in thy name, and we forbade him, because he followed not us." But Jesus said, "Forbid him not: for there is no man

which shall do a mighty work [or better, who has a mighty power] in my name, and be able to quickly speak evil of me. For he that is not against us is for us."

The same circumstance is repeated in *Luke*, ix, 49-50, and the answer is the same. Now just before this Jesus was said to have cast out an evil spirit from a child; and his reply above was not only an admission that those on his plane could do like things, but also a plea for toleration. In *Acts*, viii, we find Simon Magus performing wonders in Samaria, but as to him read the able articles of Mr. Mead in *Lucifer*, our London magazine.

If you ask why the church has so largely departed from the esoteric doctrine, I answer, Because the Church was founded on Peter. Christ foretold that he would betray him. He did betray him before the crucifixion, and afterwards, for he understood not the inner teaching and taught largely the exoteric doctrine. He sowed dissension among the congregations, and Paul preached against him and Barnabas boldly, but the words of Paul were not understood by the many, and were gradually forgotten. The only reason why Paul stands preeminent among the Apostles is because he knew and taught esoteric Christianity.

The Path

ASTRAL BODIES AND ASTRAL VOYAGINGS: II — *Jerome A. Anderson*

(Concluded)

The third Astral form with which we have to deal in studying these productions arising out of the composite nature of man, is the most terrible of all. It is at once apparent that when, in speaking of the persistence or impermanency of the Kama Rupa, it was pointed out that this depended upon the extent to which the Manasic essence succeeded in transmuting the kamic or permitted itself to become tainted with the desires of Kama, that there was a possibility of the whole of the reflected Lower Manas being dragged down to the kamic plane. That this is a real danger to every human being is a true and terrifying fact in nature. When it unfortunately occurs, the astral body of such an entity, though differing in degree only from the Kama Rupa proper, has enough distinguishing characteristics to entitle it to a separate place. It belongs to a distinct genus in this; that it has dropped out of the evolutionary impulse altogether, has no part in the general advance upon the human plane, and constitutes truly a "lost soul". It retains all of that reflected feeling of "I am I" which, though an illusion, is yet at the base of our earthly personalities. Consequently this entity has a feeling of personality as strong as while living; can think, act, and generate karma; can even reincarnate as a human monster, and is the source of many of those cases of true obsession which so largely help to fill that flower of our modern "intellectual" civilization — the insane asylum. It can and sometimes does relate occurrences of its past earth-life quite accurately, although its love of evil is so great that it nearly always resorts to falsehood, even in this particular. No one can have attended many spiritualistic seances without

noticing how largely suicides and accidental deaths preponderate when genuine communications are had. For there are no accidents in nature, and those who are cut off in their prime, while not all by any means lost souls, are so cut off because of causes they themselves have generated, and with such there is, on account of the large amount of vitality suddenly transferred from the physical to their astral form (not to the Linga Sarira, but to the Kama Rupa), an intense desire to resume their earthly habits and occupations, and which only very slowly fades out. Such, together with really "lost souls", become "guides" to their poor mediums — in reality obsessing vampires, destroying both moral tone and physical vitality in their unfortunate victims. The "guide" of such an one, with whom the writer was at one time familiar, admitted to his intimates that he had been a pirate, although on ordinary occasions he was wont to parade as an ex-minister! In discussing his probable nature with a friend in the privacy of his office, the writer characterized the "guide" as a vampire, which fact was promptly reported to him at the next time he saw the medium; thus showing that these evil entities are entities, and not phantoms of the imagination, as materialists would fain classify them.

In taking up the next class of astral forms we have at length reached a more agreeable portion of our subject, where we no longer deal with the denizens of the lowest astral realms. For there the creative work of Manas was at best a blind, sub-conscious groping, so far below its own state had its essence become buried, even before reaching the physical plane. But now we come to a series of Thought Forms, ranging from those still subconsciously constructed, as in dream, to the Mayavi Rupa of the Adept, which he consciously creates, endows it with the necessary qualities, and transports it wheresoever he wills with the rapidity of thought. Perhaps the very faintest, most fleeting, of

these forms are those creations by means of which we dramatize our thoughts in ordinary dream. For, when not viewing actual scenes in the Astral Light, which can only happen when the consciousness is partially or wholly awake on this plane, one only sees his own creations. It is true these creations are "subjective", so-called, but modern philosophy is fast beginning to realize that the subjective to the perceiver is a great deal more real than the objective. These dream creations of ours are actual entities, capable of functioning so long as our will holds them in existence, just as an universe objectivises itself so long as the great Cosmic will falters not nor wearies in its manvantaric projection. A step higher than these are those forms — true Mayavi Rupas — which the soul creates for itself when it abandons the body during sleep. For clothed in one of these, it can travel immense distances from the physical form without the danger to this which would result, should the Linga Sarira be attempted to be used. As the consciousness begins to awaken in these forms and upon these planes, there is often the memory of persons and places brought back and impressed upon the physical brain with sufficient distinctness to be remembered and recognised when awake. Thus the father of the writer dreamed that he was travelling along a familiar road until he came to and passed far beyond any point he had ever reached when awake. While exploring this to him new territory, he came to an object he had never before seen — a *corduroy* bridge. This novelty so impressed him that he vividly remembered the supposed dream. It chanced that sometime thereafter he removed from that State, and by the road he had taken when dreaming. At the point at which he dreamed he had seen the strange structure he found the bridge, exactly as he had seen it while dreaming.

To these semi-conscious dream forms we have to relegate those "wraiths" of the dying which appear so often to a distant person

at the moment of death. For the consciousness of all of these dream forms is derived from the lower Manas, which has to win self-consciousness upon any plane before its consciousness upon it is anything more than a confused, uncertain dream. This self-consciousness has been partly gained in the case of clairvoyants, who actually visit other places clothed in these thought forms, when their physical descriptions are really accurate. Of course ordinary clairvoyance is simply seeing upon the astral plane by those who have evolved the power to transfer their self-consciousness to their astral organs, but there is a kind of clairvoyance which uses these forms, and which approaches somewhat the true Mayavi Rupa of the Adept.

This, the Mayavi Rupa or illusion body of the Adept, or of those who have won the right and attained the power to consciously create and inhabit it, is the next we have to consider. About it we ordinary mortals know very little. But it is evident that it is but a natural power to which the whole human race will attain in the course of its evolution, and which these advanced Ones have anticipated by the supreme efforts of an unselfish and purified will. That they can transport these bodies to any place, however distant, with the rapidity of thought, and make them both invisible to the ordinary eye, or apparently as solid and real as flesh and blood, has been well attested by the most competent witnesses. Not only did a Master do this, in a visit to Col. Olcott in New York while his physical body was in India, but he actually left behind him an article of his apparel when he disappeared, and which the Colonel still possesses. It will be claimed that such an event is only evidence to those who witness it, but this can hardly be so classified when we consider the really vast mass of testimony which shows that this projection of astral forms is only a natural power of every soul, and which we at present exercise feebly and unconsciously, while Adepts but do the same thing

consciously.

Higher still than the Mayavi Rupa is the Nirmanakaya body, the form woven by those who have conquered every illusion of matter, who have won the right to Nirvana, but who refuse their reward in order to still toil, unseen and unfelt by those for whom they have sacrificed so much. It is from such high and holy Beings, clothed in their Nirmanakaya vestments, that genuine inspiration from spiritual sources comes. It is their duty and their delight to daily and hourly contend with the enemies of humanity by such help and inspiration, given in the hour of need. Yet by this is not meant a "communication" such as comes from "Summerland" by any means. For the inspiration in this case but obeys the universal law that all true power proceeds from within outwards, and so these always seem to come from the recesses of our own being, and are utterly indistinguishable from those which really do proceed from our own Higher Ego. So, unnoticed, except by the Adept clairvoyant, uncredited, un-thanked, do these highest and holiest of Earth-evolved beings proceed with their compassionate tasks.

There are higher forms yet, but they can hardly be classified as Astral. Such are the Augoeides, the Radiant Forms of our Divine Fathers in Heaven, spoken of by Bulwer Lytton; the Dharmakaya vestments of those Buddhas of spiritual selfishness how but gain Nirvana to "disappear forever from the hearts and memories of mankind", instead of donning the humble Astral robe of the Nirmanakaya. There is, too, that undescribed mysterious vestment which clothes us in our devachanic rest. But enough have been classified to show their common origin, their different uses and functions, and to enable the student to satisfactorily assign each to its proper place and plane of consciousness. Thus, in the case of table-tipping, slate-writing, etc., he will instantly know that the astral organ of some living and present person is

the actual factor in the phenomenon; the intelligence, if any, being reflected from the minds of those present. If there be forms materialized, he may be sure that one or more Linga Sariras of those present have exuded and attracted to them enough of molecular matter and vitality to form a transient Rupa for a Kamic entity, or, perhaps, a lost soul to regain for a few moments those earth sensations and experiences for which it longs. Let a sensitive person observe the startling depression of vitality, as well as the horrible charnel-house smell remaining in the room after a genuine "materialization", and he will be at no loss to account for the source of the power or of the "conditions" necessary to accomplish the result. He may seek in vain among the paradoxes and platitudes of the so-called "communications" for evidence of any high or really spiritual entity, for Nirmanakayas do not seek the atmosphere of the seance room any more than does the ordinary man or woman the horrors of the morgue or dissecting rooms of our colleges, which are their nearest physical counterparts. And if there does come uncalled into his mind a suggestion to labor altruistically for humanity, a longing to live upon a higher, holier plane than that which he realizes he now occupies, he will not disturb or flatter himself by the thought that perhaps a Nirmanakaya is endeavoring to impress him, for he will realize that the plane of a Nirmanakaya, which is that of his own Higher Ego, is too near the Divine for any feeling of selfish proprietorship, of "this is mine and not thine", to mar the Unity of thought and purpose towards which we now feebly strive in our endeavors to "form the nucleus of a Universal Brotherhood". And if in his sub-conscious construction of these lower, transient entities, he finds a promise and prophecy of a time when he shall consciously and joyously take part in the creation or construction of such worlds as he now inhabits, then will his study of even these lowly, unscientific "astral forms" not have been in vain.

The Path

ESOTERIC TEACHING — *A. P. Sinnett*

Some recent references in the *PATH* to portions of the original esoteric teachings embodied by me in *Esoteric Buddhism* seem to call for remarks on my part in reply. The line of criticism in question has culminated in an article which appears in the *PATH* for July, entitled "Mars and Mercury".

The point at issue is this: — In the original teaching which I received from the Masters I was definitely informed that the planets Mars and Mercury formed part of the septenary chain to which our own world belongs. The question is one which, on its own merits, will only be of interest within the area of serious Theosophic study; but the controversy that has now arisen really involves some of the deepest questions affecting the future well-being of the Theosophical Society and the progress of the movement. It is for this reason that I now feel bound to take it up.

For a long time after the publication of *Esoteric Buddhism* the statement concerning Mars and Mercury remained unchallenged. It scarcely seemed possible that any one imbued with respect for the Masters' teaching could challenge it, because, as has been publicly stated, after the publication of *Esoteric Buddhism* the great Adept who gave me the information wrote to me declaring explicitly that it constituted a correct exposition of his teaching. His words were: — "Be certain that with the few undetectable mistakes and omissions notwithstanding, your *Esoteric Buddhism* is the only right exposition, however incomplete, of our occult doctrines. You have made no cardinal, fundamental mistakes, and whatever may be given to you hereafter will not clash with a single sentence in your book, but, on the contrary, will explain away any seeming contradiction." In later years when the *Secret*

Doctrine was published by Madame Blavatsky, I found to my great surprise that she had asserted a new view of the planetary chain, altogether at variance with that previously given out, and had represented the seven planets of that chain as seven different states of this earth, making out Mars and Mercury to be in no way associated with the evolution of our human family, but simply to be themselves the objective planets, corresponding to the earth, of other chains. On the basis of this declaration some Theosophical students have felt bound by their loyalty to Madame Blavatsky to put aside the earlier teachings of the Masters conveyed through myself, and to argue that I misunderstood my instructions. This view is emphasized with great vigor in the *PATH*, — in the article above referred to, signed by Mr. Judge, — and the really important point developed by the controversy has to do with the question, What was Madame Blavatsky's position really in the occult world, and what kind of authority should be attached to the writings she has left behind her?

I hope no one will take the explanation I am now forced to give as implying any abandonment by me of the position respecting Madame Blavatsky I have always maintained. I showed in the fragmentary biography I put together at her own wish, with the assistance of herself and members of her family, under the title *Incidents in the Life of Madame Blavatsky*, that she was truly in close relations with the great Masters of esoteric wisdom. That she was one of their partially initiated disciples was also unquestionable for anyone who has been in independent touch with the realities of the occult world. She was what she always called herself, a *chela*, or pupil of the Masters, generally described by them by the term *upasika*, well-known in the East as signifying a female *chela*; and when the teaching first came to me in preparation for the book which I ultimately wrote, Madame Blavatsky eagerly perused the letters I received in reply to my

elaborate questions, assuring me constantly that the information they contained was almost as new to her as it was to me, except in so far as a part of it was vaguely present to her mind without having ever been formulated with precision. Through her it was in the first instance undoubtedly that I came into communication with the Masters, and in many ways for many years, during some of which she had few other friends, I endeavored to show my appreciation of the debt of gratitude, in this respect, I owed her. But the matter we have now to deal with has nothing to do with personal relationships. I have to defend the teaching of which I was made the exponent, and now that the subject has been forced so prominently to the front, I cannot leave Theosophists to suppose I acquiesce in the claims that have been made to correct my faithful exposition of the occult doctrine.

It is not my business here to offer hypotheses to account for the strange misapprehensions into which Madame Blavatsky fell when writing the *Secret Doctrine*, not merely as regards these questions of Mars and Mercury, but also in regard to some other points which have not yet attracted attention. That Madame Blavatsky was capable of making mistakes when endeavoring to amplify and expand the occult teaching of the Masters is the all-important conclusion to which I think all unbiased minds in the Theosophical Society must be brought by a consideration of the matter under discussion. In endeavoring to show, on p. 163, vol. 1 of the *Secret Doctrine*, that I misunderstood the teaching in reference to Mars and Mercury, Madame Blavatsky quotes a question which I put to the Master, K.H., and his reply. Here I must add a few words of explanation of the circumstances under which the correspondence in question came to be available for quotation. When I returned to England in 1883 and published *Esoteric Buddhism* — long before Madame Blavatsky ever thought of returning to this country — the most earnest Theosophists of

that day were exceedingly eager to see the original papers on the basis of which that volume had been written. I used to read portions of the correspondence at meetings of the Society, and many members pressed me eagerly for permission to take copies of them. I referred the matter to the Master himself, and in the first instance he distinctly expressed disapproval of the idea. The letters, as he pointed out, were written to me, to inform my own mind, in order that I might in turn put out their substance in a suitable literary shape. They would not be intelligible to others unfamiliar with the course of the correspondence on both sides, and so on. The urgent desire, however, of certain Theosophists made me feel as though I were selfishly withholding from them documents which we all revered very sincerely, and at a later date — to my lasting regret — I was induced to apply a second time to the Master for leave to have some of these letters copied. He gave me that leave then, enjoining me to take a solemn pledge from persons to whom I gave the copies that they would never be made use of in any way without my permission. Under these conditions the great bulk of my correspondence with the Mahatmas, in so far as it related to Theosophical teaching, was copied and treasured for a time by the persons to whom I gave it. Several years later, when Madame Blavatsky was living in this country, she naturally acquired overwhelming influence over a great many members of the Society. She desired one of these to give up to her the copies that had been received from me. The member in question conceived her orders to over-ride the original pledge, and gave them up. They have since been scattered about the world, so that I have seen extracts from them in the PATH and elsewhere, and for want of the interpretation that would have been suggested if the original letters of enquiry from me had also been printed, provoking misapprehensions on the part of those who only in this way read half the correspondence. Now, the original question relating to Mars was as follows: —

"What planets of those known to ordinary science, besides Mercury, belong to our system of worlds?" The question took that form because information concerning the association of Mercury with our chain of worlds as the next planet on which this body of humanity was destined to evolve, had been given to me previously. The answer was: — "Mars and four other planets, of which astronomy knows nothing. Neither A, B, nor Y, Z are known, nor can they be seen through physical means, however perfected." The answer is incorrectly quoted in the *Secret Doctrine*, and is made to run, — "Mars, *etc.*, and four other planets . . ." The interpolation of this "etc." lends color to the view Madame Blavatsky was at the time maintaining, viz., that while I had intended to ask a question concerning *our chain*, the Master thought I meant to ask a question about the *solar system* at large. This idea is a strange one for an occultist to have accepted. An Adept dealing with his pupil could not make such a mistake about his meaning. But internal evidence makes it obvious that no such mistake was made. If the question had related to the solar system, it would have been absurd. "What planets besides Mercury belong to the solar system?" The question would have been ridiculous in that form — the answer almost more so, — "Mars and four others . . ." invisible to telescopes. What about Jupiter and Saturn, and all the invisible planets of the other world systems? Madame Blavatsky, as all who knew her intimately are well aware, was capable of making any imaginable mistake in matters relating to physical science. Her mind was out of tune with all such matters. But how the friends who helped her with the proofs of the *Secret Doctrine*, even without having their eyes opened by knowing that the "etc" was an interpolation, could have let this passage pass, is very surprising. Finally, be it observed that "A, B, and Y, Z," were the names assigned by agreement at that period of my correspondence with the Master

to the first, second, sixth, and seventh globes of our chain. The notion that there could be airy ambiguity about my question or the answer, in the circumstances, is an insult to common sense, — not to speak of Adept wisdom. I am entitled to add that at a very recent date, within the last few months since this subject has been under discussion, the Master himself in communication with me made the following comment on the situation: — "If I had been capable of paltering with the truth, and playing with words in the way which has been attributed to me, not one line of all the manuscript of mine in your possession would have been worth the paper it is written on".

Few persons in touch with the principles of occultism will be surprised to hear me quoting recent words addressed to me by the Master. Relations like those which were established between my humble self and Him in days gone by are of a kind that do not come to an end except through the misconduct or faithlessness of the pupil. During Madame Blavatsky's lifetime my privileges of communication with the Master through channels of which she knew nothing were private and personal, and I was precluded from speaking of them. That prohibition has since been removed. Madame Blavatsky disliked anything that savored of interference with her rights as founder of the Theosophical Society, and while she lived no one else would have been allowed to speak on behalf of the Masters to the Society at large. But it will be obvious on reflection that unless the whole design of occult teaching is a delusion also, fresh neophytes as time goes on must come within the scope of the personal teaching of the Masters. In this respect we are moving forward now in a new era. I should be the last person to claim any monopoly — such as Madame Blavatsky in a certain sense enjoyed while she lived — of the honor of conveying teaching from the Masters. No one now left in the Society, I should think, could be so unwise as to make claims of that nature.

But as it has been my duty in the past to put the teaching of the Mahatmas before the world, so it looks probable that such tasks will present themselves again, and on this account it is that I am bound at the present crisis to speak rather more plainly than inclination in other circumstances would have prompted. For many Theosophists, I know, Madame Blavatsky represented the whole movement, but, great as she was, the movement is something much greater. For many such persons Madame Blavatsky may have been the only teacher from whom they received occult enlightenment. Immense as my respect is for her attainments, for her industry and devotion to the work she undertook, it is, nevertheless, a fact that I myself did not receive my Theosophic teaching directly from her, but in the way described; and long before her death my relations with the Master were carried on through the intermediation of one of his *chelas*, quite outside the range of Madame Blavatsky's connexions. It ought to be for all earnest workers in the Theosophical movement a matter of great satisfaction that this is so, because in this way an entirely independent line of confirmation is provided for much that Madame Blavatsky has taught, for the *bona fides* of her position in its broadest aspects, and for the much-discussed existence of the Masters.

Following the quotation from my letter given in the *Secret Doctrine* as above described, comes a letter as printed in that volume with many passages omitted, in which Madame Blavatsky seems to give a correction, derived by her from the Master himself, confirming her view of the planetary chain. Here, again, minute comment upon the entangled situation is very difficult. I can only say that the omitted passages would materially alter the interpretation the letter seems to bear, and that some words obviously put in by Madame Blavatsky in parentheses must not be understood to have existed in the original.

Of course it matters very little for most people in this country first awakening to the significance of Theosophic teaching, whether Mars and Mercury are connected with this earth in the manner described or not; but what is of immense importance — in order that the movement, carried on loyally and rationally, shall always continue a healthy living organization, in touch with higher wisdom — is that all persons interested in its progress should shun the disastrous mistake of stereotyping the utterances of Madame Blavatsky — or of anyone else outside of the Masters — as the final word of esoteric teaching, and an infallible testimony to constitute a new body of dogmatic scripture and lead the human understanding once more into the quagmires of bigotry and sectarianism.

A few words must be given in conclusion to some points in Mr. Judge's recent article. When he says the two Masters who have had to do with *Esoteric Buddhism* and the *Secret Doctrine* have decided distinctly, first, that no other globes of the earth chain are visible from its surface, etc., etc., and that "Mr. Sinnett misunderstood them when he thought they meant to say Mars and Mercury were two of the six fellow-globes of the earth", I can only affirm for the guidance of those who may be able to feel that I speak with some claim to be listened to in such a matter, that I am quite sure Mr. Judge entirely mistakes, and that the Masters in question never said anything of the sort. The argument which endeavors to draw a correspondence between the organization of the septenary chain and the seven principles of man is one which rests on an entirely false analogy. It would be as reasonable to attempt to trace an analogy between the seven principles of man and the seven days of the week. There is an analogy between the principles of man and the principles *of the earth* — or of any other individual planet, visible or invisible, — but seven is a terrible stumbling-block for Theosophical students who know

there is something in it without knowing very much more.

Finally, in quoting from one of the letters to me by the Master which were got at under the circumstances I have described above, Mr. Judge represents him as saying, "You are putting me questions pertaining to the highest initiation. I can give a general view, but I cannot and dare not enter upon details." It was scarcely fair of Mr. Judge to bring in the passage quoted, as though it bore on the matter in hand. It related to enquiries which had nothing to do with Mars and Mercury, but to a totally different question.

The Path

HOW TO SQUARE THE TEACHINGS — *William Q. Judge*

Place has been given to Mr. Sinnett's admirably written article "Esoteric Teaching" for two good reasons: *first*, because he requested its publication, and *second*, because the theme is excellent and the time propitious. But by its appearance the PATH is not bound to the conclusions of the learned author.

Roughly summarizing the history of the recrudescence of the teaching of the Lodge for this century, we find H. P. B. publicly beginning it, though guardedly, in *Isis Unveiled* as herself the messenger of the real Teachers behind. At that time (1875) she gave private teachings (1) in America to certain persons. Then in India in the *Theosophist*, with H. P. B. as editor, it proceeds to further unfolding in articles entitled "Fragments of Occult Truth". It is a pity this name was not preserved and used for the book which the "Fragments" afterwards became — *Esoteric Buddhism*. Later the *Occult World* came out in 1884, and also *Esoteric Buddhism*. During all this time H. P. B. was doing her own work with others, explaining the same philosophy as was given to Mr. Sinnett, and contributed to literature the *Key to Theosophy* and the *Secret Doctrine*. The fact — not denied by Mr. Sinnett or anyone — is that the letters from the Masters from which the matter for *Esoteric Buddhism* was taken came in the main through H. P. B., for although it is true she "showed surprise" to Mr. Sinnett on seeing certain things communicated to him in letters from the Masters, the surprise was not at teachings which were new to her, but surprise that they were divulged at all, for she knew the teaching, inasmuch as she taught it under pledge as far back as from 1875 to 1878 in America.

In her *Secret Doctrine*, availing herself of the same teachers to

whom she introduced Mr. Sinnett, she corrected two errors into which she said he had fallen, *i.e.*, respecting Devachan and our companion planets. It is a perfectly unthinkable proposition to say that she was not advised by the Masters when writing the *Secret Doctrine*. I who saw many of the Masters' letters in 1888 in reference to the *Secret Doctrine* certainly cannot give up the evidence of my inner and outer senses. I know as surely as I know any fact that the same teachers were giving her in 1887 and 1888, as before, information for that book, in black upon white, and I am certain they dictated the corrections given in *Secret Doctrine* upon the points now before us. Evidence, eye-sight, and tradition confirm it, for in 1876 to 1878 I was given by her the same theories and the clue to the misunderstanding which a desire for consistency as to mere words has now aroused.

Even in 1888 it was *not the time* to make the point precisely clear to the public. Times have rule in occult teaching more than most readers — or writers — of theosophical books suspect. But the clue was given, a broad hint was thrown out. It is *now the time* when what I was told in 1876 and 1878 by the Masters through H. P. B. may be told, since the prohibition put personally upon me has been withdrawn.

The questions repeating Mars and Mercury — and I might add those which might have been but were not put about Venus — did touch upon other questions on the outskirts of higher initiations and which never are and never will be answered *before the right time*. The statement in the Master's letter to Mr. Sinnett that the questions put by the latter approached too near to secrets of higher initiations did not, it is true, refer directly to these questions about Mars and Mercury, but that does not alter the fact that all the questions then propounded on this planetary subject touched the delicate area; and whether Mr. Sinnett or anyone else liked it or not, attention had to be drawn off even at

the risk of creating a temporary confusion on the topic. But in 1888 time had rolled on further, and now it is 1893 and nearer and nearer to another cycle. The clue may now be given. It may be noticed, if readers will observe, that the many questions raised in reference to Mars and Mercury served the additional purpose of so distracting the attention of questioners that hardly any queries were raised about the subject of "Cycles" on which the Masters had the completest information but about which the Lodge is more careful to remain silent than in respect to other points — yet the cycles are more important and have more bearing on life than Mars and Mercury. Mars, Mercury, and Venus have a special and direct relation to this earth and its invisible companions. Those three visible spheres have to do with certain cosmic principles and lines of influence in and on the earth, while the remaining visible planets of the Solar System have not the same relation. Read it thus, as taught before Mr. Sinnett was in the T. S., and as repeated in the *Secret Doctrine*:

The unseen companions of your earth are united with it in mass, though different as to quality of substance. The visible planets of your Solar System which have a relation special and peculiar to Earth are Mars, Mercury, and Venus. But what that peculiar — nay wonderful — relation is do not ask, for we will not tell you. If while the current is open you persist in the question, you will arouse in yourselves a perplexity which the answer obtained will not relieve. Is there not a spirit of irritation, of rage, and another of wisdom and active judgment in man and Nature which may relate to visible planets which are not an actual part of earth's own special family? This is as far as we will now go.

The whole misunderstanding hinges on the word "relation". It was a word which led up to many things. The presence of Mars

and Mercury in the sky presents a *relation* to the earth, yet they have another *relation* to it which Saturn, Jupiter, and so on have not, while the latter bear the same relation to us of proximity as do the first. Admit the proposed construction above given, and at once there is complete concordance between *Esoteric Buddhism* and *Secret Doctrine* as to esoteric divulgements. But continue the controversy to try and show that *Esoteric Buddhism* had not a single blunder, and perplexities of all sorts impossible to relieve will spring up on every hand. The Masters have commended the book, and well so, as it is made up from their letters. But that does not prevent one making slight mistakes, as, for instance, the one that all men stay in devachan for 1500 years. This is not the fact, nor is it according to reason. And I make bold to say that it is not 1500 years since I was last in devachan, but much less; and this assertion is made on personal knowledge supported by confirmatory statement from the same Masters. But it is true that the general run of the human race stays in devachan for the average time of 1500 years of mortal time.

Mars, Mercury, Venus, then, are a part of our system in the sense of having an extremely important relation and influence with the human race and its planets, and having that in mind it was quite permissible for the teacher to reply that Mars and Mercury belong to our system.

FOOTNOTE:

1. Moreover, a considerable part of the philosophy expounded by Mr. Sinnett was taught in America before *Isis Unveiled* was published to two Europeans and to my colleague, Col. Olcott. — *Secret Doctrine*, vol. I, p. xix. ([return to text](#))

ON THE FUNCTIONS OF A DOORMAT — *Katharine Hillard*

As I paused on the threshold of Headquarters one day, I found myself sympathetically regarding the doormat at my feet. What position could be lowlier than it held? Not even permitted to enter the house, but having the humble duty assigned it of cleaning the feet of those more favored ones who were admitted to the sanctum. It did not utter a word of complaint; I think no one ever knew it to remonstrate; and as to thinking that it was shamefully neglected, and that it had as good a right as the stair-carpet to climb to the innermost offices of the PATH, and even to repose beneath the Editor's desk, — I doubt if such a notion ever occurred to it.

Instead of complaining, of bewailing its unfortunate destiny, of accusing the powers that be of favoritism, or of trying to blazon its own virtues to the world, it remains with a divine patience where it was put, and does what it can to make the ways of others pleasant. It preserves the halls and stairways from the dust and mud of the street, and it lies there to be trampled upon, day after day and month after month, by the busy feet of those who never give a thought to the patient service it renders them. Talk about recognition! it never has any, it would not know the meaning of the word, much less does it claim the reward of gratitude for what it has done, a gratitude expressed in smiles and pleasant words, as a circus horse expects lumps of sugar after he has gone through his tricks. Once in a while it suffers a furious beating, for no fault of its own, but simply to free it from the impurities heaped upon it by others, and this too it undergoes in silence and without even a murmur. To remonstrate never occurs to it, much less to rise up in rebellion and oppose the hand that strikes it or the heel that grinds it into the dust.

So perfect is its humility, so absolute its patience, that I set myself to learn the lessons that it taught; and what higher ones could be studied by a scholar than those of trust, submission, humility, and patience? It is hard sometimes to be content with a place upon the threshold, where we feel ourself trodden under the feet of those who "go up higher", but if we can help those feet, we too have part and lot in their advancement. And if we have really learned the lesson of trust, we know that the place assigned us is the place where we belong, and where we can do the most good, if we will only consent to work with our own tools and not grasp at another's. What says the *Gita*? "It is better to do one's own duty, even though it be devoid of excellence, than to perform another's duty well." But one of the most insidious forms of that ambition against which we are so strenuously warned, is what we call emulation, the desire to distinguish ourselves as we have seen others distinguish themselves, the feeling that, given the chance, we could do great things. But the greatest thing is to use the chance we have, for "to him who hath shall be given", and to learn the lesson of trust in those great Powers that have set us in our places and know better than we can what we are fitted to do.

This lesson of trust springs out of humility, for it is only when we recognize our own feebleness that we learn to confide in the strength and wisdom of others. In *Letters that have Helped Me* we are told, "The Karma of your present life is *the higher patience*", and this is explained by the compiler to mean "the fine line between pride and humility". The doormat does not fling itself into the gutter in a foolish fit of self-abasement, but it remains at the top of the steps, in a place of its own, which is "the place neither too high nor too low", on which Krishna told Arjuna to sit.

Submission does not imply grovelling, or even self-depreciation, but only the consent to do a lower duty that someone else may the

better perform a higher, for which he has a better equipment than ourselves. A private holds as honorable a position as a captain, and without privates there could be no captains. In the army of the Lodge promotion never goes by favor or by seniority, and when we are fit to be captains we shall find ourselves marching at the head of our regiments. Till then, let us trust in our commanding officer and obey his orders as we would like to have our own obeyed.

The doormat was never known to complain that it was not appreciated, nor even to be despondent because it had to lie there alone with no one to help it, even to recognize its efforts. And when we have learned this lesson of silent devotion, we shall learn to know all that the Masters meant when they wrote, "Ingratitude is not one of our failings. The humblest worker is seen and helped".

The crowning grace of service is joy, and verily this is its own reward.

The Path

OUR CONVICTIONS — *William Q. Judge*

SHALL WE ASSERT THEM?

To THE PATH: — Please resolve a doubt. Are members of the T.S. required to become flabby in character upon entering the Society, and to give up their convictions for fear of a vague future dogmatism? I ask this because in some of our magazines I have seen objections raised to a free promulgation of one's ideas on such subjects, for instance, as the Adepts or Masters, Reincarnation, Karma, and so on. If we are so required, then I would ask why we have a free platform in the T.S., and when were the statements made in the President's inaugural address of 1875 withdrawn?

Fraternally,

S. F. HECHT. Admitted to the T.S. May 5, 1892.

This question seems easy to answer. It is presumed that the correspondent refers to an objection to my plainly stating either in our journals or in any other way my own personal beliefs. It is evident that S.F.H. is thinking of the objection made in the *Theosophist* by N. D.K. to my plainly saying I believe in the existence of the Masters of whom so often H. P. B. spoke. N.D. K., taking up a letter of mine, quoted this sentence; "And when we come to examine the work and the foundation of the T.S. and its policy, I find it perfectly proper for me to assert, as I do in accordance with my own knowledge and belief, that our true progress lies in our fidelity to Masters as ideals and facts". S.F.H. is perplexed because N.D.K. seemed to object to that, but the perplexity need not exist nor need we become flabby in our convictions.

For, as will be seen by reading, and not straining, the sentence quoted, the "policy" of the T.S. referred to by me therein is that of leaving everyone quite free to express his views on all these points. Although N.D.K. would appear to think I meant that the T.S. policy was for it to make these declarations, it is easy to see by consulting the constitution that its policy is the opposite. The policy is freedom to members and perfect neutrality on the part of the T.S. To have any other, or to say that merely because one is in a society such as ours, or is an officer, he cannot give his own opinions so long as he accords the same privilege to another, would be a monstrous thing, contrary to our constitution and quite against a long history in which, from H. P. B. and Col. Olcott down, all members have had perfect freedom of expression. So S.F.H. need have no fear; our policy of freedom is not altered; all have a right to their convictions; and it is certain that if anyone is becoming flabby the oldest members of the T.S. will at once adjure him to strengthen his sincere convictions and not hesitate to give them expression, always allowing to every one else the same liberty of thought and speech. And to aid our correspondent we will give some further light if possible.

Let us take first H. P. Blavatsky. She began in the T.S., with its free platform, immediately to preach and promulgate her own personal view that the Masters were facts, and facts of very great magnitude, and this she did and continued against the most violent opposition and the fiercest ridicule. She also proclaimed unequivocally, as Cagliostro did many years before in Paris, a belief in the occult machinery of the Cosmos with all that that implies. Moreover, in the name of the Master she did very wonderful phenomena, which one of the same Masters has said, as published by Mr. Sinnett, have puzzled men for a good part of a century. And while thus freely expressing her own views she allowed the same freedom to all others, and was herself the agent

for the taking into the T.S. of many who did not believe as she did but who often scouted at her convictions. Then, further, she proclaimed a system of philosophy with all her ardor just as she had a right to do, and merely laid it before the world within the pale of a free Society, which is not compelled to accept but whose members fortunately do in great part. And in saying they are thus fortunate I am now giving expression to my own views.

Next consider the career of Col. H. S. Olcott since he began the work of the T. S., President then as he now is, as and we hope he will remain. He is our highest officer. Yet he has not failed to assert his undying belief in the Adepts and Masters universal and particular. It is a good example for those who have the same belief. It was done in the T.S., not as officer but as man, as individual member, and it would be a poor sort of constitution that would have prevented him. Long ago he said they existed and tried to prove it. He worked with the Psychological Research Society of London to prove to them the existence of the Masters and the truth of the doctrines given out by them as to occult phenomena. That may have appeared to be disastrous, but it was done with good intent and still under the constitution, for if against the constitution why was he not charged and put out? Because it was within his right. And in various places since then he has made the same assertions. At the Convention of the European Section in 1891 he publicly said on the platform that the Masters existed and that he had seen them himself, and spoke also of more than the two most spoken of in the T.S. and its literature. Then last, and now, he repeats it all with greater detail and particularity in his own series of Diary Leaves in his own magazine which has always been called the only organ the T.S. has. For, mark you, the *PATH* and *Lucifer* have never been made the organs of the T. S.; nor, indeed, should they be.

Mr. Sinnett stands out in high relief among those who have in

public and private, within the T. S., asserted with all his strength his belief in the Masters' existence and tried his very best to prove his assertion. His books, his pamphlets, his speeches in public and private, all show this. Was he wrong, was he not fully justified under the constitution? And has he not gone even further and taken up the cudgels in battle for his views?

It very clearly appears, then, that under the Constitution we all have the fullest right to proclaim our views, not once but as often as we see fit, so long as we give others the same right and do not say that the T.S. as a body is responsible, for it is not. This is the beauty of our law. We are free just as the United States constitution is free and proclaims for no creed and no sort of god but leaves all men to say what they please, if they do not interfere with the liberty of others.

Entry into our ranks in no way infers a becoming flabby, by which it is supposed the querent means a fear of saying what and in what each individual believes, because this is a brotherhood free from dogmatism. Earnestness and sincerity are not dogmatism at all, and it is undeniable that a reform in philosophy and thought such as ours could never prosper if our members were to grow flabby in this or in any other particular. Then again, if some of us have found that for us the Masters exist, it is our human universal duty to tell others, so that they may find out also or be able to show by good substantial proof that we are wrong. When they shall have proved this to our satisfaction it will be time for us to disband, for then will have fallen the theory of the possible spiritual evolution of man, and we can then leave the field to the scientific materialists who not long ago declared the possibility of that high evolution. But as this is a *reductio ad absurdum* we may all continue our preachments of views, some for and some against man's great inheritance. The PATH will continue to say its editor believes in humanity and in the great

Masters of Wisdom.

The Path

OCCULT ARTS: I — *William Q. Judge*

No. 1. PRECIPITATION

The word "precipitation" means to throw upon or within. This term is used in chemistry to describe the fact of a substance, held or suspended in fluid, being made to disengage itself from the intimate union with the fluid and to fall upon the bottom of the receptacle in which it is held; in the use of applied electricity it may be used to describe the throwing upon a metal or other plate, of particles of another metal held in suspension in the fluid of the electric bath. These two things are done every day in nearly all the cities of the world, and are so common as to be ordinary. In photography the same effect is described by the word "develop", which is the appearing on the surface of the sensitized gelatine plate of the image caught by the camera. In chemical precipitation the atoms fall together and become visible as a separate substance in the fluid; in photography the image made by an alteration of the atoms composing the whole surface appears in the mass of the sensitized plate.

In both cases we have the coming forth into visibility of that which before was invisible. In the case of precipitation of a substance in the form of a powder at the bottom of the receptacle containing the fluid, there is distinctly, (*a*) before the operation an invisibility of a mass of powder, (*b*) upon applying the simple means for precipitation the sudden coming into sight of that which was before unseen.

And precisely as the powder may be precipitated in the fluid, so also from the air there can be drawn and precipitated the various metals and substances suspended therein. This has been so often done by chemists and others that no proofs are needed.

The ancients and all the occultists of past and present have always asserted that all metals, substances, pigments, and materials exist in the air held in suspension, and this has been admitted by modern science. Gold, silver, iron and other metals may be volatilized by heat so as to float unseen in the air, and this is also brought about every day in various mines and factories of the world. It may therefore be regarded as established beyond controversy that as a physical fact precipitation of substances, whether as merely carbon or metal, is possible and is done every day. We can then take another step with the subject.

Is it possible to precipitate by will-power and use of occult laws upon a surface of wood, paper, metal, stone, or glass a mass of substance in lines or letters or other combinations so as to produce an intelligible picture or a legible message? For modern science this is not possible yet; for the Adept it is possible, has been done, and will be still performed. It has also been done unintelligently and as mere passive agents or channels, among mediums in the ranks of European and American spiritualists. But in this latter case it has the value, and no more than that, of the operations of nature upon and with natural objects, to be imitated by conscious and intelligently-acting man when he has learned how, by what means, and when. The medium is only a passive controlled agent or channel who is ignorant of the laws and forces employed, as well as not knowing what is the intelligence at work, nor whether that intelligence is outside or a part of the medium.

The Adept, on the other hand, knows how such a precipitation can be done, what materials may be used, where those materials are obtainable, how they can be drawn out of the air, and what general and special laws must be taken into account. That this operation can be performed I know of my own knowledge; I have

seen it done, watching the process as it proceeded, and have seen the effect produced without a failure. One of these instances I will give later on.

Precipitation of words or messages from Adepts has been much spoken of in the Theosophical Society's work, and the generality of persons have come to some wrong conclusions as to what they must be like, as well as how they are done and what materials may be and are used. Most suppose as follows:

1. That the precipitated messages are on rice paper;
2. That they are invariably in one or two colors of some sort of chalk or carbon;
3. That in every case they are incorporated into the fibre of the paper so as to be ineradicable;
4. That in each case when finished they came from Tibet or some other distant place invisibly through the air.
5. That all of them are done by the hand of the Adept and are in his handwriting as commonly used by him or them.

While it is true in fact that each of the above particulars may have been present in some of the cases and that every one of the above is possible, it is not correct that the above are right as settled facts and conclusions. For the way, means, methods, conditions, and results of precipitation are as varied and numerous as any other operation of nature. The following is laid down by some of the masters of this art as proper to be kept in mind.

(a), A precipitated picture or message may be on any sort of paper.

(b), It may be in black or any other pigment.

(c), It may be in carbon, chalk, ink, paint, or other fluid or

substance.

(d), It may be on any sort of surface or any kind of material.

(e), It may be incorporated in the fibre of the paper and be thus ineffacable, or lie upon the surface and be easily eradicated.

(f), It may come through the air as a finished message on paper or otherwise, or it may be precipitated at once at the place of reception on any kind of substance and in any sort of place.

(g), It is not necessarily in the handwriting of the Adept, and may be in the hand comprehended by the recipient and a language foreign to the Adept, or it may be in the actual hand of the Adept, or lastly in a cipher known to a few and not decipherable by any one without its key.

(h), As matter of fact the majority of the messages precipitated or sent by the Adepts in the history of the Theosophical Society have been in certain forms of English writing not the usual writing of those Adepts, but adopted for use in the Theosophical movement because of a fore-knowledge that the principal language of that movement would for some time be the English.

Some messages have been written and precipitated in Hindi or Urdu, some in Hindustani, and some in a cipher perfectly unintelligible to all but a few persons. These assertions I make upon personal knowledge founded on observation, on confirmation through an inspection of messages, and on logical deduction made from facts and philosophical propositions. In the first place, the Adepts referred to — and not including silent ones of European birth — are Asiatics whose languages are two different Indian ones: hence their usual handwriting is not English and not Roman in the letters. *Secondly*, it is a fact long suspected and to many well known both in and out of the Theosophical Society that the Fraternity of Adepts has a cipher

which they employ for many of their communications: that, being universal, is not their handwriting. *Thirdly*, in order to send any one a precipitated message in English it is not necessary for the Adept to know that language; if you know it, that is enough; for, putting the thought in your brain, he sees it there as your language in your brain, and using that model causes the message to appear. But if he is acquainted with the language you use, it is all the easier for the Adept to give you the message exactly as he forms it in his brain at first. The same law applies to all cases of precipitation by an alleged spirit through a medium who does not know at all how it is done: in such a case it is all done by natural and chiefly irresponsible agents who can only imitate what is in the brains concerned in the matter.

These points being considered, the questions remain, How is it all done, what is the process, what are the standards of judgment, of criticism, and of proof to the outer sense, is imposition possible, and, if so, how may it be prevented?

As to the last, the element of faith or confidence can never be omitted until one has gotten to a stage where within oneself the true standard and power of judging are developed. Just as forgery may be done on this physical plane, so also may it be done on the other and unseen planes and its results shown on this. Ill-disposed souls may work spiritual wickedness, and ignorant living persons may furnish idle, insincere, and lying models for not only ill-disposed souls that are out of the body, but also for mere sprites that are forces in nature of considerable power but devoid of conscience and mind. Mind is not needed in them, for they use the mind of man, and merely with this aid work the hidden laws of matter. But this furnishes some protection illustrated in the history of spiritualism, where so many messages are received that on their face are nonsense and evidently but the work of elementals who simply copy what the medium or the

sitter is vainly holding in mind. In those cases some good things have come, but they are never beyond the best thought of the persons who, living, thus attempt to speak with the dead.

Any form of writing once written on earth is imprinted in the astral light and remains there as model. And if it has been used much, it is all the more deeply imprinted. Hence the fact that H. P. Blavatsky, who once was the means for messages coming from the living Adepts, is dead and gone is not a reason why the same writing should not be used again. It was used so much in letters to Mr. Sinnett from which *Esoteric Buddhism* was written and in many other letters from the same source that its model or matrix is deeply cut in the astral light. For it would be folly and waste of time for the Adepts to make new models every time any one died. They would naturally use the old model. There is no special sanctity in the particular model used by them, and any good clairvoyant can find that matrix in the astral light. Hence from this, if true, two things follow: (a), that new communications need not be in a new style of writing, and (b), there is a danger that persons who seek either clairvoyants or mesmerized *lucides* may be imposed on and made to think they have messages from the Adepts, when in fact they have only imitations. The safeguard therein is that, if these new messages are not in concordance with old ones known to be from their first appointed channel, they are not genuine in their source, however phenomenally made. Of course for the person who has the power inside to see for himself, the safeguard is different and more certain. This position accords with occult philosophy, it has been stated by the Adepts themselves, it is supported by the facts of psychic investigation inside the ranks of Spiritualism, of Theosophy, of human life.

It is well known that mediums have precipitated messages on slates, on paper, and on even the human skin, which in form and manner exactly copied the hand of one dead and gone, and also

of the living. The model for the writing was in the aura of the enquirer, as most mediums are not trained enough to be able independently to seek out and copy astral models not connected with some one present. I exclude all cases where the physical or astral hand of the medium wrote the message, for the first is fraud and the second a psychological trick. In the last case, the medium gazing into the astral light sees the copy or model there and merely makes a *facsimile* of what is thus seen, but which is invisible to the sitter. There is no exemption from law in favor of the Adepts, and the images they make or cause to be made in astral ether remain as the property of the race; indeed in their case, as they have a sharp and vivid power of engraving, so to say, in the astral light, all the images made there by them are deeper and more lasting than those cut by the ordinary and weak thoughts and acts of our undeveloped humanity.

The best rule for those who happen to think they are in communication with Adepts through written messages is to avoid those that contradict what the Adepts have said before; that give the lie to their system of philosophy; that, as has happened, pretend that H. P. B. was mistaken in her life for what she said and is now sorry. All such, whether done with intention or without it, are merely *bombinans in vacuo*, sound that has no significance, a confusion between words and knowledge delusive and vain altogether. And as we know that the Adepts have written that they have no concern with the progress of selfish science, it must be true that messages which go on merely to the end of establishing some scientific proposition or that are not for the furtherance especially of Brotherhood cannot be from them, but are the product of other minds, a mere extension through occult natural law of theories of weak men. This leads to the proposition that:

Precipitation of a message is not *per se* evidence that it is from

one of our White Adepts of the Great Lodge.

(To be continued.)

The Path

TO A THEOSOPHIST — *A. E. Lancaster*

We do not know that we have lived before;
We can but hope that we shall live again,
Unless the grief that stings though it be o'er
Subdue submission's fain but faint amen.
So dark the chance of life, the chance of death
To darker issue still may lead the way,
Like some black angel with a torch whose breath
Crimsons a night more dread than dreadest day.
But yet, if it be well we should have been,
It will be well should we not cease to be
Until, through deathful life, we enter in
Where life and death are tuned to ecstasy.
Ah, friend, in that long birthday may we meet,
To bless the bitterness that ended sweet.

— ALBERT EDMUND LANCASTER

THAT EVERLASTING PERSONAL EQUATION — *J. D. Buck*

The personal equation begins with the descent of the monad into matter. It lies brooding in the rocks: it glares or beams in the beauty of plant and flower: it snarls and devours in the animal: and it struts in pride, envy, and conceit, while criticising and condemning others in man. It vanishes only at the supreme moment of renunciation, when man loses self and relinquishes all for humanity. The Individual having then completely absorbed the Personal, Higher Manas becomes a center of Power in which the lower self has no share.

Now we may not all have reached that point; certainly the present writer has not; but may not one of fair intelligence grasp at least the philosophy, see the truth of it, and work toward it?

In the ordinary affairs of life this personal bias works in two ways, viz; in self-seeking directly, as in lust and greed, and in detraction and spoliation of others. The latter form is often the more objectionable and dangerous because subtle and concealed. People often indulge in harsh or unkind criticism of others, unconscious that their motive is simply to bring their own unchallenged virtues into greater prominence, when, in fact, they are themselves open to criticism on the same points. Hence it follows that we have no end of talk about charity, brotherhood, etc., etc., but when it comes to the daily test amid the petty trials and annoyances of every-day life, where real charity and *consideration for the weaknesses and ignorance of others are the test of character*, we are found wanting. This was a trait specially marked in H.P.B. If we are really wise we shall not expect of others that which we know, or ought to know, they are incapable of performing. What folly is all our talk and writing regarding

occultism compared with that of the *Secret Doctrine*, and yet how careful was its author to encourage and help each and all in their attempts to understand and to explain, correcting only when glaringly false to principles or misapprehending truths.

But perhaps the most insidious and seductive form of the personal equation is that which distorts intelligent appreciation and open loyalty to teachers and earnest workers into hero-worship, and which seeks under the cry of "No Popery" to belittle and detract. Consciously or unconsciously the effort is thus made to shame to silence all appreciation and loyalty to the real workers for the world's progress. "Oh you are a hero-worshiper, and blinded by zeal or personal regard." Independence! Liberty! Equality! These are the real virtues! Have not these dwelt on the lips of red-handed murder also? Such a position is the very apotheosis of Egotism. It seeks to hide a knock-kneed allegiance and a flabby zeal under the bluster of personal liberty, and would reduce the world to a mediocrity of indifference. He who most highly appreciates loyalty and self-sacrifice is he who best knows what they cost in self-denial and eternal vigilance, and instead of being blind to the weaknesses and foibles that may co-exist with these virtues, he is the very one who sees them most clearly, because he is also conscious of them in himself. If he really desires to see the truth triumph, he will welcome every service and honor all who serve it, and not count to the last poor scruple every little weakness till the service of truth and the truth served are buried out of sight.

It hence occurs that the very worst form of the personal equation is this everlasting harping on personalities; and the surest road to Popery is the cry of No Popery! This is one of those "paradoxes of the highest science", as Eliphas Levy would put it. Those who are really independent and able to stand alone, are not everlastingly prating about liberty. They just do as they please, and please to do

right and say nothing about it, but it never occurs to any one that such a person can be enslaved. There is a silent conviction that that would be a useless if not a hazardous experiment. How, then, is confidence to be inspired in others? I answer, *by deserving it*, and not by prating about it. When it has been thus earned by conflict, neither an army of detractors nor the "hosts of hell" can destroy it; least of all, those weak-kneed, timid souls who are afraid of their personal freedom. We might as well remember that while Brotherhood is universal there is a kinship of souls and cycles and circles in all human associations and relations. Each is drawn to his own circle by Karmic law; the tyrant and the sycophant each obey the law. Those who are earnest and at heart loyal will not bother about trifles, but go ahead with the work in hand. They are not blind even to trifles, but they assign them their true value instead of dwelling on them and magnifying. We have had all these issues in the past, and they will come again and again. They do not affect the Cause or the workers materially, though they may *seem* to do so for a time. Look at the efforts to kill the T. S. movement. Some through design, some through hatred and revenge, some inspired by blind conceit or hairbrained folly. "What did they accomplish? They harmed only their originators and sympathisers, simply because there were always some at the head who took the Masters as facts and ideals, and had devoted themselves to them and their work *without any reservation whatever*. Did they insist that others should agree with them or come to their conclusions? Never! They just worked, and WORKED, and WORKED! ready to help any and all, patient and pains-taking with all; and individually they would stand to the work if every one else deserted it.

How many such does it take to constitute an invincible guard with Truth and Masters back of them? Very few, for they are few, and yet without these few the poor old T. S. would long ago have

gained the limbo of other centuries.

The question no longer regards failure, at least here in America. The question is, how many are ready to work without detraction of other workers? How many will stick to ideals, aims, facts, and — WORK? Those who cannot or will not are not to be anathematized, neither will they guide the work or measure it. They will simply become camp-followers first and deserters later on. Left in the rear they can wrestle with their own Karma. I hold the Masters to be facts, determined by the sequence of all evolution, by history, by direct testimony of H. P. B. and many other witnesses. He who calls this belief or candid statement dogmatic or blindly credulous, simply convicts himself of ignorance of principles, and even of the meaning of words. He can accept or reject my conclusions as he pleases, and I have no war with him till he misconceives or misrepresents my position as being other than it is. Dogmatism builds idols, but it never conceives Ideals. Ideals are the moving fiery chariots of the Gods: the Crown Jewels of the Hierarchies: the themes of the heavenly symphonies: the *ultima thule* of human evolution: something to strive for, work for, die for if need be, and every royal servant of Truth embodies and gives life to an Ideal such as are the MASTERS.

The Path

OCCULT ARTS: II — *William Q. Judge*

No. I

(CONCLUDED)

PRECIPITATION

The outer senses cannot give a safe final judgment upon a precipitated message, they can only settle such physical questions as how it came, through whom, the credibility of the person, and whether any deception on the objective plane has been practiced. The inner senses, including the great combining faculty or power of intuition, are the final judges. The outer have to do solely with the phenomenal part, the inner deal with the causes and the real actors and powers.

As precipitations have been phenomenally made through "controlled" mediums who are themselves ignorant of the laws and forces at work, these are but strange phenomena proving the existence of a power in Nature either related to human mind or wholly unrelated to it. These are not the exercise of Occult Arts, but simply the operation of natural law, however recondite and obscure. They are like the burning of a flame, the falling of water, or the rush of the lightning, whereas when the Adept causes a flame to appear where there is no wick, or a sound to come where there is no vibrating visible surface, occult art is using the same laws and forces which with the medium are automatically and unconsciously operated by subtle parts of the medium's nature and "nature spirits", as well as what we know as *kama-lokic* human entities, in combination. And here the outer senses deal solely with the outer phenomena, being unable to touch in the least on the unseen workings behind. So they can only decide

whether a physical fraud has been practiced; they can note the day, the hour, the surrounding circumstances, but no more.

But if one hitherto supposed to be in communication with the White Adepts comes to us and says "Here is a message from one of Those", then if we have not independent power in ourselves of deciding the question on inner knowledge, the next step is either to believe the report or disbelieve it. In the case of H.P. B., in whose presence and through whom messages were said to come from the White Adepts, it was all the time, at the final analysis, a matter of faith in those who confessedly had and have no independent personal power to know by the use of their own inner senses. But there intuition, one of the inner powers, decided for the genuineness of the report and the authentication of the messages. She herself put it tersely in this way: "If you think no Mahatma wrote the theories I have given of man and nature and if you do not believe my report, then you have to conclude that I did it all". The latter conclusion would lead to the position that her acts, phenomena, and writings put her in the position usually accorded by us to a Mahatma. As to the letters or messages of a personal nature, each one had and has to decide for himself whether or not to follow the advice given.

Another class of cases is where a message is found in a closed letter, on the margin or elsewhere on the sheet. The outer senses decide whether the writer of the letter inserted the supposed message or had some one else do it, and that must be decided on what is known of the character of the person. If you decide that the correspondent did not write it nor have anyone else do so, but that it was injected phenomenally, then the inner senses must be used. If they are untrained, certainly the matter becomes one of faith entirely, unless intuition is strong enough to decide correctly that a wise as well as powerful person caused the writing to appear there. Many such messages have been received in the

history of the T. S. Some came in one way, some in another; one might be in a letter from a member of the Society, another in a letter from a outsider wholly ignorant of these matters. In every case, unless the recipient had independent powers developed within, no judgment on mere outer phenomena would be safe.

It is very difficult to find cases such as the above, because *first*, they are extremely rare, and *second*, the persons involved do not wish to relate them, since the matter transmitted had a purely personal bearing. A fancy may exist that in America or England or London such messages, generally considered bogus by enemies and outsiders, are being constantly sent and received, and that persons in various quarters are influenced to this or that course of action by them, but this is pure fancy, without basis in fact so far as the knowledge and experience of the writer extend. While precipitations phenomenally by the use of occult power and in a way unknown to science are possible and have occurred, that is not the means employed by the White Adepts in communicating with those thus favored. They have disciples with whom communication is already established and carried on, most generally through the inner ear and eye, but sometimes through the prosaic mail. In these cases no one else is involved and no one else has the right to put questions. The disciple reserves his communications for the guidance of his own action, unless he or she is directed to tell another. To spread broad-cast a mass of written communications among those who are willing to accept them without knowing how to judge would be the sheerest folly, only productive of superstition and blind credulity. This is not the aim of the Adepts nor the method they pursue. And this digression will be excused, it being necessary because the subject of precipitation as a fact has been brought up very prominently. I may further digress to say that no amount of precipitations, however clear of doubt and fraud as to time, place, and outward

method, would have the slightest effect on my mind or action unless my own intuition and inner senses confirmed them and showed them to be from a source which should call for my attention and concurrence.

How, then, is this precipitation done, and what is the process? This question brings up the whole of the philosophy offered in the Secret Doctrine. For if the postulate of the metaphysical character of the Cosmos is denied, if the supreme power of the disciplined mind is not admitted, if the actual existence of an inner and real world is negatived, if the necessity and power of the image-making faculty are disallowed, then such precipitation is an impossibility, always was, and always will be. Power over mind, matter, space, and time depends on several things and positions. Needed for this are: Imagination raised to its highest limit, desire combined with will that wavers not, and a knowledge of the occult chemistry of Nature. All must be present or there will be no result.

Imagination is the power to make in the ether an image. This faculty is limited by any want of the training of mind and increased by good mental development. In ordinary persons imagination is only a vain and fleeting fancy which makes but a small impression comparatively in the ether. This power, when well-trained, makes a matrix in ether wherein each line, word, letter, sentence, color, or other mark is firmly and definitely made. Will, well-trained, must then be used to draw from the ether the matter to be deposited, and then, according to the laws of such an operation, the depositing matter collects in masses within the limits of the matrix and becomes from its accumulation visible on the surface selected. The will, still at work, has then to cut off the mass of matter from its attraction to that from whence it came. This is the whole operation, and who then is the wiser? Those learned in the schools laugh, and well

they may, for there is not in science anything to correspond, and many of the positions laid down are contrary to several received opinions. But in Nature there are vast numbers of natural effects produced by ways wholly unknown to science, and Nature does not mind the laughter, nor should any disciple.

But how is it possible to inject such a precipitation into a closed letter? The ether is all-pervading, and the envelope or any other material bar is no bar to it. In it is carried the matter to be deposited, and as the whole operation is done on the other side of visible nature up to the actual appearance of the deposit, physical obstructions do not make the slightest difference.

It is necessary to return for a moment to the case of precipitations through mediums. Here the matrix needs no trained imagination to make it nor trained will to hold it. In the astral light the impressions are cut and remain immovable; these are used by the elementals and other forces at work, and no disturbing will of sitter being able to interfere — simply from blind ignorance — there is no disturbance of the automatic unconscious work. In the sitter's aura are thousands of impressions which remain unmoved because all attention has been long ago withdrawn. And the older or simpler they are the more firmly do they exist. These constitute also a matrix through which the nature spirits work.

I can properly finish this with the incident mentioned at the beginning. It was with H.P. B. I was sitting in her room beside her, the distance between us being some four feet. In my hand I held a book she never had had in her possession and that I had just taken from the mail. It was clear of all marks, its title page was fresh and clean, no one had touched it since it left the bookseller. I examined its pages and began to read. In about five minutes a very powerful current of what felt like electricity ran up and down my side on the skin, and I looked up at her. She was looking

at me and said "What do you read?" I had forgotten the title, as it was one I had never seen before, and so I turned back to the title page. There at the top on the margin where it had not been before was a sentence of two lines of writing in ink, and the ink was wet, and the writing was that of H.P. B. who sat before me. She had not touched the book, but by her knowledge of occult law, occult chemistry, and occult will, she had projected out of the ink-bottle before her the ink to make the sentence, and of course it was in her own handwriting, as that was the easiest way to do it. Hence my own physical system was used to do the work, and the instant of its doing was when I felt the shock on the skin. This is to be explained in the way I have outlined, or it is to be all brushed aside as a lie or as a delusion of mine. But those last I can not accept, for I know to the contrary, and further I know that the advice, for such it was, in that sentence was good. I followed it, and the result was good. Several other times also have I seen her precipitate on different surfaces, and she always said it was no proof of anything whatever save the power to do the thing, admitting that black and white magicians could do the same thing, and saying that the only safety for any one in the range of such forces was to be pure in motive, in thought, and in act.

The Path

CAN WE COMMUNICATE WITH THE DEAD? — *Katharine Hillard*

SOME REASONS AGAINST IT

In the course of last Tuesday night's discussion upon this subject, there was one point that might possibly bear further amplification, and that was the question of the means of such communication. The first question that would be asked about any distinguished Brahmin proposing to visit us would be, "Does he speak our language?" Otherwise he is to us a sealed book.

To carry this analogy a little further, I would ask you to consider the case of a man who should go to see the great actor Salvini in his drama called *Civil Death*. The playgoer comes home enraptured with the performance, wrought to enthusiasm by the unselfish character of the hero of the tragedy, a loving father who breaks his heart rather than interfere with the welfare of his child. The spectator, thrilled with the splendor of the man's sacrifice, feels that of all men he is the noblest, and he demands of the manager an introduction to the being who has so uplifted him. "But, my dear sir," replies the manager, "that hero you so much admire is the creature of a night; he is not a reality, but an illusion. The real man is Salvini, who plays this and many other parts, and I would present you to him with pleasure, only you do not speak his language, nor he yours, nor have we an interpreter capable of giving you any satisfaction." "But it is not Salvini, it is the man I saw on the stage last night that I want to talk with," says our friend. "And I tell you again," says the manager, "that that man was an illusion, and ceased to be when the actor who created him laid aside his costume and left the theatre."

Such a desire and such an attempt as this would seem to us very childish and very futile, but, after all, is it not precisely analogous

to the behavior of those who try to communicate with the dead?

"All the world's a stage,
And all the men and women merely players.
They have their exits and their entrances,
And one man in his time plays many parts."

But that "one man" is not the being we know, whose heroism attracts us or whose cowardice repels, but is the immortal entity we call the individual consciousness, the real Ego who, indeed, "in his time plays many parts." The man who has left us, and whom we so long to meet again, is but one of those "many parts" played by the Ego, who, when it leaves the body that we love, lays aside its costume and quits the theatre of life. That *personality* exists no longer; the Ego, the Mind that created and informed it, "home has gone, and ta'en its wages," to quote our greatest poet once more. It has thrown off the body, its more ethereal counterpart, the astral double, and the still more ethereal framework of its desires, its idiosyncracies, its passions; it is a pure Intelligence, it belongs to another state of consciousness than ours. Can we expect to communicate with it when we do not know a syllable of its celestial language? Even if we could be shown its astral double, that filmy counterpart of the outer body, and could that form be made to utter a few of the unmeaning platitudes that such forms have been heard to speak, could that give any satisfaction to the friend who knows that the mind is not there? Is there any consolation in looking at a dummy made up of our friend's old clothes?

If we accept and learn by heart the theosophic doctrine of the seven-fold nature of man, of what earthly use is that knowledge unless we make it part of our life, a lamp unto our feet? When Captain Cuttle consulted his oracle, Jack Bunsby, that astute old mariner always wound up his Orphic utterances with the remark,

"The bearin's o' this observation lies in the application of it."
Unless we apply what we have learned, what good is it to us? If we *know* that the personality is an illusion, like all the things of this world, that it is made up of the body, the astral double, the body of desire, and the principle of vitality, and that all these are necessarily impermanent and must pass away at death, what is there left to communicate with in this four-fold division which we are accustomed to call the lower quarternary? And if we know likewise that the Higher Triad, or the *individuality*, persists, we know that this eternal being consists of the three immortal parts called Spirit, Soul, and Mind, in ordinary parlance, and that all three form that Ego whose condition is so far above this plane of illusions that there can be between us no medium of communication, no common language in which we may converse. So Tennyson says:

"My old affection of the tomb,
A past of stillness yearns to speak:
Arise, and get thee forth and seek
A friendship for the years to come.

I watch thee from the quiet shore;
Thy spirit up to mine can reach;
But in dear words of human speech
We two communicate no more."

And here the poet, with a poet's intuition, has struck the same law that we have been told governs the "Kingdom of the Gods," or Devachan. That is, that under certain conditions a pure and lofty nature may pass into Devachan during life, and be drawn into communion with the disembodied spirit that can never descend to it. "I shall go to him, but he shall not return to me," said David of his child, and it is true of all.

But here we must beware of allowing ourselves to think of

disembodied existence in our terms of space and time. To the freed spirit there is no place, but only *condition*, and there is no reason why our loved ones who have passed from our sight should not be still near us, still loving us, and through the power of that love influencing our lives for good. "We are with those whom we have lost in material form," says the *Key*, "and far, far nearer to them now than when they were alive. . . . For pure divine love is not merely the blossom of a human heart, but has its roots in eternity. . . . And love beyond the grave has a magic and divine potency which reacts on the living."

The lesson of the theosophic teaching as to communication with the dead is, then, briefly this. That with their fleeting and illusionary personality it were a futile thing to seek such intercourse; but that to bring about the highest form of communion with those pure Intelligences who dwell now on another plane than ours, we must so elevate and purify our own lives and our own souls that while yet upon this earth we may be caught up into heaven and hear unspeakable words. It is Tennyson again who has expressed this so beautifully that you can bear to hear it once more, for none but a poet can say it half so well.

"How pure at heart and sound in head,
With what divine affections bold,
Should be the man whose thought would hold
An hour's communion with the dead.

In vain shalt thou, or any, call
The spirits from their golden day,
Except, like them, thou too canst say
My spirit is at peace with all.

They haunt the silence of the breast,
Imaginations calm and fair,

The memory like a cloudless air,
The conscience as a sea at rest:

But when the heart is full of din,
And doubt beside the portal waits,
They can but listen at the gates,
And hear the household jar within."

The Path

IMPOLITIC REFERENCE — "H. P. B." — *Alexander Fullerton*

Theosophy is rapidly pushing its way through journalistic and other channels, and is cropping out in regions and hamlets the most unexpected. Its expansion during the last few years has astonished even those who best know its merits, and every day brings new indications that it is soon to be in the forefront of the questions of the age and the interest of the religious world. For, in truth, it supplies the very desiderata for which earnest men have vainly sought, and finds welcome in exact proportion as those meeting it are intelligent, open-minded, and devout. A system which insists on including every fact which research can grasp, which harmonizes each fact and each department of its vast philosophy, which solves the piteous puzzles in every human life and lot, which nerves to the most patient endurance and the most hopeful endeavor, is one which cannot be indifferent to those who think and feel and aspire.

Theosophy is not only exhaustive in its inclusions, it is most ingenuous in its methods. It waives aside all cajolery or special pleading, and asks no one to give his assent to its statements unless his reason is thoroughly convinced. Any other adhesion would be half-hearted, insincere, superficial: none such is congenial to a system which cares only for truth, and for perception of truth, and for honest avowal of the perception. Unless a man finds its teachings upheld by his judgment and his moral sense, it frankly tells him that he cannot rightfully accept them.

But in order for the judgment to act, Theosophy furnishes copiously the material. The philosophy may be divided into two parts, — the facts and laws wholly beyond the reach of us

ordinary mortals, the facts and laws measurably within our reach but needing elucidation by the former class. These it expounds with fulness, fortifying itself with the discoveries of science and the best exercise of reason. Those it presents as upon the evidence of extraordinary mortals, men whose larger acquisitions of faculty enable them to transcend our limits and explore vast realms beyond. Then it connects the two and exhibits a consistent scheme explanatory of all life seen and unseen, and by the beautiful harmony and relation of all parts depicts a whole which is worthy of its Divine Author.

As knowledge of matters outside our ken can only be communicated to us through one of ourselves, Theosophy avows that certain individuals have from time to time been used as channels of these higher truths, the sources being above them, known to be such, avowed to be such. Sometimes in sacred writings recognized as "Scriptures", sometimes in scientific expositions of advanced grade, sometimes in moral or spiritual disquisitions, sometimes in the translation of inaccessible or non-understood works, truth appertaining to loftier planes is made to percolate down for the benefit and refreshment of dwellers upon the plains. In such cases the channel was valued for its accuracy and its service; it did not authenticate the truth, it transmitted it; it was not the authority but the witness. The truth, even, did not rest upon the medium; its certitude was in the responsiveness of the auditor, and its sanction in the validity of its source.

Thus it is that Theosophy approaches all hearers of this or any other age, — large-minded, open-handed, frank, inviting every critical research, discountenancing all sham or partiality, pointing to proofs, citing evidence when accessible and furnishing testimony when not, appealing only to reason and insight and perception. Its most conspicuous Apostles most exhibit this spirit, and beg their pupils to look not *to* them but

through them for the Truth which is to make free. They disclaim names as finalities, and will not consent that texts are to be fetters to the soul or any book weigh down a struggling mind. A disciple may reverence his teacher, but not truly so by repetition of phrases or by any other course than that which has convinced and qualified the teacher himself.

These facts have important bearing in the era to which Theosophy has now arrived. It has passed beyond the stage of mere novelty, and its philosophy has larger coherence as well as wider popular attention. Advance is being made into broader regions of thought, principles are receiving fuller application, legitimate criticism is testing the soundness of doctrine. The Theosophical Society finds a hearing in many quarters formerly barred to it, and its expounders have audiences neither unfriendly nor unfair. To be distinct they have to be explicit, and to be explicit they have to be precise. But this often seems to be dogmatic, to be laying down fact as if incontestable, to be proclamatory of truth as assured. It is by no means necessarily so, for the genuine expounder disclaims more than commendation to reason and will not allow any coercive intention. It is his to suggest, to vindicate, to impress; never to insist, demand, or extort. If there is appearance of dogmatism, it is contrary to his purpose and spirit, utterly contrary to the Society he represents.

Even though there may be no real dogmatic character in Theosophy, the Society, or its expounders, there may yet be an impolicy of reference which impairs the course of the message. The revival in the West of the ancient Wisdom Religion came about through Madame H. P. Blavatsky, herself an Initiate and a direct messenger from the Masters behind. The services she gave to the Cause, the self-sacrificing devotion to her mission which marked every day of her career, the contributions she made to Theosophical literature and learning, no pen can fully compute.

Theosophists feel for her a gratitude and veneration which they may well feel for one who was the means of throwing open to them a new and boundless spiritual life, and in her works they find an exhaustless treasure of scientific, moral, and spiritual truth. Not unnaturally but still mistakenly, many of them extend this attitude from their private studies to their public discussions, and forget that a reverence which is personal cannot validate a proposition which is impersonal. To non-Theosophic hearers a doctrine stands or falls by its conformity to reason and the moral sense, not by the repetition of a name or a quotation from a book. Take Karma, for instance. If it is to become influential as a motive in life, its existence and operations have to be shown by argument, analogy, and illustration. All quarters can be drawn upon, and the larger the basis the surer the construction. Demonstrated thus, it makes its way to the judgment and the heart. But treat it as a dictum of *Isis Unveiled*, *The Key to Theosophy*, and *The Secret Doctrine*, consider it as proved because H. P. B. said so, dispose airily of questions as worthless because they have no sanction in H. P. B.'s works or words, and it becomes merely a shibboleth of adherence to a side, not at all an ethical law to be verified by conviction.

And certainly the most devoted Theosophists — who are usually also the most devoted disciples of the Teacher — are often willing to admit that this mistake has been made in public exposition. It is a mistake in judgment, for the public are to be won through the merits of a doctrine and not through appeals to an authority. It is a mistake in perception, for they who perpetrate it forget that their own conversion to Theosophy was by conviction of reason, reverence being a later experience. And it is a mistake in policy, for the free mind resents an attempt to coerce it by a name instead of an attempt to influence it by a fact. So irritation is aroused, and a truth which might be winsome is transformed into

a dogma which must be repellent, the spirit waxing impatient at the supposition that it can be over-awed by a quotation or silenced by a term. Undoubtedly many a warming interest has been chilled by supposition that Theosophy is expressed and bounded by H. P. B.'s published works, that it has no other support than can be found from her, that all propositions are to be tested by their conformity to the *Secret Doctrine*, that Theosophists think only as she allowed and believe only as they are sure she would approve. And if an inquirer conceives that the choice is between a free range of thought which shall carry him, unfettered, through every sphere and bring him before every truth, and a circumscribed round which shall tether him to a name and a book, he cannot be blamed if he thinks harsh things, says harsh words, and abjures Theosophy, H. P. B., and the Society.

Now free-thought and insistence on reason as the vindication of doctrine are no disloyalty to our great Leader. Rather are they homage to her, since she so battled for them. No one who knew her or who is familiar with her works found her exacting of subservience to her views. On the contrary, she held and taught and enjoined that submission without conviction was not only worthless but unmanly, and her appeal was ever to argument and proof. We shall not improve upon her by reversing her policy, and we shall not further the Cause she loved by methods she disapproved. Loving reverence may express itself in loving imitation, the truest homage in an extension of her own spirit. In commending Theosophy and its priceless benefits to men, the genuine disciple of H. P. B. can refrain from phrases which she abjured and references which she discountenanced, and can uphold the philosophy and its contents and its conclusions with the richest of arguments and illustrations and verifications. As they affect the public mind and swell the number of the enlightened and the aspiring, he will become ever more conscious

of the broad spirit of his mission, and, while not pushing the name and words of H. P. B. to the forefront of his discourse, will know that behind it they are a source of strength and inspiration and motive, flowing through his every thought and impulse, even though rarely voiced in the hearing of the multitude.

[NOTE. The above article has my unqualified approval. It is easy to prove that the Theosophical Society is not dogmatic and has no creed and no personal authority in matters of doctrine or belief; but the wise Theosophist should see to it that undue attention is not given to a line of proof that may arouse a needless opposition. — W. Q. J.]

The Path

OCCULT ARTS: III — *William Q. Judge*

No. III. DISINTEGRATION — REINTEGRATION

Just as we have seen that precipitation is known to material science in electroplating and other arts, so also is it true that in most departments of applied science disintegration is understood, and that here and there reintegration of such substances as diamonds has been successfully accomplished. But these are all by mechanical or chemical processes. The question here is, whether — as in respect to precipitation — the occult powers of man and nature can bring about the results. Has any one ever reduced a solid object to impalpable powder and then at a distant place restored the object to its former state? And, if so, how is it done? As to the first, I can only say that I have seen this done, and that many testimonies have been offered by others at various times for the same thing. In the records of Spiritualism there are a great many witnesses to this effect, and accepting all cases in that field which are free from fraud the same remarks as were made about precipitation apply. With mediums it is unconsciously done; the laws governing the entire thing are unexplained by the medium or the alleged spirits; the whole matter is involved in obscurity so far as that cult is concerned, and certainly the returning spooks will give no answer until they find it in the brain of some living person. But the fact remains that among powerful physical mediums the operation has been performed by some unknown force acting under hidden guidance, itself as obscure.

This feat is not the same as apportionment, the carrying or projecting of an object through space, whether it be a human form or any other thing. Buddhist and Hindu stories alike teem with such

apportations; it is alleged of Apollonius the Greek, of Tyana; Christian saints are said to have been levitated and carried. In the Buddhist stories many of the immediate disciples of Buddha, both during his life and after his death, are said to have flown through the air from place to place; and in the history of Rama, some ascetics and Hanuman an the monkey god are credited with having so levitated themselves.

So many metals and minerals may be volatilized that we may take it as a general rule that all — until an exception is met with — are volatile under the proper conditions. Gold is slow in this respect, some observers having kept it heated for two months with no loss of weight, and others found a small loss after exposing it to violent heat; a charge of electricity will dissipate it. Silver volatilizes at red heat, and iron can also be similarly affected. But when we come to wood or softer vegetable matter, the separation of its atoms from each other is more easily accomplished. The process of disintegrating by the use of occult forces and powers is akin to what we can do on the material plane. The result is the same, however the means employed may vary; that is, the molecules are pressed apart from each other and kept so. If by mechanical, chemical, and electrical processes man can bring about this result, there is no reason, save in an asserted unproved denial, why it may not be done by the use of the mind and will. Rarity or unusualness proves nothing; when the telegraph was new its rarity proved nothing against its actuality; and it is every day becoming more the fashion to admit than it is to deny the possibility of anything in the realm opened up by our knowledge of electricity, while the probability is left merely to suspended judgment.

Passing from material science to the medical researches into hypnotism, we find there the stepping-stone between the purely mechanical physical processes and the higher subtler realm of

the mind, the will, and the imagination. Here we see that the powerful forces wielded by the mind are able to bring about effects on bone, flesh, blood, and skin equal in measure to many processes of disintegration or volatilization. But in every-day life we have similar suggestive facts. In the blush and the cold chill which come instantaneously over the whole frame, spreading in a second from the mental source, are effects upon matter made directly from mind. Even a recollection of an event can easily bring on this physical effect. In hypnotic experiments the skin, blood, and serum may be altered so as to bring out all the marks and changes of a burn or abrasion. In these cases the mind influenced by another mind makes an image through which the forces act to cause the changes. It is possible because, as so often asserted by the ancient sages, the Universe is really Will and Idea, or, as is so well put in a letter from one of the Adepts, "the machinery of the cosmos is not only occult, it is ideal: and the higher metaphysics must be understood if one is to escape from the illusions under which men labor and which will continually lead them into the adoption of false systems respecting life and nature in consequence of the great 'collective hallucination' in which modern scientific persons glory so much, but which they do not call by that name." (1)

So much, then, being briefly premised, it is said by the schools of occultism, known not only since the rise of the Theosophical movement but followed for ages in the East and continued down to the present day in India — that the trained man by the use of his will, mind, and imagination can disintegrate an object, send it along currents definitely existing in space, transport the mass of atoms to a distant place, passing them through certain obstacles, and reintegrate the object at the given distant spot exactly with the same visibility, limits, and appearance as it had when first taken up for transport. But this has its limitations. It cannot

ordinarily be done with a human living body. That would require such an expenditure of force and so interfere with the rights of life that it may be excluded altogether. Size and resistance of obstacle have also to do with success or failure. Omnipotence of a sort that may transcend law is not admitted in Occultism; that the Adepts pointed out when they wrote that if they could at one stroke turn the world into an arcadia for lofty souls they would do so, but the world can only be conquered step by step and under the rule of law. It is the same in all operations that copy nature either chemically or mechanically. Hence it is said in these schools that "there are failures in occult art as well as among men". Such failures come from an inability to cope with limiting conditions. We can analyse the phenomenon of disintegration and transport of mass of matter and reintegration in this way: There is the operator who must know how to use his will, mind, and imagination. Next is the object to be dealt with. Then there is the resisting obstacle through which it may have to pass; and the air, ether, and astral light through which it travels. Lastly is the question whether or not there is the force called cohesion, by means of which masses of matter are held together within limits of form.

If it be said that the force known as gravity holds masses of matter together, we are reduced to accepting a more mysterious explanation for a common thing than the three persons in one God. But cohesion without any other postulate amounts merely to saying that masses of matter cohere because they cohere.

Occultism, in common with the Vedantic philosophy, says that there is a force of cohesion which has its roots and power in the spirit and in the ideal form; and attraction and repulsion operate from the same base also. Further, that school holds gravitation to be but an exhibition of the action of these two — attraction and repulsion. Living masses such as vegetables, animals, and men

deal with matter in another state from that which is in minerals, and exhibit the quicker action of disintegrating forces; while minerals go to pieces very slowly. Both kinds are compelled in time to fall apart as masses in consequence of the action of evolutionary law when they are left altogether to themselves; that is, the whole quantity of matter of and belonging to the globe is continually subject to the hidden forces which are moulding it for higher uses and turning it, however slowly, into a higher class of matter. The normal rate is what we see, but this normal rate may be altered, and that it can be altered by intelligent mind and will is the fact. This alteration of rate is seen in the forcing processes used for plants by which they are made to grow much faster than is usual under common conditions. In the same way in masses of matter which will surely go to pieces in the course of time, long or short, the molecules may be pushed apart before their time and held so by the trained will. That is, the force of repulsion can be opposed to natural attraction so as to drive the molecules apart and hold them thus away from each other. When the repulsion is slackened, the molecules rush together again to assume their former appearance. In this case the shape is not altered, but the largely diffused body of molecules retains its shape though invisible to the eye, and upon appearing to sight again it simply condenses itself into the smaller original limits, thus becoming dense enough to be once more seen and touched.

When a small object is thus disintegrated by occult means it can be passed through other objects. Or if it is to be transported without disintegration, then any dense intervening obstacle is disintegrated for a sufficient space to allow it to pass. That the latter is one of the feats of fakirs, yogis, and certain mediums can be hardly a matter of doubt except for those who deny the occult character of the cosmos. Alleged spirits in respect to this have said, "We make the intervening obstacle fluid or diffused, or do

the same thing for the object transported", and for once they seem to be right. A gentleman of high character and ability in the northwest told me that one day a man unknown in his village came to the door, and exhibiting some rings of metal made one pass through the other, one of the rings seeming to melt away at the point of contact. H. P. Blavatsky has narrated to me many such cases, and I have seen her do the same thing. As, for instance, she has taken in my sight a small object such as a ring, and laying it on the table caused it to appear without her touching it inside of a closed drawer near by. Now in that instance either she disintegrated it and caused it to pass into the drawer, or disintegrated the drawer for a sufficient space, or she hypnotized me with all my senses on the alert, putting the object into the drawer while I was asleep and without my perceiving any sort of change whatever in my consciousness. The latter I cannot accept, but if it be held as true, then it was more wonderful than the other feat. The circumstances and motive were such as to exclude the hypnotizing theory; it was done to show me that such a phenomenon was possible and to give me a clue to the operation, and also to explain to me how the strange things of spiritualism might be done and, indeed, must be done under the laws of man's mind and nature.

Next we have the intelligent part of the matter to look at. Here the inner senses have to act under the guidance of a mind free from the illusions of matter, able to see into the occult cosmos behind the veil of objectivity. The will acts with immense force, exerting the powers both of attraction and repulsion as desired; knowledge of occult chemistry comes into use; the currents in the astral light or ether have to be known, as also how to make new currents. Those who have seen into the astral light and looked at the currents moving to and fro will understand this, others will either doubt, deny, or suspend judgment. The imagination as in

the case of precipitation, is of prime importance; for in these things imagination is the sight and the hand of the mind and the will, without which the latter can accomplish nothing, just as the will and brain of a man whose arms are cut off can do nothing unless others aid him. But mind, will, and imagination do not reconstruct the disintegrated object, for as soon as the dispersing force is slackened from its hold on the mass of molecules, the imagination having held the image of the object, the atoms obediently and automatically rearrange themselves as before.

All this may seem fanciful, but there are those who know of their own knowledge that it is all according to fact. And it is doubtless true that in no long time modern science will begin, as it is even now slowly starting, to admit all these things by admitting in full the ideal nature of the cosmos, thus removing at once the materialistic notions of man and nature which mostly prevail at the present day.

The Path

MARS AND THE EARTH (1) — *Annie Besant*

The apparent contradiction between the teaching of the Masters as put forward by their direct messenger, H. P. Blavatsky, and as understood by Mr. Sinnett is capable of very easy explanation. The solution turns on the words "solar system". If that term be held to denote the solar system known to Western Science, the sentence given by Mr. Sinnett is meaningless; but reference to the series of letters from which the isolated passage respecting Mars is quoted at once shows the meaning attached to the "solar system" in the correspondence. I naturally turned to the letters themselves — copies of which I have — to solve the puzzle, and I found that Master K.H. used the term in a special and quite definite sense.

He explains three kinds of manvantaras, pralayas, etc. — universal, solar, and minor. A minor manvantara is composed of seven rounds, i.e., the circuit seven times of a planetary chain of seven globes. To such a chain our earth belongs. A solar period consists of seven such sevenfold rounds, i.e., forty-nine; seven such planetary chains compose a "solar system"; in three of such chains our Earth, Mars, and Mercury form the D globe. Globe D of the Mars chain and globe D of the Mercury chain are visible to us, because those chains are sufficiently near our own in evolution, one behind us, one ahead of us, for their matter to affect our senses, while the remaining four chains are too far away in evolution to have enough in common with us for visibility. Mars and Mercury bear a special relation to our Earth in the whole evolution of the solar system, though not part of the Earth chain. The other four planetary chains belonging to our solar system are too far behind us or in front of us for even their globes D to be seen.

Other planets belonging to the solar system of Science as arranged in the West do not belong to the solar system of the Esoteric Philosophy, and it is the ignoring of this which has led to the confusion. A western reader naturally gives the term his own sense, not knowing that in the teachings it was used in a quite different one. And so, once more, we find the Masters' doctrines self-consistent.

[Note. The above article, sent for coincident publication in *Path* and *Lucifer*, is an important contribution, as it furnishes a final explanation which, if properly taken, will tend to assuage controversy. On page 163, Vol. I, *Secret Doctrine* the author, referring to this subject in a foot note, says: "Copies of all the letters received or sent with the exception of a few private ones — 'in which there was no teaching', the Master says — are with the writer". Some may have imagined that this statement in the foot note was a "license" taken by the author of the *Secret Doctrine*, but surprises are not uncommon, and there seems to be very little doubt about the truth of the assertion. It is extremely easy to misunderstand in respect to the "almost ideal machinery of the occult Cosmos" when we are dealing with it in English words produced by a thoroughly materialistic development, but in the course of time the teachings given out all will be found in harmony as our views expand. The word "solar", for instance, connotes only ideas in relation to the visible sun, and yet it is the only English word we could use if we wished to speak of an unseen solar orb superior to and governor of our visible one. In time, however, all these perplexities will be relieved. — Ed.]

INDIA BETWEEN TWO FIRES — *A Brahmin*

The above is the general topic for discussion by our dailies and weeklies just now. It seems to me that the above is perfectly true, but not in the sense they take it. India, educated, thinking India, is now truly between *two fire*; on one side is the fierce fire of materialism and intellectual selfishness, fanned by our foreign education, casting a lurid glare on our impoverished condition, making it doubly hideous; on the other side is the yet but tiny spark of our Sanatana Dharma, which the Theosophical Society is ever trying to fan into a flame, and which even at this stage is shedding its calm radiance over the minds of men. Young men, graduates of our Universities, are swayed to and fro, now abject followers of the men of science, now inclined toward our Religion; now a rank skeptic, now a new convert to a belief in the Shastras. Brothers do not agree with each other; one a bigot of science, and the other no less a bigot of his idol. Father and son, younger and elder, husband and wife, master and servant, teacher and students, all of them disagree; the one a rigid Hindu, the other a hater of all beliefs and dogmas. Truly we are passing through strange and dangerous times, and none can say whether it will be all plain sailing hereafter or there is a breaker ahead.

Twenty years ago, it was twenty years and no more, we two students, while boldly declaring our Religion to be Hinduism, considered ourselves something like heroes; and now many seriously question the truth of that which they do not find in the Shastras. Now the question is, which is to win at last, bigotry or Theosophy? By bigotry I mean bigotry either in Science or Religion, materialism or transcendentalism; for they are equally pernicious, equally limiting further progress, intellectual as well as spiritual. Even now the war has commenced between disbelief

and belief on the one hand and between reasonable belief and blind faith on the other, and many are passing from blind disbelief to blind faith without pausing to think what they are doing; so belief is *between two fires*, and yet hopes to win at last.

There are two very popular weekly papers in Bengal. One condemns all that is foreign, is opposed to all innovations and reforms (even the Railway and the Telegraph, strange as it may appear to you); the other would REFORM everything Indian, and condemns all that we have. Both are largely read, both admired by many. So those that think calmly and judge soundly are *between two fires*; yet they fondly hope that they will in time prevail.

On the one hand, the introduction of Western civilization is ever increasing our wants; on the other, we are, for many reasons, becoming poorer and poorer; many find themselves unable to make the two ends meet, others are in pinching want. While foreign luxuries are becoming common, our means of livelihood are becoming scarce, and we find ourselves *between, two fires* as regards our economic condition.

You in the far West may not sympathize with our thoughts and aspirations, with our movements and actions, yet purified, regenerated India, rising Phoenix-like from the ashes of its dark Kali Yuga, would be able to yet instruct the West by expounding its time-honored Shastric teachings, and in that relation, if not in others, it is bound to the West by the holy tie of spiritual sisterhood, a tie that can not, should not, be ignored by you.

And it is in that belief that I write to you, let Theosophy and Brotherhood prevail all the world over, let us help each other in the cause of Spiritual Progress of Humanity, and there are those who will assist us, as they have founded the Society to which we all have the honor to belong.

The Path

THE KEY-NOTE — A. F. H.

It is always the key-note of everything that we want to seek or strike. The key-note of Christianity seems to be the personal or personality, the key-note of Theosophy, individuality; therefore in the evolution of the race they work beautifully together, Christianity preceding the wider Theosophy, which, again, leads into the Universal, there becoming the Wisdom Religion and the "Heir of all the Ages".

We should be grateful to Christianity. As represented by Jesus, it was Theosophy. But at that time the World lived in the personal, and so translated his teachings into its own language, as is the custom of humanity, from childhood on, with everything it accepts — and it must do so to accept it.

The child begins with the personal; it naturally grasps for itself. "Self-preservation is the law of life" has always been said in the Western world, and Christianity has provided for the carrying out of this law. It has a personal God, personal salvation, a personal heaven with a personal harp, classifications of persons there, and personal bodies (which they regard as themselves) here, in this world, even suggesting that these will be resurrected into the other world. Then, only, will they be surely saved, for until then heaven is an uncertain state where they are represented by a filmy something which they call their soul, but to which they hardly venture to give their undivided attention or to consider as necessary, until after death. Meanwhile, their bodies and the relations of this life are more interesting and all absorbing.

This is the Froebel method. It is the method of all intelligent education and of evolution. "First that which is natural, and then that which is spiritual." But here must come in another stage of

development. The continuity of this life is questioned. Death steps in to take our loved ones, and thus our hearts are touched to long for a continuance of these ties, or the rush of civilization causes changes in outside ways. The lesser is sunk in the greater, small business enterprises cease to succeed, everything must change and be on a larger scale, houses must be torn down, palaces must be built, trusts must be formed, people must live in hotels or apartments if they have not purses to conduct life in a large way. The interests of man cease to be centred in himself, he is part of a whole; like a child when he begins to go to school, he is an individual in a community.

Then must begin consideration for others; his own interests cannot exclusively usurp his attention; others have rights; only by conceding these can he hold his place. Here comes in the germ of "Brotherly love", and the consciousness of Karma, or the law of action and reaction, cause and effect. Then, if some loved one is taken away, the feeling comes that there must be something beyond the body, there must be a continuity of life — and here we find the essence of the individual, the soul. Bodies lose their preeminence in our thoughts, we realize that our true life is on other and invisible planes. As we cannot see and hear our departed loved ones, we learn to meet them in the Over-Soul, the Universal, and thus again sink our separateness — this time, of the Soul — in the grand whole, or Spirit. Then man really lives, and begins to realize, to know, what he may be, and that, being Spirit, he can dominate and not be subject to matter, which is but the manifestation of Spirit. This larger life of Spirit with its limitless possibilities is the teaching of Theosophy, which is the continuation of Christianity, and the spirit, but not the letter, of Christ's teachings. We have lived in the letter, the body; now we live in the Spirit. We may live that Spirit in the Churches or out of the Churches. But we are told in the Bible that it is difficult for

new wine to be held in old bottles. Form is not lasting, and forms confine. The old meaning clings to them and the Spirit is hampered. When a man wishes to change his life, to live on a higher plane, we tell him he can do it more easily and rapidly by going to a new place, by changing his associations. It needs a man of marked conviction and firm will to renew himself amid old surroundings. And thus in the life of the Soul the beginner can work better and more rapidly among those who believe we *are* the Soul and the body is but raiment. The literature, the associations, the daily lives of his companions help him. For this reason only would we leave the Churches and join the Theosophical Society, for this and to help on the work of the Society which has helped us. But if we are strong enough to be carried by the Spirit, to live in our souls and aid those still in the bondage of the flesh, amid the old surroundings, we may do a great work in the Churches. That is a question each must judge for himself. In Theosophy one has a larger and more unquestioned freedom to do, to be, and to grow.

The Path

OCCULT ARTS: IV — *William Q. Judge*

No. IV.

SOME PROPOSITIONS BY H. P. BLAVATSKY. (1)

The following is extracted from H.P.B.'s first book, and is printed in this series with the belief that it will be useful as well as interesting. She gives some fundamental oriental propositions relating to occult arts, thus:

1. There is no miracle. Everything that happens is the result of law — eternal, immutable, ever-active. Apparent miracle is but the operation of forces antagonistic to what Dr. W. B. Carpenter, F. R.S. — a man of great learning but little knowledge — calls "the well ascertained laws of nature". Like many of his class, Dr. Carpenter ignores the fact that there may be laws once "known", now unknown, to science.
2. Nature is triune: there is a visible objective nature; an invisible, indwelling, energizing nature, the exact model of the other and its vital principle; and above these two is *spirit*, the source of all forces, alone eternal and indestructible. The lower two constantly change; the higher third does not.
3. Man is also triune: he has his objective physical body; his vitalizing astral hotly (or soul), the real man; and these two are brooded over and illuminated by the third — the sovereign, the immortal spirit. When the real man succeeds in merging himself with the latter, he becomes an immortal entity.
4. Magic, as a science, is the knowledge of these principles,

and the way by which the omniscience and omnipotence of the spirit and its control over nature's forces may be acquired by the individual while still in the body. Magic, as an art, is the application of this knowledge in practice.

5. Arcane knowledge misapplied is sorcery; beneficently used, true magic or wisdom.

6. Mediumship is the opposite of Adeptship; the medium is the passive instrument of foreign influences, the Adept actively controls himself and all inferior potencies.

7. All things that ever were, that are, or that will be, having their record upon the astral light, or tablet of the unseen universe, the initiated Adept, by using the vision of his own spirit, can know all that has been known or can be known.

8. Races of men differ in spiritual gifts as in color, stature, or any other external quality; among some people seership naturally prevails, among others mediumship. Some are addicted to sorcery, and transmit its secret rules of practice from generation to generation, with a range of psychical phenomena, more or less wide, as the result.

9. One phase of magical skill is the voluntary and conscious withdrawal of the inner man (astral form) from the outer man (physical body). In the cases of some mediums withdrawal occurs, but it is unconscious and involuntary. With the latter the body is more or less cataleptic at such times; but with the Adept the absence of the astral form would not be noticed, for the physical senses are alert and the individual appears only as though in a fit of abstraction — "a brown study", as some call it. To the movements of the wandering astral form neither time nor space offers any obstacle. The thaumaturgist thoroughly skilled in

occult science can cause himself (that is, his physical body) to *seem* to disappear or to apparently take on any shape that he may choose. He may make his astral form visible, or he may give it protean appearances. In both cases these results will be achieved by a mesmeric hallucination simultaneously brought on. This hallucination is so perfect that the subject of it would stake his life that he saw a reality, when it is but a picture in his own mind impressed upon his consciousness by the irresistible will of the mesmeriser.

But while the astral form can go anywhere, penetrate any obstacle, and be seen at any distance from the physical body, the latter is dependent upon ordinary methods of transportation. It may be levitated under prescribed magnetic conditions, but not pass from one locality to another except in the usual way. Inert matter may be in certain cases and under certain conditions disintegrated, passed through walls and recombined, but living animal organisms cannot.

Arcane science teaches that the abandonment of the living body by the soul frequently occurs, and that we encounter every day in every condition of life such living corpses. Various causes, among them overpowering fright, grief, despair, a violent attack of sickness, or excessive sensuality, may bring this about. The vacant carcass may be entered and inhabited by the astral form of an Adept, sorcerer, or an elementary (an earth-bound disembodied human soul), or, very rarely, an elemental. Of course an Adept of white magic has the same power, but unless some very exceptional and great object is to be accomplished he will never consent to pollute himself by occupying the body of an impure person. In insanity the patient's astral

being is either semi-paralyzed, bewildered, and subject to the influence of every passing spirit of any sort, or it has departed forever and the body is taken possession of by some vampirish entity near its own disintegration and clinging desperately to earth whose sensual pleasures it may enjoy for a brief season longer by this expedient.

10. The corner stone of magic is an intimate practical knowledge of magnetism and electricity, their qualities, correlations, and potencies. Especially necessary is a familiarity with their effects within and upon the animal kingdom and man. There are occult properties in many other minerals equally strange with that in the loadstone, which all practitioners of magic must know and of which so-called exact science is wholly ignorant. Plants also have like mystical properties in a most wonderful degree, and the secrets of the herbs of dreams and enchantments are only lost to European science, and, useless to say too, are unknown to it except in a few marked instances such as opium and hashish. Yet the psychological effects of even these few upon the human system are regarded as evidences of a temporary mental disorder.

To sum up all in a few words; Magic is spiritual wisdom; nature the material ally, pupil, and servant of the magician. One common vital principle pervades all things, and this is controllable by the perfected human will. The Adept can stimulate the movements of the natural forces in plants and animals in a preternatural degree. Such experiments are not obstructions of nature but quickenings; the conditions of intenser vital action are given.

The Adept can control the sensations and alter the

conditions of the physical and astral bodies of other persons not Adepts; he can also govern and employ as he chooses the spirits of the elements. He cannot control the immortal spirit of any human being living or dead, for all such spirits are alike sparks of the Divine Essence and not subject to any foreign domination.

Propositions 2 and 3 contain and include the seven-fold classification. In 1877 H. P. B. was writing for those who had known but the three-fold scheme. In number two the vital principle (*prana* or *jiva*) is given; the body with vitality makes two; the real man inside called the soul, being composed of *astral body*, *desires*, and *mind*, makes five; the spirit, including the connecting link of *Buddhi*, completes the seven. The will is one of the forces directly from spirit, and is guided, with ordinary men, by desire; in the Adepts' case the will is guided by *Buddhi*, *Manas*, and *Atma*, including in its operation the force of a pure spiritual desire acting solely under law and duty.

THE SYMBOLISM OF THE UPANISHADS: I — *C. J.*

I

Students of the Oriental Theosophy, which finds its highest expression in the Ten Upanishads, are met at the outset by a serious difficulty which has proved a real stumbling block in the way of many earnest disciples, and has almost completely veiled the true meaning of these most ancient mystical books to all who have approached them in a purely literary or philological spirit.

This serious difficulty, which is caused by the symbolism of the Upanishads, requires two qualifications for its solution: first, some knowledge at first hand of the interior truths and realities represented by these symbols; and secondly, a certain acquaintance with the symbology of the great religions of antiquity. This ancient symbology is marked by such a uniformity in countries and times as widely separated as those which gave birth to the Vedas and the Book of Job, the Mysteries of Osiris and the Apocalypse, that, in view of these resemblances, not only is one led to infer an identity of inspiration underlying all ancient symbolism, but also that an acquaintance with the method of expression of one ancient faith will often give clear insight into the darkest passages of another.

The source of this original identity of inspiration is not far to seek: for all the ancient religions treat of the same subject, the mysteries of the interior development of man, and the understanding of the universe which is reached in the course of that interior development. It is evident that a complete and exhaustive understanding of the ancient scriptures and the mysteries of inner life which are hidden beneath their symbols can be attained only by those whose inner unfoldment has gone

so far as to identify them with the spirit in which these ancient scriptures were written, the universal spirit of wisdom and goodness. But though a complete understanding of the whole meaning of books like the Upanishads is thus impossible for all but the highest and holiest Sages, one cannot follow the path of interior development, of the inner light, with earnestness and integrity, without gaining some insight into the hidden meaning of the symbols; and this, added to an acquaintance with other scriptures, may make clear much that seemed hopelessly obscure.

The best way to illustrate this is by a concrete example; and we cannot do better than begin with the Katha Upanishad — the "Secret of Death," as one translator calls it — which is distinguished for its purity and beauty of style and its universal application to human life, not less than for its avoidance of mere technical and scientific treatment of certain special powers and potencies of the inner life, such as one finds, for instance, in the Chhandogya and Brihadaranyaka Upanishads. The Katha Upanishad begins:

Vajashravasa, verily, seeking favor, offered in sacrifice all he possessed. He had a son, also, by name Nachiketas. Him, though still a child, faith entered, when the offerings were brought. He meditated:

– These have drunk water, eaten grass, given milk, and lost their strength. Joyless worlds he gains who offers these. He addressed his father:

– To whom, then, wilt thou give me? said he. Twice, thrice he asked him.

– To Death I give thee, said he.

It would not be contrary to the spirit of these ancient scriptures to find a meaning in the names of Nachiketas and his father.

Vajashravasa may mean "one who sacrifices according to tradition or ritual", while Nachiketas may mean "one who has lost the desire for sensation". But without insisting upon this, we may turn to the general meaning of father and son. A son, in the symbolism of the Upanishads, means a new birth; either spiritual regeneration, or simply reincarnation; this meaning of the new life which faith had entered, or of the soul in that new life, is represented here by Nachiketas. His father is the past birth, or the condition before the spiritual rebirth, which offers an inadequate sacrifice.

The lean cattle, who have "given milk and lost their strength", represent either worldly enjoyments or the physical powers which enjoy them; just as perfect, well-nourished cows represent the spiritual powers, which succeed them. Vajashravasa, the type of the soul in the former or unregenerate birth, offered up these lean cattle, the physical enjoyments; Nachiketas, his son, the new or regenerate birth, perceived that this offering was inadequate; the offering needed was not the sacrifice of worldly enjoyments, but the sacrifice of self.

[Nachiketas meditates.]

– I go the first of many; I go in the midst of many. What is this work of Death, that he will work on me today?

Look, as those that have gone before, behold so are those that shall come after. As corn a mortal is ripened; as corn he is born again.

[Nachiketas comes to the House of Death. Nachiketas speaks:]

– Like the Lord of Fire, a pure guest comes to the house. They offer him this greeting:

Bring water, O King Death!

Fair hopes and friendship, truth and holy deeds, sons and cattle, all forsake the foolish man in whose house a pure guest dwells, without food.

What is the House of Death to which Nachiketas comes? It has two meanings. The first and universal meaning is the physical world, the "world of birth and death" to which the soul comes in each new life. The second, more special, meaning is the underworld, visited by the spirit of the neophyte at initiation.

[After three days, Death returns. Death speaks:]

– As thou, a pure guest and honorable, hast dwelt three nights in my house without food — honor to thee, pure one, welcome to thee — against this, choose thou three wishes.

[Nachiketas speaks:]

– That my father may be at peace, well-minded, and with anger gone towards me, O Death; that he may speak kindly to me, when sent forth by thee; this of the three as my first wish I choose.

[Death speaks:]

– As before will he be kind to thee, sent forth by me; by night will he sleep well, with anger gone, seeing thee set free from the mouth of Death.

The three nights which Nachiketas passes in the House of Death have also two meanings; the first, the universal meaning, in which the three nights are the "three times", present, past, and future, the three conditions to which everything is subject in this physical world, the House of Death. The special meaning refers to

the initiation in which the soul "descended into hell, and rose again the third day. One of the three wishes of Nachiketas refers to each of these "three times"; the first, "that the father may be at peace", refers to the past; the meaning of "father" being the same as before.

[Nachiketas speaks:]

– In the heaven-world there is no fear; nor art thou there, and fear comes not with old age. Crossing over hunger and thirst, and going beyond sorrow, he exults in the heaven-world.

The heavenly fire thou knowest, Death; tell me it, for I am faithful. The heaven-worlds enjoy undyingness. This as my second wish I choose.

[Death speaks:]

– To thee I tell it; listen then to me, O Nachiketas, learning that heavenly fire. Know thou also the excellent winning of endless worlds, for this is hidden in the secret place.

He told him then that fire, the source of the worlds, and the bricks of the altar, and how many and what they are. And he again spoke it back as it was told; and Death, well pleased, again addressed him.

The next three verses, which speak of the triple fire as part of a ceremony, are evidently a later addition; they are therefore omitted here. It is possible that they take the place of older verses which spoke too clearly of the sacred fire and were therefore omitted in the later manuscripts. But the secret of the triple fire may be revealed by the words, "he told him that fire, the source of the worlds, and the bricks (of the altar), how many and what they are"; the triple fire being here the Higher Triad, the unmanifested

three that underlie creation, preservation, and regeneration; as also the being, consciousness, and bliss of the Self, the Atma. The altar being the manifested world, which is crowned by the unmanifested three. The square altar is thus the lower quaternary, the bricks being the four or seven planes or worlds of manifestation. The triple fire and the square altar would thus be the triangle above the square in symbolism, the triangle being the same as the Egyptian pyramid, also connected with "pur" or fire. The "speaking back" is the reflection of the seven in Nachiketas, the individual soul.

[Death speaks:]

– This is the heavenly fire for thee, Nachiketas, which thou hast chosen as thy second wish. They shall call this fire thine. Choose thy third wish, Nachiketas.

[Nachiketas speaks:]

– This doubt that there is of a man that has gone forth; "he exists" say some, and "he exists not" others say. A knowledge of this taught by thee: this of my wishes is the third wish.

[Death speaks:]

– Even by the gods it was doubted about this; not easily knowable and subtle is this law. Choose, Nachiketas, another wish. Hold me not to it; spare me this.

[Nachiketas speaks:]

– Even by the gods, thou sayest, it was doubted about this; nor easily knowable is it, O Death. Another teacher of it cannot be found like thee. No other wish is equal to this.

This third wish is the essence and crown of the whole Upanishad.

Not the first wish "that the father may be at peace," that the past may "sleep well"; nor the second wish, the heavenly fire, are the true mystery of the Secret of Death.

The words, "the doubt that there is of a man that has gone forth," evidently bear two meanings. They refer first to the death of the body, and the doubt as to the survival of the personality. But this is not the deeper meaning. Nachiketas has confidently looked forward to the time when he shall be "released by Death" and "freed from the mouth of Death"; and has spoken of "the heaven-world which enjoys immortality"; so that he does not doubt as to the immortality of the soul, in its ordinary sense of the individual survival after death.

It is not this physical death, but the death which precedes the true spiritual rebirth and inward illumination; the death of the passions and selfishness, of personal desire, which must be passed through before the initiation by the spirit is reached; what Paul calls the "death to sin, and the new birth to righteousness"; the death which comes only once, while the physical death comes many times; the turning-point of the soul, after it has reached its extremest limit on the outward path. This is the death whose secret Nachiketas asks. The "man that has gone forth" would be, in this sense, the Jivanmukta, "for whom there is no return", who has entered Nirvana, of whom the gods have doubted; " 'he exists' say some, 'he exists not,' others say."

Of this secret there is no teacher but Death; the death of selfishness must be passed through before an understanding can be reached of that true undyingness "which is not immortality but eternity"; and which may be reached in the midst of life, long before the time of physical death has come.

[Death speaks:]

– Choose sons and grandsons of a hundred years; and cattle and elephants and gold and horses. Choose the great treasure-house of the world, and live as many autumns as thou wilt.

If thou thinkest this an equal wish, choose wealth and length of days. Be thou mighty in the world, O Nachiketas. I make thee an enjoyer of thy desires.

Whatsoever desires are difficult in the mortal world, ask all desires according to thy will.

These beauties, with their chariots and lutes — not such as these are to be won by men — be waited on by them, my gifts. Ask me not of dying, Nachiketas.

This answers to the offer made by the Lord of the House of Death to another neophyte, who, like Nachiketas, "descended into hell, and rose again the third day"; the offer of the kingdoms of this world and the glory of them. It would seem that the knowledge and power which make the spiritual rebirth possible are great enough to render certain the winning of any lesser prize, if the ambition to be mighty on the earth remains. These alternatives are offered, therefore, by the power which, if they are refused, will become the Initiator.

[Nachiketas speaks:]

– By tomorrow these fleeting things wear out the vigor of a mortal's powers. Even the whole of life is little; and chariots and dance are in thy power.

Not by wealth can a man be satisfied. Shall we choose wealth if we have seen thee? Shall we desire life while thou art master? But the wish I choose is verily that.

Coming near to the unfadingness of the immortals, a fading

mortal here below, and understanding it, understanding the sweets of beauty and pleasure, who would rejoice in length of days?

This that they doubt about, O Death, what is in the great Beyond, tell me of that. This wish that draws nigh the mystery, Nachiketas chooses no other wish but that.

(To be concluded)

The Path

BUDDHA AND A DEVA (1)

Thus I have heard. On a certain day the Blessed one (Buddha) dwelt at Srasvati, at the Jeta grove, in the garden of Anata-pindaka. When the night was far advanced, a radiant celestial one (Deva), whose countenance was exceedingly sublime and whose refulgent splendor illuminated the whole of the grove, approached the Bhagavat (Buddha) and worshipped him, standing aside. He then addressed the Bhagavat in verse — What is the sharpest sword? What the deadliest poison? What the fiercest fire? What the grossest darkness?

Bhagavat replied in verse — A harsh word is the sharpest word; covetousness, the deadliest poison; anger, the fiercest fire; ignorance, the grossest darkness.

The Deva asked: Who does gain the greatest benefit? Who does lose the most? What is the most invulnerable armor? What the best weapon?

Bhagavat replied: He is the greatest gainer who gives to other, and he loses the most who receives from other. Patience is the most invulnerable armor; wisdom the best weapon.

Deva: Who is a thief? What is the most precious treasure for the wise? Who is a robber (not only on the earth, but also in the heaven)?

Bhagavat: Evil thought is a stealer; virtue, the most precious treasure for the wise. Immorality is a robber, not only on the earth but also in the heaven.

Deva: Who enjoys the greatest happiness? Who is the richest? Who is the noblest? Who the most ignoble?

Bhagavat: He whose desires are moderate is most happy; he is richest who is contented; the virtuous is noblest; the vicious is basest.

Deva: What is that which is attractive? What is that which is disgusting? What is the most horrible pain? What is the greatest enjoyment?

Bhagavad: Good is attractive; evil, disgusting. Of all the pains, the hell is the most tormenting; the deliverance from rebirth is the height of bliss.

Deva: What wish is right and proper? What wish is wrong and improper? What is the most violent fever? Who the best physician?

Bhagavat: Emancipation from transmigratory existence is right and proper to wish for; but not all the evil desires. Concupiscence is the most violent fever; Buddha, the best physician.

Deva: What power is able to ruin all the world? By what influence is all the world confused? What makes us forsake our friends? What does prevent our being born in the heaven?

Bhagavat: It is by ignorance that all the world is ruined, and by sceptics that it is confused. A cruel, covetous heart causes us to forsake our friends. Our attachment to agreeable objects renders it impossible for us to be born in the heaven.

Deva: What is it that neither fire can burn, nor water corrode, nor wind crush down, but that is able to make good the whole world? What was secure from the attack of a malefactor who would come to take it away?

Bhagavat: Blessing!

Deva then asked and said: Now I have only one doubt left to be

resolved; pray clear it away for me: — Who has been, is, and will be the greatest self-deceiver?

Bhagavat answered and said: Whoever possesses great riches, and yet fails to use them for promoting his blessings, has been, is, and will be the greatest self-deceiver.

The Deva, having heard the words of the Bhagavat, was full of exceeding joy, and worshipped him, throwing himself down at his feet. And he disappeared suddenly from the presence of the Bhagavat.

The Path

UPANISHADS ON RE-BIRTH

Hence one whose fire is burned out is reborn through the tendencies in ind; according to his thoughts he enters life. But linked by the fire with the Self, this life leads to a world of recompense. – *Prashna Upanishad*.

Dust thou art and to dust thou shalt return. – *Genesis*

The above quotation from *Prashna Upanishad* gives the old doctrine, the same as in Buddhism, that re-birth is due to mind and to the tendencies therein. "Whose fire has burned out" means the fire of life expiring. "According to his thoughts" does not refer to what one wishes to have for rebirth, but to the seeds of thought left in the mind from the thinking of each hour of life; these in a mass make a tendency or many tendencies which on coming out either keep the soul to that family in all modes of thought and act or tend to segregate the soul from the circle into which it was born. "This life leads to a world of recompense", because by the fire of life it is linked to the Self, which being thus bound goes after death to the state where recompense is its portion. The alternation to and fro from one state to another for purposes of compensation is not the attainment of knowledge but the subjection to results eternally, unless the soul strives to find the truth and becomes free, and ceases to set up causes for future births. A Jewish tradition says that Adam had to reincarnate as David and later as the Messiah; hence "to dust thou shalt return".

THE SYMBOLISM OF THE UPANISHADS: II — C. J.

II

The first part of the Katha Upanishad, if we have interpreted its symbols aright, taught the descent of Nachiketas — the soul — into this outer world, graphically described as the House of Death; its lingering there for three nights, which are the three times, past, present, and future, that condition everything in the House of Death; there confronted by Death, the prince of this world; the soul is offered three wishes, one for the past, one for the present, one for the future. The first is the quiescence of the past and the tranquil return of the soul to the source whence it fell into the "mouth of death", the second, the secret of the three fires on the four-fold altar, or the three divine energies which underlie the four-fold world of manifestation, the world of the present; the third is the secret of the Great Beyond, that real world to which the soul's true life belongs, and whence it has strayed into this House of Death.

The first two wishes have been already satisfied; the third is treated of in the second and third parts of the Upanishad, which we shall translate and comment on as before. In the second part, the speaker is Death the Great Initiator; not the body's death, but the death of the lower self, which alone can open the doors of the Great Beyond. What lies behind that door is told as far as words can tell it; it is the eternal mystery, which remains hidden in secret, and everlastingly unrevealable for all who have not passed the initiation — or "new beginning" — of the death of the lower self.

[Death speaks:]

– The better is one thing; the dearer is another thing; these two draw a man in opposite ways. Of these two it is well for him who chooses the better; he fails of his object who chooses the dearer.

The better and the dearer approach a man; looking closely at them, the Sage discerns between them. The Sage chooses the better rather than the dearer; the fool chooses the dearer, through lust of possession.

The better is what belongs to the real world, the Great Beyond. The dearer is what belongs to this unreal world, the House of Death, in whose gift are "wealth and length of days, the great treasure-house of the world, and the beauties with their chariots and lutes"; representative of the ideals of the lower self. The better and the dearer are the blessedness and the happiness, in Carlyle's inimitable chapters of *Sartor Resartus* which speak of the Everlasting No, the Center of Indifference, and the Everlasting Yea; where with matchless vividness and power are depicted the death of the lower self and the new birth of the soul. These two, the better and the dearer, draw every man in opposite ways; every man, that is, has the longing for Death's fair gifts; and also the incipient sense of the Great Beyond, called, in its negative aspect, Conscience, but which becomes positive, as intuition and growing omniscience, when Death's Initiation has been passed through.

[Death continues:]

– Thou, indeed, understanding dear and dearly loved desires, Nachiketas, hast passed by them. Not this way of wealth hast thou chosen, in which many men sink.

Wide apart are these two minds, unwisdom, and that of which the knower says "it is wisdom". I esteem Nachiketas

to be one seeking wisdom, nor do manifold desires allure thee.

Others, turning about in un wisdom — self-wise, thinking they are learned — and fools, stagger, lagging in the way, like the blind led by the blind.

The Great Beyond gleams not for the fool, led away by the delusion of possessions. "This is the world, there is no other", he thinks; and so falls again and again under my dominion.

The understanding of desire is the deep and irrevocable conviction, based upon the experience of innumerable lives, innumerable incarnations, that desire can never be satisfied; that the gratification desired is never actually touched, but remains each time just one step out of reach. Like fruit under a glass case, the object of desire is never seized, but every effort towards perfect gratification is stopped by an irresistible barrier. The essential nature of desire is that it actually is never gratified, but every effort at gratification leads to another and this again to another. Every attempt at gratification is at once a disappointment and the father of a new desire. To this understanding of desire, which is the last ripeness of the lower self before it falls off the tree of life, must be added another qualification, the firm steady will, which, after the conviction of the futility of desire has been fully reached, gives effect to that conviction by checking the little children of desire, as they are born in the mind and run down through emotion into action. These three worlds, the world of mind, of emotion, and of action, are the "three worlds" which are to be conquered by the neophyte, and the first, that of the mind, must be conquered first. When this is done, the outward actions of desire, robbed of their motive power, will cease of themselves; their continuation would

show, not that the soul had risen above the body, of whose mere outward acts it was independent, but that the first of the three worlds, the mind where the children of desire are born, was still unconquered and unclean. The delusion that a pure soul may accompany impure action is a part of that unwisdom which brings men "again and again under the dominion of death". Then Death speaks of the Great Beyond:

– That is not to be gained even for a hearing by many; and, hearing it, many understand it not. Wonderful is the speaker of it, blessed is the receiver; wonderful is the knower of it, blessed is the learner.

Not by a baser man is this declared; but it is to be known by much meditation. There is no way to it unless told by another, nor can it be debated by formal logic.

The comprehending of this cannot be gained by debate; but when declared by another it is dearest to a good understanding. Thou hast obtained it, for thou art steadfast in the truth, and a questioner like thee, Nachiketas, is dear to us.

That which many do not even gain for a hearing is the Voice of the Silence, the first glimmer of the inner light which shines in the soul and illumines the Great Beyond. Many who hear it understand not; they follow the "promptings of conscience" blindly and haltingly, knowing not that this is the first gleam of the light that lightens the world. "The speaker of it" is the Higher Self, which brings the light to the soul; the hearer of it is the soul which receives that light. The Higher Self is the "other that tells it"; without being told by that other, it cannot be known; but whenever the hearer is ready, the teacher is ready also; when the soul is purified and reaches out toward the light, the light will certainly appear.

[Death speaks:]

– I know that what is called precious is unenduring; and by unlasting things what is lasting cannot be gained.

Therefore the triple fire was chosen by me, and instead of these unenduring things I have gained what endures.

Thus saying, and having beheld the fulfilment of desire, the seat of the world, the endless fruit of sacrifice, the shore where there is no fear, great praise, and the wide-famed world, thou, Nachiketas, hast wisely passed them by.

The lasting thing which cannot be gained by the unlasting is peace, which can never come from the gratification of desire, but only from the kindling of the triple fire, the three-fold Higher Self, of Being, Bliss, and Knowledge. The words "the fulfilment of desire" refer to Death's offer in the first part of the Upanishad. The seat of the world is the "Kingdoms of this world and the glory of them"; the fruit of sacrifice or good deeds is the rest in Devachan — the shore where there is no fear; all this, Nachiketas, understanding its unlasting character, had passed by.

[Death continues:]

– But that which is hard to see, which has entered the secret place and is hidden in secret, the mystery, the Ancient; understanding that bright one by the path of union with the Inner Self, the wise man leaves exaltation and sorrow behind.

A mortal, hearing this and understanding it, passing on to that righteous subtle one and obtaining it, rejoices, having good cause for rejoicing; and the door to it is wide open, I think, Nachiketas.

"The Mystery, the Ancient" is the Higher Self, which for the

unenlightened is hidden in the secret place, the beyond, above the ordinary consciousness of the soul; it is the ancient, because the Higher Self is the power which again and again causes the incarnation of the personality through a vast series of lives, and thus, as the Ancient of Days, it is endless both backwards and forwards. It is to be found by the path of union with the Inner Self, the bridge so often spoken of in the Upanishads. This bridge, which the disciple must cross by becoming it, is really the identification of the personality with the life of the Higher Self by perfectly following its dictates and assimilating its nature; by the perfect obedience through which alone there is liberty.

A mortal learning this obedience and understanding it, and then becoming himself the path by identifying himself with the law of the path, reaches that Subtle one, where is eternal joy and not that lower exultation which is merely the opposite of grief; this exultation and grief being the two sides of the lower, personal self, while joy and peace are of the Higher Self and have no opposites; for the Higher Self is beyond the world of opposites, heat and cold, sorrow and exultation, and the rest. As the law is always waiting for obedience, the door is always open.

[Death speaks:]

– What them seest to be neither the law nor lawlessness, neither what is commanded nor what is forbidden, neither what has been nor what shall be, say that it is THAT.

That resting-place which all the Vedas proclaim, and all austerities declare; seeking for which they enter the service of the eternal; that resting-place I briefly tell to thee.

It is the unchanging Eternal; it is the unchanging Supreme; having understood that eternal one, whatsoever a man wishes, that he gains. It is the excellent foundation, the

supreme foundation; knowing that foundation, a man grows mighty in the eternal world.

The Higher Self is again defined as that which is free from the pairs of opposites; that which is neither the righteousness of the ritual law nor yet the unrighteousness of breach of that law; neither the performance of ritual nor its neglect; but a new life, a new yet ancient being, above the virtue and vice of the ritual law, because it dwells in the Great Beyond, while the law of ritual is, at best, for this world or for Devachan. The Higher Self is also the resting-place declared by the Vedas, because it rests above the personal life, while the personal life goes through endless alternations of birth and death; as the Higher Self, being a facet of the Infinite One, contains within itself the infinite; he who has gained it possesses all things, and therefore possesses whatever he may desire.

[Death speaks:]

– The knower is never born nor dies; nor is it from anywhere, nor did anything become it. Unborn, eternal, immemorial, this ancient is not slain when the body is slain.

If the slayer thinks to slay it, if the slain thinks it is slain, neither of them understands; this slays not, nor is slain. Smaller than small, greater than great, this self is hidden in the heart of man.

He who has ceased from sacrifices and passed sorrow by, through the favor of that ordainer beholds the greatness of the Self.

Though seated, it travels far; though at rest, it goes everywhere; who but thee is worthy to know this bright one, who is joy without rejoicing?

The "knower" is again the Higher Self, which knows all things. It is the ordainer, because it is the will and power of the Higher Self which ordains the incarnations of the personality and directs the whole series, with a single purpose, from beginning to end; correcting one life and supplementing its deficiencies in those that follow. Though seated, though at rest, it travels far, from one end of the chain of births to the other; it is everywhere, in every birth, because it overshadows and ordains them all.

[Death continues:]

– Understanding this great lord, the Self, the bodiless in bodies, the unstable in stable things, the wise man cannot grieve. This Self is not to be gained by speaking of it, nor by cleverness, nor by much hearing. Whom this chooses, by him it is gained; and the Self chooses his body as its own.

He who has not ceased from evil, who is not at peace, who stands not firm, whose emotions are not at rest, cannot obtain it by understanding. Brahman and Kshatriya are its food; its anointing is death; who knows truly where it is?

This final clause reiterates the truth that through the death of the lower self, and perfect integrity, and through these only, the path to the Self can be known; that Self whose food is Brahman and Kshatriya — knowledge and power; and whose anointing comes only through the death of selfishness. When selfishness is dead, then that Self chooses the purified soul, which gradually becomes one with it, in the resting-place which all the Vedas sing.

The Path

HYPNOTISM (1) — *William Q. Judge*

What is the hypnotic force or influence? What really happens when a hypnotic experiment is performed? What is proved by it? What force is exerted that, after making a man sleep, rouses him to a false wakefulness in which he obeys a suggestion, seems to lose his identity, becomes apparently another person, speaks a language he knows nothing of, sees imagined pictures as real ones? How is it that in this state his physical body follows the operator's suggestion and becomes blistered by a piece of paper which possesses no blistering power, sneezes when there is no actual titillation of the olfactory nerves, shivers over a hot stove, and perspires if it be suggested that a block of ice is a mass of fire?

All this and very much more has been done in hypnotic experiments, just as it was done many years ago by mesmerizers, electro-biologists, and wandering fascinators of all sorts. Then it was outside the pale of science, but now since physicians renamed a part of it "hypnotism" it is settled to stay among the branches of psychology theoretical and applied. The new schools, of course, went further than the first did or could. They added a species of witchcraft to it by their latest claim to be able to externalize and localize the nerve-sensitiveness and hence mental impressionability of the subject; to put it in his photograph or within a glass of water, so that if the former be scratched or the latter touched, the patient at once jumped or screamed. This is the old way of making a wax image of your form and sticking pins in it, whereupon you pined and died; men and women were burned for this once. This, while interesting and important if true, possesses the interest of a nightmare, as it suggests how in the near future one's picture may be for sale to be blistered and

stabbed by an enemy, provided the extraneous localization of sensibility is first provided for. But the other experiments touch upon the great questions of identity, of consciousness, of soul, and of personality. They raise an issue as to whether the world be physical and mechanical, as Descartes thought, or whether it is fleeting and a form of consciousness existing because of thought and dominated by thought altogether, as the Theosophists modern and ancient always held.

Professor James of Harvard has published his conclusion that experiments in hypnotism convince him, as they have convinced many, of the existence of the hidden self in man, while the French schools dispute whether it is all due to one personality mimicking many, or many personalities wrapped up in one person and showing one phase after another. Facts are recorded and wonderful things done, but no reasonable and final explanation has been made by the modern schools. Except here and there they, being ignorant of man's hidden real nature and powers, or denying the existence of such, see no cause for alarm in all these experiments and no danger to either society or the individual. As the true evolution of man's inner powers at the same rate and time concurrently with all other racial and planetary evolution is not admitted by these schools, they cannot perceive in the future any possibly devilish use of hypnotic powers. The Theosophist, however, suggests an explanation for the phenomena, points to similar occurrences through history, and intimates a danger to come if the thinking world does not realize our true nature as a being made of thought and consciousness, built in and on these, and destructible by them also so far as his personality is concerned. The danger is not in knowing these things and processes, but in the lack of morality and ethics in the use of them both now and in the future.

One theory for use in explaining and prosecuting hypnotic

research is about as follows. Man is a soul who lives on thoughts and perceives only thoughts. Every object or subject comes to him as a thought, no matter what the channel or instrument, whether organ of sense or mental center, by which it comes before him. These thoughts may be words, ideas, or pictures. The soul-man has to have an intermediary or connecting link with Nature through and by which he may cognize and experience. This link is an ethereal double or counterpart of his physical body, dwelling in the latter; and the physical body is Nature so far as the soul-man is concerned. In this ethereal double (called astral body) are the sense-organs and centers of perception, the physical outer organs being only the external channels or means for concentrating the physical vibrations so as to transmit them to the astral organs and centers where the soul perceives them as ideas or thoughts. This inner ethereal man is made of the ether which science is now admitting as a necessary part of Nature, but while it is etheric it is none the less substantial.

Speaking physically, all outer stimulus from nature is sent from without to within. But in the same way stimuli may be sent from the within to the without, and in the latter mode is it that our thoughts and desires propel us to act. Stimuli are sent from the astral man within to the periphery, the physical body, and may dominate the body so as to alter it or bring on a lesion partial or total. Cases of the hair turning grey in a night are thus possible. And in this way a suggestion of a blister may make a physical swelling, secretion, inflammation, and sore on a subject who has submitted himself to the influence of the hypnotizer. The picture or idea of a blister is impressed on the astral body, and that controls all the physical nerves, sensations, currents, and secretions. It is done through the sympathetic nervous plexus and ganglia. It was thus that ecstatic fanatical women and men by brooding on the pictured idea of the wounds of Jesus produced on

their own bodies, by internal impression and stimulus projected to the surface, all the marks of crown of thorns and wounded side. It was self-hypnotization, possible only in fanatical hysterical ecstasy. The constant brooding imprinted the picture deeply on the astral body; then the physical molecules, ever changing, became impressed from within and the *stigmata* were the result. In hypnotizing done by another the only difference is one of time, as in the latter instances the operator has simply to make the image and impress it on the subject after the hypnotic process has been submitted to, whereas in self-hypnotization a long-continued ecstasy is necessary to make the impression complete.

When the hypnotic process — or subjugation, as I call it — is submitted to, a disjunction is made between the soul-man and the astral body, which then is for the time deprived of will, and is the sport of any suggestion coming in unopposed, and those may and do sometimes arise outside of the mind and intention of the operator. From this arises the sensitiveness to suggestion. The idea, or thought, or picture of an act is impressed by suggesting it on the astral body, and then the patient is waked. At the appointed time given by the suggestor a secondary sleep or hypnotic state arises automatically, and then, the disjunction between soul and astral body coming about of itself, the suggested act is performed unless — as happens rarely — the soul-man resists sufficiently to prevent it. Hence we point to an element of danger in the fact that at the suggested moment the hypnotic state comes on secondarily by association. I do not know that hypnotizers have perceived this. It indicates that although the subject be dehypnotized the influence of the operator once thrown on the subject will remain until the day of the operator's death.

But how is it that the subject can see on a blank card the picture

of an object which you have merely willed to be on it? This is because every thought of any one makes a picture; and a thought of a definite image makes a definite form in the astral light in which the astral body exists and functions, interpenetrating also every part of the physical body. Having thus imaged the picture on the card, it remains in the astral light or sphere surrounding the card, and is there objective to the astral sense of the hypnotized subject.

Body, soul, and astral man properly in relation give us a sane man; hypnotized, the relation is broken and we have a person who is not for the time wholly sane. Acute maniacs are those in whom the disjunction between astral man and soul is complete. Where the hypnotized one remains for months in that state, the astral man has become the slave of the body and its recollections, but as the soul is not concerned no real memory is present and no recollection of the period is retained.

The varied personalities assumed by some subjects brings up the doctrine of a former life on earth for all men, The division between soul and astral man releases the latter from some of the limitations of brain memory so that the inner memory may act, and we then have a case of a person reenacting some part of his former life or lives. But a second possibility also exists, — that by this process another and different entity may enter the body and brain and masquerade as the real person. Such entities do exist and are the astral shells of men and women out of the body. If they enter, the person becomes insane; and many a maniac is simply a body inhabited by an entity that does not belong to it.

The process of hypnotizing is as yet unknown in respect to what does happen to the molecules. We claim that those molecules are pressed from periphery to center instead of being expanded from the inside to the surface. This contraction is one of the symptoms

of death, and therefore hypnotizing is a long step toward physical and moral death. The view expressed by Dr. Charcot that a subject is liable to fall under the influence at the hands of anyone should be admitted, as also that in the wake of the hypnotizer will be found a host of hysteriacs, and that it all should be regulated by law is unquestionable. I go still further and say that many persons are already in a half-hypnotized state, easily influenced by the unprincipled or the immoral; that the power to hypnotize and to be sensitive to it are both progressive states of our racial evolution; that it can and will be used for selfish, wicked, and degrading purposes unless the race, and especially the occidental portion of it, understands and practices true ethics based on the brotherhood of man. Ethics of the purest are found in the words of Jesus, but are universally negated by Church, State, and individual. The Theosophical doctrines of man and nature give a true and necessary basis and enforcement to ethics, devoid of favoritism or illogical schemes of eternal damnation. And only through those doctrines can the dangers of hypnotism be averted, since legislation, while affixing penalties, will not alter or curtail private acts of selfishness and greed.

The Path

WHAT PROOF HAVE WE? (1) — *J. C. Keightley*

Mr. Chairman, Friends: Before entering upon the question of the evening I shall ask your permission to make use, temporarily, of the pronouns "you" and "we". By the use of the pronoun "you" I shall for the moment designate persons outside the Theosophical Society, who might or might not be enquirers about, or interested in, the Eastern Teachings. By the use of the pronoun "we" I shall designate all members of the Theosophical Society, and I will beg you to remember that I recognize in reality no such distinction; that I make use of this nomenclature for the purposes of clear illustration only, and that experience has shown full well that there are many devoted Theosophists who have never heard that word, and many using the word who have not even grasped the outermost significance thereof.

The question of the evening is "What proof have we?" Now this question is being asked daily more and more, is pressing upon us from all sides. For this reason, before entering into any argument as to the nature of proof itself, I wish to examine into the bearing and the reason, in short the justification, of this question; I wish to see what reason there is in its being put to us at all. And above all it is necessary to know *why* it is put to us and who are the persons who bring it forward. For at the very outset of his entrance into the Theosophical forum (and by "forum" I mean that place wherein a man may speak of his convictions — and be heard), the Theosophist finds himself almost immediately confronted by this question of proof. Too often the question converts the forum into the arena; the place where the combat as if for life, or for that which is dearer than life, goes on. The rightfulness of this question naturally becomes our first concern. When we speak of our belief you press up to us demanding this

proof. What right have you to make that demand? There are two things which constitute a man's right: first, there is his need of a thing — his real need; that constitutes a right in the eyes of any moral community; *secondly*, — and a bad second, — there are the rights of custom. Let us examine the lesser rights first, viz. — the rights of custom.

Are you accustomed, then, in your daily life to demand the proof of things before you can accept them? Do you demand proof of the purity of the water you drink, of the food you eat, of the financial investments you make? On all these depend health, life, immunity from care. Do you go to the root of each subject, examining each for yourself, or do you take the asseveration of one or another expert on the subject? You do examine, I know, but do you examine to the very root? No! What journeys, what expense, what knowledge would that not involve! Hence the custom has arisen of accepting the verdict of an expert number of our fellow beings upon such points: each such person is supposed to have examined more or less into the subject, though he may or may not have done so. Have you ever heard the story of the aged gentleman who determined to take nothing without absolute proof and who was therefore found at midnight still longing to partake of his early cup of coffee, usually taken before rising, because the busy chemist called in had not yet had time to decide whether milk, sugar, and coffee were pure? Would you not, then, be quite as belated in your daily life if you were to undertake to obtain unimpeachable proofs for yourselves? It has hence come about that you believe many an improbable thing without proof. You trust your friends, your wives, your societies, your churches, your scientists, yes, even your theologians, at times, without proof. It would be rare to find a man who would admit that he did not believe the world moves round the sun, and yet what *proof* has he of that? None. He has not even the knowledge necessary to

obtain the real proof, that proof which is found alone in a man's own experience. In the same way he has accepted the presence of life, or lives, in the air and the water. He has accepted many a problem, many a discovery in this scientific age; he feels that to deny these would also make him a laughing-stock. And if we ask him "What proof have you of this or that?", he gives us in reply some well-known name. To such a point has this practice been carried that Prof. Tyndall said some years ago in the United States that in his belief the testimony of a number of veracious witnesses constituted ample proof. We can give you this, and the world-known names besides if you will, in support of Theosophy, but you would not accept; you probably would laugh at it. In our opinion you would be quite right in doing so. Nevertheless I point out to you that in thus meeting us at the outset with a demand for proof, you are setting up as a right that which you do not ask of any other department of the world's knowledge, except in a very few rare circumstances which I shall specify hereafter. To take up another point of the subject; not long ago I met a gentleman well-known in all English-speaking countries as a literary man of wide and varied accomplishment. He spoke to me of certain matters in which I felt deep interest. So deep indeed was this interest that later on I said to him "Can you give me any proof of what you advance?" What was his reply? It was this: "I did not ask you to believe the statements I was then putting forward, as matters of interest, of conversation, of what you please; I repeat, that I did not seek your belief, consequently you have no right to ask proof of them. Proof may only justly be asked of a man who is endeavoring to secure your adherence to what he puts forward".

This I believe in the common tenet. Consequently, the Theosophist, young or old, educated or non-educated, wise in experience or just entering upon that experience, official or non-official, has an entire right to put forward his belief with all the

eloquence and earnestness he can muster to the task without laying himself open to any charge of dogmatism, without giving you any right to demand his proofs. In order to be dogmatic he would have to make two assertions, (a)"These are the lines of my belief and I will never alter them, never enlarge them; they shall never grow fuller or wider than they now are. (b) I insist upon your accepting this present statement of mine as the only truth." If he has not unmistakably done these two things, he triumphantly escapes the charges of biased minds who see dogmatism in his earnestness and narrowness in his eloquent definition. I think if you will follow out these lines it will be plain to you that custom does not sanctify this demand so pressed upon Theosophists; no, not even that hallowed Custom which has been erected as a goddess in our midst but which changes her fashion and face with every year. Even the legal rule demands that the accuser, the challenger, shall prove his case.

In coming to a man's *need* of proof we touch upon deeper ground. I do not mean to say by this that the need is deep in every man; as we have in fact seen, it rarely is so. But let us suppose a man who has gone forth from all accustomed modes of thought, self-banished, as it were, from the normal realm of mind. Hungering for food, food for that man who is "the man that was and is and shall be, for whom the hour shall never strike", he comes and asks us "What proof have you of these things?" To *his* need we must perforce turn a compassionate ear. And yet, how little can we do; for, look you, we are not divided from him in thought, or heart, or experience by any will whatsoever of our own. It is the mere fact that we have touched what he has not touched, that we have seen where his eyes were closed, that we have heard while he listened to another voice, it is this fact which makes the difference between us. It is not a difference of higher or lower, of greater or lesser knowledge, of superiority or inferiority; it is

simply the difference of experience, as colorless as the difference between rates of vibration; we have evolved to a different point, or by differing means, and our conclusions vary from his because the content of our consciousness varies from his. But in a moment, in the flash of an eye, he may see all his past by another light, by the inner light, and may find himself transported much further along the great evolutionary path than we ourselves now are. All our knowledge is relative, and where a point of time makes up the situation, another point of time may alter its uttermost foundation.

When, further, a man has a real need of anything in this world, what does he ordinarily do? Let us suppose that he wished to ask of a chemist, of the shoemaker at his awl or of the miner shut out from daylight and health in his pit; what would happen then? We can fancy him going to the miner and saying, "I want proof of the geological strata in which your ore lies; proof that yours is the proper method of excavating: proof that this ore which I see at the mouth of the pit has really been brought up by you and by no other and from the place which you describe". What is the answer? A jeer and a curse, perhaps. Or perhaps a question, "Are you a miner? If you be, come on down and see for yourself". And if you are not, a further jeer. So with the shoemaker. He shows you his finished article; but if you ask him to demonstrate to you that it was made precisely so and so, from the skinning of the dead beast and the tanning of the leather up to the final fashioning that fits for it the child's dainty foot, a stare of surprise will be the least and the most courteous reply you can expect. Or fancy yourself entering the laboratory of Crookes or of Tesla or Edison and demanding proofs of his latest discoveries. Let us again take the Artist, the Sculptor, or any earthly creator you may choose, into this conclave, and let us in fancy ask him for the much-sought-for proof. They may show us the finished thing; they

may demonstrate all its parts; is that proof? No! No! How do we know that it was made as they say; by the methods they describe; with the materials they claim; under the conditions that they assert? We would have to obtain their formula, or what science calls their working hypothesis, we would have to take that home with us, and, securing just the same conditions, just the same materials, work out by their methods, duly prescribed, to their exact results. This being so, the first question they would ask of us is this, "Are you a man of my trade?"; and finding we were not, they too would turn aside from us with a more or less courteous putting-off as the case may be. It is clearly evident that every man who has attained, in any department of life, knows one primary thing, and that is, that no man can understand those results which are *his* proofs unless he also knows the working hypothesis and has experience of the trade.

What I am coming to is this. In order to have your proof, you must work for it. In all this great universe there is no proof obtainable except by work; whether work of the body; work of the eye; work of the mind, that great overseer which sums up the results of all other classes of work; work there must be or proof there is none. And, speaking for myself, I honor, I may say I revere, the man or woman strong enough, patient enough, determined enough to get proof. For the only proof lies in man's own experience. There is no other that does not melt away like the hoar frost on the mountain, like the foam dashed from the turbulent sea.

It thus comes about that the attitude of the Theosophist, or indeed of any really thinking person, is the attitude imposed by Nature herself. To know a thing you must be it; you must have experience of it. When the Theosophist quotes from the Christian Bible those most occult words, "Lead the life if ye would know the doctrine", he is not putting you off because of any lack of proof of

his own, because of any want of power of speech or eloquence, because he cannot point out the work, the method of work, or the way. No; he is uttering one of the eternal verities, and great Nature herself sustains him. Experience you must have, before you know a thing in its depth and breadth and length. In matters of the mind this experience may be purely mental, as in matters of sympathy; but mental experience in certain souls is at once the most objective and most evident of all experiences. Hence when you ask us for proof we know well that you are asking what you ask of very few. We know well that you rarely put your theologians or scientists or great artisans or inventors or mechanics or laborers — no, not even your statesmen or your women — to this test. Nevertheless, the true Theosophist, recognizing that he is in part his brother's keeper, will not return the answer of Cain, who cried "Am I my brother's keeper?", but, on the contrary, he will meet you with a fact in nature — the fact that you must work for your proof even as he worked, and that without such work the facts which he may offer will never become an integral part of your experience, will never be accepted by the thinking man within you as a truth in which he has part.

And now let me ask, What is proof? In Western lands there is a maxim, "The law is common sense." Let us, then, have recourse to this embodied common sense in order to make out our reply. Last week I asked one of the ablest barristers in London for a definition of proof. After a little puzzlement he said that the best reply he could make me would be that proof was "evidence sufficient to satisfy the Court." That sounds well; but Courts vary. There are some inquirers who assert that the production of phenomena would be sufficient proof of all the teachings of the East. This reminds us of the tale of the two Rabbis, the first of whom was endeavoring to prove to the second that he knew more

of the Supreme Being than his friend. In proof of this the learned Rabbi No. 1 offered to cause the walls of the temple where they sat to fall down. The second Rabbi placidly remarked: "Friend, that would prove that thou didst indeed know how to cause walls to fall down, but it would prove nothing else." Moreover, a law of the human mind very often commented upon would render such phenomena valueless. I am again reminded of another tale, the newest parrot story as imported from America (with the profanity discreetly left out, for the parrot not being intentionally, or, as we may say, consciously, profane, I think this little attention is due to him in a Theosophical Lodge). My parrot lived in a shop of a seller of fireworks, and was used to seeing very brilliant specimens of coruscations set off for the benefit of intending purchasers. These gave him great delight. In fact, he became quite hardened to them and began to regard them with an air of cynical and accustomed habit. One day, however, the shop blew up; the parrot found himself landed in a distant and barren field, minus his feathers (for he did not take his wardrobe with him on that rapid journey). Scratching his naked head with his bleeding claw, he exclaimed: "Ain't it wonderful! What *will* happen next?" This attitude is that of the phenomena seeker who, witnessing more and more, desires the repetition of the same experience over and over, but a little stronger each time; as witness the Spiritualists, who with all their remarkable phenomena have built up no real philosophy. But I will not take up your time by enlarging further upon this head, but shall be happy if anything I may have said will serve as a text which you can follow out in your own mind. And to those to whom the whole discourse may appear dull I would offer a prescription embodied in two of George Herbert's most exquisite lines addressed to the Church-goer:

"And, if the preacher weary,
God takes the text and preaches patience."

I am quite sure if you learn patience, Sovereign Patience, from my discourse, you will have learned a virtue greater than any I have within my gift.

Since, then, we find that phenomena are not proof, the nature of proof still remains unexplained. What proof does the Law offer? In almost all cases witnesses come forward and detail the narrative which Court and Jury hear. Take, for example, a murder case. Is the murder shown? No! Is it described? Not always. A tale is told by more or fewer witnesses. Told to whom? To what? To the minds of the Jurymen and the Court, and the Mind, the eternal witness, hears, weighs, sums up, judges, condemns or sets free. Here, then, we have the Law. The oracular embodied common-sense of the land recognizes that proof is subjective and not objective, and that the mind of man is the sole arbiter, the sole judge, and that the evidence upon which he makes up his verdict is evidence cognizable by the mind of man alone, valid to him alone; that mind is indeed the power behind the throne For, mark you, if the minds of the Jury differ in any case, the Jurymen in the minority who have not seen the case from the standpoint of the majority acquire no condemnation therefor. They are not reproached — not justly reproached, at all events, because they have not seen the case as others do and have not derived the same conclusions from the same evidence. All that is said is that their minds have not acted upon the evidence normal to the majority. And yet even in the history of the Law these minorities have proved to be right with the passage of time. Innocent men have been hung on the verdict of a majority. Take another point: the Law itself recognizes the constitutional inability of two or more minds to see an event alike. Bribed and perjured witnesses always tell the tale exactly alike; by this peculiarity the Law recognizes them. Veracious witnesses, being so many different minds, have each seen a different side of the

occurrence. And in this cause we have the Law itself unconsciously acknowledging that every mind is at a different standpoint of evolution from every other. In this lies the reason why each person must gain his own proof through his own experience. To what, now, do these facts lead us? To this: in this highly civilized day, in our *very* Christian countries, you will take the life of your fellow-beings on subjective proof when you will not for one instant receive the same as valid at the hands of your fellow Theosophists.

If, then, the Theosophist chose, as I doubt not he would choose, to disregard the peremptory nature of this demand for proof and the fact that it is seldom asked except for argumentative purposes, which, as everyone knows, end in mere contention; if he chose, I say, to give serious attention to the question, his natural reply would be this: What is that for which you demand proof? Is it for the whole bulk of Theosophic teaching? Is it for the existence of Masters? Is it for the reality of phenomena? Now of the latter question I think we have already disposed, but there is one thing more which might be said, and it is this: If you are not yourself master to some extent of the laws lying behind nature, or operating through nature, you do not know whether any phenomena which may be produced before you consist in (A) mere mesmeric or hypnotic phenomena causing you to see what has no temporary existence at all, or (B) the actual phenomena in which something has been created by the use of occult or hidden Law, which something did not exist in objective form at all before. It is thus clear that *only* to the Adept, who needs it not, can valid proof of this kind be given, and that those who ask for it are ignorant in the deepest sense of ignorance. To be ignorant and to know it is a depth; but to be ignorant and not to know it is a greater depth still. Now again, as to proof, as to the existence of a Great Lodge or Hierarchy of Wise Beings. On this I purposely

touch very lightly: and I may say, indeed, that if any one came to me saying that I had published my belief in Theosophical teachings and were to ask "Have you any proof?" I should reply: "For myself? Yes! Certainly I have proof. For you? No! For you I have none at all." You would mistake if you were to call this pride on my part. The reply would arise wholly from the knowledge that no man can in any sense be the savior of another man. Each man must arise and must get his own proof, with the help, perhaps, if he be working, of his fellow-workmen. But of proof as to the existence of the Elder Brothers of the race, I may permit myself to make one very common-sense remark, as it appears to me. Reverse the case. Say that I am living in Thibet and that I am asked as to the existence of certain living, very prominent, very highly evolved and able men, residents of America, but who have been known to visit other lands. I tell the Thibetans of these men; they ask for proof of their existence. I show pictures. They are not proof. I show letters. They are not proof. I call upon other men and women who have seen them to testify. Their word too is denied. I point to the religious and other books of America to show that a knowledge of these men has existed for a long period of time. This too is not proof. I call upon our learned men, who admit that the existence of such highly evolved men was always part of the belief of the residents of the country. My Thibetans shrug their shoulders at this mass of testimony and remain unconvinced. And any one of you, if you were standing by me, would no doubt say to me, "In heaven's name why not leave them to their ignorance?" Now this is precisely what I should do; in fact, I should never have proceeded so far as this imaginary picture points out. And why? Because it is part of my experience that no one gets any living proof that way, and I should not waste my time in attempting the impossible. It is not that I know more than the supposed inquirer. It is that the content of my consciousness is not the content of his consciousness and never

can become so by any effort of mine. He will have to live and work and get the proof himself, as I did, if I have it at all. And when we add to this fact, that the proof of a man's being a Mahatma or Great Soul has to do with the interior and mysterious processes of the soul itself; that the soul alone recognizes the Great Soul; that such a Being is first met upon the plane of soul, and there only at first; I think you will concede that this subject of proof becomes a very difficult one, and that you must be content to leave me to what you may, if you please, call my delusions; or else you may accept the working hypothesis of living the life if you would know the doctrine, and work out thereby the matter to its ultimate conclusion. For other means than life and work there are none. Other proof of the existence of Great Souls, mastering the bodies in which they dwell, having communion with mankind travailing in pain on the one hand, and with the great boundless freedom of spirit on the other; other proof, I say, than that your soul first touches Their souls, there is none. There never will be any other proof until you have first mastered that truth and have learned to know the intangible eternal presences by a proof more sure than the presence of evanescent form.

Or, again, the proof asked may be that of certain fundamental propositions of Theosophy, such as those laid down in the Secret Doctrine. These are first, the existence of a boundless, eternal Principle of life; second, the universality of the law of periodicity, or Karma; third, the spiritual identity of all souls with the Over-soul. Such proof can be sought, and can, so far as my own experience goes, be found in every department of life. I admit that in this so-called scientific age the merest weaklings are so inflated with the rabies of science that they think they must have scientific proof of everything, and hence would deny what maybe called proof by analogy. Science herself, laboriously great but often true, treats us no better. But permit me to take a case in

point, an illustration from a lecture recently delivered in this hall on what are called "The Lives." In that lecture it was shown that science demonstrated certain action and reaction always taking place in the unit, as it is called, of protoplasmic matter. It was also shown that this series of action and reaction was precisely the same as those given in the Secret Doctrine relative to the action of the life-principle in regard to the Solar systems, worlds, man, and even the constituent cells of his body. Now, as I say, science would refuse us the right to this proof by analogy. But let us see if we cannot wrest it from her own utterance. For what says science further, after postulating this unit of protoplasm and definite actions and reactions taking place? Science shows at once this fact, that the whole visible universe is built up of a series of just such units. In this conclusion, then, she herself gives us that proof in regard to the universe to which we have laid claim. Or take another case. In the same lecture it was said that protoplasm, the basis of all life, was built up of certain well-defined chemical constituents, but that if you put those constituents together in their exact proportions, living protoplasm would not result. What would be absent? Life would be absent. The scientist claims that there is no such thing as life *per se*, life in itself. But may we not fairly claim that if the absence of life or motion prevents this chemical structure so carefully builded up after the living-model, from being alive, it is a fair conclusion that there is a something called Life whose absence makes the difference between a living thing and a dead thing, as science uses the terms "life" and "death." I speak advisedly of the terminology of science, for to the Theosophist Life and a change in the modes of Life alone are known.

Going thus rapidly over the whole ground of proof, what I would finally suggest to my fellow Theosophists is this: The proof that is wanted is proof of the great spiritual side of life and that which in

all directions underlies the visible and material. Now the proofs of life are everywhere. They are found in all occupations, in all departments of life, in all sciences, in all arts; they are best found in the beings of whom life itself is composed. Take, for instance, the question of evolution, that great moot-point which is said to have been the chief among the discoveries (re-discoveries I should call them) of this century. You may find it everywhere. You may find it in statecraft, in the tendency away from warfare and towards arbitration. You may find it in the trades, in the tendency away from monopoly and towards cooperation; yes, even in the limited co-operation of monopolists, which is its most dangerous form. You may find it in education; in the tendency, growing greater every hour, to give the same advantages to both sexes. You may find it in theology, in that these later days have seen the study of comparative theology, in part adopted, in place of that method where a man learned only his own form of belief and, at most, the best argument of other schools, in order to be able to refute. You may find it in the industrial life of cities; in the custom, growing daily greater, of embracing the sale of all manner of goods in one shop, instead of employing that shop as a place where only one species of goods could be obtained. You will find it in the drama, which, opening at the beginning of the century with the statuesque method of the Greek stage, and passing through the romantic, the melodramatic or intensely real, the ideal (as in some plays of Tennyson and others of his school), has finally culminated at the close of the century in a school of playwrights who show all the situations of life arising out of and caused by the complexities of character of that thing painfully created, life after life by man: I mean, the heart of man itself. That heart has built up the whole of life about us. It is responsible for all the strange alternations, struggles, differences, and tragedies of life. The latter-day dramatist has seen it; the prophetic seer has sung it for centuries also. If you turn to music, if you turn to

painting, evolution is still plainly discerned. If, then, Theosophists wish to point out such proof relative to the ancient Eastern beliefs as may serve as sufficient basis for a man to begin to work upon, let them turn to the various departments of life and demonstrate the first faint clues of greater riddles in them. Not a mother among her children, not a workman by his bench, not a photographer spreading his film ready for the transforming fingers of the light to create some radiant image and cast it out of space upon the glass, not any man or any woman working-anywhere but can bring- some material from his or her place of life with which to build broad and wide the base of this universal temple which we can and will raise to the skies. Do not look abroad in things unknown to you for proof; seek that proof of the building spirit, the living spirit, the unseen all-powerful workman, in the Life of which you are part; and having discerned Him behind his customary mask, bring to us the faithful image of that which you have seen. The mother, observing the birth of character with the child, watchful of the development of the mere animal mind, joyous discerner of the first unfolding of the immortal soul, can put together argument for Reincarnation, for the belief that the strong character already shown in infancy — character dissimilar to that of all the ancestry perhaps — has been moulded by many a prior life. In the inter-correlation of forces, the behavior of energy, its conservation and interaction, the scientist can find still other proof. When the microscopist can find no bacteria present in a speck of matter placed under his most powerful lens, the photographer, preparing a plate sensitized to the action of the rays of the ultra-violet only- — the unseen rays whose action and existence can only be demonstrated by chemistry — the photographer, I say, photographing by these rays, produces pictures of living and moving bacteria to which the wonder-revealing lens was blind. The astral ray revealing the lower astral forms — is it not a fitting

sequence? And H. P. Blavatsky said that the greatest proof of occult theory would be found along biological and chemical lines. The schoolboy reads in his Natural Philosophy the first law of motion: "Action and reaction are equal and opposite in direction." It is true of emotion as well. And it reveals the Law of Karma. H. P. Blavatsky pointed out the path. We should each seek to give our own proofs. No more is needed. No more can be asked. The proofs lie within yourselves; your daily acts fecundate them, your lives are their heralds. You have but to speak them. There is not one of us from whom all the rest may not learn something of proof, were that proof but brought before them. And is it not a duty which we owe to our belief, to demonstrate the real amplitude of its base?

Or perhaps it is proof of our ideals that men ask. What kind of proof, think you, would hold good of an ideal? I can conceive no other proof than its action upon the life. Were I asked, "Who are these men who have attained in ever so small measure to some proof of these great truths?" I would make answer thus: They are those who have looked upon a far star beyond the tern pest. They are those who have worked and toiled and waited, who being crushed have arisen, who having fallen have struggled and have arisen again and again. They are those who have done this for the sole and pure sake of the realization of an ideal which assures them that the salvation of one is inextricably bound up in the salvation of all. They are those who have seen the mighty image of Unity and Harmony far beyond the contemplation of the mere mortal mind, and who work on towards it regardless of themselves, caught up in the glory of that immortal ideal. For the proof of a man is his life. The proof of an Ideal is its life in the soul.

The Path

REINCARNATION IN JUDAISM AND THE BIBLE — *William Q. Judge*

The lost chord of Christianity is the doctrine of Reincarnation. It was beyond doubt taught in the early days of the cult, for it was well known to the Jews who produced the men who founded Christianity. The greatest of all the Fathers of the Church — Origen — no doubt believed in the doctrine. He taught preexistence and the wandering of the soul. This could hardly have been believed without also giving currency to reincarnation, as the soul could scarcely wander in any place save the earth. She was an exile from Paradise, and for sins committed had to revolve and wander. Wander where? would be the next question. Certainly away from Paradise, and the short span of human life would not meet the requirements of the case. But a series of reincarnations will meet all the problems of life as well as the necessities of the doctrines of exile, of wanderings for purification, of being known to God and being judged by him before birth, and of other dogmas given out among the Jews and of course well known to Jesus and whoever of the seventy odd disciples were not in the deepest ignorance. Some of the disciples were presumably ignorant men, such as the fishermen, who had depended on their elders for instruction, but not all were of that sort, as the wonderful works of the period were sufficiently exciting to come to the ears of even Herod. Paul cannot be accused of ignorance, but was with Peter and James one of several who not only knew the new ideas but were well versed in the old ones. And those old ones are to be found in the Old Testament and in the Commentaries, in the Zohar, the Talmud, and the other works and sayings of the Jews, all of which built up a body of dogma accepted by the people and the Rabbis. Hence sayings of Jesus, of Paul, and others have to be viewed with the

well-known and never-disputed doctrines of the day held down to the present time, borne well in mind so as to make passages clear and show what was tacitly accepted. Jesus himself said that he intended to uphold and buttress the law, and that law was not only the matter found in the book the Christian theologians saw fit to accept, but also in the other authorities of which all except the grossly unlearned were cognizant. So when we find Herod listening to assertions that John or Jesus was this, that, or the other prophet or great man of olden time, we know that he was with the people speculating on the doctrine of reincarnation or "coming back", and as to who a present famous person may have been in a former life. Given as it is in the Gospels as a mere incident, it is very plain that the matter was court gossip in which long philosophical arguments were not indulged in, but the doctrine was accepted and then personal facts gone into for amusement as well as for warning to the king. To an Eastern potentate such a warning would be of moment, as he, unlike a Western man, would think that a returning great personage would of necessity have not only knowledge but also power, and that if the people had their minds attracted to a new aspirant for the leadership they would be inflamed beyond control with the idea that an old prophet or former king had come back to dwell in another body with them. The Christians have no right, then, to excise the doctrine of reincarnation from their system if it was known to Jesus, if it was brought to his attention and was not condemned at all but tacitly accepted, and further, finally, if in any single case it was declared by Jesus as true in respect to any person. And that all this was the case can, I think, be clearly shown.

First for the Jews, from whom Jesus was born and to whom he said unequivocally he came as a missionary or reformer. The Zohar is a work of great weight and authority among the Jews. In

II, 199 b, it says that "all souls are subject to revolutions". This is metempsychosis or *a'leen b'gilgoola*; but it declares that "men do not know the way they have been judged in all time". That is, in their "revolutions" they lose a complete memory of the acts that have led to judgment. This is precisely the Theosophical doctrine. The Kether Malkuth says, "If she, the soul, be pure, then she shall obtain favor . . . but if she hath been defiled, then she shall wander for a time in pain and despair . . . until the days of her purification". If the soul be pure and if she comes at once from God at birth, how could she be defiled? And where is she to wander if not on this or some other world until the days of her purification? The Rabbis always explained it as meaning she wandered down from Paradise through many revolutions or births until purity was regained.

Under the name of "Din Gilgol Neshomes" the doctrine of reincarnation is constantly spoken of in the Talmud. The term means "the judgment of the revolutions of the souls". And Rabbi Manassa, son of Israel, one of the most revered, says in his book *Nishmath Hayem*: "The belief or the doctrine of the transmigration of souls is a *firm* and *infallible dogma* accepted by the whole assemblage of our church with one accord, so that there is none to be found who would dare to deny it . . . Indeed, there is a great number of sages in Israel who hold firm to this doctrine so that they made it a dogma, a fundamental point of our religion. We are therefore in duty bound to obey and to accept this dogma with acclamation . . . as the truth of it has been incontestably demonstrated by the Zohar and all books of the Kabalists."

These demonstrations hold, as do the traditions of the old Jews, that the soul of Adam reincarnated in David, and that on account of the sin of David against Uriah it will have to come again in the expected Messiah. And out of the three letters ADM, being the

name of the first man, the Talmudists always made the names Adam, David, and Messiah. Hence this in the Old Testament: "And they will serve Jhvh their God and David their king whom I shall *reawaken* for them." That is, David reincarnates again for the people. Taking the judgment of God on Adam "for dust thou art and unto dust thou shalt return", the Hebrew interpreters said that since Adam had sinned it was necessary for him to reincarnate on earth in order to make good the evil committed in his first existence; so he comes as David, and later is to come as Messiah. The same doctrine was always applied by the Jews to Moses, Seth, and Abel, the latter spelt Habel. Habel was killed by Cain, and then to supply the loss the Lord gave Seth to Adam; he died, and later on Moses is his reincarnation as the guide of the people, and Seth was said by Adam to be the reincarnation of Habel. Cain died and reincarnated as Yethrokorah, who died, the soul waiting till the time when Habel came back as Moses and then incarnated as the Egyptian who was killed by Moses; so in this case Habel comes back as Moses, meets Cain in the person of the Egyptian, and kills the latter. Similarly it was held that Bileam, Laban, and Nabal were reincarnations of the one soul or individuality. And of Job it was said that he was the same person once known as Thara, the father of Abraham; by which they explained the verse of Job (ix, 21), "Though I were perfect, yet would I not know my own soul", to mean that he would not recognize himself as Thara.

All this is to be had in mind in reading Jeremiah, "Before I formed thee in the belly I knew thee; and before thou earnest out of the womb I sanctified thee"; or in Romans ix, v. 11, 13, after telling that Jacob and Esau being not yet born, "Jacob have I loved and Esau have I hated"; or the ideas of the people that "Elias was yet to first come"; or that some of the prophets were there in Jesus or John; or when Jesus asked the disciples "Whom do men think that

I am?" There cannot be the slightest doubt, then, that among the Jews for ages and down to the time of Jesus the ideas above outlined prevailed universally. Let us now come to the New Testament.

St. Matthew relates in the eleventh chapter the talk of Jesus on the subject of John, who is declared by him to be the greatest of all, ending in the 14th verse thus:

And if ye will receive it, this is Elias which was for to come.

Here he took the doctrine for granted, and the "if" referred not to any possible doubts on that but simply as to whether they would accept his designation of John as Elias. In the 17th chapter he once more takes up the subject thus:

10. And his disciples asked him saying, Why, then, say the scribes that Elias must first come? And Jesus answered and said unto them; Elias truly shall first come and restore all things. But I say unto you that Elias is come already, and they knew him not but have done to him whatsoever they listed. Likewise shall also the Son of Man suffer of them. Then the disciples understood that he spake unto them of John the Baptist.

The statement is repeated in Mark, chapter ix, v. 13, omitting the name of John. It is nowhere denied. It is not among any of the cases in which the different Gospels contradict each other; it is in no way doubtful. It is not only a reference to the doctrine of reincarnation, but is also a clear enunciation of it. It goes much further than the case of the man who was born blind, when Jesus heard the doctrine referred to but did not deny it nor condemn it in any way, merely saying that the cause in that case was not for sin formerly committed, but for some extraordinary purpose, such as the case of the supposed dead man when he said that the

man was not dead but was to be used to show his power over disease. In the latter one he perceived there was one so far gone to death that no ordinary person could cure him, and in the blind man's case the incident was like it. If he thought the doctrine pernicious, as it must be if untrue, he would have condemned it at the first coming up, but not only did he fail to do so, he distinctly himself brought it up in the case of John, and again when asking what were the popular notions as to himself under the prevailing doctrines as above shown. Matthew xvi, v. 13, will do as an example, as the different writers do not disagree, thus:

When Jesus came into the coasts of Cesarea Phillipi he asked his disciples, Who do men say that I am? And they said, Some say that thou art John the Baptist, some Elias, and others Jeremias or one of the prophets.

This was a deliberate bringing-up of the old doctrine, to which the disciples replied, as all Jews would, without any dispute of the matter of reincarnation; and the reply of Jesus was not a confutation of the notion, but a distinguishing of himself, from the common lot of sages and prophets by showing himself to be an incarnation of God and not a reincarnation of any saint or sage. He did not bring it up to dispute and condemn as he would and did do in other matters; but to the very contrary he evidently referred to it so as to use it for showing himself as an incarnate God. And following his example the disciples never disputed on that; they were all aware of it; St. Paul must have held it when speaking of Esau and Jacob; St. John could have meant nothing but that in Revelations, chap, iii, v. 12.

Him that overcometh will I make a pillar in the temple of my God, and *he shall go no more out.*

Evidently he had gone out before or the words "no more" could have no place or meaning. It was the old idea of the exile of the

soul and the need for it to be purified by long wandering before it could be admitted as a "pillar in the temple of God". And until the ignorant ambitious monks after the death of Origen had gotten hold of Christianity, the doctrine must have ennobled the new movement. Later the council of Constantinople condemned all such notions directly in the face of the very words of Jesus, so that at last it ceased to vibrate as one of the chords, until finally the prophecy of Jesus that he came to bring a sword and division and not peace was fulfilled by the warring nations of Christian lands who profess him in words but by their acts constantly deny him whom they call "the meek and lowly".

The Path

THE SYMBOLISM OF THE UPANISHADS: III — C. J.

III

The third part of the Katha Upanishad continues the teaching of Death to Nachiketas, which has already been followed through the first two parts:

– Those who know the Eternal, the five fires, and the triple flame tell of the shadow and the light entering the cave through the long age, and drinking the reward of good deeds in the world.

No better sentence for illustrating the symbolism of the Upanishads could be chosen. The first words hardly need an explanation. They need, rather, realization in the inmost recesses of the heart. But who are the knowers or practicers of the five fires? These words allude to an ancient penance, when the ascetic stood bare-headed between four fires, in the blazing heat of the Indian sun. But this penance in itself is symbolical. The five fires are the five senses, or the five powers of sensation, which make up the phenomenal, illusory world; and it is the heat of these five fires of delusion which the true ascetic must learn to withstand. The knower of the triple flame is he who knows the Higher Self, the triple Atma, or the triad Atma, Buddhi, and Higher Manas; that is, Spirit, Soul, and pure reason. What, then, are the shadow and the light that these three tell the knower of the eternal, he who withstands the five fires of sense, and he who knows the triple flame of the Higher Self? We may discern the meaning by the words which follow. The shadow and the light enter the cave, or the hidden world, and enjoy for a long age the fruit of good deeds done in the world. The shadow and the light are, therefore, the Spirit, and its vehicle the soul, which, entering into the hidden

world of Devachan after death, reap the good Karma of the past life.

[Death continues:]

– Let us teach to Nachiketas what is the bridge of sacrificers, the unperishing Eternal, and the fearless shore of those who seek, to pass over.

The bridge by which the sacrificers of self pass over to the shore where there is no fear, the resting-place of the unperishing Eternal, is the link between the Higher and the lower self; it is the latent power of the lower self to rise to the Higher Self, and thus to cross over from the outer world which is its field of life to the inner world of the Higher Self.

– Know that the Self (Atma.) is the lord of the chariot; that the body (Sharira) is the chariot; know that soul (Buddhi) is the charioteer; and that mind (Manas) is the rein.

They say that the organs (or impulses) are the horses; and the external world of objects is their road. As the self is yoked to mind and the impulses, the wise say the Self is the enjoyer. But he who is unwise, with mind not bound to the Self (that is, with lower Manas preponderant), his impulses are ungoverned, like the charioteer's unruly horses. But he who is wise, with mind ever bound to the Self (with higher Manas preponderant), his impulses are controlled like the charioteer's good horses.

In this simile of the chariot, Buddhi governs kama through Manas, under the inspiration of Atma. The reins are well in hand, the horses are controlled, when Manas is recipient of the light of Atma, through the mediation of Buddhi; when the lower aspires to the Higher Self. It will be remembered that in the *Bhagavad-Gita* Krishna is the charioteer or Buddhi.

– But who is unwise, unmindful, and ever impure, obtains not that resting-place and goal); but falls back into the world of birth and death.

But he who is wise, mindful, and ever pure, he indeed reaches a resting-place from which he is not born again.

He who has wisdom for his charioteer, keeping mind well in hand, reaches the end of the path, the supreme resting-place of the evolving power.

The impulses are higher than the senses; mind (Manas) is higher than the impulses; soul (Buddhi) is higher than mind; and the Great Self (Mahamatma) is higher than Buddhi. Higher than this Great is the Unmanifested. Higher than the Unmanifested is the Logos (Purushas). Than the Logos, none is higher; that is the prop, the Supreme Way.

The "unwise, unmindful" is again he whose lower mind (Manas) is not dominated by the Higher. For only with this domination and preponderance of the higher mind over the lower, by which the center of life passes from the lower mind dominated by desire (kama-manas) to the higher mind dominated by Spirit Soul (Atma-Buddhi-Manas) is the final goal reached; for the center of life thus leaves a temporary and unstable dwelling for one that is eternal and fixed; and thus the end of the path is reached, the supreme seat of the power which evolves the worlds.

– The hidden Self does not shine forth in all beings; but is seen by the keen and subtle soul of subtle seers.

Let the wise man restrain voice (creative power) and mind; let him restrain them by the Self which is wisdom. Let him restrain this wisdom by the Self which is great; and this let him restrain in the Self which is peace.

This is the secret of the triple Self, the three-fold Atma; its three sides are Wisdom, Power, and Peace. These correspond to the three sides of the Self, Sat, Chit, Ananda, or Being, Consciousness, and Bliss, in the classification of the later Vedantins.

Then, having taught the final secret, the bridge across to the Great Beyond, and the way to cross over, and the nature of the Self that dwells on the other side, Death bids Nachiketas:

– "Awake, arise! Having obtained thy wishes, understand them. The wise say the path is hard to traverse, like the keen edge of a razor". Then, having won the soundless, touchless, formless, unfading, the everlasting, that has neither taste nor smell, the beginningless, endless Eternal, that is beyond the Great, he is released from the mouth of Death.

And the Initiation is ended; the lesson of death is learned. The Upanishad concludes:

– This is the immemorial teaching declared by Death to Nachiketas. Declaring and hearing it, the wise grows great in the world of the Eternal. He who causes this supreme secret to be heard in the assembly of those who seek the Eternal, or at the time of the union with those who have gone forth builds for everlastingness; he builds for everlastingness.

A last word as to the meaning of this "union with those who have gone forth". The Sanskrit word used is Shraddha, the yearly sacrifice to the spirits of ancestors in the ascending line; when the sacrificer is united in spirit to his forefathers in the other world. But the inner meaning is that union with spiritual ancestors in the ascending Guru parampara chain which is described in the last chapter of the "Idyll of the White Lotus". This union with the

spirit of the Great Ones who have gone before is the Great Initiation, the theme of the "immemorial teaching of Death".

The Path

A NOTE ON REINCARNATION — *Albert E. S. Smythe*

It is possible that since in our Western thought there is a good deal of hesitation about accepting the idea of reincarnation, involving, as it does usually, the belief in a previous objective state of existence of which no direct evidence can be offered and no memory remains, much might be done towards making the way plain by more constantly insisting on the simple fact of incarnation. Once people begin to think of themselves as dual entities, part physical and part non-physical, and of the non-physical being incarnated in the flesh in the ordinary course of Nature's providence, the further idea of a repetition of the process will easily creep into acceptance. Christians cannot reject incarnation in respect of Jesus of Nazareth. By-and-bye they will apply it to themselves. Belief in reincarnation will follow naturally. Let us teach that we are descended from the right hand of the Father, and that our destiny lies upward again towards that everlasting seat.

I have not met in my Theosophical reading any treatment of one aspect of reincarnation which has impressed me in considering the objection of failure of memory of past lives. While not a linguist I have devoted some attention to languages, and have been interested in many curious facts concerning idioms, and in the complete representation of ideas obtained in translating from one language to another. In the first place take the Irse, or Irish Keltic. The idiom requires that in giving expression to sensations such as hunger, thirst, fear, happiness, etc., the verb is used with prepositional pronouns. "I fear" would in Irish be literally expressed as "Fear is on me;" "I am hungry" as "Hunger is on me"; "I wish it" as "It is a wish with me". In the other case, take the salutations of various nations. We ask "How do you do?" or

"Howdy?" according to our academic or provincial training. The Frenchman enquires "How do you carry yourself?" The German wonders "How goes it?", and the Chinese "Have you eaten rice?" All these indicate the same underlying idea, but a different method in each case of conceiving and expressing it.

I do not purpose discussing the question of the possibility of conceiving an idea without giving it formal expression, but it is undeniable that the average man cannot think without words; he cannot have ideas until he has the means of expressing them. This is admitted by those who declare the English language deficient in terms fit to convey the force of the metaphysical conceptions found in the Sanskrit. Interesting light is also thrown on the subject in connection with the training of blind deaf-mutes, to whom a form or vehicle of expression is indispensable before reason manifests itself. The brain must be taught or trained to recognize certain symbols, either of form or of sound, before it can become a medium for the conveyance or expression of ideas.

But most of us speak only one language, and that English. We cannot understand a person speaking in a strange tongue, however clearly he conceives his idea in his own mind. The unfamiliar sounds convey nothing to the brain. Could one's brain respond directly to another's brain vibration, mere language would be unnecessary. It is probable that the idea would be transmitted directly without the circumlocution of mouth and ear. This appears to be indicated by what is called thought-transference, varied in Mr. W. T. Stead's experience of automatic writing.

Confined, then, as we are to one language for the recognition of ideas, and that a language scarcely four hundred years old, doubtfully intelligible even in Chaucer, it seems unreasonable to suppose that we could recognize the ideas we formed in the

language of another birth until at least we were familiar with the language we actually used in that previous existence, or until such a cultivation of the brain had been successfully undertaken as would permit the direct reception of thought impressions from the astral matrix. Neither can it be denied that this is the case, since we all have ideas "occurring" to us, as we say, for which we cannot account, and which have no apparent origin in our immediate surroundings. May they not be a direct survival from other lives in which they had been promulgated in the speech of the nation and period to which we then belonged? This we could not deny or affirm in the absence of familiarity with the forgotten language. It would be of interest to make enquiry among linguists, especially among those versed in the dead languages of all ages, as to whether any of these old tongues presented readier channels of thought than others, or than the present mother-tongue.

It is evident that the most important point is the necessity of clearly conceiving ideas in themselves, rather than their aspects presented by idiom, or by the varying expression of different languages and thinkers. This of course involves the practice of concentration and the development and control of imagination, the creative faculty on the mental plane.

The Path

THE FUNDAMENTAL BELIEFS OF BRAHMANISM IN CHRISTIANITY

— *S. T. Krishnamacharya*

Moksha Shastra, or the Science of Emancipation or Salvation, is divided into three kinds; namely, Karma Yoga, Gnana Yoga, and Bhakti Yoga. This three-fold division is found in the Buddhistic writings. It is not unknown to the New Testament writers. We read in I *Corinthians*, chapter xii, 8: "To some is given by the Spirit the word of wisdom; to another the word of knowledge by the same Spirit; to another faith by the same Spirit".

2. To all of these systems the observance of the moral and ceremonial laws is necessary. The Ten Laws are called by the Brahmins the Dasa Dharma; they are called by the Buddhists the Dasa Sila; by the Christians they are called the Ten Commandments.

3. According to the Brahmins the cause of Samsara or the misery of rebirth is Avidya or Ignorance. The Buddhists believe in the same doctrine. In Christianity we find a similar notion. We read in *Ephesians*, "We are alienated from God through ignorance and vanity of our minds".

4. To dispel ignorance the Brahmins and the Christians agree that we must renounce selfishness and the love of worldly objects.

5. The cause of misery, according to the Brahmins, is Avidya, which is defined in the Yoga Philosophy as the mistaking of non-eternal, impure, and painful things for eternal, pure, and pleasurable things. It is the mistaking the carnal for the spiritual, or the loving of the worldly objects instead of the soul. An allusion to this doctrine of the Yoga Philosophy is found in the New Testament. In *Colossians*, chap, ii, we read, "Why as though living

in the world are ye subject to the ordinances? Touch not, taste not, handle not; which are all to perish with the using, after the commandments and doctrines of men; which things have, indeed, a show of wisdom in humility and neglecting the body". In Romans we read that the cause of sin is the *phronema sarkos*, or the lust of the flesh. We are told that the carnal mind is in enmity against God and cannot please God. The Greek phrase *phronema sarkos* is in Sanskrit *sarirabhimana*.

6. The universal laws of Causation and Evolution, which play a very important part in the writings of the Brahmans and Buddhists, are not opposed to the doctrines of Christianity.

7. The word which Sanskrit and Pali writers use to express Rebirth by Karma is *punarganmo*. In the New Testament we find the word *paliggenesia* is used to express Regeneration. As the word *paliggenesia* (Regeneration) is a derivative of the Sanskrit word *punarganma*, we may presume that the New Testament writers used the Greek word *paliggenesia* (regeneration) to express the doctrine of Rebirth by Karma.

8. Brahmans and the Buddhists are all opposed to a belief in blind faith or simple dogmas. We read in the New Testament, "Prove all things and hold fast to that which is good".

9. Bhakti Yoga or the doctrine of Sanctification by Faith plays a very important part in the Sacred Books of the Brahmans and the Buddhists. In the New Testament *pistis* (Faith), which is a derivation of Bhakti, plays the same important part.

10. The definition of Yoga according to the Yoga philosophy is the suppression or stopping of the constant changes of the mental states. In the New Testament we are told that the Soul finds rest when it is in a blissful state. Christ says "Take up my yoke and you will find rest". This is simply a translation of the second Sutra of

the Yoga philosophy.

11. The doctrines of the Sermon on the Mount are beautifully summed up in the Yoga philosophy. According to it the surest way to attain enlightenment is:

1. To love happiness.
2. To pity the miserable.
3. To take pleasure in the practice of virtue.
4. To disregard vice.

12. The following two stanzas, which have been taken and translated by the Buddhists and Christians, beautifully express the truths of Brahminism.

1. To abstain from evil, and to be constantly virtuous; to do good and to lead an excellent life; this is in fact the surest way to obtain emancipation.
2. Let no one do to another that which he will not like to be done unto himself. This, in short, is the duty or virtue which is binding upon all, though one may practice other things or not.

13. India was not an unknown land to the early Christians. There was some sort of commerce between Palestine and India. According to Eusebius and other early Christian Church historians, there were Christian churches in India, founded by St. Bartholomew and St. Thomas at Calimine. The word Calimine may be derived either from Chola Mane or Kairanini or Triplicane near Madras. The Syrian Christians of India call their Saint Marthoma. The word Christ may be derived from either of the two Sanskrit words, Chrishna or Sreshta. In the New Testament the word Chrestos is translated "easy", as in the phrase

"my yoke is easy". As every one knows, there is a good deal of resemblance between the lives of Krishna and Christ.

14. In the New Testament the word Gospel does not always mean the life of Christ. When used by Christ himself the word must mean something other than his own life. The Greek word which is translated Gospel is *euaggelion* and literally means a good message. It exactly corresponds to the Sanskrit word *agama* used in the Yoga philosophy in a similar sense. The Sanskrit word used in the Yoga philosophy to express "universal" is *savanabhumna* or that which belongs to all countries or kingdoms. Therefore the Gospel of the Kingdom which Christ preached is the Universal Moral Laws. Again, the phrase "Gospel of the Kingdom" exactly corresponds to the Sanskrit phrase "Raja Vidya" used in the Bhagavad-Gita. Again, the Greek word which is translated angel is *aggelos*. This word exactly corresponds to the Sanskrit word *Sma Agatos* or *Sugatas* or *Tathagatas* or *Mahatmas* or those who bring good news. It is thus clear that while Buddha reached the Four Noble Truths or Chatur Vyahas, Christ preached the Gospel of the Kingdom, or the Universal Moral Laws or Yamas.

The Path

REINCARNATION OF ANIMALS — *William Brehon*

Very little has been said on the question whether or not the theory of Reincarnation applies to animals in the same way as to man. Doubtless if Brahman members well acquainted with Sanskrit works on the general subject were to publish their views, we should at least have a large mass of material for thought and find many clues to the matter in the Hindu theories and allegories. Even Hindu folk-lore would suggest much. Under all popular "superstitions" a large element of truth can be found hidden away when the vulgar notion is examined in the light of the Wisdom-Religion. A good instance of this on the material plane is to be found in the new treatment proposed for small-pox. The old superstition was that all patients with that disease must be treated and kept in darkness. But the practise was given up by modern doctors. Recently, however, some one had the usual "flash" and decided that perhaps the chemical rays of the sun had something to do with the matter, and began to try red glass for all windows where small-pox patients were. Success was reported, the theory being that the disease was one where the chemical rays injured the skin and health just as they do in ordinary sunburn. Here we see, if the new plan be found right, that an old superstition was based on a law of nature. In the same way the folk-lore of such an ancient people as the Hindu deserves scrutiny with the object of discovering the buried truth. If they are possessed of such notions regarding the fate of animals, careful analysis might give valuable suggestion.

Looking at the question in the light of Theosophical theories, we see that a wide distinction exists between man and animals. Man reincarnates as man because he has got to the top of the present scale of evolution. He cannot go back, for Manas is too much

developed. He has a *Devachan* because he is a conscious thinker. Animals cannot have *Manas* so much developed, and so cannot be self-conscious in the sense that man is. Besides all this, the animal kingdom, being lower, has the impulse still to rise to higher forms. But here we have the distinct statement by the Adepts through H.P. B. that while possibly animals may rise higher in their own kingdom they cannot in this evolution rise to the human stage, as we have reached the middle or turning-point in the fourth round. On this point H. P. B. has, in the second volume of the *Secret Doctrine* (first ed.) at p. 196, a foot note as follows:

In calling the animal "soulless" it is not depriving the beast, from the humblest to the highest species, of a "soul", but only of a conscious surviving Ego-soul, i.e., that principle which survives after a man and reincarnates in a like man.

The animal has an astral body that survives the physical form for a short period; but its (animal) Monad does not reincarnate in the same, but in a higher species, and has no "Devachan" of course. It has the *seeds* of all the human principles in itself; but they are latent.

Here the distinction above adverted to is made. It is due to the Ego-Soul, that is, to *Manas* with *Buddhi* and *Atma*. Those principles being latent in the animal, and the door to the human kingdom being closed, they may rise to higher species but not to the man stage. Of course also it is not meant that no dog or other animal ever reincarnates as dog, but that the monad has tendency to rise to a higher species, whatever that be, whenever it has passed beyond the necessity for further experience as "dog". Under the position the author assumes it would be natural to suppose that the astral form of the animal did not last long, as she says, and hence that astral appearances or apparitions of animals were not common. Such is the fact. I have heard of a few,

but very few, cases where a favorite animal made an apparitional appearance after death, but even the prolific field of spiritualism has not many instances of the kind, And those who have learned about the astral world know that human beings assume in that world the form of animal or other things which they in character most resemble, and that this sort of apparition is not confined to the dead but is more common among the living. It is by such signs that clairvoyants know the very life and thought of the person before them. It was under the operation of this law that Swedenborg saw so many curious things in his time.

The objection based on the immense number of animals both alive and dead as calling for a supply of monads in that stage can be met in this way. While it is stated that no more animal monads can enter on the man-stage, it is not said nor inferred that the incoming supply of monads for the animal kingdom has stopped. They may still be coming in from other worlds for evolution among the animals of this globe. There is nothing impossible in it, and it will supply the answer to the question, Where do the new animal monads come from, supposing that all the present ones have exhausted the whole number of higher species possible here? It is quite possible also that the animal monads may be carried on to other members of the earth-chain in advance of man for the purpose of necessary development, and this would lessen the number of their appearances here. For what keeps man here so long is that the power of his thought is so great as to make a *Devachan* for all lasting some fifteen centuries — with exceptions — and for a number who desire "heaven" a *Devachan* of enormous length. The animals, however, being devoid of developed *Manas*, have no *Devachan* and must be forced onwards to the next planet in the chain. This would be consistent and useful, as it gives them a chance for development in readiness for the time when the monads of that kingdom shall begin to rise to a

new human kingdom. They will have lost nothing, but, on the contrary, will be the gainers.

The Path

CONVERSATIONS ON OCCULTISM WITH H.P.B. — *William Q. Judge*

In 1875, '76, '77, and '78 my intimacy with H.H.B. gave me many opportunities for conversing with her on what we then called "Magic". These useful, and for me very wonderful, occasions came about late at night, and sometimes during the day. I was then in the habit of calling on her in the day-time whenever I could get away from my office. Many times I stayed in her flat for the purpose of hearing as much and seeing as much as I could. Later on, in 1884, I spent many weeks with her in the Rue Notre Dame des Champs in Paris, sitting beside her day after day and evening after evening; later still, in 1888, being with her in London, at Holland Park, I had a few more opportunities. Some of what she said I publish here for the good of those who can benefit by her words. Certainly no greater practical occultist is known to this century: from that point of view what she said will have a certain useful weight with some.

ON DEVACHAN

This term was not in use at this time. The conversation was about steps on the Path and returning here again. In answer to a question:

"Yes, you have been here and at this before. You were born with this tendency, and in other lives have met these persons [supposed Adept influences], and they are here to see you for that reason."

Later, when definite terms had come into use, the question raised was whether or not all stayed 1500 years in Devachan.

"Well, Judge, you must know well that under the philosophy we

don't all stay there so long. It varies with the character of each. A thoroughly material thinker will emerge sooner than one who is a spiritual philosopher and good. Besides, recollect that all workers for the Lodge, no matter of what degree, are helped out of Devachan if they themselves permit it. Your own idea which you have stated, that 1500 years had not elapsed since you went into Devachan, is correct, and that I tell is what Master himself tells me. So there you are."

PRECIPITATIONS BY MASTERS

In reply to a question on this she said:

"If you think Master is going to be always precipitating things, you mistake. Yes, He can do it. But most of the precipitations are by chelas who would seem to you almost Masters. I see His orders, and the thoughts and words He wishes used, and I precipitate them in that form; so does * * * and one or two more."

"Well, what of Their handwritings?"

"Anything you write is your handwriting, but it is not your personal handwriting, generally used and first learned if you assume or adopt some form. Now you know that Masters' handwritings, peculiar and personal to Themselves, are foreign both as to sound and form — Indian sorts, in fact. So They adopted a form in English, and in that form I precipitate Their messages at Their direction. Why Balmost caught me one day and nearly made a mess of it by shocking me. The message has to be seen in the astral light in *facsimile*, and through that astral matrix I precipitate the whole of it. It's different, though, if Master sends me the paper and the message already done. That's why I call these things 'psychological tricks'. The sign of an objective wonder seemed to be required, although a moment's thought will show it is not proof of anything but occult ability. Many a medium has

had precipitations before my miserable self was heard of. But blessed is the one who wants no sign. You have seen plenty of these things. Why do you want to ask me? Can't you use your brain and intuition? I've sampled almost the whole possible range of wonders for you. Let them use their brains and intuition with the known facts and the theories given."

IF WHITE MAGICIANS ACT, WHAT THEN?

"Look here; here's a man who wants to know why the Masters don't interpose at once and save his business. They don't seem to remember what it means for a Master to use occult force. If you explode gunpowder to split a rock you may knock down a house. There is a law that if a White Magician uses his occult power an equal amount of power may be used by the Black one. Chemists invent powders for explosives and wicked men may use them. You force yourself into Master's presence and you take the consequences of the immense forces around him playing on yourself. If you are weak in character anywhere, the Black ones will use the disturbance by directing the forces engendered to that spot and may compass your ruin. It is so always. Pass the boundary that hedges in the occult realm, and quick forces, new ones, dreadful ones, must be met. Then if you are not strong you may become a wreck for that life. This is the danger. This is one reason why Masters do not appear and do not act directly very often, but nearly always by intermediate degrees. What do you say, — 'the dual forces in nature'? Precisely, that's just it; and Theosophists should remember it."

DO MASTERS PUNISH

"Now I'm not going to tell you all about this. They are just; They embody the Law and Compassion. Do not for an instant imagine that Masters are going to come down on you for your failures and wrongs, if any. Karma looks out for this. Masters' ethics are the

highest. From the standpoint of your question They do not punish. Have I not told you that, much as detractors have cast mud at Them, never will the Masters impose punishment. I cannot see why such a question comes up. Karma will do all the punishing that is necessary."

ABOUT ELEMENTALS

"It's a long time ago now that I told you this part would not be explained. But I can tell you some things. This one that you and Olcott used to call * * * can't see you unless I let him. Now I will impress you upon it or him so that like a photograph he will remember so far. But you can't make it obey you until you know how to get the force directed. I'll send him to you and let him make a bell."

[In a few days after this the proposed sign was given at a distance from her, and a little bell was sounded in the air when I was talking with a person not interested in Theosophy, and when I was three miles away from H. P. B. On next seeing her she asked if * * * had been over and sounded the bell, mentioning the exact day and time.]

"This one has no form in particular, but is more like a revolving mass of air. But it is, all the same, quite definite, as you know from what he has done. There are some classes with forms of their own. The general division into fiery, airy, earthy, and watery is pretty correct, but it will not cover all the classes. There is not a single thing going on about us, no matter what, that elementals are not concerned in, because they constitute a necessary part of nature, just as important as the nerve currents in your body. Why in storms you should see them how they move about. Don't you remember what you told me about that lady * * * who saw them change and move about at that opera? It was due to her tendencies and the general idea underlying the opera." [It

was the opera of Tristan and Isolde, by Wagner. — J.] "In that case, as Isolde is Irish, the whole idea under it aroused a class of elementals peculiar to that island and its traditions. That's a queer place, Judge, that Ireland. It is packed full of a singular class of elementals; and, by Jove! I see they even have emigrated in quite large numbers. Sometimes one quite by accident rouses up some ancient system, say from Egypt; that is the explanation of that singular astral noise which you said reminded you of a sistrum being shaken; it was really objective. But, my dear fellow, do you think I will give you a patent elemental extractor? — not yet. Bulwer Lytton wrote very wisely, for him, on this subject".

[Riding over in Central Park, New York.] "It is very interesting here. I see a great number of Indians, and also their elementals, just as real as you seem to be. They do not see us; they are all spooks. But look here, Judge, don't confound the magnetism escaping through your skin with the gentle taps of supposed elementals who want a cigarette."

[In W. 34th street, New York. The first time she spoke to me of elementals particularly, I having asked her about Spiritualism. — J.]

"It is nearly all done by elementals. Now I can make them tap anywhere you like in this room. Select any place you wish." [I pointed to a hard plaster wall-space free from objects.] "Now ask what you like that can be answered by taps."

Q. What is my age? *Taps*: the correct number.

Q. How many in my house? *Taps*: right.

Q. How many months have I been in the city? *Taps*: correct.

Q. What number of minutes past the hour by my watch? *Taps*: right.

Q. How many keys on my ring? *Taps*: correct.

H. P. B. "Oh bosh! Let it stop. You won't get anymore, for I have cut it off. Try your best. They have no sense; they got it all out of your own head, even the keys, for you know inside how many keys are on the ring, though you don't remember; but anyhow I could see into your pocket and count the number, and then that tapper would give the right reply. There's something better than all that magic nonsense."

SHE PRECIPITATES IN LONDON

In 1888 I was in London and wanted a paper, with about four sentences written on it in purple ink, which I had left in America. I came down to her room where B. Keightley was, and, not saying anything, sat down opposite H. P. B. I thought: "If only she would get me back someway a copy of that paper." She smiled at me, rose, went into her room, came out at once, and in a moment handed me a piece of paper, passing it right in front of Keightley. To my amazement it was a duplicate of my paper, a *facsimile*. I then asked her how she got it, and she replied: "I saw it in your head and the rest was easy. You thought it very clearly. You know it can be done; and it was needed." This was all done in about the time it takes to read these descriptive sentences.

The Path

THE FIRE-SELF (1) — *Jasper Niemand*

I hung from the horns of the moon and the name of the Fire-Self was whispered to me.

(The Fire-Self, the Sage, the Instructor, (2) whose awakener is the memory of man.)

The name of the Fire-Self was whispered from afar; I dropped from the moon (3) the better to hear; dropped, though the moon grew big with desire to detain me. (4)

Into the darkness I fell; (5) icy the rushing breath that bore me to the mouth of the cavern deep and small, the abode whence the Fire-Self springs." (6)

(Forth leaps the Fire-Glory, (7) the one, devouring the man who awaits It.)

That Self came not forth: by many a name I called It.

Called till the echoes were silent, (8) replete with sound and the rejection thereof.

Not a god whose name could conjure it up, the Fire-Self, whispered by the memory of Man.

Memory, when I questioned, upbraided me, saying:

"Is not Fire the devourer of all; of men, gods, powers, even of the worlds in space:

"How has It dealt with the moon, the mother-world from which we fell:

"Has not her light paled before It; how then callest thou upon It by a name:

"Are we not one, I, thou, and It: namest thou *That-Which-Is* by a sound?

"I alone am its forerunner. I, Thought, in the stillness reflect It. Hold forth to Itself Its own image, thyself; abandoner of gods and of names."

(So hotly burned memory within me; memory, the servant of the flaming one.)

"Come", I cried; "Come forth, *Myself*; I alone can receive and maintain Thee".

Thought blazed up as a sudden torch, blazed long, discovering the darkness.

Thrice at the mouth of the cave I called; the third time that Self sprang upon me.

The Fire-Self blazed throughout my being: the man lay in dust and ashes.

In vain the moon poured her chill rays upon his body; the Fire-Self licked them up as it ran: a new man leaped from the scintillant river.

A man without form, without name; a fiery spark in the blazing ocean. In effulgent brightness They walked the skies together. They looked upon the Unutterable.

Said the Flame to the spark: "Let us forth into the Beyond". They knew the omnipotent Darkness; together They became one with That. Together they issued forth from That; the Fire and the Spark as one Self, calmed and quenched with Knowledge.

At the mouth of the cave They parted. (They who can never be dissevered. They who can never be dissociated. Rulers in two worlds are They, each in his own, linked by a tense and living

cord of Thought, the cord silvered (9) by the conquered moon, the gift giver.)

"Ere They parted, the Fire restored to the man-spark his form: man returned to the Fire-Self a part of Its Knowledge.

"Give me", I cried, "Thy chief secret at parting; let it go with me into the land without substance, where form is the only wisdom".

It fled, but I fled after; I laid my soul against Its fiery vesture.

"Unto me be it given to know Thee as Thou art. Give me Thy name that I may call Thee again; in Thee is my only real Life; a god (10) am I, now I know It".

The Fire-Self upreared, a gigantic pillar: the Devourer of worlds rose before me. (11) The Flame found a voice that was soundless, (12) mightier than the uproar of waters.

"If thou wouldst be Self of Myself, answer me this," said that voice.

"When is the Fire-Self greater than great? Speak aright and abide with Me forever."

"It is greatest when It leads Its sparks forth into the Silence and becomes the One Wisdom", I answered.

The Fire-Self receded, thrusting me forth as spent lava is spued from the volcano.

"Greatest am I" — spake the Glory, remonstrant, "when Man, the spark struck from myself, spends my Wisdom in the service of his fellows".

"Better is it", said the Fire-Self, "to give the heart knowledge to the hungry and the thirsty, than to over-run with Me the azure fields of Light. "When thou ridest thus, man art thou no more: That thou

art from Which the heart of man set forth.

"But when thou bringest back the Memory thereof, when thou spendest that Life for thy fellows, That thou art to which I shall return; thou art thyself the goal called 'Great Compassion': to reach that goal I spend myself upon the worlds in space. Great is Wisdom, but greater is the use thereof. Be thou my outrunner; attain that Consciousness and the use thereof for Me. Call upon me then and I obey thee: My doors open only when the heart of man beats against them, calling in the name of its fellow man".

The Path

UNITED YET INDEPENDENT — *H. T. Edge*

In cooperative work, as in every other problem before students of occultism, there are two extremes to be avoided and one right course to be maintained; two evils opposed to one good; a pair of opposites reconciled by a unity; and in cooperative work, as in other problems, many make the mistake of avoiding the more obviously wrong extreme merely to fall into the other extreme which is less obviously wrong. A body of workers should neither repel one another nor lean on one another. The former maxim is so obvious that no one fails to recognize its truth and to strive to act in accordance with it; but there are many who, in doing so, rush to the opposite pole of weak reliance on others. Workers should cling to the cause, not to each other; for if they cling to each other, the failure of an individual will be disastrous for the whole; while, if each one clings to the cause, each one must be torn away separately ere the whole fabric can be destroyed. The pillars of a temple do not lean up against one another, neither do they counteract each other; each stands firmly on its own base and is independent of the support of the others, yet all unite in the common object of supporting the dome. We must be as the pillars of a temple, helping one another, yet independent and each on his own base. The destruction of one or two does not seriously impair the building, for the others still stand firm.

In unity is strength, and though we must be united in a common object, yet we must not lose the advantage arising from our individual unity. A body of workers all mutually dependent constitutes a single united centre of force; but if, while maintaining their unity of purpose, they retained their independence of individual action, they would be more powerful, for they would constitute a number of separate centres

synthesized by one great centre — a number of unities forming one cardinal unity. When many members of a body are self-reliant, their self-reliance synthesizes itself into a great power and stability, and the total force is much greater than it would be if they all leaned up against one another. It is a law of nature that a number of *logoi* or individualities should constitute collectively a single superior *logos* or individuality. Our Egos, though each acts independently, all emanate from a single central *logos*, of which they are only parts, but whose quality of egoism each reflects. Our bodily organs, though each has a separate function, all unite to form the whole man. They do not thwart each other, nor absorb one another's functions nor combine to do the work of one. We should be like the rays of the sun, which shoot in all directions and yet are but fulfilling the separate details of a single organized plan. It is upon this very diversity of course that depends the successful carrying out of that plan; for were all the rays to shoot in the same direction the sun as a luminary would be a failure. This illustration also serves to show us how two people pursuing opposite courses can yet subserve a common end; for to every ray there is another that shoots in the precisely opposite direction.

Why should we try to persuade our friends over to our own views, or grieve because they differ from us in details? Would we have all workers do the same work, all climbers ascend the same path, all occultists follow the same ray of truth? Light has many hues and the sun has many planets; and though there is a maxim to the effect that those not yet qualified to be suns may remain for the present humble planets, no reason is given why we should all be the same planet. A general, in conducting a campaign, assigns to each division of his army a particular portion of the work he wishes carried out; a master-printer assigns to each operative his due share of the work in hand, one setting the type, another

reading the proofs, and so on. Each subdivision does its own work without interfering with the work of others, and through this simultaneous carrying out of many dissimilar details the whole plan, for which all alike cooperate, is successfully accomplished.

Though most of us recognize this principle in matters of external work, there are many who fail to carry its application into more interior departments of our work; it applies equally well to methods of thought and ways of looking at the questions that affect our moral life. One student may, through the exigencies of his own nature, be impressed most strongly by the value of fiery energy, while another may pin his faith to the principle of "power through repose": if these two should try to convert one another, they would be merely wasting time and labor, and the work of both would be hindered. Each should do what is best for himself, and leave the other to follow what is best for him. We are all necessarily impressed with different aspects of the great problem, and must therefore all work on different tacks, but, while recognizing our own method as the best so far as we ourselves are concerned, we must frankly acknowledge the equal importance (to the general body) of our brother's plan.

Many are the paradoxes that present themselves to the student of occultism, and among them this is not the least important — to work in perfect harmony with our colleagues, and at the same time to work as if upon our own individual effort depended the whole enterprise. To realize this we must be united yet independent.

The Path

THE RED RAJPUTS

Brother Charles Johnston, F.T. S., formerly of the Dublin Lodge in Ireland, is a member of the Royal Academy of Science and retired from the British Civil Service of India. His interest in Indian questions of religion, philosophy, and ethnology is very great, and as his linguistic accomplishments are extensive, his studies in that field are of value. The *Imperial and Asiatic Quarterly Review* for October, 1893, has an article by him under the above title which Theosophists will do well to read if they can procure it.

Starting with the assertion of De Quatrefages that there are four principal color groups in the human family, of white, yellow, red, and black races, he adds this from the *Mahabharata*:

The color of the Brahmans is white; of the Kshatriyas red, of the Vaish-yas yellow, of the Shudras black.

While Col. Tod has given much of what is called the history of the Rajputs, Johnston shows that although we have been in contact with Rajputana for over a hundred years, there as yet exists no material for an exact study of its ethnology; while the latter as an exact science is very young and was for a long time hampered by the old Mosaic traditions about Shem, Ham, and Japhet. He holds that the Rajputs are red in color, and also makes good argument on the point that in ancient times they as Kshatriyas or warriors were above the Brahmans so far as mystical and spiritual knowledge went. Quoting the Brihadaranyaka Upanishad thus, "This knowledge has never before dwelt in any Brahman", he goes to point out that Krishna, the great King and Sage, was a Kshatriya, while next comes Buddha, admitted by the Hindus to be an Avatar, who was also a Kshatriya, all being held by him to be Rajputs. Krishna traced his doctrine from the Kshatriya Manu

through a line of Rajarshis or Rajanya sages. This is in the *Bhagavad Gita*, where the last personage named in the line is Ikshvaku, of whose race was Buddha. Hence he ascribes the spirit of the Upanishads and of Buddhism to the mystical genius of the Rajanya race. The well-known characteristic of the Brahmans of not having missionaries should be remembered at this point. The reformers they have had have been mostly among themselves, as, for instance, the great Brahman Shankaracharya. If Johnston's argument be right, then it is a very remarkable fact that the Gayatri, or that holy verse which is the "mother of the Vedas", repeated every morning by thousands of Brahmans as they bathe in the Ganges, was composed by a Kshatriya and not by a Brahman. On this we have in the Upanishads these words: "The Brahman sat at the foot of the Kshatriya". This upholds the spiritual dignity of the Rajanyas, who are the Kshatriyas and the Red Rajputs. And, as he shows, to this time the Ranas of Mewar "unite spiritual with royal authority and officiate as high priests in the temple of the guardian deity of their race". We should not forget, either, that it is recorded respecting the proceedings after the death and cremation of the body of Buddha that the Moriyas of Pippalivana, saying that Buddha was of their soldier caste, took away the embers to erect a cairn over them. (1) And the name to be applied to these is *lohita*, or red, which is also the name of the planet Mars, the fighter.

Johnston's ethnological deduction is as follows: "That the Kshatriyas of ancient India are identical in ethnic characteristics with the Rajputs of today". The Red Rajputs are the descendants of the solar race, a race of kings, of mystical men who not only could learn of mystic occultism but could also fight and rule, which is contrary to the regulation for the Brahman.

If we turn now to the *Secret Doctrine*, vol. 1, p. 405, there is most interesting and suggestive matter on this head, with names also,

given doubtless with a purpose not divulged. She says:

Two persons, Devapi of the race of Kuru, and Mauru (Mora) of the family of Ikshvaku . . continue alive throughout the Four Ages, residing at Kalapa. They will return hither in the beginning of the Krita Age . . . Mara (Moru), the son of Shigra, through the power of devotion (Yoga) is still living . . . and will be the restorer of the Kshattriya race of the Solar Dynasty.

Max Muller, it is said, translates Moru as Morya, of the Morya dynasty, evidently of the same race or family as those who came and took the embers from the cremation of Buddha. To take the embers, when read under the rules of Indian symbolism, is very much like "taking the essence of spiritual culture after all the rest is burned or purged away". Another valuable article to read in connection with this is the Moryas and Koothoomi in *Five Years of Theosophy*, 483. All students of these extremely interesting points are indebted to Brother Johnston for his paper, all too short as it was.

The Path

CHRISTIAN FATHERS ON REINCARNATION — *William Q. Judge*

Our brother George R. S. Mead, the General Secretary of the European Section T. S., has held that whether or not Origen, the greatest of the Fathers, believed in reincarnation, the Christian Church never formally anathematized the doctrine. If this position is sound there will yet be an opportunity for the Roman Church to declare the doctrine by holding that the anathema pronounced was against a species of incarnation or of metempsychosis not very clearly defined except as a preexistence of the soul as opposed to a special creation for each new body. This declaration can only be made by placing the future lives of the soul on some other planet after leaving this one. That would be reincarnation, but not as we understand it.

The issue of *Lucifer* for February has valuable contributions under "Notes and Queries" on this subject, and from that I extract something. Beausobre says:

It is a very ancient and general belief that souls are pure and heavenly substances which exist before their bodies and come down from heaven to clothe and animate them. *
* I only quote it to show that his nation (Jews) believed for a long time back in the preexistence of souls. * * All the most learned Greek fathers held this opinion, and a considerable portion of the Latin fathers followed them herein. * * It has been held by several Christian philosophers. It was received into the Church until the fourth century without being obnoxious to the charge of heresy.

Beausobre, however, calls the belief an "error". It would be interesting to know whether it is not the fact that at about the

fourth century the monks and bishops were ignorant men who would be more likely to take up a narrow dogma necessary for preservation of their power than to hold the broader and grander one of preexistence. Origen died about A. D. 254. He was so great and learned that even in his lifetime other men forged his name to their own writings. But while he was still living uneducated monks were flocking into the ranks of the priesthood. They obtained enough strength to compel Jerome to turn against Origen, although previously holding similar views. It was not learning, then, nor spiritual knowledge that brought about the subsequent condemnation of Origen, but rather bigotry and unspiritual ignorance. Origen distinctly held as a fundamental idea "the original and indestructible unity of God and all spiritual essences". This is precisely the doctrine of the Isovasya Upanishad, which says:

When to a man who understands, the Self has become all things, what sorrow, what trouble can there be to him who once beheld that unity?

Franck's *Kabale* is referred to in these answers as saying that Origen taught transmigration as a necessary doctrine for the explaining of the vicissitudes of life and the inequalities of birth. But the next quotation throws doubt again into the question, closing, however, thus:

When the soul comes into the world it leaves the body which had been necessary to it in the mother's womb, it leaves, I repeat, the body which covered it, and puts on another body fit for the life we lead on earth. * * *But as we do not believe in metempsychosis*, nor that the soul can ever be debased so as to enter into the bodies of brute animals.

There are several ways of looking at this. It may be charged that some one interpolated the italicized words; or that Origen was

referring to transmigrating back to animals; or, lastly, that he and his learned friends had a theory about incarnation and reincarnation not clearly given. My opinion is that he wrote as above simply as to retrograde rebirth, and that he held the very identical doctrine as to reincarnation found in *Isis Unveiled* and which caused it to be charged that H. P. B. did not know or teach reincarnation in 1877. Of course I cannot produce a quotation. But how could such a voluminous writer and deep thinker as Origen hold to the doctrines of unity with God, of the final restoration of all souls to pristine purity, and of preexistence, without also having a reincarnation doctrine? There are many indications and statements that there was an esoteric teaching on these subjects, just as it is evident that Jesus had his private teaching for the select disciples. For that reason Origen might teach preexistence but hold back the other. He says, according to Franck, that the question was not of metempsychosis according to Plato, "but of *an entirely different theory which is of a far more elevated nature*". It might have been this.

The soul, considered as spirit and not animal soul, is pure, of the essence of God, and desirous of immortality through a person; the person may fail and not be united to the soul; another and another person is selected; each one, if a failure in respect to union with the Self, passes into the sum of experience; but finally a personal birth is found wherein all former experiences are united and union gained. From thenceforward there is no more falling back, for immortality through a person has been attained. Prior to this great event the soul existed, and hence the doctrine of preexistence. For all of the personal births the soul was the God the Higher Self of each, the luminous one, the Augoeides; Existing thus from all time, it might be the cause of rebirths but not itself be reincarnated, as it merely overshadowed each birth without being wholly in the flesh. Such a doctrine, extremely mystical and

providing for each a personal God with a great possibility held out through reunion, could well be called by Origen "a different theory" from metempsychosis and "of more elevated character".

When once more the modern Christian Church admits that its founders believed in preexistence and that Jesus did not condemn reincarnation, a long step will have been taken toward uprooting many intolerant and illogical doctrines now held.

The Path

ZOROASTRIANISM — *S. D. Bharucha*

RELIGION OF THE "FIRE WORSHIPERS"

The managers of the Parliament of Religions of the World's Fair requested Mr. Narroji of London, a Parsee who is in Parliament, to advise as to the best means for having the Zoroastrian religion represented there, and they were directed to the Rahnunai Mazdayasnan Society of Bombay, which appointed their lecturer, Mr. Sheriarji D. Bharucha, to prepare an address. This he did, and it may be regarded as authoritative. The Society subsequently published the address, and these extracts are from it. (1)

TIME

There are two expressions as to Time. The first is Time without bounds, or Eternity. The second is Time with a fixed period and therefore restricted to mean a cycle of time. The state of the Universe before the present cycle of time is not treated of in the books. But the end of the world is synchronous with the end of the present cycle when the last of Saoshyants will come. He will regenerate all; the souls in hell will be raised up and all souls will be brought unto bliss, for God's wish cannot be gainsayed. [Hence we see that the old cyclic doctrine is held and that final damnation is not possible. In some Persian books recurrent cycles are mentioned.]

CREATION

Its object is to promote happiness. The doctrine of creating something out of nothing is not held, but it is taught that the material cause of the world was supplied by the efficient cause Himself. At first there was a spiritual series of creatures. [This resembles the system of *Secret Doctrine*. After these came

corporeal creations, the lower coming first, and then man last. In the course of this evolution the Saoshyants, who are saviors and teachers, come among men.

MAN'S CONSTITUTION

Man is a compound of material and spiritual parts, thus:

<i>Tanu</i>	Body
<i>Ushtana</i>	Life
<i>Urvan</i>	Soul (Feminine)
<i>Fravashi</i>	Soul (Masculine)

To soul are ascribed *mind, consciousness*, and the like.

The soul having been furnished with every aid is expected to come out successful in its moral career and get reward. But if it fails no vicarious salvation can be asked, as that is unknown to the religion.

ETHICS

As salvation depends on works, it is a peremptory duty to lead a holy life. The code is: Good word, good thought, good deed. All the very highest virtues are inculcated and described in the same way as in any modern system, and vices are emphatically denounced.

WORSHIP AND RITUAL

Oral recitations of the Sacred Word, sometimes accompanied with ritual, form their worship. Every Parsee generally prays by himself [this is the religion of Jesus], but public worship by all is sometimes performed. Most of the ritual must be performed by the priests. The most necessary ritual is the prayer on untying and retying the sacred thread, called *Kusti*, round the waist on the sacred shirt called *Sudra*. [This thread is extremely like the

Brahminical one]. Between seven and fifteen the child must be invested with *Kusti* and *Sudra*. The *Sudra* is a white linen shirt with a breast-piece in front. *Kusti* is a thread or tape made of seventy-two woolen threads, girded three times round the waist with four knots, two in front and two behind. It is worn day and night. It is made of lamb's wool. The ceremony of investiture is called *Navzot*, *i. e.*, new or first worship, and is performed by one priest in presence of the audience. The materials, colors, knots, and numbers are all symbolical. Laymen cannot take part in the principal ritualistic performances, but can touch some of the accessory implements. [Herein is similarity to Roman Catholic ritual.] Animal sacrifices were once offered, but are not now.

PARSIS NOT FIRE-WORSHIPERS

A fallacious notion that the Zoroastrians worship fire arose from their outward reverence for it as a great natural salutary agent. All their writers modern and ancient repudiate the notion, and Zoroaster enjoined the worship of the Supreme Being alone. Ferdosi says in the *Shahnameh*, a great epic,

Do not say that they were fire-worshippers;
For they were worshipers of God the Holy.

It is extremely probable that Zoroaster found the people worshipping idols, as certain references point to that fact, and reformed them gently by suggesting that they salute as holy the fire, which is the best and highest symbol of the Divine. In the Sun it represents the source of all life on earth, and it would be the part of a wise man to direct people who lived among idolators to such a grand and pure symbol, certainly less open to objection than are the images of Jesus and Mary used in modern times by Christians.

The Path

THE REAL BASIS OF ASTROLOGY — *George E. Wright*

In attempting to arrive at any philosophical explanation of Astrology it will be necessary for us to regard the solar system in several aspects. If, for instance, we were to consider the sun in a purely physical sense, we should find him to be the source of life and heat. He might also be conceived as the parent of the planets that lie within his circle of attraction, inasmuch as they are supposed to have originally sprung from him, according to the commonly-accepted Nebular Hypothesis. But having proceeded thus far, we have come to the end of knowledge regarding the Sun's properties so far as defined by astronomical science. In the same way taking up Saturn, Jupiter, and the other planets, we find that they have no relation with each other except such as is expressed by the general law of attraction. Astronomy is thus seen to be limited in its scope to the physical or the material aspect of the planetary bodies.

ASTROLOGY A HIGHER ASPECT

But is this all? Is there nothing beyond? May we not by careful study and analysis discover some elements existing in the sun and his satellites which are not recognized by materialistic science, and which may throw some light upon the problems of planetary existence? The ancients thought so, and the oldest science known and taught among men was the science of astrology. Just how far they reasoned out the rules governing the movements and influences of the planets we cannot tell. That part of astrology has never been divulged, being probably retained as something occult and pertaining to advanced initiation. What they did transmit was merely a set of empirical rules and statements which were essentially exoteric. Perhaps it was just as

well, as in this Kaliyuga of physical science astrology was bound to be neglected, and sneered at, and denounced in any event, whether its rationale was revealed or kept secret. There has, however, been published one book in recent years wherein are given many hints and suggestions by which any student, if so inclined, might do much towards reconstructing the science of astrology and placing it upon a basis of reason instead, as it is now, of empiricism. I refer, of course, to the *Secret Doctrine*.

MICROCOSMIC ANALOGY

In all speculative inquiries, whether in the field of physics or metaphysics, there is no argument which appeals to reason more forcibly than that of analogy. "As above, so below." This phrase expresses the intimate relation and correlation between microcosm and macrocosm. Do we not recognize the fact that law and order permeate the universe? Students of occultism learn as one of their earliest lessons that Man is ever to be regarded as the microcosm and external Nature the macrocosm, or, in other words, that the same general laws or tendencies governing mankind are also exhibited in the natural world. This analogy being once clearly established, it is comparatively easy to understand that the planets and the Sun, like Man, may have a manifold constitution, and may be regarded in many different aspects. The astronomical view is manifestly the lowest, as it comprises only their physical or material attributes.

PLANETS VARIOUSLY DEVELOPED

Let us take as a starting-point, therefore, the well-known seven principles of Man. These may doubtless be applied to each of the planets. At first sight, this may seem perplexing and difficult to prove, at least in its entirety. Where, it may be asked, is the Atma or the Astral body of Saturn, for instance? This is a question that would be very hard to answer without a key. Fortunately that key

is at hand. It is as follows: that while all of the seven principles are inherent in each planet, they may and probably do have different degrees of development. We know that in the stone and the plant and the animal these seven principles exist, though partly latent. In the animal kingdom, for instance, only the four lower principles have as yet found expression, the others remaining in abeyance or undeveloped. So, with the planets, it may be that only a partial development has as yet been attained in some, while others have reached a higher stage. This supposition is doubtless hypothetical, and of course cannot be proven by any appeal to the five senses; yet analogically it is extremely reasonable and more than probable. If it is so, and if the seven planets possess higher attributes distributed among them in varying degrees, then we can begin to understand, or, at any rate, obtain an inkling of, the real basis of astrology.

ORIGIN OF THE ZODIAC

Reference has been made to the Sun as the parent of his satellites. This is explained by the Nebular Hypothesis. It has been shown by Madame Blavatsky in the *Secret Doctrine* (Vol. 1, page 588) that the Nebular Hypothesis is a theory which only partially accounts for the formation of suns and planets generally. In reality, it only throws back the inquiry as to the origin of the Cosmos one step, leaving still unexplained the origin of matter, out of which nebulae were evolved. However, accepting the Hypothesis in its material aspect as probably true, we see how, in accordance with its provisions, the Sun, in turning upon its axis and at the same time moving forward in space, threw off or left behind at different epochs masses of nebulous matter which themselves revolved in the same direction around the Sun and gradually hardened into worlds. As these planets were stripped off from the Sun's equator, they must necessarily have passed off in the same direction into space, and consequently they have ever since

moved upon the same plane, although at varying distances from the central nebula.

These planets are all revolving at varying rates of speed around the sun. Hence it follows that we upon the earth, in looking at the different planets, would always see them travelling in the same path across our apparent sky. That path, which extends about 8 degrees on each side of the ecliptic, is called the zodiac.

COMPOSITION OF THE SUN

If we proceed to view the different planetary bodies in a higher aspect than the merely astronomical, we shall find that they possess certain characteristics or properties which vary with their varying degrees of development. The Sun, for instance, has from time immemorial been known astrologically as the "giver of life." If this be a true denomination, then we must suppose that all life as it exists upon this, and doubtless upon other globes, is derived from the Sun. Life must come from some source, and certainly we cannot trace its origin anywhere on our earth. Yet the life principle is universally diffused, and may be detected in a greater or less degree of development in every atom of matter whether organic or inorganic. This would have been a bold statement to make in public only a very few years ago, but today it requires no argument, being generally admitted by the scientific world. Certainly the latest investigations of physicists tend to corroborate the ancient astrological theory of the origin of life. It is now conceded that the photosphere of the Sun is not composed of fire, as was so long supposed, but is a magnetic or electric envelop. Nor is it very difficult to believe that the phenomenon called life is a certain phase or differentiation of the same mysterious force which in its lowest physical manifestation is known as electricity. In an article on the "Source of Heat in the Sun" in the *Popular Science Monthly*, Mr. Robert Hunt, F.R.S.,

wrote as follows:

"Arago proposed that this envelop should be called the Photosphere, a name now generally adopted. By the elder Herschel the system of this photosphere was compared to mother-of-pearl. It resembles the ocean on a tranquil summer day, when its surface is slightly crisped by a gentle summer breeze. Mr. Nasmyth has discovered a more remarkable condition than any that had previously been suspected, objects that are peculiarly lens-shaped like willow-leaves, different in size, not arranged in any order, crossing each other in all directions, with an irregular motion among themselves. The size of these objects gives a grand idea of the gigantic scale upon which physical operations are carried out in the Sun. They cannot be less than 1,000 miles in length, and from 200 to 300 miles in breadth. The most probable conjecture which has been offered respecting those leaf or lens-like objects is that the photosphere is an immense ocean of gaseous matter in a state of high incandescence, and that they are perspective projections of the sheets of flame. . . . But regarding Life — Vital Force — as a power far more exalted than either light, heat, or electricity, and, indeed, capable of exerting a controlling power over them all, we are certainly disposed to view with satisfaction that speculation which supposes the photosphere to be the primary seat of vital power, and to regard with a poetic pleasure that hypothesis which refers the solar energies to life."

From the above statement it may be seen how modern science treads upon the heels of ancient wisdom, astrology having always denominated the Sun as "hyleg," the giver of life.

SIGNIFICANCE OF THE OTHER PLANETS

In the admission of this hypothesis of life as emanating from the Sun, we have at once stepped beyond and outside of the physical

and material aspect of the great luminary. If all life proceeds from him, then each individual life must also depend upon the common origin, and we are launched upon the sea of astrology. The direct connection between the Sun, 93,000,000 miles distant, upon the health, and consequently to that extent upon the destiny, of every human being, is established. But the influence of other planets upon the inhabitants of earth is less easy of comprehension. Yet even here the law of analogy may hold to some extent. If the Sun has an acknowledged effect upon all of earth's people, the other planets should also possess some influence, even though in a varying degree. Notwithstanding their varying size, it is well known that the power of their attraction is sufficient to cause a considerable variation in the eccentricity of the earth's orbit, and if they possess such influence on the physical plane, why should they not have as much, or even greater, influence upon the astral or psychic plane? Astrology teaches that such is the case, and assigns to each planet a certain kind and degree of such influence. Thus the planet which we familiarly know as Mercury has in all ages and in all nations and in all languages stood as the representative of wisdom. In Sanskrit he was called Buddha, Lord of Wisdom; in Iranian or Chaldaean, Nebo, knowledge; in Egyptian, Thoth or thought. On account of his proximity to the Sun, he was said to receive seven times as much light and life as the earth. In modern exoteric astrology he governs the constructive, the inventive, the intuitive faculty which finds expression in literary or commercial excellence. Originality, at least such originality as can be said to exist, comes from Mercury, the "messenger of the gods".

In Venus is again exemplified the wonderful symbolism of the East. Hindu astrology from the earliest times considered this planet as having two aspects, in one being known as Sukra, the bright, the shining, and in the other and lower aspect as Usanas,

desire. In these names are allegorized the dual and differing influences which Venus exercises upon humanity. In her higher aspect she is the "lesser fortune" of exoteric astrology, shedding a mild and benevolent ray upon the soul of man, inclining him to the gentler affections of family and kindred, and the ties of friendship and social intercourse. She thus lightens up a world otherwise dark, and too often full of sorrow and care. But in her character as Usanas she typifies the lower form of desire, which, carried to excess, leads to so much misery and wrong. This is the true explanation of the influence of Venus. Later astrologers lost the key and confused her significations. Sukra-Usanas became Lucifer-Venus, and the dual name was thought to refer only to her appearance at various seasons in the year as evening and as morning-star. The name Venus was derived directly from Usanas, and Sukra, the shining one, became Lucifer, the bright, the morning-star. And then, last of all, the church took a hand and formulated a theory or, rather, a myth — - whichever you choose to call it — still further degrading the noble conception of the early Aryan star-gazers. She decided that, as the loftier aspects of Venus had disappeared from Latin astrology and only the grosser aspect prevailed, Lucifer should be considered as a fallen angel, as a basis for the myth of Satan, in fact; and that idea has descended to the present day among even the orthodox Protestants, who are not generally aware of its Romanist origin.

In the name of Jupiter is found an argument for the Hindu claim to the invention of astrology. The Latin word "Jupiter" is borrowed from Greek mythology, where the father of the gods is called "Zeus pater," but this is manifestly a direct copy from the Sanskrit "Dyaus pitar," father of heaven, an epithet of Indra. The word "Zeus" has no meaning, but "Dyaus" in Sanskrit has a very definite interpretation. The root "div" means "to shine", and hence its application to the sky. Our word "day" is directly

evolved from it. In the same way the Aryans, reverencing the sky with all its starry host, came to regard it as "divine", and "dyaus", which originally meant bright and shining, passed into Greek as Zeus, the god of gods. Astrology very appropriately considers Jupiter as governing the religious faculty in Man, and he also indicates judgment and reason. He is the greater benefic, and his influence under favorable directions is always for the highest and most permanent good. The Sun may bring glory, and Mercury may induce fame, but Jupiter confers more lasting and substantial benefits by penetrating the inner nature and stimulating the spiritual growth.

In Saturn we have the antithesis of Jupiter. He is the "greater infortune", and, indeed, to his baleful influence may be traced nearly all of the misfortune with which humanity is afflicted. The name "Saturn" can be traced to Sut or Sut-Typhon, the dragon of Egyptian mythology, the evil spirit, the spirit of darkness, from which Christianity deduced the conception of the devil, even borrowing the very name and calling this personage Satan. Yet Saturn did not originate in Egypt. Like almost every other important mythical idea and metaphysical thought, we can trace this one back to India, where Asita, the evil one, means literally that which is black. To this day in exoteric astrology Saturn always represents a dark person. And even such a simple, everyday word as soot, in English, the black particles of smoke deposited in chimneys, comes from the same ancient source. So, too, Saturn's day has always been the seventh day of the week in all nations and all languages. Among the Egyptians Sut-Typhon was so dreaded that his day was set apart for special prayer and worship, a custom which was subsequently taken up by the Hebrews and continued by them up to the present time.

The etymology of Mars is equally interesting. Of course we are familiar with its Greek form, "Ares", which doubtless came from

the Egyptian Artes. Yet neither of these names has any inherent significance. It is only when we again refer to the Sanskrit that light appears. Here the name appears as Ava, and it means primarily a corner, an angle, hence anything sharp or cutting. This gives us the key to the influence of Mars. He is not peaceful and pleasant, but quarrelsome and sudden. He presides over battles as the Roman god of war, and in sickness he produces violent and sharp attacks such as fevers and apoplexy. All lingering diseases are due to Saturn. Therefore is Mars termed the "lesser infortune." The good aspects of Mars, however, confer advancement in military life, and sometimes even produce marriage, but in the latter case there is seldom any real affection, marriage being suddenly brought about by an influx of mere passion. It is an aphorism in astrology that people born with Mars in Aries on the ascendant always have a scar upon the face. The reason for this is said to be that when Mars comes exactly to the ascendant he causes an accident, and as Aries rules the head, it will take the form of some cut or bruise which will show through life upon the countenance.

Although the earth is not usually considered in exoteric astrology to have any influence, at least upon the lives of its own inhabitants, it may be interesting to know that our planet, like the others, possesses marked characteristics. How gratifying it would be to us if we could only define those characteristics as being of a lofty and noble order. But alas! such is not the case. From the most ancient times the earth has stood for all that is ignoble and material and base and unspiritual. In order not to offend the susceptibilities of people, dwellers upon this globe — "of the earth earthy" — astrology has kindly cast a veil over our weakness, and hidden under the disguise of an assumed name the symbol which designates our planet and its influence. The term "part of fortune" expresses to a limited degree the nature of that influence. It does,

indeed, represent the merely temporal prosperity of the native. It measures, so to speak, the exact size of the pile of dollars or other kinds of money and property which each person is able to accumulate in a lifetime. The existence of the Part of Fortune is disputed by some modern astrologers on the ground that it is purely a figment of the imagination, yet Claudius Ptolemy laid great stress upon it, and as he derived his rules from Egyptian and Chaldaean predecessors, it would seem as though there must be some foundation for it.

HELIOCENTRIC AND GEOCENTRIC ASTROLOGY

The mere fact of the Part of Fortune, or Earth, being included in all ancient horoscopes is an indication that at one time astrology was based upon the heliocentric system. According to the present geocentric theory which constructs a horoscope about the earth as a centre, it would seem absurd to introduce the same Earth again in the same horoscope as a planet or satellite of itself. Yet if at a remote epoch the heliocentric system was in vogue, the Earth would certainly figure along with Mars, Venus, and the other planets. And if, then, at a subsequent period the science was purposely or ignorantly muddled by being changed into a geocentric scheme, the Earth might very naturally survive as a feature of the horoscope, changed only in name to the Part of Fortune.

The principal objection urged against astrology at the present day is the fact that it implies a geocentric arrangement of the heavens. We all know how Copernicus revolutionized modern astronomy by introducing, or perhaps revamping, the heliocentric theory, and everyone knows what a tremendous step forward was thus taken in our knowledge and understanding of the movement of all bodies in our solar system. And it is therefore quite natural to denounce astrology as false because it still adheres to the

geocentric arrangement. Yet the comparison is not entirely perfect. We mortals are dwelling upon this Earth, and according as the other planets revolve and focus upon us their rays, so are we, according to the astrological theory, affected. So, to all intents and purposes, we may truly consider them as circling around the earth as a centre, and in that fashion construct our horoscopes. If we were living upon Mars, it would be equally appropriate to place Mars in the centre, and likewise if we were denizens of the Sun we would put the Sun in the centre, in which case we would have truly and as a matter of fact a system of heliocentric astrology.

I have brought forward this view of the subject to show that astrology should not be condemned solely on account of its geocentric proclivities, and to answer the criticism of R. A. Proctor and other scientific writers. Yet, having made that defense, I am ready to admit that the astrology of the future will probably be heliocentric. The cycles and epicycles of Ptolemy answered their purpose for fifteen hundred years, and afforded a tolerably reasonable account of the motions of the planets. So, too, and perhaps in a yet greater degree, geocentric astrology has fulfilled the necessary conditions of horoscopy. Various attempts, on the other hand, have been made to construct a heliocentric system, but so far without success.

PRECESSION OF THE EQUINOXES

Another objection frequently brought against astrology is the fact that by means of the precession of the equinoxes the signs of the zodiac have since the time of Ptolemy passed entirely out of the constellations after which they were named. This appears to be a more difficult question to meet than the previous one. Yet Ptolemy was fully aware of this constant change in the position of the signs, for he distinctly provided in the *Tetrabiblos* for this

contingency. He said in Book I, Chap. xii.:

"The beginning of the whole Zodiacal circle (which in its nature as a circle can have no other beginning or end capable of being determined) is, therefore, assumed to be the sign Aries which commences at the vernal equinox."

It will thus be seen that Ptolemy, and doubtless other astrologers before him, considered the influence of the Zodiacal signs as belonging to the places which they occupied, and not to the stars of which they were composed.

Ashmand says: "He (Ptolemy) has expressly and repeatedly declared that the point of the vernal equinox is ever the beginning of the Zodiac, and that the 30 degrees following it ever retain the same virtue as that which he has in this work attributed to Aries, although the stars forming Aries may have quitted those degrees. The next 30 degrees are to be accounted as Taurus, and so of the rest. There is abundant proof throughout the *Tetrabiblos* that Ptolemy considered the virtues of the constellations of the Zodiac as distinct from the spaces they occupied."

DIRECTIONS AND TRANSITS

Predictions in astrology are based upon three kinds of aspects, which are known respectively as primary and secondary directions and local transits. These follow an obscure and inexplicable law of cycles, and, while apparently distinct, are in reality greatly dependent upon each other; so much so, that if an astrologer consults but one kind, he will obtain very unsatisfactory and uncertain results. Primary directions depend upon the revolution of the earth upon its own axis every twenty-four hours. In that time each planet apparently travels completely around us, making a circuit of 360 degrees. As in twenty-four

hours these pass over the meridian 360 degrees, in one hour they will pass over 15 degrees, and one degree being equal to one-fifteenth of an hour, is therefore equivalent to four minutes. One degree of right ascension is considered equal to one year of time. Hence an error of four minutes in the time of birth will cause an error of one degree of right ascension or of one whole year in the subsequent life of the native. This is why it is so essential to know the exact moment of birth before drawing up a horoscope, or at least before attempting to forecast future events. And the lack of this information has been the cause of so many failures of astrologers in the past to accurately predict important occurrences. Fortunately there are rules by which the exact moment of birth may be ascertained and the truth of primary directions vindicated.

It is comparatively easy to compute secondary directions. They are said to be "merely the aspects formed by the Sun or Moon within a few weeks after birth by their proper motion in longitude in the heavens." But this definition fails to convey any meaning to the ordinary reader. I would add in explanation that, following the same law of cycles as is manifested in primary directions, although in a slightly different aspect, each day succeeding birth is considered as equivalent to a year of subsequent life. Thus the tenth day after birth will show events that will happen in the tenth year, the twentieth day the twentieth year, and so on. Secondary directions indicate affairs of secondary importance, yet whose effects last several weeks or months, while primary directions denote the greater occurrences and epochs of a career, frequently extending over a series of years, during which time a person is said to be uniformly lucky or unlucky as the case may be.

Local transits are extremely simple and are generally employed by professional astrologers. They are based upon the direct

motion of the planets around the Sun. While to the observer of the heavens night after night the planets which are visible appear to retain about the same relative position to each other, in reality they are moving onward at varying rates of speed, and each night take a slightly different position. While our earth completes the circuit of the Sun in one year, it takes about thirty years for Saturn to finish his orbit. Each planet has a different rate of speed. Hence the combinations of position that arise daily are practically infinite. The local transits are the transits of one planet over the place of another in any nativity. They produce the minor events of life, the daily cares, annoyances, triumphs, and joys which everyone has, but which do not as a rule occasion any lasting effect. If, however, there is a coincidence of several evil transits at about the same time, particularly if the primary and secondary directions are also bad, then serious results may be expected. It is said that even primary directions cannot take effect without having transits of a similar nature to work through, and on this many professional astrologers ignore primary directions altogether, claiming that the local transits furnish all the data required for making predictions. In reality the reason for such omission is the difficulty of computing such primary directions. Local transits, on the other hand, require no mathematical skill or labor. The positions of the planets from day to day are given in every ephemeris or almanac published.

EMPIRICAL RULES

It may be inferred from the foregoing hasty sketch of the main features of astrology that there is much in the science, as at present taught and practised, which cannot be understood. We read the rules laid down in the books, but no analysis is able to make clear to us their reason. Taking the aspects, for instance, no one can tell why a square, which implies four, should consist of only three signs of the Zodiac, while trine, implying three, should

in reality embrace four signs or houses. Many other perplexing features arise to embarrass the student. It may be admitted without argument that a large part of the science is empirical. We have simply inherited a mass of rules and aphorisms which may be applied blindly, and our only consolation is that when properly used they generally bring about results which tally with the actual facts. We may not know why a certain direction in some person's horoscope will produce decidedly good or malefic effects, but that such effects are produced is proven to us again and again, until even the most skeptical must acknowledge the verification. Perhaps the empiricism is incident to the materialism of the age. It may be that with greater psychic development, or at any rate development of the intuitive intelligence, many of these blind rules will be made plain.

PRESENT ASTROLOGICAL STATUS

In the meanwhile it is not by any means safe to sneer at this most ancient of all sciences, or even to belittle its importance at the present day. The mistakes of professional astrologers, the vain pretenses of vulgar charlatans, the lack of earnest and thorough study on the part of those who are by nature qualified to succeed in it, are all drawbacks which combine to hide a knowledge of astrology from, the world at large, and thus render it essentially occult. Yet no one can investigate its claims in an unprejudiced spirit, or even pursue the study of it to a limited extent, without coming across sufficient evidence to prove that there is really something in it, — that it is not all a mere imaginary scheme. Individual assertion is, of course, of little value in a matter of this kind, else the testimony of the wisest men of all ages would not be so contemptuously disregarded as it is by the self-sufficient, materialistic, scientific writers of today. Doubtless there is room for improvement in the art and practice of astrology as it is now set forth, yet the errors and misconceptions of its practitioners

are far more than outweighed by the constant verification of its rules and principles. What it wants is not ignorant abuse and denunciation, but serious investigation and study. Perhaps the twentieth century, whose dawn is already heralded by a widening of the range of human thought and a breaking down of the old walls of bigotry, will develop some intuitive soul who will see through the veils of empiricism by which astrology is now obscured, and so lift it up to the plane where it rightfully belongs as one of the keys to the mysteries of life and cosmic evolution.

The Path

LODGES OF MAGIC — *H. P. Blavatsky*

The following article by Madame Blavatsky appeared in "Lucifer" for October, 1888, and has teaching value for Theosophists still.

"When fiction rises pleasing to the eye.
Men will believe, because they love the lie;
But Truth herself, if clouded with a frown.
Must have some solemn proofs to pass her down."

CHURCHILL

One of the most esteemed of our friends in occult research propounds the question of the formation of "working-Lodges" of the Theosophical Society, for the development of adeptship. If the practical impossibility of forcing this process has been shown once in the course of the Theosophical movement, it has scores of times. It is hard to check one's natural impatience to tear aside the veil of the Temple. To gain the divine knowledge, like the prize in a classical tripos, by a system of coaching and cramming, is the ideal of the average beginner in occult study. The refusal of the originators of the Theosophical Society to encourage such false hopes has led to the formation of bogus Brotherhoods of *Luxor* (and Armley Jail?) as speculations on human credulity. How enticing the bait for gudgeons in the following specimen prospectus, which a few years ago caught some of our most earnest friends and Theosophists.

"Students of the occult science, searchers after truth, and Theosophists who may have been disappointed in their expectations of Sublime Wisdom being freely dispensed by HINDI MAHATMAS, are cordially invited to send in their names to . . . , when, if found suitable, they can be admitted, after a short probationary term, as Members of an Occult Brotherhood, who

do not boast of their knowledge or attainments, but teach freely" (at £1 to £5 per letter?) and without reserve (the nastiest portions of P. B. Randolph's "Eulis") "all they find worthy to receive" (read: teachings on a commercial basis; the cash going to the teachers, and the extracts from Randolph and other "love-philter" sellers to the pupils!) (1)

If rumor be true, some of the English rural districts, especially Yorkshire, are overrun with fraudulent astrologers and fortune-tellers, who pretend to be Theosophists, the better to swindle a higher class of credulous patrons than their legitimate prey, the servant maid and callow youth. If the "lodges of magic", suggested in the following letter to the Editors of this Magazine, were founded without having taken the greatest precautions to admit only the best candidates to membership, we should see these vile exploitations of sacred names and things increase an hundredfold. And in this connection, and before giving place to our friend's letter, the senior Editor of LUCIFER begs to inform her friends that she has never had the remotest connection with the so-called "H(ermetic) B(rotherhood) of L(uxor)", and that all representations to the contrary are false and dishonest. There is a secret body — whose diploma, or Certificate of Membership, is held by Col. Olcott alone among modern men of white blood — to which that name was given by the author of *Isis Unveiled* for convenience of designation, (2) but which is known among Initiates by quite another one, just as the personage known to the public under the pseudonym of "Koot Hoomi" is called by a totally different name among his acquaintance. What the real name of that Society is, it would puzzle the "Eulian" phallicists of the "H. B. of L." to tell. The real names of Master Adepts and Occult Schools are never, *under any circumstances*, revealed to the profane; and the names of the personages who have been talked about in connection with modern Theosophy are in the possession only of

the two chief founders of the Theosophical Society. And now having said so much by way of preface, led us pass on to our correspondent's letter. He writes:

"A friend of mine, a natural mystic, had intended to form, with others, a Branch T.S. in his town. Surprised at his delay, I wrote to ask the reason. His reply was that he had heard that the T.S. only met and talked, and did nothing practical. I always did think the T.S. ought to have Lodges in which something practical should be done. Cagliostro understood well this craving of humans for something before their eyes, when he instituted the Egyptian Rite and put it in practice in various Freemason lodges. There are many readers of *Lucifer* in . . . shire. Perhaps in it there might be a suggestion for students to form such lodges for themselves, and to try, by their united wills, to develop certain powers in one of the number, and then through the whole of them in succession. I feel sure numbers would enter such lodges, and create a great interest for Theosophy. "A."

In the above note of our venerable and learned friend is the echo of the voices of ninety-nine hundredths of the members of the Theosophical Society: one hundredth only have the correct idea of the function and scope of our Branches. The glaring mistake generally made is in the conception of Adeptship and the path thereunto. Of all thinkable undertakings that of trying for Adeptship is the most difficult. Instead of being obtainable within a few years or one lifetime, it exacts the unremitting struggles of a series of lives, save in cases so rare as to be hardly worth regarding as exceptions to the general rule. The records certainly show that a number of the most revered Indian Adepts became so despite their births in the lowest, and seemingly most unlikely, castes. Yet it is well understood that they had been progressing in

the upward direction throughout many previous incarnations, and, when they took birth for the last time, there was left but the merest trifle of spiritual evolution to be accomplished, before they became great living Adepts. Of course no one can say that one or all of the possible members of our friend A's ideal Cagliostrian lodge might not also be ready for Adeptship, but the chance is not good enough to speculate upon: Western civilization seems to develop fighters rather than philosophers, military butchers rather than Buddhas. The plan "A" proposes would be far more likely to end in mediumship than Adeptship. Two to one there would not be a member of the lodge who was chaste from boyhood and altogether untainted by the use of intoxicants. This is to say nothing of the candidates' freedom from the polluting effects of the evil influences of the average social environment. Among the indispensable pre-requisites for psychic development, noted in the mystical Manuals of all Eastern religious systems, are a pure place, pure diet, pure companionship, and a pure mind. Could "A" guarantee these? It is certainly desirable that there should be some school of instruction for members of our Society; and had the purely exoteric work and duties of the founders been less absorbing, probably one such would have been established long ago. Yet not for practical instruction on the plan of Cagliostro, which, by-the-bye, brought direful suffering upon his head, and has left no marked traces behind to encourage a repetition in our days. "When the pupil is ready, the teacher will be found waiting", says an Eastern maxim. The Masters do not have to hunt up recruits in special. shire lodges, nor drill them through mystical non-commissioned officers: time and space are no barriers between them and the aspirant; where thought can pass they can come. Why did an old and learned Kabbalist like "A." forget this fact? And let him also remember that the potential Adept may exist in the Whitechapels and Five Points of Europe and America, as well as in the cleaner and more

"cultured" quarters; that some poor ragged wretch, begging a crust, may be "whiter-souled" and more attractive to the Adept than the average bishop in his robe, or a cultured citizen in his costly dress. For the extension of the Theosophical movement, a useful channel for the irrigation of the dry fields of contemporary thought with the water of life, Branches are needed everywhere; not mere groups of passive sympathisers, such as the slumbering army of church-goers, whose eyes are shut while the "devil" sweeps the field; no, not such. Active, wide awake, earnest, unselfish Branches are needed, whose members shall not be constantly unmasking their selfishness by asking "What will it profit us to join the Theosophical Society, and how much will it harm us?", but be putting to themselves the question "Can we not do substantial good to mankind by working in this good cause with all our hearts, our minds, and our strength?" If "A." would only bring his . . . shire friends, who pretend to occult leanings, to view the question from this side, he would be doing them a real kindness. The Society can get on without them, but they cannot afford to let it do so.

Is it profitable, moreover, to discuss the question of a Lodge receiving even theoretical instruction, until we can be sure that all the members will accept the teachings as coming from the alleged source? Occult truth cannot be absorbed by a mind that is filled with preconception, prejudice, or suspicion. It is something to be perceived by the intuition rather than by the reason; being by nature spiritual, not material. Some are so constituted as to be incapable of acquiring knowledge by the exercise of the spiritual faculty; e.g. the great majority of physicists. Such are slow, if not wholly incapable of grasping the ultimate truths behind the phenomena of existence. There are many such in the Society; and the body of the discontented are recruited from their ranks. Such persons readily persuade themselves that later teachings,

received from exactly the same source as earlier ones, are either false or have been tampered with by chelas, or even third parties. Suspicion and inharmony are the natural result, the psychic atmosphere, so to say, is thrown into confusion, and the reaction, even upon the stauncher students, is very harmful. Sometimes vanity blinds what was at first strong intuition, the mind is effectually closed against the admission of new truth, and the aspiring student is thrown back to the point where he began. Having jumped at some particular conclusion of his own without full study of the subject, and before the teaching had been fully expounded, his tendency, when proved wrong, is to listen only to the voice of his self-adulation, and cling to his views, whether right or wrong. The Lord Buddha particularly warned his hearers against forming beliefs upon tradition or authority, and before having thoroughly inquired into the subject.

An instance. We have been asked by a correspondent why he should not "be free to suspect some of the so-called 'precipitated' letters as being forgeries", giving as his reason for it that while some of them bear the stamp of (to him) undeniable genuineness, others seem from their contents and style to be imitations. This is equivalent to saying that he has such an unerring spiritual insight as to be able to detect the false from the true, though he has never met a Master, nor been given any key by which to test his alleged communications. The inevitable consequence of applying his untrained judgment in such cases would be to make him as likely as not to declare false what was genuine, and genuine what was false. Thus what *criterion* has any one to decide between one "precipitated" letter, or another such letter? Who except their authors, or those whom they employ as their *amanuenses* (their *chelas* and disciples), can tell? For it is hardly one out of a hundred "occult" letters that is ever written by the hand of the Master in whose name and on whose behalf they are sent, as the

Masters have neither need nor leisure to write them; and that when a Master says, "I wrote that letter", it means only that every word in it was dictated by him and impressed under his direct supervision. Generally they make their chela, whether near or far away, write (or precipitate) them, by impressing upon his mind the ideas they wish expressed, and if necessary aiding him in the picture-printing process of precipitation. It depends entirely upon the *chela's* state of development how accurately the ideas may be transmitted and the writing-model imitated. Thus the *non-adept* recipient is left in the dilemma of uncertainty whether, if one letter is false, all may not be; for, as far as intrinsic evidence goes, all come from the same source and all are brought by the same mysterious means. But there is another and a far worse condition implied. For all that the recipient of "occult" letters can possibly know, and on the simple grounds of probability and common honesty, the unseen correspondent who would tolerate one *single fraudulent line in his name* would wink at an unlimited repetition of the deception. And this leads directly to the following. All the so-called *occult* letters being supported by identical proofs, *they have all to stand or fall together*. If one is to be doubted, then all have, and the series of letters in the *Occult World, Esoteric Buddhism*, etc., etc., may be, and there is no reason why they should not be in such a case — *frauds*, "clever impostures", and "forgeries", such as the ingenuous though stupid agent of the "S.P. R." has made them out to be, in order to raise in the public estimation the "scientific" acumen and standard of his "Principals".

Hence, not a step in advance would be made by a group of students given over to such an unimpressible state of mind, and without any guide *from the occult side* to open their eyes to the esoteric pitfalls. And where are such guides, so far, in our Society? "They be blind leaders of the blind", both falling into the ditch of

vanity and self-sufficiency. The whole difficulty springs from the common tendency to draw conclusions from insufficient premises, and play the oracle before ridding oneself of that most stupefying of all psychic anesthetics — IGNORANCE..

FOOTNOTES:

1. Documents on view at LUCIFER's Office, viz., Secret MSS. written in the handwriting of (name suppressed for past considerations), "Provincial Grand Master of the Northern Section". One of these documents bears the heading, "A brief Key to the Eulian Mysteries," *i.e.* *Tantric* black magic on a phallic basis. No; the members of *this* Occult Brotherhood "do not boast of their knowledge". Very sensible on their part: least said soonest mended. ([return to text](#))

2. In *Isis Unveiled* vol. ii. p. 308. It may be added that the "Brotherhood of Luxor" mentioned by Kenneth Mackenzie '*vide* his *Royal Masonic Cyclopaedia* as having its seat in America, had, after all, nothing to do with the Brotherhood mentioned by and known to us, as was ascertained after the publication of *Isis* from a letter written by this late Masonic author to a friend in New York. The Brotherhood Mackenzie knew of was simply a Masonic Society on a rather more secret basis, and, as he stated in the letter, he had *heard of, but knew nothing of our* Brotherhood, which having had a branch at Luxor (Egypt), was thus purposely referred to by us under this name alone. This led some schemers to infer that there was a regular Lodge of Adepts of that name, and to assure some credulous friends and Theosophists that the "H. B. of L." was either identical or a branch of the same, supposed to be near Lahore! — which was the most flagrant untruth. ([return to text](#))

MOON'S MYSTERY AND FATE — *William Brehon*

Probably no heavenly body has received as much attention from men in all ages as our moon. Many causes contributed to this. The moon is near us; she is a remarkable and large object in the sky; she enlightens the night; she appears to have much to do with man and his affairs. Omens, spells, wishes, oracles, divination, traditions cluster around her during all time. It would be difficult to find a scripture that does not exalt the moon. The Christian Bible says that God ordained that the sun should rule the day and the moon the night. The Roman Church depicts Mary the Mother of God holding the child while she stands upon the crescent moon. The twelfth chapter of Revelations opens thus:

And there appeared a great wonder in heaven; a woman clothed with the sun, and the moon under her feet, and upon her head a crown of twelve stars.

Other religions are the same as this modern Hebraic one in giving the moon a very great prominence.

Even science cannot escape the fascination. The brilliancy and nearness of the moon and her many recurring changes all aid in fixing the attention of science. Modern and ancient science alike unite in watching the night's great light as she performs her journey round us. Nations regulate themselves and their acts, religious and commercial, by the moon. Feast days of the church are fixed more by the lunar than the solar calendar, for all the movable feasts depend on the moon. Calendars rule commercial affairs in credits, obligations, and settlements.

From earliest times the calendar, ruled in fact by the moon's motion, has been of immense interest to man. Periodically rulers

of the earth try to reform the calendar of days and months when it as periodically gets out of order. The present arrangement of months with twenty-eight, twenty-nine, thirty, and thirty-one days was invented to make a calendar which would last some centuries before another one will be needed, just because the moon's motion will not give twelve regular months, but twelve regular ones and one small one of about six days. And when the present style of reckoning was introduced, many communities of men in Europe rebelled because they thought they had been deprived of some actual days of life.

Caesar ordered a reformation of the calendar by attempting to use the sun, but in time it fell into great confusion. Pope Gregory XIII directed ten days to be suppressed, and then found that the Julian calendar had an error which would amount to three days in four hundred years — quite a serious matter. The Gregorian year now prevails, except in Russia. But still the greater number of men and the greater number of festivals depend on the moon and her motion. While if we examine the records relating to superstition, we will find that whatever may have been the place once held by the sun, it has been usurped by the moon, leaving one nation distinctly worshippers of the Lord of Day.

Modern Theosophy, coming on the field as the uniter of all religions by explaining the symbols and traditions of each, is not exempt from the mystery of the moon. H. P. Blavatsky is our sole originator of a theory regarding the satellite which one could not have invented with the most wonderful imagination. She says her teachers told her, and leaves us to work out the details; but her theory will bear investigation if taken as part of the whole evolutionary scheme reported by her. If we had thought to escape from lunar dreams and puzzles we were in error, for while she plainly asserts that the former body of the entity now called Man's Earth is the very moon in our sky, the existence of a

mystery is as plainly declared. The first mystery which she claimed to reveal — and, indeed, she first of every one states it — is that in a remote period, when there was no earth, the moon existed as an inhabited globe, died, and at once threw out into space all her energies, leaving nothing but the physical vehicle. Those energies revolved and condensed the matter in space near by and produced our earth; the moon, its parent, proceeding towards disintegration, but compelled to revolve around her child, this earth. This gives us a use and history for the moon.

But then the same messenger says that the "superstition" prevailing so long and widely as to the moon's bad influence, as in insanity, in necromancy, and the like, is due to the fact that the moon, being a corpse intimately associated with earth, throws upon the latter, so very near to her, a stream of noxious emanations which, when availed of by wicked and knowing-persons, may be used for man's injury. Then the same writer goes on to assert that six mysterious doctrines or facts remain yet untold, and all relating to the moon.

It would be idle to speculate on these mysteries, for it has ever been found that unless the Great Initiates speak the general run of men can but modify, enlarge, or intertwine by their fancy those facts and doctrines of which they have heard. But as to the fate of the moon, H. P. B., speaking for those Initiates, says plainly what is to become of our satellite.

In the first volume of *Secret Doctrine*, in a foot note on page 155 of the first edition, she writes:

Both [Mercury and Venus] are far older than the earth, and before the latter reaches her seventh Round her mother moon will have dissolved into thin air, as the "moons" of the other planets have, or have not, as the case may be, since there are planets which have *several* moons — a

mystery again which no Œdipus of astronomy has solved.

This is extremely plain as to our moon, yet raises another mystery as to the general subject of moons. If correspondence is a law of nature, as I firmly believe, then it would be in accordance with it for the moon, considered as earth's former body, to dissolve all away in course of time. And as evolution proceeds with uniformity, the upward progress of our races and earth should be marked by the gradual fading and final disappearance of the moon, as H. P. B. says. It is likely that before our sixth round is ended, it being the round relating to *Buddhi* as the vehicle of *spirit*, the body of the moon, which was the vehicle for *prana* and astral body, will have disappeared. Very probably one of the unrevealed mysteries has to do with the uses and purposes of and for the whole mass of matter now constituting the moon's bulk. But whatever those mysteries are, the fate of our satellite is very clearly asserted, for the benefit of those who have confidence in H. P. B.'s teachers, and who are willing to take the key of correspondence for the unlocking of the lock of Nature.

The Path

POINTS OF AGREEMENT IN ALL RELIGIONS (1) — William W. Judge

MR. CHAIRMAN, LADIES AND GENTLEMEN : Let me read you a few verses from some of the ancient Scriptures of the world, from the old Indian books held sacred by the Brahmans of Hindustan.

"What room for doubt and what room for sorrow is there in him who knows that all spiritual beings are the same in kind and only differ from each other in degree?"

"The sun does not shine there, nor the moon and the stars, nor these lightnings, and much less this fire. When He shines, everything shines after Him; by His light all this is lighted.

Lead me from the unreal to the real!

Lead me from darkness to light!

Lead me from death to immortality!

Seeking for refuge, I go to that God who is the light of His own thoughts; He who first creates Brahman and delivers the Vedas to him who is without parts, without actions, tranquil, without fault, the highest bridge to immortality, like a fire that has consumed its fuel". — *Mundaka Upanishad*.

Such are some of the verses, out of many thousands, which are enshrined in the ancient Hindu Vedas beloved by those we have called "heathen"; those are the sentiments of the people we have called idolaters only.

As the representative of the Theosophical movement I am glad to be here, and to be assigned to speak on what are the points of agreement in all religions. I am glad because Theosophy is to be found in all religions and all sciences. We, as members of the

Theosophical Society, endorse to the fullest extent those remarks of your chairman in opening, when he said, in effect, that a theology which stayed in one spot without advancing was not a true theology, but that we had advanced to where theology should include a study of man. Such a study must embrace his various religions, both dead and living. And pushing that study into those regions we must conclude that man is greatly his own revealer, has revealed religion to himself, and therefore that all religions must include and contain truth; that no one religion is entitled to a patent or exclusive claim upon truth or revelation, or is the only one that God has given to man, or the only road along which man can walk to salvation. If this be not true, then your Religious Parliament is no Parliament, but only a body of men admiring themselves and their religion. But the very existence of this Parliament proclaims the truth of what I have said, and shows the need which the Theosophical Society has for nineteen years been asserting, of a dutiful, careful, and brotherly inquiry into all the religions of the world, for the purpose of discovering what the central truths are upon which each and every religion rests, and what the original fountain from which they have come. This careful and tolerant inquiry is what we are here for today; for that the Theosophical Society stands and has stood; for toleration, for unity, for the final and irrevocable death of all dogmatism.

But if you say that religion must have been revealed, then surely God did not wait for several millions of years before giving it to those poor beings called men. He did not, surely, wait until He found one poor Semitic tribe to whom He might give it late in the life of the race? Hence He must have given it in the very beginning, and therefore all present religions must arise from one fount.

What are the great religions of the world and from whence have

they come? They are Christianity, Brahmanism, Buddhism, Confucianism, Judaism, Zoroastrianism, and Mohammedanism. The first named is the youngest, with all its warring sects, with Mormonism as an offshoot and with Roman Catholicism boldly claiming sole precedence and truth.

Brahmanism is the old and hoary religion of India, a grown-up, fully-developed system long before either Buddhism or Christianity was born. It extends back to the night of time, and throws the history of religion far, far beyond any place where modern investigators were once willing to place even the beginning of religious thought. Almost the ancient of ancients, it stands in far-off India, holding its holy Vedas in its hands, calmly waiting until the newer West shall find time out of the pursuit of material wealth to examine the treasures it contains.

Buddhism, the religion of Ceylon, of parts of China, of Burmah and Japan and Tibet, comes after its parent Brahmanism. It is historically older than Christianity and contains the same ethics as the latter, the same laws and the same examples, similar saints and identical fables and tales relating to Lord Buddha, the Savior of Men. It embraces today, after some twenty-five hundred years of life, more people than any other religion, for two-thirds of the human family profess it.

Zoroastrianism also fades into the darkness of the past. It too teaches ethics such as we know. Much of its ritual and philosophy is not understood, but the law of brotherly love is not absent from it; it teaches justice and truth, charity and faith in God, together with immortality. In these it agrees with all, but it differs from Christianity in not admitting a vicarious salvation, which it says is not possible.

Christianity of today is modern Judaism, but the Christianity of Jesus is something different. He taught forgiveness, Moses taught

retaliation, and that is the law today in Christian State and Church. "An eye for an eye, and a tooth for a tooth" is still the recognized rule, but Jesus taught the opposite. He fully agreed with Buddha, who, preaching 500 years before the birth of the Jewish reformer, said we must love one another and forgive our enemies. So modern Christianity is not the religion of Jesus, but Buddhism and the religion of Jesus accord with one another in calling for charity, complete tolerance, perfect non-resistance, absolute self-abnegation.

If we compare Christianity, Buddhism, and Hinduism together on the points of ritual, dogmas, and doctrines, we find not only agreement but a marvellous similarity as well, which looks like an imitation on the part of the younger Christianity. Did the more modern copy the ancient? It would seem probable. And some of the early Christian Fathers were in the habit of saying, as we find in their writings, that Christianity brought nothing new into the world, that it existed from all time.

If we turn to ritual, so fully exemplified in the Roman Catholic Church, we find the same practices and even similar clothing and altar arrangements in Buddhism, while many of the prescribed rules for the altar and approaching or leaving it are mentioned very plainly in far more ancient directions governing the Brahman when acting as priest. This similarity was so wonderful in the truthful account given by the Catholic priest Abbe Hue that the alarmed Church first explained that the devil, knowing that Christianity was coming, went ahead and invented the whole thing for the Buddhists by a species of *ante facto* copying, so as to confound innocent Catholics therewith; and then they burned poor Abbe Hue's book. As to stations of the cross, now well known to us, or the rosary, confession, convents, and the like, all these are in the older religion. The rosary was long and anciently used in Japan, where they had over one hundred and seventy-two

sorts. And an examination of the mummies of old Egypt reveals rosaries placed with them in the grave, many varieties being used. Some of these I have seen. Could we call up the shades of Babylon's priests, we should doubtless find the same rituals there.

Turning to doctrines, that of salvation by faith is well known in Christianity. It was the cause of a stormy controversy in the time of St. James. But very strangely, perhaps, for many Christians, the doctrine is a very old Brahmanical one. They call it "The Bridge Doctrine", as it is the great Bridge. But with them it does not mean a faith in some particular emanation of God, but God is its aim, God is the means and the way, and God the end of the faith; by complete faith in God, without an intermediary, God will save you. They also have a doctrine of salvation by faith in those great sons of God, Krishna, Rama, and others; complete faith in either of those is for them a way to heaven, a bridge for the crossing over all sins. Even those who were killed by Krishna, in the great war detailed in the *Ramayana*, went straight to heaven because they looked at him, as the thief on the cross looking at Jesus went to Paradise. In Buddhism is the same doctrine of faith. The twelve great sects of Buddhism in Japan have one called the Sect of the Pure Land. This teaches that Amitabha vowed that any one who calls three times on his name would be born into his pure Land of Bliss. He held that some men may be strong enough to prevail against the enemy, but that most men are not, and need some help from another. This help is found in the power of the vow of Amita Buddha, who will help all those who call on his name. The doctrine is a modified form of vicarious atonement, but it does not exclude the salvation by works which the Christian St. James gives out.

Heaven and Hell are also common to Christianity, Buddhism, and Brahmanism. The Brahman calls it Swarga; the Buddhist, Devachan; and we, Heaven. Its opposite is Naraka and Avitchi.

But names apart, the descriptions are the same. Indeed, the hells of the Buddhists are very terrible, long in duration and awful in effect. The difference is that the heaven and hell of the Christian are eternal, while the others are not. The others come to an end when the forces which cause them are exhausted. In teaching of more than one heaven there is the same likeness, for St. Paul spoke of more than a single heaven to one of which he was rapt away, and the Buddhist tells of many, each being a grade above or below some other. Brahman and Buddhist agree in saying that when heaven or hell is ended for the soul, it descends again to rebirth. And that was taught by the Jews. They held that the soul was originally pure, but sinned and had to wander through rebirth until purified and fit to return to its source.

In priesthood and priestcraft there is a perfect agreement among all religions, save that the Brahman instead of being ordained a priest is so by birth. Buddha's priesthood began with those who were his friends and disciples. After his death they met in council, and subsequently many councils were held, all being attended by priests. Similar questions arose among them as with the Christians, and identical splits occurred, so that now there are Northern and Southern Buddhism and the twelve sects of Japan. During the life of Buddha the old query of admitting women arose and caused much discussion. The power of the Brahman and Buddhist priests is considerable, and they demand as great privileges and rights as the Christian ones.

Hence we are bound to conclude that dogmatically and theologically these religions all agree. Christianity stands out, however, as peculiarly intolerant — and in using the word "intolerant" I but quote from some priestly utterances regarding the World's Fair Parliament — for it claims to be the only true religion that God has seen fit to reveal to man.

The great doctrine of a Savior who is the son of God — God himself — is not an original one with Christianity. It is the same as the extremely ancient one of the Hindus called the doctrine of the Avatar. An Avatar is one who comes down to earth to save man. He is God incarnate. Such was Krishna, and such even the Hindus admit was Buddha, for he is one of the great ten Avatars. The similarity between Krishna or Cristna and Christ has been very often remarked. He came 5,000 years ago to save and benefit man, and his birth was in India, his teaching being Brahmanical. He, like Jesus, was hated by the ruler, Kansa, who desired to destroy him in advance, and who destroyed many sons of families in order to accomplish his end, but failed. Krishna warred with the powers of darkness in his battles with Ravana, whom he finally killed. The belief about him was that he was the incarnation of God. This is in accord with the ancient doctrine that periodically the Great Being assumes the form of man for the preservation of the just, the establishment of virtue and order, and the punishment of the wicked. Millions of men and women read every day of Krishna in the *Ramayana* of Tulsi Das. His praises are sung each day and reiterated at their festivals. Certainly it seems rather narrow and bigoted to assume that but one tribe and one people are favored by the appearance among them of an incarnation in greater measure of God.

Jesus taught a secret doctrine to his disciples. He said to them that he taught the common people in stories of a simple sort, but that the disciples could learn of the mysteries. And in the early age of Christianity that secret teaching was known. In Buddhism is the same thing, for Buddha began with one vehicle or doctrine, proceeded after to two, and then to a third. He also taught a secret doctrine that doubtless agreed with the Brahmans who had taught him at his father's court. He gave up the world, and later gave up eternal peace in Nirvana, so that he might save men. In

this the story agrees with that of Jesus. And Buddha also resisted Mara, or the Devil, in the wilderness. Jesus teaches that we must be as perfect as the Father, and that the kingdom of heaven is within each. To be perfect as the Father we must be equal with him, and hence here we have the ancient doctrine taught of old by the Brahmins that each man is God and a part of God. This supports the unity of humanity as a spiritual whole, one of the greatest doctrines of the time prior to Christianity, and now also believed in Brahmanism.

That the universe is spiritual in essence, that man is a spirit and immortal, and that man may rise to perfection, are universal doctrines. Even particular doctrines are common to all the religions. Reincarnation is not alone in Hinduism or Buddhism. It was believed by the Jews, and not only believed by Jesus but he also taught it. For he said that John the Baptist was the reincarnation of Elias "who was for to come". Being a Jew he must have had the doctrines of the Jews, and this was one of them. And in Revelations we find the writer says: "Him that overcometh I will make a pillar in the house of my God, and he shall go out no more".

The words "no more" infer a prior time of going out.

The perfectibility of man destroys the doctrine of original sin, and it was taught by Jesus, as I said. Reincarnation is a necessity for the evolution of this perfection, and through it at last are produced those Saviors of the race of whom Jesus was one. He did not deny similar privileges to others, but said to his disciples that they could do even greater works than he did. So we find these great Sages and Saviors in all religions. There are Moses and Abraham and Solomon, all Sages. And we are bound to accept the Jewish idea that Moses and the rest were the reincarnations of former persons. Moses was in their opinion Abel the son of Adam;

and their Messiah was to be a reincarnation of Adam himself who had already come the second time in the person of David. We take the Messiah and trace him up to David, but refuse, improperly, to accept the remainder of their theory.

Descending to every-day-life doctrines, we find that of Karma or that we must account and receive for every act. This is the great explainer of human life. It was taught by Jesus and Matthew and St. Paul. The latter explicitly said:

"Brethren, be not deceived; God is not mocked; for whatsoever a man soweth, that also shall he reap."

This is Karma of the Brahman and Buddhist, which teaches that each life is the outcome of a former life or lives, and that every man in his rebirths will have to account for every thought and receive measure for the measure given by him before.

In ethics all these religions are the same, and no new ethic is given by any. Jesus was the same as his predecessor Buddha, and both taught the law of love and forgiveness. A consideration of the religions of the past and today from a Theosophical standpoint will support and confirm ethics. We therefore cannot introduce a new code, but we strive by looking into all religions to find a firm basis, not due to fear, favor, or injustice, for the ethics common to all. This is what Theosophy is for and what it will do. It is the reformer of religion, the unifier of diverse systems, the restorer of justice to our theory of the universe. It is our past, our present, and our future; it is our life, our death, and our immortality.

FOOTNOTES:

1. An address delivered April 17th, 1804. before the Parliament of Religions at San Francisco, Calif., by William Q. Judge.

The Midwinter Fair at San Francisco had annexed to it a Religious

Parliament modeled after the first great one of 1893 at Chicago. Dr. J. D. Buck and William Q. Judge, the latter as General Secretary American Section, were officially invited to address the Parliament at one of its sessions as representatives of the Theosophical movement. Time was so short that all speakers were limited to thirty minutes each; for that reason the address is not as full as it would be had more time been granted. But the occasion once more showed the strength of the T.S. movement. ([return to text](#))

The Path

HOW TO STUDY THE "SECRET DOCTRINE": I — *J. H. Fussell*

Is there a key to the study of the *Secret Doctrine*? Are the seeming contradictions in the *Secret Doctrine* really such, or is there a possibility of their reconciliation?

It is not the purpose of this paper to show that the apparent contradictions are *not* contradictions, nor even to attempt to reconcile any of them; for, while it is claimed by some students that such reconciliation can be shown in many cases, others fail to see it in any. Nor is it necessary to bring up the question of the fallibility of the writer of the book, for even going so far as to grant infallibility to H. P. B., which she herself would have disclaimed, there remains the imperfection of the language in which the book is written, and its inadequacy to express purely metaphysical ideas. There is, however, it is claimed, a key to the study of the *Secret Doctrine*, the use of which will open many of its doors, clear away many of its difficulties, connect many otherwise disconnected statements, and even reconcile some of its apparent contradictions.

Theosophy is synthetic. The *Secret Doctrine* is also synthetic, and the key to its study, if such may be found, must also be, so to say, synthetic. For the difficulty in understanding it is partly due to the fact of the many points of view from which each subject is treated and the absence of definite links to connect the different statements thence arising: *e. g.* a subject in one place may be treated from the standpoint of the Vedanta philosophy, and in another place from that of the Sankya philosophy, and again from a third standpoint elsewhere. Add to all this the personal equation of the reader, usually a very important factor, depending upon education and general trend of mind, and it will

be evident that it is no easy matter to reduce to order the great mass of information contained in the volumes under consideration.

It may be as well at this point to call to mind one of the preliminary requisites for the study of Occultism, and the value of a pursuit of the second object of the T. S., viz.: to free the mind from all preconceived ideas which may be due to inheritance and training, so that the true underlying meaning of the subject in hand may be grasped apart from the garb in which it is given, or the particular system of philosophy according to which it is presented. In other words, every student must learn to think for himself, and must realize that the ultimate tribunal to which he must refer everything is his own inner nature. The completest philosophy ever conceived can be no more than a mere working hypothesis for the student until he has arrived at that point where such a philosophy may be proved and tested in every way, *i. e.* until he is able to reformulate the same philosophy for himself and is able to base it on his own knowledge, not on the knowledge of others. In fact, each one ought to have his own philosophy of life: not a cut and dried philosophy with hard and fast limits, but a living philosophy which can grow as the mind develops, taking in a wider and wider horizon and sending its roots deeper and deeper in search of the living waters of Truth.

The key above referred to is threefold and consists of the three fundamental propositions of the *Secret Doctrine*. (1) Space does not permit of giving these here in full, but they may be summed up briefly as follows:

(a) "An Omnipresent, Eternal, Boundless, and Immutable Principle, on which all speculation is impossible. . . . It is beyond the range and reach of thought unthinkable and unspeakable."

This first proposition is a statement of the unity underlying the whole manifested universe, the unity of source and the unity of ultimate essence of all things, of the whole of nature, of things animate and inanimate, of universes, worlds, men, atoms. A further statement of this proposition is, that although the ultimate Reality, the ever Unmanifested, is One, yet the *sine qua non* of all manifestation is duality. Manifestation implies duality, relativity, and is unthinkable save as comprising subject and object, cogniser and the thing cognized, the ego and the non-ego, spirit and matter. To rise above this quality one must pass from the finite, the conditioned, the manifested, into the unmanifested, the unconditioned, the infinite. From this duality which underlies all manifestation further spring the pairs of opposites, for the object of cognition can only be such in reference to other objects; a condition or state or property can be known only in reference to other conditions, states, or properties. This arises from and indeed constitutes one of the primary functions of mind, that of analysis and comparison. Separateness and illusion do not exist save in the mind; it is in the mind that arises the idea of the "me" and the "not me", and then the further analysis of the totality of the "not me" by means of the pairs of opposites, heat and cold, light and darkness, love and hate.

(b) "The absolute universality of the law of periodicity, of flux and reflux, ebb and flow." The Universe *in toto* is periodically "the playground of numberless universes, manifesting and disappearing", called "the manifesting stars" and the "sparks of eternity".

(c) "The fundamental identity of all Souls with the Universal Over Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every soul — a spark of the former — through the cycle of Incarnation (or "Necessity") in accordance with Cyclic and Karmic law, during the whole term".

This proposition further goes on to say that each Soul or divine spark, in order to have an independent (conscious) existence must have "(a) passed through every elemental form of the phenomenal world of that Manvantara, and (b) acquired individuality, first by natural impulse, and then by self-induced and self-devised effort (checked by its Karma), thus ascending through all the degrees of intelligence from the lowest to the highest Manas, from mineral and plant up to the holiest archangel."

It is easily seen that propositions (b) and (c) depend upon (a). For if there is a Unity underlying all things it must imply, and be implied by, universal law as in (b), and also it must imply a unity in evolution as in (c). If we grant the unity of all things in source and essence, this ultimate unity must also apply to the law underlying and guiding all manifestation, and synthesizing all the known *laws* of the manifested universe. Furthermore, if we grant the One Reality, the ever Unmanifested Unity, and also that manifestation is the differentiation not of, but arising in, the One, thus causing the apparent "many", it must follow that between "non-manifestation" and the condition of greatest manifestation, between homogeneity and the utmost heterogeneity, there is endless progression, endless gradation, without one break or a single missing link in the chain of evolution.

There is, then, a sequence and a logical connection between these fundamental propositions, and since they are given as being "fundamental" it may be that in them we may find a key to the whole philosophy of the *Secret Doctrine*.

The tendency of Western thought and civilization has for a long time been in the direction of specialization. Religion, Philosophy, and Science have been separated and considered apart from one another, so much so that Religion has said "The secrets of life and

death are with me alone, follow me." Science has said "Follow me and I will teach you to map out the heavens and weigh the sun in a balance; I will teach you the story of evolution, and the chemical combination of atoms upon which life depends." But if asked "What of the Soul?" Science answers. "I have nothing to do with the Soul, it is outside my province; we can never know anything about the soul, or that it exists; but follow me, accumulate facts, frame hypotheses, and get knowledge." And Philosophy? . . . Philosophy has been running between the two, between dogmatic Religion and dogmatic Science, and ending too often in agnosticism, or else mere empiricism. Let it not be understood, however, that the writer is unaware that there are many of the exponents of Religion, of Philosophy, and of Science who cannot be included in the above; but he asks, can it be denied that such has been the general trend of thought in these departments.

What, however, has this to do with using a key to the study of the *Secret Doctrine*? It is an illustration of the tendency of thought which each one of us has from education and heredity, viz.: to treat part of a subject as the whole subject, to look at things from one standpoint only, and so long as we are unable to view a subject as a whole and in its relation to other subjects, so long will the *Secret Doctrine* remain practically a sealed book; so long will the different view-points cause its statements to appear contradictory; so long will the connecting links be unperceived. What is needed is a study of fundamentals, and a constant application of and appeal to them. The *Secret Doctrine* begins with a statement of fundamentals; and its philosophy, far older than Plato, is yet Platonic, *proceeding from universals to particulars*. Hence to study it, to comprehend it, the student must proceed along the same lines, and endeavor to grasp with his mind the fundamentals, and to realize that neither man nor

anything can be separated from the All, but that all evolution has one origin, is guided by one law, and has one aim. If the student can ever keep this in his memory, then can he also take up the study in the way that Science does, from particulars to universals, but with a far different result, for he no longer has to look for a key; he has it in his own hand.

The Path

PROOFS OF THE HIDDEN SELF — *William Q. Judge*

THROUGH DREAMS

The dream state is common to all people. Some persons say they never dream, but upon examination it will be found they have had one or two dreams and that they meant only to say their dreams were few. It is doubtful whether the person exists who never has had a dream. But it is said that dreams are not of importance; that they are due to blood pressure, or to indigestion, or to disease, or to various causes. They are supposed to be unimportant because, looking at them from the utilitarian viewpoint, no great use is seen to follow. Yet there are many who always make use of their dreams, and history, both secular and religious, is not without records of benefit, of warning, of instruction from the dream. The well-known case of Pharaoh's dream of lean and fat kine which enabled Joseph as interpreter to foresee and provide against a famine represents a class of dream not at all uncommon. But the utilitarian view is only one of many.

Dreams show conclusively that although the body and brain are asleep — for sleep begins primarily in the brain and is governed by it — there is still active a recollector and perceiver who watches the introspective experience of dreaming. Sorrow, joy, fear, anger, ambition, love, hate, and all possible emotions are felt and perceived in dreams. The utility of this on the waking plane has nothing to do with the fact of perception. Time all is measured therein, not according to solar division but in respect to the effect produced upon the dreamer. And as the counting of this time is done at a vastly quicker rate than is possible for the brain, it follows that some person is counting. In all these dreams there is a recollection of the events perceived, and the memory of it is

carried into the waking state. Reason and all the powers of intelligent waking man are used in dreams; and as emotion, reasoning, perception, and memory are all found to be even more active in dreams than in waking life, it must follow that the Hidden Self is the one who has and does all this.

The fanciful portion of dreams does not invalidate the position. Fancy is not peculiar to dreaming; it is also present in waking consciousness. In many people fancy is quite as usual and vivid as with any dreamer. And we know that children have a strong development of fancy. Its presence in dream simply means that the thinker, being "liberated temporarily from the body" and the set forms or grooves of the brain, expands that ordinary faculty. But passing beyond fancy we have the fact that dreams have prophecy of events not yet come. This could not be unless there exists the inner Hidden Self who sees plainly the future and the past in an ever present.

IN CLAIRVOYANCE

Waking clairvoyance cannot now be denied. Students of Theosophy know it to be a faculty of man, and in America its prevalence is such as to call for no great proof. There is the clairvoyance of events past, of those to come, and of those taking place.

To perceive events that have taken place in which the clairvoyant had no part nor was informed about, means that some other instrument than the brain is used. This must be the Hidden Self. Seeing and reporting events that subsequently transpire gives the same conclusion. If the brain is the mind, it must have had a part in a past event which it now reports, either as actor or as hearer from another who was present, but as in the cases cited it had no such connection as actor, then it follows that it has received the report from some other perceiver. This other one is the Hidden

Self, because the true clairvoyant case excludes any report by an eye-witness.

Then again, when the clairvoyant is dealing with an event presently proceeding at a distance, it is necessary that a perceiver who recollects must be present in order to make report. For the brain and its organs of sight and hearing are too far off. But as the clairvoyant does report correctly what is going on, it is the other Hidden Self who sees the event, bridges the gap between it and the brain, and impresses the picture upon the bodily organs.

THE FEELING OF IDENTITY

If recollection is the basis for the feeling of identity continuous throughout life, and if brain is the only instrument for perception, then there is an inexplicable series of gaps to be accounted for or bridged over, but admitting the Hidden Self no gaps exist.

We are born feeling that we are ourself, without a name, but using a name for convenience later on. We reply to challenge by saying "It is I" — the name following only for convenience to the other person. This personal identity remains although we fall asleep each night and thus far become unconscious. And we know that even when a long period is blotted out of memory by fall, blow, or other accidental injury, the same feeling of identity crosses that gap and continues the same identical "I" to where memory again acts. And although years of life with all their multiplicity of events and experience have passed, leaving but a small amount of recollection, we yet know ourselves as that unnamed person who came to life so many years before. We do not remember our birth nor our naming, and if we are but a bundle of material experience, a mere product of brain and recollection, then we should have no identity but constant confusion. The contrary being the case, and continuous personal identity being felt and perceived, the inevitable conclusion is that

we are the Hidden Self and that Self is above and beyond both
body and brain.

The Path

HOW TO STUDY THE "SECRET DOCTRINE": II — *J. H. Fussell*

If, as has been claimed, the three fundamental propositions constitute a key to the study of the *Secret Doctrine*, the student should endeavor to apply these not merely to the philosophy as a whole, but to each and every department and special topic and to the linking of these together. Only by so doing can the true relations between the latter be found, and the place and importance of each in respect to the whole. It must therefore be borne in mind that these propositions apply to the whole manifested Cosmos, to Universes, worlds, and men, to all planes of the Cosmos as well as to all kingdoms of Nature; that back of all manifestation is the One Reality, one common Source; that guiding all manifestation is one Universal Law; and that the working of this one Law and the line of evolution are fundamentally the same in all cases.

A study of the great systems of ancient philosophy would show that underlying each are these same propositions, or some phases of them which, although differently expressed, embody the same fundamental ideas. In some instances these have been put into the form of aphorisms, which to a great extent are the keynotes of the systems in which they are so expressed. Such, for instance, are the following: "As above, so below", from the Hermetic school of philosophy; "Man is the Microcosm of the Macrocosm", from the ancient Hindu philosophy; both of these aphorisms are expressions of what is known as the "Law of Correspondences" which was used by all the great Hindu philosophers and to a greater or less degree by more modern writers, *e.g.*, some of the early Church Fathers, and by Boehme, Swedenborg, and others. It will easily be seen that these aphorisms are dependent upon the fundamental propositions of the *Secret Doctrine*, and in a

measure contain or imply the latter. Then there is the Cabalistic saying, "A stone becomes a plant; a plant, a beast; a beast, a man; and man, a god". This particular statement is, however, only a partial statement of the third proposition; it is only a partial statement of evolution. It goes further than the modern scientific statement of evolution in that it does not stop at man, but it makes no statement of the stages of evolution preceding the mineral; it only begins at the lowest point of the cycle of evolution, omitting the elemental kingdoms on the downward arc. The above statements and many others are constantly referred to in the *Secret Doctrine*, and by presenting these fundamentals in different aspects the student who learns to connect them together is better enabled to comprehend the methods and working of Nature and also that to us most vital problem — man's place in Nature. Furthermore, these various statements furnish an additional argument for the Wisdom Religion's being the fountain of Truth from which *all* streams of Truth have sprung.

It is necessary, then, to examine these aphorisms and to include them as part of the key of which we are in search. In a letter from a Master to Mr. A. P. Sinnett advice is given to the student to hold to the doctrine of analogy and correspondences. (1)

Everything follows analogy. "As above, so below." Man is the Microcosm of the Universe. That which takes place on the spiritual plane repeats itself on the Cosmic plane. Concretion follows the lines of abstraction; corresponding to the highest must be the lowest; the material to the spiritual. (2)

If man indeed be the Microcosm of the Macrocosm, a copy in miniature of the Universe, we can well understand the value of the injunction given by the Delphi Oracle, "Know Thyself!", and

the student of the *Secret Doctrine* cannot fail to notice the frequent application therein of knowledge about man to the elucidation of the mysteries of the Cosmos. In the same way knowledge of Nature as a whole gives us a knowledge of Nature's miniature, man. The study of man and the study of Nature must be pursued together, hand in hand; if we would understand one we must understand both, each one in relation to the other.

Not only is man the Microcosm of the Macrocosm, but each molecule, each atom, as well as each world and each system of worlds, mirrors the whole Universe; and each individual monad, each spark of the Universal Over-Soul, whether informing a world, a man, or an atom, is a mirror of the Universal Over-Soul.

"Lift thy head, O Lanoo; dost thou see one or countless lights burning in the dark midnight sky?"

"I sense one Flame, oh Gurudeva, I see countless undetached sparks shining in it."

"Thou sayest well. And now look around and into thyself. That light which burns inside thee, dost thou feel it different in anywise from the light that shines in thy Brother-men?"

"It is in no way different, though the prisoner is field in bondage by Karma, and though its outer garments delude the ignorant into saying 'Thy Soul and my Soul'."

The radical unity of the ultimate essence of each constituent part of compounds in Nature — from Star to mineral Atom, from the highest Dhyān Chohan to the smallest infusoria, in the fullest acceptation of the term, and whether applied to the spiritual, intellectual, or physical worlds — this is the one fundamental law in Occult Science. (3)

This fundamental law in Occult Science is the basis of the "Law of Correspondences", which in so many cases has been hit upon by

Mystics and used by them intuitionally and, very often it would seem, fancifully. And being acquired merely intuitionally, and no basis or foundation being given, this law has come to be regarded by many as a mere empiricism. All through the *Secret Doctrine* this law is held to, and it is illustrated to such an extent that it rests with the student himself to test whether it be a law or not. Let the student hold to the doctrine of analogy and correspondences. The Law of Correspondences does not merely hold on one and the same plane, as, for instance, in the case of man and Nature, the physical external man corresponds to physical external Nature, the astral man to the astral side of Nature, etc., but there is also a correspondence between different planes, and action and reaction from plane to plane. Manifestation takes place on four planes, which are phenomenal and *rupic* (*rupa*=form), while above these are three *arupa* or formless planes, where form ceases to exist and which cannot become objective to us. The three higher planes are noumenal and subjective, the four lower are phenomenal, and are, or may be, objective to us. The seven planes represent the seven states of Cosmic consciousness, the three higher planes being inaccessible to human intellect as developed at present. "These seven planes correspond to the seven states of consciousness in man." (4) All ultimate causes originate on the higher planes, and pass from plane to plane to the lowest which is the plane of ultimate effects, whence there may again be reaction on the higher planes. That which may appear as an effect on any plane, due to a cause on a higher plane, may itself act as a cause in reference to a still lower plane. In this way there is correspondence from plane to plane, and in this way all manifestation proceeds, from plane to plane; from within, without. And although very few who can see into the astral and psychic planes of Nature can connect these with the physical plane, or rise to the purely spiritual, yet no links are missing between them, and it is only by a comprehension of the

Law of Correspondences that it is possible to connect them together. The varied aspects of Nature, the many phases of development which we see in all the kingdoms of Nature and which exist on all the phenomenal planes; the hierarchies of beings — gods, men, elementals — which represent the stages of the development of the soul, are all links in the endless chain of manifestation. Destroy one link and the chain would be destroyed; but granting continuity, granting the law of cause and effect — Karma, it follows that the Law of Correspondences must also hold good, and we shall be wise if we follow the advice of the Master and hold to it as a guide in our studies.

The Path

NEMESIS — *Katharine Hillard*

In a note to p. 305 of the second volume of the *Secret Doctrine*, Mme. Blavatsky points out the difference between the Greek idea of Nemesis and the Aryan Karma, which is often thought to be exactly the same thing. But the conception of Nemesis varied with different poets at different epochs, and from the purely abstract idea of the inevitable punishment of sin became anthropomorphised into a goddess to be worshipped and to be placated by prayer and submission. "If we would connect Karma with Nemesis", says Mme. Blavatsky in the passage referred to, "it has to be done in the triple character of the latter as Nemesis, Adrasteia, and Themis. For while the latter is the goddess of Universal Order and Harmony (who, like Nemesis, is commissioned to repress every excess and keep man within the limits of Nature and righteousness under severe penalty), *Adrasteia* — the inevitable — represents Nemesis as the immutable effect of causes created by man himself. Nemesis, as the daughter of *Dike*, is the equitable goddess, reserving her wrath for those alone who are maddened with pride, egotism, and impiety. It is, then, *Adrasteia*, or "the inevitable" who would answer best to the Eastern conception of Nemesis, or Karma, as Eternal Law working out its necessary consequences. "Every act rewards itself", says Emerson, "or, in other words, integrates itself, in a twofold manner; first, in the thing, or in real nature; and secondly, in the circumstance, or in apparent nature. Men call the circumstance retribution. The causal retribution is in the thing, and is seen by the soul. The retribution in the circumstance is seen by the understanding; it is inseparable from the thing, but is often spread over a long time and so does not become distinct till after many years. Crime and punishment grow out of one

stem. Punishment is a fruit that unsuspected ripens within the flower of the pleasure which concealed it. Cause and effect, means and ends, seed and fruit, cannot be severed; for the effect already blooms in the cause, the end preexists in the means, the fruit in the seed."

Emerson was thoroughly in sympathy with the teachings of the Oriental philosophy, and nowhere more completely so than in this passage from his essay on *Compensation*. For he not only points out to us that a deed and its consequences are one, but seizes that more occult view that the real thing is in the soul, and is perceived by the soul. It is in what we *are* that the reality lies, and what we do is but the impress that the seal of our nature prints upon the world without. If that seal be as the head of a god, so much the better for the world, and, in reversion, for ourselves; but that seal has been modelled by the forces of our own soul, and we only are responsible for the image that it bears. No subterfuge will avail us, no shirking and no dallying alter the preordained result of the forces we have chosen to set in motion. "The world is full of judgment-days", says Emerson elsewhere, and we are continually being judged, not only for our sins, but for our blunders. "You should have known better", says stern Nature, when we transgress her rules and suffer the consequences and try to plead ignorance as an excuse. And deep in our inmost souls we know that she is right. "Nothing can work me damage except myself", says St. Bernard; "the harm that I sustain I carry about with me, and never am a real sufferer but by my own fault." And if the believer in only one life upon earth could realise this, how much more should those who have made the doctrine of reincarnation their own appreciate the idea of more remote causes for suffering than can be traced in one earthly existence! Far back in the mists of time, by some initial choice of good or evil, did we begin to create that Nemesis which surrounds us

today, built up year after year and life after life the palace or the prison of the soul. For choice, within certain limits, we have always, and it is ours to weave the black thread or the white at will into the web of our future destiny. "Karma-Nemesis guards the good and watches over them", says the Occultist, "in this as in future lives, and punishes the evil-doer, aye, even to his seventh rebirth. So long, in fact, as the effect of his having thrown into perturbation even the smallest atom in the Infinite World of harmony has not been finally readjusted. For the only decree of Karma — an eternal and immutable decree — is absolute Harmony in the world of matter as in the world of Spirit." (*S.D.*, I, 643).

So that we see that our Nemesis is no offended Deity, punishing with anger an infringement of his arbitrary decrees, but the striving of the universe to right itself, to repair the injuries that our heedless or wilful actions have effected in the harmony of the whole. If, then, the corner-stone of the universe is that spiritual unity which manifests itself in universal brotherhood, the more we can do to make that brotherhood a material reality, the more nearly we shall approach the harmony of the spiritual world, which is Life and Love, not Death and Selfishness. And as Emerson has shown us, the real thing is in the soul, the causal retribution there. Can any punishment that earthly justice can inflict upon a man be half so terrible as that which comes from within, the torments that spring from his own fear, his own remorse? Not long ago, Felix Adler gave a magnificent discourse on "The Penalties of Sin", every word of which might find an echo in all right-thinking-minds. The report I read (for I was not so fortunate as to hear it) said that he concluded by stating the difference between the present generation and its forefathers in respect to the doctrine of sin. "Our forefathers were haunted by the sleepless eye of God, which they believed to be ever fixed

upon them, piercing every veil and wall. They believed that God would punish them, either immediately or at the last judgment. But now man has become his own accuser, and the judgment-seat is transferred to his own breast. In his own brain is the prototype of the universal laws. In the name of those universal laws he pronounces sentence upon himself. "The more our moral nature unfolds, the more difficult does it become to satisfy the awful divinity within our bosom. The most agonizing pain which the modern man can suffer, as many know to their bitter cost, is self-condemnation. The highest boon to which we can aspire is to be able to dwell in peace with the God within us."

Surely every Theosophist would re-echo these words of the great ethical teacher. And should we not agree with him also when he said that the true aim of punishment was reformation, not vengeance, and that the pangs of conscience were to be regarded as the beginning of a process of spiritual regeneration? For what is the voice of conscience but the voice of the higher Ego in man, of that diviner Self who is ever striving to reach the lower nature and bring it up into closer relations with the God within us? If we refuse to listen to that voice, if knowing the right we still the wrong pursue, we are knotting another mesh of that great net of Destiny in whose folds we shall some day struggle unavailingly, like captive birds. Our struggles will be all in vain, for the meshes of Nemesis hold fast, but neither Nemesis nor vengeance wove them, but we ourselves of our own free choice. The criminal sets in motion long years (it may be long lives) beforehand, the train of causes that one day lands him in a jail, but imprisonment will do him no good unless it go hand-in-hand with reform. What men call the vengeance of the law is but too often the right name for its punishments; it is the revenge of the community for its violated peace and order that is embodied in the verdict of the jury and the sentence of the judge, the strong arm of the law

stretched out to slay and not to save. When the idea of universal brotherhood shall have become a more living reality, all prisons will be reformatories in the truest sense of the word, and the wrong-doer will be taught to listen to the voice in his own soul, and helped to obey its dictates and to struggle back towards the right. The way of the transgressor is hard, but how doubly hard when he has to retrace his painful footsteps with all the forces of his vitiated nature battling against him, all the demons of the sinful past rising up to oppose his progress! Byron was said to have had every gift but the faculty of knowing how to use them, and he has left an ample record of the torments inflicted by a misspent life. Could there be anything more terrible than the "Incantation" in *Manfred*, which summons the elements of his own character to be his torturers?

The Voice says to him:

From thy false tears I did distil
An essence which has strength to kill;
From thine own heart I then did wring
The black blood in its blackest spring;
From thine own lip I drew the charm
Which gave all these the chiefest harm:
In proving every poison known.
I found the strongest was thine own!

By thy cold breast and serpent smile.
By thy unfathomed gulfs of guile;
By the perfection of thine art
Which passed for human thine own heart:
By thy delight in others' pain,
And by thy brotherhood of Cain,
I call upon thee! and compel
Thyself to be thy proper Hell!

So much for Nemesis as "the just indignation of the gods". But justice has good gifts as well as evil in her well-balanced scales, and the soul can decree itself a nobler mansion as the swift seasons roll, and can lay the cornerstone today. Built up of lofty thoughts and noble purposes, founded upon the rock of steadfast resolution and unflinching courage, crowned with the fair white dome of love and truth, that edifice shall rise, a mansion not built with hands, but eternal in the heavens. And if we fashion our lives thus, Nemesis shall wear for us not the terrible aspect of the avenging Furies, but the smile that Wordsworth saw upon the face of Duty.

Stern lawgiver! yet thou dost wear
The Godhead's most benignant grace;
Nor know we anything so fair
As is the smile upon thy face;
Flowers laugh before thee on their beds;
And fragrance in thy footing treads;
Thou dost preserve the stars from wrong,
And the most ancient heavens thro' thee are fresh and
strong.

The Path

HOW TO STUDY THE "SECRET DOCTRINE": III — J. H. Fussell

(Concluded from page 149)

Perhaps the first great difficulty which confronts the student of the *Secret Doctrine* arises from the lack of method which seems to prevail throughout the work. But if in spite of this he can at all familiarize himself with the subject matter, he will almost certainly come to the conclusion that, although from a literary standpoint this lack of method certainly exists, yet from the standpoint of a student of Theosophy it is a great gain. For there is, so it seems to the writer, a *deeper* method in the seeming lack of it than could have been obtained in any other way. The student, however, at the very outset is warned and may know what to expect, and if he is wise he will lay his plans accordingly. H. P. B. herself speaks of the "necessity under which the writer (H. P. B.) has labored to be ever explaining the facts given from the hoariest Past by evidence gathered from the historical period. No other means was at hand, at the risk even of being once more charged with a lack of method and system." (1) And she has been so charged by those who forget the reason which she herself gave for such lack of method. In considering this we come to another very important matter which must be taken into account in our study of the *Secret Doctrine*, and a knowledge of which to a great extent reveals the *deeper* method underlying the seeming lack of it.

The *Secret Doctrine* is based upon Stanzas from the "Book of Dzyan", a book hitherto unknown to Orientalists, and but little known in the East. These stanzas "give an abstract formula which can be applied, *mutatis mutandis*, to all evolution: to that of our tiny earth, to that of the chain of planets of which that earth

forms one, to the Solar Universe to which that chain belongs, and so on, in an ascending scale, till the mind reels and is exhausted in the effort." (2)

Consider for a moment! In what language could such an abstract formula be written; how could it be expressed? It could only be in a language which is perfectly symbolical, and whose symbols, while primarily representing abstract ideas and being subject to mathematical law, are yet capable of being applied to all the departments of Nature and thus of having as many interpretations. Such a language or writing was "the early hieroglyphic cypher, still preserved in some Fraternities, and named in Occultism the *Senzer*". (3) In regard to this language it is stated that there was a time when it was "known to the Initiates of every nation, when the forefathers of the Toltec understood it as easily as the inhabitants of the lost Atlantis, who inherited it, in their turn, from the sages of the Third Race, the *Manushis*, who learned it direct from the *Devas* of the Second and First Races". (4)

Such was the ancient "Mystery" language, the language of symbolism, which has been preserved to a greater or less extent in the languages in which the ancient scriptures of the World were originally written, and which was the foundation of the Jewish Kabala. Students of the Kabala and of the symbolism of the ancient religions have arrived at the conclusion that all have not only sprung from one primeval teaching but that all bear record to the one primeval "esoteric" language. It is claimed in the *Secret Doctrine* that from one small volume written in this ancient sacerdotal tongue were derived the books of Kiu-ti, the book of Shu-king, China's primitive bible, the sacred books of Thoth-Hermes, the Puranas, the Chaldean Book of Numbers, and the Pentateuch. (5) So that, since it is the aim of our author to prove the identity of source and symbolism of all the religious teachings of the World, it is inevitable that constant reference to, and

quotations from, them must be made. This in itself makes the study of the *Secret Doctrine* a difficult matter, in that it is the cause, to a great extent, of the seeming lack of method and introduces so many apparent side-issues. But the great difficulty does not lie here, but in the different interpretations which can be put upon all these ancient writings.

The Mystery language has seven keys, symbology has seven departments, and these or at least some one or more of them must be known to some degree if the ancient scriptures are to be understood. But how many understand even one of the keys and can use it? We can to some extent apply the "three fundamental propositions" to all our studies in the *Secret Doctrine* we may also be able in some degree to make use of the law of correspondence and analogy for the elucidation of some of its propositions; but further knowledge, knowledge of the science of symbology, is required for the full solution of its problems. Hence it is most important for the student to bear this in mind, and to study with a view to acquiring knowledge of this most ancient science. The work under consideration is not the *Secret Doctrine* itself, except in so far as much that is there given out has hitherto been secret for the West; it touches only the outer fringe and lifts but a corner of the veil of the true Secret Doctrine which must ever remain hidden from the profane. At the same time, however, it gives the student clues by following which he may learn the A, B, C, of the Mystery language of the Initiates, and so take the first step toward comprehending those depths of knowledge which is in their possession, but which is also the heritage of every man.

In these preliminary articles the writer can do little more than call the attention of the Student of the *Secret Doctrine* to this most important part of his studies. An important point to notice is the fact that the Science of Symbology depends upon, and is indeed only an application of, the Law of Correspondences, and so

ultimately depends upon the "three fundamental propositions". Hence, although we have found what at first sight seem to be different keys to the study of the *Secret Doctrine*, these are in reality but different aspects of *one* key which may be applied to all the departments of nature.

Throughout the *Secret Doctrine* the attention of the student is again and again definitely called to the way in which he may arrive at an understanding of its truths, and of those contained in all the ancient religions and mythologies, in which the deepest mysteries of man and nature have found expression. If therefore he will keep this in mind and follow the hints given him he will find evidence accumulate in support of its statements on every side. In support of the above it will be sufficient to give only two quotations from the *Secret Doctrine*: others can be easily found by the student himself.

Every old religion is but a chapter or two of the entire volume of archaic primeval mysteries — Eastern *Occultism* alone being able to boast that it is in possession of the full secret, with its *seven* keys. (6)

As truly stated by Ragon, 'the ancient Hierophants have combined so cleverly the dogmas and symbols of their religious philosophies that these symbols can be fully explained only by the combination and knowledge of *all* the keys'. They can be only *approximately* interpreted, even if one finds out three of these seven systems: the *anthropological*, the *psychic*, and the *astronomical*. The two chief interpretations, the highest and the lowest, the spiritual and the physiological, they preserved in the greatest secrecy until the latter fell into the hands of the profane. (7)

The true value of the *Secret Doctrine* can only be known by those

who read it with reference to the purpose for which it was written, and it has been the writer's aim to point out the main guide-posts, which, however, are no discovery of his, but to which the *Secret Doctrine* itself is continually directing attention. So far as the method of study is concerned, this will depend largely upon the previous training and capabilities of the student, but by far the greater number of students of the *Secret Doctrine* recommend, after a general reading, study by topics, for the information on any one subject is, from the very nature and purpose of the book, scattered throughout its two volumes.

The *Secret Doctrine* is a mine of knowledge and information. Much information can be obtained by a mere reading, but its great treasures do not lie on the surface; they must be dug out, and its pearls can only be had for the diving. It is no wonder that those who look upon this latter part of the XIXth Century as the flower of the Ages should find such difficulty in reading this work, or that they should complain of its lack of method, for "this work is written for the instruction of students of Occultism" (8) and "the rejection of these teachings may be expected and must be accepted beforehand". (9)

The intelligent study of the *Secret Doctrine* requires persistence and effort, and it is well to realize this at the outset. It may be that the conclusions which the student may reach today will be modified, if not completely changed, in the future; indeed, this is inevitable if progress is to be made. For man's outlook is limited, and it must be that, as his horizon widens, new factors will arise which will modify previous conclusions; but if he can make sure of his "fundamentals" and hold to them, he will have a sure guide which will not fail him in any of his investigations of the mysteries of man and nature.

THE COLOR OF THE ANCIENT ARYANS — *K. P. Mukherji*

THE INNER AND THE OUTER MAN AND THEIR COLORS

In an article somewhat curiously termed "The Red Rajputs" published in the October number of the *Asiatic Quarterly*, the following passage is quoted from the Mahabharata:

The color of Brahmans is white; of the Kshatryas red; of the Vaishyas yellow; of the Shudras black.

The above does not mean that the Brahmans were white like the Europeans, the Kshatryas copper-colored like the Red Indians, the Vaishyas yellow like the Jews, and the Shudras black like the negroes. The four castes could not differ so much in color for the simple reason that long before the Mahabharatic period intermarriages were common and the offspring admitted into that caste, generally or broadly speaking, to which the father belonged.

"Ajam ekam lohita Shukta Krishnam" say our Shastras about Prakriti, the root of the physical or material universe. "The unborn one is red, white, and black, for the *gunas* (attributes) composing it", called *sattwa*, *rajas*, and *tamas*, correspond to those colors thus:

Sattwa, white color, shining, wisdom, light;

Rajas, red color, reflecting energy, motion;

Tamas, black color, covering ignorance, darkness.

They correspond to many other things, as may be found in the Puranas, but the above will do for the present. Now in the Brahmans *Sattwa-gunam* or quality predominates, in the Kshatryas *rajas*, in the Shudras *tamas*. The color yellow in our

Shastras corresponds to gross matter, and the Vaishyas were engaged in worldly pursuits. The Brahman represents the wisdom of the nation, the Kshatryas the energy of it, the Vaishyas its material prosperity, and the Shudras obedience and order.

As said in the *Bhagavad-Gita*, anger and desire are the result of *rajogunam*, and the Inner Man becomes red when they predominate. Thus in the Shanti Parvan of the *Mahabharata* quoted in the article but not correctly translated: —

This manifested Universe is all Brahm, it was originally created by Brahma, the color was due to Karma; those twice born who forsaking their own *dharma* (or law and duty) became fond of kamic enjoyments, sharp, prone to answer, hasty and red-limbed, fell into Kshatryaship.

Varna means color as well as caste; the one is the cause of the other; the skin may be as white as snow, but if *rajo-gunam* be dominant the Inner Man will be red. Even now our astrologers say of what varna the babe is, no matter whether it is fair or dark, no matter of what caste it may be, according to the positions of the planets at the time of birth. Such varna refers to the Inner Man and not to his physical envelope.

(5) BRAHMA

THE SEVEN RISHEES CREATED OR
EVOLVED
THREE MORE RISHEES ENDING
WITH DAKSHA. THEY CREATE.
Color not known.

V.
CREATION.

BRAHMA BECOMES MANU SYAMBHAVA,
and creates men in general.

The Seven Rishees create Brahmans and devas of white color.
Daksha incarnates and becomes *Prachetas*
by falling into generation.

VI.
SEXUAL CREATION.

Prachetas Daksha creates men in general. Some of the Brahmans fall into
generation. People multiply, and are divided by a Manu into the
four castes according to their qualifications.

In the following I will try to show the distribution of colors from the beginning.

The foregoing will further show that the colors spoken of cannot

be the color of the skin. For a Western man who tries to materialize everything and thinks himself liberal-minded and scientific if he can but rise above the pigmy conception of Biblical creation said to have begun a few thousand years back, it is very difficult to perceive that the real meaning of passages in the Shastras can often be learnt after you begin to live a real Hindu life, after you learn to meditate long and intensely, after you have a growing faith in our Shastras. Love them and they will repay your patience and labor; study hurriedly, partially, and materialize the teachings, and you will find them self-contradictory, ridiculous, absurd, and what not. Make your choice, for it is said, "The Sun suffers not in splendor if all the blind unanimously say that there is no Sun".

The Path

VAST WORKS OF THE PAST

The objection is often urged against Theosophical theories that they were produced by Eastern nations, and if we are to judge by India of today these beliefs will result in stagnating human effort. But the facts do not support the objection. Indeed, if we think of the present works of man in the West and make any comparison with the older days, we must conclude that ours are the most fragile and will the sooner yield to the destroying touch of time. What modern work is to be compared to the pyramid of Ghizeh in Egypt? None in respect to any of the elements involved. Which of our huge buildings will last for more than ten thousand years? In Chicago the place where most, perhaps, the tall buildings are found in one spot, they say the foundation is really mud, and even now the tallest tower of all must come down and other buildings show signs of weakness. As light convulsion would wreck them all. And what of our records both of literature and science? All will wither, disappear, be eaten up by moth and worm, and after a time not a line be left. What do we record on our inscriptions on buildings when we make any? Only some unimportant names of builder, contractor, or official in the municipality. There are no sentences of art or science or philosophy. And even the foundation stones contain but silly remains and small things of no use to future men. Most of our energy is devoted to getting mere coin that must soon or late be lost or given up, be melted, and altogether done away with. Yet though the Egyptians, who long ago left the scene, held beliefs that we might regard as superstitious, they made buildings and inscriptions and pictures which confront us today as the mute proofs of the mightiness of a nation that rules its life by theories we do not accept.

But in India and the rest of the East is where the objection is

directed. Even there the facts are to the contrary. What of their tanks for watering towns and fields; of their great temples; of their awe-inspiring underground constructions; of those buildings cut out of the solid mountain with mathematical precision. Can these be the work of people whose beliefs tend to stagnate human effort? I think not.

The caves of Ellora and Elephanta contain immense images and carvings which would do credit to this day. The caves of Kailas are 401 feet deep and 185 feet wide. Man made these. Inside is a conical pagoda 100 feet high, with a music gallery, five large chapels, a large court, and a colonnade. Three immense elephants are there cut from the stone. An image of Lakshmi reposes with two elephants standing on their hind legs as if pouring water over her. A passage then opens right and left. Thirty feet on there are two obelisks carved, being 41 feet high and 11 feet square. Thirty feet more and you find a great pagoda carved inside and out. There are sixteen pillars, twenty-two pilasters, and five entrances. The roof is carved to represent cross beams, and each pillar is different from the other.

At Ajunta are twenty-seven cut caves, the inscription seeming to give the date of 200 years B.C. What is the temple of Solomon to all this?

Then look at India's tanks. We would call them reservoirs. That of Lingamputti is a great triangle $2\frac{1}{2}$ miles long, 1 broad at the base, and 200 years old. Bhusrapatanam tank is 13 miles in circumference; Guntoor 8 miles; Gurgi 12 miles; Shengalmalla 11 miles; Duraji 9 miles. Chambrambakam was twenty miles, and watered sixty-eight villages. Vivanam has a dam 12 miles long. At Hyderabad is a great tank about 20 square miles, watering the city.

All over the East are immense works of the past which we could

not duplicate, and which our sordid civilization would not permit us to think of "wasting" money upon. If we seek further and inquire of the works of the mind, the ancient astronomy confronts us. Were it not for it, our astronomers might now be wondering what was the meaning of the backward motion of the sun in the Zodiac, if they knew anything at all about it. It is fair, then, to say that there is no force at all in the objection to Theosophical thought as an Eastern product on the ground that it will or might inhibit effort. On the contrary, it will broaden our civilization and make us create works as great if not greater than those of the past. But we must not ignore the past, for to do so is to incur a sure if mysterious retribution, because that past belongs to ourselves and was a part of our own doing and begetting.

The Path

COMMUNICATIONS FROM "SPIRITS" — *William Q. Judge*

THEIR SOURCES AND METHODS

The complexity of this subject makes treatment of it difficult. So little is known, and challenge of power to know is so natural, that any treatment must be unsatisfactory. Those "spirits" whose existence as active entities wholly in the spiritual world is claimed by the votaries of the worship of the dead, have not told us clearly anything of lasting value. They have had in America distinctly forty years to give the information in, but disagreeing among themselves and not showing in any way a concert of mental action by way of explanation, nothing has as yet resulted from the very sphere where, if anywhere, the knowledge ought to exist. If it be true, as is asserted for them, that those who have reported are conscious, intelligent spirits, then all of them who while reporting to man have failed to lead him to a right conclusion are blameworthy. Some of these entities or intelligences or spirits or whatever they are have, however, made through their mediums assertions of fact about nature and occult physiology which are in my opinion true, but they have not been accepted. Independently speaking in the air, using trance mediums and writings, they have at various times spoken of and described the astral light; have upheld reincarnation; have sustained the teachings of Swedenborg, and in many ways indicated a complete agreement with Theosophical explanations of occult nature; they have shown that materializations of spirits cannot be possible, and that the sometimes really coagulated forms are liable to be frauds of a pious nature, inasmuch as they are not the bodies of the dead nor in any sense whatever their property, that they are over and over again simply surfaces or masses on which pictures of dead or living may be reflected,

being thus a spirit-conjurer's trick beyond our power. But they have found no favor, and the cult does not, as a whole, think along those lines. If, then, the "spirits" themselves failed to get credence, how shall I gain any? The scientific world, on the other hand, knows not these realms, and believing not in either Theosophical or Spiritualistic explanations accords no belief to the one or the other. So we will have to be satisfied with just saying what is in mind, trusting to fate and time alone.

Many factors have to be admitted as present in this question. Some of them may be described, but many must as yet remain untouchable.

First. There are the minds (*a*) of the medium, and (*b*) of the sitter or sitters or enquirers. Neither can be left out of account. At once this should show how vast is the theme, for it is well known that the mind and its powers are but little known.

Second. Occult psychological powers and faculties of all concerned. This would include the subconscious or subliminal mind of the hypnotic schools.

Third. Physical memory, which is automatic, racial, national, and personal. This is present at all times. To overlook it is simply blindness. To trace it is extremely difficult, requiring a trained mind and trained inner sense. It is that memory which causes a child to catch at a support even just at birth; it is the guide in sleep when often we do acts for preservation or otherwise; it brings up the hate that a man of one race may feel for another race after centuries of oppression or repulsion; it causes the cat, no matter how young, to arch back and expand the tail the moment a dog is near. To say that man, the one who is the last great product of all the material evolution, has not this physical memory would be folly. But I have not heard that the spirits have told of this, nor described it, nor indicated how it may be traced,

nor to what extent it acts in the simulation of conscious intelligence.

Fourth. Forces in their law and method wholly unknown to medium or sitters. These constitute the moving power, the writing force, the reflecting power, and all the vast number of hidden powerful forces behind the veil of objective matter.

Fifth. Entities of some kind or another, unseen but present, whether elementals, elementaries, shades, angels, nature-spirits, or what not.

Sixth. The Astral Light, the Ether, the Akasa, the Anima Mundi.

Seventh. The Astral Body of medium and sitter. I have purposely put this by itself, for it has its own automatic action as much as has the physical body. With it must be also noted its memory, its idiosyncrasies, whether it is new for the person in question or whether it is one that has been used for more than one life, though each time in a different body. For if it be new to the present body, its memories and powers and peculiarities will be different from those of one that has actually been through several lives. It is not so rare in fact that the astral body is an old one; many mediums have strange powers because they have several distinct astral memories due to so much prior experience in one astral body. This alone would furnish a field for study, but we have not heard of the "spirits" telling about it, though some have shown that they experience these multiform personalities.

Lastly, there is the great fact well known to those who have studied this subject from its occult side, that the personal inner self centered in the astral body has the power not only to delude itself, but also to delude the brain in the body and cause the person to think that a distinct other personality and intelligence is speaking to the brain from other spheres, when it is from the

astral self. This is for some people extremely difficult to grasp, as they cannot see how that which is apparently another person or entity may be themselves acting through the means of the dual consciousness of man. This dual consciousness acts for good or for the opposite in accordance with the Karma and character of the inner, personal self. It sometimes appears to a sensitive as another person asking him to do this, that, or the other, or exhorting to some line of conduct, or merely wearing some definite expression but being silent. The image seems to be another, acts as another, is to all present perception outside the perceiving brain, and no wonder the sensitive thinks it to be another or does not know what to think. And if the present birth happens to be one in which strong psychic power is a part of the nature, the delusion may be all the greater.

Having briefly analyzed to begin with, let us now go further.

During the history of Spiritualism, many communications have been made to and through mediums upon many subjects. Facts have been given that could not be known to the medium, some lofty ideas have also had expression, advice has emanated, prophecies have been issued, some of the questions that vex the soul have been treated.

That facts of death, kind of death, place where wills might be found have been told, unexecuted purpose of the dead expressed, personal peculiarities of the former person shown, have all been too easily accepted as proof of identity. These things are not proof. If they are, then a parrot or a phonograph may prove identity with a man. The possibilities are too many in other directions for this sort of proof to be final or even competent. The living clairvoyant may, by taking the requisite mental steps, become so absorbed in the person clairvoyantly brought up — both being alive — as to accurately reproduce all the other

person's peculiarities. Consequently the same thing done in respect to a deceased may be possible in the same way for a clairvoyant entity on the other side of death reporting to us. But, at the same time, it is the fact that the astral body of the deceased does now and then consciously have a part in such reports by reason of unfinished separation from earth and its concerns, or from gross materiality. In other cases where the astral "shell", as some call it, is involved, it is galvanized by nature spirits or by the power of living beings once men who are condemned by their own character to live and function in the denser part of the astral envelope of the earth.

The very moment we go to a medium, who always forms the condensing focus for these forces and that realm, we begin to draw to us the astral remains of all persons whom we think of or who are enough like us or the medium to fall into the line of attraction. Thus we have in the sphere of the focus those we knew and those we never heard of and who never heard of us when they were alive. Elemental sprites which act as the nerves of nature come also, and they, condensed or plunged into the human astral shells, give a new life to the latter and cause them to simulate intelligence and action sufficient to delude all who are not positively trained in these matters. And this sort of training is almost unknown as yet here; it does not suffice to have followed on the proceedings of hundreds of *seances* or hundreds of experiments; it consists in actual training of the inner senses in the living man. If the astral shape is coherent it will render a coherent report, but that is what also a phonograph will do. If it be partly gone or disintegrated it will, like a damaged phonograph cylinder, give a confused report or suddenly stop, to be replaced by another, better or worse. In no case can it go beyond facts known before to it, or those known to the inner or outer sense of the medium or sitter. And as these astral shells

form the greater part of what come to a medium, this is the reason that forty long years of dealing with them have resulted in so little. It is no wonder, then, that the "astral shell" theory has been over-worn by many Theosophists, causing Spiritualists to think that to be the only explanation which we have. A judicious fear also has contributed to the much dwelling on this theory, for with it come up all the actual and very present dangers to mediums and sitters. These galvanized things necessarily are devoid of conscience, and hence cannot but act on and from the very lowest plane of morals and life, just as may happen to be the left-over material memory of the astral person; and that will vary in accord with the essence of the former life and not with its appearance. Hence we may have the shade of Smith or Jones who seemed to their neighbors to have been good men but who in reality always had low or wicked thoughts and strong desires which law or convention prevented them from giving full expression to. In the astral world, however, this hypocrisy is absent, and the real inner character will show itself or have its effect. And in any case whatever, the material shade of the best of men will not be as good as the man tried to be, but will have all the follies and inner sinfulness of his inheritance against which he struggled when living. Therefore it cannot be that these astral remnants are beneficial to us, no matter who was the person they once belonged to. They are but old clothes, and not the spirit of the man. They are less divine than the living criminal, for he still may be a complete trinity.

But good thoughts, good advice, good teaching, high ideas, noble sentiments have also come from this other world, and it cannot be that "astral shells" have given them. If they were sifted out and tabulated, it would be found that they are not different from what living men have said of their own free will and intent. They are not new save as to means of communication. The strangeness of

method very often serves to more deeply impress them on the mind of the recipient. But yet this extraordinary means has now and again led men to give them out as something new in all time, as very wonderful, as a revelation, when the unprejudiced observer sees that they are the opposite, are old or trite, and sometimes mixed up with gush and folly, the product of either one side or the other as might happen. This has cast a stigma on the cult of Spiritualism and made the profane to laugh.

We have therefore to consider such communications which were valuable at the time or to a person, and beneficial in their effect. For were we to refuse to do so, the weapon thus forged will cut the Theosophist who so often is found to be a believer — as I am myself — in communications from Masters or Mahatmas who are no less spirits, but rather more so, because they are still in bodies of one sort or another.

The Path

SEEKING THE SELF — *Che-Yew-Tsang*

Every new mind is a new classification. Every incarnate soul presents us with a new aspect of that Self by reason of which we exist. Yet here is one who has in fact, if not in theory, set around himself a barrier. Within it certain of his fellows have been honored with admission. From them he can learn; others he can only teach. Perhaps those so highly favored are students of older date than he himself; perhaps they are scholars of recognized achievements. What indeed is to be learned from one who cannot even talk good English? Another, hearing that "within oneself the key to the mystery lies hidden", delves within his own mind in search of its secret workings. He is enough for himself, he thinks. He will expound to those unhappy seekers after the objective as much of what he has discovered as they can understand. He has not learned their language; but then how could he? Yet a third will study Nature, will roam the fields, will watch the lilies grow, will listen to the music of the wind as it croons amidst the trees. Man, he says, has become diseased, and is no longer a natural growth, but one of Nature's great mistakes. Or perhaps The Ancients alone were possessed of the occult truth. Nothing worth the hearing or the reading has been written for some two thousand years. This age is matter-sodden; the spirit has gone out of it. Then he buries himself in musty volumes of a bygone age, seeking in them the Light of lights.

Barriers all. Why such false limits to the unlimited? Is not the Self in our midst today as yesterday and forever? Is not man, corrupt or incorrupt, Its chief expression, Its long-worn vesture? And if one could judge of a city by one inhabitant, it could only be after many travels through many lands and with a perfect knowledge of race and type and history.

Wise indeed is he who finds his teacher everywhere. In stone and star and scroll, in man and child, in the present and the past — in boundless Nature. Who would exile Life from any point in space? Is there an atom that is not conscious? And is there not Motion and that which moves, both in ourselves and everywhere without? The fall of a leaf, the chance word of friend or foe — both show us the workings of forces which as the agents of law might help in the downfall of nations.

We must interpret other minds by ours; but we must learn to understand our own by those around us. Mind is something more than our own mind. Only a fool in his pride will think that *that* man at any rate can teach him nothing. There is naught existing from which we have not much to learn. Nor need we make such haste to teach. Many, like live volcanoes, perpetually pour forth a stream of smothering verbiage; not waiting to be asked, seeking but an ear into which to turn their surplus energy. Their word must be heard. Of ignorance in themselves they rarely have time to think. An answer is always ready, though not of necessity correct.

Yet it is possible to teach by proper learning. If we seek in all things their lesson, we give whilst we receive. We admit no barriers; we turn to each and all and listen, looking for the Self. It speaks. The poorest, meaning thing on earth knows something we do not know. By causing its expression, by receiving in humility some simple fact, some glimpse of truth, we teach. Whether it be from man or beast or mineral, we give strength to its inner life. We have called forth that which lay hidden; we have helped in the birth of a thought.

The true learner is a teacher of wisdom. All that he takes he bestows; all that he gives is returned to him with increase. But this give and take is not his doing; it is the movement of that Law

upon which he waits.

We have but one tireless Friend, who, though forsaken, forsaketh not; who, throughout long neglect, standeth at hand, waiting but a call to lighten our hearts of their burdens. His memory doth not fail. When thy friends abandon thee, when they ask of thee a price for their friendship thou canst not pay, this Friend stands as forever unshaken and ready. Yet, oh my brother, if in thy loneliness thou turnest to the faithful One, forget not that he standeth also by those who do not stand by thee. Behind them he is hidden. Then turn not thy face from their sight, lest thou shouldst lose the vision of this thy Comforter and Companion. His homes are not numbered. He answereth thy cry from strange places, though thou callest him from out the chamber of thy heart.

The Path

CONVERSATIONS ON OCCULTISM (1)

Student. What is Occultism?

Sage. It is that branch of knowledge which shows the universe in the form of an egg. The cell of science is a little copy of the egg of the universe. The laws which govern the whole govern also every part of it. As man is a little copy of the universe — is the microcosm — he is governed by the same laws which rule the greater. Occultism teaches therefore of the secret laws and forces of the universe and man, those forces playing in the outer world and known in part only by the men of the day who admit no invisible real nature behind which is the model of the visible.

Student. What does Occultism teach in regard to man, broadly speaking?

Sage. That he is the highest product of evolution, and hence has in him a centre or focus corresponding to each centre of force or power in the universe. He therefore has as many centres or foci for force, power, and knowledge as there are such in the greater world about and within.

Student. Do you mean to include also the ordinary run of men, or is it the exceptions you refer to?

Sage. I include every human being, and that will reach from the lowest to the very highest, both those we know and those beyond us who are suspected as being in existence. Although we are accustomed to confine the term "human" to this earth, it is not correct to confine that sort of being to this plane or globe, because other planets have beings the same as ours in essential power and nature and possibility.

Student. Please explain a little more particularly what you mean by our having centres or foci in us.

Sage. Electricity is a most powerful force not fully known to modern science, yet used very much. The nervous, physical, and mental systems of man acting together are able to produce the same force exactly, and in a finer as well as subtler way and to as great a degree as the most powerful dynamo, so that the force might be used to kill, to alter, to move, or otherwise change any object or condition. This is the "vril" described by Bulwer Lytton in his *Coming Race*.

Nature exhibits to our eyes the power of drawing into one place with fixed limits any amount of material so as to produce the smallest natural object: or the very largest. Out of the air she takes what is already there, and by compressing it into the limits of tree or animal form makes it visible to our material eyes. This is the power of condensing into what may be known as the ideal limits, that is, into the limits of the form which is ideal. Man has this same power, and can, when he knows the laws and the proper centres of force in himself, do precisely what Nature does. He can thus make visible and material what was before ideal and invisible by filling the ideal form with the matter condensed from the air. In his case the only difference from Nature is that he does quickly what she brings about slowly.

Among natural phenomena there is no present illustration of telepathy good for our use. Among the birds and the beasts, however, there is telepathy instinctually performed. But telepathy, as it is now called, is the communicating of thought or idea from mind to mind. This is a natural power, and being well-understood may be used by one mind to convey to another, no matter how far away or what be the intervening obstacle, any idea or thought. In natural things we can take for that the

vibration of the chord which can cause all other chords of the same length to vibrate similarly. This is a branch of Occultism, a part of which is known to the modern investigator. But it is also one of the most useful and one of the greatest powers we have. To make it of service many things have to combine. While it is used every day in common life in the average way — for men are each moment telepathically communicating with each other — to do it in perfection, that is, against obstacle and distance, is perfection of occult art. Yet it will be known one day even to the common world.

Student. Is there any object had in view by Nature which man should also hold before him?

Sage. Nature ever works to turn the inorganic or the lifeless or the non-intelligent and non-conscious into the organic, the intelligent, the conscious; and this should be the aim of man also. In her great movements Nature seems to cause destruction, but that is only for the purpose of construction. The rocks are dissolved into earth, elements combine to bring on change, but there is the ever onward march of progress in evolution. Nature is not destructive of either thing or time, she is constructive. Man should be the same. And as a free moral agent he should work to that end, and not to procuring gratification merely nor for waste in any department.

Student. Is Occultism of truth or of falsehood; is it selfish or unselfish; or is it part one and part the other?

Sage. Occultism is colorless, and only when used by man for the one side or the other is it good or bad. Bad Occultism, or that which is used for selfish ends, is not false, for it is the same as that which is for good ends. Nature is two-sided, negative and positive, good and bad, light and dark, hot and cold, spirit and matter. The Black magician is as powerful in the matter of phenomena as the

White, but in the end all the trend of Nature will go to destroy the black and save the white. But what you should understand is that the false man and the true can both be occultists. The words of the Christian teacher Jesus will give the rule for judgment: "By their fruits ye shall know them. Do men gather grapes of thorns or figs of thistles?" Occultism is the general, all-inclusive term, the differentiating terms are White and Black; the same forces are used by both, and similar laws, for there are no special laws in this universe for any special set of workers in Nature's secrets. But the path of the untruthful and the wicked, while seemingly easy at first, is hard at last, for the black workers are the friends of no one, they are each against the other as soon as interest demands, and that may be anytime. It is said that final annihilation of the personal soul awaits those who deal in the destructive side of Nature's hall of experience.

Student. Where should I look for the help I need in the right life, the right study?

Sage. Within yourself is the light that lighteth every man who cometh here. The light of the Higher Self and of the Mahatma are not different from each other. Unless you find your Self, how can you understand Nature?

ON THE SOURCES OF THE "SECRET DOCTRINE" — *Katharine Hillard*

It has often been my fortune to be asked upon what authority the statements in the *Secret Doctrine* were made, and I thought it might be useful to many members of the T. S. to have the few passages of the book itself that refer to its origins put into a more compact and easily-handled form. At the same time we must never forget the two points upon which H. P. B. herself laid so much stress; first, that nothing was to be accepted by the student simply and solely upon *authority*, however exalted, but only that to which his own soul testified as the truth; and second, that a large part, even of the esoteric teaching, was allegorical. Bearing these two statements in mind, we have as it were a touchstone wherewith to prove all things and to hold fast that which is good.

In the introductory chapter to Vol. I the author speaks of the "Wisdom Religion" as the inheritance of all the nations, the world over, and states that Gautama's metaphysics and secret teachings form but a very small part of the esoteric wisdom of the world since the beginning of our humanity, while he limited his *public* instructions to the purely moral and physiological aspect of the Wisdom Religion, to Ethics and Man alone. Things "unseen and incorporeal" the great Teacher reserved for a select circle of his Arhats, who received their initiation at the famous Saptaparna cave near Mount Baibhar. These teachings, once transferred from this inner circle into the outer world of China, Japan, Siam, and Burmah, soon became greatly changed and corrupted, while early in the present century *one* key to the ancient symbolism having been discovered, its outer and grosser meaning was eagerly seized as explaining everything, and the literature of phallicism threatened to usurp the place of all other symbolism. And this,

says H. P. B., is perhaps "the true reason why the outline of a few fundamental truths from the Secret Doctrine of the archaic ages is now permitted to see the light".

The main body of the doctrines given is found scattered through hundreds and thousands of Sanscrit manuscripts, some already translated, more or less badly, others still in the vernacular. These are accessible to the scholar, while a few passages, taken from oral teaching or from the Commentaries, will be found difficult to trace. However, one fact is certain, says Mme. Blavatsky, that the members of several esoteric schools — the seat of which is beyond the Himalayas, and whose ramifications may be found in China, Japan, India, Tibet, and even in Syria and South America — claim to have in their possession *all* the sacred and philosophical works, whether in manuscript or in type, in whatever language or whatever character, that have ever been written, from the ideographic hieroglyphs down. And that these works have been carefully preserved in subterranean crypts and cave-libraries in the mountains of Western Tibet and elsewhere, where there are said to be hidden collections of books far too numerous to find room even in the British Museum.

The documents have been concealed, it is true, but the knowledge itself has always been made known to the chosen few through the medium of the great Adepts and teachers. More than one great scholar has stated that there never was a religious founder who had invented a new religion or revealed a new truth. They were all *transmitters*, not original teachers, and handed on fragments of the truths they had learned, couched in the symbolism of their own special nation.

The teaching of the *Secret Doctrine* antedates the Vedas, and much of it has only been transmitted orally. The present instalment is based upon the Stanzas of the *Book of Dzyan*, a

volume written in Senzar, the secret sacerdotal tongue, once known to the Initiates of every nation. For this language, besides having an alphabet of its own (says H. P. B. in the preface to the *Voice of the Silence*), may be rendered in several modes of ideographic writing, common and international property among initiated mystics and their followers. Dan (in modern Chinese and Tibetan phonetics, Ch'an) is the general term for the esoteric schools and their literature. In old books the word "Janna" is defined as "to reform one's self by meditation and knowledge", a second, *inner* birth. Hence Dzyan (Djan, phonetically), the *Book of Dzyan*. The only original copy now in existence, says *Isis Unveiled* (vol. I, p. 1), is so very old that modern antiquarians would not even agree upon the nature of the fabric upon which it is written. Tradition says that its contents were dictated to the first men of each race by the Divine Beings whose duty it was to instruct them. The old book, having described cosmic evolution and explained the origin of everything on earth, including physical man, gives the true history of the races from the First down to the Fifth, our present race, and stops short with the death of Krishna, which occurred about 4995 years ago.

It is the original work from which the many volumes of *Kin-ti* were compiled, and not only this and the *Siphrah Dzenionta* (the most ancient Hebrew document on occult learning), but even the *Sepher Jezireh*, the book of *Shu-King* (China's primitive bible), the sacred volumes of the Egyptian Thoth-Hermes, the Puranas of India, the Chaldean *Book of Numbers*, and the *Pentateuch* itself, are all derived from that one small parent volume, upon which an enormous mass of commentaries, glosses, etc., have been written. In the *Secret Doctrine* as we have it, certain portions of the stanzas of the *Book of Dzyan* are printed, and extracts are also given from the Chinese, Tibetan, and Sanscrit translations of the original Senzar Commentaries and Glosses.

In addition we are told (I, 208) that is it from the Divine Teachers before-mentioned that infant humanity got its first notions of all the arts and sciences, as well as of spiritual knowledge, and it is they who laid the foundation-stones of those ancient civilizations that are so puzzling to our modern scholars. The Druidical circles, the dolmans, the temples of India, Egypt, and Greece, the towers and the 127 towns in Europe which were found "Cyclopean in origin" by the French Institute, are all the work of initiated Priest-Architects, the descendants of those primarily taught by the "Sons of God", justly called the "Builders".

The *Secret Doctrine* (I, 272) is the accumulated Wisdom of the Ages, but such is the power of occult symbolism that the facts which have actually occupied countless generations of initiated seers and prophets to marshal, to set down, and explain, are all recorded in a few pages of geometrical signs and glyphs. It is useless to say that the system in question is no fancy of one or several isolated individuals, but is the one uninterrupted record covering thousands of generations of seers, whose respective experiences were made to test and to verify the traditions passed orally by one race to another of the teachings of the Divine Instructors who watched over the childhood of humanity. And for long ages the "Wise Men" of the Fifth, our own, Race passed their lives in *learning, not teaching*, in checking, testing, and verifying in every department of Nature the traditions handed down to them, by the independent visions of great Adepts; that is, men who have developed their physical, mental, psychic, and spiritual organizations to the utmost possible degree. No vision of one Adept was accepted till it was checked and confirmed by the visions — so obtained as to stand as independent evidence — of other Adepts, as well as by centuries of experiences.

In fact, the history of the world since its formation and to its end is "written in the stars", that is, is recorded in the Zodiac and the

Universal Symbolism whose keys are in the keeping of the Initiates (II, 438). The records of the temples, zodiacal and traditional, as well as the ideographic records of the East as read by the Adepts of the Sacred Science, are not a whit more doubtful than the so-called ancient history of the European nations, now edited, corrected, and amplified by half a century of archaeological discoveries, and the very problematical reading of the Assyrian tiles, cuneiform fragments, and Egyptian hieroglyphics. So are our data based upon the same inscriptions *in addition* to an almost inexhaustible number of secret works of which Europe knows nothing, and *plus* the perfect knowledge by the Initiates of the symbolism of every word so recorded.

It was a correct inference of Barth from the study of the *Rig Veda*, that *this Scripture has been compiled by Initiates* (II, 45 1). The whole of the *Secret Doctrine* is an endeavor to prove this truth. The ancient Adepts solved the great problems of science, however unwilling modern materialism may be to admit the fact. The mysteries of Life and Death *were* fathomed by the great master-minds of antiquity; and if they have preserved them in secrecy and silence it is because these problems formed part of the sacred Mysteries, and because they must always have remained incomprehensible to the vast majority of men, as they do now.

Such are the statements, in a more or less condensed form, of the sources of that most extraordinary book known as the *Secret Doctrine*, taken from the two volumes of the work itself, as well as from the introductory chapters of the *Voice of the Silence* and *Isis Unveiled*.

The Path

SUPERSENSUOUS PLANES AND MIND — *James H. Connelly*

Theosophy affirms the existence of supersensuous planes in the Macrocosm, each of which bears its part in the composition of the Microcosm (man), and occultism — or, in other words, advanced science — demonstrates beyond question the intimate relations between them and the material one which is the field of our mundane experiences. Evidence of their existence is also found in a proper understanding of the operations of the mind. These may be broadly classed as imagination, perception, reception, retention, recollection, ratiocination, and impulsion. That this classification is crudely general may be admitted, but it is sufficiently definite for present purposes, which do not include an exhaustive analysis of the infinitely complex functions of the mind, a work in which even so close and careful a reasoner as Raue found himself hampered by the limitations of a volume of almost six hundred pages.

Ultra-materialists — whom it would be better perhaps to call corporealists — affirm that all thought is a product of molecular modes of motion, mere expression of activity in brain-tissue cells, and point to the discernible effects of mental action upon the gray matter of the brain as evidence in support of their hypothesis. This is as correct as it would be to say that the copper of the etcher's plate originates the picture which, in lines and dots, is bitten into its surface by the acid skilfully applied by the artist in conformity to the requirements of the ideal in his mind. The fact of the matter is that the gross matter of which the brain is composed, whether gray or white, great or small in quantity, and much or little convoluted, is of itself as little capable of originating thought, or even sensing an impression, as a stone would be, or the brain itself if the life-principle were separated

from it. But within that brain, present in every molecule and even atom of it — yet as far beyond the corporealist's discovery as the conditions of life on Sirius — is the astral brain, which is also matter, but of such tenuity in its atomic constitution that it may not be, in any way, apprehended by our gross senses.

The functions of that astral brain are perception of sensations and their translation to the mind, and the application of the conative forces resultant from such mental cognition to the direction, through the gross brain, of subservient physical impulse. What, then, is the gross brain? Simply a cellular aggregation of molecular matter having such specialized differentiation as enables it to store up, as impressions, the vibrations conveyed to it by the astral brain, holding them as latent vestiges of sensation and, when required, translating them to the lower rate of vibrations appreciable by the denser molecular matter of the body, so becoming the immediate motor force for action. The capacity for development with which it came into being was a matter of Karmic award, being prescribed by its environment, the hereditary influences upon it, and various other circumstances which it is not necessary now to particularize, all having their effect in determining its quality — as the sun, air, soil, and moisture govern the growing plant — but nothing endowing it, in any degree, with the power of starting vibrations, or — in other words — originating thought. Even the primitive forces, the capacity for mere sensory perceptions, do not belong to the gross brain but to the astral brain, in which it is not unreasonable to suppose they inhere as unconsciously-cherished remainders from the exceptionally strong range of impressions naturally resultant from preceding existences, subject to the needs and desires of the corporeal form.

Those who affirm the capacity of gross matter to generate thought assume to find support for their hypotheses in the waste, by

mental energy, of the gray tissue of the corporeal brain, but they might as well ascribe to flowing blood the cutting of the vein from which it issues. The waste is an effect, not a cause. All energy is destructive, or, to speak more accurately, is reconstructive, and "the power which builds, unbuilds, and builds again" is ceaselessly at work. Molecular disintegration is hastened by all activity in every sort of tissue, and, if a proper balance is maintained, the work of molecular rearrangement is proportionately hastened by nutrition. Some scientists now affirm that cholesterin — a fatty salt found in the bile, lungs, and brain, and for which until very recently nobody saw any particular use — is the especial nutriment of the grey matter of the brain. Will the corporealists affirm that it is the cholesterin which does the thinking; that an heroic impulse or poetic thought is flattened crystals, insoluble in water but solvable in alcohol and ether, having well defined angles of crystallization and obtainable in quantity from gall-stones? The gentlemen who study mind from the standpoint of matter know a little about the physical brain, but not all, by any means, even of that. Is there one of them who knows the use of the pineal gland — which Descartes affirmed to be "the seat of the soul" — or can account for the gray sand found in it, not present in idiots or infants, scant in old age, and most abundant in middle-age brains of notable mental vigor?

The primitive forces already spoken of manifest themselves in the earliest moments of an infant's existence and do not cease while life lasts. They all tend towards experience of and repletion with external stimuli which correspond to their nature, and all experiences of sensation thus perceived are recorded in the plastic substance of the molecular brain as vestiges which may be stirred from latency to manifestation either by repetition of the stimuli primarily causing them, by contrasting stimuli, or by a strenuous effort of the mind, consciously or unconsciously

applied, as conative vibrations, through the astral medium. Evidently the depth of such latent impressions must be proportioned to the strength and frequency of the experiences of like stimuli of which the vestiges are resultants. Hence it is but natural that the larger number of vestiges accumulated from the lower, or animal, senses — which are most productive of experiences in corporeal life — should eventually predominate in strength over those of the higher or intellectual range. And this affords an explanation of the power of Kama — or animal desire — in controlling our lives, so that a pessimistic good man has been moved to declare that "man is born to evil as the sparks fly upward". It also, if we reflect upon the extensions of this influence, enables us to comprehend the seeming mystery of the formation, during life, of the Kama-rupa, the wholly animal soul which becomes perceptible after death as an objective entity. And it makes apparent why and how men's characters are so often stamped upon their bodily features and forms. All the sensualities and vices that stain men's souls stamp themselves first in deep impressions upon the plastic brain, and thence find expression in the outward form to every part of which that brain extends its influence. It is erroneous to suppose that the brain is all lodged in the cavity of the skull. It is in the spine and the nerve ganglions, and practically throughout all the extensions of the nervous system. Virchow characterized the new-born child as "an almost purely spinal being", and Pfluger's experiments upon frogs demonstrated that consciousness of sensations, capacity to locate them, and power to direct corporeal action were all retained by the unfortunate batrachians upon which he experimented, after their skulls had been emptied of brain matter. The transference of consciousness of a still higher range from the brain to the solar plexus, under certain abnormal nervous conditions, may also be cited as an additional evidence of the diffusion of the specialized matter responsive to astral vibrations. So throughout the entire

man runs his gross brain, and coextensive with it his astral brain, energizing it, directing its formative work of giving outward demonstration, in all his physical being, of what he has made of his soul.

Perception of sensations and their retention as vestiges for stimulation of conative force at the command of recollection — which is a mandatory vibration in the mind — may then be said to be powers located in the astral brain and its tool, the gross organ. But beyond these is the higher range of faculties, ratiocination, reception of purely mental impressions — either from purely subjective concepts or by reflection from the mentality of another — and finally the power of impulsion of mental force upon others. All these must necessarily, to be made potential, find translation through the lower rate of the astral medium to the still further diminished rate of the gross brain, if eventual manifestation on the material plane is sought, but not otherwise.

That sensory perception is an attribute of the astral brain and not of the corporeal is sufficiently evidenced by its highest manifestation in the experience of the many who possess the power of "seeing on the astral plane" either normally or under the abnormal stimulus of some phase of hypnotic control. The entities seen by so-called "spiritualistic mediums", and which they mistake for spirits of the dead, are on the astral plane. Charcot, Binet *freres*, James, and many other investigators have shown the ability of a hypnotee to become a witness of things which were not within the range of physical perception and, being outside the knowledge of any person whose mentality could have reached the subject, could only have been sensed through perception of astral vibrations. And the state of *statuvolism*, or self-induced trance is simply an excitation of the astral percipiency to an abnormal degree.

These phenomena must not be confused with others, very closely related yet altogether different, in which the compelling force of one mentality exerted upon another is very clearly demonstrated. The mind of every human being, in proportion to its development, possesses individual capacity in ability to reason, to draw deductions from vestiges of perceptions at its command, or impressions of a higher range, and thus to elect for itself between good and evil. It is this which constitutes its moral responsibility and determines its evolutionary progress, whether downward under the domination of its Kamic control or upward to spiritual life. But it is likewise susceptible, in greater or lesser degree, to the vibrations projected upon its plane by other minds, affecting and in some cases even paralyzing that power of ratiocination. This is the case when it is subjected to the will of another mentality exercising upon it hypnotic control, when it is rendered mentally — and it would justly seem — morally irresponsible. It may, on the other hand, if sufficiently forceful to impel such vibrations on the mental plane, in the same way take from others their mentality temporarily and even, to some extent, permanently. Herein lies the awful danger attendant upon the practice of hypnotism, for both the "hypnotist" and the "sensitive".

CONVERSATIONS ON OCCULTISM

Student. — What is the effect of trying to develop the power of seeing in the astral light before a person is initiated?

Sage. — Seeing in the astral light is not done through Manas, but through the senses, and hence has to do entirely with sense-perception removed to a plane different from this, but more illusionary. The final perceiver or judge of perception is in Manas, in the Self; and therefore the final tribunal is clouded by the astral perception if one is not so far trained or initiated as to know the difference and able to tell the true from the false. Another result is a tendency to dwell on this subtle sense-perception, which at last will cause an atrophy of Manas for the time being. This makes the confusion all the greater, and will delay any possible initiation all the more or forever. Further, such seeing is in the line of phenomena, and adds to the confusion of the Self which is only beginning to understand this life; by attempting the astral another element of disorder is added by more phenomena due to another plane, thus mixing both sorts up. The Ego must find its basis and not be swept off hither and thither. The constant reversion of images and ideas in the astral light, and the pranks of the elementals there, unknown to us as such and only seen in effects, still again add to the confusion. To sum it up, the real danger from which all others flow or follow is in the confusion of the Ego by introducing strange things to it before the time.

Student. — How is one to know when he gets real occult information from the Self within?

Sage. — Intuition must be developed and the matter judged from the true philosophical basis, for if it is contrary to true general

rules it is wrong. It has to be known from a deep and profound analysis by which we find out what is from egotism alone and what is not; if it is due to egotism, then it is not from the Spirit and is untrue. The power to know does not come from book-study nor from mere philosophy, but mostly from the actual practice of altruism in deed, word, and thought; for that practice purifies the covers of the soul and permits that light to shine down into the brain-mind. As the brain-mind is the receiver in the waking state, it has to be purified from sense-perception, and the truest way to do this is by combining philosophy with the highest outward and inward virtue.

Student. — Tell me some ways by which intuition is to be developed.

Sage. — First of all by giving it exercise, and second by not using it for purely personal ends. Exercise means that it must be followed through mistakes and bruises until from sincere attempts at use it comes to its own strength. This does not mean that we can do wrong and leave the results, but that after establishing conscience on a right basis by following the golden rule, we give play to the intuition and add to its strength. Inevitably in this at first we will make errors, but soon if we are sincere it will grow brighter and make no mistake. We should add the study of the works of those who in the past have trodden this path and found out what is the real and what is not. They say the Self is the only reality. The brain must be given larger views of life, as by the study of the doctrine of reincarnation, since that gives a limitless field to the possibilities in store. We must not only be unselfish, but must do all the duties that Karma has given us, and thus intuition will point out the road of duty and the true path of life.

Student. — Are there any Adepts in America or Europe?

Sage. — Yes, there are and always have been. But they have for

the present kept themselves hidden from the public gaze. The real ones have a wide work to do in many departments of life and in preparing certain persons who have a future work to do. Though their influence is wide they are not suspected, and that is the way they want to work for the present. There are some also who are at work with certain individuals in some of the aboriginal tribes in America, as among those are Egos who are to do still more work in another incarnation, and they must be prepared for it now. Nothing is omitted by these Adepts. In Europe it is the same way, each sphere of work being governed by the time and the place.

Student. — What is the meaning of the five-pointed star?

Sage. — It is the symbol of the human being who is not an Adept, but is now on the plane of the animal nature as to his life-thoughts and development inside. Hence it is the symbol of the race. Upside down it means death or symbolizes that. It also means, when upside down, the other or dark side. It is at the same time the cross endowed with the power of mind, that is, man.

Student. — Is there a four-pointed star symbol?

Sage. — Yes. That is the symbol of the next kingdom below man, and pertains to the animals. The right kind of clairvoyant can see both the five- and the four-pointed star. It is all produced by the intersections of the lines or currents of the astral light emanating from the person or being. The four-pointed one means that the being having but it has not as yet developed Manas.

Student. — Has the mere figure of a five-pointed star any power in itself?

Sage. — It has some, but very little. You see it is used by all sorts of people for trademarks and the like, and for the purposes of organizations, yet no result follows. It must be actually used by

the mind to be of any force or value. If so used, it carries with it the whole power of the person to whom it may belong.

Student. — Why is the sword so much spoken of in practical Occultism by certain writers?

Sage. — Many indeed of these writers merely repeat what they have read. But there is a reason, just as in warfare the sword has more use for damage than a club. The astral light corresponds to water. If you try to strike in or under water with a club, it will be found that there is but little result, but a sharp knife will cut almost as well under water as out of it. The friction is less. So in the astral light a sword used on that plane has more power to cut than a club has, and an elemental for that reason will be more easily damaged by a sword than by a club or a stone. But all of this relates to things that are of no right value to the true student, and are indulged in only by those who work in dark magic or foolishly by those who do not quite know what they do. It is certain that he who uses the sword or the club will be at last hurt by it. And the lesson to be drawn is that we must seek for the true Self that knows all Occultism and all truth, and has in itself the protecting shield from all dangers. That is what the ancient Sages sought and found, and that is what should be striven after by us.

The Path

WRONG POPULAR NOTIONS — *William Q. Judge*

What are your proofs?" is often asked of the Theosophical student who believes in reincarnation and Karma, who holds to the existence of the astral body, and who thinks that evolution demands a place in the cosmos for Mahatmas (or great souls) as facts and ideals. "If you cannot prove reincarnation just as you would a fact in a court of law, I will not believe", says one, while another says, "Make such objective demonstrations as science does, and then you may expect me to agree with you". But in truth all these objectors accept as proven in the way they demand for Theosophy many things which on a slight examination are seen to rest as much on theory and metaphysical argument as do any of the doctrines found in Theosophical literature. The axioms of mathematics are improvable; the very word assumes that they have to be accepted. Being accepted, we go forward and on the basis of their unproved truth demonstrate other and succedent matters. The theories of modern astronomy are taken as true because by their means eclipses are foretold and other great achievements of that science made possible. But many centuries ago quite different theories of the relations and motions and structure of the heavens allowed the old astronomers to make the same deductions. Let us examine a few words and things.

THE ATOM

The atom and the molecule are very influential words. They are constantly used by people claiming to follow science, but who indulge in criticisms on the uncertainties of Theosophical speculation. Yet no one ever saw an atom or a molecule. They are accepted as facts by science — just as the spiritually-inclined accept the existence of the invisible soul — yet it is impossible to

objectively prove either the one or the other. They are deemed to be proven because they are necessary. But let a Theosophist say that the astral body exists, and Mahatmas also, because both are necessary in evolution, and at once a demand arises for "demonstration" by objective proofs.

THE SUN

The sun is the apparent source of energy, and is confidently supposed by many to be a mass of burning material. No one, however, knows this to be so. No one was ever there, and the whole set of theories regarding the luminary rests on assumptions. Many natural facts are against some of the theories. The great fact that the higher the mountain the more cold it is on top would be one, not wholly accounted for by theories as to radiation. And when we remember the great, the immense, difference between the various scientific estimates of the sun's heat, doubt increases. Seeing that electricity is now so much better known, and that it is apparently all-pervading, the ancient idea that the sun is a center of electrical or magnetic energy which turns into heat as well as other things on reaching here, becomes plausible and throws some spice of illusion into the doctrine that our sun is a mass of burning matter.

Again, the sun is seen as if over the horizon in full view every clear evening, when in fact he has been some minutes down below the line of sight. Refraction partly accounts for this, but none the less is his apparent visibility or position above the horizon an illusion.

THE STARS

Many of those that are known as fixed stars are immeasurably far away. Sirius is at an immense distance, and has been receding always many thousands of miles each minute. Others are so far

off that it takes one hundred thousand years for their light to reach here.

Yet since records began they have all remained apparently in one place and in the same relation to each other. They constitute a vast illusion. They are moving and yet they remain still. We point the telescope at one of our sister planets, and knowing that its light takes fifteen minutes or more to get to us, we must be continually directing the glass to a point in space where the planet is not, and by no possibility can we point to where it actually is. Still, for all this uncertainty, many complicated and definite calculations are based on these observations of mere illusions.

LATITUDE AND LONGITUDE

These are practically used every hour of the day for the safeguarding of human life and property. But they exist only in the brains of men, for they are not in the sky or on land. They are theoretical divisions made by man, and they are possible only because the sole reality in nature is that which is jeered at by many as the ideal. But if the ancients are said to be the constructors of a great human chart in the Zodiac, the divisions of which have a bearing on the navigation of the great ocean of human evolution, the proud practical man says that you have but shown the ancients to be fanciful, superstitious, grotesque. But they were not so. Doubtless the saying recorded of Jesus about the time when we should see "the sign of the Son of Man in the heavens" will not so far from now be found to have a practical meaning in human life.

The ancient Sage was like the modern captain. The captain takes an observation of the illusionary stars and the blazing sun, thus discovering whether his ship is near or far from land. The Sage observed the Zodiac, and from the manner it and its boats were

related to each other he was able to calculate whether the human freight in the boat of human evolution was near a rock or on the free, open sea in its eternal and momentous journey.

SENSATION OF TOUCH

Every one is accustomed to say that he has touched this or that object on which his fingers may have rested. But this is not so. We do not touch anything; we only perceive and report a sensation which we call touch. If that sensation is due to actual contact between the skin and the object, then the harder we pressed, and thus the nearer we came to the object's surface, the more accurate should be the sensation. In fact, however, if we press hard we dull the sensation and turn it into one of pain for the skin. There is always a space between the skin and the surface dealt with, just as there is always a space between the molecules of each mass. If two smooth planes be pushed on to each other they will adhere, and the smoother they are the more difficult it will be to get them apart. If we could actually touch the hand to any surface so as to cover all of it with a touching surface, we could not withdraw the hand at all. All that we get, then, by what we call touch is the idea produced by the vibration and by that much of contact as is possible in the case.

CONTINUOUS SOLIDITY

Quite Theosophical is the scientist when he says that "we cannot know anything of the actual nature of matter in itself, but can only know the sensation or the phenomena". The mineral or metal called even the hardest is not solid or continuous in itself. This is now admitted by all scientific men. Even the diamond, "hardest of all", is a mass of moving molecules made up of like moving atoms. Its hardness is only relative. It is simply harder than glass because its atoms are moving at a more rapid rate. In a recent lecture in London Mr. Bell, a scientific light, told how the

edge or point of the diamond cuts the glass because the molecules in the diamond move rapidly and get in between the slower ones of the glass and thus cut it. And so it is with all other masses of matter. They are only masses of molecules in different rates of vibration; none of them solid or hard save in a relative sense. Is it not true, then, as so often held by philosophers and so insisted on by those Adepts who gave us information through H. P. Blavatsky that the world we are in is to be properly considered in a metaphysical sense and not as a mere mechanism that can be explained on mechanical principles? And in the face of all the illusions and all the speculations of life and science, why should the Theosophist be asked to make or give any different sort of proofs than those availed of by science in all its investigations? There is no reason.

The Path

THE SPIRIT OF THINGS — *C. F. Wright*

"Ideas rule the world", quoted one of Those whose influence in the Theosophical Society is not the less felt because its source is unperceived by most members. Yet there are many, even among our own Theosophists, who hold tightly to the notion that the world is held and even advanced by forms and words. From the ritualism and ceremonies of the Priesthood to the carefully rounded phrases of a Chesterfield there is scarcely a step. Both are equally useless to the development of the real man. The effort of each leads men away from the contemplation of the Spirit to the adoration of matter. Humanity has ever been led away from its freedom and recognition of the eternal principle of Life, to make obeisance to the god of form — and matter! Those in the past who said that all objectivity was Maya or illusion spoke a truth which must vibrate throughout all time, reverberating through the hearts of all who develop to the life of independence and power. For assuredly none can limit the changes in the Great Breath, whose perpetual motions in the unseen world make the varieties in this.

It is worth while to recognize this as a philosophy, and so prevent many mistakes. The world pulls this way and that, seeking her freedom in legislature and habit, oblivious to the fact that it is precisely these things which forge her chains. Belief in the necessity for Custom and Convention, sovereigns and saviours, style and good usage, is really born of the soulless: for these all limit freedom of the Spirit and propose to chain it to one idea. Hence arise disputations, and from them warfares.

Yet even recognizing this, the philosopher will not rebel against them nor seek their immediate destruction. Himself emancipated,

in the world though not of it, he will see that the world being held by forms, through them it must be aided and advanced to freedom.

Some will think it is going too far to say that the spirit of evil and stagnation is in form. But it is easy to demonstrate this truth. Every great leader, every genius, has thrown off the yoke of form-slavery, and drawn his principles of action from the free source of things. Though often disregarding and destroying things men have long believed dear and sacred, yet while he lives men follow him and love him; recognizing something of the heavenly power about him, they find strength in his freedom and delight to be in his presence and to know his thoughts. Who has not seen the spirit of life in a child? And there are none among us who upset customs more than children. Buddha, Jesus, and the true religious founders destroyed all forms. Even though we see in them the great originators of present religious forms, it is not because they desired that that should be so, but because their ideas and wisdom were clothed in matter by their followers, who, possessing little recognition of the Spirit, were incapable of drawing life from anything but externals. Poets and painters, musicians, geniuses of all kinds, are noted for their eccentricities, yet no one can doubt that they see deeper into the divinity of things than do the Philistines. Strange as it may seem, it is, after all, the power of *originality* which is indicative of possible progress in any human being. Without this the nature is in darkness, there is no light in it and no creative power.

The Theosophical Society was established on such a basis that should prevent, if possible, its ever being tied by forms. Yet how many there are who want to make it a *respectable* institution — will not help a brother unless he be of the same rank as themselves! How many, indeed, wish that H. P. B. had not had eccentricities, or had not done so much outwardly to vibrate and

shock conventional shells; or that fewer uneducated persons were in the ranks and more of those who are book-learned and well placed in Society!

Others are so caught in the web of form that they think it impossible for anyone to possess wisdom or light outside the Society's ranks. Let such know that there are many persons all over the world, outside the T. S., who have caught something of the Spirit of Wisdom just now lighting up the whole earth, and these as well as T. S. members are surely being helped by the Great Brotherhood behind. The T. S. has its own work to do. It was the originator of these thoughts in the West, and through its members they must be given to the world. And if taken up and used by others outside, a part here and a part there, sometimes imperfectly, generally unacknowledged, it is no harm, but always unconsciously an aiding the world. There are no forms here, no priesthood; each one has his own wisdom and should hasten to let the world know of it.

It is not only the Theosophical Society we work for, as a Society merely. This is a great danger to be avoided. It is for the Society only as a useful vehicle of ideas that we labor. It will fade and fall to pieces some time — and let us trust it may be destroyed long before it approaches the possibility of becoming a priesthood — but the ideas the world and our race have received through it will live and will have moulded the thought of the people almost without their knowing it. We shall be forgotten, but the thoughts we have passed on will live. Members should recollect they are not building an institution, but only erecting a temporary structure in which a little wisdom has been stored.

Many in the Society are just now used by Those "behind the scenes", to become vehicles of truth. They are intended to hand it on. Once the brain has opened to the Light only one thing can

again close it, that is, the *keeping back of wisdom from others*. Yet many receive knowledge in a flash of intuition, and instead of giving it out at some Branch meeting or to someone who may need it, they keep it hid away to burst it forth later in a carefully-written paper or lecture, so that they may receive credit for their ideas and not have them stolen by others beforehand. Their ideas will then find no ground in which to take root: they should have been given out when received. And in time such persons will, if this habit be kept up, lose the spiritual power they now possess. Moreover, the setting free of ideas in the world at the right moment has a great deal to do with the development of occult powers, however little connection between these two matters there may seem to be. It is pure personality and selfishness that make one hold back and wait until the thoughts can be given out with greater credit to himself.

Madame Blavatsky launched her wisdom into the world without any consideration of herself. Probably her thought was something of this nature: "I know my English is faulty, I know my science is not of the best, but my wisdom is true, and it must be sent forth. Others will steal my ideas and knowledge for their own glorification, but it does not matter, that is their own loss; they are also helping me in my labor."

So it is that work which must be done, and speedily lest we lose the knowledge ere we have pinned it. Let loose the ideas among the people; do not hold them till you can get glory by them. Do not wait until you can understand Sanskrit, can write classical English, have made a name for yourself in the world, before you become a worker. This is all fear of form. To be sure, the better the instrument the better the work, but the means must not be mistaken for the end. The time is short; only a few more years exist for active work. Let the ideas loose in the world at all costs; and no matter at what loss of fame to yourself. After all, on your

death-bed you will know that it is the IDEA — spiritual or otherwise — of life that you have had, and your virtue, that are the important things, not how much you have known of other men's thoughts, or how correctly you have dressed.

The Ideas live and rule, not the words that clothed them nor the imagery used for their expression. And it is well known that he who thus impersonally acts comes more and more directly in relationship with the Brotherhood of Light.

The Path

LETTERS OF H. P. BLAVATSKY: I (1)

These letters will be continued each month in the *PATH*. They constitute a correspondence carried on by H. P. B. with her Russian relatives, and are being translated into English by H. P. B.'s niece, Mrs. C. Johnston, whose maiden name was Vera Jelihovsky, and whose mother is Mme. Jelihovsky, the sister of H. P. B. who contributed under her own name to Mr. Sinnett's *Incidents in the Life of Madame Blavatsky*. As most of the letters were not dated, it will not always be possible to say whether H. P. B. was writing from America, Tibet, Egypt, or the North Pole. A great many letters are in this correspondence, and the series will be continued until all are published. They are all of wonderful interest. It must be borne in mind for a clearer understanding of her words that she was writing to relatives who did not understand her strange inner life, and many of whom held religious opinions very different from hers. Permission has been given me to add some notes, but for those I alone will be responsible.— W. Q. J.

About the year 1875 Madame Jelihovsky, who is well known both on account of her own contributions to literature and also as the sister of Madame Blavatsky, heard that H. P. B. had commenced to write in a way that would have been impossible to her a few years before. How she had acquired the knowledge that won the unanimous praise of both the English and American press was beyond all explanation. There were rumors afloat as to "sorcery" being at the root of it, and filled with forebodings and terrors Madame Jelihovsky wrote to her sister, imploring an explanation. (2) She received the following reply:

"Do not be afraid that I am off my head. All that I can say is that someone positively *inspires me* — . . . more than this: someone enters me. It is not I who talk and write: it is something within me, my higher and luminous Self, that thinks and writes for me. Do not ask me, my friend, what I experience, because I could not explain it to you clearly. I do not know myself! The one thing I know is that now, when I am about to reach old age, I have become a sort of storehouse of somebody else's knowledge. . . . *Someone* comes and envelops me as a misty cloud and all at once pushes me out of myself, and then I am not "I" any more — Helena Petrovna Blavatsky — but someone else. Someone strong and powerful, born in a totally different region of the world; and as to myself it is almost as if I were asleep, or lying by not quite conscious, — not in my own body but close by, held only by a thread which ties me to it. However, at times I see and hear everything quite clearly: I am perfectly conscious of what my body is saying and doing — or at least its new possessor. I even understand and remember it all so well that afterwards I can repeat it and even write down *his* words. . . . At such a time I see awe and fear on the faces of Olcott and others, and follow with interest the way in which *he* half-pityingly regards them out of my own eyes and teaches them with my physical tongue. Yet not with my mind but his own, which enwraps my brain like a cloud. . . . Ah, but really I cannot explain everything."

H. P. B.'s astonishment at this marvellous development of her own powers would appear to have been great, if one may judge by a letter she wrote (about 1875 to 1876) to her aunt, Madame Fadeef, with whom she had been brought up and educated:

"Tell me, dear one, do you take any interest in physiologico-psychological mysteries? Here is one for you which is well qualified to astonish any physiologist: in our Society there are a few exceedingly learned members — for instance, Professor

Wilder, one of the first archaeologists and Orientalists in the United States, and all these people come to me to be taught, and swear that I know all kinds of Eastern languages and sciences, positive as well as abstract, much better than themselves. That's a fact! And it's as bad to run up against a fact as against a pitchfork. So then tell me: how could it have happened that I, whose learning was so awfully lame up to the age of forty, have suddenly become a phenomenon of learning in the eyes of people who are really learned? This fact is an impenetrable mystery of Nature. I — a psychological problem, an enigma for future generations, a Sphinx! (3) Just fancy that I, who have never in my life studied anything, and possess nothing but the most superficial smattering of general information; I, who never had the slightest idea about physics or chemistry or zoology, or anything else — have now suddenly become able to write whole dissertations about them. I enter into discussions with men of science, into disputes out of which I often emerge triumphant. . . . It's not a joke; I am perfectly serious; I am really frightened because I do not understand how it all happens. It is true that for nearly three years past I have been studying night and day, reading and thinking. But whatever I happen to read, it all seems familiar to me. I find mistakes in the most learned articles, and in lectures by Tyndall, Herbert Spencer, Huxley, and others. If some archaeologist happens to call on me, on taking leave he is certain to assure me that I have made clear to him the meaning of various monuments, and pointed out things to him of which he had never dreamed. All the symbols of antiquity, and their secret meaning, come into my head and stand there before my eyes as soon as the conversation touches on them.

"A pupil of Faraday's, a certain Professor H., who has been christened by the voice of a thousand mouths 'the Father of experimental Physics', having spent yesterday evening with me,

now assures me that I am well qualified to 'put Faraday in my pocket'. Can it be that they all are simply fools? But it is impossible to suppose that friends and enemies alike have leagued together to make of me a savant if all that I do is to prove superficially certain wild theories of my own. And if it was only my own devoted Olcott and other Theosophists who had such a high opinion of me, it could be said: '*Dans le pays des aveugles les borgnes sont rois*' ('In a country of blind men the one-eyed are kings'). But I continually have a whole crowd from morning to night of all kinds of Professors, Doctors of Science, and Doctors of Divinity; (4) for instance, there are two Hebrew Rabbis here, Adler and Goldstein, who are both of them thought to be the greatest Talmudists. They know by heart both the *Quabalah* of Simeon Ben Jochai and the *Codex Nazarteus* of Bardesanes. They were brought to me by A., a protestant clergyman and commentator on the *Bible*, who hoped they would prove that I am mistaken on the subject of a certain statement in the Chalden Bible of Onkelos. And with what result? I have beaten them. I quoted to them whole sentences in ancient Hebrew and proved to them that Onkelos is an authority of the Babylonian school."

In the earlier letters of H. P. B. to Madame Jelihovsky the intelligence which has been referred to as "enveloping her body" and using her brain is spoken of as "the Voice" or "Sahib". Only later did she name this, or another "Voice", as "Master". For instance, she writes to Madame Jelihovsky:

"I never tell anyone here about my experience with the *Voice*. When I try to assure them that I have never been in Mongolia, that I do not know either Sanskrit or Hebrew or ancient European languages, they do not believe me. 'How is this,' they say, 'you have never been there, and yet you describe it all so accurately? You do not know the languages and yet you translate straight from the originals!' and so they refuse to believe me. (5) They

think that I have some mysterious reasons for secrecy; and besides, it is an awkward thing for me to deny when everyone has heard me discussing various Indian dialects with a lecturer who has spent twenty years in India. Well, all that I can say is, either they are mad or I am a changeling!"

About this time H. P. B. appears to have been greatly troubled, for though some members of the nascent Theosophical Society were able to get "visions of pure Planetary Spirits", she could only see "earthly exhalations, elementary spirits" of the same category, which she said played the chief part in materializing seances. She writes:

"In our Society everyone must be a vegetarian, eating no flesh and drinking no wine. This is one of our first rules." (6) It is well known what an evil influence the evaporations of blood and alcohol have on the spiritual side of human nature, blowing the animal passions into a raging fire; and so one of these days I have resolved to fast more severely than hitherto. I ate only salad and did not even smoke for whole nine days, and slept on the floor, and this is what happened: I have suddenly caught a glimpse of one of the most disgusting scenes of my own life, and I felt as if I was out of my body, looking at it with repulsion whilst it was walking, talking, getting puffed up with fat and sinning. Pheugh, how I hated myself! Next night when I again lay down on the hard floor, I was so tired out that I soon fell asleep and then got surrounded with a heavy, impenetrable darkness. Then I saw a star appearing; it lit up high, high above me, and then fell, dropping straight upon me. It fell straight on my forehead and got transformed into a hand. Whilst this hand was resting on my forehead I was all ablaze to know whose hand it was. . . . I was concentrated into a single prayer, into an impulse of the will, to learn who it was, to whom did this luminous hand belong. . . . And I have learned it: there stood over it I myself. Suddenly this

second me spoke to my body, 'Look at me!' My body looked at it and saw that the half of this second me was as black as jet, the other half whitish-grey, and only the top of the head perfectly white, brilliant, and luminous. And again I myself spoke to my body: 'When you become as bright as this small part of your head, you will be able to see what is seen by others, by the purified who have washed themselves clean. . . . And meanwhile, make yourself clean, make yourself clean, make yourself clean.' And here I awoke."

At one time H. P. B. was exceedingly ill with advanced rheumatism in her leg. Doctors told her that it was gangrened, and considered her case hopeless. But she was successfully treated by a negro who was sent to her by the "Sahib". She writes to Madame Jelihovsky:

"He has cured me entirely. And just about this time I have begun to feel a very strange duality. Several times a day I feel that besides me there is someone else, quite separable from me, present in my body. I never lose the consciousness of my own personality; what I feel is as if I were keeping silent and the other one — the lodger who is in me — were speaking with my tongue. For instance, I know that I have never been in the places which are described by my 'other me', but this other one — the second me — does not lie when he tells about places and things unknown to me, because he has actually seen them and knows them well. I have given it up: let my fate conduct me at its own sweet will; and besides, what am I to do? It would be perfectly ridiculous if I were to deny the possession of knowledge avowed by my No. 2, giving occasion to the people around me to imagine that I keep them in the dark for modesty's sake. In the night, when I am alone in my bed, the whole life of my No. 2 passes before my eyes, and I do not see myself at all, but quite a different person — different in race and different in feelings. But what's the use of talking about it? It's

enough to drive one mad. I try to throw myself into the part and to forget the strangeness of my situation. This is no mediumship, and by no means an impure power; for that, it has too strong an ascendancy over us all, leading us into better ways. No devil would act like that. 'Spirits', maybe? But if it comes to that, my ancient 'spooks' dare not approach me any more. It's enough for me to enter the room where a seance is being held to stop all kinds of phenomena at once, especially materializations. Ah no, this is altogether of a higher order! But phenomena of another sort take place more and more frequently under the direction of my No. 2. (7) One of these days I will send you an article about them. It is interesting."

2. It must be recollected that the "rumors of sorcery" were afloat in Russia and not in America. — W. Q. J. ([return to text](#))
3. This name was prophetic, for thus she has been often called — W.Q. J. ([return to text](#))
4. Col. Olcott and myself can testify to the continual stream of people of sorts which entered her rooms everyday. In 1875 she told me that when she had to write about evolution a large picture of scenes of the past would unroll before her eyes, together with another picture of the present time. — W. Q. J. ([return to text](#))
5. In London, in 1888, a Hindu who had met her at Meerut said to her in my presence through an interpreter that he was surprised she did not use his language then, as she had used it at Meerut. She replied, "Ah, yes, but that was at Meerut." — W. Q. J. ([return to text](#))

6. This was a proposed rule. H. P. B. accepted a thing proposed as a thing done, and so spoke of it here. But she did not carry out that rule then proposed, and never then suggested its enforcement to me. — W.Q. J. ([return to text](#))

7. These phenomena were those amazing feats of magic, hundreds of which I witnessed in broad daylight or blazing gas-light, from 1875 to 1878. — W.Q. J. ([return to text](#))

The Path

CONVERSATIONS ON OCCULTISM

Student. — Is there not some attitude of mind which one should in truth assume in order to understand the occult in Nature?

Sage. — Such attitude of mind must be attained as will enable one to look into the realities of things. The mind must escape from the mere formalities and conventions of life, even though outwardly one seems to obey all of them, and should be firmly established on the truth that Man is a copy of the Universe and has in himself a portion of the Supreme Being. To the extent this is realized will be the clearness of perception of truth. A realization of this leads inevitably to the conclusion that all other men and beings are united with us, and this removes the egotism which is the result of the notion of separateness. When the truth of Unity is understood, then distinctions due to comparisons made like the Pharisee's, that one is better than his neighbor, disappear from the mind, leaving it more pure and free to act.

Student. — What would you point out as a principal foe to the mind's grasping of truth?

Sage. — The principal foe of a secondary nature is what was once called *phantasy*; that is, the reappearance of thoughts and images due to recollection or memory. Memory is an important power, but mind in itself is not memory. Mind is restless and wandering in its nature, and must be controlled. Its wandering disposition is necessary or stagnation would result. But it can be controlled and fixed upon an object or idea. Now as we are constantly looking at and hearing of new things, the natural restlessness of the mind becomes prominent when we set about pinning it down. Then memory of many objects, things, subjects, duties, persons, circumstances, and affairs brings up before it the various pictures

and thoughts belonging to them. After these the mind at once tries to go, and we find ourselves wandering from the point. It must hence follow that the storing of a multiplicity of useless and surely-recurring thoughts is an obstacle to the acquirement of truth. And this obstacle is the very one peculiar to our present style of life.

Student. — Can you mention some of the relations in which the sun stands to us and nature in respect to Occultism?

Sage. — It has many such, and all important. But I would draw your attention first to the greater and more comprehensive. The sun is the center of our solar system. The life-energies of that system come to it through the sun, which is a focus or reflector for the spot in space where the real center is. And not only comes mere life through that focus, but also much more that is spiritual in its essence. The sun should therefore not only be looked at with the eye but thought of by the mind. It represents to the world what the Higher Self is to the man. It is the soul-center of the world with its six companions, as the Higher Self is the center for the six principles of man. So it supplies to those six principles of the man many spiritual essences and powers. He should for that reason think of it and not confine himself to gazing at it. So far as it acts materially in light, heat, and gravity, it will go on of itself, but man as a free agent must think upon it in order to gain what benefit can come only from his voluntary action in thought.

Student. — Will you refer to some minor one?

Sage. — Well, we sit in the sun for heat and possible chemical effects. But if at the same time that we do this we also think on it as the sun in the sky and of its possible essential nature, we thereby draw from it some of its energy not otherwise touched. This can also be done on a dark day when clouds obscure the sky, and some of the benefit thus be obtained. Natural mystics,

learned and ignorant, have discovered this for themselves here and there, and have often adopted the practice. But it depends, as you see, upon the mind.

Student. — Does the mind actually do anything when it takes up a thought and seeks for more light?

Sage. — It actually does. A thread, or a finger, or a long darting current flies out from the brain to seek for knowledge. It goes in all directions and touches all other minds it can reach so as to receive the information if possible. This is telepathically, so to say, accomplished. There are no patents on true knowledge of philosophy nor copyrights in that realm. Personal rights of personal life are fully respected, save by potential black magicians who would take anyone's property. But general truth belongs to all, and when the unseen messenger from one mind arrives and touches the real mind of another, that other gives up to it what it may have of truth about general subjects. So the mind's finger or wire flies until it gets the thought or seed-thought from the other and makes it its own. But our modern competitive system and selfish desire for gain and fame is constantly building a wall around people's minds to everyone's detriment.

Student. — Do you mean that the action you describe is natural, usual, and universal, or only done by those who know how and are conscious of it?

Sage. — It is universal and whether the person is aware or not of what is going on. Very few are able to perceive it in themselves, but that makes no difference. It is done always. When you sit down to earnestly think on a philosophical or ethical matter, for instance, your mind flies off, touching other minds, and from them you get varieties of thought. If you are not well-balanced and psychically purified, you will often get thoughts that are not correct. Such is your Karma and the Karma of the race. But if you

are sincere and try to base yourself on right philosophy, your mind will naturally reject wrong notions. You can see in this how it is that systems of thought are made and kept going, even though foolish, incorrect, or pernicious.

Student. — What mental attitude and aspiration are the best safeguards in this, as likely to aid the mind in these searches to reject error and not let it fly into the brain?

Sage. Unselfishness, Altruism in theory and practice, desire to do the will of the Higher Self which is the "Father in Heaven", devotion to the human race. Subsidiary to these are discipline, correct thinking, and good education.

Student. — Is the uneducated man, then, in a worse condition?

Sage. — Not necessarily so. The very learned are so immersed in one system that they reject nearly all thoughts not in accord with preconceived notions. The sincere ignorant one is often able to get the truth but not able to express it. The ignorant masses generally hold in their minds the general truths of Nature, but are limited as to expression. And most of the best discoveries of scientific men have been obtained in this sub-conscious telepathic mode. Indeed, they often arrive in the learned brain from some obscure and so-called ignorant person, and then the scientific discoverer makes himself famous because of his power of expression and means for giving it out.

Student. — Does this bear at all upon the work of the Adepts of all good Lodges?

Sage. — It does. They have all the truths that could be desired, but at the same time are able to guard them from the seeking minds of those who are not yet ready to use them properly. But they often find the hour ripe and a scientific man ready, and then touch his cogitating mind with a picture of what he seeks. He then

has a "flash" of thought in the line of his deliberations, as many of them have admitted. He gives it out to the world, becomes famous, and the world wiser. This is constantly done by the Adepts, but now and then they give out larger expositions of Nature's truths, as in the case of H.P.B. This is not at first generally accepted, as personal gain and fame are not advanced by any admission of benefit from the writings of another, but as it is done with a purpose, for the use of a succeeding century, it will do its work at the proper time.

Student. — How about the Adepts knowing what is going on in the world of thought, in the West, for instance?

Sage. — They have only to voluntarily and consciously connect their minds with those of the dominant thinkers of the day to at once discover what has been or is being worked out in thought and to review it all. This they constantly do, and as constantly incite to further elaborations or changes by throwing out the suggestion in the mental plane so that seeking and receptive minds may use it.

The Path

RIGHT ACTION — J. H. F.

In defining Philosophy, Professor Ferrier said that "Philosophy is not Truth, but reasoned Truth". And although it may be objected that Truth in its widest aspect must include "reasoned Truth" or Philosophy, yet to a great extent because the West has such imperfect knowledge of the real nature of Mind and of its inner workings, Truth has come to be regarded too much simply as knowledge of facts, of such facts as can be demonstrated *scientifically*, and of their relations and sequence on this plane only. All else is regarded more or less as speculative and uncertain. It is said that we can really know only what Science can demonstrate; other things may be true, we shall be glad if they are true, but they must first be *proved* true before we can regard them seriously. And so Philosophy, the "reasoned Truth" which endeavors to get at the *how* and the *why* of things, and which in so doing passes into the realm of metaphysics, is regarded, at least in its deeper aspect, as speculative; for although it accepts the facts of Science, it transcends Science and cannot be demonstrated according to modern scientific methods. If we take Religion in its true sense, as that which binds back men to the source of all, and so binds man to man on the inner planes of being, and which must include "right action" and "right living", we may see that Philosophy is the link between Science and Religion, that it completes the one and makes possible the other.

It is not enough *to know*, we must do more, we must endeavor *to know how*, and *to know why*. And although the ultimate *how* and *why* may be beyond us, may even transcend our powers of conception, yet it should be our aim to ever approximate to that ultimate. The history of man in all ages shows that he is ever impelled to seek the solution of this problem. Now in one way,

now in another, man has sought to learn the *wherefore* and meaning of existence. The great religions of the world; the philosophies of all times; ancient and modern Science; these with their cosmogonies and theories of creation and emanation, of evolution and development, all are pages in the history of man's inner life, spiritual, moral, and mental; and could we read aright we could trace how at times he has risen till he has stood in the clear light of Truth, how too often he has sunk into the depths of shadow and illusion.

Where do we stand today in our seeking after Wisdom? What guide-posts have we to direct our course? Shall we follow the teachings of any one of the World-religions, or shall we take modern philosophy or modern science as a guide? But how can we know *which* of all these to follow? Surely we are in great perplexity, for before we can intelligently know which is the best guide we ought to study and compare all these teachings; otherwise we may make a great mistake and follow a false guide, when a little patience, a little investigation and study, would have shown us a true one. If we are to live rightly, to act rightly, we must have a right basis and we must think rightly. But it is claimed that even a slight comparative study of the great religions will reveal that their ethics are almost identical, and that if we can go deeper into this study we shall be forced to the conclusion that all had a common origin. So that while it is profitable to pursue such a course of study and if possible to add to it the study of philosophy and modern Science, yet even if this is beyond our power we need not despair nor become indifferent.

For what is it that is really necessary in order that we may act rightly? It may indeed be that to act rightly in an ultimate sense, ultimate knowledge is needed; but for each one to act rightly where he is depends upon his efforts to use the knowledge he now has, and upon his striving to reach his ideal. For each one

has an ideal of some sort, perhaps a very high and holy ideal which he cherishes in his heart of hearts, and yet because it is so high he may too often fail to even remember it. A little thought will show that we have different ideals at different times, and that these are constantly changing. This must be so even if our ultimate ideal remains the same. That action is right action for each one which is done as far as possible with reference to one's ideal. By endeavoring to act up to our ideals we test them and make it possible for us to form new and higher ideals. A man's ideal is the unconscious result of his philosophy, and, strange as it may seem, the only way to obtain a true philosophy is not so much by studying as primarily and especially by living and acting, by living and acting up to one's ideal. So let the student ponder over the words of Jesus: "If any man willeth to do his will, he shall know of the teaching;" and let him also meditate on the words of a far earlier teacher, Krishna; "He who is perfected in devotion findeth spiritual knowledge springing up spontaneously in himself in the progress of time."

The Path

LETTERS OF H. P. BLAVATSKY: II

(Begun in December)

The newspapers gave accounts of certain of these phenomena and described the appearance of astral visitors, amongst others a Hindu. In sending the extracts H. P. B. comments:

"I see this Hindu every day, just as I might see any other living person, with the only difference that he looks to me more ethereal and more transparent. Formerly I kept silent about these appearances, thinking that they were hallucinations. But now they have become visible to other people as well. He (the Hindu) appears and advises us as to our conduct and our writing. He evidently knows *everything* that is going on, even to the thoughts of other people, and makes me express his knowledge. Sometimes it seems to me that he overshadows the whole of me, simply entering me like a kind of volatile essence penetrating all my pores and dissolving in me. Then we two are able to speak to other people, and then I begin to understand and remember sciences and languages — everything he instructs me in, even when he is not with me any more."

Directly *Isis Unveiled* was published, H. P. B. wrote to Madame Jelihovsky:

"It seems strange to you that some Hindu Sahib is so free and easy in his dealings with me. I can quite understand you: a person not used to that kind of phenomenon — which, though not quite unprecedented, is yet perfectly ignored — is sure to be incredulous. For the very simple reason that such a person is not in the habit of going deeply into such matters. For instance, you ask whether he is likely to indulge in wanderings inside other

people as well as me. I am sure I don't know; but here is something about which I am perfectly certain: Admit that man's soul — his real living soul — is a thing perfectly separate from the rest of the organism; that this perisprit is not stuck with paste to the physical 'innerds'; and that this soul which exists in everything living, beginning with an infusoria and ending with an elephant, is different from its physical double only inasmuch as being more or less overshadowed by the immortal spirit it is capable of acting freely and independently. In the case of the uninitiated profane, it acts during their sleep: in the case of an initiated adept, it acts at any moment he chooses according to his will. Just try and assimilate this, and then many things will become clear to you. This fact was believed in and known in far distant epochs. St. Paul, who alone among all the apostles was an initiated Adept in the Greek Mysteries, clearly alludes to it when narrating how he was 'caught up to the third heaven, whether in the body or out of the body I cannot tell: God knoweth'. Also Rhoda says about Peter, 'It is not Peter but his angel' — that is to say, his double or his soul. And in the *Acts of the Apostles*, ch. viii, v. 39, when the spirit of God lifted up Philip and transported him, it was not his body that was transported, not his coarse flesh, but his Ego, his spirit and his soul. Read Apuleius, Plutarch, Jamblichus, and other learned men — they all allude to this kind of phenomenon, though the oaths they had to take at the time of their initiation did not allow them to speak openly. What mediums accomplish unconsciously, under the influence of outside powers which take possession of them, can be accomplished by Adepts consciously at their own volition. That's all. . . . As to the Sahib, I have known him a long time. Twenty-five years ago he came to London with the Prince of Nepaul; three years ago he sent me a letter by an Indian who came here to lecture about Buddhism. In this letter he reminded me of many things, foretold by him at the time, and asked me whether I

believed him now and whether I would consent to obey him, to avoid complete destruction. After this he appeared repeatedly, not only to me but also to other people, and to Olcott whom he ordered to be President of the Society, teaching him how to start it. I always recognize and know the Master, and often talk to him without seeing him. How is it that he hears me from everywhere, and that I also hear his voice across seas and oceans twenty times a day? I do not know, but it is so. Whether it is he personally that enters me I really cannot say with confidence: if it is not he, it is his power, his influence. Through him alone I am strong; without him I am a mere nothing."

There was naturally considerable fear in the minds of H. P. B.'s nearest relatives as to the character of this mysterious Hindu teacher. They could not help regarding him as more of a "heathen sorcerer" than anything else. And this view H. P. B. took pains to combat. She told them that her Master had a deep respect for the spirit of Christ's teachings. She had once spent seven weeks in a forest not far from the Karakoram mountains, where she had been isolated from the world, and where her teacher alone had visited her daily, whether astrally or otherwise she did not state. But whilst there she had been shown in a cave-temple a series of statues representing the great teachers of the world, amongst others:

"A huge statue of Jesus Christ, represented at the moment of pardoning Mary Magdalene; Gautama Buddha offers water in the palm of his hand to a beggar, and Ananda is shown drinking out of the hands of a Pariah prostitute."

H. P. B. wrote to Madame Jelihovsky (date unknown) that she was learning to get out of her body, and offering to pay her a visit in Tiflis "in the flash of an eye". This both frightened and amused Madame Jelihovsky, who replied that she would not trouble her

so unnecessarily. H. P. B. answered:

"What is there to be afraid of? As if you had never heard about apparitions of doubles. I, that is to say, my body, will be quietly asleep in my bed, and it would not even matter if it were to await my return in a waking condition — it would be in the state of a harmless idiot. And no wonder: God's light would be absent from it, flying to you; and then it would fly back and once more the temple would get illuminated by the presence of the Deity. But this, needless to say, only in case the thread between the two were not broken. If you shriek like mad it may get torn; then Amen to my existence: I should die instantly. I have written to you that one day we had a visit from the double of Professor Moses. Seven people saw him. As to the Master, he is quite commonly seen by perfect strangers. Sometimes he looks just as if he were a living man, as merry as possible. He is continually chaffing me, and I am perfectly used to him now. He will soon take us all to India, and there we shall see him in his body just like an ordinary person."

From New York:

"Well, Vera, whether you believe me or not, something miraculous is happening to me. You cannot imagine in what a charmed world of pictures and visions I live. I am writing *Isis*; not writing, rather copying out and drawing that which She personally shows to me. Upon my word, sometimes it seems to me that the ancient Goddess of Beauty in person leads me through all the countries of past centuries which I have to describe. I sit with my eyes open and to all appearances see and hear everything real and actual around me, and yet at the same time I see and hear that which I write. I feel short of breath; I am afraid to make the slightest movement for fear the spell might be broken. Slowly century after century, image after image, float out of the distance

and pass before me as if in a magic panorama; and meanwhile I put them together in my mind, fitting in epochs and dates, and know *for sure* that there can be *no mistake*. Races and nations, countries and cities, which have for long disappeared in the darkness of the prehistoric past, emerge and then vanish, giving place to others; and then I am told the consecutive dates. Hoary antiquity makes way for historical periods; myths are explained to me with events and people who have really existed, and every event which is at all remarkable, every newly-turned page of this many-colored book of life, impresses itself on my brain with photographic exactitude. My own reckonings and calculations appear to me later on as separate colored pieces of different shapes in the game which is called *casse-tete* (puzzles). I gather them together and try to match them one after the other, and at the end there always comes out a geometrical whole. . . . Most assuredly it is not I who do it all, but my Ego, the highest principle which lives in me. And even this with the help of my Guru and teacher who helps me in everything. If I happen to forget something I have just to address him, or another of the same kind, in my thought, and what I have forgotten rises once more before my eyes — sometimes whole tables of numbers passing before me, long inventories of events. They remember everything. They know everything. Without them, from whence could I gather my knowledge?"

Soon after the appearance of *Isis Unveiled* H. P. B. received invitations to write in all sorts of newspapers. This greatly amused her, and she wrote to Madame Jelihovsky:

"It's lucky for me that I am not vain, and besides as a matter of fact I have hardly any time to write much in other people's publications for money. . . . Our work is growing. I must work, must write and write, provided that I can find publishers for my writings. Would you believe that so long as I write I am all the

time under the impression that I write rubbish and nonsense which no one will ever be able to understand? Then it is printed and then the acclamations begin. People reprint it, are in ecstasies. I often wonder: can it be that they are all asses to be in such ecstasies? Well, if I could write in Russian and be praised by my own people, then perhaps I should believe that I am a credit to my ancestors, Counts Hahn Hahn von der Rothenhahn of blissful memory."

H. P. B. often told her relatives that she took no author's pride in the writing of *Isis Unveiled*; that she did not know in the least what she was writing about; that she was ordered to sit down and write, and that her only merit lay in obeying the order. Her only fear was that she would be unable to describe properly what was shown to her in beautiful pictures. She wrote to her sister: "You do not believe that I tell you God's truth about my Masters. You consider them to be mythical; but is it possible that it is not clear to you that I, without their help, could not have written about 'Byron and grave matters', as Uncle Roster says? What do we know, you and I, about metaphysics, ancient philosophies and religions, about psychology and various other puzzles? Did we not learn together, with the only difference that you did your lessons better? And now look at what I am writing about, and people — such people too, professors, scientists — read and praise! Open *Isis* wherever you like and decide for yourself. As to myself I speak the truth: Master narrates and shows all this to me. Before me pass pictures, ancient manuscripts, dates — all I have to do is to copy, and I write so easily that it is no labor at all, but the greatest pleasure."

(But the ancient manuscripts to which H. P. B. refers were not only seen by psychic means. Hodgson, the great self-exposer of the S. P. R., discovered a page of a mysterious and ancient manuscript at Adyar. This was proof to him, as it was written in

cypher, that she was a Russian spy. It was from a page of a Senzar manuscript, lost by H. P. B. and deeply lamented as lost!) In another letter of about the same date, H. P. B. wrote her sister:

"Do not believe that Theosophy contradicts or, much less, destroys Christianity. It only destroys the tares, but not the seed of truth: prejudice, blasphemous superstitions, Jesuitical bigotry. We respect men's freedom of conscience and their spiritual yearnings far too much to touch religious principles with our propaganda. Every human being who respects himself and thinks has a holy of holies of his own, for which we Theosophists ask respect. Our business concerns philosophy, morals, and science alone. We ask for truth in everything; our object is the realization of the spiritual perfectability possible to man: the broadening of his knowledge, the exercising of the powers of his soul, of all the psychical sides of his being. Our theosophical brotherhood must strive after the ideal of general brotherhood throughout all humanity; after the establishment of universal peace and the strengthening of charity and disinterestedness; after the destruction of materialism, of that coarse unbelief and egotism which saps the vitality of our country."

The Path

OUR OVERWHELMING VIRTUES — *Che-Yew-Tsang*

The superior Virtue is not seen as virtue,
and therefore it is the spirit thereof.

The inferior virtue wears the garment of virtue,
and therefore it contains not the spirit.

The superior Virtue flows of its own accord.

—*Tao-Teh-King*.

The dangers of vice have been the subject of many wise discourses. Its horrors have been painted with vivid realism, whilst glorious virtue has been held up before the eyes of men as something to be striven for and, when attained, to be most carefully preserved.

Yet no truth, however deeply true, is final in itself. Seeming ultimates are but stages in unlimited progression, and the highest virtue man can reach to now will vanish like some mist before the sunlight of his spirit in an age to come. But the future is with us today as a shadow which ever recedes as we ever approach; and virtue which is perforce imperfect may entomb us as surely as vice.

Vice contains in itself its own destroyer. Separative, it quickly disintegrates. Few men think it a final goal: they will presently be virtuous, when they are old, or in better circumstance, or have not to meet this present and unique temptation. Virtue is more tenacious. It is self-satisfied, and clings to one who has striven for it, fostered it, and who trembles at the thought of its loss. Here I speak of that peculiar virtue which is our very own. We may have vices, we may do wrong, but this virtue we have got and never will surrender. Has it not consoled us in many an hour of self-reproach, of blame which was almost deserved? More consoling

has it been to many than the errors of their neighbors.

Yet for one moment consider: much has been said of polarity, of the dualism in nature. The pairs of opposites have been catalogued at length: light and darkness, heat and cold, male and female, have been found to coexist. It has also been shown that these, though opposite in name, are far from separate in fact. How could light follow on darkness if the darkness had not contained it? How could sweetness spring from that which seemed so bitter if the bitterness held only itself? Even so the loftiest virtue embosoms a sleeping sin. "Sin", if only inasmuch as it may hinder that growth which is Nature's aim, by our attachment to a limitation; by our failure to rise to the universal through love for this so pleasing grace.

It may be Justice. We will be ideally just; we will be impartial as few, if any, have ever dreamt of being. How noble a virtue it is, and how safe a guide? An idol fit for the worship of all men, you will think, and one that we should bow to with the rest. By its aid we can judge all these events — and men, with evenness and with no fear or favor. We will calmly sit on the judgment-seat and weigh the evidence, so that no man shall say "He has a bias", but all shall admire the perfect Justice we exemplify.

I say that the soul does not know it. The soul is not concerned in this chopping and balancing of statement. It does not cry to its companions. "Let us consider this alleged misdoing by the aid of our united wisdom". Thought for the preservation of its own integrity is not allowed to close the door on this greater thought — Another's need. For the soul has a mighty generosity that flows and swells and sweeps before it any thought but this: "How can I help my brother who is now unfortunate?" That generosity is not born of the emotions; it has forgotten the meaning of tears. It springs from an understanding of Time; from long waiting upon

that law which is beyond all Justice, since it knows not doubt nor anything but unity.

Or it is Work. Someone, after many years of effort, has overcome the grosser form of the natural sloth of matter. His mind, his brain, his body, have been trained to answer to his will: every gift is utilized, every moment is turned to account. He acts, indifferent to obstacles, regardless of consequences — striving to serve. The man confides to himself he would die if he could not work. But there is a pride of action. Then if fate which is greater than he overtakes him, and he loses the labor he loves, he calls upon death to relieve him of the burden of life since now he is useless and his course is run.

But the soul, having seen this thing before, knows better. It knows that *the form* of service is not counted in the least; that every act can be a mode of one spirit of devotion. Whether maimed, or blind, or tied by chains of duty to a life of seeming pettishness, is not man still the resting-place of the Eternal? Is that so little he dare speak of uselessness? Wise indeed must he have suddenly become if he would improve upon the working of the Law! For wisdom in every age has been well content to say "Thy will be done, O Lord of Destiny!" We have so little faith: we must see — and show — some result of all our efforts. Yet is there neither first nor last in this great reckoning of life, and to hold a pleasure rightly or meet a pain is as hard a feat as to turn the stream of a nation's history.

Work can be overwhelming in more ways than one. I have read in a Hindu book of a half-fledged sage who, by his power of goodness, attempted to destroy the character of the growth of the world. His goodness was a passion, a passion that craved self-immolation, not for the sake of others but for its own sake. He had not reached that point of equilibrium where there is only

selflessness, where both selfishness and unselfishness have been laid down. In that state wrong self-immolation is not known.

Want of equilibrium is at the root of all disease, and even as there must still be those who, like this Hindu of old, seek to obtain what *they* believe to be good at the expense of right, and would purify the world at the price of acting as its executioners, so there are those who crave for work regardless whether it be their own or that of others. Another's work is usually more pleasing than that which lies so very near to us. It has a foreign flavor and promises excitement. Such do not wait to ask, "Is this my duty?" They are above such slow consideration. Yet how much confusion on all planes of being they would save themselves and others by that moment's pause! But this has been said since the beginning of things, to be said to the end, and still we have not found the Middle Path, the place of equilibrium. He who has reached it, as one of Nature's greatest scholars said, "acts but does not strive, and without striving overcomes everything".

Thus every virtue, as has been said, embosoms a sleeping sin, and the wise man beware of it, treating his virtue as a stage in his gradually-lessening ignorance, not as an aim and end in itself to be worshipped and glorified. If he could lay aside his calculated code of conduct for the more generous impulse of the soul, he would greatly be the gainer. But the soul he calls "his own", and will not therefore trust it. He has not learnt to separate the voice of his desires from that other voice which speaks to him of cold, clean truth; and therefore he calculates. His morals must be neatly docketed, ready for production as required; and although a few minutes' notice is needed at times for prompt delivery — he is only mortal.

The Immortals are not calculators. They act. They also breathe after their fashion, and without failure. And the light of the

Immortals is the light that lighteth every man who cometh into the world. Verily they who know it shall go back to their Home in peace.

The Path

CONVERSATIONS ON OCCULTISM

Student. — Are there any rules, binding on all, in white magic or good occultism? I mean rules similar to the ten commandments of the Christians, or the rules for the protection of life, liberty, and property recognized by human law.

Sage. — There are such rules of the most stringent character, the breaking of which is never wiped out save by expiation. Those rules are not made up by some brain or mind, but flow from the laws of nature, of mind, and of soul. Hence they are impossible of nullification. One may break them and seem to escape for a whole life or for more than a life; but the very breaking of them sets in motion at once other causes which begin to make effects, and most unerringly those effects at last react on the violator. Karma here acts as it does elsewhere, and becomes a Nemesis who, though sometimes slow, is fate itself in its certainty.

Student. — It is not, then, the case that when an occultist violates a rule some other adept or agent starts out like a detective or policeman and brings the culprit to justice at a bar or tribunal such as we sometimes read of in the imaginative works of mystical writers or novelists?

Sage. — No, there is no such pursuit. On the contrary, all the fellow-adepts or students are but too willing to aid the offender, not in escaping punishment, but in sincerely trying to set counteracting causes in motion for the good of all. For the sin of one reacts on the whole human family. If, however, the culprit does not wish to do the amount of counteracting good, he is merely left alone to the law of nature, which is in fact that of his own inner life from which there can be no escape. In Lytton's novel, *Zanoni*, you will notice the grave Master, Mejnour, trying to

aid Zanoni, even at the time when the latter was falling slowly but surely into the meshes twisted by himself that ended in his destruction. Mejnour knew the law and so did Zanoni. The latter was suffering from some former error which he had to work out; the former, if himself too stern and unkind, would later on come to the appropriate grief for such a mistake. But meanwhile he was bound to help his friend, as are all those who really believe in brotherhood.

Student. — What one of those rules in any way corresponds to "Thou shalt not steal"?

Sage. — That one which was long ago expressed by the ancient sage in the words, "Do not covet the wealth of any creature". This is better than "Thou shalt not steal", for you cannot steal unless you covet. If you steal for hunger you may be forgiven, but you coveted the food for a purpose, just as another covets merely for the sake of possession. The wealth of others includes all their possessions, and does not mean mere money alone. Their ideas, their private thoughts, their mental forces, powers, and faculties, their psychic powers — all, indeed, on all planes that they own or have. While they in that realm are willing to give it all away, it must not be coveted by another.

You have no right, therefore, to enter into the mind of another who has not given the permission and take from him what is not yours. You become a burglar on the mental and psychic plane when you break this rule. You are forbidden taking anything for personal gain, profit, advantage, or use. But you may take what is for general good, if you are far enough advanced and good enough to be able to extricate the personal element from it. This rule would, you can see, cut off all those who are well known to every observer, who want psychic powers for themselves and their own uses. If such persons had those powers of inner sight

and hearing that they so much want, no power could prevent them from committing theft on the unseen planes wherever they met a nature that was not protected. And as most of us are very far from perfect, so far, indeed, that we must work for many lives, yet the Masters of Wisdom do not aid our defective natures in the getting of weapons that would cut our own hands. For the law acts implacably, and the breaches made would find their end and result in long after years. The Black Lodge, however, is very willing to let any poor, weak, or sinful mortal get such power, because that would swell the number of victims they so much require.

Student. — Is there any rule corresponding to "Thou shalt not bear false witness"?

Sage. — Yes; the one which requires you never to inject into the brain of another a false or untrue thought. As we can project our thoughts to another's mind, we must not throw untrue ones to another. It comes before him, and he, overcome by its strength perhaps, finds it echoing in him, and it is a false witness speaking falsely within, confusing and confounding the inner spectator who lives on thought.

Student. — How can one prevent the natural action of the mind when pictures of the private lives of others rise before one?

Sage. — That is difficult for the run of men. Hence the mass have not the power in general; it is kept back as much as possible. But when the trained soul looks about in the realm of soul it is also able to direct its sight, and when it finds rising up a picture of what it should not voluntarily take, it turns its face away. A warning comes with all such pictures which must be obeyed. This is not a rare rule or piece of information, for there are many natural clairvoyants who know it very well, though many of them do not think that others have the same knowledge.

Student. — What do you mean by a warning coming with the picture?

Sage. — In this realm the slightest thought becomes a voice or a picture. All thoughts make pictures. Every person has his private thoughts and desires. Around these he makes also a picture of his wish for privacy, and that to the clairvoyant becomes a voice or picture of warning which seems to say it must be let alone. With some it may assume the form of a person who says not to approach, with others it will be a voice, with still others a simple but certain knowledge that the matter is sacred. All these varieties depend on the psychological idiosyncrasies of the seer.

Student. — What kind of thought or knowledge is excepted from these rules?

Sage. — General, and philosophical, religious, and moral. That is to say, there is no law of copyright or patent which is purely human in invention and belongs to the competitive system. When a man thinks out truly a philosophical problem it is not his under the laws of nature; it belongs to all; he is not in this realm entitled to any glory, to any profit, to any private use in it. Hence the seer may take as much of it as he pleases, but must on his part not claim it or use it for himself. Similarly with other generally beneficial matters. They are for all. If a Spencer thinks out a long series of wise things good for all men, the seer can take them all. Indeed, but few thinkers do any original thinking. They pride themselves on doing so, but in fact their seeking minds go out all over the world of mind and take from those of slower movement what is good and true, and then make them their own, sometimes gaining glory, sometimes money, and in this age claiming all as theirs and profiting by it.

THE OLD WISDOM-RELIGION — *J. D. Buck*

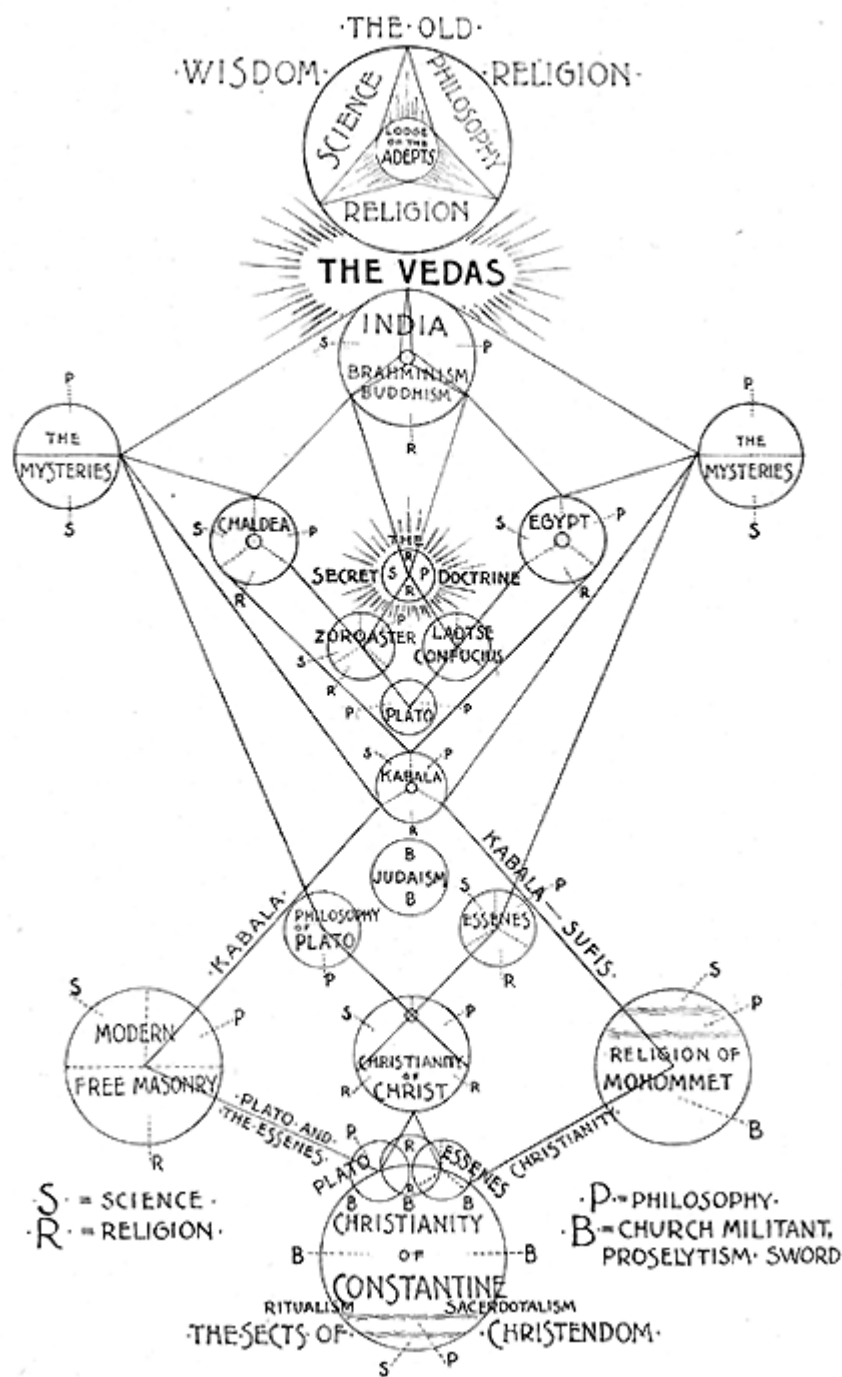

All readers of T. S. literature are aware that the terms Theosophy, Secret Doctrine, and Wisdom-Religion are generally used as synonymous. While such use of these terms is permissible, and while each of these terms may be made to convey the full meaning of the others, perhaps the real meaning of all the terms can best be shown by an object-lesson in the Wisdom-Religion. The most permanent embodiment and the most accessible form of the Secret Doctrine has always been in the form of religion, the outer forms serving only as a veil to the deeper meaning which was always represented by symbols, glyphics, allegories, and parables. The sublimest truths were ever regarded as a divine revelation to man, and therefore formed the basis of devotion and gave the forms of religious worship. The deeper mysteries completely coordinated the three departments of human action in the search after truth, viz.: Religion, Philosophy, and Science, so that there was perfect agreement between them. Science had no missing-links, Philosophy no false syllogisms or irreconcilable paradoxes, and Religion was entirely divorced from superstition and blind credulity or unreasoning dogmatism. That all such statements will be angrily denied we are quite well aware, and I am as little anxious that the general statements herein made and illustrated by the diagram shall be believed. My only desire is that they shall be *understood*, and so far apprehended that the reader may be enabled to preserve the picture in the mind for future reference. They who do this need never confound the Secret Doctrine with the outer garb or the degenerate form of any religion known to the world today.

The diagram is not meant to be historically or chronologically exact, though philosophically it is, I believe, true and exact as to

relations and sequence. It may be read from below upward, tracing our inheritance backward beyond written history, or it may be read in the reverse order. I prefer the latter method.

Let us, then, assume that there existed in the remote past a Wisdom-Religion emanating from the "Elder Brothers" of the human race who constituted a Lodge of Adepts; whose office it was to preserve and transmit to later generations the accumulated wisdom of all previous humanities. This Wisdom-Religion was a complete coordination of the Religious, the Scientific, and the Philosophical elements in human knowledge. It is therefore represented by a circle divided equally into three parts, with the Lodge in the center as a nucleus. The earliest embodiment of this ancient wisdom was in the Vedas of old India. From the Vedas and Upanishads sprang ancient Brahmanism and later Buddhism, both of which preserved the three-fold division of religion, philosophy, and science. Next in order of importance came the religions of Chaldea and Egypt, each again preserving the three-fold form. Each of these had its organized Mysteries, in which the philosophical and scientific doctrines were preserved and taught to neophytes, with which the outer religious forms taught to the masses were originally in perfect harmony. Next came the religions of Persia and China, emanating from Zoroaster, Confucius, and Laotse, still showing the three-fold form, and followed by the philosophy of Pythagoras and Plato, and then again becoming embodied in the Kabalah with which the Pentateuch and the "Oral Teachings" (afterwards the Talmud) constituted the Jewish Religion. Repudiating later Judaism, with its ceremonies, bloody sacrifices, and traditions, and in keeping with the warnings and anathemas of the Prophets, the religion taught by Jesus embodied the more direct wisdom of the Kaballa, the philosophy of Plato (the doctrine of the Logos), and the doctrines of the Essenes and Gnostics. Thus was shown a direct

descent from the old Wisdom-Religion, though giving prominence to the religious and ethical rather than to the scientific and philosophical elements. Nothing is easier than to trace this inheritance by tradition and glyphic. In Christianity under Constantine and Eusebius dogma and the sword established the reign of ecclesiasticism, superseded the religion of Jesus, and prepared the way for the dark ages. The religion of Mahommed, though a religion of conquest and blood, still through its Sufis preserved at least the traditions of a Secret Doctrine, while modern Free Masonry, coordinating the symbols from many sources (largely Kabalistic), has transmitted to modern times the science and philosophy once embodied in the Wisdom-Religion, though it has failed to recover the Key to the lost secret. Coming at last to the sects into which Christianity is today divided, ignorant theological speculations have failed entirely to discern the synthesis of the Wisdom-Religion, and while making a fetich of the name of Jesus have preserved only the ethics he taught, and so divorced his Divinity from his Humanity and became an easy prey to the materialism of modern science. Religion is the divinest part of the ancient three-fold wisdom, because it is through religion that divine truth alone reaches the toiling, sorrowing masses of humanity. Christ knew and taught the Wisdom-Religion, but Christianity today with its ironclads and standing armies is more an heir of Constantine than of Christ. Other and older religions are largely ethnic, and Christianity might indeed become in the truest sense catholic if it would go back to Christ. It is now slowly but surely being undermined by modern materialism. It might find in Theosophy a mighty ally that would enable it to defy materialism and convert the world, but it is too proud and creed-bound to do that, and so Karma awaits it.

LETTERS OF H. P. BLAVATSKY: III

The following letter was written before the foundation of the Theosophical Society. A somewhat inaccurate translation appeared in Mr. Sinnett's *Incidents in the Life of Madame Blavatsky*, but as some additions were made to the original it is interesting to see what was actually written by H. P. B. at such an early date.

"The more I see of spiritist seances in this cradle and hotbed of Spiritism and mediums, the more clearly I see how dangerous they are for humanity. Poets speak of a *thin partition* between the two worlds. There is *no* partition whatever. Blind people have imagined obstacles of this kind because coarse organs of hearing, sight, and feeling do not allow the majority of people to penetrate the *difference* of being. Besides, Mother-Nature has done well in endowing us with *coarse* senses, for otherwise the individuality and personality of man would become impossible, because the dead would be continually mixing with the living, and the living would assimilate themselves with the dead. It would not be so bad if there were around us only spirits of the same kind as ourselves, the half-spiritual refuse of mortals who died without having reconciled themselves to the great necessity of death. Then we might submit to the inevitable. One way or another, we cannot help identifying ourselves physically and in a perfectly unconscious way with the dead, absorbing the constituent atoms of what lived before us: with every breath we inhale them, and breathe out that which nourishes the formless creatures, elementals floating in the air in the expectation of being transformed into living beings. This is not only a physical process, but partly a moral one. We assimilate those who preceded us, gradually absorbing their brain-molecules and exchanging

mental auras — which means thoughts, desires, and tendencies. This is an interchange common to the entire human race and to all that lives. A natural process, an outcome of the laws of the economy of nature. . . . It explains similarities, external and moral. . . . But there exists another absolute law, which manifests itself periodically and sporadically: this is a law, as it were, of artificial and compulsory assimilation. During epidemics of this kind the kingdom of the dead invades the region of the living, though fortunately this kind of refuse are bound by the ties of their former surroundings. And so, when evoked by mediums, they cannot break through the limits and boundaries in which they acted and lived. . . . And the wider the doors are opened to them the further the necromantic epidemic is spread; the more unanimous the mediums and the spiritists in spreading the magnetic fluid of their evocations, the more power and vitality are acquired by the glamour."

Madame Jelihovsky says that "Helena Petrovna described many seances in terms of horror in consequence of the sights she was enabled to see as a result of her clairvoyance. She saw details hidden from the others present: perfect invasions of hosts of soulless remains of mortals, 'woven of fleshly passions, of evil thoughts, of vicious feelings which had outlived the body'". And H. P. B. wrote:

"It stands to reason that this mere earthly refuse, irresistibly drawn to the earth, cannot follow the soul and spirit — these highest principles of man's being. With horror and disgust I often observed how a reanimated shadow of this kind separated itself from the inside of the medium; how, separating itself from his astral body and clad in someone else's vesture, it pretended to be someone's relation, causing the person to go into ecstasies and making people open wide their hearts and their embraces to these shadows whom they sincerely believed to be their dear

fathers and brothers, resuscitated to convince them of life eternal, as well as to see them. . . . Oh, if they only knew the truth, if they only believed! If they saw, as I have often seen, a monstrous, bodiless creature seizing hold of someone present at these spiritistic sorceries! It wraps the man as if with a black shroud, and slowly disappears in him as if drawn into his body by each of his living pores."

In the year 1878, or thereabouts, a defence of modern Spiritualism was brought out by Alfred Russell Wallace. This greatly pleased H. P. B., who wrote on the subject to her sister:

"See how cleverly he proves how mistaken people are who say that we propagate ancient prejudices and superstitions; how he proves that a body of people who preach the study of man's nature, who teach the acquirement of eternal bliss as a consequence of attaining the full perfection of their moral and spiritual powers, is the chiefest enemy, not only of gross materialism, but also of all kinds of silly bigotry and myth-worship. Spiritualism is an experimental science; its development — which is the object of the Theosophical Society (1) — will make it possible to find a foundation for a true philosophy. There is only one truth, and it is higher than anything else. Theosophy is bound to destroy such meaningless expressions as 'a miracle' or the 'supernatural'. In nature everything is natural, but everything is not known; and yet there is nothing more miraculous than her powers, hidden as well as revealed. Spiritualism, *meaning the spiritual powers of man and the deeper knowledge of the psychical aspects of life*, which we Theosophists preach, will cure the old evils of religious quarrels, owing to which the faith of man in the primitive truths of immortality and repayment according to deserts is disappearing. Wallace speaks the truth when he says that Spiritualism well deserves the sympathy of moralists, philosophers, even of politicians and of everyone who desires the

perfecting of our society and our life."

H. P. B. did not spare herself when portraying the humorous side of her surroundings. The American Phrenological Society wrote and asked for her portrait and for a cast of her head, and Professor Buchanan, the phrenologist and psychometer, called on her for an interview. She describes the incident in writing to Madame Jelihovsky:

"And so this poor victim (victim in view of his awful task) was sent to me — a phrenological occultist, who came in the company of a huge bouquet (as if I were a prima donna!) and with three trunk-loads of compliments. He fingered my head and fingered it again; he turned it on one side and then on the other. He snorted over me — snorted like a steam-engine, until we both began to sweat. And at last he spat in disgust. 'Do you call this a head?', he says; 'It's no head at all, but a ball of contradictions.' 'On this head', he says, 'there is an endless war of most conflicting bumps; all Turks and Montenegrins.' (2) I can't make anything of this chaos of impossibilities and confusion of Babel. Here, for instance', he says, poking my skull with his finger, 'is a bump of the most ardent faith and power of belief, and here, side by side with it, the bump of scepticism, pessimism, and incredulity, proudly swelling itself. And now, if you please, here is the bump of sincerity for you, walking hand in hand with the bump of hypocrisy and cunning. The bump of domesticity and love for your country boxes the ears of the bump of wandering and love of change. And do you mean to say you take this to be a respectable head?' he asked. He seized himself by the hair, and in his despair pulled a considerable lock from his own respectable head, answering to the highest standards of phrenology. . . . But all the same he described, drew, and published my poor head for the amusement of the hundred thousand subscribers to the *Phrenological Journal*. Alas, alas, 'heavy is the crown of

Monomach!' (3) The aureola of my own greatness, acquired so undeservedly, is simply crushing me. Here, I send you a copy of my poor head, which you are requested to swallow without any sauce. A hundred thousand Yankees are going to feast upon it, and so I am certainly going to save a bit for my own blood!"

"Now listen to this, little brothers", she writes in her next letter, "I am sending you a great curio. Examine it, wonder at it, and improve by it. The Freemasons of England, whose Grand-Master is the Prince of Wales, have sent me a diploma, which means to say that I am raised to a high Masonic dignity, and so my title is 'Mysterious Freemason'. Ah me! next I shall probably be elected Pope of Rome for my virtues. The decoration they sent me is very beautiful: a ruby cross and a rose. I send you the cutting from the *Masonic Journal*."

Many honors were showered upon H. P. B. as a result of the publication of *Isis Unveiled*. A very ancient Society in Benares, founded before the beginning of the Christian era, called the Sat-Bai, sent her a diploma in Sanskrit, decorated with many symbols. It is remarkable that in this diploma Helena Petrovna is alluded to as a "Brother of the female sex". "Henceforward our brother Rad is entitled, owing to his great knowledge, to power over the inferior grades of ministers, couriers, listeners, scribes, and the dumb ones." H. P. B. also received a very ancient copy of the *Bhagavad-Gita*, in a mother-of-pearl and gold binding, from an Indian Prince. At the approach of the Russo-Turkish war of 1877-1878, H. P. B. wrote many articles against the Roman Catholics, because the Pope had blessed the weapons of the Turks. These articles she signed "A Russian Woman". They created such a stir that Cardinal McCloskey sent his Jesuit secretary to her, under the pretext of making the acquaintance of "such a remarkable woman, and pioneer thinker, who knew how to shake off the prejudice of patriotism and to create for herself an independent

position in an independent country". In February, 1877, she wrote to her sister:

"I told him his endeavors were in vain; that whatever I personally, as a Theosophist, might believe was no business of his at all; that the faith of my Russian fathers was sacred to me; that I shall always stand up for this faith and for Russia, and shall always write against the attacks of the hypocritical Catholics upon them as long as my hand can hold a pen, and without letting myself be frightened by the threats of their Pope or the wrath of their Roman Church, the Great Beast of the Apocalypse!"

The result of this visit was a new article by her against the head of the Western Christian Church, who blessed Musselmans that they might the better kill Christians, Slavs, and Russians. Soon after this move Mme. Jelihovsky received newspaper cuttings containing the report of H. P. B.'s real fight — but this time not with an ecclesiastic, but with a propagator of materialistic views, of European renown. She writes to her sister in her usual humorous way:

"I send you, friends, one more article of mine, which received by no means small honors here and was reprinted by several New York papers. This is the way it happened: the London scientist Huxley has been visiting here, 'the progenitor of protoplasm and high-priest of psychophobia', as I have surnamed him. He delivered three lectures. At the first, he made short work of Moses and abolished the whole of the *Old Testament*, declaring to the public that man is nothing but the great-grandson of a frog of the Silurian period. At the second he 'beat everyone', like a new Kit Kitich. (4) 'You are all fools', he says, 'you don't understand anything. . . . Here is the four-toed foot of Hipparion, the antediluvian horse, for you, from which it is evident that we, five-toed men, are closely related to it as well, through our origin.'

There is an insult for you! But at the third lecture our wise *psychophob* tried to sing it altogether too high, and so started telling fibs. 'Listen to me', he says, 'I have looked into the telescopes, I have whistled under the clouds in balloons, I have looked out for God everywhere with great zeal; and nowhere, in spite of all my researches, did I see or meet him! Ergo — there is no God and there never was any such!' It was worth these peoples' while paying him \$5,000 for three lectures of this sort of logic. 'Also', he says, 'the human soul. . . . where is it? Show it to me as I can show you the heart and the rest of the 'inwards'. Anima Muni, ether, Archos of Plato. . . . I have searched for the soul with the aid of spy-glasses and microscopes; I have observed the dying and anatomized the dead, but upon my word of honor, there is no trace of it anywhere! It is all a lie of the spiritists and the spiritualists. Don't you', he says, 'believe them.' I felt awfully sorry at all this. So sorry as even to be angry. So I thought to myself, let me go and write an article against this self-willed, self-opinionated Kit Kitich. And what do you think? I have written it. And it came out not at all so bad, as you can see by the enclosed copy. Needless to say, I immediately took this article, sealed it, and sent it through our corresponding members to London, to be delivered to Huxley with my most earnest compliments."

H. P. B. was compelled for various reasons to become an American citizen. This troubled her considerably, as, like all Russians, she was passionately devoted to her country. She wrote to Madame Fadeef:

"My dearest, I write to you because otherwise I would burst with a strange feeling which is positively suffocating me. It is the 8th of July today, an ominous day for me, but God only knows whether the omen is good or bad. Today it is exactly five years and one day since I came to America, and this moment I have just returned from the Supreme Court where I gave my oath of

allegiance to the American Republic and Constitution. Now for a whole hour I have been a citizen with equal rights to the President himself. So far so good: the workings of my original destiny have forced me into this naturalization, but to my utter astonishment and disgust I was compelled to repeat publicly after the judge, like a mere parrot, the following tirade: that I 'would renounce for ever and even to my death every kind of submission and obedience to the emperor of Russia; that I would renounce all obedience to the powers established by him and the government of Russia, and that I would accept the duty to defend, love, and serve the Constitution of the United States alone. So help me God in whom I believe!' I was awfully scared when pronouncing this blackguardly recantation of Russia and the emperor. And so I am not only an apostate to our beloved Russian Church, but a political renegade. A nice scrape to get into, but how am I to manage to no longer love Russia or respect the emperor? It is easier to say a thing than to act accordingly."

FOOTNOTE:

1. At this time a wide distinction was drawn between "Spiritualism" and "Spiritism". It will be seen from H. P. B.'s own definition that she was not speaking of "Spookology" as the object of the Theosophical Society. ([return to text](#))
2. This was during the war in 1877. ([return to text](#))
3. The coronation crown of Russia; this was said by one of the Tsars. ([return to text](#))
4. Kit Kitich, or in Academic Russian Tit Titich, is a stage character whose favorite saying is: "Who can beat Kit Kitich when Kit Kitich will beat everyone first?" He has long become the synonym of a bully, a petty, self-willed, domestic tyrant. The popular Russian dialect quite unconsciously transforms "Titus, the son of Titus"

(Tit Titich) into "the Whale, the son of the Whale" ("Kit" means "whale" in Russian); and H. P. B. used this unconscious pun to make fun of the biological evolutionist who claimed to be, in some sense, the son of the whale, and whose doctrine she found to be "very like a whale", too. But a pun, unlike a bishop, loses by translation. ([return to text](#))

The Path

HAVE FAITH — M. H. W.

When the truths of Theosophy first dawn upon the student, shedding new light on the meaning of life and of death, on the mystic word "Brotherhood" and all that it may convey, on the origin of evil, on the meaning and use of suffering and pain, a new impetus is given to effort, and for a while, perchance, it seems very easy to live the life of an ascetic. Personal griefs and losses! O how little do they count, we say to ourselves. How *can* people, on perceiving the first gleam of the light of truth, allow themselves to remain longer prisoners in the dungeons of selfishness, of ambition, of jealousy, and of wrath? How easy it is to snap the chains of conventionality and to march forth into the sunlight of peace and knowledge, never more to be drawn backward into the darkness of this illusionary world! These and kindred thoughts pass through the mind of the enthusiastic student, who would fain enter the realm of practical occultism, to whom the path now looks so easy, so comfortable, so delightful. Away with unkind sentiments towards our brothers and sisters; away with desires for material advancement; away with selfish griefs and care for the world's opinions! How easy it now seems to work for the great orphan Humanity, towards whom our hearts leap forth in sympathy!

And so for a time we are at peace with ourselves and the world. We feel our lives pledged to devoted work for others; we think it possible that, unknown though it be to ourselves as yet, we may already be accepted chelas to some high teacher. We breathe the air of spiritual purity, while we feel we have brushed from us forever the dust of material and personal interests. We think much about the Masters, those lofty souls pledged to self-sacrifice, and we feel very near them, — as, indeed, we may be for the time

being.

Days pass by in this condition with nothing to disturb the harmony, and we, though still weak, believe we are strong. Alas! a time comes when some new temptation assails us, an unlooked-for foe appears, and lo! whither has all our seeming strength departed? Where are all our stern resolves? Whence, indeed, has fled that boasted peace of mind, which we fondly thought that naught could ruffle? We had been resting in such strong faith in our Elder Brothers, and our intuition had assured us of their Radiant Presence; and in the recognition of such a Presence it had seemed impossible to be disturbed and troubled by earthly concerns. Why, then, this weakness? How could it be possible to succumb anew and so strongly to the "sense of separateness"?

Such, indeed, was the experience of one who was very young as yet in knowledge and understanding of herself. At first, wildly enthusiastic to embrace the new life of the spirit which opened before her in its possibilities, she thought to make a sudden leap from olden habits and desires, loves and hopes and jealousies, straight forward into a life of self-forgetfulness. And falling, she was very sad, very sore and bruised. She was discouraged, alas, as well, and wondered that she ever could have hoped and believed that conquest of her lower nature could be easily compassed.

Fainting and weary, she had a vision. Before her stretched a rugged mountain, reaching far, far up into the mountain, and a path led up the mountain, aye, to the very top; but so steep it was, so sharp the ascent, that she, a pilgrim on the way, was overcome by dizziness when but a few steps had been taken upward. Exhausted, she sank upon the ground. But looking up, she beheld two Brothers of the race, tall and grand-looking men, loving and tender of mien. They were standing in the pathway above her, reaching downward a helping hand to herself, just started on that

difficult journey which leads to knowledge and to freedom. They saw her fall, those Elder Brothers, and they realized that as yet her strength was not equal to climbing that rugged, steep ascent. She must rise, but a longer, slower way must be followed by her because of her great weakness. Should they leave her to take that journey alone, her whose store of energy must not be drawn upon too exhaustively, whose weakness would not allow her to mount rapidly? No, indeed, no! They turned their way downward towards her, and with a tender, pitying smile led her aside into another path hidden among the bushes and the trees, and rising more gradually and slowly upward. The way was dark, it is true, save for their Radiant Presence, the light of freedom was hidden from view in many places, and yet flashes of it illumined the path at intervals. It was restful to the poor, weak soul who had once hoped and trusted in her strength to rise more rapidly. It was comforting to know that her Guardians, the Guardians of the Race, were not impatient, but were still watching and helping, never wearying in their care and tenderness, even though the journey must be slow because of her great weakness. And she kept her eyes turned toward them and she had faith.

The Path

CONVERSATIONS ON OCCULTISM

Student: — At a former time you spoke of entities that crowd the spaces about us. Are these all unconscious or otherwise?

Sage. — They are not all unconscious. First, there are the humdrum masses of elementals that move like nerve-currents with every motion of man, beast, or natural elements. Next are classes of those which have a peculiar power and consciousness of their own and not easily reached by any man. Then come the shades of the dead, whether mere floating shells, or animated elementals, or infused with galvanic and extraordinary action by the Brothers of the Shadow. Last, the Brothers of the Shadow, devoid of physical bodies save in rare cases, bad souls living long in that realm and working according to their nature for no other end than evil until they are finally annihilated — they are the lost souls of Kama Loka as distinguished from the "animated corpses" devoid of souls which live and move among men. These Black entities are the Dugpas, the Black Magicians.

Student. — Have they anything to do with the shocks, knocks, bad influences, disintegration of soft material accompanied by noises more or less distinct?

Sage. — Yes, they have. Not always, of course. But where they are actually seen at the time preceding such occurrence, they are the agents.

Student. — Then I am to suppose that if such takes place with me I am the attracting person, the unfortunate channel through which they have come?

Sage. — No, you are thoroughly in error there. You are not such channel in that case. You are in fact the opposite, and the very

cause for the temporary defeat of that dark entity. You have mistaken the appearance, the outer manipulation of forces, for the thing itself. If you were their channel, their agent, the cause for their coming and thus making their presence possible, there would be no noise and no explosion. They would then act in and through you for the hurt of others, silently and insidiously. They approach your sphere and attempt to make entry. The strength of your character, of your aspiration, of your life, throws them off, and they are obliged, like rain-clouds, to discharge themselves. The more strong they are, the louder will be their retreating manifestation. For the time they are temporarily destroyed or, rather, put outside the combat, and, like a war vessel have to retire for repairs. In their case this consists in accumulating force for a new attack, there or elsewhere.

Student. — If, then, such loud explosions, with pulverization of wall-plaster and the like, take place, and such an evil entity is seen astrally, it follows that the person near whom it all occurred — if identification due to solitude is possible — was in fact the person who, by reason of inner power and opposition to the evil entity, became the cause for its bursting or temporary defeat?

Sage. — Yes, that is correct. The person is not the cause for the entity's approach, nor its friend, but is the safeguard in fact for those who otherwise would be insidiously affected. Uninformed students are likely to argue the other way, but that will be due to want of correct knowledge. I will describe to you condensedly an actual case. Sitting at rest on a seat, eyes closed, I saw approach one of those evil entities along the astral currents, and looking as a man. His hands like claws reached out to affect me; on his face was a devilish expression. Full of force he moved quickly up. But as I looked at him the confidence I felt and the protection about me acted as an intense shock to him, and he appeared to burst from within, to stagger, fall to pieces, and then disappeared. Just

as the disintegration began, a loud noise was caused by the sudden discharge of astral electricity, causing reactions that immediately transmitted themselves into the objects in the room, until, reaching the limit of tension, they created a noise. This is just the phenomenon of thunder, which accompanies discharges in the clouds and is followed by equilibrium.

Student. — Can I carry this explanation into every objective phenomenon, say, then, of spiritualistic rappings?

Sage. — No, not to every case. It holds with many, but specially relates to the conscious entities I was speaking of. Very often the small taps and raps one hears are produced under the law referred to, but without the presence of such an entity. These are the final dissipations of collected energy. That does not always argue a present extraneous and conscious entity. But in so far as these taps are the conclusion of an operation, that is, the thunder from one astral cloud to another, they are dissipations of accumulated force. With this distinction in mind you should not be confused.

Student. — Have not colors a good deal to do with this matter?

Sage. — Yes; but just now we will not go into the question of color except to say that the evil entities referred to often assume a garb of good color, but are not able to hide the darkness that belongs to their nature.

STEPPING-STONES — *C. F. Wright*

It would seem by the way in which many members regard the working of the T. S. that the old traditions concerning exoteric wisdom and the method by which it is taught are but lightly regarded. There is a great difference between learning and wisdom, and a little reflection on that fact would be of use to many. The Theosophical movement was intended to give men Wisdom more than anything else, and the methods which it adopts in thus training its members are those which have held good in the East and in all Occult Brotherhoods from time immemorial. The peculiar and particular difference between the method of instruction employed in Occult bodies and that of our western colleges lies mainly in that the one, while apparently saying very little, seeks to develop the intuitions, and the other, while saying a great deal, merely supplies the brain with facts. The former deals in generalities, the latter in particulars. Mr. Sinnett rightly said in his *Esoteric Buddhism* that the traditional methods of teaching in the East aimed at impressing every fresh idea on the memory by provoking the perplexity it at last relieved. This perplexity arises from an absence of a certain power in the Ego of the student to perceive the greater laws of Nature. But by dwelling on the thought that the Master puts forward, in time the student comes to develop that power and thereby to recognize a new fact in Nature. Madame Blavatsky's *Secret Doctrine* was written in that way, and it will always perplex students until they have reached to the development of the author of that book. She has been criticized for her want of order, and sometimes for the absence of such statements as would lead the brain-development forward by orderly processes, but she did not seek to develop the reflective powers, but rather

to awaken the perceptive ones.

Now we should remember, and always hold to in our endeavor to help the world, the occult and traditional method of teaching. In our Branches we should be sure that we are conducting them on this basis. The writer knows some persons who try to turn their Branches into clubs or literary associations, merely placing them on the level of any other like club. Then, again, he knows of others who try to turn them into semi-religious institutions, but in both of these cases there is a distinct falling away from the original lines, and we must examine ourselves very carefully to see what is the proper thing to do in the management of Branches and in public meetings in order that we may awaken the spiritual insight of anyone in the outside world.

Now there is one very simple matter by which we can know how to act, and that is by noting carefully in our minds those things which have helped us and developed us, and those things which have, on the other hand, held us back. The use of these things will undoubtedly have a similar effect upon, the generality of other persons and we should remember this. If we want to help others we should bring forward the ideas that have aided us. It does not matter if we ourselves have now gone far beyond them: they were stepping-stones to us at one time and would be helps now to other persons if rightly employed. It is not difficult to find members amongst us who are throwing aside a great many conceptions as materialistic now, that were aids to them once. The simple statement, for example, of reincarnation: that the soul is an intelligence which passes on from life to life, entering new physical bodies and coming back to the race again and again; is regarded now by many as a very crude and even materialistic statement of the truth of the matter. Yet it was a very new idea to them but a few years ago, and, moreover, they would never have advanced to their present high development had not

Reincarnation been presented to them then in that very crude and materialistic manner. Therefore, what they should do now, when speaking to others below them, is to waive aside the immense knowledge they have gained and be content to present matters in a simple and clear light to those who know less than they.

If we enquire into the reason as to why it is that many desire to present such a vast amount of information in their essays and papers at a Branch meeting or before the public, or to become very metaphysical and discourse on the Absolute and Be-ness and the like, we should see that it arises really from a subtle form of egotism. They wish to show how much they know, and it does not mean simply that they wish to show how much book-learning they have, but often how much *spiritual enlightenment* they possess; this latter making it very difficult for them to find any egotism in what they do. To present a spiritual truth in a materialistic manner, and without referring to "spirit and matter", and "good and evil", or Sanskrit terms, would seem to them almost profane. Why? Because they know better, they have passed beyond all materialistic thought! But nevertheless they should remember that there are many others who have not yet reached this pinnacle of enlightenment, and their object in getting up to speak should be, if they are Theosophists at all, not to show how much they know, but really to help. Egotism springs from a want of sympathy with the race, and if one who speaks or writes or even converses with a fellow-student or one who knows nothing of Theosophy does so merely with the idea of impressing him with the amount of his own information he cannot help him in the slightest degree. True sympathy is a desire to help another, and this again is the root of one's own possible advancement. Egotism is a desire to get as much praise as possible from others, and it therefore closes up and destroys the nature of him who

possesses it.

Always there is this difference between the egotist and the sympathetic helper of man. The one desires to tell how much he knows; the other seeks to aid men in knowing as much as he. The former tries to surprise with the amount of his learning and even spiritual wisdom, the latter always seeks to give his fellow-men instruction as to how to obtain that information and spiritual wisdom.

So, then, if we are going to develop teachers and helpers for the race, we must instruct others by picking out those things that have aided us from the mass of Theosophical literature that is given to the world, and speak of them in the simplicity in which we received them; in that way to lead others up to our own enlightenment. Many say that Madame Blavatsky made a mistake in her method of enlightening the world; yet all her "mistakes" had definite objects in them. She knew infinitely more than she said, but she did not care about saying all she knew because she was not an egotist. She desired rather to help the world than to surprise it with the profundity of her knowledge. And those persons who decry Madame Blavatsky and point to her mistakes are the very ones who but a short while past learned all that they now know of the sacred truths of life from her teachings.

Let all members, then, get rid of this egotism, and, remembering the old traditions, teach the philosophy as it was given out in the earliest T. S. days. Those things that helped you at first will help others now. It may be that in your idea that you have gone far beyond Madame Blavatsky, you have not come near to where she stood. You may have but intellectually recognized wisdom which she knew intuitively. The simple expression of the Theosophical doctrines, the teachings about Karma and Reincarnation and those about the seven principles of man and the like, in their

simplest form, should be given to the public in order that they may be aided as you have been. For it is a fact that those things that aided you will undoubtedly aid others.

Again, remember also that the philosophy more than the mere ethics is what the world needs. Telling a person to "be good" instead of showing him why he should thus act, is what is being done in every church. It is not suitable to this age. Only a week ago one member overheard a visitor to a Theosophical meeting saying as he left the hall, "Universal Brotherhood! I don't know about that! Why should I not skin a man? He'd skin me if he had the chance." Showing that what the visitor wanted was not the mere telling him to become one of a body of universal brothers, but the giving to him of a philosophy which should explain the rationale thereof.

Remember, then, to place before the world and those you come in contact with the stepping-stones which have served as helps to you, and think constantly upon this rule of life:

Do not desire to tell people how much you know or how wise you are, but rather instruct them so that they also may acquire the knowledge and the wisdom for themselves.

The Path

LETTERS OF H. P. BLAVATSKY: IV

In a letter to Madame Jelihovsky: "I have not written to you for a month, my well-beloved friend, and could you guess the cause of it? One beautiful Tuesday morning in April I got up as usual, and as usual sat down at my writing table to write to my Californian correspondents. Suddenly, hardly a second later, as it seemed to me, I realized that for some mysterious reason I was in my bedroom and lying on my bed; it being evening and not morning any more. Around me I saw some of our Theosophists and Doctors looking at me with the most puzzled faces, and Olcott and his sister Mrs. Mitchell — the best friend I have here, both of them pale, sour, wrinkled, as if they had just been boiled in a saucepan. 'What's the matter? What's gone and happened?', I asked them. Instead of answering, they heaped questions upon me: what was the matter with me? And how could I tell — nothing was the matter with me. I did not remember anything, but it certainly was strange that only the other moment it was Tuesday morning, and now they said it was Saturday evening; and as to me, these four days of unconsciousness seemed only the twinkling of an eye. There's a pretty pair of shoes! Just fancy, they all thought I was dead and were about to burn this dismantled temple of mine. But at this, Master telegraphed from Bombay to Olcott: 'Don't be afraid. She is not ill but resting. She has overworked herself. Her body wanted rest, but now she will be well.' Master was right. He knows everything, and in fact I was perfectly healthy. The only thing was I did not remember anything. I got up, stretched myself, sent them all out of the room, and sat down to write the same evening. But it is simply awful to think about the work that has accumulated. I could not give a thought to letters."

Then from India, describing her arrival:

"Olcott was exactly like Carnival *Bauf Gras*; Miss B. like a pole covered with convolvulus; W. like a bed of lilies and roses; and I myself probably like a huge balloon woven of flowers. I was ready either to laugh or to be angry. They placed us in a boat, and we were taken to the landing-stage amidst the sounds of music, where we ran up against a new solemnity: we were met by a band of local, half-naked dancing girls, who surrounded us chanting their *mantra*, and led us in state — all the time bombarding us with flowers — to a maybe you think to a carriage? Not at all, to a white elephant! Good Lord, the effort it cost me to climb over the hands and backs of naked coolies to the top of this huge animal. It still puzzles me to know how I managed not to drop out of the 'howdah' where Olcott and I were put, especially when the elephant was rising to his feet. The others were placed in palanquins, and lo! to the accompaniment of acclamations, tamborines, horns, with all sorts of theatrical pomp, singing, and a general row, they carried us — humble slaves of God — to the house of the Arya Somaj."

In a letter to Madame Fadeef, dated November, 1879, H. P. B. writes:

"Would you like to get acquainted with the programme of my inevitable monthly work? If so, here you are: *first* to see to the accuracy of every article for the next number of the *Theosophist*; *second*, to see to the translation of from two to four articles in Sanskrit or the Indian vernaculars into English; *thirdly*, to personally write the leader and some other signed article; *fourthly*, to examine all the mystical articles to prevent Olcott and other co-workers from mixing things up and from over-salting these contributions; *fifthly*, to correct, proofs, sometimes five times running; *sixthly*, to answer some three or four dozen letters

addressed to the Corresponding Secretary of the Theosophical Society; *seventhly*, to thank people who send us books for our library from all points of the compass, and to acknowledge their receipt; *eighthly*, to answer a few dozen private letters; *ninthly*, to write two or three periodical articles for the American and Indian newspapers; *tenthly*, to be present at the initiation of the new members, to enter their names, and to give them their diplomas by the dozen and more; *eleventh*, to enter the new subscribers; *twelfth*, to skim through about forty magazines and newspapers; *thirteenth*, to receive visitors every evening — as many as the hall will hold — all kinds of Brahmans, Buddhists, Sikhs, Jains, Parsis, Mussulmans, and Europeans, who come for scientific purposes, and with whom I have to discuss philosophy and metaphysics up to eleven o'clock at night; *fourteenth*, and above all these I sometimes have additional work to do: for instance, to post six hundred and fifty invitation cards — one of which I send to you, as you are one of our members — for a great ceremony which is to be held tomorrow evening, the 29th of November, in honor of the fifth anniversary of the Society (1879), of the opening of our library and the publishing of our magazine the *Theosophist*. You can easily imagine the pleasure of getting oneself up 'regardless' in this heat; of hanging oneself over with every kind of medal, sign, and the ribbons of different Societies, and to smile at six hundred and fifty naked, half-naked, muslin-clad and evening-dressed Brother-Theosophists. Thank God I am going away at the beginning of December to Allahabad, with a deputation of Rao-Bahadurs, which means 'Great Warriors'. I am going there with a double object, first to see Swami Dayanand, second, to get acquainted with the wife of the Resident. I have promised the Sinnetts to spend some time with them. A prospect of calls, dinners, and balls in 'high life'. My hair stands on end at the very thought of it, but it must be done. I have warned Mrs. Sinnett that I, though not a Russian spy but an American citizen, will not listen

to a single word of disrespect to Russia or to our Emperor. Just let them try, and how I will abuse their England! So let them be warned."

H. P. B.'s position as an exponent of true mysticism was recognized in India. Lord Lytton, the Governor General and the son of the author of *Zanoni*, said of her: "I know only of one author who can hold her own in mystical literature with my father. It is H. P. Blavatsky. She can well stand comparison with the author of *Zanoni* in her comprehension of abstract metaphysics." The remark was reported in the Indian newspapers, and H. P. B. wrote to her sister:

"And so now I have become the lion of the day. I am proclaimed to be a deep orientalist, a friend of science, a herald of truth which has been enslaved by centuries of prejudice. Read the newspaper cuttings which I send to you, and glory in your relation being glorified by the nations!"

In another letter:

"From Simla I wrote an article for the *Novoe Vremya*, 'The Truth about the Nephew of Nana Sahib'. I have gathered the most elaborate information about this scamp. *Golos* constantly prints letters written by this liar, as if to incite England to make war on Russia. And *Novoe Vremya* disdained to print my note. For what reason? Besides being true, it is written as a free contribution. One would think they might have believed in tin-good intention of a countrywoman of theirs, of a Russian who is at the very source of the information about this self-proclaimed and false ally of Russia — this Prince Ramchandra. His biography — perfectly false — has appeared in the June number of the Russian *Herald*, 1889. And his letters from Bagdad and Cabul, printed in *Golos*, amuse and needlessly irritate everyone here who knows the truth of the matter. (1) . . . Whilst in Simla, Olcott and Sinnett, nearly

dragging me by force, made me visit Sir A. Lyall, Chief-Secretary for Foreign Affairs; also dine with the Viceroy, and in fact go to all kinds of aristocratic gatherings; and everywhere I had to quarrel so much for Russia's sake that I got a sore throat and am sick of them all! And yet our papers won't print my articles!"

In spite of the lack of courtesy on the part of the Russian newspapers in regard to herself, H. P. B. always subscribed to many Russian magazines and papers, and having no time to read these during the day, she robbed herself of sleep during the short five or six hours of her nightly rest, in order to know what was going on in her own country. The arrival of one of these newspapers gave rise to the following psychometric experience in the autumn of 1880. Writing to Madame Fadeef, H. P. B. expressed her gratitude for a parcel of newspapers she had sent her:

"And what an interesting thing happened to me not long since. I received your bundle of *Novoe Vremyas* and went to bed a little after ten (you know I get up at five). Having taken up one of the newspapers, without choosing, just the nearest one, I stretched myself and went deep into thought about a certain Sanskrit book which I thought would help me to make good fun of Max Muller in my magazine. So you see it was by no means about you that I was thinking. And the newspaper lay all the time behind my head on the pillow, partly covering my forehead. When all of a sudden I felt myself transported into some strange and yet familiar house. The room I saw was new to me, but the table in the middle of it an old acquaintance. And there, sitting at the table, I saw you — you, my darling comrade, sitting smoking your cigarette and deeply thinking. The supper was laid on the table, but there was no one else in the room. Only it seemed to me that I caught a glimpse of Aunt going away through the door. Then you raised your hand and, taking a newspaper from the table, put it aside. I had just time to read its heading, *Herald of Odessa*, after which

everything disappeared. To all seeming-there was nothing strange in this occurrence, but here is something strange: I was perfectly sure that it was a number of the *Novoe Vremya* that I had taken up, and having noticed in my vision some slices of black bread beside you, I was suddenly seized with such a desire to taste some of it — even a wee crumb — that I felt its taste in my mouth. I thought to myself, What does it all mean? What can be the cause of such a fancy? And in order to get rid of a desire that could not be gratified, I unfolded the newspaper and began to read. When lo! it actually was the *Herald of Odessa*, and not at all the *Novoe Vremya* in my hands. And, moreover, crumbs of my longed-for rye-bread were sticking to it! And so these fragments on touching my forehead transmitted to my consciousness the whole scene as it probably happened at the precise moment of their sticking to the newspaper. In this case, crumbs of rye-bread have taken the place of a photographic apparatus. These dry pieces of bread gave me such intense delight, having transported me for a brief moment to you. I was quite filled with the atmosphere of home, and in my joy I licked up the biggest crumb, and as to the small ones — here they are, I have cut them out as they stuck to the paper and send them back to you. Let them return home with some of my own soul. This may be rather a silly proceeding, but perfectly sincere."

FOOTNOTE:

1. This extract is interesting as showing that whilst Mr. Hodgson was quite sure (among other things) that H. P. B. was a Russian spy, her own countrymen would not trust her politically because she was an American citizen and a resident in India. ([return to text](#))

THE NEW DEPARTURE — *F. Hartmann*

With the advent of the theosophical movement inaugurated by H. P. Blavatsky, an era of self-thought began. The Theosophical Society was intended to be free from any enforced belief in any opinion, creed, or dogma whatever; being based upon no other fundamental principle than the unity of the One from whom all life with its infinite variety of forms originates, and the resulting brotherhood of all human beings. Undoubtedly one of the causes which led to the rapid growth of that Society was that many people instinctively or intuitionally perceived the sublimity of that idea, even if they were not capable of grasping it intellectually at once. In fact, those who are able to conceive that a person may become interiorly illumined by the light of truth and be taught by wisdom itself, so that he may know the truth, not from mere hearsay or from the reading of books, or from information received, or from his own speculations and fancies, but from awakening himself to a higher state of self-consciousness, and living himself in that light; the number of persons who can conceive of that, seems to be still comparatively small. Especially in England, the country ridden by orthodoxy, hypocrisy, and conventionalism; where everyone looks upon everybody with contempt unless he dresses like him, feeds like him, adopts the same manners and believes the same things as he; where everything is divided off into boxes and pigeon-holed; where nobody cares what you are, but everybody wants to know to what system, club, or church you belong; the meaning of the word self-thought, self-knowledge, or Theosophy seems to be generally misunderstood, and this misunderstanding is about to invade the ranks of the Theosophical Society, bringing with it a bagful of dogmas and doctrines, threatening the freedom of that

Society and to turn it into a sect; perhaps a sect with more advanced views than those of the rest, but a sect after all, in which no one can attain freedom, but is bound to follow blindly the scent of a leader.

There is not a country in the world in which the book called "The Bible" is so much worshipped as in England, and perhaps nowhere is the meaning of its contents so much misunderstood; otherwise it would be known more generally that this freedom from dogmatism and the self-perception of truth taught by Theosophy form the sum and substance of the new "covenant" or the new dispensation. This is nowhere better explained than in Chapter viii of the epistle of St. Paul to the Hebrews, where it is said: "I will put my laws into their *mind* and write them in their *hearts*, and I will be to them a God and they shall be to me a people. And they shall not teach every man his neighbor and every man his brother, saying Know the Lord; for *all shall know me, from the least to the greatest*. In that he saith, A new covenant, he hath made the first one old. Now that which decayeth and waxeth old is ready to vanish away."

It is not said that the new dispensation is to consist in that somebody with a new set of more plausible dogmas than the old ones is to come forward and to convert the people to a belief in them; but the new covenant consists in the self-recognition of that eternal light of divine wisdom which heretofore was known only theoretically from descriptions received through the prophets and sages. No amount of theories and opinions enables a person to see; they can only serve to aid him in overcoming the obstacles which prevent him from seeing, and perhaps to persuade him to open his eyes. The new covenant consists in growing into that freedom, where no sectarian or theological crutches are required; but where the light of divine wisdom itself can illumine the heart.

The fact that this new covenant does not consist in the establishment of a new creed is also shown by St. Paul in the same letter at its beginning: "Now of the things which we have spoken, this is the sum: We have such an high priest, who is set on the right hand of the throne of the Majesty in the heavens: a minister of the true tabernacle [the spiritual soul] which the Lord pitched and not man . . . For if he were on earth, he should not be a priest, seeing that there are priests that offer gifts according to the law."

Thus it is shown that it is not an earthly, mortal man who puts his laws directly into men's minds and writes them in their hearts; but it is the great luminous soul itself that sends its light into every mind and heart that is ready to receive it; — not theoretically, as was the old way and custom among the blind, by secondary information; but practically, according to the new departure by which everyone is asked to open his eyes and receive himself that light of which those who keep their eyes closed know only from hearsay. Who is he who is set on the right hand of the Majesty in the heavens? Surely not a man of this earth. The Occultist knows that the right hand of God means his power, because the right hand is the symbol for doing good, and the power of the divine man is divine love; while only that love is divine which is universal and identical with divine self-knowledge; for "love" in its true sense means the recognition of Self (Atma) in another thing, while divine love recognizes itself in everything.

This divine love or self-knowledge is *Theosophy*, of which it is plainly said in the Bible (*I Corinth.*, II, 7); "We speak wisdom among them that are perfect, yet not the wisdom of this world, nor of the princes of this world that come to nought; but we speak the wisdom of God [the inner man] in a mystery (*theou sophian*), which God ordained before the world (*pro ton aionon*) unto our

glory", and it must therefore be plain to every rational mind that this Divine Wisdom cannot be explained and proved to those who have no comprehension for it, nor can the nature of Divine Love be demonstrated to those who keep their hearts closed against it by self-love, conceit, and mutual incriminations. Such persons, enveloped as they are in the veil of spiritual ignorance (Tamas), will not be able to understand the nature and purport of the new dispensation.

Those of the Theosophical Society, and out of it, who are still clamoring for a creed, needing, as a stick upon which to lean, the opinion of some leader believed to be a reliable authority, belong to the *outer* circle, to the pronaos of the temple. No matter how many pledges they have signed and how many ceremonies they have performed, they have not entered into the sanctuary into which none with his eyes shut is admitted. Praiseworthy as their object may be in studying the theories regarding immortal life, while they are not yet able to experience it practically they ought not to imagine that having become well versed in these theories they have attained self-knowledge, but know that a description of food does not appease hunger, while he who eats receives the benefit of it even without a description, so all the theories about the origin of man and his development into a divine being have only the object of inducing him to follow the true path, while only he who walks upon that path and practically develops into a divine being will obtain real self-knowledge and arrive at his destination.

To the *inner* circle will belong those who, not satisfied with mere theories nor with blindly following the sounding horn of a leader, succeed in opening their own spiritual eye and receive themselves the light which shines for leaders and for followers alike. Having awakened to the realization of the inner life of the soul, they are thereby initiated into that inner life and receive the

new dispensation, which cannot be enforced upon them by any outward pledge, interpretation, or ceremony. All that the outward man (the personality) does out of his own perverted self-will and without the inner impulse from the divine man (Mahatma) within, is worthless and foolish; even his pledges are the result of folly and selfishness, for he makes his promises for the purpose of obtaining a selfish end and pledges himself to do that which he has not the power to accomplish. But the spiritually awakened man, knowing his own Master and having become united with him, even for a moment, is during that moment filled with the understanding and the power of the Master, and what he does in such circumstances is not done by him personally, but through him by the Master, as a conscious but selfless instrument of the Master's will, and the proof that he has acted as an instrument for the Master can be found nowhere except by and within himself.

This is the doctrine that has been taught in the Vedas, the *Bhagavad Gita*, and the *Bible*, by the ancient Rosicrucians and mystics of all ages. Theosophical students have often admitted its possibility, but comparatively few seem to believe that it can be practically carried out. This, then, is the new departure which we would propose for the Theosophical Society; that we should seek to outgrow the old dispensation and enter the new; that the question should not be whether we are loyal to Jones or to Smith, but whether we are loyal to immortal Truth; that we cease to dispute as to whether the description given of the light by Smith or the one given by Jones is correct, but ourselves tear away the veil of selfishness and ignorance which shuts us out from the perception of light. This is the new departure, that everyone should seek to know the Master within himself, and become himself that Master over the delusion of "self"; when he will be able to know the reflection of the image of the Master in others as well as himself. Not by mere science and clever speculation, nor

by gush and sentimentalism, is true freedom attained. There is no other way to it except through the awakening to the knowledge of eternal truth.

The Path

LETTERS OF H. P. BLAVATSKY: V

H.P.B. was exceedingly ill in the early part of 1881, and all the doctors agreed that she would have to be cauterized in the back. She tried to keep out of bed in spite of it, though her back was in a terrible condition; but whether in bed or out of it she kept continually at work. She wrote in momentary despair:

"Oh God! what a misery it is to live and to feel. Oh, if it were possible to plunge into Nirvana! What an irresistible fascination there is in the idea of eternal rest! Oh, my darlings, only to see you once more, and to know that my death would not give you too much sorrow."

In many of her following letters she showed she was ashamed of this little weakness. Her convictions were too deep, says Madame Jelihovsky; she knew too well that even in death it is not everyone who realizes the longed-for rest. She despised and dreaded the very thought of a willful shortening of suffering, seeing in it a law of retribution the breaking of which brings about only worse suffering both before and after death. In case H.P.B. should suddenly be taken ill, she always left instructions with Col. Olcott, or one of her secretaries, to inform her family of the fact. On this occasion they were greatly astonished, not long after hearing of her suffering, to learn in the beginning of August, 1881, that she had suddenly started for Simla in northern India, on her way further north. From Meerut she informed her family in her own handwriting that she was ordered to leave the railways and other highways, and to be guided by a man who was sent to her for the purpose, into the jungles of the sacred forest "Deo-Bund"; that there she was to meet a certain great Lama, Debodurgai, who would meet her there on his way back to Tibet from a pilgrimage

to the tree of Buddha, and who was sure to cure her. She writes:

"I was unconscious. I do not remember in the least how they carried me to a great height in the dead of night. But I woke up, or rather came back to my senses, on the following day towards evening. I was lying in the middle of a huge and perfectly empty room, built of stone. All round the walls were carved stone statues of Buddha. Around me were some kind of smoking chemicals, boiling in pots, and standing over me the Lama Debodurgai was making magnetic passes."

Her chronic disease was much relieved by this treatment, but on her way back she caught a severe rheumatic fever. Her illness was in no slight measure due to her distress at the murder of the Tsar Alexander II. On hearing of the Emperor's death she wrote to Madame Jelihovsky:

"Good heavens, what is this new horror? Has the last day fallen upon Russia? Or has Satan entered the offspring of our Russian land? Have they all gone mad, the wretched Russian people? What will be the end of it all, what are we to expect from the future? Oh God! people may say, if they choose, that I am an Atheist, a Buddhist, a renegade, a citizen of a Republic, but the bitterness I feel! How sorry I am for the Imperial family, for the Tsar martyr, for the whole of Russia. I abhor, I despise and utterly repudiate these sneaking monsters — Terrorists. Let every one laugh at me if they choose, but the martyr-like death of our sovereign Tsar makes me feel — though I am an American citizen — such compassion, such anguish, and such shame that in the very heart of Russia people could not feel this anger and sorrow more strongly."

H.P.B. was very pleased that the *Pioneer* printed her article on the

death of the Tsar, and wrote to her sister about it:

"I have put into it all I could possibly remember; and just fancy, they have not cut out a single word, and some other newspapers reprinted it! But all the same, the first time they saw me in mourning many of them asked me, 'What do you mean by this? Aren't you an American?' I got so cross that I have sent a kind of general reply to the *Bombay Gazette*: not as a Russian subject am I clothed in mourning (I have written to them), but as a Russian by birth, as one of many millions whose benefactor has been this kindly, compassionate man now lamented by the whole of my country. By this act I desire to show respect, love, and sincere sorrow at the death of the sovereign of my mother and my father, of my sisters and brothers in Russia. Writing in this way silenced them, but before this two or three newspapers thought it a good opportunity to chaff the office of the *Theosophist* and the *Theosophist* itself for going into mourning. Well, now they know the reason and can go to the devil!"

On being sent a portrait of the dead Emperor in his coffin, H.P.B. wrote to Madame Fadeef on the 10th of May, 1881:

"Would you believe it, the moment I glanced at it something went wrong in my head; something uncontrollable vibrated in me, impelling me to cross myself with the big Russian cross, dropping my head on his dead hand. So sudden it all was that I felt stupified with astonishment. Is it really I who during eight years since the death of father never thought of crossing myself, and then suddenly giving way to such sentimentality? It's a real calamity: fancy that even now I cannot read Russian newspapers with any sort of composure! I have become a

regular and perpetual fountain of tears; my nerves have become worse than useless."

In another letter to Madame Fadeef, dated 7th March, 1885 H.P.B. shows how perfectly she was aware of what was taking place in her own family, and how strong her clairvoyance was, mentioning amongst other things a conversation between her two aunts that had taken place on the day on which she wrote from India:

"Why does Auntie allow her spirits to get so depressed? Why did she refuse to send a telegram to B. [her son] to congratulate him when he received the decoration of St. Anne? 'No occasion for it; a great boon indeed!' she said, did she not?"

And in another letter she reproaches Madame Fadeef:

"You never mention in your letters to me anything that happens in the family. I have to find out about everything through myself, and this requires a needless expenditure of strength."

Madame Fadeef was a subscriber to the *Bulletin Mensuel de la Societe Theosophique*, published in Paris, but frequently did not read it until long after it had been received by her. On the 23d March, 1883, H.P.B. wrote to her asking her to pay especial attention to the ninth page of the number issued in Paris on the 15th March. This issue had been received by Madame Fadeef some time previously, and on looking at the uncut number, at H.P.B.'s suggestion, she found that on the page mentioned by H.P.B. there was a large mark in blue pencil as it seemed. The passage so marked referred to the prophecy of the Saint Simonists that in 1831 a woman would be born who would reconcile the beliefs of the extreme East with the Christian beliefs

of the West, and would be the founder of a Society which would create a great change in the minds of men.

The Path

COMETS — *William Q. Judge*

The probable genesis, the constitution, the movements, and the functions of comets have engaged the greatest attention of astronomers.. They very often appear to defy laws which apply to other celestial bodies. That the laws governing the heavenly bodies are not all known must be admitted upon very little reflection. Two things alone would raise doubts as to whether modern astronomers are acquainted with all those laws. The first is that although the great fixed stars are known to be moving at enormous rates — for instance, that Sirius is receding from us with great velocity every moment — yet for ages they all appear to stand in the same relative positions, and are therefore called "fixed" stars in comparison with the planetary bodies nearer to us, which move with apparently greater rapidity. The other is that some of the planets having one moon seem to have a different law prevailing over them, in that one of the moons will move in a direction opposite to the others. There are, in the first volume of the *Secret Doctrine* (first ed., pp. 203-209), two paragraphs which indicate some of the views of the Adepts in respect to comets.

"Born in the unfathomable depths of space, out of the homogeneous element called the World-Soul, every nucleus of Cosmic matter suddenly launched into being begins life under the most hostile circumstances. Through a series of countless ages it has to conquer for itself a place in the infinitudes. It circles round and round between denser and already fixed bodies, moving by jerks, and pulling toward some given point or center that attracts it, trying to avoid, like a ship drawn into a channel dotted with reefs and sunken rocks, other bodies that draw and repel it in turn: many perish, their mass disintegrating

through stronger masses and, when born within a system, chiefly within the insatiable stomachs of various suns. Those which move slower and are propelled into an elliptic course are doomed to annihilation sooner or later. Others moving in parabolic curves generally escape destruction, owing to their velocity.

Some very critical readers will perhaps imagine that this teaching as to the cometary stage passed through by all heavenly bodies is in contradiction with the statements just made as to the moon's being the mother of the earth. They will perhaps fancy that intuition is needed to harmonize the two. But no intuition is, in truth, required. What does science know of comets, their genesis, growth, and ultimate behavior? Nothing — absolutely nothing! And what is there so impossible that a laya center — a lump of cosmic protoplasm, homogeneous and latent — when suddenly animated or fired up, should rush from its bed in space and whirl throughout the abysmal depths in order to strengthen its homogeneous organism by an accumulation and addition of differentiated elements? And why should not such a comet settle in life, live, and become an inhabited globe?"

It is to be observed here that the same war which we see going on upon this plane goes on upon the cosmic planes also, it being stated that when a nucleus of matter begins life it does so under the most hostile circumstances. On this plane, the moment the soul leaves the body the never-ceasing life-energy begins to tear the particles apart and separate them into smaller lives. And it is known that the theory is held by the Adepts that during life one set of cells or points of life wars against another set, and that what we call death results from the balance being destroyed, so that the mass of cells which work for destruction, of any

composition in nature, gaining the upper hand, immediately begin to devour the other, and, at last, turn upon themselves for their own destruction as composite masses. That is to say, not that there is one distinct quantity of cells which are destroyers, opposed by another distinct quantity which are conservers, but that the negative and positive forces in nature are constantly acting and reacting against each other. The equilibrium, or natural state, is due to the balancing of these two opposite forces. The positive is destructive, and if that force gains the upper hand it converts all those cells over which it has control for the moment into destroyers of the other, negative, cells. Hence a negative cell might at some time become a positive cell, and *vice versa*. After the balance is destroyed, then the positive forces accumulate to themselves more cells under their influence, and then again a division of the two forces takes place, so that a portion of the positive become negative, and in that way, continually dividing and subdividing, so-called death, as known to us, takes place.

It has not been understood what comets are, but these paragraphs indicate that the opinion of the Adepts is that they are the beginning of worlds, *i.e.*, that we see in comets the possible beginnings of worlds. The sentence beginning the quotations — "Born in the unfathomable depths of Space", etc. — means that, a laya center being formed, the homogeneous mass of matter is condensed at that point, and, the energy of nature being thrown into it, it starts up, a fiery mass, to become a comet. It will then either pursue its course in evolution, if it is accumulating to its matter from other masses, or will be drawn into them for their aggrandizement. The hint is thrown out that the parabolic moving masses, owing to their velocity, escape destruction because they are able to evade the attraction from greater masses.

In the second paragraph quoted a clue is given to those who would be likely to think that this theory could not be consistent with the other, *viz.*, that the moon is the mother of the earth. It is intended to be shown in the paragraph that the starting-up, as before suggested, of a mass of matter from the laya center is due to the energy propelled into that center from a dying globe, such as the moon is. This having been begun, no matter what may be the wanderings of the fast-moving mass, it will at last come back to the place from which it started, when it shall have grown to a greater maturity. And this is indicated in the last statement — "Why should not such a comet settle in life, live, and become an inhabited globe?"

This theory is as useful, consistent, and reasonable as any that materialistic science has invented in respect to comets or any other heavenly bodies, and, being perfectly in accord with the rest of the theories given out by the Adepts, there can be no objection raised to it, that it violates the general system which they have outlined.

The Path

LETTERS OF H. P. BLAVATSKY: VI

By the end of 1883 H.P.B. had resolved to go to Europe. Just about this time the members of her family in Odessa were in great trouble. General R. A. Fadeef, the brother of H.P.B.'s mother, was dying. They were all of them so overcome by sorrow and by continual watching over him, whilst on the other hand they knew of H.P.B.'s intention to start for Europe, that for a long time not one of them wrote to her. Only a few days after the funeral they thought of informing her about their common misfortune. But their letters reached Madras when H. P. B. had already left that city, and were sent back to Europe after her departure. Meanwhile she spent some time in Bombay and let her family know that on the 7th of February, 1884, she had arranged to embark on board the "Chundernagore". She wrote:

"I am starting depressed by a terrible foreboding. Either uncle is dead or I am off my head. The night before our leaving Adyar I dreamed of a scene which happened exactly twenty years ago in Tiflis, in 1864, when I was so ill, as you remember. I was lying on a sofa in the hall dozing, and on opening my eyes I saw Uncle bending over me with so much sadness and pity in his face that I jumped to my feet and actually burst into tears, just as I have done when this scene repeated itself all over again in dream. And about five days ago, in a railway carriage, I was alone in the compartment at about two o'clock a.m. I was lying down but not sleeping, when suddenly between me and the window through which the moon shone very brightly, I saw someone standing. The lamp was covered, but all the same I recognized him at once. It was Uncle, pale, thin, dishevelled. Lord, how I started forward, and then heard in

answer to my cry his voice as if vanishing in the air, 'Farewell to you, Helena Petrovna' — and then everything disappeared. I refused to believe myself. My heart was breaking: I felt I was to believe, but tried not to do so. And then a third time, again when awake: I was not asleep, having great pain in my leg, but shut my eyes in the effort to doze. Half-lying in an arm-chair, I saw him once more before me. But this time as he formerly used to be, twenty years ago. He was looking at me with an amused twinkle in his eyes as he used to do. 'Well', he says, 'and so we have met once more.' 'Uncle', I cried, 'Uncle, for goodness sake tell me you are alive!' 'I am alive', he answered, 'more than at any other time before, and I am shielded from suffering. Do not give way to sadness, but write to *them* not to make themselves wretched. I have seen father and all of them, all of them.' The last words sounded as if going away, becoming less and less audible, and his very outline became more transparent and at last disappeared altogether. Then I knew for certain he was no more in this world. I knew he was ill all this time, but it is so long since I heard from you. But then he chose to come personally and say good-bye to me. Not a single tear in my eyes, but a heavy stone in my heart. The worst of it is that I do not know anything for certain."

H.P.B. got her mail at Suez, and only then learned from the newspapers and her relations' letters that she had been perfectly right.

H.P.B. stayed in Nice with the Countess of Caithness before going on to London. Whilst there, she received numerous invitations to stop with people in England, and replied to these letters in a sort of circular. It reads as follows (translated from the Russian):

"Having received the cordial invitations of . . . and others, I am deeply touched with this proof of the desire to see and to make the acquaintance of my unworthy self on the part of both new and old friends in England. But I do not foresee for myself any possibility of struggling with my fate. I am ill, and feel myself to be much worse than in Bombay and even more so than in the open sea. In Marseilles I spent a whole day in bed, and am still in bed, feeling as if I were on the point of breaking into pieces like an old sea-biscuit. All that I hope to be able to do is to mend my weighty person with medicines and will-power, and then drag this ruin overland to Paris. And what would be the use of my going to London? What good could I do to you in the midst of your fogs mixed up with the poisonous evaporations of the 'higher civilization'? I have left Madras *a mon corps defendant*; I should not have gone at all if I had not been compelled to make up my mind on account of my illness and the orders of the Master. . . . I feel sick and cross and wretched, and gladly would I return to Adyar if I could. . . . Lady Caithness is an incarnation of all that is good: she does everything possible to rest me and to make me comfortable. I must wait here till the weather is more settled. When the March winds are over I shall go to Paris to meet the delegates of the European Branches of the T.S., but I very much fear it will be torture for me. Am I fit for such civilized people as you all are? But in seven minutes and a quarter I should become perfectly unbearable to you English people if I were to transport to London my huge, ugly person. I assure you that distance adds to my beauty, which I should soon lose if near at hand. Do you think I could listen with equanimity to discussions about Sankaracharya being a Theist, and that Subba Row does not know what he is talking about; or to still more striking

statements about Raj Yogis, to the crippling of the Buddhist and Adwaita teachings even in their exoteric interpretations? No doubt as a result of all these trials I should burst a blood-vessel. Let me die in peace if it is not given to me to go back to my familiar Lares and Penates in my dear Adyar!"

H.P.B. despatched letters daily to Odessa, where at that time both her aunts and her sister lived, imploring them not to deprive her of a last meeting with them on this earth, with all the passion she always felt in regard to her family. It was like the affection of a child.

"My dear, my sweet one, don't you bother about money. What is money? Let it be switched! Katkoff is bombarding me with telegrams. One of them was sent to me here by post from Madras. Twenty-nine words! I expect it cost him at least 500 francs, and when I wrote to him from here he sent another asking for my articles. He must be wanting them badly if he asks for them at such cost. So we shall have money. I expect you must have been greatly impressed with all the flatteringly magnificent articles about me in the newspapers, in the *Pall Mall* and others. They praise me entirely out of all proportion. In spite of all my uncouth and far from presentable figure with my swollen legs, I am getting to be *a la mode!* Reporters from all parts simply give me no rest."

Next from Paris in 1884:

"If for no other reason, come for the sake of the fun and see how I am worshipped as a kind of idol; how in spite of my tearful protests all sorts of Duchesses, Countesses, and 'Miladis' of Albion kiss my hands, calling me their 'saviour' — who has torn them from the abyss of Materialism,

unbelief and despair — *sic!* You will see for yourself how they carry on about me. You will probably go to at least one of the meetings, to one of the *Seances Philosophiques de la Socie'te Thcosophique d'Orient et d' Occident* in the princely halls of the Duchesse de Pomar. You shall see there the *elite de la socie'te et de l' intelligence de Paris*. Renan, Flammarion, Madame Adam, and lots of the aristocracy from the Faubourg St. Germain. . . . And besides, we really do not want any of them at all, but for God's sake do not always change your mind: do not kill me. Give me this greatest and only happiness in the end of my life. I am waiting and waiting and waiting for you, my own ones, with an impatience of which you can have no idea. ... I have run away from my cosmopolitan friends and interviewers, and other prying torturers, leaving Paris for a few days for Anghein, Villa Croisac, belonging to my dear friends Count and Countess d'Adhemar. They are real friends, caring for me not only for the sake of phenomena — which be bothered. Here I have a whole *enfilade* of rooms at my own and at your service. But if you wish we can easily live in Paris, coming here only for a few days. The Countess is a charming woman: she has already prepared rooms for you, and insists upon your staying with her. It's only a quarter of an hour from Paris, past St. Denis, and the station is nearly at the entrance of the chateau. Don't be afraid of being in their way. Their house is a huge one. She is a very rich American, so nice and unpretentious. Her husband also, though a great aristocrat and a crusted legitimist, is very simple in his ways."

In spite of this, Madame Fadeef and Madame Jelihovsky preferred to stay with H.P.B. in Paris, where they spent six weeks together. Many interesting things happened. Mr. W. Q. Judge was at that

time staying in the same house with them. When the time came for the party to break up, H.P.B. started for London some two hours before her sister and aunt left for Russia. The latter accordingly saw her off at the Gare du Nord, with a large party of friends and acquaintances. To use Madame Jelihovsky's own words:

"H.P.B. was very unwell, being hardly able to move her swollen feet which gave her awful pain. Most probably I was not the only one to nourish angry thoughts against her all-powerful Mahatmas — if they actually were so kind as described — thinking that they might help her, relieving her suffering, were it only in part, now that she had a long trip and the sorrow of parting with us before her. As usual she stood up for them, assuring us that though they do not think it a good thing to relieve people's suffering (the latter being the lawful reaction on each separate person), yet her own particular Master had often helped her, saving her from mortal illnesses. I walked, supporting her under the arm, to the platform, when suddenly she drew herself up, and glancing over her shoulder exclaimed: 'What is that? Who touched me on the shoulder? Did you see a hand?' No one had seen any hand, and we all stared at each other in astonishment. But how great was our surprise when Helena Petrovna smiled, and, pushing my arm aside, walked ahead firmly and briskly as I had never lately seen her do. 'So now', she said, 'this is an answer to you, Vera; you have been abusing them for their lack of desire to help me, and this moment I saw the hand of the Master. Look how I walk now.' And in fact she walked all the time on the platform, quickly and quite easily. Though she had to change the railway carriage twice, she got in and got out each time without visible effort, assuring us that her pain

had entirely gone and that it was long since she had felt herself so well physically."

The Path

A BASIS FOR ETHICS — *Katharine Hillard*

One of the books which were most read and talked of last year was Mr. Kidd's work on *Social Evolution*. His theory, expressed in the fewest possible words, was that in nature we could find no basis for ethics, that the keynote of natural and of human progress was self-interest, as shown in the struggle for existence, that this might and does become an enlightened self-interest and make for the preservation of the species in the end, but for the origin of true altruism we must look to something outside man and the physical universe, an impulse towards doing good to others which could only spring from a divine and what Mr. Kidd calls "an ultra-rational sanction", in a word, some religious conviction.

Close upon the heels of Mr. Kidd's book came Drummond's *The Ascent of Man*, marked by all the fascinations of easy and brilliant style for which this author is so noted, and equally characterized by his well-known fancifulness and tendency to run off the track of scientific thought into the boggy wilderness of the fantastic. Mr. Drummond says of Kidd's theory (and I think the objection is well-taken), "Practically, as a vindication of the dynamic power of the religious factor in the Evolution of Mankind, nothing could be more convincing. But as an apologetic it only accentuates a weakness which scientific theology never felt more keenly than at the present hour. . . Does not Mr. Kidd perceive that anyone possessed of reason enough to encounter his dilemma, either in the sphere of thought or of conduct, will also have reason enough to reject any 'ultra-rational' solution? That is, if our mind is of a character to be convinced, with Mr. Kidd, that altruism does not belong to human nature, but is foisted upon it, as it were, by some outside religious sentiment, will not that mind naturally

repudiate the idea that any such God outside the machine can exist?" And furthermore Mr. Drummond remarks: "The first essential of a working religion is that it shall be congruous with Man; the second, that it shall be congruous with Nature.

Whatever its sanctions, its forces must not be abnormal, but reinforcements and higher potentialities of those forces which from eternity have shaped the progress of the world."

In all probability, most of us would not interpret this sentence as Mr. Drummond would, but from either point of view it is an admirable statement. His own theory, as distinguished from Mr. Kidd's, is briefly this: That we find the germ of altruism in the struggle for the existence of others, as shown primarily in the maternal instincts of animals, which develop in some orders into the display of affectionate and protective impulses and actions in the father also, and finally into those associations for mutual protection which have for their object the preservation of the species rather than of the individual. In fact, he is rather inclined to agree with Prof. Mantegazza of Italy, another charming but not very trustworthy writer, who expounds the optimistic doctrine that "the whole of nature is one hymn of love". But is not this very association to which Drummond refers, an action prompted rather by fear of a common enemy than any desire to assist in the preservation of other lives? In that very valuable little book on *The Evolution of Sex* by Geddes and Thomson, its authors seem to have taken the desirable middle course by affirming with Littré, Leconte, and others, "the coexistence of twin streams of egoism and altruism which often merge for a space without losing their distinctness, and are traceable to a common origin in the simplest forms of life. . . . There are two divergent lines of emotional and practical activity — hunger, self-regarding egoism, on the one hand; love, other-regarding altruism, on the other. . . . The actual path of progress is represented by action and reaction between

the two complementary functions, the mingling becoming more and more intricate." And the diagram our authors give to illustrate their idea is, curiously enough, in the figure of the caduceus, used, too, as you will remember, by Prof. Crookes.

Here we have, then, the theories of three different thinkers as to the basis of ethics; Mr. Kidd placing it altogether outside of human nature and human reason; Prof. Geddes finding it in the twin stream of egoism and altruism whose sources are in the nutritive and reproductive functions of the body; and Prof. Drummond adding to this the theological conception of the assistance of a personal God. He says, however, as I have already stated, that the first essential of a working religion is that it shall be congruous with man; its second, that it shall be congruous with nature. Strangely enough, this theologian seems to entirely overlook the fact that in the spiritual oneness of man and nature should we seek the true basis of ethics, an idea faintly shadowed forth in the "ideal unity" which stands at the top of Prof. Geddes's diagram.

The Theosophist would maintain that the problems continually confronting the evolutionist will only be solved when the triple nature of man's evolution is fully recognized, and he is treated as a being unfolding in three directions, the physical, the psychical or mental, and the spiritual. To look for the origin of soul-functions among the organs of the body is like trying to trace the source of a mountain streamlet to a salt-marsh. Those animal instincts called altruistic reach out a very little way and in a very few directions, and even these would be classed by the Theosophist as belonging to that "animal soul" which birds and beasts share with human beings. Side by side, then, with the evolution of the body must run the evolution of the soul, and as the spiritual is always the same, and only its medium develops, it may be figured as the staff of the caduceus around which the twin

serpents wreath their coils. The sensations of the body arise in the body and govern its acts; the emotions of the soul, the thoughts of the mind, belong to the other side of the double nature; but both, as well as all the universe, live and move and have their being in the great ocean of Spirit.

To become convinced that we are all descended from a common ancestral form can never make a very deep impression upon our hearts; a brotherhood based upon so remote and so purely physical a relationship will hardly affect the behavior of man to man. But once get rid of the heresy of the belief in the separateness of soul or *self* from the One Universal, infinite Self, and the command to love thy brother as thyself seems to appeal to the heart of all, and we have a basis of ethics, not founded on the transient and illusory side of man's nature, but on the true and the real. If mankind is one great organism, as we believe it to be, built up of countless individual lives as our bodies are built up of countless individual cells, how evident it becomes that the welfare of one is the welfare of all, and that an injury to the least of these must have its reactionary effect upon the whole system. This idea is beautifully set forth in Mr. Coryn's admirable essay on *Prana*. "Before evolution began," he says, "one soul . . . shot itself out into the rays we call men, a duality in consciousness of the material and the spiritual. All men follow diverse paths, and go through diverse paths and rough places, that this soul *in them* may perfect itself in all experiences. . . . Humanity is one Self. At the beginning it was one; it now seems many, but at the end, when the minds of men are tuned together (a process already indicated by the growing sensitivity of many to the unspoken thoughts and feelings of others), humanity will be one vast organism in perfect harmony, and every unit, still thinking itself a unit, will yet feel with every other, giving, nevertheless, its individual color to all it takes into its consciousness. . . . Except by

assuming the reality of this one life in us all, there is no possible means of accounting for sympathy with pain. . . . Every feeling of sympathy", concludes Mr. Coryn, "is absolute proof of one life-spirit in men . . . And this is not a mere metaphysical idea, but it is the only guide of life worth having."

If we take, then, our unity in Spirit as an actual and living fact, we shall find an ethical system based upon it to be equally congruous with nature and man, thus fulfilling Prof. Drummond's ideal of "a working religion". For even the man who from the dictates of "an enlightened self-interest" endeavors to fill his part in the world to the best of his ability, contributes something to the elevation of the race. For that depends, of course, upon the perfecting of the individual, and every effort, however small, in the direction of right raises the general average of humanity. Such a person works only upon the lower planes, but the impulse towards the higher will gradually impel him onwards, till in some succeeding incarnation he shall work from the plane of soul rather than from that of body.

Nor should the sympathy that springs from our true unity cause us only to feel with another's pain; it should make us also rejoice in another's happiness. Their joy should be our joy as well as their sorrow our sorrow, and if we can only think of all mankind as one, then the thought of the many parts of that great Unit that are happy and prosperous and free from pain should do something to cheer us when we are lonely or sad or suffering. Some of us are having a good time; let us fix our mind on those that rejoice, and not on a temporary ache in a little finger. Jonathan Edwards thought that part of the happiness of the saints in heaven was made up of their contemplation of the miseries of the damned. Our "working religion" would teach that could the souls in hell bring themselves to realize the happiness of the souls in heaven, they would be no longer among the damned, but the flames that

beset them would turn to fragrant roses, wet with the dews of Paradise.

The basis for ethics, then, given by Theosophy, is the idea of universal brotherhood founded upon the conviction of our spiritual unity, and therefore having its impulse from within rather than from without, the cultivation of right thought, that from it may spring spontaneously right speech and right action, and thus, in a sense far deeper than is dreamed of by the churches, the promise of Jesus shall be fulfilled: "Seek ye first the kingdom of heaven, and all these things shall be added unto you".

The Path

LETTERS OF H. P. BLAVATSKY: VII (1)

A few days after leaving Paris H.P.B. wrote to Madame Fadeef from London, where she was staying with Miss Arundale:

"My dear, my precious Nadeja Andreevna! For many years I have not cried, but now I have cried out all my tears on losing sight of you two. I thought my heart would burst, I felt so faint. Happily, some kindly French people in the same compartment as myself brought me some water at the next station and took care of me as best they could. At Boulogne Olcott came to meet me, and was nearly ready to cry himself on seeing how ill I was. He was also greatly put out by the thought that you and Vera might think him heartless for not having come to fetch me in Paris. But the poor old body never knew I was so unwell. You know I am always shaky. I spent a night in Boulogne, and next morning five more of our Theosophists came from England to look after me. Amongst them two good friends, Captain B. and his sister Lady T. I was nearly carried to the steamer and off it again, and triumphantly brought to London. I can hardly breathe, but all the same we have a reception this evening, to which probably about fifty of our old acquaintances will come. English people in their totality are not fickle; they have lots of constancy and loyalty. At Charing Cross, Mohini and K. nearly frightened to death all kinds of English people by falling down before me as if I had been an idol. It made me positively angry, this tempting of providence.

"My dear, this new parting from you is so bitter for me, and yet it is a consolation to have seen each other and to have

learned to know each other better. I tell you, friend, life has nothing better than the consolation and happiness of the deep affection for things and people we have loved from childhood. This kind of thing can never die: it will have eternal life in eternity. Long, long after I had gone I saw you three together — you, Vera, and Madame de Morsier. She writes me she *was* with you until the moment your train left. This woman has a good heart, for the sake of which we must forgive her moody temper."

From London, between May and August, 1884:

"I shall never get well here. It's not life I lead here, but a sort of mad turmoil from morning till night. Visitors, dinners, evening callers, and meetings every day. Our Olga X. assures me she feels a sort of adoration for me, and daily brings some of her friends to see me. She has already brought me the whole of celebrated London, except the great Minister Gladstone, who, according to the *St. James Gazette*, both fears and admires me — 'is afraid of as much as he admires her'! To my mind this is simply a kind of glamor. . . . On the 21st July there was a meeting — *conversazione* as they are called here — in honor of Madame Blavatsky and Col. Olcott, held in the Prince's Hall. At first they printed five hundred invitation cards, and then there was such a rush for them that they had to add nearly as many again. Madame X. wrote asking for two tickets in the name of our Ambassador, and personally brought the Ambassadors of France, Holland, Germany, Turkey, Prince H. of Roumania, and nearly the whole of the staff of her devoted friend Gladstone. Lastly, Hitrovo, our Consul General in Egypt, who came here on business. . . . I leave it to your own imagination to fancy the following picture: a huge hall, ladies in low dresses, *costumes de gala*

of all nations — and I sitting in the place of honor, a kind of kingly throne out of a ballet performance, in my black velvet dress with a tail three yards long (which I hate), and Sinnett and Lord B. and Finch, the President of the London Lodge T.S., bringing and introducing to me, one by one, all who want to make my personal acquaintance. And of such there happened to be — I am trying not to exaggerate — about three hundred people. Just fancy, smiling and shaking hands with three hundred ladies and gentlemen during two hours. Oof!! Lord and Lady H. asked me to dine with them next day. After such an evening: just think of it! Cross, the Secretary for India, sat down beside me and complimented me to such an extent on the love of the Hindus for me that I simply got frightened: they might put a political coloring even on this! Besides all sorts of European notabilities, they introduced to me a heap of black and yellow Princes, Maori, Javanese, Malay — I don't know who. Professor Crookes and his wife sat behind my arm-chair like a pair of adjutants, pointing out to me no end of their colleagues of the Royal Society, celebrated *savants* in physics, astronomy, and all kinds of 'Dark Sciences'. Now, darling, do you see, do you feel, the working of Karma? English Science, intelligence, and aristocracy paying honors to me which I do not deserve in the least. Master declared to me beforehand it would be so, and now I am perfectly miserable getting lots of visits and invitations, especially after Sinnett's speech in Prince's Hall. He struck an attitude and began to oratorise: 'Ladies and gentlemen! Before you you see a woman who has accomplished a world-wide work. She alone thought out and executed a colossal plan, the creation of a whole army of cultured people whose duty it is to fight against Materialism and Atheism as much as against superstition

and an ignorant interpretation of the teaching of Christ (that is to say, against the one hundred and thirty-seven sects, Shakers, Quakers, howling Salvationists revelling in darkness) which is the shame of the Christian world. . . . Ladies and gentlemen of cultured England, behold the woman who has shown the world what can be accomplished by the power of will, steadfastly pursuing a certain aim, and by a strongly realized ideal. All alone, ill, without means, without patronage, without help of any kind, with the sole exception of Col. Olcott, her first convert and apostle, Madame Blavatsky has planned to unite into one intellectual whole a universal brotherhood of all nations and of all races. She has accomplished this undertaking; she has overcome animosity, calumny, the opposition of fanatics, and the indifference of ignorant people. . . . Even our liberal Anglo-Indian government mistakenly arose against her humanitarian mission. But happily it realized its mistake and stopped in time.' And so on and on in the same strain. The applause was deafening. I tried to blush for modesty's sake, but got pale instead for want of air. I nearly fainted, for I am still very weak; though my legs from that moment in the railway station have stopped aching altogether.

"What am I to do with all these letters, evidently intended to arouse my pity, from all these admirers who are so very much in love with me? Half of them I can answer only in thought. But amongst them are many whom I really love and pity, as for instance our poor Solovioff. It's not long since I have come to London, but I have already got two such pitiful letters. The only thing he asks of me is to care for him and not forget him. He says he has never loved anyone outside of his family as he loves poor old me. Also

our dear J. D. Glinka: do you know what she has done? She has printed five hundred copies of the document and the letter of Prince Dondukoff clearing me from the calumny of Mdlle. Smirnoff, and has sent them to all who are doubtful about the matter. . . But, God bless my enemies! Now listen to a curious story: M. A. Hitrovo, our Consul in Egypt, called on me and asked me among other things: 'By the way, did you get our telegram, signed collectively by all the crew of the frigate *Strelak*? We sent from Suez to Port Said an expression of our gratitude to Radha Bai (2) for her kindly affection and remembrance of her compatriots'. I listened silently without understanding a word. 'But don't you remember', he says, 'I, as Consul, had to see off the Ambassador to China, and so was on board the frigate which you met in the Suez Canal'. Only then I remembered. Don't you recollect I told you in Paris about a joke I played in Suez, on the 3d of March if I am not mistaken. Our steamer of the *Messagerie* had to tie up in order that a big Russian frigate might pass on its way to China. So I took my visiting-card and wrote on it, 'A Russian woman who during many years never saw a Russian face sends a hearty greeting and deep salutations and her wishes for a pleasant voyage to all the Russians, beginning with the Commander and the officers and ending with the Marines. God protect Russia and her Czar!' — signed Radha Bai. And on the other side I wrote my real name and my Adyar address. We put this card into a tin box and flattened it. Then when the frigate was in line with us, Olcott very deftly threw the tin over into a group of officers and soldiers, and I shouted 'A letter to the Commander'. It was handed to him immediately, and under our very eyes he read it out. All the officers took off their caps to me, waving them to my address, and the crew shouted 'Hurrah!' I was

awfully pleased. 'We were all very much amused by your invention', said Hitrovo, 'and very much touched by your note. The Ambassador and all the officers immediately agreed to wire you their gratitude to Port Said'. And fancy, isn't it vexing, it was never delivered to me. ... I told Hitrovo I should insist upon its delivery, as a souvenir."

Herr Gebhardt came to fetch H. P. B. from London, and took her over to Elberfeldt, anxious that she should have proper care and rest, as well as tonic waters and massage, which had been ordered by many doctors who had agreed that her brain was the only sound organ in her body. H.P.B writes:

"I travelled as if I had been a queen. Everywhere I had cabins and railway carriages all to myself, and Gebhardt, who came to fetch me in London, never allowed me to pay a penny for anything. We were about fifteen Theosophists travelling together, and here I have also found a large party of German Theosophists waiting for me. The President of the new German Branch, Dr. Hubbe Schleiden, Baron von Hoffman and his wife, du Prel, a certain dignified Countess Spreti with her husband and Aide-de-Camp — for he is a General — Captain U. I may well say with Madame Kourdukoff (3) that I have found here a company of lords, counts, and princes, all of them very decent people — and all Theosophists of ours. Besides them there was the celebrated painter, Gabriel Max (don't you know?), with his wife and his sister-in-law, and Madame Hammerle from Odessa; and Solovioff writes that he will not fail to come. What if you come also?"

Next came the Coulomb disturbance. In regard to this Madame Jelihovsky writes: "H.P.B. stayed nearly two months in Germany and was thinking of settling in Europe for good — a step greatly

recommended by the doctors. But at this time began a tragedy, preparations for which had been made long previously by the enemies of her work. The *Christian College Magazine* of Madras issued a series of letters purporting to be signed by her and to be written to a certain French woman, Madame Coulomb. This Madame Coulomb, with her husband, had kept a hotel in Cairo some years before, and Helena Petrovna had stayed in it during the existence of her Spiritualistic Society which never succeeded. Unfortunately for her, she met them again, many years later, in India, when they were in abject misery and want, and kind-heartedly sheltered them in her house. In H.P.B.'s absence Madame Coulomb quarrelled with all the occupants of the house, and consequently thought of finding some other situation for herself. Then Madame Coulomb was offered a very profitable transaction. Someone was sent to them by a certain missionary, explaining to them that in destroying this heretical Society they would act as good Christians — and besides would earn a goodly sum of money. This the Coulombs tried to earn as all now know. H.P.B. writes:

"Everything has changed. A hostile wind is blowing on us. What cure, what health is possible for me? I have to go back quickly to the climate that is fatal to me. It can't be helped. Were I to pay for it with death, I must clear up these schemes and calumies because it is not me alone they harm: they shake the confidence of people in our work, and in the Society, to which I have given the whole of my soul. So how can I care for my life? . . . They write to us that in Madras, Bombay, and Calcutta all the street walls are covered with thousands of placards: 'Fall of Madame Blavatsky; her Intrigues and Deceits Discovered' — and so on and so on. But on the other hand there are more than a thousand people who have arisen in my defence. Not

letters alone, but telegrams costing thousands of rupees have been sent to the *Times* of London. As to India, the war there is more than a newspaper war. About two hundred native students have crossed out their names from the registers of this Christian College whose journal has printed these wonderful letters of mine. To be fair to truth, I must say that with the exception of two or three government papers in India, everyone is on my side. Even here some people have shown themselves real friends to me. Madame N. brought Mackenzie Wallace to see me; he has lived in Russia, and has written such an excellent book about Russia and speaks Russian so well. He is going to be sent as a Secretary to the Viceroy, Lord Dufferin. He gave me a letter of introduction to Nubar Pasha of Cairo, requesting him to help me in finding information about the Coulombs. Above all it is necessary to show up these rascals."

HERMES AS UNIVERSAL SOURCE

The opening chapter of Iamblichus on *The Mysteries*, translated by Taylor from the Greek in 1821, is devoted chiefly to showing that true inspiration has but one source, however various the channels.

"Hermes, the God who presides over language, was formerly very properly considered as common to all priests; and the power who presides over the true science concerning the Gods is one and the same in the whole of things. Hence our ancestors dedicated the inventions of their wisdom to this deity, inscribing all their own writings with the name of Hermes. If, therefore, we participate in a portion of this God, adapted and commensurate to our powers, you do well to propose your theological doubts to the priests as friends, and to make those doubts known to them. I also very properly conceiving that the epistle sent to my disciple Ambo was written to me, shall give you a true answer to your inquiries. For it would not be becoming that Pythagoras and Plato, Democritus and Endoxus, and many others of the ancient Greeks, should have obtained appropriate instruction from the sacred scribes of their time, but that you who are our contemporary and think conformably to those ancients, should be frustrated of your wish by those who are now living and who are called common preceptors. I therefore thus betake myself to the present discussion; and do you, if you please, conceive that the same person to whom you sent the letter returns you an answer. Or, if it should seem fit to you, admit it to be me who discourses with you in writing, or some other prophet of the Egyptians, for this is

of no consequence.

"Or, which I think is still better, dismiss the consideration whether the speaker is an inferior or superior character, but direct your attention to what is said, so as readily to excite your mind to survey whether what is asserted is true or false."

The Path

PROOFS OF REINCARNATION: I — *J. A. Anderson*

Before taking up the subject of Reincarnation, it will perhaps be well to dwell for a few moments on Incarnation. That is to say, we ought to establish the premise that the human soul is incarnated in a body before we deal with the question as to whether or not it reincarnates. In attempting this, it is necessary to enter somewhat deeply into the domain of philosophy, to establish a basis for our conceptions as to the nature and origin of the human soul, and to determine its relation to that body in which we assert it incarnates. Without however attempting to explain the nature, functions or powers of the Absolute, it is certain that this presents itself to our conception as a Triad of aspects, or hypostases which we recognize as Consciousness, Force and Matter. These hypostases are eternal, and eternally associated. There can be no consciousness isolated from matter and force, nor matter nor force apart from consciousness, nor from each other. Evolution can only consist in the changes in the relations between these hypostases, for all its vast processes which constitutes and *IS* the Manifested Universe must leave the Absolute untouched and unchanged by their infinite correlations and permutations.

There must be evidently an infinite gradation in the relative amounts, so to speak, of consciousness, force and matter associated in and as the Universe. The rock for example will have less consciousness and force, and a great preponderance of matter. The human soul will have more consciousness and force, and very much less matter — understanding in each instance potent as opposed to latent states. The latent potentialities in every instance are equally infinite for each of these hypostases, and this is the philosophical basis for attributing all the infinite diversity of the Manifested Universe to an Absolute Unity for its

origin. Infinite Potentialities can only arise in an Infinite Unity — an axiom.

If, then, we can prove the human soul to be an entity independent of and superior to its body, we at once obtain a very important clue to guide us in the study of those infinite correlations among the three hypostases of the Absolute. It becomes evident that entities occupying superior states can clothe themselves with matter already ensouled by entities less advanced, which at once throws a great light upon the philosophical reason for evolution as enabling entities more advanced to associate themselves with those less so, and thus because of their common origin and essence to emulate or bestow a portion of their own power upon these. If we are inclined to shy at this construction of *emanation*, then let us simply say that the very presence of the higher entity quickens into activity the dormant potentialities of the lower — a fact we constantly observe in nature, and which is at the basis of all attempts to educate and expand the minds of the masses. So that the scheme of evolution, apparently heartless when viewed from the purely materialistic aspect of the survival of the fittest, becomes the very embodiment of Supreme Love and Divine Compassion when illumined by the Wisdom of Theosophy.

Is, then, materialism correct in assuming that the consciousness displayed by the human soul is but a mode of force; a form of molecular vibration; a production of the chemical and molecular activities of the body, arising because and out of these activities, and ceasing with the death of the body? In other words, has man a soul?

Let us briefly examine this question. If the soul were the production of the activities going on in the body, then it ought to present the same conscious phenomena at every period of its existence. But we find, strangely and unaccountably from any

scientific standpoint, the fact that life is broken entirely in twain by the mysterious phenomenon of sleep. The very familiarity of this process renders us unable to appreciate its exceeding mystery. One-third of man's entire existence is passed in a condition which would be utterly impossible were his soul the product of the molecular activities of his body, because during sleep all of these go on unchanged. The heart beats as strongly, and respiration goes on even more regularly. In fact, it is well known that sleep refreshes and restores the body; puts it in a better condition to perform its functions than before it had this necessary rest. Then, if all the functions proceed, and many of them even better, during sleep, why is that consciousness or intellection alone suspended? There can be but one answer — that man's soul is not his body, but is an independent, thinking being, using that body until it (so to speak) wears out its power to respond to thought; and then, without ceasing to be, with no possibility of perishing, the soul retires to those, to us, subjective realms which lie beyond the molecular side of nature and permits its body to rest. This theory, and this alone, explains why we sleep. Certain so-called abnormal conditions of consciousness also establish — and fully establish, to any reasonable mind — the further fact that the soul is not, and cannot be, the body. Some of these are trance, hypnotism, and allied conditions. Hypnotism in particular entirely demolishes the materialistic theory. For it is a fact that if a person is hypnotized his soul is freed to such an extent that it becomes very greatly superior to its condition before this was done. Hypnotize an ignorant boor, and, if the hypnotizer does his work properly, there will arise out of that chaos of ignorance, which represents the boor in his ordinary condition of mentality, a magnificently philosophical Ego, an Ego possessed of a thousand times more knowledge than the boor is able to express; thus proving that even the lowest and most ignorant have behind them a comparatively infinite amount of

wisdom and knowledge. Theosophy asserts that evil acts and thoughts in former lives have caused them to create for themselves, or incarnate in, such bodies that they are unable to display those traits or make use of that wisdom which is their heritage by right of having won it in former ages. Hypnotism, then, proves that there is an Ego, a higher, almost infinitely wiser Ego, buried in the most ignorant breast, which would be utterly impossible were the soul merely a sort of conscious steam given off because of the molecular activities of the body.

Further, if the soul were not independent of the body then would memory be impossible. It is a well-known, scientific fact that to its uttermost atom, the body completely changes within seven years. Many of the tissues change in a very much less time than this. The gray matter of the brain for instance will completely change and rebuild itself anew in a very few months. But, resting upon the proposition that the entire body changes only every seven years, then if the real soul, the Ego, were the product of the molecular activities of that body, beyond seven years no man could remember. It would be an impossible thing. Man in this case would be a simple center of consciousness having no hold upon the past and no conception of the future. This fact that his body completely and entirely changes at least every seven years is a most important one to bear in mind, when studying not only the phenomena of reincarnation, but all conscious phenomena. It has not been nor can it be explained by any materialistic hypothesis.

Without however needlessly wearying ourselves with the repetition of facts and logical deductions which may be found in every domain of scientific or philosophic investigation, we may rest here and declare that the human soul is an Ego, having its origin upon a higher plane of the differentiated Cosmos; a plane where thought is the key-note, and reason or ideation dominates all other forms of consciousness, and where consciousness itself

dominates the matter and force aspects of the One Absolute. Its body is a synthesis of entities in whom these other aspects of the Absolute are dominant, and with whom the Ego is thus associated under the law of Divine Compassion. This association also affords the Ego opportunity to increase its own store of wisdom through its experiences upon those lower planes of consciousness which it is entitled to approach by means of its synthesising these lower entities with the sense organs which constitute its body.

Reincarnation, then, means the repeated return of the soul to earth, or to the molecular plane of existence, by rebirth in new physical bodies. This rebirth occurs under the law of Cause and Effect — the one absolute law which links the Infinite to the finite, and makes a finite possible. By some unexplained and perhaps unexplainable action of this law, all existence in the manifested universe proceeds under a further law of cycles. Every phenomenon of nature absolutely without exception obeys this latter law, although the majestic sweep of many of these renders verification difficult because of the brevity of human life. In consciousness its action is to produce alternate objective and subjective states; in matter alternating forms, and in force alternating correlations. Under it the human soul proceeds upon its evolutionary journey — for reincarnation or reembodiment is the very process and method of evolution, — occupies a body for a time, casts it off, retires to subjective realms, and reappears in due time in another body.

If then we find indisputable evidence that the human soul is an Ego, having its origin upon a higher plane of the Cosmos, and that it has incarnated in its present body, is it not logical to infer that it has done so before and may do so again? That which nature has done once can she not repeat? Is Incarnation such a strange, wonderful freak of nature that it may not be repeated except by creating a new soul each time? The fact that we find ourselves

incarnated beings, using bodies to which we are infinitely superior, is proof positive to a reasonable, logical mind that reincarnation is possible. For through all the processes of evolution it is the soul which evolves. This is the key-note to the dispute between Theosophists and materialists. Materialism claims that it is the form which evolves; and Theosophists declare that it is the soul; and that as the soul, using thought as the expression of its force, evolves, creating the myriad forms which we see in nature, these appear in response to that inner force. What is there to guide evolution if there be not some permanent entity upon, or at least taking its origin in, a higher plane of nature? Upon this molecular plane there are certain molecular forces. These play among molecules, having neither the power to choose this direction nor that. If there were not something superior to these molecular forces, guiding, controlling them, and thus causing the production of the myriad forms in nature, there would be no nature. Would winds ever blow flowers into existence? Will the change of the seasons, the frost and the thaw, produce the fruit, the flying eagle, or the thinking man? What an absurdity! The designer, modeller and creator lies deeper in the heart of nature than any entity having its normal existence upon this molecular plane. And how can evolution proceed unless this same entity returns? Man may acquire all the wisdom and knowledge possible to his race under the particular environments in which he incarnates, but if he die never to return to earth again, how is his soul to evolve? His life may help others, but he himself profits no more by it. For him there is no further progress; the store of wisdom which he has gathered as the result of his experiences is lost forever, both to himself and to the race, unless he himself conserves it and returns to earth, for it is impossible to conserve that personal store by any other method. And this is true of every entity in nature. The slow change of form and modification of function is always in response to the

necessities of a permanent, evolving, inner entity. They are due to causes which the entity brings over with it; things for which it has experienced the need in past lives and which find fruition in the present one. And this not only applies to man, but to the insect, the vegetable, to the entities bound up in the rock. Because nature is but embodied consciousness; and every entity is a partaker and a worker in that grand scheme of evolution which does not single out, as the theology of today would teach us, man alone, and leave the rest of creation to an eternal annihilation. There is not an entity however humble but is a part of the throbbing heart of nature, working its way toward the divine state which man occupies; and no entity so low but that it may in the eternities of duration arrive at the highest stage of which the human mind can conceive.

The Path

THE PRINCIPLE OF DUALITY — *Katharine Hillard*

As soon as we become conscious of existence we are at once confronted by the principle of duality, in that which is within us and that which is without, or the Me and the Not-me. The infant must gradually learn the idea of separateness, learn to distinguish that which is part of himself from that world beyond him, that his eager clutches cannot grasp. In fact at every moment of his life he is confronted with those "pairs of opposites" of which the Eastern philosophy tells us that the universe is composed. The Pythagoreans are said to have hated the duad, or the binary as it was also called, because it was to them the origin of differentiation and therefore of contrasts, discord, and the beginning of evil. It was that imperfect state into which the first manifested being fell when first detached from the Source of all Being. It was the point from which the two roads of Good and Evil bifurcated, and all that was double-faced or false the Pythagoreans called "binary," because to them *One* was alone Good, and Harmony, because from one alone no discord can proceed. And as the Monad was one and an odd number, the ancients called the odd numbers the only perfect ones, and considered them all as masculine and perfect, while even numbers were regarded as imperfect and were given only to the *terrestrial* and *infernal* deities. So that Virgil in his eighth eclogue asserts: "Unequal numbers please the Gods." (S. D. II. 602.)

But if we put aside these conceptions of the Greek and Latin races and go back in thought to the origin of all things, we cannot get away from the conviction that with the commencement of manifestation duality must begin. The moment we try to imagine the dawn of the universe we formulate the conception of *life*, and life is inconceivable without motion, which is change, either of

place or condition, — is the action of attraction and repulsion, of the out-breathing and the in-breathing of the "Great Breath." Evil is the shadow of Good as Darkness is the shadow of Light, and everywhere throughout creation the opposite poles of positive and negative maintain the balances of universal law, and regulate the order of the heavenly bodies, or round a dew-drop on a blade of grass.

But as time went on and the earlier spiritual teachings came to be overlaid with grosser and more material ideas, the two equal and coordinate aspects of the Divine, that we call ordinarily Spirit and Matter, began to be considered as Good and Evil, and represented not complementary but antagonistic forces. Instead of the beautiful symbol of the Greek Caduceus bringing to men's minds the thought of the twin serpents of evolution encircling the Tree of Life, it had for them only the significance of everlasting struggle, of never-ending discord.

And this antagonism of forces that alone can set the universe in motion and preserve it in life, took the form in ancient Persia of the opposition of Deity and Devil, who were originally one in nature as in name. The exaltation of Ormuzd, the Spirit of Good, says Mr. Cox, in his *Aryan Mythology*, "carried the greatness of Ahriman (the Spirit of Evil) to a pitch which made him the creator and the sovereign of an evil universe at war with the Kosmos of the Spirit of Light. ... It was a dualism which divided the world between two opposing self-existent deities, while it professedly left to men the power of choosing whom they should obey."

With this Persian dualism the Jews came into contact during their captivity in Babylon, and the author of evil, the tempter, soon began to appear in strong opposition to the beneficent Father and God.

But Mr. Cox points out that while the Jewish mind readily

absorbed this idea of the conflicting hierarchies, the one heavenly, the other diabolical, it nevertheless drew no sharp distinction between spirit and matter and had little definite idea of either the fact or the conditions of a life after death. It was left for Christianity to couple a distinct assurance of personal immortality with a profound belief in the devil and all his angels. Upon this rock did the early Christian fathers build their Church, for if we eliminate from their system of faith, the element of diabolical power, the whole fabric falls to pieces.

But when we go back to the original teachings of the *Zend Avesta*, that even as early as the days of the Babylonian captivity had become so corrupted, we find the principles of Good and Evil but the spiritual equivalents of Light and Darkness, Pain and Happiness; and as these were supposed to be exactly balanced against each other, so are their spiritual correlations. "Those old Spirits *who are twins*," says the *Zend Avesta*, "made known what is good and what evil in thoughts, words and deeds. Those who are good distinguish between the two; not so those who are evildoers."

If we turn to the pages of the *Secret Doctrine* we shall find all these ideas amplified and set forth with all that wealth of illustration for which that book is so remarkable, and on page 416 of vol. i, we seem to find the kernel of the whole thing in these words: "In human nature evil denotes only the polarity of matter and spirit, which principles are one *per se*, inasmuch as they are rooted in the Absolute. In Kosmos the equilibrium must be preserved. The operations of the two contraries produce harmony, like the centripetal and centrifugal forces which are necessary to each other, — mutually interdependent- — in order that both shall live. If one is arrested, the other will immediately become self-destructive."

But the principle of duality is not only shown in all the "pairs of opposites" that make up the universe, but also in the rhythmic changes of its periods of activity and repose. This Law of periodicity, of flux and reflux, of ebb and flow, is absolutely universal, and therefore governs not only the sweep of the stars through the heavens, the changes of the surface of the earth, the physical phenomena of health and disease, of animal and of human life, but is also the foundation of what we have learned to call the law of action and reaction in the thought of man. Every real student of literature and art, as well as of philosophy and religion, will recognise this principle as the cause of all the changes in painting and in poetry that have so diversified their character even within the last three or four hundred years. Take the Elizabethan era for instance, when our poetry reached its climax of perfection, for then physical life and physical luxury, the worship of beauty as it appeared to all the senses, had stimulated the emotional nature to its utmost and passionate strength and perfect music were the outcome of this stimulus. Then the ebb came, passionate strength degenerated into license and vice, the Puritan reaction towards virtue and the severest restraint began, and beauty became a term of reproach. The Restoration set the pendulum swinging towards license again, but feebly, for the abandonment to passion is not strength but weakness. Then came the artificial era of Pope and his fellows, when nature was tabooed and everything was done by rule. After the artificial came the natural back again, and the wave of reaction set in motion by Rousseau and the influences of the French Revolution gave us Wordsworth and the Lake School, with its range from the simplicity of grandeur and nobility to the simplicity of childishness. Another reaction, and the worship of beauty in form and color — especially color — began with the Pre-Raphaelite painters and poets, and Swinburne and Rossetti swept us away in a flood of bright tints and soft melody, while

Tennyson expressed the triumph of artistic feeling and Browning the reaction against it. Now the influx of poetry that came into the world with the poets born mostly in the first quarter of our century, has died out: nearly all the great singers are dead; and the reaction gives us the triumph of form, dainty lyrics that pride themselves on the accurate observance of rule and on keeping the exact measure of the *triolet*, the *ballade*, the *rondeau*.

And we might go through the same sort of analysis in every department of thought, for everywhere through the universe the principle of "action and reaction" prevails. Old Geoffrey Chaucer realised this great truth when he wrote some five hundred years ago, those wise words:

"Hearken this counsel for thy secureness:
Upon thy glad day ever have in mind
The unknown woe of harm that comes behind."

Not that we should always be looking forward to a possible misfortune, but that we should realize that there is nothing stable in this world where everything is most literally in a state of change and transition. "Let him that standeth take heed lest he fall," for it is on our "glad day," when everything looks bright to us, when our powers seem strongest, our position most secure, that we are nearest to "the unseen woe of harm that comes behind."

And of course the reverse of the picture is equally true, and the darkest hour of night precedes the hour of dawn. Dark hours must come to all of us, when our bodily strength fails and our mental powers are clouded, when all relation to the spiritual world above us seems cut off, and we drift like idle weeds upon a midnight sea. But even then the tide is turning, and if we only keep our hearts faithful to the right, the sun will shine for us again and the faint light of dawn broaden into the perfect day.

The Path

LETTERS OF H. P. BLAVATSKY: VIII (1)

Writing from Suez, on November 30th, 1884, H.P.B. says:

"I sit in an hotel 'by the sea and wait for the weather.' (2) In plain words I am waiting for our steamer, which is now busy crawling along the canal. We arrived here direct from Cairo by rail, having spent ten days there, which counts for much these days. That they mean much you will see for yourself by the long telegrams from the London newspapers which I send to you. I am beginning to be convinced that I actually am a celebrity when so much money is paid for telegrams about me. The correspondent of the *Daily Telegraph* came personally to interview me, and asked my permission to let his readers know of my discoveries as to the antecedents of Mon. and Mme. Coulomb, and as to my own 'movements.' In the telegrams as you see they are styled 'blackmailers' and 'fraudulent bankrupts,' hiding from several *ordres d'arret*. You will also see that in Alexandria and Cairo I was 'received very warmly by the Viceroy and the cream of society.' And so I really was. You cannot imagine how much was made of me. As soon as Hitrovo learned that I had arrived, he invited us to his house and immediately began all sorts of dinners, lunches, picnics, till the very sky was hot. Our Russian compatriots, Hitrovo, Abaza, Tschegloff, gentleman-in-waiting, and the ex-Madame Beketoff, *nee* Princess Vera Gagarin and now Countess de la Salla — all of them such nice, kindly people that I do not know how to thank them for their services and their kindness. And even on the part of the foreigners, I was astonished, not with their extreme amiability — to amiability I am used — but

with their real cordiality and simplicity of manner. Next morning I went with Mrs. Cooper-Oakley to see the Nubars, taking with me the letter of Mackenzie Wallace, and as soon as my card was sent in, Nubar Pasha in person came to meet us nearly to the street door. He led us into the Palace, brought his wife and his daughter, Madame Tigran Pasha, and they were all so kind to us, we might have been old friends. Certainly I ascribe it all to the letter of my dear Olga Alexeevna (Madame N.). Madame Nubar Pasha is an Armenian, a well-educated and well-read woman, speaking French like a Parisian, a real *grande dame*. We lunched and dined with them twice. At their house I made the acquaintance of a dear Russian soul, Countess de la Salla. Her husband is an adjutant to the Khedive, but he is more like a healthy, nice-looking Russian lad than an Italian. She knew me by hearsay and also as 'Radha Bai,' and when she heard that I was the niece of General Rostislav Fadeef, she positively fell on my neck and kissed me. Uncle used to go to their house as an intimate friend, and she was so attached to him that she had tears in her eyes when she asked me for particulars of his death. She took me up, and began to take me from one aristocratic house to another, proclaiming to all that I am a 'celebrity,' a 'wonderful woman,' an authoress, a savant and what not. She took me to the *Vice-Reine*, as the wife of the Khedive is called here, assuring me that it was absolutely necessary. There in the Khedive's Harem I found a crowd of visitors, most of them English women, wives of the notabilities who are now reigning over Egypt. My old, but not kindly acquaintance from India, Lady B., who was always an enemy to the T.S., fairly stared at me, finding me on a sofa side by side with their *Vice-Reine*; and the Countess de la Salla immediately wanted to know if she was a Theosophist! and declared

that she herself had joined the Society and was 'awfully proud of her diploma!' *Un coup de theatre!* Then she took me to the niece of Ishmail Pasha, the late Khedive; to his son's wife, Princess Hussain. Both these Princesses and the wife of the Khedive have a European education, are Parisian in speech — *des emancipees*. The *Vice-Reine* is positively a beauty, a most charming face, but it is a pity she is too stout. The de la Sallas have got up a dinner-party for me, inviting about fifty of the local aristocracy, both French and English, as well as our diplomatic corps. All the Russians are especially delighted with my having turned an English clergyman, the Rev. C. Leadbeater, into such an ardent Theosophist. As if he were the only one! Why amongst our members we have even got Bishops.

"Well, and now I am starting for Madras to fight the pseudo-Christian missionaries. God's will be done; and 'if He does not give us up the pig wont eat us.' (3) Good-bye my dear, my loved ones: maybe forever, but even this would not matter. Happiness is not to be gained on earth. Here we have the dark entrance-hall alone, and only on opening the door into the real living place, into the reception-room of life, shall we see light. Whether in Heaven, in Nirvana, in Swarga is all the same: the name does not matter. But as to the divine Principle it is One, and there is only one Light, however differently it may be understood by various earthly darknesses. Let us wait patiently for the day of our real, our best birth. Yours until that day, until Nirvana and forever."

H.P.B. left India in April, 1885. She was desperately ill at the time, and there was so much confusion over her departure that she was not even given her clothes to take with her. She gave Colonel Olcott her word of honor that she would not say where she was

living until the worst of the storm had blown over, and she kept her word. With Babajee and Mary Flynn she travelled to Naples, and there lived in entire seclusion for some months. Whilst there, she put in preliminary order her materials for the *Secret Doctrine*. Madame Jelihovsky writes that she herself sometimes did not like the idea of certain people in Tibet apparently monopolizing all the wisdom in the universe. H. P. B. would reply that they did not monopolize such wisdom; she spoke of the existence of these particular Great Souls because she knew of their existence, but others no doubt existed in other parts of the world who were equally wise and equally great.

"In every country and in every age there were and there will be people, pure of heart, who, conquering their earthly thoughts and the passions of the flesh, raise their spiritual faculties to such a pitch that the mysteries of being and the laws governing Nature and hidden from the uninitiated, are revealed to them. Let blind men persecute them; let them be burned and hunted from 'societies acknowledged by law;' let them be called Magi, Wise Men, Raj Yogis or saints — they have lived and they still live everywhere, recognized or unrecognized. For these people who have illumined themselves during their life-time, there are no obstacles, there are no bodily ties. They do not know either distance or time. They are alive and active in the body as well as out of it. They *are*, wherever their thought and their will carries them. They are not tied down by anything, either by a place, or by their temporary mortal covering."

When the three months' residence in Naples had nearly expired, H.P.B. thought of going to Germany, where, as she wrote, they at least had warm stoves and double windows in the winter, and where it was possible to be comfortable indoors. She also vigorously defended the "Adyar Theosophists" for having left her

in such sore straits in Naples, and protested that they had done all that was possible for her under the circumstances; and to prove that the Society itself was loyal to her, she sent her relatives hundreds of letters from Branches and people in India, England, and "especially in America," protesting against her retirement. She had resigned her office of Corresponding Secretary at Colonel Olcott's urgent entreaty, as he had been greatly alarmed over the Coulomb attack.

All her letters at this time breathed peace and rest, even gladness, caused by the many proofs of sincere friendship from such people, she wrote,

— "as Solovioff. (4) I am travelling with him in Switzerland. I really cannot understand what makes him so attached to me. As a matter of fact I cannot help him in the least. I can hardly help him to realize any of his hopes. Poor man. I am so sorry for him and all of them."

PROOFS OF REINCARNATION: II — *Jerome A. Anderson*

(Continued from June, p. 88)

The formal proofs of reincarnation may be classified as phenomenal, philosophical and ethical; each of which will be briefly presented in its proper connection. Beginning with the phenomenal proofs, the greatest phenomenon, and the one to which, because of its familiarity, we pay the least attention, is the infinite diversity of human character. There is no possible explanation, no reasonable hypothesis, which can account for the fact that in a humanity amounting to over a billion souls, now upon this earth, there are no two alike. If man be but his body, or if he has been on earth but once, all must have entered matter subject to similar forces. Then how is it possible for such infinite divergences to exist? All live in similar environments, eat similar food, are subject to similar variations, and yet, from the very first moment of life, each diverges from the others. Is there anything in matter, or material processes, to account for this? And, further, are there any innate powers in the human mind itself to explain it, unless we accept the hypothesis of reincarnation, and declare that souls starting out innocent, ignorant and inexperienced have, by an infinite number of differing experiences, responded by diverging into these infinitely variant by-paths of character? And this is a true explanation. Reincarnation — the return of the same entity *plus* the sum of the effects of the experiences — is the only method by which the conservation of mental energy, or force, is possible, and if there be law and order, and not chaos and chance, in the Cosmos, mental energy is as truly conserved as are the forces on the molecular planes of nature. Under the action of this conservation, each man brings over the character which he himself made, and which, for the reasons above, must be

infinitely variant. And character is the one thing which changes little from the cradle to the grave, although the whole object and aim of evolution is its modification. The child who comes into the world grasping and selfish — do we not know that he will go through life grasping all within his reach? The infant born with a generous, loving disposition — is not this the promise and prophecy of the maintenance of those traits throughout its subsequent life? Is not the truism that the child is the father of the man born of universal experience? Character lies deep; it is profound, eternal; it is very, very slowly modified. It is the task of eternity to make it symmetrical; to round out and develop divine, noble, godlike characters. Only by a supreme effort of the human will, maintained throughout years of conscious struggling, can it in one life be materially changed. So true is this that physiognomy, phrenology and chieromancy — half sciences, it is true — and all of the means by which man's physical form depicts his inner nature, depend upon the fact that our characters do not change. It is this fact, also, which proves so strongly that this stubborn, unbending element of our nature comes over life after life, following like an avenging or rewarding Nemesis throughout all our incarnations.

As illustrating the importance of character, let us study for a moment its aspects of genius and idiocy — the light and the dark possibilities of our nature. There is no fact — no hypothesis, even — which accounts for genius, or which explains why from the very moment of birth a soul should display these wonderful faculties which constitute genius, except the one fact which does completely and entirely explain it — reincarnation. Materialism seeks to do so by "antenatal influence": saying that a combination of entirely fortuitous circumstances happening during the brief months of inter-uterine life are sufficient to produce results affecting and entirely changing the subsequent life. The

explanation is so impotent as scarcely to need refutation. Napoleon was an instance. Here was a man, born in the humblest possible condition of life, rising until he dominated empires and sent kings from their thrones at a single word; rising from obscurity to the very pinnacle of human power; a man who, in those strange, abnormal conditions into which he sometimes passed, would cry out to his Marshals, "I am Charlemagne. Do you know who I am? I am Charlemagne." The military genius of this man, materialism declares, was entirely due to the fact that his father was a soldier and his mother was a camp follower! Can absurd reasoning be carried farther? Napoleon, no doubt, as he himself declared, was Charlemagne reincarnated, and before that was, perhaps, Hannibal, as one of his biographers has shown how profoundly his character resembles that of the great Carthaginian. Genius can only arise through reincarnation or chance. Is this world governed by chance? If it is, then genius, like everything else, must arise by chance, but not otherwise. But, if there be law dominating this universe, if fire burn, if gravitation attract, if there be any guarantee of stability in the universe whatever; then we must rule out chance: for if it operate in one instance, it must in all. Either this world is governed by law or it is governed by chance; they cannot be co-rulers, and when the operation of so many immutable laws is demonstrable we may safely relegate chance to the realms of superstition. That source of the power which enables the child musician to compose harmonies with musical laws which it has never learned; which renders the mathematical child able to solve problems which baffle the powers of adult minds; which makes the child poets, child artists, child philosophers and so on, can only be fully and entirely explained by the fact that such souls have evolved and brought over those powers from former lives. The soul which builds wisely brings over from its past; the soul which was an idler brings over from its past; and herein is the explanation of

genius and of its obverse, idiocy. A soul which draws down veil after veil of matter over its spiritual perceptions, which dwells in infamy, lives only for the material and sensual, is again descending into matter; and it can descend so far as to entirely lose its hold upon its own divine nature. Such a one will finally reappear on earth an idiot just as surely as the man who constantly adds to his faculties by work and study will return in time a genius. Genius represents the fruition of work along a particular line. It is the promise and prophecy of the glorious powers which are possible to every man. When a soul comes to earth a perfected musician, it means that that soul has rounded out the musical side of its nature. When another comes a philosopher, it means that that soul has struggled in philosophical directions. And for one who has rounded out certain faculties, the possibilities of rounding out opens in an infinite number of directions; and herein we have the possibility of advancement throughout infinite eternities. The musician can later become a philosopher; the philosopher, a musician; and so on. Each one, when he has completed a certain line, is then ready to follow some other. Herein is the true explanation why as a child one will show himself to be a mathematical prodigy, and in after life care nothing for it, but work in some other direction. It is because the necessities of that soul are requiring it to seek another line of action, to so eternally endeavor to complete a character which has in it infinite possibilities.

Further phenomenal proofs are the appearance of the form in response to the inner need, already dwelt upon. There is no power in external nature to cause the neck of the crane, for example, to extend itself two or three feet because this has become necessary to its existence. How can the winds, the sunshine, or any physical force cause this thing to happen? We must have the inner entity evolving, and the necessities of that

inner entity in its changing environments causes the phenomenon. All modifications of form are so caused. They are the response to the inner necessity alone, and prove conclusively that it is an inner entity which is slowly winding its way up the eternal spiral of evolution. There is also no power in the seed, or the root, or the bulb, to reproduce the form of the old plant. Yet they do it. From whence comes this power? The fact that the molecules of the root or the bulb change and are renewed even more swiftly than those of the human body proves that there is, even in the vegetable and animal kingdoms, something which is evolving, something around which the form is built. Theosophy declares that at the base of every animal or vegetable form is an "elemental soul" — a potential soul, rather — which has not yet reached the state in which it is capable of expressing thought. These entities are all evolving; and herein is the reason, and the only reason, why the seed, affording the point of contact with this material plane, enables that entity to come back and rebuild for itself the old form. The tulip dies down completely at the end of the year, and the next summer grows up and reproduces the same flower to the most minute speck of color. What has preserved the form of the flower during this interval of apparent non-existence? This fact alone explains it, that its inner entity has rebuilt its old form. No scientist nor philosopher has put forward any tenable hypothesis to explain why two eggs, of almost precisely the same appearance, will develop the one into the mouse and the other into the elephant. There is no reason, no explanation, for any of these puzzles except we accept the fact that beneath the surface phenomena there is taking place the evolution of entities, and that each of these reincarnates, or reembodies itself, upon the completion of its own cycle. This is exemplified before our eyes, were we not too blind to see. For in the animal kingdom a portion of the cycle or reincarnation is actually carried on without leaving the physical plane, as in the

metamorphosis of insects. The caterpillar goes into a subjective existence, remains there wholly unresponsive to external stimuli, entirely rearranges the matter of its body by the mysterious power of its inner entity, or soul, passing first into the chrysalis, and then into the soaring butterfly. What greater contrast can there be than the repulsive caterpillar transformed into the beautiful butterfly? Nature is always ready to prove herself a kind, loving, reasonable teacher, if we but study her methods. And here we have reincarnation shown us in its every detail, because the lower entity, swinging through its cycle, has not descended into subjective realms sufficiently to entirely conceal the process from our view.

There are other phenomena which are of the nature of testimony. Many sane, truthful people remember having lived before. I hold myself the written testimony of a lady who recalls the past of a little sister who died before she was born, and who on this account was supposed to be "crazy," and was laughed at because she would repeat incidents of a life that had ceased before her birth.

Direct knowledge of having lived before comes at times to all. Has not everyone had a strange feeling of having done this or that thing which he happens to be doing, before? It is simply the breaking through the brain of the consciousness of a previous existence which is confused, so feeble is that consciousness, with what one is now doing. The present act is intermingled with the consciousness of a previous existence, causing the uncanny, because unexplained, sensation.

But the clearest and the most convincing proofs that reincarnation is true are those reasons which may be termed philosophical. Philosophy is the highest exercise of the human mind; the rationalising process of the human intellect. There can

be no higher proof than philosophy; no higher Court of Appeal than this supreme function, this godlike attribute of the human soul. Therefore, if reincarnation can be shown to be reasonable, logical and philosophical, we have offered the very highest possible proof that it is true. The two grandest discoveries of modern science, by means of which it has made its greatest strides into the unknown, are its generalizations of the conservation of energy, and the indestructibility of matter. By these it proves that there is no such thing as the annihilation of either matter, force or consciousness, for science by no possible method can demonstrate that consciousness can be, or ever has been, separated from matter or force. The three, as pointed out, are eternally associated, and if the law of conservation of force be true, then this law applies to the conservation of conscious force; and there is no escape from that conclusion. If heat will change into electricity, and electricity into light; if it is impossible to destroy a certain mode of force so that it will not reappear in another state, then how absurd to assert, in a law-governed Cosmos, that the highest form of force, intellectual energy, can be annihilated? It is impossible, illogical, absurd. That conscious energy which the human soul displays, and the mode of which constitutes character, must be conserved, or the conservation of all force and energy is a chimera. That intellectual energy is conserved during life cannot be denied; that it is conserved life after life has been shown to be the only explanation of differing characters. It cannot be conserved except by this method. If death dissipates all the energies of the soul, if all that each has gained by experience perishes at death, then is the law of the conservation of force violated. There is no escape from this position. Either force is conserved or it is not. Science asserts that it is conserved, and proves it upon the material plane. Theosophical philosophy asserts that it is conserved upon the mental plane, and proves that this is true by the logical and

philosophical proofs pertaining to this plane. It shows that character is plainly the conservation of the force generated by thought and act in the past; that man is under the same laws, dominated by the same divine energies, which guide and control the entire universe. We must not in our blind vanity dissociate ourselves from nature, nor fancy that we are governed by special laws or dispensations.

If force, then, is conserved, intellectual force is conserved; if matter is indestructible, then the material vestments of the soul are also indestructible. Theosophy declares that there is no consciousness which has not its material vehicle, of some degree, and that these thinking souls of ours are associated with a material form or vehicle which is equally eternal, and which must persist throughout eternity, if the soul persists.

Perhaps the highest and most unanswerable proofs that reincarnation is true are ethical. If there be justice in this Cosmos, or in human destiny, then must it be true; because by no other method is justice possible. Otherwise, from the cradle to the grave we are met by injustice, in a thousand ways and forms. One child is born an Australian Blackamoor; another, heir to the British throne; one soul comes to diseased, drunken, vicious parents, foredoomed to a life of infamy and misery; another to the purest, most intellectual, most loving and holy mother and father. If the soul comes to earth for the first time, and has had no part in creating the conditions that surround it at birth, then is this world a very chaos of injustice. But Theosophy teaches that each soul comes to its own; and the fact that these terrible injustices do surround men at birth can be explained only through accepting the fact that each one has so lived in the past as to have created that character which makes it impossible to come to other parents. We are Blackamoors, white, red, poor, degraded, generous, loving or whatever we may be, because we have

created those characters in the past; and just as truly as that one acid poured into one hundred alkaline bases unerringly seeks that and that alone for which it has the greatest affinity, so will the human soul seek those parents who have for it the greatest sum of attractions, and to whom in most instances it is already bound by the karmic ties of past associations. Unless this is true, our mental powers, our thoughts, our conception of nature, our entire relation to this molecular plane of existence are modified by bodies to which we come by chance.

How can the Christian reconcile justice with the fact of God's sending an innocent soul — one which he created for this special occasion — to a mother whose husband is a drunkard or a criminal, or to one who has no husband? All such things are wickedly unjust if such a soul has no voice in the matter. Reincarnation reconciles these birth differences; throws a light upon the problems of life, and shows that all injustice is only apparent, and has originated within ourselves. No other hypothesis explains or reconciles life and the existence of evil. There is infinite injustice in the world unless we admit the fact that we have created those circumstances in the past which control our present lives, and are now suffering the just deserts of our past actions.

And at death we find the greatest of all injustices. Babies who die we are told go to heaven. They have done nothing to earn heaven, but by the mere chance of death, at a day, a month, or a year, go to an eternal happiness, while sisters or brothers, born of the same parents, under the same environments, having the same tendencies, yielding to temptations surrounding them, must go to an eternal hell. And either heaven or hell predicates an infinite result as the effect of a finite cause! How absurd, how illogical, to claim that it is possible in one brief, finite existence, to set up infinite causes! One short life determines everything; eternal

destinies hang upon finite causes! This from the religious standpoint. From that of Materialism men live, love, suffer and die, to end in annihilation!

There is no hypothesis, then, which holds out any reasonable and logical hope for the human race except that of reincarnation. It teaches that energy generated in any life cannot be lost or destroyed; that a victory gained is forever won. It holds out to us the promise and prophecy of infinite potentialities. It sets no limit to the heights to which we can climb. And while thus giving to man a glorious hope in the future, it also throws the light of love, compassion and justice about his present, and so enables him to face his godlike destiny, unterrified by death and undismayed by life.

The Path

ADVANTAGES AND DISADVANTAGES IN LIFE — *William Q. Judge*

That view of one's Karma which leads to a bewailing of the unkind fate which has kept advantages in life away from us, is a mistaken estimate of what is good and what is not good for the soul. It is quite true that we may often find persons surrounded with great advantages but who make no corresponding use of them or pay but little regard to them. But this very fact in itself goes to show that the so-called advantageous position in life is really not good nor fortunate in the true and inner meaning of those words. The fortunate one has money and teachers, ability, and means to travel and fill the surroundings with works of art, with music and with ease. But these are like the tropical airs that enervate the body; these enervate the character instead of building it up. They do not in themselves tend to the acquirement of any virtue whatever but rather to the opposite by reason of the constant steeping of the senses in the subtle essences of the sensuous world. They are like sweet things which, being swallowed in quantities, turn to acids in the inside of the body. Thus they can be seen to be the opposite of good Karma.

What then is good Karma and what bad? The all embracing and sufficient answer is this:

Good Karma is that kind which the Ego desires and requires; bad, that which the Ego neither desires nor requires.

And in this the Ego, being guided and controlled by law, by justice, by the necessities of upward evolution, and not by fancy or selfishness or revenge or ambition, is sure to choose the earthly habitation that is most likely, out of all possible of selection, to give a Karma for the real advantage in the end. In this light then, even the lazy, indifferent life of one born rich as

well as that of one born low and wicked is right.

When we, from this plane, inquire into the matter, we see that the "advantages" which one would seek were he looking for the strengthening of character, the unloosing of soul force and energy, would be called by the selfish and personal world "disadvantages." Struggle is needed for the gaining of strength; buffeting adverse eras is for the gaining of depth; meagre opportunities may be used for acquiring fortitude; poverty should breed generosity.

The middle ground in all this, and not the extreme, is what we speak of. To be born with the disadvantage of drunken, diseased parents, in the criminal portion of the community, is a punishment which constitutes a wait on the road of evolution. It is a necessity generally because the Ego has drawn about itself in a former life some tendencies which cannot be eliminated in any other way. But we should not forget that sometimes, often in the grand total, a pure, powerful Ego incarnates in just such awful surroundings, remaining good and pure all the time, and staying there for the purpose of uplifting and helping others.

But to be born in extreme poverty is not a disadvantage. Jesus said well when, repeating what many a sage had said before, he described the difficulty experienced by the rich man in entering heaven. If we look at life from the narrow point of view of those who say there is but one earth and after it either eternal heaven or hell, then poverty will be regarded as a great disadvantage and something to be avoided. But seeing that we have many lives to live, and that they will give us all needed opportunity for building up character, we must admit that poverty is not, in itself, necessarily bad Karma. Poverty has no natural tendency to engender selfishness, but wealth requires it.

A sojourn for everyone in a body born to all the pains,

deprivations and miseries of modern poverty, is good and just. Inasmuch as the present state of civilization with all its horrors of poverty, of crime, of disease, of wrong relations almost everywhere, has grown out of the past, in which we were workers, it is just that we should experience it all at some point in our career. If some person who now pays no heed to the misery of men and women should next life be plunged into one of the slums of our cities for rebirth, it would imprint on the soul the misery of such a situation. This would lead later on to compassion and care for others. For, unless we experience the effects of a state of life we cannot understand or appreciate it from a mere description. The personal part involved in this may not like it as a future prospect, but if the Ego decides that the next personality shall be there then all will be an advantage and not a disadvantage.

If we look at the field of operation in us of the so-called advantages of opportunity, money, travel and teachers we see at once that it all has to do with the brain and nothing else. Languages, archaeology, music, satiating sight with beauty, eating, the finest food, wearing the best clothes, travelling to many places and thus infinitely varying impressions on ear and eye; all these begin and end in the brain and not in the soul or character. As the brain is a portion of the unstable, fleeting body the whole phantasmagoria disappears from view and use when the note of death sends its awful vibration through the physical form and drives out the inhabitant. The wonderful central master-ganglion disintegrates, and nothing at all is left but some faint aromas here and there depending on the actual love within for any one pursuit or image or sensation. Nothing left of it all but a few tendencies — *skandhas*, not of the very best. The advantages then turn out in the end to be disadvantages altogether. But imagine the same brain and body not in places of ease, struggling for a good part of life, doing their duty and not in

a position to please the senses: this experience will burn in, stamp upon, carve into the character, more energy, more power and more fortitude. It is thus through the ages that great characters are made. The other mode is the mode of the humdrum average which is nothing after all, as yet, but an animal.

The Path

THE THEOSOPHICAL MOVEMENT

There is a very great difference between the Theosophical Movement and any Theosophical Society. The Movement is moral, ethical, spiritual, universal, invisible save in effect, and continuous. A Society formed for theosophical work is a visible organization, an effect, a machine for conserving energy and putting it to use; it is not nor can it be universal, nor is it continuous. Organized Theosophical bodies are made by men for their better cooperation, but, being mere outer shells, they must change from time to time as human defects come out, as the times change, and as the great underlying spiritual movement compels such alterations.

The Theosophical Movement being continuous, it is to be found in all times and in all nations. Wherever thought has struggled to be free, wherever spiritual ideas, as opposed to forms and dogmatism, have been promulgated, there the great movement is to be discerned. Jacob Boehme's work was a part of it, and so also was the Theosophical Society of over one hundred years ago; Luther's reformation must be reckoned as a portion of it; and the great struggle between Science and Religion, clearly portrayed by Draper, was every bit as much a motion of the Theosophical Movement as is the present Society of that name — indeed that struggle, and the freedom thereby gained for Science, were really as important in the advance of the world, as are our different organizations. And among political examples of the movement is to be counted the Independence of the American colonies, ending in the formation of a great nation, theoretically based on Brotherhood. One can therefore see that to worship an organization, even though it be the beloved theosophical one, is to fall down before Form, and to become the slave once more of that

dogmatism which our portion of the Theosophical Movement, the T.S., was meant to overthrow.

Some members have worshipped the so-called "Theosophical Society," thinking it to be all in all, and not properly perceiving its *de facto* and piecemeal character as an organization nor that it was likely that this devotion to mere form would lead to a nullification of Brotherhood at the first strain. And this latter, indeed, did occur with several members. They even forgot, and still forget, that H. P. Blavatsky herself declared that it were better to do away with the Society rather than to destroy Brotherhood, and that she herself declared the European part of it free and independent. These worshippers think that there must be a continuance of the old form in order for the Society to have an international character.

But the real unity and prevalence, and the real internationalism, do not consist in having a single organization. They are found in the similarity of aim, of aspiration, of purpose, of teaching, of ethics. Freemasonry — a great and important part of the true Theosophical Movement — is universally international; and yet its organizations are numerous, autonomous, sovereign, independent. The Grand Lodge of the state of New York, including its different Lodges, is independent of all others in any state, yet every member is a Mason and all are working on a single plan. Freemasons over all the world belong to the great International Masonic Body, yet they have everywhere their free and independent government.

When the Theosophical Society was young and small, it was necessary that it should have but one government for the whole of it. But now that it has grown wide and strong, having spread among nations so different from each other as the American, the English, the Spanish, the Swedish and others in Europe, and the

Hindu, it is essential that a change in the outward form be made. This is that it become like the Freemasons — independent in government wherever the geographical or national conditions indicate that necessity. And that this will be done in time, no matter what certain persons may say to the contrary, there is not the slightest doubt.

The American Group, being by geographical and other conditions outwardly separate, began the change so as to be in government free and independent, but in basis, aspiration, aim and work united with all true Theosophists.

We have not changed the work of H.P.B.; we have enlarged it. We assert that any person who has been admitted to any Theosophical Society should be received everywhere among Theosophists, just as Masons are received among Masons. It is un-theosophical to denounce the change made by the American Group; it is not Theosophy nor conducive to its spread to make legal claims to theosophical names, symbols and seals so as to prevent if possible others from using them. Everyone should be invited to use our theosophical property as freely as he wishes. Those who desire to keep up H.P.B.'s war against dogmatism will applaud and encourage the American movement because their liberated minds permit; but those who do not know true Theosophy, nor see the difference between forms and the soul of things, will continue to worship Form and to sacrifice Brotherhood to a shell.

The Path

LETTERS OF H. P. BLAVATSKY: IX (1)

H.P.B. was in perfect raptures over the climate and scenery of Switzerland. All her life she adored nature. "I have never breathed so freely. I can even walk as I have not been able to walk for ten years past."

At this time all the sad troubles of the past year appeared to Helena Petrovna not in a black but in a humorous light. She wrote to Madame Jelihovsky in September, 1885:

"My faithful Theosophists won't let me alone. They invite me to London. They want me to put myself at the head of the European Theosophical Society; and to edit my *Theosophist* from there. And the Hindus are also piling letters on me, telling me I must come back to India, threatening poor Olcott with a mutiny without me. In their eyes he is only the realizer of my inspirations, and I am the chief priestess and Pythia. Have you read about the Psychists (the members of the S. P. R.) and their meeting in London, publicly accusing me of having created Theosophy, of having invented the Mahatmas, and of having played all kinds of tricks — all with the only aim and object of political intrigue for Russia, which paid me for it?! Even such enraged Conservatives and Russophobes as Mr. Sinnett and Lord Borthwick were disgusted with such meaningless rubbish. The only foundation for their accusation is that during my arrival in India some Anglo-Indian papers stopped abusing Russia, as they had been doing up till then. There is some truth in this. Some of the editors of the best papers, as *The Indian Mirror*, *Amrita Bazaar Patrika*, *The Hindu*, etc., are Theosophists and my

personal friends, and so they knew very well that every word uttered by them against Russia cut me to the heart — especially if it is Englishly unjust. And so they abstained from it, and for this I was promoted into a paid official spy. Oh Lord, I recognize my usual fate! *D'avoir la reputation, sans en avoir eu la plaisir!* And if I only had the consolation of having been of some use to dear Russia: but such was not the case; only negative, trivial results."

"I understand," wrote H.P.B. in another letter, "that the Psychical Research Society could not help separating from us. Though at the beginning it warmed itself in the nest of the Theosophical Society, like the thievish cuckoo warming its progeny in someone else's nest — at the time, as you remember, when Myers so constantly wrote to you, (2) and also requested me to write to you asking you to act as his Russian correspondent. It would be too dangerous for Myers, as he makes a point of not separating himself from European Science, to proclaim honestly and fearlessly what are no tricks and no lies but the result of powers not known to European scientists. He would have against him all the greatest social peers of England, the clergy and the corporations representative of Science. As to us Theosophists, we have no fear of them, as we swim against the stream. Our Society is a kind of constant poke-in-the-eye for all the bigoted Jesuits and pseudo-scientists. As for me, being a Russian, I am a regular scapegoat for them all. They had to explain my influence in some way or another, and so they wrote an indictment — a whole book by a former colleague and friend, Myers. It begins with the words: 'We proclaim Madame Blavatsky the grandest, the cleverest, the most consummate impostor of the age!' And in truth it looks like it! Just think of it: I arrive all alone in

America; choose Olcott, a spiritualist, and begin work on him as a kind of prologue, driving him mad without any delay! But from an ardent follower of Spiritualism he becomes a Theosophist; after which I, though unable at the time to write three English words without a mistake, sit down and write *Isis*. Its appearance produces a *furor* on one side and gnashing of teeth on the other. Here I invent the Mahatmas, and immediately dozens of people take to believing in them, many see them — there begins a series of phenomena under the eyes of hundreds of people. In a year the Society counts a thousand members. Master appears to Olcott ordering him to migrate to India. We start, baking new Branches like hot loaves on our way, in London, in Egypt, in Corfu. At last in India we grow to be many thousands. And, mind you, all these are my tricks. Letters of the Mahatmas simply pour from all the points of the compass, in all languages; in Sanskrit, in Indian dialects, in ancient Telugu — which is little known, even in India. I fabricate all this and still alone. But after a short time I very adroitly make confederates out of those whom till then I had deceived, leading them by their noses; I teach them how to write false letters in handwritings which I have invented and how to produce jugglers' tricks. When I am in Madras, the phenomena happening in Bombay and Allahabad are produced by my confederates. Who are they, these confederates? This has not been made clear. Take notice of this false note. Before Olcott, Hubbe-Schlieden, the Gordons, the Sinnetts, and other people of standing, Myers politely excuses himself, acknowledging them to be only too credulous, poor dupes of mine. Then who are the deceivers with me? This is the problem which my judges and accusers cannot explain anyhow. Though I point out to them that these people must necessarily exist: otherwise

they are threatened with the unavoidable necessity of proclaiming me an out-and-out sorceress. How could it be otherwise? In five years I create an enormous Society, of Christians, Hindus and Buddhists. Without going anywhere, being constantly ill, sitting as if rooted at my work, the results of which are evident — I, an old Russian 'gossip,' spreading nets over thousands of people who without any signs of insanity believe in my phenomena; as also hundreds of thinkers and learned people who from being materialists became visionaries — how *can* people help seeing in me the 'greatest impostor of the age'?

"In the enumeration of my sins, it is openly proclaimed: 'You naive Anglo-Saxon Theosophists, do not believe that Madame Blavatsky's influence in India only reaches you; it goes far further. When she came back to Madras, about eight-hundred students, not Theosophists at all, presented her with an address of sympathy. Her influence is immense. Nothing would be easier for her than to instil hatred towards England in the hearts of the Hindus, and to prepare the soil slowly but surely for a Russian invasion.' So this is what they fear, is it? A Russian spy indeed! no spy at all, but a regular conqueror. You may be proud of such a sister.

"It is no longer my business, but the business of all Theosophists. Let them fight for me; as for me, I am sitting quietly in Wurtzburg, waiting for Nadya's (Madame Fadeef's) promised visit, and won't stir from here. I am writing a new book which will be worth two such as *Isis*."

About the same time she informed her friends that the phenomena of her clairvoyance and clairaudience, which took place many years ago in New York, were taking place again and

were considerably intensified. She said she saw "such wonderful panoramas and antediluvian dramas," had such clear glimpses and vistas into the hoary past, maintaining she had never *heard or seen better* with her inner faculties.

About this time the half-restored health of Madame Blavatsky came to grief again. The worry of her final rupture with V. S. Solovioff, whom she had taken for a true disinterested friend until then, and the death of a beloved cousin of hers were partial causes of it. Her sister writes concerning it: "V. S. Solovioff did not succeed in his earnest wish to 'ruin' Madame Blavatsky, but by this new scratch at her sore heart he certainly succeeded in shortening her life." The result of all was a day's swoon.

"I have frightened them all, poor people," writes H.P.B., "I am told that for half an hour I was like one dead. They brought me back to life with digitalis. I fainted in the drawing room, and returned to consciousness when undressed in my bed, with a doctor at the foot of my bedstead, and Mlle. Hoffman crying her eyes out over me. The kind hearted Hubbe-Schleiden, President of the German Society, brought the doctor personally from town, and my kindly ladies, wives of the painters Tedesco and Schmiechen, and Mlle. Hoffman sat up all night with me."

MIND AS THE THEATRE OF HUMAN EVOLUTION: I — *J. D. Buck*

Man is essentially a Divine Being, and his ultimate perfection is the aim and end of all evolution. The divine potency promises human perfectibility. Evolution is the process of its attainment. Men differ only in the stage of their evolution. They are in essence one; the process of evolution differs only in details and in time, circumstance, and place, in order that individuality may be presented. Self-consciousness is derived from, and finally again merges into, universal consciousness. The beginning and the end are the same with all, the details of the journey only differ. The potency of divinity and the diversity of nature are the two poles of the life-current along which man journeys, and of the spiral up which he climbs. The pivot around which the life-wave cycles in man is the Mind. Dividing the seven principles in man, or, strictly speaking, the seven planes or aspects of the One Eternal Divine Principle — into two groups, we have an upper triad that is changeless and pure, and a lower quaternary that is transient and perishable. Speaking symbolically, it is the presence of the upper triad in the lower quaternary that gives man his humanity. Previous to this man is only an animal. Losing this he sinks bodily and permanently to the animal plane. If we unite the human intelligence to the ferocity of the beast, evolution ceases and atavism rules supreme. Margrave, Mr. Hyde, and Jack the Ripper are illustrations. It is the presence of the lower quaternary in the upper triad that merges man in divinity. This is precisely the meaning of the "Fall" and the "Redemption" of man. It is not a foolish fable, nor an irreconcilable paradox, but an epitome of human evolution with its descending and ascending arcs. Its plan is a complete philosophy: Its process an exact science: Devotion to its pursuit and obedience to its behests are the essence and acme

of all religion. Jesus and Buddha, all the Avatars of all the Ages, are illustrations. The battle-field of human evolution is the Mind. When the triad touches the animal quaternary the circuit is closed, a spark flashes out and the dawn of reason and intelligence begins. That which follows is the "fruit of the tree of knowledge of good and evil." The fruit of the tree of Life is withheld. That awaits man at his goal, not at his beginning. This fact of the mind as the battle-ground of evolution, as the field of all human endeavor, has been recognized in all ages. "As man thinketh, so he is." "My mind to me a kingdom is." "I think, therefore I am." "All that I am is the result of what I have thought." These and many more are the flashes of intuition radiating out from the inner consciousness of man, the waking of the lower sense to the higher truth. Theosophy transforms these flashes of light into full-orbed spheres and fortifies them with a complete philosophy and an exact science, so that with chart and compass man no more sails an unknown sea, but guides his journey at will.

But what is the mind that is thus the theatre of man's ceaseless evolution? Modern materialism masquerading in the garb of Science tells us that "Mind is a property of Matter;" a result of aggregation, combination, differentiation and the like. But Materialism does not tell us how Matter thinks, or becomes conscious, or how aggregations of molecules come to possess or to manifest qualities absent from the molecules themselves. In fact, they describe phenomena and point to results, but tell us nothing as to real causes or essential nature.

If my body is conscious, or my brain thinks, it is on another plane, a lower degree. I think, and act, and manifest consciousness through them: they are my servants, and even their aggregate is not me, they are mine. Name all their qualities and phenomena; classify all their properties, and I am still the "Catagorical

Imperative." They are conscious, each on its own plane and in its own degree, but I am conscious of consciousness, I alone dominate the aggregate. "I, am I." What then is the mind? But first, what is the Ego, the *I am*? To use the expression of Descartes — "My self-consciousness and all that is contained in it, that is my true Ego." Aristotle had postulated a nutritive, a scientific, a motive and a thinking soul, but Descartes restored the unity of the spiritual being. But according to Theosophy the true Ego is more than the sum of individual self-consciousness, because that expansion of animal consciousness into human self-consciousness as one stage of evolution is, nevertheless, a limitation, and the next stage of evolution removes the very limitation that, while it makes man human, prevents him from being a God in the platonic sense. This philosophy never for a moment loses sight of the Divine nature of man, and perfection as his final goal. While, therefore, the Ego is the centre of man's consciousness and while it represents the sum of all his experiences, we must not overlook its derivation on the one hand, nor its destiny on the other. Otherwise evolution would have no meaning, and, accepting self-consciousness as a fact, experience could only result in elaboration and differentiation. We should be involved in a vicious circle, and doomed to ring the changes of an endless series of complications in experience. Instead of this, as plane after plane has been passed, so plane after plane stretches before us as evolution proceeds. The circle of experience, instead of being a hollow sphere that hems us in, is a spiral that leads us upward and onward.

It is in the upper triad that the real Ego abides, while "my self-consciousness and all that is contained in it" results from the union of the upper triad with the lower quaternary. Mind and self-consciousness are the result of this union. The immediate organ of these is the human brain, while the entire physical

structure stands as intermediate organs and tributary to the self-conscious centre. The existence and consciousness of the Ego, then, is our starting-point. The Ego is limited by the body which it inhabits, and by its environment. Consciousness *per se* is the sum of all evolution of the Ego up to the human plane, and self-consciousness is the crown of all previous evolution but is derived from the higher Ego. We thus become conscious of consciousness, *i.e.*, self-conscious. That which is the crown of all subhuman evolution and which determines the human endowment, is but the starting-point of the next evolutionary stage, the crown of which will be Divine, or Universal Consciousness. When man has conquered his environment and adjusted all his volitional impulses to all external conditions and sequences, he will have attained to a degree of knowledge and power that is superhuman and hence Divine.

In answering the question "What is mind?" we thus have in view man's origin, nature and destiny, and the whole philosophy of his ceaseless evolution. We have shown the mind to be the theatre of man's evolution because it is the seat of his self-consciousness, in which he gains experience or knowledge of good and evil. The bodily avenues of sense and feeling relate him to the world about him in the varied experiences of life. Man is potentially a mirror or epitome of the universe, and his varied experience converts the potentiality into actuality. It is thus that his ideas become realities and the Divine Ideal is at last attained. Man's experiences are the phenomena of his daily life represented in terms of self-consciousness. As this progressive series of daily experiences, changing and evanescent, are individual and not universal, the mind is the theatre of their display. The mind is not, however, a passive screen but the living-phantasmagoria with Imagination to create, with reason to combine, adjust, weigh and measure; with judgment or desire to discriminate and with will to execute. The

mind is therefore, not only the theatre for all these varied experiences but the succession and the sum of all our states and conditions of consciousness. It is in this final synthesis that the mind is united with the Ego. It is thus with the moving panorama of events and experiences of the daily life of the individual that man realizes his ideas, and it is thus again that "Ideas move the world." These human ideas are feeble and imperfect caricatures of Universal and Eternal Ideals. Thus it is that the human gropes its way to the Divine.

It is the Light of the Logos, the spark of Divinity dwelling in the Higher Ego that thus lures man on, and pushes him toward his final destiny. The physical brain is but a senseless clod; matter cannot think; but illuminated by this divine light, this sphere of man's self-consciousness functioning through the physical brain, converts the world into terms of experience and slowly transforms the lower quaternary — the man of flesh and blood — into the higher triad, the Divine Man.

The Path

ETERNAL LIFE AND ETERNAL PUNISHMENT — *W. E. Copeland*

Perhaps no other words are more frequently on the lips of Christians than the words which head this article. And yet without the aid of Theosophy they cannot be correctly interpreted. The word translated "eternal" or "everlasting" is a Greek word, *aionios*, and should be translated "age-lasting." Without a study of Oriental literature or of Theosophy, it is impossible to know what this word means. The Orientals — and we must always remember that Jesus was an Oriental and was speaking to Orientals — firmly believed in the doctrine of cycles, of births, deaths and re-births as applying not only to men but to Universes or *Kosmoi* as well. The Hindus called an *aeon* or age a "Manvantara" or "Manifestation." They tell us of the day of Brahm, when there is a Manvantara, when Brahm objectivizes himself, and a night of Brahm, when the Manvantara ends, all manifestation ceases, and the objective becomes subjective, disappearing into the Absolute; to be followed as it had been preceded, by other days and nights of Brahm. These appearances, lasting millions of years but having a beginning and an end, are the (*aeons* spoken of in the New Testament, and will not bear the translation either of "eternal" or of "everlasting." When we remember that in the time of Jesus the doctrine of reincarnation was very generally accepted and evidently was believed by Jesus himself, we can the more readily perceive the meaning of everlasting punishment. It is age-lasting, and ends with the Manvantara, because with the close of the objective period there will be no more bodies into which to be reborn, and no longer an earth on which to live the physical life.

Age-lasting life and age-lasting punishment shall end, so far as Jesus has anything to say about time; but life has in it a quality

wanting in punishment or in death. The punishment ends with the age, but the life must continue through the sleep of Brahm, as the life of a seed or of a plant continues through the winter with no conscious manifestation; but as with the summer manifestation begins, so when a new *aeon* or Manvantara begins, then the life starts a new series of manifestations on a higher plane of consciousness.

But that entity which has not come into the full light, has not risen to the plane of divine consciousness, or in Scripture language "does not know God," which leads the selfish life of separateness thinking only of the objective life, — such a one under the law of Karma reaps what it sows, and must be reincarnated again and again through the *aeon*, receiving suffering disappointments, what seem to us punishments; and these experiences will last during the *aeon*. The earth-bound soul afflicted by the ever-changing earth-life, suffers during the *aeon*; but with the disappearance of that which caused the sorrow it ceases to suffer and, with a new cycle of manifestation, starts again to reach the plane of divine consciousness which all human beings will sometime reach.

Just as there is mineral, vegetable, animal, and human consciousness, so there is spiritual, angelic, and divine consciousness; as there are planes of consciousness below the human, so are there planes above. When we have risen to those above we are independent of time and space: then have we come to know that love of God which is in Christ, from which Paul says "that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature can separate us."

DEVACHAN — *Robert Adger Bowen*

A Paradise indeed, this state of man:

 Filled with the rarest gold the spirit knows.

 The soul's high aspirations and the glows

Too pure to burn save in blest Devachan.

A wondrous moontide, brooding for a span

 Between the troublous days and all their woes,

 Where bloom immortal longings felt by those

Who dimly here Life's solemn mystery scan.

Oh! whither now is fled the sting of Death?

 Oh! where is now the victory of the grave?

 Gone, gone the horror and the aching dread!

While sweet as comes the moonlight's tender breath

 Where midnight waters sleep without a wave,

 Sweeps o'er the soul a joy serene instead.

THE NATURE AND PURPOSE OF DEVACHAN: I — *Joseph H. Fussell*

Very few of us accomplish in life all that we wish. We propose to ourselves to do much that is noble, we have high aspirations and hopes. We give much thought to these, laying out plans and building castles in the air. This of course affects our lives and actions to some extent. In some cases it very largely affects them, but in the majority there is some great obstacle to fulfilment; either the conditions of life are unfavorable, or our duties to others dependent on us require all our energies. It is but a dream, a mere dream, to too many. Does it follow however that our castle building, our hopes and aspirations, are futile? We cannot answer this question unless we know something of the true nature of man and of the planes of being on which he acts.

It will be sufficient for our purpose to consider man as a threefold being, or to view him under three aspects:

- (1) the real man, the soul, the essential nature of man, the experiencer and actor;
- (2) the mind or middle nature of man;
- (3) the physical body or external nature, including in this the passions and desires.

We may look upon (2) and (3) as being planes of manifestation of the soul, or as being vestures in which the soul is clothed, or as instruments it uses to gain experience.

If we think seriously on the matter it is not difficult to understand that the physical body with the passions and desires does not constitute the real man, for we know that it is possible to train, control, and use these. This implies an actor above or behind the physical body to whom the latter is an instrument. It is more

difficult to realize that the mind is also an instrument, and that it is not the mind itself which controls the body but that the real man stands even back of the mind and uses it and can train it for greater and greater use as an instrument. The mind is an instrument by means of which man may control his lower external nature. We can understand too that the physical body is a vesture, vehicle, or sheath for the soul or real man, but it is more difficult to understand that the mind, using the term in a general sense, is also a sheath or vesture. It is through these mental and physical vestures that the soul gains experience on lower planes of being.

We use the physical vesture in all our relations with external nature and in the ordinary actions in everyday life; generally speaking, we may say that the physical vesture is that which is used during life on the physical plane. Many people, not stopping to think about the matter, imagine that all life, *i.e.*, that between birth and death, is spent on the physical plane. But is this really so? We might ask if they ever used their minds to such an extent that they forgot, for instance, that it was dinner time, or that they did not hear some one speak to them. Or, we might ask if they ever dreamed, or where they were when they were fast asleep, not even dreaming. If we consider the matter it becomes clear that a great part of life is not spent on the physical plane, but on some other plane, and that the soul uses some other vesture or instrument than the physical body for gaining experience on this plane. This other plane is the mental plane, the plane of thought, imagination, will, aspiration, and of ideals. The vesture that the soul uses on this plane we may call the mental vesture.

Now let us ask ourselves another question: What is it that makes life joyful and happy or hard and miserable? Is it the possession of external things, wealth, position, fame, or does it not rather depend on the *mental* attitude? This question does not require

any detailed discussion and we may answer immediately that it is the mental attitude that colors and changes the whole of life. The reason of this is that man is essentially a thinking being, who in the present stage of evolution has reached that point where his most important and peculiar sphere of action is the mind. Man has risen above the animal stage of evolution, in which he was happy and contented with objects of sense and with mere externals; by becoming man he became a thinker, a dreamer, and, no longer satisfied with mere animal existence, he questions himself and nature, seeking to know the riddle of life. If on the one hand we were mere animals or on the other had complete control over our animal nature we would use all the animal functions of our physical bodies according to nature; we would eat for instance only when hungry — in order simply to satisfy hunger, and we would be satisfied always with the simplest kind of food. But we are no longer animals, and the great majority of us have not yet conquered our animal natures. The two natures in us, the physical and the mental, get sadly mixed up, and we do not eat and drink only to satisfy our needs but take an aesthetic pleasure in our eating and drinking, *i.e.* the mind enters into the simplest and most external things of life. I do not say this is all wrong, but it is part of the discipline of life to attain to the right proportion in regard to these two natures.

No action originates on the physical plane, the seed of all action is on the mental plane; action on the physical plane is an effect of some cause on the mental plane. But we know that thoughts do not immediately take effect in action on the physical plane, in fact the thought energy may remain stored up for years or for a lifetime and never result in action during the present life.

Because of this and because of ignorance of the true relation between thought and act the majority of people have come to consider that, after all, the plane of action, the physical plane, is

the real plane, and the other is a mere illusion; they say it only exists in thought, in the mind, thus making thought and the mind an illusion. So, too, they consider the waking life as the only real life. When they go to sleep and perhaps dream they know on waking that they have lived through the night because they are alive today and remember their life of yesterday, but sleeping is not real life to them, because they do not do anything when they are asleep and the dreams they have are only dreams; they vanish into thin air as soon as they awake. This is no proof however that we do not really live and gain experience during sleep, it simply is a proof that such people are not able to coordinate the two states of consciousness, the waking and the sleeping. It does not prove anything else. It is not possible here to consider all the evidence and arguments that during sleep the soul is active on another plane of consciousness and in a world entirely different from this; not a world of dream and illusion, but a world of real experience and development. Our waking life oscillates between two poles, (*a*) physical activity with a minimum of mental activity, and (*b*) a maximum of mental activity, mental abstraction, with a minimum of physical activity. Normally, during sleep, the physical activity is also a minimum, but can we say that the mental activity is a maximum? In one sense, yes, but not in the sense of activity of the merely intellectual and reasoning powers for which the brain is an instrument. According to many writers on Theosophy, ancient and modern, these are only the lower powers of the mind. The higher powers are very difficult to describe, but some idea may be obtained from a consideration of the state of pure mental abstraction, sometimes called "brown study." In such a state the mind ceases to reason, to cogitate, but passes into what is called contemplation, a state of knowledge of the attainment of knowledge.

From the standpoint of everyday life such a state appears to be one of inactivity because the brain is not active, but it is really a state of higher activity, of finer vibrations, too fine indeed for the brain in its normal state to respond to. In the dream state the brain is to some degree active but generally not under control, the soul having for the time being partially loosened its hold of the physical body: most dreams are not due to direct action in the brain but are the result of reflections, generally very imperfect, from the higher and true thought plane. In deep, dreamless sleep the soul loosens its hold still further of the physical organism and may leave it for a time, although still magnetically connected with it, and hence to some extent being still influenced by the physical plane.

We can now go a step further. After death the soul leaves the physical body and the physical plane altogether and — not considering any intermediate planes — passes into Devachan. It is impossible to describe states of consciousness; they must be felt and experienced. But if we try to understand the relations between those states that we experience in earth-life we may to some extent *infer* what the devachanic state is like. That is, we may make it more real to us, and in this way attain to a clearer comprehension of the various statements in regard to Devachan which have been made by theosophical writers and so accept these statements, not merely on authority, but because of their reasonableness.

One of the first points to be noted is that the soul in Devachan is entirely out of the influence of earth-life and of the physical plane; the soul no longer has a physical vesture or a physical brain which it may use as an instrument. It is clothed only in a mental vesture and its plane of consciousness will therefore be a step beyond all those we have so far considered. In ordinary and intense thought activity, in dreaming, and dreamless sleep, the

soul is still connected to some extent with the physical body and therefore liable in varying degree to the influences of the physical plane. But in Devachan it passes beyond all these, and, because of its being freed from this lower plane becomes thereby more open to influences from higher planes. Devachan is a mental plane, and the vesture of the soul when in it is a mental vesture. Hence in order to understand more clearly the nature of Devachan we must study our own minds and the laws of thought.

(To be continued)

The Path

LETTERS OF H. P. BLAVATSKY: X (1)

The following letter belongs properly to an earlier part of the series. It was written from Bombay in the autumn of 1882:

"My blood is transformed into water; it oozes out and forms bags. For this I have to thank, *primo*, Bombay heat and dampness, and *secundo* my eternal irritations, bothers and troubles. I have become so nervous that the light step of Babula's bare feet gives me palpitations of the heart. I have forced Dudley (the Doctor) to tell me that I may die any moment from any kind of fright, without which I could live a year or two more. As if it were possible with the life I lead! I have twenty frights a day, not one. I have put the whole business into the hands of the Masters. M ___ wants me to start at the end of September. He has sent me one of his Chelas from the Nilgiri, to take me with him. Where, I do not know exactly, but probably into some place in the Himalayas."

After this there was a long lapse in the letters, and then H.P.B.'s sister got a few lines from her, dating from Darjeeling, saying that she had nearly died; that she certainly would not be among the living if it had not been for the miraculous intervention of her Master, who had taken her off to the mountains and brought her back to life again by means of a few passes, when she was to all intents and purposes a corpse. Madame Jelihovsky often asked H.P.B. in after days for further particulars of this mysterious episode in her life. "How did she happen to find herself unconscious and ill in some unreachable and perfectly impassible mountains in the Himalayas? Who took her there? Where did she spend the time of her convalescence? How, again, did she return

to civilization?" She always answered that firstly she could not remember everything, and secondly she was not allowed to tell everything. Madame Jelihovsky writes, however, that, if not at this time then at some earlier epoch, she is perfectly certain that H.P.B. visited Lhasa, and that she had also been to the chief religious centre of Thibet, where among several hundred Lamas lives the Teshu Lama, the spiritual head of the Buddhists, whom they consider the reincarnation of Buddha. Madame Jelihovsky is also certain that at some time or other her sister had been in the Kuen Lun mountains. H.P.B. always told her that the two Mahatmas whom she knew personally were very different, both in character and in their mode of living; that the Mahatma K.H. was much more accessible, and lived with his sister and nephew in Kuen Lun; that Mahatma M., her personal teacher, had no fixed residence, was much more serious and stern, was always on the move, going wherever he might be most needed at the moment. The former talked and laughed at times like any ordinary person; the latter never, being very laconic. He is the older of the two.

When H.P.B. returned she was almost perfectly healthy and strong, and, to the great astonishment of the doctors, began her work again. On the seventeenth of December, 1882, H.P.B., Col. Olcott and others moved to Adyar. She wrote to Mme. Fadeef:

"It is simply delightful. What air we have here; what nights! And what marvellous quiet! No more city noises and street yells. I am sitting quietly writing, and now and then gaze over the ocean sparkling all over as if a living thing — really. I am often under the impression that the sea breathes, or that it is angry, roaring and hurling itself about in wrath. But when it is quiet and caressing there can be nothing in the world as fascinating as its beauty, especially on a moonlit night. The moon here against the

deep dark-blue sky seems twice as big and ten times brighter than your European mother-of-pearl ball. Farewell."

Her sister and niece visited her at Ostende in 1886. This is what she wrote to them soon after they left:

"I shall take myself to task now that I am alone; and instead of a restless wandering Jew I shall turn myself into a 'hermit crab,' into a petrified sea monster, stranded on the shore. I shall write and write, — my only consolation! Alas, happy are the people who can walk. What a life to be always ill — and without legs, into the bargain . . ."

After her great illness in Ostende in the Spring of 1887, she wrote to her sister:

"My darling, do not be frightened: once more I have disappointed the snub-nosed one. (2) Some people have pulled me through. Such wonderful things happen to me. You write, 'How can you be so careless!' As if I have caught cold through carelessness. I never rose from my armchair, never left the room, sitting as if chained to my *Secret Doctrine*; I have made everyone work at it: the Countess, Dr. Keightley, the cousin of the one you saw in Paris. He came as a delegate from London, to invite me to go there — and I put him to work! Don't you see how it was: about ten days before my illness the London Society began to call out vehemently for me — they wanted me, they said; could not do anything without me. They want to study occultism, and so burn with the desire of depriving Ostende of my beneficent presence. Before then I got heaps of imploring letters, but kept silent. Be off with you! I thought to myself, let me alone to write my book quietly. Not at all: they sent a deputation for me. Dr. Keightley tells me, 'We have taken a

beautiful house with a garden, we have got everything ready for you and we shall transport you in our arms. Do be persuaded!' And so I was about to make up my mind. The Countess began packing; her intention was to pack me up first, then to go to Sweden and sell her property, in order to live with me, never leaving me — and all of a sudden I dropped down! Such is my planet of destiny, it appears. And besides, here is another wonder for you: On the 27th of March we were to start, and on the 17th I went to sleep in my armchair after dinner, without any reason. You know this never happens to me! I went into a very deep sleep, and suddenly spoke to her, as she told me afterwards, for I do not remember anything myself: 'Master says you must not go away because I shall be mortally ill.' She shouted, 'What are you saying?' I awoke and also shouted with astonishment, 'What are you screaming about? What has happened?' *Tableau!* Two days after we nearly forgot all about it, when I received a letter from a certain London member, whom I never saw before in my life — Ashton Ellis, a doctor of the Westminster Dispensary, a mystic, a Wagnerian, great lover of music, still quite a young man, he also insisted on my coming for the simple reason, don't you know, of having seen me before him and having recognized me because of my portraits. I stood, he says, on the other side of the table on which he was writing, and gazed at him. I and Constance (the Countess Wachtmeister) were very much amused by his enthusiastic statement: 'My life seems strangely linked with yours,' he writes, 'with you and the Theosophical Society. I know I am bound to see you soon.' We were amused, but soon forgot all about it. Then I caught a cold in the throat, I really do not understand how, and then it grew still worse. When on the fifth day — after

I had to go to bed, the Ostende doctors said there was no hope, as the poisoning of the blood had begun owing to the inaction of the kidneys, I dozing all the time and doomed to enter eternal sleep while thus dozing — the Countess remembered that this Ashton Ellis is a well-known doctor. She telegraphed to him, asking him to send her a good specialist. And lo! — this perfect stranger wires back: 'coming myself, shall arrive in the night.' Through my sleep I dimly remember someone coming into the room in the night, taking my hand and kissing it and giving me something to swallow; then he sat at the edge of my bed and started massaging my back. Just fancy, this man never went to bed during three days and three nights, rubbing and massaging me every hour."

Further Madame Blavatsky's letter narrates that she heard some one saying her body would not be allowed to be burned, were she to die not having signed her will.

"Here," she continues, "consciousness awoke in me, struck with horror at the thought of being buried, of lying here with catholics, and not in Adyar. ... I called out to them and said: 'Quick, quick, a lawyer,' and, would you believe it, *I got up!* Arthur Gebhard, who had just returned from America and had come here with his mother, having heard about my illness, rushed out and brought a lawyer and the American Consul, and I really don't know how I could gather so much strength: — I dictated and signed the will. . . . Having done with it, I felt I could not keep up any longer. I went back to bed saying to myself: 'Well, good bye, now I shall die.' But Ashton Ellis was positively beside himself; the whole night he massaged me and continually gave me something nasty to drink. But I had no hope, for I saw my body was grey and covered with dark yellowish-blue spots,

and loosing consciousness I was bidding good bye to you all in my thoughts."

But the cure had taken effect; she slept twenty-four hours and woke up to life again.

Concerning the same illness she writes to her aunt, Madame Fadeeff:

"*Sunday, Catholic Easter.* – My old comrade and friend, I wrote to you about my illness some ten days ago, when I was still in bed. So what reason have you to grumble at my *playing the dummy* (3) *again*? It is true, though, that I was nearly about to play the eternal dummy; once more I had a hair's breadth escape, and once more I have risen from the dead. When and how I caught cold, having never left my room, — is more than I can understand. It began with bronchitis, and ended with a complication of kidney disease. The Ostende doctors tortured me, with no result at all, robbing me of my money and nearly killing me, but I was saved by a Theosophist of ours, Dr. Ashton Ellis, who as a reward has lost a situation with good pay, having left the Westminster Dispensary without permission and having been the last nine days by my side (massaging my back). When all the local doctors gave me up, Countess remembered about Ashton Ellis, whom she knew by reputation, and asked him to give some advice or to send some doctor, and he answered, he was coming personally in the night. He dropped everything and came here. And mind you, he had not so much as seen me before, knowing of me only through my work and articles. I am simply tortured with remorse, he having lost so much for my sake. At least it is well he is a bachelor. . . . He has saved me with massage, rubbing me day and night, positively taking no

rest whatever. Lately he has been to London and returned yesterday, informing me that he will not leave me until I am quite recovered and intends to take me to London personally, the first warm day. Madame Gebhard is still with me; instead of spending Easter with her family, she is nursing me, as if I was a baby, and seeing that I take my medicine, whilst the Countess has gone to Sweden, being compelled to do so, in order to sell her property. In future she proposes to live with me inseparably, to look after me and to take care of me. And what do you say about the attachment this Ashton Ellis has shown to me! Where could a man be found, who would give up a good position and work, all in order to be free to save from death an old woman, an unknown stranger to him? . . . And everything at his own expense, — he refuses to take a penny from me, treating me, into the bargain, to some very old Bordeaux, he has unearthed from somewhere. And all this from a stranger and an Englishman, moreover. People say: the 'English are cold, the English are soulless.' Evidently not all ... You ask whether you should send me something, whether I want something? I do not want anything, darling, except yourself. Send me yourself. We have not seen each other for a year and a half, and when shall we meet again? Maybe, never. I am going to London, and in the autumn, if I don't die by that time, I want to go to Adyar. They persistently ask for me there Have you received our new Parisian magazine, *Le Lotus*? It is edited, as you will see on the title page, '*sous l'inspiration de H. P. Blavatsky*' (!?) What 'inspiration,' please, when I have no time to write a single word for them. ... I have taken three subscriptions: one for you, one for Vera, and one for Katkoff. I simply adore Katkoff for his patriotism. I do not mind his not sending me any money again, God bless his

soul. I deeply respect him, because he is a patriot and a brave man, speaking the truth at whatever cost! Such articles as his are a credit to Russia. I am sure that if darling uncle were still living he would find an echo of his own thoughts in them. . . . Oh, if only the Regents were hanged in Bulgaria, and Germany checkmated, I should die in peace."

MIND AS THE THEATRE OF HUMAN EVOLUTION: II (1) — J. D. Buck

Mental evolution is not the end nor the aim of man's existence. The human Ego endowed with self-consciousness evolves through the agency of the mind. The expansion and cultivation of the mind is, therefore, a means to an end, a method and not an ultimatum. Just here lies the fallacy and the failure of nearly all our modern methods of education. Mental experiences however varied or exact are but the steps by which we rise to the delectable Mountains of Truth; but when the summit is gained the steps by which we climbed are lost in the cloudland below, while we are merged and lost in the grandeur of the above and the beyond. The knowledge that is of most worth is not the changing experiences, nor the transitory ideas of daily life, but that which is Eternal, — the Ideals where Nature and Divinity meet and mingle, and in the final comprehension of which the consciousness of the Ego becomes universal. Its environment is now boundless space and no longer the narrow bounds of the tabernacle of flesh. Its limited and limiting ideas have evolved into Divine and Universal Ideals, and man is at one with the Over-Soul. Evolution is a meaningless jargon if it comes short of this final consummation. Theosophy teaches this supreme realization as to the destiny of Man, the goal of Humanity. That which makes it possible is the Divinity in man ever evolving toward its source. That which retards it is the selfishness in man, the bondage of the personal equation, the outgrowth of his self-consciousness which he mistakes for the end, whereas it is but the beginning of his really human evolution.

It is thus through a clear apprehension of the nature of man as a complex and composite being that he may work, if he will,

intelligently toward his goal. He need not drink to the last dregs the varied experiences of his lower nature, for he may unfold the wings of his spirit and soar in the empyrien. He who is born to Divinity need not end in despair. He will never become lost or bewildered if he will follow his highest ideals. If he will relinquish self he may gain all. He that would save his life — the personal and selfish — shall lose it, but he that will lose his life for My sake — the divine and eternal — shall find it. It is thus that the Divine and inspired teachers of men voice in another form the philosophy and the science of evolution as taught in Theosophy. The truth is within our grasp and if we reject it and suffer we have only ourselves to blame.

Man will never reach perfection through intellectual evolution. Brain-culture and soul-culture are by no means synonymous, nor does intellect comprise or bound the realms of knowledge. Even if to these we add Athletics and Moral Philosophy our curriculum is by no means complete. What the Gymnasium and field are to physical development, the mind is to range and power of thought; and as the athlete emerges from the one, so does the Ego from the other, armed and equipped for the real work of life.

Brain-culture, all that usually passes for education, only clears the ground for building of character and the real evolution of the Ego. The materials are now within reach, and real discrimination begins. Ideas are now put into action, and from the moving panorama of events, and the varied experiences of life, Ideals are at last discerned. The brain is like a mirror in which the Higher Manas is reflected. The result of this reflection is human intelligence or self-consciousness. These are the terms of the human equation, the solution of which by the mathematics of experience will solve the riddle of life. The unknown quantity is the real man, the Divine Ego. Nor is the Higher Manas the final source of Man's potentiality. Itself impersonal, and yet the source

of man's personality, it still shines by a reflected light. The real Logos lies far beyond. The "light of the Logos" is Divine Compassion, and this light it is in which the Higher Manas dwells, as the lower mind is fed from the higher. It is thus we may "enter the light, but never touch the flame." The real Logos, the Atmic ray serene, the "Father in Heaven" of the Christos, dwells in impenetrable darkness in the Great Unknown and forever unknowable. Evolution is not mere expansion and the broadening of experience, it is in the highest sense an ascension; born of aspiration; guided by intuition. To perceive this is to awaken into life from the sleep of the senses. To strive toward it is the real evolution of man. To attain to it is to complete the cycle of Necessity. This is the destiny of Humanity, the real meaning of life, the journey of the human soul; and the possibility of its realization lies in the Divine origin and nature of Man.

Selfishness, greed and lust forever defeat it. Divine Compassion alone assures it, and intellect alone also can never realize this Supreme Ideal. But when intellect opens the window of the mind to the light of truth, and the Higher Manas beams like the full-orbed moon upon the field of man's conscious life, then will the Sun of Truth expand man's vision and reveal to him his Divine Nature and destiny: A child of Earth imprisoned on a star; yet at home among the constellations: A clod, a word, a beast, a man; but destined to become a God. "All that I am is the result of what I have thought;" not of the mere *process* of thinking. Mind is the Theatre; but the goal is Perfection.

NOTES ON THE BHAGAVAD-GITA — *William Brehon*

We assume, quite justifiably, I think, that the *Bhagavad-Gita* sets forth Aryan philosophy. The Aryan is white and noble in contradistinction to the black and ignoble. This book then, if Aryan, must give us a noble system of philosophy and ethics, useful not only for speculative minds but also in daily life. Whoever was the author, he, or they, compressed into a short conversation — that is, short for Indians — the essence of religion and philosophy.

The singular manner in which this conversation or lecturing or teaching came about should be first noted. It is after the very beginning of a battle, for the arrows had already begun to fly from side to side. A rain of arrows would first be thrown in before the hand-to-hand encounter began. Arjuna and Krishna are in Arjuna's great chariot. And there, between the two armies, Arjuna asks for advice and receives it through eighteen chapters. All of this has significance.

Arjuna is man or the soul struggling to the light, and while Krishna was one of the Avatars or manifestations of God among men, he is also the Higher Self. Arjuna as man in this world of sense and matter is of necessity either always in a battle or about to begin one, and is also ever in need of advice. This he can get only in a valuable way from his Higher Self. So the singular manner of placing the conversation where it is, and of beginning it as it begins, is the only way it ought to be done.

Arjuna is the man in the life his Karma has produced, and he must fight out the battle he himself invited. Arjuna's object was to regain a kingdom, and so each one of us may know that our fight is for a kingdom gainable only by individual effort and not by

anyone's favor.

From the remarks by Arjuna to Krishna we can perceive that the kingdom he — like ourselves — wishes to regain is the one he had in some former age upon this planet or upon some far more ancient one. He has too much insight, too much evident soul-power and wisdom to be an Ego who only for the first, or second, or third time had visited this earth. We likewise are not new. We have been here so many times that we ought to be beginning to learn. And we have not only been here, but beyond doubt those of us who are inwardly and outwardly engaged in the Theosophical movement for the good of others, have been in a similar movement before this life.

This being so, and there being yet many more lives to come, what is the reason we should in any way be downcast? The first chapter of the Book is really not only the survey of the armies, but also the despondency of the principal person — Arjuna. He grows downcast after looking over all the regiments and seeing that he had, on both sides, friends, teachers, relatives, as well as enemies. He falters because want of knowledge prevents him from seeing that the conflict and many apparent deaths are inevitable. And Krishna then proceeds to give him the true philosophy of man and the universe so that he can either fight or refrain from fighting, whichever he sees at any time the best.

Krishna leads him gradually. He plays upon his pride by telling him that if he backs out all men will say he is the most ignoble of all cowards; then he plays upon his Hindu religious teaching, telling him that a warrior must obey the rules of his caste, and fight. He does not plunge at once into high metaphysical speculation or show him occult wonders. And herein it seems to me is a good lesson for all working Theosophists. Too many of us when trying to spread forth the theosophical teaching drag the

poor Arjunas we have caught right into obscure realms where Theosophists themselves know nothing at all but terminology. Krishna's wise, practical and simple method should be followed, and much better results will be obtained. Our object is to spread theosophical philosophy as widely and quickly as possible. This cannot be done if we indulge in words and phrases far removed from daily life. What good does it do to talk about the Absolute, Parabrahm and Alaya, and to say *manas* when we mean mind, and *kama* when desire and passion are the English equivalents? It only puzzles the new enquirer, who feels that he has to learn a new language before he will be able to do anything with Theosophy. It is a good deal easier to show that the new terms can be learned afterwards.

The first chapter having introduced the practical question of life, the second is equally practical, for it directs attention at the outset to the larger and eternal life of which each incarnation is a day or a moment. For Krishna says:

"I myself never was not, nor thou, nor all the princes of the earth; nor shall we ever hereafter cease to be. As the Lord of this mortal frame experienceth therein infancy, youth and old age, so in future incarnations will it meet the same. One who is confirmed in this belief is not disturbed by anything that may come to pass."

Thus, continued *practical* existence as opposed to continued theoretical and so-called heavenly existence, and as opposed to materialistic annihilation, is declared at once. This is true immortality. The Christian Bible has no word in the original, teaching immortality such as this; and the preaching of the priests does not lean to an unselfish view of continued existence. And it is very certain that if one is fully confirmed in the knowledge of eternal life through reincarnation he is quite unlikely to be

disturbed by things that disturb other people. So at the very outset the teachings of Krishna open up a tremendous vista of life, and confer a calmness most necessary for us in the fight.

The generality of men have many and widely branching objects for mental devotion. It is a devotion to sense, or to self, or to wrong belief or to improper practice. But the follower of the *Bhagavad-Gita* gradually comes to see that the true devotion is that which has but one object through all changes of scene, of thought, or of companionship. That object is the Self which is all in all. The Self, as object, is immovable, whereas the objects taken up by the unwise are movable and transitory.

Equal mindedness and skill in the right performance of duty are the true rules — this is yoga. This right performance of duty means the mental state, for the mere performance of an act has no moral quality in it, since even a machine may be made to perform acts usually done by men. The moral quality resides in the person inside and in his presence or absence. If a human body, asleep or devoid of a soul, raised its hand and took the life of another, that would not be a crime. And oppositely the performance of a good act is no virtue unless the person within is in the right attitude of mind. Many an apparently good act is done from selfish, hypocritical, crafty or other wrong motives. These are only outwardly good. So we must attain to a proper state of mind, or mental devotion, in order to know how to skilfully perform our actions without doing so for the sake of the result; doing them because they ought to be done, because they are our duties.

Krishna warns Arjuna also against inactivity from a false view of the philosophy. This warning necessary then is so still. On hearing this teaching for the first time many say that it teaches inaction, sitting still, silence. And in India great numbers taking that view,

retired from life and its duties, going into the caves and jungles away from men. Krishna says: —

"Firmly persisting in yoga perform thy duty."

To endeavor to follow these rules empirically, without understanding the philosophy and without making the fundamental doctrines a part of oneself, will lead to nothing but disgust and failure. Hence the philosophy must be understood. It is the philosophy of Oneness or Unity. The Supreme Self is one and includes all apparent others. We delude ourselves with the idea that we are separate. We must admit that we and every other person are the Self. From this we will begin to see that we may cease to be the actor although outwardly doing every act that is right. We can cease to be the actor when we know we can withdraw ourselves from the act. Attachment to the act arises from a self-interest in the result that is to follow. It is possible for us to do these things without that self-interest, and if we are trying to follow the rule of doing our actions because they ought to be done we will at last do only that which is right to be done.

A great deal of the unhappiness of life comes from having a number of interests in results which do not come out as expected. We find people pretending to believe in Providence and to rely on the Almighty but who are continually laying down plans for those powers to follow. They are not followed, and as the poor mortal fixed his mind and heart on the result, unhappiness follows.

But there is a greater unhappiness and misery caused by acting, as is the usual way, for the sake of results. It is this that causes rebirth over and over again unendingly. It is by this that the great humdrum mass of men and women are whirled around the wheel of rebirth for ages, always suffering, because they do not know what is happening to them, and only by an accident altering the poor character of births incessantly repeated.

The mind is the actor, the person who is attached. When it is deluded it is not able to throw off the subtle chains that bind it to reincarnation. Having spent an incarnation in looking after results it is full of earthly impressions, and has made the outer skandhas very powerful. So when its stay in Devachan is at its end the old images, impressions and the powerful skandhas drag it back to another life. At the time of bodily death the mind is temporarily almost altered into the image of the dominant thought of life, and so is beside itself or insane by comparison with the sage and with what ought to be its proper state. Being so it is impossible for it either to prevent rebirth or to select and take up an incarnation with a definite end and work in the world in view.

The bearing of the teaching upon ethics is in my opinion very important. It gives a vital system as opposed to a mechanical one. We are to do our duty with the thought that we are acting for and as the Supreme Being, because that Being acts only by and through the creatures. If this be our real rule it would in time be impossible for us to do wrong, for constantly thinking thus we grow careful as to what acts we commit and are always clearing up our view of duty as we proceed.

On the other hand a mechanical code of ethics leads to error. It is convenient because any fixed code is more convenient to follow than the application of broad principles in brotherly spirit. Mechanical codes are conventional and for that reason they lead to hypocrisy. They have led people to mistake etiquette for morality. They cause the follower of them to unrighteously judge his neighbor who does not come up to his conventional code which is part of his ethics. It was a mechanical system of ethics that permitted and encouraged the Inquisition, and similar ethics in our later days permit men professing the highest altruism to

persecute their brothers in the same way in intention. If the law and liberty of the times were not opposed they would slay and torture too.

But I have only time to touch lightly upon some of the many valuable points found in the first two chapters. If but those two chapters were preserved and the others lost, we would still have enough.

The remaining chapters deal with universal cosmical truths as well as with philosophy and ethics. They all enforce the great doctrine of unity or non-separateness. In going over them we find such references as require us to know and to believe in the Wisdom-Religion. The rise and destruction of races is given, the obscurities and darkness between evolutionary periods, the universal great destructions and the minor ones are there. Through all these the Self sits calmly looking on as the spectator, the witness, the receptacle.

Where Arjuna the Archer is, he who was taught by Krishna, with him is glory, honor, fortune and success. He who knows Arjuna knows himself.

The Path

THE NATURE AND PURPOSE OF DEVACHAN: II (1) — Joseph H. Fussell

We have called the mind an instrument of the soul, and like any instrument it may be well or ill-used, it may be under complete control or be unmanageable. It is very important to realize that the soul or real man is above the mind and that it has this power to control it. The mind has been well compared to a boat and the soul to the boatman. A good sailor will guide his boat whithersoever he wishes, but one who does not know how to manage rudder and sails is at the mercy of every tide and every wind and, drifting hither and thither, can keep no certain course. Nearly every thoughtful person realizes to some extent that the mind is an instrument; yet few fully realize that it can be *completely* controlled. Those whose chief object is the gratification of the senses come to identify themselves with the physical body and those whose life is centered in the things of the mind often identify themselves to a greater or less degree with the mind. Entire control of the mind is impossible so long as there is any identification of the soul with it.

We take hold of physical things with our hands, *i.e.*, we grasp them physically. We also take hold of things with our minds and grasp them, metaphysically, with the understanding. It was held by some of the ancient philosophers that the mind takes on the form of that to which it is applied and becomes modified thereby, *i.e.*, it becomes conformed, to a degree depending on the intensity of the thought, to the idea underlying the object of its attention. If, therefore, the mind be the subtile vesture of the soul, its form will correspond in the main to the general character of the thoughts which occupy it, and will be continually modified thereby, reacting more slowly on the physical, external vesture until that

also represents and corresponds to the inner character or thought.

The mind may be made to take conscious hold of a thing, with intent and deliberately, or a thought or idea may enter and occupy the mind subtilely and almost unnoticed and become firmly established before we are well aware of its presence. Every thought is a seed, and once it has gained entrance to the mind will either begin to grow, or else remain dormant until favorable conditions shall permit its growth and ripening. If a bad thought is permitted to enter it will stay as a seed unless immediately expelled by the conscious thinking of the opposite thought, but if not expelled it will remain until later it may be aroused into activity by another thought of kindred nature, and then once again comes the opportunity of expulsion. So too good thoughts may remain unconsciously in the mind as seeds ready to give their added strength to new good thoughts. Whatever thought has been permitted to enter will at some time present itself either for rejection or to gain further strength. So long however as our minds are occupied with thoughts which are not allied to one of these latent seeds of thought and also so long as no awakening suggestion comes from without the seed will lie dormant.

Now, our actions do not spring from our occasional thoughts but from our character. We may define character as the — relatively — permanent mass of thoughts, the involuntary and unconscious bent of the mind which shows itself throughout the whole life. It is said that when a man is himself, when he is under no restraint, then his innate character is most evident. To some extent character is expressed externally in the physical form, but could we see the inner form, the mental vesture, we should find that *it* exactly represented the character in every particular. The mental vesture is the exact counterpart, in form, of the character, and the building up and changing of this vesture goes on step by step with

the building up and changing of character.

But the character is not changed by a passing thought, it can be changed only by persistent thinking and by the constant endeavor to express the thought in action. Just as it is with difficulty that the ordinary child learns to play on a musical instrument or to draw, every motion requiring a conscious effort of the will; but after long practice, attention having no longer to be paid to the individual motions, the hand and the eye become trained and immediately responsive to the mind and will; so it is with modes of thought and with the practice of ethics. We may realize, whether intellectually or intuitionally, that we ought to cultivate a certain habit of thought or follow a certain line of conduct and yet at the beginning it may be almost impossible for us to carry this out. It is however a matter of general experience that by persisting in any certain course of thought or action the difficulties gradually grow less until conscious effort is no longer needed and a habit is formed, which becomes a "second nature." But what becomes of the great mass of thoughts which in any man's life will generally show a tendency in some particular direction, but which are never persistently and consciously followed out or cultivated? What happens in the case of a man who more or less *drifts* through life, at least so far as his relation to his higher nature is concerned? What also happens in the case of a man with an intense love of art, or an intense desire to help humanity or to follow some ideal, but who is unable to carry out his desires or to accomplish save in very slight degree that which he has set his heart upon, though he may give his whole life to the work? Surely in the latter case the life is not wasted. The mind of the man who drifts is like a field into which all kinds of seeds, good and bad, flowers and weeds, are blown by the wind, but the ground of which is not cultivated or tilled. The mind of the other is like a field the soil of which needs breaking up before the seed

can grow. Other parts of the field may be well tilled and other seeds be grown to flowers and fruit but in this one corner the field is barren.

In the *Bhagavad-Gita* occurs this passage: "Whoso in consequence of constant meditation on any particular form thinketh upon it when quitting his mortal shape, even to that doth he go."

This gives us the key-note to the whole matter, for a man at the moment of death reviews the whole of his past life and that "particular form" which he "thinketh upon" is the dominant form of the past life, is the trend and aim — unconscious perhaps — of all his thoughts and acts. A man is *forced* to think at the moment of death that which he thought during life, he has no choice in the matter and cannot will it otherwise.

According to this philosophy then, the earth-life strikes the key-note to the life after death, that is, to the devachanic life.

The devachanic state is essentially one for the assimilation of all those thoughts and aspirations of the preceding state that relate in any way to the higher nature, and is for the transforming of these into character. Those thoughts which had been ours in earth-life and which may have remained little more than dormant seeds, or which on the other hand we may have tended carefully but yet could never bring to full perfection — all these will take root and grow in the devachanic state. They may not take deep root, or grow luxuriantly, for this depends on the intensity of the thought and the effort exerted in its direction at the moment of death. But every thought-seed which relates to the soul will there blossom forth. For the devachanic plane is the plane of thought, of dream — but remember such dreams are real experiences, they are not *mere dreams* or idle visions — and there the soul is clothed only in the mental vesture, the garment of thought, and is no more hampered and confined in the physical

vesture — it is entirely freed for the time from the earth plane.

In earth-life we spin the threads of thought and aspiration which in Devachan are woven into the inner vesture of the soul; we prepare the bricks and mortar in earth-life and in Devachan these are fitted into place and used in the edifice of thought which the soul is building for itself. So we go on spinning and weaving and building, often undoing what we have done and so having to weave and build again and again until a perfect vesture without seam, a perfect dwelling-place, is prepared for the true man, the soul.

One purpose of earth-life is to express the inner nature in the outer external act; this we cannot help doing, it is the law of our being, and as said in the *Bhagavad-Gita*:

"All creatures act according to their natures; what then will restraint effect?"

The purpose of Devachan is to build up this inner nature — the character. Let us consider again the cases above mentioned; of the man ever striving to express himself in art or music, or to reach his ideal in whatever direction it may lie, but who apparently fails because his external nature and his environments are not suited to the carrying out of his ideals. In Devachan when freed entirely from the limitations of external physical life, the thought has free scope and can express itself in the thought vesture which responds immediately and coincidentally with the thought. So it is said that man in Devachan achieves to the full all that he desires. This must be so. It is not unreasonable that it should be so, nor is it illusionary. Man simply rises to the plane of his ideal and has a foretaste of what he will in part some day accomplish in earth-life. I say he *will* accomplish it, maybe at first only in part, but ultimately in its perfection; for he builds this ideal into his character and nature

and will act according to his nature, and if we accept the doctrine of the perfectibility of man all powers must ultimately be his. That which may now prevent the full exercise of his powers in their perfection is the other side of his nature, the lower nature which wars ever against the higher and according to which man is also constrained to act until by *self-restraint* and devotion to the higher nature he entirely subdues the lower. In the next earth-life the devotee who has given his life to music or art will, it is held, come back with the power to express his ideal in its completeness, all other things being equal. The philanthropist, unable to carry out his plans for the good of his fellowmen though devoting all his energies to the work, will come back into conditions where his energies will find full play. This is because in Devachan the thoughts, desires and efforts of the past life have woven themselves into his character, and become part of his own nature, so that the artist, the musician or the philanthropist cannot help but express this nature in outward act. But then comes a test, the test that all who have genius, all who have great powers, must meet. Will they use these powers for self or for others, will ambition find entrance into their hearts, or will each be able to say: "When the Master reads my heart He shall find it clean utterly"?

And the man who drifts, who has no definite purpose in life, who has good thoughts at times and high resolves but does not persist in them; *his* Devachan will correspond to his life. His good thoughts and resolves will blossom and bear fruit and will mould and transform his inner vesture, but only to the extent of the thought energy and the endeavor to express them in act during life. Still his character will be to this extent modified and strengthened so that in the succeeding life there will be a greater ability to give them outer expression.

This assimilation and transformation of thought into character

form, in the writer's opinion, the great purpose of Devachan. For the great majority of people, Devachan is necessary, and if the above view be a correct one it is not a state of selfishness as has been held by some, any more than it is a form of selfishness for us to digest our food so that it may give us strength to continue our work, — it is a necessity in nature.

The points we have yet to consider in connection with this subject are the so-called illusion of Devachan and the possibility of rising above the necessity of Devachan or shortening its period.

(To be concluded)

The Path

THEOSOPHY AND CAPITAL PUNISHMENT — *William Q. Judge*

From ignorance of the truth about man's real nature and faculties and their action and condition after bodily death, a number of evils flow. The effect of such want of knowledge is much wider than the concerns of one or several persons. Government and the administration of human justice under man-made laws will improve in proportion as there exist a greater amount of information on this all-important subject. When a wide and deep knowledge and belief in respect to the occult side of nature and of man shall have become the property of the people then may we expect a great change in the matter of capital punishment.

The killing of a human being by the authority of the state is morally wrong and also an injury to all the people; no criminal should be executed no matter what the offence. If the administration of the law is so faulty as to permit the release of the hardened criminal before the term of his sentence has expired, that has nothing to do with the question of killing him.

Under Christianity this killing is contrary to the law supposed to have emanated from the Supreme Lawgiver. The commandment is: "Thou shalt not kill!" No exception is made for states or governments; it does not even except the animal kingdom. Under this law therefore it is not right to kill a dog, to say nothing of human beings. But the commandment has always been and still is ignored. The Theology of man is always able to argue away any regulation whatever; and the Christian nations once rioted in executions. At one time for stealing a loaf of bread or a few nails a man might be hanged. This, however, has been so altered that death at the hands of the law is imposed for murder only, — omitting some unimportant exceptions.

We can safely divide the criminals who have been or will be killed under our laws into two classes: *i.e.*, those persons who are hardened, vicious, murderous in nature; and those who are not so, but who, in a moment of passion, fear, or anger, have slain another. The last may be again divided into those who are sorry for what they did, and those who are not. But even though those of the second class are not by intention enemies of Society, as are the others, they too before their execution may have their anger, resentment, desire for revenge and other feelings besides remorse, all aroused against Society which persecutes them and against those who directly take part in their trial and execution. The nature, passions, state of mind and bitterness of the criminal have, hence, to be taken into account in considering the question. For the condition which he is in when cut off from mundane life has much to do with the whole subject.

All the modes of execution are violent, whether by the knife, the sword, the bullet, by poison, rope, or electricity. And for the Theosophist the term *violent* as applied to death must mean more than it does to those who do not hold theosophical views. For the latter, a violent death is distinguished from an easy natural one solely by the violence used against the victim. But for us such a death is the violent separation of the man from his body, and is a serious matter, of interest to the whole state. It creates in fact a paradox, for such persons are not dead; they remain with us as unseen criminals, able to do harm to the living and to cause damage to the whole of Society.

What happens? All the onlooker sees is that the sudden cutting off is accomplished; but what of the reality? A natural death is like the falling of a leaf near the winter time. The time is fully ripe, all the powers of the leaf having separated; those acting no longer, its stem has but a slight hold on the branch and the slightest wind takes it away. So with us; we begin to separate our different inner

powers and parts one from the other because their full term has ended, and when the final tremor comes the various inner component parts of the man fall away from each other and let the soul go free. But the poor criminal has not come to the natural end of his life. His astral body is not ready to separate from his physical body, nor is the vital, nervous energy ready to leave. The entire inner man is closely knit together, and he is the reality. I have said these parts are not ready to separate — they are in fact not able to separate because they are bound together by law and a force over which only great Nature has control.

When then the mere physical body is so treated that a sudden, premature separation from the real man is effected, he is merely dazed for a time, after which he wakes up in the atmosphere of the earth, fully a sentient living being save for the body. He sees the people, he sees and feels again the pursuit of him by the law. His passions are alive. He has become a raging fire, a mass of hate; the victim of his fellows and of his own crime. Few of us are able, even under favorable circumstances, to admit ourselves as wholly wrong and to say that punishment inflicted on us by man is right and just, and the criminal has only hate and desire for revenge.

If now we remember that his state of mind was made worse by his trial and execution, we can see that he has become a menace to the living. Even if he be not so bad and full of revenge as said, he is himself the repository of his own deeds; he carries with him into the astral realm surrounding us the pictures of his crimes, and these are ever living creatures, as it were. In any case he is dangerous. Floating as he does in the very realm in which our mind and senses operate, he is forever coming in contact with the mind and senses of the living. More people than we suspect are nervous and sensitive. If these sensitives are touched by this invisible criminal they have injected into them at once the

pictures of his crime and punishment, the vibrations from his hate, malice and revenge. Like creates like, and thus these vibrations create their like. Many a person has been impelled by some unknown force to commit crime; and that force came from such an inhabitant of our sphere.

And even with those not called "sensitive" these floating criminals have an effect, arousing evil thoughts where any basis for such exist in those individuals. We cannot argue away the immense force of hate, revenge, fear, vanity, all combined. Take the case of Guiteau, who shot President Garfield. He went through many days of trial. His hate, anger and vanity were aroused to the highest pitch everyday and until the last, and he died full of curses for every one who had anything to do with his troubles. Can we be so foolish as to say that all the force he thus generated was at once dissipated? Of course it was not. In time it will be transformed into other forces, but during the long time before that takes place the living Guiteau will float through our mind and senses carrying with him and dragging over us the awful pictures drawn and frightful passions engendered.

The Theosophist who believes in the multiple nature of man and in the complexity of his inner nature, and knows that that is governed by law and not by mere chance or by the fancy of those who prate of the need for protecting society when they do not know the right way to do it, relying only on the punitive and retaliatory Mosaic law — will oppose capital punishment. He sees it is unjust to the living, a danger to the state, and that it allows no chance whatever for any reformation of the criminal.

EACH MEMBER A CENTRE — *William Q. Judge*

Some years ago one of those Masters in whom so many of our members believe directed H.P.B. to write a letter for him to a certain body of Theosophists. In this he said that each member could become, in his own town or city, if earnest sincere and unselfish, an active centre from which would radiate unseen powerful forces able to influence men and women in the vicinity for good; and that soon enquirers would appear, a Branch in time be organized, and thus the whole neighborhood would receive benefit. This seems just and reasonable in addition to its being stated by such high authority. Members ought to consider and think over it so that action may follow.

Too many who think themselves theosophically alone in their own town, have folded their hands and shut up their minds saying to themselves that they could do nothing, that no one was near who could possibly care for Theosophy, and that that particular town was the "most difficult for the work."

The great mistake in these cases is forgetting the law indicated in what H.P.B. wrote. It is one that every member ought to know — that the mind of man is capable of bringing about results through means of other minds about him. If we sit and think that nothing can be done, then our subtle mind meets other minds within the radius of our sphere — not small — and shouts into them:

"Nothing can be done." Of course then nothing is done. But if unselfishly and earnestly we think *Theosophy*, and desire that others should, like us, be benefited by it, then to the minds we meet in stray moments of the day and in many hours of the night we cry "Theosophy," and "Help and hope for thee." The result must be an awakening of interest upon the slightest provocative

occasion.

Such an inner attitude, added to every sort of attempt at promulgation, will disclose many unsuspected persons who are thinking along this very line. Thus will the opportunity of the hour be taken advantage of.

Our last Convention marked an era: the dying away of strife and opening of greater chances, the enlargement and extension of inquiry and interest on the part of the great public. This is a very great opportunity. Branches and members alike ought to rise to meet and use all that this will afford. Remember that we are not fighting for any form of organization, nor for badges, nor for petty personal ends, but for Theosophy; for the benefit, the advantage and the good of our fellow-men. As was said not long ago, those of us who follow after and worship a mere organization are making fetishes and worshipping a shell. Unselfishness is the real keynote.

Those of us who still, after years and after much instruction, are seeking and wishing for personal progress or preferment in the occult side of life, are destroying that quality first referred to — of being a living, breathing centre of light and hope for others. And the self-seekers thus also lessen their possible chances in the next life here.

Close up the ranks! Each member a centre; each Branch a centre; the whole a vast, whirling centre of light and force and energy for the benefit of the nation and of the race.

The Path

LETTERS OF H. P. BLAVATSKY: XI (1)

In letters and conversation alike, H.P.B. often referred to the debt of gratitude she owed to the Countess Wachtmeister, Madame Gebhard, and especially Doctor Ashton Ellis, for their devotion and self-abnegation during her illness. In one of the last letters she wrote to Madame Jelihovsky from Ostende, she spoke as follows:

"I really do not know what to think! What am I to them? Why should the Countess be so devoted to me, as to be ready to give her life for mine? What am I to Ellis, who never saw me before, that he should think nothing of the risk, when leaving the hospital without permission, for a whole week for my sake; now he has lost his place, his handsome pay, and his rooms at the Westminster Dispensary. He went home and returned here laughing: he does not care a bit, he says! He will have more time to spend on Theosophy, with his practise alone. Well, what does all this mean? What do they find in me? Why should it be my fate to influence the destinies of other people? I tell you seriously, *I feel frightened!* I cease understanding causes and feel lost. The only thing I know is that I have called forth an unknown power which ties the destinies of other people to my destiny, to my life. ... I know also to my great relief, that many amongst those devoted to me look up to me as to their rescuer. Many were heartless egotists, faithless materialists, worldly, lightheaded sensualists, and many have become serious people, working indefatigably, sacrificing everything to the work: position, time, money, and thinking but of one thing: their spiritual and intellectual development. They have become in a way the

victims of self-sacrifice, and live only for the good of others, seeing their salvation and light in me. And what am I? I am what I always was. At least so far as they are concerned, seriously. I am ready to give the last drop of my blood for Theosophy, but as for Theosophists I hardly love anyone amongst them personally. I cannot love anyone personally, but you of my own blood. . . . What a blind tool I am, I must own, in the hands of the one whom I call my Master! ... I do not know, *I do not know, I do not know*. For me, as for anyone else, the phenomenal birth of our Society, on *my* initiative, its daily and hourly growth, its indestructibility, in spite of the many blows from its enemies — are an unsolved riddle. I do not know any logical cause for it, but I see, I know, that the Theosophical Society is preordained to have a world-wide importance. It will become one of the events of the world! It possesses a moral and psychical power, the weight of which, like the ninth wave, will submerge, sweep away and drown all that the lesser waves of human thought have left on the shore; all foreign sediments, all shreds and patches of systems and philosophies. I am its blind motor, but a great power rests with it."

When finally settled in London Madame Blavatsky wrote to her sister:

"Here I am planted among the fogs of Albion. Literally *planted*, because I did not come here of my own free will. I have been dragged over by my *admirers*, nearly in my bed or in their arms. They make a regular hobby of me. To their mind, they won't be able to find their way to the Kingdom of Heaven without me. They sent a deputation with a petition from seventy-two Theosophists who have firmly made up their minds to deprive poor Ostende of my

'ennobling' presence and 'beneficent magnetic fluid' — *excuse du peu!* I grumble at them, I drive them away, I shut myself off from all these *mystical vampires*, who suck all the moral strength out of me — no! all the same they rush to me, like flies to honey. 'We have become aware,' they say, 'of the spirit of holiness and moral perfection in your *atmosphere*. You alone can enlighten us and give life to the hybernating and inactive London Society.' Well, now they have got what they wanted; I have come and thrown more fuel into the furnace — I hope they won't repent it. I sit at my table and write, whilst they all jump about and dance to my music. Yesterday we had a meeting at which was formed a new branch of the Theosophical Society, and — just fancy that — they unanimously called it 'The Blavatsky Lodge of the T.S.!' . . . This I call hitting the Psychological Research Society straight in the face; let them learn of what stuff we are made! . . . We are about to found a magazine of our own, *Lucifer*. Don't allow yourself to be frightened: it is not the devil, into which the Catholics have falsified the name of the Morning Star, sacred to all the ancient world, of the 'bringer of light,' Phosphoros, as the Romans often called the Mother of God and Christ. And in St. John's *Revelation* does it not say, 'I, Jesus, the morning star'? I wish people would take this to mind, at least. It is possible that the rebellious angel was called Lucifer *before his fall*, but after his transformation he must not be called so. . . . It is simply frightful what a lot of work I have. They write from Paris that the Society is also divided there. They refuse to acknowledge the Branch under the presidency of Lady Caithness, Duchesse de Pomar, and ask for a representative of mine; just like those here, who want me to take the place of Sinnett. . . . They insisted upon my tearing myself to pieces for them! I am to play at being a kind of

'omnipresent' General Booth with his Salvation Army! Thank you very much! And a new magazine — *Le Lotus* — they intend to start too. I have refused the editorship point blank; and so look at the title page — I enclose the specimen copy — '*Sous l' inspiration de Mme. H. P. Blavatsky.*' How do you like that now? And, please, how am I to inspire them? Am I to send magnetic fluids to Gaboriau, its editor, and to his collaborators? It appears that your sister is getting to be the fashion in Europe also. Look at Hartmann dedicating his book to 'my *genius.*' But how I am to get time for everything — magazines, lessons in occultism, the *Secret Doctrine*, the first part of which is not yet ready — I do not know myself!"

During this eventful time Madame Blavatsky was in excellent spirits and very hopeful as to the future of her Society, as is shown by the following letter to her sister:

"A whole Society of Catholic clergy and High-Church fanatics has been formed here against your sister. They already have had three meetings. During the first they tried to prove that I am no more and no less than the very Devil in petticoats. But my Theosophists protested, and having asked for the right of speech proved very neatly on the spot that these Catholics were Jesuits, sorry Christians, worshippers of Baal and Mammon. During the second, they tried to take up the old story: she is a spy, an agent of the Russian government and is dangerous to British interests. . . . Here arose Lane Fox, Sinnett and Sir W. Grove and proved to the public that the enemies of Theosophy, who fear my Russian patriotism, are near relatives to Balaam's ass, though it saw an angel, at least, and could talk, and they see only small blue devils everywhere, in their bigotry, and can't speak, into the bargain. At the third

meeting was discussed the question: can it be that I am Antichrist? Here the young Lord P. got up and read out my answer, in which I laconically but clearly inform the world, that if twice two equals four, all these people are blank ignoramuses and calumniators. The effect exceeded expectation as you will see from the reports, so great was the enthusiasm of my friends. . . . Now they are going to cry still louder: *Lucifer* will kill our opposers! Even my personal enemies are full of praises for it. ... And yet I feel sad, oh so sad! Oh, if I only could see you."

The Path

THE NATURE AND PURPOSE OF DEVACHAN: III — *Joseph H. Fustell*

(Concluded from September number)

It is very generally held that Devachan is mostly a state of illusion and of the imagination and that the soul is simply surrounded by pictures of its own making. It is said, for instance, that in Devachan we are not really with our friends or those whom we love but that we only *imagine* this to be the case.

Let us consider what constitutes nearness and recognition. There are the nearness and recognition that are due to physical sense perception and those that are due to inner perceptions. They may belong to the outer or the inner planes of being. Usually we say we are near another when we can see, hear and touch that other. But our physical senses reveal to us only the external physical man, and a little thought will show that something else is needed to constitute nearness and recognition in any true sense. Take the case of one we have loved becoming insane, or simply falling asleep or being absorbed in a train of thought in which we have no part. We may see, hear and touch but because of the absence of *soul*-response are not in any true sense near that one. In normal cases, however, we infer from the outward manifestations what the inner nature may be, but unfortunately the latter is too often concealed by the former instead of shining through it. We live so much on the outer plane, and place so much confidence in our sense perceptions that the inner perceptions have become dull, and we persuade ourselves into believing that what we see, hear and touch is the real man. We know inwardly that the real man is not to be known in this way, but yet, to a very large extent, we govern our lives according to

outward seemings instead of making them conform to inner verities.

A very slight consideration forces us to a belief in the illusory nature of physical, sensuous life, but it needs a strong purpose to turn away from it and make it wholly subservient to the higher life. Instead of this we cling to it as the real life and the thought of physical separation and physical death is the one we shrink from the most. If we hold to the idea that sensuous life is the true one then it is inevitable that Devachan will appear as a state of illusion, but once we begin to realize the inner life then it becomes possible to take a new view of the life after death.

All true love and friendship have their roots in the inner planes and belong, in the measure that they are true, to the soul and to the inner nature. It is however possible for the strongest ties of love and friendship to exist on the soul plane without being manifested in this or any earth life. It is also possible where there is this inner friendship between two persons for it to be obscured in the case of one but not in that of the other. It depends upon the person's Karma and his will whether the personal life is able to faithfully reflect and work harmoniously with the inner life. This view affords an explanation of cases in which there is the desire for love and friendship on one side only, which is not reciprocated. Ultimately we are all linked together by the same ties which have their basis in the essential unity and divinity of man. But we do not at all attain to the full realization of this, though it is not ultimately unattainable; we only realize it in part and too often only as a theory or as a philosophical proposition.

All that we are capable of, so long as we do not rise above this sphere of limitation, is to experience in some small degree one or other of the varied manifestations of the essential unity. We fail to see the pure white light and catch only a faint glimmer of one

or other of the prismatic rays into which it is divided on this plane of illusion. Both the mental vesture and the physical vesture act as the prisms which separate the colored rays one from another, and according to the nature of the prisms will the rays be transmitted more or less faithfully or some perhaps not transmitted at all. It is evident therefore that if we place our reliance on the physical senses for the discovery of truth we lay ourselves open to error and delusion. In earth life we use both the physical and the mental prisms — though we rarely use either in the best way possible — and these are the instruments through which shines the light of our own souls, and through which also we perceive the light which shines through the mental and physical vestures of others. In Devachan we use only the mental vesture or prism and because of its being freed from all connection with the physical vesture it transmits more easily and faithfully the rays of light which have their source in the soul. There may still be barriers to the passage of the light owing to one's development and Karma but the barriers of merely personal life are removed. We do not necessarily experience in Devachan that which the *personality* desires but only to the extent that the desires of the personality are in conformity with those of the soul. We touch more nearly the soul plane and all the things which belong only to the personal life are left behind.

If many of those barriers which prevent us from knowing our true relations to others are in Devachan broken down, we cannot call it an illusion. On earth we interchange with those whom we love the vibrations of sight, hearing and touch and also of thought, but it is only the last named that make true recognition and nearness possible; it is the others, the sense vibrations, that deceive and mislead us. In Devachan these sense vibrations do not exist, but the higher vibrations and the perceptions that belong thereto have fuller scope and wider range, and we enter

into a realm of truer recognition and knowledge. There is nothing really lost by our leaving behind the physical sense perceptions, for the soul has its own powers of sight which far transcend anything that can be experienced on the physical plane.

Whatever true love and recognition there may have been on earth, whether between friend and friend, lover and loved one, mother and child, that love and recognition will be increased a hundredfold in Devachan.

Our conceptions of Devachan and of this life would be much clearer if we could view these as related to consciousness and not to place, time, and matter. We may, if we will, rise to the Devachanic plane while on earth and may even rise above the necessity of a Devachan between earth lives. To the extent that we assimilate the experiences of our lives and put into action our ideals and resolves, to that extent do we shorten the Devachanic period. In the case of the mass of men, their stay in Devachan is of such long duration because they do not put into practice their ideals or live according to inner convictions. We dream so much that is noble and high and pure but are not able to put it into practice. No doubt external conditions have much to do with this but the will is a much more important factor. The fact is that we do not use our wills and have not the courage to live according to the light of our inner nature. We know we are tied down by conventionality but lack the will and the courage to break loose from it. Yet the will is ours if we but knew it and would use it. The mere desire to escape Devachan is not enough to cause us to reincarnate immediately. The Devachanic state is a necessity, the assimilation of experiences and the building up of character are essentials to progress, and also life on the soul plane is necessary. We cannot escape from these if we are to progress along the line of evolution; but nature gives us a choice and a power in the matter. It is not a choice to escape Devachan but either to have

our Devachan while on earth or after earth life. It is only in regard to those who know of this power but refuse to exercise it by not living a spiritual life and not making their Devachan here that we can speak of the Devachan after earth life as selfish. For the ordinary man Devachan is not a selfish but a necessary state. Yet we have little need to concern ourselves with shortening the period of or escaping Devachan if we but act up to the highest within us. Our part is to do our duty now, to live the highest life possible; Nature and the Law take care of the rest, and they always give to each the greatest opportunity that is possible and place each in those conditions which are most favorable to progress.

The Path

THE BODILY SEATS OF CONSCIOUSNESS: I — *Herbert Coryn*

To simplify the difficult study of the bodily Headquarters of consciousness, a study nevertheless upon which each of us can immediately enter, we will take the three leading and quite obvious grades, namely, (a) the physiological, organic, animal consciousness resident in the animal organs, (b) the intellectual or human consciousness of the brain, (c) the spiritual or essential and permanent consciousness of the heart.

Every cell in the body as also every particle of any kind of matter is a life, a centre of conscious Force. Every such point of consciousness is capable of acting upon our human consciousness and of giving rise to some kind of sensation on some plane. That sensation constitutes partial knowledge of it. Some of such centres of conscious life produce in our consciousness the sense: of solidity and from that notion of solidity arises our chief conceptions of matter as a solid something. But in nature is really only the conscious life; the solidity is of our own addition. But the particles or points of consciousness in nature and our own body, physical, astral, or subtler still, act on our consciousness in many other ways. Some of them awake passions; others awake pictures belonging to our own past, and this constitutes memory; some awake pictures of places and scenes belonging to remote areas of time and space; some engender spiritual ideation in our consciousness. Both we ourselves and all these are points of consciousness in the Universal Mind. These monads exist severally on the various planes of that Mind, and they act upon that level of our consciousness to which they correspond, for man belongs to all the levels of nature. And we in our turn react upon them, color them, train them. The many millions of points of consciousness of which the body is composed, from the physical

plane upward, pass and repass through our own consciousness, acting and reacting; and it is thus easy to see that about us is an epitome of the universe, and that the body may be the temple of all the consciousnesses. A few facts as to the relation of consciousness to the body are known to all, and a few more are well known in medicine. Going beyond such scraps of knowledge into a generalization, we can see the probability of the truth that every bodily organ, by means of the nerve plexuses that surround and penetrate it, is connected with our brain and consciousness, and that each modifies consciousness in a peculiar way. Every cell of each organ has a consciousness of its own; a group of many cells thus combined into an organ has also, as a group, a complex consciousness of its own; the whole body composed of all the organs, has also an animal consciousness of *its* own as a whole, and this consciousness is *our* consciousness to the extent that we are animals. In fact many of us are but roughly reasoning animals. Well then, this total bodily consciousness of ours has a certain character or flavor which is its usual one, and it is a blend of the several flavors of consciousness contributed by the organs and their cells. So unless we take ourselves in hand we are at the mercy of the organs. Let a few nerve fibres lose a little of their proper sheath of oily material and neuralgia arises, also probably an altered view of life as a whole. Malposition or inflammation of an important group of organs will or may so alter consciousness as to produce hallucinations, melancholia, or insanity. The general color of consciousness may, as is well known and proverbialised, be altered by a sluggish liver. Life then seems not worth living: immortality is very doubtful, at any rate for you, and your sins acquire a very menacing aspect. Your new business venture is certain to fail. You take with more or less wisdom a blue pill. Tomorrow you get up cheerful; your business venture is a certain success; your sins, if any, are few and little detrimental; life is a splendid possession. That represents what the liver can do

in consciousness.

You do too much bicycling and strain your heart, so that it beats weakly and irregularly. While it does so, you feel an indefinable sense of impending disaster, you walk about under the oppression of a gloomy forevision which really foresees nothing. You acquire a belief in portents and the sight of a black cat fills you with foreboding. With a wisdom derived from your success with the blue pill, you take a heart tonic. The disasters disappear over the edge of the horizon; your scepticism as to portents returns. Analogously patients with advanced lung disease are often singularly hopeful. The general consciousness can also react on the organs. Prolonged grief, or a piece of very bad news may produce jaundice or totally stop all the powers of digestion. A fear of coming calamity or an anxiety may weaken the heart, make it irregular, or stop it altogether. Let these suffice as examples. The general flavor of consciousness, then, made up by the blended flavors contributed by the organs, constitutes what we call temperament; and men differ in temperament because the emanations from the organs differ in proportion to each other for different men. And that proportion is in its turn due mainly to the trend of the last life; is karmic. It was not for nothing that what we now call "the blues" was last century called "the spleen," for the spleen is one of the organs whose influence, if not quite healthy, makes us moody and depressed. We may also note the relation of the liver to gout and rheumatism, and the temper of the gouty man. All this may sound very materialistic, but it is not so in reality. The distemper of the organs today is the physical register and effect of the unbalanced mind of yesterday. It occasionally happens that a periodically due attack of epilepsy is replaced by an ungovernable outburst of rage, and it seems reasonable to assume that in such case the epilepsy of this life is karmic effect of ungoverned rage in the last. Continued

alcoholism will deprave the liver, and many cases of congenitally depraved liver with a resulting morbid, gloomy, passionate, or suicidal temperament, may well be karmic result of alcoholism in the last birth, in its turn due to unregulated desire for the sensation of physical luxury. In a sentence, the bodily mechanism of this life with its disturbing action upon the mind, is the result, in its unbalance, of the unbalanced mind of last life. It must be true that diseases primarily arise in consciousness, as unrul'd desire.

(a) We have been laying the foundation for a closer study of the sensuous consciousness, the first of our three degrees. With your sensuous consciousness you hear what is being said; with your intellectual consciousness you understand it; with your spiritual consciousness you may have an intuition that it is right or wrong, elevating or otherwise. The sensuous consciousness is the consciousness of the body and senses. As you sit wrapped in thought your eye wanders round the room and reads the title of a book. After you have done thinking, the title of the book floats across your mental consciousness and you wonder how it got there and where you saw the book. You, the self, become conscious of what was at first only in the consciousness of the eye.

Or you wake up gradually and become at last aware that for the past hour you have had a toothache. The nerve has known of it all that hour, and at last you partake yourself of the same pleasing knowledge. The hysterical patient with an anaesthetic arm and hand is not herself aware (if the arm is out of her sight through a hole in a screen) that you have guided her fingers holding a pencil to write the word London. The hand will nevertheless of itself automatically rewrite the word.

The sensuous consciousness is of the body and senses. It is always

there, but the mind does not necessarily attend to it. When the mind does attend to it, it passes into the sensuous state, by far the most usual, the densest and grossest state. The sensuous consciousness is the being aware of what the body and senses are saying; by it we relate ourselves by many avenues of communication to the outer world, and this consciousness is calm or muddled, happy or irritable, acute or dull, according to the condition of the organs. It has in the organs its proper seat, and in *their* consciousness resides its primary memory. For example, the stomach and palate remember the meal of yesterday, or rather remember the set of sensations they experienced during the eating of the meal, which was all they knew about it. Hunger reawakens this memory and from this springs the wider memory of other organs; that of the nose, giving the anticipated smell of the dishes; that of the eye, their appearance; that of the organic nerves, the pleasant sensation following repletion. All these memories of the body reside therein, and therein alone. When they wake up, each organ of memory flashes a series of sparks into the mental consciousness, awakening it, throwing it vividly into the sensuous state, and causing it to set about preparations for dinner that involve thought. But if we were engaged in deep meditation about something, the whole set of bodily memories regarding dinner could arise in the organs without affecting the mind, except perhaps with a sense of vague discomfort. The proper memory of the mind has nothing to do with these, and if the mind desires to remember the sensations of dining it must do so by awakening the memory of these sensations in their appropriate organs and then attend thereto. But there is no need to take so much trouble, for in an hour or two the organs will take the matter into their own hands. The killing out of any particular bodily desire is to be done by the steady exclusion from the mind of the pictures that radiate from the memory and nascent activity of the organ particularly concerned. Thus the organ is deprived of

the mental reactive force which alone keeps it in an unduly active state, and it starves down to the proper degree of subordination. This inevitably, however slow the process.

(To be continued)

The Path

THE FOURFOLD LOWER MAN — *J. H. Connelly*

THE ASTRAL BODY AND ITS FUNCTIONS, ETC.

Years ago, long before I had even heard of Theosophy, Dr. J. R. Buchanan told me about his discovery of Psychometry. I did not believe a word of the seemingly preposterous things he claimed as within the scope of his new science, and would have found his affirmations amusing if my mind had not been pre-occupied with saddened contemplation of him as a mental wreck. While we were talking, a member of his class came in — a dainty little lady with a handsome intellectual face and charming manners — and the old man said to her, "I have been telling my friend about our new science, but can see that he does not believe in it. Have you any objection to giving him a demonstration of what it can do?" "None whatever," she replied smilingly. He requested that I should give her a piece of paper bearing writing, or marks of any sort, made by one whom I knew well. I did, and she held it in her right hand probably twenty minutes, while taking part brightly in a general conversation upon a variety of topics. Then she described the writer of that letter, who was one of the most prominent and brainiest of New York journalists, told first how he looked, his height, figure, complexion, the colors of his eyes and hair, and so on: then reviewed his habits, the bent of his mind, preferences, prejudices and ambitions; analyzed his character; even admirably defined the peculiarities of his literary work. All was clear, definite, detailed, and exceedingly accurate, as I either knew at the time or ascertained by subsequent inquiry. The man could not have done himself more exact justice, and in some matters would not, I think, have done so much.

Amazement almost paralyzed me. I had watched her closely, and

she had not seen a stroke of the writing (could not, indeed, if she had wished to): I had been careful to give no hint of the writer's identity and she did not know *who* the man was, any more than I know the name of the political boss in the chief city on Mars, — but she knew *what* he was, as if she had been his conscience. When she took her departure the doctor increased my perplexity by his explanation of the phenomenon. He said a great deal about the astral essence, or spirit of things, and I listened, but my mental attitude was that of the old sailor regarding a tough yarn, that he "might hoist it aboard, but couldn't stow it away in the hold."

That experience worried me a long time; it seemed so utterly inexplicable. Thought-transference I knew something about, but psychometry went altogether beyond that into regions not merely unexplored but actually unsuspected. Either the doctor had not been sufficiently clear and explicit for me to understand him, or my personal evolution had not yet reached the point where I could assimilate his information — the latter most probably — and it was all hazy to me. It would have been soothing if I had been able to treat it in the scientific materialist's way of dealing with supersensuous things, which is simply to deny their existence; or that of the parson's, who put up a sign at the entrance of every unexplored path — "No Thoroughfare," or "Closed, by order of the Commissioners." or something of the sort. As I said, it worried me, until Theosophy taught me the septenate composition of man, what his astral principle is, whence it is derived, its functions and importance as the link between the plane of gross matter and the higher realms of mind and soul. I say Theosophy taught me; but, to be explicit, the exponent was William Q. Judge, which is, after all, the same thing to me, since the philosophy and he — the wisest and best teacher we have since H.P.B. is gone — are inseparable in my mind.

Recapitulation, to an assemblage of Theosophists, of what we all have been able to learn concerning the astral being would, it seems to me, be a waste of time, if not actually bordering upon impertinence. But I may be permitted to suggest, simply as an unauthorized and wholly personal notion of my own, a mild protest against getting into a habit of being misled by the common use of the words "lower" and "higher" as applied to the principles of man. Of course the permanencies — spirit, soul and mind — are of more ultimate importance than the transient personal principles; but while we are in the corporeal phase of our evolution, it is not wise to even affect to look down upon the latter, or assume that they are to be regarded as regrettable clogs upon our ineffable remainders. The principles are not disposed like the steps of a stairway, but interblended, mutually introactive and reciprocal in their action, like the atoms of the akasa, differentiated into distinct gradations, yet one and the same in ultimate essence of being. Our development of the "higher" principles depends upon our employment of them as forces upon the "lower," which are requisite as the field of such exercise, and the good and evil of the "lower" are dependent upon circumstances and susceptible of adjustment by ourselves. Do not let us forget that the only essential, unqualified and avitchi-deserving evil is that which may be developed in the manasic principle. Such development may seem to be from kamic incitement, but the kamic impulse then is only a reflection of the baleful light from the wicked manas. Properly controlled, the kamic influence is simply one of energy, forceful for good, inspiring and sustaining the loftiest endeavors of the human soul. The kama-rupa, man's self-created embodiment from the akasa, of his most intense desires, dominant thoughts, and habitual impulses, is not necessarily a thing of horror, but may be deva or demon just as he wills it. And as for the intellectual side of manas as distinguished from the spiritual — the "lower manas" as it is

styled — it may be purified, elevated, strengthened, but must always be an inseparable adjunct in even the highest states of consciousness. I don't think I could respect an angel who had not a finely developed lower manas — if such a being were possible, which I do not believe — and am very sure I have no confidence in the compatibility of lofty spirituality with low intellectuality in humanity. Exceedingly stupid and grossly ignorant persons are sometimes very pious Christians, but that is quite in "the eternal order of the fitness of things," and does not at all disturb my views of the general principle involved. They may be even conspicuously moral persons — which is quite another thing — but their quality as such is surely not a resultant from their lack of intelligence. An oyster has probably as few vices as any other creature living, but that is simply because it is an oyster, not by reason of its spirituality. As for the astral principle, which binds together all personal entities in one common humanity, through which we are first made conscious of our one-ness with the universe, (manifested God) and by the right use of which we may pass the veil of the Unknown, still as mortals, and win knowledge and power commensurate with our aspirations; the Magical Agent of sensation and action! the Liberator from the trammels of corporeality! the Enlightener! — is it not worthy of our profound interest and tireless endeavors for its comprehension and control? Nothing is more apparent than that the most advanced races of humanity have, at this time, reached the point in evolution where development of the astral consciousness is a natural and inevitable step in their progress. Whether so recognized or not, its manifestations are the dominant interest of the seriously thinking world of today. Advanced scientists already accept the astral body of man as a logical necessity, arriving at perception of its existence through a process of reasoning analogous to that which compelled recognition of the akasa — finding it indispensable to explanation of certain indisputable

phenomena. No force can produce effects without an adequate medium of transmission to its objective point of manifestation. This is as true of the mental energies as of those of light, heat, or motion. The astral principle of man is the adequate medium between his own mind and his gross body; the converter of the intensely rapid vibrations of the former to the low rate of the latter for the phenomena of action, and the converter of the lower rate to the higher for phenomena of sensation. Furthermore, it is the sensitive medium by which the vibrations of one mind are communicated directly to another in the now familiar phenomena of telepathy and hypnotism — neither of which would be possible without it — through the continuous vibrations of the astral matter of the akasa in unison with those of the active entities impelling and sensing them. One school of hypnotists affirm a magnetic aura as a prime factor in the production of phenomena, which another school deny, but that is a detail at present unimportant, particularly as that aura is not comprehended as the astral principle and is only under discussion between them with reference to its possible influence in inducing the trance state. The hypnotization of a sensitive is, primarily, domination of the physical forces through mastery of the astral, upon which they are dependent; secondarily, subjugation of the mental forces of the hypnotee, likewise through control of the astral consciousness, by the hypnotizer. The abnormal state thus induced might properly, so far as the subject is concerned, be characterised as one of astralization, since in it consciousness is confined to the astral plane, through inhibition of the normal mental control belonging to the personality. And it is interesting, and highly significant, to observe that under the operation of this inhibition the newly awakened, or liberated, faculty of perceptivity becomes, in some cases, so intense that it extends to vestiges of impression from precedent incarnations, in the sub-conscious mind.

It is not at all surprising that the experiments of the hypnotists opening the door to an illimitable field of recondite knowledge, should have fascinated and filled them with wonder and awe at the revelations of the mysteries of the personality which they have been able to penetrate, and the powers of which they find themselves possessed; but it is strange that so few of them seem yet to have remembered the scientific law already referred to — that requiring an adequate medium for the transmission of every force as a condition to its manifestation. As the vibrations of light would stop short at an exhausted receiver, did not the akasic atoms transmit them through the atmospheric vacuum, so, were there not something of synchronous vibrational rate to carry the mentally impelled astral vibrations of the hypnotizer to the astral percipience of the hypnotee, there could be no transmission of the former's energy for control of the latter. That something is the semi-material gradation of the akasa which we refer to as the "astral current," or "astral light," or "astral plane," and the next important step science will be compelled to take is its recognition. That step cannot now be long delayed, and, when taken, will be, by virtue of its enforced admission of akasic differentiation and consequently of the supersensuous planes, the death-blow to materialism. The limit of knowledge our occidental scientists may attain in this new field of study, without adoption of the methods of the occultists, may be an interesting subject for speculation. Already they have handled and thrown aside, without suspicion of their use, the keys to doors confronting them. In no branch of science dealing with gross matter would have been overlooked such plain indications and suggestions for more exhaustive knowledge, as have been afforded in hypnotism's tentative touch of the supersensuous world. Here is one conspicuous illustration.

Oriental philosophies affirm the practicability of evolving material forms from semi-material astral matter by the

intelligently directed force of will. They say that by properly applied mental effort one can cause to appear objectively to him any form or color which is first a clear subjective concept and upon which he with concentrated attention fixes his will; furthermore, that by continued application of such will-force he will be able to eventually cause a condensation and agglomeration of the tenuous astral matter to such an extent that the form or color will appear objectively to the sensuous perceptions of others, and even attain enduring materiality in conformity with his creative concept. All that simply amuses our wise men, who do not believe a word of it. Yet some of them, without seeming to know it, have done something toward proving the oriental claims, which it is strange they do not realize.

During some experiments at Nancy, a woman in hypnotic trance was shown a perfectly blank white card and told there was a picture of Napoleon upon it. She recognized the portrait at once, criticised and admired it. The imaginary picture in the mind of the hypnotiser was clearly transferred to her astral consciousness, and she saw it on the card in every detail of uniform, expression, and so on. After a little time, her attention being momentarily withdrawn, the card was reversed and turned over. Then she was told to look at it again. She said, "It is on the other side. Now you are holding it upside down." Evidently it was objective to her astral perception, not merely a subjective-reflection from her master's mentality. Then the card was placed in a pack of others, in every way exactly similar to it, except that it had on one edge, for the purpose of identification, a minute mark which she could not have known anything about, since it was made by another person than the hypnotizer, who did not draw her consciousness to it. The pack was thoroughly shuffled and placed in a drawer, and she, having been told that after awakening she should remember and pick out that particular card bearing the picture,

was restored to normal conditions. This instruction as to what the sensitive shall, or shall not, do or remember upon awakening, seems necessary to establish an available connection between the astral consciousness and the normal faculties. Without it there is no memory of anything occurring in the trance state. When the woman was fully awake, she was told to look among the cards in the drawer for one bearing a picture. She did so, and quickly picked out the marked card, saying, "Here is one with a portrait of Napoleon on it." When other persons were unable to see anything on the smooth white surface, she became indignant, thinking some trick was being played upon her. The cards were then photographed together, spread out on a plain surface. To corporeal sight they were just so many blank spaces, but care had been taken to locate the one representing the marked card, and when they were put before the sensitive, though she was, to all seeming, in perfectly normal condition, at once she pointed out that particular card as bearing the portrait of Napoleon. She believed that she saw it with her physical eyes, the illusion of sense being fully established, but the perception was of course by her sensitized astral, consciousness. She saw it just as various persons I know see elementals and "spooks" — and sometimes deem them "angel visitors from the summer land." Would the camera make record of conditions of matter beyond the range of our most highly developed and aided sensuous perceptions? Why not? In enlargements of siderial photographs, discovery of stars is made where no telescope, however powerful, could reveal anything. She believed that she saw the portrait with her normal sight, as if it had been a photograph or engraving, and yet she was wide awake. Now, what did she see? It is by no means a violent assumption that the will-force of the operator and her thorough conviction, directed to the card with considerable definiteness of attention, had operated to make a deposit of astral matter there in conformity with the concept in their imaginations — a portrait of

Napoleon — and that her perception of it was by no means the mere interesting illusion her hypnotizer supposed, but veritable sight, by the extremely sensitized astral vision, of what was as real on the astral plane as an *alto-relievo* in bronze would have been on the material plane. The experiment is not reported as having been carried beyond that point. No attempt seems to have been made to test if that astral picture would be visible to the astral consciousness of another sensitive, or if, by further and yet more intense concentration of attention upon it, a deposit of astral matter sufficient for sensuous perception could have been procured. Yet both those things, it would seem, should have suggested themselves; could not have failed to do so, I am sure, if the experimenters had been Theosophists.

While man's body was still composed of astral matter, up to the time when the third root-race began to approximate in materiality to their environment of gross matter, he needed, and had, but three senses, *hearing*, *touch*, and *sight*. The third race began to acquire the additional sense of *taste*, which was the normal possession of the fourth. In like manner of gradual development, the fifth sense, *smell*, possessed only by the more advanced of the fourth, toward the completion of their period became common — with all previously possessed — to the fifth root-race, ours. And again "coming events cast their shadows before," as we of the fifth race are growing conscious of a sixth sense, which will be the birth-right of the sixth root-race, for whom the way is now being prepared. The arcane wisdom teaches that perfected humanity will be endowed with seven senses, but what the seventh will be we can hardly even imagine, as it must necessarily transcend our present powers of comprehension. The sixth, that of *Astral Perception*, which challenges our attention now, is as much as we are able to deal with understandingly. As we know, each of our five senses is but

the responding of astral matter, slightly differentiated for special service in different organs, to the tatwic vibrations in the akasa. Hardly anybody has them all equally developed, and, so slight are the distinctions between their service, frequently when one is lost another takes its place. All are but means of perception to one synthesizing cause, that of knowledge by the astral consciousness, for transmission of correct cognition to the mind. That superior sense, capable of grasping knowledge without employment of the five intermediary senses, the exercise of which is limited by the physical organs, is what is now demonstrated, by exceptional organism and under abnormal conditions. Already sensitives in hypnotic trance *hear* what is far beyond the range of physical ears, *see* that which is shut from them by walls, and — when not by extraneous mental control compelled to err — are accurately conscious of the qualities of *materiality*, *odor*, and *sapidity* possessed by remote objects. The man of the sixth root-race will possess those capabilities, in his normal condition, as an attribute of his conscious waking life, without susceptibility to its perversion at another's will.

By the way, that most common of hypnotic experiments, the betrayal of the senses of the hypnotee, is a noteworthy proof of the astral body and demonstration of its being the real receiver of all sense impressions. At the will of the hypnotizer the sensitive finds sweet sour or bitter, is deaf to loudest noises, insensible to vilest smells, experiences pain as pleasure, sees things that are not or does not see those which are, and so on, — all without any impairment of the physical organs. This seems wonderful to those who view things from a materialistic stand-point only, but is very simple.

The physical eyes do not see, or the physical ears hear, or the physical brain think. The mechanism of sensation and impulsion to voluntary action is altogether in the astral being, which is

controlled by the mind capable of exerting will-force upon it. One may gain such command over his astral organs as to be, at will, deaf, blind, insensible to heat or cold or pain, and this while his physical organs are in normal condition. Of itself, the gross body can, in none of its parts, do or experience anything. Even those editors who, when writing about Theosophy, seem to think with their feet, are not even capable of that.

The change of state called "death" is the first step of the Ego in its periodical change of vestments. The corporeal body is abandoned. Its component myriad lives, drawn from the material elements and held together until then by the superior force of the jivic differentiation of the universal pranic wave of life, are set free and, animated by the life-principle infusing each according to its special laws, all return to their respective affiliations with gross matter. All the rest of the man remains, but in what may be scientifically characterized as a "critical" state, one of change. Enough of the jivic principle is retained in the entity to hold together the semi-material astral body, or *linga sarira*, constituting it still a vehicle for the yet more ethereal principles of both the personality and the individuality. It is now in what we know as the *kama-lokic* state. The lower *manas* yet inhabits the entity, endowing it with powers of reflection, giving direction to *kamic* incitements, and, under the impulsion of the higher *manas*, enhancing recollection. At the same time, the instrument of action and sensation — the corporeal body — exists no longer; hence the desires of the *kamic* principle — or animal soul — vivified and spurred to the utmost, are starved and made tortures instead of gratifications. From these conditions it would seem natural to deem the *kama-lokic* state, while awaiting the second death, one of retrospective agony and horrible illusions of present experience, the legitimate products of evil life; not very far removed from the Christian's hell, except that the high

temperature and brimstone of the latter would be subjective to the former, realized only by those ill-advised enough to have expected them.

How long the kama-lokic state continues is a question. I have somewhere read, or heard affirmed, that it lasts until the second death, that of the astral body, and that cannot occur until the corporeal body has been resolved back to its elements. But I find no reason for believing anything of the sort. I do not see how the abandoned material particles can have any influence at all in determining conditions for the now wholly disconnected entity upon another plane. If that were so, the most infamously vile rich man could practically assure himself against having to endure more than a few minutes of kama loka at the utmost. He would simply need to make inheritance of his wealth conditional upon his body being promptly cremated and proper chemical treatment being given to his ashes. And, on the other hand, the purest, tenderest and saintliest soul that lived on earth in the days of the Pharaohs and, according to the custom of her people, had the ill-luck to be embalmed, would be suffering unspeakable tortures yet, through that unfortunate circumstance only. It is a notion which so little commends itself to my reason and sense of justice that I could almost as soon believe in the vicarious atonement. The truth no doubt is that the duration of the kama-lokic state is a matter of karmic adjustment, to meet with absolute justice the deserts and requirements of each individual case, and is even less subject to estimate of time limitation than the duration of the devachanic state. All that can be said positively is that it ends with the "second death," the withdrawal of the manasic triad to devachan, which is beyond the field of our present consideration.

The linga sarira thenceforth exists only as an unconscious form, a "shell" in semblance of its departed personality, gradually

disintegrating and dissipating, soon restoring its atoms to the astral current whence they had been temporarily withdrawn. Until wholly dissipated, it is a convenience for elementals seeking to effect impersonations of the dead, in obedience to mediumistic invocations. The last spark of jiva left it when the manasic triad went out, and thereafter its process of decay is analogous to that of the corporeal body.

But one principle strictly belonging to the personality is still left, the kama rupa or animal soul, which preserves a specialized consciousness confined to its dominant faculties, *memory* — through vestiges of sensuous impression made during life — and *desire*, the product of such memory impelling to recurrent experience. The power of ratiocination it has lost with the lower manas; a vehicle for action and sensation it no longer possesses, since deprived of the linga sarira. It can only wait and suffer until the karmic hour strikes for its return to the world of causes and effects. And, with exceptions which will be noted, it does return, for it, the self-created Self of the man, the embodiment of all characteristics of his personality, is the germ upon which is formed the astral body of a "new-springing life." It is the karmic link between incarnations. Through it the heredity of ancestral physical features and mental traits and the latencies from which atavistic phenomena spring are preserved. It is the seed from which grow the distinctive conformations of body and the cerebral developments that limit and modify the faculties and tendencies of the lower or personal mind. In it inhere the taints of evil, the accursing skandhas, of an unworthy past. In short, it is the architect of the corporeal house that will exactly meet the requirements for experience of some Ego returning to reincarnation. And it should not be understood as wholly evil. Good also inheres in this abstract remnant of personality. It returns to life through the energy of its desire for existence,

which is its dominant quality, but the purpose of such desire is not necessarily altogether bad. Where it is, the current of karmic retribution carries it steadily downward, from one incarnation to another, through a succession of beings devoid of the higher principles, under increasing weight of woe resultant from continuous evil, until the desire for life fades out and the wretched entity reaches extinction. Who but the All-Wise shall say at what point in that descent return for the miserable animal soul is no longer possible — where must be abandoned the hope that the energy of its nature may not be helpful to evolutionary ascent by the human soul to union with the spiritual if the right influences can be brought to bear upon it?

I am well aware that this view of the functions of the kama-rupa may be regarded by some of my brethren as — to say the least — not explicitly set forth in such teachings as we have received. Indeed, if I remember aright, somewhere there is a statement from which the assumption may be drawn that the kama-rupa in some mysterious way becomes responsible for the existences of animals, or incarnates in animals, or something of the sort. As a figurative affirmation that may be all right. I have no doubt some reincarnated human beings possess the characteristics of lions, many more those of foxes and wolves, and an infinite number are much like asses. But as a literal statement of fact I find nothing in reason to support it. And I have too much respect for the animals to believe it, anyway. I sympathize with good Walt Whitman who wrote:

"I think I could turn and live with animals, they are so placid and self-contained.

I stand and look at them long and long.

They do not sweat and whine about their condition,

They do not lie awake in the dark and weep for their sins,

They do not make me sick discussing their duty to God,

Not one is dissatisfied, not one is demented with the mania
of owning things,
Not one kneels to another, nor to his kind that lived
thousands of years ago,
Not one is respectable or unhappy, over the whole earth."

To return from this gruesome digression to the more engaging theme of astral consciousness: What a magnificent vista of possibilities opens before the imagination in contemplation of the conditions of existence in a community where everybody shall be endowed with that sixth sense and, beyond it, have fully developed astral sensitiveness to the mental vibrations of those surrounding him; where each will not simply live in a glass house but himself be transparent. Professional reformers would have there no excuse for continuing in business; selfish financiering, corrupt "practical politics," hypocrisy, treachery and crime would no longer pay, indeed would not even be practicable; and vice would die a natural death. There is no wild improbability in such an imagining, unless we utterly refuse to believe in a coming millenium when everybody shall "eschew sack and live cleanly." If evolution is eventually to bring man to perfection, as we all hopefully believe, a very long stride in that direction would certainly result from the universal conscious utilization of the full powers of the astral body.

The Path

MECHANICAL THEOSOPHY — *William Q. Judge*

The earnest, devoted student can hardly believe that there exist any theosophists sincerely holding a belief in theosophical doctrines but who are, at the same time, found to have such a mechanical conception of them as permits one to retain undisturbed many old dogmas which are diametrically opposed to Theosophy. Yet we have such among us.

It comes about in this manner. First, Theosophy and its doctrines are well received because affording an explanation of the sorrows of life and a partial answer to the query, "Why is there anything?" Then a deeper examination and larger comprehension of the wide-embracing doctrines of Unity, Reincarnation, Karma, the Sevenfold Classification, cause the person to perceive that either a means of reconciling certain old time dogmas and ideas with Theosophy must be found, or the disaster of giving the old ones up must fall on him.

Contemplating the criminal class and laws thereon the mechanical theosophist sees that perhaps the retaliatory law of Moses must be abandoned if the *modus vivendi* is not found. Ah! Of course, are not men agents for karma? Hence the criminal who has murdered may be executed, may be violently thrust out of life, because that is his karma. Besides, Society must be protected. You cite the bearing on this of the subtile, inner, living nature of man. The mechanical theosophist necessarily must shut his eyes to something, so he replies that all of that has no bearing, the criminal did murder and must be murdered; it was his own fault. So at one sweep away goes compassion, and, as well, any scientific view of criminals and sudden death, in order that there may be a retaliatory Mosaic principle, which is really bound up in

our personal selfish natures.

Our naturalistic mechanician in the philosophy of life then finds quite a satisfaction. Why, of course, being in his own opinion a karmic agent he has the right to decide when he shall act as such. He will be a conscious agent. And so he executes karma upon his fellows according to his own desires and opinions; but he will not give to the beggar because that has been shown to encourage mendicity, nor would he rescue the drunken woman from the gutter because that is her fault and karma to be there. He assumes certainly to act justly, and perhaps in his narrowness of mind he thinks he is doing so, but real justice is not followed because it is unknown to him, being bound up in the long, invisible karmic streams of himself and his victim. However, he has saved his old theories and yet calls himself a theosophist.

Then again the mechanical view, being narrow and of necessity held by those who have no native knowledge of the occult, sees but the mechanical, outer operations of karma. Hence the subtle relation of parent and child, not only on this plane but on all the hidden planes of nature, is ignored. Instead of seeing that the child is of that parent just because of karma and for definite purposes; and that parentage is not merely for bringing an ego into this life but for wider and greater reasons; the mechanical and naturalistic theosophist is delighted to find that his Theosophy allows one to ignore the relation, and even to curse a parent, because parentage is held to be merely a door into life and nothing more.

Mechanical Theosophy is just as bad as that form of Christianity which permits a man to call his religion the religion of love, while he at the same time may grasp, retaliate, be selfish, and sanction his government's construction of death-dealing appliances and in going to war, although Jesus was opposed to both. Mechanical

Theosophy would not condemn — as Christianity does not — those missionaries of Jesus who, finding themselves in danger of death in a land where the people do not want them, appeal to their government for warships, for soldiers, guns and forcible protection in a territory they do not own. It was the mechanical view of Christianity that created an Inquisition. This sort of religion has driven out the true religion of Jesus, and the mechanical view of our doctrines will, if persisted in, do the same for Theosophy.

Our philosophy of life is one grand whole, every part necessary and fitting into every other part. Every one of its doctrines can and must be carried to its ultimate conclusion. Its ethical application must proceed similarly. If it conflict with old opinions those must be cast off. It can never conflict with true morality. But it will with many views touching our dealings with one another. The spirit of Theosophy must be sought for; a sincere application of its principles to life and act should be made. Thus mechanical Theosophy, which inevitably leads — as in many cases it already has — to a negation of brotherhood, will be impossible, and instead there will be a living, actual Theosophy. This will then raise in our hearts the hope that at least a small nucleus of Universal Brotherhood may be formed before we of this generation are all dead.

The Path

LETTERS OF H. P. BLAVATSKY: XII (1)

XII (2)

The effect of her work was spreading, at which she was overjoyed, founding with her usual buoyancy great hopes for her Society, the teachings she advocated and the people who followed them. But personally, at the bottom of her heart, she felt cold and lonely, in spite of the many devoted people around her. Her constant cry was, Oh for something Russian, something familiar, somebody or something loved from childhood! She was always glad to spend all her savings to have her sister or her sister's children with her. To please her, Madame Jelihovsky offered to ask the Rev. E. Smirnoff, the minister of the Russian Embassy Church in London, to call on her. H.P.B. was very pleased with the suggestion: "But will he not refuse?" she wrote in return. "Maybe he also takes me for the Antichrist? What an inconsistent old fool I am: there is a gulf for me between the Catholic and Protestant clergy and our own priesthood. Is it not astonishing that I, a heathen, hating Protestantism and Catholicism alike, should feel all my soul drawn towards the Russian Church. I am a renegade, a cosmopolitan unbeliever — everyone thinks so, and I also think so, and yet I would give the last drop of my blood for the triumph of the Russian Church and everything Russian."

During the winter of 1887 *Novoe Vremya*, one of the leading St. Petersburg papers, informed the Russian public that Helena Petrovna Blavatsky, a compatriot of theirs, had settled in London with the view of demolishing Christianity and spreading Buddhism, to further which she had already built a pagoda with Buddha's idol in it, etc., etc. She immediately wrote a letter on the subject to the office of this newspaper, in a very good-natured

and humorous tone, but unfortunately it never was printed.

"Why should *Novoe Vreniya* tell such fibs?" she wrote to Mme. Jelihovsky. "Whence could it gather that our intention is to preach Buddhism? We never dreamed of such a thing. If in Russia they read my *Lucifer*, our chief organ in Europe at present, they would learn that we preach the purest Theosophy, avoiding the extremes of Count Tolstoi, trying to reestablish the purely Christlike Theosophy and life-giving morality. In the third, November, number there will be an article of mine ('The Esoteric Character of the Gospels') in which I stand up for the teachings of Christ, glorifying, as usual, his true doctrine, not disfigured as yet either by Popery or Protestantism. I, *i.e.*, we Theosophists, certainly do unmask Phariseeism and superstition of every kind. I do not spare Catholicism either, which has overdressed the pure teachings of Christ with unnecessary gewgaws and empty-sounding ritualism, or Protestantism which, in the heat of its indignation against the wilfulness of the Pope and the vanity of the Catholic clergy, has stripped the tree of truth of all its healthy bloom and fruit, as well as of the barren flowers, which were grafted on it by Popery. We mean, it is true, to give it hot to bigotry, to Phariseeism, to bitter materialism, but "Buddhism" is not the right word for them to use. Make of it whatever you can. People call me, and, I must admit, I also call myself, a heathen. I simply can't listen to people talking about the wretched Hindus or Buddhists being converted to Anglican Phariseeism or the Pope's Christianity: it simply gives me the shivers. But when I read about the spread of Russian orthodoxy in Japan, my heart rejoices. Explain it if you can. I am nauseated by the mere sight of any foreign clerical, but as

to the familiar figure of a Russian pope I can swallow it without any effort.

I told you a fib in Paris, when I said I did not want to go to our Church; I was ashamed to say that I went there before your arrival, and stood there, with my mouth wide open, as if standing before my own dear mother, whom I have not seen for years and who could not recognise me! . . . I do not believe in any dogmas, I dislike every ritual, but my feelings towards our own church-service are quite different. I am driven to think that my brains lack their seventh stopper (3) . . . Probably, it is in my blood . . . I certainly will always say: a thousand times rather Buddhism, a pure moral teaching, in perfect, harmony with the teachings of Christ, than modern Catholicism or Protestantism. But with the faith of the Russian Church I will not even compare Buddhism. I can't help it. Such is my silly, inconsistent nature."

In May 1888 Madame Jelihovsky lost her son. Madame Blavatsky felt her sister's sorrow with her usual acuteness and passion, which is shown by the two following fragments:

" . . . in a country new to you all, you, may be, will find some relief. Come, darling. Come all of you, my dears, do not grudge me this greatest joy. You will have a separate room, and we have a garden, a nice shady garden, with birds singing in it, as if in the country. You shall be comfortable, and the poor girls will have what little distraction is possible for them . . . Smirnoff is also writing to you, advising you to come. He is so fond of you all. . . He has just been to see me. He is the only person with whom I could talk about you as with an intimate friend. For God's sake make up your mind! do come! . . . do not change your

mind. The hope to see you has given new life to me. This is my first gladness, my first ray of light in the darkness of sorrow and suffering, of my *lonely* suffering, my untold suffering for you! Come, darling . . ."

She certainly possessed a great faith in the undying nature of man, which amounted to knowledge, and without doubt she could have used her moral influence over her sister to console her. But the great kindness of her loving heart knew better than even this and she tried to soothe her loved ones with words about new, unfamiliar surroundings, her garden and birds singing in it, as simple as the first pangs of her sister's sorrowing heart. Late in the autumn of 1888 there was a considerable lapse of time between her letters to her sister, at which Madame Jelihovsky grew impatient and wrote reproachfully to ask with what she was so very busy that she could not find a minute to write a letter. Madame Blavatsky answered:

"Friend and sister: Your thoughtless question, 'What am I so busy with?' has fallen amongst us like a bomb loaded with naive ignorance of the active life of a Theosophist. Having read it, I translated your Kushma Proatkoff (4) into the language of Shakespeare; and, as soon as I translated it — Bert., Arch., Wright, Mead, and the rest of my home staff swooned right away, smitten with your defamatory question — 'what am I busy with?' I, is it? I tell you, if there ever was in the world an overworked victim it is your long-suffering sister. Do take the trouble to count my occupations, you heartless Zoilas. Every month I write from forty to fifty pages of "Esoteric Instructions," instructions in secret sciences, which must not be printed. Five or six wretched voluntary martyrs among my esotericists have to draw, write and lithograph during the nights, some 320 copies of them, which I have to

superintend, to rectify, to compare and to correct, so that there may be no mistakes and my occult information may not be put to shame. Just think of that! White-haired, trained Cabalists and sworn Free-Masons take lessons from me. Then, the editing of *Lucifer* wholly depends upon me, from the leader and some other more or less lively article for every number, to the correcting of proofs. Then my dear Countess d'Ad-hemar sends me *La Revue Theosophique*; I can't refuse to help her either. Then, I also must eat, like anyone else, which means supplying some other bread-winning article. Then the receptions, the weekly meetings, accompanied by learned discussions, with a stenographer behind my back, and sometimes two or three reporters in the corners, — all this, you can easily believe, takes some time. I must read up for every Thursday, because the people who come here are no ignoramuses from the street, but such people as the electrician K., Dr. William B. and the naturalist C. B. I must be prepared to defend the teachings of Occultism against the applied sciences, so that the reports of the stenographer may be printed, without correction, in our new monthly publication under the name of *The Transactions of the Blavatsky Lodge*. This alone, the stenographer and the printing — cost my theosophists nearly £40 a month Since your departure they have all gone mad here; they spend such a lot of money that my hair stands on end Don't you see, they have written a circular to all theosophists of all the wide world: 'H.P.B.,' they say, 'is old and ill, H.P.B. won't stay with us much longer. Suppose H.P.B. died, then we might whistle for it! There will be no one to teach us manners and secret wisdom. So let us raise a subscription for the expenses, etc., etc. . . . 'And so they have raised a subscription and now

spend money. And 'H.P.B.' sits with holes in her elbows, sweating for everybody and teaching them. Needless to say, I won't accept penny for this sort of teaching. 'Your silver perish with you, for that you thought to buy the grace of God for money,' I repeat to everyone who imagines he can buy the divine wisdom of centuries for pounds and shillings."

The following two letters show how very open Madame Blavatsky was to new impressions, even in her old age. The first is from Fontainebleau, the second from Jersey, where she was taken by Mrs. Candler in the summer of 1889, less than two years before her death. Both are to Madame Fadeef.

"Delicious air, all impregnated with the resin of the pine forest and warmed by the sun, to which I am exposed whole days, driving in the lovely park — has revived me, has given me back my long lost strength. Just fancy, several theosophists came yesterday from London to see me, and so we all went to see the castle. Out of the fifty-eight state rooms of the palace I have done forty-five with my *own, unborrowed legs!!* It is more than five years since I have walked so much! I have ascended the entrance steps, from which Napoleon I took leave of his guardsmen; I have examined the apartments of poor Marie Antoinette, her bedroom and the pillows on which rested her doomed head; I have seen the dancing hall, *gallerie de Francois I*, and the rooms of the "young ladies" Gabrielle d' Estree and Diane de Poitiers, and the rooms of Madame de Maintenon herself, and the satin cradle of *le petit roi de Rome* all eaten up by moths, and lots of other things. The Gobelins, the Sevres china and some of the pictures are perfect marvels. I have also put my ringers on the table on which the great Napoleon signed his resignation. But best of all I liked the

pictures embroidered with silk *par les demoiselles de St. Cyr* for Madame de Maintenon. I am awfully proud of having walked all around the palace all by myself. Think of it, since your stay in Wursburg I have nearly lost my legs; and now, you see, I can walk all right. But what trees in this *doyen des forets!* I shall never forget this lovely forest. Gigantic oaks and Scotch firs, and all of them bearing historical names. Here one sees oaks of Moliere, of Richelieu, of Montesquieu, of Mazarin, of Beranger. Also an oak of Henri III, and two huge seven hundred year old trees *des deux freres Faramonds*. I have simply lived in the forest during whole days. They took me there in a bath-chair or drove me in a landau. It is so lovely here, I did not feel any desire to go to see the Exhibition. . . . "

Then from Jersey:

"Well, my old comrade, I have seized a short little minute in the interval of work, which is simply smothering me after my inertia and laziness at Fontainbleau, and write to you in bed, in spite of being perfectly well. The doctor has put me there for precaution's sake, as lately my knees have been aching a little. I have been brought here by my Mrs. Ida Candler, an American friend, so that I might get some sea air. The house is quite close to the shore, yellow sand begins right from the steps.

On three sides the house is drowsed in trees and flowers. Camelias and roses, as if we were in Italy! . . . A lovely island and so curious. They have a government of their own here, England being acknowledged only nominally, mostly for the sake of the pompousness. They issue their own coins and keep to their own ancient Norman laws. For instance, in case some person wants to catch a thief in his

garden or simply box somebody's ears, he must shout, before he proceeds to do so '*Haro! Oh, Rollo, mon prince et mon seigneur!*' Otherwise he will catch it himself. This "Rollo" is the first of the Norman princes, father of Robert the Devil, a giant and a hero, who took the island from the Druids. The inhabitants speak a funny kind of French; but they are awfully offended if anyone says they are French or English. 'I am a Jerseyman, and no one else' they say . . ."

The Path

THE BODILY SEATS OF CONSCIOUSNESS: II — *Herbert Coryn*

(Concluded from October number)

(b) But the mind has its own proper mental or intellectual consciousness, wherein it applies itself more particularly to the brain than to the body elsewhere; and connected with the brain are the proper mental and intellectual memories. This is the second of the three possibilities of consciousness, and its activities are registered by its own organ of memory. Try and remember an event or a train of thought you have nearly forgotten and you will shortly perceive by a sense of fulness or even a headache that it is with the brain you are working. It is with the brain that are registered the memories of all things that we did with thought, inasmuch as it was by the brain that we did them. For the intellectual consciousness is the organ of the judgment and comparisons of cognitions of any plane, and without it all cognitions of all planes must remain comparatively unrelated and so not knowledge proper. We walk to a place and remember afterwards whatever we thought about on the journey, not the steps we took. Walking is done by the spinal cord and it alone has the mechanical memory of the method, not the brain, though there is a continual intercommunication between the organic and cerebral memories. The association of thoughts, ideas, pictures and sensations arises from that interchange and relation. The stomach preserves the memory of the method of digestion. That is not in the brain, and like walking, it can go on when thought is otherwise occupied. States of consciousness, whether sensuous or spiritual, to be remembered, must be reawakened where they arose. Though they may involuntarily awake by association, the mind holds the key to their voluntary awakening and comparison. Connected with the brain are the memories of all

things whatsoever to which the mind has ever applied itself, and no others. The mind, entering the sensuous state, gathers up as food some of the leading cognitions of the senses, which thereupon become mental pictures, and carries those it has seized to the brain for registration in memory. I go into a strange room and bend my mind to a study of it. The whole picture of the room, entering my senses, the eyes, the ears, the nose, enters the sensuous consciousness of the mind which for that purpose has voluntarily entered the sensuous state. Thereupon there exists in my mind a complete picture for brain registration. I say I am conscious of the room. Let us particularize a little. Say there is a red mark on one of the walls. A bit of the retina of the eye vibrates in accordance with that mark. This vibration flows back from the eye along the ether in the centre of a nerve thread, and, passing through the brain, reaches a cell on its surface, a cell which thereupon vibrates in response to the red mark. The eye saw the mark first, and afterwards I see it. The brain-cell ceases after awhile to throb to that red vibration. Part of the energy of vibration leaves the cell and passes out into the ether, the astral aura about each of us, and there is thereafter in my astral picture-gallery a picture of the red spot, an astral picture or point of defined energy in space capable of pouring its energy back into that cell and reawakening its vibrations and therefore my memory of the spot. Wherefore the cell, while it remains healthy is the key to that memory. For when it revibrates in connection with the astral picture, and the vibration flows downward as far as the retina, the whole of the primary conditions under which I noted the spot reexist, only somewhat more faintly. So I faintly re-see the spot, and that is the process of memory. If all this occurs too vividly, say when all the brain-cells are throbbing too fast in fever, it may be as vivid as the primary cognition and so become an hallucination. Similarly, in the case of the room, other cells take up and vibrate to other leading features of the walls.

Suppose there was a blue mark alongside of the red. This is taken up by a cell adjacent to that which took up the red. When I turn my attention to other matters, both red and blue cells discharge their vibrations into the ether, wherein exists henceforth a little picture of two spots side by side, one red and one blue. Now suppose I am in another room, and on a wall facing me again exists a red spot which I note. It follows the easy path traced by the first, reaching the same cell, and perhaps finally the first astral picture. This consists of two spots, but when one of them, in this case the red, is thus reinforced, the reinforcing energy will overflow into the other. So there will be recalled to my memory the two spots of the first wall and I shall say that this second wall reminds me, by its partial resemblance, of the first.

So while a brain-cell is vibrating, and at the same time giving off vibratory energy to the ether, such overflowing etheric vibrations from point to point may wake up all kinds of old pictures of the past of which also they form a part; and these, affecting their related cells, will cause the dead and spectral past to spring suddenly into life and color. But the cells of this present brain cannot wake up ether-pictures to which they never give rise, but which, connected with the last birth, were given origin by and keyed to a brain long since dead. Hence, though the complete astral gallery of the last life remains about us, it is now closed to us. The cells of *this* brain have only electric wires to the pictures of *this* life, which they themselves awoke in the astral light. So we may lose certain memories, if the brain-cells that are keyed to them become destroyed by disease. The memories remain as astral pictures, but we have lost the key to that gallery. Of course, if we know how to raise our consciousness above the brain limits, we can reach these pictures and a million others, and to these we may key some brain-cells for the purpose of future ready reference, but this requires training. Similarly we cannot

remember much of the astral picturing of dreams, because in the transit down to the ordinary consciousness we do not key the brain-cells to those astral pictures, or but to few of them. So the brain-cells lie between our ordinary consciousness and the astral world, and whatever of the astral, whether memories of this or another life, or astral visions, reaches us here, must, I think, do so by exciting some brain-cells. In deep sleep we go through and far beyond the astral planes, but as we cannot key the brain-cells to any of these high experiences, we can recover little or nothing of that which survives only as dim feelings or as the tattered shreds of blended dreams. So knowledge and consciousness remain unified.

It seems therefore that the brain must do its work in terms of pictures, and that pure brain thinking is a comparison of these. To recall an emotion, you must reawake to that effect the organ that gave rise to it. You can only remember a toothache by re-arousing the pain in the offending nerve in a shadowy manner, though it would become less and less shadowy by continuance. You can only remember hunger by making the nerves behind the stomach partly reproduce it. Hunger in the stomach sets up such associated pictures as a meal-table in the brain, and in the brain are only those pictures, not the hunger. Hunger in sleep will cause the brain to make a very real picture of a meal. You can recall hunger by reversing the process, creating the alluring picture of a chop, and *this* awakes the "brain of the stomach." You can start at any point of this circuit of consciousness and go forward or backward. When you see a man hunting for food, you could do as the scientists do, elaborately tabulate and measure his actions, and arrive at no result except your tables. But you know that when you yourself go through those acts it is in response to the inner emotion of hunger, and so, going at once beyond the outer observation of science, you grasp the real fact of the

situation, namely, that the man's actions are caused by hunger. You have got from effect back to cause. Apply that very process to all nature, and in different parts of your being you will be able to find or feel the cause at the root of every effect or movement in nature, at once reaching to a wisdom behind and above that outer observation and measuring we call science. But there are parts of nature that cannot find their counterpart in us in any such kamic organ as the stomach; if we would understand these we must use other seats of feeling. We are all in the habit of living too exclusively in the brain, and for that reason are materialistic. The materialist requires that all the divine play of nature should manifest to his brain, which can really only concern itself with the outer pictures; and this on penalty of relegation to the domain of the "Unknowable." The brain cannot reflect the soul of nature, which is not a picture. The heart must do that, and *that* organ of knowledge we do not cultivate and so deny soul in nature. The brain cannot reflect the hunger in our meal-hunting man, and to be logical the materialist should therefore deny his hunger and relegate to the "Unknowable" the cause of his actions. We answer part for part to nature, and each part of us must interpret its own part of nature. The mainspring of nature is in its heart, and to understand *that*, our own heart must be used.

(c) And this brings us to the third of the three planes of human consciousness and its bodily seat, for the body is the temple of many things high as well as low.

Krishna says of himself in the *Bhagavad Gita*: "I am the ego which is seated in the hearts of all beings." *The Secret Doctrine* says "That class of the Fire-Dhyanis which we identify with the Agnishwattas is called in our school the Heart of the Dhyanic body, and it is said to have incarnated in the third race of men and made them perfect. A mysterious relation exists between the essence of this angelic Heart and that of man. And

the Egyptian defunct invokes his heart or the deity of it as necessary to and presiding over his incarnations. It was taught by H.P.B. that "Every cell in the human organism corresponds with a like cell in the divine organism of the manifested universe, which is an intelligent unit in this or that hierarchy of beings." This refers of course to the informing life of each cell, a life that is withdrawn at bodily death, and makes it clear that there is a specific identity of life-essence in each cell of the body and some conscious being in the cosmos, man epitomizing the universe; and further that the informing spiritually conscious life-essence of the human heart is derived from and forever linked with the Agnishwattas who awaken in man self-consciousness, egoism. The pulse of the divine life of the Universe, source of all wisdom, is in the beat of the human heart. H.P.B., speaking of the brain of man, teaches that it is "the direct recipient of the impressions of the heart" which are spiritual, and then shows the macrocosmic parallel thus. "The universe possesses a brain as the organ of its mind. This brain though not objective to our senses is none the less existing. As in man so in the universe. Every organ *therein* is a sentient entity, and every particle of substance" (material or spiritual) "is a cell, a nerve centre, which communicates with the brain-stuff."

But what are the ideations of the heart-consciousness? What is spiritual consciousness, and who is the spiritual man? Is emotion spirituality? There may be base emotion as well as noble. Is intellection spiritual? Intellection may be used for the vilest objects. We must separate off spirituality from its concomitants. Let us get something to the point from the *Bhagavat Gita*, that sacred home for all souls who would find rest and wisdom.

The primeval spirit is that "from which floweth the never ending stream of conditioned existence." It is then the eternal root. "It is even a portion of myself which draweth together the five senses

and the mind in order that it may obtain a body and may leave it again." So it is also the root selves of men, and "devotees who strive to do so see it dwelling in their own hearts." In living nature it is clothed with the qualities and those who would find it must go beneath them, by *feeling*, and find the life. "It is the light of all lights, and it is wisdom itself, the object of wisdom, and that which is to be obtained by wisdom; in the hearts of all it ever presideth." It is with the heart that its presence is to be felt and understood, not the brain. The heart consciousness is one that reflects in feeling the motive essence lying within the outer ways of nature, thus sympathetically knowing them and generating real wisdom.

If now with this as a starting-point we turn to the "First Principles" of Herbert Spencer's philosophy, we shall find something which seems to me not far from some of this. For he shows that behind all forms in the two worlds of matter and of consciousness, deeper than all changes, must be held to lie an absolute reality which on the one side is the substratum of consciousness and on the other that of matter, whilst in it inhere all the laws that rule the changes of both. There is little in Herbert Spencer's First Principles that might not be of value to the student of the *Bhagavad Gita*, and throughout its pages is a solemnity behind the words that places it in harmony with the profound and solemn devotion of the poem. The spiritual man is he who feels in himself that absolute reality of Spencer, the spirit of the *Gita*. Only, when the outer consciousness has suspended its changes, we are taught in the latter that that root-soul can be consciously attained by the man who thus mounts to it by long devotion and meditation. Do we know our own consciousness as one with that supreme source of consciousness? It is one, in the heart, but do we think from there? Yet to think from there, or rather to feel, and to think from the brain, mark apart the

spiritual and the intellectual men.

Why does the boulder crash from hanging cliffs into the foaming sea? Because of the life-bond stretching and drawing through space from earth to crag, a force of the world-life in the heart alike of man and nature. Or with the brain we can say gravitation, acting inverse to the square of the distance. Why does the tree throw up in the spring a million opened leaves to the Sun? By the very same leap and outgoing glow of conscious life that makes the child, shout, the lover woo, the heart of the poet make thought glow into passion and words fall into the cadencies of music, the outgoing of spirit into matter. Every movement of nature has its reflection, its counterpart, its explanation therefore, in the consciousness of the heart of man, and he is spiritual who can read out his own heart into nature and her ways. In the heart glows that one eternal life that is the life of nature; it comes and goes in its degrees, it takes every form and flows through each to all others, lending to each a consciousness. Blessed is the consciousness of man in that it can, as can that of no other form in nature, find and recognize and learn from its source. In a moment can be learned in the heart the purpose of that leaved and flowered splendor of the tree, though words can bear little relation to such a piece of knowledge. If we give many moments through the years, surely consciousness will grow, deepen, understand, and we shall find in our hearts every secret, every purpose, the causality of every stir of the tree's half-blind life; and this would be the recovery of memory of what, ages and ages gone, was our own whole life. Going on through years and lives, we shall learn more and more of the path of the Spirit in all worlds and all consciousnesses. Following this path, there are many even amongst ourselves who have gone far; and yet, since they speak but the words of the poor brain, they do not in writing or speech betray their place in this school of nature. These, when

we meet them, we run the risk of slighting, and may entertain angels unawares. Such men must be known by the heart.

What shall we do to get on this path of complete wisdom? It is an easy path, no violence is needed. How shall we know we are upon it? To any one who with earnestness should ask: Am I on it? the answer would be yes; for the very wish for such a journey is a movement of the heart that *is* that path.

If the self of the tree elected to dwell in the leaves, it would die with oncoming autumn; if it have home in the root, it will watch all springs and all autumns unmoved; so in man the self in the heart throws up the foliage of life, and we elect to dwell in that finite. We hold to the brain and to body, to feeling, to passion, to sensation, to all that is young and strong for a spring but whose autumn is certain. "Those who are wise in spiritual things grieve neither for the death nor the living. I myself never was not, nor thou, nor all the princes of the earth, nor shall we ever hereafter cease to be. As a man throweth away old garments and putteth on new, even so the dweller in the body, having quitted its old mortal frame, entered into others which are new". That is the Gita again, pointing out the easy path, a path that only seems hard when we think of it with the brain. The thoughts of the Gita are spoken to the personal self from the heart of each of us, translated into words that the brain may comprehend; but to the hearing of him who is willing to give prolonged and deep attention, trying to attain the while his highest consciousness, there arises within and about the words the keynote and harmonies of another world, sounded from the heart. It is the same with the stanzas of the *Secret Doctrine*; they must be heard and felt from the heart, since in the heart is that very power which brought forth the worlds and will again withdraw them. The processions of the Universe, like those of the tree, must be *felt*, if we would understand them. They are states of feeling,

reflected in the rhythm of the stanzas. We can note the graded increase of the pulse. First there is stillness and the flow of word-tone is very smooth. "The eternal parent, wrapped in her ever invisible robes had slumbered once again for seven eternities. Time was not, for it lay asleep in the infinite bosom of duration. Alone the one form of existence stretched boundless, infinite, ceaseless, in dreamless sleep, and life pulsated unconscious in universal space throughout that all presence." Through the stages reflected in the second stanzas the pulse of the heart of the world stirs a little, and in the third it moves into real life. "The last vibration of the seventh eternity thrills through infinitude. The vibrations sweeps along, touching with its swift wing the whole universe, and the germ that dwelleth in darkness." And in the fourth arises the great movement and the marshalling of the forces of the "Army of the Voice." It is with the heart, not firstly or finally the brain, that we approach some understanding of that vast drama, just as we understand the falling cliff, the unfolding tree, and the purposes of human life. For thus sympathetically comes our understanding of men. In this work we cease neither to act nor to think. At once we think and act with greater range and scope. We make too little allowance for the possibilities of time. Finding that we can for a moment retire to the heart and let the force there drive the body to its work and duties, we are disappointed because in another instant the currents flash again to the brain and leave us as before, the petty man of this body and habit and name. Think what the years will do if we try only for a little, daily, to seek sanctuary in the heart. The little cares of life will begin to take their proper insignificance, and the small resentments of daily injuries cease to be. Nature will lose to our eyes her dead externality and become the changeful home of that golden flame we have begun to find in our own hearts. Charity for all men will soften our thoughts and words, for we shall see that what they do that we call evil means only that they have not

yet become aware of that light we have begun to seek. If the stone and the tree have it, how much more humanity, its chiefest work and embodiment. To those who will, then, the "Path" in one aspect may be counted easy. Not easy the uttermost surrender to the guidance of the Voice, but the *beginning* that leads to the great end is easy. The voice is conscience, but it is very much more than we are accustomed to intend by that word. At the dawn, when first the darkness began to break, it alone was; thought, life, will, and about it the veils of mother-substance. Down the long ladder of being it gave form to the formless, life to form, consciousness and law to life. Turning upon itself, the life and consciousness became those of man, and in man is still in its purity that unfading flame, the old light, the master-thought of the world. Is the finding of it too difficult? "The man whose devotion has been broken off by death goes to the region of the righteous, and is then born on earth in a pure family, or even among those who are spiritually illuminated. Being thus born again he comes in contact with the knowledge that belonged to him in a former body, and from that time he struggles more diligently towards perfection. . . . Even if only a mere enquirer he reaches beyond the outer words of the scriptures."

The stillness of the lake, the movement of the ocean, the stir of the spring-life in the tree, the passions and hopes and loves that play in mankind, the mediation of the wise, the light of the consciousness of a Master, the thought on which rests the universe, all these things are to be understood by each in the heart, and wisdom gathers from life to life.

The Path

BHAVAGAD-GITA – CHAPTER VII — *William Brehon*

This chapter is devoted to the question of that spiritual discernment by means of which the Supreme Spirit can be discerned in all things, and the absence of which causes a delusion constantly recurring, the producer of sorrow. Krishna says that this sort of knowledge leaves nothing else to be known, but that to attain it the heart — that is, every part of the nature — must be fixed on the Spirit, meditation has to be constant, and the Spirit made the refuge or abiding-place. He then goes on to show that to have attained to such a height is to be a Mahatma.

Among thousands of mortals a single one perhaps strives for perfection, and among those so striving perhaps *a single one knows me as I am.*

This points out the difficulty to be met in any one life, but is not cause for discouragement. It simply makes clear the fact, and thus also punctures the boastful claims of those who would pretend to have reached perfection but do not show it in their acts.

He then gives an eightfold division of his inferior nature, or that part of the Universal One which can be known. This is not the nature of man, and does not oppose the theosophical sevenfold system of human principles. No particular theosophical classification for the divisions of nature has been given out. It would, on the one hand, not be understood, and on the other, disputes leading to no good end would follow. He might as well have stated the twenty-fivefold division held by some other school. This "inferior nature" is only so, relatively. It is the phenomenal and transient which disappears into the superior at the end of a kalpa. It is that part of God, or of the Self, which chose to assume the phenomenal and transient position, but is, in

essence, as great as the superior nature. The inferiority is only relative; as soon as objective material, and subjective spiritual, worlds appear, the first-named has to be denominated inferior to the other, because the spiritual, being the permanent base, it is in that sense superior: but as an absolute whole all is equal.

Included in the inferior nature are all the visible, tangible, invisible and intangible worlds; it is what we call Nature. The invisible and intangible are none the less actual; we know that poisonous gas, though invisible and intangible is fatally actual and potential. Experiment and induction will confer a great deal of knowledge about the inferior nature of God and along that path the science of the modern west is treading, but before knowing the occult, hidden, intangible realms and forces — often called spiritual, but not so in fact — the inner astral senses and powers have to be developed and used. This development is not to be forced, as one would construct a machine for performing some operation, but will come in its own time as all our senses and powers have come. It is true that a good many are trying to force the process, but at last they will discover that human evolution is universal and not particular; one man cannot go very far beyond his race before the time.

Krishna points out to Arjuna a gulf between the inferior and the superior. This latter is the Knower and that which sustains the whole universe, and from it the inferior nature springs. So the materialistic and scientific investigator, the mere alchemist, the man who dives into the occult moved by the desire for gain to himself, will none of them be able to cross the gulf at all, because they do not admit the indwelling Spirit, the Knower.

The superior nature can be known because it is in fact the Knower who resides in every human being who has not degraded himself utterly. But this must be admitted before any approach to

the light can be made. And but few are really willing, and many are unable, to admit the universal character of the Self. They sometimes think they do so by admitting the Self as present, as contiguous, as perhaps part-tenant. This is not the admission, it leaves them still separate from the Self. All the phenomenal appearances, all the different names, and lives, and innumerable beings, are hung suspended, so to say, on the Self. Thus:

And all things hang on me as precious gems upon a string.

A number of preeminently great and precious things and powers are here enumerated and declared to be the Self; while next the very delusions and imperfections of life and man are included. Nothing is left out. This is certainly better than an illogical religion which separates God from the delusions and cruelties of nature, and then invents a third thing, in the person of a devil, who is the source of human wickedness. All this further accentuates the difficulties in the way. Krishna says the illusion is difficult to surmount, but that success can be attained by taking refuge in the Self — for he is the Self. The entire congregation of worshippers who are righteous find favor with the Self, but those who are spiritually wise are on the path that leads to the highest, which is the Self.

This means, as Krishna says, that those who with the eye of spiritual wisdom see that the Self is all, begin to reincarnate with that belief ingrained in them. Hitherto they had come back to earth without that single idea, but possessed of many desires and of ideas which separated them from the Self. Now they begin to return fully at rest in the Self and working out their long-accumulated karma. And at last they become what was mentioned in the opening verses, a Mahatma or great soul.

There is, however, a large number of persons who are in the class which has been deprived of spiritual discernment "through

diversity of desires" or who have not yet had discernment for the same reason. The verse reads as follows:

Those who through diversity of desires are deprived of spiritual wisdom, adopt particular rites subordinated to their own natures, and worship other Gods.

Although these words, like the rest of the colloquy, were spoken in India and to a Hindu, they are thoroughly applicable in the west. Every mode of thought and of living may be called a rite gone over by each one as his conscious or unconscious religion. A man adopts that which is conformable, or subordinate, to his own nature, and being full of desires he worships or follows other Gods than the Supreme Self. In India the words would more particularly mean the worship, which is quite common, of idols among those who are not educated out of idolatry; but they would also mean what is said above. In the west these "other gods" are the various pleasures, objects, aims and modes of life and thought, be they religious or not, which the people adopt. They have not the many thousands of gods of the Hindu pantheon, each one for some particular purpose, but it comes to the same thing. The idol-worshipper bows to the god visible so that he may attain the object of his heart which that god is supposed to control. The western man worships his object and strives after it with all his heart and mind and thus worships something else than the Supreme Imperishable One. The god of one is political advancement, of another — and generally of most — the possession of great wealth. One great god is that of social advancement, the most foolish, hollow and unsatisfactory of all; and with it in America is yoked the god of money, for without wealth there is no social preeminence possible except in those cases where official position confers a temporary glory. The mother often spends sleepless nights inventing means for pushing her daughter into social success; the father lies wakefully

calculating new problems for the production of money. The inheritors of riches bask in the radiance coming from their own gold, while they strive for new ways to make, if possible, another upward step on that road, founded on ashes and ending at the grave, which is called social greatness. And out of all this striving many and various desires spring up so that their multiplicity and diversity completely hide and obstruct all spiritual development and discernment.

But many who are not so carried away by these follies attend to some religion which they have adopted or been educated into. In very few cases, however, is the religion adopted: it is born with the child; it is found with the family and is regularly fastened on as a garment. If in this religion, or cult, there is faith, then the Supreme Self, impartial and charitable, makes the faith strong and constant so that thereby objects are attained. In whatever way the devotee chooses to worship with faith it is the Supreme which, though ignored, brings about the results of faith.

A curious speculation rises here; it may be true, it may be not. It can be noticed that millions of prayers are recited every month addressed to the One God, all through Christendom, asking various favors. Millions were offered for the conversion to a better life of the Prince of Wales — they failed. The rain ceases and prayers are made, but the dryness continues. Candles are lighted and prayers said to stop the earthquake which is destroying the city — the quakings go on until the impulse is ended and the city ruined. It is perfectly impossible to prove answers to prayer in enough cases to convince the thoughtful. Now, the speculative thought is, that perhaps the prayers offered to an unmanifested God have no effect, for to be effectual the Being appealed to must have a separate existence so as to be able to intervene in separated manifested things. Christians do not possess the statistics of results from prayer offered to Gods in

Oriental countries. The usual cases brought forward in the west are such as the orphan asylum, for which nothing is asked except in prayer. But in India they have institutions similarly — but not so lavishly — supported and no asking alone save to the particular patron god. It is a matter of strong, constant faith which carries the thoughts of the prayer into the receptive minds of other people, who are then moved by the subconscious injected thought to answer the request. Now if the prayer is offered to an unseen and unknown God the faith of the person is not firm, whereas perhaps in the case of the idol-worshipper, or of the Roman Catholic addressing himself to the Mother of God — with her image before him, the very presence of the representative is an aid to constancy in faith. All this applies of course to prayers for personal and selfish ends. But that prayer or aspiration which is for spiritual light and wisdom is the highest of all no matter to whom or what addressed. All religions teach that sort of prayer; all others are selfish and spiritually useless.

The Path

LETTERS OF H. P. BLAVATSKY: XIII (1)

In February, 1890, she wrote to Mme. Jelihovsky:

"As you see, I am in Brighton, on the seashore, where I was sent by the doctors, to inhale the oceanic evaporations of the Gulf Stream, to get rid of a complete nervous prostration. I do not feel any pains, but palpitations of the heart, a ringing in the ears — I am nearly deaf — and weakness too, such weakness that I can hardly lift my hand. I am forbidden to write or read or even to think, but must spend whole days in the open air — 'sit by the sea and wait for fair weather.' My doctor got frightened, himself, and frightened all the staff. It is an awfully expensive place; and my money — alas! So my esotericists put their money together immediately and persuaded me to go. And now subsidies fly to me from all points of the compass, for my care; some of them even unsigned, simply to my address. America especially is so generous that, upon my word, I feel ashamed. I admit they 'want' me, as they repeat to me twenty times a day, but still, why should they spend so much? They keep me in luxury as if I were an idol, and don't allow me to protest.

"Two or three Theosophists at a time take turns at my side, coming from London; watching my every movement like Cerberuses. Now one of them is putting his head in with a tearful request to stop writing, but I must let you know that I am still alive. You have been to Brighton, have you? We have splendid spring weather here; the sun is simply Italian, the air is rich; the sea is like a looking-glass, and during whole days I am pushed to and fro on the

esplanade, in an invalid chair. It is lovely. I think I am already strong enough. My brain moves much less, but before I was simply afraid for my head. My doctor said exhaustion of the brain and nervous prostration. 'You have overworked yourself,' he says, 'you must give yourself a rest.' That's it! And with all this work on my hands! 'You have written your full,' he says; 'now drive about.'

"It is easy for him to speak, but all the same I must put the third volume of the *Doctrine* in order, and the fourth — hardly begun yet, too. It is true though that in my present state of weakness my head keeps nodding, I feel drowsy. But, all the same, don't be afraid. There is no more danger. Take consolation from the enclosed newspaper cuttings. You see how the nations magnify your sister! My *Key to Theosophy* will bring many new proselytes, and the *Voice of the Silence*, tiny book though it is, is simply becoming the Theosophists' bible.

"They are grand aphorisms, indeed. I may say so, because you know I did not invent them! I only translated them from Telugu, the oldest South-Indian dialect. There are three treatises, about morals, and the moral principles of the Mongolian and Dravidian mystics. Some of the aphorisms are wonderfully deep and beautiful. Here they have created a perfect *furor*, and I think they would attract attention in Russia, too. Won't you translate them? It will be a fine thing to do."

The sea air did her good, but she did not keep her strength long. Not later than April she was again forbidden to work, abstaining from which was a real torture for her, as with her failing strength the activity of her thought seemed only to increase. She knew she had not much time to lose, and yet she had to spend whole days

in her bed doing absolutely nothing. She wrote to her sister:

"And still I have a consolation: my Theosophists grudge nothing for me in either labor, time or money. Formerly I used to think they could not do without me, having imagined I am a well of wisdom, and so took care of me as of a precious jewel, which has come from far across the seas. And now I see I was mistaken, many of them simply love me as a dear mother of theirs. For instance Mrs. Candler: she is not a very deep Theosophist, and yet she spent the whole of the last summer petting me and now again she writes, asking me to settle beforehand where I feel inclined to spend the season, and wants to take me to all kinds of places, having wrapped me in wadding. But I shall not go anywhere. I want you, Vera, you and your children. Besides, it seems likely that Charlie and Vera will also return from India. They could not stay long in Russia; you are free to do what you like, so instead of the country come to me, all of you. ... Or maybe you would prefer to spend the summer in Stockholm, near the seaside instead of England. Seriously — my Swedish Theosophists are very eager that I should come; one of them offers me a whole villa at my service, with a park and a yacht to sail in the bay. . . . But I think we might as well stay in London. Our new house, the Theosophical headquarters, is right in Regent's Park, near the Zoological Gardens. I am forbidden to work now, but all the same I am awfully busy changing from one end of London to the other. We have taken three separate houses, joined by a garden, for several years; 19 Avenue Road, with building-right. So I am building a lecture hall, to hold 300 people; the hall is to be in Eastern style, made of polished wood, in a brick shell, to keep the cold out; and no ceiling inside, the roof being supported by

beams and made also of polished wood. And one of our Theosophists who is a painter is going to paint allegorical signs and pictures over it. Oh, it will be lovely!"

Mme. Blavatsky was as pleased as a child with all the new arrangements, and yet she had a foreboding she was to die in this new house, and spoke of it to her sister.

Her next letter, dated July, describes the opening of her new lecture hall.

"At one end of the hall they placed a huge arm-chair for me and I sat as if enthroned. I sat there hardly able to keep myself together, so ill was I, my doctor near at hand in case I should faint. The hall is lovely, but about 500 people had assembled, nearly twice as many as it would hold. . . . And imagine my astonishment: in the first row I was shown Mrs. Benson, the wife of the Archbishop of Canterbury, to whom my *Lucifer* addressed a "brotherly message." I am sure you remember it? What are we coming to! The speeches were by Sinnett and others, but, needless to say, no one spoke so well as Annie Besant. Heavens, how this woman speaks! I hope you will hear her yourself. She is now my coeditor of *Lucifer* and the president of the Blavatsky Lodge. Sinnett is to remain the president of the London Lodge alone. As for me, I have become a regular theosophical pope now: I have been unanimously elected president of all the European theosophical branches. But what is the use of all this to me? . . . If I could get some more health — that would be business. But honors and titles are altogether out of my line." (2)

The Path

THE DOCTRINE OF REBIRTH — *Bandusia Wakefield*

ARGUMENTS IN ITS FAVOR BROUGHT TOGETHER AND SOME OBJECTIONS ANSWERED

The term *reincarnation*, as used in Theosophical literature, means the coming again and again of the human soul into successive human bodies of flesh, but *never* into the body of a lower animal.

In evolution the door always closes behind the eternal pilgrim, and, for this informing and indwelling principle, there is no going back. Its progress is like the flow of the blood through the heart. Valves open for the forward flow of the life current in its cycle, but close against a backward flow. Or it is like that of the chambered nautilus that builds itself new mansions as the old ones grow too small, and never goes back; in fact, cannot, for the old house is outgrown. So when once a centre of self-consciousness has been evolved from the Universal Consciousness, and has incarnated in a fit vehicle for its use, the human body, it can never enter the body of a lower animal or function through its organism.

Reembodiment, or change of form, is a method of progress in the involution and evolution of the whole cosmos, but reembodiment of collective life in forms below the human is succeeded by reincarnation of individual thinking entities when the human stage is reached.

We see evidence of design in all nature, a working towards an end, and in this working a cyclic law obtains, alternate periods of subjective and objective life. We see it clearly in the vegetable kingdom. The tree drops its old garment of leaves, the life principle withdraws to the root and dwells in subjectivity till the period of reawakening, when it comes forth again into trunk and

branch and takes on a new body of leaves. Not only the leaves, but branch and stalk of other plants, die, leaving only root or bulb or seed to hold the latent life and ideal plan of the plant. But the life and the plan are there, however unmanifested, and nature never makes a mistake in reembodying the one in accordance with the other. In this kingdom a physical vehicle is not dispensed with during subjective periods, but is reduced to small limits.

Reembodiment is plainly discernible in the insect world, where the same old material is worked over into a new and entirely different body but always with the intervening subjective states. We have a familiar illustration of this in the caterpillar, chrysalis, and butterfly. Higher in the scale, transformations in the same body are limited to organs, the informing principle is more developed, and it has no longer a physical body during subjective states save in hibernation, sleep and trance.

As reembodiment, with alternate periods of activity and rest, obtains in the lower kingdoms, analogy would lead us to infer the same for the higher. If it is worth while to conserve the informing principle of a plant with its specific character and reembody it, surely the soul of man deserves as much.

The immortality of the human soul demands reembodiment of some kind, somewhere, and the fittest body at present is the human organism, which required so many million years for its building, and the fittest place is earth so long as earth can furnish needed experience. If the life of the soul is without an end it must also be without a beginning, for that which has one end must have two. A beginning with the body implies an end with the body. That the soul is not the product of the body and does not necessarily perish with it is evident from its superiority over the body, as no stream can rise higher than its source.

The aim we see about us in nature is surely not set aside when we

come to man, and since the soul of man incarnates, it must incarnate for a purpose, and that purpose must be the development of all the latent potentialities within it through experience by its contact with matter on the physical plane. This development includes the conquest of matter and the training of the animal man till it becomes a fit instrument for the divine, and implies also the helping of other souls in their development. This object we plainly see cannot be accomplished in one earth life, even the longest; and how many quit the body at birth or in early childhood! If these can complete their development under other conditions than those afforded on the physical plane, then were it never necessary to incarnate at all and incarnation is a farce. But incarnation being necessary, reincarnation must be so also. To acquire wisdom there must be opportunity for all experience, and to learn the unsatisfying nature of material life it must be tested in every phase. Many, many lives on earth are necessary for this; and the desire which first brought the soul into physical life will bring it again and again until physical life has nothing more to offer that can draw the soul.

The theory of repeated earth-lives in which a reincarnating ego reaps what it has sown and sows what it will reap is the only one consistent with the idea of justice. The great differences in mental and moral capacities of different individuals, as well as in their circumstances, can be just on no other ground than that each individual has made his own capacities and conditions. What justice is there in creating new souls without any wish, will or action on their part for all new-born bodies and making these souls with widely different tendencies and capacities, placing some, often weak ones, in the most wretched and vicious surroundings where only strong souls could be virtuous, and others in beautiful, good and happy homes with every incentive to virtue, and then holding all alike responsible for the outcome

of their lives? There is no justice in it. Only on the theory that each soul makes for itself its character and conditions is there any justice in the existing state of things. But this theory demands preexistence of the soul and reincarnation.

Neither is there any justice in the theory that some race in the future will reap the grand results of the experience of preceding races, unless that race be composed of the same egos as the preceding or has rendered or will render them like benefits.

The wide divergences in mental and moral characteristics in the same family can be accounted for only on the theory of a persistent ego that incarnates again and again gathering up, assimilating and carrying on the results of all its experiences. Heredity will not account for these differences, for even in the case of twins where not only the ancestry but the prenatal conditions are the same these wide mental and moral divergencies may be seen in connection with great physical similarity. Heredity accounts for the physical likeness and is a co-worker with reincarnation by affording the ego a suitable instrument for its purposes, an instrument which the ego has earned by its past.

Reincarnation and not heredity accounts for genius and infant precocity. Often the genius is the only one in his family possessing his striking qualities in any marked degree. He neither inherited them from ancestors nor transmitted them to posterity, but must have acquired them by his own exertions in the past, and still carries them with him. To call these qualities the unearned gift of a Creator is but to ascribe partiality and injustice to that Creator.

Infant precocity shows remembrance of knowledge acquired in the past. This is true not only of a Mozart, who composed a most difficult concerto at the age of four years, but of less noted persons who at a very early age were able to read without having

been taught in the present life.

Some persons comprehend and accept with great readiness Theosophical teachings on first presentation, because these are not new to their egos, while others of equal intellect comprehend and accept with difficulty or not at all. We readily accept those new ideas which are only an extension of our previous ideas.

Great spiritual lights, such as Jesus and Buddha, are no products of heredity with the added acquirements of one life only; but the suffering through which those souls were perfected and made one with the divine spirit was the suffering of many lives.

Reincarnation best accounts for the decay of highly-civilized races and nations and the rise of new ones. The egos that brought on the high civilization of the old race quit it for the new, and then less and less advanced egos incarnate in the old, thus bringing on its decay. By the law of progress through heredity the race ought to go on to greater things instead of going back. Through reincarnation there is real and continued progress. The going-back is only apparent, for all the egos go forward, and only the race made use of as an instrument by successively less and less advanced egos goes back. The instrument, but not the user, wears out.

Only the theory of reincarnation gives a satisfactory explanation of the extinction of races. All the egos in the present cycle of development, having progressed beyond the need of anything that a certain race can furnish, will no longer incarnate in it, but will seek a more advanced race, so births cease in the old race and it becomes extinct.

The reappearance of certain types of civilization after intervals of 1500 years goes to sustain the doctrine of reincarnation of the same ego after that interval in a subjective state. As an example of

this note the reappearance of the conquering, colonizing and empire-loving character of the Romans of the Augustan period in the English of the Elizabethan age. See also at the present time in the currents of mystic, religious and philosophical thought a reappearance of the mystic thought, Gnosticism and Neo-Platonism of the fourth century.

The instinctive feelings of attraction and repulsion felt on first meeting people and without any apparent reason, may be due to old relations existing in former lives and not yet severed on the invisible planes. Indeed they are sometimes hard to account for on any other hypothesis.

Peculiar emotions connected with certain things and events point to some unknown former relationship to them.

Dreams often indicate a familiarity with persons and things not known in this life.

Intuitions of former lives enrich the page of the poet. Wordsworth says:

Our birth is but a sleep and a forgetting;
The soul that rises with us, our life's star,
Hath had elsewhere its setting
And cometh from afar.

The same thought in varying phrase is expressed by many other inspired poets.

There are many people who have distinct remembrance of former lives, and that all do not remember is no proof of previous non-existence; for we do not remember the first years of our infancy nor many of the events of our later life, yet we do not on that account consider ourselves to have been non-existent. The reason so many of us do not remember is because the new brain

we use in the present body is not sufficiently sensitive to the fine vibrations of the Higher Ego to be impressed with its knowledge of the past. But when the lower nature has been sufficiently trained and purified, then each personality will be able to receive the knowledge of the past and be strong enough to bear it. But at the present stage of development, it is a blessing to most of us that we are not burdened with a memory of the details of the past, and many would be glad to forget portions of the present life could the lesson be retained without the remembrance of the mistakes that taught them. This is just what we have from our past lives.

The objection to reincarnation is sometimes offered that it is unjust to suffer for an unremembered past, or for the deeds of another personality. Those who make this objection, however, never think of injustice in reaping the happy rewards of an unremembered past, or of the deeds of another personality. They fail also to consider how many causes of suffering sown in this life are forgotten before the suffering comes, yet they do not for that reason think the suffering unjust. Through all lives the ego is the same; and each personality, though a new one, is an aggregation of qualities from the past. So the suffering is just.

Some people object to reincarnation because, as they say, they do not want to come back, they have had enough of the troubles of earth and are tired of earth-life, or they do not wish to lose their individuality or be separated from their friends or fail to recognize them. All these objections are based on the likes and dislikes of the objectors, as if these were sufficient to change facts and laws of nature. These people lose sight of the common fact in their every-day experience that there not liking things does not prevent their being. But granting the potency of likes and dislikes, one may be weary of earth-life under certain conditions and yet be eager to try it under others. In fact, it is a common thing to hear people say, "Oh, if I could only live my life over again with

the knowledge I now have, how differently I would act!" This chance they sigh for they will have.

As for losing the individuality, this is a mistake. The individuality, which includes all that is worth saving, is not lost. It is only the undesirable portion of the being that is broken up. The new personality is but a new putting together of old material which has to be worked over till something better is made of it, or till it is so refined and purified that it is worthy to be preserved.

The objection regarding the failure to recognize friends is based on externals. That these friends must continue to have the same outward appearance is entirely unreasonable, as they do not do this even through one short earth-life. Applied to the soul-plane, this objection would preclude all mental and spiritual growth. In regard to the separation of friends, souls that are truly bound together by pure unselfish love are not separated by either birth or death of a body. Attachments hold over from one life to another and bring the same individuals together in successive incarnations.

Another objection put forward against reincarnation is that by presenting the opportunities of future lives it will make people careless regarding the present, that they will follow evil courses, indulging in whatever gratifies the lower nature. This might be so if there were no retribution, but every evil thought and deed carries in itself the seed of pain. The law of Karma is inseparably linked to that of reincarnation, and there is no escaping the consequences of one's acts. This knowledge, instead of making people more inclined to lead evil lives, will have just the opposite effect.

The appearance of vicious children in virtuous families and virtuous children in vicious families is offered as an objection to the theory that the soul is drawn to reincarnate in a family having

similar characteristics to his own. Other factors than this, however, enter into the account. The interlinking of past Karma may be such as to bring together in the same family very different characters. Sometimes strong souls that have a mission to help humanity may be born into low conditions from choice, for by such birth they are best enabled to help all. They are too strong and pure to be overpowered by the conditions and so rise above them. But by their lowly birth and passing up through all ranks they are enabled to come into sympathetic touch with all.

Reincarnation accounts for the divergences in families while heredity does not, although it is claimed that they may be accounted for by reversion. Yet the theory of reversion is disproved by the appearance of a single genius in an obscure family; for had any of his like appeared before in that family it would not have been obscure.

It is claimed that reincarnation sets aside heredity, or that heredity invalidates reincarnation, neither of which is true; for reincarnation works with heredity, the latter affording the suitable physical environment for the returning ego.

Increase of population is put forward as an objection to reincarnation, yet it is not positively known that the population of the earth increases, there being no statistics of population in many parts of it; and even if the population should increase there are so many more egos out of incarnation than in it that the increase could easily be accounted for without affecting the theory of reincarnation.

Reincarnation is believed in by the majority of the human race. It is the belief of Brahmans, Buddhists, Zoroastrians, Sufi Mohammedans and many of the tribes of North and South America, among them the Mayas. It is held by some Jews and Christians and by most of the members of the Theosophical

Society of whatever religion. As a theory reincarnation is becoming less strange and unreasonable to the western mind, and it certainly best accounts for known existing facts.

This doctrine is very clearly taught in the *Bhagavad-Gita*, which is accepted by both Brahmans and Buddhists, and also in the Upanishads. It belongs to the ancient religious teachings of the Egyptians. The "Song of Resurrection" by Isis is a song of rebirth. It is taught in the *Talmud*, the *Zohar* and *Kether Malkuth*, and in the *Old* and *New Testaments*. Micah prophecies the coming again of one whose "going-forth" had been from everlasting (v. 2).

Jesus asked his disciples "Whom do men say that I am?" And they answered, "Some say thou art John the Baptist, some Elias, and others Jeremias or one of the prophets" (*Matthew*, xvi, 13). So it was thought that any of these might come again. And the same belief on the part of his own chosen disciples is implied by the question, "Who did sin, this man or his parents, that he was born blind?" (*John*, ix, 2), which implies the possibility of his sinning before birth. And Jesus said nothing against such a belief in either case although he says of himself, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth" (*John*, xviii, 37). On the contrary he declares that, "Before Abraham was, I am" (*John*, viii), and that John the Baptist was Elias come again (*Matthew*, xi, 14). In *Revelation* (iii, 12,) is the statement, "Him that overcometh will I make a pillar in the house of my God, and he shall go no more out," which implies that he had been out before and would go out again unless he overcame. In *John* (iii, 13) is the passage, "No man hath ascended up to heaven, but he that came down from heaven," which teaches preexistence unless heaven has been and is devoid of men. There are numerous other passages supporting the teaching of reincarnation to be found in the Christian Bible.

A general knowledge in the western world of the doctrines of karma and reincarnation would be a very beneficial influence. It would greatly increase the sense of moral responsibility and consequently the moral character of the people. It would change the attitude of the rich and the poor towards each other for the better. The rich would feel themselves accountable for making the best use of their wealth, would know that if they practised injustice and unkindness in their treatment of the poor and had no sympathy for their suffering, that they might expect sometime to be poor themselves and suffer like treatment to learn a needed lesson. So even from a selfish point of view there would be a strong incentive to brotherly action. A thorough assimilation of these doctrines would strike deeper root than this and would really make people less selfish. On the part of the poor these teachings would enable them to see that they themselves were the real makers of their hard lot, that they had earned it by their own past or that they had chosen it for their own soul growth.

This knowledge would help them to bear with patience what would otherwise be revolted against as great injustice, and it would take away their hate and envy of the rich, while at the same time the rich would be more kind to them, so that a general brotherly feeling would arise. A wholesome teaching is this:

Who toiled a slave may come anew a prince,
For gentle worthiness and merit won;
Who ruled a king may wander earth in rags
For things done and undone.

BHAGAVAD-GITA – CHAPTER VII — *William Brehon*

Although the strength of the devotee's devotion and faith for any God or object is due entirely to the Supreme Self, no matter if the faith be foolish and the God false, yet the reward obtained is said to be temporary, transitory, sure to come to an end. But unlike Western religious systems this is declared to be a matter of law instead of being determined by sentiment or arbitrarily. The sentences in which I find this are as follows:

But the reward of such short-sighted man is temporary.

Those who worship the Gods go to the Gods, and those who worship me come to me.

Man, made of thought, occupant only of many bodies from time to time, is eternally thinking. His chains are through thought, his release due to nothing else. His mind is immediately tinted or altered by whatever object it is directed to. By this means the soul is enmeshed in the same thought or series of thoughts as is the mind. If the object be anything that is distinct from the Supreme Self then the mind is at once turned into that, becomes that, is tinted like that. This is one of the natural capacities of the mind. It is naturally clear and uncolored, as we would see if we were able to find one that had not gone through too many experiences. It is moveable and quick, having a disposition to bound from one point to another. Several words would describe it. Chameleon-like it changes color, sponge like it absorbs that to which is applied, sieve-like it at once loses its former color and shape the moment a different object is taken up. Thus, full of joy from an appropriate cause, it may suddenly become gloomy or morose upon the approach of that which is sorrowful or gloomy. We can therefore say it becomes that to which it is devoted.

Now "the Gods" here represent not only the idols of idol-worshippers, but all the objects and desires people run after, for the idols are but the representatives of the desired object. But all these Gods are transitory. If we admit the existence of Indra or any other God, even he is impermanent. Elsewhere it is said that all the Gods are subject to the law of death and rebirth — at the time of the great dissolution they disappear. The vain things which men fix their minds on and run after are of the most illusory and transitory character. So whether it be the imaginary Gods or the desires and objects the mind is fixed on, it — that is, those who thus act — has only a temporary reward because the object taken is in itself temporary. This is law and not sentiment.

Pushing into details a little further it is said that after death the person, compelled thereto by the thoughts of life, becomes fixed in this, that or the other object or state. That is why the intermediate condition of kama-loka is a necessity. In that state they become what they thought. They were bigots and tortured others: those thoughts give them torture. Internal fires consume them until they are purified. The varieties of their different conditions and appearances are as vast in number as are all the immense varieties of thoughts. I could not describe them.

But those who worship or believe in the Self as all-in-all, not separate from any, supreme, the container, the whole, go to It, and, becoming It, know all because of its knowledge, and cease to be subject to change because It is changeless. This also is law, and not sentiment.

The chapter concludes by showing how the ignorant who believe in a Supreme Being with a form, fall into error and darkness at the time of their birth because of the hold which former life-recollections have upon the mind. This includes the power of the Skandhas or aggregates of sensations and desires accumulated in

prior lives. At birth these, being a natural part of us, rush to us and we to them, so that a new union is made for another lifetime. In the other life, not having viewed the Self as all and in all, and having worshipped many Gods, the sensations of liking and disliking are so strong that the darkness of rebirth is irresistible. But the wise man died out of his former life with a full knowledge of the Self at the hour of death, and thus prevented the imprinting upon his nature of a set of sensations and desires that would otherwise, upon reincarnation, lead him into error. This is the chapter on Unity, teaching that the Self is all, or if you like the word better, God: that God is all and not outside of nature, and that we must recognize this great unity of all things and beings in the Self. It and the next chapter are on the same subject and are only divided by a question put to Arjuna.

The Path

GENERAL PERTINENT OBSERVATIONS — *The Observer*

Quite a number of Theosophists — I mean members of the Society — have been talking to me of what a shame it is that the great daily newspapers give so much space to such events as a prize fight or the marriage of an American millionaire's daughter to an English duke, and will not put in matter about Theosophy. It is quite true that our doings do not occupy much space in the papers, but what are they for? They were not established for our propaganda and we should be satisfied with what they do give us. But it has been found that in outlying states and places, where there is not so much going on, the newspapers are willing to give a great deal of attention to us. I understand that the whole of the *Ocean of Theosophy* appeared in a newspaper of Fort Wayne, Indiana, before it was published in book-form. The great papers of the principal cities cannot afford to do this because their mass of readers is enormous and varied. The intelligent Theosophist will at once see that it would be hopeless to expect thousands of people who do not care for Theosophy to be daily interested in accounts of it. Then the city newspaper represents the selfish, hurried, superficial, money-grabbing majority, just as much as it does the others in minority. And if we just think for a moment — those of us who have kept up with our history — of the great difference between now and 1875 as to our treatment by newspapers, we must in fact be very thankful.

American members ought to know how difficult is the case of their European brothers. Here we have greater freedom of thought, hence quicker acceptance, and very little persecution. Over there it is not so. Such a thing could hardly occur there as did here the other day. The ministers in a town rose up against our lecturer and tried to prevent his speaking by inducing the

landlord to cancel the contract for the hall. Result: many citizens otherwise uninterested, intervened and obtained for us another hall. This could hardly take place, say in a similar small town in England, where the clergymen's *fiat* would be final. The people over there have not yet wholly escaped from the physical domination of the church. If they had lately so escaped they would themselves be yet too bigoted to give us the hearing or the freedom we get here.

Then, too, look at their newspapers! They either ignore the whole matter or now and then blurt out that Theosophy has been killed dead as a door-nail, never to rise again. All this tends to discourage. But members know Theosophy is not dead. We should not forget the plight of our fellows, and they can gain encouragement from our activity and the freedom we have.

A very significant fact is this: The Roman Catholics ignore Theosophy and all our doings. Of course now and then in their own church newspapers — which we never read — they may use us badly, but otherwise they are silent. We may go to a town and be well advertised, the Episcopalians and the Methodists will howl about us, but the Roman Catholics say nothing. This is in accord with the policy of killing a thing by ignoring it. We are therefore pleased, or ought to be, for the abuse the others heap upon us. Why should members groan when now and then we are loudly and unjustifiably abused? Why, that is a good advertisement, and surely we want the world to know of Theosophy.

Hypnotism is once more suggested as a means for doing away with all crime, and the New York *Herald* in November printed an article thereon. In this the writer proposes to hypnotize crime out of all criminals, and hopes soon to see asylums for the purpose. The case of a kleptomaniacal boy is cited who, the writer said,

had been changed into an honest boy, and now has a position of great trust.

This horrible notion, as it seems to me, will of course have believers and helpers. People, like physicians, are empirical and prone to cure the outer sore rather than the poor blood that caused it. But the case of the boy proves nothing because it is not known how long the effect of suggestion will last, nor whether it may not suddenly break down and leave the person again a criminal. Then the people who propose this method do not know Theosophy. They do not see the seeds of crime in the mind, and do not admit that it might be worse to prevent the criminal now for present benefit than to let him work his criminal nature out. For if his criminal thought is now simply stopped for a while it may come out worse in the next life. It would seem as if the story in the *Bible* of the man having his devils come back worse than before might illustrate this. But even the proposal made so seriously points out how generally theosophical and occult ideas have affected the American public.

Proposals looking to the formation of retreats — some irreverent people would call them monasteries or nunneries — for Theosophists, seem to be unwise. There are not enough members in the entire movement to do its work properly. Why then withdraw them from activity? The duty of every member now is a business duty as well as one purely philosophical, psychical and ethical. Collections of members coming together in one house should be, at this period of our progress, for better and wider work. And that work should be now and not in the future. Hence getting up such centres, in debt, and sure to have to struggle through a long period, is a mistake.

LETTERS OF H.P.B. TO DR. HARTMANN: I

1885 TO 1886

I

OSTENDE, DECEMBER 5

My dear Doctor: (1) — You must really forgive me for my seeming neglect of you, my old friend. I give you my word of honor, I am worried to death with work. Whenever I sit to write a letter all my ideas are scattered, and I cannot go on with the *Secret Doctrine* that day. But your letter (the last) is so interesting that I must answer it as asked. You will do an excellent thing to send to the *Theosophist* this experiment of yours. It has an enormous importance in view of Hodgson's lies and charges, and I am happy you got such an independent corroboration; astral light, at any rate, cannot lie for my benefit. (2)

I will only speak of number 4, as the correctness about the other three letters you know yourself. 1. This looks like the private temple of the Teschu Lama, near Tchigadze — made of the "Madras cement"-like material; it does shine like marble and is called the snowy "Shakang" (temple) — as far as I remember. It has no "sun or cross" on the top, but a kind of algiorna dagoba, triangular, on three pillars, with a dragon of gold and a globe. But the dragon has a swastika on it and this may have appeared a "cross." I don't remember any "gravel walk" — nor is there one, but it stands on an elevation (artificial) and a stone path leading to it, and it has steps — how many I do not remember (I was never allowed inside); saw from the outside, and the interior was described to me. The floors of nearly all Buddha's (Songyas) temples are made of a yellow polished stone, found in those

mountains of Oural and in northern Tibet toward Russian territory. I do not know the name, but it looks like yellow marble. The "gentleman" in white may be Master, and the "bald-headed" gentleman I take to be some old "shaven-headed" priest. The cloak is black or very dark generally — (I brought one to Olcott from Darjeeling), but where the silver buckles and knee-breeches come from I am at a loss. (3) They wear, as you know, long boots — up high on the calves, made of felt and embroidered often with silver — like that devil of a Babajee had. Perhaps it is a freak of astral vision mixed with a flash of memory (by association of ideas) about some picture she saw previously. In those temples there are always movable "pictures," on which various geometrical and mathematical problems are placed for the disciples who study astrology and symbolism. The "vase" must be one of many Chinese queer vases about in temples, for various objects. In the corners of the temples there are numerous statues of various deities (Dhyanis). The roofs are always (almost always) supported by rows of wooden pillars dividing the roof into three parallelograms, and the mirror "Melong" of burnished steel (round like the sun) is often placed on the top of the Kiosque on the roof. I myself took it once for the sun. Also on the cupolas of the [dagoba] there is sometimes a graduated pinnacle, and over it a disk of gold placed vertically, and a pear-shaped point and often a crescent supporting a globe and the svastica upon it.

Ask her whether it is this she saw, Om tram ah hri hum, which figures are roughly drawn sometimes on the Melong "mirrors" — (a disk of brass) against evil spirits — for the mob. Or perhaps

what she saw was a row of slips (little cubes) on which such things are seen:

If so, then I will know what she saw. "Pine woods" all round such temples, the latter built expressly where there are such woods, and wild prickly pear, and trees with Chinese fruit on that the priests use for making inks. A lake is there, surely, and mountains plenty — if where Master is; if near Tchigadze — only little hillocks. The statues of Meilha Gualpo, the androgyne Lord of the Salamanders or the Genii of Air, look like this "sphinx;" but her lower body is lost in clouds, not fish, and she is not beautiful, only symbolical. Fisherwomen do use soles alone, like the sandals, and they all wear fur caps. That's all; will this do? But do write it out.

Yours ever,

H. P. B.

II

WURZBURG, DECEMBER (SOMETHING), 1885

My dear Conspirator: (4) — Glad to receive from your letter such an emanation of true holiness. I too wanted to write to you; tried several times and — failed. Now I can. The dear Countess Wachtmeister is with me, and copies for me, and does what she can in helping, and the first five minutes I have of freedom I utilize them by answering your letter. Now, as you know, I also am occupied with my book. It took possession of me (the epidemic of writing) and crept on "with the silent influence of the itch," as Olcott elegantly expresses it — until it reached the fingers of my

right hand, got possession of my brain — carried me off completely into the region of the occult. (5) I have written in a fortnight more than 200 pages (of the *Isis* shape and size). I write day and night, and now feel sure that my *Secret Doctrine* shall be finished this — no, not *this* — year, but the next. I have refused your help, I have refused Sinnett's help and that of everyone else. I did not feel like writing — now I do. I am permitted to give out for each chapter a page out of the Book of Dzyan — the oldest document in the world, of that I am sure — and to comment upon and explain its symbology. I think really it shall be worth something, and hardly here and there a few lines of dry facts from *Isis*. It is a completely new work.

My "satellite," (6) I do not need him. He is plunged to his neck in the fascinations of Elberfeld, and is flirting in the regular style with the Gebhardt family. They are dear people and are very kind to him. The "darling Mrs. Oakley" has shown herself a brick — unless done to attract attention and as a *coup d'etat* in the bonnet business. But I shall not slander on mere speculation; I do think she has acted courageously and honorably; I send you the *Pall Mall* to read and to return if you please; take care of the paper.

Thanks for photo. Shall I send a like one to your "darling"? She is mad with me however. Had a letter from Rodha; she swears she never said to "Darling" or the he Darling either, that I had "abused them to the Hindus."

To have never existed, good friend, is assuredly better. But once we do exist we must not do as the Servian soldiers did before the invincible Bulgarians or our bad Karma, we must not desert the post of honor entrusted to us. A room may be always had at Wurzburg; but shall you find yourself contented for a long time with it? Now the Countess is with me, and I could not offer you anything like a bed, since we two occupy the bedroom; but even if

you were here, do you think you would not go fidgeting again over your fate? Ah, do keep quiet and wait — and try to *feel* once in your life — and then do not come at night, as you did two nights ago, to frighten the Countess out of her wits. Now you did materialize very neatly this time, you did. (7) Quite so.

Yours in the great fear of the year 1886 — nasty number.
H. P. B.

(*To be continued*)

FOOTNOTES:

1. On the request of Mr. and Mrs. Johnston and others I have permitted these private letters from H. P. Blavatsky to myself to be published in the PATH, as they contain some things of general interest. — Dr. F. Hartmann ([return to text](#))
2. This refers to the clairvoyant (psychometric) examination of an "occult letter," which was printed, together with the picture, in the *Theosophist* of 1886. The psychometer was a German peasant woman, entirely uninformed in regard to such things; but gave as it appears a correct description of a Buddhist temple in Tibet, with its surroundings and the inscriptions within; also of the lamas or priests and of the Master, and also of some people working in the neighborhood of the temple. The picture could not have been read from my own mind, as I have never seen such a temple, or if I have been there in the spirit, that visit has left no trace in my personal memory. — H. ([return to text](#))
3. The explanation of seeing the gentleman in knee-breeches may be that I was just then very much occupied with the spirit of the well-known occultist, Carl von Eckertshausen. — H. ([return to text](#))
4. H.P.B. used to call me in fun her "conspirator" or "confederate"

because the stupidity of certain persons went so far as to accuse me of having entered into a league with her for the purpose of cheating myself. — H. ([return to text](#))

5. This was in answer to a letter in which I complained of the irresistible impulse that caused me to write books, very much against my inclination, as I would have preferred to devote more time to "self-development." — H. ([return to text](#))

6. Babajee. ([return to text](#))

7. I know nothing about it. — H. ([return to text](#))

The Path

YUGAS — A. J. Vosburgh

In reading Theosophical literature one is often confronted by the words Mahayuga, Kaliyuga, Manvantara, Kalpa, etc. No doubt all of the older members of the T.S. are perfectly familiar with the words and their meaning, but it may be of help to recent members, or those who have not time or opportunity to dig down into ancient eastern chronology, to see the principal points clearly set forth.

It has been taught that there was no true understanding of the stellar or solar system until the time of Copernicus, some four hundred years ago, but to any student it is evident he built his system upon that of the Pythagorean school of two thousand years before. The Chinese have some astronomical annals, which they claim go back about 3000 years B.C.; they do not record much but comets and eclipses, and many of their predictions of the latter cannot be verified by modern calculations.

The Egyptians taught astronomy to the Greeks, and they no doubt had very close knowledge of the solar system; their year was of 365 days, with methods of correcting. Although they have left us no observations, the north and south position of the Pyramids has led to a supposition that the Egyptians used them for astronomical purposes. The Zodiac of Denderah is one of their relics, and it is worth noting that upon it the equinoctial points are in the sign of Leo. If it was constructed at that time, it would carry us back nearly 10,000 years.

The Chaldeans, according to Diodorus, had long observed the motion of the heavenly bodies, as well as eclipses; they had the metonic period, or cycle of 19 years, also three other astronomical cycles, the Saros of 3600 years, the Neros 600 and the Sosos of 60

years. Simplicius and Porphyry relate that a series of eclipses, preserved at Babylon, were transmitted by Alexander to Aristotle and contained the observations of 1903 years preceding the conquest of Babylon by the Macedonians, and although crude, they were sufficiently correct to enable Halley to discover the acceleration of the Moon's mean motion. There have also been discovered in the ruins of Palenque, among the Toltecs and Aztecs, planispheres, on one of which were inscribed symbolical figures corresponding nearly to the signs on the Chinese planispheres, and (Humbolt) "that the name of the first day is also the name of *Water*, and that the symbol consists of undulating lines similar to that of Aquarius in the Egyptian and Greek Zodiacs.

The Hindus have possessed astronomical knowledge for thousands of years, and their calculations today are found to be singularly correct; the question in regard to them is, whether an astronomical system of advanced character, which certainly was found among them, is as old as they assert it to be. It is claimed that they may have obtained their knowledge from the Arabians or Egyptians; but, on the other hand, the remarkable correctness of their tables, and the known character of the people in question, whose advances in mathematics cannot be doubted, and whose habits have throughout recorded history induced them to repel all connection with foreigners, are urged in favor of the originality of their system. We have their calendars annexed to the Vedas, which date back according to Colebrooke 1400 years B.C. They include a solar year of 365 days and are so composed as to determine it correctly. The Zodiac of Vereapettah and that described by Sripeti in the Sanskrit, are believed to be older than Denderah. (Sir William Jones.)

The "Bones of Napier," an ingenious instrument used in making long calculations, before the discovery of logarithms, was used in

a slightly different form by the Hindus long before.

As with nations of the present, the Hindus referred to two principal meridians, Lanca and Ramissuram. Lanca is supposed to have been an island (no longer existing) under the equator, somewhat southwest of the island of Ceylon. It was one of the four cities, Yavacoti, Lanca, Bornacoti, and Siddhapuri, which are supposed to lie under the equator 90 deg. distant from each other. Ramissuram is a small island situated between Ceylon and the continent of India at the entrance of Palks passage in the straits of Manaar. It is famous for its ancient Pagoda and Observatory. The meridian of Lanca is supposed to run through two other towns on the continent of India, Sanahita-saras and Avanti, now Oogein. The Shastras state that "in the north on the same meridian as Lanca there are two other cities, Avanti-Rohitaca (the mountain) and Sannihita-saras, which in *former times* were the seats of colleges and observatories." I mention these facts simply to show the possession by the Hindus from remote times of an extensive knowledge of mathematics and astronomy. We now come to their division of time.

The Tamil solar year is sidereal, *i.e.*, the space of time during which the Sun departing from a star returns to it again. Their Zodiac is divided into 12 signs, or mansions, Mesha, Vrisha, Midhuna, *et al*, corresponding to our Aries, Taurus, Gemini, etc. Each solar month contains as many days and parts of days as the sun stays in each sign. They divide the year into six seasons, called Ritu, in the Sanskrit, of two months each, the first of which, Chaitram or Vaisacha, corresponds to our April. The Saran or natural day is the time included between two consecutive sun risings. The names of the days are as follows:

1. Sunday	Ravi	Sun
2. Monday	Soma	Moon

3. Tuesday	Mangala	Mars
4. Wednesday	Bhuda	Mercury
5. Thursday	Guru	Jupiter — also Teacher's day.
6. Friday	Sucra	Venus
7. Saturday	Sani	Saturn.

They also divided time into a number of cycles or yugas, the meaning of which has been interpreted in various ways; the most accepted holds that the word yug, or yuga, properly means the conjunction or opposition of one or more planets. It is generally used however to express long periods of years at the expiration of which certain phenomena occur. It is probably more particularly referred to the revolution of Jupiter, one of whose years is about twelve of ours, five revolutions or sixty years being equal to a Vrihaspati chakra or cycle (literally a wheel) of Jupiter. In this Vrihaspati cycle there are contained five other cycles of twelve years each. The names of these five cycles or yugas are:

1. Samvatsara	Presided over by	Agni
2. Parivatsara	"	Area
3. Iduratsara	"	Chandra
4. Anuvatsara	"	Brahma
5. Udravatsara	"	Siva

The use of these yugs is prehistoric, at least to outsiders. In each Mahayug, reckoning from the past, we have four lesser yugs, as follows:

1. Satya yug	or Golden age	1,728,000 years
2. Treta yug	or Silver age	1,296,000 years
3. Dvapara yug	or Brazen age	864,000 years
4. Kali yug	or Iron age	432,000 years

So that a Mahayug consists of 4,320,000 years.

The sun performs 4,320,000 Bag-hanas, or sidereal revolutions, in a Mahayug.

There are also the Ayanas, or librations of equinoctial points, 600 in a Mahayug.

A Kalpa consists of 1000 Mahayugs, or 4,320,000,000 years, which Kalpa is also called a "Day of Brahma" (*S.D.* ii, 308). In *making up* the Kalpa we have, first, a twilight, or Sandhya, equal to the Satya yug of 1,728,000 years; second, fourteen Manvantaras of 308,448,000 years *each*, all of which together make up the Kalpa. Each Manvantara is presided over by a patriarch, or Manu, the names of which I omit. *We are* living in the seventh Manvantara (presided over by the patriarch Vaivas-vata), of which twenty-seven Mahayugs have passed. So if one desires to know exactly where he is along the "Pilgrimage of the Ego" the following scheme will place him:

Sandhi, or Twilight of Kalpa	1,728,000 years
Six Manvantaras	1,850,688,000 years
Twenty-seven Mahayugs	116,640,000 years
The Satya yug = to Sandhi	1,728,000 years
The Treta yug	1,296,000 years
The Dvapara yug	864,000 years
Of Kali yug up to April 11th, 1895	4,997 years

The beginning of the Kalpa was the time when planetary motion began. Of this time, 17,064,000 years were spent or employed in creation, at the end of which man appeared.

It will be seen from the above that the first 5000 years of our Kali yug will expire April 11th, 1898.

Do *we* look for any manifestations?

The Path

SOME VIEWS OF AN ASIATIC (1)

You ask me what is my belief about "reincarnation." Well, as it is a complicated question, I must give you a plain statement of my full belief. To begin with, I am a Pantheist. I believe that *the whole universe is God*. You must, however, well understand that the word "God" does not convey to me any meaning attached to that word by the Westerns. When I say "God" I understand it to be nature or universe, and no more. Therefore I might more appropriately be called a "naturalist." To my mind there is no possibility of the existence of an extra-cosmical Deity. For if there were, the harmony or equilibrium of nature could not be preserved, and the whole, instead of being one harmonious whole, would be a Tower of Babel. This harmony can be kept only by the working of the immutable laws of Nature. And if the laws of nature be immutable, they must be blind, and require no guiding hand. (2) Hence the existence of an extra-cosmical Deity is impossible. This is, as far as I can understand, the chief teaching and principle of Aryan philosophy. As the position is logical, I must accept it in preference to the Semitic theory, which rests on blind faith alone.

Some of the Pantheists recognize the existence of two distinct entities, viz., Matter and Spirit. But thinking deeply over the subject has led me to the conclusion that their position is not quite logical; for, as far as I can understand, there can be but one Infinite entity and not two. Call it either matter or spirit, but it is one and the same. Who can say that this is spirit and that matter? Take an instance: Ice is a gross form of matter. If a little rarified it will be water, which is still matter. Higher still it is vapor; still matter. Higher, gas; it is still matter. Further it becomes ether, but it is still matter; and then you may go on *ad infinitum*. Thus

becoming more and more sublimated, it will reach its climax by the way of spiritualization. But still it does not become nothing. For if it does, there must come a time when the whole universe will be nothing. If it is so, it is not infinite, as it has an end. If it has an end, it must have had a beginning; if it had a beginning, it must have been created; and thus we must assume the existence of an extra-cosmical Deity, which, as said above, is not logical. Then we thus logically find that this highest sublimated form of matter cannot be nothing. In this case matter has reached that climax of sublimation or spiritualization, when any further action would make it grosser, not finer. What is commonly understood by the word *spirit*, then, is nothing but that highly etherealized form of matter which we, with our finite senses, cannot comprehend. But it is still matter, inasmuch as it is still something and liable to be grosser.

There is then *only one* eternal infinite existence, call it either spirit or matter. I will, however, call it by the latter name, as that is most suited in its common understanding for what I am to state. Matter, as you know, we call *Maya*. Some say that this thing does not really exist; but I do not agree to that. In my opinion it is called *Maya simply on account of these transformations*. It is never steady. The process is ever working. The one infinite agglomeration of matter is in some of its modes becoming grosser, while in others becoming more sublimated. The circle is ever turning its round. Nothing goes out of that circle. Everything is kept within its bounds by the action of the centripetal and centrifugal forces. The *forms* are changing, but the *inner substance* remains the same.

You will ask: "What is the use of being good or bad; our souls in proper time will be etherealized?" But what is a soul? Is it material or immaterial? Well, it is material for me, and there is nothing immaterial, as said above. As far as I can think, it is an

agglomeration of all the attributes together with that something which gives us the consciousness that we *are*. But in the case of the ice, it was not sublimated until touched by heat. The centripetal force was strong in its action, and it required the centrifugal force to refine the ice. Just so with man. The action of the centripetal force keeps us to our gross forms, and if we have to etherealize ourselves, we must supply the centrifugal force, which is our *will*. And this is the first principle of Occultism. We must study and know the forces of nature. Every result must be in proportion to the cause producing it. We are every instant emitting and attracting atoms of matter. Now, a person who is not an occultist will have various desires, and unconsciously to himself he will produce a cause which will attract to him such atoms of matter as are not suited for his higher progress. The same way, when he is emitting others, he may give them such a tendency that they will mix with others evilly inclined; and thus other individualities, which are thus formed, will have to suffer for no fault of theirs. But an occultist directs both. He is the master of the situation. He guides them, and by knowing their action he produces such conditions as are favorable to his obtaining of "Nirvana." (3)

But what is *Nirvana*? By Nirvana I mean a *state*, and not a locality. It is that condition in which we are so etherealized that instead of being merely a mode of the Infinite Existence, as at present, we are merged in totality, or we become the *whole*. Another thing about the advanced occultist is that he is in a better position to benefit humanity.

The particles of which I am formed have always existed; yet I do not know in what form they existed before. Probably they have passed through billions of transformations. (4) Why do I not know these? Because I did not supply the force that would have prevented the disintegration of my individuality. (5) I will, if I

attain Nirvana, remain there till the action of the force that put me there ceases; the effect being always in proportion to the cause. The law of Exhaustion must assert itself. (6)

In passing through this process of etherealization, you all along give a certain tendency to the particles of which you are composed. This tendency will always assert itself; and thus in every cycle, or reincarnation, you will have the same advantages which you can always utilize to soon be free, and by remaining longer in the Nirvana state than the generality of humanity, you are comparatively free. (7) So every consciousness, which has been once fully developed, must disintegrate, if not preserved by the purity of its successive Egos till the Nirvana state is attained. Now I believe that the full development of my consciousness as Krishna is possible only on this earth, (8) and therefore if I die before that is done I must be reborn here. If I reach the Nirvana state, even though I am in another body, I shall know myself as Krishna.

Now I suppose this is sufficient for you. It is difficult to put such ideas on paper. Such things are to be understood intuitively.

FOOTNOTES:

1. Taken from a private letter to William Q. Judge, F.T.S., received in 1878-9, and first published in the *Platonist*. ([return to text](#))

2. Allowance must be made all through for a lack of complete knowledge of the English language. What is here meant is that the inherent impulse acts according to its own laws without any *extra-cosmic* power meddling with it as a guide. — Editor. ([return to text](#))

3. It is said that Buddha attained to Nirvana before he left this earth, hence he was always free. — Editor. ([return to text](#))

4. That all the particles of the matter of our universe have passed through millions of transformations, and been in every sort of form, is an old assertion of the Adepts. H.P.B. in *Isis Unveiled*, and the *Secret Doctrine* points this out as showing how the Adept may use matter, and it will also bear upon the protean shapes the astral matter may assume. Editor. ([return to text](#))

5. This word is used to mean the personalities; the person in any birth. Since the letter was written, *individuality* is much used to mean the indestructible part.- Editor. ([return to text](#))

6. If this be right —and I agree with it — Nirvana has to come to an end, just as Devachan must; and being ended, the individual must return to some manifested plane or world for further work.- Editor. ([return to text](#))

7. The comparison made is with the general run of men in all races. They are not free at any time. In the writer's opinion there is a certain amount of freedom in being in Nirvana; but he refers to other and secret doctrines which he does not explain. — Editor. ([return to text](#))

8. This has always been accepted, that only on earth could we unify the great potential trinity in each, so that we are conscious of the union, and that when that is done, and not before, we may triumph over all illusions, whether of name or form, place or time, or any other. — Editor. ([return to text](#))

The Path

THE SCREEN OF TIME — *William Q. Judge*

Forever hiding futurity, the Screen of Time hangs before us, impenetrable. Nor can it be lifted. Its other side may have pictures and words upon it which we would like to read. There is such a desire in the human heart to know what the coming days may hold, that if there be pictures on the hidden side of the Screen we long to see them. But fortunately for us in our present weak condition we may not look behind. Standing in front, all we are privileged to perceive are the reflections from human life thrown upon this side known as the present, while the pictures that have been there in the past turn themselves into background and distance, sometimes bright, but oftener gloomy and grey.

A very pernicious doctrine is again making an appearance. It is weak, truly, but now is the time to deal with and destroy it if possible. It is the theory that the best way to overcome a tendency — of any sort — of the physical nature, is to give way to it. This is the dreadful doctrine of Satiation: that the only way to deal with lust and other things of the lower plane is to satisfy all cravings. By argument this may be shown to be an evil doctrine; but fact overcomes all argument, and it is easy to discern the truth to be that satiation of a craving does not remove its cause. If we eat, and dissipate hunger, the need for food will soon be felt again. And so with all cravings and tendencies which are classified as bad or low, or those which we wish to get rid of. They must be opposed. To satisfy and give way to them will produce but a temporary dullness. The real cause of them all is in the inner man, on the plane of desire whether mental or physical. So long as no effort is made to remove them they remain there. The *Voice*

of the Silence is against the doctrine of satiation most clearly, and so are the voices of all the sages. We must all wish that this pernicious idea may never obtain a hold in Theosophical ranks.

The desire to see the fulfilment of lugubrious and awful prophecies is a singular one for good men to hold. Yet many Theosophists have this most strange peculiarity. They have read and heard of certain prophecies said to have been made by H. P. B. about calamitous and disastrous times to come in Europe; of a new reign of terror; of sinking continents and destroyed nations. They add to these the improbable, vague and sometimes hoaxing prophecies by astrologers and old women. Then they begin to wish all these most terrifying things would come to pass so that their prophets may be justified. Every time a slight jar occurs in Europe they feel the *terreur* is at hand. But it does not arrive. Surely we ought to be satisfied with an ominous prophecy, if we believe in it, and be content to let its fulfilment be delayed for an extremely long period. We do not need prophecies, in any case, because out of our present deeds future events are made. Those among us who wish, as I said, for the realization of forebodings are the croakers of the movement. Even among the singular people called Theosophists they are singular, but their peculiarity is both unhealthy and useless.

In 1888 I had a morning conversation with H. P. B. at the Lansdowne Road house in London, upon the spread or weight of the Theosophical movement. I said that it was sometimes appalling to remember the millions of people in America alone, in comparison with the few Theosophists and Theosophical branches: what hope was there of our making a change in national character in any land? Her reply was that, while it might seem discouraging looked at in that way, it was really not so.

"Look," she said, "at our beginnings in 1875, when no one knew of Theosophy, and only jokes greeted our amazing efforts for publicity. But now we have come into the papers and magazines. We have made a distinct impression on the mind and literature of the time. This is much to have done."

There is abundant proof of this on every hand. Our name is now well understood. Writers may allude in their sketches to Theosophists and Theosophy without fear of castigation by the editor. There are two recent conspicuous instances. The N. Y. *Herald*, in December last, had an article in which this occurs:

"No man on the globe knows how to keep a hotel as the American does. He is a perfect *Mahatma* at the business."

Here is this great word abused, it is true; but that does not damage it. It has reached in less than twenty years the familiar treatment which it took in India centuries to come to. There they often use it as a term of reproach, on the principle that to call a man that high and great thing which he cannot be is to abuse him.

Again, in the *Cosmopolitan* for December last — a magazine widely read — there is a story by Zangwill called "Choice of Parents," on the abolition of compulsory reincarnation. The sketch deals entirely with the ante-natal world and reincarnation on the earth. Not long before the author had something in the English *Pall Mall Magazine* wherein Theosophy, Theosophists and reincarnation were mentioned. I do not know who will have the hardihood to deny the great share the Theosophical movement has had in bringing about this change.

At the present time one of the most urgent needs is for a simplification of Theosophical teachings. Theosophy is simple

enough; it is the fault of its exponents if it is made complicated, abstruse or vague. Yet enquiring people are always complaining that it is too difficult a subject for them, and that their education has not been deep enough to enable them to understand it. This is greatly the fault of the members who have put it in such a manner that the people sadly turn away. At public meetings or when trying to interest an enquirer it is absolutely useless to use Sanskrit, Greek or other foreign words. Nine times out of ten the habit of doing so is due to laziness or conceit. Sometimes it is due to having merely learned certain terms without knowing and assimilating the ideas underneath. The ideas of Theosophy should be mastered, and once that is done it will be easy to express those in the simplest possible terms. And discussions about the Absolute, the Hierarchies, and so forth, are worse than useless. Such ideas as Karma, Reincarnation, the Perfectibility of Man, the Dual Nature, are the subjects to put forward. These can be expounded — if you have grasped the ideas and made them part of your thought — from a thousand different points of view. At all meetings the strongest effort should be made to simplify by using the words of our own language in expressing that which we believe.

The Path

LETTERS OF H.P.B. TO DR. HARTMANN: II

1885 TO 1886.

III

[NO DATE]

MY DEAR DOCTOR: — Two words in answer to what the Countess told me. I do myself harm, you say, "in telling everyone that Damodar is in Tibet, when he is only at Benares." You are mistaken. He left Benares toward the middle of May, (ask in Adyar; I cannot say for certain whether it was in May or April) and went off, as everybody knows, to Darjeeling, and thence to the frontier *via* Sikkhim. Our Dar-jeeling Fellows accompanied him a good way. He wrote a last word from there to the office bidding good-bye and saying: "If I am not back by July 21st you may count me as dead." He did not come back, and Olcott was in great grief and wrote to me about two months ago, to ask me whether I knew anything. News had come by some Tibetan pedlars in Darjeeling that a young man of that description, with very long flowing hair, had been found frozen in the (forget the name) pass, stark dead, with twelve rupees in his pockets and his things and hat a few yards off. Olcott was in despair, but Maji told him (and he, D., lived with Maji for some time at Benares,) that he was not dead — she knew it through pilgrims who had returned, though Olcott supposes — which may be also — that she knew it clairvoyantly. Well I know that he is alive, and am almost certain that he is in Tibet — as I am certain also that he will not come back — not for years, at any rate. Who told you he was at Benares? We want him sorely now to refute all Hodgson's guesses and inferences that I simply call lies, as much as my "spy" business and forging — the blackguard: now mind, I do not give myself out as infallible in

this case. But I do know what he told me before going away — and at that moment he would not have said a fib, when he wept like a Magdalen. He said, "I go for your sake. If the Maha Chohan is satisfied with my services and my devotion, He may permit me to vindicate you by proving that Masters *do* exist. If I fail no one shall ever see me for years to come, but I will send messages. But I am determined in the meanwhile to make people give up searching for me. I want them to believe I am dead."

This is why I think he must have arranged some trick to spread reports of his death by freezing.

But if the poor boy had indeed met with such an accident — why I think I would commit suicide; for it is out of pure devotion for me that he went. (1) I would never forgive myself for this, for letting him go. That's the truth and only the truth. Don't be harsh, Doctor — forgive him his faults and mistakes, willing and unwilling.

The poor boy, whether dead or alive, has no happy times now, since he is on probation and this is terrible. I wish you would write to someone at Calcutta to enquire from Darjeeling whether it is so or not. Sinnett will write to you, I think. I wish you would.

Yours ever gratefully,
H. P. B.

IV

[NO DATE]

MY DEAR DOCTOR: — I read your part II — and I found it excellent, except two or three words you ought to change if you care for truth, and not to let people think you have some animus yet against Olcott. (2) Such are at the end "Presidential orders" and too much assurance about "fictions." I never had "fictions," nor are Masters (as living men) any more a fiction than you and I. But

this will do. Thus, I have nothing whatever against your theory, though you do make of me a sort of a tricking medium.

But this does not matter, since as I wrote to Dr. H.S. and will write to all — "Mme. Blavatsky of the T.S. is dead." I belong no more to the European Society, nor do I regret it. You, as a psychologist and a man of acute perception, must know that there are situations in this life, when mental agony, despair, disgust, outraged pride and honor, and suffering, become so intense that there are but two possible results — either death from broken heart, or ice-cold indifference and callousness. Being made to live for purposes I do not know myself — I have arrived at the latter state. The basest ingratitude from one I have loved as my own son, one whom I have shielded and protected from harm, whom I have glorified at the expense of truth and my own dignity, has thrown upon me that 'straw which breaks the camel's back.' It is broken for the T. S. and for ever. For two or three true friends that remain I will write the *S.D.*, and then — depart for some quiet corner to die there. You have come to the conviction that the "Masters" are "planetary spirits" — that's good; remain in that conviction.

I wish I could hallucinate myself to the same degree. I would feel happier, and throw off from the heart the heavy load, that I have desecrated their names and Occultism by giving out its mysteries and secrets to those unworthy of either. If I could see you for a few hours, if I could talk to you; I may open your eyes, perhaps, to some truths you have never suspected. I could show you who it was (and give you proofs), who set Olcott against you, who ruined your reputation, and aroused the Hindu Fellows against you, who made me hate and despise you, till the voice of one who is the voice of God to me pronounced those words that made me change my opinion. (3)

I could discover and unveil to you secrets for your future safety

and guidance. But I must see you personally for all this, and you have to see the Countess. Otherwise I cannot write. If you can come here, even for a few hours, to say good-bye to me and hear a strange tale, that will prove of benefit to many a Fellow in the future as to yourself, do so. If you cannot, I ask you on your honor to keep this private and confidential.

Ah, Doctor, Karma is a fearful thing; and the more one lives in his inner life, outside this world and in regions of pure spirituality and psychology, the less he knows human hearts. I proclaim myself in the face of all — the biggest, the most miserable, the stupidest and dullest of all women on the face of the earth. I have been true to all. I have tried to do good to all. I have sacrificed myself for all and a whole nation — and I am and feel as though caught in a circle of flaming coals, surrounded on all sides like an unfortunate fly with torn-off wings — by treachery, hatred, malice, cruelty, lies; by all the iniquities of human nature, and I can see wherever I turn — but one thing — a big, stupid, trusting fool — "H.P.B." — surrounded by a thick crowd circling her (4) of traitors, fiends and tigers in human shape.

Good-bye, if I do not see you, for I will write no more. Thanks for what you have done for me. Thanks, and may you and your dear, kind sister be happy.

Yours,
H. P. B.

(To be continued)

FOOTNOTES:

1. The fact is that Damodar was never asked to go to Tibet, but begged to be permitted to go there, and at last went with permission of H.P.B., on which occasion I accompanied him to the steamer. — H. ([return to text](#))

2. This refers to my *Report of Observations at the Headquarters at Adyar*. ([return to text](#))

3. Babajee, whose Brahmanical conceit caused him to turn against H.P.B. when he became convinced that he could not make her a tool for the propaganda of his creed. — H. ([return to text](#))

4. This explains the letter printed in the notorious book of V. S. Solovyoff, page 124. The intrigue was acted by Babajee, who, while professing great friendship for me, acted; as a traitor and spy. — H. ([return to text](#))

The Path

THE SUBJECTIVE AND THE OBJECTIVE — *Alpha*

A LESSON FROM THE CAVE OF PLATO — REPUBLIC, BOOK I

"After this, I said, imagine the enlightenment and ignorance of our nature in a figure: Behold! human beings living in a sort of underground den, which has a mouth opening towards the light, and reaching all across the den; they have been here from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them; for the chains are arranged in such a manner as to prevent them from turning round their heads. At a distance above and behind them the light of a fire is blazing, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have before them, over which they show the puppets.

"I see, he said.

"And do you see, I said, men passing along the wall, carrying vessels which appear over the wall; and some of the passengers, as you would expect, are talking, and some of them are silent?

"That is a strange image, he said, and they are strange prisoners.

"Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

"True, he said, how could they see anything but the

shadows, if they were never allowed to move their heads?

"And of the objects which were being carried in like manner they would only see the shadows?"

"Yes, he said.

"And if they were able to talk with one another, would they not suppose that they were naming what was actually before them?"

"Very true.

"And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy that the voice which they heard was the voice of a passing shade?"

"No question, he said.

"There can be no question, that the truth would be to them just nothing but the shadows of the images."

The term *consciousness* is used by writers connected with the Theosophical movement with a very wide range of meaning. Atoms are invisible lives, says H.P.B.; and there is no such thing as inorganic, in the sense of dead or lifeless matter. Every variety or kind of existence is conscious on its own plane or according to its own condition or state; the molecules of granite as well and as truly, though not in the same way, as the mind of man. Every molecule in the brain has its own consciousness, according to its state or plane of existence; and the sum of the consciousness of its molecules is the consciousness of the brain in its totality, considered as a merely physical, visible organ.

But the astral man, which we may take to be coextensive with the physical man, and to correspond with it, if not to coincide with it,

organ for organ and molecule for molecule, is the real seat of sensation; and in the brain the sensations are registered and interpreted. The astral brain, the organ of Kama Manas, or of the lower or personal mind, furnishes the connecting link between the thinker and the object of thought; and here is bridged the chasm which has been recognized by philosophers, in Western lands at least, as utterly impassable. Says President Bascom:

"Facts must exist either in space as physical or in consciousness, as mental; there is no third state. Mental and physical phenomena are cut broadly and deeply apart, by the fact that the one class transpires exclusively in consciousness, and the other as exclusively out of consciousness (in space)."

Again he says:

"There is no *a priori* impossibility discoverable by us, making the transfer of influence from mind to matter, from matter to mind, an absurdity. Our last traces of physical force in the movement inward are found in the brain; our first traces in the movement outward are also met with at the same point. Thus far only can the eye trace material changes; here is- it first able to pick them up. How the last nervous impulse is linked to the play of consciousness . . . we cannot imagine. . . . We are profoundly ignorant of any connection between the two."

Now the scheme of Theosophy recognizes a continuous gradation of powers, faculties, states, principles — call them what you will — from the highest or most spiritual to the lowest or most material. In this whole gamut of states or conditions no chasm is found; there is nothing to bridge; consciousness is the necessary substratum and presupposition of the most material, and consciousness is the noumenon or essential reality of the most:

spiritual.

We know of nothing more material or external than the physical, material, visible body — the world of matter, so called; and here is the inner wall (reversing the figure from outward to inward) of the cave which Socrates describes in Plato's dialogue; the wall upon which fall the shadows supposed by the prisoners to be the only realities. Indeed, the "wall" may be taken as merely the drop-curtain of the theatre, and the shadows themselves as representing the physical substance known to ourselves and our fellow prisoners. Hence there can be on this lowest plane (the plane of the shadows) really no consciousness as we know it; consciousness only looks on what is below, and cannot for its chains turn its face upward to the light. It is said, indeed, that the atom is the Atma or seventh principle of the molecule; but the molecule is infinitesimal and invisible, and what consciousness it may have in itself — what is the nature of consciousness on that plane — we cannot profitably guess even, much less know.

The astral or kamic man is within, or above, or superior to the physical man; and its apprehension of external or physical nature, which we term sensation, is the lowest form of consciousness recognized by us. But mere sensation is not intelligent. As the astral or emotional man exists within (in the symbolical meaning of "within") the physical man, and by its power of sense takes hold of the latter, so there exists within the astral or emotional the logical faculty or principle, whose office is to sort out the sensations and refer each to its source or cause in the outer world. This logical faculty (the lower mind or Kama Manas) is, as related to the world or planes below it, the faculty that perceives; and its action in taking hold of and interpreting the sensations is called perception.

Now suppose we consider the real Ego, the enduring entity that

we mean when we say "man," to be one of the prisoners represented by Plato as confined in a den or cave; and external, physical, visible and tangible matter as the shadows on the wall of the cave. The Ego, in its descent from spirit into matter, goes deeper and deeper into the cave until it reaches the wall and is stopped. It can go no farther; and it must, impelled by the universal and all-embracing law of action and reaction, retrace its course toward spirit. Its progress downward or outward (from spirit — inward as to the cave) has been without consciousness in any sense that we can comprehend. When it strikes the wall of its dungeon and strives to go still farther, it cannot do so; its limit is reached. This develops unintelligent consciousness — a consciousness wholly spiritual, and in no sense maniac. As it recedes backward in involution, still facing the wall, the reflected light of Manas thrown back from the wall enables it to interpret in a manner these sensations — to distinguish them from each other and to group them — but not at first to relate them to itself. Here is the beginning of the lowest mind, known in Mr. Sinnett's classification as Kama Rupa or the Animal Soul. To reach this degree of development immeasurable ages were required. The first dawn of sensation begins when the physical development has proceeded far enough to furnish a suitable vehicle for the astral body. The astral development goes on, and moulds the physical world to its purpose, until it in its turn has become — or until the two together have become — a suitable vehicle for the emotional and perceptive faculties. These steps are easy to name, but they have been taken with slow and toilsome tread through the first, second and third rounds of our chain of globes; and were repeated in briefer but immensely long periods in the first races of this our fourth round.

To the stone belongs molecular consciousness, not consciousness as we know it, but only so called by analogy; to the plant belongs

astral consciousness, or the dawn of sensation; to the animal belongs emotional consciousness, or the dawn of perception. As this faculty or principle becomes more and more fully developed and active, a new faculty begins to act — the human intellect, the lower manas, begins to awake and exercise its functions. The prisoner has retreated far enough from the wall of his cave, has evolved far enough toward spiritual perception, to be able to recognize his lower principles as himself — to relate the experience, the sensations, the perceptions of these lower principles to his own identity; to distinguish between the "I" and the "not-I." This is self-consciousness, or consciousness of self; and here the human stage is reached in the return of the monad from its journey to the confines of matter.

In *Discussions of Philosophy and Literature*, Sir William Hamilton, one of the foremost philosophers of modern times, makes the following statement:

"In the philosophy of mind, *subjective* denotes what is to be referred to the thinking subject, the Ego; *objective*, what belongs to the object of thought, the Non-Ego. . . . These correlative terms correspond to the first and most important distinction in philosophy; they embody the original antithesis in consciousness of self and not-self — a distinction which in fact involves the whole science of mind; for psychology is nothing more than a determination of the subjective and the objective, in themselves, and in their reciprocal relations."

Hamilton was not only a profound thinker and an erudite scholar; he was also a master in the English language, and capable of expressing his thoughts clearly and tersely. The definition above quoted certainly gives the right use of these terms; and for those who, with President Bascom, hold that a gulf

that cannot be bridged cuts broadly apart the facts which transpire in consciousness and the facts which transpire in space, it would seem to need no further elucidation. But when they are used in Theosophical discussions, the further consideration must not be overlooked, that the Ego, the Non-Ego, and the bond between the two (the thinker, the object of thought, and the thought) are all one. This gives emphasis to the fact that the line between the subject and object is purely imaginary; the distinction is logical and not metaphysical. Thus the terms subjective and objective are seen to be wholly correlative, and what is subjective in one relation is objective in another, and *vice versa*. This correlative feature has always been recognized; but it becomes more significant and takes on new phases when viewed in the light of the septenary constitution of man.

Philosophers who have thought most deeply, and who have explored most fully the nature of man, and the various problems of ontology, show by their postulates and their reasoning that they implicitly apprehend, if they do not explicitly recognize, several of the distinctions represented by the septenary classification of principles. Dr. James March, president of the University of Vermont at the time of his death about fifty years ago, left several philosophical treatises which were afterward collected and published by his successor in the faculty of that institution. It is many years since I read this work, but I remember distinctly an essay in which the learned doctor discussed the changes wrought by the supervening of higher faculties in the course of evolution. He spoke of the force by which a crystal is built up by accretion, by regular additions from without; of the force by which a vegetable germ develops from within; of the powers of perception and locomotion which distinguish the animal, to some species of which he conceded the logical faculty of ratiocination; and of the faculty of intuition, or

perception of intellectual and spiritual truths and axioms, which distinguishes man from the lower forms of animal life. Here, in the classification of existence as amorphous, crystalline, vegetable, animal and human, each higher including all lower but superadding a new faculty, power, or principle of growth, there is plainly foreshadowed the method upon which our teaching of the septenary constitution of nature and of man is developed.

As the subjective is that which is within, and the objective is that which is without, the relation first emerges upon the evolution of the astral principle, or *Linga Sharira*; for the merely physical entity is so thoroughly one in nature that its different forms can hardly be considered as bearing this relation to each other. (Yet there is probably a septenary in physical nature below the astral, as witness earth, water, air, fire, etc.; and earth may be in truth objective to air.) The distinctions that are so obvious, organic, inorganic, etc., are really differing manifestations of the informing higher principles. But upon the development of the astral principle the relation appears; this is subjective as to the physical body, and the latter is objective as to the former. So when the kamic principle develops, or evolves from potentiality to potency, from a latent state to activity, this in turn becomes subjective, and to it the lower principles are objective. When the Lower Manas in its turn becomes active and subjective, it takes intelligent cognizance of the lower principles as objective, and recognizes their identity with itself, and then self-consciousness appears. And when, by evolution or training, the Higher Manas becomes active, then will the entire quaternary, or lower Ego, become in relation to this added faculty, objective.

This is very well expressed in an article in *Lucifer* for September, 1891 (vol. ix, p. 23,) as follows:

"This expansion of consciousness includes a development

of the subtle senses which open up to the inner man new worlds, peopled with their inhabitants, and interdependent the one with the other. The subjective becomes the objective, with a still more subtle subjectivity beyond, which can become again objective as a still more spiritual consciousness is attained by the striver after freedom."

In the *Secret Doctrine*, vol. i, p.189, H.P.B. says:

"It stands to reason that there must be an enormous difference in such terms as 'objectivity' and 'subjectivity,' 'materiality' and 'spirituality,' when the same terms are applied to different planes of being and perception."

This paper is intended to be suggestive rather than exhaustive; and I shall have accomplished my purpose if I have set the relation of subjective to objective in a clearer light, and pointed out the direction in which to look for a better understanding of the philosophical side of our literature.

The Path

BHAGAVAD-GITA – CHAPTER VI — *William Brehon*

More than one subject is treated in this chapter. It ends what I call the first series, as the whole eighteen chapters should be divided into three groups of six each.

Renunciation, equal-mindedness, true meditation, the golden mean in action, the Unity of all things, the nature of rebirth and the effect of devotion upon it and devachan, are all touched upon.

It is a most practical chapter which would benefit Theosophists immensely if fully grasped and followed. The mistakes made many thousand years ago by disciples were the same as those of today. Today, just as then, there are those who think true renunciation consists in doing nothing except for themselves, in retiring from active duties, and in devoting their attention to what they are pleased to call self-development. On the other hand are those who mistake incessant action for true devotion. The true path is between these two.

The forsaking of worldly action — called *sannyas* — is the same as what is known in Europe as the monastic life, especially in some very ascetic orders. Adopted selfishly under a mistaken notion of duty it cannot be true devotion. It is merely an attempt to save oneself. The course adopted by some Theosophical students very much resembles this erroneous method, although it is practised in the freedom of the world and not behind monastery walls.

To be a true renouncer of action and a devotee one must put the problem on another plane. On the physical brain plane there is no way of reconciling a contradiction such as appears to exist in the direction to perform actions and yet renounce their performance. It is exactly here that many readers of the

Bhagavad-Gita stop and are confused. They have for so long been accustomed to thinking of the physical and living in it, the terms used for their thought are so material in their application, that, seeing this contradiction, they say that the book will not benefit them. But considering the difficulty from the view that the real actor is the mind, that acts are not the dead outward expressions of them, but are the thoughts themselves, we can see how one can be both a renouncer and a devotee, how we can outwardly perform every action, multitudes of them, being as active as any one who is wrapped up in worldly pursuits, and yet be ourselves unattached and unaffected.

Duty and the final imperative — the "what ought I to do" — comes in here and becomes a part of the process. The actions to be performed are not any and every one. We are not to go on heedlessly and indiscriminately doing everything that is suggested. We must discover what actions ought to be performed by us and do them for that reason and not because of some result we expect to follow. The fact that we may be perfectly certain of the result is no reason for allowing our interest to fasten upon that. Here again is where certain Theosophists think they have a great difficulty. They say that knowing the result one is sure to become interested in it. But this is the very task to be essayed — to so hold one's mind and desires as not to be attached to the result.

By pursuing this practice true meditation is begun and will soon become permanent. For, one who watches his thoughts and acts so as to perform those that ought to be done, will acquire a concentration in time which will increase the power of real meditation. It is not meditation to stare at a spot on the wall for a fixed period, or to remain for another space of time in a perfectly vacuous mental state which soon runs into sleep. All those things are merely forms which in the end will do no lasting good. But

many students have run after these follies, ignoring the true way. The truth is, that the right method is not easy; it requires thought and mental effort, with persistency and faith. Staring at spots and such mis-called occult practices are very easy in comparison with the former.

However, we are human and weak. As such we require help, for the outer self cannot succeed in the battle. So Krishna points out that the lower self is to be raised up by the help of the higher; that the lower is, as it were, the enemy of the higher, and we must not allow the worst to prevail. It will all depend upon self-mastery. The self below will continually drag down the man who is not self-conquered. This is because that lower one is so near the thick darkness that hangs about the lower rungs of evolution's ladder it is partly devil. Like a heavy weight it will drag into the depths the one who does not try to conquer himself. But on its other side the self is near to divinity, and when conquered it becomes the friend and helper of the conqueror. The Sufis, the Mohamedan mystical sect, symbolize this in their poetry relating to the beautiful woman who appears but for a moment at the window and then disappears. She refuses to open the door to her lover as long as he refers to their being separate; but when he recognizes their unity then she becomes his firm friend.

The next few verses in the *Gita* outline that which is extremely difficult — equal-mindedness, and intentness upon the Supreme Being in heat and cold, pleasure and pain, success and failure. We cannot reach to this easily, perhaps not in many lives, but we can try. Every effort we make in that direction will be preserved in the inner nature and cannot be lost at death. It is a spiritual gain, the riches laid up in heaven to which Jesus referred. To describe the perfection of equal-mindedness is to picture an Adept of the highest degree, one who has passed beyond all worldly considerations and lives on. higher planes. Gold and stones are

the same to him. The objects he seeks to accomplish are not to be reached through gold and, so it and the pebbles have the same value. He is also so calm and free from delusion of mind and soul that he remains the same whether with enemies or friends, with the righteous or the sinners.

This high condition is therefore set before us as an ideal to be slowly but steadfastly striven after so that in the course of time we may come near it. If we never begin we will never accomplish, and it is far better to adopt this high ideal, even though failing constantly, than to have no ideal whatever.

But some are likely to make a mistake herein. Indeed they have done so. They set up the ideal, but in a too material and human manner. Then they thought to walk on the chosen path by outward observance, by pretending to regard gold and stones as the same to them, while in their hearts they preferred the gold. Their equal-mindedness they confined to other people's affairs, while they displeased and alarmed all relatives and friends by the manner of riding this hobby and by wrong neglect of obvious duty. Truly they sought for equal-mindedness, but failed to see that it can only be acquired through right performance of duty, and not by selecting the duties and environments that please us.

(To be continued)

The Path

HOW SHOULD WE TREAT OTHERS? — *F. T. S.*

The subject relates to our conduct toward and treatment of our fellows, including in that term all people with whom we have any dealings. No particular mode of treatment is given by Theosophy. It simply lays down the law that governs us in all our acts, and declares the consequences of those acts. It is for us to follow the line of action which shall result first in harmony now and forever, and second, in the reduction of the general sum of hate and opposition in thought or act which now darkens the world.

The great law which Theosophy first speaks of is the law of karma, and this is the one which must be held in view in considering the question. Karma is called by some the "law of ethical causation," but it also the law of action and reaction; and in all departments of nature the reaction is equal to the action, and sometimes the reaction from the unseen but permanent world seems to be much greater than the physical act or word would appear to warrant on the physical plane. This is because the hidden force on the unseen plane was just as strong and powerful as the reaction is seen by us to be. The ordinary view takes in but half of the facts in any such case and judges wholly by superficial observation.

If we look at the subject only from the point of view of the person who knows not of Theosophy and of the nature of man, nor of the forces Theosophy knows to be operating all the time, then the reply to the question will be just the same as the everyday man makes. That is, that he has certain rights he must and will and ought to protect; that he has property he will and may keep and use any way he pleases; and if a man injure him he ought to and will resent it; that if he is insulted by word or deed he will at once

fly not only to administer punishment on the offender, but also try to reform, to admonish, and very often to give that offender up to the arm of the law; that if he knows of a criminal he will denounce him to the police and see that he has meted out to him the punishment provided by the law of man. Thus in everything he will proceed as is the custom and as is thought to be the right way by those who live under the Mosaic retaliatory law.

But if we are to inquire into the subject as Theosophists, and as Theosophists who know certain laws and who insist on the absolute sway of karma, and as people who know what the real constitution of man is, then the whole matter takes on, or ought to take on, a wholly different aspect.

The untheosophical view is based on separation, the Theosophical upon unity absolute and actual. Of course if Theosophists talk of unity but as a dream or a mere metaphysical thing, then they will cease to be Theosophists, and be mere professors, as the Christian world is today, of a code not followed. If we are separate one from the other the world is right and resistance is a duty, and the failure to condemn those who offend is a distinct breach of propriety, of law, and of duty. But if we are all united as a physical and psychical fact, then the act of condemning, the fact of resistance, the insistence upon rights on all occasions — all of which means the entire lack of charity and mercy — will bring consequences as certain as the rising of the sun tomorrow.

What are those consequences, and why are they?

They are simply this, that the real man, the entity, the thinker, will react back on you just exactly in proportion to the way you act to him, and this reaction will be in another life, if not now, and even if now felt will still return in the next life.

The fact that the person whom you condemn, or oppose, or judge

seems now in this life to deserve it for his acts in this life, does not alter the other fact that his nature will react against you when the time comes. The reaction is a law not subject to nor altered by any sentiment on your part. He may have, truly, offended you and even hurt you, and done that which in the eye of man is blameworthy, but all this does not have anything to do with the dynamic fact that if you arouse his enmity by your condemnation or judgment there will be a reaction on you, and consequently on the whole of society in any century when the reaction takes place. This is the law and the fact as given by the Adepts, as told by all sages, as reported by those who have seen the inner side of nature, as taught by our philosophy and easily provable by anyone who will take the trouble to examine carefully. Logic and small facts of one day or one life, or arguments on lines laid down by men of the world who do not know the real power and place of thought nor the real nature of man cannot sweep this away. After all argument and all logic it will remain. The logic used against it is always lacking in certain premises based on facts, and while seeming to be good logic, because the missing facts are unknown to the logician, it is false logic. Hence an appeal to logic that ignores facts which we know are certain is of no use in this inquiry. And the ordinary argument always uses a number of assumptions which are destroyed by the actual inner facts about thought, about karma, about the reaction by the inner man.

The Master "K.H.," once writing to Mr. Sinnett in the *Occult World*, and speaking for his whole order and not for himself only, distinctly wrote that the man who goes to denounce a criminal or an offender works not with nature and harmony but against both, and that such act tends to destruction instead of construction. Whether the act be large or small, whether it be the denunciation of a criminal, or only your own insistence on rules or laws or rights, does not alter the matter or take it out of the rule laid

down by that Adept. For the only difference between the acts mentioned is a difference of degree alone; the act is the same in kind as the violent denunciation of a criminal. Either this Adept was right or wrong. If wrong, why do we follow the philosophy laid down by him and his messenger, and concurred in by all the sages and teachers of the past? If right, why this swimming in an adverse current, as he said himself, why this attempt to show that we can set aside karma and act as we please without consequences following us to the end of time? I know not. I prefer to follow the Adept, and especially so when I see that what he says is in line with facts in nature and is a certain conclusion from the system of philosophy I have found in Theosophy.

I have never found an insistence on my so-called rights at all necessary. They preserve themselves, and it must be true if the law of karma is the truth that no man offends against me unless I in the past have offended against him.

In respect to man, karma has no existence without two or more persons being considered. You act, another person is affected, karma follows. It follows on the thought of each and not on the act, for the other person is moved to thought by your act. Here are two sorts of karma, yours and his, and both are intermixed. There is the karma or effect on you of your own thought and act, the result on you of the other person's thought; and there is the karma on or with the other person consisting of the direct result of your act and his thoughts engendered by your act and thought. This is all permanent. As affecting you there may be various effects. If you have condemned, for instance, we may mention some: (a) the increased tendency in yourself to indulge in condemnation, which will remain and increase from life to life; (b) this will at last in you change into violence and all that anger and condemnation may naturally lead to; (c) an opposition to you is set up in the other person, which will remain forever until one

day both suffer for it, and this may be in a tendency in the other person in any subsequent life to do you harm and hurt you in the million ways possible in life, and often also unconsciously. Thus it may all widen out and affect the whole body of society. Hence no matter how justifiable it may seem to you to condemn or denounce or punish another, you set up cause for sorrow in the whole race that must work out some day. And you must feel it.

The opposite conduct, that is, entire charity, constant forgiveness, wipes out the opposition from others, expends the old enmity and at the same time makes no new similar causes. Any other sort of thought or conduct is sure to increase the sum of hate in the world, to make cause for sorrow, to continually keep up the crime and misery in the world. Each man can for himself decide which of the two ways is the right one to adopt.

Self-love and what people call self-respect may shrink from following the Adept's view I give above, but the Theosophist who wishes to follow the law and reduce the general sum of hate will know how to act and to think, for he will follow the words of the Master of H. P. B. who said: "Do not be ever thinking of your self and forgetting that there are others; for you have no karma of your own, but the karma of each one is the karma of all." And these words were sent by H.P.B. to the American Section and called by her words of wisdom, as they seem also to me to be, for they accord with law. They hurt *the personality* of the nineteenth century, but the personality is for a day, and soon it will be changed if Theosophists try to follow the law of charity as enforced by the inexorable law of karma. We should all constantly remember that if we believe in the Masters we should at least try to imitate them in the charity they show for our weakness and faults. In no other way can we hope to reach their high estate, for by beginning thus we set up a tendency which will one day perhaps bring us near to their development; by not

beginning we put off the day forever.

The Path

LETTERS OF H.P.B. TO DR. HARTMANN: III

1885 TO 1886

(Concluded)

V

[NO DATE]

MY DEAR DOCTOR: — Every word of your letter shows to me that you are on the right path, and I am mighty glad of it for you. Still, one may be on the right way, and allow his past-self to bring up too forcibly to him the echoes of the past and a little dying-out prejudice to distort them. When one arrives at knowing himself, he must know others also, which becomes easier. You have made great progress in the former direction; yet, since you cannot help misjudging others a little by the light of old prejudices, I say you have more work to do in this direction. All is not and never was bad in Adyar. The intentions were all good, and that's why, perhaps, they have led Olcott and others direct to fall, as they had no discrimination. The fault is not theirs, but of circumstances and individual karmas.

The first two pages of your letter only repeat that, word for word, which I taught Olcott and Judge and others in America. This is the right occultism. Arrived at Bombay, we had to drop Western and take to Eastern Rosicrucianism. It turned [out] a failure for the Europeans, as the Western turned [out] a failure for the Hindus. This is the secret, and the very root of the failure. But, having mixed up the elements in the so-desired Brotherhood — that could not be helped. Please do not misunderstand me. Occultism is one and universal at its root. Its external modes differ only. I certainly did not want to disturb you to come here only to hear

disagreeable things, but [I] do try: (a) to make you see things in their true light, which would only benefit you; and (b) to show you things written in the *Secret Doctrine* which would prove to you that that which you have lately learned in old Rosicrucian works, I knew years ago, and now have embodied them. Cross and such symbols are world-old. Every symbol must yield three fundamental truths and four implied ones, otherwise the symbol is false. You gave me only one, but so far it is a very correct one. In Adyar you have learned many of such implied truths, because you were not ready; now you may have the rest through self-effort. But don't be ungrateful, whatever you do. Do not feel squeamish and spit on the path — however unclean in some of its corners — that led you to the Adytum at the threshold of which you now stand. Had it not been for Adyar and its trials you never would have been where you are now, but in America married to some new wife who would either have knocked the last spark of mysticism out of your head, or confirmed you in your spiritualism, or what is worse, one of you would have murdered the other. When you find another man who, like poor, foolish Olcott, will love and admire you as he did — sincerely and honestly — take him, I say, to your bosom and try to correct his faults by kindness, not by venomous satire and chaff. We have all erred and we have all been punished, and now we have learned better. I never gave myself out for a full-blown occultist, but only for a student of Occultism for the last thirty-five or forty years. Yet I am enough of an occultist to know that before we find the Master within our own hearts and seventh principle — we need an outside Master. As the Chinese Alchemist says, speaking of the necessity of a living teacher: "Every one seeks long life (spiritual), but the secret is not easy to find. If you covet the precious things of Heaven you must reject the treasures of the earth. You must kindle the fire that springs from the water and evolve the Om contained within the Tong: One word from a wise Master and you

possess a draught of the golden water."

I got my drop from my Master (the living one); you, because you went to Adyar. He is a Saviour, he who leads you to finding the Master within yourself. It is ten years already that I preach the inner Master and God and never represented our Masters as Saviours in the Christian sense. Nor has Olcott, gushing as he is. I did think for one moment that you had got into the epidemic of a "Heavenly Master and Father God," and glad I am to find my mistake. This was only natural. You are just one of those with whom such surprises may be expected at any moment. Commit one mistake, and turn for one moment out of the right path you are now pursuing, and you will land in the arms of the Pope. Olcott does not teach what you say, Doctor. He teaches the Hindus to rely upon themselves (1), and that there is no Saviour save their own Karma. I want you to be just and impartial; otherwise you will not progress. Well, if you do not come and have a talk — I will feel sorry, for I will never see you again. If you do, the Countess and I will welcome you.

Yours ever truly,
H. P. B.

VI

April 3, 1886.

MY DEAR DOCTOR: — I had given up all hope of ever hearing from you again, and was glad to receive today your letter. What you say in it seems to me like an echo of my own thoughts in many a way; only knowing the truth and the real state of things in the "occult world" better than you do, I am perhaps able to see better also where the real mischief was and lies.

Well, I say honestly and impartially now — you are unjust to Olcott more than to anyone else; because you had no means to

ascertain hitherto in what direction the evil blew from.

Mind you, Doctor, my dear friend, I do not justify Olcott in what he did and how he acted toward yourself — nor do I justify him in anything else. What I say is: he was led on blindly by people as blind as himself to see you in quite a false light, and there was a time, for a month or two, when I myself — notwithstanding my inner voice, and to the day Master's voice told me I was mistaken in you and had to keep friends — shared his blindness. (2)

This with regard to some people at Adyar; but there is another side to the question, of which you seem quite ignorant; and that I wanted to show to you, by furnishing you with documents, had you only come when I asked you. But you did not — and the result is, this letter of yours, that will also go against you in the eyes of Karma, whether you believe in the Cross empty of any particular entity on it — or in the Kwan-Shi-Yin of the Tibetans.

To dispose of this question for once, I propose to you to come between now and May the 10th, when I leave Wurzburg to go elsewhere. So you have plenty of time to think over it, and to come and go as you like. The Countess is with me. You know her; she is no woman of gush or impulse. During the four months we have passed together, and the three months of utter solitude, we have had time to talk things over; and I will ask you to believe her, not me, when and if you come, which I hope you will. (3)

As to the other side of the question, that portion of your letter where you speak of the "army" of the deluded — and the "imaginary" Mahatmas of Olcott — you are absolutely and sadly right. Have I not seen the thing for nearly eight years? Have I not struggled and fought against Olcott's ardent and gushing imagination, and tried to stop him every day of my life? Was he not told by me (from a letter I received through a Yogi just returned from Lake Mansarovara) in 1881 (when he was

preparing to go to Ceylon) that if he did not see the Masters in their true light, and did not cease speaking and enflaming people's imaginations, that he would be held responsible for all the evil the Society might come to? (4) Was he not told that there were no such Mahatmas, who Rishi-like could hold the Mount Meru on the tip of their finger and fly to and fro in their bodies (!!) at their will, and who were (or were imagined by fools) more gods on earth than a God in Heaven could be, etc., etc., etc.? All this I saw, foresaw, despaired, fought against; and, finally, gave up the struggle in utter helplessness. If Sinnett has remained true and devoted to them to this day, it is because he never allowed his fancy to run away with his judgment and reason. Because he followed his common-sense and discerned the truth, without sacrificing it to his ardent imagination. I told him the whole truth from the first, as I had told Olcott, and Hume also.

Hume knows that Mahatma K. H. exists, and holds to it to this day. But, angry and vexed with my Master, who spoke to him as though he (Hume) had never been a Secretary for the Indian Government and the great Hume of Simla — he denied him through pure viciousness and revenge.

Ah, if by some psychological process you could be made to see the whole truth! If, in a dream or vision, you could be made to see the panorama of the last ten years, from the first year at New York to the last at Adyar, you would be made happy and strong and just to the end of your life. I was sent to America on purpose and sent to the Eddies. There I found Olcott in love with spirits, as he became in love with the Masters later on. I was ordered to let him know that spiritual phenomena without the philosophy of Occultism were dangerous and misleading. I proved to him that all that mediums could do through spirits others could do at will without any spirits at all; that bells and thought-reading, raps and physical phenomena, could be achieved by anyone who had a

faculty of acting in his physical body through the organs of his astral body; and I had that faculty ever since I was four years old, as all my family know. I could make furniture move and objects fly apparently, and my astral arms that supported them remained invisible; all this ever before I knew even of Masters. Well, I told him the whole truth. I said to him that I had known Adepts, the "Brothers," not only in India and beyond Ladakh, but in Egypt and Syria, — for there are "Brothers" there to this day. The names of the "Mahatmas" were not even known at the time, since they are called so only in India. (5) That, whether they were called Rosicrucians, Kabalists, or Yogis — Adepts were everywhere Adepts — silent, secret, retiring, and who would never divulge themselves entirely to anyone, unless one did as I did — passed seven and ten years probation and given proofs of absolute devotion, and that he, or she, would keep silent even before a prospect and a threat of death. I fulfilled the requirements and am what I am; and this no Hodgson, no Coulombs, no Sellin, can take away from me. All I was allowed to say was — the truth: There is beyond the Himalayas a nucleus of Adepts, of various nationalities; and the Teschu Lama knows them, and they act together, and some of them are with him and yet remain unknown in their true character even to the average lamas — who are ignorant fools mostly. My Master and K. H. and several others I know personally are there, coming and going, and they are all in communication with Adepts in Egypt and Syria, and even Europe. I said and proved that they could perform marvellous phenomena; but I also said that it was rarely they would condescend to do so to satisfy enquirers. You were one of the few who had genuine communications with them; and if you doubt it now, I pity you, my poor friend, for you may repent one day for having lost your chance. (6)

Well, in New York already, Olcott and Judge went mad over the

thing; but they kept it secret enough then. When we went to India, their very names were never pronounced in London or on the way (one of the supposed proofs — that I had invented the Mahatmas after I had come to India — of Mr. A. O. Hume!) When we arrived, and Master coming to Bombay bodily, paid a visit to us at Girgaum, and several persons saw him, Wimbridge for one — Olcott became crazy. He was like Balaam's she-ass when she saw the angel! Then came Damodar, Servai, and several other fanatics, who began calling them "Mahatmas"; and, little by little, the Adepts were transformed into Gods on earth. They began to be appealed to, and made *puja* to, and were becoming with every day more legendary and miraculous. Now, if I tell you the answer I received from Keshow Pillai you will laugh, but it characterizes the thing. "But what is your idea of you Hindus about the Masters?" — I asked him one day when he prostrated himself flat before the picture in my golden locket. Then he told me that they (the Mahatmas) were their ancient Rishis, who had never died, and were some 700,000 years old. That they were represented as living invisibly in sacred trees, and when showing themselves were found to have long green hair, and their bodies shining like the moon, etc., etc. Well, between this idea of the Mahatmas and Olcott's rhapsodies, what could I do? I saw with terror and anger the false track they were all pursuing. The "Masters," as all thought, must be omniscient, omnipresent, omnipotent. If a Hindu or Parsi sighed for a son, or a Government office, or was in trouble, and the Mahatmas never gave a sign of life — the good and faithful Parsi, the devoted Hindu, was unjustly treated. The Masters knew all; why did they not help the devotee? If a mistake or a flapdoodle was committed in the Society — "How could the Masters allow you or Olcott to do so?" we were asked in amazement. (7) The idea that the Masters were mortal men, limited even in their great powers, never crossed anyone's mind, though they wrote this themselves repeatedly. It was "modesty

and secretiveness" — people thought "How is it possible," the fools argued, "that the Mahatmas should not know all that was in every Theosophist's mind, and hear every word pronounced by each member?"

That to do so, and find out what the people thought, and hear what they said, the Masters had to use special psychological means, to take great trouble for it at the cost of labor and time — was something out of the range of the perceptions of their devotees. Is it Olcott's fault? Perhaps, to a degree. Is it mine? I absolutely deny it, and protest against the accusation. It is no one's fault. Human nature alone, and the failure of modern society and religions to furnish people with something higher and nobler than craving after money and honors — is at the bottom of it. Place this failure on one side, and the mischief and havoc produced in people's brains by modern spiritualism, and you have the enigma solved. Olcott to this day is sincere, true and devoted to the cause. He does and acts the best he knows how, and the mistakes and absurdities he has committed and commits to this day are due to something he lacks in the psychological portion of his brain, and he is not responsible for it. Loaded and heavy is his Karma, poor man, but much must be forgiven to him, for he has always erred through lack of right judgment, not from any vicious propensity. Olcott is thoroughly honest; he is as true as gold to his friends; he is as impersonal for himself as he is selfish and grasping for the Society; and his devotion and love for the Masters is such that he is ready to lay down his life any day for them if he thinks it will be agreeable to them and benefit the Society. Be just, above all, whatever you do or say. If anyone is to be blamed, it is I. I have desecrated the holy Truth by remaining too passive in the face of all this desecration, brought on by too much zeal and false ideas. My only justification is that I had work to do that would have been too much for four men, as you know. I

was always occupied with the *Theosophist* and ever in my room, shut up, having hardly time to see even the office Hindus. All was left to Olcott and Damodar, two fanatics. How I protested and tried to swim against the current, only Mr. Sinnett knows, and the Masters. Brown was crazy before he came to us, unasked and unexpected. C. Oakley was an occultist two years before he joined us.

You speak of hundreds that have been made "cowards" by Olcott. (8) I can show you several hundreds who have been saved through Theosophy from drunkenness, dissolute life, etc. Those who believed in a personal God believe in him now as they did before. Those who did not — are all the better in believing in the soul's immortality, if in nothing else. It is Sellin's thought, not yours — "the men and women ruined mentally and physically" by me and Olcott. Hubbe Schleiden is ruined only and solely by Sellin (9) aided by his own weakness.

No, dear Doctor, you are wrong and unjust; for Olcott never taught anyone "to sit down and expect favors from Mahatmas." On the contrary, he has always taught, verbally and in print, that no one was to expect favors from Mahatmas or God unless his own actions and merit forced Karma to do him justice in the end.

Where has Sellin heard Col. Olcott's Theosophy? Sellin had and has his head full of spiritualism and spiritual phenomena; he believes in spirits and their agency, which is worse even than believing too much in Mahatmas. We all of us have made mistakes, and are all more or less to blame. Why should you be so hard on poor Olcott, except what he has done personally against you, for which I am the first to blame him? But even here, it is not his fault. I have twenty pages of manuscript giving a detailed daily account of your supposed crimes and falseness, to prove to you that no flesh and blood could resist the proofs and

insinuations. I know you now, since Torre del Greco; I feared and dreaded you at Adyar — just because of those proofs. If you come, I will let you read the secret history of your life for two years, and you will recognize the handwriting. (10) And such manuscripts, as I have learned, have been sent all over the branches, and Olcott was the last to learn of it. What I have to tell you will show to you human nature and your own discernment in another light.

There are things it is impossible for me to write; and unless you come here — they will die with me. Olcott has nothing to do with all this. You are ignorant, it seems, of what took place since Christmas. Good-bye, then, and may your intuitions lead you to the Truth.

Yours ever,
H. P. B.

10. These papers, filled with the most absurd denunciations against me, were concocted by Babajee out of jealousy and national hatred. — H. ([return to text](#))

The Path

DEVACHAN — *Bandusia Wakefield*

Devachan means literally the land of the Gods, and is probably so called because it is only the diviner aspect of man that can be in this state. It corresponds in some respects to what is called Heaven, being a state of happiness which is experienced after death. Such being the case, the question will probably at once arise, "How do you know anything about it, or that there is such a state?" Though it is the province of this paper only to tell what is taught in Theosophical literature regarding this state, yet it may be well to give a few of the reasons for believing in its existence and its ascribed character. And first, soul itself, being the highest, worthiest thing we know, would surely not be blotted out of existence, when even matter is known to be blotted out of existence, when even matter is known to be indestructible. In fact, no essence can be destroyed, though it may change its form.

Everywhere in nature we see alternate periods of activity and rest, subjectivity and objectivity. We see it in human as well as in lower forms of life on earth in the alternate periods of sleeping and waking, which are but copies of still greater similar periods. Nature conserves her energy as much in holding to one plan of progress as in any other way, and there is more reason to believe that she does it with the human soul than to believe the contrary, and that subjective spiritual states of being alternate with objective material ones. Then there is direct testimony regarding subjective states of consciousness of a high order, as people experience them under certain conditions even during earth-life.

An anesthetic which paralyzes the lower principles leaves the consciousness wide awake on higher planes, and the experience is most blissful, giving a taste of what the happiness of self-

conscious being on spiritual planes must be. Sometimes a high type of dream where all the lower principles are inactive does the same thing; and sometimes the lower instrument on coming to activity again is able to receive the record of the higher experience. The same thing also occurs under some trance conditions.

In the *Psychical Research Reports* (part 25) Prof. Ramsay tells of his subjective condition when *partly* anaesthetized. He says the tendency of his mind when not under this influence is that of scientific scepticism. "But under the influence of an anaesthetic all doubts vanish. . . . It is as if the veil which hides whence we come, what we are, and what will become of us, were suddenly rent, and as if a glimpse of the Absolute burst upon us. An overwhelming impression forced itself upon me that the state in which I then was, was reality; that now I had reached the true solution of the riddle of the Universe; . . . that all outside objects were merely passing reflections on the eternal mirror of my mind."

There was with him a "vivid conception of the ideal foundation of the Universe" and "immediate knowledge of his individual eternity;" but upon the cessation of anaesthesia and return to bodily sensation, he was again on his ordinary mental plane. This is the common experience, save that the memory of it is usually less vivid, being "often only an impression of having gone through an immensity of experience." Ordinary people have the experiences already given; but there are people whose evolution has been carried on far beyond the stage of ordinary people, and who can at will raise the centre of conscious activity from the lower to the higher planes and bring back the record of the higher experiences. They thus know what spiritual life untrammelled by the lower principles is, and it is from their teachings, so far as understood, that the present paper is written.

If what is said seems reasonable and fits in with the facts we know, it is certainly worthy of respectful consideration.

We find rest in a change of occupation, or change from one form of activity to another. In this sense Devachan is a state of rest. It is not cessation from all activity, but only from the lower forms which prevail on earth, while the higher forms are here much enhanced. Whatever belongs only to a physical body is of course left behind with that body. Hatred, envy, jealousy and all lower desires, the producers of pain, are left behind dormant and with them the pain they bring; while all pure, unselfish desires and feelings and all the nobler activities of the mind, being spiritual in their nature, continue without let or hindrance in a spiritual state. Whatever forces of this character were set in motion during earth-life will now go on to full and free expansion. Any pursuit of an ideal or abstract nature, such as poetry, music, art, philosophy, may still be carried on and progress made. Pure unselfish love here strengthens by exercise, and its waves reach down to earth in helpfulness. Devachan is not a condition of purely abstract spirituality, but of personal spirituality. It is an idealized continuation of all that was best and of a spiritual character in the last earth-life, and a realization of unfulfilled spiritual aspirations, a subjective state of unalloyed happiness. The spiritual aspect of the desires and lower mind unites with the higher triad, or spiritual principles, and gives color to the Devachanic entity and its experiences. According to its weakness or strength will be the poverty or richness of Devachan for any Ego, but for everyone, it will have all the richness, variety and happiness which that soul is capable of experiencing. There are as many degrees in this state as there are differently developed Egos, and each Ego is exactly suited. In no other sort of heaven than the one which each soul makes for itself could this be the case.

We know that on earth the same scenery and the same surroundings have very different effects upon different people, are interpreted in very different ways. One may be entranced with the beauty of a landscape, while another may see only how many dollars and cents there are in the forests and fields. To one certain vibrations are music, to another, noise; to one, other vibrations are a beautiful harmony of light and shade, color and form, that stirs the depths of his soul, while to another, the same vibrations are mere patches of color that touch no deeper chord than the external sense; but even the sense of color is an interpretation of the mind, for all that comes from without is vibration. Thus the appearances of this earth, which we account so real, are but the interpretations of the mind of the great world of vibrations that pour in upon it; and this mind continues its method upon a higher plane and still interprets the vibrations which reach it, but here only those can reach it which mean to it harmony, beauty, friends, friendship, love and other noble ideas and sentiments, for only such belong to this plane, and here only the higher aspect of mind is active.

Devachan is a subjective state compared to life on the physical plane; but there are many degrees of subjectivity, and this is not the highest. Being a subjective state, the ideas of space and time as we know them here are not applicable there; yet everything on that plane has as much reality and objectivity to the consciousness there as have the appearances of earth to the consciousness here. It is a natural state in which the soul finds itself on the removal of the limitations of the lower principles. The psychic and spiritual energies generated during earth-life are only partially carried out on earth, owing to material limitations, and on the removal of the latter these energies come into unhindered operation. They have their rise, expansion, decline and exhaustion in the Devachanic state, and when this is

accomplished, then other energies generated in earth-life, whose field is the physical plane, begin to operate, and the Ego is drawn back to rebirth.

Generally speaking, the length of time an Ego remains in Devachan depends upon the amount and strength of these psychic and spiritual energies. An Ego whose previous life had been wrapped almost entirely in material interests would have a short Devachan, while one whose life had been absorbed in spiritual interests would have a long one. The average length is said to be about 1500 years. There are exceptional cases of advanced Egos who are helped out of Devachan by Adepts before the natural expiration of their time, for the purpose of hastening their development and helping humanity.

Only advanced Egos are strong enough to endure this treatment; for not only is Devachan a natural state, but it is essential to the development of the great mass of Egos. The soul needs the rest which this change brings, it needs the opportunity to sift, correctly estimate and assimilate the higher experiences of earth-life, and to make progress in ideal lines already begun. Devachan supplies all this, refreshes and strengthens the soul on the spiritual side so that it is better fitted for its next struggle on earth. It gives a needed rest after the strain of earth-life, and is as necessary in the great life of the soul as sleep is in the short life of the body.

As a matter of justice to the Ego, Devachan is also essential, for it is impossible during earth-life to reap the effects of all the good thoughts and deeds and high aspirations of the soul, and this second field on the soul plane, which is really the field where the causes are sown, is also needed for the reaping of their effects. Here too are generated forces which have their effects in the period of embodiment, strengthening the spiritual aspect of the

next earth-life. The reason this field requires so much more time than the physical is because the more spiritual the more enduring anything is.

Through all we see a purpose in Devachan, and it is to help on the evolution of the soul through furnishing an opportunity for the adjustment of all karmic effects not adjustable in earth-life.

In these intervals between earth-lives we have closer touch with Reality, are nearer the plane where all selves are in unity than on earth; but we have to learn to feel this oneness on the plane of greatest separateness, so we come again and again into earth-life, with its confusions of personal interests, to accomplish the task.

To the extent that Devachan is removed from the Absolute Reality, to that extent it is an illusion; but it is much less an illusion than the physical plane, which is still farther removed from the eternal and unchangeable Truth. The farther any plane is removed from the One Reality the more illusory it is, and the more transitory all that pertains to it. So the objective life on this physical plane, which we are accustomed to look upon as so real, is but a passing illusion compared to the more spiritual and permanent life of Devachan. The denser the veils of matter, the more is Reality hidden. As there are still veils in Devachan, there is still illusion there, but these veils are thinner than on earth. The use of the word "dream" to describe this subjective state has led many astray, because the wrong meaning has been attached to "dream." Dream has been regarded in the west as something purely fanciful when not the result of a disordered stomach, while the fact is that the dream state when not affected by the body has more of reality in it than the waking. When the body is in a favorable condition these dreams are sometimes remembered. In these the soul is on its own plane, the very plane of Devachan. It sees about it loved ones who have passed from

earth, as well as those that are still embodied; and this is no delusion, for the soul-plane is one, and sympathetic souls are in touch whether embodied or disembodied. The delusion comes in waking hours when one thinks there was no reality in the dream experience. The death of the body simply removes one personality from the presence of others; it cannot change the relationship of the individualities, the spiritual selves. If these were united by strong ties of spiritual love and sympathy, the mere removal of an obstruction, of a few veils of matter, does not make them any further apart. To them there is no space, and the spiritual, magnetic currents between them still hold. Hence it is that the unselfish love of a mother in Devachan is a protecting influence to her child on earth. The higher Ego of that child is on her own plane, and it is no illusion that she should sense its presence, and as that presence to her on earth wore a certain garb, she clothes it again in the same, the body of her child. Though this higher connection and inter-relation remains, yet being as it is on the plane of the higher Ego, there can come into it nothing pertaining to the sins and sorrows of earth, and so the happiness of the Devachani is secured.

The laws that operate below are but reflections of those on higher planes. Here we are susceptible to currents of thought, are more or less open to receive whatever is in harmony with our own trend. Why should not two souls of like aspiration and pursuit, dwelling each in its own Devachanic world, mutually influence each other by the sympathetic currents between them? It must be so, as that plane is still nearer the Reality where all is One than is this plane of separateness, the earth. There is a real and continuous interchange of thought and feeling of the purest kind on the inner planes between the dweller in Devachan and his real friends whether there or on earth, and this is not merely memory, though it "goes on under conditions made up of the memories of

earth." Every transmitted wave of thought or feeling from a friend is clothed by the mind with the form of that friend. This little dress may be called illusion, but the continuous intercourse of soul to soul is a transcendent reality. Our illusion even here on earth is the "taking of the outer form for the thing itself."

This unbroken connection of souls remaining, we see the possibility of souls in bliss giving help to those still struggling on the earth. For strong loving thoughts and desires for their highest good are in a measure felt by embodied souls who are thus stimulated to higher endeavor and protected from their own worse selves. Those who on earth worked for some cause for the good of men still carry it on in thought, the radiating energy of which may inspire others still on earth and take expression in their words and deeds. Here for us is a great hope in beginning any true work for humanity. We do not lay it down, but help to carry it on in another way, till we are ready again to take it up once more on earth. And death too is stripped of its terrors, for there is no cessation of the higher activities, no stop to true progress, no severance of real friends. Death is truly a "benediction of nature upon all that is good in us."

"Never the spirit was born; the spirit shall cease to be never;
Never was time it was not; End and Beginning are dreams.
Birthless and deathless and changeless remaineth the spirit
forever;
Death hath not touched it all, dead though the house of it seems!"

"Nay, but as when one layeth
His worn-out robes away,
And, taking new ones, sayeth,
'These will I wear today!'
So putteth by the spirit
Lightly its garb of flesh,

And passeth to inherit
A residence afresh."

The Path
