FOREWORD.

IN the history of public bodies, the chapter which relates the origin and vicissitudes of the Theosophical Society should be unique. Whether viewed from the friendly or the unfriendly standpoint, it is equally strange that such a body should have come into existence when it did, and that it has not only been able to withstand the shocks it has had, but actually to have grown stronger proportionately with the bitter unfairness of its adversaries. One class of critics say that this fact strikingly proves a recrudescence of human credulity, and a religious unrest which is preliminary to a final subsidence upon Western conservative lines. The other see in the progress of the movement the sign of a world-wide acceptance of Eastern philosophical ideas, which must work for the reinvigoration and incalculable broadening of the spiritual sympathies of mankind. The patent, the undeniable fact is, that up to the close of the year 1894, as the result of but nineteen years of activity, charters had been granted for 394 branches of the Society, in almost all parts of the habitable globe; and that those issued in that latest year outnumbered the

Digitized by Google

yearly average since the foundation, in 1875, by 29.9 per cent. Statistically viewed, the relentless and unfair attack which the Society for Psychical Research and the Scottish Missionaries delivered against it in 1884, and which it was hoped would destroy it, merely resulted in very largely augmenting its prosperity and usefulness. The latest assault—that through the *Westminster Gazette*—must inevitably have the same ending. The simple reason is that, however thoroughly the private faults and shortcomings of its individual leaders may be exposed, the excellence of the Society's ideas is not impugned in the least. To kill the Theosophical Society, it is first necessary to prove its declared objects hostile to the public welfare, the teachings of its spokesmen pernicious and demoralising. It being impossible to do either the one or the other, the world takes the Society as a great fact, a distinct individuality, which is neither to be condemned nor applauded because of the merit or demerit of its representative personalities. This truth begins to force itself upon outsiders. One of the ablest among contemporary journalists, Mr. W. T. Stead, said in *Borderland*, in the course of a digest of these "Old Diary Leaves" as they originally appeared in the *Theosophist*, that nobody now cares whether the Coulomb and S. P. R. charges of trickery against Madame Blavatsky were true or false; her worst enemies being unable to deny her the credit of having affected modern philosophical thought to an extraordinary degree by popularising certain noble Eastern ideas. The same

Digitized by Google

holds with respect to her many colleagues, who, like herself, have spread these ancient teachings through the medium of the Theosophical Society. This wonderful organisation, which grew out of a commonplace parlour gathering in a New York house, in the year 1875, has already made for itself such a record that it must be included in any veracious history of our times. Its development having gone on by virtue of an inherent force, rather than as the result of astute foresight and management; and having been so closely—for some years almost exclusively, connected with the personal efforts of its two founders, Madame Blavatsky and myself, it will perhaps help the future historian if the survivor sets down truthfully and succinctly the necessary facts. The series of chapters which now compose this book was begun nearly three years ago in the *Theosophist* magazine, and a second series, devoted to the history of the Society after the transfer to India, is now in progress. The controlling impulse to prepare these papers was a desire to combat a growing tendency within the Society to deify Mme. Blavatsky, and to give her commonest literary productions a quasi-inspirational character. Her transparent faults were being blindly ignored, and the pinchbeck screen of pretended authority drawn between her actions and legitimate criticism. Those who had least of her actual confidence, and hence knew least of her private character, were the greatest offenders in this direction. It was but too evident that unless I spoke out what I alone knew, the true history of our movement

Digitized by Google

could never be written, nor the actual merit of my wonderful colleague become known. In these pages I have, therefore, told the truth about her and about the beginnings of the Society—truth which nobody can gainsay. Placing as little value upon the praise as upon the blame of third parties, and having all my life been accustomed to act according to what I have regarded as duty, I have not shrunk from facing the witless pleasantries of those who regard me as a dupe, a liar, or a traitor. The absolute unimportance of others' opinions as a factor in promoting individual development is so plain to my mind, that I have pursued my present task to its completion, despite the fact that some of my most influential colleagues have, from what I consider mistaken loyalty to "H. P. B.," secretly tried to destroy my influence, ruin my reputation, reduce the circulation of my magazine, and prevent the publication of my book. Confidential warnings have been circulated against me, and the current numbers of the *Theosophist* have been removed from Branch reading-room tables. This is child's play: the truth never yet harmed a good cause, nor has moral cowardice ever helped a bad one.

Mrs. Oliphant in her *Literary History of England*, (iii., 263,) says of Benthan just what may be said of H. P. B: "It is evident that he had an instinct like that of the Ancient Mariner, for the men who were born to hear and understand him, and great readiness in adopting into his affections every new notability whom he approved of, . . . he received an amount of service and devo-

Digitized by Google

tion, which few of the greatest of mankind have gained from their fellow-creatures."

Where was there a human being of such a mixture as this mysterious, this fascinating, this light-bringing H. P. B.? Where can we find a personality so remarkable and so dramatic; one which so clearly presented at its opposite sides the divine and the human? Karma forbid that I should do her a feather-weight of injustice, but if there ever existed a person in history who was a greater conglomeration of good and bad, light and shadow, wisdom and indiscretion, spiritual insight and lack of common sense, I cannot recall the name, the circumstances or the epoch. To have known her was a liberal education, to have worked with her and enjoyed her intimacy, an experience of the most precious kind. She was too great an occultist for us to measure her moral stature. She compelled us to love her, however much we might know her faults; to forgive her, however much she might have broken her promises and destroyed our first belief in her infallibility. And the secret of this potent spell was her undeniable spiritual powers, her evident devotion to the Masters whom she depicted as almost supernatural personages, and her zeal for the spiritual uplifting of humanity by the power of the Eastern Wisdom. Shall we ever see her like again? Shall we see herself again within our time under some other guise? Time will show.

H. S. OLCOTT.

OLD DIARY LEAVES.

CHAPTER I.

FIRST MEETING OF THE FOUNDERS.

SINCE I am to tell the story of the birth and progress of the Theosophical Society, I must begin at the beginning, and tell how its two founders first met. It was a very prosaic incident: I said "*Permettez moi, Madame*," and gave her a light for her cigarette; our acquaintance began in smoke, but it stirred up a great and permanent fire. The circumstances which brought us together were peculiar, as I shall presently explain. The facts have been partly published before.

One day, in the month of July, 1874, I was sitting in my law-office thinking over a heavy case in which I had been retained by the Corporation of the City of New York, when it occurred to me that for years I had paid no attention to the Spiritualist movement. I do not

Digitized by Google

know what association of ideas made my mind pass from the mechanical construction of water-metres to Modern Spiritualism, but, at all events, I went around the corner to a dealer's and bought a copy of the *Banner of Light*. In it I read an account of certain incredible phenomena, *viz.*, the solidification of phantom forms, which were said to be occurring at a farm-house in the township of Chittenden, in the State of Vermont, several hundred miles distant from New York. I saw at once that, if it were true that visitors could see, even touch and converse with, deceased relatives who had found means to reconstruct their bodies and clothing so as to be temporarily solid, visible, and tangible, this was the most important fact in modern physical science. I determined to go and see for myself. I did so, found the story true, stopped three or four days, and then returned to New York. I wrote an account of my observations to the *New York Sun*, which was copied pretty much throughout the whole world, so grave and interesting were the facts. A proposal was then made to me by the Editor of the *New York Daily Graphic* to return to Chittenden in its interest, accompanied by an artist to sketch under my orders, and to make a thorough investigation of the affair. The matter so deeply interested me that I made the necessary disposition of office engagements, and on September 17th was back at the "Eddy Homestead," as it was called from the name of the family who owned and occupied it. I stopped in that house of mystery, surrounded by phantoms and having daily ex-

Digitized by Google

periences of a most extraordinary character, for about twelve weeks—if my memory serves me. Meanwhile, twice a week there appeared in the *Daily Graphic* my letters about the "Eddy ghosts," each one illustrated with sketches of spectres actually seen by the artist, Mr. Kappes, and myself, as well as by every one of the persons—sometimes as many as forty—present in the "séance-room."* It was the publication of these letters which drew Madame Blavatsky to Chittenden, and so brought us together.

I remember our first day's acquaintance as if it were yesterday; besides which, I have recorded the main facts in my book (*People from the Other World*, pp. 293 *et seq*). It was a sunny day and even the gloomy old farm-house looked cheerful. It stands amid a lovely landscape, in a valley bounded by grassy slopes that rise into mountains covered to their very crests with leafy groves. This was the time of the "Indian Summer," when the whole country is covered with a faint bluish haze, like that which has given the "Nilgiri" mountains their name, and the foliage of the beeches, elms, and maples, touched by early frosts, has been turned from green into a mottling of gold and crimson that gives the landscape the appearance of being hung all over with royal tapestries. One must go to America to see this autumnal splendour in its full perfection.

* In *People from the Other World* I have described all these phenomena and the tests against fraud which I invented and employed.

Digitized by Google

The dinner hour at Eddy's was noon, and it was from the entrance door of the bare and comfortless dining-room that Kappes and I first saw H. P. B. She had arrived shortly before noon with a French Canadian lady, and they were at table as we entered. My eye was first attracted by a scarlet Garibaldian shirt the former wore, as in vivid contrast with the dull colours around. Her hair was then a thick blond mop, worn shorter than the shoulders, and it stood out from her head, silken-soft and crinkled to the roots, like the fleece of a Cotswold ewe. This and the red shirt were what struck my attention before I took in the picture of her features. It was a massive Calmuck face, contrasting in its suggestion of power, culture, and imperiousness, as strangely with the commonplace visages about the room as her red garment did with the grey and white tones of the walls and woodwork and the dull costumes of the rest of the guests. All sorts of cranky people were continually coming and going at Eddy's to see the mediumistic phenomena, and it only struck me on seeing this eccentric lady that this was but one more of the sort. Pausing on the door-sill, I whispered to Kappes, "Good gracious! look at *that* specimen, will you." I went straight across and took a seat opposite her to indulge my favourite habit of character-study.* The two ladies con-

* In a chain-shot hit at an American vituperator, she draws the following amusing portrait of herself: "An old woman—whether forty, fifty, sixty, or ninety years old, it matters not; an old woman whose Kalmuco-Buddhisto-Tartaric features, even in youth, never made her appear pretty; a woman, whose ungainly garb, uncouth

Digitized by Google

versed in French, making remarks of no consequence, but I saw at once from her accent and fluency of speech that, if not a Parisian, she must at least be a finished French scholar. Dinner over, the two went outside the house and Madame Blavatsky rolled herself a cigarette, for which I gave her a light as a pretext to enter into conversation. My remark having been made in French, we fell at once into talk in that language. She asked me how long I had been there and what I thought of the phenomena; saying that she herself was greatly interested in such things, and had been drawn to Chittenden by reading the letters in the *Daily Graphic*: the public were growing so interested in these that it was sometimes impossible to find a copy of the paper on the book-stalls an hour after publication, and she had paid a dollar for a copy of the last issue. "I hesitated before coming here," she said, "because I was afraid of meeting that Colonel Olcott." "Why should you be afraid of him, Madame?" I rejoined. "Oh! because I fear he might write about me in his paper." I told her that she might make herself perfectly easy on that score, for I felt quite sure Col. Olcott would not mention her in his letters unless she wished it. And I introduced myself. We became friends at once. Each of us felt as if we were of the same social world, cosmopolitans, free-thinkers, and in closer touch than with the rest of the company, intel-

manners, and masculine habits are enough to frighten any bustled and corseted fine lady of fashionable society out of her wits." [*Vide* her letter "The Knout" to the *R. P. Journal* of March 16, 1878.]

Digitized by Google

ligent and very worthy as some of them were. It was the voice of common sympathy with the higher occult side of man and nature; the attraction of soul to soul, not that of sex to sex. Neither then, at the commencement, nor ever afterwards had either of us the sense of the other being of the opposite sex. We were simply chums; so regarded each other, so called each other. Some base people from time to time, dared to suggest that a closer tie bound us together, as they had that that poor, malformed, persecuted H. P. B. had been the mistress of various other men, but no pure person could hold to such an opinion after passing any time in her company, and seeing how her every look, word, and action proclaimed her sexlessness.*

Strolling along with my new acquaintance, we talked together about the Eddy phenomena and those of other lands. I found she had been a great traveller and seen many occult things and adepts in occult science, but at first she did not give me any hint as to the existence of the Himalayan Sages or of her own powers. She spoke of the materialistic tendency of American Spiritualism, which was a sort of debauch of phenomena accompanied by comparative indifference to philosophy. Her manner was gracious and captivating, her criticisms upon men and things original and witty. She

* I hold to this same view despite the pretended confessions of early misconduct, contained in certain letters of hers to a Russian gentleman and recently published in a work entitled *A Modern Priestess of Isis*. In short, I believe my estimate of her sexual purity to be true and her pretended revelations false—mere bravado.

Digitized by Google

was particularly interested in drawing me out as to my own ideas about spiritual things and expressed pleasure in finding that I had instinctively thought along the occult lines which she herself had pursued. It was not as an Eastern mystic, but rather as a refined Spiritualist that she talked. For my part I knew nothing then, or next to nothing, about Eastern philosophy, and at first she kept silent on that subject.

The séances of William Eddy, the chief medium of the family, were held every evening in a large upstairs hall, in a wing of the house, over the dining-room and kitchen. He and a brother, Horatio, were hard-working farmers; Horatio attending to the out-door duties, and William, since visitors came pouring in upon them from all parts of the United States, doing the cooking for the household. They were poor, ill-educated, and prejudiced—sometimes surly to their unbidden guests. At the farther end of the séance-hall the deep chimney from the kitchen below passed through to the roof. Between it and the north wall was a narrow closet of the same width as the depth of the chimney, 2 feet 7 inches, in which William Eddy would seat himself to wait for the phenomena. He had no seeming control over them, but merely sat and waited for them to sporadically occur. A blanket being hung across the doorway, the closet would be in perfect darkness. Shortly after William had entered the cabinet, the blanket would be pulled

Digitized by Google

aside and forth would step some figure of a dead man, woman or child—an animate statue so to say—temporarily solid and substantial, but the next minute resolved back into nothingness or invisibility. They would occasionally dissolve away while in full view of the spectators.

Up to the time of H. P. B.'s appearance on the scene, the figures which had shown themselves were either Red Indians, or Americans or Europeans akin to visitors. But on the first evening of her stay spooks of other nationalities came before us. There was a Georgian servant boy from the Caucasus; a Mussulman merchant from Tiflis; a Russian peasant girl, and others. Another evening there appeared a Kourdish cavalier armed with scimitar, pistols, and lance; a hideously ugly and devilish-looking negro sorcerer from Africa, wearing a coronet composed of four horns of the oryx with bells at their tips, attached to an embroidered, highly coloured fillet which was tied around his head; and a European gentleman wearing the cross and collar of St. Anne, who was recognised by Madame Blavatsky as her uncle. The advent of such figures in the séance-room of those poor, almost illiterate Vermont farmers, who had neither the money to buy theatrical properties, the experience to employ such if they had had them, nor the room where they could have availed of them, was to every eye-witness a convincing proof that the apparitions were genuine. At the same time they show that a strange attraction to call out these images

Digitized by Google

from what Asiatics call the Kama-loka attended Madame Blavatsky. It was long afterwards that I was informed that she had evoked them by her own developed and masterful power. She even affirms the fact in a written note, in our *T. S. Scrap-book*, Vol. I., appended to a cutting from the (London) *Spiritualist* of January, 1875.

While she was at Chittenden she told me many incidents of her past life, among others, her having been present as a volunteer, with a number of other European ladies, with Garibaldi at the bloody battle of Mentana. In proof of her story she showed me where her left arm had been broken in two places by a saber-stroke, and made me feel in her right shoulder a musket-bullet, still imbedded in the muscle, and another in her leg. She also showed me a scar just below the heart where she had been stabbed with a stiletto. This wound reopened a little while she was at Chittenden, and it was to consult me about it that she was led to show it to me. She told me many curious tales of peril and adventure, among them the story of the phantom African sorcerer with the oryx-horn coronet, whom she had seen in life doing phenomena in Upper Egypt, many years before.

H. P. B. tried her best to make me suspect the value of William Eddy's phenomena as proofs of the intelligent control of a medium by spirits; telling me that, if genuine, they must be the double of the medium escaping from his body and clothing itself with other appearances; but I did not believe her. I contended

Digitized by Google

that the forms were of too great diversities of height, bulk, and appearance to be a masquerade of William Eddy; they must be what they seemed, *viz.*, the spirits of the dead. Our disputes were quite warm on occasions, for at that time I had not gone deep enough into the question of the plastic nature of the human Double to see the force of her hints, while of the Eastern theory of Maya I did not know its least iota. The result, however, was, as she told me, to convince her of my disposition to accept nothing on trust and to cling pertinaciously to such facts as I had, or thought I had acquired. We became greater friends day by day, and by the time she was ready to leave Chittenden she had accepted from me the nick-name "Jack," and so signed herself in her letters to me from New York. When we parted it was as good friends likely to continue the acquaintance thus pleasantly begun.

In November, 1874, when my researches were finished, I returned to New York and called upon her at her lodgings at 16 Irving Place, where she gave me some séances of table-tipping and rapping, spelling out messages of sorts, principally from an invisible intelligence calling itself "John King." This pseudonym is one that has been familiar to frequenters of mediumistic séances these forty years past, all over the world. It was first heard of in 1850, in the "spirit room" of Jonathan Koons, of Ohio, where it pretended to be a ruler of a tribe or tribes of spirits. Later on, it said it was the earth-haunting soul of Sir

Digitized by Google

Henry Morgan, the famous buccaneer, and as such it introduced itself to me. It showed its face and turban-wrapped head to me at Philadelphia, during the course of my investigations of the Holmes mediums, in association with the late respected Robert Dale Owen, General F. J. Lippitt and Madame Blavatsky (*vide People from the Other World*, Part II.), and both spoke and wrote to me, the latter frequently. It had a quaint handwriting, and used queer old English expressions. I thought it a veritable John King then, for its personality had been as convincingly proved to me, I fancied, as anybody could have asked. But now, after seeing what H. P. B. could do in the way of producing *mayavic* (*i. e.*, hypnotic) illusions and in the control of elementals, I am persuaded that "John King" was a humbugging elemental, worked by her like a marionette and used as a help towards my education. Understand me, the phenomena were real, but they were done by no disincarnate *human* spirit. Since writing the above, in fact, I have found the proof, in her own handwriting, pasted in our *Scrapbook*, Vol. I.

She kept up the illusion for months—just how many I cannot recollect at this distance of time—and I saw numbers of phenomena done as alleged by John King—as, for example, the whole remarkable series at the Philadelphia residence of the Holmeses and that of H. P. B. herself, above referred to. He was first, John King, an independent

Digitized by Google

personality, then John King, messenger and servant —never the equal—of living adepts, and finally an elemental pure and simple, employed by H. P. B. and a certain other expert in the doing of wonders.

It is useless to deny that, throughout the early part of her American residence, she called herself a spiritualist and warmly defended Spiritualism and its mediums from their sciolistic and other bitter traducers. Her letters and articles in various American and English journals contain many evidences of her occupying that position. Among other examples, I will simply quote the following:

"As it is, I have only done my duty; first, towards Spiritualism, that I have defended as well as I could from the attacks of imposture under the too transparent mask of science; then towards two helpless, slandered mediums. . . . But I am obliged to confess that I really do not believe in having done any good—to Spiritualism itself. . . . It is with a profound sadness in my heart that I acknowledge this fact, for I begin to think there is no help for it. For over fifteen years have I fought my battle for the blessed truth; have travelled and preached it—though I never was born for a lecturer —from the snow-covered tops of the Caucasian Mountains, as well as from the sandy valleys of the Nile. I have proved the truth of it practically and by persuasion. For the sake of Spiritualism I have left my home, an easy life amongst a civilised society, and have become a wanderer upon the face of the earth. I had already seen

Digitized by Google

my hopes realised, beyond my most sanguine expectations, when my unlucky star brought me to America. Knowing this country to be the cradle of Modern Spiritualism, I came over here from France with feelings not unlike those of a Mohammedan approaching the birthplace of his Prophet," etc., etc. (Letter of H. P. B. to the *Spiritualist* of December 13, 1874.)

The two "helpless mediums" alluded to were the Holmeses, of whose moral quality I have always had the poorest opinion. Yet, *in H. P. B.'s presence* I witnessed, under my own test conditions, along with the late Robert Dale Owen and General Lippitt, a series of most convincing and satisfactory mediumistic phenomena. I half suspected then that the power that produced them came from *H. P. B.*, and that if the Holmeses alone had been concerned, I should either have seen tricks or nothing. Now, in hunting over the old scrap-books, I find in H. P. B.'s MSS. the following memorandum, which she evidently meant to be published after her death :

"IMPORTANT NOTE.

"Yes, I am sorry to say that I *had* to identify myself, during that shameful exposure of the Holmes mediums, with the Spiritualists. I had to save the situation, for *I was sent from Paris to America on purpose to prove the phenomena and their reality, and show the fallacy of the spiritualistic theory of spirits.* But how could I do it best? I did not want people at large to know that I could *produce the same things* AT WILL. I had received

Digitized by Google

orders to the contrary, and yet I had to keep alive the reality, the genuineness and *possibility* of such phenomena, in the hearts of those who from Materialists had turned Spiritualists, but now, owing to the exposure of several mediums, fell back again, returned to their scepticism. This is why, selecting a few of the faithful, I went to the Holmeses, and, helped by M. and his *power*, brought out the faces of John King and Katie King from the Astral Light, produced the phenomena of materialisation, and allowed the spiritualists at large to believe it was done through the medium of Mrs. Holmes. She was terribly frightened herself, for she knew that *this once* the apparition was real. Did I do wrong? The world is not prepared yet to understand the philosophy of Occult Science; let them first assure themselves that there are beings in an invisible world, whether 'Spirits' of the dead or elementals; and that there are hidden powers in man which are capable of making a *god* of him on earth.

"When I am dead and gone people will, perhaps, appreciate my disinterested motives. I have pledged my word to help people on to *Truth* while living, and I will keep my word. Let them abuse and revile me; let some call me a medium and a Spiritualist, others an impostor. The day will come when posterity will learn to know me better. Oh, poor, foolish, credulous, wicked world!"

The whole thing is here made plain: the Spiritualism

Digitized by Google

she was sent to America to profess and ultimately bring to replace the cruder Western mediumism, was Eastern Spiritualism, or Brahma Vidya. The West not being prepared to accept it, her first assigned work was to defend the real phenomena of the " circle " from that prejudiced and militant enemy of spiritual belief—materialistic, sciolistic, physical science, with its votaries and leaders. The one necessary thing for the age was to check materialistic scepticism and strengthen the spiritual basis of the religious yearning. Therefore, the battle being joined, she took her stand beside the American Spiritualists, and for the moment made common cause with them. Yes, posterity *will* do her justice.

I wish I could recall to memory the first phenomenon done by her confessedly as by an exercise of her own will power, but I cannot. It must have been just after she began writing *Isis Unveiled* and possibly it was the following : After leaving 16 Irving Place and making a visit to friends in the country, she occupied rooms for a time in another house in Irving Place, a few doors from the Lotos Club and on the same side of the street. It was there that, later, the informal gathering of friends was held at which I proposed the formation of what afterwards became the Theosophical Society. Among her callers was an Italian artist, a Signor B., formerly a Carbonaro. I was sitting alone with her in her drawing-room when he made his first visit. They talked of Italian affairs, and he suddenly pronounced the name of

Digitized by Google

one of the greatest of the Adepts. She started as if she had received an electric shock ; looked him straight in the eyes, and said (in Italian) "What is it ? I am ready." He passed it off carelessly, but thenceforward the talk was all about Magic, Magicians, and Adepts. Signor B. went and opened one of the French windows, made some beckoning passes towards the outer air, and presently a pure white butterfly came into the room and went flying about near the ceiling. H. P. B. laughed in a cheerful way and said : "That is pretty, but I can also do it !" She, too, opened the window, made similar beckoning passes, and presently a second white butterfly came fluttering in. It mounted to the ceiling, chased the other around the room, played with it now and then, with it flew to a corner, and, presto ! both disappeared at once while we were looking at them. "What does that mean ?" I asked. "Only this, that Signor B. can make an elemental turn itself into a butterfly, and so can I." The insects were not real but illusionary ones.

I recall other instances of her control of elementals or, as Hindus would term it, Yakshini Vidya. An early one is the following : On a cold winter's night, when several inches of snow lay upon the ground, she and I were working upon her book until a late hour at her rooms in Thirty-fourth Street. I had eaten some saltish food for dinner, and at about 1 A.M., feeling very thirsty, said to her : "Would it not be nice to have some hothouse grapes ?" "So it would," she replied, "let us have some." "But the shops have been closed for hours, and

Digitized by Google

we can buy none," I said. "No matter, we shall have them, all the same," was her reply. "But how?" "I will show you, if you will just turn down that gas-light on the table in front of us." I turned the cock unintentionally so far around as to extinguish the light. "You need not have done that," she said. "I only wanted you to make the light dim. However, light it again quickly." A box of matches lay just at hand, and in a moment I had relit the lamp. "See!" she exclaimed, pointing to a hanging book-shelf on the wall before us. To my amazement there hung from the knobs at the two ends of one of the shelves two large bunches of ripe black Hamburgh grapes, which we proceeded to eat. To my question as to the agency employed, she said it was done by certain elementals under her control, and twice later on, when we were living in the so-called "Lamasery," she repeated the phenomenon of bringing fruits for our refreshment while at work on *Isis*.

Little by little, H. P. B. let me know of the existence of Eastern adepts and their powers, and gave me by a multitude of phenomena the proofs of her own control over the occult forces of nature. At first, as I have remarked, she ascribed them to "John King," and it was through his alleged friendliness that I first came into personal correspondence with the Masters. Many of their letters I have preserved, with my own endorsement of the dates of their reception. For years, and until shortly before I left New York for India, I was connected in pupilage with the African section of the

Digitized by Google

Occult Brotherhood; but, later, when a certain wonderful psycho-physiological change happened to H. P. B. that I am not at liberty to speak about, and that nobody has up to the present suspected, although enjoying her intimacy and full confidence, as they fancy, I was transferred to the Indian section and a different group of Masters. For, it may be stated, there is and ever was but one altruistic alliance, or fraternity, of these Elder Brothers of humanity, the world over; but it is divided into sections according to the needs of the human race in its successive stages of evolution. In one age the focal centre of this world-helping force will be in one place, in another elsewhere. Unseen, unsuspected as the vivifying spiritual currents of the Akash, yet as indispensable for the spiritual welfare of mankind, their combined divine energy is maintained from age to age and forever refreshes the pilgrim of Earth, who struggles on towards the Divine Reality. The sceptic denies the existence of these adepts because he has not seen or talked with them, nor read in history of their visible intermeddling in national events. But their being has been known to thousands of self-illuminate mystics and philanthropists in succeeding generations, whose purified souls have lifted them up out of the muck of physical into the brightness of spiritual consciousness; and at many epochs they have come into personal relations with the persons who are devoting or inclined to devote themselves to altruistic labour for bringing about the brotherhood of mankind. Some of this class, very humble

Digitized by Google

and apparently very unworthy—like us leaders of the Theosophical Society movement—have been blessed with their sympathy and partaken of their instruction. Some, like Damodar and H. P. B., have first seen them in visions while young; some have encountered them under strange guises in most unlikely places; I was introduced to them by H. P. B. through the agency that my previous experiences would make most comprehensible, a pretended medium-overshadowing "spirit." John King brought four of the Masters to my attention, of whom one was a Copt, one a representative of the Neo Platonist Alexandrian school, one—a very high one, a Master of the Masters, so to say—a Venetian, and one an English philosopher, gone from men's sight, yet not dead. The first of these became my first Guru, and a stern disciplinarian he was, indeed, a man of splendid masculinity of character.

In time I came to know from themselves that H. P. B. was a faithful servant of theirs, though her peculiar temperament and idiosyncracies made her too antipathetic to some of them to permit of their working with her. This will not seem strange if one remembers that each individual man, whether adept or laic, has evolved along a particular ray of the Logos, and is in spiritual sympathy with his associate souls of that ray, and may be in antagonism, on this physical plane, with entities of another ray when clothed in flesh. This is probably the *ultima ratio* of what is called magnetic, auric, or psychical sympathy and antipathy. Whatever the reason may be

Digitized by Google

some of the Masters could not and did not work with H. P. B. Several did, among them some whose names have never as yet been given out, but whom I had much intercourse with in those early years of the Theosophical Society movement.

Among other things about herself H. P. B. told me, when I had got along far enough to know of the Brotherhood and her relation with it, that she had come to Paris the previous year (1873) intending to settle down for some time under the protection of a relative of hers, residing in the Rue de l'Université, but one day received from the "Brothers" a peremptory order to go to New York to await further orders.

The next day she had sailed with little more than money enough to pay her passage. She wrote to her father for funds to be sent her in care of the Russian Consul in New York, but this could not arrive for some time, and as the Consul refused her a loan, she had to set to work to earn her daily bread. She told me she had taken lodgings in one of the poorest quarters in New York—Madison Street—and supported herself by making cravats or artificial flowers—I forget which now—for a kind-hearted Hebrew shop-keeper. She always spoke to me with gratitude about this little man. As yet she had received no intimation as to the future, it was a sealed book. But the following year, in October, 1874, she was ordered to go to Chittenden and find the man who, as it turned out, was to be her future colleague in a great work—myself.

Digitized by Google

Her intimate friends will recollect her telling this story about her sudden departure under orders from Paris to New York. Mr. Sinnett mentions it in his *Incidents in the Life of Madame Blavatsky* (page 175), and it has been elsewhere published. But these acquaintances had it from her later on, and her enemies may say it was an afterthought of hers, a falsehood concocted to fit in with a little farce she subsequently invented. Accident, however,—if it be an accident—has just now, while I am writing these pages, brought me a valuable bit of corroborative proof. We have had staying at Adyar an American lady, Miss Anna Ballard, a veteran journalist, a life member of the New York Press Club, who, in the course of professional duty, met H. P. B. in the first week after her arrival at New York. In the course of conversation, amid a variety of less important facts, Miss Ballard casually mentioned to me two, that I at once begged her to put in writing, *viz.*: that H. P. B., whom she found living in a squalid lodging-house, said that she had suddenly and unexpectedly left Paris at one day's notice, and, secondly, that she had visited Tibet. Here is Miss Ballard's own version of the affair:

"ADYAR, 17th January, 1892.

"DEAR COL. OLCOTT:—My acquaintanceship with Mme. Blavatsky dates even further back than you suppose. I met her in July, 1873, at New York, not more than a week after she landed. I was then a reporter on the staff of the *New York Sun*, and had been detailed to

Digitized by Google

write an article upon a Russian subject. In the course of my search after facts the arrival of this Russian lady was reported to me by a friend, and I called upon her; thus beginning an acquaintance that lasted several years. At our first interview she told me she had had no idea of leaving Paris for America until the very evening before she sailed, but why she came or who hurried her off she did not say. I remember perfectly well her saying with an air of exultation, 'I have been in Tibet.' Why she should think that a great matter, more remarkable than any other of the travels in Egypt, India, and other countries she told me about, I could not make out, but she said it with special emphasis and animation. I now know, of course, what it means. ANNA BALLARD."

Unless prepared to concede to H. P. B. the power of foreseeing that I should be getting this written statement from Miss Ballard in India, nineteen years later, the fair-minded reader will admit that the statements she made to her first friend in New York, in 1873, strongly corroborate the assertions she has ever since made to a large number of people about the two most important incidents in the history of her connection with the Theosophical movement, (*a*) her preparation in Tibet, and (*b*) her journey to America in search of the person whose Karma linked him to her as the co-agent to set this social wave in motion.

She made an abortive attempt to found a sort of Spiritual Society at Cairo, in 1871 [*vide* Peebles' *Around the*

Digitized by Google

World, p. 215, and Sinnett's *Incidents in the Life of Mme. Blavatsky*, p. 158], upon a basis of phenomena. Not having the right persons to organise and direct it, it was a lamentable fiasco and brought upon her much ridicule. Yet the magical phenomena she wrought with the help of the self-same Copt and another adept whom I subsequently came into relations with, were most startling.* It was apparently a reckless waste of psychic

*See an article in *Frank Leslie's Popular Magazine* for February 1892, illustrated by mendacious engravings, yet containing a few facts along with much falsehood. The author, Dr. A. L. Rawson, mentions the Cairo failure of the "attempt to form a society for occult research," and says that "Paulos Metamon, a celebrated Coptic magician, who had several very curious books full of astrological formulas, magical incantations and horoscopes which he delighted in showing his visitors, *after a proper introduction*" advised delay. Dr. Rawson says that she (H. P. B.) had told the Countess Kazinoff "that she had solved at least one of the mysteries of Egypt, and proved it by letting a live serpent loose from a bag she had concealed in the folds of her dress." From an eye-witness I had it that while H.P.B. was in Cairo the most extraordinary phenomena would occur in any room she might be sitting in; for example, the table lamp would quit its place on one table and pass through the air to another, just as if carried in some one's hand; this same mysterious Copt would suddenly vanish from the sofa where he was sitting, and many such marvels. Miracles no longer, since we have had the scientists prove to us the possibility of inhibition of the senses of sight, hearing, touch, and smell by mere hypnotic suggestion. Undoubtedly this inhibition was provoked in the company present, who were made to see the Copt vanish, and the lamp moving through space, but not the person whose hand was carrying it. It was what H. P. B. called a "psychological trick," yet all the same a fact and one of moment to science. Scientists attest the fact of inhibition yet confess ignorance as to its rationale. "How"—say Drs. Binet and Féré, in their celebrated work *Le Magnetisme Animal*—"has the experimentalist produced this curious phenomenon? We know nothing about it. We only grasp

Digitized by Google

energy, and indicated anything but either personal infallibility or divine guidance. I could never understand it. And as regards the Theosophical Society every circumstance tends to show that it has been a gradual evolution, controlled by circumstances and the resultant of opposite forces, now running into smooth, now into rough grooves, and prosperous or checked proportionately with the wisdom or unwisdom of its management. The general direction has always been kept, its guiding motive ever identical, but its programme has been variously modified, enlarged, and improved as our knowledge increased and experience from time to time suggested. All things show me that the movement as such was planned out beforehand by the watching Sages, but all details were left for us to conquer as best we might. If we had failed, others would have had the chance that fell to our Karma, as I fell heir to the wasted chances of her Cairo group of 1871. Speaking of growth of knowledge, I can look back and trace a constant enlargement of my own

the external fact, to know that when one affirms to a sensitive subject that an object present does not exist, this suggestion has the effect, direct or indirect, to dig in the brain of the hypnotic an anesthesia corresponding to the designated object. But what happens between the verbal affirmation, which is the means, and the systematised anesthesia, which is the end? . . . Here the laws of association, which are so great a help in solving psychological problems, abandon us completely." Poor beginners! They do not see that the inhibition is *upon the astral man*, and Eastern magicians excel them in "psychological tricks" simply because they know more about psychology, and can reach the Watcher who peers out upon the foolish world of illusion through the windows of the body: the telephonic nerves being inhibited, the telegraphic wires are cut, and no message passes in.

Digitized by Google

ideas, deeper perception of truth, and capacity to assimilate and impart ideas. My published articles and letters between 1875 and 1878 prove this distinctly. When I was a child (in Occultism) I spoke as a child; often dogmatically, after the fashion of comparative tyros.

I never heard anything from H. P. B. in the early days to make me think that she had the least intimation, until sent to Chittenden to me, about any future relationship between us in work, nor even then that the Theosophical Society was to be. We have it on her own authority, as quoted above, that she was sent from Paris to New York in the interest of Spiritualism, in the best sense of that word, and before we met she had attended séances and consorted with mediums, but never came under public notice. In May, 1875, I was engaged in trying to organise at New York with her concurrence a private investigating committee under the title of the "Miracle Club." In the *Scrap-book* (Vol. I.) she writes about it:

"An attempt in consequence of orders received from T* B* (a Master) through P. (an Elemental) personating John King. Ordered to begin telling the public the truth about the phenomena and their mediums. And now my martyrdom will begin! I shall have all the Spiritualists against me, in addition to the Christians and the Sceptics. Thy will, oh M., be done. H. P. B."

The plan was to keep closed doors to all save the members of the Club, who were forbidden to divulge even the place of meeting. "All the manifestations, in-

Digitized by Google

cluding materialisations, to occur in the light, and without a cabinet." [*Spiritual Scientist*, May 19, 1876.] Taking H. P. B.'s remark above, as written, it looks as though there would have been no Theosophical Society—it looks so, I say—if her intended medium for the Miracle Club had not utterly failed us and so precluded my completing the organisation.

I notice in Mr. Sinnett's book the coincidence that she arrived at New York on the 7th of July, 1873–that is to say on the *seventh* day of the *seventh* month of her forty-second year (6x7), and that our meeting was postponed until I should have attained my forty-second year. And, to anticipate, it must also be remarked that she died in the seventh month of the seventeenth year of our Theosophical relationship. Add to this the further fact, recently published by me in the *Theosophist*, that Mrs. Annie Besant came to H. P. B. as an applicant for membership in the seventh month of the seventeenth year after her final withdrawal from the Christian communion, and we have here a pretty set of coincidences to bear in mind.

CHAPTER II.

MADAME BLAVATSKY IN AMERICA.

I HAVE found a letter to myself from an older acquaintance of Madame Blavatsky's than even Miss Ballard, the existence of which I had forgotten. The last-named lady met her at New York within the first week after her arrival from France, but Dr. Marquette knew her in Paris, before she started on that long and brilliant career which led, *per aspera ad astra*, to end at the Woking crematory for the moment, in 1891, and then keep on and ever onward. The innuendoes about her having led a wild life at the French capital in 1873, are answered by this frank statement of an educated lady physician, whom I personally knew at New York, but who, I understand, is now deceased. She says :

"NEW YORK, December 26, 1875.

"DEAR SIR :

"In reply to your inquiries, I have to say that I made Madame Blavatsky's acquaintance in Paris in the year 1873. She was living in the Rue du Palais, in an apart-

Digitized by Google

ment* with her brother, M. Hahn, and his intimate friend M. Lequeux. I was with her almost daily, and, in fact, spent a good part of my time with her when I was not in the hospitals or attending the lectures. I am, therefore, able to state from positive knowledge, what her behaviour was. It gives me great pleasure to say that that behaviour was *unexceptionable*, and such as to entitle her to every respect. She passed her time in painting and writing, seldom going out of her room. She had few acquaintances, but among the number were M. and Mme. Leymarie. Mme. Blavatsky I esteem as one of the most estimable and interesting ladies I ever met, and since my return from France, our acquaintance and friendship have been renewed.

"Yours respectfully,

(Sd.) "L. M. MARQUETTE, M.D."

In the preceding chapter it was mentioned that she had left Paris for New York, by order of the Masters, on a day's notice, and with barely enough money to pay her way out. I recall a circumstance of the journey which, as she told it, brings into high relief one trait of her many-angled character—her impulsive generosity. She had bought a first-class ticket from Havre to New York, and had gone to the quay to either see or embark on the steamer, when her attention was attracted by a peasant woman, sitting on the ground with a child or

* An "*appartement*" does not mean, as with us, a single chamber, but a suite of rooms, comprising reception, dining and bed-rooms, with a kitchen and servants' quarters.—O.

Digitized by Google

two beside her, and weeping bitterly. Drawing near, H. P. B. found she was from Germany on her way to America to rejoin her husband, but a swindling emigrant runner at Hamburgh had sold her bogus steamer tickets, and there she was, penniless and helpless : the steamship company could do nothing, of course, and she had neither relative nor acquaintance in Havre. The heart of our kind H. P. B. was so touched that she said : "No matter, good woman, I will see if something cannot be done." She first vainly tried her powers of persuasion (and objurgation) upon the blameless agent of the company, and then, as a last expedient—her own funds being insufficient for the purpose — had her saloon ticket changed for a steerage berth for herself, and for the difference got steerage tickets for the poor woman and her children ! Many "proper" and "respectable" people have often expressed horror at H. P. B.'s coarse eccentricities, including profanity, yet I think that a generous deed like this would cause whole pages of recorded solecisms in society manners to be washed away from the Book of Human Accounts ! If any doubt it, let them try the steerage of an emigrant ship.

We have seen how Miss Ballard found H. P. B. living in a wretched tenement-house in an East-end New York street, pending the arrival of money from home, and honestly supporting herself by sewing cravats. This was in July, 1873. In the following October her ever-indulgent, forbearing, and beloved father, died, and, on the 29th of the month, she received a cable dispatch from

Digitized by Google

Stavropol, from her sister "Elise," conveying the news and informing her as to the amount of her heritage: adding that a draft for 1000 roubles had been sent her. [I have the original dispatch before me as I write.] In due course of post she received all the money, and then shifted her quarters to better neighbourhoods in New York city—Union Square, East Sixteenth St., Irving Place, etc., and it was in the last-named I found her domiciled upon returning from the Eddy Homestead. Her money did not stay with her long, however, for, as it is recorded in Mr. Sinnett's book, while she could endure with perfect patience the miseries of poverty if compelled, no sooner did money fall into her lap than she seemed to be unhappy unless she was throwing it away with both hands in the most imprudent fashion. A document in my possession illustrates this so well that I must quote from it. It is an agreement entitled "Articles of co-partnership entered into this twenty-second day of June, in the year One thousand eight hundred and seventy-four, by and between C.....G....., party of the first part and Helen Blavatsky, party of the second part, to wit:" Clause 1 recites that the co-partnership is "for the purpose of working the land and farm at N——, in the County of ——, Long Island," the property of C. G.; Clause 2 says, "the said co-partnership shall commence on the first day of July, 1874, and shall continue for the period of three years." Clause 3 states that C. G. puts the use of the farm into the co-partnership as an off-set against the sum of one thousand dollars paid in

Digitized by Google

by H. P. B. By Clause 4 "all proceeds for crops, poultry, produce, and other products raised on the said farm shall be divided equally, and all expenses" equally shared. Clause 5, and last, reserves the title of the land to C. G. The document is duly signed and sealed by the parties, witnessed and recorded.

What anybody might have expected happened: H. P. B. went to live on the farm; got no profits, had a row, acquired debts and a neat little lawsuit which friends helped her to settle long afterward. That was the last of her bucolic dream of profits from sales of garden-truck, poultry, eggs, etc.: three months later she met me in the Vermont ghostland, and the wheels of our war chariot began rumbling prophetically through the lowest levels of the Akash!

In November, 1874, signing her letter "Jack the Pappoose," she wrote to ask me to get her an engagement to write weird stories for a certain journal, as she would soon be "hard up," and gave me a rollicking account of her family pedigree and connexions on both sides; talking like a democrat, yet showing but too plainly that she felt that she, if any one, had reason to be proud of her lineage. She writes me how the *Daily Graphic* people had interviewed her about her travels and asked for her portrait. Considering how many thousand copies of her likeness have since been circulated, the world over, it will amuse if I quote a sentence or two about this first experience of the sort:

"Don't you know, the fellows of the *Graphic* bored

Digitized by Google

my life out of me to give them my portrait? Mr. F. was sent to get me into conversation after I came out [for the Eddys, she means], and wanted them to insert my article against . . . Beard. I suppose they wanted to create a sensation and so got hold of my beautiful nostrils and splendid mouth . . . I told them that nature has endowed and gifted me with a potato nose, but I did not mean to allow them to make fun of it, vegetable though it is. They very seriously denied the fact, and so made me laugh, and you know '*celui qui rit est desarmé*.'"

A well-known physician of New York, a Dr. Beard, attracted to Chittenden by my *Graphic* letters, had come out with a bombastic and foolish explanation of the Eddy ghosts as mere trickery, and she had flayed him alive in a reply, dated October 27th and published in the *Graphic* of October 30th. Her letter was so brave and sparkling a defence of the Eddy mediums, and her testimony as to the seven "spirit-forms" she herself had recognised so convincing, that she at once came into the blaze of a publicity which never afterwards left her. This was the first time her name had been heard of in America in connection with psychological mysteries, my own mention in the *Graphic*, of her arrival at Chittenden appearing, if I am not mistaken, a little later. However, be that as it may, her tilt with Dr. Beard was the primary cause of her notoriety.

She carried a tone of breeziness, defiant brusqueness, and *camaraderie* throughout all her talk and writing in

Digitized by Google

those days, fascinating everybody by her bright wit, her contempt for social hypocrisies, and all "caddishness," and astounding them with her psychical powers. The erudition of *Isis Unveiled* had not yet overshadowed her, but she constantly drew upon a memory stored with a wealth of recollections of personal perils and adventures, and of knowledge of occult science, not merely unparalleled but not even approached by any other person who had ever appeared in America, so far as I have heard. She was a totally different personage then from what she was later on, when people saw her settled down to the serious life-work for which her whole past had been a preparatory school. Yes, the H. P. B. I am now writing about, in whose intimate comradeship I lived, with whom I was on terms of perfect personal equality, who overflowed with exuberant spirits and enjoyed nothing more than a comic song or story, was not the H. P. B. of India or London, nor recognisable in the mental colossus of the latter days. She changed in many things, yet in one thing she never improved, *viz.*, the choice of friends and confidants. It almost seems as though she were always dealing with *inner selves* of men and women, and had been blind to the weakness or corruption of their visible, bodily shells. Just as she flung her money to every specious wretch who came and lied to her, so she made close friends of the passing hour with people the most unworthy. She trusted one after another, and, for the time being, there seemed nobody like them in her eyes; but usually the morrow brought disillusion and disgust,

Digitized by Google

without the prudence to avoid doing it all over again. I mentioned above the attempt to form a Miracle Club, for the study of practical psychology. The intended medium belonged to a most respectable family, and talked so honestly that we thought we had secured a prize. He proved to be penniless, and as H. P. B. in his hour of greatest need had no money to spare, she pawned her long gold chain and gave him the proceeds. That wretch not only failed utterly as a medium, but was also reported to us as having spread calumnies against the one who had done him kindness. And such was her experience to the end of her life; the ingratitude and cruel malice of the Coulombs being but one of a long series of sorrows.

The subsequent history of that gold chain is interesting. It was, of course, redeemed from pawn, and, later, she wore it in Bombay and Madras. When, in the Ninth Annual Convention of the Society, held at Adyar, a subscription was started to create the Permanent Fund, H. P. B. put her chain up at private auction, and it was bought by Mr. E. D. Ezekiel, and the money handed over to the Treasurer of the T. S. for the Fund in question.

Before my series of Chittenden letters to the *Daily Graphic* was finished, I had arranged for their publication in book form at Hartford, Conn., and about the same time H. P. B. removed to Philadelphia. A blight fell upon Spiritualism in those days, in consequence of Mr. Dale Owen's public denunciation of the Holmes

Digitized by Google

mediums as cheats. The journals of that movement lost heavily in subscribers, the most popular books lay unsold on the publishers' shelves. My own publishers were so alarmed that I arranged, through Mr. Owen, with Mrs. Holmes for a course of test-séances under my own conditions, and went there and carried out my plan, with the colleagues before mentioned. Thence I proceeded to Havana, N. Y., and saw the truly marvellous mediumistic phenomena of Mrs. Compton. Both sets of experiences were embodied in my book, and it was published.

H. P. B. was still at Philadelphia, so I accepted her urgent invitation to come and take a few days' holiday after my long term of work. Expecting to be absent from New York only two or three days, I left no instructions at my office or club about forwarding my letters, but, finding upon arrival that she was not likely to let me go so soon, I went on the second day to the General Post-Office, gave the address of my lodgings, and asked that any letters coming for me might be delivered there by carrier. I expected none, but fancied that the people in my office, not hearing from me, might address me at the Philadelphia Post-Office on the chance of my getting their letter. Then happened something that astonished me—knowing so little as I did of the psychical resources of H. P. B. and her Masters—and which even now, despite so long an experience of phenonena, remains a world-wonder. To understand what follows, let the reader examine any letter he has re-

Digitized by Google

ceived by post, and he will find two office stamps upon it; the one on the face, that of the office at which it was posted, the one on the back, that of the office to which it was addressed; if it has been sent on after him from the latter office, it will at least bear those two stamps, and, in addition, those of any series of post-offices to which it was re-addressed until it finally reached his hand. Now, on the evening of the very day on which I had left my address at the Philadelphia General Post-Office, the local postman brought me letters coming from widely distant places—one, I think, from South America, or at any rate, some foreign country—addressed to me at New York, bearing the stamps of the respective offices of posting, *but not that of the New York Post-Office.* Despite all post-office rules and customs, they had come straight to me to Philadelphia without passing through the New-York Post Office at all. *And nobody in New York knew my Philadelphia address*, for I did not myself know what it would be when I left home. I took these letters myself from the postman's hand, being just on the point of going out for a walk when he arrived. So the letters were not tampered with by H. P. B. *Upon opening them, I found inside each, something written in the same handwriting as that in letters I had received in New York from the Masters, the writing having been made either in the margins or any other blank space left by the writers.* The things written were, either some comments upon the character or motives of the writers, or matter of general purport as regards my occult studies. These

Digitized by Google

FAC-SIMILE OF THE COVER OF A LETTER PHENOMENALLY DELIVERED.

Digitized by Google

were the precursors of a whole series of those phenomenal surprises during the fortnight or so that I spent in Philadelphia. I had many, and no letter of the lot bore the New York stamp, although all were addressed to me at my office in that city.

The accompanying fac-simile of one of the covers—a letter from Prof. J. R. Buchanan—will show that although addressed to me at New York, it was delivered by the Philadelphia carrier without having been re-addressed to that city. The house number—H. P. B.'s residence—was written in the City Delivery Department of the Philadelphia Post-Office. The New York stamp is not on the back.

When we come to analyse the psychical phenomena of or connected with Mme. Blavatsky, we find that they may be classified as follows :

1. Those whose production requires a knowledge of the ultimate properties of matter, of the cohesive force which agglomerates the atoms ; especially a knowledge of Akash, its composition, contents, and potentialities.

2. Those which relate to the powers of the elementals when made subservient to human will.

3. Those where hypnotic suggestion through the medium of thought-transference creates illusive sensations of sight, sound, and touch.

4. Those which involve the art of making objective images, pictorial or scriptory—which are first purposely created in the adept-operator's mind ; for instance, the precipitation of a picture or writing upon paper or other

Digitized by Google

material surface, or of a letter, image, or other mark upon the human skin.

5. Those pertaining to thought-reading and retrospective and prospective clairvoyance.

6. Those of the intercourse at will between her mind and the minds of other living persons equally or more perfectly gifted, psychically, than herself. Or, sometimes, the subordination of her will and whole personality to the will of another entity.

7. Those, of the highest class, where by spiritual insight, or intuition, or inspiration—as indifferently called; there being no real difference in the condition, but only in names—she reached the amassed stores of human knowledge laid up in the registry of the Astral Light.

Recalling my observations for the past twenty years as well as I can, I think that all the tales I have ever told or shall henceforth tell, will drop into one or other of these classes.

The sceptic will certainly say that my groups are arbitrary and my hypotheses fanciful. He will ask me to prove that there are elemental spirits ; that there is such a thing as clairvoyance ; that material objects called for can be brought from a distance ; that anybody really knows the nature of the attraction of cohesion, etc. I shall, for my sole answer, tell what I and others have seen, and then challenge the doubter to find in nature any thinkable laws, outside those above enumerated, which explain the facts—the hard undeniable facts. If the theory of miracle, or diabolism, be propounded, then I shall be

Digitized by Google

dumb, for that cuts off argument. I do not pretend to be able to explain the rationale of all of H. P. B.'s phenomena, for to do that one would need to be as well informed as herself; which I never pretended to be.

CHAPTER III.

PHILADELPHIA PHENOMENA.

AN experiment, made by H. P. B., with myself as a passive agent, shortly after my coming to her house in Philadelphia, narrows the phenomena of letter-transport, with precipitation of writing inside sealed covers, to very close limits. The facts were these : she was tipping tables for me, with and without the contact between her hands and the table ; making loud and tiny raps—sometimes while holding her hand six inches above the wood, and sometimes while resting her hand upon mine as it lay flat upon the table ; and spelling out messages to me from the pretended John King which, as rapped out by the alphabet, I recorded on scraps of paper that were subsequently torn up and thrown away. At last some of these messages relating to third parties seemed worth keeping, so one day, on my way home, I bought a reporter's note-book, and, on getting to the house, showed it to her and explained its intended use. She was seated at the time and I

Digitized by Google

standing. Without touching the book or making any mystical pass or sign, she told me to put it in my bosom. I did so, and after a moment's pause she bade me take it out and look within. This is what I found: inside the first cover, written and drawn on the white lining paper in lead pencil:—

"JOHN KING,
HENRY DE MORGAN,

his book.

4th of the Fourth month in A.D. 1875."

Underneath this, the drawing of a Rosicrucian jewel; over the arch of the jewelled crown, the word FATE; beneath which is her name, "Helen," followed by what looks, after the rubbing of these seventeen years, like 99, something smudged out, and then a simple +. At the narrowest point, where the head of the compasses enters the crown, are the initials I. S. F.; beneath that a monogram, blending the capital letters A, T, D, and R, the T much larger than the others. At one foot of the compasses is my name, at the other the name of another man, a resident of Philadelphia; and along the segment of the arch connecting the two points of the pair of compasses run the words "Ways of Providence." I have the book on my table as I write, and my description is taken from the drawing itself. One striking feature of this example of psycho-dynamics is the fact that no one but myself had touched the book

Digitized by Google

after it was purchased: I had had it in my pocket until it was shown to H. P. B., from the distance of two or three feet, had myself held it in my bosom, removed it a moment later when bidden, and the precipitation of the lead-pencil writing and drawing had been done while the book was inside my waistcoat. Now the writing inside the cover of my notebook is very peculiar; the e's being all like the Greek *epsilon*, and the n's something like the Greek *pi*: it is a quaint and quite individual handwriting, not like H. P. B.'s, but identical with that in all the written messages I had from first to last from "John King." H. P. B. having, then, the power of precipitation, must have transferred from her mind to the paper the images of words traced in this special style of script; or, if not she, but some other expert in this art did it, then that other person must have done it in that same way—*i. e.*, have first pictured to himself mentally the images of those words and that drawing, and then precipitated; that is, made them visible on the paper, as though written with a lead pencil. After seventeen years this psychograph remains legible, and some—not all—of the characters have the shine of plumbago: those that have not seem as though the lines had been sunken into the fabric of the paper. I have records of precipitations made in crayon, water colors, blue, red, and green pencils, ink and gold paint, as well as the formation of solid substances, but one scientific principle un-

Digitized by Google

derlies them all, *viz.*, the objectivation of images, previously "visualised," or formed in the mind of the expert, by the employment of cosmic force and the diffused matter of space. The imagination is the creative hidden deity; force and matter its working tools.

The days and evenings of my Philadelphia visit were symposia of occult reading, teaching, and phenomena. Among H. P. B.'s most pleasant and sympathetic friends were Mr. and Mrs. Amer, and Messrs. M. D. Evans and J. Pusey, in whose presence a variety of phenomena were wrought. I remember, among others, that one afternoon she caused a photograph on the wall to suddenly disappear from its frame and give place to a sketch portrait of John King while a person present was actually looking at it. By degrees my mind was taking in the Eastern theories of spirit and spirits, of matter and materialism. Without being asked by H. P. B. to give up the spiritualistic hypothesis, I was made to see and to feel that, as a true science, Spiritualism could only be said to exist in the East, and its only proficients were pupils and teachers of the Oriental schools of occultism. With the sincerest desire to be fair to the Spiritualists, I must say that up to the present moment no scientific theory of mediumistic phenomena that covers the ground and is generally accepted among them, has been put forward, nor have I seen convincing proof that among Western adherents to

Digitized by Google

the movement there has been discovered a system by which spirits may be evoked or physical phenomena compelled at will. Not a medium that I have ever met or heard of possesses a mantram or Vidya (scientific method) for those purposes, such as are common and have been known for ages in all Eastern countries. See, for example, the article "An Evocation by Sorcery," in the *Theosophist* for May, 1892. Thus for instance, while I and H. P. B.'s other friends were made to believe the John King (almost daily) phenomena were done by a disembodied man, once the famed buccaneer, Sir H. Morgan, and that she was serving him as medium, or, at least, contented helper, H. P. B. did things which implied a knowledge of magic. Let me give a homely example while at the same time remarking that great scientific inductions have been reached by the chance observation of equally commonplace facts—*e. g.*, the falling of an apple, the jumping of the lid of a boiling kettle. One day, bethinking me that a sufficiency of towels was but too evidently lacking in her house, I bought some and brought them home with me in a parcel. We cut them apart, and she was for putting them into immediate use without hemming, but, as I protested against such bad housekeeping, she good-naturedly set to plying her needle. She had hardly commenced when she gave an angry kick beneath the work-table at which she sat, and said, "Get out, you fool!" "What is the matter?" I asked.

Digitized by Google

"Oh," she replied, "it is only a little beast of an elemental that pulled my dress and wants something to do." "Capital!" I said; "here is just the thing; make it hem these towels. Why should you bother about them, and you such an atrocious needlewoman as that very hem proves you to be?" She laughed, and abused me for my uncomplimentary speech, but at first would not gratify the poor little bond-slave under the table that was ready to play the kindly leprachaun if given the chance. I, however, persuaded her at last: she told me to lock up the towels, the needles and thread, in a bookcase with glass doors lined with thick green silk, that stood at the farther side of the room. I did so and resumed my seat near her, and we fell to talking on the inexhaustible and unique theme that occupied our thoughts—occult science. After perhaps a quarter of an hour or twenty minutes, I heard a little squeaky sound, like a mouse's pipe, beneath the table, whereupon H. P. B. told me that "that nuisance" had finished the towels. So I unlocked the bookcase door, and found the dozen towels were actually hemmed, though after a clumsy fashion that would disgrace the youngest child in an infant-school sewing-class. Hemmed they were, beyond the possibility of doubt, and inside a locked bookcase which H. P. B. never approached while the thing was going on. The time was about 4 P.M., and, of course, it was broad daylight. We were the only persons in the room, and no third person entered it until all was finished.

Digitized by Google

Her house in Philadelphia was built on the usual local plan, with a front building and a wing at the back which contained the dining-room below and sitting or bedrooms above. H. P. B.'s bedroom was the front one on the first floor (the second, it is called in America) of the main building; at the turn of the staircase was the sitting-room where the towels were hemmed, and from its open door one could look straight along the passage into H. P. B.'s room if her door also stood open. She had been sitting in the former apartment conversing with me, but left to get something from her bedroom. I saw her mount the few steps to her floor, enter her room and leave the door open. Time passed, but she did not return. I waited and waited until, fearing she might have fainted, I called her name. There was no reply, so now, being a little anxious and knowing she could not be engaged privately, since the door had not been closed, I went there, called again, and looked in; she was not visible, though I even opened the closet and looked under the bed. She had vanished, without the chance of having walked out in the normal way, for, save the door giving upon the landing, there was no other means of exit; the room was a *cul de sac*. I was a cool one about phenomena after my long course of experiences, but this puzzled and worried me. I went back to the sitting-room, lit a pipe, and tried to puzzle out the mystery. This was in 1875, it must be remembered, many years before the Salpétrière school's experiments in hypnotism had been vulgarised, so it never occurred to

Digitized by Google

me that I was the subject of a neat experiment in mental suggestion, and that H. P. B. had simply inhibited my organs of sight from perceiving her presence, perhaps within two paces of me in the room. After awhile she calmly came out of her room into the passage and returned to the sitting-room to me. When I asked where she had been, she laughed and said she had had some occult business to attend to, and had made herself invisible. But how, she would not explain. She played me and others the same trick at other times, before and after our going to India, but even the latest instance happened long before the easy hypnotic solution of the problem would have occurred to me. As explained in the first chapter of this series, the superior neatness of Oriental over Western hypnotic suggestion is that in such cases as this, the inhibitory effect upon the subject's perceptive organs results from mental, not spoken, command or suggestion. The subject is not put on his guard to resist the illusion, and it is done before he has the least suspicion that any experiment is being made at his expense.

Since I took no measurement at the time, I must concede that the following also may have been a case of suggested illusion. H. P. B. was wearing her hair at that time in a bushy mop, without comb or pins or twists, and in length it might have been about to the lobes of her ears. I came home to tiffin one day, and, her bedroom door standing open as usual, stopped for a minute's chat, before mounting to my own room on the floor

Digitized by Google

above. She was standing near one of the windows, and her head being in high light, I noticed particularly the mass of her hair and its tousled appearance. I also observed the shine of the daylight upon the glossy, pale grey paper with which the ceiling was covered. After a few words together I ran up stairs, but had not been there a minute before I heard her calling me to come down. I did so at once, saw her standing in the same place, but her hair was now so much longer that it almost touched her shoulders. She said nothing about that, but pointed to the ceiling over her head and said : " Here is something that John has drawn for you." My recollection is now very dim as to what it was, but, as I remember it, it was a huge sketch of a man's head, with some writing or symbols near it ; all done in lead-pencil, at the spot where I had noticed the blank surface to be when I passed up stairs. I then took hold of her lengthened hair, and asked her, laughing, where she bought her pommade, as it was certainly very efficacious if it could cause hair to grow two inches within three minutes. She made some merry rejoinder, and said I should not meddle with things that were of no consequence ; such freaks of nature sometimes happened to her ; it was not to see that she had called me, but only to show me what John King had done on the ceiling. Considering the time that had elapsed from my leaving to my re-entering the room, and the fact that the ceiling was too high for her to reach, even by standing on a chair or table, my present inference is that the drawing was done in one of two ways, *viz.*,

Digitized by Google

either by herself at her leisure, while I was out, by mounting upon a step-ladder, and inhibiting me from seeing the work until she chose; or by the process of instantaneous precipitation while I was ascending and descending one short flight of stairs. That it was not visible to me when I was first in the room, I can positively aver, and if the reader chooses to speculate as to the rationale of the matter, he must take my statement as made for what it is worth. What makes me suspect that the apparent lengthening of H. P. B.'s hair was illusory, is the fact that, try as I may, I cannot remember whether it continued to seem long or apparently resumed its previous length that day or the next. People in India, and others subsequently, in Europe, saw her hair twisted up into a knot and confined by a comb, but it was years after we met before she would let it grow long enough for that purpose; I am not sure that it was not when we went to visit the Sinnetts at Simla; so I am probably right in suspecting that the apparent sudden lengthening was a Maya done by way of a joke. But very, very strange things happened with her hair on several occasions, to be hereafter narrated. And strangest of all, was that which happened to my beard one night, as we shall see in good time. Speaking of her jokes, it may be said that, throughout all our years of intimacy, she wasted enough psychic force on useless phenomena to have sufficed to convince the whole Royal Society if it had been judiciously employed. I have heard her ring astral bells that were drowned in the

Digitized by Google

noise of conversation, make raps that nobody heard save myself, and do other phenomena that passed unnoticed, but which would have greatly strengthened her credit as a thaumaturgist if she had but chosen the favourable moment and given the right chances for observation. However, all that is past and gone, and my task is to record, as remembered, the psychical experiments which satisfied my critical reason as to the reality of the science of Eastern Magic. In doing which, shall I not be acting as a true friend to H. P. B., whose character has been vilified and whose occult powers denied because she fed rogues at her table and warmed traitors in her bosom? These days and events of which I write were in the pre-*Coulombian* era, when real adepts taught eager pupils and genuine phenomena happened. And they were days when I knew my colleague as a human being, before she had been half-deified by friends who had known nothing of her human failings, hence of her humanity. As I shall present her, the now fading ideal image of the writer of *Isis* and the *S. D.*, will become clothed in flesh and blood ; a real (masculinised) woman ; living like other people when awake, but going into another world and dealing with nobler people, when asleep or in waking clairvoyance ; a personality inhabiting an enfeebled female body, " in which . . . a vital cyclone is raging much of the time "—to quote the words of a Master. So fitful, so capricious, so unreliable, so exacting, so tempestuous as to call for heroic forbearance and self-control if one would live and work with her in an

Digitized by Google

unselfish spirit. These phenomena of hers that I saw, the manifold proofs she gave of the existence behind her of teachers whose feet she felt she was scarce worthy to dust, and the later *epistasis*, when the turbulent and exasperating woman became a writing and teaching sage and a benefactress to the soul-seeker ;—all these, and the books she left behind her, combine to prove her exceptional greatness and make her eccentricities forgotten, even by those to whom they caused most mental suffering. In showing us the Path, she laid us all under such a weight of obligation that it is impossible to harbour any feeling save gratitude for her.

CHAPTER IV.

MADAME BLAVATSKY'S SECOND MARRIAGE.

IN giving anything like a consecutive account of early Theosophic days—by which term I mean to include all days of intercourse between H. P. B. and myself, so far as I can recall them—I must briefly allude to the cases of precipitation of manuscript by her which are mentioned in my *People from the Other World* (pp. 455-6-7 and 8). Ostensibly, as above stated, they were given me by John King, of Kamaloca, whilom buccaneer, knighted by His Britannic Majesty Charles II., but now apparently a mere pseudonym of H. P. B.'s elementals. At a séance at her hotel in Philadelphia, on the evening of January 6, 1875, the alleged J. K. doing phenomena, I said: "If you are in reality a spirit, as you pretend, give me some exhibition of your power. Make me, for example, a copy of the last note from E. W. to Mr. Owen that I have in the portfolio in my pocket." No notice was taken of the request that evening, but on the next but one after it, while H. P. B. was writing and I reading at the same table, loud raps sounded, and, upon

Digitized by Google

my calling the English alphabet, spelt out, "Hand me your dictionary under the table, will you?" The only dictionary there, was a Russian-English one of H. P. B.'s, which was handed (not dropped, but *handed*, as if to a something or invisible somebody down there, that could take the bulky volume) beneath as requested. The raps then called for a mucilage bottle, and then for a pen-knife. These also having been passed under the table, there was momentary silence, after which was rapped the word "Look!" We took up the book, knife, and bottle, and upon a fly-leaf of the dictionary I found a precipitated copy of the note in question. The call for the knife was explained to me thus: a certain infinitesimal quantity of the metal composing the blades was disintegrated from the mass and used in precipitation of the black writing from the state of metallic vapour. The gum-arabic lent some of its particles—also vaporised for the purpose—as a cohesive aid in the experiment. The portfolio containing the duplicated note had been in my pocket continuously since my coming to Philadelphia, until half an hour prior to the experiment, when I had laid it on the mantel-shelf, and had had it in full view whenever I raised my eyes from my book. H. P. B. was all the time within two feet of me, at her table writing, and no person save ourselves was or had been in the room since I laid it upon the shelf. Upon comparing the original writing and the duplicate, by superposition, it was evident that they were not fac-similes, which made it the more interesting.

Digitized by Google

The next evening, H. P. B. and I being again alone, the raps called for a piece of Bristol-board drawing-paper to be handed beneath the table. Showing me first that both sides were blank, my colleague passed it down to "John King," whereupon the raps bade me look at my watch and note how long the experiment would require. With my watch in hand, I glanced under the table-cloth and satisfied myself that there was but the one sheet of paper there which I had handled the moment before. At the end of just thirty seconds the raps spelt out "Done." I looked at the paper and felt disappointed upon seeing that the exposed surface was as blank as before, but upon the under face, the one next the carpet, was found a second and even better copy of the original E. W. letter. This time the portfolio containing the letter was in the inside breast-pocket of my coat, where it had been continuously since the previous evening's experiment in precipitation. A Mr. B——, who entered the room at this moment, assisted me in making a very careful scrutiny of the documents, placing one over the other as I had already done, and becoming, like myself, entirely convinced of the genuineness of the phenomenon. I may say, in parenthesis, that this gentleman received in his carpet-bag while travelling by railway train, a letter from "John King" conveying instructions as to something of a personal nature. He told me the story himself, showed me the letter, and stated upon honour, that it had come into his bag while in a train and miles distant from Philadelphia and H. P. B.

Digitized by Google

This incident recalls similar experiences of my own while travelling by train, in France, with Babu Mohini M. Chatterji, and in Germany with Dr. Huebbe Schleiden, both in the year 1884.

The mention of this gentleman (Mr. B.) reminds me of the duty I owe to the memory of H. P. B. to state her exact relations with him. It has been insinuated that they were not altogether creditable, and that there was a mystery concealed which would not bear probing. This is of a piece with the multitudinous cruel reports that were spread about her. She is dead and gone now from the world's sight and beyond the reach of the slanderer, but, judging from my own feelings, I am sure that all who love her memory will be glad to know the facts from one of the half dozen who are able to give them. They are these: One of my Chittenden letters in the *Daily Graphic* aroused the interest of this Mr. B.—a Russian subject—and led him to write me from Philadelphia expressing his strong desire to meet my colleague and talk over Spiritualism. No objections being made by her, he came over to New York towards the end of 1875, and they met. It turned out that he fell at once into a state of profound admiration, which he expressed verbally, and later, by letter, to her and to me. She persistently rebuffed him when she saw that he was matrimonially inclined, and grew very angry at his persistence. The only effect was to deepen his devotion, and he finally threatened to take his life unless she would accept his hand. Meanwhile, before this crisis

Digitized by Google

arrived, she had gone to Philadelphia, put up at the same hotel, and received his daily visits. He declared that he would ask nothing but the privilege of watching over her, that his feeling was one of unselfish adoration for her intellectual grandeur, and that he would make no claim to any of the privileges of wedded life. He so besieged her that—in what seemed to me a freak of madness—she finally consented to take him at his word and be nominally his wife; but with the stipulation that she should retain her own name, and be as free and independent of all disciplinary restraint as she then was. So they were lawfully married by a most respectable Unitarian clergyman of Philadelphia, and set up their *lares* and *penates* in a small house in Sansom Street, where they entertained me as guest on my second visit to that city—after my book was finished and brought out. The ceremony took place, in fact, while I was stopping in the house, although I was not present as a witness. But I saw them when they returned from the clergyman's residence after the celebration of the rite.

When I privately expressed to her my amazement at what I conceived to be her act of folly in marrying a man younger than herself, and inexpressibly her inferior in mental capacity; one, moreover, who could never be even an agreeable companion to her, and with very little means—his mercantile business not being as yet established—she said it was a misfortune that she could not escape. Her fate and his were temporarily linked to-

Digitized by Google

gether by an inexorable Karma, and the union was to her in the nature of a punishment for her awful pride and combativeness, which impeded her spiritual evolution, while no lasting harm would result to the young man. The inevitable result was that this ill-starred couple dwelt together but a few months. The husband forgot his vows of unselfishness, and, to her ineffable disgust, became an importunate lover. She fell dangerously ill in June from a bruise on one knee caused by a fall the previous winter in New York upon the stone flagging of a sidewalk, which ended in violent inflammation of the periosteum and partial mortification of the leg; and as soon as she got better (which she did in one night, by one of her quasi-miraculous cures, after an eminent surgeon had declared that she would die unless the leg was instantly amputated), she left him and would not go back. When, after many months of separation, he saw her determination unchangeable, and that his business, through his mismanagement, was going to the dogs, he engaged counsel and sued for a divorce on the ground of desertion. The summonses were served upon her in New York, Mr. Judge acted as her counsel, and on the 25th May, 1878, the divorce was granted. The original documents have ever since been in my custody. That is the whole story, and it will be seen that it shows no criminality nor illegality on her part, nor any evidence that she derived the slightest worldly advantage from the marriage beyond a very modest maintenance, without a single luxury, for a few months.

Digitized by Google

Before dismissing Mr. B. from the scene, I might mention a variant of her precipitation phenomena which I personally witnessed. He talked continually of a deceased grandmother, whom he professed to have loved very dearly, and begged H. P. B. to get him, if possible, her portrait, the family having none. Wearied by his importunities, she, one day when we three were together, took a sheet of writing-paper, went to the window, held it against the glass with the palms of her two hands, and in a couple of minutes handed him the paper, upon which I saw the portrait, in black and white, of a queer little old woman, with a dark complexion, black hair, many wrinkles, and a large wart on her nose! Mr. B. enthusiastically declared the likeness to be perfect.

Her time during this period was fully engrossed with writing for the public press, upon Western Spiritualism at first, and later upon that of the East. Her "first occult shot," as she terms it in a note to the cutting pasted into our scrap-book, will be found in the (Boston) *Spiritual Scientist*, vol. i., July 15, 1875, comment upon which will be made in the next chapter.

The publication of my book led to important results; among others, to interminable discussions in the American and English organs of Spiritualism and in the secular press, in which both H. P. B. and I engaged, and to the formation of lasting friendships with several most excellent correspondents, with whom we threshed out the whole subject of Eastern and Western occultism. Al-

Digitized by Google

most immediately we found ourselves addressed by enquirers in both hemispheres and attacked or defended by opponents and sympathisers. The well-known Hon. Alexandre Aksakof, Russian Imperial Privy Councillor and a fervid Spiritualist, engaged H. P. B. to translate my book into Russian, offering to bring it out at his own expense. She complied, and shortly there appeared in St. Petersburgh a very kind and appreciative pamphlet by Professor N. A. Wagner, of the Imperial University, in which he (himself a scientific authority of the first rank) was good enough to say that in conducting my researches I "had complied with all the requirements of cautious scientific enquiry"; a testimonial of which I naturally felt very proud. Mr. Crookes, F. R. S., and Mr. Alfred R. Wallace, F. R. S., of England, and M. Camille Flammarion of France, the world-famous astronomer, were also very kind and sympathetic in their expressions. Some months later, Mr. C. C. Massey, of London, came over to America expressly to verify, by personal observation on the spot, the accuracy of my account of the Eddy phenomena. We saw much of each other, and were so mutually satisfied that a close, almost brotherly friendship sprang up between us; one that has lasted to this day unbroken and unclouded even by a single misunderstanding. I had already been brought into the most sympathetic relations with the late Hon. R. D. Owen and Mr. Epes Sargent, of Boston. The latter gentleman and scholar had been the channel for my gaining both a precious correspondent and the dearest of friends, in the

Digitized by Google

late Mr. W. Stainton Moses,* M.A. (Oxon), teacher of Classics and English, in University College, London, and the most honoured and brilliant writer among British Spiritualists. A copy of my book was sent him and reviewed in the *Psychological Magazine* or *Human Nature* —I forget which—and little by little we drifted into an almost weekly interchange of letters for several years. His first one, now before me, is dated April 27, 1875, and is devoted to discussion of the conditions and results of "circle" mediumistic phenomena. He draws my attention to a fact, sneered at by Professor Tyndall in his well-known letter to the old London Dialectical Society, yet only too palpable to all experienced enquirers into this class of natural phenomena, *viz.*, that "as a matter of fact certain people by their mere presence do seriously interfere with, and by their mere contiguity paralyse the phenomena: and that from no fault of their own, nor from any mental attitude (as want of faith, etc.), but from the atmosphere which surrounds them. The more sensitive the medium the more perceptible this is." Mr. Stainton Moses continues: "There are many personal friends of mine in whose presence phenomena with me cease, to my great chagrin, nor have I the least power to alter the result." Alluding to the phenomenon of the apparent de-materialisation of the medium (*e. g.*, the case of Mrs. Compton, as described in my book), he declares it to be most astounding of all, and says he cannot ac-

* Moses is not the real name but Moseyn or Mostyn, as he told me. The other is a corruption.

count for it, though he believes "it is not unknown to the Oriental Magicians." What I have said in a previous chapter as regards the power of deluding the sight by the now scientific process of hypnotic inhibition of the nerves, solves this mystery and does away with a lot of superstitious beliefs and alleged diabolism. It was worth all the trouble of writing that book to have made two such life-long friends as Stainton Moses and Massey: but it did much more, it changed my life and made an epoch. While Mr. Massey was in America we together visited several mediums, and he was one of those who joined H. P. B. and myself in forming the Theosophical Society toward the close of that year (1875). I introduced him to H. P. B. and he frequently visited her rooms, became her close friend and constant correspondent until the intimacy was broken, several years later, by a circumstance known as the "Kiddle incident." When he returned to London I gave him an introductory letter to Mr. Stainton Moses, and thus began that intimacy between us three which has only been interrupted by the death of "M. A. Oxon."

Mention has been made of one Signor B——. an Italian artist possessed of occult powers, who visited H. P. B. in New York. I witnessed, one autumn evening, in 1875, just after the T. S. was formed, the extraordinary phenomenon of rain-making effected by him by—as he said—the control of spirits of the air. The moon was at the full and not a cloud floated in the clear blue sky. He called H. P. B. and myself out upon the balcony of

Digitized by Google

her back drawing-room, and, bidding me keep perfectly silent and cool, whatever might happen, he drew from the breast of his coat and held up towards the moon a pasteboard card, perhaps 6 × 10 inches in size, upon one face of which were painted in water-colors a number of squares, each containing a strange mathematical figure, but which he would not let me handle or examine. I stood close behind him, and could feel his body stiffen as though it were responding to an intense concentration of will. Presently he pointed at the moon and we saw dense black vapours, like thunder-clouds, or, I should rather say, like the tumbling mass of black smoke that streams away to leeward from the funnel of a moving steamer, pouring out of the shining eastern rim of the brilliant satellite, and floating away towards the horizon. Involuntarily I uttered an exclamation, but the sorcerer gripped my arm with a clutch of steel and motioned me to be silent. More and more rapidly the black pall of cloud rushed out, and longer and longer it stretched away towards the distance, like a monstrous jetty plume. It spread into a fan-shape and soon other dark rain-clouds appeared in the sky, now here, now there, and formed into masses rolling, drifting, and scudding exactly like a natural water metre. Rapidly the heavens became overcast, the moon disappeared from view, and a shower of rain-drops drove us into the house. There was no thunder or lightning, no wind, just simply a smart shower, produced within the space of a quarter-hour by this man of mystery. When we came into the

Digitized by Google

light of the chandelier, I saw that his face had that look of iron firmness and that clenching of the teeth that one sees on the faces of comrades in battle. And truly for good reason, for he had just been battling against and conquering the unseen hosts of the elements, a thing that brings out every spark of virile force in man. Signor B. did not linger with us but hastily took his leave, and, as the hour was late, I followed his example within the next few minutes. The pavement was wet with rain, the air damp and cool. My rooms were but a few steps off, and I had barely reached them and settled myself for a smoke when the bell rang, and, upon opening the front door, upon the threshold I found Signor B., pale and partly exhausted. He excused himself for troubling me but asked for a glass of water. I made him enter, and after he had drunk the water and rested awhile, we went to conversing about occult subjects and kept it up for a long time. I found him ready to talk about art, literature or science, but extremely reticent about occult science and his personal experience in psychical development. He explained, however, that all the races of elemental spirits are controllable by man when his innate divine potencies are developed : his will then becoming an irrestible force before which all inferior, that is every elemental force, whether organised as entities or brute, blind cosmic agents, are compelled to yield. I had seen no black smoke actually pouring out of the moon, that was a simple illusion produced by the concentration of his thought upon her surface, but I had certainly seen

Digitized by Google

clouds form out of the moonlit sky and rain fall, and he commended the fact to me for reflection. But now he gave me a bit of advice which fairly astonished me. I had seen him on the best of terms with H. P. B., talking in the most friendly and unreserved way about Italy, Garibaldi, Mazzini, the Carbonari, the Eastern and Western adepts, etc., and matching phenomena, like the trick of the white butterflies, and I certainly had reason to be amazed when, putting on an air of mystery, he warned me to break off my intimacy with her. He said she was a very wicked and dangerous woman, and would bring some terrible calamity upon me if I allowed myself to fall under her malign spell. This—he said—he was ordered by the great Master, whose name I had heard him pronounce to H P. B., to tell me. I looked at the man to see if I could detect the concealed meaning of this preposterous speech, and finally said: "Well, Signor, I know that the Personage you mention exists; I have every reason, after seeing your phenomena, to suspect that you have relations with him or with the Brotherhood; I am ready, even to the sacrifice of my life, to obey his behests; and now I demand that you give me a certain sign by which I shall know, positively and without room for the least doubt, that Madame Blavatsky is the devil you depict, and that the Master's will is that my acquaintance with her shall cease." The Italian hesitated, stammered out something incoherent, and turned the conversation. Though he could draw inky clouds out of the moon, he could not throw black doubt into my heart about my

Digitized by Google

friend and guide through the mazy intricacies of occult science. The next time I saw H. P. B. I told her about B.'s warning, whereupon she smiled, said I had nicely passed through that little test, and wrote a note to Signor B. to "forget the way to her door." Which he did.

CHAPTER V.

SPIRITUALISM.

OUT of the sea of controversy into which H. P. B. and I were plunged by my *Graphic* letters and my book; Mr. Owen's article on Katie King and his interleaved disclaimer, in the January (1875) *Atlantic Monthly;* General Lippitt's contributions to the *Galaxy* (December, 1874) and the *Banner of Light;* the attacks upon and defences of the Holmes mediums; and the universal discussion of Spiritualism in the American and European press,—were churned certain precious things: among them, the forcing of Eastern occult ideas upon Western attention, and the birth of the Theosophical Society.

To refute the mendacious stories of Mahatma meddlings and attendant phenomena, and show the natural stages by which the Society came into being, we must glance at the earlier letters written to the press by its two actual pioneers and parents (of which I have an incom-

Digitized by Google

plete set of copies). The details may be dry, but they are important as historical data.

As already explained, the self-advertising attack of the late Dr. George M. Beard—an electropathic physician of New York city—upon the Eddys, and his wild and false assertion that he could imitate the form-apparitions with "three dollars' worth of drapery," lashed H. P. B. into a Berserker writing-rage and made her send the *Graphic* that caustic reply, covering a bet of $500 that he could not make good his boast, which first acquainted the American public with her existence and name. Naturally, people took sides; the friends of Spiritualism and the mediums siding with H. P. B., while the opponents, especially the materialistically inclined scientists, ranged themselves in the cohort of Dr. Beard's supporters. The one who profited by the dispute was Beard, whose *ruse*—worthy of Pears, Beecham, or Siegel—advertised him and his electricity beyond his expectations. Profiting by the chance, he gave a thoroughly well advertised lecture on this subject, and another, if I remember aright, upon Mesmerism and Thought-reading, at the New York Academy of Music. The *Banner of Light*, the *R. P. Journal* and other papers, commenting upon H. P. B.'s anti-Beard letter, she replied, and so, very speedily found herself with her hands full of controversy. As I said before, she took up the position of an out-and-out Spiritualist, who not only believed but *knew* that the powers behind the mediums, which wrote, produced physical phenomena, talked in air-formed voices,

Digitized by Google

and even showed their entire forms and disconnected faces, hands, feet or other members, were the earth-haunting spirits of the dead; neither more nor less. In a previous chapter I quoted passages from her published letters and articles going to prove this, and in her very first letter to me, written from New York within a week after she left me at Chittenden (October, 1864) addressing me as "Dear Friend" and signing herself "Jack," and in her second one, dated six days later and signed "Jack Blavatsky," she entreats me not to praise the mediumistic musical performance of one Jesse Sheppard, whose pretence to having sung before the Czar, and other boasts she had discovered to be absolutely false; as such a course on my part would "injure Spiritualism more than anything else in the world." * "I speak to you," she tells me, "as a true friend to yourself and (as a) Spiritualist anxious to save Spiritualism from a danger." In the same letter, referring to a promise given her by "Mayflower" and "George Dix," two of the alleged spirit-controls of Horatio Eddy, that they would help her by influencing the judge before whom was pending her lawsuit to recover the money put into the Long Island

* Led by his unlucky star, Sheppard—she writes—had brought her a lot of his St. Petersburgh credentials, in Russian, to translate. Among them she found a Police license to sing at the Salle Koch, a low lager-bier saloon and dance hall, resorted to by dissipated characters of both sexes, and a music-master's bills for 32 roubles, for teaching him certain Russian songs—which we heard him sing at Eddy's, *in a dark séance when he was ostensibly under the control of Grisi and Lablache!* I give the facts on her authority without prejudice.

Digitized by Google

market-garden copartnership—she says: "Mayflower was right, Judge —— came in with another decision in my favour." Did she believe, then, that medium-controlling spirits could and would influence justices? If not, what does her language imply? Either she was a Spiritualist, or so represented herself for the time being, with the ulterior design of gradually shifting Spiritualists from the Western to the Eastern platform of belief in regard to the mediumistic phenomena. In her anti-Beard letter (*N. Y. Daily Graphic*, Nov. 13, 1874), she says—speaking of the incident of the bringing to her by the "spirits" of Horatio Eddy, of a decoration-buckle that had been buried with her father's body, at Stavropol—"I deem it my duty as a Spiritualist to," etc., etc. Later on, she told me that the outburst of mediumistic phenomena had been caused by the Brotherhood of Adepts as an evolutionary agency, and I embodied this idea in a phrase in my book (*P.O.W.*, p. 454, top), suggesting the thinkable hypothesis that such might be the fact. But then, in that case, the spiritualistic outbreak could not be regarded as absolutely maleficent, as some Theosophical extremists have depicted it; for it is inconceivable—at least to me, who knew them—that those Elder Brothers of Humanity would ever employ, even for the good of the race, an agency in itself absolutely bad. The Jesuit motto, *Finis coronat opus*, is *not* written on the temple walls of the Fraternity.

In the same number of the *Daily Graphic* to which she contributed her anti-Beard letter, was published her bi-

Digitized by Google

ography, from notes furnished by herself. She says, "In 1858, I returned to Paris and made the acquaintance of Daniel Home, the Spiritualist . . . Home converted me to Spiritualism . . . After this I went to Russia. I converted my father to Spiritualism." In an article defending the Holmes mediums from the treacherous attack of their ex-partner and show-manager, Dr. Child, she speaks of Spiritualism as "*our* belief" and "*our* cause"; and again, "the whole belief of *us* Spiritualists"; still further, "if we Spiritualists are to be laughed at, and scoffed, and ridiculed, and sneered at, we ought to know at least the reason why." Certainly; and some of her surviving colleagues might profitably keep it in mind. In the *Spiritual Scientist* of March 8, 1875, she says that a certain thing would "go towards showing that, notwithstanding the divine truth of our faith (Spiritualism) and the teachings of our invisible guardians (the spirits of the circles), some Spiritualists have not profited by them, to learn impartiality and justice."

This was both courageous and magnanimous on her part; thoroughly characteristic of the way in which she flung herself in the fore-front of battle for any cause that she took up. Her sympathies for liberty and free-thought led her to follow, with several other ladies, the victory-bringing flag of Garibaldi, the Liberator, and to plunge into the thick of the carnage at Mentana; and so now, when she saw the Spiritual Idea battling against Materialistic Science, no fear of contamination by contact with fraudulent mediums, evil spirits, or cliques of

Digitized by Google

Spiritualists who preached and practised free-love and the breaking of healthy social bonds, made her hesitate for one moment about taking her stand on the side of Spiritualism. Her policy may be condemned by some, her language—as seen in the few specimens, out of many, above quoted—be regarded as a full endorsement of the very Spiritualism she afterwards so mercilessly criticised ; but to judge her fairly, one must try and put himself beside her under the then existing conditions ; he must try to realise how much she knew, both in theory and practise, about psychical phenomena that the world need to know before casting itself into the lethal stream of Materialism. Many of us would have used much more guarded language, and thus avoided leaving behind us such a tangle of contradictions and confusion ; but then she was exceptional in every respect—in mental and psychical powers, in temperament and in method of controversy. One object of this narrative is to show that, with all human frailties and eccentricities that may be ascribed to her, she was a great, high-towering personage, who did a great altruistic work for the world, and was rewarded with savage ingratitude and blinded depreciation.

Her instructions to me about the existence of the elemental spirit world went on—as before noted—apace with our private intercourse with (alleged) rapping spirits, and so, long before I had adopted the Eastern theory of Pisachas and Bhûtas,called by us elementaries,*

*In point of fact, both of us used to call the spirits of the elements "elementaries," thus causing much confusion, but when *Isis* was

Digitized by Google

I had come to distinguish the two unlike classes of phenomena-working agents, the sub-human nature-spirits, and the earth-bound, ex-human elementaries. Towards the close of the winter season of 1874–5, while at Hartford seeing my book through the press, but too late to re-write it, I had the rare chance of consulting the superb collection of books on the occult sciences in the Watkinson Library of Reference, made for it by Dr. H. C. Trumbull, the erudite Librarian. I was thus pretty well prepared to understand H. P. B.'s verbal explanations, and her many surprising psychical phenomena in illustration of them. This course of preparatory reading, lectures, and phenomena also stood me in good stead when she addressed herself to the laborious task of writing *Isis Unveiled*, and enlisted me as her helper.

It was in the first quarter of the year 1875, that we became interested in the *Spiritual Scientist*, a small but bright and independent journal, published and edited in Boston, by Mr. E. Gerry Brown. The crying need of the hour was a paper which, while recognised as an organ of Spiritualism, could be induced to help in bringing Spiritualists to scrutinise more closely the behaviour and pretended psychical gifts of their mediums, and to patiently listen to the theories of spirit being and intercourse with the living. The older journals of that class were, what might be termed too orthodox, while Mr.

being written, I suggested that we should employ the distinctive terms "elemental" and "elementary" in the connections they have ever since had. It is too late to change them now, else I should do it.

Digitized by Google

Brown's specialty seemed to be to win his way by fearless criticism of abuses. Our relations with him were brought about by a letter to him (*Spi. Sci.*, March 8, 1875), and within the next month he had been taken under the favour of the powers behind H. P. B. In the number of the journal in question for April 17th, appeared a very notable circular headed "Important to Spiritualists." The importance of it to Mr. Gerry Brown was in the promise (fairly redeemed) * it embodied of literary and pecuniary help to be given him, while to the public which concerned itself in the question of Spiritualism, it held out the profitable idea that the paper would be used as the organ of the new movement for placing American Spiritualism on a more philosophical and intellectual basis. The circular stated that the leading Spiritualist papers were "compelled to devote most of their space to communications of a trivial and purely personal character, interesting only to the friends of the spirits sending them . . ." and to beginners. The London *Spiritualist* and Paris *Revue Spirite* were cited as "examples of the kind of paper that should have been established in this country (U. S. A.) long ago—papers which devote more space to the discussion of principles, the teaching of philosophy, and the display of conservative critical ability, than to the mere publication of

* Professor Buchanan, Epes Sargent, Charles Sotheran and other known writers, not to mention our two selves, began contributing to his columns, and H.P.B. and I gave him several hundred dollars towards current expenses. The latter form of help was acknowledged in his "leader" of June 1, 1875, entitled "Rock Bottom."

Digitized by Google

the thousand-and-one minor occurrences of . . . circles." The third paragraph read as follows :

" It is the standing reproach of American Spiritualism that it teaches so few things worthy of a thoughtful man's attention : that so few of its phenomena occur under conditions satisfactory to men of scientific training ; that the propagation of its doctrines is in the hands of so many ignorant, if not positively vicious, persons ; and that it offers, in exchange for the orderly arrangements of prevailing religious creeds, nothing but an undigested system of present and future moral and social relations and accountability." *

I wrote every word of this circular myself, alone corrected the printer's proofs, and paid for the printing. That is to say, nobody dictated a word that I should say, nor interpolated any words or sentences, nor con-

* I was then and have since often been reproached by Spiritualists for the severity of my strictures upon the prevalent large admixture of immoral views and behaviour among mediums and whole groups of pretended Spiritualists, but I never wrote more caustic things about them than are to be found in the newspaper articles and books of leading writers among themselves. To say nothing of the sweeping and savage depreciation of the whole company of his brother mediums and psychics, by that peacock medium, Home, Mrs. Hardinge Britten says (*Nineteenth Century Miracles*, p. 426), that her spirit guides had told her that "the worst foes of Spiritualism would be of its own household, and the cruellest stabs directed against it would be dealt by the hands of Spiritualists themselves." In another place she says: "and thus this great cause, like many another of the world's purest Messiahs, has been lifted up on the cross of martyrdom between the thieves of licentiousness and cupidity" ; if it had not died out, "it is not for lack of every available effort on the part of humanity to sap its integrity by internal corrup-

trolled my action in any visible way. I wrote it to carry out the expressed wishes of the Masters that we— H. P. B. and I— should help the Editor of the *Scientist* at what was to him, a difficult crisis, and used my best judgment as to the language most suitable for the purpose. When the circular was in type at the printer's and I had corrected the proofs, and changed the arrangement of the matter into its final paragraphs, I enquired of H. P. B. (by letter) if she thought I had better issue it anonymously or append my name. She replied that it was the wish of the Masters that it should be signed thus : "*For the Committee of Seven*, BROTHERHOOD OF LUXOR." And so it was signed and published. She subsequently explained that our work, and much more of the same kind, was being supervised by a Committee of seven Adepts belonging to the Egyptian

tion, as well as by external antagonism. . . ." Free-love "had expanded from an incipient germ to the full maturity of a widespread movement. . . . The monstrous flow of licentious doctrine, often illustrated by monstrous licentiousness of life and conduct, which for a certain period of time spread like an evil contagion throughout the United States, . . . cast a most unjust and ruinous ill-odour over the reputation and belief of tens of thousands of innocent persons," etc. I never wrote anything as strong as that; though even Mrs. Britten has not exaggerated the unsavoury condition of affairs produced by the unrestricted encouragement of intercourse between the living and the dead. To regulate this intercourse, to announce its perils, and to show what was true spiritualism, and how man can develop true spirituality, was plainly H. P. B.'s design and her motive for declaring herself a Spiritualist. This will be evident, I think, to those who follow her course throughout to the day of her death.

Digitized by Google

group of the Universal Mystic Brotherhood.* Up to this time she had not even seen the circular, but now I took one to her myself and she began to read it attentively. Presently she laughed, and told me to read the acrostic made by the initials of the six paragraphs. To my amazement, I found that they spelt the name under which I knew the (Egyptian) adept under whose orders I was then studying and working. Later, I received a certificate, written in gold ink, on a thick green paper, to the effect that I was attached to this "Observatory," and that three (named) Masters had me under scrutiny. This title, Brotherhood of Luxor, was pilfered by the schemers who started, several years later, the gudgeon-trap called "The H. B. of L." The existence of the real Lodge is mentioned in Kenneth Mackenzie's *Royal Masonic Cyclopædia* (p. 461).

Nothing in my early occult experience during this H. P. B. epoch, made a deeper impression on my mind than the above acrostic. It proved to me that space was no bar to the transmission of thought-suggestions from the teacher's to the pupil's brain; and it supported the theory that, in the doing of world-work, the agent may often be actually led by overseeing directors to do things which they choose to have done, without his being at all conscious that his mind is not functioning under the sole impulse of its controlling Ego. Applying this

* It has been already explained that I first worked under the Egyptian part of the African section and later under the Indian section.

Digitized by Google

not unreasonable or unscientific theory to the whole history of the Theosophical Society, who can say in what proportion of cases any of us has been unconsciously doing what had to be done, but might not have been done if no external influence had given us the push? And how many of the wretched mistakes, missteps, and injurious eccentricities that have occurred, or been shown, by either of us, were due to our just being left to follow our own wrong impulses, the result of our temperaments, ignorance, moral weakness or bigoted prejudices? People often wonder why the various scandals, such as the Coulomb and lesser ones which we have had to suffer from, were not foreseen and prevented by the Masters; why H. P. B. was not forewarned of what traitors would do; and why, in the seemingly most serious crisis, no help came, no spiritual guide appeared. Of course, such questions imply the absurdity that Mahatmas, who implicilty believe in and govern their own actions by the strict rules of Karma, would take us, like so many puppets on wires, or so many poodles being taught tricks, and put us through set motions, to the meddling with our Karma, and the consequent interference with our rights. What the evolution of society needs at a particular juncture is, perhaps, that a certain person should do, write, or say a certain thing which, once done, brings after it a whole train of consequences. If that necessary thing involves no Karmic wrong to the individual, the mental impulse to do it may be given him, and so the sequences of cause

Digitized by Google

and effect be begotten. The destinies of Europe, for example, are under the control of three or four men, who might meet together in a boating party and in the same boat. If some certain trifle should occur, then such a kingdom would ultimately be destroyed, such a dynasty develop into a scourge of the race, or such an era of peace and progress be entered upon. If either the one or the other be demanded at that juncture by the interests of all mankind, and *no other means are available* for precipitating the crisis, then I could conceive it as lawful for the mental suggestion to be made from without: or, take a simpler case, which is also historical. A point had been reached in the progress of Egyptology where the world needed a better clue than it had for reading the hieroglyphics: in the literature of that ancient civilisation lay great and precious truths—truths, the time to republish which had arrived. All other means failing, an Arab labourer is simply moved to dig at a certain spot, or break open a certain sarcophagus; he finds an engraved stone or an inscribed papyrus; which he sells to Mr. Grey, at Thebes, in 1820, or to Signor Casati, at Karnak or Luxor; who, in turn, transmit it to Champollion, or Young, or Ebers; who find the missing clue, and with it decipher very important old writings. It is the helping, not the fratricidal, hand that these hidden benefactors of ours hold out to humanity. Or, to cite a case much nearer home: I am moved to buy a paper on a certain day; I read a certain thing in it; which prompts me to take a natural step;

Digitized by Google

which, later, brings H. P. B. and myself together; which, after a while, evolves the Theosophical Society and its consequences. For taking the initial step, I reap no merit; but if the effect is a good one, and I merge myself into it, and work for it with unselfish fervour, then I *do* share in the *whole* benefit that that effect imparts to humanity. I saw some poor people at Galle, once, reaching up their hands to touch the baskets of food which richer neighbours had procured for and were bearing on their heads to a company of Buddhist monks. Upon inquiry I was told that, by feeling a true sympathy for the deed of charity, they partook of the merit it involved. It meant more than a long sermon to me, and I embodied the idea in my *Buddhist Catechism.*

I found among my papers last week an old letter from the Hon. Alexander Aksakoff, of St. Petersburgh, which though probably not one of those which were so phenomenally abstracted from the mailbags en route to New York and delivered to me in Philadelphia, since it is dated in St. Petersburgh the 4-16th April, 1875, and must have reached me after my visit to H. P. B. was finished, contains a lead-pencil postscript on the fourth page in the quaint handwriting of "John King." He tells me that my correspondent "is a truly good man and a learned one, too"—facts which are now acknowledged universally. Having lost or given away the envelope, I cannot fix the exact date of the letter's arrival. In it, M. Aksakoff informs me that, after reading my *Graphic* letters and noting their effect in the

Digitized by Google

two hemispheres, he is convinced of the absolute necessity for an exhaustive inquiry into the phenomena, by the best men of science. He asks me if I cannot organise such a committee, and tells me what has been done in Russia. There are four professors of eminence, in as many different Universities, who have, in committee, gone thoroughly into the matter and satisfied themselves of the reality of the phenomena; if I choose, these scientific gentlemen will send me a joint appeal to their American colleagues, to do as they have done, and thus settle, once and for all, the most important problem that man has to solve for his own sake and for the welfare of the race. Of course, this was exactly the motive which had prompted my undertaking the Eddy researches, but I found the obstacles presented, in the ignorant and brutish obstinacy of the mediums and their whole corps of "guides," insurmountable, and recorded the fact in my book. I was a little amused to read, in a Postscript written two days later than his letter, that M. Aksakoff, who had meanwhile finished reading H. P. B.'s Russian translation of my book, said it was plain that an orderly scientific search with such people as mediums was impossible, and begged me to consider his plan as cancelled. The matter did not drop there, however, for our correspondence was kept up, and resulted in H. P. B. and I being asked to serve as a committee to select a trustworthy medium to be sent over to St. Petersburgh, for trial and testing by a Special Committee of Professors of the St. Petersburgh Imperial University. We

Digitized by Google

accepted the commission, and our joint card announcing the fact to the public appeared in the *Spiritual Scientist* of July 8, 1875—as far as I can make out from the confused way in which the newspaper-cuttings are pasted in our Scrap-Book, Vol. I. At all events, in the journal of that day was published a translation of Mr. Aksakoff's letter to H. P. B. broaching the subject, thus :

"My prayer to you and Col. Olcott is as follows : Will you be so kind as to translate into English the enclosed 'Appeal to Mediums' . . . consult together and report to us [the Imperial Society of Experimentalists in Physics] whom, of American mediums we had better invite to St. Petersburgh in the best interests of the Cause? For our first experiments we should prefer having mediums for simple but strong physical manifestations *in the light.* Use all your influence to get us good mediums, begin the work at once and advise me without loss of time. Bear in mind that money is no object with us," etc.

Naturally enough this letter drew out a good many applications, and we personally tested the mediumship of several of the parties, seeing some extremely surprising phenomena, and some really beautiful. Its appearance was seized upon by certain impudent impostors to give a public show of pretended mediumship at the Boston Theatre, on a Sunday evening in the same July, advertising themselves as engaged to go to Russia. We exposed and repudiated them in a card sent, July 19, 1875, to all the Boston papers.

CHAPTER VI.

ORIENTAL DISAPPROBATION.

BY common consent the Western public have assumed that professional mediums, whose food and lodging depend upon their constant ability to produce psychical phenomena when patrons come to see the same, are greatly tempted in emergencies to supplement real ones with fraudulent imitations. Poor, almost without an exception ; often invalids, yet obliged to support children and perhaps lazy or disabled husbands ; their incomes extremely precarious, at best, because the mediumistic state depends upon psycho-physiological as well as atmospheric conditions beyond their control, it is not strange that, under the pressure of quarter-day or some other dire necessity, their moral sense should become blunted. Naturally they yield to the temptation flung at them by credulous visitors, who, apparently, ask nothing better than to pay to be duped. At any rate, that is how professional mediums have explained it to me. They have told me their miserable life-histories, how the fatal gift of mediumship embittered their child-

Digitized by Google

hood, made them shunned and persecuted by their schoolmates, sought after and run down by the curious, caused them to be used as a drawing sensation by travelling showmen, to the profit of their own parents (*vide* the tragical story of the Eddy children as told by them to me, in *P. O. W.*, chapter II.), and developed the seeds of hysteria, phthisis, or scrofula, to the ruin of their health. Mrs. Hardinge Britten, than whom nobody has known more of mediums and mediumship, told me in New York, in 1875, that she had seldom or ever known a medium who was not of a scrofulous or phthisical temperament, and medical observation shows, I believe, that derangements of the reproductive organs are quite common among them. Genuine mediumship, promiscuously practised, is, I fear, a serious physical danger, to say nothing as regards its effect morally. Every physician tells us that to sleep in an ill-ventilated room in company with a mixed company of persons, some perhaps diseased, is most dangerous and may prove fatal. But this risk is nothing as compared with that run by the poor public medium, who has to tolerate the presence and be soaked in the magnetic aura of all comers, be they morally or physically diseased or healthy: gross, sensual, irreligious, unspiritual, brutish in habitual thought, word, or deed, or the opposite. Alas! poor things, theirs is a psychical prostitution. Thrice happy such as can develop and practise their psychical gifts in the pure surroundings of a select and superior company: so were Temple seeresses guarded in the ancient times.

Digitized by Google

The above remarks are pertinent to the line of inquiry that H. P. B. and I had undertaken, at M. Aksakoff's request, on behalf of the St. Petersburgh scientific committee. While we realised that we should have to choose among professionals, it not being likely that any private medium would consent to the publicity and annoyance of such an ordeal, we determined that we should be thoroughly satisfied of the real and reasonably available psychical powers of the male or female medium we should ultimately recommend. M. Aksakoff's desire that preference should be given to those whose phenomena could be shown "in the light," was most reasonable, for thus the chance of successful trickery is minimised; yet there were then—and are now, for that matter—few mediums who could count upon anything of a very striking character happening at their séances by daylight. Our choice would have been narrowed down to two or three like C. H. Foster, or Dr. Slade, who were equally indifferent whether they sat by day or night since their successes in giving "tests of spirit identity" were tolerably certain. We decided, therefore, to find a good medium at any rate, whether he or she came quite up to M. Aksakoff's ideal or not. Our inquiries extended over several months, to the May of 1876, if I am not mistaken, and as I may as well finish with this episode, now that it is taken up, even though it breaks in upon the chronological sequence of events in T. S. history, I shall recall the successive stages of the St. Petersburgh mediumistic inquiry as best I can.

Digitized by Google

In the summer of 1875, a woman named Youngs was practising mediumship for a livelihood at New York. She was, as I dimly recall her, a largely built person, of obstreperous manners and strong physical as well as psychical powers. Her tone of bullying towards her "guides in Spirit Land" was in amusing contrast with the honeyed accents commonly used by most mediums towards the invisibles. "Now, then, spirits," she would say, "don't be lazy; hurry up; what are you about? Move the piano, or do this or that. Come, we are all waiting!" *And do it they did*, as though obedient to her will. Her chief phenomenon was the causing of the spirits to raise a full-sized, heavy piano and making it tilt forward and backward in time to her playing of airs upon it. I heard of her and thought I would get H. P. B. to go with me and see what she could do. She consented, so I put into my pocket three things, to be used as new tests of her mediumship, a raw egg and two English walnuts, the experimental value of which will be presently seen. Fortunately I am not obliged to rely wholly upon memory, since I find a cutting from the New York *Sun* of September 4, 1875, giving an accurate account of the séance and of my tests. Fifteen persons were present. The *Sun* reporter says:

"The performance began with the lifting of the piano by invisible powers, three times for 'yes' and once for 'no,' in answer to questions put by Mrs. Youngs, she resting her hands lightly on top of the music-rack. She then sat down and played various airs, and the instru-

Digitized by Google

ment rose and fell and beat the time. She then went to one end of the piano and called up Colonel Olcott, and as many more of the others as chose to make the experiment, and, causing each to place his left hand underneath the case, laid one of her hands lightly under it, whereupon, at her demand, the end of the heavy instrument [He says elsewhere that he, the reporter, 'could not lift one end of it,' so great was its weight] was lifted off the floor without the slightest effort on her part. The Colonel here asked to be permitted to make a single test which should not injure the medium at all. Mrs. Youngs consenting, he produced a hen's egg from a box, and asked her to hold it in her hand against the under side of the piano, and then request the spirits to raise it. The medium said that, in the course of her mediumship, such a test had never been suggested, and she could not say it would be successful, but she would try. She took the egg and held it as desired, and then rapping upon the case with her other hand, asked the spirits to see what they could do. Instantly the piano rose as before, and was held for a moment suspended in the air. The novel and striking experiment was a complete success.

"Mrs. Youngs then asked as many of the heaviest persons in the room as could sit on the instrument to mount it, and the invitation being accepted by seven ladies and gentlemen, she played a march, and the instrument, persons and all, were lifted easily. Colonel Olcott now produced a couple of English walnuts, and asked the spirits to crack the shells under the piano legs without

Digitized by Google

crushing the kernels, the idea being to show that some power beyond the one woman herself, and a power governed by intelligence, was exerting itself. The spirits were willing, but as the piano legs rested upon rolling casters the test was abandoned. He then asked to be permitted to hold an egg in his own hand against the under side of the piano, and have Mrs. Youngs lay her hand beneath and against his, so that he might have a perfect demonstration of the fact that no muscular force whatever was being exerted by her. This test was also agreed to and immediately tried. The piano rose the same as before. The manifestations of the evening were then brought to a close with the *lifting of the instrument without the medium's hands touching it at all.*"

This was certainly a very striking manifestation of psycho-dynamical power. Not only was a seven-and-a-half-octave piano, too heavy for one man to lift endwise, raised without the least expenditure of muscular force by the medium or any other living person present, and in a fully lighted room, but *an intelligent comprehension of requests and compliance with them* was demonstrated. Let us admit that the medium's intelligence was alone in play, still we have the problem of how she could transform her thought, first into will and then into active force. The final test of making her lay her hand beneath mine, which held the egg, and then cause the ponderous instrument to rise as lightly as a feather, contrary to the law of gravity, was to me, as well as to H. P. B., conclusive proof of her mediumistic gift, and we made

Digitized by Google

her a conditional offer to recommend her to M. Aksakoff. The condition was that she should subject herself to a series of harmless yet convincing tests, the successful passing of which would warrant us in thoroughly endorsing her. She, however, declined the offer on account of the long voyage and her unwillingness to leave her country to go among foreigners. I do not know what became of her, but I heard that she adopted my egg test as her stock demonstration of her true mediumship. There was very little spirituality about it, but a good deal of revolutionising physics, that I thought might stagger Professor Mendeleyeff and his brother scientists.

A very much prettier and more poetical phase of mediumship was that of Mrs. Mary Baker Thayer, of Boston, Mass., to the examination of whose phenomena I devoted some five weeks of the same summer season. She is, or was, what is called a "flower medium," *viz.*, a pyschic in whose presence rain showers of flowers, growing bushes, vines and grasses, and leaves and branches freshly torn from trees, perhaps of a kind that are exotics and to be found only in hot-houses in that cold country. When I knew her she was a middle-aged woman of winsome manners, very obliging as to tests, and always cheerful and friendly. Like many other public mediums, however, she drank to some extent; she said—and I can quite believe it—to make up for the terrible drain of the phenomena upon her nervous power. That she was a real medium I am fully convinced, but that

Digitized by Google

she also supplemented by trickery her genuine phenomena, I also *know*. I know, because I caught her at it one evening in the year 1878, shortly before our leaving for India, when she was trying to convince me of her ability to "pass matter through matter," in imitation of Professor Zöllner's celebrated experiments at Leipzig with the help of the medium Slade. I was very sorry that she tried the game with me, for until then I had had nothing but good to say of her. It is sad, I repeat, to know that these poor mediumistic martyrs to human selfishness and inquisitiveness are so often, not to say invariably, driven by necessity to practising on credulity for the lack of reasonable maintenance and surveillance, by properly constituted spiritualistic societies and committees, in command of adequate funds for the purpose. I have always pitied rather than blamed the wretched mediums, while laying the responsibility upon the Spiritualists as a body, where it solely belongs. Let those who think differently try starvation and selfish neglect for a while, and see if they will then be so quick to condemn tricking psychics.

A long summarised report of my Thayer investigations —in part of which H. P. B. assisted—appeared in the New York *Sun* of August 18, 1875, and was extensively copied throughout America and Europe, and translated into various languages.

The method of procedure at Mrs. Thayer's séances was this : The company being assembled, some respectable visitor agreeable to all was asked to examine the

Digitized by Google

room and furniture, to fasten and, if he liked, seal the windows, lock the doors and take charge of the keys. The medium would also, if asked (provided that she meditated no trickery), suffer her dress to be searched for hidden flowers or other objects. She permitted me to do this whenever I liked, and willingly suffered me to tie and seal her up in a bag, a test I first employed with Mrs. Holmes. All present would then seat themselves about a large dining-table, join hands (the medium as well as the rest), the lights would be put out, and in perfect darkness phenomena would be waited for. After some delay one could hear a pattering on the bare table-top, the air would be filled with fragrance, and Mrs. Thayer would call for a light. Upon the room being illuminated, the surface of the table would be seen, sometimes, quite covered with flowers and plants, and sometimes they would be found thrust into the dress of the sitters or into their hair. Occasionally butterflies would come, or a rush of flying birds would be heard overhead and there might be a dove, a canary, a linnet, or some other bird, fluttering to the four corners of the room; or a gold-fish would be flopping about on the table, wet, as if just taken from the water. Sometimes people present would cry out in pleased wonder on finding between their hands some flower or plant they had mentally asked might be brought them. One evening I saw in front of a Scottish gentleman a full-grown heather plant of his native country, roots and all, and with the soil clinging to them as if it had just been uprooted. There were even

Digitized by Google

three angle worms wriggling in the dirt. It was quite a common thing for smilax and other vines, seemingly just torn from their pots or beds, and with the soil amidst their roots, to be brought : I had them myself. But I had a better thing than that. One afternoon, I visited Forest Hills Cemetery, situate in a suburb of Boston, and, passing through the green-houses, my attention was struck by a curious plant with long, narrow leaves, striped with white and pale green, known in botany as the *Dracæna Regina*. With my blue pencil I drew underneath one of the leaves the six-pointed star and mentally asked the spirits to bring it to me in Mrs. Thayer's next circle, on the following evening. On that occasion I sat beside her and held her hands to make sure of her good faith. In the dark, I felt some cool and moist object drop upon one of my hands which, when the room was again lit up, proved to be my marked *Dracæna* leaf ! To make assurance doubly sure, I revisited the green-house and found that my leaf had actually been detached from the stalk and the one I had in my pocket fitted the fracture ! A number of similar facts, which I lack space to even cursorily mention, convinced me that Mrs. Thayer was a real psychic ; there was, moreover, a certain physiological phenomenon which not only strengthened my belief, but cast much light upon the whole problem of mediumship. Holding both her hands in mine, I noticed that just at the moment when the falling plants began to patter on the table, she would shudder as if chilly, sigh, and her hands instantly turned deathly

Digitized by Google

cold, as though a flush of iced water had suddenly run through her veins. The next moment the hands would resume the normal temperature of health. I challenge all the doubting scientists in the world to imitate this phenomenon *in themselves*. It seems indicative of a total change of "vital polarity," in the making of phenomena, to use a necessary expression. When H. P. B. evoked the full-length spirit-form out of Mrs. Holmes's cabinet (*P. O. W.*, 477) she clutched my hand convulsively and her hand grew icy cold; the hand of Signor B., the Italian sorcerer was like ice after his rain-compelling phenomenon; and the passage of the hysteriac into the cataleptic trance and other deeper stages of physical unconsciousness, is attended with abnormal lowering of bodily temperature. Dr. A. Moll says (*Hypnotism*, 113) that the "particularly surprising" experiments of Kraft-Ebing prove that "we must assume an astonishing capacity for regulating the temperature of the body" by hypnotic suggestion. It is fair to infer, therefore, that such a very marked change in animal heat as we have seen occurring in Mrs. Thayer and others at the moment when psychical phenomena are happening, indicates *bona fides*—the pathological change could not be simulated. Not to dwell too long on this medium's case, highly interesting though it is, I will merely mention that at one of her public séances I counted and identified eighty-four species of plants; at another, given under my own test-conditions, saw birds appear, caught and *kept* them; at another, at a private

Digitized by Google

house and in broad daylight, saw flowers and a branch torn from a tree in the compound, brought ; and at still another, in the same friend's house—where H. P. B. and I were both guests, she having come there from Philadelphia and I from New York, to follow out these investigations for M. Aksakoff—saw big stones and a quaint old table-knife of an ancient pattern, dropped on the table. But one particular rose given me by Mrs. Thayer's benevolent Pushpa Yakshini (See Art. "Fire Elementals," *Theosophist*, vol. xii., 259) was the vehicle for a phenomenon by H. P. B. that excelled all that I had ever seen a medium do.

Our kind hostess, Mrs. Charles Houghton, wife of a well-known lawyer of Boston, living in the suburb of Roxbury, drove into town with me one evening to attend Mrs. Thayer's public séance. H. P. B. declined to go, so we left her talking with Mr. Houghton in the drawing-room. The carriage had been ordered to come for us at a certain hour, but the séance had proved a short one and all the assistants had left save Mrs. Houghton, another lady, and myself. As we had nothing better to occupy ourselves with, I asked Mrs. Thayer to give us three a private séance, to which she obligingly agreed. So we took places at the table. I held the medium's two hands and placed a foot upon her two feet, one of the ladies fastened the doors and saw that the windows were secure, and the other took charge of the light. This being extinguished, we waited in darkness for some time, but there was no sound of plant-dropping. Presently we

Digitized by Google

heard the carriage drive up to the door, and at the same moment I felt a cool, moist flower lightly dropped, as though it might have been a snow-flake, upon the back of my hand. I said nothing until the candle was lighted, and even then continued holding Mrs. Thayer's hands, and called the ladies' attention to the fact. The flower on my hand was a lovely, half-opened double moss-rose bud, glistening with drops of dew. The medium, starting as though some one had addressed her from behind, said : "The spirits say, Colonel, that that is a present for Madame Blavatsky." I thereupon handed it to Mrs. Houghton, and she gave it over to H. P. B. on reaching home, where we found her smoking cigarettes and still talking with our host. Mrs. Houghton left the room to go and lay off her bonnet and wrap, and I seated myself with the others. H. P. B. was holding the rose in her hand, smelling its fragrance and with a peculiar far-away look in her face, that her intimates always associated with the doing of her phenomena. Her reverie was interrupted by Mr. Houghton's saying, "What an exquisite flower, Madame ; will you kindly let me see it ?" She handed it to him with the same dreamy look and as if mechanically. He sniffed its odour, but suddenly exclaimed : "How heavy it is ! I never saw a flower like this. See, its weight actually makes it bend over towards the stalk !" "What are you talking about ?" I remarked, "There is nothing unusual about it ; certainly there was not a while ago when it fell on my hand. Let me see it." I took it from him with my left hand, and

Digitized by Google

lo! it weighed certainly very heavy. "Take care; don't break it!" exclaimed H. P. B. Tenderly I lifted the bud with the thumb and finger of my right hand and looked at it. Nothing visible to the eye accounted for the phenomenal weight. But presently there sparkled a pin-point of yellow light in its very heart, and before I could take a second look, a heavy plain gold ring leaped out, as though impelled by an interior spring, and fell on the floor between my feet. The rose instantly resumed its natural erect position and its unusual weight had gone. Mr. Houghton and I, both lawyers, moved by the professional instinct of caution, then carefully examined the flower, but detected not the slightest sign of its petals having been tampered with; they were so closely packed and overlaid that there was no possibility of forcing the ring under cover without mutilating the bud. And, in fact, how could H. P. B. have played the trick, right before our two pairs of eyes, in the full glare of three gas-jets, and while holding the rose in her right hand for not above a couple of minutes before she gave it to Mr. Houghton? Well, certainly, there is an explanation possible in Occult Science: the matter in the gold ring and that in the rose petals could have been raised from the third to the fourth dimension, and restored back to the third at the instant when the ring leaped out of the flower. And that, doubtless, is what did happen; and open-minded physicists should kindly note the fact that matter may have weight without physical bulk, as this charming experiment proves. The ring

Digitized by Google

has been found to weigh a half ounce. I am wearing it at this moment. It was not a creation out of nothing, only an *apport;* it belonged to H. P. B., I think, and it is "hall-marked," or otherwise stamped to indicate its quality. It was a great ring for phenomena, certainly, to judge from what happened to it a year and a half later. The Theosophical Society was a year old then, and H. P. B. and I were living in two apartment suites in the same house. One evening my married sister, Mrs. W. H. Mitchell,* came with her husband to visit H. P. B. and myself, and, in the course of conversation, asked me to see the ring and bade me tell its history. She looked at it and put it on her finger while I was talking, after which she held it towards H. P. B. in the palm of

A FLOWER-BORN GOLD RING.

her left hand for her to take it. But H. P. B. leaving it lying as it was without touching it, closed my sister's fingers on it, held the hand for a moment, then let go, and told my sister to look at it. It was no longer a plain gold ring, for we found three small diamonds imbedded in the metal, "gipsy" fashion, and set so as to form a triangle. How was it done? The least miraculous theory is that H. P. B. had had a jeweller insert the diamonds previously, and concealed them from us

* If any one chooses to ask her she will corroborate my narrative, no doubt. Her address is Orange, New Jersey, U. S. A.

Digitized by Google

by inhibiting our sense of perception until the spell was removed at the moment my sister's hand opened. As a hypnotic experiment this is perfectly comprehensible; I have seen such things done and can do them myself. One can not only cover a little diamond with the mask of invisibility, but a man, a roomful of people, a house, a tree, rock, road, mountain—anything, in short: hypnotic suggestion includes seemingly limitless possibilities. Well, let this particular experiment be explained as it may, it was a very perfect success.

To return to Mrs. Thayer: we were so pleased with her phase of mediumship that we offered her the chance to go to Russia, but, like Mrs. Youngs and for the same reasons, she declined. Similar offers were conditionally made to Mrs. Huntoon, a sister of the Eddys, and to Mrs. Andrews and Dr. Slade, but all declined. So the affair dragged on until the Winter of 1875, by which time the Theosophical Society had come into existence; M. Aksakoff's committee had broken the original compact framed to secure a thorough investigation of the phenomena, and, with Prof. Mendeleyeff, an iron-clad materialist, at their head, had published a condemnatory report, framed on baseless conjecture, not on evidence; whereupon M. Aksakoff, with noble unselfishness and from sheer love of the truth, had determined to carry out the original programme at his own cost and risk. He writes to the London *Spiritualist* about that time:

"When I resolved to search after mediums to visit St. Petersburgh, . . . I decided upon a line of action

Digitized by Google

which I communicated to Colonel Olcott, whom I deputed to select mediums in America. I told him that I wanted our committee to have the means of proving the abnormal movement of solid objects in the light without contact with any living person. I further wished to find mediums who could get the movement of solid objects in the dark behind curtains, while they were seated in front thereof in full view of the sitters," etc.

This will give my Indian readers an idea of the extraordinary physical phenomena which were going on at the time in the Western countries. In the East, similar displacements of solid things, such as household furniture, cooking utensils, articles of clothing, etc., are occasionally heard of, but always with horror, and the eye-witnesses have scarcely ever dreamt of making them the subjects of scientific research : on the contrary, they are looked upon as misfortunes, the work of evil spirits, often of earth-bound souls of near relatives and intimate friends, and their greatest desire is to abate them as unqualified nuisances. I only repeat what has often been explained before by all theosophical writers, in saying that intercourse between the living and their deceased friends and connections is, to the Asiatic, an abhorrent proof that the dead are not happily dissevered from earthly concerns, and thus are hampered in their normal evolution towards the condition of pure spirit. The West, as a whole, despite its religious creed, is grossly materialistic, imagining the future life as but an extension of this in time,—and in space too, if one comes to consider its

Digitized by Google

physical conceptions of heaven and hell—and can only grasp the actuality of post-mortem conscious existence through such concrete physical phenomena as M. Aksakoff enumerates, and the many others which astonish the visitors to mediums.* The East, on the other hand, is spiritual and philosophical in its conceptions, and phenomena of the above kind are to Asiatics but evidences of the possession of a low order of psychical powers by those who show them. The incident of my flower-born ring, of Mrs. Thayer's showers of plants, flowers, and birds, and of Mrs. Youngs's lifting of pianos on eggs, strike the Western materialist's imagination, not as horrors but simply as interesting lies, too scientifically revolutionary to be true, yet vastly important if so. I suppose I must have heard a hundred times if once, in India, that it was a great pity that H. P. B. showed phenomena, for it went to prove that she had not reached a high stage of Yoga. True, the Yogi is warned by Patanjali, as the contemporary *bhikshus* were by Gautama Buddha, to beware of vainly showing their wonders when they found the *Siddhis* had developed themselves in the course of their psychical evolution. Yet the Buddha himself sometimes displayed his transcendent powers of this kind, but improved the occasion

* In drafting the much-discussed "Third Object" of the Theosophical Society, at New York, my mind was influenced by the knowledge of this fact, and, at the same time, by my ignorance of the full scope of Oriental Science. Had I known what evils were to come upon us through the pretended development of psychical powers, I should have worded it otherwise.

Digitized by Google

to preach the noble doctrines of his Arya Dharma, and spur his hearers to the noblest efforts to spiritualise, after de-brutifying themselves. And so with most other religious teachers. Did not H. P. B. adopt the like policy? Did she not, even while doing her wonders, warn us all that they were a very subordinate and insignificant part of Theosophy—some, mere hypnotic suggestions, others physical marvels in the handling of matter and force, by knowledge of their secrets and an acquired control over the elemental races concerned with cosmic phenomena? Nobody can deny this; nobody can truthfully aver that she did not invariably teach that the psychical experiment has the same relation to spiritual philosophy that the chemical experiment has to the science of chemistry. She, no doubt, erred in wasting power to astonish unimportant observers, that could have been far more profitably employed in breaching the walls of incredulous and despotic Western science: yet she did thereby convince some who were thus influenced to do good work for this great movement of ours; and some of the most tireless of that class among us came into Eastern out of Western Spiritualism over the bridge of psychical phenomena. For my part, I can say, that the great range of marvels of educated will-potency which she showed me, made it easy for me to understand the Oriental theories of spiritual science. My greatest sorrow is that others, especially those of my Eastern colleagues whose minds were thoroughly prepared, did not have the same chance.

CHAPTER VII.

DR. SLADE.

OUR search for mediums resulted in our selection of Dr. Henry Slade for the St. Petersburgh test. Mr. Aksakoff sent me $1,000 in gold for his expenses, and in due course he departed on his mission. But, through greediness, or vanity, perhaps, certainly most unadvisably, he stopped in London, gave séances, created a great public excitement, and was arrested on the complaint of Professor Lankester and Dr. Donkin on the pretence of trickery. C. C. Massey was his counsel, and saved him on a technical point, on appeal. Slade subsequently gave at Leipzig the famous tests by which Professor Zöllner proved his theory of the Fourth Dimension, and visited The Hague and other places before going to St. Petersburgh. Before we sent him abroad he submitted his mediumistic powers to the scrutiny of a special committee of the Theosophical Society, which with one dissentient, who made a most unfair minority report, certified to Mr. Aksakoff its belief in his genuine-

Digitized by Google

ness. A most instructive account, showing long and intimate familiarity with his powers, was supplied by his former business partner, Mr. James Simmons, to the issue of the *Theosophist* for November, 1893.

I had quite forgotten until I came to write the present chapter, at what period in the year 1875 the Eastern theory of sub-human and earth-bound spirits was brought to public attention, but I now find in our Scrap Books that the term "Elementary Spirits" was first used by myself in a letter to the *Spiritual Scientist* of June 3, 1875, reference being made to the sub-human spirits of the elements, or what we now call, "the elementals." It was but a bare reference, without the giving of any explanatory details, and intended as a caution to Spiritualists against swallowing, as they had been doing previously, without proper sifting and analysis, the messages of real or pretended mediums as trustworthy communications from departed spirits. The publication of the "Luxor" circular (in the *Spiritual Scientist*, April 17, 1875), provoked some private correspondence and public comment, the most important example of the latter being a scholarly and interesting article by a young barrister named Failes, writing under the pseudonym of "Hiraf," which appeared in the *Spiritual Scientist* for 1875, p. 202, and was continued in the next week's issue. It is full of theosophical ideas interpreted in terms of Rosicrucianism and under that title. The writer presents the Eastern philosophy of Unity and Evolution; and shows how it anticipated by many centuries the modern theories

Digitized by Google

of force-correlation and conservation of energy. Its major importance, however, was the fact that it drew from H. P. B. a reply, which, in our Scrap-book, she calls "My first occult shot," and which, in fact, laid open the whole field of thought since ploughed up by the members, friends, and adversaries of the Theosophical Society.

In tracing up H. P. B.'s literary history from that point until the close of her life, one important fact should be borne in mind by such as are willing to do her simple justice. She was not a "learned" woman, in the literary sense, when she came to America. When, long after *Isis Unveiled* was begun, I inquired of her ever-beloved aunt Mdlle. N. A. Fadeyef, where her niece had acquired all this varied knowledge of recondite philosophies, metaphysics, and sciences, this prodigiously intuitive comprehension of ethnical evolution, the migrations of ideas, the occult forces of nature, etc., she wrote me frankly that up to their last meeting, some four or five years previously, Helena had "not even thought of such things in her dreams," that her education had been simply that of any young lady of good family. She had learnt, besides her native Russian, French, a little English, a smattering of Italian, and music: she was astounded at my accounts of her erudition, and could only attribute it to the same sort of inspiration as had been enjoyed by the Apostles, who, on the Day of Pentecost, spoke in strange tongues of which they had previously been ignorant. She added that from her childhood

Digitized by Google

her niece had been a medium, more extraordinary for psychical power and variety of phenomena than any of whom she had read in the whole course of a lifelong study of the subject.* I had a better chance than any of her friends to know what were her actual literary attainments, having helped her in her correspondence and labours of authorship and corrected almost every page of her MSS. for years: besides which I had her confidence in a greater degree, from 1874 to 1885, than any other person. I can affirm, then, that in those early days she was not, in her normal state, a learned woman, and was never an accurate writer. This is *à propos* of her reply to "Hiraf," in which she went into particulars about Occultism and explained the nature of elementary spirits. A learned but blindly vindictive critic of hers, stigmatises this article as "simply a rehash of the writings upon Magic of Eliphas Levi, and Des Mousseaux, and Hargrave Jennings' "Rosicrucians." In it, he says, "the Madame (*sic*) disclaims any authority as a teacher, calling herself 'poor, ignorant me,' and states that she desired simply to tell a little of the little she picked up in her long travels in the East. The statement that she derived any of this article from 'the East' is untrue; the whole of it was taken from European books."

And whence did their authors get their knowledge, unless from other authors? And whence these authors? From the East, always from the East: not one of those mentioned was a practical occultist, an adept in practi-

* Letter dated Odessa, 8/20 May, 1877.

Digitized by Google

cal psychology ; not even Eliphas Levi, save to the minor extent of being able (taking himself as the authority) to evoke spirits by the formularies of Ceremonial Magic. He was too much addicted to the pleasures of the table to be anything higher in Magic. Des Mousseaux was simply a most industrious and successful compiler for the Jesuits and Theatins, whose complimentary certificates he publishes in his works ; and as for the late Mr. Hargrave Jennings, we all knew him for an estimable little gentleman, a London *littérateur*, with a book knowledge of occult subjects and not conspicuously accurate in his deductions. Whether H. P. B. did or did not acquire her practical psychical knowledge or powers in the East, it is undeniable that she *had* them, could practise them whenever she liked, and that her explanations of them were identical with those which are given in the teachings of every Eastern school of Occult Science. I, personally, can further testify that she was in relations with Eastern adepts, and that not only she, but even I, was visited by them, conversed with them and was taught by them, before leaving America and after reaching India. To her, the books of Levi, Des Mousseaux, and all other modern and ancient writers were simply the toolboxes from which she could take the tools she needed in building the Western structure for the habitation of Eastern ideas : from one she could take one fact, from another, another. She found them but imperfect tools, at best, for those who knew, concealed, and those who did not, twisted and mutilated or misrepresented their

Digitized by Google

facts. The Rosicrucian, Hermetic and Theosophical Western writers, producing their books in epochs of religious ignorance and cruel bigotry, wrote, so to say, with the headsman's axe suspended over their necks, or the executioner's fagots laid under their chairs, and hid their divine knowledge under quaint symbols and misleading metaphors. The world lacked an interpreter, and H. P. B. came to supply the need. Having the clues to the labyrinth in her own trained consciousness and full practical experience, she led the way, torch in hand, and bade the morally brave to follow her.* An American critic said of *Isis* that she quoted indiscriminately from the classical authors and from the current newspapers of the day; and he was right, for it mattered not what author or paragraphist she quoted from so long as his writing suggested an idea illustrative of her present theme. This answer to "Hiraf" was the first of her esoteric writings, as her answer to Dr. Beard was the first of her defences of mediumistic Spiritualism. The history of Literature furnishes no more surprising spectacle than that of this fashionably under-educated Russian noblewoman writing English at times like an Englishman; French so pure that French authors have told me her articles would serve as models of style in French schools; and Russian so enticingly brilliant as to make the conductor of the most impor-

* I say this with a reservation as to the actual degree of her own independent agency in the affair, about which I do not feel willing to dogmatise.

Digitized by Google

tant of their reviews actually beseech her to write constantly for it, on terms as high as they gave Tourguénief. She was not always at those high-water marks, however; sometimes she wrote such bad English that her MSS. had to be almost re-written. Nor, as said, was she an orderly or accurate writer; her mind seemed to rush ahead at such a pace, and streams of thought came pouring from both sides in such force that confusion and want of method were the result in her writing. She laughed once, but confessed the justness of the comparison, when I told her that her mind was like Dickens's image of Mugby Junction, with its ceaseless trains screaming in and screaming out, backing and shunting, and from morning to night keeping up a bewildering confusion. But beginning with the "Hiraf" article, and coming down to the last line she wrote for type, one thing must honestly be said—her writing was always full of thought-suggestion, brilliant and virile in style, while her keen sense of humour often seasoned her most ponderous essays with mirth-provoking ideas. To the methodical scholar she was exasperating, yet never dull or uninteresting. Later on, I shall have occasion to speak of the phenomenal changes in her literary and conversational moods and styles. I have said, and shall always reiterate, that I learnt more from her than from any schoolmaster, professor, or author I ever had to do with. Her psychical greatness, however, so overmatched her early education and mental discipline that the critics who knew her only in literature have done

Digitized by Google

her bitter and savage injustice. X. B. Saintine writes, in *Picciola*, that the penalty of greatness is isolation; her case proves the aphorism: she dwelt on spiritual heights whither only the eagles of mankind soar. Most of her adversaries have only seen the mud on her shoes; and, verily, sometimes she wiped them even on her friends who could not mount on wings as strong as her own.

The "Hiraf" letter has another historical value in that she therein proclaims unequivocally "from personal knowledge" the existencc of regular schools of occult training "in India, Asia Minor, *and other countries*." "As in the primitive days of Socrates and other sages of antiquity," she says, "so now, those who are willing to learn the Great Truth will ever find *the chance* if they only 'try' to meet some one to lead them to the door of 'one who knows when and how.'" She corrects "Hiraf's" too sweeping generalisation of calling all occultists Rosicrucians; telling him that that fraternity was but one of many occult sects or groups. She now openly styles herself "a follower of Eastern Spiritualism," and foresees the time when American Spiritualism will "become a science and a thing of mathematical certitude." Again, reverting to the question of adepts, she says the real Kabbala, of which the Jewish version is but a fragment, is in possession of "but a few Oriental philosophers; where they are, who they are, is more than is given me to reveal. Perhaps I do not know it myself and have only dreamed it. Thousands will say it is all imagination: so be it. Time will show. The only

Digitized by Google

thing I *can* say is that such a body exists, and that the location of their Brotherhoods will never be revealed to other countries until the day when Humanity shall awake, . . . Until then, the speculative theory of their existence will be supported by what people erroneously believed to be *supernal* facts." Her article conveys the warning that it is waste of time to seek to become a practical Kabbalist (or Rosicrucian, if you will) by acquiring a book knowledge of occult literature; it is as foolish, she says, "as to try to thread the famous labyrinth without the clue, or to open the ingenious locks of the mediæval ages without having possession of the keys." She defines the difference between White and Black Magic and warns against the latter. Finally, she says: "But say what you (the 'very orthodox priests and clergymen of various creeds and denominations, you who are so intolerant towards Spiritualism,' [mark what meaning her context gives the term now] 'the purest of the Children of Ancient Magic,') will, you cannot help that which was, is, and ever will be, namely, the direct communication between the two worlds. We term this intercourse modern Spiritualism with the same force and logic, as when we say the 'New World,' in speaking of America."

I am sure all earnest members of the Theosophical Society will be glad to know that as early as July, 1875, H. P. B. affirmed the existence of the Eastern Adepts, of the mystic Brotherhood, of the stores of divine knowledge in their keeping, and of her personal connec-

Digitized by Google

tion with them. She reaffirms this in a letter to the *Spi. Sci* (p. 64, but of what month of 1875 I cannot tell, as she has not dated the cutting in our Scrap-book; but she writes from Ithaca whither she went to visit Professor and Mrs. Corson, of Cornell University, in August or early September), and puts forth the important idea that "Spiritualism, in the hands of an adept, becomes Magic, for he is learned in the art of blending together the laws of the Universe, without breaking any of them and thereby violating Nature. In the hands of an inexperienced medium, Spiritualism becomes UNCONSCIOUS SORCERY; for . . . he opens, unknown to himself, a door of communication between the two worlds, through which emerge the blind forces of Nature lurking in the astral Light, as well as good and bad spirits."

The occult Idea was now fairly launched, and our published writings and private correspondence henceforth teemed with such allusions. My first extended contribution on those lines was a letter entitled "The Immortal Life," dated August 23, 1875, and published in the *New York Tribune* of the 30th of that month. I state in it that I had believed in the mediumistic phenomena for about a quarter of a century, but had discredited the assumed identification of the intelligences behind them. I affirm my belief in the reality of ancient occult science, and the fact that I had unexpectedly "been brought into contact with living persons who do, and had in my presence done the very marvels that Paracelsus, Albertus, and Apollonius are credited with."

Digitized by Google

In saying this, I had in mind not only H. P. B.'s multifarious phenomena, not only the beginnings of my intercourse with the Mahâtmas, but also the disclosure to my own eyes, in my own bedroom, in a house where H. P. B. did *not* live, and when she was *not* present, of the spirits of the elements, by a stranger whom I casually met in New York, one day shortly before penning the letter.

The stranger came by appointment to my chambers. We opened the folding doors which separated the sitting from the small bedroom, sat on chairs facing the wide doorway, and by a wonderful process of Máya (I now suppose) I saw the bedroom converted, as it were, into a cube of empty space. The furniture had disappeared from my view, and there appeared alternately vivid scenes of water, cloudy atmosphere, subterranean caves, and an active volcano; each of the elements teeming with beings, and shapes, and faces, of which I caught more or less transient glimpses. Some of the forms were lovely, some malignant and fierce, some terrible. They would float into view as gently as bubbles on a smooth stream, or dart across the scene and disappear, or play and gambol together in flame or flood. Anon, a misshapen monster, as horrid to see as the pictures in Barrett's *Magus*, would glare at me and plunge forward, as though it wished to seize me as the wounded tiger does its victim, yet fading out on reaching the boundary of the cube of visualised *ákásh*, where the two rooms joined. It was trying to one's nerves, but after my experiences

Digitized by Google

at Eddy's I managed not to "weaken." My stranger friend declared himself satisfied with the result of the psychical test, and, on leaving, said we might meet again. But until now we have not. He seemed a fair-skinned Asiatic, but I could not exactly detect his nationality, though I then fancied him a Hindu. He talked English as fluently as myself.

CHAPTER VIII.

THEOSOPHICAL SOCIETY PROPOSED.

WE may now take up the story of the formation of the Theosophical Society and show what led up to it, who were the people who formed it, and how its aims and objects were defined. For this, let it be remembered, is a complete history of the Society's beginnings, not a mere record of personal recollections of H. P. B.

The way had been prepared for the organisation of such a society by the active discussion, first, of Spiritualism and afterwards of some portions of Eastern spiritualistic ideas. This had been going on since my *N. Y Sun* report on the Eddys appeared, in August of the previous year (1874), and had been tenfold intensified since H. P. B. and I met at Chittenden, and used the press for the exposition of our heterodox views. Her piquant published letters, the stories that were afloat about her magical powers, and our several affirmations of the existence of non-human races of spiritual beings,

Digitized by Google

drew into our acquaintanceship numbers of bright, clever people of occult leanings. Among these were scientific men, philologists, authors, antiquarians, broad-minded clergymen, lawyers, and doctors, some very well known Spiritualists, and one or two gentlemen journalists attached to metropolitan papers, only too eager to make good "copy" out of the business. It was an audacious thing, certainly, to stand, defiant of public prejudice, and assert the scientific legitimacy of ancient Magic in this age of scientific scepticism. Its very boldness compelled public attention, and the inevitable result was that, in time, those whom the discussion had drawn together in sympathy should group themselves together as a society for occult research. The attempt of May, 1875, to form such a nucleus in a "Miracle Club" having failed, for the reason stated in Chapter I., the next opportunity presented itself when Mr. Felt lectured privately to a few friends of ours, in H. P. B.'s rooms at 46 Irving Place, New York, on the 7th of September of the same year. This time there was no failure: the tiny seed of what was to be a world-covering banyan tree was planted in fertile soil and germinated. I regret to say that, to my knowledge, no official memorandum exists of the persons actually present on that particular evening, though one of them, the Reverend J. H. Wiggin, an Unitarian clergyman, published in *The Liberal Christian* of Sept. 4th, a notice of a similar gathering during the previous week, at which the fact of Mr. Felt's promised lecture was, I think, announced for the evening of the

Digitized by Google

7th. He names H. P. B., myself, Signor Bruzzesi, a New Jersey judge and his wife, and Mr. Charles Sotheran (who had procured for him from H. P. B. an invitation to be present). He expresses his wonder at the range and depth of the conversation, remarking:

"It would be discourteous to detail the minutiæ of a friendly conversation where there was no desire for publicity nor any magic display, or offer notions about it. The phallic element in religions; recent wonders among the mediums; history; the souls of flowers; Italian character; the strangeness of travel; chemistry; poetry; Nature's trinity; Romanism; gravitation; the Carbonari; jugglery; Crookes's new discoveries about the force of light; the literature of Magic—were among the topics of animated discussion lasting until after midnight. If Madame Blavatsky can indeed bring order out of the chaos of modern spiritism she will do the world a service."

On the evening of September 7th, Mr. Felt gave his lecture on "The Lost Canon of Proportion of the Egyptians." He was a remarkably clever draughtsman, and had prepared a number of exquisite drawings to illustrate his theory that the canon of architectural proportion, employed by the Egyptians, as well as by the great architects of Greece, was actually preserved in the temple hieroglyphics of the Land of Khemi. His contention was that, by following certain definite clues one could inscribe what he called the "Star of Perfection" upon a certain temple wall, within which the whole

Digitized by Google

secret of the geometrical problem of proportion would be read ; and that the hieroglyphs outside the inscribed figure were but mere blinds to deceive the profane curiosity-seeker ; for, read consecutively with those within the geometrical figure, they either made undecipherable nonsense or ran into some quite trivial narrative.

This diagram consists of a circle with a square within and without, containing a common triangle, two Egyptian triangles and a pentagon. He applies it to the pictures, statues, doors, hieroglyphs, pyramids, planes, tombs and buildings of Ancient Egypt, and shows that they agree so perfectly with its proportions that they must have been made by its rule. He applies the same canon of proportion to the masterpieces of Greek art and finds that they were, or might have been, carved without models by this rule. It is, in fact, the true canon of Nature's architecture. The late Dr. Seth Pancoast, M.D., of Philadelphia, a most erudite Kabbalist, being present, categorically questioned Mr. Felt as to whether he could practically prove his perfect knowledge of the occult powers possessed by the true ancient magician ; among others, the evocation of spirits from the spatial deep. Mr. Felt replied as categorically that he had done and could do that with his chemical circle. "He could call into sight hundreds of shadowy forms resembling the human, but he had seen no signs of intelligence in these apparitions." I take these details from a contemporary cutting that I find in its proper place in our Scrap-book I., but to which the name of the

Digitized by Google

paper is not attached. It looks as if it had been cut from Mr. Wiggin's paper, *The Liberal Christian.*

Felt's theory and drawings were so captivating that J. W. Bouton, the publisher of symbological books, had contracted with him to bring out his work in 1000 pages folio, with numberless illustrations, and had advanced a large sum for copper plates, graving tools, presses, etc., etc. But having to deal with a genius burdened with a large family and exasperatingly unpunctual, the thing dragged along until he lost all patience, and the final result was, I believe, a rupture between them and the grand work was never published.

Mr. Felt told us in his lecture that, while making his Egyptological studies, he had discovered that the old Egyptian priests were adepts in magical science, had the power to evoke and employ the spirits of the elements, and had left the formularies on record; he had deciphered and put them to the test, and had succeeded in evoking the elementals. He was willing to aid some persons of the right sort to test the system for themselves, and would exhibit the nature-spirits to us all in the course of a series of lectures, for which we were to pay him. Of course we passed an informal vote of hearty thanks for his highly interesting lecture, and an animated discussion followed. In the course of this, the idea occurred to me that it would be a good thing to form a society to pursue and promote such occult research, and, after turning it over in my mind, I wrote on a scrap of paper the following:

Digitized by Google

" Would it not be a good thing to form a Society for this kind of study ? "

—and gave it to Mr. Judge, at the moment standing between me and H. P. B., sitting opposite, to pass over to her. She read it and nodded assent. Thereupon I rose and, with some prefatory remarks, broached the subject. It pleased the company and when Mr. Felt, replying to a question to that effect, said he would be willing to teach us how to evoke and control the elementals, it was unanimously agreed that the society should be formed. Upon motion of Mr. Judge, I was elected Chairman, and upon my motion Mr. Judge was elected Secretary of the meeting. The hour being late, an adjournment was had to the following evening, when formal action should be taken. Those present were requested to bring sympathisers who would like to join the proposed society.

As above stated, no official record by the Secretary of the attendance at this first meeting survives, but Mrs. Britten quotes, in her *Nineteenth Century Miracles*, (p. 296), a report which was published in a New York daily and copied into the *Spiritual Scientist*, and from her book I take the following extracts :

" One movement of great importance has just been inaugurated in New York, under the lead of Colonel Henry S. Olcott, in the organization of a society, to be known as the Theosophical Society. The suggestion was entirely unpremeditated, and was made on the evening of the 7th inst. in the parlors of Madame Blavatsky,

Digitized by Google

where a company of seventeen ladies and gentlemen had assembled to meet Mr. George Henry Felt, whose discovery of the geometrical figures of the Egyptian Cabbala may be regarded as among the most surprising feats of the human intellect. The company included several persons of great learning and some of wide personal influence. The Managing Editors of two religious papers; the co-editors of two literary magazines; an Oxford LL.D.; a venerable Jewish scholar and traveller of repute; an editorial writer of one of the New York morning dailies; the President of the New York Society of Spiritualists; Mr. C. C. Massey, an English visitor [barrister-at-law]; Mrs. Emma Hardinge Britten and Dr. Britten; two New York lawyers besides Colonel Olcott; a partner in a Philadelphia publishing house; a well-known physician; and, most notable of all, Madame Blavatsky herself, comprised Mr. Felt's audience. . . . During a convenient pause in the conversation, Colonel Olcott rose, and after briefly sketching the present condition of the spiritualistic movement; the attitude of its antagonists, the Materialists; the irrepressible conflict between science and the religious sectaries; the philosophical character of the ancient theosophies and their sufficiency to reconcile all existing antagonism; and the apparently sublime achievement of Mr. Felt, in extracting the key to the architecture of Nature from the scanty fragments of ancient lore left us by the devastating hands of the Moslem and Christian fanatics of the early centuries, he proposed to form a nucleus around

Digitized by Google

which might gather all the enlightened and brave souls who are willing to work together for the collection and diffusion of knowledge. His plan was to organise a society of Occultists and begin at once to collect a library ; and to diffuse information concerning those secret laws of Nature which were so familiar to the Chaldeans and Egyptains, but are totally unknown by our modern world of science."

This being from an outside source and published within a few days of the meeting, is even more welcome than if official, as it shows conclusively what I had in mind when proposing the formation of our Society. It was to be a body for the collection and diffusion of knowledge ; for occult research, and the study and dissemination of ancient philosophical and theosophical ideas : one of the first steps was to collect a library. The idea of Universal Brotherhood was not there, because the proposal for the Society sprang spontaneously out of the present topic of discussion. It was a plain, business-like affair, unaccompanied by phenomena or any unusual incident. Lastly, it was free of the least sectarian character and unquestionably antimaterialistic. The little group of founders were all of European blood, with no strong natural antagonism as to religions, and caste distinctions were to them non-existent. The Brotherhood plank in the Society's future platform was, therefore, not thought of: later on, however, when our sphere of influence extended so as to bring us into relations with Asiatics and their religions and

Digitized by Google

social systems, it became a necessity, and, in fact, the corner-stone of our edifice. The Thesophical Society was an evolution, not—on the visible plane,—a planned creation.

I have an official report of the meeting of September 8th, signed by myself, as Chairman, and W. Q. Judge, as Secretary, which I will quote from our Minute Book:

"In consequence of a proposal of Col. Henry S. Olcott, that a Society be formed for the study and elucidation of Occultism, the Cabbala, etc., the ladies and gentlemen then and there present, resolved themselves into a meeting, and, upon motion of Mr. William Q. Judge, it was

"*Resolved*, That Col. H. S. Olcott take the chair. Upon motion it was also

"*Resolved*, That Mr. W. Q. Judge act as Secretary. The chair then called for the names of the persons present, who would agree to found and belong to a Society such as had been mentioned. The following persons handed their names to the Secretary:

"Col. Olcott, Mme. H. P. Blavatsky, Chas. Sotheran, Dr. Chas. E. Simmons, H. D. Monachesi, C. C. Massey, of London, W. L. Alden, G. H. Felt, D. E. de Lara, Dr. W. Britten, Mrs. E. H. Britten, Henry J. Newton, John Storer Cobb, J. Hyslop, W. Q. Judge, H. M. Stevens (all present save one).

"Upon motion of Herbert D. Monachesi, it was

Digitized by Google

"*Resolved*, That a committee of three be appointed by the chair to draft a constitution and by-laws, and to report the same at the next meeting. Upon motion, it was

"*Resolved*, That the chair be added to the Committee.

"The chair then appointed Messrs. H. J. Newton, H. M. Stevens, and C. Sotheran to be such Committee.

"Upon motion, it was

"*Resolved*, That we now adjourn until Monday, September 13th, at the same place, at 8 P.M."

The Society, then, had sixteen *formers*—to use the most apposite term—not founders; for the stable founding was a result of hard work and self-sacrifice, of years, and during a part of that time H. P. B. and I worked quite alone in the trenches, laying the strong foundation. Our colleagues either went out entirely, or became listless, or were prevented by force of circumstances from devoting their time and efforts to the work. But I must not anticipate.

When this portion of my narrative appeared in the *Theosophist* (November, 1892), sketches were given of several of the officers of the Society, to which the interested reader is referred; the superabundance of material for the present volume compelling me to condense so far as practicable. I shall, however, preserve my note on Mr. Alden for the sake of the story of one of his occult experiences.

Digitized by Google

Mr. W. L. Alden, now so well known in London literary circles, was then an editorial writer on the *N. Y. Times*, of great repute for his caustic and humoristic criticisms upon current topics. I met him in Paris recently, after many years of separation, and learnt that he had been holding an important consular appointment under the American Government. He had an amusing adventure in New York, I recollect, at about the beginning of our acquaintance. He was then an editorial contributor to the *N. Y. Daily Graphic*, and I was writing for the paper my Chittenden letters. A host of eccentric people were attracted to the editorial rooms to ask idle questions, and they bored the editor, Mr. Croly, so much that at last he published a cartoon, representing himself standing at bay, with a revolver and huge pair of shears, to defend himself against an irruption of, "long-haired men and crop-haired women" Spiritualists. But one morning there came an aged man in Eastern garb, who carried a strange-looking, evidently very old book under his arm. Saluting the editorial staff with grave courtesy, he began talking about my letters, and about Western and Eastern Spiritualism. All left their writing-tables and clustered about him. When he spoke of Magic he turned quietly towards Alden, whose occult tastes nobody had until then suspected, and said: "Do you believe there is truth in Magic, Sir?" Taken aback, Alden replied: "Well, I have read *Zanoni* and think there may be something in it." By request, the stranger showed his queer book to the

Digitized by Google

editors. It proved to be a treatise upon Magic, written in Arabic or some other Eastern tongue, with numerous illustrations interspersed with the text. All were very much interested, Alden especially, who, at parting, asked the old gentleman if he might have some further talk with him. The latter smilingly assented, and gave him an address at which to call. When Alden went there, however, *it proved to be a Roman Catholic image and book-shop;* my friend found himself tricked, and ever after, for months, fruitlessly kept a sharp eye upon the people he met, in the hope that he might once more see the mysterious Asiatic. I was told by Mr. Croly that the man never revisited the *Graphic* office; it was as if the earth had swallowed him. This unexpected appearance and sudden disappearance of mysterious people who bring rare books to the right man, or who impart useful hints that put him on the right path through the swamp of difficulties through which he is bravely floundering towards the truth, is not an uncommon experience. Many a case of the kind has been recorded in religious history. Sometimes the visit is made during the waking hours, sometimes in visions of the night. The revelations sometimes come in "flashes" —flashes of the *buddhi* in upon the *mânas*—begetting great discoveries in science; as the idea of the spectroscope flashed in upon the mind of Fraunhöfer, that of the nature of lightning upon Franklin's, that of the telephone upon that of Edison, and that of ten thousand other great facts or laws upon other minds open to sug-

Digitized by Google

gestion. It would be deemed exaggeration to say that *every* aspirant to arcane knowledge has his chance to get it, once in his lifetime, yet it is true, I believe, that the percentage of those who have is a hundredfold greater than people imagine. It is the individual's misfortune if, through ignorant misconceptions as to how such a messenger should look, or with what phenomenal portents his message should be delivered, he "entertains an angel unawares" or elbows him in the street without feeling even a tremor to divert his attention from a passing cab. I speak of that which I know.

CHAPTER IX.

FORMATION OF THE THEOSOPHICAL SOCIETY.

AT the adjourned meeting, on the evening of September 18th, 1875, Mr. Felt continued from the previous meeting, September 8th, the interesting description of his discoveries, which he illustrated by a number of colored diagrams. Some persons present thought they saw light quivering over the geometrical figures, but I incline to the belief that this was due to auto-suggestion, in part, and partly to what Felt said about their magical properties.* Certainly, I saw noth-

* The following important draft of a letter signed by Mr. Felt was found by me a short time after this chapter was written. I cannot remember whether the letter was sent for publication or not, but incline to the latter opinion. The importance of the document lies in the fact that in it, Mr. Felt unreservedly affirms the existence of elemental spirits, his acquired control over them, their effect upon animals and their relations with humanity. I think the statements as to the influence of the Egyptian geometrical drawings upon Mr. Felt's hearers exaggerated. The would-be teachers who did not come to learn, as Mr. Felt describes them, were the Spiritualist members whose orthodoxy was unshakable.

NEW YORK, June 19, 1878.

TO THE EDITOR OF THE "LONDON SPIRITUALIST."

My attention has but just now been called to certain articles, published in your city, and one of them in your paper, which reflect upon

Digitized by Google

ing of an occult nature nor did the others present, save a very inconsiderable minority. The lecture finished, the order of the day was taken up; I acting as Chair-

statements made by friends of mine, respecting the "Theosophical Society" and myself. One or more of the writers question whether such a person as myself actually exists, or is but "the creation of the brains of Mme. Blavatsky and others." Having very little in common with the public which supports your paper, I seldom see it, and would perhaps never have known of these statements, if they had not been pointed out to me. I am engaged in mathematical pursuits, and take little or no interest in anything that cannot be exactly demonstrated, for which reason Spiritualists and myself have very few bonds of sympathy. I have so little faith in their so-called manifestations that I have long since given up trying to keep track of them.

The Theosophical Society was started under the mistaken impression that a fraternity of that kind could be run on the modern mutual admiration plan for the benefit of the newspapers, but very soon everything was in confusion. There were no degrees of membership nor grades, but all were equal. Most members apparently came to teach, rather than to learn, and their views were thoroughly ventilated on the street corners. The propriety of making different degrees was at once apparent to the real Theosophists, and the absolute necessity of forming the Society into a secret body. This reorganization into a secret society, embracing different degrees, having been accomplished, all statements of what has transpired since the members were so bound in secrecy, are of course to be viewed with suspicion, as, even if such statements were true, things may have been done in the presence of the *illuminati*, of which many ex-members and novitiates had no knowledge. Of my own acts in and out of the society, before this bond of secrecy, I am at liberty to speak, but of my doings or the doing of others since that time, I have no right to give evidence. Mr. Olcott's statement about my experiments with elemental or elementary spirits, in his inaugural address, was made without consultation with me or my consent, and was not known to me until too long after its appearance for me to protest. Although substantially true, I looked upon it as premature, and as something that should have been kept within the knowledge of the Society.

That these so-called elementals or intermediates, or elementary or

Digitized by Google

man, and Mr. C. Sotheran as Secretary. The Minute Book says :

"The Committee on Preamble and By-laws reported

original spirits were creatures that actually existed, I was convinced through my investigations in Egyptian archæology. While working at drawings of several Egyptian Zodiacs, in the endeavour to arrive at their mathematical correspondences, I had noticed that very curious and unaccountable effects were sometimes produced. My family observed that at certain times a pet terrier dog and a Maltese cat, which had been brought up together and were in the habit of frequenting my study and sleeping on the foot of my bed, were acting very strangely, and at last called my attention to it. I then noticed that when I commenced certain investigations the cat would first appear to be uneasy and the dog for a short time would try to quiet him, but shortly the dog would also seem to be in dread of something happening. It was as though the perceptions of the cat were more acute, and they would both then insist on being let out of the room, trying to get out themselves, by running against the glass windows. Being released they would stop outside and mew and bark as though calling to me to come out. This behaviour was repeated until I was forced to the conclusion at last that they were susceptible to influences not perceptible to me.

I supposed at first that the hideous representations on the Zodiacs, etc., were "vain imaginations of a distempered brain," but afterwards thought that they were conventional representations of natural objects. After studying these effects on the animals, I reflected that as the spectrum gives rays, which though to our unaided sight invisible, had been declared by eminent scientists to be capable of supporting another creation than the one to us objective, and that this creation would probably also be invisible (Zöllner's theory), this phenomenon was one of its manifestations. As these invisible rays could be made apparent by chemical means, and as invisible chemical images could be reproduced, I commenced a series of experiments to see if this invisible creation or the influences exerted by it would be thereby affected. I then began to understand and appreciate many things in my Egyptian researches that had been incomprehensible before. As a result I have become satisfied that these Zodiacal and other drawings are representations of types in this invisible creation

Digitized by Google

progress, and Mr. De Lara read a paper which he had been requested to write for the Committee.

"At the suggestion of the Committee it was, upon motion.

delineated in a more or less precise manner, and interspersed with images of natural objects more or less conventionally drawn. I discovered that these appearances were intelligences, and that while some seemed to be malevolent and dreaded by the animals, others on the contrary were not obnoxious to them, but on the contrary they seemed to like them and to be satisfied when they were about.

I was led to believe that they formed a series of creatures in a system of evolution running from inanimate nature through the animal kingdom to man, its highest development; that there were intelligences capable of being more or less perfectly controlled, as man was more or less thoroughly acquainted with them, as he was able to impress them as being higher or lower in the scale of creation, or as he was more or less in harmony with nature or nature's works. Recent researches showing that plants possess senses in greater or less perfection, having convinced me that this system can be still further extended. Purity of mind and body, I found to be very powerful, and smoking and chewing tobacco and other filthy habits, I observed to be especially distasteful to them.

I satisfied myself that the Egyptians had used these appearances in their initiations; in fact, I think I have established this beyond question. My original idea was to introduce into the Masonic fraternity a form of initiations such as prevailed among the ancient Egyptians, and tried to do so, but finding that only men pure in mind and body could control these appearances, I decided that I would have to find others than my whisky-soaked and tobacco-sodden countrymen, living in an atmosphere of fraud and trickery, to act in that direction. I found that when these appearances, or elementals could not be kept in perfect control, they grew malicious, and despising men whom their cunning taught them must be debased, they became dangerous, and capable of inflicting damage and harm.

With one of the members of the Society, a legal gentleman of a mathematical turn of mind, I accomplished the following, after the manner of Cornelius Agrippa, who claimed for himself and Trithemus, that "at a great distance, it is possible without any doubt to influence

Digitized by Google

"*Resolved*, That the name of the Society be 'The Theosophical Society.'

"The chair appointed the Rev. Mr. Wiggin and Mr. Sotheran a Committee to select suitable meeting rooms;

another person spiritually, even when their position and the distance is unknown." *De Occulta Phil.—lib.* III., p. 3. Several times, just before meeting me, he observed a bright light; and at last came to connect this light with my coming and questioned me about it. I told him to notice the hour and minute at which these lights would be seen, and when I met him afterwards I would tell him the exact time. I did this 30 or 40 times before his naturally sceptical mind was thoroughly convinced. These lights appeared to him at different times of the day, wherever he happened to be, in New York or Brooklyn, and we arranged that, in each case, about two hours from that time I should meet at his office.

These phenomena differ essentially from any mesmeric, magnetic, or so-called spiritual manifestations that I am acquainted with, and are not referable thereto; this gentleman has never been influenced by me in either of these ways.

Once he came to my house, in the suburbs of this city, and examined some Kabbalistic drawings upon which I was working, with one of which he was much impressed. After leaving he saw, in bright day-light, in the cars, an appearance of a curious kind of animal, of which he then made a sketch from memory. He was so impressed with the circumstance and the vividness of the apparition, that he went at once to one of the *illuminati* of the Society, and showed his drawing. He was informed that though apparently an ideal figure, it was really a so-called elemental spirit which was represented by the Egyptians as next in the order of progression to a certain reptile, which was the figure he had seen at my house, and that it was employed by the Egyptians in making their Zodiacs, at initiations, etc., etc. He then returned to me, and without comment I showed him a drawing of the very figure seen by him, whereupon he told me that he had seen it and under what circumstances and produced his sketch. He was then convinced that I foresaw that he would see this appearance after having been impressed by my Kabbalistic drawing.

Digitized by Google

and then several new members were nominated and, upon motion, it was

"*Resolved*, That these persons be added to the list of founders."

These phenomena are clearly not referable to any familiar form of manifestations.

At one of my lectures before the Theosophical Society, at which all degrees of members were present, lights were seen by the *illuminati* passing to and from one of my drawings, although they stood in the glare of several gas lights, a dark cloud was observed to settle upon it by others, and other phenomena, such as the apparent change of the Zodiacal figures into other forms or elemental representations, were observed.

Certain members of lower degree were impressed with a feeling of dread, as though something awful were about to happen; most of the probationers were rendered uncomfortable or uneasy; some became hypercritical and abusive; several of the novitiates left the room; and Mme. Blavatsky, who had seen unpleasant effects follow somewhat similar phenomena in the East, requested me to turn the drawings and change the subject. If there had previously been any doubt, the absolute necessity of forming the society into degrees was then apparent, and I have never since met others than the *illuminati* of the society, with similar manifestations.

The unfriendly tone of the article above referred to was entirely uncalled for, and there was no boasting on the part of any of the members in their remarks. Being a secret society we could not in any manner retaliate until permission to do so was given. Having now received permission, I here publicly state that I have lately performed what I agreed to do, and, unless the Council forbids, I hereby give permission to such of the *illuminati* as have seen it, to come forward, if they choose and bear evidence of the fact.

I do not know if you will think this worth the space it will occupy in your columns, but think that it is but just, after keeping an absolute silence for more than two years, I should now be heard in this matter. Modern Spiritualism need not weep with Alexander, for there is another world for it to discover and conquer.

GEORGE H. FELT.

Digitized by Google

"After which the meeting adjourned, subject to the call of the chair. The report is signed by me as Chairman and by Dr. John Storer Cobb, for C. Sotheran, Secretary."

The choice of a name for the Society was, of course, a question for grave discussion in Committee. Several were suggested, among them, if I recollect aright, the Egyptological, the Hermetic, the Rosicrucian, etc., but none seemed just the thing. At last, in turning over the leaves of the Dictionary, one of us came across the word "Theosophy," whereupon, after discussion, we unanimously agreed that that was the best of all; since it both expressed the esoteric truth we wished to reach and covered the ground of Felt's methods of occult scientific research. Some stupid story has gone about that, while the Committee were sitting, a strange Hindu walked into the room, threw a sealed packet upon the table and walked out again, or vanished, or something of the sort; the packet, when opened, being found to contain a complete draft of a Constitution and By-laws for the Society, which we at once adopted. This is sheer nonsense; nothing whatever of the sort occurred. Several similarly absurd yarns have been set afloat about us from time to time; some of them very funny, some weird, some too childishly improbable to be worth even reading, but all misleading. An old journalist myself, I cared too little for such *canards* to take the least notice of them. While they create temporary confusion and misconceptions, in the long run they do no harm.

Digitized by Google

As regards the drafting of the original By-laws, we took much pains and drew up as good a set as any society could desire. The Rules of various corporate bodies were examined, but those of the American Geographical and Statistical Society and the American Institute were thought by us to be as good models as any to follow. All preliminaries being settled, we obtained permission from Mrs. Britten that the next meeting should be held at her private residence (no hall having as yet .been taken), and I issued (on post-cards) the following notice :

The Theosophical Society.

NEW YORK, *October* 13, 1875.

The Committee on By-Laws having completed its work, a meeting of the Theosophical Society will be held at the private residence, No. 206 West 38th St., on Saturday, October 16, 1875, at 8 p. m., to organize and elect officers. If Mr. Felt should be in town, he will continue his intensely interesting account of his Egyptological discoveries. Under the By-Laws proposed, new members cannot be elected until after thirty days' consideration of their application. A full attendance at this preliminary meeting is, therefore, desirable.

The undersigned issues this call in compliance with the order adopted by the meeting of September 13th ultimo.

(*Signed*) HENRY S. OLCOTT, *President, pro. tem.*

Digitized by Google

The copy of the original post-card sent by post by Sotheran to H. P. B. I have, framed, at "Gulistan," and my own copy is also in my possession.

Our Minute Book records the following persons as present at this meeting in question :

"Mme. Blavatsky, Mrs. E. H. Britten, Henry S. Olcott, Henry J. Newton, Chas. Sotheran, W. Q. Judge, J. Hyslop, Dr. Atkinson, Dr. H. Carlos, Dr. Simmons, Tudor Horton, Dr. Britten, C. C. Massey, John Storer Cobb, W. L. Alden, Edwin S. Ralphs, Herbert D. Monachesi, and Francisco Agromonte.

"On behalf of the Committee on Preamble and By-Laws, the Preamble was read by the chair, and the By-Laws by Mr. Chas. Sotheran."

Mr. Massey was then introduced by the chair and made some remarks; after which he was obliged to hurry away to the steamer on which he was to sail for England.

Discussions ensued and various motions were made on the adoption of the By-Laws; the final result being that the draft submitted by the Committee was laid on the table and order printed. The meeting then adjourned. H. S. Olcott was Chairman and J. S. Cobb Secretary of the meeting.

The next preliminary meeting was held at the same place on the 30th October. The Committee on rooms having reported, Mott Memorial Hall, 64 Madison Avenue (a few doors only from our recently purchased

Digitized by Google

New York Headquarters), was selected as the Society's meeting-place. The By-Laws were read, discussed and finally adopted, but with the proviso that the Preamble should be revised by H. S. Olcott, C. Sotheran and J. S. Cobb, and then published as the Preamble of the Society.

Voting for officers was next proceeded with; and Tudor Horton and Dr. W. H. Atkinson being appointed tellers of the Election, the result was announced by Mr. Horton as follows:

President, HENRY S. OLCOTT; *Vice-Presidents*, DR. S. PANCOAST and G. H. FELT; *Corresponding Secretary*, MME. H. P. BLAVATSKY; *Recording Secretary*, JOHN STORER COBB; *Treasurer*, HENRY J. NEWTON; *Librarian*, CHARLES SOTHERAN; *Councillors*, REV. J. H. WIGGIN, R. B. WESTBROOK, LL.D., MRS. EMMA HARDINGE BRITTEN, C. E. SIMMONS, M.D., and HERBERT D. MONACHESI; *Counsel to the Society*, WILLIAM Q. JUDGE.

The meeting then adjourned over to the 17th November, 1875, when the perfected Preamble would be reported, the President Elect deliver his Inaugural Address, and the Society be thus fully constituted.

On the evening designated, the Society met in its own hired room; the minutes of the previous meeting were read and approved; the President's Inaugural Address was delivered and ordered printed; upon Mr. Newton's motion, thanks were voted to the President; and the Society, now constitutionally organised, adjourned over to the 15th December.

Digitized by Google

Thus the Theosophical Society, first conceived of on the 8th September and constitutionally perfected on the 17th November, 1875, after a gestatory period of seventy days, came into being and started on its marvellous career of altruistic endeavour *per angusta ad augusta*. Inadvertently, in our first published document, the *Preamble and By-Laws of The Theosophical Society*, the 30th October was given as the date of organisation, whereas, as seen above, it should properly have been November 17, 1875.

The foregoing narrative of the origin and birth of the Society is very prosaic and lacks all the sensational and imaginative features which have sometimes been ascribed to the event. It has, however, the merit of being historically exact; for, as I am writing history and not romance, I have stuck to the evidences of our certificated records and can prove every point. With an exaggeration of supposed loyalty which has bred injustice, as bigotry invariably does, many persons have been repeating to the echo the incorrect statement that H. P. B., and she alone, founded the Theosophical Society; what her colleagues did was less than nothing. The fact is that she herself vigorously repudiated the idea when put forward by Mr. J. L. O'Sullivan, in 1878. She says—answering a caustic critic:

"With crushing irony he speaks of us as 'our teachers.' Now I remember having distinctly stated in a previous letter that we [she and I] have *not* offered ourselves as teachers, but, on the contrary, decline any such office—

Digitized by Google

whatever may be the superlative panegyric of my esteemed friend, Mr. O'Sullivan, who not only sees in me a 'Buddhist priestess' (!) but, *without a shadow of warrant of fact, credits me with the foundation of the Theosophical Society and its Branches.*" [Letter of H. P. Blavatsky, in the *Spiritualist* of March 22, 1878.]

H. P. B. was quite wonderful enough as she actually was without the fulsome praise that has been lavished upon her; and the attempt to read into every word and action an occult value will only recoil upon its authors, by the inflexible general law of action and reaction observable in Nature. Her devotees ignore the fact, that the more previsionary power and infallible insight they ascribe to her, the more mercilessly will men hold her accountable for her every action, her mistakes in judgment, inaccuracies in statement, and other foibles which, in an ordinary—*i. e.*, an uninspired person, are often only mildly blamed because recognised as proofs of human infirmity. It is a most unfriendly act to try to make her a being above humanity, without a weakness, spot, or blemish, for her written public record, let alone her private correspondences, proves the thing impossible.

Though my Inaugural Address was applauded by my audience, and Mr. Newton, the orthodox Spiritualist, joined with Mr. Thomas Freethinker, and the Rev. Mr. Westbrook, to get a vote that it be printed and stereotyped—a good proof that they did not think its views and tone unreasonable—yet it reads a bit foolish after seventeen years of hard experience. A good deal of its

Digitized by Google

forecast of results has been verified, much of it falsified. What we counted on as its sound experimental basis, *viz.*, Felt's demonstration of the existence of the Elemental races, proved a complete and mortifying disappointment. Whatever he may have done by himself in that direction, he showed us nothing, not even the tip end of the tail of the tiniest Nature-spirit. He left us to be mocked by the Spiritualist and every other class of sceptic. He was a man of extraordinary acquirements, and had made what seemed a remarkable discovery. So probable, indeed, did it appear that—as I have above stated—Mr. Bouton, an experienced merchant, risked a very heavy sum on the speculation of getting out his book. For my part, I believe he had done what he claimed, and that, if he had but systematically followed up his beginnings, his name would have been among the most renowned of our epoch. Having so often seen H. P. B. employ the Elementals to do phenomena, Signor B. do the same on several occasions, and my mysterious strangers show me them in my own rooms, what was easier than for me to believe that Felt could do likewise; especially when H. P. B. assured me that he could? So, with the temerity of a born pioneer and the zeal of a congenital optimist and enthusiast, I gave rein to my imagination and depicted, in my Address, what was likely to result if Felt's promise was made good. Luckily for me, I put in the "if"; and it might have been better if it had been printed thus—IF. On the plea of his pecuniary necessities, he got out of

Digitized by Google

Treasurer Newton $100 to defray the costs of the promised experiments, but brought us no Elementals. In the Council meeting of March 29, 1876, a letter from him was read, in which he stated that "he was prepared to fulfil his promise to lecture before the Society upon the Kabbalah, and giving an outline of the different departments into which he would divide his subject."

Whereupon, Mr. Monachesi moved a Resolution, which was passed, that

"The Secretary be intrusted to have printed and circulated among the Fellows of the Society, either the letter of V. P. Felt, or a syllabus which Fellow Felt and himself would prepare." [Extract, "Minutes of the T. S.," p. 15.]

The circular was issued, and helped somewhat to lessen the feeling of resentment that prevailed against Mr. Felt for his breach of promise. He actually delivered his second lecture on the 21st June, but then he again failed us, and I find that, in the Council meeting on the 11th October, on Treasurer Newton's motion, a Resolution was adopted, instructing Mr. Judge, the Society's Counsel, to demand that he should fulfil his legal obligation at an early date. But he never did. Finally, he went out of the Society; and, it having thus been proved that nothing was to be expected of him a number of persons also vanished from the Society, and left us others, who were not mere sensation-seekers, to toil on as best we might.

And it *was* toil, as all who were at all active in those

Digitized by Google

days, very well recollect. Our object was to learn, experimentally, whatever was possible about the constitution of man, his intelligence, and his place in nature. Especially Mind, active as WILL, was a great problem for us. The Eastern magus uses it, the Western mesmerist and psychopath employ it ; one man developes it, and becomes a hero, another paralyses it, and becomes a spirit medium. To its resistless sway the beings of all kingdoms and various planes of matter are obedient, and when imagination is simultaneously active, it *creates*, by giving objectivity to just-formed mind-images. So, though Felt had defaulted, and we could count on no sailing on smooth tides, yet we had still many fields left for research, and we explored them a little. The old records show that we tested mediums, tried experiments in psychometry, thought-reading and mesmerism, and wrote and listened to papers. But we made slow progress, for, though we all, by tacit consent, put the best face upon it, every one of us was secretly discouraged by Felt's fiasco, and there seemed no chance of finding a substitute : the rain-maker, Signor B., had been driven away by H. P. B., after his futile attempt to create a breach between her and myself ; my swarthy, elemental-summoning visitor did not show his face again ; and H. P. B., upon whose help everybody had—as we thought—not unreasonably counted, refused to do the slightest phenomenon at our meetings. So the membership dwindled by degrees, until, at the end of a year or so, there survived the following : the form of a good

Digitized by Google

organisation, sound and strong in its platform ; a clangorous notoriety ; a few, more or less indolent, members ; and an indestructible focus of vitality in the quenchless enthusiasm of the two friends, the Russian woman and American man, who were in deadly earnest ; who never for a moment harboured a doubt as to the existence of their Masters, the excellence of their delegated work, or the ultimate complete success that would crown it. Judge was a loyal friend and willing helper, but he was so very much our junior that we could not regard him as an equal third party. He was more like the youngest son in a family. Many an evening after we had established our residential Headquarters, when our visitors had gone and H. P. B. and I stopped in the Library-room for a parting-smoke and chat, have we laughed to think how few we could count upon to stand by us through everything. The fair speeches and smiles of the evening's guests would be recalled, and the selfishness they often meant to mask detected. The one thing we felt more and more as time went on was, that we two could absolutely depend upon each other for Theosophy, though the sky itself should crack ; beyond that, all depended upon circumstances. We used to speak of ourselves as the Theosophical Twins, and sometimes as a trinity ; the chandelier hanging overhead making the third of the party ! Frequent allusions to both these pleasantries occur in our Theosophical correspondence ; and on the day when she and I were leaving our dismantled apartments in New York, to go aboard the

Digitized by Google

steamer that was to take us towards India, the last thing we did was to say, with mock seriousness, "Farewell, old Chandelier; silent, light-giving, unchanging friend and confidant!"

The enemy have sometimes said that when we sailed away from America we left no Theosophical Society behind us; and to a certain extent that was true, for, owing to several causes, it did nothing to speak of during the next six years. The social nucleus—always the most powerful factor in movements of this kind—had been broken up; nobody was able to form a new one; another H. P. B. could not be created: and Mr. Judge, the then only potential future leader and organiser, was called away to Spanish countries by professional business, as above remarked.

It must be said, in justice to Mr. Judge, General Doubleday, and their associates in the original Theosophical Society, whom we left in charge on leaving for India, that the suspended animation was for two or three years mainly due to my own fault. There had been some talk of converting the Society into a high Masonic degree, and the project had been favourably viewed by some influential Masons. I shall have to recur to this subject later on. For the present it suffices to say that I was asked to draft an appropriate form of ritual, and when we left America this was one of the first things I was to do after reaching India. But instead of the quiet and leisure anticipated, we were instantly plunged into a confusion of daily work and

Digitized by Google

excitement; I was forced on the lecturing platform; we made long journeys through India; the *Theosophist* was founded, and it was simply impossible to give any attention to the ritual; though I have several letters from General Doubleday and Judge complaining that it was not sent them, and saying they could do nothing without it. Moreover, our wider experience convinced us of the impracticability of the plan: our activity had taken a much wider extension, and our work a more serious and independent character. So, finally, I decided not to follow up the scheme. But by this time Judge had gone abroad and the others did nothing.

In a letter dated New York, October 17, 1879,—a year after our departure—Mr. Judge writes: "We have taken in but few members and decided to wait for the ritual before taking in more, as that would make a serious change." For us two, however, there had been twelve months of heavy work. General Doubleday writes to the same effect under date of September 1, 1879, saying: "With regard to the T. S. in the United States we have been in *statu quo*, waiting for the promised ritual." On the 23d of June, 1880, he asks: "Why do you not send us that ritual?" And Mr. Judge, on April 10, 1880, tells me, "Everything here lags. No ritual yet. Why?" November 7, 1881, Judge being absent in South America, his brother, whom he had left in charge of T. S. affairs, writes me that nothing is doing, and that "the Society will not start working until W. Q. J., General Doubleday, and I [he] can find time

Digitized by Google

and means to start it"; both of which were lacking. Finally—as it is useless to follow up the matter further—on January 7, 1882, Judge writes: "The Society is dormant, doing absolutely nothing. Your explanation about the ritual is satisfactory."

Yet throughout all these years, Mr. Judge's letters to H. P. B., myself, and Damodar show that his zeal for Theosophy and all mysticism was unquenchable. His greatest desire was that a day might come when he should be free to devote all his time and energies to the work of the Society. But as the clover seed, imbedded in the soil twenty feet below the surface, germinates when the well-diggers bring it up above ground, so the seed we planted in the American mind, between the years 1874 and 1878, fructified in its due time; and Judge was the husbandman predestined to reap our harvest. Thus, always, Karma evolves its pioneers, sowers, and reapers. The viability of our Society was proximately in us two founders, but ultimately in its basic idea and the transmitters, the August Ones, who taught us and shed into our hearts and minds the light of their benevolent goodwill. As both of us realised this, and as we were both permitted to work for it and with them, there was a closer bond between us two than any that the common social relationships could have forged. It made us put up with each other's weaknesses and bear all the grievous frictions incident to the collaboration of two such contrasting personalities. As for myself, it made me put behind me as things of no value all worldly ties, ambi-

Digitized by Google

tions, and desires. Truly, from the bottom of my heart, I felt, and feel, that it is better to be a door-keeper, or even something more menial than that, in the house of the "Lord on High," than to dwell in any silken pavilion the selfish world could give me for the asking. So felt H. P. B., whose tireless enthusiasm for our work was a never-failing wellspring of encouragement to every one coming in contact with her. Feeling thus, and ready, as we were, to make every sacrifice for our cause, the extinction of the Theosophical Society was simply impossible.

Many things of interest to Theosophists are recorded in the early Society records. At the Council meeting of January 12, 1876, it was resolved, upon the motion of J. S. Cobb, "that William Q. Judge, Counsel to the Society, be invited to assist in the deliberations of the Council, at its meetings." At the same meeting, the withdrawal of Mr. Sotheran from the Society was noted and Mr. H. J. Newton appointed to fill the vacancy; and the Council ordered the Recording Secretary to lay before the Society, at its next regular meeting, the following Resolution, as upon the recommendation of the Council, for adoption:

"That in future this Society adopt the principle of secrecy in connection with its proceedings and transactions, and that a Committee be appointed to draw up and report upon the details necessary to give effect to such a change."

Digitized by Google

So that, after an experience of barely three months—I had thought it was much longer—we were obliged in self-defence to become a secret body. At the Council meeting of March 8, 1876, on motion of H. B. Blavatsky, it was

"*Resolved*, That the Society adopt one or more signs of recognition, to be used among the Fellows of the Society, or for admissions to the meetings."

A Committee of three, of whom H. P. B. was one, was appointed by me to invent and recommend signs. The appropriate seal of the Society was partly designed after a very mystical one that a friend of H. P. B.'s had composed for her, to use on her letter-paper, and it was beautifully engraved for us by Mr. Tudor Harton. A little later Mr. Judge and I, with the concurrence of others, sketched a badge of membership, consisting of a serpent coiled about an Egyptian Tau. I had two made, for H. P. B. and myself, but we subsequently gave them away to friends. Quite recently, this very pretty and appropriate symbol has been revived in America.

But what little secrecy there ever was in the Society—as little, or even less than that so carefully guarded by the Tyler of a Masonic Lodge—has virtually passed away, after its brief period of use in our early days. In 1889, it was made the chief feature in the Esoteric Society which I chartered for H. P. B., and, I regret to say, has caused us much harm with much good.

CHAPTER X.

BARON DE PALM.

THE evolution of the Society up to its perfected organisation having been traced, we may now give attention to special incidents which occupied the attention of its founders and more or less affected its interests. If the details of early T. S. history were known to the majority of its members this historical retrospect might be left to some less busy person than myself to compile. In point of fact, however, no other living person knows them all so well as I ; no one save H. P. B., and I assumed all the responsibilities, took all the hard knocks, organised all the successes : so, perforce, I must play the historian. If I do not, the truth will never be made known. The special incident to be dealt with in the present chapter is the story of Baron de Palm's connection with our Society, his antecedents, death, will, and funeral ; his cremation will require a separate chapter. This is not Theosophy, but I am not writing Theosophy ; it is history, one of several affairs which were

Digitized by Google

mixed up in our Society's concerns, and which greatly occupied the time and thoughts of my colleague and myself. These affairs threw upon me, as President, in particular, very grave responsibilities. When I say that I carried through the De Palm funeral obsequies with the conviction that it would cost me a professional connection worth some £2,000 a year, my meaning will appear. The thing apprehended did happen, because I mortally offended the gentleman—a bigoted Christian—who controlled the matter in question, and who influenced its transfer to another friend of his. Of course, I should do it over again, and I only mention the circumstance to show that it cost something to be a worker with the Masters in those early days.

Joseph Henry Louis Charles, Baron de Palm, Grand Cross Commander of the Order of the Holy Sepulchre and Knight of various other orders, was born at Augsburg, May 10, 1809, in an ancient baronial family of Bavaria. Late in life he emigrated to America, lived a number of years in the Western States, and about December, 1875, came to me in New York with an introductory letter from the late Col. Bundy, editor of the *Religio Philosophical Journal*, commending him to my courtesy. Finding him a man of engaging manners, evidently familiar with the best society, and professing much interest in Spiritualism and a wish to learn something about our Oriental theories, I made him welcome, and at his request introduced him to H. P. B. The acquaintance was kept up, the Baron joined our Society,

Digitized by Google

and, a vacancy occurring soon after by the resignation of the Rev. J. H. Wiggin, he was elected a Member of Council on the 29th March, 1876. As he complained of feeble health, and of having no one in New York who cared whether he lived or died in the wretched boarding-house where he was put up, I invited him to come and occupy a room in my "apartment," looked after his comfort, and called in a physician to prescribe for him. Symptoms of pneumonia and nephritis showing themselves and the medical attendant pronouncing him in danger, he got me to send him Mr. Judge, the Society's Standing Counsel, and executed a will devising certain parcels of real estate at Chicago to two lady friends, making me residuary legatee, and appointing Mr. Newton, Treasurer of the T. S., and myself his executors, with full powers. Under medical advice and at his own earnest request, he was removed to the Roosevelt Hospital on Friday evening, May 19th, (1876), and died the next morning. The result of an autopsy was to show that he had for years been suffering from a complication of diseases of the lungs, kidneys, and other organs ; a medical certificate that he had died of nephritis was given and filed, as prescribed by law, in the Health Bureau, and the body was conveyed to the receiving-vault of the Lutheran Cemetery pending the completion of arrangements for interment.

In religion Baron de Palm was a Voltairean with a gloss of Spiritualism. He particularly asked that no clergyman or priest should officiate at his funeral, but

Digitized by Google

that I should perform the last offices in a fashion that would illustrate the Eastern notions of death and immortality. The recent agitation of the subject of cremation in Great Britain and America, caused by the incineration of the body of the first Lady Dilke, the scientific experiments of Sir Henry Thompson (*vide* his published essay *The Treatment of the Body after Death*, London, 1874), and the sensational articles and pamphlets of Rev. H. R. Haweis upon the unspeakable horrors of the burial-grounds of London, led me to ask him how he would wish me to dispose of his remains. He asked for my opinion upon the relative superiority of the two modes of sepulture, concurred in my preference for cremation, expressed a horror of burial, some lady he had once known having been buried alive, and bade me do as I found most advisable. A dilettante sort of body calling itself the New York Cremation Society, had been formed in April, 1874, and I had enrolled myself as a member, and been elected a member of the Legal Advice Committee; but beyond passing resolutions and issuing pamphlets the members had done nothing to prove the faith that was in them. Here, at last, was the chance of having a body to burn, and thus inaugurating the very needed reform. I offered it to the Society in question and it was accepted. The weather being warm for the season, urgent haste was called for, and up to the evening before the day appointed for the public funeral of the Baron, it was understood that after the ceremonies I was to deliver

Digitized by Google

over the body to the Society's agents for cremation. Meanwhile H. P. B. and the rest of us bestirred ourselves to organise an impressive "Pagan funeral"—as the press chose to call it—compose a litany, devise a ceremonial, write a couple of Orphic hymns for the occasion, and get them set to appropriate music. On the Saturday evening mentioned above we were rehearsing our programme for the last time when a note was brought me from the Secretary of the N. Y. Cremation Society, to say that they would have to give up the cremation because of the great noise that the papers had made about the funeral and their attacks upon the Theosophical Society. In other words, these respectable moral cowards dared not face the ridicule and animosity which had been excited against us innovators. The quandary we were in did not last longer than a half hour, for I finally offered to take the whole responsibility upon myself, and pledged my word that the body should be burnt if I had even to do it myself. The promise was fulfilled in due time, as the sequel will show.

Through the obliging courtesy of the Rev. O. B. Frothingham, whose congregation were worshipping in the great hall of the Masonic Temple, at the corner of Twenty-third Street and Sixth Avenue, New York City, we were enabled to hold the Baron's obsequies in that vast apartment. An hour before the appointed time the street was crowded by an eager, even somewhat obstreperous multitude, and a strong body of police had

Digitized by Google

to be sent for to prevent the doors being forced. We had issued two kinds of admission tickets, both of triangular shape, one a black card printed in silver, for reserved seats, the other a drab one printed in black, for general admission; and the police were instructed to admit nobody without one or the other kind. But an American or British mob is hard to restrain, and there was such a rush when the doors were opened that the 1500 holders of tickets had to find seats as best they could. The great hall, which holds 2000 people, was crowded in every corner, the very passages and lobbies were blocked, and from the buzz of conversation and uneasiness prevailing it was easy to see that the multitude had come to gratify its curiosity, certainly not to evince either respect for the dead or sympathy with the Theosophical Society. It was just in that uncertain mood when the least unexpected and sensational incident might transform it into the wild beast that an excited crowd becomes at times. Through the whole of the previous week the leading papers had been lashing public curiosity into a frenzy, and one of the wittiest burlesques I ever read, that appeared in the *World* upon our anticipated ceremonial and public procession, set all New York laughing. For the benefit of our Theosophical grand-children I will quote the following fragment:

"'All right,' said the Colonel; 'go ahead and make out your programme, but leave everybody out but the members of the society, for the Masons wont have anything to do with it.'

Digitized by Google

"Two hours were then spent in making out an order of march and a programme of exercises after the procession reaches the Temple, and the following is the result. The procession will move in the following order:

"Colonel Olcott as high priest, wearing a leopard skin and carrying a roll of papyrus (brown card-board).

"Mr. Cobb as sacred scribe, with style and tablet.

"Egyptian mummy-case, borne upon a sledge drawn by four oxen. (Also a slave bearing a pot of lubricating oil.)

"Mme. Blavatsky as chief mourner and also bearer of the sistrum. (She will wear a long linen garment extending to the feet, and a girdle about the waist.)

"Colored boy carrying three Abyssinian geese (Philadelphia chickens) to place upon the bier.

"Vice-President Felt, with the eye of Osiris painted on his left breast, and carrying an asp (bought at a toy store on Eighth avenue).

"Dr. Pancoast, singing an ancient Theban dirge:

> "'Isis and Nepthys, beginning and end;
> One more victim to Amenti we send.
> Pay we the fare, and let us not tarry,
> Cross the Styx by the Roosevelt Street ferry.'"

"Slaves in mourning gowns, carrying the offerings and libations, to consist of early potatoes, asparagus, roast beef, French pancakes, bock-beer, and New Jersey cider.

"Treasurer Newton, as chief of the musicians, playing the double pipe.

Digitized by Google

"Other musicians performing on eight-stringed harps, tom-toms, etc.

"Boys carrying a large lotus (sun-flower).

"Librarian Fassit, who will alternate with music by repeating the lines beginning :

> "'Here Horus comes, I see the boat,
> Friends, stay your flowing tears ;
> The soul of man goes through a goat
> In just 3,000 years.'

"At the Temple the ceremony will be short and simple. The oxen will be left standing on the sidewalk, with a boy near by to prevent them goring the passers-by. Besides the Theurgic hymn, printed above in full, the Coptic national anthem will be sung, translated and adapted to the occasion as follows :

> "Sitting Cynocephalus, up in a tree,
> I see you, and you see me.
> River full of crocodile, see his long snout !
> Hoist up the shadoof and pull him right out."

With this sort of thing going on for days together in advance, it may be imagined in what sort of dangerous mood was the crowded audience, only a handful of whom were members of the T. S. and most of whom were positively prejudiced against it. All went peacefully enough, however, until an excited Methodist, a relative of an F. T. S. who was assisting me in the ceremony, rising and wildly gesticulating, shouted "That 's a lie !" just when I had pronounced the words "There is but one first cause, uncreated—." Instantly the audience sprang to their feet and some turned towards the door,

Digitized by Google

as people will in such crises, not knowing whether the confused shout may not mean an alarm of fire: some of the rougher sort mounted the chairs, and, looking towards the stage, seemed ready to take part in fighting or skirmishing in case such should break out. It was one of those moments when the turn of events depends upon the speaker. As it happened, I had once seen the great Abolitionist orator, Wendell Philips, by imperturbable coolness quell a mob who were hooting and catcalling him, and as the memory flashed within me I adopted his tactics. Stepping quietly forward, I laid my left hand upon the Baron's coffin, faced the audience, stood motionless and said nothing. In an instant there was a dead silence of expectancy; whereupon, slowly raising my right hand, I said very slowly and solemnly: "We are in the presence of death!" and then waited. The psychological effect was very interesting and amusing to me, who have for so many years been a student of crowds. The excitement was quelled like magic, and then in the same voice as before, and without the appearance of even having been interrupted, I finished the sentence of the litany—"eternal, infinite, unknown."

The two Orphic hymns that we compiled for the occasion were sung by a volunteer choir of the New Yorker Sængerbund and the organ accompaniment was the music of an Italian Mass, 300 years old; "and,"—says the *Sun's* report—"as it swelled and then died softly away in the half gloom of the crowded but hushed room, with the symbolic fire flickering (on the triangular altar) and

Digitized by Google

the ancient knightly decorations flashing on the coffin, the effect was very impressive."

After the singing of the first Orphic hymn, an invocation, or *mantram*, was made to "the Soul of the World, whose breath gives and withdraws the form of everything." "The universe," it went on to say, "is thy utterance and revelation. Thou, before whom the light of being is a shadow which changes and a vapor that passes away; thou breathest forth, and the endless spaces are peopled; thou drawest breath and all that went forth from thee returns again." Good Vedântism this and good Theosophy! The same thought ran throughout all the parts of the service—the hymns, invocation, litany, and my discourse. In the latter I gave such particulars about Baron de Palm as I had got from himself (and very misleading they were afterwards proved to be when I heard from the family solicitor). I explained the character and objects of the T. S.* and my view of the complete inefficacy of death-bed repentance for the forgiveness of sins. I am glad to see upon reading the newspaper reports after the lapse of many years that I preached the doctrine of Karma, pure and simple. There was an out-

* "This Society," I said, "was neither a religious nor a charitable but a scientific body. Its object was to enquire, not to teach, and its members comprised men of various creeds and beliefs. 'Theology' meant the revealed will of God, 'Theosophy' the direct knowledge of 'God.' The one asked us to believe what some one else had seen and heard, the other told us to see and hear for ourourselves. Theosophy taught that by cultivation of his powers a man may be inwardly illumined and get thereby a knowledge of his God-like faculties."

Digitized by Google

burst of applause and hisses when I said that the Society "considered the ruffian who stood under the gallows a ruffian still though twenty prayers might have been uttered over him." I immediately commanded silence and continued my remarks,—reported thus :

"He then went on to say that Theosophy could not conceive of bad going unpunished or good remaining unrewarded. I believe a man to be a responsible being, and it was a religion not of professions but of practices. It was utterly opposed to sensuousness and taught the subordination of the body to the spirit. There, in that coffin, lay (the body of) a Theosophist. Should his future be pronounced one of unalloyed happiness without respect to the course of his past life? No, but as he had acted so should he suffer or rejoice. If he had been a sensualist, a usurer, or a corrupter, then the divine first (and only) cause could not forgive him the least of his offences, for that would be to plunge the universe into chaos. There must be compensation, equilibrium, justice."

After the singing of the second Orphic hymn, Mrs. E. Hardinge Britten, the Spiritualist orator, addressed the audience for about ten minutes, in the capacity of a speaking medium, concluding with a strongly emotional apostrophe to the deceased Baron, bidding him farewell, declaring that he had "passed the golden gates wherein (*sic*) sorrow entereth not," and strewing his bier with flowers, "as symbols of full-blown life!" This closed the proceedings and the huge audience quietly dispersed.

Digitized by Google

The body of the deceased was given in charge of Mr. Buckhorst, the Society's undertaker, to be lodged in a receiving vault until I could arrange for its cremation. I was obliged to devise a better method of preserving it than the weak process of embalming that had been employed at the Hospital, which proved its inefficacy even within the fortnight. It gave me much anxiety, and no end of enquiry and research was involved, but I solved the difficulty at last by packing the cadaver in desiccated clay impregnated with the carbolic and other vapors of distilled coal tar. Decomposition had actually begun when the antiseptic was applied in the first week of June, but when we examined the corpse in the following December before removal for cremation, it was found completely mummified, all liquids absorbed and all decay arrested. It could have been kept thus, I am convinced, for many years, perhaps for a century, and I recommend the process as superior to any other cheap method of embalming that has ever come under my notice.

H. P. B. had no official part in the public celebration of the De Palm obsequies, but made herself heard all the same. She sat with the non-officiating members of the Society among the audience, and when the excited Methodist interrupted our litany and a policeman was getting him in hand to escort him out of doors, she stood up and called out, " He 's a bigot, that 's what he is ! " and set everybody around her laughing, in which she soon heartily joined. The members who took part in the ceremony were Messrs. Judge, Cobb, Thomas,

Digitized by Google

Monachesi, Oliver, and three or four more whose names I cannot recall.

The Council of the T. S., at its meeting of June 14th, and the Society, in its session of 21st June (1876), passed Resolutions ratifying and confirming all that the officers had done in connection with the De Palm autopsy, obsequies, and enbalming. A Resolution was also adopted to the effect that,

"The President and Treasurer of this Society, who are the executors under the last will and testament of our late fellow be, and hereby are, authorised and empowered to do in the name of this Society any and all further acts, which they may deem necessary to complete the disposal of the remains of our late fellow, according to his expressed wishes and direction."

The Baron's funeral being over, the next thing was to see what his estate was likely to realise for the Society (for although all was left to me individually there was an understanding between us that I should be free to hand over everything to the T. S). Mr. Newton and I obtained probate of the will, and Mr. Judge was instructed to make the necessary inquiries. Our first shock came when we opened his trunk at the hospital: it contained two of my own shirts, *from which the stitched name-mark had been picked out.* This looked very cloudy indeed, a bad beginning towards the supposed great bequest. There were also in the trunk a small bronze bust of a crying baby, some photographs and

Digitized by Google

letters of actresses and prima donnas, some unreceipted bills, some gilt and enamelled duplicates of his orders of nobility, a flat, velvet-lined case containing the certificates of his birth, his passports and the several diplomatic and court appointments he had held, the draft of a former will, now cancelled, and a meagre lot of clothing. Beyond this, nothing; no money or jewelry, no documents, no manuscripts, no books, no evidences of a literary taste or habits. I give these details—in which Mr. Newton and Mr. Judge and others will corroborate me—for an excellent reason, to be presently stated.

The old will described him as Seignior of the castles of Old and New Wartensee, on Lake Constance, and his papers showed him to be the presumed owner of 20,000 acres of land in Wisconsin, forty town lots in Chicago, and some seven or eight mining properties in Western States. Upon the low estimate that the farming land was worth $5 per acre, the rumour spread that I had inherited at least £20,000, to say nothing of the two Swiss castles, the town lots, and the gold and silver mining claims. It ran through the whole American press, editorials were written upon it, and I received a shoal of letters, congratulatory and begging, from known and unknown persons in various countries. Mr. Judge communicated with the lady legatees, with public officials at home and abroad, and with a representative of the Baron's family. This took several months, but the final result was this: the ladies would not take the Chicago lots for a gift, the Wisconsin land had been sold

Digitized by Google

for taxes years before, the mining shares were good only for papering walls, and the Swiss castles proved castles in the air ; the whole estate would not yield even enough to reimburse Mr. Newton and myself for the moderate costs of the probate and funeral! The Baron was a broken-down noble, without means, credit, or expectations ; a type of a large class who fly to republican America as a last resource when Europe will no longer support them. Their good breeding and their titles of nobility gain them an entrance into American society, sometimes chances of lucrative posts, oftener rich wives. I never knew exactly what our friend had been doing in the West, but through importunate creditors who turned up, I found out that he had at any rate been concerned in unprofitable attempts to form industrial companies of sorts.

Neither then nor since have I discovered one grain of proof that Baron de Palm had either literary talent, erudition, or scholastic tastes. His conversation with H. P. B. and myself was mainly upon superficial matters, the topics which interest society people. Even in Spiritualism he did not seem to have been a deep thinker, rather an interested observer of mediums and phenomena. He told us much about his experiences in diplomatic circles, and ascribed his present straitened circumstances (as regards the possession of ready cash) to his futile attempts, when an attaché, to vie with rich English diplomats in showy living and fashionable indulgences. He read little and wrote nothing : as I

Digitized by Google

had ample opportunity of observing, since he was living with me as my guest.

It would be painful for me to dwell upon these personalities but for the necessity of my showing the man's character, and leaving my readers to judge for themselves whether he was fit to be a teacher or mentor to a person like the author of *Isis Unveiled* and *The Secret Doctrine*. For that is the disputed point. With an inconceivable malignity certain unprincipled foes of hers have spread the calumny that her *Isis Unveiled* is "nothing but a compilation from the manuscripts of Baron de Palm, and without acknowledgment." This will be found in a mendacious letter of Dr. Elliott Coues in the *New York Sun* of July 20, 1890, which the Editor of that influential paper more recently, in the most honorable spirit of justice, expressed regret for having published and declared unsupported by evidence. The falsehood has been circulated, as I am informed, by Mrs. Emma Hardinge Britten, by a learned calumniator in *The Carrier Dove*, and by other hostile newspaper writers: it has, moreover, been given a certain permanency of publication by an expelled French F. T. S., one Dr. G. Encausse (known by the pseudonym of *Papus*) in his work *Traité Methodique de Science Occulte*, which was reviewed in the *Theosophist* for August, 1892.

To those who knew H. P. B.'s mode of life while writing her book, who were acquainted with Baron de Palm at the West and in New York, and who were associated with him during his brief connection with the T. S., the above candid and easily proven details about his person-

Digitized by Google

ality, habits, and acquirements will suffice. For others, I reluctantly append the scathing letter which Herr Consul Obermayer, of Augsburg, Bavaria, sent Mr. Judge in response to his official and professional enquiry as to M. de Palm's supposed European properties, and which has been translated for this publication from the original in my possession. From its date, the reader will see that we did not receive it, and consequently did not know the truth about the Baron's European antecedents, until a full year after his death, and five months after the world-famous cremation of his remains :

"CONSULATE OF THE ARGENTINE REPUBLIC,
AUGSBURG, *May* 16, 1877.

No. 1130.

TO WILLIAM Q. JUDGE,
Attorney and Counsellor at Law,
71 *Broadway, New York.*

"From your letter of the 7th ult., I gather that Baron Josef Heinrich Ludwig von Palm died in New York in the month of May, 1876.

"The undersigned, Consul Max Obermayer (late United States Consul at Augsburg from 1866 to 1873), happens by chance to be in a position to give you the information desired regarding the deceased in a thoroughly exhaustive manner, and is very willing to do so.

"Baron von Palm was in his youth an officer in the Bavarian army, but was forced on account of his many shady transactions and debts to leave the service. He then betook himself to other parts of Germany, but could not remain long anywhere, because his great friv-

Digitized by Google

olity, his love of good living and his debaucheries constantly led him to incur fresh debts and involve himself in shady transactions; so that he was even condemned by the courts and sent to jail.

"After it became impossible for him to remain longer in Germany, he went to Switzerland to enter on a new course of swindling, and he actually succeeded, by false promises and misrepresentations, in persuading the owner of Schloss (Castle) 'Wartensee' to sell him that property, which he forthwith occupied. His stay there, however, was short; not only was he unable to raise the purchase money, but he could not even pay the taxes, and in consequence the property was sold for the account of the creditors and Palm fled to America.

"Whether or not he supported himself in America by frauds is not known here.

"Of property in Europe he possesses not *one cent's* worth; all that may be found among his effects to that purport is *a pure swindle.*

"The only property on which he had any claim whatever, before he went to America, was a share in the Knebelisher inheritance in Trieste. When he left he had already taken much trouble to obtain immediate payment of this amount, but in vain.

"Towards the end of the year 1869, Palm addressed himself to the undersigned in his then capacity of United States Consul, with the request to arrange for the payment to him of his share in the Knebelisher estate mentioned above.

Digitized by Google

"This request was at once complied with, and, as appears from the enclosed copy of his receipt, the sum of 1,068 Thalers 4/6 = $3247.53 was placed at Palm's disposal by a consular letter of Jan. 21, 1870, and he availed himself thereof through the banking house of Greenbaum Bros. & Co., as appears from his letter to the consulate of Feb. 14, 1870.

"I can only repeat that Palm possessed in Europe neither a single dollar in money, nor a single foot of ground, and that everything which may be found among his papers to the contrary is based solely upon fraudulent representation.

"Palm's only known relatives are the two Baronesses Von T—— domiciled in Augsburg, both families in every way most respectable, and to whom Palm in the last year of his residence in Europe caused much scandal and annoyance.

"The above gives all that is to be known about the deceased Palm in the most exhaustive manner, and probably more even than you may have expected.

. . . . . .

(Signed) MAX OBERMAYER.

Consul Argentine Republic."

My compliments to M. Papus, Mrs. Britten and her "party." *Palmam qui meruit, ferat!*

CHAPTER XI.

THE FIRST CREMATION IN AMERICA.

BARON DE PALM'S cremation is the theme of the present chapter. I have related above the circumstances which led to my taking it upon myself and, since it is historically important from having been the first public cremation in the United States and the first where a crematorium was employed, the details should be interesting.

The cremation took place December 6, 1876, at the small inland town of Washington, Washington County, Pennsylvania, more than six months after the body had been packed in carbolised dried clay at New York. It is very easy now to cremate a body, either in America or England, for efficient crematories are available and cremation societies exist, but then it was quite another thing. When I pledged myself to dispose of the Baron's remains as he wished, there were no facilities, no precedents in my country to follow, unless I wished to adopt the Eastern method of open-air burning, which had

Digitized by Google

been once employed, and which, in the then state of public prejudice and the probable refusal of the Sanitary Board to issue a permit, would have been very difficult, not to say dangerous. My only practicable policy was to wait until the chance offered itself. In the year 1816, a Mr. Henry Laurens, a wealthy gentleman of South Carolina, ordered his executors to burn his corpse and compelled his family to acquiesce by the testamentary proviso that they should not inherit his estate unless his wishes were strictly carried out. Accordingly, his body was burnt on his own plantation in the Eastern fashion, on a funeral pyre and in the open air; his family and near relations being present. One other case of the kind is recorded, that of a Mr. Berry, the pyre being used in this instance also, if my memory serves me. But there had been no case of the disposal of human remains in a retort or crematorium constructed for the purpose, and so, as above said, I had no choice but to wait patiently the turn of events. I was not kept long in suspense, for one morning in July or August it was announced in the papers that Dr. F. Julius Le Moyne, an eccentric but very philanthropic physician of Western Pennsylvania, had begun erecting a crematorium for the burning of his own body. I immediately opened correspondence with him, with the result that (Letter of August 16, 1876) he consented that if he should survive the completion of his building, the Baron's corpse should be the first one disposed of. At the time of the funeral the possibility of there being a subsequent cremation

Digitized by Google

was not publicly announced but only whispered about; now, however, it was openly declared, my purpose being to give the authorities fair warning, so that if any legal obstacle existed it might be brought to view. Mr. F. C. Bowman, Counsellor at Law (Barrister), and I were elected a legal Advisory Committee of the original N. Y. Cremation Society, to carefully examine the statutes and report whether or not a person had the right of choosing the way in which to dispose of his body. We found nothing to indicate the contrary; and, in fact, common sense itself would show that if a man has absolute ownership of anything belonging to him it must be of his physical body, and that he is free to say how it shall be disposed of after his death, provided that he chooses no method imperilling the rights or welfare of others. Under my private agreement with the N. Y. Cremation Society, and hence long before Dr. Le Moyne's crematorium was ready, we made formal application to the Brooklyn Board of Health for a permit of removal for cremation, and the Board took counsel's opinion.* It agreed with Mr. Bowman's and mine, and an ap-

* Following is the text of the note in question:

NEW YORK CITY, June 5, 1876.

GENTLEMEN:

The undersigned, Executors under the last Will and Testament of Joseph Henry Louis, Baron de Palm, hereby apply for the delivery to them of his body, now lying in the receiving vault of the Lutheran Cemetery: the said body to be removed to a convenient point beyond the city limits and cremated, agreeably to the request of the aforesaid De Palm.

(Signed) H. S. OLCOTT,
H. J. NEWTON.

Digitized by Google

plication, couched in officially prescribed terms, being made later when the crematorium was finished, the permit was duly granted. Thus the first important point was made, and no legal impediment existing, the advocates of cremation had only to meet theological, economic, scientific, and sentimental objections. Dr. Le Moyne and I agreed upon the plan of arranging for a public meeting with addresses from representative men, to take place immediately after the cremation, and for an evening meeting to discuss the merits and demerits of this mode of sepulture. We agreed that each public speaker should confine himself to a special branch of the subject, to avoid repetitions while covering the entire ground.

Owing to the neutral character of the T. S. upon all questions involving different religious opinions, it had been decided that my co-executor and I should carry out this affair in our personal capacities. It was also decided that there should be no further religious ceremonies. Both Dr. Le Moyne and I being strong advocates for cremation, we were fully convinced that the public interest demanded the giving of wide publicity to this event and the invitation of men of science and officers of Boards of Health, to be present and carefully scrutinise the process of reduction of the body by fire. "I agree with you," writes the good old Doctor, "that the addresses are to be confined to the subject of cremation without branching out on other topics, however proper and right they might be in themselves and in their own

Digitized by Google

place. I have never intended or expected that our programme should include any kind of religious service, but should be a strictly scientific and sanitary experiment, looking to a reform in the disposition of a body." The American press, which had made fun of the T. S. for having too much religious ceremony at the Baron's funeral, now abused us for having none at all at his cremation. However, we cared nothing for that, the praise and the blame of the ignorant being equally valueless. Dr. Le Moyne and I wished to settle the following points: (*a*) Whether cremation was a really scientific method of sepulture; (*b*) Whether it was cheaper than burial; (*c*) Whether it offered any repugnant features; (*d*) How long it would take to incinerate a human body. In pursuance of the policy of bold publicity, Mr. Newton and I, as executors, and Dr. Le Moyne, as owner of the crematory, addressed the following invitation to Boards of Health, individual scientists, selected principals and professors of colleges, clergymen and editors:

NEW YORK, November, 1876.

DEAR SIR: Upon the 6th of December, proximo, at Washington, Pa., will be cremated the body of the late

JOSEPH HENRY LOUIS, BARON de PALM,

Grand Cross Commander of the Sovereign Order of the Holy Sepulchre at Jerusalem; Knight of St. John of Malta; Prince of the Roman Empire; late Chamberlain to His Majesty the King of Bavaria; Fellow of the Theosophical Society, etc., etc.,

Digitized by Google

in compliance with wishes expressed to his executors shortly before his decease. This ceremony you are respectfully invited, either in person or by proxy, to attend.

The cremation will be effected in a furnace specially designed for the purpose, and erected by F. Julius Le Moyne, M.D., as an earnest of his preference for this mode of sepulture.

The occasion being one of interest to Science, in its historical, sanitary, and other aspects, the Executors of Baron de Palm have consented that it shall have publicity. This invitation is accordingly sent you in the hope that you may find it convenient to be represented and, in case the general subject of cremation should be discussed, take part in the debate. The University of Pennsylvania, the Washington and Jefferson College, the New York College of Physicians and Surgeons, other institutions of learning, and the Health Boards of Boston, Philadelphia, Washington (D. C.), and other cities, have already signified their intention to send representatives. It is believed that the occasion will draw together a very large number of highly competent and influential scientific observers. Addresses appropriate to the occasion will be delivered.

Washington is a town in Washington County, in the State of Pennsylvania, twenty-five miles West of Pittsburgh, on the Chartiers Valley R. R., and about midway between the cities of Pittsburgh and Wheeling. Trains leave Pittsburgh and Wheeling for Washington at 9

Digitized by Google

o'clock A.M., and at 5 o'clock P.M., every day except Sunday. The running time is about two hours.

The audience room of the Crematory being quite small, it is necessary that the number intending to be present should be known in advance. You are therefore requested to signify your determination by mail or telegraph to either of the undersigned at your early convenience.

HENRY S. OLCOTT, } *Executors under the last Will*
HENRY J. NEWTON, } *and Testament of Baron de Palm.*

Address, Box 4335, N. Y. City.

Or, F. JULIUS LE MOYNE, M.D.

Address, Washington, Washington Co., Pa.

The acceptances were numerous, the public interest being so thoroughly aroused that, as a gentleman (Mr. A. C. Simpson of Pittsburgh, Pa.), who had access to the exchanges of an influential journal, declares, "there is not a journal printed in the United States but has had more or less to say, not only about the Baron's burning, but also about his theosophical religious views" (see *Banner of Light*, Jan. 6th, 1887). One of the most amusing things written about the case was the expression used by Mr. Bromley in a *N. Y. Tribune* editorial, that "Baron de Palm had been principally famous as a corpse."

It was a great responsibility to take upon ourselves, for, if anything went wrong with Dr. Le Moyne's furnace, there would have been a tremendous clamour against us for exposing a human body to the chance of irrever-

Digitized by Google

ential scientific maltreatment.* However, the object in view being so thoroughly humanitarian, we carried the affair through without flinching. To guard as far as possible against accident, the good Doctor first tested the furnace on a sheep's carcase and, in a letter dated October 26, 1876, he reports to me that it had been "a complete success. A carcase weighing 164 lbs. had been cremated in six hours and it could have been done in less time." He then had made a skeleton crate, or bier, composed of flat and round half-inch bars, the whole weighing about 40 lbs., in which to lay the corpse for putting it into the retort; and asked me to buy, if possible, a sheet of asbestos cloth to lay over it as a sort of fire-resisting shroud. This was not procurable at the time and I had to devise a substitute. Upon my arrival at the place, one peep into the heated retort showed me that any ordinary cerement about the corpse would be instantaneously consumed and the body be uncovered, so I soaked a bed-sheet with a saturated solution of alum and ventured that. It proved to be perfectly efficacious, and, I believe, has now come into general use.

I need not go into many details about the cremation, since they can all be found in the file of any American

* There was one risk to be provided against, viz., the possibility of the corpse being carbonised in the still air of an incandescent clay retort heated up to a temperature of 1500° to 2000°. To obviate this, Dr. Le Moyne, against the protest of his contractor, drilled an air-hole in the iron door of the retort and fitted to it a revolving flap which permitted of the hole being opened or closed at pleasure. In the sheep-cremation experiment this proved so thoroughly efficacious that the contractor was converted to the Doctor's views.

Digitized by Google

journal for the month of December, 1876 : still, considering the historical interest which attaches to this first scientific cremation in the United States, a condensed narrative embodying the main facts had better be given by its responsible manager.

The Le Moyne crematorium is (for it still exists), in a small, one-storied brick structure divided into two rooms ; the one to the left on entering, a reception-room, the other containing the furnace and retort. Exclusive of the value of the land, it cost Dr. Le Moyne about $1700, or say £340. Everything was very plain, repulsively so, one might say : there was no ornamentation within or without—just simply a practical corpse-incinerator, as unæsthetic as a bake-oven. Yet results have shown that it is thoroughly practical and can do its intended work as well as if its walls had been of sculptured marble, its partitions of ornately carved wood, and its doors and furnace poems in modelled bronze. Dr. Le Moyne wrote me that his aim was to give the poor a method of sepulture that would be far cheaper than burial, and offer more safeguards against those violations of graves and those tragedies of premature burial which are unavoidable in the case of the prevailing fashion of sepulture. The theft of the corpses of the late Lord Crawford and Balcarres, of Scotland, and Mr. A. T. Stewart, of New York, not to mention the thousands of body-snatchings for dissectors, prove the reality of the former, while the alleged cutting up of poor Irving Bishop while entranced, and the instances where, upon re-opening a coffin, the

Digitized by Google

body has been found turned and with the flesh of its arms gnawed by the hapless victim in his agony of starvation and suffocation, give a fearful weight to the last-named suggestion. The pecuniary and sanitary ends in view were attained with the Le Moyne furnace, for even this first cremation in America cost us only about ten dollars, and proved that a body could be disposed of without unpleasant concomitants.

Mr. Newton and I reached Washington, Pa., on the 5th December, 1876, with the Baron's remains enclosed in two envelopes—the coffin and an outer case of wood. Dr. Le Moyne and others met us at the station, and the corpse was taken in a hearse to the crematorium, where it lay until the next morning in charge of an attendant, the fireman who stoked the furnace. The fire (of coke) had been lighted at 2 A.M. that day and the retort was already at a dazzling white heat—"hot enough" the stoker said "to melt iron." The mechanical construction of the apparatus was simplicity itself. An arched retort of fire-clay, 8 ft. long by 3 ft. broad and the same in height, for receiving the corpse, was surrounded by a fire-flue communicating with a furnace beneath the retort; which had a tall chimney for making a draft and carrying off the smoke. An opening from the retort into the surrounding hot-air flue allowed the escape into it of the gases and other volatile products of cremation, where they were effectually consumed. A large iron door luted with fire-clay around the frame, was fitted into the front of the retort, and the swinging flap, above

Digitized by Google

described, not only permitted of the introduction of cold air and the making of a slight draught through the retort at will, but also served as a peep-hole through which glimpses could be had of the progress of the cremation from time to time. As the corpse lay upon an open iron crate, swathed in its alum-saturated sheet, in a fire-clay box which effectually separated it from the furnace-fire beneath, it will be seen that there could be none of that horror of roasting human flesh and bursting entrails which makes one shudder at an open-air pyre-burning, while, as all the lighter products of cremation, the gaseous and watery components of a body, were burnt up in the heat-flue that encircled the white-hot retort, there was none of that unpleasant odour that sometimes sickens one who drives past an Indian burning-ghât. The corpse simply dries into nothing save the ashes of its skeleton. When the retort was opened, the morning after De Palm's cremation, there was nothing left of the once tall, stout body save a trail of white powder and some fragments of osseous articulations; the whole weighing but some 6 lbs.*

* More fortunate than most innovators, I have lived to see several reforms that I helped in the cradle, become world-wide successes. Of these, cremation is one. Public opinion has now, after the lapse of seventeen years reached the point where a law-journal dares print the following praise of cremation:

"There is nothing surer than that in the not far distant future the cremation of dead bodies will be in universal vogue. It is now ascertained that earth-worms convey microbes of disease from cemeteries, and distribute them at their own sweet will. We have never yet been able to comprehend how about thirty thousand putrefying bodies in an acre or two of ground can be anything less than an un-

Digitized by Google

Our invitation to scientists and sanitary boards was accepted in many cases, and the following gentlemen attended the cremation: Dr. Otterson, of the Brooklyn Board of Health; Dr. Seinke, President of the Queen's County Board of Health; Dr. Richardson, Editor of the (Boston) *Medical Journal;* Dr. Folsom, Secretary of the Boston B. of H.; Prof. Parker, of the University of Pennsylvania; three physicians deputed by the Philadelphia B. of H.; one who represented Lehigh University; Dr. Johnson, of the Wheeling, W. Va. B. of H.; Dr. Asdale, Secretary of the Pittsburgh B. of H.; a number of other medical men attending unofficially; and a swarm of reporters and special correspondents representing all the leading American and some foreign journals. I know it as a fact that the intention of the editors was to have the fullest details telegraphed to their papers, the *N. Y Herald*, for instance, having ordered its reporter to wire at least three columns; but a

mitigated danger to those living within a few miles of their influence. Earth is a pretty good deodoriser, but there are limits to its capacity. If any one has studied the slow process of animal putrefaction, they know how revolting it is, and what a danger arises from the noisome gases which escape. Do the advocates of interment imagine that the gases from thousands of closely-packed corpses escape toward the centre of the earth? If so, they will have to learn that they easily permeate the few feet of earth, and have liberty to roam in the sunlight and poison those who happen to cross the path of their wanderings. Every malignant disease which curses mankind to-day is the admonition of law calling on us to improve our habits and live in accordance with reason, and the only hope of our ever being rid of epidemics is by the slow but sure process of education. The time will come when all putrefactive matter will be rendered harmless by the action of heat."—*Jury.*

Digitized by Google

tragedy occurred which changed their plans : the Brooklyn Theatre caught fire the same evening and some two hundred people were burnt alive. Thus, the greater cremation weakened the public interest in the lesser one.

The mummified corpse of the Baron being removed from the coffin and laid in the iron crate, enwrapped in my alum-soaked sheet, I sprinkled it with aromatic gums and showered it with choice roses, primroses, smilax, and dwarf palm leaves, and laid sprays of evergreens on the breast and about the head.* From the *N. Y. Times* report I quote the following :

" When all was ready the body was quietly and reverently slid into the retort. There were no religious services, no addresses, no music, no climax, such as would have thrown great solemnity over the occasion. There was not one iota of ceremony. Everything was as business-like as possible. At 8.20 o'clock Dr. Le Moyne, Col. Olcott, Mr. Newton, and Dr. Asdale quietly took their stations on either side of the body, and raising the cradle from the catafalque bore it at once to the crematory retort, and slid it in with its unearthy burden head foremost.

" As the end of the cradle reached the further and hottest end of the furnace, the evergreens round the head burst into a blaze and were quickly consumed, but the flowers and evergreens on the other part of the body

* Visitors to Adyar Headquarters may see framed and engraved pictures of this and other scenes and details of the cremation taken from the *N. Y. Daily Graphic*.

Digitized by Google

remained untouched. The flames formed, as it were, a crown of glory for the dead man."

The description is not quite complete, for, as the head of the corpse passed into the superheated retort, the evergreens that surrounded it took fire and a plume of smoke drew out of the door, as if it were a bunch of ostrich feathers, such as a lady wears in her hair at a drawing-room, or a knight of old bore in the crest of his helmet. The iron door of the retort was closed at once after the crate had been thrust in, then bolted and screwed up tight. At first all was dark inside, owing to the steamy vapour from the soaked sheet and the disengagement of smoke from the incinerating gums and plants, but this passed off in a few minutes, and then we could see what is well described by the *Times* correspondent in these words :

"By this time the retort presented the appearance of a radiant solar disk of a very warm rather than brilliant color, and though every flower and evergreen was reduced to a red-hot ash condition, they retained their individual forms, the pointed branches of the evergreens arching over the body. At the same time I could see that the winding-sheet still enfolded the corpse, showing that the solution of alum had fully answered its purpose. This answers one of the avowed objections to cremation —the possibility of indecent exposure of the body. Half an hour later it was plainly evident that the sheet was charred. Around the head the material was blackened

Digitized by Google

and ragged. This was easily accounted for. It appears that in saturating the sheet with the solution of alum, Col. Olcott began at the feet, and that by the time he reached the head the supply was exhausted. All were, however, rejoiced to see that the heat was increasing rapidly."

A REMARKABLE SCENE.

"Just at this time a remarkable muscular action of the corpse, almost amounting to a phenomenon, occurred. The left hand, which had been lying by the side of the body, was gradually raised, and three of the fingers pointed upward. Although a little startling at the moment, this action was of course the mere result of intense burning heat producing muscular contraction. At 9.25 o'clock Dr. Otterson tested the draught in the retort by placing a piece of tissue paper over the peephole, some one having suggested that there was not a sufficient amount of oxygen in the retort to produce the necessary combustion. It was found that the draught was ample. At this time the left hand began to fall back slowly into its normal position, while a luminous rose-colored light surrounded the remains, and a slight aromatic odor found its way through the vent-hole of the furnace. An hour later the body presented the appearance of absolute incandescence. It looked red hot. This was the result of the extra firing, the heat of the furnace now being far more unpleasant than it was before, with the mouth of the retort wide open."

Digitized by Google

CURIOUS EFFECTS NOTICED.

"As the retort became hotter the rosy mist I have spoken of assumed a golden tinge, and a very curious effect was noticed in the feet. The soles of the feet were, of course, fully exposed to any one looking through the peep-hole. They gradually assumed a certain transparency, similar in character to the appearance of the hand when the fingers are held between the eye and a brilliant light, but very much more luminous. At 10.40 o'clock Dr. Le Moyne, Col. Olcott, William Harding, and the health officers present entered the furnace-room and held a consultation with closed doors. On re-appearing they announced that the cremation of the body was practically complete. Any one looking into the retort at this moment would think it ought to have been.

"The fiery ordeal through which Shadrach, Meshach, and Abed-nego passed on account of Nebuchadnezzar's golden image must have been a trifling experience compared with what the body of the Baron de Palm had gone through. Some experiments with sheep were made by Dr. Le Moyne when the furnace was completed, but Mr. Dye, the builder of the furnace, says the body was more thoroughly cremated at the end of two hours and forty minutes than the sheep were in five or six hours. About this time I noticed that the body was beginning to subside, that, though incandescent to a degree, it was nevertheless a mere structure of powdery ashes, which the lungs of a child might blow away. The red-hot

Digitized by Google

filmy shroud still covered the remains, and the twigs of evergreens still remained standing, though they had sunk with the subsidence of the body. The feet too had fallen, and all was rapidly becoming one glowing mass of a white light and an intense heat. . . . At 11.12 o'clock Dr. Folsom, Secretary of the Massachusetts Board of Health, made a careful examination, so far as possible, of the retort and its contents. His announcement that 'Incineration is complete beyond all question' was received with universal gratification. The last vestige of the form of a body had disappeared in the general mass."

I have given so much out of the scores of descriptions of the event that might have been quoted, because of the excellence of the narrative and its historical value. Another reason is that it shows how cleanly and esthetical this mode of sepulture is in contrast with that of burial. One feature of cremation must recommend it to the friends of those who die in far-distant lands, viz., that the bodies can be converted into dust, and thus easily, unostentatiously, and unobjectionably be taken home and laid in the family vault or in the cemetery, alongside the remains of relatives—

> "Those that he loved so long and sees no more,
> . . . not dead, but gone before."

On the afternoon of the same day, at the public meeting at the Town Hall, Dr. King, of Pittsburgh discoursed upon the deleterious and poisonous effects of crowded

Digitized by Google

graveyards; Dr. Le Moyne upon the scriptural and practical issues of cremation; President Hays showed its unobjectionable character from the Biblical aspect; Mr. Crumrine expounded its legality; and I contributed a historical retrospect of the subject in ancient and modern times.

The furnace fire was, of course, drawn as soon as the body was thoroughly incinerated, and the draught-hole in the door stopped up, so as to give the retort time to cool down gradually as, if exposed to the cold air, it would inevitably have cracked. Dr. Asdale and I removed the ashes on the following morning and placed them in a Hindu urn that had been given me in New York for the purpose. I took them to town with me and kept them until shortly before our departure for India, when I scattered them over the waters of New York Harbour with an appropriate, yet simple, ceremonial.

And thus it came about that the Theosophical Society not only introduced Hindu philosophical ideas into the United States, but also the Hindu mode of sepulture. Since that first scientific cremation in America, many others, of men, women, and children, have occurred, other crematoriums have been built, and cremation societies have been originated in my country. British prejudice has been so far overcome that Parliament has legalised cremation, a society has been chartered, and it was in its crematorium at Woking, near London, that the body of H. P. B. was burnt, agreeably to her verbal and written request.

Digitized by Google

In the abstract it matters not to me whether my "desire-body" be dropped through the salt sea to its amœba-strewn floor, or left in the snow-locked Himalayan passes, or on the hot sand of the desert; but, if I am to die at home and within reach of friends, I hope that, like those of the Baron de Palm and H. P. B., it may be reduced by fire to harmless dust, and not become a plague or a peril to the living after it has served the purpose of my present *prarâbdha karma!*

CHAPTER XII.

PUTATIVE AUTHOR OF "ART MAGIC."

I SHALL now redeem my promise (See Chap. VIII.) to say something about Mrs. Hardinge Britten's *Art Magic*, and its production. It has been mentioned above that the book was launched almost coincidently with the formation of the Theosophical Society, and the circumstances are a little curious. Mrs. Britten was particularly struck by them, and testifies to her surprise in the following passages in a letter to the *Banner of Light:*

"So amazed and struck was I with the coincidence of *purposes* (*not ideas*), expressed in the inauguration of the Theosophic Society, at which I was present, with some of the purposes, though not the ideas put forth in my friend's work, that I felt it to be my duty to write to the President of that Society, enclose a copy of the still unpublished advertisement, and explain to him that the publication of the book in question anticipated, without concert of action or even personal acquaintance, with the parties concerned, whatever of Cabalistic lore the said Theosophic Society might hereafter evolve."

Digitized by Google

The coincidence consisted in the fact that the book and our Society simultaneously affirmed the dignity of ancient Occult Science, the existence of Adepts, the reality of, and contrast between, White and Black Magic, the existence of the Astral Light, the swarming of Elemental races in the regions of air, earth, etc., the existence of relations between them and ourselves, and the practicability of bringing them under subjection by certain methods long known and tested. It was, so to say, an attack from two sides simultaneously upon the entrenched camp of Western ignorance and prejudice.

Mrs. Britten affirmed that *Art Magic* had been written by an Adept of her acquaintance, "a life-long and highly honoured friend,"* whom she had first met in Europe, and for whom she was but acting as "Translator" and "Secretary." His name, she said, was Louis, and he was a Chevalier. A piquant Prospectus, calculated to switch the most jaded curiosity to the buying-point, was issued, and the bibliophile's cupidity excited by the announcement that the Author would only permit five hundred copies to be printed, and even then should reserve the right of refusing to sell to those whom he might find undeserving!† This right he seems to

* *Nineteenth Century Miracles*, p. 437.

† "To prevent his recondite work from falling into the hands of such heterogeneous readers, as he felt confident would misunderstand or perhaps pervert its aims to evil uses." (*Nineteenth Century Miracles*, p. 437.) And in a letter to myself, of September 20, 1875, about her copy of *Cornelius Agrippa* that I wished to borrow, she calls Louis "The Author of the *book of books* (italics hers), just advertised in the *Banner*," and says, "This man would far sooner burn his book and die amidst its ashes than spare it even to a favoured 500."

Digitized by Google

have exercised, since, in another published letter to "The Slanderers of *Art Magic*,"—whom she calls "little pugs"—she tells us that "some twenty names have been struck off by the Author." The fact that some persons, more cavilling than well-informed, had hinted that her book had been hatched in the Theosophical Society, provoked her wrath to such a degree that, with a goodly show of capitals and italics, she warns all these "whisperers who dare not openly confront us," that she and her husband "had laid the case before an eminent New York legal gentleman," who had instructed them "to say publicly that, free as this country may be to do what each one pleases (*sic*), it is not free enough to allow the circulation of injurious libels"—and that they "had instructed him to proceed immediately against any one who hereafter shall assert, publicly or privately, that the work I have undertaken—namely, to become Secretary to the publication of *Art Magic*, or Mundane, Sub-Mundane and Super-Mundane Spiritualism—has anything to do with Col. Olcott, Madame Blavatsky, the New York Theosophic Society, or any thing or person belonging to either those persons or that Society" (*vide* her letter in *Banner of Light*, of about December, 1875; the cutting in our Scrap-Book being undated, I cannot be more exact).

This clattering of pans was kept up so persistently—she and her husband actually being all the while executive members of the Theosophical Society—that, despite the fancy price put upon the book—$5 for a volume of

Digitized by Google

467 pages, in pica type heavily leaded, or scarcely as much matter as is contained in a 7*s.* 6*d.* volume of the London publishers—her list was soon filled up. I, myself, paid her $10 for two copies, but the one now before me is inscribed, in Mrs. Britten's handwriting, "To Madame Blavatsky, in token of esteem from the Editor [herself] and the Author [?]." The Prospectus stated that, after the edition of 500 copies was run off, the "plates" were to be destroyed. The imprint shows the book to have been "Published by the Author, at New York, America," but it was copyrighted by William Britten, Mrs. Britten's husband, in the year 1876, in due form. The printers were Messrs. Wheat and Cornett, 8 Spruce St., N. Y.

I have given the above details for the following reasons: 1. The book marks a literary epoch in American literature and thought; 2. I suspect that good faith was not kept with the subscribers, myself included; since the work—for which we paid an extravagant price—was printed from type forms, not plates, and Mr. Wheat himself told me that his firm had printed, by Mr. or Mrs. Britten's orders, 1500 instead of 500 copies—the truth of which assertion his account-books should show. I only repeat what her printer told me, and give it for what it may be worth; 3. Because these and other circumstances, among others the internal evidence of the matter and execution of the work, make me doubt the story of the alleged adept authorship. Unquestionably there are fine, even brilliant, passages in it, and a deal

Digitized by Google

that is both instructive and valuable. As a neophyte in this branch of literature, I was, at the time, deeply impressed with it, and so wrote to Mrs. Britten ; but the effect of these upon me was afterwards marred by my discovery of the unacknowledged use of text and illustrations from Barrett, Pietro de Abano, Jennings, Layard, and even (see plates facing pp. 193 and 219) from *Frank Leslie's Illustrated Newspaper* * ; also by the unspiritual personification of God, "the eternal, uncreated, self-existent, and infinite realm of spirit" (p. 31), as a *globe*, that is to say, a limited sphere or central sun related to the universe as our sun is to our solar system ; by much bad spelling and grammar ; by such mistakes as the making of "Chrishna and Buddha Sakia" heroes of an episode identical with that told of Jesus, *viz.*, a

* The book-reviewer of *Woodhull and Claflin's Weekly*, a New York journal of the day, in noticing the appearance of *Art Magic* uses very severe language in regard to the reputed Author, whom he identifies, whether justly or unjustly, I cannot say, with Mrs. Britten. The book, he says, "is simply a rehash of books accessible to any student of even limited means, and (which) can be readily found in almost any book-store, or on the shelves of any public library. Ennemoser's *History of Magic*, Howitt's *Supernatural*, Salverte's *Philosophy of Magic*, Hargrave Jennings's *Rosicrucians*, Barrett's *Magus*, Agrippa's *Occult Philosophy*, and a few others are the real sources of this wretched compilation, which is full of bad grammar and worse assumptions. We unhesitatingly assert that there is not a single important statement in the book which cannot be discovered in already-printed books." This is exaggerated censure, for the book does contain passages worthy of Bulwer-Lytton ; in fact, one would say they were written by him ; and while the forced loans of illustrations and matter from the authors cited are palpable, there is much sound occult doctrine sententiously put, to reward the patient reader.

Digitized by Google

"flight and concealment in Egypt and their return to work miracles," etc.; * also by the declaration, which contradicts every canon of Occult Science ever taught in any school, that for becoming a Magican, or Adept, the "first great pre-requisite is a prophetic or naturally *mediumistic organisation*" (p 160); and that the sitting in "circles," mutual mesmerism, the cultivation of intercourse with spirits of the dead, and the acceptance of spirit guides and controls, are substantial and lawful aids to the development of Adept powers. Whatever Adept may have written this book, most assuredly it became in the pro-

* But I really must quote, for the edification of the High Priest H. Sumangala, and other unenlightened Buddhist scholars, the whole passage: "The births of these Avatars through the motherhood of a pure Virgin, their lives in infancy threatened by a vengeful king, their flight and concealment in Egypt, their return to work miracles, save, heal and redeem the world, suffer persecution, a violent death, a descent into Hell, and a re-appearance as a new-born Saviour, are all items of the Sun God's history, which have already been recited, etc. etc." (*Op. cit.*, p. 60). Fancy Buddha Gautama concealed in Egypt, suffering a violent death, and then descending into Hell! And this *Art Magic* is claimed to be the work of an Adept, who had studied in the East, and been initiated in its mystical lore! An Adept, moreover, who, when cholera was raging in London, "adjourned to an observatory"—in London—where he and "a select party—all distinguished for their scientific attainments," made "observations through an immense telescope, constructed under the direction of Lord Rosse" (*Ghost Land*, p. 134, by the same Author); which telescope happens to have never been nearer London than its site at Birr Castle near Parsons Town, Kings County, Ireland! The fact is that the Author of this book seems to have borrowed his (or her) alleged facts—even to the misspelling of the names of Krishna and Sakya Muni—from Chapter I. of Kersey Graves's veracious work, *The World's Sixteen Crucified Saviours*, which H. P. B. satirised so merrily in *Isis Unveiled*.

Digitized by Google

cess of "editing" and "translating" a panegyric upon mediumship, and upon those phases of it which Mrs. Britten's mediumistic history seems to illustrate. One has but to compare it with *Isis Unveiled*, to see the vast difference in favour of the latter as a trustworthy elucidation of the nature, history, and scientific conditions of magic and magicans, of both the Right and Left Hand paths. To affirm that mediumship and adeptship are compatible, and that any Adept would permit himself to be guided or commanded by departed spirits, is an absurdity only equal to that of saying that the North and South Poles are in contact. I remember very well pointing this out to Mrs. Britten upon first reading her book, and that her explanation was not at all convincing. She makes one statement, however, which Spiritualists often deny, but which is doubtless true, nevertheless:

"It is also a significant fact, and one which should commend itself to the attention alike of the physiologist and psychologist, that persons afflicted with scrofula and glandular enlargements, often seem to supply the pabulum which enables spirits to produce manifestations of physical power. Frail, delicate women—persons, too, whose natures are refined, innocent, and pure, but whose glandular system has been attacked by the demon of scrofula, have frequently been found susceptible of becoming the most remarkable instruments for physical demonstrations by spirits."

The author had seen astounding phenomena exhibited

Digitized by Google

by "rugged country girls and stout men of Ireland and North Germany," but careful scrutiny would often reveal in the mediums a tendency to epilepsy, chorea, and functual derangements of the pelvic viscera.

"It is a fact, which we may try to mask, or the acknowledgment of which we [Adepts?] may indignantly protest against, that the existence of remarkable medium powers augurs a want of balance in the system, etc."

Yet (p. 161), we are told that, "To be an 'Adept' was to be able to practise magic, and to do this was either to be a natural prophet [or medium, as above declared], cultured to the strength of a magician, or an individual who had acquired this prophetic [mediumistic?] power and magical strength through discipline." And this *soi-disant* Adept, says (p. 228) that if "the magic of the Orient combine with the magnetic spontaneity of Western Spiritism, we may have a religion, whose foundations laid in science and stretching away to the heavens in inspiration, will revolutionise the opinions of ages and establish on earth the reign of the true Spiritual Kingdom."

But this will suffice to show what manner of Adept is the reported Author of *Art Magic*, and what weight should be given to Mrs. Britten's current sarcasms and pifflings against H. P. B., her teachings, and the pretensions of the Theosophical Society which she helped us found. In the early days, she declared her acquaintanceship with us "a great privilege," her membership something to be proud of, and her office in the T. S.

Digitized by Google

"a mark of distinction" [Letter on "The Slanderers of *Art Magic*" in *Spiritual Scientist*]; and, as late as the year 1881 or 1882, she calls herself, in a letter introducing Professor J. Smyth, of Sydney, to H. P. B., her unchanged friend, for whom she ever feels "the old time affection"; yet she has been anything but that of later years; and it is her attitude towards Theosophy which has created the necessity for my recording these several reminiscences, both in the interest of history, and for the profit of her friends and herself.

The author, we are told, had had "more than forty years" of occult experience (p. 166), after having "learned the truth" of magical science; so that he might reasonably be taken as at least fifty or sixty years of age when *Art Magic* was published; yet, from an alleged portrait of him, obligingly sent me by Mrs. Britten from Boston to New York, in 1876, for examination,* he seems a young man of about twenty-five. Moreover, all those years of profound study ought to have made his face embody the acquired masculine majesty one finds in the countenance of a true Yogi or Mahatma; whereas in this portrait, of a pretty man with mutton-chop whiskers, the face has the vapid weakness of a "sick sensitive," of a fashionable lady-killer, or, as many say who have seen it, that of a wax figure such as the Parisian barber sets in his shop window to display his wigs and whiskers upon. One who has ever

* Her conditions were that I was to show it only to those living in our house and then return it to her.

Digitized by Google

been face to face with a real Adept, would be forced by this effeminate dawdler's countenance to suspect that either Mrs. Britten had, *faute de mieux*, shown a bogus portrait of the real author, or that the book was written by no "Chevalier Louis" at all.

The portrait is far less interesting in itself than in its relation to a remarkable phenomenon, which H. P. B. did upon the provocation of a French lady, a Spiritualist, then a guest at our New York Headquarters. Her name was Mlle. Pauline Liebert, and her place of residence at Leavenworth, in Kansas, a distant Western State. H. P. B. had known her in former years at Paris, where she took the deepest interest in "spirit photography." She believed herself to be under the spiritual guardianship of Napoleon Bonaparte, and that she possessed the power of conferring upon a photographer the mediumistic faculty of taking the portraits of the spirit-friends of living sitters! When she read in the papers H. P. B.'s first letters about Dr. Beard and the phenomena of the Eddy family, she wrote to her and told about the wonderful success she had had in Kansas, St. Louis, and elsewhere among the photographers, in getting spirit portraits. Mr. H. J. Newton, the Treasurer of the T. S., was a distinguished and scientific amateur photographer, and had fitted up a very excellent experimental gallery in his own house. Upon hearing from me about Mlle. Liebert's pretensions, he asked us to invite her to pay us a visit and give him sittings, with a view to testing her claims in the interest of science. H. P. B. complied,

Digitized by Google

and the eccentric lady came to New York at our expense, and was our guest during several months. The erudite calumniator of the *Carrier Dove*, whom I have above mentioned in another connection, published (*C. D.*, vol. viii., 298) an alleged assertion of Mlle. Liebert to himself, that H. P. B.'s phenomena were tricks to delude me along with others, that her pictures were bought or prepared in advance and foisted on us as instantaneous productions, etc., etc.; in short, a tissue of falsehoods. He parades her as an intelligent person, but the fact is that she was credulity personified, so far as her spiritualistic photographs were concerned. Upon her arrival at New York, she began a course of photographic sittings at Mr. Newton's house, confidently prognosticating that she should enable him to get genuine spirit portraits. Mr. Newton patiently went on with the trial, until, with the fiftieth sitting, and no result, his patience gave way and he stopped. Mlle. Liebert tried to account for her failure by saying that the "magnetism" of Mr. Newton's private gallery was not congenial to the spirits; notwithstanding the fact that he was the foremost Spiritualist of New York City, the president of the largest society of the kind. With Mr. Newton's obliging help, I then arranged for a fresh series of trials in the photographic gallery of Bellevue Hospital, the manager of which, Mr. Mason, was a man of scientific training, a member of the Photographic Section of the American Institute, and anxious to test Mlle. Liebert's pretensions in a sympathetic spirit. His success was no

Digitized by Google

better than Mr. Newton's, despite seventy-five careful trials under the French lady's prescribed precautions against failure. All these weeks and months that the two series of experiments were going on, Mlle. Liebert lived with us, and almost every evening she used to bring out and lovingly con over a handful of so-called spirit photographs that she had collected in divers places. The ignominious collapse of her hopes as to the test trials in progress seemed to make her dote upon what the poor deluded creature regarded as past successes, and it was an amusing study to watch her face while handling her thumb-worn *pièces de conviction.* H. P. B. had naturally but small pity for intellectual weaklings, especially little for the stubborn dupes of mediumistic trickery, and she often poured out the vials of her wrath upon the—as she called her—purblind old maid. One cold evening (Dec. 1, 1875), after a fresh day of failures at Mr. Mason's laboratory, Mlle. Liebert was, as usual, shuffling over her grimy photographs, sighing and arching her eyebrows into a despairing expression, when H. P. B. burst out: "Why will you persist in this folly? Can't you see that all those photographs in your hand were swindles on you by photographers who did them to rob you of your money? You have had every possible chance now to prove your pretended power,—more than one hundred chances have been given you, and you have not been able to do the least thing. Where is your pretended guide, Napoleon, and the other sweet angels of Summerland; why don't

Digitized by Google

they come and help you? Pshaw! it makes me sick to see such credulity. Now see here: I can make a 'spirit picture' whenever I like and—of anybody I like. You don't believe it, eh? Well, I shall prove it on the spot!" She hunted up a piece of card-board, cut it to the size of a cabinet photograph, and then asked Mlle. Liebert whose portrait she wished. "Do you want me to make your Napoleon?" she asked. "No," said Mlle. L., "please make for me the picture of that beautiful M. Louis." H. P. B. burst into a scornful laugh, because, by Mrs. Britten's request, I had returned to her through the post the Louis portrait three days previously, and it being by that time in Boston, 250 miles away, the trap set by the French lady was but too evident. "Ah!" said H. P. B., "you thought you could catch me, but now see!" She laid the prepared card on the table before Mlle. Liebert and myself, rubbed the palm of her hand over it three or four times, turned it over, and lo! on the under side we saw (as we then thought) a fac-simile of the Louis portrait. In a cloudy background at both sides of the face were grinning elemental sprites, and above the head a shadowy hand with the index-finger pointing downward. I never saw amazement more strongly depicted on a human face than it was upon Mlle. Liebert's at that moment. She gazed in positive terror at the mysterious card, and presently burst into tears and hurried out of the room with it in her hand, while H. P. B. and I went into fits of laughter. After a half hour she returned, gave me

Digitized by Google

the picture, and on retiring for the night I placed it as a book-mark in a volume I was reading in my own apartment. On the back I noted the date and the names of the three witnesses. The next morning I found that the picture had quite faded out, all save the name "Louis," written at the bottom in imitation of the original: the writing, a precipitation made simultaneously with the portrait and the elves in the background. That was a curious fact—that one part of a precipitated picture should remain visible, while all the rest had disappeared, and I cannot explain it. I locked it up in my drawer, and Mr. Judge, dropping in a day or two later, or, perhaps, the same evening, I told him the story and showed him the defaced card; whereupon he asked H. P. B. to cause the portrait to re-appear and to "fix" it. It needed but a moment for to lay the card again face down upon the table, cover it with her hand, and reproduce the picture as it had been. He took it by her permission, and kept it until we met him at Paris in 1884, when—as he had fortunately brought it with him—I begged it of him for the Adyar Library. From Paris I crossed over to London, and, going one evening to dine with my friend Stainton Moses, he showed me his collection of mediumistic curios, *among others, the very original of the Louis picture, which I had returned to Mrs. Britten by post from New York to Boston in 1876!* On the back was written "M. A. Oxon, March 1, 1877, from the Author of *Art Magic*, and *Ghostland*." The next day I brought and showed Stainton Moses the H. P. B copy, and he kindly gave

DUPLICATE OF THE PRETENDED PORTRAIT OF "CHEVALIER LOUIS," PHENOMENALLY PRODUCED.

Digitized by Google

me the original. Thus, after the lapse of eight years, both came back to my hand. Upon comparing them, we found so many differences as to show conclusively that the one was not a duplicate of the other. To begin with the faces look in opposite directions, as though the one were the enlarged and somewhat deranged reflection of the other in a mirror. When I asked H. P. B. the reason for this, she said that all things on the objective plane have their images reversed in the astral light, and that she simply transferred to paper the astral reflection of the Louis picture *as she saw it:* the minuteness of its accuracy would depend upon the exactness of her clairvoyant perception. Applying this test to these two pictures, we find that there are material differences in horizontal and vertical measurements throughout, as well as in the curl of the hair and beard and the outlines of the dress: the "Louis" signatures also vary in all details while preserving a general resemblance. When the copy was precipitated, the tint was infused into the surface of the whole card as a sort of pigmentous blur, just as the background still remains, and H. P. B. touched up some of the main lines with a lead-pencil; to the artistic improvement of the picture, but to its detriment as an exhibit of occult photography.

I am fortunately able to cite an account, hitherto unpublished, by Mrs. Britten herself, of the incidents connected with the taking of the portrait. It is given in a letter to Lady Caithness, Duchesse de Pomar, who copied it out at my request:

Digitized by Google

"I now enclose you a faint shadow of our 'archimagus.' I deeply regret my inability to send you anything better, for, indeed, his face is wonderfully beautiful. He has raven hair, superb eyes, a very fine complexion, and the sweetest smile imaginable—you may judge therefore what a poor representation this picture forms of him. It only resembles him as he lay fainting in the carriage* when we left the photographer's. There was a very curious incident about this picture. When the negative was finished, I insisted on the photographer making me a proof, then and there, in order that I might judge of its resemblance; that proof I took away with us, requesting my friend, who is a fine artist, to make me an enlarged crayon sketch for myself,—this he agreed to do. I wondered why the photographer did not send me any more pictures, and waited for many days for them. I knew it only represented my poor sufferer as he then was, not as he generally appears, still he entreated me to send it as it was for his *Madonna*—as he calls you—because he had made such a great exertion to have it taken, and only for you. Still he did not come. The photographer might have been prevented from executing the pictures, I thought, by bad weather. At last I called on him—when, with a strange and singular air of reluctance, he acknowledged that almost immediately after we had left, the picture on the negative FADED ENTIRELY OUT, leaving only some very faint indications or marks, which looked like Cabalistic characters. He was very angry

* A fainting adept would indeed be a novelty in the East!

Digitized by Google

about it, complained that these spiritualists were always playing tricks when they came for pictures, and he could not bear to have anything to do with them. I demanded to see the negative which he reluctantly showed me. He then, at my request, developed the plate [Note above that it had already been developed and printed from—H. S. O.], but the figures or signs are so faint that they are scarcely perceptible. He added, in a frightened way, that he 'did not want the gentleman to come again, for he did n't think he was a mortal man anyway.'

"I was terribly disappointed, but had no resource but submission. I had half resolved to have my miniature copied, when I received from Cuba, where Louis went first, the chalk-drawing he has made from the proof. He added to it a statement that the proof he took with him *has most strangely faded out*, leaving nothing but a faint indication of some Cabalistic signs too faint to make out.

"Is not that very strange? Determined not to be balked, I have had the chalk-drawing photographed, and though it is somewhat inferior in softness to the proof, it is an equally good resemblance of our invalid. What momentous times we are living in!"

Momentous, indeed, when Adepts of forty years' experience are made to look like a school-girl's hero, and photographic negatives are twice developed, each time giving a different print!

CHAPTER XIII.

"ISIS UNVEILED."

OF the writing of *Isis Unveiled*, let us see what reminiscences memory can bring out of the dark-room where her imperishable negatives are kept.

If any book could ever have been said to make an epoch, this one could. Its effects have been as important in one way as those of Darwin's first great work have been in another: both were tidal waves in modern thought, and each tended to sweep away theological crudities and replace the belief in miracle with the belief in natural law. And yet nothing could have been more commonplace and unostentatious than the beginning of *Isis*. One day in the Summer of 1875. H. P. B. showed me some sheets of manuscript which she had written, and said: "I wrote this last night 'by order,' but what the deuce it is to be I don't know. Perhaps it is for a newspaper article, perhaps for a book, perhaps for nothing: anyhow, I did as I was ordered." And she put it away in a drawer, and nothing more was said about it for

Digitized by Google

some time. But in the month of September—if my memory serves—she went to Syracuse (N. Y.), on a visit to her new friends, Professor and Mrs. Corson, of Cornell University, and the work went on. She wrote me that it was to be a book on the history and philosophy of the Eastern Schools and their relations with those of our own times. She said she was writing about things she had never studied and making quotations from books she had never read in all her life: that, to test her accuracy, Prof. Corson had compared her quotations with classical works in the University Library, and had found her to be right. Upon her return to town, she was not very industrious in this affair, but wrote only spasmodically, and the same may be said as to the epoch of her Philadelphia residence, but a month or two after the formation of the Theosophical Society, she and I took two suites of rooms at 433 West 34th St., she on the first and I on the second floor, and thenceforward the writing of *Isis* went on without break or interruption until its completion in the year 1877. In her whole life she had not done a tithe of such literary labour, yet I never knew even a managing daily journalist who could be compared with her for dogged endurance or tireless working capacity. From morning till night she would be at her desk, and it was seldom that either of us got to bed before 2 o'clock A.M. During the daytime I had my professional duties to attend to, but always, after an early dinner we would settle down together to our big writing-table and work, as if for dear life, until bodily

Digitized by Google

fatigue would compel us to stop. What an experience! The education of an ordinary life-time of reading and thinking was, for me, crowded and compressed into this period of less than two years. I did not merely serve her as an amanuensis or a proof-reader, but she made me a collaborator; she caused me to utilise—it almost seemed—everything I had ever read or thought, and stimulated my brain to think out new problems that she put me in respect to occultism and metaphysics, which my education had not led me up to, and which I only came to grasp as my intuition developed under this forcing process. She worked on no fixed plan, but ideas came streaming through her mind like a perennial spring which is ever overflowing its brim. Now she would be writing upon Brahma, anon upon Babinet's electrical "meteor-cat"; one moment she would be reverentially quoting from Porphyrios, the next from a daily newspaper or some modern pamphlet that I had just brought home; she would be adoring the perfections of the ideal Adept, but diverge for an instant to thwack Professor Tyndall or some other pet aversion of hers, with her critical cudgel. Higgledy-piggledy it came, in a ceaseless rivulet, each paragraph complete in itself and capable of being excised without harm to its predecessor or successor. Even as it stands now, and after all its numerous re-castings, an examination of the wondrous book will show this to be the case.

If she had no plan, despite all her knowledge, does not that go to prove that the work was not of her own

Digitized by Google

conception; that she was but the channel through which this tide of fresh, vital essence was being poured into the stagnant pool of modern spiritual thought? As a part of my educational training she would ask me to write something about some special subject, perhaps suggesting the salient points that should be brought in, perhaps just leaving me to do the best I could with my own intuitions. When I had finished, if it did not suit her, she would usually resort to strong language, and call me some of the pet names that are apt to provoke the homicidal impulse; but if I prepared to tear up my unlucky composition, she would snatch it from me and lay it by for subsequent use elsewhere, after a bit of trimming, and I would try again. Her own manuscript was often a sight to behold; cut and patched, re-cut and re-pasted, until if one held a page of it to the light, it would be seen to consist of, perhaps, six, or eight, or ten slips cut from other pages, pasted together, and the text joined by interlined words or sentences. She became so dexterous in this work that she used often to humorously vaunt her skill to friends who might be present. Our books of reference sometimes suffered in the process, for her pasting was frequently done on their open pages, and volumes are not wanting in the Adyar Headquarters and London libraries which bear the marks to this day.

From the date of her first appearance in the *Daily Graphic*, in 1874, throughout her American career, she was besieged by visitors, and if among them there

Digitized by Google

chanced to be any who had some special knowledge of any particular thing cognate to her field of work, she invariably drew him out, and, if possible, got him to write down his views or reminiscences for insertion in her book. Among examples of this sort are Mr. O'Sullivan's account of a magical séance in Paris, Mr. Rawson's interesting sketch of the secret initiations of the Lebanon Druses, Dr. Alexander Wilder's numerous notes and text paragraphs in the Introduction and throughout both volumes, and others which add so much to the value and interest of the work. I have known a Jewish Rabbi pass hours and whole evenings in her company, discussing the Kabballa, and have heard him say to her that, although he had studied the secret science of his religion for thirty years, she had taught him things he had not even dreamed of, and thrown a clear light upon passages which not even his best teachers had understood. Whence did she get this knowledge? That she had it, was unmistakable; whence did she get it? Not from her governesses in Russia; not from any source known to her family or most intimate friends; not on the steamships or railways she had been haunting in her world-rambles since her fifteenth year; not in any college or university, for she never matriculated at either; not in the huge libraries of the world. To judge from her conversation and habits before she took up this monster literary task, she had not learnt it at all, whether from one source or another; but when she needed it she had it, and in her better moments of in-

Digitized by Google

spiration—if the term be admissible—she astonished the most erudite by her learning quite as much as she dazzled all present by her eloquence and delighted them by her wit and humorous raillery.

One might fancy, upon seeing the numerous quotations in *Isis Unveiled* that she had written it in an alcove of the British Museum or of the Astor Library in New York. The fact is, however, that our whole working library scarcely comprised one hundred books of reference. Now and again single volumes would be brought her by Mr. Sotheran, Mr. Marble or other friends, and, latterly, she borrowed a few of Mr. Bouton. Of some books she made great use—for example, King's *Gnostics;* Jennings' *Rosicrucians;* Dunlop's *Sod* and *Spirit History of Man;* Moor's *Hindu Pantheon;* Des Mousseaux's furious attacks on Magic, Mesmerism, Spiritualism, etc., all of which he denounced as the Devil; Eliphas Lévi's various works; Jacolliot's twenty-seven volumes; Max Müller's, Huxley's, Tyndall's, Herbert Spencer's works, and those of many other authors of greater or less repute: yet not to exceed the hundred, I should say. Then what books *did* she consult, and what library had she access to? Mr. W. H. Burr asked Dr. Wilder in an open letter to the *Truth-seeker* whether the rumour was true that *he* had written *Isis* for H. P. B.; to which our beloved old friend would truthfully reply that it was a false rumour, and that he had done as much for H. P. B. as I have above stated, had given her much excellent advice, and had, for a consideration, prepared the very

Digitized by Google

copious Index of some fifty pages, from advanced plate-proofs sent him for the purpose. That is all. And equally baseless is the oft-repeated tale that I wrote the book and she touched it up: it was quite the other way about. I corrected every page of her manuscript several times, and every page of the proofs; wrote many paragraphs for her, often merely embodying her ideas that she could not then (some fifteen years before her death and anterior to almost her whole career as a writer of English literature) frame to her liking in English; helped her to find out quotations, and did other purely auxiliary work: the book is hers alone, so far as personalities on this plane of manifestation are concerned, and she must take all the praise and the blame that it deserves. She made the epoch with her book, and, in making it, made me—her pupil and auxiliary—as fit as I may have been found to do Theosophical work during these past twenty years. Then, whence did H. P. B. draw the materials which compose *Isis*, and which cannot be traced to accessible literary sources of quotation? *From the Astral Light*, and, by her soul-senses, from her Teachers—the "Brothers," "Adepts," "Sages," "Masters," as they have been variously called. How do I know it? By working two years with her on *Isis* and many more years on other literary work.

To watch her at work was a rare and never-to-be-forgotten experience. We sat at opposite sides of one big table usually, and I could see her every movement. Her pen would be flying over the page, when she would

Digitized by Google

suddenly stop, look out into space with the vacant eye of the clairvoyant seer, shorten her vision as though to look at something held invisibly in the air before her, and begin copying on her paper what she saw. The quotation finished, her eyes would resume their natural expression, and she would go on writing until again stopped by a similar interruption. I remember well two instances when I, also, was able to see and even handle books from whose astral duplicates she had copied quotations into her manuscript, and which she was obliged to "materialise" for me, to refer to when reading the proofs, as I refused to pass the pages for the "strike-off" unless my doubts as to the accuracy of her copy were satisfactory. One of these was a French work on physiology and psychology; the other, also by a French author, upon some branch of neurology. The first was in two volumes, bound in half calf, the other in pamphlet wrapper. It was when we were living at 302 West 47th street—the once-famous "Lamasery," and the executive headquarters of the Theosophical Society. I said: "I cannot pass this quotation, for I am sure it cannot read as you have it." She said: "Oh don't bother; it 's right; let it pass." I refused, until finally she said: "Well, keep still a minute and I 'll try to get it." The far-away look came into her eyes, and presently she pointed to a far corner of the room, to an *étagère* on which were kept some curios, and in a hollow voice said: "There!" and then came to herself again. "There, there; go look for it over there!" I went,

Digitized by Google

and found the two volumes wanted, which, to my knowledge, had not been in the house until that very moment. I compared the text with H. P. B.'s quotation, showed her that I was right in my suspicions as to the error, made the proof correction and then, at her request, returned the two volumes to the place on the *étagère* from which I had taken them. I resumed my seat and work, and when, after awhile, I looked again in that direction, the books had disappeared! After my telling this (absolutely true) story, ignorant sceptics are free to doubt my sanity; I hope it may do them good. The same thing happened in the case of the *apport* of the other book, but this one remained, and is in our possession at the present time.

The "copy" turned off by H. P. B. presented the most marked dissemblances at different times. While the handwriting bore one peculiar character throughout, so that one familiar with her writing would always be able to detect any given page as H. P. B.'s, yet, when examined carefully, one discovered at least three or four variations of the one style, and each of these persistent for pages together, when it would give place to some other of the caligraphic variants. That is to say, there would not often—never, as I now remember—be more than two of the styles on the same page, and even two only when the style which had been running through the work of, perhaps, a whole evening or half an evening, would suddenly give place to one of the other styles which would, in its turn, run through the rest of an

Digitized by Google

evening, or the next whole evening, or the morning's "copy." One of these H. P. B. handwritings was very small, but plain; one bold and free; another plain, of medium size, and very legible; and one scratchy and hard to read, with its queer, foreign-shaped a's and x's and e's. There was also the greatest possible difference in the English of these various styles. Sometimes I would have to make several corrections in each line, while at others I could pass many pages with scarcely a fault of idiom or spelling to correct. Most perfect of all were the manuscripts which were written for her while she was sleeping. The beginning of the chapter on the civilisation of Ancient Egypt (vol. i., chap. xiv.,) is an illustration. We had stopped work the evening before at about 2 A.M. as usual, both too tired to stop for our usual smoke and chat before parting; she almost fell asleep in her chair while I was bidding her good-night, so I hurried off to my bedroom. The next morning, when I came down after my breakfast, she showed me a pile of at least thirty or forty pages of beautifully written H. P. B. manuscript, which, she said, she had had written for her by——well, a Master, whose name has never yet been degraded like some others. It was perfect in every respect, and went to the printers without revision.

Now it was a curious fact that each change in the H. P. B. manuscript would be preceded, either by her leaving the room for a moment or two, or by her going off into the trance or abstracted state, when her lifeless

Digitized by Google

eyes would be looking beyond me into space, as it were, and returning to the normal waking state almost immediately. And there would also be a distinct change of personality, or rather personal peculiarities, in gait, vocal expression, vivacity of manner, and, above all, in temper. The reader of her *Caves and Jungles of Hindustan* remembers how the whirling pythoness would rush out from time to time and return under the control, as alleged, of a different goddess? It was just like that —bar the sorcery and the vertiginous dancing—with H. P. B.: she would leave the room one person and anon return to it another. Not another as to visible change of physical body, but another as to tricks of motion, speech, and manners; with different mental brightness, different views of things, different command of English orthography, idiom, and grammar, and different—very, *very* different command over her temper; which, at its sunniest, was almost angelic, at its worst, the opposite. Sometimes my most stupid incapacity to frame in writing the ideas she wished me to put would be passed over with benevolent patience; at others, for perhaps the slightest of errors, she would seem ready to explode with rage and annihilate me on the spot! These accesses of violence were, no doubt, at times, explicable by her state of health, and hence quite normal; but this theory would not, in the least, suffice to account for some of her tantrums. Sinnett admirably describes her in a private letter as a mystic combination of a goddess and a Tartar, and in noticing her behaviour in these

Digitized by Google

different moods, says :* "She certainly had none of the superficial attributes one might have expected in a spiritual teacher; and how she could, at the same time, be philosopher enough to have given up the world for the sake of spiritual advancement, and yet be capable of going into frenzies of passion about trivial annoyances, was a profound mystery to us for a long while, etc." Yet, upon the theory that when her body was occupied by a sage it would be forced to act with a sage's tranquillity, and when not, not, the puzzle is solved. Her ever-beloved aunt, Mme. N. A. F., who loved her, and whom she loved passionately to her dying day, wrote Mr. Sinnett that her strange excitability of temperament, still one of her most marked characteristics, was already manifest in her earliest youth. Even then she was liable to ungovernable fits of passion, and showed a deep-rooted disposition to rebel against every kind of authority or control. ". . . The slightest contradiction brought on an outburst of passion, often a fit of convulsions." She has herself described in a family letter (*Op. cit.*, p. 205) her psychical experience while writing her book :

"When I wrote *Isis* I wrote it so easily, that it was certainly no labour, but a real pleasure. Why should I be praised for it? Whenever I am *told* to write, I sit down and obey, and then I can write easily upon almost anything—metaphysics, psychology, philosophy, ancient religions, zoölogy, natural sciences, or what not. I never

* *Incidents in the Life of Madame Blavatsky*, p. 224.

Digitized by Google

put myself the question : '*Can* I write on this subject ?' . . . or, 'am I equal to the task ?' but I simply sit down and *write*. Why ? Because *somebody who knows all* dictates to me. My *Master*, and occasionally others whom I knew on my travels years ago. Please do not imagine I have lost my senses. I have hinted to you before now about them . . . and I tell you candidly, that whenever I write upon a subject I know little or nothing of, I address myself to *them*, and one of them inspires me, *i. e.*, he allows me to simply copy what I write from manuscripts, and even printed matter that pass before my eyes, in the air, during which process I have never been *unconscious* one single instant."

She once wrote her sister Vera about the same subject—the manner of her writing :

" You may disbelieve me, but I tell you that in saying this I speak but the truth ; I am solely occupied, not with writing *Isis*, but with Isis herself. I live in a kind of permanent enchantment, a life of visions and sights, with open eyes, and no chance whatever to deceive my senses ! I sit and watch the fair goddess constantly. And as she displays before me the secret meaning of her long-lost *secrets*, and the veil becoming with every hour thinner and more transparent, gradually falls off before my eyes, I hold my breath and can hardly trust to my senses ! . . . For several years, in order not to forget what I have learned elsewhere, I have been made to have permanently before my eyes all that I need to see. Thus, night and day, the images of the past are ever

Digitized by Google

marshalled before my inner eye. Slowly, and gliding silently like images in an enchanted panorama, centuries after centuries appear before me . . . and I am made to connect these epochs with certain historical events, and I *know* there can be no mistake. Races and nations, countries and cities, emerge during some former century, then fade out and disappear during some other one, the precise date of which I am then told by . . . Hoary antiquity gives room to historical periods; myths are explained by real events and personages who have really existed; and every important, and often unimportant event, every revolution, a new leaf turned in the book of life of nations—with its incipient course and subsequent natural results—remains photographed in my mind as though impressed in indelible colours. . . . When I think and watch my thoughts, they appear to me as though they were like those little bits of wood of various shapes and colours, in the game known as the *casse-tête:* I pick them up one by one, and try to make them fit each other, first taking one, then putting it aside until I find its match, and finally there always comes out in the end something geometrically correct . . . *I certainly refuse point-blank to attribute it to my own knowledge or memory*, for I could never arrive alone at either such premises or conclusions. . . I tell you seriously *I am helped.* And he who helps me is my GURU." (*Op. cit.*, 207).

She tells her aunt that during her Master's absence on some other occupation,—

Digitized by Google

"He awakens in me, his substitute in knowledge . . . At such times it is no more *I* who write, but my inner Ego, my '*luminous-self*,' who thinks and writes for me. Only see . . . you who know me. When was I ever so learned as to write such things? Whence was all this knowledge?"

Readers, whose taste leads them to probe such unique psychical problems as this to the bottom, should not fail to compare the above explanations that she gives of her states of consciousness, with a series of letters to her family that was begun in the *Path* magazine (N. Y. 144 Madison Ave.) for December, 1894. In those she plainly admits that her body was occupied at such times, and the literary work done by foreign entities who taught me through her lips and gave out knowledge of which she herself did not possess even a glimmering in her normal state.

Taken literally, as it reads, this explanation is hardly satisfactory; for, if the disjointed thought-bits of her psychical *casse-tête* always fitted together so as to make her puzzle-map strictly geometrical, then her literary work should be free from errors, and her materials run together into an orderly scheme of logical and literary sequence. Needless to say, the opposite is the case; and that, even as *Isis Unveiled* came off the press of Trow, after Bouton had spent above $600 for the corrections and alterations that she had made in galley, page, and electroplate proofs,* it was, and to this day is, without a

* He writes me, May 17th, 1887, "the alterations have already cost $280.80, and at that rate, by the time the book appears it will be handicapped with such fearful expense that each copy of the first 1000

Digitized by Google

definite literary plan. Volume I. professes to be confined to questions of Science, Volume II. to those of Religion, yet there are many portions in each volume that belong in the other ; and Miss Kislingbury, who sketched out the Table of Contents of Vol. II. on the evening when I was sketching out that of Vol. I., can testify to the difficulty we had in tracing the features of a plan for each of our respective volumes.

Then, again, when the publisher peremptorily refused to put any more capital into the venture, we had prepared almost enough additional MS. to make a third volume, and this was ruthlessly destroyed before we left America; H. P. B. not dreaming that she should ever want to utilise it in India, and the *Theosophist*, *Secret Doctrine*, and her other subsequent literary productions, not even being thought of. How often she and I mingled our regrets that all that valuable material had been so thoughtlessly wasted !

We had laboured at the book for several months and had turned out 870-odd pages of manuscript when, one evening, she put me the question whether, to oblige ——(our "*Pâramaguru*"), I would consent to begin all over again ! I well remember the shock it gave me to

will cost a great deal more than we shall get for it, a very discouraging state of affairs to begin with. The cost of composition of the first volume alone (with stereotyping) amounts to $1,359.69, and this for one volume alone, mind you, *without paper, press work or binding !* Yours truly, J. W. Bouton." Not only did she make endless corrections in the types, but even after the plates were cast, she had them cut to transpose the old matter and insert new things that occurred to her or that she had come across in her reading.

Digitized by Google

think that all those weeks of hard labour, of psychical thunder-storms and head-splitting archæological conundrums, were to count—as I, in my blind-puppy ignorance, imagined—for nothing. However, as my love and reverence and gratitude to this Master, and all the Masters, for giving me the privilege of sharing in their work was without limits, I consented, and at it we went again. Well for me, was it, that I did; for, having proved my steadfastness of purpose and my loyalty to H. P. B., I got ample spiritual reward. Principles were explained to me, multifarious illustrations given in the way of psychical phenomena, I was helped to make experiments for myself, was made to know and to profit by acquaintance with various Adepts, and, generally, to fit myself—so far as my ingrained stubbornness and practical worldly self-sufficiency would permit—for the then unsuspected future of public work that has since become a matter of history. People have often thought it very strange, in fact incomprehensible, that, of all those who have helped in this Theosophical movement, often at the heaviest self-sacrifice, I should have been the only one so favoured with personal experiences of and with the Mahátmas that the fact of their existence is a matter of as actual knowledge as the existence of my own relatives or intimate friends. I cannot account for it myself. I know what I know, but not why many of my colleagues do not know as much. As it stands, many people have told me that they pin their faith in the Mahátmas upon my unchanging and unimpeached personal testimony, which

Digitized by Google

supplements the statements of H. P. B. Probably I was so blessed because I had to launch the ship "Theosophy" with H. P. B. for H. P. B.'s Masters, and to steer it through many maelstroms and cyclones, when nothing short of actual knowledge of the sound basis of our movement would have influenced me to stick to my post.

Let us next attempt to analyse the mental state of H. P. B. while writing her book, and see if any known hypothesis will give us the clue to those marked differences in personality, handwriting, and mentality above mentioned. The task is one of so delicate and complicated a nature that I doubt if such a psychical problem, save Shakespeare's, has ever been presented before ; and I think that, after reading what I have to say, my fellow-students in Theosophy and Occult Science will concur in this opinion.

Digitized by Google

CHAPTER XIV.

DIFFERENT HYPOTHESES.

WHILE I may well despair of proving the exact degree in which the complex personality, H. P. B., may be said to have written *Isis Unveiled*, yet I think it clear and beyond dispute that she digested and assimilated all the material, making it her own and fitting it into her book like bits of stone into a mosaic. As Prof. Wilder recently wrote me: "Few books are absolutely original. That these volumes were in her peculiar style is as plain as can well be. People only demand that Mr. Henry Ward Beecher's principle be applied: 'When I eat chicken, I do not become chicken; the chicken becomes me!'"

Nothing would be easier than to shirk the whole inquiry, and chime in with those who simply declare H. P. B. to have been, so to say, divinely inspired, and guiltless of errors, contradictions, exaggerations, or limitations; but I cannot do this, having so well known her, and the truth only will serve me. As for shrinking from the closest inquiry into her occult and mental gifts, it is

Digitized by Google

not to be thought of. I, certainly, am not going to shut my eyes to facts, and thus abandon her and her work to those who would rejoice in destroying the pedestal upon which we ought to place her, and degrading her into the dangerous impostor which the leaders of the S. P. R. tried to show her to be. The very question of the alleged resemblances between her own handwriting and that of a Master—one of the counts in their indictment—properly comes within the lines of our present discussion of the MS. of *Isis Unveiled*.

One cannot fail to see, after reflection, that as regards the case in point, at least these several hypotheses must be considered:

1. Was the book written by H. P. B. entirely as an independent, conscientious amanuensis, from the dictation of a Master?

2. Or wholly or in part by her Higher Self while controlling her physical organism?

3. Or as a medium obsessed by other living persons?

4. Or partly under any two or more of these three conditions?

5. Or as an ordinary spiritual medium, controlled by intelligences disincarnate?

6. Or was it written by several alternately latent and active personalities of herself?

7. Or simply by her as the uninspired, uncontrolled and not obsessed Russian lady, H. P. B., in the usual state of waking consciousness, and differing in no way from any author doing a work of this class?

Digitized by Google

Let us begin with the last alternative. We shall discover very readily and unmistakably that H. P. B.'s education and training were quite incongruous with the idea that she was erudite, philosophical, or in the least degree, a book-worm. The memoirs of her life, as communicated by her family to Mr. Sinnett, her biographer, and to myself, * show that she was a rebellious pupil with no love of serious literature, no attraction for learned people, no tendency to haunting libraries : the terror of her governesses, the despair of her relatives, a passionate rebel against all restraint of custom or conventionality. Her early years were passed in the company of "hunchback goblins" and sprites, with whom she spent days and weeks together, and in playing disagreeable tricks upon, and clairvoyantly telling disagreeable secrets to, people. The only literature she loved was the folk-lore of Russia, and at no period of her life before she began to write *Isis*, not even during the year she lived in New York before being sent to hunt me up, did the family or any of her friends or acquaintances hear of her displaying bookish habits or tastes. Miss Ballard and other ladies who knew her in her several New York lodging-houses, and were familiar with her habits and mode of life, never knew her to have visited the Astor, the Society, the Mechanics', the Historical, the American Institute, the Brooklyn, or the Mercantile library : no one has ever come forward to recognise her as a frequenter of those alcoves of printed

* Cf. Chapter VII.

Digitized by Google

thought. She belonged to no scientific or otherwise learned society in any part of the world; she had published no book. She hunted up thaumaturgists in savage and semi-civilised countries, not to read their (non-existent) books, but to learn practical psychology. In short, she was not a literary person up to the time of writing *Isis*. This fact was equally clear to each of her New York intimates as it was to myself; and the opinion is confirmed by herself in the last *Lucifer* article, "My Books," that she wrote before her death.* In it she says that the following facts are "undeniable and not to be gainsaid:

"(1). When I came to America in 1873, I had not spoken English—which I had learned in my childhood colloquially—for over thirty years. I could understand when I read it, but could hardly speak the language.

"(2). I had never been at any College, and what I knew I had taught myself; I have never pretended to any scholarship in the sense of modern research; I had then hardly read any scientific European works, knew little of Western philosophy and sciences. The little which I had studied and learned of these disgusted me with its materialism, its limitations, narrow cut-and-dried spirit of dogmatism and air of superiority over the philosophies and sciences of antiquity.

"(3). Until 1874, I had never written one word in

* The article in question is very inaccurate, as was shown in this chapter as originally published in the *Theosophist*, May, 1893. Space does not permit its repetition here.

Digitized by Google

English, nor had I published any work in any language. Therefore :-

"(4) I had not the least idea of literary rules. The art of writing books, of preparing them for print and publication, reading and correcting proofs, were so many close secrets to me.

"(5) When I started to write that which developed later into *Isis Unveiled*, I had no more idea than the man in the moon what would come of it. I had no plan ; did not know whether it would be an essay, a pamphlet, a book or an article. I knew that *I had to write it*, that was all. I began the work before I knew Colonel Olcott well, and some months before the formation of the Theosophical Society."

The last sentence is misleading, for she did not begin it until we were well acquainted and in fact, were close friends. In fact, the whole article ought to have been entirely re-written if it was to have been her last.

The endless substitutions of new for old "copy" and transportations from one Chapter or one Volume to another, in *Isis Unveiled*, were confined to such portions of the work as, I should say, were done in her normal condition—if any such there was—and suggested the painful struggles of a "green hand" over a gigantic literary task. Unfamiliar with grammatical English and literary methods, and with her mind absolutely untrained for such sustained desk-work, yet endowed with a courage without bounds and a power of continuous mental concentration that has scarcely been

Digitized by Google

equalled, she floundered on through weeks and months towards her goal, the fulfilment of her Master's orders. This literary feat of hers surpasses all her phenomena.

The glaring contrasts between the jumbled and the almost perfect portions of her MS. quite clearly prove that the same intelligence was not at work throughout: and the variations in handwriting, in mental method, in literary facility, and in personal idiosyncracies, bear out this idea. At this distance of time and with her MS. destroyed, it is impossible for me to say which of her shifting personalities is mainly responsible for her alleged unacknowledged use of quotations. Whatever came into my hands that seemed as if taken from another author I, of course, would put between inverted commas, and it is quite possible that their blending with some of her own original ideas is chargeable to me; the passages in question reading as if somebody's else. When she wrote other people's words into her current argument without break of the continuity, then, naturally enough—unless the passages were from books I had read, and that were familiar to me—I would go on correcting it as H. P. B.'s own "copy." I have said above that I got my occult education in the compilation of *Isis* and in H. P. B.'s teaching and experiments; I must now add that my previous literary life had taken me into other and much more practical fields of study than the literature which is synthesised in *Isis*, *viz.*, Agricultural Chemistry and Scientific Agriculture generally. So that she might have given me "copy" entirely made

Digitized by Google

up of passages borrowed from Orientalists, Philologists, and Eastern Sages, without my being able to detect the fact. Personally I have never had plagiarisms in *Isis* pointed out to me, whether verbally or otherwise, nor do I know there are such ; but if there are, two things are possible,(*a*) that the borrowing was done by the untrained, inexperienced literary beginner, H. P. B., who was ignorant of the literary sin she committed, or (*b*) that the passages had been so worked into the copy as not to draw my editorial attention to their incongruity with what preceded and succeeded them. Or—a third alternative—might it be that, while writing she was always half on this plane of consciousness, half on the other ; and that she read her quotations clairvoyantly in the *Astral Light* and used them as they came *à propos*, without really knowing who were the authors or what the titles of their books ? Surely her Eastern acquaintances will be prepared to think that a plausible theory, for if ever anyone lived in two worlds habitually, it was she. Often—as above stated—I have seen her in the very act of copying extracts out of phantom books, invisible to my senses, yet most undeniably visible to her.

Now let us consider the next hypothesis, the 6th, *viz.*, that the book was written by several different H. P. B. personalities, or several personal strata of her consciousness capable of coming *seriatim* into activity out of latency. Upon this point the researches of our contemporaries are not yet so far advanced as to unable us to dogmatise. In his *Incidents in the Life of Mme. Blavatsky*

Digitized by Google

(p. 147), Mr. Sinnett quotes a written description of hers of a "double life" she led throughout a certain "mild fever," which was yet a wasting illness, that she had when a young lady in Mingrelia:

"Whenever I was called by name, I opened my eyes upon hearing it, and was myself, my own personality in every particular. As soon as I was left alone, however, I relapsed into my usual, half-dreamy condition, and became *somebody else* (who, namely, Mme. B. will not tell). . . . . In cases when I was interrupted, when in my other *self*, by the sound of my present name being pronounced, and while I was conversing in my dream-life, —say at half a sentence either spoken by me or those who were with my second *me* at the time,—and opened my eyes to answer the call, I used to answer very rationally, and understood all, for I was never delirious. But no sooner had I closed my eyes again than the sentence which had been interrupted was completed by my other *self*, continued from the word, or even the half word it had stopped at. When awake, and *myself*, I remembered well *who I was* in my second capacity, and what I had been and was doing. When *somebody else*, *i. e.*, the personage I had become, I know I had no idea of who was H. P. Blavatsky! I was in another far-off country, a totally different individuality from myself, and had no connection with my actual life."

In view of what has since been seen, some might say that the only H. P. B. was the conscious entity which inhabited her physical body, and that the "somebody

Digitized by Google

else" was not H. P. B., but another incarnate entity, having an inexplicable connection with H. P. B.'s body and H. P. B. True, there are cases known where certain tastes and talents have been shown by the second self which were foreign to the normal self. Prof. Barrett, for instance, tells of a vicar's son in the North of London who, after a serious illness, became two distinct personalities. The abnormal self "did not know his parents, he had no memory of the past, he called himself by another name, and, what is still more remarkable, he developed musical talent, of which *he had never shown a trace.*" So there are many cases where the second self, replacing the normal self, calls itself by a different name and has a special memory of its own experiences. In the well-known case of Lurancy Vennum, her body was completely obsessed by the disincarnate soul of another girl named Mary Roff, who had died twelve years before. Under this obsession her personality changed entirely; she remembered all that had ever happened to Mary Roff prior to her decease, but her own parents, connexions, and friends became total strangers. The obsession lasted nearly four months.* The body occupied seemed to Mary Roff "so natural that she could hardly feel it was not her original body born nearly thirty years ago." The Editor of the *Watseka Wonder* pamphlet copies from *Harper's Magazine* for May, 1860, the Rev. Dr. W. S. Plummer's account of

* See The *Watseka Wonder*. To be had of the Manager, *Theosophist* Office.

Digitized by Google

a certain Mary Reynolds' double personality which lasted, with intervals of relapse to the normal state, from her eighteenth to her sixty-first year. During the last quarter century of her life, she *remained wholly in her second abnormal condition :* the normal self, that was the conscious owner of that body, had been wiped out, as it were. But, observe the strange fact that all she knew in the second self had been taught her in that state. She began that second life at eighteen (of the body's life) oblivious of Mary Reynolds, of all she had known or suffered ; her second state was precisely that of a new-born infant. " All the past that remained to her, was the faculty of pronouncing a few words : until she was taught their significance, they were unmeaning sounds to her."—(*Watseka Wonder*, p. 42.)

In the *Incidents, etc.* (p. 146), is an explanation of the way in which H. P. B. would give the Gooriel and Mingrelian nobility, who came to consult her, answers to their questions about their private affairs. She would simply, while in full consciousness, clairvoyantly see their thoughts " as they evolved out of their heads in spiral luminous smoke, sometimes in jets of what might be taken for some radiant material, and settled in distinct pictures and images around them." The following is especially suggestive :

" Often such thoughts and answers to them *would find themselves impressed in her own brain, couched in words and sentences in the same way as original thoughts do.* But, so far as we are all able to understand, the former visions

Digitized by Google

were always more trustworthy, as they are independent and distinct from the seer's own impressions, belonging to pure clairvoyance, not 'thought transference,' which is a process always liable to get mixed up with one's own more vivid mental impressions."

This seems to throw light upon the present problem, and to suggest that it is thinkable that H. P. B., while quite normal as to waking consciousness, saw clairvoyantly, or by thought-absorption—a better word than thought-transference in this connection—the stored-up wisdom of the branch of literature she was examining, and so took it into her own brain as to lose the idea that it was not original with herself. Practical Eastern psychologists will not regard this hypothesis so unreasonable as others may. True, after all, it is but a hypothesis, and her enemies will simply call her a cribber, a plagiarist. With the ignorant, insult is the line of least resistance.

The supporters of this theory should, however, recollect that H. P. B.'s most ardent and passionate wish was to gather together as many corroborations as possible, from all ancient and modern sources of the theosophical teachings she was giving out ; and her interest all lay on the side of quoting respectable authorities, not in plagiarising from their works for her own greater glory.

I have read a good deal and known something about this question of multiple personality in man, but I do not remember a case where the awakened latent personalities, or second personality, was able to quote from books

Digitized by Google

or talk languages with which the normal waking self had never had any connection. I know a scientific man in England who had quite forgotten his mother-tongue from having lived abroad from his eleventh year without speaking or even hearing it spoken, until his twenty-ninth year, when he began to re-learn it with the help of grammar and dictionary, yet while he was thus struggling through the rudiments of the language, spoke it correctly in his sleep. But the knowledge had in his case simply sunk into the realm of "sub-liminal" consciousness, *i. e.*, latent memory. And there is the familiar case of the illiterate house or kitchen-maid, who was overheard reciting in her somnambulic state Hebrew phrases and verses which—as afterwards proven—she heard declaimed by a former master, years before. But who brings forward proof that H. P. B. had ever in her life studied the authors quoted in *Isis Unveiled?* If she did not consciously plagiarise them, and had never read them, how could they have come to her on the theory that the book was written by an H. P. B. II. or H. P. B. III.? My readers in Western lands will have seen the unique case of Madame B., a French hysteriac and patient of Professor Janet, reported and commented upon by Prof. Richet, the eminent hypnotist. The case is quoted by Mr. Stead in his "Real Ghost Stories" number of the *Review of Reviews*, for Christmas, 1891. In her case the two personalities—we are told—"not only exist side by side, but in the case of the subconscious self, knowingly co-exist, while over or beneath both

Digitized by Google

there is a third personality which is aware of both the other two, and apparently superior to both. . . Mme. B. can be put to sleep at almost any distance, and when hypnotised completely changes her character. There are two well-defined personalities in her, and a third of a more mysterious nature than either of the two first. The normal waking state of the woman is called Léonie I., the hypnotic state Léonie II. The third occult unconscious personality of the lowest depth is called Léonie III. Léonie I. is a 'serious and somewhat melancholy woman, calm and slow, very gentle and extremely timid.' Léonie II. is the opposite—'gay, noisy, and restless to an insupportable degree : she continues good-natured, but she has acquired a singular tendency to irony and bitter jests. In this state, she does not recognise her identity with her working self. "That good woman is not I," she says : "She is too stupid."' 'Léonie II. gets control of Léonie I.'s hand when she is in an abstracted mood ; her face calm, her eyes looking into space with a certain fixity,' but not 'cataleptic, for she was humming a rustic tune ; her right hand wrote quickly, and, as it were, surreptitiously.' When recalled to herself and the writing shown her, 'of the letter which she was writing she knew nothing whatever.' When Léonie I. (the waking self) was effaced and Léonie II., the second self, was aroused in the hypnotic condition, and rattling on with her usual volubility and obstreperousness, she suddenly showed signs of terror ; hearing a voice as if from another part of the room,

Digitized by Google

which scolded her and said : ' Enough, enough, be quiet, you are a nuisance.' This was a third personality, which awakened and took full possession of the patient's organism when she had been plunged into a deeper stage of lethargy. She unhesitatingly confessed that it was she who had spoken the words heard by Léonie II., and that she did it because she saw that the Professor was being annoyed by her babble. The imaginary voice which so terrified Léonie II. because it seemed supernatural, proceeded "—says Mr. Stead—" from a profound stratum of consciousness in the same individual."

Our present purpose being only to superficially examine the subject of multiple personality in connection with the hypothesis that H. P. B. might have had no other aid in writing *Isis* than her own several personalities, we need not go deeper into a problem to sound which one must turn to the Hindu philosophical and mystical authorities. The ancient theory is that the "KNOWER" is capable of seeing and knowing all when he has been disburthened of the last veil of the physical consciousness. And this knowledge comes to one progressively as the fleshly veils are raised. In common, I suppose, with most extemporaneous public speakers, I have by long practice acquired, in some degree, the habit of triplex mental action. When lecturing in India extemporaneously, in English, and being interpreted, sentence by sentence into some other tongue, I find one part of my mind following the translator and trying to guess from the behaviour of the audience, often aided by

Digitized by Google

the hearing of familiar words, whether my thoughts are being correctly rendered ; at the same time, another part of my mind will be observing individuals and making mental comments upon their peculiarities or capabilities —sometimes I may even address side remarks to some acquaintance sitting near me on the platform ; the two mental activities are distinct and independent. The instant my interpreter has uttered his last word, I catch up the thread of my argument and proceed through another sentence. Simultaneously with the progress of these two functions, I have a third consciousness, as of an observant third, and higher self, which notes the other two trains of thought, yet without becoming entangled with them. This represents, of course, a rudimentary stage of psychical development, the higher degrees of which are indicated in some of the aspects of H. P. B.'s spiritual endowments ; yet even so much experience as this helps one to comprehend the problem of her mental phenomena : it is a feeble, yet sure, sign that the Knower can observe and know.

If I were a Mussulman, I should probably affirm with Mahommed himself, that the writing of the Koran in such classical Arabic by so uneducated a man as himself was the greatest of psychical miracles, a proof that his spiritual Ego had burst through trammels of flesh and drawn knowledge directly from its heavenly source. If H. P. B. had been an ascetic, mistress of her physical self and her waking brain, able to write pure English without having acquired it, and to have formed and

Digitized by Google

fashioned her book after a consistent plan, instead of messing up her materials as she did, I might believe the same thing of her, and ascribe that wonder-book of entrancing interest to her own developed individuality. As it is, I cannot ; and I must pass on to discuss our other theories.

CHAPTER XV.

APPARENT POSSESSION BY FOREIGN ENTITIES.

OUR next question is, did she write *Isis* in the capacity of an ordinary spiritual medium, *i. e.*, under the control of spirits of the dead? I answer, Assuredly not. If she did, then the power controlling her organism worked differently from any that is recorded in books or that I, personally, ever saw operating during the many years in which I was interested in that movement. I have known mediums of all sorts—speaking, trance, writing, phenomena-making, medical, clairvoyant, and materialising; have seen them at work, attended their séances and observed the signs of their obsession and possession. H. P. B.'s case resembled none of them. Nearly all they did she could do; but at her own will and pleasure, by day or by night, without forming "circles," choosing the witnesses, or imposing the usual conditions. Then, again, I had ocular proof that at least some of those who worked with us were living men, from having seen them in the flesh in In-

Digitized by Google

dia after having seen them in the astral body in America and Europe; from having touched and talked with them. Instead of telling me that they were spirits, they told me they were as much alive as myself, and that each of them had his own peculiarities and capabilities; in short, his complete individuality. They told me that what they had attained to, I should, one day, myself acquire; how soon, would depend entirely upon myself; and that I might anticipate nothing whatever from favour; but, like them, must gain every step, every inch of progress by my own exertions.

One of the greatest of them, the Master of the two Masters about whom the public has heard a few facts and circulated much foul abuse, wrote me on June 22, 1875: "The time is come to let you know who I am. I am not a disembodied spirit, Brother, I am a living man; gifted with such powers by our Lodge as are in store for yourself some day. I cannot be with you otherwise than in spirit, for thousands of miles separate us at present. Be patient and of good cheer, untiring labourer of the sacred Brotherhood! Work on and toil too for yourself, for self-reliance is the most powerful factor of success. Help your needy brother and you shall be helped yourself in virtue of the never-failing and ever active Law of Compensation": the law of Karma, in short, which, as the reader perceives, was taught me from almost the beginning of my intercourse with H. P. B. and the Masters.

And yet, despite the above, I was made to believe

Digitized by Google

that we worked in collaboration with at least one disincarnate entity—the pure soul of one of the wisest philosophers of modern times, one who was an ornament to our race, a glory to his country. He was a great Platonist, and I was told that, so absorbed was he in his life-study, he had become earth-bound, *i. e.*, he could not snap the ties which held him to the Earth, but sat in an astral library of his own mental creation, plunged in his philosophical reflections, oblivious to the lapse of time, and anxious to promote the turning of men's minds towards the solid philosophical basis of true religion. His desire did not draw him to taking a new birth among us, but made him seek out those who, like our Masters and their agents, wished to work for the spread of truth and the overthrow of superstition. I was told that he was so pure and so unselfish that all the Masters held him in profound respect, and, being forbidden to meddle with his Karma, they could only leave him to work his way out of his (Kámalokaic) illusions, and pass on to the goal of formless being and absolute spirituality according to the natural order of Evolution. His mind had been so intensely employed in purely intellectual speculation that his spirituality had been temporarily stifled. Meanwhile there he was, willing and eager to work with H. P. B. on this epoch-making book, towards the philosophical portion of which he contributed much. He did not materialise and sit with us, nor obsess H. P. B., medium-fashion; he would simply talk with her psychically, by the hour together, dictating copy, telling her what refer-

Digitized by Google

ences to hunt up, answering my questions about details, instructing me as to principles, and, in fact, playing the part of a third person in our literary symposium. He gave me his portrait once—a rough sketch in colored crayons on flimsy paper—and sometimes would drop me a brief note about some personal matter, but from first to last his relation to us both was that of a mild, kind, extremely learned teacher and elder friend. He never dropped a word to indicate that he thought himself aught but a living man, and, in fact, I was told that he did not realise that he had died out of the body. Of the lapse of time, he seemed to have so little perception that, I remember, H. P. B. and I laughed, one morning at 2.30 A.M., when, after an unusually hard night's work, while we were taking a parting smoke, he quietly asked H. P. B. "Are you ready to begin?"; under the impression that we were at the beginning instead of the end of the evening! And I also recollect how she said: "For Heaven's sake don't laugh deep in your thought, else the 'old gentleman' will surely hear you and feel hurt!" That gave me an idea: to laugh superficially is ordinary laughter, but to laugh deeply is to shift your merriment to the plane of psychic perception! So emotions may, like beauty, be *sometimes* but skin-deep. Sins, also: think of that!

Except in the case of this old Platonist, I never had, with or without H. P. B.'s help, consciously to do with another disincarnate entity during the progress of our work; unless Paracelsus may be called one, about which,

Digitized by Google

in common with the Alsatians, I have grave doubts. I remember that one evening, at about twilight, while we lived in West Thirty-fourth Street, we had been talking about the greatness of Paracelsus and the ignominious treatment he had had to endure during his life and after his apparent death. H. P. B. and I were standing in the passage between the front and back rooms, when her manner and voice suddenly changed, she took my hand as if to express friendship, and asked, "Will you have Theophrastus for a friend, Henry?" I murmured a reply, when the strange mood passed away, H. P. B. was herself again, and we applied ourselves to our work. That evening I wrote the paragraphs about him that now stand on p. 500 of Vol. II. of *Isis*. As for his being dead, the odds are always against any given Adept's having actually died when to ordinary men he seemed to. With his knowledge of the science of mâyâvic illusion, even his seeming corpse screwed into a coffin and laid away in a tomb, would not be sufficient proof that he was really dead. Barring accidents, which may happen to him as well as to a common man if he be off his guard, an Adept chooses his own place to die in, and his body is so disposed of as to leave no trace behind. For example, what became of the gifted, the noble-souled Count St. Germain, the "adventurer" and "spy" of the encyclopædias, who dazzled the courts of Europe a century ago, moved in the highest and the most erudite circles, was admitted to the intimacy of Louis XV., built hospitals and otherwise lavished vast sums in charities, took nothing

Digitized by Google

for even the greatest personal services, retired to Holstein, and—disappeared as mysteriously as he had appeared?* *Après nous le Deluge,* said the King's mistress; after St. Germain came the French Revolution and the upheaval of mankind.

Rejecting the idea that H. P. B. wrote *Isis* as an ordinary spirit medium "under control," we have seen, however, that some portions of it were actually written to a

* No one ever knew his origin or his real name. The Maréchale de Belle Isle, who met him in Germany, induced him to come to Paris. He had a noble personal appearance and polished address, "considerable erudition and a wonderful memory, spoke English, German, Spanish, and Portuguese to perfection, and French with a slight Piedmontese accent. . . . He occupied for many years a remarkable social position at the French Court. . . . He was in the habit of telling the credulous that he had lived 350 years, *and some old men, who pretended to have known him in their youth, declared that in 60 or 70 years his appearance had in no wise changed.* Frederic the Great, having asked Voltaire for some particulars respecting this mysterious person, was told that he was 'a man who never dies and who knows everything.'" No one knowing his motives or the sources of his wealth, they settled it to their own satisfaction in the same way as that which Hodgson, the spy of the S. P. R., resorted to in the case of H. P. B. to explain her presence in India; he was alleged "to have been employed during the greater part of his life as a spy at the courts at which he resided" (*Am. Cyc.*, Ed. 1868, vol. xiv., pp. 266–7). But, all the same, no evidence whatever to support this calumny has ever been forthcoming. The *Encyclopædia Britannica* takes the same view of St. Germain, and the *Dictionnaire Universel d'Histoire et de Geographie* echoing the falsehood, says that "this will account for his riches and the mystery with which he enwrapped himself!" If Mme. de Fadeef—H. P. B.'s aunt—could only be induced to translate and publish certain documents in her famous library, the world would have a nearer approach to a true history of the pre-Revolutionary European mission of this Eastern Adept than has until now been available.

Digitized by Google

spirit's dictation : a most extraordinary and exceptional entity, yet still a man out of the physical body. The method of work with him as above described tallies closely with that she described in a family letter, when explaining how she wrote her book without any previous training for such work.

"Whenever I am *told* to write, I sit down and obey, and then I can write easily upon almost anything—metaphysics, psychology, philosophy, ancient religions, zoölogy, natural sciences, or what not. . . . Why? Because *somebody who knows all* dictates to me. *My Masters*, and occasionally *others whom I knew on my travels years ago.*" (*Incidents*, page 205.)

This is exactly what happened between her and the old Platonist, but he was not her "Master," nor could she have met him on her travels on this physical plane, since he died before she was born—this time. Then arises the question whether the Platonist was really a spirit disincarnate, or an Adept who had lived in that philosopher's body and seemed to, but really did not, die out of it on September 1, 1687. It is certainly a difficult problem to solve. Considering that the ordinary concomitants of spirit-possession and spirit-intercourse were wanting, and that H. P. B. served the Platonist in the most matter-of-fact way as amanuensis, their relation differing in nothing from that of any Private Secretary with his employer, save that the latter was invisible to me but visible to her, it does look more as if we were dealing with a living than with a disincarnate person.

Digitized by Google

He seemed not quite a "Brother"—as we used to call the Adepts then—yet more that than anything else; and as far as the literary work itself was concerned, it went on exactly as the other parts of it did when the dictator, or writer, as the case might be, was professedly a Master (Cf. Theory 1). The dictator or *writer*, I say, and this requires some explanation.

It is stated above that the H. P. B. manuscript varied at times, and that there were several variants of the one prevailing script; also that each change in the writing was accompanied by a marked alteration in the manner, motions, expression, and literary capacity of H. P. B. When she was left to her own devices, it was often not difficult to know it, for then the untrained literary apprentice became manifest and the cutting and pasting began; then the copy that was turned over to me for revision was terribly faulty, and after having been converted into a great smudge of interlineations, erasures, orthographic corrections and substitutions, would end in being dictated by me to her to re-write (Cf. Theory 7). Now often things were, after a while, said to me that would be more than hints that other intelligences than H. P. B.'s were at times using her body as a writing machine: it was never expressly said, for example, "I am so and so," or "Now this is A or B." It did not need that after we "twins" had been working together long enough for me to become familiar with her every peculiarity of speech, moods, and impulses. The change was as plain as day, and by and by after she had been

Digitized by Google

out of the room and returned, a brief study of her features and actions enabled me to say to myself, "This is ——, or ——, or, ——" and presently my suspicion would be confirmed by what happened. One of these *Alter Egos* of hers, one whom I have since personally met, wears a full beard and long moustache that are twisted, Rajput fashion, into his side whiskers. He has the habit of constantly pulling at his moustache when deeply pondering: he does it mechanically and unconsciously. Well, there were times when H. P. B.'s personality had melted away and she was "*Somebody else*," when I would sit and watch her hand as if pulling at and twisting a moustache that certainly was not growing visibly on H. P. B.'s upper lip, and the far-away look would be in the eyes, until presently resuming attention of passing things, the moustached Somebody would look up, catch me watching him, hastily remove the hand from the face, and go on with the work of writing. Then there was another Somebody, who disliked English so much that he never willingly talked with me in anything but French: he had a fine artistic talent and a passionate fondness for mechanical invention. Another one would now and then sit there, scrawling something with a pencil and reeling off for me dozens of poetical stanzas which embodied, now sublime, now humorous ideas. So each of the several Somebodies had his peculiarities distinctly marked, as recognisable as those of any of our ordinary acquaintances or friends. One was jovial, fond of good stories and witty to a degree; another, all

Digitized by Google

dignity, reserve, and erudition. One would be calm, patient, and benevolently helpful, another testy and sometimes exasperating. One Somebody would always be willing to emphasise his philosophical or scientific explanations of the subjects I was to write upon, by doing phenomena for my edification, while to another Somebody I dared not even mention them. I got an awful rebuke one evening. I had brought home a while before two nice, soft pencils, just the thing for our desk work, and had given one to H. P. B. and kept one myself. She had the very bad habit of borrowing penknives, pencils, rubber, and other articles of stationery and forgetting to return them : once put into her drawer or writing-desk, there they would stay, no matter how much of a protest you might make over it. On this particular evening, the artistic Somebody was sketching a navvy's face on a sheet of common paper and chatting with me about something, when he asked me to lend him another pencil. The thought flashed into my mind, "If I once lend this nice pencil it will go into her drawer and I shall have none for my own use." I did not say this, I only thought it, but the Somebody gave me a mildly sarcastic look, reached out to the pen-tray between us, laid his pencil in it, handled it with his fingers of that hand for a moment, and lo ! a dozen pencils of the identical make and quality ! He said not a word, did not even give me a look, but the blood rushed to my temples and I felt more humble than I ever did in my life. All the same, I scarcely think I deserved the

Digitized by Google

rebuke, considering what a stationery-*annexer* H. P. B. was!

Now when either of these Somebodies was "on guard," as I used to term it, the H. P. B. manuscript would present the identical peculiarities that it had on the last occasion when he had taken his turn at the literary work. He would, by preference, write about the class of subjects that were to his taste, and instead of H. P. B. playing the part of an amanuensis, she would then have become for the time being that other person (Cf. Theory 3). If you had given me in those days any page of *Isis* manuscript, I could almost certainly have told you by which Somebody it had been written. Where, then, was H. P. B.'s self at those times of replacement? Ah, that is the question; and that is one of the mysteries which are not given to the first comer.* As I understood it, she herself had loaned her body as one might one's type-writer, and had gone off on other occult business that she could transact in her astral body; a certain group of Adepts occupying and manœuvring the body by turns. When they knew that I could distinguish between them, so as to even have invented a name for each by which H. P. B. and I might designate them in our conversation in their absence, they would frequently give me a grave bow or a friendly farewell nod when about to leave the room and give place to the next relief-

* Nearly two years after the above was published H. P. B. explained to her relatives (cf. *Path* articles above cited) the secret; she was not in her body, but seemingly near it, with full consciousness watching its manipulation by third parties.

Digitized by Google

guard. And they would sometimes talk to me of each other as friends do about absent third parties, by which means I came to know bits of their several personal histories; and would also speak about the absent H. P. B., distinguishing her from the physical body they had borrowed from her. One Mahâtma, writing me about some occult business, speaks of it—the H. P. B. body—as "the old appearance"; again, in 1876, he writes about "it and the Brother inside it"; another Master asks me—*à propos* of a terrific fit of anger to which I had (unintentionally) provoked H. P. B.—"Do you want to kill the body?"; and the same one, in a note of 1875, speaks of "those who represent us in the *shell*"—the underscoring of the word being his. Can any one understand my feelings upon discovering on a certain evening that I had unsuspiciously greeted the staid philosopher described in the next few sentences of the main-text, with an hilarious levity that quite upset his usual calm? Fancying that I was addressing only my "chum" H. P. B., I said: "Well, Old Horse, let us get to work!" The next minute I was blushing for shame, for the blended expression of surprise and startled dignity that came into the face, showed me with whom I had to deal. It was as bad a *gaucherie* as that committed by good old Peter Cooper at the New York Academy Ball to the Heir Apparent, when he slapped him on the shoulder and said: "Well, Wales, what do you think of this?" This was the one of them for whom I had the most filial reverence. It was not alone for his profound

Digitized by Google

learning, lofty character and dignified demeanour, but also for his really paternal kindness and patience. It seemed as if he alone had read to the bottom of my heart, and wished to bring out every little spiritual germ that lay there as a latent potentiality. He was—I was told—a South Indian personage of long spiritual experience, a Teacher of Teachers; still living among men ostensibly as a landed proprietor, yet known for what he was by nobody around him. Oh, the evenings of high thinking I passed with him; how shall I ever compare with them any other experiences of my life! Most vividly of all I remember one evening when, by half hints more than anything else, he awakened my intuition so that it grasped the theory of the relationship of cosmic cycles with fixed points in stellar constellations, the attractive centre shifting from point to point in an orderly sequence. Recall your sensations the first time you ever looked through a large telescope at the starry heavens—the awe, the wonder, the instant mental expansion experienced in looking from the familiar and, by comparison, commonplace Earth to the measureless depths of space and the countless starry worlds that bestrew the azure infinity. That was a faint approach to my feeling at the moment when that majestic concept of cosmic order rushed into my consciousness; so overpowering was it, I actually gasped for breath. If there had previously been the least lingering hereditary leaning towards the geocentric theory, upon which men have built their paltry theologies, it was then swept away

Digitized by Google

like a dried leaf before the hurricane. I was borne into a higher plane of thought, I was a free man.

It was this Master who dictated to H. P. B. the Replies to an English F. T. S. on questions suggested by a reading of "Esoteric Buddhism," which was published in the *Theosophist* for September, October, and November, 1883. It was at Ootacamund, at the house of Maj.-Gen. Morgan, when, shivering with the cold, and her lower limbs swaddled in rugs, she sat writing them. One morning I was in her room reading a book, when she turned her head and said: "I 'll be hanged if I ever heard of the Iaphygians. Did you ever read of such a tribe, Olcott?" I said I had not, why did she ask? "Well," she replied, "the old gentleman tells me to write it down, but I 'm afraid there is some mistake; what do you say?" I answered that if the Master in question gave her the name, she should write it without fear as he was always right. And she did. This is an example of multitudinous cases where she wrote from dictation things quite outside her personal knowledge. She never studied Hindî, nor, normally, could she speak or write it; yet I have a Hindî note in Devanâgari characters that I saw her write and hand to Swami Dayánand Saraswati at the Vizianagram garden-house at Benares, where we were guests in 1880. The Swami read it, wrote and signed his answer on the same sheet, and H. P. B. left it on the table, from which I took it.

But I wish to say again, as distinctly as possible, that, not even from the wisest and noblest of these H. P. B.

Digitized by Google

Somebodies did I ever get the least encouragement to either regard them as infallible, omniscient, or omnipotent. There was never the least show of a wish on their part that I should worship them, mention them with bated breath, or regard as inspired what they either wrote with H. P. B.'s body, or dictated to her as their amanuensis. I was made simply to look upon them as men, my fellow-mortals; wiser, truly, infinitely more advanced than I, but only because of their having preceeded me in the normal path of human evolution. Slavishness and indiscriminate adulation they loathed, telling me that they were usually but the cloaks to selfishness, conceit, and moral limpness. Their candid opinions were frequently vouchsafed to me after the departure of some of these flattering visitors, and it would have sent any of my readers into a fit of laughter if they had been there one evening after a gushing lady had bade us good-night. Before leaving she petted H. P. B., sat on the arm of her chair, patted her hand and kissed her on the cheek; I standing near by and seeing the blank despair depicted in the (male) Somebody's face. I conducted the lady to the door, returned to the room, and almost exploded with merriment when the ascetic Somebody—a sexless *sadhoo* if there ever was one—turned his mournful eyes at me and in an accent of indescribable melancholy said, "She KISSED me!" It was too much; I had to sit down.

I have remarked above that the dictation and literary collaboration between the old Platonist and H. P. B.

Digitized by Google

was identical with that between her and the actual Adepts; and that, as he delighted in one branch of work, so each of the others had their individual preferences. But there was the difference that while they at times would dictate to her and at others occupy her body and write through it as if it were their own (just as the spirit of Mary Roff utilised the body of Lurancy Vennum and felt it as natural as if she had been born in it), the Platonist never obsessed her: he only used her as his amanuensis. Then, again, I have spoken of the part of the *Isis* writing that was done by H. P. B. *in propriâ personâ*, which was inferior to that done for her by the Somebodies. This is perfectly comprehensible, for how could H. P. B., who had had no previous knowledge of this sort, write correctly about the multifarious subjects treated in her book? In her (seemingly) normal state, she would read a book, mark the portions that struck her, write about them, make mistakes, correct them, discuss them with me, set me to writing, help my intuitions, get friends to supply materials, and go on thus as best she might, so long as there were none of the teachers within call of her psychic appeals. And they were not with us always, by any means. She did a vast deal of splendid writing, for she was endowed with marvellous natural literary capacity; she was never dull or uninteresting, and, as I have elsewhere noted, she was equally brilliant in three languages when the full power was upon her. She writes her Aunt that when her Master was busy elsewhere he left his substitute with her, and

Digitized by Google

then it was her " Luminous Self," her Augoeides, which thought and wrote for her (Cf. Theory 2). About this, I cannot venture an opinion, for I never observed her in this state : I only knew her in three capacities, *viz.*, her proper H. P. B. self ; with her body possessed or overshadowed by the Masters ; and as an amanuensis taking down from dictation. It may be that her Augoeides, taking possession of her physical brain, gave me the impression that it was one of the Masters that was at work : I cannot say. But what she omits telling her Aunt is that there were many, many times, when she was neither possessed, controlled nor dictated to by any superior intelligence, but was simply and palpably H. P. B., our familiar and beloved friend, latterly our teacher ; who was trying as well as she could to carry out the object of her literary mission. Yet, despite the mixed agencies at work in producing *Isis*, there is an expression of individuality running throughout it and her other works—something peculiar to herself. Epes Sargent and other American literati expressed to me their wonder at the grasp she showed of our language, and one gentleman went to the length of publishing the opinion that we had no living author who could excel her in writing English. This, of course, is vague exaggeration, but happily her style has been made the subject of a close comparison with those of others by a philologist of scientific training.

In his work on the *Origin, Progress, and Destiny of the English Language and Literature*, the learned author, Dr. John A. Weisse, publishes a number of analytical

Digitized by Google

tables which show the sources of the words used by English writers of renown. In the following excerpts will be seen the derivations of the English of *Isis Unveiled* in comparison with those of the words employed by some other authors. Dr. Weisse says the book is "a thesaurus of new phases and facts, so sprightfully related that even the uninitiated may read them with interest." Following is the analysis :

Which Author and Work Analysed.	Greco-Latin Words.	Gotho-German-ic Words	Celtic Words.	Semitic Words.
Robert Burton, A.D. 1621, *Anatomy of Melancholy*....	54	46	0	0
John Bunyan, 1682, *Pilgrim's Progress*.....	31	68	1	0
Sir Thomas Browne, 1682, *Hydriotaphia*	51	47	2	0
Sam. Johnson, 1784, (1780?) *Lives of the English Poets*.	47	51	2	0
R. C. Trench, *On the Study of Words*.....	30	68	2	0
George P. Marsh, *Lectures on the English Language*, p. 133	58	41	1	0
S. A. Allibone, 1872, *Crit. Dict. Eng. Literature, etc.*.	53	46	1	0
Darwin, *Origin of Species*...	53	46	1	0

It seems, therefore, that the English of Madame Blavatsky is practically identical with that of Dr. Samuel Johnson, which one might say is as nearly classically perfect as one could ask. The same test applied to her French writings would, doubtless, prove her to be as facile in the use of that beautiful language as the greatest of modern French authors.

CHAPTER XVI.

DEFINITION OF TERMS.

THEN how are we to regard the authorship of *Isis Unveiled*, and how H. P. B.? As to the former, it is unquestionably a collaborated work, the production of several distinct writers and not that of H. P. B. alone. My personal observations upon this point are fully borne out by what she herself admits in her explanatory letters to her family, as quoted by Mr. Sinnett, for she says that all the portions which deal with subjects previously unfamiliar to her were either dictated to her by some master or written by her higher self through the brain and hand of her physical body. The question is highly complex, and the exact truth will never be known as to the share which each of the participants had in it. The personality of H. P. B. was the mould in which all the matter was cast, and which, therefore, controlled its form, colouring, and expression, so to say, by its own idiosyncracies, mental as well as physical. For, just as the

Digitized by Google

successive occupiers of the H. P. B. body only modified its habitual handwriting, but did not write their own,* so in using the H. P. B. brain, they were forced to allow it to colour their thoughts and arrange their words after a fixed personal fashion peculiar to it. Like as the daylight passing through cathedral windows becomes coloured to the tints of the stained glass, so the thoughts transmitted by them through H. P. B.'s peculiar brain would have to be modified into the literary style and habits of expression to which it had been by her developed. And even common sense teaches us that the closer the natural identity between the possessing intelligence and the in-

* A very curious fact is to be noticed in this connection, viz., that the "Mahátmá M.'s" handwriting, which was so carefully scrutinised by the S. P. R., their experts and agents, and said to resemble that of H. P. B., was a coarse, rough script, something like a collection of chopped roots and brush-wood, while the handwriting of the same personage in the *Isis* MS. and in the notes he wrote me was totally different. It was a small, fine script, such as a lady might have written, and while generally resembling H. P. B.'s own handwriting, yet differing from it so as to present an appearance of distinct individuality, which enabled me to recognise it as that personage's MS. whenever I saw it. I do not pretend to account for this fact, I only state it as something which must be recorded. It should be considered hereafter by whatever psychological experimentalist may be studying the general phenomenon of psychic writing through mediums, or intermediaries of a similar kind, whether by precipitation, control of the hand, or occupancy of the body. I think that such an inquiry will result in proving that such writing, when as closely analysed as were the alleged Mahátmá's writings by the S. P. R., *always* resembles that of the intermediary to a greater or lesser extent, and without carrying the implication of bad faith on his or her part. Ignorance, or wilful disregard of this fact, caused the S. P. R.'s indictment against H. P. B. to lose almost all its point. The late W. Stainton Moses, M.A. (Oxon.), quotes in his work on *Psychography*, p. 125,

Digitized by Google

tellectual and moral personality controlled, the easier should be the control, the more fluent the composition, the less involved the style. In point of fact what I noticed was this, that at times when the physical H. P. B. was in a state of supreme irascibility, the body was rarely occupied save by the Master whose own pupil and spiritual ward she was, and whose iron will was even stronger than her own; the gentler philosophers keeping aloof. Naturally, I asked why a permanent control was not put upon her fiery temper, and why she should not always be modified into the quiet, self-centred sage that she became under certain obsessions. The answer was that

from a letter to him from Mr. W. H. Harrison, formerly editor of *The Spiritualist*, and a very experienced observer of psychical phenomena, the following remarks about the messages through Dr. Slade: "I noticed that they were nearly always in the handwriting of the medium; and this, which, to an ignorant person, would have been indicative of imposture, was in favour of the genuineness of the phenomena to an expert. On leaving the room after the séance, I had a short talk with Mr. Simmons, and without telling him what I knew, but merely to test his integrity, I asked whether the handwriting on the slates bore any resemblance to that of Dr. Slade. Without hesitation, he replied that there was usually a strong resemblance. This shows the truthfulness and absence of exaggeration incidental to the statements of Mr. Simmons." Mr. Harrison adds that "before Dr. Slade came to London, years of observation at numerous séances had proved to me that the materialised hands common at séances were most frequently the duplicates of those of the medium, and produced nearly the same handwriting." And yet, in the presence of Slade, and another psychic, named Watkins, alleged "spirit messages" were written in some twenty different languages, none of which were known to the mediums nor written by them in the usual way of writing, but all either by precipitation or the manipulation of a crumb of pencil or crayon laid on a slate, which their hands did not touch.

Digitized by Google

such a course would inevitably lead to her death from apoplexy; the body was vitalised by a fiery and imperious spirit, one which had from childhood brooked no restraint, and if vent were not allowed for the excessive corporeal energy, the result must be fatal. I was told to look into the history of her kinsfolk, the Russian Dolgoroukis, and I would understand what was meant. I did so and found that this princely and warlike family, tracing back to Rurik (ninth century A.D.), had been always distinguished by extreme courage, a daring equal to every emergency, a passionate love of personal independence, and a fearlessness of consequences in the carrying out of its wishes. Prince Yakob, a Senator of Peter the Great, was a type of the family character. Disliking an imperial ukase, he tore it to pieces in full council of the Senate, and when the Tsar threatened to kill him, he replied: "You have but to imitate Alexander, and you will find a Clitus in me." (*Am. Encyc.*, *VI.*, 551.) This was H. P. B.'s own character to the life, and she more than once told me that she would not be controlled by any power on earth or out of it. The only persons she actually reverenced were the Masters, yet even towards them, she was occasionally so combative that, as above said, in certain of her moods the gentler ones could not, or did not approach her. To get herself into the frame of mind when she could have open intercourse with them had—as she had pathetically assured me—cost her years of the most desperate self-restraint. I doubt if any person

Digitized by Google

had ever entered the Path against greater obstacles or with more self-suppression.

Of course, a brain so liable to disturbance was not the best adapted to the supremely delicate business of the mission she had taken upon herself; but the Masters told me it was far and away the best now available, and they must get all they could out of it. She was to them loyalty and devotion personified, and ready to dare and suffer all for the sake of the Cause. Gifted beyond all other persons of her generation with innate psychical powers, and fired with an enthusiasm that ran into fanaticism, she supplied the element of fixity of purpose, which, conjoined with a phenomenal degree of bodily endurance, made her a most powerful, if not a very docile and equable agent. With less turbulence of spirit she would, probably, have turned out less faulty literary work, but instead of lasting seventeen years under the strain, she would, doubtless, have faded out of the body ten years earlier and her later writings have been lost to the world.

The fact that the psychic's personality distinctly modifies the extraneous writing that is done through her agency or intermediation, gives us, it seems to me, a test by which to judge of the genuineness of any communications alleged to have come from Mahátmás "M." or "K. H." since H. P. B.'s death. While she was alive their communications always, wherever received or by whomsoever apparently written, resembled her own handwriting to some extent. This is as true of the

Digitized by Google

letters which I phenomenally received on a steamer on the high seas and in railway carriages, as of those which dropped out of space, or otherwise phenomenally reached the hands of Mr. Sinnett, Mr. Hume, and other favoured correspondents of our Eastern teachers. For, wherever she might be, she was the vortex-ring through which they had to work with us in the evolution of our galaxy out of the nebula of modern thought. It did not matter at all whether she were with them in Tibet, or with me in New York, or with Mr. Sinnett at Simla: their co-operative affinity was psychical, hence as unaffected as thought itself, by questions of time and space. We have seen in the phenomenon of letters which were arrested in postal transit, written in, and made to reach me at Philadelphia instead of New York, a striking illustration of this principle in psycho-dynamics (Cf. Chapter II.). Bearing this in mind, the important deduction follows that the probabilities are as an hundred to one that any written communication alleged to be from either of the Masters and received since H. P. B.'s death *is open to suspicion if the handwriting is the same as it used to be before that event.* * Grant the premise, and the conclusion is inevitable. If all Mahátmá MSS. in her time had to, and did, resemble in some degree her

* This Chapter was originally published in July, 1893. My deduction has been objected to by some for whose judgment I have great respect. It may be that I am wrong, but at least I can say that I have seen no proofs to the contrary, even up to the present time (August, 1895). The specimens of Mahátmá writing that have come to my notice since 1891 are, I fear, fraudulent imitations.

Digitized by Google

own handwriting because they were transmitted through her psychical agency, then, of course, none coming to us since May, 1891, should resemble it or would be at all likely to, her agency having ceased and her modifying action upon it having been destroyed. Such writings should now resemble the manuscript of the new agent or agents. Of course, I pre-suppose that the evidence for the genuineness of the writing is satisfactory, as it was in the case of H. P. B., whose transmitted communications were often done by precipitation in one's presence, or made to come inside sealed covers, *which she had not handled*, or dropped out of space before one's eyes, or were otherwise phenomenally produced. The precipitated writings of Slade, Watkins, and various other mediums come under the same category. Neither a resemblance of a Master's handwriting, nor the fact that there was more or less likeness to that of the supposed intermediary, would be the least evidence, *primâ facie*, of genuineness; quite the contrary. Unless every reasonable suspicion of bad faith had been eliminated, the mystical message would not be worth the paper it was written upon, nor the time required to read it. Even when the genuineness is beyond doubt, psychical messages are often commonplace and absolutely valueless, save as psychical facts. I, for one, can say that since 1853, when I first knew of these phenomena, I never attached the least importance to any psychical teaching on account of its reputed authorship, its only value being its subject-matter. I strongly advise all my readers

Digitized by Google

to follow the same rule if they would be on the safe side: better far an enlightened scepticism than the most lauded credulity. For remember that probably no one has ever received a line in English from a Master in his own normal handwriting and written by him in the usual way, unless possibly we except the note which K. H. formed in my own hand when he visited me in his physical body, one night in my tent at Lahore, in 1883. I should not care to dogmatise even about that, as I did not see him write it, and he may have created the letter then and there through the H. P. B. aura that went everywhere with me. Besides K. H. and the old Platonist above mentioned, none of the Masters had learnt to write English, and when they did write it, they had to resort to the same abnormal method as that used by H. P. B. at Benares to write the Hindî note, in Devanâgari characters, to Swami Dayánand Saraswati, above alluded to. In this connection the two completely dissimilar handwritings of Mahátmá M. in the *Isis* MSS. of 1875–7 and the Indian letters to sundry persons after 1879, must be kept in mind. When H. P. B. wrote to the Masters or they to her, on business that was not to be communicated to third parties, it was in an archaic language, said to be "Senzar," which resembles Tibetan, and which she wrote as fluently as she did Russian, French, or English. In fact, I have preserved a note I received from one of the Masters while in New York, along the top of which is written, in pure Tibetan characters in a sort of gold ink, the word "Sems *d*pa*h*." I had

Digitized by Google

shown it to no one all these years, until quite recently at Calcutta, when Pandit Sarat Chandra Das, C. I. E., the Tibetan explorer and scholar, translated it for me as meaning "Of powerful heart"—an honorific title given in Tibet to a Bodhisattva.

There was another and supreme reason why the Masters dare not control and compel H. P. B.'s innate character to be softened and refined into the higher ideal of a benevolent and gentle Sage independently of her own volition. To do so would have been an unlawful interference with her personal Karma—as I may now express it. Like every other human being, she represented, as she then was, a certain personal equation, the fruit of a certain evolutionary progress of her entity. It was its Karma to have been born this time in just such a tumultuous female body and to have the chances thus offered to gain spiritual progress by a life-long combat against its hereditary passions. To have interfered with that by benumbing the violent temper and suppressing the other personal defects of character, would have been a grievous wrong to her without hastening her evolution one whit: it would have been something like the keeping of a hypnotic sensitive perpetually under the hypnotiser's will, or an invalid permanently stupefied by a narcotic. There were intervals when her body was not occupied by the writing Mahátmás, nor her mind absorbed in taking down what was dictated to her: at least I assume it to be so, although I have sometimes been even tempted to suspect that none of us, her colleagues, ever knew the

Digitized by Google

normal H. P. B. at all, but that we just dealt with an artificially animated body, a sort of perpetual psychical mystery, from which the proper *jîva* was killed out at the battle of Mentana, when she received those five wounds and was picked out of a ditch for dead. There is nothing intrinsically impossible in this theory, since we have the historical fact that the normal personality of the girl Mary Reynolds was thrust aside or obliterated for the space of forty-two years, while her body was occupied, energised and controlled by another personality, which had no knowledge of the eighteen years' experiences and reminiscences of the normal self prior to this replacement. As regards H. P. B., I do not assert but only theorise, for I dare not say positively who this marvel of a woman, or, as M. de Buffon would have classified her, this *homo duplex*, was. She was such a bundle of contradictions, so utterly incapable of being classified like any of us common folk, that as a conscientious man I shrink from anything like dogmatic assertion. Whatever she may have said to myself or anybody else, counts with me for very, very little, for having lived and travelled with her so long, and been present at so very many of her interviews with third parties, I have heard her tell the most conflicting stories about herself. To have been open and communicative would have been to betray the residences and personalities of her Teachers to that multitude of self-seekers whose egotistic importunities have ever driven the would-be Yogi to the seclusion of the cave or forest. She chose as the easiest way out of

Digitized by Google

the difficulty to contradict herself and throw the minds of her friends into confusion. How easy it would have been for her, for example, to have told Mr. Sinnett that, when trying to enter Tibet in 1854, *vid* Bhutan or Nepál, she was turned back by Capt. (now Maj.-Genl.) Murray, the military commandant of that part of the frontier, and kept in his house in his wife's company a whole month. Yet she never did, nor did any of her friends ever hear of the circumstance until Mr. Edge and I got the story from Major-General Murray himself, on the 3rd March last, in the train between Nalhati and Calcutta, and I had printed it. So as to her age, she told all sorts of stories, making herself twenty, forty, even sixty and seventy years older than she really was. We have in our scrap-books certain of these tales, reported by successive interviewers and correspondents to their journals, after personal interviews with her, and on sundry occasions when I was present myself.* She said to me in excuse that the Somebodies inside her body at these various times were of these various ages, and hence no real falsehood was told, although the auditor saw only the H. P. B. shell and thought what was said referred only to that!

*Cf. an interviewer's report in the *Hartford Daily Times*, December 2, 1878. She had been making herself out a sort of Methusaleh, and the correspondent writes: "Very, very old? Impossible. And yet she declares it is so; sometimes indignantly, sometimes with a certain pride, sometimes with indifference or impatience. 'I came of a very long-lived race. All my people grow to be very old. . . . You doubt my age? I can show you my passports, my documents, my letters for years back. I can prove it by a thousand things.'" It

Digitized by Google

I have used the word "obsession" above, but am well aware of its wretched insufficiency in this case. Both "obsession" and "possession" have been made to signify the troubling of a living person by evil spirits or demons: an obsessed person is one vexed or besieged, a possessed person one who is possessed, controlled, overshadowed, or occupied by them. Yet what other term is available in English? Why did not the early Fathers invent a more decent word to signify the possession, control, occupancy, or overshadowing of a person by good spirits than that of "filling," or even let obsession and possession stand for that also? "And they were all *filled* with the Holy Ghost, and began to speak with other tongues, as the spirit gave them utterance." But this will not help us unless we ignore the circumstance that H. P. B.'s body became, at times, occupied by other entities—how far let the following anecdote suggest. She and I were in our literary workroom in New York one summer day after dinner. It was early twilight, and the gas had not been lighted. She sat over by the South front window, I stood on the rug before the mantle-piece, thinking. I heard her say

was a large way she had of knocking the numerals about! Like that of the Sikh Akali (*vide* Mr. Maclagan's Punjab Census Report of 1891) who "dreams of armies and thinks in lakhs;"—(a lakh is 100,000). "If he wishes to imply that five Akalis are present, he will say that five lakhs are before you."

The *Phrenological Journal* for March, 1878, contains her portrait and character-sketch. The writer says: "In the course of her long life—for she is upward of eighty years old—etc." I myself heard her tell this yarn to the writer of the article.

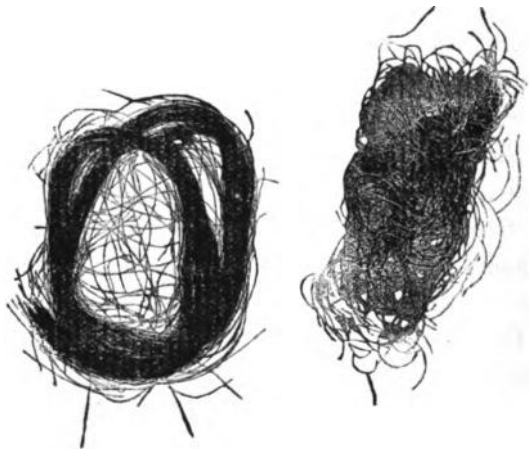
Digitized by Google

"Look and learn"; and glancing that way, saw a mist rising from her head and shoulders. Presently it defined itself into the likeness of one of the Mahátmás, the one who, later, gave me the historical turban, but the astral double of which he now wore on his mist-born head. Absorbed in watching the phenomenon, I stood silent and motionless. The shadowy shape only formed for itself the upper half of the torso, and then faded away and was gone; whether re-absorbed into H. P. B.'s body or not, I do not know. She sat statue-like for two or three minutes, after which she sighed, came to herself, and asked me if I had seen anything. When I asked her to explain the phenomenon she refused, saying that it was for me to develop my intuition so as to understand the phenomena of the world I lived in. All she could do was to help in showing me things and let me make what I could of them.

Numerous witnesses can testify to another phenomenon which may or may not go towards proving that other entities were sometimes occupying the H. P. B. body. On five different occasions—once to please Miss Emily Kislingbury, and once my sister, Mrs. Mitchell, I remember—she gathered up a lock of her fine, wavy auburn hair, and either pulled it out by the roots or cut it off with scissors, and gave it to one of us. But the lock would be *coarse, jet black, straight* and without the least curliness or waviness in it; in other words, Hindu or other Asiatic human hair, and not in the least like her own flossy, baby-like, light-brown locks. My Diary for

Digitized by Google

1878 shows that other two occasions were on July 9th, when she did the thing for Hon. J. L. O'Sullivan, ex-U. S. Minister to Portugal, and on November 19th, when she did it for Miss Rosa Bates in the presence of six other witnesses besides Miss Bates and H. P. B. and myself. The enemy may suggest that this was but a trick of simple



TWO LOCKS OF HAIR CUT BY AUTHOR FROM H. P. B.'S HEAD ON THE SAME EVENING.

"palming," but that is met by the statement that in the case of the lock given to Miss Kislingbury or my sister—I forget which—the recipient was allowed to take the scissors and cut out the lock herself. I have two locks taken from her head, both black as jet and far coarser than hers, but one distinctly coarser than the other. The former is Egyptian, and the latter Hindu hair.

Digitized by Google

What better explanation of this phenomenon is there than that of supposing that the men to whom these black locks had belonged were actually occupying the mâyâvic H. P. B. body when they were removed from the head? But to return to our philological difficulty.

The word *epistasis* will not do for us; for that means "inspection, superintendence, command, management," which does not cover the case. Epiphany is not much better, *epiphaneia* being a shining upon, manifestation, etc., etc. We have no word; yet one is greatly needed at this stage of our psychical research, and for it we must go to the East.

This occupancy by living persons of another living person's body, though so outside our Western experience that we have no word for it is, like all else in psychological science, known and defined in India. *A'ves'a* (pronounced Ahveysha) is the act of possessing, *i. e.*, entering and controlling, a human body belonging to a living being (*jîva*). It is of two kinds: when the Adept's own *ams'a* (*sûkshma s'arîra*), or astral body, is withdrawn from his own physical body and introduced into the other person's body, it is then called *svarûpâves'a;* but when by his mere *sankalpa* (will-power) he influences, broods over, or controls that other person's (*jîva*) body to do that which would otherwise be beyond its power, *e. g.*, to speak an unlearnt foreign tongue, to understand unfamiliar branches of knowledge, to instantly disappear from the sight of bystanders, to transform itself into a terrifying shape, as of a serpent or a ferocious animal,

Digitized by Google

etc., then the thing is called *saktyâves'a*. This gives us all we need, and so, as we took "Epiphany" from the Greek, why should we not all agree to adopt the easy word *A'ves'a* from the Sanskrit, since it is ready to our hand and means the very thing that we, toddling babes in the nursery of adeptship, must have to get on with in our studies? It applies only to the psychical commerce between two living persons or to the overshadowing and inspiration of a living person by a superior spiritual entity, and must not be degraded to signify the occupancy of a medium's body or its control for the production of phenomena, by a dead man's soul. That is called *grâhana*, and the elementary (dead man's soul) *grâham* (pronounced grah-hum). The same word is used to express the occupancy of a living body by an elemental, or Nature-spirit. Such occupancy may be (*a*) spontaneous, *i. e.*, effected by the attraction of the elemental towards a psychic; or (*b*) compulsory, *i. e.*, compelled by the will of a sorcerer or magician who has learnt the formulas for subjecting an elemental or elementary to his control. I got in Japan a photograph of a bronze group representing Ko-bo-dai-shi, the alleged Adept founder of the Shingon sect, with two little elementals crouched at his feet and awaiting his pleasure. A monk of the Yama-busi sect—that of the wonder-workers of Japan—gave me a scroll wall-painting of the Founder of his sect with attendant elemental servants. This picture now hangs in H. P. B.'s old room in London. She, herself, had also such servants obedient to her.

There is an old and amusing Indian story of how King Vikramádityá conquered the obstinacy of the Princess Pés'ámadandé who had made a vow to keep silent and marry nobody who could not compel her to answer his questions. The mighty king magician got astride his favourite elementary—not elemental—the Brahmarákshás Bhetála, and made him transport him into the very chamber of the lady. Finding that she would not answer him in the natural way, he made Bhetála obsess all her ladies-in-waiting and set them to praising him, telling him a story, and reproaching their mistress for her silence. Thereupon she sent them out of the room. The Princess then drew a curtain between herself and the king, but the spirit was made to enter the curtain and set it talking. The Princess pushed the curtain aside; whereupon her petticoat took up the conversation, and she cast that aside. Then the robe was made to speak, then the undergarment, then the four legs of her *charpai* or lounge; but the stubborn damsel held her tongue. Finally Bhetála was made to show (materialise) himself as a parrot, was caught by the Princess's order and given to her, and it straightway went on to tell a story about the Princess being obsesssed by S'ani, the god of Ill Luck. This was too much for her; she flung herself at Vikram's feet, confessed herself vanquished, and as he did not want her for wife, was given by him in marriage to a suitable Prince. The story is given in *Pés'ámadandé Kathai*, a Tamil story book.

The weighty subject of A'ves'a is treated of in the *Laghu Sabdârtha Sarvasva* of Mahámahopádhyáya Paravastu Vencatarungáchárya, Vol. I., p. 316, art. *Avatâra*. All intelligent Western readers of theosophical literature have heard of the Hindu theory of Avatárs—the Avatárs of Vishnu, the visible manifestations of the protecting care of God over erring mankind, the proofs of his desire to keep them walking in the path of religious aspiration. Avatâras are of two kinds: *Prâdurbhâva* and *A'ves'a*. The act of assuming a body which is not presided over, or rather animated by, a jîva, is called Prádurbháva, of which Râma and Krishna are cited as examples. What A'ves'a is, has been shown above. We find in *Pâncharâtra Pâdmasamhitâ Charyâpada*, Chapter XXIV., verses 131–140, full instructions for performing the A'ves'a:

"I now tell thee, O Lotus-born, the method by which to enter another's body (*Pindam*). . . . The corpse to be occupied should be fresh, pure, of middle age, endued with all good qualities and free from the awful diseases resulting from sin (*viz.*, syphilis, leprosy, etc.) The body should be that of a Brahmin or even of a Kshatriya. It should be laid out in some secluded place (where there is no risk of interruption during the ceremonial process), with its face turned towards the sky and its legs straightened out. Beside its legs, shouldst thou seat thyself in *Yogâsana* (a posture of yoga), but previously, O four-faced one, shouldst thou with fixed and mental concentration, have long exercised this yoga

Digitized by Google

power. The jîva is located in the *nâbhichakra* (solar plexus), is of itself radiant as the sun and of the form of hamsa (a bird)* and it moves along the Idâ and Pingala nâdis (two alleged channels of psychic circulation). Having been concentrated as hamsa (by yoga), it will pass out through the nostrils, and, like a bird, dart through space. Thou shouldst accustom thyself to this exercise, sending out the Prâna to the height of a palm-tree, and causing it to travel a mile, or five miles or more, and then re-attracting it into thy body, which it must re-enter as it left it, through the nostrils, and restore it to its natural centre in the nâbhichakra. This must be practised daily until perfection be reached."

Then, having acquired the requisite skill, the Yogi may attempt the experiment of psychical transfer and, seated as above described, he will be able to withdraw his *Prâna-jîva* from his own body, and introduce it into the chosen corpse, by the path of the nostrils, until it reaches the empty solar-plexus, there establishes its residence, reanimates the deceased person, and causes him to be seen as though "risen from the dead."

* Hamsa is "Soham" inverted, which means "That I am," referring to Parabrahm. Thus Parabrahm = Jîvâtma = Soham = Hamsa. But at the same time Hamsa being also the name of a divine bird supposed to possess the power of separating milk from water, it is made to esoterically represent A'tmâ. This is what is meant by the text "of the form of the bird Hamsa." Hamsa is that "silvery spark in the brain," that starry spark which is "not the soul, but the halo around the soul," so vividly described by Bulwer Lytton in the XXXI. chapter of *A Strange Story*.

The story of the resuscitation of the body of the deceased Rajah Amaraka of Amritapura by the Sage S'ankaráchárya, given by Mádhava, one of his biographers, has been very widely read. A *résumé* of it will be found in the article "Life of S'ankaráchárya, etc.," contributed by Mr. (later Justice) K. T. Telang, on page 69 of the number of the *Theosophist* for January, 1880. The Sage had pledged himself, if granted one month's respite, to answer questions propounded to him by the wife of Sage Mándana Misra upon the science of Love, with which he, a celibate from childhood, was totally unacquainted. Journeying with his disciples, he reached the vicinity of Amritapura and saw the Rajah's corpse lying at the foot of a tree, surrounded by mourners. This was his chance to acquire the desired knowledge practically, so leaving his body to the care of his disciples, he withdrew from it his *prána-jíva*, entered the body of the King, and amid the tumultuous joy of his subjects over the supposed resuscitation, went to the capital and for some months lived the usual Zenana life of a sovereign ruler, and finally answered the questions about love.* The details need not be given here, my object being merely to use the incident in connection with the problem of H. P. B., as an illustration of the recognised power of A'ves'a possessed by a Yogi. Mádhaváchárya's *S'ankaravijdya* thus describes it :

"Withdrawing the (Prána) *Vdyu* from the extremities of the toes and emerging through the *brahmarándhra*, the

* *Vide* "Káma Sutra."

Digitized by Google

knower of Yoga (S'ankara) entered, and, by slow degrees, occupied the whole body of the dead (King) down to its very feet."

By an interesting coincidence, I had just read this passage when a certain circumstance flashed into my memory, and I turned over my old New York files of letters and memoranda until I had found the following. It occurs in some notes I made at the time, of a conversation between myself and one of the Mahátmás, a Hungarian by birth, who, on that evening, occupied H. P. B.'s body:

"He shades his eyes and turns down the gas in the standing burner on the table. Ask him why. Says that light is a physical force, and entering the eye of an unoccupied body, encounters—*i. e.*, strikes against, the astral soul of the temporary occupant, gives it a shock and such a push that the occupant might be pushed out. Paralysis of the occupied body is even possible. Extreme caution must be used in entering a body, and one cannot thoroughly fit oneself to it throughout until the automatic movements of the circulation, breathing, etc., adjust themselves to the automatism of the occupier's own body—with which, however far distant, his projected astral body is most intimately related. I then lit a burner of the chandelier overhead, but the occupier at once held a newspaper so as to shade the crown of the head from the light. Surprised, I asked for an explanation, and was told that it was even more dangerous to have a strong top light strike upon the crown of the head than to have light shine into the eyes."

Digitized by Google

I knew nothing then about the six vital centres (*shat chakramas*) of the body; nor was I aware that the most important of them, the *brahmarândhra*, was under the parietal bones; nor that it is the custom in India to break the skull of the burning corpse at that place to facilitate the withdrawal of the astral body of the deceased: moreover, I had not then read the story of S'ankarâchârya's leaving his own body and entering that of the deceased Rajah by that path of the soul. I simply saw what the Mahâtmâ did, and wondered over his explanation; but now, in the fulness of time, the mystery is cleared up and the cases of New York and Amritapura are mutually related. By the light of the latter and the teachings of Aryan occult science, one can more readily comprehend the mystery of the former. Whereas before all was dark, and we had not even a name at our disposal to explain the fact, we can now see that it is possible for any one versed in Yoga to occupy the body of another living person, when the astral body of its owner has been withdrawn and the empty house is placed at the disposal of visiting friends. The bearing which this matter has upon the problem of H. P. B. is most evident; as I shall try to show in the next chapter.

CHAPTER XVII.

RE-INCARNATION.

THE first effect of proving the collaborate nature of *Isis Unveiled*, is to confirm our critical view of its registered author: she remains a mental prodigy, yet drops out of the literary class which includes such giants of acquired knowledge as Aristotle, Longinus, Buddaghosha, Hiouen Thsang, Alberuni, Mádhaváchárya, Nasireddin—the Persian philosopher and cyclopædist—and in modern times, Leibnitz, Voltaire, Spencer, etc. The justness of her self-estimate is shown, and, without, ranking as erudite, she becomes an almost unique problem among Western people. If the theory of Bacon's authorship of Shakespeare's plays be disproved, then Shakespeare's production of them, when his vagabond disposition and commonplace character are taken into account, rather supports than contradicts the theory that, like H. P. B., he was but an agent of greater, unseen, living intellects, who controlled his body and used it to write things far beyond his normal capacity. The comparison is to his advantage, because we find in his works

Digitized by Google

a far deeper aquaintance with human nature and wider grasp of intuitive knowledge than in hers. His natural mind (or that which was drawn from) seems to have contained from the beginning all that he would ever be obliged to utilise; whereas she appears to have been the subject of a distinct mental evolution. Take, for instance, her teachings on Re-incarnation, the strong foundation-stone of the ancient occult philosophy, which was affirmed in the *Secret Doctrine* and her other later writings. When we worked on *Isis* it was neither taught us by the Mahátmás, nor supported by her in literary controversies or private discussions of those earlier days. She held to, and defended, the theory that human souls, after death, passed on by a course of purificatory evolution to other and more spiritualised planets. I have notes of a conversation between a Mahátmá and myself in which this same theory is affirmed. And this puzzles me most of all; for, while it is quite conceivable that, either through imperfect cerebro-psychic training, or otherwise, she, the pupil and psychic agent, might not have known the solid philosophical basis of the Re-incarnation theory, I can scarcely see how the like ignorance could extend to the Adept and Teacher. Is it possible that Re-incarnation was not taught this Adept by *his* Master, and that he, as well as H. P. B., had to learn it subsequently? There are said to be sixty-three stages of Adeptship, and it is not impossible. There are, among them, I was told, men who are great natural psychics yet almost illiterate; and at least one who, like Buddha's

Digitized by Google

favourite, Ananda, possesses no *Siddhis*, yet is so intuitional as to be able to understand all esoteric writings at sight. My notes report the Teacher as telling me that "Souls go hence after death to other planets. Souls that are to be born on this Earth are waiting in other invisible planets." These two statements agree with the latest teachings of H. P. B., the planets in question at either end of the soul's earthly habitation being members of our "chain of globes." But there is left a vast hiatus between the two extremes, that we now understand to be filled with the multitudinous evolutionary re-births of the travelling entity. Let the note stand as it is, but H. P. B., in *Isis* (Vol. I., p. 351) says most unequivocally.

"We will now present a few fragments of this mysterious doctrine of Re-incarnation—as distinct from transmigration—*which we have from an authority*. Re-incarnation, *i. e.*, the appearance of the same individual, or rather of his astral monad, twice on the same planet, *is not a rule in nature; it is an exception*, like the teratological phenomenon of a two-headed infant."

The cause of it, when it does occur is, she says, that the design of nature to produce a perfect human being has been interfered with, and therefore she must make another attempt. Such exceptional interferences, H. P. B. explains, are the cases of abortion, of infants dying before a certain age, and of congenital and incurable idiocy. In such cases, the higher principles have not been able to unite themselves with the lower, and hence a perfect being has not been born. But—

Digitized by Google

"If reason has been so far developed as to become active and discriminative, *there is no Re-incarnation on this Earth*, for the three parts of the triune man have been united together, and he is capable of running the race. But when the new being has not passed beyond the condition of monad, or when, as in the idiot, the trinity has not been completed, the immortal spark which illuminates it has to re-enter on the earthly plane, as it was frustrated in its first attempt. Otherwise, the mortal or astral, and the immortal, or divine, souls could not progress in unison and pass onward to *the sphere above*."

The italics are mine, and thus I was taught. My present belief is that of the Hindus and Buddhists. She told Mr. Walter R. Old—who is my informant—that she was not taught the doctrine of Re-incarnation until 1879—when we were in India. I willingly accept that statement, both because it tallies with our beliefs and writings in New York, and, because, if she knew it when we were writing *Isis*, there was no earthly reason why she should have misled me or others, even if she had so desired, which I do not believe.

She and I believed, and taught orally as well as wrote that man is a trinity of physical body, astral body (soul—the Greek *psuché*), and divine spirit. This will be found set forth in the first official communication made by us to the European reading public. It was an article entitled "The Views of the Theosophists," and appeared in the *Spiritualist* for December 7, 1877. In it, speaking for our whole party, I say :

Digitized by Google

"We believe that the man of flesh dies, decays, and goes to the crucible of evolution, to be worked over and over again; that the astral man (or *double*, or soul), freed from physical imprisonment, is followed by the consequences of his earthly deeds, thoughts and desires. He either becomes purged of the last traces of earthly grossness, and, finally, after an incalculable lapse of time, is joined to his divine spirit, and lives forever as an entity, or, having been completely debased on earth, he sinks deeper into matter and is annihilated."

I go on to say that "the man of pure life and spirituality of aspiration would be drawn towards a more spiritual realm than this earth of ours and repelled by its influence"; while, on the other hand, the vicious and thoroughly depraved person would have lost his spirit during life, be reduced to a duality instead of a trinity at the hour of death, and, upon passing out of the physical body, become disintegrated; its grosser matter going into the ground and its finer turning into a *bhût*, or "elementary," "wandering in and about the habitations of men, obsessing sensitives to glut vicariously its depraved appetites, until its life is burnt out by their very intensity and dissolution comes to crown the dreadful career."

This was the sum and substance of our teaching at that time about the nature and destiny of man, and shows how infinitely far away from believing in Re-incarnation H. P. B. and I were then. If any one should be disposed to say that this letter of mine in the *Spiritualist* represents only my personal views, and that neither the

Digitized by Google

Masters nor H. P. B. are responsible for my crudities, I shall just refer them to the issue of the *Spiritualist* for February 8, 1878,* where appears a letter from H. P. B. herself upon the general subject of my letter; which had aroused a most animated discussion between the chief exponents of British Spiritualism on the one side, and C. C. Massey, John Storer Cobb, Prof. Alex. Wilder, Miss Kislingbury, Dr. C. Carter Blake, Gerald Massey and myself, on the other, and been called by M. A. (Oxon.) "a Theosophical rock hurled by the vigorous arm of the P. T. S. and creating a huge splash" in the unhealthy pool of trans-Atlantic Spiritualism. H. P. B.'s clarion, as usual, waked the echoes. She calls herself "the unattractive old party *superficially known* as H. P. Blavatsky"—a most significant phrase; says that "the Colonel corresponds directly with Hindu scholars, and has from them a good deal more than he can get from so clumsy a preceptor as myself;" and that she thinks I have "thrown out some hints worthy of the thoughtful consideration of the unprejudiced." A second letter from me in answer to M. A. (Oxon.) appeared in February, and a very long, very powerful, and very explicit one from H. P. B., of date N. Y., January 14, 1878, *did* appear in the *Spiritualist* of February 8, of the same year. This whole letter is well worth reading. In it she says, *à propos* of the necessity that an Ego which has failed to unite itself with the physico-psychical duality of

* Apparently the wrong date has been pasted above the cutting in our scrap-book. I think it must have been February 1.

Digitized by Google

a child who prematurely dies, should re-incarnate—"Man's cycle is not complete until he becomes individually immortal. No one stage of probation and experience can be skipped over. He must be a man before he can become a spirit. A dead child is a failure of nature —he must live again ; and the same *psuché* re-enters the physical plane through another birth. *Such cases, together with those of congenital idiots are, as stated in "Isis Unveiled," the only instances of human re-incarnation.*" Can anything be plainer?

Our party left New York for India on Dec. 17, 1878, and a few days previously H. P. B. wrote to the *Revue Spirite*, of Paris, an article which appeared in that magazine, Jan. 1, 1879 ; it was in answer to sundry critics. She now describes man as four-principled, a "tetraktis" or quaternary. I translate :

"Yes, 'for the Theosophists of New York, man is a trinity, and not a duality.' He is, however, more than that : for, by adding the physical body, man is a *Tetraktis*, or quaternary. But, however supported in this particular doctrine we may be by the greatest philosophers of ancient Greece, it is neither to Pythagoras, to Plato, nor, furthermore, to the celebrated *Theodidaktoi* of the school of Alexandria, that we owe it. We shall speak further on of our Masters."

After citing passages from various ancient authorities in support of the views presented, she says : "our Masters [meaning those from whom we learnt the doctrine] are Patanjali, Kapila, Kanada, all the systems and

Digitized by Google

schools of A'ryavârta which served as inexhaustible mines for the Greek philosophers, from Pythagoras to Plato." Not all the Indian schools, certainly, for among them the old sects of Charvakas and Brihâspatis denied the survival of man after death, and were almost exact prototypes of our modern Materialists. It is also to be noted that Patanjali, Kapila, and the other Masters she names, taught that Re-incarnation is the rule in Nature, while she and I declared it to be the exception.

Ultimately, the doctrine of Re-incarnation was fully accepted and expounded, both in its exoteric sense and esoterically. Not publicly taught so early as 1879, however, for it is not to be found in the first two volumes of the *Theosophist*, but only appears in the third, and then in connection with the *Fragments of Occult Truth*, a series of essays, chiefly by Mr. A. P. Sinnett, and based upon instructions given him by the Masters and by H. P. B. In its plain exoteric, or orthodox form, I had got it in Ceylon and embodied it in the *Buddhist Catechism*, of which the first edition, after passing through the ordeal of critical examination by the High Priest Sumángala Thero, appeared in July, 1881. The *Catechism*, of course, was only a synopsis of the doctrines of Southern Buddhism, not a proclamation of personal beliefs. The exposition of the Re-incarnation theory was rather meagre in the first edition; but it was given at much greater length in the revised edition of 1882, where I defined the relation of the re-incarnated being of this birth to that of the preceding ones, and answered the question why we have no memory of experiences in

Digitized by Google

prior incarnations. A conversation with Sumángala Thero upon the morality of the theory of Karma, led me to frame the note defining the difference between Personality and Individuality, between physical memory, or the recollection of things which pertain to the ordinary waking consciousness, and spiritual memory, which has to do with the experiences of the Higher Self and its Individuality. The distinction had not previously been made, but it was at once accepted and has been propagated by all our chief Theosophical writers since that time. H. P. B. adopted it, and has introduced it in her *Key to Theosophy* (pp. 134 and 130), with enlargements and illustrations. These are historical facts, and their bearing upon the present discussion is evident.

H. P. B.'s first published declaration that Re-incarnation was an element in Theosophical belief occurs in the leading article of the first number ever issued of the *Theosophist* (*What is Theosophy?* Vol. I., p. 3, October, 1879). It was but a bare allusion to the subject and nothing more.

"Theosophy," she says, "believes also in *Anastasis*, or continued existence, and in transmigration (evolution), or a series of changes in the soul, which can be defended and explained on strict philosophical principles; and only by making a distinction between *Paramátmá* (transcendental, supreme soul) and *Jívátmá* (animal, or conscious soul), of the Vedântins."* This is

* *Anastasis* does not mean Re-incarnation, but a raising from the dead of the same person; and *Jívátmá* is not the animal soul—as even all younger Theosophists are aware.

Digitized by Google

extremely vague, and does little towards solving the difficulty. In a foot-note to this passage, however, she promises a series of articles on *The World's Great Theosophists*, in which, says she, "we intend showing that from Pythagoras, who got his wisdom in India, down to our best known modern philosophers and Theosophists —David Hume and Shelley, the English poet, and the spiritists of France, included—many believed and yet believe in metempsychosis, or Re-incarnation of the soul, etc." But she does not clearly say what is her own belief. The promised series of articles most unfortunately never appeared, though it may have been the germ of her idea to devote one of the new volumes of *The Secret Doctrine* to an account of the Great Adepts.

Mr. Sinnett's famous series of essays entitled *Fragments of Occult Truth* was begun by H. P. B. in No. 1, of Vol. III., of the *Theosophist*, as an answer to Mr. Terry, of Melbourne, who had taken exception to the anti-spiritualistic views of Theosophists. In the first *Fragment*, she reiterates the teaching of New York, that the soul at death passes into another world, "the so-called world of effects (in reality, a state and not a place), and there, purified of much of its material taints, evolves out of itself a new Ego, to be re-born (after a brief period of freedom and enjoyment) *in the next higher world of causes, an objective world similar to this present globe of ours*, but higher in the spiritual scale, where matter and material tendencies play a far less

Digitized by Google

important part than here." Re-incarnation is herein postulated, but not on this globe nor by the same Ego, but by another one which generates out of our present one in an interplanetary state. In *Fragment No. 3* (*Theosophist* for Sept., 1882), the new Ego is said after passing its normal time—according to its merit, which agrees with the doctrine taught by S'rî Krishna, in the *Bhagavadgîta*—in a state of felicity (Devachan) either to pass on to the "next superior planet," or return for re-birth on this globe "if it has not completed its appointed tale of earth-lives." Previously to this there had been nothing published about an appointed number of Re-incarnations, either on this globe or others, but only the outlines sketched of a psychic pilgrimage, or evolutionary progress from star to star, of a Divine Self which clothed itself with a new soul-body in each palingenesis.

In 1880, we two visited Simla, and Mr. A. O. Hume enjoyed the good fortune, which had previously fallen to Mr. Sinnett's lot, of getting into correspondence with our Mahátmás. H. P. B. revisited Simla without me in 1881, and the two friends above-named received in due time from the Masters the Re-incarnation theory. Mr. Sinnett expounded it in *Fragment No. 4* (*Theosophist*, Vol. IV., No. 1, October, 1882), where he laid the basis of the doctrine of terrestrial Re-incarnations in a series of major and minor, or root and sub-races, and the extension of the process to the other planets of a chain to which the Earth belongs. Mr. Hume did the same in

Digitized by Google

his *Hints on Esoteric Theosophy* (Calcutta, August, 1882), where he synthetically says that "man has many complete rounds to make of the entire cycle (chain, he means) of the planets. And in each planet, in each round, he has many lives to live. At a certain stage of his evolution, when certain portions of his less material elements are fully developed, he becomes morally responsible." (Op. cit., p. 52.)

Thus, six years after the date of my New York conversation with the Mahátmá, the fundamental and necessary idea of Re-incarnation was launched on the sea of modern Western thought from the congenial land of its primeval birth.

I have been obliged to trace its evolution within our lines at the risk of a small digression, as it was necessary for the future welfare of the Society to show the apparent baselessness of the theory that our present grand block of teaching had been in H. P. B.'s possession from the beginning. That theory I consider pernicious and without foundation. If I am wrong, I shall be most happy to be corrected. To admit it would involve the necessity of conceding that she had knowingly and wilfully lent herself to deception and the teaching of untruth in *Isis*, and later. I believe that she wrote then as she did later, exactly according to her lights, and that she was just as sincere in denying Re-incarnation in 1876-'78 as she was in affirming it after 1882. Why she and I were permitted to put the mis-statement into *Isis*, and, especially, why it was made to me by the Mahátmá,

Digitized by Google

I cannot explain, unless I was the victim of glamour in believing that I talked with a Master on the evening in question. So let it pass. The Masters could give H. P. B. whatever they chose by dictation, they could write it themselves with her hand by occupying her physical body, and they could enable me to write by giving me hints and outlines and then helping my intuitions. Yet, notwithstanding all this, they certainly did not teach us what we now accept as the truth about Re-incarnation; nor bid us keep silent about it; nor resort to any vague generalities capable of being now twisted into an apparent agreement with our present views; nor interpose to prevent us from writing and teaching the heretical and unscientific idea that, save in certain few cases, the human entity was not, and could not, be re-incarnated on one and the same planet.*

To return to the matter of the occupancy (*dves'a*) of H. P. B.'s body. There was one collateral proof continually thrusting itself upon one's notice, if one but paid attention to it. Let us say that the Master A or B had been "on guard" an hour or more, had been working on *Isis*, alone or jointly with me, and was at a given moment saying something to me or, if third parties were present, to one of them. Suddenly she (he?) stops speaking, rises and leaves the room, excusing herself for

* Some valued friends have tried to persuade me to omit all the foregoing argument about the genesis of the Re-incarnation idea within our movement, but I cannot see it as my duty to do so. I will no more suppress important facts than I will make false statements.

a moment on some pretext to strangers. She presently returns, looks around as any new arrival would upon entering a room where there was company, makes herself a fresh cigarette, and says something which has not the least reference to what had been talked about when she left the room. Some one present, wishing to keep her to the point, asks her kindly to explain. She shows embarrassment and inability to pick up the thread ; perhaps expresses an opinion flatly contradicting what she had just affirmed, and when taken to task, becomes vexed and says strong things ; or, when told that she had said so-and-so, appears to take an introspective glance and says, "Oh yes: excuse me," and goes on with her subject. She was sometimes as quick as lightning in these changes, and I myself, forgetting her multiplex personality, have often been very irritated for her seeming inability to keep to the same opinion, and her bold denial that she had not said what she had certainly said plainly enough, the moment before. In due time, it was explained to me that it takes time, after entering another's living body, to link on one's own consciousness with the brain memory of the preceding occupier, and that if one tries to continue a conversation before this adjustment is complete, just such mistakes as the above may occur. This accords with what the Mahátmá told me in New York about occupancy, and with the description of the way in which, we were told in *Shankaravijâya*,* Shankara

* In a recent Calcutta lecture on "The Kinship between Hinduism and Buddhism" I show that the best Orientalists regard *Shanka-*

entered the defunct Rajah Amaraká's body: "entered and *by slow degrees occupied* the whole body of the dead down to its very feet." The explanation of the gradual blending of the two *jívas* in one steady heart and other bodily automatism (Cf. XVI.) extends to the matter of the two consciousnesses, and until this is perfected, there must be just such a confusion of ideas, assertions, and recollections as I have above described, and as the majority of H. P. B.'s visitors must have been puzzled by. Sometimes, when we were alone, has either the departing Somebody said: "I must put this into the brain so that my successor may find it there," or the incoming Somebody after greeting me with a friendly word, asked me what was the subject of discussion before the "change."

I have noted above how various Mahátmás, in writing to me about H. P. B. and her body, spoke of the latter as a shell occupied by one of themselves. In my Diary of 1878, I find entered under date of October 12, and in the H. P. B. manuscript of Mahátmá "M," the following: "H. P. B. talked with W. alone until 2 after midnight. He confessed he saw *three* DISTINCT individualities in her. He *knows* it. Does not wish to say so to Olcott for fear H. S. O. will make fun of him! ! !" The underscorings and points of exclamation are copied literally. The "W." mentioned was Mr. Wimbridge, who was then our guest. To account for an entry made

ravijdya as an old spurious work. I quote it now merely for the sake of the description of the *dves'a* process.

by another person in my private Diary, I must explain that when I left New York on professional business, which I had to do several times in that year, the daily record was written up by "H. P. B.," the noun of multitude. In the entry of the following day (Oct. 13) the same hand, after specifying the seven visitors who called that evening, writes of one of them: "Dr. Pike, looking at H. P. B. several times, started and said that no one in the world impressed him so much. Once he sees in H. P. B. a girl of 16, at another an old woman of 100, and again a man with a beard! !" On Oct. 22, the same hand writes: "H. P. B. left them [our visitors of that evening] in the dining-room and retired with H. S. O. to the library to write letters. N—— [a certain Mahátmá] left watch and in came S—— [another adept]; the latter with orders from ∴ to complete all by the first day of December" [for our departure for India]. On November 9, in another modified H. P. B. script, is written: "Body sick and no hot-water to bathe it. Nice caboose." November 12, in the "M" script: "H. P. B. played a trick on me by suddenly *fainting*, to the great dismay of Bates and Wim. Used the greatest will-power to put up the body on its legs." November 14, in same handwriting: "N—— decamped and M. walked in [from and into the H. P. B. body is meant]. Came with definite orders from ∴. *Have to go* at the latest from 15 to 20 Dec. [to India]." November 29, another Mahátmá writes that he had "answered the Russian Aunt"—*i. e.*, the beloved aunt of H. P. B.

Digitized by Google

Finally, not to dwell upon one subject too long, on Nov. 30, a third Mahátmá writes: "Belle Mitchell came at 12 and took away the S—— [Mahátmá M.] for a walk and drive. Went to Macy's. Had to materialise rupees. H. P. B. came home at 4, etc." I have also various letters from the Mahátmás alluding to H. P. B. in her own individual capacity, sometimes speaking very frankly about her peculiarities, good and bad, and was once sent, by the Masters, *with written instructions*, on a confidential mission to another city to bring about certain events necessary for her spiritual evolution. I have the document still. One quite long letter that I received in 1879, while in Rajputana, most strangely alters her sex, speaks of her in the male gender, and confounds her with Mahátmá M.—known as our Guru. It says—about a first draft of the letter itself which had been written but not sent me: "Owing to certain expressions therein, the letter was stopped on its way by order of our Brother H. P. B. As you are not under my direct guidance but his (hers), we have naught to say, either of us; etc." And again: "Our Brother H. P. B. rightly remarked at Jeypore that, etc." It is a noble communication throughout, and if it were pertinent to our present theme, I should feel tempted to publish it, so as to show the high quality of the correspondence that for years went on between my blessed Teachers and myself. It was in this particular letter that I was told, in answer to my expressed desire to retire from the world and go and live with them, that, "The only means available and

Digitized by Google

at hand for you to reach us, is *through the Theosophical Society*," which I was abjured to consolidate, push forward and build up; I must learn to be unselfish. My correspondent adds: "None of us live for ourselves, we all live for humanity." This was the spirit of all my instructions, this is the idea inculcated throughout *Isis Unveiled*. Let the literary faults of that book be what they may; let its author be charged with plagiarism or not; the sum and substance of its argument is that man is of a complex nature, animal at one extreme, divine at the other; and that the only real and perfect existence, the only one that is free from illusions, pain and sorrow, because in it, their cause—Ignorance—does not exist, is that of the spirit, the Highest Self. The book incites to pure and high living, to expansion of mind and universality of tenderness and sympathy; it shows there is a Path upwards, and that it is accessible to the wise who are brave; it traces all modern knowledge and speculation to archaic sources; and, affirming the past and present existence of Adepts and of occult science, affords us a stimulus to work and an ideal to work up to.

Upon its appearance the book made such a sensation that the first edition was exhausted within ten days.*

* The *American Bookseller* (October, 1877), says: "The sale . . . is unprecedented for a work of its kind, the entire edition having been exhausted within ten days of the date of publication. In 1783, Godfrey Higgins published his *Anacalypsis*, a work of similar character, and although only 200 copies were printed, at the death of the author, a number of years after, many copies remained unsold, and were disposed of in bulk by his executors to a London bookseller. The work is now exceedingly rare and readily brings $100 per

Digitized by Google

The critics, on the whole, dealt kindly with it. Dr. Shelton Mackenzie, one of the most capable ones of the day, writes that "it is one of the most remarkable works for originality of thought, thoroughness of research, depth of philosophic exposition, and variety and extent of learning that has appeared for very many years" (*Phila. Press*, October 9, 1887). The literary critic of the *N. Y. Herald* (Sep. 30, 1877), says that independent minds "will welcome the new publication as a most valuable contribution to philosophical literature," and that it "will supplement the *Anacalypsis* of Godfrey Higgins. There is a great resemblance between the works. . . . With its striking peculiarities, its audacity, its versatility and the prodigious variety of subjects which it notices and handles, it is one of the remarkable productions of the century." Dr. G. Bloede, an erudite German scholar, says that, "under all considerations, it will range among the most important contributions to the literature of the modern science of the spirit, and be worth the attention of every thinking student of this."

copy. The world has grown older since the days of Higgins, and Madame Blavatsky's book is of greater interest; but still the demand for it is quite remarkable, and far beyond the expectations of its publishers." Perfectly true; and so surprised and pleased was Mr. Bouton, that on Sunday, Feb. 10, 1878, in my presence, he offered her $5,000 as copyright on an edition of a book in one volume, if she would write it, which should a little more unveil *Isis*. He intended to print only 100 copies and make the price $100 per copy. Though she needed money badly enough, she refused the offer on the ground that she was not permitted at that time to divulge any more arcane secrets than she had done in *Isis*. Mr. Bouton is still living and can corroborate this statement.

Digitized by Google

Some of the notices were flippant and prejudiced enough to make it clear that the critics had not read the book. For instance, the *Springfield Republican* said it was "a large dish of hash"; The *N. Y. Sun* classifies it with the similar works of past times as "discarded rubbish"; the Editor of the *N. Y. Times* wrote to Mr. Bouton that he was sorry they could not touch *Isis Unveiled*, as they "have a holy horror of Mme. Blavatsky and her letters"; the *N. Y. Tribune* says her learning is "crude and undigested" and "her incoherent account of Brahmanism and Buddhism, suggests a hint of the presumption rather than the information of the writer." And so on and so forth. The weighty fact, however, is that the book has become a classic—as Mr. Quaritch prophesied to Mr. Bouton that it would;* has gone through a number of editions; and now, after the lapse of seventeen years, is in demand all over the world. When it was ready for publication I, of course, did what I could to bring it to the notice of my personal acquaintance; and I remember shortly afterwards meeting one of them—a leading legal functionary—in the street, and having him shake his fist at me in a friendly way, and say, "I have a crow to pick with you." "And why?" I asked. "Why? Because you made me buy *Isis Un-*

* Mr. Quaritch writes to Mr. Bouton from London, December 27, 1877, in a letter which the latter kindly gave us as an encouraging forecast: "The book will evidently make its way in England and become a classic. I am very glad to be the English agent." And, I may add, we were more glad that he should be; knowing his reputation for indomitable energy and high-mindedness.

veiled, and I found it so fascinating that my law cases are getting into arrears, and I have been sitting up nearly the whole of the past two nights to read it. Not only that, but she makes me feel what a lot of commonplace men we are in comparison with those Eastern mystics and philosophers she writes so charmingly about." The first money received for a copy of *Isis* was sent me by a lady of Styria with her order ; we kept it " for luck," and it now hangs, framed, on the walls of the *Theosophist* office at Adyar.

The truest thing ever said about *Isis* was the expression of an American author that it is " a book with a revolution in it."

CHAPTER XVIII.

EARLY DAYS OF THE SOCIETY.

AMONG the public events which contributed to give notoriety to our Society in its early days, was the rescue of a party of pauper Arabs from threatened starvation, and their shipment to Tunis. It was theosophical only in the limited sense of being humanitarian, hence an act of altruism ; and all altruistic endeavours are essentially theosophical. Moreover, in this case, the element of religion was a factor. The story, in brief, is as follows :

One Sunday morning, in July, 1876, H. P. B. and I, being alone in the "Lamasery," read in the morning papers that a party of nine ship-wrecked Mussulman Arabs had been landed from the schooner *Kate Foster*, just arrived from Trinidad. They were penniless and friendless, could not speak a word of English, and had wandered about the streets for two days without food, until the secretary of the Turkish Consul gave them some loaves of bread, and, by order of His Honor the Mayor of New York, temporary shelter had been given

Digitized by Google

them at Bellevue Hospital. Unfortunately for them, certain New Regulations about emigrants had been adopted in the March preceding by the Commissioners of Public Charities and the Emigration Board, which made both those public bodies powerless to deal with cases like the present. The papers stated that the Arabs had brought no documents with them to prove their nationality, and thereby fix upon some foreign Consul the responsibility for their custody and relief; in vain they had been taken to the consuls of Turkey and France; and, unless private relief were forthcoming, a bitter prospect was before them. How well I remember the scene when we had read the narrative! H. P. B. and I stood shoulder-to-shoulder, looking out of the south front window, each deploring the lot of the poor cast-aways. The fact which appealed strongest to our feelings was that they were Mussulmans—Heathen, whose religion placed them outside the bounds of ready sympathy in a community of Christians, who, to say nothing about popular prejudice, had too frequent appeals to relieve the wants of their co-religionists. These unfortunates had a right, then, to the kind offices of fellow Heathen like ourselves, and then and there it was decided that I should go to work. The result was that I succeeded, under the favour of the Mayor of New York, in collecting some $2000, with which their necessities were supplied, and they were sent to Tunis under charge of a member of our Society. All the details will be found in the *Theosophist* for September, 1893.

Digitized by Google

As said in a previous chapter, among the most delightful reminiscences of those early theosophic years is our correspondence with thoughtful, cultured persons of both sexes, of whom two are most lovingly remembered. They are Charles Carleton Massey and William Stainton Moseyn (or, as corrupted, Moses). The general topic of our correspondence was mentioned above (Cf. Chapter IV.), and the names of these two loyal friends can never pass out of my memory. We, of course, represented the conservative party of Oriental Occultism; Stainton Moseyn (Moses) was a progressive, truth-seeking, highly-educated Spiritualist, taking him all-in-all the ablest man among them; and Massey was between the two extremes, a candid and convinced investigator of the phenomena, with a deeply metaphysical mental bias, ready to meet half-way any new facts or ideas we might put forward. The interchange of letters—some so long as to be rather essays—continued between us four during several years, and our discussions covered a very wide range of interesting, important, even vital questions relating to psychological subjects. The one most thoroughly threshed out was, I fancy, that of the Elemental Spirits, their place in nature, and their relations with humanity. I had lightly touched upon this question in our first European manifesto above alluded to, but it was now gone into in all its chief bearings. I deeply regret that those in charge of Stainton Moseyn's papers, have not yet sent me those which might have helped me in my present work, as I might have made it

Digitized by Google

much more interesting by comparing H. P. B.'s and my letters with the replies of our friends, which I have preserved. S. M. had gone into the investigation of mediumistic phenomena with the sole purpose of satisfying himself whether they were real or not, but shortly found himself a medium despite himself, and the subject of phenomena of the most extraordinary kind. By night and by day, whether alone or in company, they would occur, and soon all the scientific and philosophical ideas he had brought away from Oxford, were scattered to the four winds, and he had to accept new theories of matter and force, man and nature. His revered friend and benefactress, Mrs. Speer, gave in *Light*, weekly reports of the séances held by S. M. at Dr. Speer's house, and, I venture to say, a more interesting record of mediumship has never been written, for, in past ages or the present, there has hardly ever been a more gifted medium than my heart-brother, now dead and gone. His pre-eminence consisted in the surprising variety of his phenomena, which were both physical and psychical and all highly instructive, added to his trained mental endowments, which reflected themselves in the quality of the psychically transmitted intelligence, and his dogged determination to believe nothing taught him by the alleged spirits which he could not perfectly understand. The major part of these teachings he received by automatic writing through his own hand, just as Mr. Stead seems now to be getting his own spirit-teachings from *Julia*; he might give his whole attention to reading a book or conversation, but

Digitized by Google

his disengaged hand would go on writing and writing by the half-hour together, and when he turned his eyes upon the pages thus covered, he would find original thoughts, conveying new ideas foreign to his own beliefs, or successfully answering his questions previously put, perhaps, on another occasion. He was always convinced, and vehemently so declared in his letters to us, that the intelligence controlling his hand was not his own ; neither his waking or latent consciousness, but just simply a spirit or spirits ; he claimed to know them perfectly by sight (clairvoyant), speech (clairaudient), and writing, as unmistakably as he knew any living person. We, on the other hand, urged that the question was not yet proven, and that there was at least an even chance that his "Imperator," or chief spirit-teacher, was his latent self, and that his circle phenomena were produced by Elementals coming for the time being under the dominion of his own masterful will. It appeared upon comparing notes that several of his most striking mediumistic phenomena were almost identical with those with which H. P. B. was edifying us in New York, and, since hers were admittedly produced by her subject Elementals, I could not see why his might not be also. Among these were the ringing of sweet "fairy bells" in the air ; the production of delicious scents in the air and as exudations from the psychic's body, which, with H. P. B., bedewed the palms of her hands, and in S. M.'s case the scalp of his head ; lights floating through the air ; precipitations of writing on surfaces beyond the operator's reach ; *ap-*

Digitized by Google

ports of gems and other objects; air-born music; the possession by each of gems which changed colour and grew dull or black when the possessor fell ill; the disintegration of crayons or leads to be used in precipitated writings; identical Oriental perfumes perceived when certain invisible intelligences versed in occult science were present; Oxon's perceiving in the astral light glowing points of coloured light arranged in a triangle so as to form the mystic symbol of the Eastern Lodge of our Mahátmás; and, finally, the power of leaving the physical body in the "double," retaining consciousness and resuming bodily occupancy at the end of the soul-flight. So close a resemblance in experiences would naturally create a strong mutual interest between the two great psychics, and naturally enough S. M. was most eager to profit by any instructions or hints that H. P. B. could give him as to how he might improve his knowledge of the other world and gain that complete control over his psychical nature which the completed training for adeptship implies. What effect our interchange of views had upon S. M.'s mind and the teachings of "Imperator" to the Speer circle, will be considered in the next chapter. I shall also have something to say with respect to the view taken by educated Hindus as to the danger and puerility of psychical phenomena, whether produced by mediums or *mántrikas*—possessors of charms of power.

CHAPTER XIX.

CONFLICTING VIEWS.

THE poles are scarcely farther apart than the views of Western Spiritualists and Asiatics with respect to communion with the dead. The former encourage it, often try to develop mediumship in themselves or their family members to enjoy it, support many journals and publish many books to tell about and discuss their phenomena, and cite the latter as proofs of the scientific basis of the doctrine of a future life. Asiatics, on the contrary, discourage these necromantic dabblings as soul-debaucheries, and affirm that they work incalculable evil both upon the dead and the living; obstructing the normal evolution of man's spirit and delaying the acquirement of *gnandm*, the highest knowledge. In Europe and America one often meets around the séance-table the noblest, purest, most learned, as well as their opposites; in the East, the mediums and sorcerers are patronised only by Pariahs and other degraded castes, as a general rule. At the West, in these

Digitized by Google

latter days, families usually feel glad rather than sorry if a medium is discovered in their household, whereas in India it is thought a disgrace, a calamity, something to deplore and to abate as soon as possible.

The Hindu, the Buddhist, the Zoroastrian, the Mussulman, are of one mind in the above respect, all being influenced by ancestral tradition as well as by their sacred writings. Dealings with the dead are not alone discountenanced, but also the exhibition of one's own psychical powers, whether congenital or developed later by ascetic training. The Indian Brahmin would, therefore, look with disfavour both upon the phenomena of M. A. Oxon, the medium, and those of H. P. B., the educated thaumaturgist. Not caring for the problems of Western psychology as intellectual stimuli, and having forms of religion which start with the basic hypothesis of spirit, they place but a minimum stress upon the psychic phenomena as proofs of immortality, loathe the obsessed medium as spiritually impure, and hold in diminished respect those who, possessing *siddhis*, vulgarise them by display. The development of a long list of *siddhis* occurs naturally and spontaneously in the progress of Yogic training, of which only eight, *Anima*, *Mahima*, *Laghima*, etc.,—the Ashta Siddhis, in short—relate to the higher spiritual state ; the other eighteen or more pertain to the astral plane and our relations to it and to the plane of this life. Black magicians and beginners have to do with these ; the progressed Adepts of White Magic with the nobler group. It is to be ob-

Digitized by Google

served, then, that while H. P. B.'s phenomena commanded the adoring wonder of her Western pupils and other intimate friends, and caused the malignant scepticism of her opponents, they actually lowered her in the opinion of the orthodox pundits and ascetics of India and Ceylon, as marking an inferior spiritual evolution. With them, there was no question of the possible genuineness of the marvels, for all such are recognised and catalogued in their Scriptures; the mental aura of a Lankester would asphyxiate them. At the same time, while the display of psychical phenomena in public or before the vulgar is condemned, the knowledge that a religious teacher possesses them adds to his sancity, as being signs of his interior development; but the rule is that they are not to be shown by a teacher even to his pupils before they have become so versed in spiritual philosophy as to be able to understand them.

In the *Kullavagga*, v., 8, I., is related the story of the sandalwood bowl of the Setthi of Rágagaha. He had had a bowl carved out of a block of sandalwood, and lifted it high up into the air on the top of a bamboo tied to a succession of other bamboos, and then offered it as a gift to any Sramaña or Brahman possessed of psychical powers (*Iddhi*) who could levitate himself and get it down. A renowned monk named Pi*nd*ala Bháradvaga accepted the challenge, rose into the air and brought down the bowl, after going "thrice round Rágagaha in the air." The onlookers, a great concourse, fell to shouting and doing him reverence, which

Digitized by Google

noise coming to the ears of the Buddha, he convened a private meeting of his disciples and rebuked Pindala.

"This is improper," said he. "Not according to rule, unsuitable, unworthy of a Sramaña, unbecoming, and ought not to be done. . . . Just like a woman who displays herself for the sake of a miserable piece of money, have you, for the sake of a miserable wooden pot displayed before the laity the superhuman quality of your miraculous power of Iddhi. This will not conduce either to the conversion of the unconverted, or to the increase of the converted; but rather to those who have not been converted remaining unconverted, and to the turning back of those who have been converted." He then made this imperative rule: "You are not, O Bhikkus, to display *before the laity* the superhuman power of Iddhi." (*Vide Sacred Books of the East*, Vol. xx., p. 79.)

In *Kullavagga*, vii., 4, 7, Devadutta is said to have "come to a stop on his way (to Arahatship), because he had already attained to some lesser thing" (pothugganiká iddhi, or psychical powers)—and *being satisfied that he had reached the summit of development.*

In Dr. Rájendralála Mitra's note to Aphorism xxviii., of Patanjali's Yoga Sutras, speaking about the developed psychical powers (*siddhis*), he says:

"The perfections described are of the world, worldly, required for worldly purposes, but useless for higher meditation, having isolation for its aim. Nor are they simply useless, but positively obstructive, for they interfere with the even tenor of calm meditation."

Digitized by Google

It is not widely understood that the developed psychical powers, covering the whole range of sublimated degrees of sight, hearing, touch, taste, smell, intuition (prophetic, retrospective, and contemporary), etc., bear to the awakened individuality a relation similar to that which the ordinary five senses do to the physical self, or personality. Just as one must learn to restrain one's perceptions of external things through the avenues of sense, to concentrate one's whole thought upon some deep problem of science or philosophy, so must the would-be *gnáni*, or sage, control the activity of his developed clairvoyance, clairaudience, etc., if he would not have his object defeated by the wandering of his thought into the bypaths they open up. I have never seen this point clearly stated before, yet it is most important to bear in mind. Through ignorance of this rule Swedenborg, Davis, the Catholic Saints and religious visionaries of all other sects have, as it were, staggered, clairvoyantly drunk, through the picture-galleries of the Astral Light; seeing some things that were and creating others that were not until they begot them; then giving out mangled prophecies, imagined revelations, bad counsel, false science, and misleading theology.

Asiatics throng to a possessor or reputed possessor of siddhis from the most selfish motives—to get sons from barren wives; cures for diseases, often the fruit of vice; recover lost valuables; influence the minds of masters to favour them; and to learn the future. They call this

Digitized by Google

"asking the blessings of the Máhátma," but no one is deceived by the euphuism in the least, and in ninety-nine cases out of a hundred, the begging hypocrite is dismissed unsatisfied. Even I, in my humble experience, came to know the meanness of this class, for out of the thousands of clamorous sick persons that I healed or relieved in my experimental researches of 1881, I doubt if one hundred were really grateful; and before the year was up, I had practically learnt how a Yogi must feel about exhibiting his psychical powers. Truly, indeed, does the Sage declare in *Suta Samhita* that the true Guru is not he who teaches one the physical sciences, who confers worldly pleasures, who trains one's powers until he may reach the gandharvas or develop the siddhis, for all these are sources of trouble and sorrow: the real Teacher and Master is he who imparts the knowledge of Brahman. This is taught likewise in Chandogya, Brahadaranya, and other Upanishads, where it is said that while the Yogi can by will-power make or destroy worlds, call to him pitris, gandharvas, and other spiritual beings, enjoy the power of Ishwara in unalloyed sathwa, yet he should avoid all these vanities as tending to foster the sense of separateness and as being hostile to the acquisition of true *gnánam*. As for voluntarily consorting with the denizens of the astral spheres, invoking their favours and submitting to their behests, no right-minded, well-informed Asiatic would even dream of it. Sri Krishna sums it up most concisely in that famous verse of the *Gita* (Ch. IX.): "Those who worship

Digitized by Google

(invoke, make *pujá* to) the Devatas (higher elementals) go to them (after death); those who worship the Pitris, go to the Pitris. The worshippers of the Bhútas (here defined by S'ankara as the lowest nature-spirits; but the word is also a synonym of Pisachas, meaning the souls of the dead or astral shells) go to the Bhútas. Only my worshippers (*i. e.*, the devotees of *gnánam*, the highest spiritual knowledge), come to me." To repeat, then H. P. B. would be respected as possessing *siddhis*, but blamed for showing phenomena; while M. A. Oxon would be looked down upon as the medium of Pisachas and Bhútas, gifted as he may have been in mind, highly educated as the University may have made him, pure and unselfish as may have been his motives.

So much for the Asiatic view of our case. As for myself, I was through-and-through a Westerner in my way of looking at the wonders of H. P. B. and Stainton Moseyn. They were to me supremely important as psychical indications and as scientific problems. While I could not solve the riddle of her complex entity, I was convinced that the forces in and behind H. P. B. and her phenomena were skilfully handled by living persons who knew Psychology as a science, and by its practice had gained power over the elemental races. In Stainton Moseyn's case there was an equal obscurity. His rooted idea was that his teachers, "Imperator," "Kabbila" [Kapila?], "Mentor," "Magus," "Sade" [Sadi?], *et al*, were all disincarnate human spirits; some very ancient, some less so, but all wise and beneficent. They not only

Digitized by Google

permitted but insisted that he should use his reason and work his own way upward; and with tireless patience answered his questions, solved his doubts, helped to develop his spiritual insight, aided him to project his astral body, and, by multifarious marvels, proved the nature of matter and force and the possibility of controlling natural phenomena: moreover, they taught him that a system of impartation of knowledge by teacher to pupil existed throughout the Cosmos, in ordinated stages of mental and spiritual development: like the classes in a school or college. In all these respects his teachings were identical with my own; and he never could convince me that, if not the same group, at least the same kind of Masters were occupying themselves in forming these two reformatory and evolutionary centres of New York and London. What a noble soul animated his body; how pure a heart, how high an aim, how deep a devotion to truth! At once a scholar, a gentleman, a clear thinker and writer, he became the most eminent of all the leaders of the Spiritualist party; or, at least so it seems to me, and I have had the personal friendship of Davis, Sargent, Owen, and many others. Before commencing this present chapter I have read and studied some seventy of his delightful letters to H. P. B. and myself—representing an interchange of above two hundred epistles; I have also consulted Mrs. Speer's "Records," and they have re-awakened the charm of our early intercourse. His close relation with us and the way in which our psychical experiences were interwoven,

Digitized by Google

make it necessary that I should give more than a merely cursory glimpse of the man; and the best way to show what he was in thought, mind, and aspiration, will be to publish in this connection some portions of an autobiographical narrative contained in one of his letters to me. It is dated from University College, London, 29th April, 1876, and reads as follows:

"My life has been cut up into 'junks'—generally of about five years' duration—and the discipline of each is peculiar; but all tends to the same. Illness in some form pervades all, and I seldom am left at one form of work more than five or seven years. I inherited good property: but it was taken from me. I lost it all in one day by an incursion of the sea. I was doing well at College—a likely First and Fellowship to follow. Ten days before examination I broke down from overwork, and was not able to read or even write a letter for two years, or rather I was obliged to defer work for my degree for two years, and then to take an ordinary one. During that two years I went all over Europe, and learned more really than I should have got from books. But it was a wreck of life's prospects.

"Then I had my five years, or six rather, at Theological work. I had a name in the Church, and was counted a preacher who would make a reputation, and get on. I was thoroughly orthodox, a more or less intelligent theologian who had really studied *all round*, and who had a knack of argument. I went to a wild country district,

Digitized by Google

partly by doctor's advice, to have benefit by sea air and solitude to recruit my health shattered at Oxford, and then I read omnivorously, and worked hard. My people would do anything for me. I could lead them anywhere, and I got a reputation in Parish and Pulpit. I overdid myself again, and felt that I must get off the excessive work (30 square miles of district to work is no joke : and all in my hands). I came to the West of England, and was appointed to a grand position in the Diocese of Sarum—a sort of select preacher. I acted twice, and irreparably broke down. Doctors could make nothing of me. They said I was overwrought : that I must rest, etc. I did rest, and got no better. Physically I was not exactly ill, but I dare not try to do anything in public.

"Then I fell ill again, this time with a fever : and in a place where no good doctor was to be had. A visitor tended me—my life was barely snatched out of the fire, and he became my fast friend—Dr. Speer. I came to London, and he asked me to live in his house and coach his boy. My property was gone, my position, my health. He took me in and I lived with him. But I could do nothing in public. He could not understand it. I could not explain it : *but it was an awful, ever-present fact.* I felt my old life was done. Yet I had no doubts as to the faith I had always held, not one—not a bit of one.

"But by degrees I found the old landmarks getting fainter : the bread grew stale. Then one day a man broke down here [at the London Univ.] and the authorities wanted somebody to carry on lectures on Philology.

Digitized by Google

Few could do it, for the thing requires preparation. I heard and offered. I have a way of pigeon-holing knowledge till it is wanted, and I had read Philology at Oxford. So I took up the thread, and they finally gave me a permanent appointment.

"Another change, you see. I could lecture well enough, but could not do my old clerical work. When friends found me at work again, they said, now you 'll take a Church in London, or So and So will be delighted to have you preach for him : but I simply *could not.* Yet I never write a lecture, and can go a session through without a note.

"Queer, Eh ?

"Well, Mrs. Speer fell ill with some serious ailment, and got hold of one of Dale Owen's books. As soon as she got down stairs she set at me. I pished and pshawed, but agreed to look into the thing. I went to Burns, got all I could, went to Herne and Williams, and in two months was in the thick of physical mediumship, such as is hardly credible. Our phenomena were far ahead of anything I have seen elsewhere. It went on for four years, and now it is dying out, and I am going into another phase—and there have been plenty more that I have passed over. Indeed, I have said too much of self. But you may as well know what sort of man I am.

"At the present I have lost all sectarian faith, *i. e.*, all distinctive dogmatism. You will see in *Spirit Teachings* how I fought for it. Now I have lost the body, and kept the spirit. I no longer count myself a member of any

Digitized by Google

Church, but I have got all the good I could out of them all. I am a free man: with such knowledge as Theological systems can give. I have thrown the husks away. And now, as soon as I have been sufficiently purified, I humbly hope to be allowed to enter within the veil, hoping there to repeat a process which, with some modifications, will be unceasing. Endless progress, perpetual purification, the lifting of veil after veil until—Eh? where have I got to? God bless you.

"Your friend and brother,

"M. A. Oxon."

At this stage had he arrived when we were brought together; thenceforth to keep in perfect sympathy and lovingly work together along parallel lines: our aspirations the same, our views not radically divergent. Often and often does he in his letters bemoan the fact that we were not living in the same city, where we might continually exchange ideas. Several chapters were devoted in the *Theosophist* to the subject of Stainton Moseyn's mediumship and the resemblance between his phenomena and H. P. B.'s, which may be read with profit.

Our Western friends will be interested in knowing that the Hindu who would enter upon a course of meditation, *i. e.*, of concentration of all one's mental faculties upon spiritual problems, has a triple system to observe. There is, first of all, to make the *Sthalla S'uddhi*, or ceremony, with the object of purifying the ground upon which he is to sit: cutting himself off from astral connection with

Digitized by Google

the astral body of the earth and with the elementals which inhabit it [*Vide Isis*, I., 379]. This isolation is helped by first purifying the ground by washing, and by the person sitting upon a spread of Kusa grass, one of the group of vegetables whose aura resists bad and attracts good elementals. In this category are also included the Neem (Margosa), Tulsi (sacred to Vishnu), and Bilwa (sacred to Shiva). Among trees infested with bad influences and which the "adversaries" of Imperator are believed to frequent, are the Tamarind and the Banyan: they also infest old wells, long-empty houses, cremation-grounds, cemeteries, battle-grounds, slaughtering places, sites of murders and all other places where blood has been spilt: this is the Hindu belief, and in this connection see *Isis*, Chaps. XII. and XIII., Vol. I. The ground having been purified and the operator isolated from terrene bad influences, he next makes the *Bhúta S'uddhi*, a recitation of verses having power to keep off the "adversaries" dwelling in the atmosphere, including both elementals and elementaries; assisting the operation by making circular (mesmeric) passes around his head with his hand. He thus creates a psychical barrier or wall about him. After having very carefully performed these two indispensable preliminaries—never to be forgotten or perfunctorily done—he then proceeds with the *A'tma S'uddhi*, or recitation of mantrams which assist in purifying his body and mind and in preparing the way for the awakening of the spiritual faculties, the absorption called "meditation," whose aim is the attainment of *gnánam*, knowledge. A pure spot,

Digitized by Google

pure air, the absence of unclean persons, *i. e.*, the unwashed, the immoral, the unspiritually-minded, the overfed, the unsympathetic—are all indispensable for the seeker after divine truth.

Imperator's admonitions to the Speer circle and, in fact, those which have been given to all really choice circles of spiritualistic investigators in all parts of the world, substantially accord with the Eastern rules. In short, the closer these precautions have been observed, the higher and nobler have been the teachings received. The revolting scenes and disgusting language and instructions which have attended so many séances where unprotected and unpurified mediums have given their services to mixed gatherings of foul and pure inquirers, are traceable to neglect of these protective conditions. Gradually, things have been changing for the better within these past seventeen years; physical mediums and physical phenomena are slowly beginning to give place to the higher forms of mediumship and manifestations.

The views of Imperator about the evils of mixed circles were reflected in Stainton Moseyn's published writings, and, if possible, more strongly in his private correspondence. He fully comprehended that the experiences of centuries must have taught the Asiatics this verity, that pure spiritual aura can no more be passed untainted through a vile medium and incongruous circle, than the water of a mountain spring be made to run pure through a foul filter. Hence their strict and stern rules for the isolation of the postulant for knowledge

Digitized by Google

from all corrupting influences, and for the thorough purification of his own self. When one sees the blind ignorance and rash confidence with which Western people go themselves and take their sensitive children into the sin-sodden aura of many a séance room, one can feel how thoroughly just is the stricture of M. A. Oxon's chief guide, about the surprising fatuity shown with respect to dealings with the spirits of the departed. The most "orthodox" of the Spiritualist writers are now only, after forty-odd years' experience with mediumistic phenomena, partly realising this truth. Yet these same persons, yielding to a rooted hatred of Theosophy—which they excuse on the score of their detestation of H. P. B.—will not hearken to the voice of the ancients nor take the precautions which experience dictates against the perils of the open circle and the public medium. The improvement above noticed is due rather to the general interest created by our literature, and its reflex action upon mediums and circles, than to the direct influence of editors, speakers, and writers. Let us hope that before long the views of the Theosophists respecting elementals and elementaries will be accorded the full attention they merit.

CHAPTER XX.

CONFLICTING VIEWS (*Continued*).

I SAT in the verandah at "Gulistan," my mountain cottage; one morning, looking northward above the sea of clouds that hid the Mysore plains from view. Presently, the vaporous ocean dissolved away, and the eye could distinctly see the Bilgirirangam Hills, seventy miles off: with a good glass the details could be easily made out. By association of ideas, the problem of the connection between Stainton Moses* and our two selves —H. P. B. and I—came to my mind. As I turned over the facts of our intercourse one by one, the confusing clouds of subsequent events rolled away, and in the distant past the glass of memory brought out his relationship to us and our Sages more distinctly than ever before. It is now clear to me that one directing Intelligence, pursuing a wide-reaching plan covering all nations and peoples, and acting through many agents besides ourselves, had in hand his development and mine,

* I use the distorted name under protest.

Digitized by Google

his body of psychical proofs and those given me by and through H. P. B. Who "Imperator," its agent, was, I know not—I do not even know who H. P. B. really was—but I have always been inclined to believe that he was either S. M.'s own Higher Self or an adept; and that "Magus" and others of S. M.'s *band* were adepts likewise. I had my *band* also—though not of "spirit controls." S. M. had an Arabian teacher, so had I; he an Italian philosopher, so had I; he had Egyptians, I had a Copt; he had a "Prudens," "versed in Alexandrian and Indian lore," so had I—several; he had Dr. Dee, an English mystic, I also had one—the one previously spoken of as "the Platonist"; and between his phenomena and H. P. B.'s there was a striking resemblance. Until Mrs. Speer's *Records* were published all these particulars were not known to me, but now everything is plain. No wonder that S. M. and I were so drawn together; it was inevitable. That he felt it too, his whole correspondence proves. He sums it up in these few words, in his letter of Jan. 24, 1876: "My strongest attraction lies to you two; and I would give anything to be able to come to you"—in the Double, he means. The saddening thing to me is that he could not have known his "band" for what they were—or what I think they were, if you like. Supposing my surmise to be correct, the obstacle was his peculiar mental bias. His intellectual history resembles Mrs. Besant's in certain respects: each fought desperately for old ideas and changed them only under the com-

Digitized by Google

pulsion of cumulative proofs; each sought only truth, and each stood bravely for it. How pathetic the story of Mrs. Besant's struggle against reason in the interest of her old faith, and her final brave yielding to logic! So, the reader of Stainton Moses' published and unpublished personal narrative must see that Imperator and his colleagues had to contend against a combative incredulity in the mental man that would not loose its hold upon the medium's mind, until it had been swept out, so to say, by a tornado of psychical demonstrations.* He was, by temperament, a conscientious mule; but once brought to accept the new philosophy, he was courage and loyalty personified, a lion for fighting and bravery. The first portrait that he sent me represents him as a thin-faced curate, seemingly as mild as milk; and no one could have guessed that that inoffensive parson was destined to become a chief leader of the party of spiritualistic free-thinkers. So necessary is trained clairvoyance to show us what our neighbour is behind his *máyá*.

It will be objected to my hypothesis about Imperator that he declared himself a spirit; and so he was as regards S. M., whether he still had connection with a physical body or not. Must not babes be fed with milk? See how ardently H. P. B. professed herself a Spiritualist in her first letters to the papers and her first interviews with reporters. See her at Philadelphia,

* Among many corroborative passages, see what Imperator says in Mrs. Speer's Record, XX.: *Light*, July 30, 1892.

Digitized by Google

doing phenomena in the Holmes séances, and allowing Gen. Lippitt, Mr. Owen, and myself to believe they were attributable to the mediumship of Mrs. Holmes whom, in our Scrap-Book, she brands as a common cheat. Was not I at first made to believe that I was dealing with disincarnate spirits; and was not a stalking-horse put forward to rap and write, and produce materialised forms for me, under the pseudonym of John King? That this delusion was shortly dropped and the truth told me, I attribute to the fact of my chronic indifference to theologies and to the identity of personalities behind the phenomena. My record is clear in this respect, as I had committed my opinions to print as far back as 1853.*

My bias of mind then was identical with my present one: which explains the fact why, with all my affection for H. P. B. and my reverence for our Masters—in neither of which do any of her disciples surpass me—I continually protest against the assertion that a fact or teaching is one whit better or weightier when associated with H. P. B. or one of our Masters or their chelas. No religion, philosophy, or expounder thereof is higher, greater, or more authoritative than Truth: for Truth and God are identical. Having no sectarian barriers to be pulled down, I was soon disabused about my teaching intelligences: whereas S. M. was obstinacy incarnate,

* *Vide* the old *Spiritual Telegraph* journal, S. B. Britten Editor, for 1853: articles of mine signed with my own name and the pseudonym "Amherst."

Digitized by Google

and it is the greatest of wonders to me that his "band" were so patient, kind, and tolerant of what must have seemed to them the whimsies of a spoilt child. His health, never very robust, broke down from overwork, as he tells us, before the commencement of his mediumship; but we also see that the powers which were already shaping his destiny caused him to break down whenever there was a good chance of his reverting to ministerial work. He was compelled to keep out of it, whether he would or not.

. . . . . .

In view of all the above (*i. e.*, the facts and arguments given in the original version of this and the preceding chapter), am I far wrong in suspecting a close connection between the Intelligence behind Stainton Moses and that behind H. P. B.? He writes me, December 31, 1876: "I do not know whether I rightly conjecture from Imperator this morning that she (H. P. B.) is about me, working about me, I mean,—for my good or enlightenment in some way. It is no use asking her; but *I believe she is.*" October 10, 1876, he writes me that he had had

"A splendid and perfectly complete 'vision'—or, as I prefer to call it, interview with Isis.* It was late, or rather near midnight—I have an accurate memo. at home—when I suddenly saw Isis in my sitting-room

* One of several nicknames H. P. B.'s intimate friends used to give her; others being "Sphinx," "Popess," and the "Old Lady."

Digitized by Google

looking through the open door into my study, where C. C. M. was sitting and where I stood. I cried out and rushed into the next room, followed by M. He saw *nil*. I saw Isis as plain as possible, and talked with her for some time. I noticed my first *rush* into the room had the effect of 'dissipating' the form, but it soon reappeared and went into my study, where M. says I seemed to pass into a sort of 'trance' or abnormal state of some kind, and went through pantomimic gestures of masonic import."

Since copying this out, I find, endorsed in my handwriting on the back of a letter of M. A. Oxon's, the following: "If between now and the 15th instant M. A. O. does not see H. P. B., she will not visit him any more. (Sgd.) H. S. O." And that very night he did see her, as described above. A year before (October 16, 1875), he thanks H. P. B. for her letter, and says it "throws a flood of light, not only on the phenomena of Spiritualism at large, but on many hints made to me which were not before clear." In short, she had helped him to understand his own spirit-teachings. Here is a beautiful passage from his letter of Oct. 7, 1876:

"One thing alone fills my eye—the search for Truth. I don't look for anything else; and though I may turn aside to examine what claims to be Truth, I soon leave the sham and return to the straight road. Life seems to me given for that alone, and all else is subordinate to that end. The present sphere of existence seems to

Digitized by Google

be only a means to that end, and when it has served its purpose, it will give place to one adapted to secure progress. Whether I live, I live for Truth: if I die, when I die, I die to pursue it better."

There is a true man's heart opened out to the sunlight. He remarks farther on:

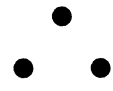
"It is because I dimly see—and far more because he (Imperator) tells me that in Occultism I shall find a phase of Truth not yet known to me, that I look to it and you (H. P. B.). Probably the time will never come during my stay on earth when I shall have penetrated the veil, probably my life will be spent in searching for Truth, through means of which you are to me the present exponent."

As regards "Magus," I have some very interesting data, and have come to a much clearer opinion than I have as to Imperator. I am almost certain that he is a living adept; not only that, but one that had to do with us. In March, 1876, I sent S. M. a bit of cotton wool or muslin impregnated with a liquid perfume which H. P. B. could cause to exude from the palm of her hand at will, asking him if he recognised it. On the 23d of that month, he replies:

"That sandalwood scent is so familiar to me. One of the most persistent phenomena in our circle was the production of scent, either in a liquid form, or in that of a scent-laden breeze. The scent we always called

Digitized by Google

'The Spirit Scent' was this; and we always had it under the best conditions. This for the past two years. My friends always knew when our best séances would be by the prevalence of that perfume in my atmosphere. The house where we used to meet would be redolent of it for days; and Dr. Speer's house in the Isle of Wight, when I was staying there, got so permeated with it that when it was reopened again six months after, the perfume was as strong as ever. What a marvellous power is it that these Brothers wield . . . I stayed in my rooms all day trying to ease my racking cough. . . . At midnight I had a more than ordinarily severe fit of coughing. When it was over, I saw by my bedside, distant about two yards, and at the height about 5 ft. 6 in. from the floor, three



small phosphorescent balls of light about the size of a small orange. They were arranged thus and formed an equilateral triangle, the base of which would measure 18 in. First I thought it was an optical delusion caused by my violent cough. I fixed my gaze on them, and they remained quiet, glowing with a steady phosphorescent light which cast no gleam beyond itself. Satisfied that the phenomenon was objective, I reached a match-box and struck a match. I could not see the balls through the match-light; but when the match went out they came again into view just as before. I repeated the match-striking six times (seven in all) when they paled, and gradually went out. It is the symbol that J. K. put at the back of your portrait. [While in transit through the

Digitized by Google

post from me to him—O.] Was it he again? It was not any of my own people, I believe."

As I have elsewhere explained, the three luminous spheres form the special symbol of the Lodge of our Adepts; and better proof of their proximity to Stainton Moses no one of us who have been their pupils would desire. He, too, says:

"Certainly all doubt as to the Brotherhood and their work is gone. I have no shred remaining. I believe, simply, and I labour so far as in me lies to fit myself for such work as they may design me for."

"Do you know anything of my friend Magus?"—he writes in another letter. "He is powerful, and is working on me *occultly*." In another one—May 18, 1877—he says to H. P. B.:

"Some of your friends have paid me a visit of late rather often, if I may judge by the atmosphere of sandalwood—the Lodge scent, O. calls it—which pervades my rooms and myself. I taste it, I exhale it, everything belonging to me smells of it, and there has recurred the old and inexplicable phenomenon which I have not seen for many months—more than a year—and *which used to obtain with me in respect of other odours.* From a well-defined spot just round the crown of the head [over the Brahmarândhra?—O.], quite small (the size of a half-crown piece), exudes a most powerful odour. It is now,

Digitized by Google

this Lodge scent, so strong as to be almost unbearable. It used to be rose, or indeed that of any fresh flower in my neighbourhood. . . . A friend gave me a Gardinia the other evening at a party. In a few minutes it gave an overpowering odour of the Lodge perfume, turned a mahogany-brown before our eyes, till the whole flower was of that colour, and it now remains dead and saturated with the odour. . . . I feel myself in a transition state, and wait what turns up. 'Magus' seems the presiding genius in many ways now."

Not at all strange, one would say, with S. M. saturated and all but stifled with the Lodge's scented atmosphere! It is a most persistent odour. In 1877, I sent him a lock of H. P. B.'s natural hair, and with it a lock of the Hindu jet-black that I have spoken of above as having been cut from her head when she was the subject of an A'ves'am. I cut this lock myself to send S. M. He acknowledged its receipt in his letter to H. P. B. of March 25, 1877. Wishing to photograph the different kinds of hair for an illustration for this book, to show the actual contrasts in fibre and color, I asked C. C. M. to return these two specimens to me out of S. M.'s collection, and quite recently they reached my hand. The Lodge scent lingers still in the black tress after the lapse of sixteen years. Readers of Church history will recall the fact that in mediæval times this odoriferous phenomenon was frequently observed among really pious and ascetic monks, nuns, and other recluses

Digitized by Google

of the cloister, the cave, and the desert. It was then called "the odour of Sanctity"; although this was a misnomer, for otherwise all saintly personages would have smelt sweet, whereas we know too well that it was more often the opposite! Sometimes from the mouth of an ecstatic, while lying in her trance, would trickle a sweet and fragrant liquor—the nectar of the Greek gods; and in the case of Marie Ange it was caught and preserved in bottles. Des Mousseaux,* the demonophobe, ascribes this product of psychical chemistry to the Devil. Poor fanatic!

CHAPTER XXI.

NEW YORK HEADQUARTERS.

THE early story of the Theosophical Society is almost told. Little remains for me but to complete my first series of reminiscences, with some sketches of our social life in New York, up to the time of our embarkation for India.

From the close of 1876 to that of 1878, the Theosophical Society as a body was comparatively inactive: its By-laws became a dead letter, its meetings almost ceased. Its few public appearances have been described above, and the signs of its growing influence are found in the increase of the Founders' home and foreign correspondence, their controversial articles in the press, the establishment of Branch societies at London and Corfu, and the opening up of relations with sympathisers in India and Ceylon.

The influential Spiritualists who joined us at first had all withdrawn; our meetings in a hired room—the Mott Memorial Hall, in Madison Avenue, New York—were

Digitized by Google

discontinued; the fees formerly exacted upon entrance of members were abolished, and the Society's maintenance devolved entirely upon us two. Yet the idea was never more vigorous, nor the movement more full of vitality, than when it was divested of its external corporateness, and its spirit was compressed into our brains, hearts, and souls. Our Headquarters' life was ideal throughout those closing years. United in devotion to a common cause, in daily intercourse with our Masters, absorbed in altruistic thoughts, dreams, and deeds, we two existed in that roaring metropolis as untouched by its selfish rivalries and ignoble ambitions as though we occupied a cabin by the seaside, or a cave in the primeval forest. I am not exaggerating when I say that a more unworldly tone would not be found in any other home in New York. The social distinctions of our visitors were left outside our threshold; and rich or poor, Christian, Jew, or Infidel, learned or unlearned, our visitors received the same hearty welcome and patient attention to their questions upon religious and other subjects. H. P. B. was born so great an aristocrat as to be at ease in the highest society, and so thorough a democratic altruist as to give cordial hospitality to the humblest caller.

One of the best read of our guests in Greek philosophy was a working house-painter, and I well remember how gladly H. P. B. and I signed his application-form as his sponsors and welcomed him into membership. Without a single exception those who published accounts of their

Digitized by Google

visits to "The Lamasery"—as we humorously called our humble suite of rooms—declared that their experience had been novel and out of the usual course. Most of them wrote about H. P. B. in terms of exaggerated praise or wonder. In appearance there was not a shade of the ascetic about her: she neither meditated in seclusion, practised austerities in regimen, denied herself to the frivolous and worldly-minded, nor selected her company. Her door was open to all, even to those whom she knew meant to write about her with pens over which she could have no control. Often they lampooned her, but if the articles were witty, she used to enjoy them with me to the fullest extent.

Among our constant visitors was Mr. Curtis, one of the cleverest reporters on the New York press, and later, a member of our Society. He made yards of good "copy" out of the Lamasery, sometimes sober, sometimes farcical, but always bright and smart. He led us into a nice trap one evening: taking us off to a circus where, he said, two Egyptian jugglers were exhibiting certain marvels that might be ascribed to a knowledge of sorcery, but which, at any rate, he wished us to see and pronounce upon as experts in the uncanny. We listened to the voice of the syren and went. The show proved to be common-place and the Egyptians *bonâ-fide* Frenchmen, with whom we had a long talk in the Manager's office between "acts." They had not even seen an Egyptian magician of the real sort described by Mr. Lane in his well-known work. On leaving the place I condoled

Digitized by Google

with Curtis on the barrenness of his experiment, but he sent us into fits of laughter by replying that, on the contrary, he now had a free hand and could supply all needed facts to make a sensational article. He did. The next day's *World* contained an account headed "Theosophs at the Circus," in which our stale talk with the two Frenchmen was converted into a highly mystical interview, accompanied by no end of weird phenomena, of spectral apparitions, *apports*, and disappearances; the whole description proving, if not the reporter's veracity, at least, his fertile fancy. Another time he brought us a paper giving an account of the night-walking of the ghost of a defunct night-watchman, along the wharves of a certain district on the East side of the city, and begged us to go and see the phantom: the police, he said, were all agog, and the inspector of that district had made all preparations to have it seized that night. Forgetting our circus experience, again we accepted. It was a rather bleak starlit night, and we sat for hours well wrapped, on a pile of lumber, by the river side, beguiling the time with smoking and chaff with a score of newspaper reporters detailed to describe the events of the night. But "Old Shep" did not manifest his disreputable *eidôlon* that time, and in due course we returned to our Lamasery vexed at the waste of a whole evening. The next day's papers, to our ineffable disgust, paraded us as a couple of crack-brained persons who had expected the impossible, and half conveying the idea that we had kept "Old Shep" away to cheat

Digitized by Google

the reporters of their lawful prey! We even got into the illustrated papers, and I have preserved in our Scrap-Book a picture representing us two, and the worshipful company of reporters as "Members of the Theosophical Society watching for Old Shep's ghost." Fortunately, the portraits of H. P. B. and myself looked no more like us than like the Man in the Moon.

One evening Curtis was present when the Countess Paschkoff was relating an adventure she had with H. P. B. in the Libanus, she speaking in French and I translating into English. The tale was so weird and interesting that he asked permission to print it, and this being granted, it duly appeared in his paper. As it exemplifies the theory of the latency in the A'kâs'a of pictures of human events and the power of calling them out which may be attained, I will quote a portion of it in this place, leaving the responsibility for the facts with the fair narrator:

"The Countess Paschkoff spoke again, and again Colonel Olcott translated for the reporter. . . . I was once travelling between Baalbec and the river Orontes, and in the desert I saw a caravan. It was Mme. Blavatsky's. We camped together. There was a great monument standing there near the village of El Marsum. It was between the Libanus and the Anti-Libanus. On the monument were inscriptions that no one could ever read. Mme. Blavatsky could do strange things with the spirits, as I knew, and I asked her to find out what the

Digitized by Google

monument was. We waited until night. She drew a circle and we went in it. We built a fire and put much incense on it. Then she said many spells. Then we put on more incense. Then she pointed with her wand at the monument and we saw a great ball of white flame on it. There was a sycamore tree near by; we saw many little flames on it. The jackals came and howled in the darkness a little way off. We put on more incense. Then Mme. Blavatsky commanded the spirit to appear of the person to whom the monument was reared. Soon a cloud of vapour arose and obscured the little moonlight there was. We put on more incense. The cloud took the indistinct shape of an old man with a beard, and a voice came, as it seemed, from a great distance, through the image. He said the monument was once the altar of a temple that had long disappeared. It was reared to a god that had long since gone to another world. "Who are you?" asked Mme. Blavatsky. "I am Hiero, one of the priests of the temple," said the voice. Then Mme. Blavatsky ordered him to show us the place as it was when the temple stood. He bowed, and for one instant we had a glimpse of the temple and of a vast city filling the plain as far as the eye could reach. Then it was gone, and the image faded away."*

About the end of 1877, or beginning of 1878, we were visited by the Hon. John L. O'Sullivan, an American

* *N. Y. World* of 21st of April, 1878, article entitled "Ghost Stories Galore."

Digitized by Google

diplomat and an ardent Spiritualist, who was passing through New York on his way from London to San Francisco. He was kindly received by H. P. B. and stoutly defended his beliefs against her attacks. Some instructive phenomena were done for him, which he subsequently described in the *Spiritualist* for February 8, 1878, in the following terms:

"She had been toying with an oriental chaplet, in a lacquer cup or bowl, the aromatic wooden beads of which, strung together, were of about the size of a large marble, and copiously carved all round. A gentleman present took the chaplet in his hands, admired the beads, and asked if she would not give him one of them. 'Oh, I hardly like to break it,' she observed. But she took it presently, and resumed her playing with it in the lacquer bowl. My eyes were fixed upon them, under the full blaze of a large lamp just above her table. It soon became manifest that they were growing in number under her fingers as she handled them, till the bowl became nearly full. She presently lifted out of it the chaplet, leaving a considerable number of loose beads, of which she said he might take what he wanted. I have ever since regretted that I had not the presence of mind, or the venturesomeness, to ask for some for myself. I am sure she would have given them freely, for she is all kindness, as well as, apparently, a woman of all knowledge. My presumption about the beads thus created under our eyes was that they were '*apports*,' brought in by spirits, in compliance with her wish or will. I believe (though

Digitized by Google

not quite certain) that her idea, and Olcott's is that these phenomena are produced in some way by a great brother '*adept*' in Thibet—the same one from whose old spinnet I was made to hear in the air overhead (as I have before mentioned, and as many other friends had done before) the faint but clear tinkling music which I was told came, borne on a current of 'astral fluid,' from Thibet; to which home of her heart Madame Blavatsky said she was going back (never again to leave it), after she should have completed her mission, task, and business which was chiefly that of publishing her book.

"Another case of fabrication of material objects out of apparently nothing. Coming in late one afternoon to her little parlour, where she usually spent seventeen hours out of the twenty-four at her writing-table, I found Colonel Olcott with her, occupied in correcting her earlier proof-sheets. I had by this time become somewhat intimate with her and Olcott, for both of whom I shall always retain a strong attachment as well as profound respect. He told me how there had taken place that afternoon one of those '*little incidents*' (as he calls them) which were of constant occurrence there. There had been a group of visitors, and an animated discussion on the comparative civilisation of the ancient Orient and the modern West.

"The subject came up of the tissues fabricated in the one and the other. Madame Blavatsky is an enthusiast on the Orient side of this dispute. She suddenly put her hand to her neck and drew forth from her ample

Digitized by Google

bosom (from beneath the old dressing-gown, which is the only garb in which I have seen her), a handkerchief of silk crape, with a striped border, very like what is called 'carton crape,' and asked whether occidental looms produced anything superior to that. They assured me (and I have ample warrant for believing them) that it had not been there before that moment. It was in smooth, fresh folds, and the conversation had arisen accidentally. I admired it, recognised in time the peculiar sickly sweet and pungent odour which attends all these '*apports*' from Far Cathay (including the beads above mentioned), and observed the peculiar signature on one edge of the handkerchief, which I had seen on various objects, and which I was told was the name (in pre-Sanskrit characters) of a great brother 'Adept' in Thibet to whom, by the way, she says she is very far inferior. When we were afterwards summoned to their very simple repast (to which had been added a hospitable bottle of wine for me, though they never touch it), she remarked to Olcott: 'Give me that handkerchief.' He gave it to her, out of the sheet of letter-paper in which he had carefully folded it in its smooth unruffled condition. She at once made a careless twist of it and tied it round her neck. When we returned from the dining-room to her warmer snuggery of a parlour, she took it off and threw it on the table by her side. I remarked, 'You treat it in a very unceremonious fashion. Will you give that one to me?' —'Oh, certainly if you would like to have it'; and she tossed it over to me. I smoothed out its creases as well

Digitized by Google

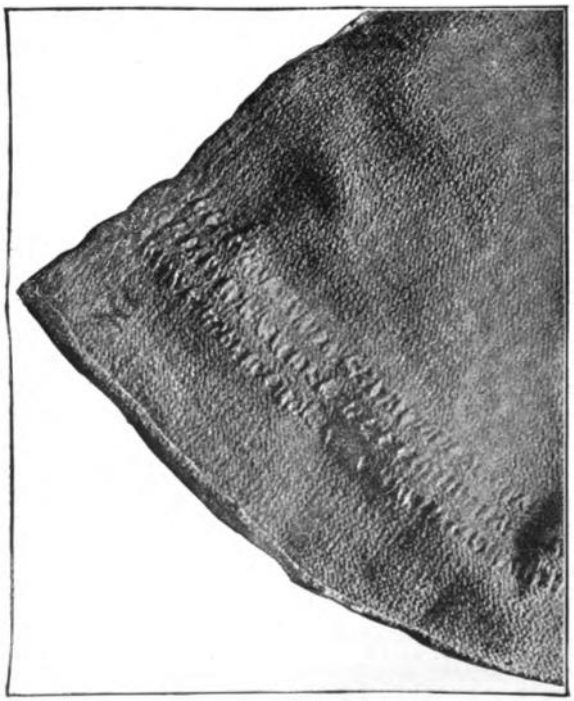
as I could, again wrapped it in a sheet of paper, and put it in my breast pocket. Later on, as I was taking my departure, and we were all on foot: she said: 'Oh, just give me that handkerchief for a moment.' Of course I obeyed. She turned her back to me for an instant or two, and then, turning again to me, she held out two handkerchiefs, one in each hand, saying: 'Take which ever you please; I thought that perhaps you might prefer this one (handing me the new one) since you have seen it come.' Of course I did so, and after travelling about fifteen miles by rail that night, I gave it to the lady best entitled to receive a favour thus conferred upon me by another lady, which latter lady, by the way, claims to be a septuagenarian, though looking only about forty. When I left America, a few days afterwards, the handkerchief had not yet melted away, nor wafted back to Thibet, on a 'current of astral fluid,' I should add that the second handkerchief was a perfect fac-simile of the first, down to every detail of the name in ancient oriental characters; which, by the way, was evidently written or painted in some black pigment or ink, not stamped mechanically."

My recollection of the handkerchief incident differs slightly from Mr. O'Sullivan's narrative. The original specimen was made out of nothing—to use the faulty common expression, for something never was nor could be made out of nothing, theologists to the contrary notwithstanding—during a conversation between H. P. B. and our friend Monsieur Herrisse of the Haytian Lega-

Digitized by Google

tion. He had said that a relative of his had brought back from China some fine crape handkerchiefs which Western looms had not yet equalled. She thereupon produced a handkerchief of the same description and asked M. Herrisse if that was what he meant, to which he assented. I took possession of it, and, at the interview with Mr. O'Sullivan, mentioned the incident and showed him the article, whereupon he asked H. P. B. to give it him. She did so, and when I humorously said she had no right to give away my property without my consent, she said I was not to mind, as she would give me another. At that moment we were called to dinner and were moving towards the door, when she bade Mr. O'Sullivan lend her the handkerchief for a moment. Standing as we were together, she turned her back for an instant, wheeled back again with a duplicate handkerchief in each hand, one of which she gave Mr. O'Sullivan, the other myself. Returning from the dining-room and resuming our former seats, she felt a cold draft from the partly opened window behind her chair and asked me for something to put on her neck. I gave her my magic handkerchief, which she loosely put about her neck and went on talking. Observing that the ends were not long enough to be properly twisted, I got a pin and wanted her to let me fasten them; but she exclaimed, "Bother you and your pins; here take back your handkerchief!" at the same time jerking it from her neck and throwing it at me. At the same instant we saw a second copy of the original still about her

Digitized by Google



A CORNER OF A CRÊPE HANDKERCHIEF.

Digitized by Google

neck, and O' Sullivan starting forward and reaching out his hand, said : " That one—please give me that one, for I saw it formed under my own eyes ! " She good-naturedly gave it him, and the one he had was restored to her and the conversation proceeded. The original one made in Herrisse's presence I have still in my possession, the second one my sister has.

I have thought it worth while to tell this story and others still to come, to show the nature of proofs she constantly afforded us of her wonder-working power in those early New York days, before there were missionaries encamped across her path, and it was worth their while to invent, purchase, or honestly come by evidence or enlist witnesses to cast doubt upon her personal character. If nothing else had subsequently been given me, those early phenomena would have fixed forever my belief in her possession of certain of the *Siddhis*, and made me very wary about discrediting her teachings on the psycho-dynamical laws behind them. It was not at long intervals, but frequently, that her friends and other visitors had this cumulative evidence that the psychically-endowed child of Sarotow had grown into the mysterious woman of 1875, without losing one of the supernormal faculties of her youth, but, on the contrary, had expanded and infinitely strengthened and augmented them. These incidents gave to her *salon* a fascinating attractiveness that was offered by no other in New York. Her personality, not the Theosophical Society, was the magnet of attraction, and she revelled in the excitement of the *en-*

tourage. So miscellaneous was it, such a mixture of music, metaphysics, Orientalism, and local gossip, that I cannot give a better idea of it than by saying it was like the contents of *Isis Unveiled*, than which no literary product is a greater conglomerate.

CHAPTER XXII.

VARIOUS PHENOMENA DESCRIBED.

ALTHOUGH sad experience has taught us that psychical phenomena are weak things to build a great spiritual movement upon, yet they have a distinct value in their proper place when strictly controlled. That place is within the limits of the third of the Declared Objects of our Society. They have a paramount importance as elementary proofs of the power of the trained human will over the brute forces of nature. In this respect they bear upon the problem of the intelligence behind mediumistic phenomena. I think that the early phenomena of H. P. B. dealt a distinct blow at the theory, until then generally held, that the messages received through mediums must of necessity be from the dead. For here were things done in the absence of presumably necessary conditions, sometimes apparently in defiance of them. The records of them now survive only in clippings from contemporary newspapers, and in the memory of witnesses who have not yet put their experiences into print, but who, being still alive, are able to

Digitized by Google

corroborate or correct my stories of phenomena that we saw together in her presence.

While highly suggestive in themselves, H. P. B.'s wonders were not usually led up to in conversation. When we were alone, she might produce some phenomenon to illustrate a teaching; or they might happen as if in answer to a query arising in my own mind as to the agency of some particular force in a given physical operation. Usually they were made, as it were, on the spur of the moment and independently of any prefatory suggestion by anybody present. Let me give an instance or two out of many that might be cited, to make my meaning clear.

One day an English Spiritualist and his friend called, and with the former his little son, a lad of 10 or 12 years. The boy amused himself for awhile by going about the room, rummaging among our books, examining our curios, trying the piano, and indulging in other freaks of curiosity. He then began fretting to go, pulling his father's sleeve and trying to make him break off a very interesting conversation with H. P. B. The father could not stop his importunities and was about to leave, when H. P. B. said: "Oh, don't mind him, he merely wants something to amuse him; let me see if I can find him a toy." Thereupon she rose from her chair, reached her hand around one of the sliding doors just behind her, and *pulled out a large toy sheep mounted on wheels*, which, to my positive knowledge, had not been there the moment before!

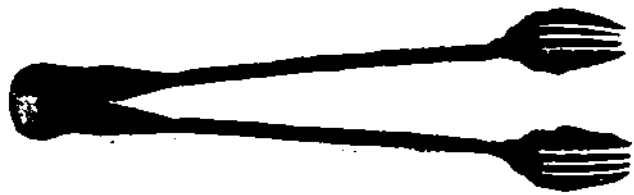
Digitized by Google

On a Christmas eve my sister came down from her flat, on the floor above the "Lamasery," to ask us to step up and see the Christmas-tree she had prepared for her children—then asleep in their beds. We looked the presents all over, and H. P. B. expressed her regret that she had not had any money to buy something for the tree herself. She asked my sister what one of the lads, a favourite of hers, would like, and being told a loud whistle, said: "Well, wait a minute." Taking her bunch of keys from her pocket, she clutched three of them together in one hand, and a moment later showed us a large iron whistle hanging in their stead on the key-ring. To make it she had used up the iron of the three keys and had to get duplicates made the next day by a locksmith. Again. For a year or so after we took up housekeeping at the "Lamasery," my family silver was used for the table, but at last it had to be sent away, and H. P. B. helped me to pack it up. That day after dinner, when we were to have coffee, we noticed that there were no sugar tongs, and in handing her the sugar basin I put in it a teaspoon instead. She asked where were our sugar tongs, and upon my replying that we had packed it up to send away with the other silver, she said: "Well, we must have another one, must n't we?" and, reaching her hand down beside her chair, brought up a nondescript tongs, the like of which one would scarcely find in a jeweller's shop. It had the legs much longer than usual, and the two claws slit like the prongs of a pickle-fork; while inside the shoulder of one of the legs

Digitized by Google

was engraved the cryptograph of Máhátma "M." I have the curio now at Adyar.

An important law is illustrated here. To create anything objective out of the diffused matter of space, the first step is to *think* of the desired object—its form, pattern, colour, material, weight, and other characteristics: the picture of it must be sharp and distinct as to every detail; the next step is to put the trained Will in action, employ one's knowledge of the laws of matter and the process of its conglomeration, and compel the elemental spirits to form and fashion what one wishes made. If



HYBRID SUGAR-TONGS PHENOMENALLY PRODUCED.

the operator fails in either of these details, his results will be imperfect. In this case before us it is evident that H. P. B. had confused in her memory the two different shapes of sugar-tongs and a pickle-fork and combined them together into this nondescript or hybrid table implement. Of course, the result was to give stronger proof of the genuineness of her phenomenon than if she had made perfect sugar-tongs: for such may be bought in shops anywhere.

One evening, when our writing-room was full of visitors, she and I sitting at opposite sides of the room, she

Digitized by Google

motioned to me to lend her a large signet *intaglio* that I was wearing that evening as a scarf-ring. She took it between her closed hands, without saying anything to anybody or attracting any one's attention save mine, and rubbed the hands together for a minute or two, when I presently heard the clink of metal upon metal. Catching my eye, she smiled, and, opening her hands, showed me my ring and along with it another, equally large but of a different pattern: the seal-tablet also being of dark green bloodstone, whereas mine was of red carnelian. That ring she wore until her death, and it is now worn by Mrs. Annie Besant and is familiar to thousands. The stone was broken on our voyage out to India, and if I remember aright, the present one was engraved and set at Bombay. Here, again, not a word of the passing conversation led up to the phenomenon; on the contrary, nobody save myself knew of its occurring until afterwards.

Another instance. I had to go to Albany as special counsel to the Mutual Life Insurance Company of New York, to argue in Committee of the Legislature against a bill then under consideration. H. P. B. profited by the chance of an escort to go with me and make a long-promised visit to Dr. and Mrs. Ditson, of Albany. She was an unpractical creature as to common affairs, and a good deal dependent upon the kind offices of friends, for her packings and unpackings of trunks, among other things. Her former friend, Dr. L. M. Marquette, on this occasion packed the Gladstone bag she was to take, and it lay open in her room at the moment when the

Digitized by Google

carriage drove up to take us to the Albany train. The bag was very full, and I had to repack some of the things on top and employ some strength to close the bag and lock it. I then carried it myself to the carriage, from the carriage to the railway carriage, and our train sped on its way. My reason for mentioning these details will presently be seen. Half way to Albany, a large bottle of sticky cough-medicine in her pocket got broken and made a mess of her tobacco, cigarette-papers, handkerchief, and the other contents of the pocket. This necessitated the re-opening of the bag and the taking out of a lot of things, to search for other smoking materials, etc. I did this myself, re-packed, closed, and re-locked the bag, and on reaching Albany I again carried it to the carriage and, at Dr. Ditson's house, took it up a flight of stairs and set it down on the landing outside the drawing-room door. The hostess at once began an animated conversation with H. P. B., whom she was seeing for the first time. Mrs. Ditson's little daughter was in the room and made friends with H. P. B., standing at her knee and petting her hand. The mysterious lady in question did not too highly appreciate this interruption of her talk with the mother, and finally said: "There, there, my child, keep quiet a few moments and I 'll give you a nice present." "Where is it? Please give it me now," the child replied. I, believing that the alleged present was still in some Albany toy-shop from which I should be asked to presently fetch it, maliciously whispered the little one to ask Madame where she was hiding

Digitized by Google

the present, and she did. H. P. B. said: "Now don't bother, my dear, I have it in my bag." That was enough for me: I asked her for her keys, went outside and opened the bag and—found packed most artistically among the clothing, and right before one's eyes upon the bag being opened, a harmonicon, or glass piano, of say 15 in. × 4 in. in size, with its cork mallet lying beside it! Now, H. P. B. did not pack her bag at New York; had not handled it up to that moment; I had closed and locked it before starting, reopened, unpacked, re-packed, and re-locked it midway on the journey; and besides that bag, H. P. B. had no other luggage. Whence the harmonicon came, and how in the world it could have been packed into a bag that was previously full to bursting, I do not know. Perhaps some S. P. R. will suggest that the engine-driver of the train had been bribed and rendered invisible by H. P. B., had opened the bag on the floor at my feet by a ghostly picklock, and had made room for the musical toy by throwing some of H. P. B.'s clothes out of the car-window! Or—perhaps it was a genuine phenomenon and she was not an absolute trickster, after all. If Dr. Marquette still lives, she can testify to seeing us and our luggage aboard the train; and if Dr. Ditson is alive, he can affirm that he took us and the veritable Gladstone bag from the station at Albany to his house. My part, to tell the story as truthfully as I can, and leave it on record as an instance of the way in which my dear old colleague sometimes did a wonder merely to gratify a child, who had

Digitized by Google

not the least idea of the importance of what had occurred.

In my friend, Dr. Upham's *History of Salem Witchcraft*, he tells us that in the case of one of the poor victims of that terrible, fanatical persecution of 1695, it was brought against her as proof of her compact with Satan, that she had walked with spotless skirts through mud and rain to a certain meeting. Upon which, the learned author suggests that the probability rather is that the accused was a tidy woman and so could keep her garments unspotted along the muddy road. Throughout his book he takes up the attitude of incredulity as to any spiritual agency having been at work behind the phenomena of obsession, without, it must be confessed, making good his case. Once, H. P. B. and I being in Boston, on a very rainy and muddy day, she walked through the streets in a pelting rain and reached her lodgings without a drop of rain or splash of mud soiling her dress; and once, I remember, we had been talking on the balcony outside her drawing-room window in Irving Place, New York, and being driven indoors by a heavy rain which lasted through the greater part of the night, I carelessly left outside a handsome velvet or brocade-covered chair. In the morning, when I called as usual on H. P. B. before going to my office, I recollected the chair and went and brought it in, expecting to find it sodden and spoilt by the rain. It was as dry as possible, on the contrary; why or how I cannot explain.

Mr. O'Sullivan's story of the duplicated China crape

Digitized by Google

handkerchiefs in the preceding chapter will be fresh in the reader's memory. I saw her do a notable thing one evening for Wong Chin Fu, a Chinese lecturer, since well known in the United States. We three were chatting about the pictures of his country as lacking the elements of perspective, whereupon he said how admirable were the figure-paintings of their artists, how rich in colour and bold in drawing. H. P. B. concurred and, in the most casual way, as it seemed, opened the drawer where she kept her writing-paper, and drew forth a finely-executed painting of a Chinese lady dressed in full Court robes. I am sure as I can be that it was not there before, but as Wong Chin Fu was not specially interested in the occult science which for us had so great a charm, I made no remark. Our visitor took the picture in his hand, looked at it, remarked upon its beauty, but said: "This is not Chinese, Madam; it has no Chinese writing in the corner. It is probably Japanese." H. P. B. looked at me with an amused expression, returned the picture to the drawer, shut it for a moment, and then re-opening it, drew forth a second picture of a Chinese lady, but wearing different coloured robes, and handed it to Wong Chin Fu. This he recognised as unmistakably from his country, for it bore Chinese lettering in the left-hand lower corner, and he at once read it!

Here is an incident by which certain information about three members of my family was phenomenally communicated to me. H. P. B. and I were alone in the

Digitized by Google

house, conversing about these persons, when a crash was suddenly heard in the next room. I hurried in there to ascertain the cause, and found that the photographic portrait of one of them, which stood on the mantel-shelf, had been turned face inward towards the wall, the large water-colour portrait of another had been pulled from the nail and lay on the floor with the glass smashed, and the photo of the third stood on the mantel-shelf undisturbed. My questions were answered. An incorrect and fabulous version of this story having been circulated, I give the facts exactly as they occurred. Not a person save us two was in the flat at the time, and nobody save myself was interested in the questions at issue.

What a strange woman she was, and what a great variety in her psychical phenomena! We have seen her duplicating tissues, let me recall incidents where letters were doubled. I received one day a letter from a certain person who had done me a great wrong, and read it aloud to H. P. B. "We must have a copy of that," she exclaimed, and, taking the sheet of note-paper from me, held it daintily by one corner and actually peeled off a duplicate, paper and all, before my very eyes! It was as though she had split the sheet between its two surfaces. Another example, perhaps even more interesting, is the following: Under date of December 22, 1887, Stainton Moses wrote her a five-paged letter of a rather controversial, or, at any rate, critical, character. The paper was of square, full letter size, and bore the embossed heading "University College, London," and

Dec 22. 1877

My dear Sphinx,

Lying, as I sadly fear under the ban of your wrath, I sit down with some awe to write to the Cooperative Society that are running the Blavatsky machine. If I err it is from ignorance. Lighten my darkness! If I fail to understand the complicated problems with which you puzzle me, remember that I am no metaphysician, not even a mathematician, but only a plain logician. I puzzle out the particular problem you set me last time you deigned to address me, and I verily believe (else I should be sorry to assert such a paradox positively) that I have succeeded in understanding you! It seems to me that you mean me to gather that I have not been in correspondence with the you — H.P.B. — but with a Brother who has taken the B. shell as a vehicle of his lucubrations for my benefit; that I shall meet him in the future, but "know him not"; & that as to "the Blavatsky" I shall never know any thing more than

COPY OF LETTER FROM M. A. OXON, PHENOMENALLY PRODUCED BY MADAME BLAVATSKY.

Digitized by Google

near the left-hand upper corner his monogram,—a W and M interlaced and crossed by the name "STAINTON" in small capitals. She said we must have a duplicate of this too, so I took from the desk five half-sheets of foreign letter-paper of the same size as Oxon's and gave her them. She laid them against the five pages of his letter, and then placed the whole in a drawer of the desk just in front of me as I sat. We went on with our conversation for some time, until she said she thought the copy was made and I had better look and see if that were so. I opened the drawer, took out the papers, and found that one page of each of my five pieces had received from the page with which it was in contact the impression of that page. So nearly alike were the original and copies that I thought them—as the reader recollects I did the copy of the Britten-Louis portrait—exact duplicates. I had been thinking so all these subsequent sixteen years, but since I hunted up the documents for description in this chapter, I see that this is not the case. The writings are almost duplicates, yet not quite so. They are rather like two original writings by the same hand. If H. P. B. had had time to prepare this surprise for me, the explanation of forgery would suffice to cover the case; but she had not. The whole thing occurred as described, and I submit that it has an unquestionable evidential value as to the problem of her possessing psychical powers. I have tried the test of placing one page over the other to see how the letters and marks correspond. I find they do not, and that is

Digitized by Google

proof, at any rate, that the transfer was not made by the absorption of the ink by the blank sheet from the other; moreover, the inks are different, and Oxon's is not copying-ink. The time occupied by the whole phenomenon might have been five or ten minutes, and the papers lay the whole time in the drawer in front of my breast, so there was no trick of taking it out and substituting other sheets for the blank ones I had just then handed her. Let it pass to the credit of her good name, and help to make the case which her friends would offset against the intemperate slanders circulated against her by her enemies.

Mr. Sinnett prints in his *Incidents in the Life of Madame Blavatsky* (p. 199), a story given him by Mr. Judge about the production by her of some water colours for him to use in making an Egyptian drawing. I was present at the time and will add my testimony to his as an eye-witness. It happened one afternoon at the "Lamasery." Judge was sketching for her—I think—the figure of a god forming man on a potter's wheel, but for lack of colours could not finish it. H. P. B. asked him which shades he needed, and on being told, stepped over to the cottage piano just behind Judge's chair, and facing towards the corner made by the end of the piano and the wall, held her dress as an apron to receive something. She presently poured from the dress upon the table before Judge thirteen bottles of Winsor and Newton's dry colours, among which were those he had asked for. A little while after he said he would like some gold

Digitized by Google

paint, whereupon she told him to fetch a saucer from the dining-room, which he did. She then asked him to hand her the brass door-key and, holding the two under the edge of the table, rubbed the key smartly upon the bottom of the saucer. In another moment she brought them into view again, and the flat part of the saucer bottom was found covered with a layer of gold-paint of the purest quality. To my question as to the function of the door-key in the experiment, she said that the soul of the metal was needed as a nucleus in which to collect together from the *âkâśa* the atoms of any other metal she meant to precipitate. For the same reason she had needed my signet ring as a help to form the other one that she made for her own use on the occasion above described. Is no hint given here of the principal at work when the alleged transmutation of metals is accomplished by the alchemist? Is, I say, for it is pretended that this art is known to various living fakirs and sanyâsis of modern India. And, moreover, do not the discoveries of Prof. Crookes as to the genesis of the elements* bring us to a point where, if science is to advance and not retrogress, she must move on to the Aryan hypothesis of Purusha and Prakriti? And does not this latter theory show us the possibility of shifting the elements of one metal into fresh combinations which would result in the development of another metal by employing the irresistible power of the Will? To do this by physical

* *Vis.*, that the atom is not a unity, but a composite of the world-stuff of space, resulting from the play of electricity.

methods means—as Professor Crookes says—the carrying back of the elements of a given metal to that extreme point where they might be shunted off on the line which would develop and bring into aggregation the elements of the other desired metal ; a thing not yet reached by physical science, even by employing the enormous resources of electricity. But what is so monstrously difficult for the chemist and electrician, who depends entirely upon the help of brute forces, may be quite easy to the Adept, whose active agent is the power of spirit, which he has learnt to bring into function : the power, in fact, which builds the Cosmos.

Between the point at which Crookes stood on the evening of January 15, 1891, when he delivered his Inaugural Address, as President of the Institution of Electrical Engineers, and made the brilliant experiments which proved the truth of his immortal hypothesis, and that occupied by European science only a quarter century before, there is a distance immeasurably greater than there is between it and the Gupta Vidyâ of our Aryan ancestors. Crookes, hero-like, while recognising the obstacles ahead and noting that "a formidable amount of hard work remains to be completed," is not in the least degree discouraged. "As for myself," he says,* "I hold the firm conviction that unflagging research will be rewarded by an insight into natural mysteries, such as now can scarcely be conceived. Difficulties, said a keen old statesman, are *things to be overcome ;*

* *Vide Jour. Inst. Elec. Engineers*, No. Vol. XX., p. 49.

and to my thinking Science should disdain the notion of finality."

To have got so far as that is the harbinger of the brighter day, when men of science will see that their inductive method multiplies an hundredfold the difficulties of learning "natural mysteries"; that the key to all mysteries is the knowledge of spirit; and that the way to that knowledge leads, not through the laboratory fire, but through that fiercer flame which is fed by egoism, kept alight by the fuel of passion and fanned by the blast of desires.

When spirit is once more recognised as the supreme factor in the genesis of the elements and the building of the Cosmos, psychical phenomena like those of our lamented H. P. B. will acquire transcendent importance as elementary scientific facts, and no longer be looked on by one party as tricks of conjuring, by the other as miracles for the surfeiting of the *gobe-mouches*.

CHAPTER XXIII.

PRECIPITATION OF PICTURES.

READERS of Lane's *Modern Egyptians*, will recall the story of a young man who, upon visiting a certain wonder-working sheikh, obtained some marvellous proofs of his occult powers. His father, then at a distant place, being somewhat ailing, the son asked that he might have news of his condition. The sheikh consenting, told him to write the father a note of enquiry; which was done, handed him by the anxious son, and by the sheikh placed under the back-pillow against which he was leaning. Presently, the sheikh drew from the same place a letter answering the young man's enquiries. It was written by the father's own hand, and, if my memory serves—for I am trusting to recollection only—stamped with his seal. At his request, also, coffee was served to the company in the father's own cups (*fingán*), which he had every reason to believe had been at the moment of asking in the paternal house in that far-off village. H. P. B. gave me one evening, with-

Digitized by Google

out fuss or parade, a fact of the first of these two orders. I wished to hear from a certain Adept upon a certain subject. She bade me write my questions, put them in a sealed envelope, and place the letter where I could watch it for the time being. This was even better than the Egyptian sheikh incident, for in that case the letter was hidden from the enquirer by the back-pillow. As I was sitting at the moment before the grate, I put my letter behind the clock on the mantel, leaving just one edge of the envelope projecting far enough for me to see it. My colleague and I went on talking about a variety of things for perhaps an hour, when she said my answer had come. I drew out the letter, found my own envelope with its seal unbroken, inside it my own letter, and inside that the answer in the Adept's familiar manuscript, written upon a sheet of green paper of peculiar make, the like of which—I have every reason to believe —was not in the house. We were in New York, the Adept in Asia. This phenomenon was, I submit, of a class to which the theory of trickery could not apply, and therefore has much weight. There is just one explanation possible—a very lame one—besides that which I conceive to be the true theory. Granting H. P. B. to be possessed of extraordinary hypnotic power, she might have instantaneously benumbed my waking faculties, so as to prevent my seeing her rise from her chair, take my letter from behind the clock, steam the gum, open the cover, read my letter, write the reply in forged handwriting, replace the contents of the envelope, refasten

Digitized by Google

it, place it back again on the mantel-shelf, and then restore me to the waking state without leaving in my memory the least trace of my experiences! But I had and still preserve a perfect consciousness of having carried on the hour's conversation, of her moving about hither and thither, of her making and smoking a number of cigarettes, of my filling, smoking, and refilling my pipe, and, generally, doing what any waking person might do when his senses were alert as to a psychical phenomenon then in progress. If some forty years of familiarity with hypnotic and mesmeric phenomena and their laws go for anything, then I can positively declare that I was fully conscious of what was going on, and that I have accurately stated the facts. Perhaps even twice forty years' experience on the plane of physical Máyá would not qualify one to grasp the possibilities in Oriental hypnotic science. Perhaps I am no more capable than the tyro of knowing what really passed between the times of writing my note and getting the answer. That is quite possible. But in such case what infinitesimally little weight should be given to the aspersions of H. P. B.'s several hostile critics, learned and lay, who have judged her an unmitigated trickster, without having had even a fourth of my own familiarity with the laws of psychical phenomena! In the (London) *Spiritualist* for January 28, 1876, I described this incident with other psychical matters, and the reader is referred to my letter for the particulars.

I am not aware of there being a special class of hir-

Digitized by Google

sute phenomena, but if there is, then the following incident may be included in it, along with that of the sudden elongation of H. B. P.'s hair at Philadelphia, described in one of my earlier chapters. After having shaved my chin for many years I began to grow a full beard, under medical advice, as a protection to a naturally delicate throat, and at the time I speak of, it was about four inches long. One morning, when making my toilet after my bath, I discovered a tangle of long hair under my chin next the throat. Not knowing what to make of it, I very carefully undid the mass at the expense of almost an hour's trouble, and found, to my great amazement, that I had a lock of beard, fourteen inches long, coming down as far as the pit of the stomach! Whence or why it had come no reading or experience helped me to guess; but there it was, a palpable fact and permanent phenomenon. Upon my showing it to H. P. B., she said it had been purposely done by our Guru while I slept, and advised me to take care of it as it would serve me as a reservoir of his helpful aura. I showed it to many friends, but none could venture any better theory to account for it, while all agreed that I ought not to cut it back to its former length. So I used to tuck it away inside my collar to hide it, and did so for years, until the rest of the beard had grown to match it. This accounts for the "Rishi beard," so often mentioned in friendly allusions to my personal appearance, and explains why I have not yielded to my long-felt wish to clip it into a more convenient and less conspicuous

Digitized by Google

shape. Whatever the fact may be called, it assuredly is not a Máyá, but a very real and tangible verity.

In the department of "precipitation"* of writings and pictures, H. P. B. was exceptionally strong, as will have been inferred from all that has preceded. It was one of M. A. Oxon's strong points likewise. On an evening of 1875 I sat at the house of the President of the Photographic Section of the American Institute, Mr. H. J. Newton, with a private medium named Cozine, to witness his slate-writings, which were far more wonderful than Dr. Slade's. The communications came upon the slate in bright blue and red colours; no pencil or crayon was used in the experiment, and I myself held one end of the slate. Upon mentioning this to H. P. B., she said: "I think I could do that; at any rate, I will try." So I went out and bought a slate and brought it home; she took it, without crayons or pencil, into a small, pitch-dark closet bed-room and lay upon the couch, while I went out, closed the door, and waited outside. After a very few minutes she reappeared with the slate in her hand, her forehead damp with perspiration, and she seeming very tired. "By Jove!" she exclaimed, "that took it out of me, but I 've done it; see!" On the slate was writing in red and blue crayons, in handwritings not her own. M. A. Oxon once wrote me an account of a similar experience of his own, save that in his case Imperator was the agent and he the

* A term, originally of my own invention, which seems to convey best of all an idea of the method employed.

Digitized by Google

passive medium, which is quite another affair. At his request Imperator wrote messages to him in various coloured inks, one after the other, inside the pocket-book he had in the breast pocket of his coat at the time. Imperator being still the *x* of Oxon's psychic life, perhaps it was the ethereal body of my friend which precipitated the coloured writings to appease the clamorous scepticism of his physical brain-consciousness, in which case his phenomenon and H. P. B.'s would be somewhat akin.

Elsewhere I have mentioned H. P. B.'s having done for me a precipitated picture on satin, which showed me the stage that Oxon had reached in his attempt to gain the power of projecting his Double by force of concentrated will-power. I had better now give the details :

One evening, in the autumn of 1876, she and I were working, as usual, upon *Isis*, at opposite sides of our writing-table, and dropped into a discussion of the principles involved in the conscious projection of the Double. Through lack of early familiarity with those subjects, she was not good then at explaining scientific matters, and I found it difficult to grasp her meaning. Her fiery temperament made her prone to abuse me for an idiot in such cases, and this time she did not spare her expressions of impatience at my alleged obtuseness. Finally, she did the very best thing by offering to show me in a picture how Oxon's evolution was proceeding, and at once made good her promise. Rising from the table, she went and opened a drawer from which she

Digitized by Google

took a small roll of white satin—the remnant, I believe, of a piece she had had given her at Philadelphia—and laying it on the table before me, proceeded to cut off a piece of the size she wanted; after which she returned the roll to its place and sat down. She laid the piece of satin, face down, before her, almost covered it with a sheet of clean blotting-paper, and rested her elbows on it while she rolled for herself and lighted a fresh cigarette. Presently she asked me to fetch her a glass of water. I said I would, but first put her some question which involved an answer and some delay. Meanwhile I kept my eye upon an exposed edge of the satin, determined not to lose sight of it. Soon noticing that I made no sign of moving, she asked me if I did not mean to fetch her the water. I said: "Oh, certainly." "Then what do you wait for?" she asked. "I only wait to see what you are about to do with that satin," I replied. She gave me one angry glance, as though seeing that I did not mean to trust her alone with the satin, and then brought down her clenched fist upon the blotting-paper, saying: "I shall have it now—this minute!" Then, raising the paper and *turning over the satin*, she tossed it over to me. Imagine, if you can, my surprise! On the sheeny side I found a picture, in colours, of a most extraordinary character.* There was an excellent portrait, of the head only, of Stainton

* The photo-engraving process not having as yet advanced to the point of photographing in colours, our cut but very poorly represents the original picture on satin.

PORTRAIT OF M. A. OXON WHICH THE SATIN PICTURE RESEMBLES.

Digitized by Google

Moses as he looked at that age, the almost duplicate of one of his photographs that hung "above the line" on the wall of the room, over the mantel-shelf. From the crown of the head shot out spikes of golden flame; at the places of the heart and the solar plexus were red and golden fires, as it might be bursting forth from little craters; the head and the place of the thorax were involved in rolling clouds of pure blue aura, bespeckled throughout with flecks of gold; and the lower half of the space where the body should be was enwrapped in similarly rolling clouds of pinkish and greyish vapour, that is, of auras of a meaner quality than the superior cumuli.

At that stage of my occult education I had heard nothing about the six *chakrams*, or psychical evolutionary centres in the human body, which are mentioned in Yoga S'ástras, and are familiar to every student of Patanjali. I therefore did not grasp the significance of the two flaming vortices over the cardiac and umbilical regions; but my later acquaintance with the subject gives this satin picture an enhanced value, as showing that the practical occultist who made it apparently knew that, in the process of disentangling the astral from the physical body, the will must be focussed in succession at the several nerve-centres, and the disengagement completed at each in turn before moving on to the next centre in the order of sequence. I take the picture to mean that Stainton Moses' experiment was being conducted as an intellectual rather than as a spiritual pro-

Digitized by Google

cess, wherefore he had completely formed and got ready for projection his head, while the other parts of his astral body were in a state of nebulous disturbance, but had not yet settled into the stage of *rûpa*, or form. The blue clouds would represent the pure but not most luminous quality of the human aura—described as shining, or radiant ; a silvery nimbus. The flecks of gold, however, that are seen floating in the blue, typify sparks of the spirit, the "silvery spark in the brain," that Bulwer so beautifully describes in his *Strange Story ;* while the greyish and pinkish vapours of the inferior portions show the auras of our animalistic, corporeal qualities. This grey becomes darker and darker as a man's animalism preponderates over his intellect, his moral and spiritual qualities, until in the wholly depraved, as the clairvoyants tell us, it is inky black. The aura of adeptship is described as a blended tint of silver and gold, as some of my readers, I am sure, must know from personal observation, and as the poets and painters of all ages have depicted in their sublimer flights of spiritual perception. This Téjas or soul-light, shines out through the mystic's face, lighting it up with a glow which, once seen, can never thereafter be mistaken. It is the "shining countenance" of the Biblical angels, the "glory of the Lord," the light that beamed in the face of Moses when descending from the Mount with such splendour that men could not bear to look upon his countenance ; a radiance that even transfigures the wearer's robes into "shining garments." The Hebrews call it *shekinah*, and

Digitized by Google

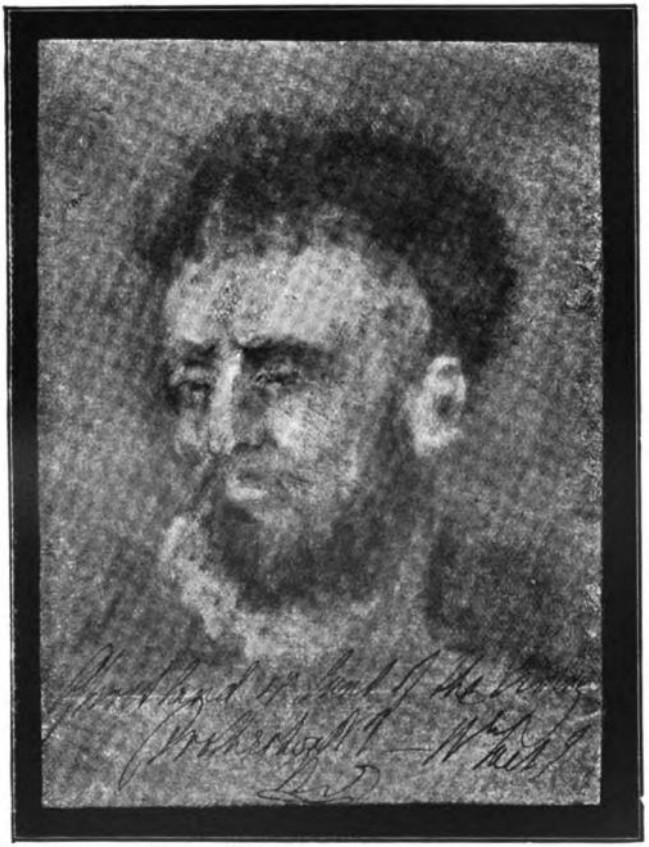
I once heard the term used by some Bagdad Jews to describe the face of a spiritual-minded visitor on that occasion. So, too, the word "shining" is applied similarly by various other nations; the pure spirits and pure men glow with the white light, the vicious and evil ones are veiled in blackness.

In the case of another precipitated portrait, made by H. P. B., there was no aura shown: I refer to that of an Indian yogi, which is described in Sinnett's *Occult World* and *Incidents in the Life of Mme. Blavatsky;* the documents respecting which were originally published in the *Spiritualist* shortly after the occurrence of the incident. It happened in this wise: On my way home to "The Lamasery" one day, I stopped at the Lotos Club and got some of the club note-paper and envelopes to use at home as occasion might require. It was late when I reached the house, and H. P. B. was at the dinner table already, with Mr. Judge and Dr. Marquette as guests. I laid the package of stationery on my desk in the writing-room (between which and the dining-room there was a dead wall, by the way), made a hurried toilet, and went to my seat at the table. At the close of the dinner we had drifted into talk about precipitations, and Judge asked H. P. B. if she would not make somebody's portrait for us. As we were moving towards the writing-room, she asked him whose portrait he wished made, and he chose that of this particular yogi, whom we knew by name as one held in great respect by the Masters. She crossed to my table, took a sheet of my crested club-

Digitized by Google

paper, tore it in halves, kept the half which had no imprint, and laid it down on her own blotting-paper. She then scraped perhaps a grain of the plumago of a Faber lead pencil on it, and then rubbed the surface for a minute or so with a circular motion of the palm of her right hand; after which she handed us the result. On the paper had come the desired portrait and, setting wholly aside the question of its phenomenal character, it is an artistic production of power and genius. Le Clear, the noted American portrait painter, declared it unique, distinctly an "individual" in the technical sense; one that no living artist within his knowledge could have produced. The yogi is depicted in *Samâdhi*, the head drawn partly aside, the eyes profoundly introspective and dead to external things, the body seemingly that of an absent tenant. There is a beard and hair of moderate length, the latter drawn with such skill that one sees through the upstanding locks, as it were—an effect obtained in good photographs, but hard to imitate with pencil or crayon. The portrait is in a medium not easy to distinguish: it might be black crayon, without stumping, or black lead; but there is neither dust nor gloss on the surface to indicate which, nor any marks of the stump or the point used: hold the paper horizontally towards the light and you might fancy the pigment was below the surface, combined with the fibres. This incomparable picture was subjected in India later to the outrage of being rubbed with india-rubber to satisfy the curiosity of one of our Indian members, who had borrowed it as a special favour

Digitized by Google



PHENOMENALLY PRODUCED PORTRAIT OF AN INDIAN YOGI.

Digitized by Google

"to show his mother," and who wished to see if the pigment was really on or under the surface! The effect of his vandal-like experiment is now seen in the obliteration of a part of the beard, and my sorrow over the disaster is not in the least mitigated by the knowledge that it was not due to malice but to ignorance and the spirit of childish curiosity. The yogi's name was always pronounced by H. P. B. "Tiraválá," but since coming to live in Madras Presidency, I can very well imagine that she meant Tiruvalluvar, and that the portrait, now hanging in the Picture Annex of the Adyar Library, is really that of the revered philosopher of ancient Mylapur, the friend and teacher of the poor Pariahs. As to the question whether he is still in the body or not I can venture no assertion, but from what H. P. B. used to say about him I always inferred that he was. And yet to all save Hindus that would seem incredible, since he is said to have written his immortal "Kural" something like a thousand years ago! He is classed in Southern India as one of the Siddhas, and like the other seventeen, is said to be still living in the Tirupati and Nilgiri Hills; keeping watch and ward over the Hindu religion. Themselves unseen, these Great Souls help, by their potent will-power, its friends and promoters and all lovers of mankind. May their benediction be with us!

In recalling the incidents for the present narrative, I note the fact that no aura or spiritual glow is depicted around the yogi's head, although H. P. B.'s account of him confirms that of his Indian admirers, that he was

Digitized by Google

a person of the highest spirituality of aspiration and purest character.

The same remark applies to the first portrait of my Guru, the one done in black and white crayons at New York by M. Harrisse: there is no nimbus. In this case at least, I can testify to the likeness, along with others who have had the happiness of seeing him. Its production was, like that done in oils at London in 1884 by Herr Schmiechen, an example of thought-transference. I think I have never published the facts before, but in any case they should have a place in this historical retrospect.

One naturally likes to possess the portrait of a distant correspondent with whom one has had important relations; how much more, then, that of a spiritual teacher, the beginning of relations with whom has substituted a nobler for a commonplace ideal of life in one's consciousness. I most earnestly wished to be able to have in my room at least the likeness of my reverend teacher, if I might not see him in life; had long importuned H. P. B. to procure it for me; and had been promised it at a favourable time. In this case my colleague was not permitted to precipitate it for me, but a simpler yet most instructive method was resorted to: a non-medium and non-occultist was made to draw it for me without knowing what he was doing. M. Harrisse, our French friend, was a bit of an artist, and one evening when the conversation turned upon India and Rajput bravery, H. P. B. whispered to me that she would try to get him to

Digitized by Google

draw our Master's portrait if I could supply the materials. There were none in the house, but I went to a shop close by and purchased a sheet of suitable paper and black and white crayons. The shopkeeper did up the parcel, handed it me across the counter, took the *half-dollar coin* I gave him, and I left the shop. On reaching home I unrolled my parcel and, as I finished doing it, the sum of half a dollar, *in two silver pieces of a quarter-dollar each* dropped on the floor! The Master, it will be seen, meant to give me his portrait without cost to myself. Harrisse was then asked by H. P. B. to draw us the head of a Hindu chieftain, as he should conceive one might look. He said he had no clear idea in his mind to go upon, and wanted to sketch us something else; but to gratify my importunity went to drawing a Hindu head. H. P. B. motioned me to remain quiet at the other side of the room, and herself went and sat down near the artist and quietly smoked. From time to time she went softly behind him as if to watch the progress of his work, but did not speak until it was finished, say an hour later. I thankfully received it, had it framed, and hung it in my little bed-room. But a strange thing had happened. After we gave the picture a last glance as it lay before the artist, and while H. P. B. was taking it from him and handing it to me, the cryptograph signature of my Guru came upon the paper; thus affixing, as it were, his imprimatur upon, and largely enhancing the value of his gift. But at that time I did not know if it resembled the Guru or not, as I had not yet seen him. When I did,

Digitized by Google

later on, I found it a true likeness and, moreover, was presented by him with the turban which the amateur artist had drawn in the picture as his head-covering. Here was a genuine case of thought-transference, the transfer of the likeness of an absent person to the brain-consciousness of a perfect stranger. Was it or was it not passed through the thought of H. P. B.? I think so. I think it was effected in the identical way in which the thought-images of geometrical and other figures were transferred to third parties in the convincing experiments recorded by the S. P. R. in its earlier published reports. With the difference, however, that H. P. B.'s own memory supplied the portrait to be transferred to Harrisse's mind, and her trained occult powers enabled her to effect the transfer direct, viz., without an intermediary; that is to say, without the necessity of having the drawing first made on a card, for her to visualise it in her own mind and then pass it on to the recipient brain. The painting by Schmiechen, of the magnificent portraits in oils of the same and another Master, which now hang in the Adyar Library, was an even more interesting circumstance, for the likenesses are so perfect and so striking as to seem endowed with life. Their eyes speak to one and search one to the bottom of his heart; their glance follows one everywhere as he moves about; their lips seem about to utter, as one may deserve, words of kindness or of reproach. They are an inspiration rather than an illustration of thought-transference. The artist has made two or three copies of them, but

Digitized by Google

not one has the soul in it that is in the originals. They were not done in the divine mood of inspiration, and the Masters' will-power is not focussed in them. The originals are the palladium of our headquarters; the copies, like images seen in a mirror, possess the details of form and colour, but are devoid of the energising spirit.

CHAPTER XXIV.

PROJECTION OF THE DOUBLE.

ALL theories and speculations upon the duplex corporeity of man, *i. e.*, of his possession of an astral, or phantasmal, body as well as a physical body, only lead up to the point where one demands proof before going further. It is so incredible to the materialistic mind as transcending common experience, that it is most likely to be pushed aside as a dream than accepted as even a working hypothesis. This, in fact, has been its handling by the average scientist, and when a braver investigator than the ordinary affirms it as his belief, he risks that reputation for cold caution which is presumed, with laughable inconsistency nevertheless, to be the mark of the true scientific discoverer. Yet many books as precise and suggestive as D'Assier's* have been published at different times, chief among them being the *Phantasms of the Living*, by Messrs. Gurney, Myers, and Podmore, and present a solid front of facts

* *Posthumous Humanity: a Study of Phantoms.*

Digitized by Google

impossible to deny, however difficult to believe. The case seems now to have been amply proved by the compilation of several thousand observed phenomena of this class; and the time seems to have come when the metaphysician who ignores them has no right to claim to be regarded as a trustworthy teacher of men. Yet, while the reason may be convinced by this array of facts, the real existence of the astral body, and the possibility of its separation from the physical "sheath" during life can only be known in one of two ways—by one's seeing the astral body of another person, or by projecting one's own and viewing one's physical body *ab extrâ*. With either of these experiences, one can say he KNOWS; with both, his knowledge becomes absolute and unshakable. I have had both. I take the witness-stand, and testify to the truth for the helping of my fellow-workers. I pass over with a bare mention the incidents of my seeing H. P. B. in her astral body in a New York street, while her physical body was in Philadelphia; of my seeing similarly a friend who was then in body in a Southern State, several hundred miles away; of seeing in an American railway train and on an American steamboat, a certain adept then physically in Asia; of receiving from the hand of another, at Jummu, a telegram sent me there by H. P. B. from Madras, and delivered to me by the adept under the guise of the Kashmiri telegraph-peon, whose appearance he borrowed momentarily for the purpose, and dissolved a moment later in full moonlight when I stepped to the door to

Digitized by Google

watch him ; of being saluted on Worli Bridge, Bombay, by another of these majestic men on another tropical evening as H. P. B., Damodar, and I sat in our phaeton enjoying the heat lightning and the cooling breeze off the sea ; of seeing him moving towards us from a little distance, advance to the very carriage side, lay his hand on H. P. B.'s, walk fifty yards away, and suddenly disappear from our sight on the causeway, bare of trees, shrubs, or other places of concealment, in the full sheen of the lightning : I pass these and other such experiences, and come to the one which of all was the most momentous in its consequences upon the course of my life. The story has been told before, but it had its place in the present retrospect, for it was the chief among the causes of my abandonment of the world and my coming out to my Indian home. Hence it was one of the chief factors in the upbuilding of the Theosophical Society. I do not mean to say that without it I should not have come to India, for my heart had been leaping within me to come, from the time when I learned what India had been to the world, what she might be made again. An insatiable longing had possessed me to come to the land of the Rishis and the Buddhas, the Sacred Land among lands ; but I could not see my way clear to breaking the ties of circumstance which bound me to America, and I might have felt compelled to put it off to that "convenient season" which so often never comes to the procrastinator and waiter upon the turn of events. This experience in question, however, settled my fate ; in an instant doubts melted

Digitized by Google

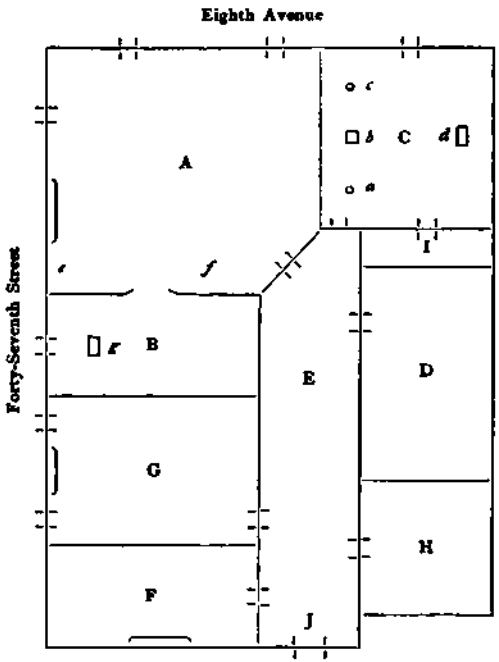
away, the clear foresight of a fixed will showed the way, and before the dawn of that sleepless night came, I began to devise the means and to bend all things to that end. The happening was thus:

Our evening's work on *Isis* was finished, I had bade good-night to H. P. B., retired to my own room, closed the door as usual, sat me down to read and smoke, and was soon absorbed in my book; which, if I remember aright, was Stephens' *Travels in Yucatan;* at all events, not a book on ghosts, nor one calculated in the least to stimulate one's imagination to the seeing of spectres. My chair and table were to the left in front of the door, my camp-cot to the right, the window facing the door, and over the table a wall gas-jet. The following simple ground plan will convey the correct idea of the premises of the "Lamasery," although not accurate as to the measurements.

EXPLANATION.—A, our working and only reception room; B, bed-room of H. P. B.; C, my bed-room; D, a small, dark bed-room; E, passage; F, kitchen; G, dining-room; H, bath-room; I, hanging closet; J, exterior door of the flat opening upon the house staircase; always closed with a spring-latch and locked at night. In my room, *a* is the chair where I sat reading; *b* the table; *c* the chair where my visitor seated himself during the interview; *d* my camp-cot. In our work-room *e* is where the cuckoo clock hung, and *f* the place of the hanging shelves against which I bruised myself. In B, *g* represents the place of H. P. B.'s bed. The door of

Digitized by Google

my room, it will be seen, was to my right as I sat, and any opening of it would have at once been noticed; the more so, since it was locked, to the best of my present recollection. That I am not more positive will not seem strange in view of the mental excitement into which the passing events threw me; events so astonishing as to make me forget various minor details which, under a cooler frame of mind, would perhaps have been retained in my memory.



Digitized by Google

I was quietly reading, with all my attention centered on my book. Nothing in the evening's incidents had prepared me for seeing an adept in his astral body ; I had not wished for it, tried to conjure it up in my fancy, nor in the least expected it. All at once, as I read with my shoulder a little turned from the door, there came a gleam of something white in the right-hand corner of my right eye ; I turned my head, dropped my book in astonishment, and saw towering above me in his great stature an Oriental clad in white garments, and wearing a head-cloth or turban of amber-striped fabric, hand-embroidered in yellow floss-silk. Long raven hair hung from under his turban to the shoulders ; his black beard, parted vertically on the chin in the Rajput fashion, was twisted up at the ends and carried over the ears ; his eyes were alive with soul-fire ; eyes which were at once benignant and piercing in glance ; the eyes of a mentor and a judge, but softened by the love of a father who gazes on a son needing counsel and guidance. He was so grand a man, so imbued with the majesty of moral strength, so luminously spiritual, so evidently above average humanity, that I felt abashed in his presence, and bowed my head and bent my knee as one does before a god or a god-like personage. A hand was lightly laid on my head, a sweet though strong voice bade me be seated, and when I raised my eyes, the Presence was seated in the other chair beyond the table. He told me he had come at the crisis when I needed him ; that my actions had brought me to this point ; that it lay with me alone

Digitized by Google

whether he and I should meet often in this life as co-workers for the good of mankind; that a great work was to be done for humanity, and I had the right to share in it if I wished; that a mysterious tie, not now to be explained to me, had drawn my colleague and myself together; a tie which could not be broken, however strained it might be at times. He told me things about H. P. B. that I may not repeat, as well as things about myself, that do not concern third parties. How long he was there I cannot tell: it might have been a half-hour or an hour; it seemed but a minute, so little did I take note of the flight of time. At last he rose, I wondering at his great height and observing the sort of splendour in his countenance—not an external shining, but the soft gleam, as it were, of an inner light—that of the spirit. Suddenly the thought came into my mind: "What if this be but hallucination; what if H. P. B. has cast a hypnotic glamour over me? I wish I had some tangible object to prove to me that he has really been here; something that I might handle after he is gone!" The Master smiled kindly as if reading my thought, untwisted the *fehtâ* from his head, benignantly saluted me in farewell and—was gone: his chair was empty; I was alone with my emotions! Not quite alone, though, for on the table lay the embroidered head-cloth; a tangible and enduring proof that I had not been "overlooked," or psychically befooled, but had been face to face with one of the Elder Brothers of Humanity, one of the Masters of our dull pupil-race. To run and beat at H. P. B.'s

Digitized by Google

door and tell her my experience, was the first natural impulse, and she was as glad to hear my story as I was to tell it. I returned to my room to think, and the gray morning found me still thinking and resolving. Out of those thoughts and those resolves developed all my subsequent theosophical activities, and that loyalty to the Masters behind our movement which the rudest shocks and the cruelest disillusioning have never shaken. I have been blessed with meetings with this Master and others since then, but little profit is to be reaped in repeating tales of experiences of which the foregoing is a sufficient example. However others less fortunate may doubt, I KNOW.

As due to my ideal of candour, I must recall a circumstance which threw a doubt once upon my competency as a witness as to the above incident. While in London in 1884, I was examined as a witness before a Special Committee of the Society for Psychical Research, and told the above story among others. A member of the committee in cross-examination, so to say, put to me the question how I could be sure that Madame Blavatsky had not employed some tall Hindu to play this farce on me, and that as to the supposed mysterious details my fancy might not have played me false. I was thereupon seized with such a disgust for their cruel suspicion of H. P. B., and their seemingly dishonourable shirking of palpable spiritual facts under cover of assumed astuteness, that I hastily answered, among other things, that I had never until that moment seen a Hindu in my life. The

Digitized by Google

circumstance of my having actually made in 1870 the voyage across the Atlantic with two Hindu gentlemen, one of whom was later our close friend at Bombay—Mooljee Thackersey—entirely slipped out of my mind. This was a clear case of amnesia (loss of memory) for I had not the least intention or interest in concealing so commonplace a circumstance; the meeting of 1870, fourteen years before the examination of me by the S. P. R., had left no such mark in my memory as to be recalled in my moment of anger, and so the force of my testimony was weakened to that extent. A meeting with Hindus five years or so before I knew H. P. B., and, through her, the real India, would not have been of paramount importance to a man of such multifarious acquaintanceships and adventures as myself. Yes, it was amnesia; but amnesia is not lying, and my story is true, even though some may doubt it. And this is the fitting place for me to say that, as some of my chapters were written while travelling, away from my books and papers, and especially as much of it is written from memory only of the long-past events, I beg indulgence for any unintentional mistakes that may be discovered. I try my best to be accurate and certainly shall be truthful.

I now pass on to my personal experiences in projections of the Double. In connection with this phenomenon let me give a word of caution to the less advanced student of practical psychology; the power of withdrawing the astral body from the physical *is no necessary proof of high spiritual development.* The contrary is

Digitized by Google

believed, by perhaps the majority of dabblers in occultism, but they are wrong. A first and sufficient proof is that the emergence of the astral body happens very often with men and women who have given little or no time to occult research, have followed no yogic system, have made no attempts to do the thing, have usually been frightened or much ashamed and vexed when convicted of it, and have not been in the least remarkable above the average of persons for purity of life and thought, spirituality of ideal, or the "gifts of the spirit" of which the Scripture speaks; often the very opposite. Then, again, the annals of the Black Art teem with numberless instances of the visible, and invisible (save clairvoyantly), projection of the Double by wicked persons bent on mischief; of bilocations, hauntings of hated victims, lycanthropical masqueradings, and other "damnable witchcrafts." Then, again, there are the three or four or more thousand cases of projections of the Double by all sorts and conditions of men, some no better than they should be, if not a good deal worse occasionally, that have been recorded and winnowed down by the S. P. R., and the yet more thousands not garnered into their cast-iron granary; all combining to prove the truth of my warning, that one must not in the least take the mere fact that a certain person can travel—whether consciously or unconsciously it matters not—in the astral body as evidence that that person is either better, wiser, more spiritually advanced, or better qualified to serve as Guru, than any other person not so endowed. It is simply the sign

Digitized by Google

that the subject of the experience has, either congenitally or by subsequent effort, loosened the astral body in its sheath, and so made it easier for it to go out and return again, when the outer body is naturally or hypnotically asleep, hence unobstructive. The reader will recall, in this connection, the satin picture of M. A. Oxon's experiments in this direction which H. P. B. made for me. Somehow or other, I have never found the time for self-training in yoga since I took up my line of practical work in our theosophical movement. I never seemed to care whether I acquired any psychical powers or not, never aspired to guruship, nor cared whether I could or could not attain Liberation during this life. To serve mankind always seemed to me the best of yogas, and the ability to do even a little towards spreading knowledge and diminishing ignorance, an ample reward. So it never entered my mind in the early days that I might train myself as a seer or a wonder-worker, a metaphysician or an adept; but I have been going on all these years on the hint given me by a Master, that *the best way to seek them was through the Theosophical Society:* a humble sphere, perhaps, yet one well within my limited capabilities, thoroughly congenial and at the same time useful. In telling about my early goings out of the body, I must not be thought, therefore, to be pluming myself upon my supposed high spiritual development, nor intending to boast of special cleverness as a psychic. The fact is, I presume, I was helped to get this, along with many other psychical experiences, as a basis of the special education

Digitized by Google

needed by one who had such work as mine cut out for him.

Here is one of my facts: H. P. B. and I had one evening in 1876, while we were living in West 34th St.,* finished writing a chapter of the original draft of *Isis Unveiled*, and on parting for the night, laid away the great pile of "copy" in a pasteboard box, with the first page on top, the last at the bottom of the heap. She occupied the flat directly under my own, in the second story of the apartment-house, and both of us, of course, locked our outer doors to keep out thieves. While undressing it occurred to me that if I had added certain three words to the final sentence of the last paragraph, the sense of the whole paragraph would have been strengthened. I was afraid I might forget them in the morning, so the whim came to me that I might try to go down to the writing-room below stairs in my Double and perhaps write them phenomenally. Consciously, I had never travelled thus before, but I knew how it must be attempted, *viz.*, by fixing the intention to do it firmly in the mind when falling asleep, and I did so. I knew nothing more until the next morning, when, after dressing and taking my breakfast, I stopped in at H. P. B.'s flat to bid her good-bye on my way to my office. "Well," she said, "pray tell me what the deuce you were doing here last night after you went to bed?" "Doing," I replied, "what do you mean?" "Why," she rejoined,

* Not the "Lamasery," but the place we occupied before going there.

Digitized by Google

"I had got into bed and was lying there quietly, when lo! I saw my Olcott's astral body oozing through the wall. And stupid and sleepy enough you seemed, too! I spoke to you, but you did not reply. You went to the writing-room and I heard you fumbling with the papers; and that's all. What were you about?" I then told her of my intended experiment: we went together into the other room, emptied out the pile of MS., and on the last page, at the end of the concluding paragraph, found two of the intended three words fully written out in my own handwriting and the third begun, but not finished: the power of concentration seeming to have become exhausted, and the word ending in a scrawl! How I handled the pencil, if I did handle it, or how I wrote the words without handling it, I cannot say: perhaps I was able just that once to precipitate the writing with the help of one of H. P. B.'s benevolent elementals, by utilising molecules of the plumbago from either of the lead pencils lying on the table along with the manuscript. Be it as it may, the experience was useful.

The reader should take note of the fact that my writing in the phenomenal way stopped at the point where, from inexperience, I let my will wander away from the work in hand. To fix it immovably is the one thing indispensable, just as it is the necessary concomitant of good work on the normal intellectual plane. In the *Theosophist* for July, 1888 (Art. "Precipitated Pictures at New York"), I explained the connection between the concentration of trained will-power and the permanency

Digitized by Google

of precipitated writings, pictures, and other similar proofs of the creative power of the mind. I instanced the very interesting and suggestive details of the projection of the Double and the precipitation of writing, given by Wilkie Collins in his novel, *The Two Destinies*—a book, in its way, as well worth reading by any student of occultism,* as *Zanoni*, *A Strange Story*, or *The Coming Race*. I cited, further, the case of the Louis portrait precipitated for Mlle. Liebert and myself, which faded out by the next morning, but was caused by H. P. B. to subsequently reappear at Mr. Judge's request, and to be so "fixed" as to be still as sharp and fresh after the lapse of many years as when first made. But no amount of reading or experimentation at second hand can compare with even one little original experience, like the one of mine above described, in its power to make one realise the truth of the universal cosmic operation of *thought* creating *form*. The s'loka *Bahúsyam Prajdyeyaiti*, etc. (VIth Anuváka, 2nd Valli, Taittiryaka-Upanishad), "He (Brahmá) *wished*, may I be many, may I grow forth. He *brooded* over himself. *After* he had thus brooded, he sent forth all, whatever there is. Having sent forth, he entered it;" is to me profoundly instructive. It has a meaning immeasurably deeper, truer, more suggestive to one who has himself *meditated* and then *created* form,

* It was this article which caused Mr. Collins to write me that, among the incidents of his life, none had more surprised him than his finding from my notice of his book that he had by the *mere exercise of the imagination*, apparently stumbled on one of the mysterious laws of occult science.

Digitized by Google

than to him whose eyes have but read the words on the page, without the echoing assent coming from within one's being.

I recall another case of my projecting my Double, which illustrates the law known as "repercussion." The reader may find the amplest materials for forming a correct opinion on this subject in the literature of Witchcraft, Sorcery, and Magic. The word "repercussion" means, in this connection, the reacting upon one's physical body of a blow, stab, or other injury, inflicted upon the Double while it is projected and moving about as a separate entity: "bilocation" is the simultaneous appearance of a person in two places; one appearance that of the physical, the other that of the astral body, or Double. M. d'Assier discusses both in his *Posthumous Humanity*, and in my English version of that excellent work, I add remarks of my own upon the subject. Speaking of the infliction of injuries upon their victims by sorcerers who could duplicate their bodies and visit them in the Double, the author says (p. 224): "The sorceress entered into the house of him against whom she had a revenge to gratify, and vexed him in a thousand ways. If the latter were resolute, and had a weapon available, it would often happen that he would strike the phantom, and upon recovering from her trance, the sorceress *would find upon her own body* the wounds she had received in the phantasmal struggle."

Des Mousseaux, the Catholic writer against Sorcery and other "black arts," quotes from the judicial archives

Digitized by Google

of England, the case of Jane Brooks, who persecuted a child named Richard Jones after a very malicious fashion. At one of her visitations, the child screamed out that the phantom of Jane was present and pretended to touch it with the point of his finger. A witness named Gilson, springing to the place indicated, slashed at it with a knife, although the phantom was visible only to the child. The house of Jane Brooks was at once visited by Gilson, with the child's father and a constable, and she was found sitting on her stool holding one of her hands with the other. She denied that anything had happened to her hand, but the other being snatched away, the concealed one was found covered with blood, and bearing just such a wound as the child had said had been inflicted on the hand of the phantom by Gilson's knife. A great number of similar cases are on record, all going to prove that any accident or injury to the projected Double reacts and reproduces itself upon the physical body in the identical spot.* This brings me to my own experience.

In our writing-room at the "Lamasery" there hung upon the wall, beside the chimney, a Swiss cuckoo-clock,

* The exact duplexity of the astral and physical bodies in man has been affirmed from the remotest ages. It is the Eastern theory that the astral man is the product of his past Karma, and that it moulds the outer encasement according to its own innate qualities, making it a visible representation of the same. This idea is succinctly embodied in the verse in Spenser's *Faerie Queene*:

> "For of the soul the body form doth take,
> For soul is form, and doth the body make."

Digitized by Google

which it was my methodical custom to wind up nightly before retiring to my own room. One morning, on going to my toilet-glass after my bath, I noticed that my right eye was black and blue, as though I had received a blow from a fist. I could not account for it in the least, and I was the more puzzled on finding that I had no pain in the injured part. In vain I racked my brain for an explanation. In my bed-room there was no post, pillar, projecting corner, or other obstruction from which I could have received injury, supposing that I had been walking about in my sleep—a habit I had never acquired, by the way. Then, again, a shock, rude enough to have blackened my eye like this, must, of necessity, have wakened me instantaneously at the time, whereas I had slept the night through as quietly as usual. So my bewilderment continued, until I met H. P. B. and a lady friend, who had shared her bed that night, at the breakfast table. The lady friend gave me the clue to the enigma. She said: "Why, Colonel, you must have hit yourself last night when you came in to wind the cuckoo clock!" "Wind the clock," I replied, "what do you mean by that? Did you not lock the door when I went to my room?" "Yes," she said, "I locked it myself; and how ever *could* you have come in? Yet both Madame and I saw you pass the sliding-doors of our bed-room and heard you pulling the chain to wind the clock. I called, but you did not answer, and I saw nothing more." Well, then, I thought, if I did enter the room in my Double and wind the clock, two things are inevitable, (*a*)

Digitized by Google

the clock must show that it was wound last night and not have run down ; (*b*) there must be some obstacle on my path between the door and the opposite chimney against which I could have hit my eye. We examined the premises and found :

1. That the clock was going and had apparently been wound up at the usual time.

2. Just near the door hung a small hanging book-shelf, the farthest front corner of one of whose shelves was of the exact height to catch my eye if I had run against it. Then there came back to me the dim recollection of myself moving towards the door from the far side of the room, with my right hand outstretched as if to feel for the door, a sudden shock, " the seeing of stars "—as it is commonly expressed—and then oblivion until morning.

That is curious, it seems to me ; very curious that a blow which, received upon the physical head, must almost inevitably have at once awakened one, should, when falling upon the projected Double, have left its substantial mark behind it by repercussion upon the physical body, without bringing me to consciousness. And the case is instructive in other aspects, as well. It shows that, provided the conditions are favourable for the slipping of the Double out of the physical body, the " duplication " is likely to occur under the stimulus of a thought-prepossession, for instance, that of a daily habit of doing any certain thing at a fixed hour. Supposing the conditions unfavourable for " projection " or " dupli-

Digitized by Google

cation," the subject would, under another set of conditions, become somnambulistic, rise from bed, go and do what was on his or her mind, and return to bed and to deep slumber without remembering anything that had occurred. The editors of the English version of the *Dabistan* say: "It is impossible to fix the epoch at which particular opinions and practices originated. . . particularly the belief that a man may attain the faculty to quit and to reassume his body, or to consider it as a loose garment, which he may put off at pleasure for ascending to the world of light, and on his return be reunited with the material elements. All these matters are considered very ancient" (*Dabistan*, Preface, lxxix). One of my most interesting experiences has been to encounter persons in different parts of the world, until then strangers, who have averred that they had seen me in public places, that I had visited them in the astral body, sometimes talked on occult matters with them, sometimes healed them of diseases, sometimes even gone with them on the astral plane to visit our Masters; yet without my keeping any remembrance of the several incidents. Yet, when one comes to think of it, it is not so improbable, after all, that one whose whole life and every waking thought and wish is bound up in this great movement of ours; who has no desire save for its success, no ambition save to push it forward to its ultimate goal, should carry his prepossession into the realms of sleep, and float through the currents of the Astral Light towards the kindred beings who are held

Digitized by Google

by the same magnet to the same attractive centre of wish and aspiration. In its truest sense—

> "It is the secret sympathy,
> The silver link, the silver tie,
> Which heart to heart, and mind to mind,
> In body and in soul can bind."

CHAPTER XXV.

SWAMI DYÁNAND.

IF I should fail to introduce the episode of our brief and upleasant connection with Swami Dyánand Sarasvati and his Arya Samaj, this could not be called a true history of the beginnings of our Society. I should prefer to omit it altogether if I could, for it is not agreeable to record the details of vanished hopes, bitter misunderstandings, and faded illusions. Now that both H. P. B. and the Swami are dead, and that sixteen years have passed since we voted for a blending of the two societies together, I feel at liberty to give the clue to what has been hitherto a sort of mystery as regards the incident, and to explain the hidden causes of the union and subsequent quarrel between the great Pandit and ourselves.

I have told all that concerns the formation of the Theosophical Society; how it originated; what were its avowed aims and objects; and how it gradually faded into a small, compact body, of which the two Founders were the dual energy: a mere nucleus of the present

Digitized by Google

organisation. I make bold to say that not a line can be produced which goes to show that our religious opinions were ever concealed or misrepresented, to whatsoever exoteric creed our correspondents may have belonged. If, therefore, Swami Dyánand and his followers ever misunderstood our position and that of the Theosophical Society, the fault was theirs, not ours. Our two hearts drew us towards the Orient, our dreams were of India, our chief desire to get into relations with the Asiatic people. No way, however, had yet opened on the physical plane, and our chance of getting out to our Holy Land seemed very slight, until one evening in the year 1877 an American traveller, who had recently been in India, called. He happened to sit so that, in looking that way I noticed on the wall above him the framed photograph of the two Hindú gentlemen with whom I had made the Atlantic passage in 1870. I took it down, showed it to him, and asked if he knew either of the two. He did know Moolji Thackersey and had quite recently met him in Bombay. I got the address, and by the next mail wrote to Moolji about our Society, our love for India and what caused it. In due course he replied in quite enthusiastic terms, accepted the offered diploma of membership, and told me about a great Hindú pandit and reformer, who had begun a powerful movement for the resuscitation of pure Vedic religion. At the same time he introduced to my notice, in complimentary terms, one Hurrychund Chintamon, President of the Bombay Arya Samaj, with whom I chiefly

Digitized by Google

corresponded thereafter; and whose evil treatment of us on arrival at Bombay is a matter of history. The latter nominated several Hindú gentlemen of Bombay for membership, spoke most flatteringly of Swami Dyánand, and brought about an exchange of letters between the latter and myself as chiefs of our respective societies. Mr. Hurrychund wrote to me, on reading my explanations of our views as to the impersonality of God—an Eternal and Omnipresent Principle which, under many different names, was the same in all religions—that the principles of the Arya Samaj were identical with our own, and suggested that, in that case, it was useless to keep up two societies, when by amalgamating we would increase our powers of usefulness and our chances of success.* Neither then nor ever since have I cared for the empty honour of leadership, and so I was but too glad to take second place under the Swami, whom I was made to look up to as immeasurably my superior in every respect. The letters of my Bombay correspondents, my own views about Vedic philosophy, the fact of his being a great Sanskrit pandit and actually playing the part of a Hindú Luther, prepared me to believe without difficulty what H. P. B. told me later about him. This was neither more nor less than that he was an adept of the Himalayan Brotherhood inhabiting the Swami's body; well known to our own teachers, and in relations with them for the accomplishment of the work

* For a full statement of the case, with documentary proofs, see Extra Supplement, *Theosophist*, July, 1882.

Digitized by Google

he had in hand. What wonder that I was as ready as possible to fall in with Hurrychund's scheme to amalgamate the T. S. with the Arya Samaj, and to sit at the Swami's feet as pupil under a master! To make such a connection I should have been ready, if required, to be his servant and to have rendered him glad service for years to come, without hope of reward. So, the matter being explained to my colleagues in New York, our Council, in May, 1878, passed a vote to unite the two societies and change the title of ours to "The Theosophical Society of the Arya Samaj." This was notified to the Swami, and in due time he returned to me the draft of a new Diploma (now before me as I write) which I had sent him, signed, as requested, with his name and stamped with his own seal. I had this engraved, issued it to a few members who wished to enlist under the new scheme, and put forth a circular reciting the principles under which we intended to work.

So far all went well, but, in due course, I received from India an English translation of the rules and doctrines of the Arya Samaj, made by Pandit Shyamji Krishnavarma, a protégé of the Swami's, which gave us a great shock—gave me, at least. Nothing could have been clearer than that the Swami's views had radically changed since the preceding August, when the Lahore Arya Samaj published his defence of his *Veda Bhâshya* against the attacks of his critics, in the course of which he quoted approvingly the opinions of Prof. Max Müller, Messrs. Colebrooke, Garrett, and others, that the God of

Digitized by Google

the Vedas was an impersonality. It was evident that the Samaj was *not* identical in character with our Society, but rather a new sect of Hinduism—a Vedic sect accepting Swami Dyánand's authority as supreme judge as to which portions of the Vedas and Shâstras were and were not infallible. The impossibility of carrying out the intended amalgamation became manifest, and we immediately reported that fact to our Indian colleagues. The Theosophical Society resumed its *status quo ante;* and H. P. B. and I drafted and the Council put out two circulars, one defining what the Theosophical Society was, the other (dated September, 1878), defining a new body, the "Theosophical Society of the Arya Samaj of Aryavart," as a bridge between the two mother societies, giving in detail the translation of the A. S. rules, etc., and leaving our members perfectly free to join the "link-society," as I called it, and comply with its by-laws, or not.

Our London Branch, which after more than two years of preliminary *pourparlers*, had formally organised on the 27th June, 1878, under the title of the "British Theosophical Society,"* issued its first public circular as "The British Theosophical Society of the Arya Samaj of Aryavart." If the digression may be excused, I will quote here, for their historical interest, some passages out of my copy of this circular, viz.:

* Under the presidency of the late Dr. Anna Kingsford, the Branch name was changed in the year 1884 to that of the "London Lodge of the Theosophical Society," which it still bears.

Digitized by Google

"1. The British Theosophical Society is founded for the purpose of discovering the nature and powers of the human soul and spirit by investigation and experiment.

"2. The object of the Society is to increase the amount of human health, goodness, knowledge, wisdom, and happiness.

"3. The Fellows pledge themselves to endeavour, to the best of their powers, to live a life of temperance, purity, and brotherly love. They believe in a Great First Intelligent Cause, and in the Divine Sonship of the spirit of man, and hence in the immortality of that spirit, and in the universal brotherhood of the human race.

"4. The Society is in connection and sympathy with the Arya Samaj of Aryavart, one object of which Society is to elevate, by a true spiritual education, mankind out of degenerate, idolatrous, and impure forms of worship, wherever prevalent."

This was a clear, frank, and unobjectionable programme, the reflection of the tone, though not of the actual letter, of my New York T. S. circular of the same year. In both, the aspiration for the attainment of spiritual knowledge through the study of natural, especially of occult, phenomena is declared, as well as the brotherhood of mankind. In drafting the New York circular it occurred to me that the membership of, and supervising entities behind, the Society would be naturally grouped in three divisions, *viz.*, new members not detached from worldly interests; pupils, like myself, who had withdrawn from the same or were ready to do so; and the adepts

Digitized by Google

themselves, who, without being actually members, were at least connected with us and concerned in our work as a potential agency for the doing of spiritual good to the world. With H. P. B.'s concurrence I defined these three groups, calling them sections, and sub-dividing each into three degrees. This, of course, was in the hope and expectation that we should have more practical guidance in adjusting the several grades of members than we had had—or have since had, I may add. In the New York circular, Clause VI. said :

" The objects of the Society are various. It influences its fellows to acquire an intimate knowledge of natural law, especially its occult manifestations."

Then follow these sentences written by H. P. B. :

" As the highest development, physically and spiritually, on earth of the creative cause, man should aim to solve the mystery of his being. He is the procreator of his species, physically, and having inherited the nature of the unknown but palpable cause of his own creation, must possess in his inner, psychical self, this creative power in lesser degree. He should, therefore, study to develop his latent powers, and inform himself respecting the laws of magnetism, electricity, and all other forms of force, whether of the seen or unseen universes."

I then proceed as follows :

" The Society teaches and expects its fellows to personally exemplify the highest morality and religious aspirations ; to oppose the materialism of science and every form of dogmatic theology . . . ; to make known,

Digitized by Google

among Western nations the long-suppressed *facts* about Oriental religious philosophies, their ethics, chronology, esoterism, symbolism . . . ; to disseminate a knowledge of the sublime teachings of that pure esoteric system of the archaic period which are mirrored in the oldest Vedas, and in the philosophy of Gautama Buddha, Zoroaster, and Confucius; finally, and chiefly, to aid in the institution of a Brotherhood of Humanity, wherein all good and pure men of every race shall recognise each other as the equal effects (upon this planet) of one Uncreate, Universal, Infinite and Everlasting Cause."

The parenthesis (upon this planet) was written in by H. P. B.

The step we were taking in resuming the Society's autonomy upon discovering the sectarian character of the Arya Samaj, thus drew from us the above categorical declaration of principles, in which, the reader will observe, were embraced—

1. The study of occult science;

2. The formation of a nucleus of universal brotherhood; and

3. The revival of Oriental literature and philosophy. In short, all the three Declared Objects upon which the Theosophical Society has been building itself up during the subsequent seventeen years.

If our Bombay friends had previously been under the least misapprehension as regards the aims and principles of our Society, the above circular removed the last excuse for its continuance.

Digitized by Google

The preamble to the Arya Samaj circular issued by us in September, 1878,—three months only before our departure for India—called attention to Pandit Shyamji's translation of the Samaj rules, embodied in the circular, and said: "The observance of these rules is obligatory only upon such fellows as may voluntarily apply for admission to the Arya Samaj; the rest will continue to be, as heretofore, unconnected with the special work of the Samaj." It went on to say that our Society, with the design of aiding "in the establishment of a Brotherhood of Humanity, had organised sections (meaning groups) in which room is provided for persons born in the most varied religious faiths, requiring only that applicants shall sincerely wish to learn the sublime truths first written by the Aryans in the Vedas and in different epochs promulgated by sages and seers, and to order their lives accordingly. And also, should they so desire, labour to acquire that control over certain forces of nature which a knowledge of her mysteries imparts to its possessor." The occult training and developments of H. P. B. and her grade of pupils were here hinted at. The phrase shows that the chief original motive of the Founders of the Society was to promote this kind of study; it being their firm conviction that with the development of the psychical powers and spiritual insight, all religious knowledge was attainable, and all ignorant religious dogmatism must vanish. The circular adds that "the Society has thus welcomed, and its members dwell in harmony with Buddhists, Lamaists, Brah-

Digitized by Google

manists, Parsis, Confucianists, and Jews," etc., which was strictly true, applicants from all these religious bodies having already been enrolled as fellows. The incongruity of this platform with that of the Arya Samajis unmistakable and seen at a glance. For Rule 2 in Shyamji's version reads :

"The four texts of the Vedas shall be received and regarded as containing within themselves all that is necessary to constitute them an extraordinary authority in all matters relating to human conduct."

Nothing is said here about any other religious scripture being an authority in human conduct, nor any benevolent interest expressed in the religious welfare of non-Vedic peoples ; in short, it is a sectarian body, not eclectic. In saying which I pronounce no opinion as to whether the Samaj is a good or a bad sect, a conservative or a progressive one, or whether its establishment by the Swami was a blessing or the reverse to India. I simply mean that it is a sect, and that, our Society not being one and standing upon a quite different platform, could not properly be merged by us into the Samaj, although we could be and wished to be friends.

As further showing the arbitrary authority which the Swami claimed and exercised in prescribing which of the S'ástras were and were not "authoritative," I quote, from the same Rule 2 of the Arya Samaj, the following :

"The Brâhmanas beginning with the Shatapatka ; the six Angas or limbs of the Vedas, beginning with the Shikshâ ; the four Upvedas ; the six Darshanas or

Digitized by Google

Schools of Philosophy; and the 1,127 Lectures on the Vedas, called *Shákhás*, or the branches—these shall be accepted as exponents of the meaning of the Vedas, as well as of the history of the Aryas. So far as these shall concur with the views of the Vedas, they shall be considered as ordinary authority."

Here is defined a sect, a sect of Hinduism, a sect based on the lines traced by its founder. The Swami, it will be seen, in passing, puts himself in opposition to the whole body of orthodox pandits, since he excludes from his list of inspirational books many that are held by them as sacred.

For instance, Smritis are omitted by the Swami, as not being conclusive authorities. But Manu, Chap. II., 10, holds that "Vedas" are "revelations" and "Smritis" (Dharma S'ástras) are "traditions"; these two are irrefutable in all matters, for by these two virtues arose. It is therefore maintained that Smritis must be respected as "*authority*."

Things remained thus until the arrival of the Founders in India and their meeting, soon after, with Swami Dyánand at Saharanpur. The chances for our entanglement in a series of misunderstandings were, of course, greatly enhanced by the necessity for the Swami and ourselves having to talk with each other through interpreters, who, however well up in ordinary English, lacked the fluency which would enable them to render correctly our views upon the abstruse questions of philosophy, metaphysics, and occult science which had to be discussed.

Digitized by Google

We certainly were made to understand that Swami Dyánand's conception of God was that of the Vedântic Parabrahman, hence in accord with our own. Under this mistake—as it afterwards was declared by him to be—I lectured at Meerut to the Arya Samaj in his presence, and declared that now all causes of misunderstanding had been removed and the two societies were really twins. Yet it was not so: they were no more akin than our Society was with the Brahmo Samaj or any Christian or other sect. Disruption was inevitable, and in due time it came. The Swami, losing his temper, tried to repudiate his own words and acts, and finally turned upon us with abuse and denunciations, and put forth a circular to the public and posted handbills in Bombay to call us charlatans and I do not know what else. This forced us in self-defence to state our case and produce our proofs, and this was done in an extra Supplement to the *Theosophist*, of date July, 1882, in which all the evidence is cited in full and engraved facsimies are given of an important document bearing the Swami's signature and the certificate of Mr. Seervai, then our Recording Secretary. Thus, after a disturbed relationship of about three years, the two societies were wrenched apart and each went on its own way.

The inherent disruptive elements were (1) My discovery that the Swami was simply that—*i. e.*, a pandit ascetic—and not an adept at all; (2) The fact that the Samaj was not standing upon the eclectic platform of the Theosophical Society; (3) The Swami's disappointment at

Digitized by Google

our receding from our first consent to accept Harischandra's bid for the amalganation; (4) His vexation—expressed to me in very strong terms—that I should be helping the Ceylon Buddhists and the Bombay Parsis to know and love their religions better than heretofore, while, as he said, both were false religions. I have also doubted whether his and our intermediary correspondent, Hurrychund Chintamon, had ever explained to him just what our views and the real platform of our Society were. The subsequent discovery of the fact that he (Hurrychund) had pocketed the Rs. 600-odd sent him by us for the Arya Samaj, and his restitution of the money at Bombay under H. P. B.'s compulsion, incline me to the opinion that he deceived both the Swami and ourselves in this respect, and that, but for my getting Shyamji's translation of the Samaj Rules, we should have gone on under the same misapprehension until coming out to India.

It is quite useless and waste of room for me to proceed further in this affair, since those who care for details can find them given at length in the extra Supplement to the *Theosophist* above mentioned. The Swami was undoubtedly a great man, a learned Sanskrit Pandit, with immense pluck, force of will and self-reliance—a leader of men. When we first met him, in 1879, he had recently recovered from an attack of cholera and his physique was more refined and delicate than usual. I thought him strikingly handsome; tall, dignified in carriage, and gracious in manner towards us, he made a

Digitized by Google

very strong impression upon our imaginations. But when I next saw him—at Benares, I believe, some few years later,—he was quite changed, and not for the better. He had grown obese, the fat stood in rolls on his half-nude body, and hung in "double-chin" masses from his under jaw. His breadth detracted from his height, so that he actually seemed to me shorter, and the poetical expression had left his Dantesque face. I have, fortunately, a souvenir of his earlier self in a copy in oils of a photograph, which was given me in Northern India. He is dead and gone now, but his Samaj survives and has spread throughout Northern India to the extent of two or three hundred branches. Annie Besant and I enjoyed a visit to the chief Samaj—at Lahore—during our recent visit to the Punjâb and helped a little, I hope, to mollify the hard feelings which the Samajists have, to my great regret, long held towards us.

The world is wide enough for us all, and it is better that we all should try to live together as brethren.

CHAPTER XXVI.

MME. BLAVATSKY AT HOME.

H. P. B. has been mainly dealt with above in her public capacity; let us now see how she appeared in the home.

But first, does any one know why she so much preferred to be called "H. P. B.," and so abhorred the title of "Madame"? That she should not like to be addressed by the surname Blavatsky, is not so strange when one remembers the facts of that wretched marriage, as given by Mr. Sinnett in his *Incidents etc.* It brought neither credit nor happiness to her, nor peace to the consort whom she, for a wager, tied to herself, for better for worse. Yet before she would marry the other Mr. B., at Philadelphia, she stipulated that she should not change her surname, and did not, save in the subsequent divorce papers, wherein she styles herself by her second husband's name. The title "Madame" she had a sort of loathing for, as she associated it with a female dog of that name that an acquaintance of hers owned in Paris, and which was specially disliked by her.

Digitized by Google

I think the apparent eccentricity of calling herself by her three initials had a deeper significance than has been generally suspected. It meant that the personality of our friend was so blended with those of several of her Masters that, in point of fact, the name she bore but seldom applied to whatever intelligence was momentarily controlling it; and the Asiatic personage who was speaking to you through her lips was certainly neither Helena, nor the widow of Genl. Blavatsky, nor a woman at all. But each of these shifting personalities contributed towards the making of a composite entity, the sum of them all and of Helena Petrovna herself, which might as well be designated "H. P. B." as anything else. The case recalls to my mind that of the composite photograph—an apparently real entity, yet but a blending of a dozen or more—which Sir Francis Galton first brought to our notice in his *Inquiry into Human Faculty*. My theory may seem untenable, at first sight, by those who did not know her so intimately as myself, yet I incline to the belief that it is the correct one.

The routine of our life at the "Lamasery" was the following. We breakfasted at about 8, dined at 6, and retired at some small hour in the morning, according to our work and its interruption by visitors. H. P. B. lunched at home and I in town, somewhere near my law-office. When we first met I was a very active member of the Lotos Club, but the writing of *Isis* put an end, once for all, to my connection with clubs and worldly entanglements in general. After breakfast I

Digitized by Google

left for my office and H. P. B. set herself for work at the desk. At dinner, more often than not, we had guests, and we had few evenings alone; for even if no visitors dropped in, we usually had somebody stopping with us in our apartment. Our house-keeping was of the simplest; we drank no wine or spirits, and ate but plain food. We had one maid-of-all-work, or rather a procession of them coming and going, for we did not keep one very long. The girl went to her home after clearing away the dinner things, and thenceforward we had to answer the door ourselves. That was not much; but a more serious affair was to supply tea, with milk and sugar, for a roomful of guests at, say, 1 A.M., when H. P. B., with lofty disregard of domestic possibilities, would invite herself to take a cup, and in a large way exclaim: "Let's all have some: what do you say?" It was useless for me to make gestures of dissent, she would pay no attention. So after sundry fruitless midnight searches for milk or sugar in the neighbourhood, the worm turned, and I put up a notice to this effect:

"TEA."

"*Guests will find boiling water and tea in the kitchen, perhaps milk and sugar, and will kindly help themselves.*"

This was so akin to the Bohemian tone of the whole establishment that nothing was thought of it, and it was most amusing later on to see the habitués getting up quietly and going off to the kitchen to brew tea for themselves. Fine ladies, learned professors, famous

Digitized by Google

artists and journalists, all jocosely became members of our "Kitchen Cabinet," as we called it.

H. P. B. had not even a rudimentary notion of housekeeping. Once, wishing boiled eggs, she laid the raw eggs on the live coals! Sometimes our maid would walk off on a Saturday evening and leave us to shift as we might for the day's meals. Then was it H. P. B. who catered and cooked? Nay, verily, but her poor colleague. She would either sit and write and smoke cigarettes, or come into the kitchen and bother. In my Diary for 1878, I find this in the entry for April 12: "The servant 'vamosed the ranch' without preparing dinner; so the Countess L. P. turned in and helped me by making an excellent salad. Besides her, we had O'Donovan to dinner." He was a rare chap, that Irishman; a sculptor of marked talent, an excellent companion, with a dry humour that was irresistible. H. P. B. was very fond of him and he of her. He modelled her portrait from life in a medallion, which was cast in bronze, and which is in my possession. What he may be now I know not, but at that time he was fond of a glass of good whiskey (if any whiskey may be called good), and once made a roomful roar with laughter by a repartee he gave to one of the company present. They were drinking together, and the person in question after tasting his glass, put it down with the exclamation, "Pah! what bad whiskey that is!" O'Donovan, turning to him with solemn gravity, laid a hand upon his arm and said: "Don't, don't say that. There is no

Digitized by Google

bad whiskey, but some is better than other." He was a Roman Catholic by birth, though nothing in particular, it appeared, in actual belief. But, seeing how hot and angry H. P. B. would always get when Roman Catholicism was mentioned, he used to pretend that he believed that that creed would eventually sweep Buddhism, Hinduism, and Zoroastrianism from the face of the earth. Although he played this trick on her twenty times, H. P. B. was invariably caught again in the trap whenever O'Donovan set it for her. She would fume and swear, and call him an incurable idiot and other pet names, but to no purpose: he would sit and smoke in dignified silence, without changing face, as if he were listening to a dramatic recitation in which the speaker's own feelings had no share. When she had talked and shouted herself out of breath, he would slowly turn his head towards some neighbour and say: "She speaks well, does n't she; but she don't believe that; it is only her repartee. She will be a good Catholic some day." And then, when H. P. B. exploded at this crowning audacity, and made as if to throw something at him, he would slip away to the kitchen and make himself a cup of tea! I have known him bring friends there just to enjoy this species of bear-baiting; but H. P. B. never nourished malice, and after relieving herself of a certain number of objurgations, would be as friendly as ever with her inveterate teazer.

One of our frequent and most appreciated visitors was Prof. Alexander Wilder, a quaint personality, the type of the very large class of self-educated American

Digitized by Google

yeomanry; men of the forceful quality of the Puritan Fathers; men of brain and thought, intensely independent, very versatile, very honest, very plucky and patriotic. Prof. Wilder and I have been friends since before the Rebellion, and I have always held him in the highest esteem. His head is full of knowledge, which he readily imparts to appreciative listeners. He is not a college-bred or city-bred man, I fancy, but if one wants sound ideas upon the migration of races and symbols, the esoteric meaning of Greek philosophy, the value of Hebrew or Greek texts, or the merits and demerits of various schools of medicine, he can give them as well as the most finished graduate. A tall, lank man of the Lincoln type, with a noble, dome-like head, thin jaws, grey hair, and language filled with quaint Saxon-Americanisms. He used to come and talk by the hour with H. P. B., often lying recumbent on the sofa, with—as she used to say—"one long leg resting on the chandelier, the other on the mantel-piece." And she, as stout as he was thin, as voluble as he was sententious and epigrammatic, smoking innumerable cigarettes and brilliantly sustaining her share of the conversation. She got him to write out many of his ideas to use in *Isis*, and they will be found there quoted. The hours would slip by without notice until he sometimes found himself too late for the last train to Newark, and would have to stop in town all night. I think that, of all our visitors, he cared about the least of all for H. P. B.'s psychical phenomena: he believed in their scientific possibility and

Digitized by Google

did not doubt her possession of them, but philosophy was his idol, and the wonders of mediumship and adeptship interested him only in the abstract.

Yet some of H. P. B.'s phenomena were strange enough, in all conscience. Besides those heretofore described, I find mention of others in my Diary, among them this curious one :

I met one day in the lower part of the city (New York) an acquaintance with whom I stopped for a few moments to chat. He was very prejudiced against H. P. B., and spoke very harshly against her, keeping to his opinion despite all I could say. At last he used such objectionable language that, in sheer disgust, I hastily left him and went on my way. I got home as usual in time for dinner, and went to my room—the one marked "G" on the plan given in Chapter XXIV. was then my sleeping apartment—to make my toilet. H. P. B. came along the passage to the open door, and from thence bade me good evening. The washing-stand was in the N. W. corner, opposite the door, and the "hard-finished" white wall above it uncovered with pictures or anything. After finishing my washing I turned toward the shaving-stand, behind me and just in front of the window, to brush my hair, when I saw something of a green colour reflected in the glass. A second glance showed it to be a sheet of green paper with writing upon it, and to be attached to the wall just over the washing-stand where I had the moment before been occupied without seeing anything save the blank wall before my eyes. I found

Digitized by Google

the paper attached to the plastering by pins at the four corners, and the writing to be a number of Oriental texts from Dhammapâda and Sûtras, written in a peculiar style and signed at the lower corner by one of the Masters. The verses were reproaches to my address for having allowed H. P. B. to be reviled without defending her ; unmistakably referring to my encounter down town with the person I had met, although no names were mentioned. I had not been five minutes in the house since my return, had spoken to nobody about the incident, nor exchanged with any one in the house more than the few words of greeting with H. P. B. from the door of my room. In fact, the incident had passed out of my mind. This is one of those phenomena of the higher class which involve the power of thought-reading, or clairaudience at a distance, and either that of producing written documents without contact, or of writing them in the ordinary way, attaching them to the wall before my return home, and then inhibiting my sight so as to make them invisible for the moment, but visible the next instant by the restoration to me of my normal vision. This seems the more probable explanation of the two, yet, even then see how fine is the phenomenon, first, in the clairaudience at the distance of three miles, and then in the inhibition of my sight without arousing the slightest suspicion in my mind of the trick being played upon me. I had carefully kept this green paper until 1891, when it was with me on my round-the-world tour, and was appropriated by somebody without my permis-

Digitized by Google

sion. I should be glad to recover it. Another production of H. P. B.'s has disappeared along with it. It is a caricature representing my supposed ordeal of initiation into the school of adepts, and a most comical picture it is. In the lower foreground I stand with a Hindu *fehta* (turban) as my only article of dress, undergoing a catechetical examination by Master K. H. In the lower right-hand corner a detached hand holds in space a bottle of spirits, and a bony bayadere, who looks like a starved Irish peasant in a time of potato-blight, is dancing a *pas de fascination*. In the upper corner H. P. B., wearing a New Jersey sunhood and Deccanee men's turn-up shoes, and carrying a bell-shaped umbrella with a flag marked "Jack" streaming from its point, bestrides an elephant and holds out a mammoth hand to "control the elements" for my helping, while another Master stands beside the elephant watching my ordeal. A funny little elemental in a cotton night cap and holding a lighted candle, says, "My stars! what's that?" from a perch on K. H.'s shoulder, and a series of absurd questions and answers written below my Interrogator's book, complete the nonsensical satire. From this description the reader may judge of the joviality of H. P. B.'s temperament at that period, and of the kindly license allowed us in our dealings with the Teachers. The mere thought of such irreverence will doubtless make cold chills to run down the spines of some of H. P. B.'s latest pupils. I do not know how I could better illustrate this joyous exhuberance of hers than by quoting the expression used

Digitized by Google

by a Hartford reporter in writing to his paper. "Madame laughed," he writes. "When we write Madame laughed, we feel as if we were saying Laughter was present! for of all clear, mirthful, rollicking laughter that we ever heard, hers is the very essence. She seems, indeed, the *Genius* of the mood she displays at all times so intense is her vitality." This was the tone of our household; and her mirthfulness, epigrammatic wit, briliance of conversation, caressing friendliness to those she liked or wanted to have like her, fund of anecdote and, chiefest attraction to most of her callers, her amazing psychical phenomena—made the "Lamasery" the most attractive *salon* of the metropolis from 1876 to the close of 1878.

A very interesting phenomenon is that of duplication of objects, the making of two or more out of one. I have given some instances above, and here is another which was described in the New York correspondence of the *Hartford Daily Times* of December 2, 1878. The correspondent passes an evening with us and meets a number of other visitors, from one of whom, an English artist, he gets the following story of what he saw H. P. B. do:

"I know it will seem incredible to you, my dear fellow," said my friend, "for it does to me as I look back upon it; yet, at the same time, I know my senses could not have deceived me. Besides, another gentleman was with me at the time. I have seen Madame create things." "Create things!" I cried. "Yes, create things,—produce them from nothing. I can tell you of two instances.

Digitized by Google

" Madame, my friend, and myself were out one day looking about the stores, when she said she desired some of these illuminated alphabets which come in sheets, like the painted sheets of little birds, flowers, animals, and other figures, so popular for decorating pottery and vases. She was making a scrap-book, and wished to arrange her title page in these pretty colored letters. Well, we hunted everywhere but could not find any, until at last we found just one sheet, containing the twenty-six letters, somewhere on Sixth Avenue. Madame bought that one and we went home. She wanted several, of course, but not finding them proceeded to use what she could of this. My friend and I sat down beside her little table, while she got out her scrap-book and busily began to paste her letters in. By and bye she exclaimed, petulantly, 'I want two S's, two P's, and two A's.' I said, 'Madame, I will go and search for them down town. I presume I can find them somewhere.'

"'No you need not,' she answered. Then, suddenly looking up, said, 'Do you wish to see me make some?'

"'Make some? How? Paint some?'

"'No, make some exactly like these.'

"'But how is that possible? These are printed by machinery.'

"'It is possible—see!'

"She put her finger upon the S and looked upon it. She looked at it with infinite intensity. Her brow ridged out. She seemed the very spirit of will. In about half a minute she smiled, lifted her finger, took up two S's

Digitized by Google

exactly alike, exclaiming, 'It is done!' She did the same with the P's.

"Then my friend thought: 'If this is trickery, it can be detected. In one alphabet can be but one letter of a kind. I will try her.' So he said: 'Madame, supposing this time, instead of making two letters separately, you join them together, thus A—A—?'

"'It makes no difference to me how I do it,' she replied indifferently, and placing her finger on the A, in a few seconds she took it up, and handed him two A's, joined together as he desired. *They were as if stamped from the same piece of paper.* There were no seams or (artificial) joinings of any kind. She had to cut them apart to use them. This was in broad daylight, in the presence of no one but myself and friend, and done simply for her own convenience.

"We were both astounded and lost in admiration. We examined these with the utmost care. They seemed as much alike as two peas. But if you wish, I can show you the letters this moment. 'Madame, may we take your scrap-book to look at?'

"'Certainly, with pleasure,' returned Madame, courteously. We waited impatiently until Mr. P. could open the volume. The page was beautifully arranged, and read thus, in brilliant letters:

"THIRD VOLUME, SCRAP-BOOK OF THE THEOSOPHICAL SOCIETY.
New York, 1878.
THEIR TRIBULATIONS and TRIUMPHS.

Digitized by Google

"'There,' said he, pointing to the S in Scrap and the S in Society, 'those are the letters she used, and this is the one she made.' There was no difference in them."*

There was nothing out of the common in the furnishing and decoration of our apartment save in the dining-room and work-room—which was at the same time our reception-room and library all in one—and they were certainly quaint enough. The dead wall of the dining-room which separated it from H. P. B.'s bed-room was entirely covered with a picture *in dried forest leaves*, representing a tropical jungle scene. An elephant stood, ruminating beside a pool of water, a tiger was springing at him from the back-ground, and a huge serpent was coiled around the trunk of a palm tree. A very good representation of it is given on p. 205 of *Frank Leslie's Popular Monthly* for February, 1892; although the picture of the room, the Hindu servant bringing in the roast, and the dining party at table *drinking wine*, is ridiculously inaccurate. The room was not like the picture; we had no Hindu servant; we did not have a drop of wine or spirits in the house; our furniture was

* The reporter, it seems, trusted to his memory, and omitted copying down at the time the words of the inscription which—being before me at this moment—I find to read as follows: "Ante and post natal history of the Theosophical Society, and of the mortifications, tribulations and triumphs of its Fellows." The letters H. P. B. duplicated are the S's in "History," "Theosophical" and "Society," two of them having been made out of the third; the P's are in "Post" and "Triumphs," and of a smaller size than the S's. She seems to have quietly duplicated several other letters, for I find no less than eight A's besides other duplicates.

Digitized by Google

totally different from the artist's sketch of it. I have never heard of another wall-picture of the sort mentioned, and it seemed to strike all our guests as entirely appropriate in such a home as the "Lamasery." The whole forest scene grew out of the covering with autumn leaves, of a figure of an elephant cut from brown paper. I made another similar invention in the work-room. The entrance-door was in an angle made by cutting off a corner, and above it the wall formed a square of perhaps 4 × 5 ft. One day I found at a curiosity-shop a splendidly mounted lioness-head; the eyes glaring, the jaws wide open, the tongue retracted, the teeth white and menacing. On getting it home and looking around for a place to put it, this square of wall struck my eye, and there I hung my trophy. By an arrangement of long, dried grasses, I made it seem as though an angry lioness were creeping through the jungle and ready to spring upon the visitors who chanced to look up at her. It was one of our jokes to have new-comers seated in an easy chair that faced the door, and enjoy their start when their eyes wandered from H. P. B. to glance around the room. If the visitor chanced to be a hysterical old maid who screamed on seeing the trophy, H. P. B. would laugh heartily. In two corners of the room I stood palm-fronds that touched the ceiling and bent over their tips in graceful curves; little stuffed monkeys peered out over the curtain cornices; a fine stuffed snake lay on top of the mantel mirror, hanging its head over one corner; a large stuffed baboon, decked

Digitized by Google

out with a collar, white cravat and pair of my spectacles, carrying under one arm the manuscript of a lecture on "Decent of Species," and dubbed "Professor Fiske," stood upright in a corner; a fine large grey owl sat perched on a bookcase; a toy lizard or two crawled up the wall; a Swiss cuckoo clock hung to the left of the chimney breast; small Japanese cabinets, carved wooden images of Lord Buddha and a Siamese talapoin, curios of sorts and kinds, occupied the top of the cottage piano, wall brackets, corner étagères and other convenient spaces; a long writing table took up the centre of the room; some book shelves with our scanty library rose above its farther end, between the two Eighth Avenue windows; and chairs and a divan or two filled up the floor space, so that one had to pick one's way to get to the farther end of the chamber. A hanging four-light gas chandelier with a drop-light over the table gave us the necessary physical illumination; the other, H. P. B. supplied. A pair of sliding glass doors (seldom closed) divided the work-room from her little bed-room, and on the wall over the doors we constructed a huge double triangle of thin punched steel sheets. Altogether the room was very artistic and pleasing to its occupants and guests, the theme of many a description in newspapers and talk among our friends. No frame could have been more appropriate for setting off the bizarre personality of its mysterious occupant, H. P. B. Many were the pen sketches of the room that appeared in the American papers of the day; among them the following

Digitized by Google

by the same correspondent of the Hartford paper, from whose interesting letters the above extracts were copied:

"Madame was seated in her little work-room and parlor, all in one, and we may add her curiosity-shop as well, for never was apartment more crammed with odd, elegant, old, beautiful, costly, and apparently worthless things, than this. She had cigarette in mouth, and scissors in hand, and was hard at work clipping paragraphs, articles, items, criticisms, and other matter, from heaps of journals from all parts of the world, relating to herself, to her book, to the Theosophical Society, to any and everything connected with her life-work and aims. She waved us to a seat, and while she intently read some article we had a chance to observe the walls and furniture of this NEW YORK LAMASERY. Directly in the centre stood a stuffed ape, with a white 'dickey' and necktie around his throat, manuscript in paw, and spectacles on nose. Could it be a mute satire on the clergy?* Over the door was the stuffed head of a lioness, with open jaws and threatening aspect; the eyes glaring with an almost natural ferocity. A god in gold occupied the centre of the mantelpiece; Chinese and Japanese cabinets, fans, pipes, implements, and rugs, low divans and couches, a large desk, a mechanical bird which sang as mechanically, albums, scrap-books, and the inevitable cigarette-holders, papers, and ash-pots, made the loose rich robe in which the Madame was apparelled seem in perfect harmony with her surroundings. A rare,

* No, on the materialistic scientists.—H. S. O.

Digitized by Google

strange countenance is hers. A combination of moods seems to constantly play over her features. She never seems quite absorbed by one subject. There is a keen, alert, subtle undercurrent of feeling and perception perceivable in the expression of her eyes. It impressed us then, and has invariably, with the idea of a double personality: as if she were here, and not here; talking and yet thinking, or acting far away. Her hair, light, very thick, and naturally waved, has not a grey thread in it. Her skin, evidently somewhat browned by exposure to sea and sun, has no wrinkles; her hands and arms are as delicate as a girl's. Her whole personality is expressive of self-possession, command, and a certain *sangfroid* which borders on masculine indifference, without for a moment overstepping the bounds of womanly delicacy."

It has been remarked above, if I remember, that what made a visit to the Lamasery so piquant, was the chance that on any given occasion the visitor might see H. P. B. do some wonder in addition to amusing, delighting, or edifying him or her with her witty and vivacious talk. In a pause in the conversation, perhaps a guest would hold up a finger, say "Hush!" and then, all listening in breathless silence, musical notes would be heard in the air. Sometimes they would sound faintly far away in the distance, then coming nearer and gaining volume until the elfin music would float around the room, near the ceiling, and finally die away again in a lost chord and be succeeded by silence. Or it might be that H. P. B. would fling out her hand with an imperious gesture and

Digitized by Google

ping! ping! would come, in the air whither she pointed, the silvery tones of a bell. Some people fancy that she must have had a concealed bell under her dress for playing her tricks; but the answer to that is that, not only I but others, have, after dinner, before rising from the table, arranged a series of finger-glasses and tumblers, with various depths of water in them to cause them to give out different notes when struck, and then tapping their edges with a lead-pencil, a knife-blade, or some other thing, have had her duplicate in space every note drawn from the "musical glasses." No trick bell worked beneath a woman's skirts would do that. Then, again, how often have people been present when she would lay her hand on a tree-trunk, a house wall, a clock case, a man's head, or wherever else she might be asked to try it, and cause the fairy bell to ring within the substance of the solid body she had her hands in contact with. I was with her at Mr. Sinnett's house at Simla when, all of us standing on the veranda, she made the musical sounds to come towards us on the air of the starlit night, from across the dark valley into which descended the hill-slope on which the house was built. And I was present when she made a bell to ring inside the head of one of the greatest of the Anglo-Indian civilians, and another to sound inside the coat pocket of another very high civilian at the other side of the room from where she sat.

She never could give any satisfactory scientific explanation of the *modus operandi*. One day when she and I were alone and talking of it, she said: "Now, see here;

Digitized by Google

you are a great whistler; how do you form instantaneously any given note you wish to produce?" I replied that I could not exactly say how I did it, except that a certain arrangement of the lips and compression of air within the mouth, the knack of which had been acquired by many years of practice, caused each note to sound simultaneously with the act of my thinking of it. "Well now, tell me: when you would sound a note do you think that, to produce it, you must put your lips, compress your breath, and work your throat-muscles in certain prescribed ways, and then proceed to do it?" "Not at all," I said; "long habit had made the muscular and pneumatic actions automatic." "Well, then, that 's just the thing: I think of a note; automatically or instinctively I work the astral currents by my trained will; I send a sort of cross-current out from my brain to a certain point in space, where a vortex is formed between this current and the great current flowing in the astral light according to the earth's motion, and in that vortex sounds out the note I think. Just, you see, as the note you mean to whistle sounds in the air-tube formed by your lips, when you put them into the right position, work your lip and throat-muscles in the right way, and force your breath to rush out of this channel or lip-orifice. It is impossible for me to explain any better. I can do it, but can't tell you how I do it. Now try any notes you please and see if I cannot imitate them." I struck a note out of one of the tumblers at random, and instantly its echo, as if the soul of it ring-

Digitized by Google

ing in Fairyland, would sound in the air; sometimes just overhead, now in this corner, now in that. She sometimes missed the exact note, but when I told her so she would ask me to sound it again, and then the note would be exactly reflected back to us out of the A'kásha.

In connection with the above read what Mrs. Speer says (*Light*, January 28, 1893) about the musical sounds that used to accompany M. A. Oxon.

"*September 19th.*—Before meeting this evening we heard the 'fairy bells' playing in different parts of the garden where we were walking; at times they sounded far off, seemingly playing at the top of some high elm trees, music and stars mingling together, then they would approach nearer to us, eventually following us into the séance-room, which opened on to the lawn. After we were seated the music still lingered with us, playing in the corners of the room, and then over the table round which we were sitting. They played scales and chords by request, with the greatest rapidity, and copied notes Dr. S. made with his voice. After Mr. S. M. was entranced the music became louder and sounded like brilliant playing on the piano. There was no instrument in that room."

The musical phenomena were evidently identical with those of H. P. B., but with the radical difference that she produced the sounds at will, while in Stainton Moseyn's case they were beyond his control and most brilliant when his body was entranced. The Speer Circle had a great deal of these "fairy bells" first and last, and, some

Digitized by Google

very unconvincing theories given by the spirits to account for them. For instance, Benjamin Franklin's alleged spirit told them (*Light*, March 18, 1893, p. 130) that "the sound you call fairy bells represents a spirit instrument, one used in the spheres." Yet he adds: "We could do much more for you had our medium a musical organisation, but it is a bad one for music." Why, if it were to be drawn from an instrument? That is almost like saying that Thalberg or Paderevsky could play their instrument better if the gasman of the building were not deaf in one ear! We may safely deny the "spirit-instrument" theory, for we have the explanation in the fact that the more musical the temperament of the medium naturally, the more melodious the fairy bells can be made to jingle in his presence. Moreover, in the case of a medium, the more deeply he is plunged into trance, the nearer and clearer may be the tintinnabulation of the bells, bells, bells!

CHAPTER XXVII.

ILLUSIONS.

THE elemental messenger of H. P. B. once rang the fairy bell with pathetic effect, at the moment when her pet canary died. It is fixed indelibly in my memory from the fact that it is associated with the recollection of H. P. B.'s feeling of genuine sorrow. It was just an ordinary little hen canary, not much to look at for beauty, but an amazingly industrious housewife; lovable because so evidently honest. I forget where we got her, but think H. P. B. brought her from Philadelphia and that I bought her mate—a splendid singer—in New York. No matter; we had them a long time and they came to be almost like children, as it were. We used to let them fly about the room at their pleasure, and the male bird would reward us by perching on a picture-frame near our work-table and singing most melodiously. The hen would light upon our table in the most fearless way, walk, chirping, right under our noses, and pick up and carry away for nest-building near the ceiling, up in the

Digitized by Google

bronze ornament on the chandelier pipe, any ends of twine or other likely materials. She seemed especially to value the long thin snippings of paper cut off by H. P. B. when pasting and readjusting her foolscap MSS. sheets. Little "Jenny" would sometimes wait until her mistress had cut off a piece of paper and dropped it on the table or floor, and then hop to it and carry it off, to the approving song of her handsome husband, "Pip." There was a Turkish carpet with fringed ends on the floor, and this gave Jenny all she could do. The little creature would take one of the strands in her beak, brace herself square upon her feet, and then lean back and tug and jerk with all her might, trying in vain to get it loose.

The nest-building was finished at last, and then Jenny began sitting up aloft over our table, her little head showing beyond the edge of the bronze cup, or ornament, on the gas-pipe. Pip sang his sweetest, and we waited for the hatching out of the eggs with pleasurable interest. The weeks passed on and Jenny still sat and we waited, but no young birds twittered, and we wondered what could be up. At last one day when the bird was away after seed and water, I placed a chair on our writing-table, H. P. B. held it, and I mounted for a peep. The nest was absolutely empty, neither fledgling there nor shell, whether full or broken: we had been fooled by our busy little canary-hen. H. P. B. gave the only possible explanation by saying that "Jenny had been sitting on her illusions": that is, she had persuaded

Digitized by Google

herself that she had laid eggs, and that it was her duty to hatch them out!

All went well with us and the birds for many months, but at last our quartette was broken up by the death of Jenny. She was found lying at her last gasp on her back in her cage. I took her out and placed her in H. P. B.'s hand, and we mourned together over our pet. H. P. B. kissed her, gently stroked her plumage, tried to restore her vitality by magnetic breathing, but nothing availed; the bird's gasps grew feebler and feebler, until we saw it could only be a question of minutes. Then the stern, granite-faced H. P. B. melted into tenderness, opened her dress, and laid little Jenny in her bosom; as if to give her life by placing her near the heart that was beating in pity for her. But it was useless; there came a last gasp, a last flutter of the birdie's heart, and then? Then, sharp and sweet and clear in the A'kásha near us, rang out a fairy bell, the requiem of the passing life; and H. P. B. wept for her dead bird.

Speaking of the possibilities of *Mâya*, shall we classify in that category the following phenomenon? One day, in moving about at the table, H. P. B. sent a huge splotch of ink over a light lawn wrapper that she was wearing. There must have been a teaspoonful of the fluid and it ran in a dozen streams down the front of the skirt to the floor. The dress was ruined. I shall drop a veil over the remarks that were elicited from her, merely saying that they were strong rather than poetical. Yet she soon showed me that the evil was not remediless,

Digitized by Google

for, stepping towards her bedroom, but without crossing the threshold, she turned her back to me and went to passing her hands over the whole dress, or so much of it as she could reach; and in another moment turning towards me, lo! the light spotted wrapper had disappeared and she stood there clothed in one of a chocolate colour. Was this a Máya? If so, when will a Máya wear out? For she wore the brown dress until it had had its turn of use, and I never saw the light one again.

She told me once in great glee of a Máya that had been put off on herself. She was travelling in the desert, she said, with a certain Coptic white magician who shall be nameless, and, camping one evening, expressed the ardent wish for a cup of good French *café au lait*. "Well, certainly, if you wish it so much," said the guardian guide. He went to the baggage-camel, drew water from the skin, and after awhile returned, bringing in his hand a cup of smoking, fragrant coffee mixed with milk. H. P. B. thought this, of course, was a phenomenal production, since her companion was a high adept and possessed of very great powers. So she thanked him gratefully, and drank, and was delighted, and declared she had never tasted better coffee at the Café de Paris. The magician said nothing, but merely bowed pleasantly and stood as if waiting to receive back the cup. H. P. B. sipped the smoking beverage, and chatted merrily, and—but what is this? The coffee has disappeared and naught but plain water remains in her cup! It never was anything else; she had been drink-

Digitized by Google

ing and smelling and sipping the Máya of hot, fragrant Mocha. Of course, it will be said that such an illusion as that may be seen at any travelling mesmeriser's show, where parafine oil is made to taste like chocolate and vinegar like honey. But there is the difference that the illusion in the case of H. P. B. was produced in silence, by simple thought-transference, and upon a subject who herself had the power of casting glamours over third persons. From the crude mesmeric experimentation in a village hall, for pay, to the highest example of mayâvic glamour thrown silently upon one person or a crowd by an Eastern juggler, fakir, sanyâsi, or adept, it is but a difference in degree. One principle runs throughout all these and all other phenomena, the observation of which is the function of the bodily senses. Whether the Máya be induced from without by the spoken word, the suggestive gesture, or the silent will of another, or it be self-engendered by the deceived imagination acting through the will upon the senses, it is all one, and he who thoroughly masters the rationale of the show of the village showman and the naked Indian juggler, will be able to grasp the theory of Máya on a cosmic scale. When one is living in daily association with a person who possesses this power of casting glamour at will over one, the thought becomes most burdensome after awhile, for one never knows whether what is apparently spoken or seen is really so or not. Not even such a visit as the one made me by the Mahátma, with the concomitants of his touching me and speaking to me, and my feeling him as

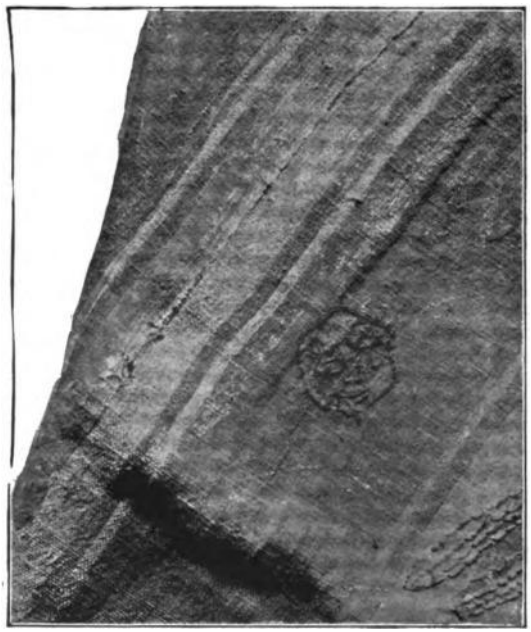
Digitized by Google

a man of substantial body like myself, would really be proof that I was not under a glamour at the time. It will be remembered that this train of thought came up in my mind during the course of our conversation, and when we were about to part, and that the Mahátma smilingly gave me the test I wanted by leaving his turban, a tangible cotton cloth with his cryptograph worked on it, on my table.

How much we read in folk-lore tales about "fairy gold" and "fairy jewels" which by the next dawn are found turned into bits of twigs, leaves, straw, or other rubbish! Such stories one finds current in almost every land and among every people. I have heard them in India. In such cases the principle of Máya is illustrated; but it would seem, from the instance I gave of the Mahátma refunding the half-dollar I had spent for the drawing materials with which his portrait was to be made for me, that the same person who could make the Máya of money at will, might also be able to either create real coin, or by the law of *apport*, bring it to one from some distant place where it lay at the moment.

The production of the two Chinese or Japanese pictures of ladies was glamour, and so was the following case. The Hon. J. L. O'Sullivan, formerly U. S. Minister to Portugal, of whom mention has been made above, was calling one day, when the conversation turned upon the phenomenon of duplication. I had brought home that afternoon a bank-note for $1,000 and had given it to H. P. B. to keep for me. She produced this note

Digitized by Google



A CORNER OF A MAHÁTMA'S TURBAN.

Digitized by Google

from her drawer, gave it to Mr. O'Sullivan to hold, rolled up, in his hand. Presently she told him to open his hand and see what he would find. He did so, and unrolling the bank-note found inside it another, its exact duplicate in paper, serial number, and face and back plate-printing. "Well," he exclaimed, "this is a famous way to become rich!" "No, indeed," answered H. P. B., "'t is but a psychological trick. We, who have the power of doing this, dare not use it for our own or any other's interest, any more than you would dare to commit the forgery by the methods of the counterfeiter. It would be stealing from the Government in either case." She refused to satisfy our curiosity as to how she effected the duplication, telling us with a laugh to find out if we could. The two notes were laid away in the drawer, and when our visitor had departed, she showed me that but the original one remained; the duplicate had dissolved again.

Shortly before we left New York, H. P. B. went out with me one evening to shop for herself. The purchases amounted to fifty dollars, and as she had no money at all at the time, I paid the bills and took charge of the receipts. As we were about entering the door of our house, she let go my arm, took my hand, and thrust some bank-notes in it saying; "There are your fifty dollars!" I repeat, that she had no money of her own, and no visitor coming to the house from whom she could have borrowed it: nor, when we left the house, did she know what she would buy nor how much she would

Digitized by Google

spend. She simply had money when she actually needed it and when it was right that she should have it. For example: I was once asked to go to a certain city and undertake some work for the Mahátmas, which had very important possibilities hanging upon its doing. I estimated that it would take me at least one or two months, and, as I was paying the "Lamasery" expenses and had other large demands upon my purse, I told H. P. B. frankly that I could not afford to spend the time away from New York. "Very well," she said, "do as you think right; you are not yet a pledged neophyte and the Brothers have not the smallest right to take you away from your business." Still, I could not bear the idea of refusing the least thing that the Teachers should ask me, and although I could not see how I would have enough coming in for my wants while absent, I finally said that I would go, at any cost. H. P. B. asked me what I should probably lose by going, and I told her that at the very lowest calculation it would be not less than $500 a month. I went, and did not return until well into the second month. On going to the bank to see what money I had to my credit, I was astounded on being told that the sum was just a thousand dollars more than I could account for. Was not the book-keeper mistaken? No, it was so and so much. Then I asked him if he could recollect the appearance of the person who had, it seemed, made two deposits of $500 each to the credit on my account. He fortunately could, because the man was of so strange an appearance: he was very

Digitized by Google

tall, with long black hair rolling on his shoulders, piercing black eyes, and brown complexion: an Asiatic, in short. The same man had made both the deposits, merely handing in the money and asking that it might be placed to my credit. He did not have my pass-book, and he asked the Receiving Teller to fill up the deposit ticket himself as "he could not write English." Supposing H. P. B. to have had the friends she had years later in India and Europe, it would not have been at all remarkable if she had got one of them to lend her the money to make good my deficit, but at that time there was not a person of her acquaintance but myself, from whom she could have borrowed even one hundred dollars, much less one thousand.

Then, again, at Bombay, she always had money given her when it was badly needed. When we landed there was barely enough to pay our current household expenses a few months ahead, let alone to squander on luxuries or superfluities; yet she and I started off to the Punjáb, with Moolji and Baboola, on that memorable journey which she expanded into her vivid romance, *Caves and Jungles of Hindustan* and spent about two thousand rupees without being the worse for it. The cruse of oil and measure of meal were never exhausted, because we were given what we required by the Masters whose work we were doing. When I asked how it was possible for this to be when the Masters were living outside the world of money-making and money-getting H. P. B. told me that they were the guardians over un-

Digitized by Google

told wealth of mines and buried treasure and jewels which, according to the Karma attaching to them, could be employed for the good of mankind through many different agencies. Some of these treasures were, however, so befouled with the aura of crime that if suffered to be dug up and circulated before the details of the law of Karma had worked themselves out, they would breed fresh crimes and more direful human misery. Again, the Karma of some individuals required that they should, as if by the merest accident, discover buried pots of money or other valuables, or attract to themselves in the way of business, fortunes greater or less. These effects of compensation were worked out by the elementals of the mineral kingdom with whom—according to Eastern belief—the apparent pets of fortune were closely allied through the elementals preponderating in their own temperaments.

This question of the existence of elemental spirits has always been the crux with the Spiritualists, yet Mrs. Britten, one of their chiefs, declares (see *Banner of Light*) that "SHE KNOWS of the existence of other than human spirits, and has seen apparitions of spiritual or elementary existence, evoked by cabalistic words and practices." The Hon. A. Aksakof, moreover, states that "Prince A. Dolgorouki, the great authority on Mesmerism, has written me that he has ascertained that spirits which play the most prominent part at séances are elementaries—gnomes, etc. His clairvoyants have seen them and describe them thus." *Spi. Sci.*, December, 1875. (T. S. Scrap-Book, I, 92.)

Digitized by Google

To resume, then, the hand of such an individual, having in him a preponderance of the elementals belonging to the natural kingdom of minerals and metals, like that of Midas, King of Phrygia, would have that magic property that " everything he touches turns to gold " ; and no matter how stupid he might be as to general affairs, his " luck " would be constant and irresistible. So, too, with a preponderance of the watery elementals, he would be attracted to the life of a sailor and stick to it despite all hardships and sufferings. So, also, the preponderance of the elementals of the air in a man's temperament would set him, as a child, to climbing trees and house-roofs, as a man, to mountaineering, ballooning, walking the tight-rope at dizzy heights, and otherwise trying to get above the earth's surface. H. P. B. told me various stories to illustrate this principle, which need not be quoted here, since human life teems with examples that may be comprehended upon testing them with the key above given. As regards the Theosophical Society, I may say that, while neither H. P. B. nor I were ever allowed to have a superfluity, we were never left to suffer for the necessaries of our life and work. Over and over again, twenty, fifty times have I seen our cash-box nearly emptied and the prospects ahead very discouraging in the pecuniary sense, yet as invariably have I received in remittances from some quarter or another, what was needed, and our work has never been stopped for a single day for lack of means to carry on the Head-quarters.

Digitized by Google

Yet the agent of the unseen Masters is often disqualified for judging whether it is or is not necessary for the success of his public work that he should have money coming in to himself. When H. P. B. was ordered from Paris to New York in 1873, she soon found herself in the most dismal want, having, as stated in a previous chapter, to boil her coffee-dregs over and over again for lack of pence for buying a fresh supply; and to keep off starvation, at last had to work with her needle for a maker of cravats. She got no presents from unexpected sources, found no fairy-gold on her mattress on waking in the morning. The time was not yet. But, although she was in such stark poverty herself, she had lying in her trunk for some time after her arrival a large sum of money (I think something like 23,000 francs) which had been confided to her by the Master, to await orders. The order finally came to her to go to Buffalo. Where that was or how to reach it, she had not the remotest idea until she enquired: What to do at Buffalo? "No matter what: take the money with you." On reaching her destination she was told to take a hack and drive to such an address, and give the money to such and such a person; to make no explanations, but to take his receipt and come away. She did so: the man was found at the address given, and found in peculiar conditions. He was writing a farewell letter to his family, with a loaded pistol on the table with which he would have shot himself in another half hour if H. P. B. had not come. It seems—as she told me subsequently—that this was a

Digitized by Google

most worthy man who had been robbed of the 23,000 francs in some peculiar way that made it necessary, for the sake of events that would subsequently happen as a consequence—events of importance to the world—that he should have the money restored to him at a particular crisis, and H. P. B. was the agent deputed to this act of beneficence. When we met she had entirely forgotten the man's name, his street and number. Here we have a case where the very agent chosen to carry the money to the beneficiary was herself in most necessitous circumstances, yet not permitted to use one franc of the trust fund to buy herself a pound of fresh coffee.

I recollect still another case where H. P. B. had the dispensing of "fairy-gold"—to use the popular term. Fortunately the beneficiary has left us the story in printer's ink.

It seems that at a meeting of certain well-known Spiritualists of Boston (Mass.) something was said as to the probability of the *Spiritual Scientist* dying out for lack of patronage. The late C. H. Foster, a famous medium who was present, gave as from a controlling spirit, the positive declaration that the calamity in question was impending; as, in fact, it was, since its Editor, Mr. Gerry Brown, had a rather large note to pay very soon and no means to meet it with. These introductory facts were published in the *Spiritual Scientist*, together with the following sequel, quoted from a clipping from that journal which I find in one of our scrap-books:

"A few days ago the manager of the *Scientist* received

Digitized by Google

a notice to call at the Western Union Telegraph Office and receipt for money sent by telegraph. He went with the following experience :

"Scene—Western Union Telegraph Office. Time, noon. To the left, receiver at desk. Enter on the right an individual who presents a money-order notice.

"*Clerk.* Are you expecting money ?

"*Individual.* Well, that 's my name and address on the order, and that 's your notice to me. I have no one in mind however.

"*Clerk.* Do you know of one Sir Henry de Morgan ?

"*Individual.* (Smiling broadly.) Well, I have heard it said that the spirit of the gentleman you mention, who lived on earth 250 years ago, takes a kind interest in my welfare. I 'll receipt for the money.

"*Clerk.* (Drawing back and changing tone.) Do you know any one about here who can identify you

"*Individual.* Yes.

"Here a member of the company is called who knows Individual and the money is paid.

"An hour later a telegram came saying :

"'I contribute ——— dollars to pay ——— note, due June 19th, and defy Charles Foster to make his prophecy good. The challenge to be published. Go to Western Union Telegraph Office, get money, and acknowledge receipt by telegraph.

"'Sir Henry de Morgan.'

"The money was sent from a far distant city. As the telegram asks us to publish, we do so willingly. We

Digitized by Google

advance no opinion in this case. We have already shown the telegram to several prominent spiritualists, one of whom suggests that a member of the circle is guying us. Well and good. We are willing to be guyed as often as any one wishes to *guy* us in this manner."

Of course, the "distant city" was Philadelphia, and the sender, H. P. B., who—as above mentioned—was, with myself, interested in helping the Editor to pull his paper through a pecuniary crisis. Now, I am fully acquainted with the extent of H. P. B.'s own resources at that time, and I absolutely know that she was not in a position to send sums, either large or small, to impecunious third parties, and that her second husband was as poor as herself and without credit to borrow upon. She must have got the money as she got that for her purchases in New York and for travelling expenses in India, viz., from the Lodge. The Sir Henry Morgan of the telegram was John King, the alleged spirit control, in whose name H. P. B.'s first phenomena were done in New York and Philadelphia.

By an interesting coincidence, while correcting these proofs, I found in our Library a book about Morgan, of which I had lost sight for some years. Its title is *The History of the Bucaniers of America; from their First Original down to this Time;* written in several languages; and now collected into one volume. Containing: The Exploits and Adventures of Le Grand, Lolonois, Roche Brasiliano, Bat the Portuguese, Sir Henry Morgan, etc. Written in Dutch by Jo. Esquemeling, one of

Digitized by Google

the Bucaniers, and thence translated into Spanish, etc., etc. [London, 1699. The Original Edition.]

It is a queer, quaint, blood-curdling old book, that I picked up in New York, I think, and we had it early in our acquaintance. The thing that gives it an especial interest to us is that the intelligence which masqueraded for my edification as John King phenomenally precipitated on the three blank leaves preceding the Title-page, the following doggerel verses:

"*To my fast friend Harry Olcott.*

"Hark ye o gents—to Captain Morgan's pedigree
Herein furnished by lying Esquemeling;
The latter but a truant, and in some degree
The Spaniard's spy—Dutch Jew—who pennance sought and sailing
Back to his foggy land, and took to book-selling.
Ye lying cur! Though Captain Morgan bucaniered
He natheless knew well I trow—the wrong from right,
From face of ennemie the Captain never steered,
And never tacked about to show his heels in fight,
Though he loved wenches, wine, and gold—he was a goodly knight.
He passed away for noble virtue praised round,
Encompast by his friends who shov'd him underground
And settled *Above*—disguising for a change—
His title, and name so famous once—that may seem strange—
But aint, and called himself *John King*—the King of Sprites
Protector to weak wench—defender of her rights. . . . .
Peace to the bones of both—the Pirat and the Knight—
For both have rotten away the good and wicked spright
And both of them have met—forwith when disembodied.
The Dutch biographer met with a tristful case
Sir Henry Morgan's spirit who had long uphoarded
The wrongs made by the Jew chased his foe's Sprite apace
And never Spirit world before or after witnessed
A more sound thrashing or more mirthful race."

Digitized by Google

" *Morality*

" Know—O friend Harry, that a Sprite's affray
In Summer Land is common any day,
That all thy evil deeds on earth begotten
Can never *there* be easily forgotten.
" Yer benevolent friend,
" JOHN KING."

The quaint diction and spelling of these verses will command attention, and I submit that they are much more characteristic of such an intelligence as presumably was the buccaneer knight's than the mass of sloppy communications we have got through mediums.

Besides the open book-shelves between the windows in our work-room at the Lamasery, there was a smaller one with glass doors, which stood in the N. E. window. On the day when I purchased the lioness head, above mentioned, I also bought a fine specimen of the large American grey owl, which was very well mounted. I first put it on a small stand in one of the corners, but later transferred it to the top of this smaller book-case, putting a box inside the cornice to raise the bird up to the proper height for display. I mention the circumstance because of an instructive phenomenon that happened between the time of my putting the box inside the cornice, and taking the stuffed bird from the writing table behind me to lift it to its place. In that instant of time there came upon the flat part of the cornice and the frames of the two glass doors, some large Tibetan writings in letters of gold ; and of so permanent a character that they remained there until we left New York

Digitized by Google

Observe the procedure: I face the book-case to put the empty box on top, and this brings my face in actual contact with the exposed front of the book-case, and I see nothing whatever written or painted on the plain wood surfaces. I turn about in my tracks, pick up the bird, turn back to lift it to its place, and—there are the gold-lettered Tibetan messages before my eyes. Was this a positive or a negative Máyá, the precipitation at that instant of a writing by thought-force, from the distance across the room where H. P. B. sat? or was it an inhibition on the sight of myself and the several others in the room, until the right moment came for removing the temporary and special blindness, and allowing us to see what H. P. B. had probably written in gold-ink during the daytime, and then had hidden under her "veil of Máyá"? I think the latter.

Mr. Judge tells Mr. Sinnett (*vide Incidents in the Life of Madame Blavatsky*, p. 191) of a phenomenon of precipitation, of which I also was witness. The facts are as follows: One evening H. P. B., Mr. Judge, and I were together and a letter had to be written to Mr. M. D. Evans, of Philadelphia, an insurance-broker. Neither of us could at the moment recollect his address; there was no place near by where a Philadelphia Directory could be consulted; and we were at our wit's end. H. P. B. and I both recollected that in Philadelphia she had had on her table a slip of blotting paper with Mr. Evans' address printed on it, in a wave-line along with that of an insurance company, but neither of us could

Digitized by Google

recall it. Finally, she did this: she took from the table before us a japanned tin paper-cutter, stroked it gently, laid a piece of blotting paper over it, passed her hand over the surface, lifted the paper, and there, on the black japanned surface of the paper-cutter was printed in bronze ink the facsimile of the inscription on the Philadelphia blotting slip that Evans had given her in that city. Her physical brain could not recollect the inscription, but when she focussed her will-power upon the (physically speaking) vague memory of her astral brain, the hidden image was dragged to light again and precipitated upon the determined surface. This was a case of a "subliminal" being converted into a supraliminal consciousness; and a most interesting one, it will be conceded.

I leave the reader to decide whether the following phenomenon was a Máyá, an *apport*, a trick, or a creation. She and I were as usual one evening smoking while at work; she her cigarette, I my pipe. It was a new one, I remember, and the tobacco was as good as one could wish, but she suddenly sniffed and exclaimed, "Pah! what horrid tobacco you are smoking, Olcott!" I said she was very much mistaken, as both pipe and tobacco were unexceptionable. "Well," she said, "I don't like it this evening; take a cigarette." "No," I replied, "I 'll not smoke since it annoys you." "Why don't you use those nice Turkish pipes that come from Constantinople?" said she. "Because I have none—a very good reason." "Well, then, here 's one

Digitized by Google

for you," she exclaimed, dropping her hand down beside her arm-chair, and bringing it up again with a pipe in it, which she handed me. It had a red clay, flaring bowl, set in filagree gilt, and a stem covered with purple velvet and ornamented with a slight gilt chain with imitation coins attached. I took it with a simple "Thank you," filled and lit it, and went on with my work. "How do you like it?" she asked. "Well enough," I said, "although instead of purple I wish the velvet had been blue." "Oh well, have a blue one then," she remarked; again putting down her hand and lifting it again with a blue-stemmed pipe in it. I thanked her and continued my work. The manœuvre was again repeated, and she said, "Here 's a baby pipe," and she gave me a miniature edition of the larger sort. Being apparently in the mood for surprises, she then successively produced a Turkish cigarette mouth-piece in gilt and amber, a Turkish coffee-pot and sugar-bowl, and finally a gilt tray in repoussé with imitation enamel ornamentation. "Any more?" I asked. "Has any Turkish shop been afire?" She laughed, and said that would do for that evening; but some time she might take the fancy of giving me by magic an Arab horse fully caparisoned, to ride down Broadway in a procession of the Theosophical Society and astonish the natives! Many, very many persons, saw the pipes and coffee equipage in our rooms thereafter, and when we left New York all were given away to friends, save the gilt tray and sugar-basin which I brought out to India and have still.

CHAPTER XXVIII.

CHARACTER SKETCH OF MME. BLAVATSKY.

A FEW words more to complete the character sketch of H. P. B. She was, even in her youth —to judge from her early portraits—a plump person, and later in life became very corpulent. It seems to have been a family peculiarity. In her case the tendency was aggravated by the manner of life she led, taking next to no physical exercise whatever, and eating much unless seriously out of health. Even then she partook largely of fatty meats and used to pour melted butter by the quantity over her fried eggs at breakfast. Wines and spirits she never touched, her beverages being tea and coffee, preferably the latter. Her appetite, while I knew her, was extremely capricious, and she was most rebellious to all fixed hours for meals, hence a terror to all cooks and the despair of her colleague.

I remember an instance at Philadelphia which shows this peculiarity in an especial degree. She had one

Digitized by Google

maid-of-all-work, and on this particular day a leg of mutton was boiling for dinner. Suddenly H. P. B. bethought her to write a note to a lady friend who lived at the other end of the city, an hour's journey each way, as there were no trams or other public conveyances going direct from the one house to the other. She called in trumpet tones for the maid, and ordered her to set off instantly with the note and bring the answer. The poor girl told her that the dinner would be spoilt, and she could not possibly get back until an hour beyond the usual time. H. P. B. would not listen and told her to begone at once. Three-quarters of an hour later H. P. B. began complaining that the stupid idiot of a girl had not returned; she was hungry and wanted her dinner, and sent all Philadelphia servants to the devil *en masse*. In another quarter of an hour she had grown desperate, and so we went down to the kitchen for a look. Of course, the pots of meat and vegetables were set back on the range, the fire was banked, and the prospect of dinner was extremely small. H. P. B.'s wrath was vehement, and so there was nothing for us but to turn to and cook for ourselves. When the maid returned she was scolded so roundly that she burst into tears and gave warning! At New York, if any nice visitor chanced to be there, either the dinner would have to wait indefinitely, or he or she or they—for it made no difference—would be asked to come in and dine, and the portions provided for us two had to be divided and sub-divided for perhaps four people. At Bombay it

Digitized by Google

was worse: one day the dinner would be put off two hours and another H. P. B. would demand to be served an hour before the time; and then frighten the wretched Goanese servants into fits, because the vegetables were half-boiled and the meat half-cooked. So when we removed to Adyar I determined to put a stop to this bother, and built a kitchen on the terrace near H. P. B.'s bed-room, gave her a set of servants to herself, and let her eat or go without as she pleased.

I found on visiting her in London after her removal there, that the same old system was in vogue, H. P. B.'s appetite having become more capricious than ever because of the progress of disease, although every possible delicacy was provided by her friends to tempt her. Poor thing! it was not her fault, although her ill health had been largely caused by her almost life-long neglect of the rules of digestion. She was never an ascetic, not even a vegetarian while I knew her, flesh diet seeming to be indispensable for her health and comfort; as it is to so many others in our Society, including myself. I know many who have tried their best to get on with vegetable diet, and some, myself for example, who have followed up the experiment for several years together, yet have been forced finally to revert to their old diet against their will. Some, on the contrary, like Mrs. Besant and other prominent Theosophists I could name, have found themselves much healthier, stronger, and better on non-flesh food, and gradually acquire a positive loathing for meat in any of its forms. All which

Digitized by Google

verifies the old proverb, "What is one man's meat is another man's poison." I think that neither blame is warranted in one case nor praise in the other, because of the regimen one chooses by preference. It is not what goes into the mouth that defiles a man, but what lies in his heart. A wise old saying, worth remembering by the self-righteous.

H. P. B. was, all the world knows, an inveterate smoker. She consumed an immense number of cigarettes daily, for the rolling of which she possessed the greatest deftness. She could even roll them with her left hand while she was writing "copy" with her right. Her devoted London physician, Dr. Mennell, has the most unique present she could have given any person: a box, with his monogram neatly carved on the lid, which contains several hundred cigarettes that she rolled for him with her own hands. She sent it to him just before her death, and the Doctor has it laid by as a souvenir of, doubtless, his most interesting and illustrious patient.

While she was writing *Isis Unveiled*, at New York, she would not leave her apartment for six months at a stretch. From early morning until very late at night she would sit at her table working. It was not an uncommon thing for her to be seventeen hours out of the twenty-four at her writing. Her only exercise was to go to the dining-room or bath-room and back again to her table. As she was then a large eater, the fat accumulated in great masses on her body: her chin doubled

Digitized by Google

and trebled ; a watery fat formed in her limbs and hung in masses over her ankles ; her arms developed great bags of adipose, which she often showed visitors and laughed at as a great joke—a bitter one as it proved in after years. When *Isis* was finished and we began to see ahead the certainty of our departure, she went one day with my sister and got herself weighed : she turned the scales at 245 pounds (17 stone 7), and then announced that she meant to reduce herself to the proper weight for travelling, which she fixed at 156 pounds (11 stone 2). Her method was simple : every day, ten minutes after each meal, she had a wineglass of plain water brought her ; she would hold one palm over it, look at it mesmerically, and then drink it off. I forget just how many weeks she continued this treatment, but finally she asked my sister to go again with her to be weighed. They brought and showed me the certificate of the shopkeeper who owned the scales, to the effect that " The weight of Madame Blavatsky this day is 156 pounds ! " So she continued until long after we reached India, when the obesity reappeared and persisted, aggravated with dropsy, until her death.

There was one aspect of her character which amazed strangers, and made her very attractive to those who loved her. I mean a sort of childish delight that she exhibited when certain things pleased her very much. She was sent once into transports of joy on receipt of a box of caviare, sweet cakes, and other delicacies from Russia, while we were at New York. She was for hav-

Digitized by Google

ing us all taste them, and when I protested that the fish-roes had the flavour of salted shoe-leather, she was almost ready to annihilate me. A crumb of black bread that chanced to be in a home newspaper she had had sent her, suggested the entire home life at Odessa. She described to me her beloved aunt Nadjeda, sitting late at night in her room, reading the papers while nibbling one of these very crusts; and then the different rooms in the house, the occupants, their habits and doings. She actually wrapped the crumb in a bit of the newspaper and laid it under her pillow to dream upon.

In my Diary of 1878, I find an entry for Sunday, July 14, 1878, about a seaside trip we took with Wimbridge. It says:

"A superb day, bright sun, cool, pleasant air, everything charming. We three took a carriage, drove to the beach and all bathed. H. P. B. presented a most amusing appearance; paddling about in the surf, with her bare legs, and showing an almost infantile glee to be in such a 'splendid magnetism.'"

At Madras she received the present of several toys in scroll-saw fret-work, from her aunt. Some of comical design she brought out to show all visitors until the novelty had worn off. One, a wall-pocket in ebony and calamander wood, hangs in her old bed-room at Adyar, where I am now writing.

On her table in New York stood an iron savings-box, modelled like a Gothic tomb or temple—one cannot say which—which was to her the source of constant delight.

Digitized by Google

It had a slit in the dome inside, and an innocent-looking round table-top on a pillar. This was connected with a crank on the outside, and if a coin were placed on it and the crank turned, the coin would presently be swept off through a slot and fall inside, from whence it could only be removed by unscrewing a certain small plate at the bottom. We made this our collection-box for the Arya Samaj, and H. P. B.—but I shall let the reporter of the *N. Y. Star* speak for himself on this point. In that paper for December 8, 1878, it is written :

" Madame Blavatsky, or, as she prefers to be called, H. P. B. (she having sent the title of ' Madame ' to look for that of ' Countess,' which she threw away before) was enraptured with the idea. ' I will fill my little temple with dollars,' she cried, ' and I shall not be ashamed to take it to India.' The temple she referred to is a small, but intricate structure, with an entrance, but no exit, for money contributed to the Arya Samaj. It is solidly constructed of cast-iron, and is surmounted by a small ' Dev.' H. P. B. kindly explained to the reporter that ' Dev ' was a Sanskrit word, differently interpreted as god, or devil, or genie by different nations of the East. The casual visitor to the Lamasery is frequently invited to place a small coin on the top of the temple, and to turn a crank. The result is invariably the great glee of the Theosophs, the discomfiture of the casual visitor, and the enrichment of the Arya Samaj, for the coin disappears in the process."

The same writer, I find, says something nice about the

Digitized by Google

mural picture in dried leaves, of a tropical jungle, that was made in our dining-room, and described in a recent chapter. We thought of making a lottery among our friends of the furniture of the Lamasery, and this was to be one of the prizes. The *Star* reporter says :

"Perhaps one of the most remarkable things in all the collection of unique prizes is one which has no claim to be considered magical. It is a mural ornament, so elaborately beautiful and yet so simple, that it seems strange that it is not fashionable. On one of the walls of the dining-room of the now famous flat is the representation of a tropical scene, in which appear an elephant, a tiger, a huge serpent, a fallen tree, monkeys, birds and butterflies, and two or three sheets of water. It is neither painted nor drawn, but the design was first cut out in paper and then autumn leaves of various hues were pasted on, while the water was represented by small pieces of broken mirror. The effect is remarkably beautiful, but the winner of the prize will probably need magical art to remove it in good condition, for it has been in its place so long that the leaves are dry and brittle."

The jocund side of H. P. B.'s character was one of her greatest charms. She liked to say witty things herself and to hear others say them. As above remarked, her *salon* was never dull save, of course, to those who had no knowledge of Eastern literature and understood nothing of Eastern philosophy, and to them time might have dragged heavily when H. P. B. and Wilder, or Dr.

Weisse, or some other *savant* were discussing these deeper depths and loftier heights of thought by hours together. Yet even then she spoke so unconventionally, and formulated her views with so much *verve* and startling parodox, that even if the listener could not follow the thread of her thought, he must admire it; as one may the Crystal Palace pyrotechnics, although he does not know the chemical processes employed to manufacture the pieces. She caught up and made her own any quaint phrase or word as, for instance, "flapdoodle," "whistle-breeches," and several others which have come to be regarded as her own invention. In our play-times, *i. e.*, after finishing our nightwork, or when visitors came or, rarely, when she wanted to have a little rest, she would tell me tales of magic, mystery, and adventure, and in return, get me to whistle, or sing comic songs, or tell droll stories. One of the latter became, by two years' increment added on to the original, a sort of mock Odyssey of the Moloney family, whose innumerable descents into matter, returns to the state of cosmic force, intermarriages, changes of creed, skin, and capabilities, made up an extravaganza of which H. P. B. seemed never to have enough. She would set me going in presence of third parties, much to my disgust sometimes, and enjoy their surprise at this rough and ready improvisation. It was all recited in an Irish brogue, and was a mere fanfarronade of every kind of nonsense; dealing extravagantly with the problems of macrocosmic and microcosmic evolution: the gist of the whole

Digitized by Google

thing being that the Moloneys were related by marriage to the Molecules, and that the two together generated the supreme potency of Irish force, which controlled the vicissitudes of all worlds, suns, and galaxies. It was, as compared with the trifling story from which it developed, like the giant Banyan tree as compared with its tiny seed-germ. She got at last to call me Moloney, both in speaking and writing, and I retaliated by calling her Mulligan. Both nicknames were caught up by our friends, and my old boxes of archives contain many letters to her and myself, under those Hibernian pseudonyms.

She was a splendid pianist, playing with a touch and expression that were simply superb. Her hands were models—ideal and actual—for a sculptor and never seen to such advantage as when flying over the keyboard to find its magical melodies. She was a pupil of Moscheles, and when in London as a young girl, with her father, played at a charity concert with Madame Clara Schumann and Madame Arabella Goddard in a piece of Schumann's for three pianos.* During the time of our relationship she played scarcely at all. Once a cottage piano was bought and she played on it for a few weeks, but then it remained closed ever after until sold, and served as a double book-shelf. There were times when

* Some weeks after the above was published I learned from a member of her family that shortly before coming to America, H. P. B. had made some concert tours in Italy and Russia under the pseudonym of "Madame Laura."

Digitized by Google

she was occupied by one of the Mahâtmas, when her playing was indescribably grand. She would sit in the dusk sometimes, with nobody else in the room beside myself, and strike from the sweet-toned instrument improvisations that might well make one fancy he was listing to the Gandhâvas, or heavenly choristers. It was the harmony of heaven.

She had a bad eye for colours and proportions in her normal state, and very little of that fine æsthetic taste which makes a woman dress herself becomingly. I have gone to the theatre with her when I expected the house to rise at us. She, a stout and remarkable looking woman, wearing a perky hat with plumes, a *grand toilette* satin dress with much trimming, a long, heavy gold chain about her neck, attached to a blue-enamelled watch, with a monogram on the back in cheap diamonds, and on her lovely hands a dozen or fifteen rings, large and small. People might laugh at her aside, but if they caught her stern eye and looked into her massive Calmuck face, their laugh soon died away and a sense of awe and wonder possessed them.

She was at times generous to the extreme, lavishly so; at others the very opposite. When she had money she seemed to regard it as something to be got rid of soon. She told me that she spent within two years a legacy of 85,000 roubles (about 170,000 rupees) left her by her grandmother, in desultory wandering over the world. A good part of the time she had with her a huge Newfoundland dog, which she led by a heavy golden chain!

Digitized by Google

She was a most downright, plain-spoken person, when not exchanging politenesses with a new acquaintance, at which times she was *grande-dame* to her finger-tips. No matter how untidy she might be in appearance, she bore the ineffaceable stamp of high birth; and if she chose, could be as dignified as a French duchesse. But in her ordinary, everyday life, she was as sharp as a knife in her sarcasm and like an exploding bomb in her moments of anger. The one unpardonable sin, for her, was hypocrisy and society airs. Then, she was merciless, and the sources of various languages were exhausted to cover the victim with contumely. She frequently saw as in a mirror, clairvoyantly, the secret sins of men and women whom she encountered; and if they happened to be particularly prone to speak of Theosophy with disdain or of herself with contempt, she would pour the vials of wrathful candour upon their heads. The "ower guid" folk were her abhorrence, but for a poor, ignorant but frank person, whether reputable or the opposite, she had always a kind word and often a gift. Unconventionality was with her almost a cult, and nothing pleased her more than to do and say things to shock the prudish. For example, I find an entry in my diary to the effect that, on a certain evening, she put on her night-dress, went to bed, and received a mixed company of ladies and gentlemen. This was after the fashion of royal and noble dames of pre-revolutionary days in Europe. Her palpable sexlessness of feeling carried all this off without challenge. No woman visitor would ever see in her a

Digitized by Google

possible rival, no man imagine that she could be cajoled by him into committing indiscretions. She swore like the army in Flanders but meant no harm, and if her uncommon predilection in this respect had not been so much noticed and denounced by the sticklers for propriety—themselves, as she clairvoyantly saw, sometimes smug sinners behind closed doors—she would doubtless have given it up. It is in human-nature, and was in her nature, superlatively, to keep doing forbidden things just out of a spirit of revolt. I knew a lady once whose child caught from the farm servants the habit of saying wicked words. The mother, a most exemplary lady in every respect, was heartbroken about it. Whipping and other punishments only made matters worse, and no better result was obtained from the last expedient of *washing out the child's mouth with bar soap* after he had been heard swearing. At last some sensible friend advised the parents to try what would come of paying no attention whatever to the bad language. The plan was a complete success, and within a few months the culprit swore no more. H. P. B. felt herself in revolt to every conventional idea of society, being in beliefs, tastes, dress, ideals, and behaviour a social helot; so she revenged herself by showing her own commanding talents and accomplishments, and causing society to fear her. Secretly smarting for her lack of physical beauty, she continually harped upon her "potatoe nose," as though she defied criticism. The world was to her an empty sham, its prizes but dross, her waking life a lugu-

Digitized by Google

brious existence, her real life that of the night when, leaving the body, she would go and sit at the feet of her Masters. So she felt little else than scorn and profound contempt for the blind bigots and narrow-thinking men of science, who had not even a stray glimpse of the truth, yet who would judge her with unrighteous judgment, and conspire to silence her by a conspiracy of calumny. For clergymen as a body she felt hatred, because, being themselves absolutely ignorant of the truths of the spirit, they assumed the right to lead the spiritually blind, to keep the lay conscience under control, to enjoy revenues they had not earned, and to damn the heretic, who was often the sage, the illuminatus, the adept. We had one scrap-book into which we used to paste paragraphs from the newspapers telling of the crimes of clergymen and priests who had been brought to justice, and before we left for India there was a large collection of them.

H. P. B. made numberless friends, but often lost them again and saw them turned into personal enemies. No one could be more fascinating than she when she chose, and she chose it when she wanted to draw persons to her public work. She would be caressing in tone and manner, and make the person feel that she regarded him as her best, if not her only friend. She would even write in the same tone, and I think I could name a number of women who hold her letters saying that they are to be her successors in the T. S., and twice as many men whom she declared her "only *real* friends and accepted

Digitized by Google

chélas." I have a number of such certificates, and used to think them treasures until, after comparing notes with third parties, I found that they had been similarly encouraged, and I saw that all her eulogies were valueless. With ordinary persons like myself and her other intimate associates, I should not say she was either loyal or staunch. We were to her, I believe, nothing more than pawns in a game of chess, for whom she had no heart-deep love. She repeated to me the secrets of people of both sexes—even the most compromising ones—that had been confided to her, and she treated mine, such as they are, I am convinced, in the same fashion. But she was loyal to the last degree to her aunt, her other relatives, and to the Masters; for whose work she would have sacrificed not only one, but twenty lives, and calmly seen the whole human race consumed with fire, if needs be.

CHAPTER XXIX.

MADAM BLAVATSKY BECOMES AN AMERICAN CITIZEN. FORMATION OF THE BRITISH THEOSOPHICAL SOCIETY. LAST DAYS IN NEW YORK.

IT was but natural that the Queen of our little Bohemia should have been asked for sittings by the Bohemian artists who clustered around her; and so it happens that she sat to Thos. Le Clear for her portrait in oils, and to O'Donovan for a bronze portrait-medallion. The Diary entry for 24th February (1878) shows that we two spent the evening at Walter Paris's studio, and had a jolly time of it with some of the best artists of New York. Most of them belonged to the famous Tile Club, whose members meet monthly at each other's studios, and paint designs on tiles supplied by the host of the evening, whose property they become, and who has them baked and glazed at his own expense. A charming arrangement, by which each member of the Club becomes in his turn, at trifling cost, the owner of a set of signed paintings by good artists.

H. P. B. was inexpressibly amused by an incident connected with my farcical improvisations, alluded to

Digitized by Google

above. One of the things she frequently called for was a burlesque of "speaking mediumship," in which the mannerisms and platitudes of a certain class of platform speakers were travestied. On the evening in question we had as a visitor a London *litterateur*, a former editor of the *Spectator* and a University man. He had gone in for a good deal of investigation of Spiritualism and was a believer. I pretended to be controlled by the spirit of a deceased High Church clergyman and, with closed eyes and solemn tone, launched out into a tirade against the demoralising influences of the day, among which I accorded first place to the Theosophical Society. The promoters of this nefarious body, I made the pseudo-spirit denounce in an especial degree, while upon H. P. B., its high priestess and head devil, I launched the thunderbolts of the major and minor excommunication. The old lady laughed until she cried, but our guest sat staring at me (as I noticed from time to time when I took a hasty glance at him between my almost closed lids), and at last broke out with the exclamation: "It 's terrible, it 's awfully real; you really should not let him do it, Madame!" "Do what?" she asked. "Give way to this mediumship when his whole self is obsessed by so strong and so vindictive a personality of the spirit-world!" This was too much for my mirth-loving colleague, and she exploded with laughter. Finally, catching her breath, she cried out: "Stop! For goodness' sake, stop, Olcott, or you will kill me!" Just then I was at the middle of a fine burst of scorn

Digitized by Google

over the pretended erudition and altruism of this "Russian schemer," but I stopped short and, turning to Mr. L., asked him in the quietest, most commonplace tone, for a match for my pipe. I almost lost my gravity on seeing his sudden start of amazement, and the sharp look of enquiry he shot into my face, telling as though he had spoken the words, his belief that I was either mad, or the most extraordinary of mediums since I could so instantaneously "pass out of control." The sequel almost finished off H. P. B. The next morning, at eight o'clock, Mr. L. called, to walk down town with me and try his persuasive powers to make me throw up this mediumship which, he assured me, would destroy my hope of useful public work in the future! The medium, he explained—as though I had not then known it for at least twenty years—was a veritable slave in the degree of his real mediumship; the passive agent of disincarnate forces whose nature he had no means of testing, and as to whose domination he had no selective power. Say what I might, he would not be persuaded that the whole affair of last evening was nothing but a joke, one of the various divertisements employed by H. P. B. and myself to relieve the strain of our serious work; he would have it that I was a medium, and so we had to let it rest. But to us it was a standing joke, and H. P. B. told it numberless times to visitors.

On the 5th April, T. A. Edison sent me his signed application for membership. I had had to see him about exhibiting his electrical inventions at the Paris

Digitized by Google

Exposition of that year; I being the honorary secretary to a Citizens' National Committee, which was formed at the request of the French Government, to induce the United States Congress to pass a bill providing for our country taking part in the first international exposition of the world's industries since the fall of the Empire and the foundation of the French Republic. Edison and I got to talking about occult forces, and he interested me greatly by the remark that he had done some experimenting in that direction. His aim was to try whether a pendulum, suspended on the wall of his private laboratory, could be made to move by will-force. To test this he had used as conductors, wire of various metals, simple and compound, and tubes containing different fluids, one end of the conductor being applied to his forehead, the other connected with the pendulum. As no results have since been published, I presume that the experiments did not succeed. It may interest him, if he should chance to see this record, to know that in 1852 I met in Ohio a young man named Macallister, an ex-Shaker, who told me that he had discovered a certain fluid, by bathing his forehead with which he could transmit thought to another person employing the same fluid at an agreed time, however distant the two might be apart. I remember writing an article on the subject under the title of "Mental Telegraphing" to the old *Spiritual Telegraph* newspaper, of the late Mr. S. B. Britten. Having been acquainted with several noted American inventors, and learnt from them the psychological pro-

Digitized by Google

cesses by which they severally got the first ideas of their inventions, I described these to Edison and asked him how his discoveries came to him. He said that often, perhaps while walking on Broadway with an acquaintance, and talking about quite other matters, amid the din and roar of the street, the thought would suddenly flash into his mind that such a desired thing might be accomplished in a certain way. He would hasten home, set to work on the idea, and not give it up until he had either succeeded or found the thing impracticable.

On the 17th April we began to talk with Sotheran, General T., and one or two other high Masons about constituting our Society into a Masonic body with a Ritual and Degrees; the idea being that it would form a natural complement to the higher degrees of the craft, restoring to it the vital element of Oriental mysticism which it lacked or had lost. At the same time, such an arrangement would give strength and permanency to the Society, by allying it to the ancient Brotherhood whose lodges are established throughout the whole world. Now that I come to look back at it, we were in reality but planning to repeat the work of Cagliostro, whose Egyptian Lodge was in his days so powerful a centre for the propagation of Eastern occult thought. We did not abandon the idea until long after removing to Bombay, and the last mention of it in my Diary is an entry to the effect that Swami Dyánand Sarasvati had promised me to compile a Ritual for the use of our New York and London members. Some old colleagues have denied

Digitized by Google

the above facts, but, although they knew it not, the plan was seriously entertained by H. P. B. and myself, and we relinquished it only when we found the Society growing rapidly by its own inherent impetus and making it impolitic for us to merge it into the Masonic body.

One evening H. P. B. made a pretty phenomenon of duplication. A French physician, Dr. B., was one of a party of nine visitors at our rooms, and sat near H. P. B.'s writing-table, so that the standing gas-light shone upon a large gold sleeve-button, bearing his initials, that he wore. H. P. B.'s eye being caught by its glitter, she reached across the table, touched the button, and then opening her hand, showed him and the rest of us a duplicate of the same. We all saw it, but she would not give it to either of us, and presently re-opening her hand, the *Mâyâ* had disappeared. One much more interesting thing she did for me, one evening when we two were alone. From time to time she had told me tales of adventure and doings about a number of persons; some in India, others in Western countries. This evening she was shuffling a pack of cards in her hands in an aimless sort of way, when suddenly she held the pack open towards me and showed me the *visiting card* of a certain British officer's wife, who had chanced to see a Mahâtma in Northern India and fallen offensively in love with his splendid face. The card bore her name, and, in a lower corner, that of her husband's regiment, *partly scratched out as with a knife*, so that I might not be able to identify the lady if I should ever meet her in

Digitized by Google

India. The shuffling went on, and every minute or two she would open the pack and show me the visiting cards of other persons known to us by name; some were glazed, some plain; some with names engraved in script, others in square lettering; some type-printed, some black-bordered, some large, and others small. It was a marvellous and quite unique phenomenon. Yet how queer it was that precious psychic force—so hard to generate, so easy to lose—should have been wasted to objectify, for a brief moment in each case, these astral phantoms of common visiting cards, when the same volume of force might have been employed to compel some great scientist to believe in the existence of the records of the A'kas'a and devote his energies to spiritual research. My respected sister, Mrs. Mitchell, who, with her husband and children, occupied a flat in the same apartment-house with us, was one day shown by H. P. B. a collection of gems and jewelry which, she says, must have represented a value of at least £10,000, and which she thought were part of her family inheritance. So little did she suspect that they were merely illusionary, that she was even incredulous when I told her that H. P. B. owned no such property. If she had, I am sure she would never have allowed herself to be put to such straits as she was.

The nearer we approached the time for our change of base, the more vehement became H. P. B.'s praise of India, the Hindus, the entire Orient and Orientals as a whole, and her disparagement of Western people as a

Digitized by Google

whole, their social customs, religious tyranny, and ideals. There were stormy evenings at the Lamasery, among which stands out one episode very distinctly. Walter Paris, the artist, and one of the best of fellows, had lived at Bombay some years as Government Architect, and was glad to talk with us about India. But not having our excessive reverence for the country and sympathy for the people, he would often offend H. P. B.'s sensitiveness by remarks on what I now know to be Anglo-Indian lines. One evening he was talking about an old servant of his who had committed some stupidity in harnessing or saddling a horse, and quietly remarked that he had slashed the man with his whip. Instantly, as if she had received the blow across her own face, H. P. B. sprang up, stood before him, and in a speech of about five minutes gave him such a scathing rebuke as to make him sit speechless. She stigmatised the act as one of cowardice, and made it serve as a text for a neat discourse on the treatment of the Oriental races by the Anglo-Indian ruling class. This was not a mere casual outburst adapted to the Western market; she preserved the same tone from first to last, and I have often heard her at Allahabad, Simla, Bombay, Madras, and elsewhere, use the same boldness of speech to the highest Anglo-Indian officials.

One way H. P. B. had of beguiling tedious hours after *Isis Unveiled* was off our hands, was to draw caricatures on playing-cards, bringing the pips into the pictures. Several of these clever productions were very

Digitized by Google

laughable. One, made out of the Ten of Clubs, was a minstrel performance; the grotesque contortions of the "end men," the solemn caddishness of the "Interrogator," and the amiable vacuity of the intermediates being admirably delineated. Another was a Spiritualistic séance, with banjo, accordeons, and tambourines flying through the air, a bucket inverted over one "investigator's" head, and an impish little elemental grinning from a lady's lap as she holds his forked tail in her hand under the impression that it is part of the body of some departed friend. A third card—made out of a Seven of Hearts, I think—shows two fat monks at a table laden with turkey, ham, and other delicacies, while bottles of wine stand ready at hand, and others are cooling in an ice vase on the floor. One of the reverend fathers, who has a most animal cast of features, is putting his hand behind him to receive a *billet-doux* from a prim servant-maid in cap and apron. Still another represents a policeman catching a runaway thief by the foot; another, a couple of swell Tommies walking with their sweethearts; a third, a patriarchal negro, running with his black grandchild in his arms, etc., etc. Quite recently I have learnt that her late father had a special talent in this same direction, so it was quite easy to account for her cleverness. I told her I thought it a pity that she should not make up an entire pack in this fashion, as it would surely yield her a goodly sum as copyright. She said she should, but the mood did not last long enough to bring the desired result.

CARICATURES ON PLAYING CARDS.

Digitized by Google

On the 8th July she took out her naturalisation papers, went with me to the Superior Court, and was duly sworn in as a citizen of the United States of America. She describes it thus in my Diary: "H. P. B. was made to swear eternal affection, devotion and defence to and of the U. S. Constitution, forswear every particle of allegiance to the Russian Emperor, and was made a 'Citizen of the U. S. of America.' Received her naturalisation papers and went home happy." Of course, the next day's American papers were full of accounts of the event, and reporters were sent to interview the new citizen, who made them all laugh with her *naïve* opinions upon politics and politicians.

The formation of the British Theosophical Society, in London (now called the London Lodge T. S.), occupied a good deal of my attention during the early summer months of 1878. This, our first Branch, was finally organised on June 27, by Dr. J. Storer Cobb, LL.D., Treasurer of the T. S., whose visit to London at the time was availed of to make him my official agent for this purpose. Mr. Sinnett has kindly favoured me with the following copy of the record of the proceedings, from the Minute Book of the Lodge in his official custody; which I publish, because of its historical interest:

MEETING OF FELLOWS,

Held at 38 Great Russell Street, London, June 27, 1878.

Present: Fellows, J. Storer Cobb, *Treasurer* (New

Digitized by Google

York Society), C. C. Massey, Dr. C. Carter Blake, Dr. George Wyld, Dr. H. J. Billing, and E. Kislingbury.

Fellow J. Storer Cobb in the chair, read letters from Mr. Yarker, Dr. K. Mackenzie, Captain Irwin, and Mr. R. P. Thomas, expressing regret at their unavoidable absence, and sympathy with the objects of the meeting; also a letter from Rev. W. Stainton Moses, stating that he was unable to take part in the meeting, having resigned his Fellowship in the New York Society.

Mr. Treasurer Cobb having stated President Olcott's instructions as to the basis of an English branch society, as communicated since a former meeting of Fellows in this place, proposed to retire, as it was not his intention to become a member of the new branch. On his being invited to remain as a listener, an informal discussion ensued, and it was finally *Resolved*, on the motion of Fellow Massey, seconded by Dr. H. J. Billing, "that, in the opinion of the English Fellows of the Theosophical Society of New York, present at this meeting, it is desirable to form a Society in England, in connection and in sympathy with that body."

In accordance with the paper of instructions received from the President, the meeting proceeded to discuss the question of a President of the Branch Society, and on the ballot being taken, C. C. Massey was found to be chosen President.

Mr. Massey, in accepting the office, made a few remarks and took the chair. It was proposed by him, and seconded by Dr. Carter Blake, that Miss Kislingbury

Digitized by Google

be Secretary to the Branch Society. This was carried and accepted by Miss K., *pro tem.*

The meeting was adjourned until further advices from New York, and the Secretary was requested to furnish a copy of these minutes to Col. Olcott (President) and a copy of the Resolution, above recorded, to the absent English members.

The following memorandum was then drawn up and signed, and given to the Secretary to forward to Col. Olcott, viz. :

"LONDON, *June* 27, 1878.

"To

"COL. HENRY S. OLCOTT,

President of the T. S., New York.

"I hereby certify that this day has been held a meeting at which has been formed an English branch of the above Society, of which Branch, Fellow Charles Carleton Massey has been, by ballot of the Fellows present, elected President.

(Signed) "JOHN STORER COBB,
Treasurer, N. Y. Society.
(Signed) C. C. MASSEY."

My official letters recognising the British Theosophical Society and ratifying the proceedings at the above reported meeting, were written July 12, 1878, and sent to Mr. C. C. Massey and Miss E. Kislingbury, the President and the Secretary.

There is an entry in my Diary for October 25th which is interesting as showing the faculty of clairvoyance that H. P. B. sometimes exercised. It says :

Digitized by Google

"O'Donovan, Wimbridge, H. P. B., and I were at dinner when the servant brought in a letter from Massey left at the moment by the postman. Before it came, H. P. B. announced its coming and nature, and when I received it and before the seal was broken, she said it contained a letter from Dr. Wyld, and read that also without looking at it."

I recollect taking the cover from the hand of the servant and laying it beside my plate, intending to defer reading it until we rose from the table. Between it and H. P. B. stood a large earthenware water-pitcher, yet while it lay there she first read the contents of Massey's letter and then those of the enclosure from Dr. Wyld. I find, moreover, that the covering letter had Mahátmic writing on one of the pages, and that I returned it to the sender with a statement of the facts, signed by myself and Mr. Wimbridge.

It is a rather notable coincidence that several astrologers, clairvoyants, and Indian ascetics should have prophesied that H. P. B. would die at sea. I find one of the sort noted on the page for November 2, 1878. A gentleman psychic, a friend of Wimbridge's, "foretold H. P. B.'s death at sea—a sudden death. Doubted that she would even reach Bombay." Majji, the Benares *Yogíni*, made the same prognostic as to the place of H. P B.'s death and even the time, but neither proved correct. No more did a card-reader at New York who predicted H. P. B.'s death by murder before 1886. In entering the affair H. P. B. very naturally put two points

Digitized by Google

of exclamation after the word murder, and cynically added the remark: "Nothing like clairvoyance!"

One of our visitors was more successful as a prophet, but he did not try his faculty on H. P. B. Here is the description I wrote of him in the Diary:

"A mystical Hebrew physician. A strange, very strange man. Has prescience as to visitors, deaths, and a spiritual insight as to their maladies. Old, thin, stooping; his hair thin, fine, grizzled and stands out in all directions from his noble head. Rouges his cheeks to correct their unnatural pallor. Has a habit of throwing his head far back and looking up into space as he listens or converses. His complexion is waxen, his skin transparent and extremely thin. He wears summer clothing in the depth of winter. He has the peculiar habit of saying when about to answer: 'Vell, see he-ere, tee-ar!'"

For thirty years he had studied the Kabbalah, and his conversations with H. P. B. were largely confined to its mysteries. He said one evening in my hearing that despite his thirty years' researches he had not discovered the true meanings that she read into certain texts, and that illumined them with a holy light.

Our departure having been finally decided upon, I began in the autumn of 1878 to get my worldly affairs into order. An active correspondence was kept up with our Bombay and Ceylon friends (a number of Buddhists and Hindus joined the T. S. by letter), our small library was shipped, and little by little our household goods were sold or given away. We made no parade of

Digitized by Google

intentions, but our rooms were thronged more than ever by the friends and acquaintances to whom they became known. H. P. B.'s entries in my Diary during my frequent absences from New York in the last weeks, testify to the nervous eagerness she felt to get away, and her fears that my plans might miscarry. In the entry of October 22d she writes—speaking of the urgency of our Mahâtmas: "N— went off watch and in came S— with orders from — to complete all by the early part of December. Well, H. S. O. is playing his great final stake." There is reference here to the change of personalities in the Intelligences controlling the H. P. B. body, and the entries in different handwritings support this idea. A similar entry occurs on November 14th, where it is said that we must use every exertion to get away by the 20th December at latest. There is a final paragraph on that page to this effect: "O gods, O India of the golden face, is this really the beginning of the end!" On November 21st other urgent orders came through the same channel, and we were bidden to begin packing our trunks. Various persons wished to accompany us to India, and some made efforts to do so, but the party finally comprised but four—H. P. B., Miss Bates, an English governess, Mr. Wimbridge, an artist and architect, and myself. On the 24th we were at it, and the following day the first of our intended party of four, Miss Bates, sailed for Liverpool, taking two of H. P. B.'s trunks with her. Again and again came the orders to hasten our departure. Writing about the unexpected

Digitized by Google

resignation of a member, H. P. B. exclaims : "Oh ! this wretched brood ; when shall we be rid of it !" The next day's entry (in red pencil and large letters) says, *à propos* of my being ready soon : "His fate depends on that :" our remaining furniture *must* be disposed of at auction before December 12th ; and the sale actually came off on the 9th. That day she writes : "Went to bed at four and was roused again at six, thanks to M— who locked the door and Jenny (the servant) could not get in. Got up, breakfasted and went off to the Battery to meet — (an occultist connected with the Lodge of the White Brotherhood). Came back at two and found an infernal row and hullabaloo at the auction. All our things went for a song, as they say in America . . . 5 P.M.— *Everything gone :* Baron de Palm adieu ! Supped on a board three inches wide !"

Then there was a skurry and a rush of visitors, articles appearing in the papers, replies written by H. P. B. On the 13th I received from the President of the United States an autograph letter of recommendation to all U. S. Ministers and Consuls ; and from the Department of State a special passport such as is issued to American diplomats, and a commission to report to Government upon the practicability of extending the commercial interests of our country in Asia. Those documents proved useful later on in India, when H. P. B. and I were under suspicion of being Russian spies ! The particulars of which farcical episode will be told in their proper place.

Digitized by Google

I find entries in the Diary showing that I got scarcely any rest during these latter days, sitting up all night to write letters, rushing away to Philadelphia and other towns, snatching a morsel of food as I could get it: while throughout the whole narrative sounds the boom of the orders to depart before the fixed day of grace—the 17th—should pass away. H. P. B.'s writing grows scratchy, and on the page for December 15th I notice two of the above-mentioned variants of her script, which show that her body was occupied by two of the Mahâtmas on that same evening. I had bought an Edison phonograph of the original pattern, and on that evening quite a number of our members and friends, among them a Mr. Johnston, whom Edison had sent as his personal representative (he being unavoidably absent), talked into the voice-receiver messages to our then known and unknown brothers in India. The several tinfoil sheets, properly marked for identification, were carefully removed from the cylinder, packed up, and they are still kept in the Adyar Library, for the edification of future times.* Among the voices kept are those of H. P. B.—a very sharp and clear record,—myself, Mr. Judge and his

* Quite recently—viz., in May, 1895—I sent these tinfoil records to Edison's London office, to see if they might not be received on one of the modern wax cylinders and so saved for posterity. Unfortunately, nothing could be done with them, the indentations made by the voices having become almost flattened out. It is a great pity, for otherwise we might have had duplicates taken off the original, and thus have had H. P. B.'s strong voice speaking audibly at our local meetings all over the world on "White Lotus Day," the anniversary of her death.

brother John, Prof. Alex. Wilder, Miss Sarah Cowell, two Messrs. Laffan, Mr. Clough, Mr. D. A. Curtis, Mr. Griggs, Mrs. S. R. Wells, Mrs. and Miss Amer, Dr. J. A. Weisse, Mr. Shinn, Mr. Terriss, Mr. Maynard, Mr. E. H. Johnston, Mr. O'Donovan, etc., of whom all were clever, and some very well known as authors, journalists, painters, sculptors, musicians, and in other ways.

The 17th December was our last day on American soil. H. P. B.'s entry says: "Great day! Olcott packed up. . . . what next? All dark—but tranquil." And then comes, written in large letters, the heart-cry of joy, CONSUMMATUM EST! The closing paragraph reads thus: "Olcott returned at 7 P.M. with the tickets for the British Steamboat, the *Canada*, and wrote letters until 11:30. Curtis and Judge passed the evening. Maynard took H. P. B. [See the writers always speaking of her in the third person] to dine at his house. She returned home at 9. He made her a present of a tobacco-pouch. Charles (our big cat) lost!! At near 12, midnight, H. S. O. and H. P. B. took leave of the chandelier and drove off in a carriage to the steamer." So closes the first volume of the history of the Theosphical Society with the departure of its Founders from America.

Behind them lay three years of struggles; of obstacles surmounted; of crude plans partly worked out; of literary labour; of desertions of friends; of encounters with adversaries; of the laying of broad foundations for the structure that in time was destined to arise for the gathering in of the nations, but the possibility of which

Digitized by Google

was then unsuspected by them. For they had builded better than they knew—better, at any rate, than I knew. What lay in the future we foresaw not. The words of H. P. B. show that: "All dark, but tranquil." The marvellous extension of our Society had not entered even into our dreams. An ex-officer of ours has published the statement that the Society had died a natural death before we left for India. The diagram opposite will show that, while it had dwindled to almost nothing, it began to revive from the moment its executive centre was shifted to India.

We passed a wretched night on the ship, what with the bitter cold, damp bedding, no heating apparatus working, and the banging of tackle and rub-a-dub-dub of the winches getting in cargo. Instead of leaving early, the steamer did not get away from her wharf until 2.30 P.M. on the 18th. Then, having lost the tide, she had to anchor off Coney Island and crossed the Sandy Hook bar only at noon on the 19th. At last we were crossing the blue water towards our Land of Promise; and, so full was my heart with the prospect, that I did not wait on deck to see the Navesink Highlands melt out of view, but descended to my cabin and searched for Bombay on my Map of India.

OLD DIARY LEAVES

THE ONLY AUTHENTIC HISTORY OF
THE THEOSOPHICAL SOCIETY

Second Series, 1878—83
(3rd Edition)

BY
HENRY STEELE OLCOTT
PRESIDENT-FOUNDER OF THE SOCIETY

"... Nothing extenuate,
Nor set down aught in malice."

THE THEOSOPHICAL PUBLISHING HOUSE
ADYAR, MADRAS 20, INDIA
1954

demand. I am proud of the fact that, although these memoirs have been appearing monthly in the *Theosophist* since March, 1892, and have been read by hundreds of living witnesses to the events cited, my veracity has not once been challenged, and but one slight inaccuracy pointed out. The growth of the Society has been as steady within the past four years as it had been up to the time of the publication of the first volume of these memoirs, the number of new branch charters issued having been 148, and the total, from the beginning up to the close of last year (1898), 592, as against 394 up to the close of the year 1894. These Branches are now grouped within eight administrative sections, whose head-offices are respectively at Benares, London, Paris, Amsterdam, Stockholm, New York, Sydney, and Auckland (N.Z.). The General Headquarters of the whole Society and the President-Founder's official residence are at Adyar, Madras. The work, therefore, already covers the greater part of the civilized world, while its literature finds its way over an even wider area, being read in the camps of miners and explorers, the huts of pioneers, and the cabins of ships sailing in all seas.

So world-covering a movement and so strongly based a Society is entitled to be taken seriously by men who think, and, since the Diary of one of its two chief founders gives the data for a truthful

history of its rise and progress, and he, the survivor, alone knows all the facts, it seems to be his clear duty to write it while his memory is still strong and his strength unimpaired.

One motive which prompted me to begin was that I might leave behind me, for the use of the future historian, as accurate a sketch as possible of that great personality-puzzle, Helena Petrovna Blavatsky, co-founder of the Theosophical Society. I declare upon honor that I have not written one word about her or her doings, save in the spirit of loyalty to her memory and to truth. I have not written a line in malice. I knew her as companion, friend, co-worker, equal—on the plane of personality; all her other colleagues stood with her in the relation of pupil to teacher, or as casual friends, or passing acquaintances, or mere correspondents. None knew her so intimately as I, for none save me saw her in all her many changings of mood, mind, and personal characteristics. The human Helena Petrovna, with her unchanged Russian nature; the Madame Blavatsky, fresh from the Bohemian circles of Paris; and the "Madame Laura,"—the bays and bouquets of whose concert tours of 1872-3 as a pianist, in Italy, Russia, and elsewhere, were not long wilted when she came to New York through Paris—were as well known to me as, later on, became the "H. P. B." of Theosophy. Knowing her, therefore, so well,

she was not to me what she was to many others—all goddess, immaculate, infallible, co-equal with the Masters of Wisdom; but a wondrous woman, made the channel for great teachings, the agent for the doing of a mighty work. Just because I did know her so much better than most others, she was a greater mystery to me than to them. It was easy for those who only saw her speaking oracles, writing profound aphorisms, or giving clue after clue to the hidden wisdom in the ancient Scriptures, to regard her as an Earth-visiting *angelos* and to worship at her feet; she was no mystery to them. But to me, her most intimate colleague, who had to deal with the vulgar details of her common daily life, and see her in all her aspects, she was from the first and continued to the end an insoluble riddle. How much of her waking life was that of a responsible personality, how much that of a body worked by an overshadowing entity? I do not know. On the hypothesis that she was a medium for the Great Teachers, only that and nothing more, then the riddle is easy to read; for then one can account for the alterations in mind, character, tastes, and predilections which have been touched upon in previous chapters; then the H. P. B. of the latter days fits on to the Helena Petrovna of New York, Paris, Italy, and all other countries and epochs. And what does the following passage (written in

my Diary by her hand on the page for 6th December 1878) mean, if not that? It says: "*We* got cold again, I think. Oh, unfortunate, empty, rotten old body!" Was this "empty" body empty of its proper tenant? If not, why should the phrase have been written with her hand in a variant of her proper handwriting? We shall never get at the truth. If I recur again and again to the problem, it is because the deeper I go into these incidents of the past, the more exciting and baffling grows the mystery. So let us pass on once more and rejoin the pilgrims at New York, in the cabin of the good steamer "Canada," of the National Line, bound for London in the bitter month of December.

Publishers' Note—The original edition of OLD DIARY LEAVES, 2nd Series, contained nine illustrations—all of them views of the Society's Estate at Adyar. These illustrations are now too faded for reproduction. With special care, however, one has been reproduced, which appears as the frontispiece in this edition.

CHAPTER I

THE VOYAGE OUT

THOUGH we left American soil on the 17th of December (1878), we did not get away from American waters until 12.30 p.m. on the 19th, as we lost the tide of the 18th and had to anchor in the Lower Bay. Imagine the state of mind of H.P.B. if you can! She raged against the captain, pilot, engineers, owners, and even the tides. My Diary must have been in her portmanteau, for in it she wrote:

"Magnificent day. Clear, blue, cloudless [sky], but devilish cold. Fits of fear lasted till 11. *The body is difficult to manage* . . . At last the pilot took the steamer across the Sandy Hook bar. Fortunately we did not get stuck in the sand! . . . All day eating —at 8, 12, 4, and 7. H.P.B. eats like three hogs."

I never knew the meaning of the phrase written by H.P.B.'s hand in my Diary on 17th December, 1878: "All dark—but tranquil," until at London, when her niece translated for me an extract from the letter written by her aunt to her mother (Mme. Jelihovsky) from London on 14th January, 1879, and which she has kindly copied out for the present use. H. P. B. writes her sister:

"I start for India. Providence alone knows what the future has in store for us. Possibly these

portraits shall be the last. Do not forget your *orphan*-sister, now so in the full meaning of the word.

"Good-bye. We start from Liverpool on the 18th. May the invisible powers protect you all!

"I shall write from Bombay *if I ever reach it.*

ELENA."

"LONDON, 14*th January*, 1879."

If she ever reached it? Then she was not certain that she would; that New York prediction might come true. Very well; but how, then, about all this romance we have been having circulated, about her having had complete foreknowledge as to our Indian career? The two clash.

There were but ten of us passengers aboard: our three—H. P. B., Wimbridge, and myself; a Church of England clergyman and wife; a jolly, red-faced young Yorkshire squire; an Anglo-Indian army captain and wife; and another lady and gentleman. Can anyone fancy what that wretched clergyman passed through, what with sea-sickness, the biting, damp cold, and daily wrangles with H. P. B.! And yet, although she gave him unreservedly her opinion of his profession, enforced at times with expressions fit to curdle his blood, he had the breadth of mind to see her nobler qualities, and at parting almost wept for losing her. He actually sent her his photograph and begged hers in exchange.

We had fine weather for only three full days. On the 22nd it changed, and—as H. P. B. records it—"Wind and gale. Rain and fog came pouring into the saloon skylarks (*sic*). Everybody sea-sick except

Mrs. Wise and H. P. B.; Moloney (myself) sang songs." The next morning was fine again, but a terrific gale burst on us in the afternoon, and the Captain was "telling fearful stories of shipwreck and drowning the whole evening. Mrs.... and Mr.... frightened out of their wits." After that the storm-fiends pursued us as if they were in the service of the opponents of our T. S. It seemed as though all the winds that Æolus tied up in paper bags for Ulysses had broken loose and gone on the rampage. One entry of mine runs through the pages for 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th and 31st December, *viz.*, "Here follow a train of days and nights of ennui, turmoil, and distress. By night, tossed about like a shuttlecock between battledores. By day, the hours hanging so heavily as to seem whole days each. A small company of incongruous passengers, tiring of the sight of each others' faces." H. P. B. writes on one day's page: "Night of tossing and rolling; H. S. O. sick abed; monotonous, stupid, wearisome. Oh for the Land! Oh for India and HOME!" We sat out the Old Year and welcomed the New. The ship's bells rang Eight-bells twice, and down in the engine-room, agreeably to custom, there was a charivari of bells, pans, steel bars, and other sonorous objects. On New Year Day, 1879, we entered the British Channel in a sea of fog, typical of our as yet unmanifested future. Steaming very carefully and shaving by a number of vessels, we took the pilot, a very old, moss-grown sort of man, at 2.30 p.m., and at 5.30 had to anchor off Deal. As the Captain discovered later, his vision had become so impaired that

he could not properly distinguish a red from a green light, and we would certainly have come to grief but for the unflagging vigilance of Captain Sumner—a splendid fellow, an ornament to the British Merchant service. If the pilot had not become blear-eyed with age, he would have taken our ship straight through to Thames Haven, and so saved us a full day's misery in the Channel.

As it was, a dense fog closed in upon us, and we felt our way along so cautiously that we had to anchor again the second night, and only reached Gravesend the following morning, where we took train to London, and so finished the first stage of our long voyage. We were received with charming hospitality by Dr. and Mrs. Billing at their suburban house at Norwood Park, which became the rallying centre of all our London friends and correspondents; among them Stainton Moses, Massey, Dr. Wyld, Rev. and Mrs. Aytoun, Henry Hood, Palmer Thomas, the Ellises, A. R. Wallace, several Hindu law and medical students, Mrs. Knowles, and other ladies and gentlemen. On 5th January I presided at a meeting of the British T. S. at which there was an election of officers.

Our time in London was completely filled with odds and ends of Society business, receipts of callers and the paying of visits to the British Museum and elsewhere; the whole spiced with phenomena by H. P. B. and séances with Mrs. Hollis-Billing's spirit guide, "Ski," whose name is known throughout the whole world of spiritualists.

The most striking incident of our stay in London was the meeting of a Master by three of us as we were

walking down Cannon Street. There was a fog that morning so dense that one could hardly see across the street, and London appeared at its worst. The two who were with me saw him first, as I was next to the kerb, and just then my eyes were otherwise occupied. But when they uttered an exclamation, I turned my head quickly and met the glance of the Master as he looked back at me over his shoulder. I did not recognise him for an acquaintance, but I recognised the face as that of an Exalted One; for the type once seen can never be mistaken. As there is one glory of the sun and another glory of the moon, so there is one brightness of the average good man or woman's face, and another, a transcendent one, of the face of an Adept; through the clay lamp of the body, as the learned Maimonides calls it, the inner light of the awakened spirit shines effulgently. We three friends kept together in the City and went together back to Dr. Billing's house, yet on entering we were told by both Mrs. Billing and H. P. B. that the Brother had been there and mentioned that he had met us three—naming us—in the City. Mrs. Billing's story was interesting. She said that the front door was locked and bolted as usual, so that nobody could enter without ringing. Yet as she left her sitting-room to go to H. P. B.'s room through the hall, she almost ran up against a tall stranger who was standing between the hall-door and H. P. B.'s room. She described him as a very tall and handsome Hindu, with a peculiarly piercing eye which seemed to look her through. For the moment she was so staggered that she could not say a word, but the stranger said: "I

wish to see Madame Blavatsky," and moved towards the door of the room where she sat. Mrs. Billing opened it for him and bade him enter. He did so, and walked straight towards H. P. B., made her an Oriental salutation, and began speaking to her in a tongue the sounds of which were totally unfamiliar to Mrs. Billing; although her long practice as a public medium had brought her into momentary contact with people of many different nations. Mrs. B. naturally rose to leave the room, but H. P. B. bade her stay and not to mind their speaking in a strange language together, as they had some occult business to transact.

Whether or not this dark and mysterious Hindu caller brought H. P. B. a reinforcement of her psychical power I cannot say, but at the dinner-table that evening she gladdened her hostess's heart by bringing up for her, from under the edge of the table, a Japanese teapot of exceeding lightness; I think at her request, though I will not be sure about that. She also caused Massey to find, in a pocket of his overcoat in the hall, an Indian inlaid card-case; but I pass that over with a bare mention, as the thing might be explained away on the hypothesis of trickery, if one were disposed to challenge her good faith. I shall treat in the same way an occurrence which struck us all—in our then uncritical frame of mind—as very wonderful. On the evening of 6th January, Ski told me to go to Madame Tussaud's Exhibition, and under the left foot of Figure 158 I should find a note to myself from a certain Personage. The next morning Rev. Aytoun, Dr. Billing, Mr. Wimbridge, and I, accordingly went to the wax-works show and actually

found the note described in the place designated. But it is recorded in my Diary that on the morning of 6th January, H. P. B. and Mrs. Billing went together to the British Museum, and, since they were out of doors, nothing prevented their going to Madame Tussaud's if they had been so minded. So, evidentially—as the S. P. G. falterers would say—the case is valueless, although I then thought and still think it was a genuine phenomenon. The next evening we sat again in a séance with Ski, and were well pleased to hear him acknowledge that he was a messenger of the Masters, and pronounce the names of several. He also threw at me in the darkness a huge silk handkerchief, on which were written the names of several of them. It was a yard and a quarter square in size!

The next evening, after dinner, H. P. B. explained to ourselves and two visitors the duality of her personality and the law which it illustrated. She admitted without qualification that it was a fact that she was one person at one moment and another the next. She gave us an astounding bit of proof in support of her assertion. As we sat chatting in the gloaming, she silent near the window with her two hands resting on her knees, she presently called us and looked down at her hands. One of them was as white, as sculpturesque as usual; but the other was the longer hand of a man, covered with the brown skin of the Hindu; and, on looking wonderingly into her face, we saw that her hair and eyebrows had also changed color, and from fair brown had become jetty black! Say it was a hypnotic Māyā, yet what a fine one it was: produced without the utterance of

a word by way of suggestion! It may have been a Māyā, for I recollect that the next morning her hair was still much darker than naturally, and her eyebrows quite black. She noticed this herself on looking into the mirror in the drawing-room, and remarking to me that she had forgotten to remove all traces of the change, she turned away, passed her hands over her face and hair two or three times, and, facing me again, she was her natural self once more.

On 15th January we sent on our heavy baggage to Liverpool; on the 17th I issued an Executive Notice appointing, *ad interim*, Major-General A. Doubleday, U. S. A., F.T.S., Acting President of the T. S.; Mr. David A. Curtis, Acting Corresponding Secretary; and Mr. G. V. Maynard, Treasurer; W. Q. Judge was already elected Recording Secretary. This arrangement was for the purpose of carrying on the work at the New York Headquarters until the future disposal of the Society should have been decided upon, according to what should happen after we had settled at Bombay. The same evening, at 9.40, we left from Euston for Liverpool, after a delightful stay of a fortnight with and among our kind friends and colleagues. Many were there to see us off, and I remember, as if it had happened but yesterday, walking to and fro the vast waiting-room with Dr. George Wyld, and exchanging views upon religious matters. The next day we passed at the Great Western Hotel, Liverpool, and at 5 p.m. embarked on the "Speke Hall" in a downpour of rain. The vessel was dirty and disagreeable to see; and what with that, and the falling of the rain, the smell of

damp tapestries and carpets in the saloon and cabins, and the forlorn faces of our forty fellow-passengers, all equally disgusted as ourselves, it was a wretched omen for our long voyage out to India. Filth and noise when embarking at New York; filth, noise and bad smells when embarking at Liverpool; it needed all the bright dream of sunny India, and the phantom mind-pictures of our anticipated Hindu friends, to keep up our courage.

We lay at anchor in the Mersey all the night of the 18th, but got away by the next dawn. My Diary shows how it looked to us: "On board everything is in a pitiable plight. The vessel is loaded almost to the water's edge—it would seem—with railway iron. There is a rough sea and nearly every wave comes aboard of us. Wimbridge and I are quartered in a cabin forward on the main deck, and are cut off from communication with the saloon aft. It is as much as a landsman's life is worth to attempt the transit. How bad it is for seafaring stewards is shown in the fact that we got nothing to eat until 3 p.m." The same misery went on the next day, and but for a basket of bread and butter that had been given us in London, and that by good luck had been put into our cabin, we should have gone hungry enough. Meanwhile H. P. B. was making it lively for the servants and her fellow-passengers who, with one or two exceptions, were shocked by her ironclad language, outraged by her religious heterodoxy, and unanimously voted her a nuisance. The ship being struck by a tremendous sea, H. P. B. was pitched against a leg of the dining-table and got her knee badly bruised.

The third day we two got her peremptory command to come aft and show ourselves; so we rolled our trousers up to our knees, took our shoes and stockings in our hands, and made rushes through the slip-sloppy water on deck, between the rolls of the ship. We found the saloon in confusion, the carpets up, water and wet things everywhere, and smells that one might expect after a ship's cabin had been shut up for two or three days. H. P. B. laid up in her cabin with her lame knee, and through the confined space of the small cabins her strong voice would ring out the name of the stewardess, "Meeses Yetz" (Mrs. Yates), in stentorian tone. O Bay of Biscay, under what an unalluring aspect wert thou presented to us, poor, sea-sick wrétches!

Cape Finisterre was passed on the night of 23rd January, and so were we delivered from the raging Bay. But we got no observation of the sun that day, and the passing from our cabin to the saloon was like wading through a wet ditch or a mill flume. The next day the weather broke and we had an azure sky and a sapphire sea. The air was balmy and spring-like, and our bedraggled passengers crawled out to bask in the brightness of the day. The rose-and-opal tinted shores of Africa, seen through a pearly haze, rose like fairy cliffs out of the sea. At the rate of 250 to 300 miles a day, we sailed up the Mediterranean, past Gibraltar, past Algiers, on to Malta, where we anchored for the night on 28th January, and filled the coal-bunkers. We went ashore and viewed the picturesque fortress and town, so famed in history for the deeds of heroism done by its besiegers and

defenders. Off again the next morning, with the ship besmeared with coal-dust in its every nook and cranny; and, as if in keeping, we encountered bad weather almost as soon as we left port. The wretched ship rolled and pitched like mad, shipping seas that would not have been even noticed on a vessel less deeply laden. All brightness fled, of course, from the faces of the passengers, and we were miserably sea-sick; our only compensation being that H. P. B. herself, who had been ridiculing us for our weakness of will and holding herself up for a pattern, was overtaken by Karma and was sick also. It was our turn to jibe and jeer, and we paid her back in kind.

Port Said was reached on 2nd February, visited by us all, and then came the blessed rest for the storm-tossed ones, of two days and nights in the Suez Canal. This, it is to be remembered, was in the days before the use of the electric search-light made night passages possible through the Canal. The "Speke Hall" entered it at 10.30 p.m. on the 2nd; tied up that night opposite the Arab village of Khandara—where, at an Arab coffee-house, we had genuine black coffee and some smokes of *narghiles*; the next night, we tied up at a station five miles from Suez, where I passed a merry evening at the station-master's house, in company with two Corsican pilots who talked French fluently; and at last, in the early dawn, emerged into the Red Sea and began the third and final stage of our sea-pilgrimage to the Land of Desire. Letters met us at Suez from some of our Hindu friends, which quickened our feverish anxiety to get to our destination as soon as possible. That

night the moon paved with silver the waters of the Gulf of Suez, and we felt as if we were sailing on a dream-sea. Nothing of moment happened until the 12th, when a flue burst in the boiler, and we had to stop for repairs. Patched up, it burst again the next day, and there were two long waits, and many precious hours lost and much irritation felt by us, to be checked thus when we ought to be close to the Bombay lights. On the 15th, at noon, we were but 160 miles away from them, and the next morning entered Bombay Harbor. I had sat up on deck until 1 o'clock in the morning, looking at the majesty of the Indian sky, and straining my gaze for the first glimpse of the Bombay light.

It came at last, as it were, a lamp rising out of the sea, and I went to bed to rest my weary body for the next day's work. Before sunrise I was on deck again, and as we steamed rapidly towards our anchorage, revelled in the panorama of the Harbor that was spread before me. Elephanta, ahead of us, was the first locality we asked to be shown us, for it was the type and visible representative of that Ancient India, that sacred Bharatavarsha, which our hearts had yearned to see revived in the India of to-day. Alas! as one turned towards promontory of the Malabar Hill the dream was dispelled. The India we saw there was one of sumptuous bungalows, framed in the luxury of English flower-gardens, and surrounded with all the signs of wealth gained in foreign commerce. The Aryavarta of the Elephanta era was blotted out by the garish splendor of a new order of things, in which religion and philosophy have no part, and the

sincerest worship is paid to the Queen's idol on the current rupee. We have become used to it now, but at first sight it gave us the painful sensation of our first disillusionment.

The ship's anchor was hardly dropped before we were boarded by three Hindu gentlemen in search of us. All seemed strangers to us, but when they pronounced their names I opened my arms and pressed them to my breast. They were Mooljee Thackersey, Pandit Shyamji Krishnavarma, and Mr. Ballajee Sitaram—all holders of our Society's diplomas. No wonder I did not recognise Mooljee, clad as he was in the artistic dress of his Bhattia caste, the dhoti and top coat of white muslin and the red turban with its quaint helmet-like shape and horn pointing forward above the brow. When he and I crossed the Atlantic together in 1870, he wore European dress throughout, and did not in the least resemble his present self. Shyamji's name has since become famous throughout Europe as a learned Pandit coaching Professor Monier Williams; and H. P. B. and I felt for him from first to last a sort of parental affection. Our three friends had passed the night on board a "bunder-boat," waiting for us, and were as joyful for our arrival as we were to come. It was a great disappointment not to be met by Hurrychund Chintamon, our chief correspondent, and, until then, our most respected one; we had not yet found him out. As he did not make his appearance, we went ashore with the others in their bunder-boat and landed on the Apollo Bunder. The first thing I did on touching land was to stoop down and kiss the

granite step; my instinctive act of pooja! For here we were at last on sacred soil; our past forgotten, our perilous and disagreeable sea-voyage gone out of mind, the agony of long deferred hopes replaced by the thrilling joy of presence in the land of the Rishis, the cradle country of religions, the dwelling-place of the Masters, the home of our dusky brothers and sisters, with whom to live and die was all we could desire. All the cruel things that our fellow-passengers had told us on board ship about their moral weakness, their sycophancy, their inability to keep faith and command the respect of Europeans, were forgotten already; for we loved them for their ancestry and for their very present imperfections, nay, we were prepared to love them for themselves. And, in my case at least, this feeling has continued down to the present day. In a very real sense to me, they are my people, their country my country; may the blessings of the Sages be and abide with them and with it always!

CHAPTER II

SETTLING DOWN AT BOMBAY

It was a burning hand that the Indian Sūrya Deva laid upon our heads as we stood on the platform of Apollo Bunder. The noonday Bombay sun of mid-February is a surprise to a Western visitor, and we had time to feel its full power before Mr. Hurrychund came to our rescue. He had gone off to the steamer just after we had disembarked, and so caused us to wait for him on the fiery quay, with the air all in a hot quiver about us.

Besides Hurrychund and the three gentlemen above mentioned, I do not recollect any others having come to greet us on landing—a fact which was bitterly resented by the members of the Arya Samaj, who charged their then President, Hurrychund, with selfish design in keeping his colleagues uninformed of our movements so that he might enjoy the first of our company by himself.

The streets of Bombay charmed us with their strikingly Oriental character. The tall apartment-houses in stucco, the novel dresses of the motley Asiatic population, the quaint vehicles, the over-powering influence of the whole picture on our artistic perceptions, and the delightful sense of being

at last at the goal of our long-nourished expectations, amid our dear "Heathen," to meet and live with whom we had crossed so many seas and buffeted so many storms—all these vivid impressions filled us with delight.

Before leaving New York, I had written Hurrychund to engage for us a small, clean house in the Hindu quarter, with only such servants as were indispensable, as we did not wish to waste a penny on luxuries. We were taken to a house of *his own* on the Girgaum Back Road, standing in a comparatively forlorn compound, and adjoining his glass-roofed photographic studio. It was certainly small enough, but being predisposed to find everything charming, we felt perfectly contented. Cocoa-palms nodded their fronds over our roof, and Indian sweet-scented flowers rejoiced our sense of smell; after the dismal sea-voyage it seemed like Paradise. The ladies of our friends' families called on H. P. B. and Miss Bates, and a number of Hindu and Parsi gentlemen on our whole party; but the rush of visitors began the next morning, news of our arrival having by this time been spread. Wimbridge—an artist—and I sat by the hour together watching the throngs that passed along the street, fairly intoxicated with the innumerable subjects for pencil and color which we saw—every hackery, bullock, dray, and human figure an art study.

We had formed one acquaintanceship on the "Speke Hall" that turned into a lasting friendship, that of Mr. Ross Scott, B.C.S., a noble fellow and an Irishman of the better sort. His long

conversations with us about Eastern Philosophy had resulted in his joining our Society. He called on the evening of our first day ashore, and provoked H. P. B. to doing a phenomenon that was quite new to me. They were sitting together on a sofa and I was standing with Hurrychund at the centre table, when Scott reproached H. P. B. for her evident intention of letting him go North to his official post, without giving him the least proof of the existence of the psychical powers in man, of which she had so much spoken. She liked him very much, and so consented to comply with his request. "What shall I do for you?" she asked. He snatched the handkerchief she was holding in her hand, and, pointing to her name "Heliona" embroidered across one corner, said: "Well, make that name disappear and another to take its place." "What name do you want?" she rejoined. Looking towards us, where we stood at a distance of a few paces, he pointed to our host and said: "Let it be Hurrychund's." We came over to them on hearing this, and saw what was done. She gave Scott to hold tight in his hand the embroidered corner of her handkerchief, retaining the opposite corner herself. After a minute or so she told him to look. He did so, found the substitution of names had been made, Hurrychund's being there in the same kind of embroidery, and, in the first impulse of excitement, cried out: "Where is your physical science now? This beats all the professors in the world! Madame, if you will give me that handkerchief, I'll pay £5 into the Arya Samaj treasury!" "Take it, and welcome," she said, and he thereupon

counted out into Hurrychund's hand five golden sovereigns. I do not recollect this fact having been communicated to the Press, but the story was at once spread by the dozen or more eye-witnesses, and helped to intensify the interest which the arrival of our party had created among educated Indian gentlemen.

On the evening of 17th February, a reception was held at the photographic studio, at which over 300 invited guests were present. The usual welcome address, with garlands, limes and rose-water as accompaniments, was given us, and H. P. B., Scott, Wimbridge, and I replied, as well as we could, in view of the deep emotion which stirred in us. My Diary says: "The occasion fairly brought the water to my eyes. The long-expected moment comes at last, and I am face to face with my spiritual kinsmen." It was unalloyed happiness, springing from the feeling of the heart, under the control of the intellect; not an evanescent gush of emotion, destined to die out soon and react into a sense of disenchantment and disgust.

The second day following, a party was made up to witness the Shivarātri anniversary celebration at Elephanta Caves. We enjoyed the picnic like so many school-children, the day giving us a series of surprises and novel sensations. The bunder-boat "Sultan," to begin with, with its strange rig and model, its Muslim crew, its quaint cabin, its primitive fire-place, where rice and curry were cooked most skillfully. Then the ancient caves, with giant sculptures seen in chiaroscuro; huge lingams,

paint-smeared, ever dripping with oblations and decked with flowers; the ablutions of the pilgrims in the adjacent pond and their circumambulations of the Shivalingam; the *pūjāris* touching the worshippers' temples with water that has bathed the stone symbol; the crowds, with their—to us—novel Eastern costumes; the painted and ash-besmeared sanyāsis, cramped into painful postures and successfully appealing to pious charity; the scores of Indian children; the sweetmeats vendors; a troop of jugglers doing the mango trick and other *tours de force* so badly as to deceive no sharp eye; and our lunch in the verandah of the keeper's cottage, whence we saw in one picture the moving, chattering throngs in the foreground, and the wide expanse of the harbor, under a cloudless azure sky, with the towers and roofs of distant Bombay on the horizon line. Then came the sail home before a free wind, our bunder-boat skimming along like a bird and beating a European yacht that ran on the same course. After more than twenty years the whole comes vividly back to my mind's eye like a freshly-painted panorama.

Visitors thronged daily to us in increasing numbers, a packed roomful of Parsi gentlemen with their wives and children being followed, immediately afterward, by a like number of Hindu families. A black Jain monk, with shaven crown and his body naked to the waist, came and, through an interpreter, cross-questioned me, at great length, upon religion. Presents of ripe fruit were sent with messages of greeting. A special performance of the Hindu drama "Sitaram" was given in our honor at the Elphinstone Theatre.

We found ourselves quartered in the most conspicuous box, bedecked with garlands of jassmine and roses, given huge bouquets, supplied with refreshments, and, on our rising to leave, having to receive an address, read to us from the stage! The play was not over by any means, but our powers of endurance had reached their limit; we went at 9 p.m. and left the theatre at 2.45 a.m.

The sweetness of this evening was followed by our first taste of bitterness the next morning. Mr. Hurrychund, after strenuous pressure, rendered his accounts. The bloom was off the plum: our supposed hospitable entertainer put in an enormous bill for rent, food, attendance, repairs to the house, even the hire of the three hundred chairs used at our reception, and the cost of a cablegram he had sent us, bidding us hasten our coming! The "demnition total" made my eyes stare; for, at that rate, we should soon find ourselves with empty pockets. And it had been given out and generally understood that we were this person's guests! Protests came, one thing led to another and we finally discovered that the considerable sum of over six hundred rupees (not then a vanishing silver disc but a substantially valuable token) which we had sent through him to the Arya Samaj, had got no further than his hand, and a precious clamor arose among his Samajist colleagues. I shall never forget the scene when H. P. B., at a meeting of the Arya Samaj, let loose at him the bolts of her scorn, and forced him to promise restitution. The money was returned, but our dealings with the man came to a sudden stop. We set to work to find a house for

ourselves, and got one for less than half the rent he was charging us for his own—for he had constituted himself our landlord. We changed quarters, bought furniture and other necessaries, and on 7th March settled ourselves down in the little house, 108, Girgaum Back Road, for the next two years. Thus was shattered our first ideal of the progressive, patriotic, fervently religious Hindu, and, to say truth, the lesson went to our hearts. To be thus deceived and played with at the outset of our Indian career was a sore sorrow; but, for the dear sake of India, we threw off the feeling of depression and kept on our way. Meanwhile our friend Mooljee Thackersey had, on 2nd March, found us a servant, the Guzerati boy, Babula, whose fidelity to H. P. B., up to her leaving India, all know, and who is still my pensioner. He has a rare talent for languages, and, with Magliabecchi's environment, might have become as great a linguist. When he entered our service he spoke English and French, Goanese, Guzerati, and Hindustani, although but about fifteen years old, and has later acquired a perfect knowledge of Tamil, after our removal to Madras.

Every evening we held an impromptu durbar, when the knottiest problems of philosophy, metaphysics, and science were discussed. We lived and breathed in an atmosphere of mind, amid the highest spiritual ideals. I see entries in my Diary of the first appearance on our scene of friends who have since been closely identified with the progress of the Theosophical movement. For example, on 8th March, our acquaintance and friendship began with Janardhan

Sakkharam Gadgil, one of the most brilliant of the Bombay University graduates; then, and until his recent retirement from worldly occupation to assume the religious life, a Baroda Judge. My notes on him testify to the immediate and deep impression made upon me by his learning, dignity of ideals, and thirst for spiritual knowledge. Yet I seem to have had some foresight as to the unlikelihood of his becoming a practical co-worker with us, for I have written in the Diary: "A far wiser and cleverer man than myself. May be made an extraordinary ally—*if he has the pluck.*" He never quite had that from being hampered by his official surroundings and the unpopularity which our cause had from the first with the ruling class. Mentally, he was not ripe for official martyrdom, though his heart pushed him that way. Yet he was ever an openly declared member of our Society; taking usually in good-natured indifference the taunts he had to bear from friends, chief among them his official superior, the Dewan of Baroda, the late Sir T. Madhava Row, K.C.S.I.—a great statesman, but a confirmed sceptic and a moral prisoner of the Sirkar.

There came to us, about that time, M. B. Namjoshi, of Poona, and Sorabji J. Padshah; the former since known as an active politician of the Sarvajanik Sabha, of Poona, the latter a brilliant young Parsi, whose devotion to the Society and ourselves personally has never weakened nor wavered for a single day. On 18th March, our young Shyamji Krishnavarma sailed for England to join Professor Monier Williams at Oxford, and help him, and himself, to fame. For

Shyamji attended one of the Oriental Congresses, and —although by caste a non-Brahmin—astonished the savants with his recitations of mantras; he came home a Pandit, and later on was Dewan of a Native State. Other two notable acquaintances were the brothers M. M. and A. M. Kunte, of whom the first was a famed Sanskrit Pandit and Professor, the other an M.D. and Demonstrator of Anatomy in Grant Medical College, Bombay. Of all our new-found friends, these were the most effusive and complimentary; of all we have ever known in India, the Doctor showed the most distressful lack of moral courage and most excited my contempt. He was a member of our Council, on terms of closest intimacy with us, most lavish in offers of assistance; his house ours, his fortune, his horses and carriage: we were his brethren indeed. One evening, at a Council meeting, he took the chair at my request, while I presented certain grave formal charges made by Swami Dayānand against Hurrychund, and at the adjournment we parted excellent friends. Two days later, the Doctor's servant brought me a letter resigning his connection with the Society, without a word of explanation. I could not believe my eyes and thought it some stupid joke; but, hastening to his house, was bewildered by his telling me that it was sober earnest. After repeated demands for an explanation, the truth came out. The Principal of the Medical College had advised him not to have his name connected with ours, as the Government suspected our Society of having political designs! And so, instead of manfully defending us and declaring our perfect indifference to

politics, which he, as one of our intimate friends and councillors, could so easily have done, this Doctor of wealth and large practice, who was not in the least dependent on his paltry college appointment, went straight home and put his cowardice into writing! Every decent American and Englishman will understand the feeling of contempt with which I turned my back on him forever. The next day, smarting under this sense of injustice, I wrote to the Professor that as his brother foresaw possible inconvenience from sticking to our Society, I hoped that no feeling of delicacy would prevent his own withdrawal if he shared the uneasiness. His answer was his written resignation! I said to another Hindu friend, whom I knew to be really dependent on his paltry Government appointment of Rs. 40 per month: "Martandrao Bhai, suppose, on going to office to-morrow morning, you should find on your desk a note to the effect that you had to choose between your membership in the Theosophical Society and your place, as we were under suspicion of political designs, what would you do?" The man's face grew serious, he seemed as if casting up the chances, and then, in a stumbling sort of utterance peculiar to him, and with a shake of the head and compression of the lips, he answered: "I—I could—d not go against my principles!" I threw my arms about him and shouted to H. P. B. in the next room: "Come! come and see a true Hindu and a brave man!" That man's name is Martandrao Babaji Nagnath; he is a Maratha Brahmin.

Visitors kept on crowding our bungalow, and stopping until late every evening to discuss

religious questions. Old and young, it was all the same; and thus did we come, so early in our connection with the Hindus, to know the difference between Western and Eastern ideals of life, and the greater dignity of the latter. Questions of wealth, color, business, or politics scarcely ever crossed our threshold; the Soul was the burning topic of debate, and, then, for the first time, H. P. B. and I became absorbed in the problems of its cyclic progressions and reincarnations. We were completely happy in our retired cottage under the cocoa-palms. The arrivals and departures of wealth-laden steamers, the hurly-burly of the Bombay mart, the agonising strife of the share and cotton markets, the petty rivalries of officialdom, the receptions at Government House, did not even enter our thoughts: we were satisfied to be—

The world forgetting, by the world forgot.

Fanatics, if you please; crazy enthusiasts; dreamers of unpractical dreams; devotees of a hobby! dupes of our imaginations. Yet our dreams were of human perfectibility, our yearnings after divine wisdom, our sole hope to help mankind to higher thinking and nobler living. And, under those umbrageous palms, we were visited in person by Mahātmās; and their inspiring presence made us strong to proceed in the path we were treading, and rewarded us an hundred-fold for all the treacheries, and jibes, and Police surveillance, and slanders, and persecutions we had to undergo. So long as they were with us, what mattered it who might be against us? The world had not conquered us, but we were destined by our Karma

to vanquish its indifference and ultimately deserve its respect.

We knew not, but those Adepts knew, that we two were to serve as the necessary nuclei for the concentration and diffusion of that ākāshic stream of old Aryan thought which the revolution of cycles had brought again into the focus of human needs. An agent is always indispensable as the vortex-ring of these intellectual and spiritual recrudescences, and, imperfect as we were, we yet were good enough to serve the present purpose, since we had at least the enthusiasm of sympathy and the quality of obedience. Our personal defects counted as nothing in the balance of the public need. Alexandre Dumas, sr., in *Les Hommes de Fer*, poetically puts this idea. "There are moments," says he, "when vague ideas, seeking a body to make themselves man, float above societies like a mist on the surface of the earth: whilst the wind pushes it over the mirror of the lakes and the carpet of the plains, it is but a formless vapor, without consistence or color; but if it encounters a great hill, it attaches itself to its crest, the vapor becomes a cloud, the cloud a shower, and while the brow of the mountain girds on its aureole of lightnings, the water which filters away mysteriously, gathers itself together in the deep cavities, and emerges at its foot, the spring of some great river which, ever swelling, crosses the land or society, and which calls itself the Nile or the *Iliad*, the Po or the *Divina Commedia*."

In these very latest days, a man of science has exhibited large and beautiful pearls, which he compelled some captive shell-fish to make, by placing

pellets of wax inside their shells, and leaving the creatures to cover them with a coating of lovely pink nacre in obedience to their natural instinct. The pinch of wax, in this case, was intrinsically valueless, but it made the nucleus without which the pearls would not have been formed by the animal. So, in a sense, we pioneers of this Theosophical movement served as nuclei around which was formed the sparkling sphere of Aryan wisdom, which is now exciting the wonder of contemporary scholarship by its beauty and its precious worth. Personally, we may have been as intrinsically valueless as the scientist's balls of beeswax, yet what has gathered around this movement of ours is what the world most needed. And each of our earnest fellow-workers is serving as a separate nucleus for the crystallization of this spiritual nacre.

CHAPTER III

LAYING FOUNDATIONS

INTIMATE as Mr. A. P. Sinnett has long been with the Founders of the Theosophical Society, and closely as his name has for years been identified with its name, fame and literature, our acquaintanceship, like all other things, had a beginning. It began with a letter, of date 25th February, 1879—nine days after our landing at Bombay—in which, as Editor of the *Pioneer*, he expresses to me the desire of becoming acquainted with H. P. B. and myself, in case we should be coming up country, and his willingness to publish any interesting facts about our mission to India. In common with the whole Indian Press, the *Pioneer* had noted our arrival. Mrs. Sinnett writes that, from having had a number of chances in London to investigate certain remarkable mediumistic phenomena, he felt more interest than the averge journalist in occult questions. The laws of the phenomena being as yet unfathomed the manifestations given mainly under unsatisfactory conditions, and the intelligence behind them a confusing jumble of assertions and theories, his curiosity had not been properly satisfied nor his reason convinced. I replied on the 27th, and even if that number was in no other instance

fateful of good luck, it certainly did in this one mark the beginning of a most valuable connection and gratifying friendship. Mr. Sinnett's kind offices came at a time when most needed, and I have never forgotten nor ever can forget that we, personally, and the Society lie under a deep debt of obligation to him. Just landed; known to be identified with Asiatic thought and unsympathetic with the ideals of the Anglo-Indian community; having settled in a retired bungalow, in the heart of the native quarter of Bombay; having been enthusiastically welcomed and accepted by the Hindus, as champions of their ancient philosophies and exponents of their religions; making no call at Government House nor social advances to the European class, and that class being as densely ignorant of Hinduism and Hindus as they were of us and our plans—we really had not the least right to expect favor from our racial kinsfolk, nor to be surprised that Government should suspect us of ulterior motives. Not another Anglo-Indian Editor was disposed to be kind to us, or to be just in his discussion of our views and ideals. Mr. Sinnett alone was our true friend and conscientious critic; but he was a powerful ally, since he controlled the most influential newspaper in India, and more than any other journalist possessed the confidence and respect of the chief officers of Government. Much is to be said later on about the progress of our acquaintance, so for the present it need only be mentioned that a brisk correspondence was kept up between Mr. and Mrs. Sinnett and our two selves, and that, in the beginning of the following December, we paid them a visit at Allahabad, when a number of

interesting circumstances occurred, to be noted in their proper sequence.

It has been remarked already that the Bombay Parsis were friendly from the beginning, calling upon us with their families in numbers, asking us to their homes, dining with us, and pressing me to preside and distribute prizes at an anniversary of a Parsi girls' school. While still in America, I had made friendly overtures to Mr. K. M. Shroff, who had just completed a lecturing tour in my country and returned home. He accepted membership, and on all occasions after our arrival at Bombay rendered us loyal help. He was a young man at that time, and not by a long way as influential in his community as he has since become, but he had innate that capacity for hard work which is the prime factor of success in life. Far more influential Parsi gentlemen than he called on us, among them Mr. K. R. Cama, the Orientalist, and his famous father-in-law, the late Mr. Maneckjee Cursetjee, the reforming pioneer, whose charming daughters were, with him, received at several European Courts and universally admired. I see in my Diary that at our first meeting—on 6th March, 1879—I pressed upon Mr. Cama's attention the necessity of organizing Parsi religious work along Theosophical lines. And I have never ceased doing the like whenever I could get the attention of an influential Parsi. It is a burning shame and disgrace to their community, that their *Shetts* are so hypnotized by the narcotics of money-getting and worldly success, that they let year after year pass by without using some small portion at least of their great wealth in searching out

the fragments of their sacred books in the four corners of their motherland, and doing for their faith, by archæological research and exploration, what the Christians have done for theirs in Egypt and Palestine. It is a loss to the whole world that the splendor of this magnificent religion is not widely known. Parsi charity is princely, but with all the treasure that has been given by them to objects of public utility, it is sad to think that no millionaire among them, however pious and orthodox, has put aside one little lakh to endow a Parsi Research Society of the kind above hinted at, although it would have helped Zoroastrianism more than all their libraries, hospitals, schools of arts, gymkhanas, drinking fountains or Prince of Wales' statues.

It has always struck me with wonder, when talking with Anglo-Indians, to see in what distinctly different worlds they and we live in the East: theirs but an extension of their home life, and filled up with threadbare amusements and distractions to make their resting hours pass by with a minimum of ennui; ours a living of Eastern ideals and a thinking of Eastern thoughts, with no spare time for amusements, nor felt necessity for the distractions of games, parties, and violent exercise. Without the personal experience, one could not imagine there was such a contrast. As I write, the memories of those earliest weeks at Bombay come back to me, and without an effort I seem to be able to recall the pettiest incidents of our life in palm-shaded Girgaum. I remember the compulsory awakening at dawn by the vociferous cawing of countless crows. I remember how my

artistic instinct was constantly excited, on glancing about our reception-room or verandah, and noting the pictures of costume, character, and racial types that I saw. I remember the sustained conversations in English, the common medium of communication between the races of the Indian Empire, and the talks and consultations aside in Guzerati, Marathi, and Hindustani, between fellow tribesmen and castemen. I can in fancy see the lanterns glinting amid the shrubbery, and the columnar trunks of the palm grove brought out into luminous relief by their light. I see ourselves clad in thin clothing and fanned with painted punkahs by Indian servants, the while often wondering how it could be so balmy and warm here and the air so fragrant with odors, while at home icy March winds were sweeping through the streets, and the frozen pavements were ringing like steel under the horses' shoes, and the starving poor huddled together in their misery. It was almost the daily repetition of a pleasant dream. The only link between us and our homes in the West, were the letters that came by each mail, and the tie of sympathy in a common work between us and our then few colleagues at New York, London, and Corfu.

The talk, one evening, had embraced the problem of the universal diffusion of intelligence throughout the Universe, and an amusing proof of its existence in one of the stupidest of birds was about that time given us. There was a fowl-house behind our kitchen, tenanted by a flock of chickens and one family of ducks—a clumsy Muscovy drake and his three wives. Miss Bates, of our quartette, had the management of

the poultry in her hands, and, as usual, they would run towards her whenever she came that way. On a certain evening, after finishing our dinner, we lingered chatting at table, when a loud quack from beneath Miss B.'s chair caused us to start up in surprise. It was the waddling, clumsy, old drake, which, as soon as he saw Miss B. noticing him, quaked again and again, shook his tail, and flapped his wings as though something troubled him. He moved, still quacking, towards the door, looking back at her as though asking her to follow him. We saw that his strange behavior meant something, so we all followed him out of doors. He led us towards the coop, where a great row seemed to be going on—hens screaming, ducks quacking for dear life. Evidently they had been, or were still being, disturbed by rats. Presently, by the light of our lantern, we saw that one of the old drake's wives had thrust her head and neck through the bamboo slats of the coop, and got caught there by slipping down to a point where a projecting knot of one of the bamboos had narrowed the slit so as to pin her neck fast when she sank: she must have been attacked by some vermin, and, flying in her fright against the palings, passed her neck through, but struck her breast heavily against them and fallen. She would have been strangled if her two sister-wives had not thrust their backs under her, and there they were supporting her weight, while the drake, escaping through a badly fastened door, came and called for Miss Bates's help! The attention of Messrs. Romanes and Herbert Spencer is invited to this proof of animal intelligence.

Shortly after our settlement in Girgaum occurred an incident which H. P. B. has embalmed as a permanent record, in her delightful *Caves and Jungles of Hindustan*. When I give the simple, sober facts, the reader can see how the glow of her splendid imagination has transformed them beyond recognition, and out of a commonplace incident created a picturesque and awesome romance. As we were sitting in the early evening, a sound as of the monotonous drubbing on a drum caught my attention. It went on and on in the same key, playing no air, but just making a wearisome succession of muffled throbs in the evening air. One of the servants being sent to trace it out, returned after a while and reported that it was a tom-tom being beaten at a neighboring house, to announce that a "wise woman" was going to be obsessed by a "goddess," and answer questions about matters of personal interest. The temptation to "assist" at so weird a performance prompted us to go to the spot and see what was up. So H. P. B. took my arm and we went to the house. In a mud-plastered room of fifteen or twenty feet square, we saw thirty or forty low-caste Hindus standing along the walls, some cocoa-nut oil lamps attached to the sides, and, squatting in the centre of the floor, a wild-looking woman, with her hair unbound, swaying her body from side to side, and jerking her head with a circular motion so as to make her long ebon tresses swirl about her, sometimes horizontally, like whip-lashes. Presently a youth entered from the back door, carrying a broad, low-rimmed circular platter, on which burnt some lumps of camphor, near

some pinches of red powder, and some shiny green leaves. He held it near the sybil's face, which she plunged into the camphor-smoke, and sniffed the fumes with murmurs of pleasure. Anon, she sprang to her feet, clutched the brass platter, waved it to right and left, renewed the whirling of her head, and then, with lissom step keeping time to the throbs of the tom-tom, sailed about the room peering into the awe-stricken faces of the Hindu spectators. Having thus made the circuit several times, she suddenly darted towards a woman in the crowd, thrust the platter towards her, and told her something in Marathi, which, of course, we could not understand, but which, it appears, related to her private concerns. Whatever it was, the effect was evident, for the woman started back as if in terror, raised her clasped hands towards the dancing prophetess, and seemed deeply moved. The same thing was repeated with various other spectators, after which the seeress whirled into the middle of the room, spun hither and thither for a while, chanted what seemed to be a mantram, and then rushed from the room through the back door. After a few minutes she returned, with her hair dripping with water, flung herself again to the ground, whirled her head as before, again received the tray of burning camphor, and repeated the performance of darting at people and telling them what they wished to know. But her voice was somewhat different this time and her motions less convulsive, which, we were told, was due to the fact that she had passed under the control of another goddess when she plunged her head into the vessel of water,

kept ready outside the door. The novelty of the thing soon wore off for us, and we returned to the house. Only this, and nothing more. There are the simple facts, and nothing more happened. But now, if the reader will turn to *From the Caves and Jungles of Hindustan* ("A Witch's Den"), he will see what H. P. B. made out of them. Instead of a wretched hovel in the densest quarter of Bombay, with an audience of coolies, we are led on elephants, by torchlight, through a dense forest, "two thousand feet above the Vindhya ridge"; the dead silence is broken by the regular hammering tread of the elephants; "uncanny voices and murmurs" are heard; we dismount from our elephants and scramble through thickets of cacti; we make a party of thirty, including the torch-bearers; the Colonel (*viz.*, myself) orders all the rifles and revolvers to be loaded; after leaving most of our clothing on the thorns of the prickly-pears, climbing a hill and descending into another ravine, we reach the "den" of the *Kangarin*—"the 'Pythia of Hindustan,' who 'leads a holy life,' and is a prophetess." Her cave of Trophonius is in a ruined Hindu temple of "red granite," her habitation in a subterranean passage, where the people believed, she had lived three hundred years. The square before the temple is lit up by an enormous bonfire, and crowded by "naked savages like so many black gnomes," who jump through some devil-dance to the sound of drums and tambourines. A white-bearded old man springs out and whirls himself around, with arms spread like wings and showing his wolf-like teeth, until he

falls senseless. A mammoth, four-horned skull of the "Sivatherium," heaped about with flowers, lies on the ground. Suddenly, the witch appears—whence or how none could say. She must have been a beauty from the description of the first view of her: "a skeleton seven feet high, covered with brown leather, with a dead child's tiny head stuck on its bony shoulders; the eyes set so deep, and at the same time flashing such fiendish flames all through your body, that you begin to feel your brain stop working, your thoughts become entangled, and your blood freeze in your veins." A very uncomfortable type o the worst genus of the astral tramp! She stands motionless for a while, holding a dish of burning camphor in one hand, a quantity of rice in the other. She looks like a carved idol, with her shrivelled neck encircled with "three rows of golden medallions," her head "adorned with a golden snake," her "grotesque, hardly human body covered by a piece of saffron-yellow muslin". Then follows a description of the obsession of the witch's body by a goddess; her convulsive movements; her vertiginous dancing, in which she moved faster than a dry leaf before the hurricane; the maddening glare of her eyes at you; her convulsions, leapings, and wild, hellish movements; the changes of one obsessing goddess for another, to the number of seven; her revelations and adjurations; an eerie dance with her own shadow; the beating of her head against the granite steps, and so on through twenty pages of as picturesque writing as can be found in our language. The mind that could do this wonderful thing is that

of a true genius. What she did in this instance, she did throughout the book—a minimum of fact was, in each case, made to cover a great area of fancy; as the small lamp in the engine head-light is by parabolic reflectors made to shine over the line like a sort of sun on wheels.

Whatever hopes we may have had of enjoying a retired life were soon dissipated. We not only found ourselves besieged by visitors, some most earnest and entitled to our help, but also drawn into a rapidly widening correspondence, with Hindus principally, about Theosophical matters. Our aims were described so distortedly by the hostile Anglo-Indian Press, and that portion of the Vernacular Press which, to the undoing of Indian ideals, feeds at the trough of belied "Progress," that we were compelled perforce to threaten legal proceedings against the Editor of the *Dnyanodaya*, the organ of the Presbyterian Marathi Mission, for a gross libel. An ample apology was at once given; yet all Missionaries were not slanderers *ab initio*, for the *Bombay Guardian*, a Missionary organ, said, apropos of the discourse mentioned below: "They who anticipated that the lecture would consist of a tirade against Christianity were mistaken. The report given is brief, but we are told by one who heard it, that the lecture was far more an attack upon Hinduism as it is, than upon Christianity." We had also to make a public statement. Accordingly, on 23rd March, I gave my first public lecture in India at Framji Cowasji Hall, Dhobitallao (the Washermen's Quarter). For novelty and picturesqueness, the scene was the culmination of delight: the contrast between

this sea of multi-colored turbans, snowy muslin dresses, and keen, onyx eyes looking out of handsome brown faces, and the black-costumed, pale-faced, bare-headed audiences of the West, with no touch of bright color save in the women's bonnets, was most striking. The crowd was so dense as to pack the hall, balconies, and stairways, until not one more man could have been crowded in, yet as quiet, orderly, and attentive as though each person had had ample room. Our quartette sat on the platform, which was thronged by the leading personages of the different native communities of Bombay, and my discourse was listened to with breathless attention, interrupted from time to time by applause. It was really an historical event that, for the first time in the recollection of the oldest inhabitant, a Western man should uphold the majesty and sufficiency of Eastern Scriptures, and appeal to the sentiment of patriotic loyalty to the memory of their forefathers, to stand by their old religions; giving up nothing until after its worthlessness had been proven by impartial study. The spirit of the occasion possessed alike speakers and hearers, and there was a moment—I recollect—when I could not restrain my emotion, but had to stop because stifled sobs choked my utterance. I felt like a fool in thus losing my self-command, but I could not help it; the pent-up voice of my heart made my lips dumb, despite all I could do. My theme was: "The Theosophical Society and Its Aims,"[1] and contained as full explanations as I could give. It should be noted that the view taken then was that the

[1] Published by the T. S.

redemption of any nation must come through its own self-evolved leaders, not from without, and that if the downfall of India was to be arrested, the inspired agent must be sought within her boundaries, not in foreign lands, nor among aliens. For ourselves, we utterly disclaimed all pretence of leadership or qualifications for the same. I believe, after twenty years' Indian experience, that this is the sound view, and the only tenable one. I also believe, as I then stated, that this necessary spiritual Teacher exists, and in the fulness of time will appear. For, truly, the signs of his coming multiply daily, and who shall say that our Society, Mrs. Besant, Vivekānanda, Dharmapāla, and others are not the *avant couriers* of the blessed day when spiritual yearnings shall again fill the Eastern heart, and materialistic grovellings be things of the black past?

Naturally, under the circumstances, the above event made a pretty strong impression. The *Indian Spectator* said: "A greater mission never was conceived. Let the Aryans make common cause; let the Hindus, Parsis, Mohammedans, Christians forget their differences, and the day of India's regeneration is not far off." It was noted as a coincidence that the Address happened to be delivered on the day on which a new year and new era commenced, according to the Sak Salivan, the Calendar used at Bombay. The *Amrita Bazaar Patrika* (8th May, 1879), said our object was "the grandest ever undertaken by man," and prayed us to come and dwell at Calcutta. In the ear of the India of 1899, after the changes that have since been wrought in native opinion, the following

utterance of the Editor of the *Patrika* will sound like rankest pessimism. He welcomed us, but said we came too late:

"What can the doctor do," he asks, "when the patient is already stiff and cold? India is dead to all sense of honor and glory. India is an inert mass which no power of late has yet been able to move. . . . India has no heart, and those of her children who have yet any portion of it left, have been deadened by blank despair. Talk of regenerating India to the Indians? You might as well talk to the sands of the sea."

This is emotional faint-heartedness, not the perspicacity and foresight of statesmanship. Shishir Babu forgot what even the elementary knowledge of agriculture as practised in his native village ought to have taught him, *viz.*, that the seed must be planted before the shade of the tree can be enjoyed, or the cereal harvest be available as daily food. Events have belied his lugubrious prognosis, and the Indian peoples are already searching backwards together for the sources of Aryan ideals. It is but a little way they have gone, it is true, yet the "inert corpse" of India, which the Calcutta Jeremiah of 1879 depicted, has proved itself a very living entity, and is calling upon its children to look up the ancient Scriptures once more for the profit of mankind.

CHAPTER IV

MANY WONDERS

BEGINNING with 29th March (1879), there were a series of strange occurrences in which Mooljee Thackersey was an essential, sometimes the chief witness—excluding H. P. B. On the day in question she told Mooljee to fetch a buggy, and, when it came, mounted into it with him. She refused to answer his questions as to whither she was going, simply telling him to order the driver to turn to right or left or go straight ahead, as she might direct. What happened Mooljee told us on their return in the evening. She had directed the course by numerous windings of streets and country roads, until they found themselves at a suburb of Bombay, eight or ten miles distant, in a grove of coniferæ. The name is not written in my Diary, but I think it was Parel, though I may be mistaken. At any rate, Mooljee knew the place, because he had cremated his mother's body in that neighborhood. Roads and paths crossed each other confusedly in the wood, but H. P. B. never faltered as to her course, and bade the driver turn and turn until they came to the seashore. Finally, to Mooljee's amazement, they were brought up by the gate of a private estate, with a magnificent

rose-garden in front and a fine bungalow with spacious Eastern verandahs in the back ground. H. P. B. climbed down and told Mooljee to await her there, and not for his life to dare come to the house. So there he waited in a complete puzzle; for such a property he, a lifelong resident of Bombay, had never heard of before. He called one of several gardeners who were hoeing the flowers, but the man would tell him nothing as to his master's name, how long he had lived there, or when the bungalow was built: a most unusual thing among Hindus. H. P. B. had walked straight up to the house, had been received cordially at the door by a tall Hindu of striking and distinguished appearance, clad entirely in white, and had gone inside. After some time the two reappeared, the mysterious stranger bade her farewell, and handed her a great bunch of roses which one of the gardeners brought to his master for the purpose, and H. P. B. rejoined her escort, re-entered the buggy, and ordered the driver to return home. All that Mooljee could draw out of H. P. B. was that the stranger was an Occultist with whom she was in relation and had business to transact that day. The roses, she said, he had sent by her to myself. The strangest part of this story to us was that, so far as we knew, there was no possibility of H. P. B.'s having learnt anything about this suburb and the way to it, at any rate since our arrival at Bombay, for she had never left the house alone, yet that she had shown the completest familiarity with both. Whether any such bungalow existed or not, we had no means of knowing save on Mooljee's testimony. He was so amazed

with his experience as to go on telling it to his friends in the town, which led one, who professed to know the suburb in question perfectly, to lay a wager of Rs. 100 that there was no such bungalow by the sea-shore and that he could not guide anyone to it. When H. P. B. heard this, she offered to bet Mooljee that he would lose the other wager; whereupon he, declaring that he could retrace every foot of the way by which they had gone, closed with the offer, and I had a carriage called at once, and we three entered it. By another Hindu interpreter, I ordered the coachman to strictly follow Mr. M.'s directions as to our route, and off we went. After a long drive by devious ways, we reached the wood, in whose shady depths the mysterious bungalow was supposed to stand. The soil was almost pure sea-sand, bestrewn with a brown mulch of pine-needles, or those of some other conifer, possibly the casuarina. We could see a number of roads running in different directions, and I told Mooljee that he must keep a sharp look-out, or he would assuredly get lost. He, however, was as confident as possible, despite the gibes thrown at him by H. P. B. about his state of mystification and the certain loss of his Rs. 100. For an hour we drove on, now to this side, now to the other, now stopping for him to dismount from the box and look about him. At last—and just a minute or so after his declaring himself perfectly sure that we were driving straight for the seaside bungalow—a train rattled by on a near embankment, and thus showed poor Mooljee that he had guided us in the very opposite direction from the one desired! We offered to give him as much time

as he liked to pursue his search, but he felt completely baffled and gave in as beaten. So we drove home. H. P. B. told all of us that Mooljee would have found the mystical bungalow if a glamor had not been brought to bear on his sight, and, moreover, that the bungalow, like all other spots inhabited by Adepts, was always protected from the intrusion of strangers by a circle of illusion formed about it and guarded and kept potent by elemental servitors. This particular bungalow was in the constant keeping of an agent who could be relied upon, and used as an occasional resting and meeting place by Gurus and Chēlās when travelling. All the buried ancient libraries, and those vast hoards of treasure which must be kept hidden until its Karma requires its restoration to human use, are, she said, protected from discovery by the profane, by illusory pictures of solid rocks, unbroken solid ground, a yawning chasm, or some such obstacle, which turns aside the feet of the wrong men, but which Māyā dissolves away when the predestined finder comes to the spot in the fulness of time. This story coincides with all folk-lore tradition, and anyone who has seen even one of an hundred recorded proofs of hypnotic inhibition in modern hospitals and clinics, can readily accept the reasonableness of such a tale of māyāvic engirdlement: the Devil is no longer accepted (outside the Vatican) as sole hypnotiser of mankind, and Charcot, Liébault, de Rochas, and others have shown us the scientific reasonableness of the old tales of Sorcery and Magic. At any rate, I give this story for what it may be worth, as I do in all cases where I myself was not an eye-witness,

when I say my say in all candor, and leave the public to believe or disbelieve as they see fit: it is nothing to me. If my own opinion be asked, I should say that to my mind the story of the bungalow seems probably true, for, as mentioned in a former chapter, we were visited in our Girgaum cottage by more than one Adept in the flesh, and one moonlight night, Damodar and I were with H. P. B. on the road leading towards the hidden house, when one came up to and saluted us at not more than arm's-length distance. But the details need not be mentioned here, as I have other things to first tell.

We now come in chronological order to a momentous country trip whose incidents have been expanded and glorified through some sixty pages in the *Caves and Jungles of Hindustan*. Until comparatively a short time ago, it lingered in my memory as a chapter of the most trustworthy as well as exciting episodes in my relations with H. P. B. As perfect candor is my aim, I shall narrate my facts, which such comments as the present state of my mind permits me to offer.

H. P. B., Mooljee, and I left Bombay by train on 4th April, 1879, for a trip to Karli Caves. Our servant Babula accompanied us. This was our entire party. We had with us no "Brahman from Poona, Moodelliar from Madras, Sinhalese from Kegalla, Bengali Zemindar, or gigantic Rajput"—visible to me, at any rate. At Narel station we left the train, and took palanquins up the hill to Matheran, the chief sanatorium of Bombay. I was given to understand that we had been invited to Karli by a certain Adept with whom I had had close relations in America during the

writing of *Isis*; and that the sundry provisions for our comfort *en route* had been ordered by him. I was not in the least surprised, then, to find at Narel station a Hindu servant of the better class, *i.e.*, not a house menial, who came forward, and, after saluting, gave a message in Marathi, which Mooljee interpreted to be the compliments of his master, and a request that we should graciously choose whether we would have palanquins or ponies for the ascent, as both were ready. H. P. B. and I chose palanquins, and Mooljee and Babula ponies. Then away we went in the day-bright moonshine, twelve bearers to each "palkee"—fair-sized, strong, muscular, dark brown fellows, of the Thakoor clan, who trotted along in broken step (so as not to jar the person in the palkee), keeping time by a sweet-voiced, measured cadence that, in its novelty, was extremely pleasant to hear, but which grew monotonously tiresome after a while. I had never before made such a poetical journey as this through that tropic night, with the sky ablaze with vividly bright stars before the moon had risen, myriad insects chirping to each other, the night birds crying to their mates, the great bats silently sailing in tortuous gyrations in quest of food, the palm fronds crackling and jungle leaves rustling, the smell of the earth, mingling now and again with that of spicy buds in a warmer air-current through which we passed, and with all the chant of the panting palkee-wallahs as they nimbly swung along. As for the escort of numberless chattering monkeys, the "thundering roars of tigers," and the "Portuguese inn, woven like an eagle's nest out of bamboos," the less said the

better in a sober historical narrative. We certainly reached the Alexandra Hotel in due course, supped at 11, went to bed quietly, rose early the next morning and enjoyed the splendid view from the verandah. Mooljee was out when I awoke, but returned an hour later with the story that he had been aroused before daybreak by the man who had met us at Narel, and shown a completely furnished bungalow which, he said, was at our disposal free of rent, for such time as we chose to occupy it. But by breakfast time, H. P. B. had become nauseated with what she called "the aura of Anglo-Indian civilization," and refused to stop over a single day. So, despite the landlord's warning against the fierce heat of the sun, away we started and rode to Narel again, in a temperature like that of the stoke-room on a steamer. By good luck neither of us were sunstruck, and in due course got the train and went on to Khandalla, a delightful place in the hills. Our same universal provider met us here also, with a spacious bullock-carriage in which he took us to the Government rest-house (dāk bungalow), where we spent the next day and night. The evening of our arrival, Mooljee strolled down to the railway station for a chat with the station-master, an old acquaintance, and got a surprise. A train came in from Bombay and stopped at the platform, when he heard his name loudly called. Looking from carriage to carriage he saw a Hindu beckoning and went to his window. The unknown proved to be the personage whom H. P. B. had visited! He handed him a fresh bouquet of what seemed to be the same kinds of roses as he had seen in the mysterious garden

of the taciturn gardeners, and which were the most beautiful he had ever seen. "These," said the gentleman, as the train moved on, "are for Colonel Olcott; give him them, please." So Mooljee brought them to me and told his story. An hour later I told H. P. B. that I should like to thank the Adept for his courtesies to our party, and if she could get it delivered, should write him. She assented, so the note was written and given her. She handed it to Mooljee and requested him to go down the public road before us and deliver it. "But," he asked, "to whom, and where; it bears no name nor address on the cover?" "No matter; take it and you will see to whom you must give it." He accordingly moved off down the road, but after ten minutes came running back, breathless and exhibiting every sign of surprise. "It's gone!" he faltered. "What?" "The letter, he took it." "Who took it?" I inquired. "I don't know, Colonel, unless it was a pisācha: he came up out of the ground, or so it seemed to me. I was walking slowly along, looking to right and left, and not knowing what I must do to carry out H. P. B.'s orders. There were no trees or bushes for a person to hide in, but just the white, dusty road. Yet suddenly, as if he had come out of the ground, there was a man a few yards off, coming towards me. It was the man of the rose-bungalow, the man who gave me the flowers for you at Khandalla station, and whom I had seen carried away in the train towards Poona!" "Nonsense, man," I replied, "you've been dreaming." "No, I was as wide awake as I ever was in my life. The gentleman said: 'You have a letter

for me—that one in your hand; have you not?' I could hardly speak, but I said: 'I don't know, Maharaj, it has no address.' 'It is for me, give it.' He took it from me and said: 'Now, go back.' I turned my back for an instant and looked to see if he was there, but he had disappeared; the road was vacant! Frightened, I turned and ran, but had not got away fifty yards when a voice at my very ear said: 'Don't be foolish, man; keep cool; all is right.' This frightened me still more, for no man was in sight. I fled, and here I am." Such was Mooljee's story, which I repeat exactly as he told it to me. If appearances go for anything, he must have spoken truth, for his fright and excitement were too evident to have been simulated by so clumsy an actor as he. At all events, a certain request contained in that letter was answered in a letter from this same Adept, which I got later, at the dāk bungalow in Bhurtpore, Rajputana, more than a thousand miles distant from this place of Mooljee's adventure. And that goes for something.

It was a moonlight night, glorious beyond anything we see in the colder Western lands, and the air sweet, bland and pure, making physical existence a charm. We three sat out on the lawn enjoying it until late, planning our visit to Karli Caves for the next day.

Towards the end of the evening, H. P. B. came out of a state of mental abstraction in which she had been sitting for some minutes, and told me that at 5 p.m., the next day, a Sanyāsi or Sanyāsis would visit us at the Caves. I recorded the forewarning before retiring; the sequel will be seen presently.

At 4 o'clock in the morning Baburao, the Adept's supposed agent, silently entered the room where Mooljee and I slept, wakened me with a touch, thrust into my hand a small, round lacquered box containing a *pān sopāri*, or betel-leaf with spice accompaniments, such as is given to guests, and whispered in my ear the name of the Adept under whose protection we were alleged to be on this trip. The significance of the gift was that in the mystical school with which we have had to do, this is the sign of adoption of the new pupil. We rose, bathed, had coffee, and at 5 left in the bullock-coach (*shigram*) for Karli, which we reached at 10. By this time there was a blazing sunshine, and we had a hard climb of it up the foot-path from the foot of the hill to the Caves. H. P. B. became so distressed for breath that finally some coolies brought a chair and carried her the last half of the ascent. It is foreign to my purpose to enter into a description of the awe-inspiring, grandiose rock-temple and its adjacent smaller cave-dormitories, which are given in every guide-book, with all their details of measurements. My narrative is concerned only with the personal adventures of our little party.

We found a festival of Rama in progress in the neighbouring village, with a great crowd, and I found it very amusing to observe its novel features. Tired with our hot climb, we went inside the great Cave, and spreading our blankets camped on the rocky floor. By and by we had our lunch, although feeling half-ashamed to be satisfying the vulgar cravings of the stomach in the aisle of a fane where, centuries before our era, thousands of ascetic recluses had

worshipped, and with chaunts of sacred slokas and gathas, united in helping each other to dominate the animal self and develop their spiritual power. Our talk, of course, ran upon the noble theme of the rise, progress, and decadence of the Brahma Vidya in India, and our hopes of its recrudescence. On these worthy subjects discoursing, we passed the time away until, looking at my watch, I found that it lacked but six minutes to 5 o'clock; so Mooljee and I left H. P. B. and went to the gate-house which guards the entrance to the Cave, and waited. No ascetic was then in sight, but in about ten minutes, there came one who drove before him a cow, which was deformed by a short fifth leg that grew from its hump. A servant accompanied him. The ascetic's face was gentle and attractive. He had flowing black hair, and a full beard, parted down the chin in the Rajput fashion, with the ends turned over the ears and worked in with the hair of the head. He was robed in the saffron-hued cloths (*bhāgwa*) of his order. Across his intellectual forehead was the smear of grey ashes (*Vibhuti*) which indicates the follower of Shiva. We watched for some sign or look of recognition, but getting none, at last joined and drew him into conversation. He explained his presence there when by rights he should have been faring on towards Hardwar, by saying that the previous day, while on his road to that noted shrine, his Guru had ordered him to be here at 5 o'clock this day, as there were persons for him to meet. No orders beyond that had been given him. If we were expecting him, then we must have been the persons his Guru

had in mind, but he had no message for us, as yet at all events. No, his Guru had not told him in person, but—this we drew from him after much cross-questioning and after an interval of silence, in which he seemed to be listening to some invisible person—by a voice, as if spoken into his ear. That was the way he always received his orders while travelling. Finding that we could get no more out of him, we took temporary leave and returned to H. P. B. Our determination to pass the night on the hill being made known to Baburao, he and Mooljee went in search of a suitable shelter, and on their return we and our luggage were removed to a small cave-dormitory cut into the hill, some distance to the right of the great cave-temple. The ancient sculptors had fashioned a two-pillared small porch at the entrance, and inside ten cubicles, with open door-ways, giving on to a central square hall or chamber of assembly. To the left of the porch a basin, cut in the rock, received the waters of a spring of deliciously cool and clear water. H. P. B. told us that from one of the cubicles in one of these small caves, a secret door communicated with other caves in the heart of the mountain, where a school of Adepts still lived, but whose existence was not even suspected by the general public: and that if I could find the right portion of rock, and handle it in a particular fashion, no hindrance would be made to my entrance—a liberal offer considering the circumstances! However, I tried, and in another little cave some way off I did actually put my hand on a place and was about to try to move it when H. P. B. began

calling me back in haste. The Adept writer of the Bhurtpore letter told me that I had actually hit upon the right place and would have prematurely penetrated to his retreat if I had not been called away. However, this is unprovable for the present, so let me proceed. Mooljee and Babula had gone to the village bazaar with Baburao, to buy provisions, and H. P. B. and I were left alone. We sat in the porch smoking and chatting, until she bade me stop where I was for a few minutes and not look around until she told me. She then passed inside the cave, as I thought to go into one of the cubicles for a nap on the rock-hewn block that served as the old monk's bed. I kept on smoking and looking over the wide landscape that lay before me like a great map, when suddenly, from within the cave, I heard a sound like the slamming of a heavy door and a burst of satirical laughter. Naturally I turned my head, but H. P. B. had disappeared. She was in neither of the cells, which I examined in detail, nor could I, with the minutest search over every inch of the rocky surfaces of their walls find the least crack or other sign of a door; there was nothing palpable to eye or touch but living rock. I had had so long and varied an experience of H. P. B.'s psychological eccentricities, that I soon ceased to bother myself about the mystery and returned to the porch and my pipe, in placid inclination to wait for what might happen. A half-hour had passed since her disappearance, when I heard a footstep just behind me and was addressed by H. P. B. in person, in a natural tone, as if nothing had happened out of the common. In reply to my

question as to where she had been, she simply said she had "had business" with . . . (mentioning the Adept) and gone to see him in his secret chambers. Curiously enough, she held in her hand a rusty old knife of a strange pattern, which she said she had picked up in one of the masked passages, and purposelessly had brought along. She would not let me keep it, but flung it out into the air with all her force, and I saw it fall into a thicket far down the hillside. I do not explain the above occurrence, leaving each reader to make what he may out of the facts. Yet, to forestall what will unquestionably occur to many minds of a certain bias, I may say that, barring the rusty knife, all is explicable on the theory of hypnotic suggestion. The sound of the slammed rock-door and the shout of laughter, H. P. B.'s seeming disappearance and subsequent sudden reappearance, can all be accounted for as hypnotic Māyā cast on me by her. She may have passed out by the porch at my very side, gone elsewhere, and returned before my very eyes without my seeing her. This is one explanation, and a very rickety one it will be to anyone who had had to do, in the state of pupilage, with a real adept of Eastern Magic.

Our people in time returned; we had a warm supper served to us in the cave-porch and then after admiring the moonlight panorama, and having a last smoke, all rolled ourselves in our blankets and lay down on the rock-floor and slept quietly until morning. Baburao sat at the porch-door and tended a wood-fire that we kept burning as a protection

against wild beasts. But—save one wretched little jackal that slunk by in the night—none came to break our rest. The *Caves and Jungles* story about my falling down a precipice and being rescued by the Sanyāsi and his five-legged cow is all fiction; so are the "far-away roars of the tigers rising from the valley," the night attack on us by a huge tiger, the casting of it into the abyss by adept will-power, and the weeping of "Miss X."—a totally unknown quantity. These were the plums and spices that H. P. B. put into her charming Indian wonder-book, to make it interesting to the Russian public, in whose language it was originally written. Equally misleading is her account of a snake-charming performance as occurring at Karli Caves, the truth being that the thing happened in our own house at Girgaum; as will be seen later on, when I come to the case in its due order.

Mooljee and I were up before H. P. B. the next morning, and after a wash at the spring, he went down to the village while I stood on the path enjoying the early morning view over the plains. After a while, to my gratification, I saw the cow-owning Sanyāsi coming towards me with the evident intention of speaking. I was at a loss what to do, as neither H. P. B. nor I knew a word of either of the vernaculars. But my doubt as to the issue was soon solved by his coming close up to me, taking my hand, giving our T. S. private tokens of brotherhood, and pronouncing in my ear the Adept's name! Then saluting me most gracefully, he bowed and went his way. We saw him no more.

We passed that day in exploring the caves, and at 4.30 p.m. wended back to the Khandalla rest-house. But while still in the Great Cave, H. P. B. passed on to me an order, telepathically received, she said, from the Adept, that we should go to Rajputana, in the Punjab. After supper we sat out again on the moon-glorified lawn of the travellers' bungalow, this time in company with two other travellers—Anglo-Indians—who retired early, leaving us three alone. My two companions strolled about conversing together and disappeared behind the house, but Mooljee speedily returned and, as it seemed, in a daze of confusion, saying that she had disappeared before his very eyes while he stood talking to her in the moonlight. He seemed really about to have a fit of hysterics, so much did he tremble. I bade him sit down and keep quiet, and not make such a fool of himself, as he had merely been made the subject of a glamor, which was a very harmless affair, such as any good mesmeriser could accomplish on his sensitive subject.[1] She soon reappeared and resumed her seat, and our chat went on. Presently two white-robed Hindu men were seen

[1] She herself specifies with full candor, on p. 588 of vol. II of *Isis*, this illusion-casting power as one of the acquired functions of a thaumaturgist, thus:

"The thaumaturgist, thoroughly skilled in occult science, can cause himself (that is, his physical body) to *seem* to disappear, or to apparently take on any shape that he may choose. He may make his astral form visible, or he may give it a protean appearance. In both cases, these results will be achieved by a mesmeric hallucination of the senses of all witnesses, simultaneously brought on. This hallucination is so perfect that the subject of it would stake his life that he saw a reality, when it is but a picture in his own mind, impressed upon his consciousness by the irresistible will of the mesmeriser."

crossing the lawn obliquely past us, some fifty yards off. They stopped when opposite our position and Mooljee was sent by H. P. B. to talk with them. As he stood with them doing this, she repeated to me what she said was their conversation and which Mooljee corroborated a moment later on rejoining us. It was a message to me to the effect that my letter to the Adept had been received and accepted, and that I should get the answer when I reached Rajputana. Before Mooljee could finish this brief report, I saw the two pupil-messengers walk away a short distance, pass behind a small bush not thick or large enough to screen a white-robed man, especially in that vivid moonlight, and disappear: there was open lawn about the bush, but the two had vanished from sight most effectually. Naturally I obeyed my first impulse to run across the lawn and search behind the bush for some signs of a subterranean place of refuge; but I found nothing, the sod was unbroken, the bush had not a twig bent out of its natural place. I had simply been hypnotised.

We left for Bombay the next morning by mail train, but our adventures were not yet finished. Baburao bade us farewell at Khandalla station after refusing to accept the *douceur* I pressed upon him—a rare stretch of self-denial, as anyone familiar with Hindu serving-men will declare. We three friends had a second-class carriage to ourselves; Babula found room in the third-class. After a while, Mooljee stretched himself out on one of the benches and fell asleep, while H. P. B. and I sitting side by side on the cross-bench—she next the left-hand window—

talked about our occult affairs in general. She finally said: "I do wish that . . . (the Adept) had not made me pass on verbally to you his message about Rajputana!" "Why?" "Because Wimbridge and Miss Bates will think it all humbug, a trick to make you take me on a pleasant journey and leave them moping at home." "Bosh!" I said; "I don't need anything more than your word for it." "But I tell you," she replied, "they will think hardly of me for it." "Then," I said, "it would have been far better if he had given you a note, which he could have done easily. Well, it's too late to worry about it now. Khandalla is fifteen or twenty miles behind us, and so let it go." She brooded over the idea a few minutes, and then said: "Well, I shall try, anyhow; it is not too late." She then wrote something on a page of her pocket-book in two kinds of character, the upper half Senzar—the language of all her personal writings from the Mahatmas—the lower half English, which she allowed me to read. It ran thus:

"*Ask Goolab Singh to telegraph to Olcott the orders given him through me at the cave yesterday; let it be a test to others as well as to himself.*"

Tearing the leaf out, folding it into a triangular shape, and inscribing on it some peculiar symbolical signs (which, she said, dominated the Elementals), she took it between her thumb and forefinger of the left hand, as if about to throw it out of the window. I, however, caught and held her hand, saying: "You want this to be a test to me? Then let me re-open the billet, and see what you do with it." She consenting

I looked inside the note, returned it to her, and, at her express bidding, watched it when she flung it from the train. It was touched by the outer edge of the air-rush made by the train, and whirled outwards towards a solitary tree near the track. We were then 3,000 feet high, up among the peaks of the Western Ghāts, with no human habitation in sight at the moment, and but very few trees beside the railway track. Just before I let her fling out the billet, I awoke Mooljee, told him what she was about doing, with him took the time by my watch, and he joined me in signing a certificate in my own note-book, which now lies before me, and from which I have refreshed my memory as to these details. The certificate is dated at "Kurjeet Station, G. I. P. R., 8th April, 1879, at 12.45 p.m.," and signed by Mooljee Thackersey as witness.

At Kurjeet, Mooljee and I wanted to descend and stretch our legs a bit on the platform, but H. P. B. said that neither of us should leave the train until we reached Bombay: she had her orders, and we would understand them in due time. So we remained with her in the carriage. In schedule time we reached home, and I at once went on an errand to the Kalbadevi Road and was gone an hour. On returning I was met by Miss Bates, who handed me a sealed Government telegraph cover, saying that she had received it from the messenger (peon) and receipted for it in my name. It read as follows:

"*Time 2 p.m. Date* 8-4-1879.
From Kurjeet To Byculla.
From Goolab Singh To H. S. Olcott.

Letter received. Answer Rajputana. Start immediately."

As I said above, until a few months ago, I regarded this as one of the most unmistakably genuine proofs of H. P. B.'s occult relations I had ever received. It so impressed all my friends, among them one in London and one in New York, to whom I forwarded it for examination. The friend at New York, moreover, reported a strange fact, which I am glad to say I recorded in my Diary for the following 1st July, after receipt of the Overland Mail of that day: Mr. John Judge, brother of W. Q. Judge—the friend in question—wrote that the name of the sender of the telegram (Goolab Singh) had entirely faded out, and he had no clue, therefore, to the sender. He enclosed the original despatch in his letter and I found the name had again become *perfectly visible*, as it is to this day. The one weak point in the whole series of phenomena is that—as I learned quite recently—Baburao had been engaged by Mooljee to look after our party at Matheran, Khandalla, and Karli Cave! It is for this reason that I have so minutely described the incidents of our pleasant trip, leaving each reader to judge for himself.

CHAPTER V

A JOURNEY TO NORTHERN INDIA

THE extension of our movement to foreign countries obliged me to devise a plan for its expansion on cosmopolitan lines and make some change in its rules. This was effected at Bombay, and the new draft being approved by several of our wisest Indian colleagues, it was published along with the text of my Framji Cowasji Institute lecture. Other modifications have been since made from time to time as experience suggested, and events of recent occurrence point to the necessity for still further modifications. The ideal which should be ever kept in view is the making of a Federation under which the completest autonomy may be enjoyed by local Sections, while ever keeping a strong sense of the dependence of the whole movement upon the central nucleus and the common interest in its strict preservation and effective management.

On Good Friday—11th April, 1879—H. P. B., Mooljee Thackersey, and I, with our servant Babula, left Bombay for the visit to Rajputana ordered at Karli Caves. The temperature of the air was suffocatingly hot, and, with the dust, made us suffer greatly in the train. Whether on account of my

physical discomfort or not, I cannot say, but I went that night in the astral body to visit the resident of the Karli subterraneans, but did not penetrate to his inner retreat. All I can recollect is what is noted in my Diary, *viz.*, that I entered one of the galleries leading to it from the dormitory where our party encamped, with Baburao sitting on guard at the entrance door.

We reached Allahabad on the 13th, and were met at the station by Swami Dayānand's local chief disciple, Pandit Sunderlal, who gave us small encouragement as to the prospects of our work in the North-Western Provinces—a forecast since happily negatived by the results of twenty-one years' changes in Indian public opinion. We put up at the Railway Company's dāk bungalow which stands within the station compound, and I can well recollect that the heat was so terrific as to make even the Hindu Mooljee catch his breath when we ventured outside the house. A lively Frenchman, Babula's former master, formerly steward of the Byculla Club, Bombay—and not, as so often asserted, a professional conjurer—was in charge of the station refreshment room, and he enlivened our repasts by telling stories of the frequent deaths of Europeans in the trains from heat apoplexy! To stout persons like H. P. B. and myself this was most reassuring. In the cool of the day we went to the bank of the Jumna to pay a visit to a remarkable old ascetic named Babu Surdass, a follower of the Sikh Guru Nanak, who exemplified in his person to a pre-eminent degree the possibilities of an obstinately fixed purpose. Since the year 1827, that is to say, for fifty-two years, he had sat through all the seasons

of heat, of rains, and of cold, on a low brick platform near the Fort, without a shelter over his head; braving all violent extremes of weather and ever meditating upon religious things. There he had sat throughout the Mutiny, paying no attention to the thundering cannon or the fights that raged throughout that district of country: their turbulent rumors could not penetrate within the realm of thought where he passed his existence. On this day of our visit the sun blazed on us like a fierce fire, but his head was bare and yet he did not seem to feel any inconvenience. The whole day long he squats on his place and the whole night as well, save at midnight, when he goes to the confluence of the two sacred streams, Ganges and Jumna, to bathe and worship. The hardships of his protracted penance have made him blind and he has to be led to the riverside, yet his face wears a cheerful look, and his smile is frank and sweet. If New Yorkers will recall the features of the late Mr. George Jones, founder of the *N. Y. Times*, they will have an excellent idea of this Sikh Sanyāsi's appearance. Through Mooljee as interpreter, H. P. B. and I conversed with the old man. He told us he was 100 years old, which may be true or not, it doesn't matter, but as to the length of his stay on that brick *gadi*, that is a matter of history. And how curious a commentary is his case upon the ideals of our worldly society; how impressive the fact of his sitting silent and unmoved, in religious introspection, throughout a half-century of human passions, raging around him, yet as powerless to affect him for weal or woe as the surges beating about the foot of a cliff

are to move it upon its base. His conversation embodied some poetical images, as for instance, when he said that the Wise Ones caught at and appropriated grains of truth as the pearl-oyster catches a raindrop to convert it into a pearl. He was quite unmoved by my telling him the real truth about the making of pearls; Science was wrong, he said, and he held to his comparison. Using the familiar illustration in the Shāstras, he reminded us that only by keeping the mind calm and the soul unperturbed can one perceive truth, as the image of the sun can only be seen in smooth water. And, as regards adversity and troubles: experience of these things brings out the sweetest essence of human knowledge, as the attar is obtained by expressing and distilling the petals of roses. When asked if he could show us phenomena, he turned his sightless orbs towards the speaker, and sadly remarked that the Wise Man never permitted his attention to be drawn aside from the search after spirit by these playthings of the ignorant; which was what they really were. When in the proper mood he has the faculty of seeing forward and backward in time, but he declined to give us any practical proofs of his clairvoyance. Every time that I have revisited Allahabad since that first occasion I have been in the habit of paying my respects to the old Sanyāsi, but on the last occasion I learnt that he was dead. It would be most instructive to learn to what extent his lifelong physical self-restraint has modified his condition in the next sphere of consciousness.

From Allahabad we moved on to Cawnpore, where we met our new friend Ross Scott and his brother, an

engineer in Government service. An early morning visit was paid the next day to another Sanyāsi, who had been living on the sandy plain across the Ganges in a state of nudity for about a year. He had a refined, spiritual face, an emaciated body, and an air of perfect indifference to worldly things. I was struck by the collapse of his stomach, which seemed as if its digestive functions were seldom called into action. He too refused to show us phenomena, with an expression of apparent disdain; evidently these Hindu seekers after spirit are on a different level from our own Western ones, and would make little account of the best miracles of our most excellent mediums. So it seemed to me, at any rate. He, however, told us about a famous ascetic, named Jungli Shah, who is credited with having done the miracle of the "Loaves and Fishes" more than once, by multiplying the food of a single person to such an extent that he was able to feed hundreds with it and give each a full meal. Since then I have heard several times of the same thing being done by different Sanyāsis. It is considered by the higher proficients in magic a comparatively easy thing to multiply a single thing, like a grain of rice, a fruit, a quantity of water, etc., the main requisite being that there shall be a nucleus around which the adept can collect the matter of space. But I should greatly like to know if these miraculous increments of food and drink are anything better than illusions; and if, provided they are not, whether those who partake of the wonder-food are nourished by it. I recollect Professor Bernheim's showing me how, by suggestion, he could make a hypnotized

patient at one moment feel his stomach full of food, and the next feel it empty and be voraciously hungry. Our young Sanyāsi also ascribed to Lukhi Bāwā and another ascetic the power of changing water into *ghee* (clarified butter). He also told us that he himself had, twenty years before, seen still another Sanyāsi cause a felled tree to be restored to full vigor of branch and leaf; and, the less wonderful fact—provided it was a mere case of paralysis of the optic nerves —of his own eyesight having been restored to him by a Guru at Muttra, the sacred city of Shrī Krishna.

At 3 p.m. we mounted an elephant for a visit to Jajmow, an ancient ruined city four miles from Cawnpore, which is said to have been the capital of the Lunar Race in 5000 B.C. It figures in *Caves and Jungles* in a much travestied form. Our objective there was the *āshram* of the old Sanyāsi named Lukhi Bāwā, above mentioned. We found him a man of venerable presence, a philosopher and erudite astrologer. He was as like the late Mr. John W. Mitchell, the New York lawyer, as if he were his twin brother. And I may say here, in parenthesis, that throughout Asia I have been finding everywhere these striking likenesses to Western friends, acquaintances, and public personages. The color of their skins makes the resemblances all the more impressive, and suggests the question whether a parity of evolutionary psychical forces, under the guidance of Karma, produces the same type of features regardless of racial peculiarities. The likenesses have equally struck my attention whether the local type was Caucasian, Mongolian, Semitic, or Negroid.

Again we were denied our wish for wonders, this third ascetic appealed to within as many days refusing to produce phenomena for us, or help us to find a wonder-worker. So much for the serious part of this excursion, but there is its other and comical side. There was no howdah (cab) on the elephant (whose florid name was Chenchal Peri, the Active Fairy), but only a "pad," or large mattress, which is strapped on by huge girths fastening under the animal's body. It requires some skill and a good balance to keep on this seat when the animal is in motion, and I leave the acquaintances of H. P. B. to imagine what happened when she turned rider along with four other neophytes to share the limited area of cushion. Out of politeness we first helped her up the short ladder, of course expecting that she would play us fair, but not she, indeed: she planted herself square in the middle of the pad and not one inch would she budge to give us a chance. In fact, her expressions were extremely forcible when we asked her to remember that she was not to have the pad all to herself. So, as Chenchal Peri's ears began to flap and she showed other signs of impatience at our wrangling, we four—W. Scott, Mooljee, Babula, and I—scrambled up and stuck on somehow at the corners, as best we could contrive. Scott sat towards the rear, and, letting one leg hang down, the she-elephant benevolently threw her tail over his ankle and held him firmly to his seat. Then we started, H. P. B. smoking, radiant as though she had been an elephant-rider from her youth upward. But the first quarter of a mile took the conceit out of her.

She rolled about unwieldily, getting her fat shaken up and her breath squeezed out of her, until she grew furious and consigned us laughers, together with the elephant and its mahout, to perdition. Ross Scott rode in one of the funny country vehicles called *ekkas*, a trap with a flat seat bigger than a postage-stamp, but not so big as a barn-door, to sit upon, with one's legs either folded up under one or dangling over the wheel; a lot of brass discs attached to the axle that rattle, a wobbling canopy of, say, two feet square overhead, and the shafts mounting over the pony's back, and, coming together to a point, resting in a crutch on the saddle. Ross Scott's leg was disabled and he could not ride the elephant with us as he wished. Throughout the four miles—which H. P. B. vowed were twenty—we rode in misery and she in wrath; but when it came to the return, no amount of persuasion could induce H. P. B. to resume her part of the elephant's pad; she made Scott squeeze over to one side of his tiny ekka seat and took the other, and as Pepys puts it, so home.

Thence on to Bhurtpore, Rajputana, by way of Agra. We were now on what to my "chum" and myself was classic ground, for it was associated with the history of the splendid Solar Race of Rajputs, to which our own Teacher belongs and which enchains all our sympathies. The Maharajah was not at home, but the Dewan gave us the hospitalities of the State; put us up at the dāk bungalow; sent us carriages; held discussions with us on philosophical subjects, and gave us facilities to visit the ancient palace of Sooraj Mull at Deegh,

twenty-three miles away. Here we found ourselves for almost the first time in the ideal Orient, the East of poetry. Nine palaces, each bearing a different name of a god, stand in a quadrangle around a shady garden: the whole called Bhawan. Beginning at the N.E. corner they are called in turn, Kissun, Hardev, Suraj, Samun, Gopal, Bhaduri, Nunda, Keshub, and Ram palaces. The centre of the garden is marked with a domed marble water-kiosk, surrounded by a shallow tank from which rise 175 water jets, met by streams that fall from an equal number of nozzles projecting from the underside of the cornice of the structure, and when in play shroud the occupants from view by a translucent wall of water; which keeps the air within deliciously cool in the hottest day and sparkles in the sunshine like a silver veil embroidered with gems. From this centre raised walks radiate in every direction and one strolls about under the cool shade of neem, tamarind, mango, babul, banyan, and pipul trees. No less than one hundred grand peacocks were strutting about on the day of our visit, swift parrots darted in emerald flashes through the air, striped squirrels flitted from tree to tree, and flocks of doves softly called to each other in the dense foliage, completing an ideally beautiful picture. The palace architecture is all Indian, the carvings in stone exquisite in design, and the angles as sharp as if but finished yesterday. In the Zenana palace, Sooraj Mull, every room has a tessellated marble floor of a different design from the rest; the lintels and frames are in pure statuary marble, decorated with patterns of climbing vines in high relief. Yet, alas! amid all

this beauty moral deformity rankly flourished, and we heard such stories of vulgar debauchery as prevalent in Bhurtpore and other Rajput towns, that we were glad to get away as soon as possible. We returned to town the same evening and passed the night at the dāk bungalow, where I had the adventure mentioned in the last chapter. H. P. B. and I were sitting alone in the rear verandah, when an old Hindu, robed in white, came around the corner of the house towards us, salaamed to me, handed me a letter, and retired from view. On opening it I found it to be the promised answer to my letter sent to Goolab Singh at Khandalla, and which, I was told in his Kurjeet telegram, I should receive in Rajputana. It was a beautifully worded and, to me, most important letter, inasmuch as it pointed out the fact that the surest way to seek the Masters was through the channel of faithful work in the Theosophical Society. That way I have persistently travelled, and even though the letter had been a false one, it has proved a blessing and a perpetual comfort in times of trouble.

Our next station was Jeypore, which we reached at 9 p. m. on 20th April, and put up at the dāk bungalow. We were sorry that we did not stay there, for we were beguiled into accepting the invitation of an uncle of the Maharajah to shift to his palace and accept his proffered hospitality. We paid dearly for our wish to know what it was to be the guests of a smooth-talking Rajah. The quarters assigned us was an open shed on the palace roof; a dust-paved brick and plaster terrace, without a bed, chair, table, mattress, bath, or a

single comfort. The Rajah left us after promising to settle us comfortably, and we waited hour after hour with admirable patience, sitting on our luggage, watching over the parapet the picturesque street crowds, and smoking to kill time. Lunch time passed and dinner time also, yet no food made its appearance nor anything to eat it with or upon. At last Babula was sent out to buy food and get wood for a fire to cook it with, and in time we stayed our hunger. No cots or mattresses coming, we opened out an iron chair-bed for H. P. B., and the rest of us spread each his blanket and lay on the hard terrace, passing a wretched night, what with heat, dust, and mosquitoes. The first thing the next morning our brutal cad of a host sent for Mooljee and literally turned us out of doors without a word of explanation. We had reason to believe, however, that it was because we were then suspected of being Russian spies (!) and had a Police officer dogging our footsteps wherever we went. Fancy that! I went straight away to Colonel Beynon, S.C., the British Resident, and protested, as a true American naturally would, against this sneaking policy which was so utterly useless, considering that we had nothing to conceal, and that the Government was welcome to read our every paper, examine our every acquaintance, and even, if it chose, have daily reports of what we had for dinner The Resident was very courteous, expressed regret that we should have been inconvenienced, and offered me a carriage and elephants if we wished to visit the old capital of the Jeypore State, Ambēr. We gladly returned to the travellers' bungalow, where

we enjoyed once more a comfortable meal and had a good night's rest.

Ambēr was deserted for a caprice of the former Maharajah, who built a complete town, the present capital, Jeypore, after his own taste as to architecture, and when it was finished ordered the whole population of Ambēr to remove there, bag and baggage! There is no other city in India to compare with it. H. P. B. wittily said it looked "like Paris done in raspberry cream". It is a town of brick and pink stucco, in almost every conceivable style of architectural facade. The streets are wide and at right angles, with boulevards and, at the crossings of streets, playing fountains; there are paved sidewalks —a most unusual thing for India—gas-lighting, a large and well-equipped College, a Public Library, superb public gardens with a fine zoological collection, and many palaces belonging to His Highness and his tributary chieftains of Rajput tribes.

Our guide at Ambēr was a stupid fellow, quite ignorant of the things we cared most to know, and full of petty odds and ends of gabble like most *valets de place*. But we did draw out of him one thing that *was* interesting. There is (or then was), it seems, a Mahatma who lives not far from the capital, and occasionally appears to the ruling Prince and one or two others. There are subterraneans of which the Maharajah has the secret, but which he is not permitted to visit or explore save in some desperate contingency, such, for instance, as a rebellion of his subjects or some such dynastic catastrophe. What truth there may be in the story I, of course,

have no means of knowing. It is said of this Mahatma that once when the Prince was going on a journey he told him he should bear him company for a certain distance. But nothing was seen of him at the time of departure, and yet he suddenly appeared to him when at a considerable distance on the way.

We formed a number of very pleasant acquaintances among the Durbar officials at Jeypore, among them a close relative of our tried colleague, Babu Norendronath Sen of Calcutta. Delightful hours were passed by us in their company, and our theme was ever Hindu and Western ideas, ideals, and social aspects. The Rajputs are of a magnificent ethnical type, and a Punjab crowd excels in beauty every public concourse I ever saw. A considerable number of feudatory chieftains were in town at the time of our visit, and the frequent passage of their trains of armed followers on gaily caparisoned horses and elephants to and from the Maharajah's palace was, to my American eyes, like the calling back out of the world's astral record-book of scenes of the Crusades. The Chief Justice of Bhurtpore had given me letters to several of these Chiefs, and I visited two of them in their camps, but on learning from the British Resident that the handsomest, and seemingly most independent, sincere, and hospitable of them had privately inquired of him whether we were safe acquaintances, I got so disgusted that I left the others to the security of their political sycophancy. The race of Rajput Princes is degenerated under foreign rule and the killing of time by gross indulgences.

From Babu Mohendranath Sen, one of the highest of the Jeypore Durbaris, we heard of a Yogī (at that time at Hardwar on pilgrimage) who is a proficient in the practice of *samādhi*. In the presence and under the supervision of our informant, he had been entombed twenty-seven days, and then in the presence of hundreds of eye-witnesses had been disentombed. The ears, nostrils, and other orifices of his body had been stopped with ghee, and the tongue turned back into the pharynx. At his resuscitation, the refilling of the lungs with air was accompanied with a wheezing sound like the letting of steam into a radiator. The incident can be attested by many living witnesses of credibility. Mohendranath Babu told us of another Yogī—also absent at Hardwar—whose forehead glows with spiritual light (*tejasa*) when he sits in contemplation.

CHAPTER VI

NORTHERN WANDERINGS, DAYĀNAND SARASWATI, SNAKE CHARMING, THE "THEOSOPHIST" STARTED

AGRA was our next station, and here we stopped three days. What can I say of the Taj that has not been better said by many cleverer travellers? The single sentence of Bayard Taylor that it is "a poem in marble" covers it all. Our local guide told us a legend that embodies practically the same idea. The plan, he said, had been seen in a vision by an old fakir, who had given it to Shah Jehan, who had followed it out implicitly. It is the materialised replica of a temple in Mohammed's Paradise! Let us hope that the heavenly original was not built at the cost of such human suffering, nor its stones cemented with such a hecatomb of lives as this peerless sepulchre of the lovely Noormahal. Words are absolutely inadequate to express the sensations felt by an æsthetic mind on entering the Taj garden through the splendid red-sandstone portal—itself a palace. Like a fair white dream it rises against the Indian lapis-lazuli sky of April, suggesting a spiritual world untainted with the dirt of this gross

world. But enough: let it stand a world-wonder for future tourists—indescribable, unique, a marble thought.

The same guide told us of another fakir[1] who, to satisfy the incredulity of a Bhurtpore Maharajah, had caused a heap of his gold mohurs (coins) to disappear from before his eyes, and reappear in the form of a shower of pieces on his queens in the Zenana part of his palace!

While we were at Agra we were visited by the local agent of Swami Dayānand Saraswati, who gave us his views of that great religious chieftain. His explanations are noted in my Diary as having been "so satisfactory that we have decided to go to Saharanpore to meet the Swamiji on his return from Hardwar". We were misled, it seems, at every step as to his teachings.

At Saharanpore the Arya Samajists welcomed us most cordially and brought us gifts of fruits and sweets. The only drawback to our pleasure was the presence of the Police spy and his servant, who watched our movements, intercepted our notes, read our telegrams, and made us feel as if we had stumbled within reach of the Russian Third Section by mistake. The town was crowded with the stream of pilgrims returning from Hardwar, a most interesting sight to us foreigners. The multitude of ascetics (or pretended ascetics, as probably the overwhelming majority of them should be called, being ascetic only

[1] For the concerned I repeat that *fakir* and *sanyāsi* are respectively the Mohammedan and Hindu names for the same personage, *viz.*, a wandering religious ascetic and celibate.

in their saffron garments), male and famale, particularly impressed us. I noted "one young fellow of most striking appearance—a gentleman in beads and whitewash. Eyes extremely bright and handsome, beard carefully trimmed, teeth white, stature tall; he looks a king."

The Samaj gave us a formal reception and banquet, Indian fashion, off leaf-plates laid on the floor, from which we ate perforce with our (washed) right hands. The Swamiji arrived the following morning at dawn, and Mooljee and I went to pay our respects. I was immensely impressed with his appearance, manners, harmonious voice, easy gestures, and personal dignity. He had just finished bathing at a well in a leafy grove, and indued his clean cloth, when we met. Equally prepossessed in my favor as I in his, of course our greetings were most cordial. He took me by the hand, led me to an open-air cemented terrace, had an Indian cot (charpoy) brought and made me sit beside him. A few compliments being exchanged we took our leave, and after an hour or so he came to the dāk bungalow and made H. P. B.'s acquaintance. In the long conversation which followed he defined his views on Nirvana, Moksha, and God in terms to which we could take no exception. The next morning we discussed the new Rules of the T. S., he accepted a place on the Council, gave me full proxy powers in writing, recommended the expulsion of Hurrychund Chintamon, and fully approved of our scheme of having sections composed of sectarians such as Buddhists, Parsis, Mohammedans, Hindus, etc. My Diary notes having been made at the time

there can be no mistake about this, and those who have followed these narratives from the beginning will appreciate our feelings when, later, his altruistic eclecticism changed into sectarian exclusiveness and his gracious kindness into bitter abuse.

We took train for Meerut in his company the next day, and on the way came to an agreement with him that he should draft and send us the three Masonic degrees we intended to make for classifying our advanced Fellows according to their mental and spiritual capabilities. On arrival we were taken to the house of Babu Sheonarain, a wealthy Government contractor and Samajist, who placed his house and all at our disposal. The next evening at 6.30 we attended a crowded meeting of the Arya Samaj, which was most interesting to our unaccustomed eyes: a gathering picturesque beyond Western conceptions. It was held in an oblong courtyard, open to the sky and surrounded by buildings. At the further end a brick platform of 50 × 100 ft., covered with Eastern carpets and rugs; a low raised dais for the Swami with a reading-stool and books lying upon it; the teacher seated on a rug leaning against one of the thick round bolsters or back-pillows of the country. In calm dignity he dominated the assemblage, and in dead silence they listened for what he should say; the twittering of homing birds the only sounds audible. Our party having been conducted to the appointed seats, the Swami sunk his chin upon his breast, became abstracted for a few minutes, and then raising his face towards the sky, his sonorous sweet voice intoned the words: "Om; Om; Shāntih, Shāntih,

Shāntih!" and as the sounds died away began a discourse on the subject of Prayer. He defined prayer as work; it was no idle muttering of words, no lip-vibrations; no flattering or menacing of God, that had the least efficacy. He had heard once a Brahmo Samajist waste two hours in merely repeating the words: "Thou God art all mercy and justice!" What good did that do? Some people talk to God as a man does to his sepoy; as though they had the right of dictation! useless folly; let him who would pray effectively, work, work, work; all beyond one's reach must be sought after by contemplation and the development of spiritual powers. So he continued, eloquent, moving, as easy in speech as the flow of a running stream. Before he closed, the silvery moonlight touched the stuccoed cornice of the house in front of us while our side was in inky shadow, the sky hung an azure plain above the tree-tops, and a shaft of the lunar radiance spread behind the Swami like a burnished silver screen, throwing his fine figure out in high relief.

Next day it was my turn to lecture, and the event came off under a *shamianah* (a blue-and-white striped canvas canopy, supported by painted poles and steadied by rope stays pegged into the ground) in the compound of Sheonarain's house. The ground was covered with *durries* (Indian cotton carpets) and spread here and there with Persian and Indian rugs. There was a table for me and a few chairs for Europeans; the rest of the audience, including the Swami, squatting on the ground. Some English officials attended and our Police spy with his

moustache shaved—apparently for purposes of disguise—graced the scene. My remarks were devoted to an exposition of the mutual benefits likely to result from a blending of interests and gifts respectively of the West and the East. Mooljee interpreted.

The Swami told us, the next day, many interesting facts in the jungle experience of himself and other Yogis. He went seven years naked (save the *langouti* —small breech-cloth or diaper, as we should call it), sleeping on the ground or a rock, eating what he could pick up in the forest, until his body became quite insensible to heat, cold, cuts and burns. Among wild animals and deadly serpents he went unharmed. Once he met a hungry bear in his path and the animal rose to him, but he waved her off with a gesture of his hand and his path was cleared. An adept he saw at Mount Abu, by name Bhavani Gihr, could drink a whole bottle of poison of which a single drop would kill an ordinary man: he could with ease fast forty days and do many other extra-ordinary things. That evening there was another large gathering to see us, and a discussion was carried on between the Swami and the Head Master of the local Government School about the proofs of the existence of a God. On Wednesday, 7th May, we turned our faces homeward (*i.e.*, Bombayward, for the West has never been "Home" to us since we left it for India) and were escorted to the station by the Swami and a large number of his followers, who flung roses after us and shouted their friendly *namastaes* as the train moved off.

Days and nights of torrid discomfort carried us at last to Bombay, but before H. P. B. would look after her bags and parcels, she marched off to our adhesive spy, and then and there, on the platform, gave him a piece of her mind. In sarcasm she complimented him upon the great results he must have reaped from his expensive trip in first-class carriages, and bade him present her best compliments and thanks to the authorities with a demand for his promotion! The poor man blushed and stammered, and—we walked away leaving him there. Then, instead of going to the house for the bath and breakfast of which we stood in so much need, we drove to the U. S. Consulate and demanded that the Consul should send a vigorous protest to the Chief of Police for his insulting treatment of inoffensive American citizens.

The stream of our existence flowed placidly on, the picturesque features of our daily life impressing themselves deeper and deeper upon our senses as the days grew into weeks and the weeks into months. Daily, the circle of our acquaintance with the Indians widened, but, with the exception of a bare handful, we came into contact with no Europeans. What difference could it make to us whether they liked us or not; they could teach us nothing we cared to know, and their round of life and occupations had no interest whatever for us. Until the calls upon my time forbade it I wrote weekly letters to a New York paper descriptive of our adventures and observations. I see from my Diary notes, that while they were running. I covered pretty much the same ground that I am now

going over. A protest which I addressed to the Bombay Government through Mr. Farnham, the United States Consul, elicited from them a disclaimer of any intentional discourtesy in setting their Police spies to watch our comings and goings. I subsequently learnt at Simla, from the Viceregal authorities, that they were much vexed that the espionage should have been carried on so clumsily as to attract our attention, and that the watching of us was nothing out of the common; it being the rule in India to watch all strangers who appear to have particular intimacy with the Hindus and to avoid intercourse with the ruling race.

I took full notes at the time of the incidents connected with the visit to our bungalow of a clever snake-charmer, and as a very fanciful version of the story is given in *Caves and Jungles*, I may as well tell the sober truth, which is quite interesting enough. The man's name was Bishunath, a native of Indore, and the thing occurred on 15th June, 1879. His appearance was most picturesque. He had a shock of jet black hair; a full beard parted, Rajput-fashion, down his chin and the ends brought over his ears; his lean brown body was naked to the waist; he wore a *dhoti*, or cloth, swathing him from the hips to the feet; over his shoulder another cloth, folded, hung to the waist; a white turban covered his head, and his regular features and bright eyes were of the pure Aryan type. In a covered, round, flat basket were some cobras, of which he turned one out on the plastered floor of Wimbridge's room. The reptile coiled itself composedly without attempting any

hostile demonstration at first, but the effect of his appearance was to make H. P. B. and Miss Bates mount upon two chairs and gather their skirts about them! The charmer, producing a gourd pipe with vents cut in the neck, began playing a soft rhythmic air not at all unpleasant to hear. It seemed to have a surprising effect upon the serpent, which rose on its coil, outspread its double fan-like hood, darted out its slender tongue, and swayed its head from side to side in time to the measure. Fresh from the reading of the declarations of various authors that these performing snakes have been rendered harmless by the extraction of their fangs, I asked the charmer, through one of the three Parsi gentlemen present, if this had been done in the present instance. He denied it and, clutching the serpent by the neck, forced open its mouth with a stick, and showed us the slender, curved teeth with their poison-sacs, at the corners of the mouth. He offered to give us the best possible demonstration if we would procure a chicken to experiment upon. One was presently brought, and then the charmer, grasping its body behind the wings, thrust it towards the snake after first irritating him by motions of menace. The snake became most nervous and angry, flickering its thread-like tongue, expanding its hood, and hissing with a noise something like a stertorous breathing. At last, the fowl being held near enough, it suddenly drew itself back and instantaneously delivered a swift blow at its victim, withdrew in recoil and struck at it again. But this time it overreached its mark, and instead of hitting the fowl's back struck one of its fangs into the

charmer's hand. A tiny drop of blood oozed out of the wound, and we could not repress exclamations of fear. But Bishunath threw the chicken on the ground, opened a small rusty tin box, took from it a bony disc, laid it on the spot of blood, and after keeping his hand quiet for a minute or two used it as freely as the other. The bony disc stuck to the skin as if it had been attached with the stickiest "stickphast" gum or glue. The poor chicken did not offer to rise, but lay where it fell, gave some kicks, shudders passed through its body, and then it died. Evidently the serpent's fangs had *not* been removed. But we now watched the charmer with painful interest, apprehending that he too might fall a victim to his temerity. He, however made light of the affair, saying that the "snake stone" would infallibly suck out all the venom. My curiosity being excited by seeing how it stuck to the man's hand, I asked him to let me take hold of it. He consenting, I did so, and found that its adhesion was so strong that the whole skin of the back of the hand rose when I pulled the "stone"; we could all see that plainly enough. After some minutes it dropped off of itself, and the charmer said he was none the worse. He then, in reply to our questions, gave us the following information. The wonderful disc is only a piece of bone—of about the size of a waistcoat button—and grows in the mouth of one cobra in fifty or an hundred, between the skin and bone of the upper jaw. The others do not have it. Its presence makes the snake king among its fellows and gives it the name Cobra Rajah. The snake-charmers open the mouth of every

serpent they catch to see if one of them may not have the precious bit of bone. The same thing is also found in the anaconda, in a species of large, poisonous, yellowish toad, and even in the elephant. Its possessor in each case is king of its species. How curious, if true! And he gave us proof of its possessing some sort of virtue. He first excited the cobra as before until he set it to striking, hissing, and expanding its spectacles-marked hood. Then, taking the disc between his finger and thumb, he held it towards the reptile, which to our utter surprise shrank back from it as one would from a hot iron held towards one's face. Swaying to right and left, it seemed to be either in terror of the mysterious object or to be getting under a sort of mesmeric influence. The charmer followed it up closely in its motions, giving it no respite; the serpent ceased hissing, retracted its hood, swayed more and more feebly, and finally settled itself down upon its coils on the floor. The charmer finished his experiment by touching the cobra on the head with the "stone". In thinking out the thing stage by stage, I could see but one alternative—either the "stone" did have the apparent effect on the serpent and thus possess a scientific interest, or the deadly reptile had been trained to go through this performance for the master it knew. To test this theory I took the disc from the charmer and went through the thing myself. My skin being white, I argued, if the snake only acts thus for a brown-skinned hand, it will probably try to bite me instead of relaxing its energies and settling itself down for a nap. I first

enraged it as I had seen it done by the charmer, keeping, it may be believed, a very close watch upon its movements and instantly withdrawing my hand when I saw the preliminary motion of its bending itself backward before the stroke. The ladies, from their vantage ground on the chairs, protested against my foolhardiness—as they called it—and H. P. B. was more than usually uncomplimentary. However, for the sake of Science, I was obdurate. The cobra being in the right state of anger, I thrust the "snake stone" at it, and was pleased to see that it behaved as before; the excitement died away, its motions grew more and more languid, and finally it settled itself all limp and I touched its head with the disc of power. After the amount of chaffering, without which no transaction can be effected in the East, we bought the snake stone for a few rupees, and I used to carry it about in my dispatch box in case anyone should be bitten by a cobra and come to me for cure. But the chance to test its efficacy did not recur, and at last I gave it to Dr. Mennell, of London, who had paid much attention to the subject of the operation of poisons of all sorts. Bishunath failed to keep an appointment for the following Sunday, when he was to have come and experimented on a couple of pariah dogs, thus disappointing a rather distinguished company of Europeans and Indians whom I had invited to be present. Our time was not entirely wasted, however, for a friend brought one Ghulam Goss, a Mohammedan juggler, to show us some of his clever tricks. I have notes of two which are worthy of mention. A perforated ball of wood was made by

him to rise slowly and fall again on a vertical string, of which one end was held in the juggler's hand and the other by his great toe. When he ordered it to mount it rose, when the opposite it slowly descended. A strung bow of bamboo, of about the size of that of a double bass, but having only two strings to it, was held by him, the strings upward, with one end pressed against his right side. On the strings three free balls of equal size lay, one before the other. At the word of command the balls moved as he bade them, now all ascending to the top of the bow, now descending one at a time, or two or three; now one ascending while the others descended to meet it at middle distance. None of us could make it out at all. The juggler kept slowly turning on his feet the while, and of course the idea of the observed effect being attributable to centrifugal force came easily enough; but it would have to be centripetal force, or gravity, which showed itself in the case of the falling balls; and how the turning juggler could make one ball be mounting under centrifugal impulse while the others were falling down the string cradle by virtue of the opposing force puzzled the company.

A queer remedy for jaundice was reported to me by a Hindu friend who had actually been cured by it ten times by his mother. A needle is threaded, the patient's forehead stroked downwards with the point of the needle several times, while the operator repeats a mantram; then the needle is laid in a cup of water; the patient is put on a plain diet for a day or two; the needle and thread turn of a deep yellow color, and the patient recovers! If somebody

tries it and succeeds perhaps they will be good enough to tell me. The mantram I cannot give, but I presume any one will do provided that it be repeated with "mesmeric intent," that is, with concentration of thought and belief in the remedy. Still, I may be wrong, for in India there are a great many mantric conjurations for as many different purposes. For one desired result one goddess (elemental) will be invoked by a specific mantram, for another object another goddess with another formulary. In every case, however, as I understand it, it is an elemental spirit that is besought to help the worshipper to obtain his desire. A very instructive essay might be written on this subject, and I hope it may be done.

Here is an entry for 23rd June, which I do not recollect the meaning of: "At 10.30 p.m. went to H. P. B.'s room and worked with her until 2-30 a.m. on the ideal of an Antetypion, or machine to rescue from Space the pictures and voices of the Past." That is all said about it, and what sort of machine we had in view has quite passed out of my recollection. There are several entries about helping H. P. B. to write "her new book on Theosophy". On 23rd May, it seems, she "broke ground" for it; on the 24th I "gave her, by request, the skeleton outline of a book embodying such crude ideas as suggested themselves to one who did not intend to be the writer of it"; on the 25th I "helped in preparing the Preface"; on 4th June we finished it; and that seed lay in the mummy's hand five or six years before it sprouted as *The Secret Doctrine*, for which the only

thing I then did was to invent the title and write the original Prospectus. After coming to Bombay I had quite enough common routine work to do without helping to write another book of cyclopædic bulk.

With the best of intentions our quartette undertook to learn Hindi for the good of the Society, but as one cannot be learning a new language and at the same time be daily receiving crowds of visitors and writing scores of letters, the attempt was soon reluctantly abandoned. Yet, so widespread is the knowledge of English in India among the educated class with whom our work has principally lain, I do not think our cause has materially suffered from our ignorance of the vernaculars.

On 18th May, I spoke before the Bombay Arya Samaj for the first time. It was an open-air meeting and the attendance was large. It appears that the reverend Editor of the Marathi organ of the Presbyterian Mission was present, and that I challenged him to come forward and make good certain slanderous innuendoes that he had permitted himself to put forth against our characters—and for which our solicitor, Mr. Turner, later made him humbly apologise in his paper. But he only muttered something in an embarrassed way, whereupon the Chairman of the meeting, the venerable Mr. Atmaram Dalvi, lost his temper and called him names. Then H. P. B.—says my Diary—"pitched into him at a lively pace. Row. Laughter. The Missionaries laid out flat!" And so they were.

A few days later, H. P. B., Miss Bates, and I paid a visit by invitation to a Dekkanee Sirdar to meet the

(Parsi) Chief Justice of Baroda, and after that gentleman left and we were about retiring, our host excused himself from the room for a moment. He presently returned, leading by the hand a charming child of ten years, whom we supposed might be his grand daughter. She was richly dressed in the Hindu fashion with a costly silk *saree* (petticoat cloth) and jacket, and her ebon hair, smoothed like polished jet on her head, was almost hidden by gold ornaments. Heavy jewels were in her ears, around her neck, wrists and ankles, and—to our surprise—in one nostril she wore the jewelled ring which, in Bombay, betokens marriage. H. P. B.'s face relaxed into a sweet smile as the child approached, but when the grey-bearded, white-haired noble, holding forward the girl's hand toward hers, said: "Madame, allow me to present to you my little wife," the smile gave place to a frown, and in tones of inexpressible disgust she shouted: "Your WIFE? You old beast! You ought to be ashamed of yourself!" We left the host trying to smile.

Our acquaintance with the Editor of the famous opposition journal of Calcutta, the *Amrita Bazaar Patrika*, began with a letter that we received from him on 12th May. He had read a report of my Framji Cowasji Hall lecture and asked our friendship. He has had it ever since, for he is a fervent patriot and a devotee of his religion—two most excellent qualities in any man. The correspondence eventuated in his coming over from Calcutta to see us, and stopping a fortnight in a bungalow next door to ours which we had hired for the library. As he was so

sincerely interested in our interpretations and defence of his sacred books. H.P.B. did some few phenomena for him; for instance, pulled some black hair from her own head, rang the astral bells and—(8th September) my Diary records—"duplicated in his presence and at his request a magic mirror with a black frame and handle, that she had received to-day from a Master." I was present and thus was it done. He was to leave in two days, and begged her to show him the phenomenon of duplication, so that he might fully comprehend her teaching as to the nature of matter and force, and their potential relations to the power of a trained will. She persistently refused for some time, but finally, when he caught up the mirror in question and asked her to duplicate that, she said she would if he would promise not to bother with any more such requests. He promising, she took the mirror in her hand, rose from her chair, turned her back upon us, and in another moment threw on the seat *two* identical glasses. Then, exhausted, she dropped into her seat and sat silent for some minutes to recover herself. Shishir Babu is happily, still living, and will be able to set me right if I have made any mistake in telling the story.

By what to Americans may seem an interesting coincidence, the conversation which decided us to found the *Theosophist* occurred on the 4th of July of that year, Independence Day. As elsewhere explained, we were driven to it by the necessity of meeting the growing interest in Theosophy by some better means than epistolary correspondence. It was simply

impossible for us to bear the strain of such constant drudgery. Entries in my Diary show that I sometimes worked from 6 a.m. to 9 p.m., and night after night until 2 and 3 a.m., yet in vain. And then the same questions would be repeated by the majority of our correspondents, and to be for ever traversing the same ground was a tiresome work. We discussed the questions in all its bearings, calculated the pros and cons, and finally decided upon the venture. But the difficulties were grave, one of them being that the Society did not possess a penny of capital nor an iota of mercantile credit to borrow upon. I made the stipulation imperative that we should issue the Magazine on the terms of the best American and English periodicals, *viz.*, payment in advance and no book debts. I was willing to bring out a year's numbers punctually even although we did not book a single subscriber; but be bothered out of our lives by trying to collect arrears of book debts, and be so harassed as to be unfit for the serious work of thinking, learning, and writing, I would not. Our Indian friends strenuously opposed this innovation, as they regarded it, Babu S. K. Ghose, of the *A. B. Patrika*, particularly so; they prophesied that it would never succeed. But it did not shake my determination. So we provided for meeting the cost of the first twelve monthly numbers, and on 6th July I wrote the Prospectus and sent it to Press. We asked Sumangala, Megittuwatte, and other Ceylon priests; Swami Dayānand; Babu Prāmada Dāsa Mittra, of Benares; Shankar Pandurang Pandit; Kashinath T. Telang, and many others to send us articles; and got the news

spread widely of our intention. This kept us busy all that season. Our active members bestirred themselves to secure subscribers, one—Mr. Seervai, our then devoted Secretary—getting nearly two hundred himself. Not before 20th September did we get the first form of type to correct; on the 22nd we sent the second form to Press, on the 27th the last, and on the evening of the last day of that month the first 400 copies of the new Magazine were delivered to us and made the occasion of much jubilation among us. My entry in the Diary concludes with the salutation: "Welcome, stranger!" That on 1st October, the day of publication, is "*Sit Lux: Fiat Lux*!" That, reader, was one hundred and ninety-two months ago, and since that time the *Theosophist* has never failed to appear, never met with a disaster, never caused its projectors to incur a shilling of debt. Since the fourth month it has paid a profit, small, it is true, yet in the aggregate enough to enable us to contribute a good many thousand rupees towards the Society's expenses, besides giving our personal services gratis. Which is saying much for a periodical like ours.

CHAPTER VII

THE FUTURE WORKERS BEGIN TO ARRIVE

To turn over the leaves of my Diary for 1879, and see how and when our long-tried and often famous colleagues came into the current of our lives, is really like watching the entrances and exits of actors in a play; and most instructive is it to trace back to the causes which brought them into the Society, and the others which in many cases threw them out of it. I am afraid I shall have to say that the latter were of a personal nature such as disappointment at not getting to know Mahatmas or at H. P. B.'s breaking her promises, disgust because of attacks upon her character or the discrediting of her phenomena, the failure to acquire desired psychical powers by the French-before-breakfast system, or some such thing. I mentioned above when and how Mr. Sinnett came to know us, and now, on the page for 3rd August, I see the fact recorded that on that day I took Damodar K. Mavalankar into membership. It was the rainy season and the dear boy used to come to see us of evenings, clad in a white rubber waterproof and leggings, a cap with flaps to match, a lantern in his hand, and the water streaming from the end of his long nose. He was as thin as Sarah Bernhardt, with

lantern jaws, and legs—as H. P. B. used to say—like two lead pencils. So far as appearances went, he seemed as little likely as any man in the Society to become a Mahatma or get within a thousand miles of a real *āshrama*. But appearances were as false in this case as they have been in those of other members who seemed infinitely his spiritual superiors, but proved otherwise.

Three days after Damodar's admission, I received the applications of Lt.-Col. (now Maj.-Gen.) W. Gordon, B.Sc., and Mrs. Gordon, of whom the latter may be ranked among the truest friends and most unwavering backers that H. P. B. ever had. And a little earlier came one K. P. Cama, a young Parsi, who made a vivid impression upon us, by reason of his familiarity with and admiring enthusiasm for Indian Philosophy. Some of his essays were published by us in the earlier numbers of the *Theosophist*. If there ever was a Hindu soul born into Parsi body it was his; and he felt it to be so.

The first step upon our scene of that malevolent person, Madame Coulomb, was in the form of a letter which H. P. B. received 11th August, 1879. The news of our arrival at Bombay had been copied into the Ceylon papers, and she, writing from Galle, told her old Egyptian acquaintance that a great excitement prevailed in the Island about us, large subscriptions were being made for the expenses of our welcome, and that "the Buddhists were running mad to see us". She sent H. P. B. a copy of one of the Colombo Anglo-Indian papers, to which she had addressed a letter defending her reputation against an

ill-natured attack, and saying that, having known her well at Cairo, she could testify that she was a lady of high character! I believe she forgot to include this historical document in her pamphlet of 1884 attacking H. P. B.'s character in the choicest phrases to which her Missionary allies could help her. So I think I will place it on record here:

"I am not acquainted with any of the members of the said Society, except with Madame Blavatsky. I have known this lady for these last eight years, and I must say the truth, that there is nothing against her character. We lived in the same town, and on the contrary she was considered one of the cleverest ladies of the age. Madame B. is a musician, a painter, a linguist, an author, and I may say that very few ladies and indeed few gentlemen have a knowledge of things in general as Madame Blavatsky." (From the *Ceylon Times*, 5th June, 1879.)

She wrote H. P. B. a doleful tale about the straits to which she and her husband had been reduced, and appealed for help: she wished, she said, to come to Bombay if they could manage to get a passage, and would like to find some sort of situation. H. P. B. told me her version of the story of her connection with the Coulombs at Cairo, how Mme. C. had been kind to her when she was there after her catastrophe on board the steamer which blew up in the Piræus, and nearly all on board were killed. So I gave her my opinion that in common gratitude she ought to help the couple, now that they were hungry and naked, so to say. She concurred and wrote the woman some letters in which, if I am not mistaken, she actually

hinted that Mme. Coulomb might one day be her successor in the T. S.! I won't be positive, but that is my impression. Nothing would be more likely, since that was a common thing with her, and if the successorship letters were collected they would form an amusing compendium.

On 4th October our party attended a durbar held for us in Bombay by Santi Saga Acharya, the most learned of the Jain priests and the Chief *jutti* (yogi) by rank. We found ourselves in a large, square, second-storey room, with plastered floor and a few square wooden posts to support the storey above. Against the wall to the left on entering hung a square figured satin drapery, the ground of a yellow color (that of the Jain and Buddhist *bhikkhus*) and a border of red. Overhead was a small canopy of figured Indian silk. Under it a narrow platform, or dais, covered with a striped carpet (*durrie*) spread over a thin Indian mattress of cotton; a back-cushion to lean against, two small cushions for the knees of a man sitting cross-legged to rest upon, and a low footstool to mount by—completed the preparations for the Acharya's comfort and dignity at the approaching interview.

Four chairs were placed for us at one side of the platform, and there were about 300 Jains there to welcome us. Presently the whole assembly rose, a way was opened from the door, and a venerable priest enters, saluting right and left. He salutes me —as the chief of our party, I suppose—but takes no notice of the two ladies, as, being a celibate monk of austere habits, was to have been expected. All the

same, in my then state of ignorance of these Eastern monastic notions, I thought it ill-bred. He seated himself, cross-legged, in his place and all the company did likewise, each on the floor where he was standing. While they were settling down I had the chance to get a good look at the monk. He had a large, capacious head with plenty of room in it for the large brain that one could see at a glance he must possess. His hair is either very closely cut or is growing between two monthly head-shavings, as the hair of Buddhist monks does. His beard is shaven smooth; he wears the Hindu dhoti and has a thin Dacca muslin scarf—of the kind that, because of its wonderfully fine texture, has been called "woven dew"—hanging over his shoulder. He wears no caste marks nor the smallest piece of jewelry. He begins the interview by cross-questioning me about my knowledge of Jain doctrine, the dialogue being carried on through two Hindu interpreters, Messrs. Pandurang and Krishna Row. I explained the state of religion at the West, and pointed out the several influences that had tended towards despiritualizing the Western nations. I affirmed the necessity for the spread of Eastern religious ideas in those countries. To learned men like himself, I pointed out, there was a loud call to take part in this great work. They had no excuse for indolent indifference; having the wisdom for which Western people had most urgent need, it was a positive sin for them to abstain from its circulation. He followed and challenged me from point to point, and made a variety of excuses for his not taking up this new and great field of work,

but I indulged in plain speaking throughout. The point that finally won his sympathies—or, at least, his expression of them—was this. "You Jains," I said, "have the tenderest compassion for the brute creation; you feed them when hungry, bury them when dead, protect them from cruel treatment, and have even opened the Pinjrapole—an animal hospital, where all sick and suffering brutes are tenderly cared for. If any Jain gentleman here present should see a famishing dog at his door, would he not share his own meal with him, rather than see him die of hunger?" An affirmative murmur ran through the room, and as I looked around every head bowed an assent. "Well, then," I said, "the bread of religious truth is far more necessary for man's salvation than a plate of food is to the nourishment of a dog's body; you Eastern people have that truth, the nations of the world are, according to your religious tenets, all your brothers; how dare you say you will not trouble yourselves to send that bread of spiritual truth to those starving Western nations, whose spiritual ideals and hopes and perceptions are being destroyed by irreligious scientific materialism?" The old Acharya straightened himself up, and he told me through the interpreters that he should be glad to help us and would write for the new magazine we had just started as a channel for such teachings. But he never did. Yet, at the same time, it must be confessed that the Jains were most ably represented at the Chicago Parliament of Religions of 1893, by Mr. Virchand Ghandhi, who presented their views so clearly and eloquently as to win general respect and sympathy.

I closed the discussion by describing some of the ways in which so-called enlightened Western nations prove their loving-kindness for the lower animals. As I described the horrors of bull-fighting, bear-baiting, fox, deer, and hare hunting, dog, rat, and cock fighting, it was curious to watch the expression of their faces. These 300 Jains looked at each other in a sort of terror of consternation, they caught their breath, devoured me with their eyes as if to search to the bottom of my heart and see if I spoke the truth, and at last the tension became so strong that I saw they could bear no more, and stopped amid a dead silence. I then asked leave to depart, all rose to salute us, the usual garlands were hung about our necks, and we departed: many following us into the street and some even running after our carriage and shouting blessings after us. Thus began our pleasant relations with the Jain community.

A few days later I addressed a packed audience invited by the "Daya Vashistha Mandlik" to hear me discourse upon the killing of animals. I see by my notes that I described the true Universal Brotherhood to be a common kinship between all sentient beings that had the divine spark manifested in them in whatsoever degree, the ant and the elephant had it as well as man, and all men of every race and kindred had it in common, only in various degrees of manifestation; it behoved us to be kind to our fellow-men and, for the same reason, to be tender to the animals in the proportion of their helplessness; the vivisector who tortured an animal, which was strapped in helplessness to a dissecting table or shut up in a

hot-chamber of iron from which he could not escape, however great his physical agony during the experiments of science, was no whit less cruel, savage, and devilishly callous to suffering, than the Inquisitor who bound his human victim to the instrument of torture, and in the name of Christian religion, smashed his limbs, tore his muscles from their attachments, and killed the "sceptic" by the most ingenious methods of slow torture. Of course, there was much sympathy shown when the address was translated into the Guzerati language. But I never spoke under so great an apprehension of possible calamity as then. The lecture-room was in the third storey, with an almost vertical stairway, the steps of which were barely wide enough for one to rest upon his heel in descending, and a loose-hanging rope was the only substitute for a baluster. The floor of the vestibule of the room was completely filled with some hundreds of shoes, left outside according to Eastern custom; and the hall was lighted by a number of kerosene wall-lamps placed barely high enough to clear the turban of a man of ordinary stature. If an accident had happened to one of those lamps and a man's flimsy costume had caught fire, there would have been an instant panic, the fleeing audience would have stumbled over the shoes, fallen in masses over each other down the perpendicular stairway, and there would have been a holocaust of victims. It is no exaggeration to say that I was infinitely relieved to find myself in the street once more.

Mr. Keshava Narasinha Mavalankar, the father of Damodar, was admitted by me to membership on

19th October, 1879, in the presence of his son and his brother, Mr. Krishna Row, by whom all Damodar's family trouble was subsequently brought about.

Our friend Gadgil made us a visit in November, which I only mention because of an entry in the Diary to the effect that he showed us two roots which are said to possess wonderful properties. One is a cure for snake poison, the other for that of the scorpion. The former is to be macerated in water and the water drunk, which is a very commonplace affair, but the other is quite another matter. When the bitten person comes to you, you simply stroke the limb with it, using downward passes, as in mesmeric treatment, which extend from above the extreme point to which the pain has extended, along the nerves to the extremity of the limb. It is the magnetic (or magical, perhaps) property of the root that draws the pain backward to its source, the scorpion puncture. By then holding it a few minutes over the wound without contact, the pain is entirely drawn out and the patient is cured. This is very interesting and may be quite true. for surely we do not yet know a thousandth part of what medical science should know about the curative agents in nature; but there is a cure for scorpion-sting even simpler than this. Old readers of the *Theosophist* will recollect articles on the curative properties of the five-pointed star. (*Vide* Vols. II and III.) The writers affirmed that they had cured many cases of this kind by merely drawing with pen and ink a five pointed star on the patient's flesh, at the extreme point of extension of the pain, and

then, as the thrill of anguish receded, following it up with the fresh inscriptions of the figure until it had returned to the place of puncture, where the figure was written for the last time and the pain went away. The first writer's assertions were speedily corroborated by other correspondents, who reported that they had repeated the experiment with entire success. Among these was Prince Harisinhji Rupsinhji, of the Bhavnagar Royal Family, who has, first and last, cured many scores of cases, and, I believe, has given relief to hundreds from neuralgic ailments of all sorts. This creates the dilemma that we must either ascribe the cure to hypnotic suggestion or to some magical property inherent in the stellar symbol. Of these hypotheses, the Materialist will prefer the former, the Magician the latter. The important fact is that the cures happen. The only way out of the difficulty seems to be to try the signature on animals, children, or imbeciles, in short upon patients whose imagination will not be affected by the sight of the drawing or the conversation that is held concerning it and its alleged powers.

The festival of Diwali (for Dīpāvali) is a time of general illumination and rejoicing because of Bhima's killing of the demon Narakarāsuram. Visits are paid, flowers and lights brighten up the whole house, presents are given to relatives and friends, new clothing to servants, and the whole family renews its wardrobe. We went that time with Hindu friends to see the illuminations in the native quarters, and to make a few calls. On leaving one house we heard an amusing story. The party was a rich banker, the

local agent and partner of a millionaire capitalist living in the interior. At intervals of two or three years, the time being never previously notified, he turns up at Bombay, and calls on his agent to show his books of account. Item by item they are gone through, the columns added up, the totals and balances verified, and all found correct to a cowrie. Then the bland-looking, childishly simple old capitalist takes his faultlessly accurate book-keeping agent by the arm to a strong room, and locks him up, after telling him that he knows he has stolen so many lakhs, but that on payment of such a proportion, he will be released from durance vile, and the books signed as "audited and found correct". Until that is done he is to have only bread and water! Useless to protest or beg off. The old chief has had his own sure way of knowing what has been going on, and stays firm until his partner perforce yields, pays the ransom, and they embrace and part the best of friends. How comical!

I went with my friend Panachand Anandji one day to pay my respects to an old Muslim fakir, very well known in Bombay at that time, named Jungli Bāwā (literally, the Forest Ascetic). We found an old man with a sharp, inquisitive expression of face, a *mortier* cap on his head, a much-wrinkled face, and a beard closely clipped and, around his mouth and chin, shaven. He wore a dhoti with gilt thread woven into the border, and a band of gold, an inch wide, crossing the end. He was a Vedāntist and had two *gosains* (beggar pupils) to serve him. He received us on the ground floor of a large square house with an

air-well in the centre. He was squatted on a straw mat with his small brass mortar and pestle for preparing pān (betel-nut paste) beside him, together with some other small brass vessels. A blue striped cotton carpet was spread for visitors, but out of regard for my European stiff knee-joints, he had a chair placed for my use. Each visitor on entering would prostrate himself on the floor and touch the holy man's feet with his forehead, this being the most deferential form of Eastern salutation. Our long discussion covered the whole ground of the two Yogas, the Hatha and Rāja. The eighty-four postures of the former were described in even too much detail. The old man questioned me closely as to what phenomena I had seen, but I declined to satisfy his curiosity, as such experiences, I had been taught in India, were regarded as sacred, and certainly they were not to be lightly discussed in a mixed assemblage like the present. The Bāwā smiled and said I was perfectly right, for such occurrences, being outside the common experience, should not be made the subject of trivial jest and sceptical denial. Alas! if we had but followed out that rule from the beginning, what a world of sorrow and pain all of us would have been spared. He said that if I would come alone to see him we would exchange confidences, and he might show me some phenomena. The interview highly interested me, as the man was undoubtedly a genuine ascetic, and both his mind and body seemed perfectly healthy, despite his fastings and other ascetic practices.

I went again to see the fakir with the same friend on the following evening. This time he received us

in the verandah; he occupying my chair of the previous evening, and Panachand and I a low settle. A handsome standing lamp of European manufacture was placed on the floor near him, and lighted up his strong face and made the gold threads of his turban sparkle and shine. One after another Hindu visitors came, made prostration to the fakir, and then retired into the shadow at the back of the verandah, where in chiaroscuro they squatted, silent and motionless, like a company of ghosts in their white *puggaris* and *dhotis*. An Indian moonlight was shining outside, silvering the smooth surfaces of the cocoa-palm fronds, and plating with silver the polished top of our brougham. The Bāwā continued the talk about the two Yogas. He said that he had cultivated the faculty of *laghima* (extreme lightness), so that he could sit suspended in the air, and walk over water as if it were dry ground. He had taught his pupils the same. But he considered all these things child's play in reality: he cared only for philosophy, the sacred and infallible guide to the path of Wisdom and Happiness. He had learnt both Yogas. Speaking of the relation of chela to guru, he said there were three kinds of service recognized for the former: he might give money, teach the Master something new, or serve him in menial offices. He told me a long fable about a Deva and Daitya. The former wished to become the pupil of the latter for the sake of learning a secret of occult science. The latter has the power of restoring life to the dead. The Deva-pupil was cut into pieces (with his consent) and boiled, and the Teacher eats some of the horrid mess. But the pupil

thus becomes incorporated into the body and essence of the Guru. Meanwhile his daughter loses her life, but the probationary test having been passed by the father—the Deva—he restores her to life when he separates himself once more from the Teacher's body, his mutilated frame is readjusted, and his life flows again in full stream through his veins and nerves. Which of the three modes of service would I choose? I told him. He thereupon postponed the exhibition of his alleged spiritual powers, and I never saw him again.

CHAPTER VIII

VISITS TO ALLAHABAD AND BENARES

THE first cloud—not counting the Hurrychund incident—rose on our Indian horizon at about this time; the cause which was to ultimately break up our quartette of exiles, began to shape itself towards the latter end of November. It was a queer and unnatural alliance at best, a fad of H. P. B.'s which was foredoomed to breed trouble. She and I—as I have said before—were absolutely of one mind as to the Masters, our connection with them, and our readiness for service. Whatever friction there was between us, by reason of our different personalities and ways of looking at things, we were entirely harmonious as regards the excellence of our cause and the necessity for the strict performance of duty. It was quite different with our colleagues, Mr. Wimbridge and Miss Bates, who were insular English at the core and Asiatic only in a thin superficial varnish that had been laid over them by the brush of H. P. B.'s fascinating enthusiasm. He was a designer and architect, she a school-teacher or governess, of about thirty-five years of age. Both had lived some years in America, and had been introduced to H. P. B. by mutual acquaintances. Fortune was smiling on neither of them then, and both fell in with H. P. B.'s

project that they should come with us to India and practise their respective professions, with such help as we could get them through our influence with respectable Hindus. I had nothing aginst Wimbridge, but felt an instinctive foreboding as to the lady. I begged H. P. B. not to bring her with us. Her invariable answer was that the two, being patriotic English in feeling, would afford by their company the best possible guarantee to the Anglo-Indian authorities of our innocence of any political designs. And said she would take upon herself all the consequences, for she knew naught but good would come out of the connection. In this, as in an hundred other instances, I yielded to her presumably superior occult foresight; and we four sailed and, at Bombay, settled together. Worse luck for us! She began by fomenting a misunderstanding between H. P. B. and a nice young lady Theosophist of New York; which drew Wimbridge in after a while, and broke up the harmony of our household. I had nothing whatever to do with the quarrel, but ultimately had to assume the disagreeable task of forcing Miss Bates out of the Society. This was always my lot; H. P. B. made the rows and I had to take the kicks and clear out the intruders! This fact is known to all our acquaintance. My colleague was always talking about her "occult nose," yet it very seldom helped her to smell a traitor or a predestined enemy who came under the guise of seeming friendliness. Without going farther, the cases of Madame Coulomb and Solovioff, the self-accused cruel traitor and spy, are quite enough to prove the fact.

On 23rd November, a Meeting was convened at our Hall to organize the Aryan Temperance Society. I thought it a shame that the leading Hindus and Parsis should rest passive and indifferent to the shocking spread of intemperance throughout India, and suffer the Missionaries to carry out alone a counter-movement. The late Rao Bahadur Gopal Rao Hari Deshmuk, a very influential Maratha Brahmin gentleman, took the chair at our meeting, the Society was agreed upon, and we secured seventy-seven signatures to the programme of organization. We then adjourned, to meet at the call of the Chair. One more meeting was held, and we got forty more signatures, but the movement proved abortive, for nobody save myself seemed much interested in it, and I was too busy with my official duties to devote to it the time it required.

On 29th November, an event of much importance occurred: we celebrated with great eclat the fourth anniversary of the formation of the Theosophical Society. It was also our first public function of the kind, the only previous notice taken of the anniversary, that of the first completed year, having been confined to a private meeting of members at Mott Memorial Hall, New York, and an address by myself. The shifting of our Headquarters to India and our enormously increased publicity seemed to demand a change of policy and a fresh start in this respect.

Mr. Wimbridge designed and lithographed an artistic invitation card, inviting our friends to "attend at the Headquarters, 108 Girgaum Back Road, Bombay,

at 8.30 p.m., on the 29th November, 1879, a meeting commemorative of the Society's Fourth Anniversary, the founding of the *Theosophist*, and the opening of the Library. There will be addresses and a display of machinery made by native artisans." Signed by myself, as President, and H. P. Blavatsky, as Corresponding Secretary. The grounds and the lane leading to them from the public road were brilliantly illuminated; arches of flame and pyramids of Indian colored lamps were placed at the mouth of the lane and the entrance to the compound; Chinese lanterns were hung on wires stretched between the palm-trees; an arch of gas-jets, spelling the word "Welcome," lighted up the Library facade; the whole ground was spread with striped Indian carpets; 400 chairs were placed for guests; a band of twenty musicians played Indian and foreign airs—among the latter, the American National hymn—and the scene was altogether beautiful. Far above the palms, the azure, tropical, star-studded sky looked down on us. Inside the Library building, tables and walls were covered with exhibits of indigenous work in brass, ivory, sandalwood, steel; the marble mosaics of Agra, the lovely shawls and soft woollen stuffs of Kashmir, hand-woven muslins from Dacca and elsewhere, cutlery from Pandharpur, and work from the Baroda School of Arts. The Dewan of Cutch, the enlightened Mr. Manibhai Jasbhai, sent a complete collection of arms and some of the famous silver work of that State. About 500 invited guests—the best known and most respectable in Bombay—were present. Addresses were made by Messrs. Gopal

Rao Hari Deshmuk (as Chairman); Naoroji Furdonji, a beloved Parsi statesman; Kashinath Trimbak Telang, subsequently a Justice of the Bombay High Court; Shantaram Narayan, a most respected Maratha lawyer; Nurshunkar Lalshunkar, the "Guzerati Poet," and myself. Altogether, it was a most appropriate and encouraging help to our Indian career. The Europeans present expressed themselves charmed with the industrial display, and gave deserved praise to Vishram Jehta's mechanical exhibits.

Two days later H. P. B., a European gentleman friend, and I dined, by invitation, in the Hindu fashion, at the house of Gopalrao Vinayak Joshi, F.T.S., the husband of poor Anandabai, who went to America for her medical degree, took it with honors, and died soon after her return to India; leaving her self-sacrificing husband with a blasted life and a broken heart. The incidents of the dinner—at which several Brahmins ate, seated in a line opposite us—have been comically described by H. P. B. with her usual exaggeration, so I need not repeat them. A circumstance that provoked much laughter was my borrowing H. P. B.'s long gold chain and wearing it in the fashion of the Brahmin's thread, to complete my resemblance to them; my clothing, like theirs, consisting merely of the dhoti from the waist downward, the torso being left bare. Our European friend was similary attired, but H. P. B. respectfully declined our mock invitation to do likewise!

On 2nd December, she and I, with Damodar and Babula, left by train for Allahabad to visit the Sinnetts whose personal acquaintance we had not yet made.

The second subsequent morning, early, we reached Allahabad and were met by Mr. Sinnett at the station with his barouche and pair, coachman and two footmen (*syces*) in handsome liveries. Mrs. Sinnett's reception of us at the house was most charming, and before she had spoken a dozen sentences we knew that we had won a friend beyond price. A Judge of the High Court and the Director of Public Instruction were among the callers that day, Mr. A. O. Hume and Mrs. Hume called the next morning, dear Mrs. Gordon made her appearance on the 7th, having travelled a long distance to see H. P. B., and little by little we got to know most of the Anglo-Indians of the Station who were worth knowing by reason of their intelligence and breadth of mind. Some of them were very prepossessing, but to none were we so attracted as to the Sinnetts and Mrs. Gordon, then in the prime of her beauty and sparkling with intelligence. I thought it was worth the voyage to India just to get to know those three. And think so still.

It is strict etiquette in Anglo-India for the new-comer to call on the residents, but as H. P. B. would call on nobody, those who cared to know her had to ignore custom and visit her as often as they liked.

Our time was pretty well filled with visitors and dinner-parties, the mention of which latter recalls an interesting fact to my mind. The Sinnetts, H. P. B., and I were driving out to dinner one evening, and had to pass through a part of the town which we had not seen before. At a point where two roads intersected, H. P. B. suddenly shuddered and said:

"Dear me, what a horrible feeling I have! It seems as if some awful crime had been committed here and human blood spilt." Sinnett said: "Do you not know where we are?" "Haven't the slightest idea," answered she. "How could I, when this is the first time I have been out of your house?" Sinnett then pointed to a large building to our right, and told her that that was the very Mess-house in which the Officers of such-and-such a regiment had been murdered at dinner by their sepoys, during the Mutiny. This served as the text for a most instructive little discourse by H. P. B. on the permanency of registers of human deeds in the Astral Light. The Sinnetts, the High Court Judge, and his family and other guests, to whom the Sinnetts told the story immediately on our arrival at the house, are living in London and can corroborate my narrative. And, in fact, this will be an appropriate place for me to say that, barring the comparatively few instances where H. P. B. and I were alone and which I have noted as I went along, her phenomena happened in the presence of many witnesses, most of whom, I presume, are still alive, and have the full opportunity to correct any misstatements or exaggerations into which, after this long lapse of years, I may unwittingly have fallen. At the same time, it is satisfactory to know that, although my "Old Diary Leaves" have been appearing in the *Theosophist* since March, 1892, and have found readers and provoked correspondence and editorial comment all over the world, not a single denial of my facts has been made, and but one modification suggested, that by Mr. Massey as

to some particulars of the butterfly-elemental story, in one of my earliest chapters. The conviction of my gullibility has undeniably become fixed in many minds by my narratives, but these criticules, being ignorant of the facts, and possibly in most cases of all psychical science as well, their opinion is not worth much. "Truth is stranger than fiction" always, and when every possible discredit has been cast on H. P. B., the residuum to her credit is overpoweringly great.

Forty-six years of modern mediumistic phenomena have not yet taught Western scientists the principles of the law of spirit intercourse, nor those of psycho-physiological abnormalism. The self-complacent way in which they discuss H. P. B.'s gifts from the point of view of her personal moral nature is a saddening proof of their ignorance of the lessons taught by Charcot and Liébault. Their time would not be wasted if they should spend some months also in the real study of Eastern literature. As a sample of the prejudiced disbelief of Western scientists, I give the following: We had to dine with us one evening a Professor of Physical Science in the local University, a man of wide renown and a charming companion. He discussed with H. P. B. her theory of the "raps" and finally asked her to produce some. She did so in various parts of the room, on the floor, the walls, the glasses of the hanging pictures, on a newspaper held out to her by Mr. Sinnett or the Professor—I forget which—and on the Professor's hand; she, sometimes not even touching the surface to be rapped upon, but, as it were, throwing a current of psychic

force against it from a distance. Sinnett then placed a large glass clock-shade on the rug before the fire and she rapped on that. Finally, to give the best possible proof that his theory (or rather, Faraday's, Tyndall's, and Carpenter's) that the raps were mechanical vibrations made by the intended, or unintentional, pushing of the medium's finger on the spot, I suggested a test which was accepted. I got H. P. B. to place her finger-tips against one of the glasses in a door that gave upon the verandah, took the lamp outside with the Professor, and held it so that the flesh of her fingers was highly illuminated, and she then caused as many raps as he successively called for. The fingers did not change place a hair's breadth nor her muscles contract, but we could see the nerves quivering before each rap, as though some fine current of nerve-force were thrilling through them. The Professor had nothing to say, save that it was all very strange. It seemed to us, her friends, as if a more conclusive proof of her good faith could not have been demanded. But the Professor subsequently declared her a trickster. Poor thing! that was all she got for trying to give a scientific man the facts on which to begin the serious study of psychology. I think the bitter experience so disgusted her as to make her even less willing than previously to take the least trouble to convince that class of observers.

On the following day I lectured to a very crowded audience on "Theosophy and Its Relations to India". The chair was occupied by Mr. A. O. Hume, since known as the "Father of the Congress," who made an eloquent and altogether excellent address; far better

than my own, for H. P. B. was in a bad temper that day and nagged me, even up to the moment when we mounted the platform, to that degree that my brain was all confused. Sinnett tells in his *Incidents*, etc., how she raged in the carriage on the way home. He writes:

"No sooner were we clear of the Hall compound on our drive back than she opened fire on him with exceeding bitterness. To hear her talk on this subject at intervals during the evening, one might have thought the aspirations of her life compromised. . . . Colonel Olcott bore all these tantrums with wonderful fortitude."

Of course: I loved her lovable qualities and out of gratitude for showing me the Path, and bore her savage temper because the good she was doing outweighed all sense of personal suffering.

But there was a decided "method in her madness"—I noticed throughout our relationship: she abused only her staunchest friends, those whom she felt were so attached to her and devoted to the Society as to be ready to put up with everything from her; to others like Wimbridge and some others I might name, whom she knew would not bear with such treatment, she never raised her voice, nor cast an epithet at them. She seemed to fear losing them.

On 15th December, we left with the Sinnetts and Mrs. Gordon for Benares, reaching there at 4 p.m. in due course. At the station we were met by Damodar and Babula, and the Munshi of the Maharajah of Vizianagaram, who invited us on behalf of his master to occupy one of his residences and be his

guest. Accepting, we drove to the Ananda Bagh, a small palace standing in a high-walled garden planted with flowers and trees, in geometrical beds, and found ourselves pleasantly lodged. Swami Dayānand Saraswati was awaiting us with warm greeting, and we found that he had kindly seen that every provision had been made for our comfort. He was looking very thin and emaciated after an attack of cholera, but this had notably refined and spiritualized his face. He was lodged in a small apartment near the gate. The main building comprised a number of small rooms around a large central hall, which had a high ceiling and attic windows giving on the flat, terraced roof. Heavy curtains hung between light masonry pillars between arches at the front side, and passing these one emerged on a platform and a broad flight of steps, all in masonry. Some sofas, a writing table, and a dozen chairs comprised the furniture of the hall. As evening fell the air was sweet with the perfume of roses, borne in from the garden, and the moon shone in lovely radiance on a grassy-banked tank, with two flights of steps descending to the water at opposite sides. His Highness' agent, the learned Dr. Lazarus, had furnished the house for us, supplied servants, and put two carriages at our disposal.

A hot discussion sprang up in the evening between Mr. Sinnett and H. P. B. on the subject of phenomena, he insisting, with apparent reason, that if she could afford to expend only a given amount of psychic force she ought to use it exclusively for doing phenomena for men of science, under convincing test conditions; she angrily refusing. Although I took sides with

Sinnett, she would not yield the point, but consigned the whole Royal Society to perdition, declaring that her experience at Allahabad had been quite enough. They parted under constraint, and Sinnett declared he should return home the next day. Morning brought peace, however, and we drove to see the Maharajah's principal palace and the Durga Mandir, or celebrated Monkey Temple, where innumerable mischievous simians were fed and petted. That evening, as we and two visitors were sitting in the high-roofed hall, two roses phenomenally dropped in our midst and all were happy again. After an early *Chota hazri* (tea and toast) the next morning we all drove to the retreat of Majji,[1] a very well-known female ascetic, learned in Vedānta, who occupied a *guhā* (excavated cave) with buildings above ground, on the bank of the Ganges, a mile or two below the city of Benares. She inherited this *āshrama* from her father, together with a house in town and an extensive and valuable Sanskrit library. It is a delightful spot in the fresh early morning, an ideal place for calm meditation and study. Situated on the edge of a bank forty or fifty feet above the river, and sheltered by some large trees, we found it charming to sit on the platform and engage in discourse with this remarkable woman: one out of many Indian experiences for which life in Western countries could never prepare one. At that time Majji appeared about forty years of age, fair-skinned, with a calm dignity and grace of gesture that commanded respect. Her voice was tender in tone, face and body plump, eyes full of

[1] Since deceased.

intelligence and fire. She refused to show us phenomena (always, it will be recollected, our first request on such occasions), which H. P. B. and I would have been glad to see on account of the previous evening's friction, but her reasons for declining were admitted by all to be sufficient, and the visit was serviceable in its effect on our good friends. I do not know whether she could have produced them or not, but being a true Vedāntin, she spoke very strongly as to the folly of people's hankering after such comparatively childish distractions, instead of enjoying the calm delight of reposing the mind with the realization of the ideals which Shankarāchārya's incomparable philosophy depicts. Go where one will throughout India, it will ever be the same experience, the most honored ascetics are those who decline to exhibit such powers as they may possess save under very exceptional circumstances. The wonder-workers are regarded as of a much lower degree, principally as black magicians, and as such appeal to the lower classes for patronage and notoriety.

The Sinnetts left for home at 2 p.m. That evening I initiated Mrs. Gordon into the Society with our simple ritual, in Swami Dayānand's presence, and he gave her instructions for developing the yogic powers.

The next morning Mrs. Gordon and I, accompanied by the Swami, drove to the Maharajah of Vizianagaram's Girls' School, and were shown about by Dr. Lazarus. We found a large number of bright, intelligent Hindu girls receiving instruction, and their examination by the Swami was very interesting. We

particularly admired their Devanāgari writing, which is done on board slates with a pointed bit of wood dipped in a creamy solution of chalk.

In the evening the Swami, Damodar, and I went over the ritual together and made sundry improvements; but in practice I doubt if I have ever employed the same formula twice in the hundreds of cases of admissions into the Society that I have made. The ritual is, in point of fact, little else than a serious explanation to the candidate of the nature of the Society, its principles and aims, its duties to the members, and theirs to it and to each other. It has always seemed to me that the putting of a man's foot into the unworldly path of the search after the nobler self and worthier ideals of life is the most important step that one could take, and the occasion has always impressed me with its solemnity. I have admitted members in almost all parts of the world, and have never failed to make a very clear and frank explanation of the nature of the undertaking upon which they were entering.

Two Muslim jugglers, infinitely inferior to the miracle-working (and never-existing) Govindaswamy described by Jacolliot, were brought to show us their skill. Along with the commonplace tricks we all have seen many times, they did some that were novel and striking. Among these were the stopping by command of wooden balls moving on a tightly-stretched perpendicular string, and the causing of them to ascend or descend without visible cause; the throwing of sand into a basin of water, pouring off the water and reproducing the sand perfectly dry;

and the resuscitation of a cobra after it had been fearfully mangled and apparently killed by a mongoose, by touching it with a bit of dried root.

The same afternoon I lectured at the town hall to a crowded audience, Babu Prāmada Dāsa Mittra, one of the most respected and highly-educated Vedāntin gentlemen of Benares, occupying the chair and benefiting the assemblage by a luminous discourse at the close of my remarks. My topic was the material and spiritual needs of India, and I illustrated the former by exhibiting a collection of the engraved brassware for which the Holy City is renowned, and pointing out the slovenly workmanship as evidence of the industrial decadence that has set in, and that the dearest interests of the country require to be stopped. In fact, scarcely one of the pretty vases or covered jars would stand square on the polished table before me, the covers of the jars were badly fitted, the feet were badly soldered on, and the two handles of a vase were rivetted at unequal heights. Since then the establishment by Government of Schools of Art has done something to better the condition of things, but there is such a rage for cheap things and so little willingness to pay for the finish which we in the West consider indispensable, that there is immense room for improvement. My kind interpreter on this occasion was Munshi Bakhtāwar Singh, of Shajahanpur. A return visit paid by Majji to H. P. B. the next morning caused surprise, as, we were told, it was a most unusual thing for her to call upon anybody save her Guru, and upon a European never. I was under a sort of

glamor about this woman from the tales that had been told me respecting her, and, in fact, I have visited her every time I have been in Benares; the latest, with Mrs. Besant and the Countess Wachtmeister. I believe I have been the means of getting her some staunch supporters, who have done innumerable acts of kindness and reverence to her, among them, the late beloved Nobin K. Bannerji, of Berhampur, and his associates in our splendid local Branch at that place. I held to my first belief that she was an adept for many years. At that time of her call she was, remember, a complete stranger to us, and, so far as we knew, nobody had explained to her what we were, save we ourselves when we called at her *āshrama*. Yet she freely told Mrs. Gordon, Damodar, and myself, in H. P. B.'s absence, a marvellous tale about her. She said that H. P. B.'s body was occupied by a Yogi, who was working in so far as he could for the spread of Eastern philosophy. It was the third body he had so used, and his total age in the three bodies was about 150 years. She made the mistake of saying that he had been inside H. P. B.'s body sixty-two years, her age being then only forty-eight in all: a bad shot certainly. Speaking always as a Vedāntin, she would allude to herself as "this body"; laying a hand on her knee or on the other arm, she would say "this body's" family, studies, residence, pilgrimages, or what not. I finally asked her why she spoke so and who she was. She said that the body we saw was entered at its seventh year by a Sannyāsi and had been occupied by him ever since; he had not completed his study of Yoga and so became reborn. The

"she" therefore was, in reality, a "he" overlaid with a female body, a parallel case to H. P. B.'s. What is certain is, that the occupant of her body had a most recalcitrant one to manage.

The same evening I lectured at the Bengali School House to another overflowing audience, and the experiences of the following day were so interesting that they must be accorded a chapter to themselves.

CHAPTER IX

PHENOMENA AND PANDITS

THIS being our first year in India, every scene and experience had the charm of novelty, and we enjoyed them like children. It was something, after all, to be suddenly transferred from prosaic America and its atmosphere of mad haste and bitter commercial competition, to the calm and mental peace of hoary India, where the sage had first place in public estimation and the saint was exalted above all princes. Scarcely any head would have been unaffected by the intoxication of the popular love and seeming reverence that we received, the delightful discussions of philosophy and spiritual ideals, the contact with high-thinkers and noted scholars, the ever-changing, picturesque daily incidents of our wanderings. I, who had passed through the social hurricane called the war of the Rebellion, and the tumult of a long public service, was moved to a degree I can now, with my present knowledge of Pandits and their ways, hardly realize, by a meeting of the Literary Society of Benares Pandits, convened on 21st December in my honor. The President was Pandit Ram Misra Shastri, Professor of Sankhya in Benares College, and the other officers his colleagues. It was a typical Oriental assemblage,

every one present, except myself, being dressed in Indian garb, and every face representing the highest Aryan ethnical type. On arrival I was received with every mark of courtesy and conducted to the seat of honor by the learned President. Coming in from the glare of sunshine, it took a little time for my eyes to get accustomed to the dim light of the brick-paved, cool room, in which a fine scent of sandalwood and tuberose blooms hung in the air. Amid a perfect silence, broken only by muffled sounds of rumbling vehicles and the jangling brass discs of ekkas, that came from the distant street, addresses of welcome were read to me in English, Sanskrit, and Hindi, expressive of the pleasure the Pandits of Benares had felt on hearing of the interest taken by our Society in Sanskrit Literature and Indian Philosophy; bidding me heartily welcome, and promising their lasting sympathy and goodwill. In my reply, I took the opportunity of pointing out what an immense service the Benares Pandits could, with the help of English-knowing graduates, do to the cause of Aryan learning by inventing Sanskrit equivalents for the numberless terms derived from the Greek and Latin, which were employed in scientific writing. For example, they might make Sanskrit synonyms for Oxygen, Hydrogen, Nitrogen, Carbon, Electricity, Magnetism, Attraction of Cohesion, Gravity; the names of chemical elements and compounds; those of Biology, Botany, Geology, etc., etc., etc. Practically, I had already discovered when being interpreted into an Indian vernacular, that, in my remarks upon Modern Science and its relations with Ancient Science, my

interpreters had to merely pronounce the technical words without translation, and hence without conveying to, say, an orthodox Pandit who had never read a Western scientific book, the least idea of what was meant. Sanskrit was abundantly rich in terms denoting every object, substance, physical or mental condition, law, principle, ideal, etc., connected with philosophy, psychology, and metaphysics, and the West would be forced to either coin new equivalents for them or take them over into its various tongues as, in the course of time, the Theosophical Society and other popularizing agencies spread Eastern views throughout the world. But the need of the hour in India was to make it possible for every undergraduate and graduate to see for himself how much the Aryan thought was in harmony with modern scientific discovery, how his ancestors had traversed the whole field of knowledge, and how proud and glad he ought to be that he was of their blood, the heir of their wisdom. Some discussion ensued between the Pandits and myself, in which I cited many instances of the necessity for a new nomenclature, with the result that the Society voted unanimously for the appointment of a Philological Committee. I was also honored by election as an Honorary Member of the Society, and after the usual garlanding, rosewater-sprinkling, and distribution of betel and *pān*, the meeting broke up. In turning over the leaves of the 1st volume of the *Theosophist*, I find an essay by Pandit Ram Misra Shastri upon "The Vedanta Darsanā," from which, to give an idea of the fondness of the Eastern mind for hyperbole, I venture to quote the following:

"Here in the land of Benares, fragrant as it were with the stores of knowledge, arrived Colonel Olcott, with a mind earnestly desirous of acquiring the knowledge of the manners, customs, mechanical and other arts and sciences of the ancient Aryas, and having formed friendship with the members of the Brahmamritavarshini Association, showed at a meeting of that assembly a very great liking for the Indian Philosophies (the Darsanas Shāstras).

"Methinks that although he is born in a foreign land, yet he is assuredly a native of India, inasmuch as in him the effect of the original antecedent relationship has shown life afresh, and he has made not infrequent efforts towards the good of India. Nevertheless, enough with such series of conjectures. The fact, however, still remains that he longs to know the philosophy (the Darsanas) of our country and, being desirous of spreading in foreign countries the knowledge of the Vedant Darsana, invited earnestly and not infrequently Vedantic contributions to their famous journal which, as it were, acts the part of the moon in expanding the lotus of Indian Wisdom."

From this meeting I went to pay my respects to Professor G. Thibaut, Ph. D., Principal of Benares College, and an old pupil and protégé of Professor Max Müller. I found him a most agreeable man, deeply versed in Sanskrit, yet without pretence or pomposity: in short, a real specimen of the German litterateur. From thence to see Mr. Wall, the local Magistrate and Collector; a title meaning nothing to Western people, but here in India designating the official who rules

almost despotically over more or less millions of Hindus in a given district, to whom he is at once the Providence, the Jupiter Tonans, and all the gods and goddesses "rolled into one".

That evening there was a glorious moon, shining day-bright out of a sky without a cloud. Doctor Thibaut, the College Sanskrit Pandits, Babu Pramādā Dāsā Mitra, Swami Dyānand, Mr. Ram Rao, one of Swami's disciples, Damodar, Mrs. Gordon, H. P. B., myself, and others, whose names are not recorded, sat on chairs and a large Indian carpet, on the platform at the head of the steps, with the moon turning our white bungalow into an ivory palace and silvering the water of the lotus tank before us, and discoursed on Aryan themes. The Swamiji was, of course, heterodox in that he denied that idol worship was authorized by the Vedas, the primal source of all inspired religion, the foundation of Brāhmanism in particular. Babu Pramādā Dāsā and the College Pandits were intensely orthodox, *i.e.*, idolaters; so the reader may fancy the warmth and volubility of the debate, to which Dr. Thibaut and we others, Europeans, gave impartial attention. Every now and then H. P. B. would get translated to her something that had been said and thereupon "take a hand in," to our great amusement; for she was so deliciously witty and unreservedly outspoken as to be irresistible. What made us laugh the more was, that her most comical outbursts would be received with unruffled solemnity by the Hindu professors, who had probably a congenital incapacity for joking, and could not form to themselves the least idea of what this prodigious

woman was driving at. Then she, seeing this, would turn to us with obstreperous energy and curse the others for a pack of bigoted fools!

At last, some of the Pandits took leave, and the rest of us went within and continued the conversation. There were H. P. B., Mrs. Gordon, Dr. Thibaut, the Swami, Pramādā Babu, Ram Rao, Damodar, and myself present. The talk was upon the subject of Yoga. "Matam Plavatsky," said Dr. Thibaut, in his strong German accent, "dese Pandits tell me dat, *un*toutedly, in te ancient times dere vere Yogis who hat actually teveloped the Siddhis tescribed in the Shāstras; tat dey coult too vonterful tings; for instance, tey coult make fall in a room like dis, a shower of roses; put now nobody can do dat." I ask my friend's pardon for transcribing his then accent and words, but the scene comes back to me so vividly that I can almost hear him speaking. He can get his revenge the first time he hears me speak German! I see him now; as he sat on a sofa to H. P. B.'s right, with his frock-coat buttoned to his chin, his intellectual, pale face as solemn as though he were pronouncing a funeral oration, and his hair cut as short as it could be, and standing up like spikes all over his head. He had no sooner pronounced the last word than H. P. B. started up in her chair, looked scornfully at him, and burst out: "Oh, they say that, do they? They say no one can do it now? Well, I'll show them; and you may tell them from me that if the modern Hindus were less sycophantic to their Western masters, less in love with their vices, and more like their ancestors in many ways they would not have to make such a

humiliating confession, nor get an old Western hippopotamus of a woman to prove the truth of their Shastras!" Then, setting her lips together and muttering something, she swept her right hand through the air with an imperious gesture, and bang! on the heads of the company fell about a dozen roses. As soon as the momentary shock of surprise was over, there was a scramble for the roses, but Thibaut sat as straight as a post and seemed to be casting it up, pro and con, in his mind. Then the discussion proceeded with renewed vivacity. The Sankhya was the topic and Thibaut put many searching questions to H. P. B., which she answered so satisfactorily that the Doctor said that neither Max Müller nor any other Orientalist had made so clear to him the *real* meaning of the Sankhya philosophy as she had, and he thanked her very much. Towards the end of the evening, in a pause in the conversation, he turned to H. P. B. and —always keeping his eyes fixed towards the floor according to his habit—said that, as he had not been so fortunate as to get one of the roses that had so unexpectedly fallen, might he be favored with one "as a souvenir of this very delightful evening"? Those were his very words. His secret thought probably was, that if the first floral rain had been a trick she would not be ready for a second, if taken unawares! "Oh yes, certainly," she said, "as many as you like." And, making another of her sweeping gestures, down fell another shower of flowers; one rose actually hitting the Doctor on the top of his head and bounding into his lap as he sat bolt upright. I happend to be looking at him at that moment and

saw the whole incident. Its effect was so funny as to set me off into a fit of laughter. He gave a little, very slight start, opened and shut his eyes twice, and then taking a rose and looking down at it, said with imperturbable solemnity: "*De veight mooltiplied py te felosity, proves dat it moost haf come from a creat distance.*" There spoke the hard savant, the unimaginative scholar, who reduces all life to an equation, and expresses all emotions by algebraical signs! The story of the discomfiture of the larking Paris students, who had dressed up one of their number in a bull's hide, rubbed phosphorus over the eyes and lips, lay in wait for the learned Cuvier in the College Campus one dark night, and with bellowings sprang out before him in the hope of giving him a start, came to my mind. As everybody knows, the legend is that the great naturalist merely paused a moment, looked at the silly apparition, said: "Humph! hoofs; horns; herbivorous"—and walked quietly on, leaving the ambushed students crest-fallen enough. Let that be as apocryphal as one pleases, this Benares incident is the simple truth, as every one present will attest.

But we had not done with the evening's surprises. Dr. Thibaut finally took leave and I conducted him to the entrance, where I lifted the purdah (curtain) to give him egress. Damodar followed after me with the light—a student reading-lamp with shade, vertical rod for the body of the lamp to slide upon, and a ring at top to carry it by. H. P. B. also left her seat and was approaching us. The Doctor and I exchanged a remark on the

beauty of the night, shook hands and he turned to go. I was just dropping the curtain when I saw on H. P. B.'s face that strange look of power which almost always preceded a phenomenon. I called back our guest and pointed to H. P. B., who spoke never a word until she took the lamp from Damodar's hand, held it by her left forefinger, looked fixedly at it, pointed at it with her right forefinger and in an imperious tone said: "Go up!" The flame rose and rose until it came to the top of the chimney. "Go down!" said she: it slowly descended until it burnt bluish at the wick. "Go up!" she exclaimed, "up: I command you." The obedient flame once more mounted to the top of the chimney. "Down!" she cried; and once more it sank to the point, almost of extinction; whereupon she returned the lamp to Damodar, nodded to the Doctor and went into her bedroom. This, again, is a plain unexaggerated tale of what really happened in our presence. If the sceptic would explain away the rose-shower incidents by the theory of confederacy,[1] at least here was one instance of a genuine phenomenon to which the theory of fraud does not apply. She said it was very simple: a Mahatma was there, invisible to all but herself, and he had just turned the lamp up and down while she spoke the words. This was one of two explanations given by her at different times, the other being that she had power over the elementals of

[1] I should have mentioned that when the two roses dropped in Mr. Sinnett's presence (see Chap. VIII), he and I at once hurried to the staircase leading to the roof-terrace, ran up, and searched about for any possibly concealed confederate. We found no one.

Fire, and they obeyed her commands. I think this is the more probable of the two. As for the facts, they are indisputable, and everybody is free to attach his own theory to them. To me, the incident was one more in a long series going to prove her possession of real and extraordinary psychical powers; facts upon which I could fall back whenever her good faith might be challenged by her critics or impugned by her own indiscretions of language and of actions. Her intimate friends believed in her in spite of her often feverish outbursts of temper, when she would declare herself ready to shout from the housetops that there were no Mahatmas, no psychical powers, and that she had simply deceived us from first to last. Talk of ordeals and trials of faith! I doubt if any neophytes, postulants, or disciples ever had to undergo fiercer ones than we. It seemed her delight to drive us frantic with her vagaries and self-accusations, she knowing all the while that to us doubt was impossible in view of our experience with her. That is why I hesitate to place the least value on her so-called "Confession" to M. Aksakof of her having had a turbulent and disreputable past. In fact, I had for years in my possession a bundle of old letters which proved her innocence of a certain grave fault that she has been charged with, and her having deliberately sacrificed her own reputation to save the honor of a young lady who had met with a misfortune. But let me not be drawn into further digression. Time will vindicate the memory of this most unhappy victim of social injustice, and meanwhile her books and her teachings stand as her imperishable monument. My

souvenirs of those long years of our common work, their struggles, sorrows, and successes, will help to show her in her true character, and, while written with the candor of the historian, they will, I hope, reflect also the spirit of loving friendship which animates their author.

After all our visitors had departed the Swami sat along with us, explaining to Mrs. Gordon the philosophy of such phenomena as we had had shown us. A note in my Diary reminds me of the intense interest with which he had watched H. P. B. while they were in progress, and, whatever he may have said later, when he chose to break with us, there is not the slightest doubt as to his having been perfectly satisfied of their genuineness at the time.

Mrs. Gordon left for her home the following morning. Dr. Thibaut came and stopped until it was our time to go to the train, and we reached Allahabad in time for dinner, and spent a quiet evening with our kind friends, the Sinnetts. The next day H. P. B. and I were given a reception in town by leading Hindu gentlemen, at the Allahabad Institute, and I made an address upon "Ancient Aryavarta and Modern India," which drew out several fervid responses at the close, and a vote of thanks, with the obligatory garlands and scented-water sprinklings. H. P. B. was also coaxed into making a brief discourse, and acquitted herself admirably.

Callers, discussions, dinner parties, and evening gatherings at the house filled up our few remaining days at "Prayāg," the holy city—as Allahabad used to be called. On 26th December I received

Mr. and Mrs. Sinnett into membership, the ceremony being made unusually interesting by a voice replying "Yes, we do" to my question whether the Masters heard the pledges of the candidates and approved of their admission into the Society. Truly, events have amply proved the value of their accession to our then small membership. On the 30th, at 8 p.m., we left for Bombay after this most delightful visit, passed two nights in the train, and reached home on New Year's Day, 1880. On the same day of the previous year, we were tossing on the stormy Atlantic, and yearning for Bombay. Our Indian life began in clouds, treachery, and disappointment; the year closed in bright promise for the future! Friends gained, obstacles surmounted, enemies baffled, our Magazine founded, the ties becoming stronger that were to bind us for life to India and Ceylon. On 31st December I wrote: "This day we have 621 subscribers to the *Theosophist*," and, however paltry that may sound to Western people, accustomed to the wonderful statistics of their journals, it was a very respectable circulation for India, where the leading daily papers of Calcutta, Bombay, and Madras have only 1,500 to 2,000 names on their mailing registers!

The first formal meeting of the Theosophical Society, as a body, in India, was held on 4th January, 1880, in the Library.

The growing business of the *Theosophist* made a deal of work for us, for, being too poor to hire helpers, we had to do the packing, addressing, and pasting, as well as the editorial duty. In addition to which was the ever-growing correspondence to look after;

so that I seldom got to bed before a late hour. This month the Magazine began to pay its way.

To keep up the interest of our members I undertook a course of weekly lectures at the Library on Mesmerism, Psychometry, Crystal-reading and allied subjects, with experimental illustrations. I treated them all from the point of view of their evidential value in the problem of the superior consciousness of man. A number of our members proved excellent sensitives, and the attendance was always large at the meetings.

We received, 15th January, from Russia the news that H. P. B.'s first Indian letter on the *Caves and Jungles of Hindustan* had made a great stir; everybody was talking about it. On 1st February we all witnessed a special performance by students of Elphinstone College, of a play called "Harischandra," which deeply interested us. This was not only on account of its novelty and picturesqueness to us Westerns, but also because we saw unfolded in this drama the undoubted prototype of the Biblical story of Job. So few beyond the Red Sea know the Purānic story of Harischandra that I am tempted to reproduce from Ward's *History of the Hindus* the following brief summary: with an important prefix, however. The story, as told in *Harischandropākhyāna*, recites that a sort of wager was made by the two great Rishis, Vashistha and Visvāmitra, on the subject of King Harischandra's inflexible virtue: the one declaring him to be the most perfect among mortals, the other replying that he had never been properly tested. If he had had to suffer the miseries of

common men, his virtue would have collapsed. The dispute ended in an agreement that Visvāmitra should be free to plague the king until he was satisfied as to his pre-eminent merit. The story taken by Rev. Missionary Ward is from the *Markandeya Purāna*. His omission to note the resemblance to the almost identical story of the temptations and victory of Job is rather amusing. Here is his version :

Harischandra's Kingdom extended over the whole earth ; he was so famed for liberality that Visvāmitra, the sage, desirous of seeing the extent of it, went to him and asked a gift. The king promised to grant him whatever he would ask. The sage demanded his kingdom and it was granted. He then asked for the fee which accompanies a gift, which the king promised to give in a month. But where should the king reside, since he had surrendered the earth to Visvāmitra ? The latter ordered him to go to Benares, which was not reckoned a part of the earth. Visvāmitra, tearing a piece of cloth into three pieces, divided it amongst the king, the queen, and their son, and the family departed ; the king attempted to take with him a gold drinking-cup, but Visvāmitra prevented him. They were nearly a month in walking to Benares, where they had no sooner arrived than Visvāmitra came and demanded the fee. The king asking from whence he should procure this, seeing he had surrendered his all, the sage directed him to sell his wife. A covetous Brahmin bought her, who allowed her food only once a day.

Visvāmitra, now complained that the sum raised by the sale of the queen was too little, and refused to accept it. The king was then led round the market, with a blade of grass in his hair, to signify that he was for sale, when a man of the lowest caste bought him and made him a swineherd and superintendent of the place where the dead are burnt. With the money thus raised the fee was paid and Visvāmitra returned home.

Harischandra's son remained at the house of the Brahmin with his mother; but the Brahmin resolving that he should not live idle, sent him daily to gather flowers in a forest, near a hermit's hut of leaves, where they broke down the trees and did much mischief; upon which the hermit forbade them once, twice, thrice, but they still continued obstinate. At last he denounced a curse on the next boy who should dare to transgress, and Harischandra's son was soon bitten by a snake and died. The distressed mother entreated the Brahmin, her master, that, as they were of the Kshatriya caste, the dead body might not be thrown into the river. The Brahmin promised to send wood to burn the body, when the mother, carrying her child to the landing place, where they burn the dead, laid it down and began to weep aloud and bitterly. Harischandra was aroused by her cries and, going to the spot, saw a female who had brought a dead body to be burnt. He demanded the usual fee for liberty to burn the corpse. She in vain pleaded that she was a poor widow, and could give nothing; he demanded that she should tear the cloth in two which she wore and give him the half

of it, and was proceeding to beat her with the iron crow in his hand, when she wept and began to tell him her miserable tale; her descent; that she was the wife of King Harischandra, and that this dead child was her son. All the feelings of horror, sorrow, and love started up in his bosom at once, and he confessed to the poor broken-hearted mother that he was her husband, the father of the dead child—that he was Harischandra. The woman was unable to believe him, but he related some secrets that had passed betwixt them when king and queen, from which she knew he must be Harischandra. She then put his dead son into his arms, and they both sat down and wept bitterly. At last, resolving to burn themselves with the dead child, they prepared the fire, and were about to throw themselves into it, when Yama and Indra arrived, and assured Harischandra that they had assumed these forms and carried him through these scenes to try his piety, with which they were now completely satisfied. They raised the the dead child to life and sent the king and queen to take possession of their kingdom.

The plot of the play that we saw represented followed the lines of the *Harischandropākhyāna*, the curtain rising in the Prologue upon a scene in Indra's Heaven, with the two Rishis in debate together, and falling on the exit of Visvāmitra to put Harischandra to the test. Every one to his taste, but it seems to me a much better beginning of the story than that given in Job i, 6 to 12; for here are two equals—advanced human adepts—wagering together, while in the other

case the Devil with impunity intrudes into the presence of God, sneers to His face about the sham virtue of His devout servant, and instead of being blasted where stood, actually provoking the "Lord" into giving a most deserving, pious, and innocent man into the power of the "Adversary" to morally vivisect!

The anniversary of the landing of our quartette at Bombay—15th February—was celebrated by our working all day, save when receiving visitors; by Mr. William Scott, D.P.W., dining with us; and by my sticking to my desk until 2 a.m.

About this time I proposed the institution of a Medal of Honor. From the *Theosophist* for March, 1880, the following excerpt shows the object in view:

"The said medal to be of pure silver and made from Indian coins melted down for the purpose; and it shall be suitably engraved, stamped, carved, or embossed with a device expressive of its high character as a Medal of Honor. It shall be annually awarded by a committee of native scholars, designated by the President, to the native author of the best original essay upon any subject connected with the ancient religions, philosophies or sciences; preference being given, other things being equal, to the occult or mystical branch of science as known and practised by the ancients."

An admirable committee was selected, and the offer published from time to time, but neither of the essays sent in was thought worthy of such a

distinction. Babu S. K. Ghose and other friends sent me some very ancient Indian coins for the purpose, and they are still in my custody. The object was, however, substantially realized by the foundation of the T. Subba Row Medal at the Convention of 1883, which has been awarded to Judge P. Sreenivasa Row, Mme. H. P. Blavatsky, Mr. G. R. S. Mead, and Mrs. Annie Besant, for specially meritorious Theosophical publications.

On 4th March, a European lady of Northern India, wife of a high military officer, was admitted into the Society, and I mention the fact merely to recall a circumstance which shows the utter lack of social relations between the two races. After the ceremony of admission of the candidate was concluded, I called on several of our cleverest Parsi and Hindu members to express any sentiments of goodwill and fellowship that they would wish the new lady member to convey to our colleagues in London. Short speeches were made by Messrs. Seervai, Deshmukh, Mooljee, Patwardhan, and others, their views being given in excellent taste and perfect English. Mrs. M. was "astonished and delighted" —she said—to find so much intelligence among the natives. In her eighteen years of residence in India she had never even spoken to any Hindu but her servants! And she, the wife of a high officer. A very much more important acquisition to our membership was that of Khan Bahadur N. D. Khandalavāla, one of the ablest men on our rolls, who was admitted at a special meeting of the Society on 9th March. The application for membership of Baron

J. Spedalieri, of Marseilles, one of the most erudite Kabalists of Europe and chief pupil of the late Eliphas Levi, reached us on the 19th of the same month. The same month brought us a Collector and Magistrate of the Punjab, a C. S., as a candidate. On the evening of the 25th, H. P. B., Damodar, and I had an experience of a most delightful character, which I have related elsewhere from memory, but which must now be repeated in its proper place from my notes of the same evening written in my Diary.

We three had driven out in the open phaeton that Damodar had presented to H. P. B., to the farther end of the causeway known as Worli Bridge, to enjoy the cool sea-breeze. A magnificent electric storm was raging, unaccompanied with rain, the flashes being so vivid as to light up the neighborhood almost like day. H. P. B. and I smoked and we all chatted about this and that, when we heard the sound of many voices coming from the seashore to our right, from a bungalow situate on a transverse road not far from the corner where we sat. Presently a party of well-dressed Hindus, laughing and talking together, came in sight, passed us and entered their carriages, which were drawn up in line on the Worli Road, and drove off to town. To see them, Damodar, who was sitting with his back to the driver, stood up and looked over the box. As the last party of convivial friends were coming abreast of our carriage, he silently touched my shoulder and motioned with his head that I was to look at something in that direction. I stood up and saw behind the last group a single human figure approaching. He, like the others, was

dressed in white, but the whiteness of his costume positively made theirs look grey, as the electric light makes the brightest gaslight appear dull and yellow. The figure was a head taller than the group which preceded him, and his walk was the very ideal of graceful dignity. As he came about as far as our horse's head, he deflected from the road in our direction, and we two, to say nothing of H. P. B., saw that it was a Mahatma. His white turban, and dress, mass of dark hair dropping to his shoulders, and full beard, made us think it was "the Sahib," but when he came to the carriage-side and stood not more than a yard from our faces, and laid his hand on H. P. B.'s left arm as it lay on the carriage body, and looked us in the eyes and responded to our reverential salutations, we then saw it was not he, but another, whose portrait H. P. B. wore, later, in a large gold locket, and which many have seen. He spoke no word, but quietly moved towards the causeway, taking no notice of, nor, seemingly, exciting any from the Hindu guests as they rolled away in their carriages towards the town. The recurrent blazes of electric light lit him up as he stood by us; and as his tall form showed against the horizon and the dark earth of the causeway, I noticed, too, that a lamp of the last of the carriages threw him up in high relief when he was some fifty feet away from us and on the causeway. There was no tree or bush to screen him from us, and, it may be believed, we watched him with intense concentration. One instant we saw him, the next he was gone; disappeared, like one of the lightning flashes. Under the strain of excitement

I jumped out of the carriage, ran to the spot where he was last seen, but no one was there. I saw nothing but the empty road and the back of the carriage that had just passed.

CHAPTER X

FIRST TOUR IN CEYLON

LET it be observed that the incident described at the end of the last chapter occurred on the evening of 25th June, 1880. On the 28th, *three days later*, the Coulombs arrived in Bombay from Ceylon, and, on our invitation, took up their temporary residence with us. The French Consul at Galle and other charitable persons had subscribed for their passages, and they had landed almost penniless. He had a box of tools and each of them a few rags of clothing. It was settled that they should stop with us until an employment could be found for him, after which they were to go to housekeeping for themselves. Under this agreement I set our friends to work to find him a situation, and after a while succeeded in getting him a machinist's berth in a cotton mill. But he did not stop there long, for he fell out with the owner and threw up the situation. I found him a man very quick-tempered and hard to please in the matter of employers, and, as no other opening, occurred, he and his wife just drifted along with us, without any definite plans as to the future. He was a clever mechanic and she a practical, hard-working woman, and as both tried to make themselves useful,

and I could get on with them by treating them kindly, they were taken into the family. From neither of them did I hear a bad word about H. P. B.'s behavior at Cairo; quite the contrary, they seemed to have the greatest respect and affection for her. As for their being concerned in any underhand trickery in the way of phenomena, they never breathed a word or gave a hint to me or to anyone about us. So, as for her subsequent assertions, in the pamphlet compiled for her by the Madras Missionaries (she could not write grammatically a sentence of English), that she and he were doing tricks for H. P. B., among others, in producing bogus apparitions of Mahatmas with an arrangement of bladders and muslin, I have not a particle of evidence that would make me credit it. It may be otherwise, but I believe the stories to be downright falsehoods, told by her for some pitiful woman's spite.

If the Mahatmas we saw at Bombay after the Coulombs came were only M. Coulomb masquerading with wigs and a false head, what was the man whom we saw at Worli Bridge, three days before their arrival, as described in the last chapter? Certainly not M. Coulomb. Then, if the figure was a real Mahatma, who could vanish out of sight, and whose features we could distinguish as he stood within a yard of us, in the glare of the vivid sheet lightning, why might not the figures we saw in and about the house, later on, have also been Mahatmas? At all events, H. P. B., even though she had been an ordinary woman, unendowed with psychical powers, is entitled to the benefit of the doubt. Such benefit I

shall always accord to her, and so will her other intimates. Let it stand at that.

First and last, all our noted members will come upon the scene of my historical drama. The entry of 9th April (1880) says: "An interesting man called to-day, with an introductory letter from Mr. Martin Wood, editor of the *Bombay Review*. His name is Tookaram Tatya. Is a cotton commission merchant; speaks English well; is very intelligent; says he is deeply interested in Yoga." So began my acquaintance with a gentleman whose name is now known throughout the world among us as one of the most indefatigable workers in Society. He had held aloof and watched us, being sceptical as to our having come to India in good faith. His knowledge of Europeans had not led him to believe that persons of our calibre could give up their home interests merely for the sake of learning Eastern philosophy; there must be some humbug at the bottom of the affair. A year passed and the first quarter of the second, and yet nobody had discovered anything bad about us. So, as he was most deeply interested in the subjects that we were engaged in, he determined to come and see for himself what sort of folk we really were. I shall never forget that private interview, which made us two know each other as though we had been friends for years, and which ended by his paying me his respects in the true Eastern fashion.

The tone of our members in the mass, at that time, will be inferred from an entry of one of those April days:

"A meeting of the T. S. was held, and I got every one present to express his views as to the best way to increase the interest in the Society. The calling of a general meeting was resolved upon. But it will amount to nothing; for, of all the members, whether here, or in Europe or America, there are only a corporal's guard of real Theosophists: the rest are but miracle-hunters."

That can hardly be said now, in view of the enormous amount of unselfish work that is being done in Great Britain, Sweden, Spain, the United States, and Ceylon, not to speak of India, Australia, and elsewhere. Yet, at the same time, it cannot be denied that a great deal of hard work has also been done, throughout all these years, under the spur of the hope of closer intercourse with the Mahatmas, and, perhaps, the attainment to some degree of powers similar to H. P. B.'s. I think that this yearning has made hundreds of most worthy people fall easy victims to such transparent humbugs as the "H. B. of L.," and a number of conscious and unconscious spiritual pretenders. Such devotion is dearly purchased by the Society when it can be extinguished upon discovering the illusion under which blind, exaggerated faith in appearances and promises has made the victims fall. For from ardent friends they usually change into virulent opponents.

About this time we were passing through the disagreeble phase of our relations with Swami Dayānand. Without the least cause, his attitude towards us became hostile; he wrote us exasperating letters, then modified them, again changed his tone

and so kept us perpetually on the strain. The fact is, our Magazine was not in the least an exclusively Arya Samaj organ, nor would we consent to hold aloof from the Buddhists or Parsis, as he almost insisted that we should. He evidently wanted to force us to choose between the continuance of his patronage and fidelity to our declared eclecticism. And we chose; for our principles we would *not* surrender for any equivalent whatever.

A visit of our party to Ceylon, long urgently requested by the leading priests and laity of the Buddhist community, had been determined upon, and the preparations occupied us throughout the whole of this month. We had to get ready in advance the matter for two or three numbers of the *Theosophist*, and my Diary records the night work we had to do. To save expense it was arranged that H. P. B., Wimbridge, and I should go, and Miss Bates and the Coulombs remain behind to look after the Headquarters. As Miss Bates was a spinster and Mme. Coulomb an experienced housewife, the unlucky idea occurred to me to transfer the housekeeping duty to the latter from the former. Fifteen years of householding had not taught me the folly of giving a newcomer the opportunity of "bossing it" over the other woman! I know it now.

Among other things, there were badges to get made for our delegation, H. P. B. being fond of such things. It was for this trip that the silver badge with gold centre, now worn by Mrs. Besant, was made for H. P. B.'s use; mine was a more gorgeous affair and those of the rest of the party much plainer. Another,

and much more serious matter, was the organization of the Bombay T. S., on the evening of 25th April: the pioneer of all our Indian, in fact, of our Oriental Branches, and the third on the list of the whole Society; not counting New York, which was still *the* Society. The two Branches older than that of Bombay are the British, now the London Lodge, and the Ionian, of Corfu. The first officers of the Bombay Branch were Mr. Keshow N. Mavalankar, *President*; Messrs. Gopalrao Hari Deshmukh and K. N. Seervai, *Vice-Presidents*; Framroz R. Joshi, *Secretary*; Krishnarao N. Mavalankar, *Treasurer*; Edward Wimbridge, Mooljee Thackersey, and Messrs. Patwardhan, Warden and Jabouli, *Councillors*. Mr. Tookaram Tatya having overcome all his distrust, was duly accepted into membership at the meeting of 2nd May.

Everything being ready, we embarked on 7th May in a British India coasting steamer for Ceylon. The party consisted of the two Founders, Mr. Wimbridge, Damodar K. Mavalankar, Purshotam and Panachand Anandji (Hindus), Sorabji J. Padshah and Ferozshah D. Shroff (Parsis): all but the first three being Delegates from the Branch to the Sinhalese Buddhists and bearers of brotherly salutations expressive of the broad tolerance of our Society in religious matters. The wife or Mr. Purshotam, a delicate, fragile little lady, accompanied her husband, and Babula attended us as servant.

We were, I believe, the only passengers on board, and the ship being clean, the officers agreeable, the weather fine, and the daily calls at the ports along the

West Coast full of interest, we enjoyed the voyage as if it were on a large private yacht. H. P. B. was in high spirits, and kept everybody in a good humor. A passionate card-player, she spent hours daily playing Nap with the ship's officers, barring Captain Wickes, whom the code of naval etiquette forbade to play with his subordinates. The chief engineer, a Mr. Elliott, soon became a great favorite of H. P. B.'s, and on the last day of the voyage, she did for him the phenomenal substitution of his name for her own in embroidery on her handkerchief. I was present and saw it. They had finished a game of Nap and fell to chatting about these alleged psychical powers, and Elliott was especially incredulous about the possibility of this phenomenon of changing an embroidered name on a handkerchief for another in embroidery. This apropos of what H. P. B. had done for Ross Scott the day of our arrival at Bombay, about which he had been told. He coaxed her again and again to do it for him, and she finally consented, and then and there did it as we all sat on deck, under the shelter of an awning. But when Elliott opened his hand in which he had held the handkerchief during the experiment, he found that H. P. B. had misspelt his name, making it Eliot instead of Elliott. Now, in Mme. Coulomb's veracious pamphlet, it is averred that H. P. B. got her to embroider names of third parties on some of her handkerchiefs after picking out her own. The implication would be that she had thus prepared the "Eliot" handkerchief, and that H. P. B. had simply changed her own for it. But until we met him on board the "Ellora" we did not

know there was such a person in existence. How, then, could Madame Coulomb have embroidered his name for future trickery? The explanation, it will be seen, is simply nonsensical.

The old Captain was a fat, good-natured person without the glimmering of a belief in things spiritual or psychical. He used to joke H. P. B. on our notions with such a delicious ignorance of the whole subject that it only made us laugh. One day she was playing her favorite, solitary game of *Patience*, when the Captain broke in upon her meditations with a challenge that she should tell his fortune with the cards. She at first refused, but at last consented, and, making him cut, laid out the cards on the table. She said: "This is very strange; it can't be so!" "What?" asked the Captain. "What the cards say. Cut again." He did so, and with the same result, apparently, for H. P. B. said the cards prophesied such a nonsensical thing that she didn't like to tell him. He insisted; whereupon she said that the cards foretold that he would not be much longer at sea; he would receive an offer to live ashore, and would throw up his profession. The big Captain roared at the idea, and told her that it was just as he had anticipated. As for his quitting the sea, nothing would please him more, but there was no such good luck in store for him. The thing passed off without further remark beyond the Captain's repeating the prophecy to the Chief Officer, through whom it became the laugh of the ship. But there was a sequel. A month or two after our return to Bombay, H. P. B. received a letter from Captain Wickes, in which he

said he owed her an apology for his behavior about the card prophecy, and must honestly confess that it had been literally fulfilled. After dropping us at Ceylon, he continued his voyage to Calcutta. On arrival, he had the offer of the appointment of Harbor Master (Port Officer) at Karwar (I think it was, or if not, then Mangalore), had accepted it, and had actually returned as passenger in his own ship! This is a specimen of a great many card prophecies H. P. B. made. I do not suppose the cards had anything to do with it save that they may have acted as a link between her clairvoyant brain and the Captain's personal aura, thus enabling her clairvoyant faculty of prescience to come into play. Yet, psychically endowed as she was, I scarcely remember her having foreseen any one of the many painful events that happened to her through treacherous friends and malicious enemies. If she did, she never told me or anybody else so far as I ever heard. A thief stole something she valued once, at Bombay, but she could not find out the culprit, nor help the Police whom she called in.

At Karwar and Mangalore our resident colleagues came off to the ship with presents of fruits and fresh milk, and stopped as long as they could to talk on Theosophy. At Calicut some of us went ashore for a run through the town, and looked in at a ginger-packing house, where we saw the roots trimmed, dried, bleached, and ground in mortars by women who were *décolletées* to a degree that one sees sometimes distantly approached at Western society functions. It is the fashion here for respectable

women to go uncovered to the waist: old or young, pretty or hideous, it is all the same; a Hindu woman of that locality who covers herself above the waist is at once known as of bad character. So, at Bombay, respectable Marathā ladies invariably go barefoot, disreputable ones shod. On the other hand, the virtuous Parsi lady would not dream of going unshod, nor the well-bred Parsi gentleman with his head uncovered. *Tot homines, quot sententiæ.*

Speaking of prophecy, I think I was a bit of a seer in writing in my Diary on the day before reaching Colombo: "New and great responsibilities are to be faced: momentous issues hang on the result of this visit." Nothing could have been truer than that.

We dropped anchor in Colombo harbor on the morning of 16th May, and after a while a large boat came alongside bringing Mohattiwatte Gunananda, the Buddhist orator-priest, John Robert de Silva, and some junior priests of Megittuwatte's pānsala (monastery). De Silva was our first lay F.T.S. in Ceylon, having joined by letter before we left New York. I made the very natural mistake of supposing, from his Portuguese name, that he was a Roman Catholic, and that his sympathetic letter to me and application for admission into membership were but Missionary traps. So, while I replied in friendly terms and sent the Diploma asked for, I sent them *under cover to Megittuwatte*, with request that he would not deliver them if the addressee was not the Buddhist he said he was. It was all right, and De Silva has ever been one of the best, most efficient, intelligent, and sincere Buddhists I have ever met.

But that the Sinhalese should keep the Portuguese and Dutch Christian surnames, which they took from motives of policy during the successive periods of Portuguese aud Dutch supremacy, when their own Sanskrit names are infinitely prettier and more appropriate, is surprising and, it must be confessed, dishonoring to the nation. We found the famed Megittuwatte (Mohattiwatte) a middle-aged, shaven monk, of full medium stature, with a very intellectual head, a bright eye, very large mouth, and an air of perfect self-confidence and alertness. Some of the more meditative monks habitually drop their eyes when conversing with one, but he looked you square in the face, as befitted the most brilliant polemic orator of the Island, the terror of the Missionaries. One could see at a glance that he was more wrangler than ascetic, more Hilary than Hilarion. He is dead now, but for many years he was the boldest, most brilliant, and powerful champion of Sinhalese Buddhism, the leader (originator) of the present revival. H. P. B. had sent him from New York a presentation copy of *Isis Unveiled*, and he had translated portions where she describes some of the phenomena she had personally witnessed in the course of her travels. His greeting to us was especially cordial. He requested us to preceed with the steamer to Galle, where arrangements had been made for our reception; he himself would go that evening by train. As a parting souvenir H. P. B. that evening rapped on the Captain's head, or rather made the raps sound inside it, and rang her fairy bells for some of the officers.

Before dawn on the 17th we were off Galle light, and getting our pilot, anchored about 500 yards from shore. The monsoon burst, and there was tremendous wind and rain, but the view was so lovely that we stopped on deck to enjoy it. A beautiful bay; a verdant promontory to the north, against which the surf dashed and in foamy jets ran high up against the rocky shore; a long, curved sandy beach bordered with tile-roofed bungalows almost hidden in an ocean of green palms; the old fort, custom house, lighthouse, jetty, and coaling sheds to the south, and to the east the tossing sea with a line of rocks and reefs walling it out from the harbor. Far away inland rose Adam's Peak and his sister mountains.

After breakfast, in a lull of the storm, we embarked in a large boat decorated with plantain trees and lines of bright-colored flowers, on which were the leading Buddhists of the place. We passed through a lane of fishing boats tricked out with gaudy cloths and streamers, their prows pointing inward. On the jetty and along the beach a huge crowd awaited us and rent the air with the united shout of "Sadhoo! Sadhoo!" A white cloth was spread for us from the jetty steps to the road where carriages were ready, and a thousand flags were frantically waved in welcome. The multitude hemmed in our carriages, and the procession set out for our appointed residence, the house of Mrs. Wijeratne, the wealthy widow of a late P. and O. contractor. The roads were blocked with people the whole distance, and our progress was very slow. At the house three Chief Priests

received and blessed us at the threshold, reciting appropriate Pali verses. Then we had a levee and innumerable introductions; the common people crowding every approach, filling every door and gazing through every window. This went on all day, to our great annoyance, for we could not get a breath of fresh air, but it was all so strong a proof of friendliness that we put up with it as best we could. Our hostess and her son, the Deputy Coroner of Galle, lavished every hospitality upon us, loading the table with delicacies and delicious fruits, such as we had never seen equalled, and dressing it in the charming Sinhalese manner, with flowers and pretty leaves; and the walls were beautified with them in artistic devices. Every now and then a new procession of yellow-robed monks, arranged in order of seniority of ordination and each carrying his palm-leaf fan, came to visit and bless us. It was an intoxicating experience altogether, a splendid augury of our future relations with the nation.

The monks, who had read Megittuwatte's excerpts from H. P. B.'s book, pressed her to exhibit her powers, and young Wijeratne, on hearing about the handkerchief phenomenon on board ship, asked her to repeat it for him. So she did, and again for a Mr. Dias; each time obliterating her own embroidered name and causing theirs to replace it. She got Wijeratne's name right, because she asked him to write it for her on a bit of paper, but she spelt Dias's "Dies," which, if Mme. Coulomb had embroidered the handkerchiefs beforehand at Bombay, would not very likely have happened, since there would have

been plenty of time to think what an absurd thing it was to spell the Portuguese name in that unheard-of way. The excitement, of course, rose to fever heat, and culminated when she made some fairy bells ring out sharp in the air, near the ceiling and out on the verandah. I had to satisfy the crowd with two impromptu addresses during the day, and at 11 p.m. we retired to rest, thoroughly fagged out.

Wimbridge and I went for a dip in the harbor very early the next morning, but we were followed and watched by crowds, so that it was very uncomfortable to move about. Our rooms were packed with visitors all day. There were no end of metaphysical discussions with the aged High Priest Bulatgāma Sumanatissa, and other sharp logicians. This old man let me into a nice embarrassment. He begged me to call on a list of Europeans and to write to twenty Burghers (half-race descendants of the Dutch) inviting them to join with the Buddhists in forming a Branch T.S. In my innocence I did so, and the next morning could have bitten off my finger for shame, for they sent me insulting replies, saying that they were Christians and wanted to have nothing to do with Theosophy or Buddhism. I stormed at the old monk for his heedlessness in making me uselessly compromise the dignity of the Society, but he only smiled and made some weak excuse. It was a lesson for me, and during the many years that have elapsed since then, I never repeated the mistake. The people of all the country round crowded into town to have a look at us, and there was general rejoicing among them. A dozen invitations were

received from towns and villages to visit them. Our rooms were never free of priest visitors. One of their customs made us laugh. If the hostess had not spread cloths over the chair seats, they would spread their own handkerchiefs over them, turn and calmly sit down, performing the business with as much solemnity as though it were part of a temple ceremony. It is a survival of one of the precautions of Yoga, *viz.*, the laying of durba grass, or a tiger or deer skin, or a straw mat, on the ground before beginning the *āsanas*, or postures of Yoga. Only its novelty made it a little funny to us.

Old Bulātgama was a particularly persistent disputant, very voluble and very kind. Among other topics of discussion was that of the psychical powers, and H. P. B., who thoroughly liked him, rang bells in the air (one a booming explosion like the striking of a large steel-bar), made "spirit" raps, caused the great dining-table to tremble and move, etc., to the amazement of her select audience.

The next evening we were treated to a devil-dancing performance by professional sorcerers, who take part in religious processions, and are called in cases of desperate illness, to drive away the evil spirits which are supposed to possess the patient. They invoke certain elementals by recitations of mantrams, and prepare themselves for their functions by a certain amount of abstinence at certain periods of the moon. Their dance is a real witch-festival. It leaves behind it a confused recollection of leaping and whirling figures tricked out with hideous masks and streaming ribbons of young cocoanut leaves;

of brandished and whirling firebrands; of black masses of oil-smoke; of postures suddenly taken, which are enough to send a nervous person into hysterics. One part of the ceremony consists in burning certain herbs and gums on hot coals and inhaling the vapors with gasping sounds, until they shiver as though stricken with an ague, and then fall senseless. In the coma, they have visions of the obsessing devils and give directions what to do. They are brought to by sprinkling them with water while a charm is muttered. An educated native gentleman told me that this dance is considered efficacious for the cure of several diseases, especially those to which pregnant women are liable. They are then said to have fallen under the influence of the "Black Prince". If the devil-dancers get the better of the disturbing evil spirit and it obeys their command to release its victim, it gives a sign of its departure by breaking off a designated branch of some tree near the house. This happened, he told me, in the case of his own stepmother.

As it had been arranged that I should give a public lecture on Theosophy on the 22nd, I made desperate efforts to think over my subject and prepare some notes. For I was then quite inexperienced in this business and was afraid to trust myself to extemporaneous discourse. But I might as well have tried to compose an aria in a machine shop where fifty blacksmiths were hammering on anvils, fifty turning lathes were whirling, and fifty people were gathered about to criticize my personal appearance, my pen, and my handwriting!

Our house was a Babel, our rooms occupied by a friendly mob from morning till night. I would have done far better to have just gone to the platform without preparation, and trusted to the inspiration of the moment, as I soon learned to do. I think my first lecture in Ceylon is worth a paragraph. It was delivered in a large room in the Military Barracks, imperfectly lighted, and packed to suffocation. A temporary platform had been erected at one end and a figured canopy suspended over it. Besides our delegation there were upon it Sumāngala, Maha Thero, the Chief Priest Bulātgama, Chief Priest Dhammalankāra, of the Amarapoora Sect, who had come twenty-eight miles to meet us, and a number more. The whole European colony (forty-five persons) were present, and, inside and outside, a mob of some 2,000 Sinhalese. I was not at all satisfied with my discourse, because, owing to the interruptions above noted, my notes were fragmentary, and the light was so bad that I could not read them. However, I managed to get through somehow, although a good deal surprised that not even the taking passages elicited applause: from the unsympathetic Europeans that was to have been expected, but from the Buddhist! As soon as a passage could be cleared our party passed out, H. P. B. and I arm-in-arm and holding each other tight so as not to be separated by the jostling crowd. "Was it a very bad speech?" I asked her. "No, rather good," she said. "Then," I continued, "why was there no applause; why did they receive it in such a dead silence? It must have been very bad." "What? what? what are you saying?"

broke in a voice from the Sinhalese gentleman who had hold of H. P. B.'s other arm. "Who said it was a bad speech? Why, we never heard so good a one in Ceylon before!" "But that can't be," I replied; "there was not a hand-clap, nor a cry of satisfaction." "Well, I should just have liked to hear one: we would have put knife into the fellow who dared interrupt you!" He then explained that the custom was to never interrupt a religious speaker, but to listen in respectful silence and, after leaving, to think over what he had said. And he very proudly pointed out the high compliment that had been paid me in the packed audience hearing me without making a sound: I could not see it in that light, and still think my lecture was so bad as to be not worth applauding: unless, perhaps, the Galle public had by common consent agreed to obey the injunction of Thomson:

"Come then, *expressive silence, muse his praise.*"

CHAPTER XI

THE POPULAR ENTHUSIASM

THIS was the Prologue to such a drama of excitement as we had not dreamt we should ever pass through. In a land of flowers and ideal tropical vegetation, under smiling skies, along roads shaded by clustering palm trees and made gay with miles upon miles of small arches of ribbon-like fringes of tender leaves, and surrounded by a glad nation, whose joy would have led them into the extravagance of actually worshipping us, if permitted, we passed from triumph to triumph, daily stimulated by the magnetism of popular love. The people could not do enough for us, nothing seemed to them good enough for us: we were the first white champions of their religion, speaking of its excellence and its blessed comfort from the platform, in the face of the Missionaries, its enemies and slanderers. It was that which thrilled their nerves and filled their affectionate hearts to bursting. I may seem to use strong language, but in reality it falls far short of the facts. If anybody seeks for proof, let him go through the lovely Island now, after fifteen years, and ask what they have to say about this tour of the two Founders and their party.

At 3 p.m. we were driven to a *wallāwa*, or country-seat of a Sinhalese noble, where I addressed[1] an audience of 3,000 from a high balcony overlooking a sort of natural amphitheatre. The multitude filled the plain and the hill-slopes adjacent to it. The considerable body of monks present "gave *pānsil*," *i.e.*, intoned the Five Precepts and Three Refuges, in the Pāli language, and the people, as with one mighty wave of sound, repeated them after them. It made a great impression upon us, for, after all, nothing in the way of sound is more impressive than the vibration of thousands of human voices combining into one rhythmic diapason.

As this visit of ours was the beginning of the second and permanent stage of the Buddhist revival begun by Megittuwatte, a movement destined to gather the whole juvenile Sinhalese population into Buddhist schools under our general supervision, even its details acquire a certain importance. The following handbill, officially issued by Damodar, indicates the first steps taken by us towards forming Branches of the Theosophical Society in the Island:

"*To whom it may concern.*

"Notice is hereby given that on Monday evening next a meeting will be held at the residence of Minuvengoda, at 8 o'clock p.m.: on which occasion Col. Olcott will briefly state the aims and objects of the Theosophical Society. After which, gentlemen desirous of joining the Society can

[1] I pray to be excused for so often speaking of myself throughout this narrative, but the fact was that, as P. T. S. and the official spokesman of the Delegation, I had to be always to the fore.

register their names in the book provided for that purpose.

"(By Order) DAMODAR K. MAVALANKAR,

Assistant Recording Secretary.

"GALLE, *22nd May*, 1880."

The venerable Bulātgama presided at the meeting, and Megittuwatte addressed it in a spirit-stirring discourse.

We were taken the next day to the coffee and cinnamon estate of Mr. Simon Perera Abeyawardene, a wealthy Buddhist gentleman of Galle, and were much interested in watching the processes of peeling, drying, and packing the cinnamon bark. It was not our host's fault that we got back home alive, for he spread for us a Gargantuan "luncheon," at which *fifty-seven* kinds of curry were served with rice, and there were as many sweet dishes of sorts. We were actually importuned "just to taste" each one of these confections, and had much trouble in making it understood that our storage room was not elastic enough to permit us to comply.

On 25th May, H. P. B. and I "took *pānsil*" from the venerable Bulātgama, at a temple of the Rāmanya Nikāya, whose name at the moment escapes me, and were formally acknowledged as Buddhists. A great arch of greenery, bearing the words: "Welcome to the members of the Theosophical Society," had been erected within the compound of the Vihāra. We had previously declared ourselves Buddhists long before, in America, both privately and publicly, so that this was but a formal confirmation of our

previous professions. H. P. B. knelt before the huge statue of the Buddha, and I kept her company. We had a good deal of trouble in catching the Pāli words that we were to repeat after the old monk, and I don't know how we should have got on if a friend had not taken his place just behind us and whispered them *seriatim*. A great crowd was present and made the responses just after us, a dead silence being preserved while we were struggling through the unfamiliar sentences. When we had finished the last of the *Sīlas*, and offered flowers in the customary way, there came a mighty shout to make one's nerves tingle, and the people could not settle themselves down to silence for some minutes, to hear the brief discourse which, at the Chief Priest's request, I delivered. I believe that attempts have been made by some of my leading colleagues of Europe and America to suppress this incident as much as possible, and cover up the fact that H. P. B. was as completely accepted a Buddhist as any Sinhalese in the Island. This mystification is both dishonest and useless, for, not only did several thousand persons, including many *bhikkus*, see and hear her taking the *pānsil*, but she herself boldly proclaimed it in all quarters. But to be a regular Buddhist is one thing, and to be a debased modern Buddhist sectarian quite another. Speaking for her as well as for myself, I can say that if Buddhism contained a single dogma that we were compelled to accept, we would not have taken the *pānsil* nor remained Buddhists ten minutes. Our Buddhism was that of the Master-Adept Gautama Buddha, which was identically the Wisdom Religion

of the Aryan Upanishads, and the soul of all the ancient world-faiths. Our Buddhism was, in a word, a philosophy, not a creed.

We lunched with a Buddhist gentleman in town, and in the evening took into membership the first eleven candidates, and with them formed the Galle Theosophical Society. *President*, S. P. DB. de Silva; *Secretary*, P. C. Wijeratne. The first Rs. 100 towards a Buddhist Publication Fund was given me that day and at once passed over to the Branch Treasurer. At 9 we sat down to dinner, and at 1 a.m. were but too glad to go to bed after a hard day's work.

The next morning we began our journey northward in carriages supplied by the fishermen of Galle, a large, poor, but hard-working caste. From this class St. Francis Xavier, the "Apostle of the Indies," recruited the greater number of his converts. Their calling, involving the taking of life, is abhorred among Buddhists, and their social status ranks very low. Yet it seems that their hearts warmed towards us as much as those of their more respectable co-religionists, and, while they shrank from approaching us themselves, in the midst of the high-caste crowd that hemmed us in, they sent me an "humble petition" that I would be graciously pleased to let my "humble petitioners," etc., etc., supply our party with carriages to Colombo. Their spokesman was an English educated young man of, I believe, another caste. The sincerity of the poor people touched me, and I sent them a message that I wished to see them, or a Committee of their elders, to thank them personally for their kind offer. Accordingly I met a

deputation, and, wishing to decline putting them to any expense, was met with such an instant protest and appeal that it ended in my accepting their offer with thanks.

Almost the entire Buddhist population of Galle massed together to see us leave town, and rent the air with friendly shouts. Our first stage was to Dodānduwa, five miles, the seat of the grand *Vihāra* and *pān-sala* of our friend Piyaratana Tissa Terunnanse, a monk of erudition, energy, and high character. At every favorable point along the road crowds had gathered to look at us, we were invited to stop and refresh ourselves with cocoanuts, milk, tea and cakes, and at several points, so large was the concourse, I had to get out of the carriage and make addresses. At Dodānduwa we were greeted wtth such a downpour of monsoon rain as had not been seen in years. During a lull we were conducted to an immense shed that Piyaratana had had erected, and I gave the expected address to 2,000 people. After that we visited his temple, which we found scrupulously tidy and well kept—an unusual circumstance in the Island. We saw a huge standing image of the Buddha, more than a century old. We passed the night in a bungalow provided for us by Mr. Weerisooriya and friends.

On again the next morning, in the two stage-coaches supplied by our friends, the Galle fishermen. I had to make four speeches this day—the first from the steps of the coach, before starting; the second from the steps of the bungalow at Ambalangoda; the third at Piyāgale, where we breakfasted at 3 p.m. (!) and were so besieged that we could scarcely breathe; the

fourth at the temple at Piyāgale, where an audience of 3,000 to 4,000 had collected. We were taken there in a fine rain, in procession, with banners, and tom-toms making a hideous racket; each beater trying to outvie the others and working the crowd up into a sort of frenzy of jubilation. The temple is situated on top of a steep, rocky hill, up which we were helped or, rather, dragged; giving poor H. P. B. agony with her lame leg, which had never fully recovered from the blow she got on board the "Speke Hall" in the storm, when she was pitched against the corner of the dining-table. The drizzling rain blurred my glasses so that I could not properly see where I was walking and, to make things worse, my pince-nez dropped from my nose and smashed on the rock over which I was passing; thus leaving me, with my myopia, in an uncomfortable plight. The gathered monks presented us an address through their Mahā Terunnanse, to which, of course, I replied at some length. Continuing on, we at last reached Kalutara at 9 p.m., but our troubles were not yet ended, as there was another bevy of monks to encounter, another address to listen to, and briefly answer, and then, after a needed meal, to bed, worn out. We were amused by an incident which happened *en route*, after dark. A man came rushing out of a wayside house with a bright light in his hand, stopped our coaches, and excitedly asked for each of us in turn. We thought he had something of importance to communicate, perhaps the *octroi*, perhaps even to warn us against a plot of the Christian party to do us injury.[1] But he

[1] That came later: they tried to murder me once.

said nothing except to repeat each of our names with a sigh of satisfaction, and then turned away. Our interpreter called after him to know what it was all about. "Oh, nothing," said he, "I only wanted to look at them."

There was no time for lying abed on this tour, so the next morning we were up at dawn when the birds began to greet each other in the palm groves, and we men had a surf bath. Under very disadvantageous circumstances, truly, with a sharp coral bottom to stand upon that was like standing on a floor covered with inverted carpet tacks, the certainty of sharks, and the presence of a critical audience, watching us as though they were a class in Delsarte or calisthenics! Still it was a bath, and that means much in the Tropics. We made a charming acquaintance to-day —a graduate of Christ College, Cambridge; one of the most intellectual and polished men we have met in Asia. Mr. Arunāchalam is a nephew of the late Sir M. Coomāraswamy, the well-known Orientalist, and at the time of our visit was Police Magistrate of Kalutara. His eldest brother is the Hon. P. Rāmanāthan, who is a warm friend of mine, and the official representative in the Legislative Council of the Tamil community. We breakfasted at Mr. Arunāchalam's house, and his courtesy drew out H. P. B.'s most charming traits, so that the visit was in every way a pleasant episode. As a dessert, or rather *pousse-café*, my colleague abused the Missionaries in her best style.

The same afternoon we had a taste of the other style of official, the Government Agent—a most

satrapy grade of public servant—having forbidden the use of any public building, even the verandah or steps of the school-house, for my lecture. The poor creature acted as though he supposed the Buddhists could be overawed into deserting their religion, or into believing Christianity a more lovable one, by excluding them from the buildings that had been erected with their tax-money and that would be lent to any preacher against Buddhism. But the fields and the sky were left us, the one for lecture-hall, the other for roof, and the meeting was held in a cocoanut grove. Some bright cloths, laid over cords stretched between trees, made our canopy and sounding-board, and a chair placed on a big table my rostrum. The audience numbered two or three thousand. It may be imagined that the occasion was improved to point out the malicious spirit which actuated the Christian party, and their dread of the Sinhalese being made to see the merits of Buddhism.

Our gravity was sorely tried the next morning. Wimbridge, Pānachand, Ferozshah, and I were made to mount a sort of bedizened triumphal car and, under an escort of a company in comical uniform, carrying wooden guns and sticks, their dark brown faces whitened with flour or chalk (to give them a quasi-European complexion), and with much music and many banners, were taken to the village of Wehra, three miles off, for a reception ceremony. I spoke to a large audience, in a very fine preaching-house (*Dharmasāla*), with two rows of white columns, stained glass windows, hanging lustres, and a large preaching pulpit. In the Oriental fashion, I sat

while speaking. After that we went to pay our respects to Waskaduwe Subhuti, Terunnanse, a monk better known among Western Orientalists than any other save Sumangala, who, of course, is *the* representative and embodiment of Pāli scholarship. After lunch at Mr. Arunāchalam's, we visited another famous priest, Potuwila Indajōti, Terunnanse, who enjoys a great renown as a *Vederāle*, or native Physician. He is sent for from all the Buddhist parts of the Island, and has made numberless cures. We found his conversation very interesting, his views as to the survival of the ego in Nirvāna being those of his late Guru, the Polhawatti priest, and opposed to those of the Ṣumangala school. He applied for admission into our membership and was accepted.

At that time the railway ended at Kalutara, and we here took train for our next station, Pānadure (pronounced vulgarly Pantura), the locality where Megittuwatte debated against the Missionaries the respective merits of Buddhism and Christianity: and got the better of them, it is said. We were lodged in a new *pānsala* adjoining a *Vihārā*, which had just been erected by a picturesque-looking old man, named Andris Perera, at his own cost. He was tall, thin, dark, had a spacious forehead, wore his hair brushed back and twisted into a long switch, which was put up like a woman's hair, with an immense and costly tortoise-shell comb; and a circular comb—a Sinhalese fashion—arched over his fine head. He wore the country dhoti and a single-breasted, last-century coat of blue cloth, with long skirts, turnover cuffs, twenty large gold

buttons down one side of the front and as many loops and lacings of gold lace opposite them, and the same ornamentation on the collar and cuffs. A gold-laced scarlet baldric, passed over one shoulder and under the opposite arm, supported a short sword with a gold scabbard; a huge gold medallion-plaque, as large as a dessert plate, was suspended diagonally in the contrary direction by a golden chain; a heavy and richly embossed gold girdle was buckled about him. His feet were bare and he wore leather sandals! The figure was so striking, so unlike any other we saw, that I noted the above details in my Diary. He had advanced some little distance from the house to receive us, and behind him stood his six tall, striking-looking sons and three handsome daughters. The group struck us as being very picturesque. I bethought me of Torquil of the Oak and his stalwart sons, though I cannot say that I thought the Sinhalese family would have withstood the *Gow Chrom* as well as the champions of the Clan Quhele. Without delay, the old "Mudaliyar" (the title of a Headman's office) led the way to a large permanent preaching-shed, and I addressed some 4,000 people. The Missionaries had been doing what little they could since our landing to try and weaken our influence with the Buddhists, so I paid my compliments to them and their questionable policy. This produced a sequel which will be mentioned later on. In truth, these Protestant Missionaries are a pestilent lot. With the Catholics we have never had a hard word.

The primeval habitat of the mosquito has never been fixed, I believe, but if it was not the Perera *pansāla*

at Pānadure, assuredly that is a most congenial place for their development: they simply swarmed. The building was an oblong, comprising small bedrooms opening on a verandah which extended on all sides, and one small hall through the middle. There were no bathrooms, the place being intended for *bhikkus* only, who bathe outdoors. The windows were furnished only with wooden shutters, and when they were shut in the daytime, the rooms were dark. H. P. B. had one of the rooms in the south end. She wanted to bathe, and, as there was no other place, I arranged for a tub in her own room. As she would be in pitch darkness if the shutters were closed, I tied a large soft mat across the end of the shutters, left standing open, and she began her toilet. The rest of us were sitting around the corner, on the other verandah, chatting, when I heard my name shouted, and ran around to see what was the matter. At that moment three Sinhalese women were in the act of creeping out beneath the edge of the mat, and the old lady was abusing them in grand style. On hearing my voice, she said that these impertinent creatures, to gratify their curiosity, had actually crept under the mat and, when she happened to turn her head, she saw them standing close against the window still, calmly watching her ablutions. Her indignation was so tragic that, while hustling the intruders away, I could not help laughing heartily. Poor things! they meant no harm; it was simply the custom of the country to peer into everybody's business and ignore any rights of privacy. This is a specimen of what we had to undergo throughout the entire visit to Ceylon.

At 2 p.m. I addressed another huge andience on the very spot where the famous "Pantura Controversy" had been held. After me, H. P. B. spoke, and Ferozshah (Parsi) and Pānachand (Hindu) made some remarks as representatives in our Society of their respective races; testifying to the eclectic spirit which animated us and pleading for wide religious tolerance. Megittuwatte presided and made two eloquent speeches. The next day I initiated as members Megittuwatte, Sri Weligama, the Pali, Sanskrit, and Elu scholar, and Waskaduwe Subhuti. Mr. J. R. de Silva interpreted for me; the Mudaliyar Andres Perera, his son-in-law, and other laymen joined the next day, and at 4 p.m. we left by rail for Colombo; reaching the capital in a downpour of rain. We were driven to a very spacious bungalow called "Radcliffe House," in the Slave Island ward, across the pretty artificial lake. A large gathering awaited us, among them Sumangala and fifty other monks. After dinner we received a Pali address from the High Priest; then followed discussions and desultory talk, and then bed.

The besieging of us by crowds was even worse here than it had been elsewhere, we had not a free moment nor the least privacy; the papers were full of stories about us, and the Christians raged. To prepare my lecture for the next evening I had to retire to Sumangala's College, and write in the library with locked doors. The next morning a serious conference was held between Sumangala, Subhuti, Megittuwatte, and myself at the College. I finished my lecture on "Theosophy and

Buddhism,"[1] and at 8 p.m. delivered it at our own residence, the hall of which had been converted into a lecture room with accommodation for 500 people. Besides Sinhalese notables, the European Inspector-General of Police, the Colonial Secretary, Editors of papers, etc. were present.

On 5th June, I lectured at Megittuwatte's own temple at Kotahēna, the one which is visited by most of the steamer passengers touching at the port. He and I spoke standing on a large table, placed in the middle of the preaching-hall, so as to be better heard by the throng. The hall and compound were packed with people like herrings in a barrel, and the heat was most oppressive. The place was gaily decorated with flags and colored cloths; a handsome arch of split palm leaves, worked into all sorts of pretty designs over a framing of areca palm timbers, towered outside; and on the wall above the regular pulpit was suspended a monster replica in gilt paper of our Society's seal. Ten candidates acquired membership the same evening. The next day there were two lectures. The first was at Kotta, a village six miles from town, the ancient seat of a powerful king, where there were triumphal arches, and no end of flags and greenery bordering the roads; and where Mr. Tepannis Perera gave us a fine repast on a broad, cool verandah. The other was at Widyodaya College (Sumangala's), on the subjects of "Nirvāna, Merit, and the Education of Buddhist Children". I had begun my appeals in this latter direction at Galle, and throughout the whole

[1] Vide *Theosophy, Religion, and Occult Science*.

tour used my best endeavors to make the people realize the risk they ran in leaving their children to be prejudiced against their ancestral religion by its professed enemies, who were in the country for no other object than this. It is a source of great satisfaction to know that the admonitions were not in vain, and that the present comprehensive and successful movement for promoting the foundation of Buddhist schools dates from this important tour.

A visit to Kelanie temple, one of the most revered shrines in the Island, where the great *stūpa* (brick cone) rests over genuine relics of the Buddha himself —and the inevitable lecture and multitudinous audience, occupied the next day; and on the following one—8th June—we organized the Colombo T. S. with twenty-seven members as a beginning. I submitted to the Branch my plan for the creation of a Buddhist Section, to be composed of two subdivisions, one exclusively laymen and lay branches, and another, not itself subdivided, exclusively of priests. This was to meet the difficulty that the ordination rules of the Vinaya forbid a monk to be associated on equal terms with laymen in worldly affairs. The scheme was approved of by all and carried out in due course; Sumangala being made Chairman of the priests' association, as well as one of the Honorary Vice-Presidents of the Society.

We left for Kandy by train on the 9th, and after the run of four and a half hours through one of the most picturesque tracts of country in the world, arrived at about 7 p.m. Along with the usual crowd, a deputation of Kandyan Chiefs—whose feudal rank

a good deal resembled in former times that of Highland Chiefs of clans—received us at the station and accompanied us to our quarters in a great procession, bright with torches and ear-splitting with tom-toms and native trumpets. Two addresses were made to us, by the Chiefs' Committee and by a society of Buddhists somehow connected with the Temple of the Sacred Tooth of Buddha, the Dalada Māligāwa. Sumangala came, and it was arranged that I should speak at this temple the next day.

The next morning we received ceremonial visits from the Chief Priests of Asgiriya and Malwatte Temples, the ranking *bhikkus* of the Island, a sort of Archbishops of Canterbury. Under the Kandyan sovereigns, these officers were the royal functionaries, joint guardians of the Tooth Temple, and had precedence in all royal religious processions. Sumangala is their junior in rank, but immensely their superior in the public estimation, as in ability. We went to the temple at 2 p.m. for my lecture, but such a crowd had wedged itself inside that it was only with the greatest difficulty that I could reach my table. And even then, the rustling of restless feet upon the stone pavement created such a confused echo at the stone ceiling that I could not make one word audible. After some minutes of vain attempts to get silence, we adjourned to the fine lawn outside. Our party mounted a broad wall to the right, along with Sumangala, and, chairs being placed for him and H. P. B., I spoke from under the overhanging branches of a bread-fruit tree, which answered very well for a sounding-board. The great

multitude stood and sat on the lawn in a huge hemispherical area, and I was able to make myself heard pretty well. The Missionaries, in anticipation of our arrival, had been spreading all sorts of calumnies against us, and on the preceding evening had been preaching bitterly against Buddhism in the streets of Kandy. Being white men, the timid Sinhalese had not dared to confront them, but brought their complaints to us. So, before going far into my discourse, I mentioned the foregoing facts, and, drawing out my watch, said I would give any Bishop, Archdeacon, Priest, or Deacon of any Church, five minutes to come forward and prove their assertions that Buddhism was a false religion; if they did not do so, the Sinhalese would be at perfect liberty to treat them and their falsehoods as they deserved. I had had five Missionaries pointed out to me in the audience, but, although I stood there, watch in hand, until the five minutes had elapsed, not a man of them lifted his voice. The Panadure sequel, above mentioned, is also connected with this episode.

A lecture at the town hall on "The Life of Buddha and Its Lessons" having been arranged for the next evening, I worked desperately to get it written under the most discouraging disadvantages. H. P. B. nearly drove me mad by calling me downstairs a dozen times, either to see people that were of no consequence to me, or to sit in a group for the pertinacious photographer. However, I managed somehow, and gave the lecture in due course to a crowd that packed the hall and its approaches. Most of the influential Government officials were present, and the applause

was constant enough to make us think it a success. Eighteen applicants for membership were admitted that evening.

On the 12th, I met a council of Kandyan Chiefs and Chief Priests, to discuss the state of the Church, and the plans which I submitted were all adopted after much debate. At 3 p.m. I spoke again outside the Dalada Māligāwa to some 5,000 people. The next day we went to Gampola on invitation of an enthusiastic Buddhist, the Mohāndriam (Headman) of the place, an elderly man. The crowd at the railway station took the horses from the carriage in which H. P. B. and I rode, and, attaching ropes, dragged it to the house prepared for us; a long procession with music and banners accompanying us, and making the transit lively with their incessant shouts of joy. Returning to Kandy, we organized that evening the Kandy T. S. with seventeen members, and the day was finished up with a cold collation provided by the Galle delegates accompanying us and one of H. P. B.'s most enthusiastic admirers, Mr. S. Perera Dharmagunavardene, Aratchi (Headman) of Colombo. At 9 the next morning, the unusual honor was conferred upon us of admitting us to a special exhibition of the Buddha Tooth Relic. This is kept in a separate tower, protected by a thick door of entrance studded with iron and fastened with four great locks, of which the keys are kept under the custody of the High Priests of Asgiriya and Malwatte, the Government Agent, and the Devanilami, a special official whose office survives the downfall of the Kandyan dynasty which created it. The relic is of the size of an alligator

tooth, is supported by a gold wire stem rising from a lotus flower of the same metal, and is much discolored by age. If genuine it would, of course, be twenty-five centuries old. When not exhibited it is wrapped in pure sheet gold, placed in a golden case, just large enough to contain it, and covered externally with emeralds, diamonds, and rubies. This again is placed in a small golden *karandua*, or dome, encrusted with precious stones; this in a large one of the same precious metal, similarly enriched; this in a third; this in a fourth dome of like value; finally, this one rests in a still larger one of thick silver plates, five feet four and a half inches high and nine feet ten inches in circumference. When exposed, the relic and its several sumptuous covers rest on a platform three feet six inches high, together with rock-crystal and golden statuettes of the Buddha and other precious objects; from the ceiling hang gems and jewels, among the latter a bird hanging by a golden chain, and formed entirely of diamonds, rubies, blue sapphires, emeralds, and cats'-eyes set in gold, but so thickly crowded as to conceal the metallic base. The depository is a small room in the second storey of the tower, without a window or loophole for a ray of light; the air is heavy with perfumes of flowers and spices; and by lamplight all sparkling with gems. The door-frame is of ebony inlaid with ivory, the panels of brass. In front of the platform a plain, square table stands for the deposit of gifts of value and offerings of flowers.[1] Needless to say, we were

[1] For a full account of the relic and its marvellous history, as well as of the Temple and contents, see Dr. Gerson Da

almost crushed by the crowd of notables who pushed in along with our party, and were glad to get out into the fresh air as speedily as possible. I believe that the relic had not been previously exposed since the visit of the Prince of Wales; so that this was regarded as the highest honor that could possibly have been shown us. On our return to our lodgings, the educated Sinhalese about us were eager to know H. P. B.'s opinion as to the genuineness of the relic, whether it is or is not a real tooth of the Buddha. This was a nice, not to say ticklish, question. Now, if we may believe the Portuguese historians Ribeiro and Rodrigues de Sá e Menezes, the real tooth, after passing through the most romantic vicissitudes, fell into the possession of the bigoted Inquisitors of Goa, who forbade the Viceroy D. Constantia de Braganca to accept a fabulously great sum—no less than 400,000 cruzados—a coin worth 2s. 9d.—offered by the King of Pegu as its ransom. They ordered it to be destroyed. So the Archbishop, in their presence and that of the high officers of State, pulverized it in a mortar, threw the powder into a lighted brazier kept ready, and then the ashes and charcoal together were scattered into the running river, in sight of a multitude "who were crowding the verandahs and windows which looked upon the water". Dr. Da Cunha—himself a Portuguese Catholic—is very sarcastic in his reflections upon this act of mean vandalism. He says:

"One can easily imagine the effect this imposing assembly of the viceroy, prelates, and the notables of

Cunha's *Memoir of the Tooth Relic of Ceylon*. London, Thacker & Co., 1870.

the old city of Goa, met for the purpose of pounding a piece of bone to dust, would have on the minds of the populace thronging the streets, the dismay of the wretched Peguan Embassy at the sight of the destruction of their saint's relic, and the grim exultation of the stern inquisitors over the dissolution of the *Dalada* in the sacred waters of the Gomati, and the consequent promotion of the glory of God, the honour and prestige of Christianity, and the salvation of souls. If there ever was a point where two extremes met it is this. The burning of a tooth for the glory of the Almighty was the point of contact between the sublime and the ridiculous."

I said that the Kandyan relic is of about the size of an alligator's tooth, but it bears no resemblance to any tooth at all, whether animal or human. It is slightly curved, about two inches in length and nearly one in breadth at the base, and rounded at the extremity. This is accounted for by some Buddhists, by a story that in the days of the Buddha "human beings were giants, and their teeth kept pace, so to speak, with their larger stature". Which, of course, is all nonsense; the Aryan histories giving no support to the idea. It is asserted that the present object of adoration was made out of a piece of deer's horn by King Vikrama Bahu, in 1566, to replace the original, burnt by the Portuguese in 1560. Then, again, others believe that this is really a substitute only, that the real tooth is concealed in a sure place, and that a substitute was what fell into the hands of the sacrilegious Portuguese. In fact, the legends

about the *Dalada* are numberless, and I must refer the curious to Dr. Da Cunha's pamphlet, and to Sir M. Coomāraswamy's, from which it was largely compiled, to the *Transactions* of the Royal Asiatic Society, to Tennent's work in Ceylon, and other sources. Among the poetic legends to which the Tooth Relic has given birth, is one to the effect that when the tooth was cast into a burning pit by an unbelieving Indian Emperor, "a lotus flower of the size of a chariot wheel arose above the flames, and the sacred tooth, emitting rays which ascended through the skies and illumined the universe, alighted on the top." This is supposed by some to explain the esoteric meaning of the Tibetan formula: "*Om Mani Padme Hum.*" For further stories, see the *Dhātuvansa*, an ancient Sinhalese work on the history of the Tooth. The Padre Francisco de Souza in his *Oriente Conquistado* repeats the popular story that "the moment the Archbishop placed the tooth in the mortar and was about to pulverize it, it made its way through the bottom and went straight to alight on a lotus flower in Kandy". Though we may not go to such length, we cannot deny that it is a comfort to the whole Sinhalese nation to regard the Tooth of Kandy as a genuine relic of the sublimest of men, and we may profit ourselves by remembering that

> In Faith and Hope the world will disagree,
> But all mankind's concern is charity.

Perhaps it was that reflection that prompted H. P. B.'s jovial answer to her interrogators: "Of

course, it is his tooth: one he had when he was born as a tiger!"

After our visit to the Dalada Māligāwa, we held a final meeting of the new local Branch T. S. and at 2 p.m. took train for Colombo.

CHAPTER XII

THE TOUR CONCLUDED

A LECTURE on "The Occult Sciences" being appointed for the next afternoon, I spent the morning in writing it, and at 5.30 it was given in a huge circus tent, to a huger andience. It was an impressive sight —that multitude of Orientals filling every inch of available room in the canvas oval. Our party sat on an advanced staging, which gave us and the people a fine chance to see each other.

As the incessant hard work of the tour had somewhat done me up, a conference was held in my bedroom with Sumangala, Megittuwatte, Bulātgama, and other Chief Priests, on Buddhist affairs; in the evening, the permanent organization of the Colombo T. S. was effected, and the members subscribed the sum of Rs. 1,050 towards the expenses of the Branch.

The next day was a busy one: at 8.30, the insatiable photographer; at 9.30, breakfasted out; at 1.30, a meeting at Widyodaya College for admission of priests, Sumangala, Bulātgama, and others entering the Society at that time; at 4, a lecture at a temple, which got for the T. S. ten new members; then another capture by photographers, Sumangala, Bulātgama, Megittuwatte, Hyeyentadūwe—Assistant Principal of

the College—Amaramoli, a well-educated, amiable and excellent monk, and myself being taken in a group. Of the party, three are already deceased—Megittuwatte, Bulātgama, and Amaramoli—so that the picture is historical and interesting to the Sinhalese people. At 7.30 p.m. (without having had a moment for meals) I held a meeting at our quarters and admitted twelve new members. Finally, at 9, still without dinner, we organized the Lanka T. S., a non-Buddhist Branch, composed of Freethinkers and amateurs of occult research. The closing act of the day was the listening and reply to an Address from the Colombo Buddhist community. After all, dinner and bed!

We left Colombo by train the next morning for Morotuwa, many friends seeing us of. H. P. B. received from a Buddhist lady, Mrs. Andrew Perera, an enamelled gold locket, and Damodar and I something better, in the form of a blessing from the High Priest and several other monks; they reciting *Pirit*—benedictory verses—and laying their hands on our breasts. H. P. B. being (ostensibly) a woman, the celibates could not touch her. She was very jolly about this all throughout the trip; at Galle, after her admission into Buddhism, she used to tease the venerable Bulātgama—whom she nicknamed her Father in God—to smoke, and, rolling a cigarette, would pass it to him *on a fan*, so that he need not to be contaminated by touching her, laughing all the while, and making the old monk share in her merriment!

Within the twenty-four hours of our last day at Colombo, we received eleven invitations for visits to various places: in fact, the whole Island would have had us visit them if time had served. At Morotuwa the Reception Committee took us in carriages from the station to Horitadūwe, where we breakfasted, and at 3 the crowd had gathered for the lecture. But I was so ill with a return of an old army dysentery, as to be unable to do more than say a few words, and Wimbridge was forced into being my substitute. To give an idea of the mental distress a novice has to pass through, in these Eastern countries, when being interpreted into a vernacular, and when knowing that the people are not getting any proper conception of what one is saying, I recall an incident of this occasion. Wimbridge, to illustrate some point he had made, said: "Now let us take a case." We discovered, later, that his interpreter had rendered it: "Now let us take a box!" In Japan, once, after lecturing at the Imperial University, Tokyo, I was pained beyond expression on learning from two Japanese-knowing English friends present that my interpreter had converted my innocent discourse on Education into a quasi-political one, embodying views that might offend the Government! Fortunately, both of these gentlemen had enough personal influence to set things right, by reporting to the Minister for Education my actual words. Many such experiences have at last made me measurably callous, and now I do not trouble myself at all as to the travesty worked on my public discourses. Always, even when I am addressing the masses who do not know English, some few

of my audience will have understood what I really said.

After the lecture we drove to Panadure, and resumed our mosquito-haunted quarters at the hospitable old Mudaliyar's *pānsāla*. A delightful bath in the early morning freshened us up for the lecture at 2 p.m., in the Mudaliyar's circular *dharmasālā*. A few hours later, I received a challenge from the head master of the S. P. G. Mission School, on behalf of the Christian party, to debate the Christian religion! The note referred to my Five Minutes' challenge at Kandy and was rather insulting in tone. Now, of course, we were following out a fixed programme in which every hour of our time was apportioned, and we were compelled to be at Galle on a fixed day to meet our steamer. This was publicly known, and, of course, the challenge was a trick; the Christian party believing that it would be refused, and they thus be left free to misrepresent our motive after we were gone. I wanted to ignore it, but H. P. B. opposed the idea, and said we must accept for the above reason. Wimbridge concurring, I sent an acceptance on certain conditions. First, that the debate should be held within three days; second, that my opponent should be an ordained priest of some orthodox sect, someone whose standing was good among local Christians, and who would be acknowledged as a respectable representative of their faith. I at once telegraphed to cancel one of the fixed engagements of the tour, so that we might be free to stop at Panadure until this business was settled. My reason for the other condition was that, at Colombo, we had met one of those pestiferous

religious parrots, whose wits are turned and whose garrulity makes intercourse with them intolerable: breeders of fads, social torments—and I suspected that he was to be my opponent. From a contest with such a person no profit or honor could be gained for Buddhism; if he were silenced, the Christian party would repudiate responsibility for his views; if he defeated me, the Buddhists would be shamed by the overthrow of their champion by one whom neither party respected, who was not an ordained priest, and whose religious opinions were most heterodox. At Colombo, this man had bored us to death with a clattering exposition of his views. He had founded—on paper—a society called Christo-Brahmo Samaj, and had presented me with a broadsheet in which the principles of the new society were explained. They were heterodox and fantastical; of which, for proof, I need only mention that he declared that the Holy Ghost must be a female, as, otherwise, Heaven would be like a cold Bachelors' Hall, with Father, Son, but no Wife!

An active exchange of notes followed the delivery and acceptance of the challenge, we trying to put the matter on a fair and honorable footing, our opponents resorting to trick and subterfuge to put us in the false position by which they hoped to profit. Our friends kept us fully advised of every step taken, including the secret discussions (overheard by listeners of both parties, the open construction of houses in Ceylon making this very easy) between the schoolmaster and the leading local Christians. Every respectable Protestant clergyman, from the Lord

Bishop downwards, had been asked but refused to confront me, and the clever Christian advocates of the High Court had followed suit. In fact, the schoolmaster I was told—had been the reverse of complimented for putting them into such a fix. Finally, as we had suspected, it was secretly arranged with the individual above mentioned for him to stand as my antagonist. Getting this from a trustworthy source, I consulted Sumangala and the other six Chief Priests who, with him, represented the whole body of Ceylon *bhikkus*, and who were all present to give me countenance, and arranged what I should do. On the day before that fixed for the discussion H. P. B. and Wimbridge went as a Committee bearing my ultimatum—so annoyingly shifty had our opponents been and so determined not to put our understanding in writing. I simply refused to have anything further to do or say with them unless a definite agreement were entered into.

The actual meeting was an exciting episode. It was held at 2 p.m. in the S. P. G. schoolhouse; a nice, airy, oblong, tile-paved structure having a lofty, well-ventilated roof and two doors opposite each other in the centre of the building. The right half had been apportioned to the Christian party, the left half to the Buddhists. Two plain, square tables were placed for my opponent and myself. At one side sat my Christo-Brahmo Samaj worthy, with a huge Bible before him. The building was densely packed and the compound outside as well. As H. P. B. and I entered with our party there was a dead silence. I bowed to both parties, and, without even glancing at my

opponent, sat down. Seeing that the initiative was left to me, I rose and said that on all such occasions it was the custom among us Western people to chose a Chairman, who should have full authority to restrain the speakers as to time and utterances, and take the sense of the meeting at the close. The Buddhist party desiring nothing more than fairplay, were perfectly willing that the Chairman should be nominated by the Christian party: the only proviso being that he should be one known for his intelligence, good character, and fair-mindedness. I therefore called on them to name a suitable person. Their leaders conferred together for a long time and at last nominated—the most bigoted and prejudiced man in the Island, one particularly obnoxious to the Buddhists. We rejected him and asked them to try again: the same result. Another trial resulted in the same way. I then said that, as they manifestly did not intend to comply with their agreements in nominating a suitable Chairman, I should name, on behalf of the Buddhists, a gentleman who was not even a Buddhist but a Christian, yet one upon whose fairness we felt we could rely. I proposed a well-known Inspector of Schools. But that was not the sort of man *they* wanted, so they rejected him and re-nominated their first nominee. So this farce went on until an hour and a half had been wasted, and I then, with Sumangala's concurrence, gave notice that unless the Christians should within the next ten minutes agree upon a proper presiding officer, we should leave the building. This did no good; so, when the time of grace expired, I rose

and read a paper which, in anticipation of some such possible result, I had prepared. After reciting the sequence of facts, including the conditions on which the challenge had been accepted, I pointed out the obstacles thrown in our way, and the deliberate insult of putting forward as my opponent a man who was not ordained, whom they did not recognize as orthodox, whose overthrow would not be looked upon as of any consequence, and whom they had taken as a *pis aller*, after vainly trying to get a better champion. Then—as they evidently did not know their champion's real religious sentiments, his broadsheet being a quite recent publication, I believe —I showed the precious document and read from it the passages relating to the Trinity. The consternation among them seemed great, so much so that a silence fell upon them; amid which our party rose and left the schoolhouse, preceded by the seven great priests and followed by an enthusiastic multitude. I never saw them so demonstrative before. They would not let us get into our carriages, but we had to walk with such a pack of human flesh about us that might have made one know how it would feel to be present in the centre of a cotton-bale. They shouted; they fired shot-guns; they cracked enormous whips—a Ceylon custom imported from India, centuries ago; they waved flags, cheered, and sang, and—a very pretty custom—tossed highly burnished brass *lotahs*—water-pots—containing a few pebbles each, into the air and caught them again, the sunshine making them sparkle like flashing lights and the pebbles joining in a pleasing subdued rattle and

clink. So the joyous band took us to our quarters, or rather to the great preaching-shed adjoining, where we had to show ourselves and the Chief Priests and I to make suitable addresses. The warmest congratulations were exchanged between friends, and it seemed the general opinion that the Protestant Christians had dealt themselves the heaviest blow ever received by their cause in the Island. As I said in another place, the Catholics did not molest us. In fact, I have just come across a cutting in our Scrap Book, from the *Ceylon Catholic Messenger*, of 20th May, 1881, from which the following extract is taken:

"The Theosophists cannot in any case be worse than the Sectarian Missionaries, and if Colonel Olcott can induce the Buddhists to establish schools of their own, as he is trying to do, he will be doing us a service; because if the Buddhists would have their own denominational schools, as we have ours, they would put a stop to the dishonesty now practised by the Sectarian Missionaries of obtaining Government money for proselytising purposes under the pretext of grants-in-aid for education. Though it is in the education of our own people that we are chiefly interested, yet it is neither our wish nor our interest as Catholics that education should not be universal."

For the sake of the amiable neutrality herein foreshadowed, we shall not traverse the concluding affirmation.

As for the luckless "Christian" champion, he was hustled away to the private room of the railway

station-master, and kept shut up there until the arrival of the next train for Colombo, for fear of unpleasant consequences from his pretended co-religionists.

The next morning we proceeded on to Bentota *via* Kalutara. The trip was delightful, both by rail along the sea-beach, where the track skirts almost the wash of the surf, and by road through the continuous groves of palms, which reminded me of the alley through the palm-house at Chatsworth; save that there it was a matter of roods, while here it was one of scores of miles. Our reception at Bentota was princely indeed. There was a procession a mile long; at least ten miles of *ola* (split tender cocoanut leaves hung on lines supported by poles) decorations along the roads and lanes, and fourteen triumphal arches at conspicuous points. I lectured from a large decorated pavilion or platform, from which we had a fine view of the assemblage and the decorations. We passed the night at the rest-house, or travellers' bungalow, a Government affair, the managing contractor of which was a warm Buddhist and put himself out to make us comfortable. We were all agreed that we had never seen so delightful a house in the Tropics. The lofty ceilings, the floors of red tiles, the walls of laterite, thick and cool, a wide verandah at the back just over the rocky shore of the sea, the rooms at least thirty feet square, the sea-breeze sweeping through them night and day, a bathing-place on the beach, abundance of flowers, a good table and a sympathetic landlord—we had nothing left to desire. H. P. B. declared she should like to pass a whole year there.

Twenty-three names of applicants were handed in that day, and in the evening we formed the Bentota T.S., which, by the way, has scarcely done anything since and up to the present time. Certainly nothing by way of Theosophy, although some help has been given to the cause of Education. This has not been for lack of good feeling, but only from their semi-illiteracy. Seven priests, sent to me by Potuwila for the purpose, were accepted as members.

After an early sea-bath we left, in a special mail-coach chartered for us by the committee, for Galle, which we reached at 5 p.m. after a most pleasant drive. Ferozshah and I were laid up the next two days, and I could make no public appearance. On the evening of 25th June, at a meeting of the Galle T.S., Mr. Simon Perera was elected President. On the 26th we drove to Matara, our southernmost point, and got there at 2 p.m. Four miles from the town we were met by a procession, estimated to be a mile long, under the lead of a local Headman, who took us in charge. The quaintest and most striking features of an ancient Sinhalese *perehera* (procession) were included in the function, and for us it had all the attraction of picturesqueness and novelty. There were costumed sword-dancers, devil-dancers, *nautchnis* with ochred faces, a revolving temple on a float—a van of marionettes—for it must be remembered that the *fantoccini* are of Eastern origin, and one sees them at nearly all festive gatherings in India, Ceylon, and Burma; and numberless flags and swallow-tail pennons were carried and waved by men and boys. Music played, tom-toms beat, songs composed in our

honor were sung, and as at Bentota, some ten miles of *ola* decorations fringed the roads. One may imagine what sized audience such demonstrations caused to gather at the lecturing-place, where I spoke. It was in a palmgrove by the seaside, I standing on a house-verandah, the people sitting in the open. I had a trying interpreter that day, and no mistake. First of all, he asked me to speak very slowly as he "did not understand English very well"; then he planted himself right before me, looking into my mouth, as if he had read Homer, and watched to see what words should "escape through the fence of my teeth". He stood in a crouching position, and with his hands clasping his knees. I spoke extemporaneously, without notes, commanding my gravity with difficulty as I was forced to see the intense anxiety depicted on his countenance. If he did not catch a sentence he would say: "Just repeat that, if you please!" In short, I found it oratory under difficulties. However, we managed it after a fashion, and the people were very patient and good-natured.

Our quarters were in a spacious two-storey house, which had been profusely decorated with flags, bunches of green cocoanuts, palm branches and flowers, making a gay appearance. We breakfasted the next morning with Mrs. Cecilia Dias Illangakoon, a wealthy Buddhist lady of saintly piety, whose kindness towards me ceased only with her life, some years later. It was she who supplied the money for the publication of the first editions, in Sinhalese and English, of my "Buddhist Catechism," and who had prepared, at a cost of nearly Rs. 3,000, the splendid

set of the Tripitika which adorns the Adyar Library. After breakfast she and her son-in-law, Mr. E. R. Gooneratne, of Galle, the most influential native official of Southern Ceylon and the local representative of Professor Rhys Davids' Pali Text Society, were admitted into the T.S., in the presence of Potuwila, Wimbridge, Padshah, and Damodar.

At 4 p.m. I lectured to 2,500 people in the compound of this house, a decorated platform having been built in the doorway for me to stand upon, and the room at my back containing seventy priests of the Siam and Amarapoora sects, the only two in the Island; not exactly sects in the strict meaning of the word, for there is no difference of dogma between them: the word only means that one set of them received their ordination (*upasampada*) from Siam, the other from Burma. Later on, I shall have some explanation to give in this respect; the more needed since H. P. B. did not seem to get it fairly into her head that such was the case, and often wrote of them as if they were quite different theological bodies.

The 28th June was a very busy day. Initiations were going on at intervals, there was a visit from a roomful of priests, headed by the High Priest of the Siam "sect" for Southern Ceylon. Two Pali addresses were read to me, by him and by a young priest of great personal influence in this Province. At 7 the above two and five more monks and nine laymen entered the T.S.; a meeting was held, and the Matara T.S. duly organized, with thirty-two out of thirty-five local members present. Midnight saw us still at work, but at last, thoroughly fagged out, we got to bed.

We went to Weligama the following morning and passed through similar experiences as before, of processions, music, village decorations, *feux de joie*, whip-crackings, flags, buntings, hymns of welcome, and huzzas. We were put up at the rest-house by the seashore, a place so charming that Pro. Haeckel, a later visitor, left an enthusiastic souvenir of his visit in the Visitors' Register, which I copied and have put away somewhere. Ceylon is really a Paradise of natural beauties for one who can appreciate them, and I do not wonder at the reluctance the Sinhalese have ever shown to venturing to foreign lands, even for profit. After tiffin I lectured from a table placed in a cocoanut grove, after which the crowd surrounded our house so densely that nearly all of us fell sick. H. P. B. and I certainly were poisoned by these emanations. We left the place at 4, and at 6 reached Galle fit only for our bedrooms, which we sought and kept to, despite all importunities. My illness continued all the next day, but on the second morning I went with Mr. S. Perera and his brothers to visit their private temple, that is to say, one that they have built mainly at their own expense, for a priest whose life was more strict and ascetic than that of most of the order. Two or three days of comparative quiet now followed, which I devoted to the preparation of an address to be read before a Convention which I had called of the two sects, with the view of creating a kindlier feeling between them, and making them equally interested in the new movement we had begun in the interest of Buddhism. The Convention met at 1 p.m. in an airy upstairs

building on the harbor beach, belonging to Mr. S. Perera. A necessary preliminary was the giving of a breakfast to the thirty delegates—fifteen from each sect. To avoid all friction, I placed the two parties in adjoining rooms communicating by a wide door. The monks first bathed their feet, washed their faces and hands, and rinsed their mouths. They then took their places on small mats placed for them, the seniors at the far end of the parallel lines, each with his copper begging-bowl before him. The laymen-hosts then brought the huge dishes of well-cooked rice, the curry stuffs, fruits, milk, and other things from the kitchen outside, and put an ample supply of solids in each bowl. On their way from the cook-house to the dining-rooms they allowed the crowd of poor persons, gathered for the purpose, to *touch* the dishes and mutter some word of benediction; the belief being that the toucher thus acquires a share of the merit conferred by the charitable act of feeding the monks. Our party took refreshments in another part of the house. When all was ready I stood in the common doorway and read the call of the meeting and then my Address, which was well interpreted as delivered. I also read my Executive Notice, announcing the creation of the Buddhist Section. Remarks having been made by the seven leading priests of the two sects, a joint committee of five each of the two bodies, with Sumangala as chairman, was chosen to carry out my plan, and the meeting then adjourned *sine die*. This was quite a new departure, joint action having never before been taken in an administrative affair; nor would it have been now possible, but for our

being foreigners who were tied to neither party, nor concerned in one of their social cliques more than in any other. We represented Buddhism and Buddhistic interests as a whole, and neither party dared hold aloof for fear of the popular disfavor, even if they had been so inclined. I am bound to say that I have never, during the subsequent nineteen years, had reason to complain of any change of this good feeling for our work by either sect. On the other hand, they have given a thousand proofs of their willingness to help, so far as their natural inertia of temperament permits them, the great revival movement which is destined to ultimately place Ceylon Buddhism upon the most sure and stable footing, since it is that of the goodwill of an educated and willing people. It has ever been a cause of deep regret to me, personally, that I could not have devoted my whole time and energies to the Buddhist cause from my early manhood, for I feel sure that by the time of our first visit to the Island, 1800, I could have brought about the complete unification in sympathy of the Northern and Southern "Churches"—to use an absurd misnomer—and could have planted a schoolhouse at every cross-road in this lovely land of the palm and the spice grove. However, let that pass as a "might have been": my time has not been wasted.

On 5th June I held a Convention of our newly-formed lay Branches. Kandy was represented by Mr. now the Honorable, T. B. Pannabokke; Colombo, by Mr. Andrew Perera; Pānadure, by Mr. J. J. Cooray; Bentota, by Mr. Abeyasekara; Galle, by Mr. S. Perera; and Matara, by Mr. Appuhami.

Our subjects of discussion were the desired secularizing of schools; the rescue of Temple endowment lands from spoliation; the proper way to restore discipline of senior over junior priests—destroyed since the native Dynasty had been replaced by a Christian Government; the preparation of propagandist literature and its circulation, etc., etc.

Two days of rest, and then a trip to Welitara, where we formed our seventh new Branch T. S. under the auspices of two out of the seven most influential monks above referred to, *viz.*, Wimelasāra Māhā Terunnanse and Dhammalankāra Māhā Terunnanse, two splendid men of high ability and leading two great bodies of the Amarapoora sect. Eighteen juniors of the latter and twelve of the former accepted membership, and with them, about every priest of any influence in Ceylon had come into our league and pledged their loyal help to the movement. I suppose the fact is that they were borne in on a wave of popular enthusiasm and could not have held back anyhow. My greatest mistake was not to have taken advantage of this feeling to have collected—as I easily might—a fund of two or three lakhs of rupees for the founding of Buddhist schools, the printing of Buddhist books, and for propaganda generally. By delaying this indispensable business until the following year, my work was infinitely harder and the aggregate of collections infinitely less. A bad year's crop had intervened, the steamers had made Colombo, instead of Galle, their port of call, and that made all the difference in the world.

A final meeting of the Galle T.S., on 11th July, was called for the permanent election of officers, and in Mr. Proctor G. C. A. Jayasekara as President, the Branch got one of the best possible executives. The 12th was our last day in the Island; on the 13th our steamer arrived, and at two we embarked; leaving many weeping friends behind, and taking away with us many recollections of gracious kindnesses, cheerful help, lovely journeys, enthusiastic multitudes, and strange experiences enough to fill the memory with vivid pictures, to recall in future years with delight; as I am doing now with the help of a few lines written in an old Diary.

CHAPTER XIII

A LITTLE DOMESTIC EXPLOSION

By way of contrast to the pleasant experiences of the Ceylon tour, we had a terribly rough sea-passage from Galle to Colombo, and all of us were miserably sea-sick. We lay in Colombo harbor all the next day, the ship tossing about and the water so tumultuous that only a very few of our friends felt inclined to come aboard; but among these few was Megittuwatte. Our fateful number seven asserted itself as usual: our visitors numbering seven, the last boat to come off (bringing us a copy of the latest issue of the *Theosophist*) bearing that number, and our engines being started at 7.7 p.m. Another stormy night followed, and we reached Tuticorin, our first Indian port, several hours late.

It amuses me to find a note in my Diary about our weights, as compared with those we took before starting. H. P. B. had gained 8 lbs., and turned the scale at 237 lbs. (16 st. 13 lbs.); I had lost 15, and weighed 170 lbs. (12 st. 2 lbs.); Wimbridge had neither gained nor lost; Ferozshah had gained 12 lbs.; and Damodar, the antithesis of H. P. B., was found to weigh only 90 lb, (6 st. 6 lbs.), having dropped 6 lbs. of flesh, which he could ill afford to part with!

It rained cats and dogs on the last day of our return voyage—as it had nearly every day; the decks were wet; the awning dripped from the great bags of water that formed wherever the ropes were at all slack; H. P. B. made absurd efforts to write at a table placed for her by the accommodating Captain on a couple of gratings, in a comparatively dry spot, but used more strong words than ink, her papers were so blown about by the gusts that swept the ship fore and aft. At last we entered Bombay harbor and in due course had the peace of solid ground under our feet. No other, however, for on reaching Headquarters we found as pretty a moral storm-centre in action as any household could wish for its dearest neighbors: Miss Bates and Mme. Coulomb were at daggers-drawn, and all sorts of charges and counter-charges were poured into our unwilling ears by those two irate women. Miss Bates charged Mme. Coulomb with having attempted to poison her, and the latter paid her back in kind. I should have liked to sweep them both out with a broom, and it would have been an excellent thing if we had, as things turned out. But instead of that I was called upon to arbitrate their differences, and sat judicially, listening to their absurd contentions for two whole evenings, and finally deciding in Mme. Coulomb's favor as regards the stupid poisoning libel, which had not a single fact to substantiate it. The real, the *teterrima causa belli*, was our having put the housekeeping into Mme. Coulomb's hands on leaving; Miss Bates not being satisfied with the responsible duty of sub-editorship, which we gave her. H. P. B. sat near while the

arbitration proceeded, smoking rather more cigarettes than usual, and putting in an occasional remark, the tendency of which was rather to augment than allay the excitement. Wimbridge, who stood as Miss B.'s next friend, finally joined me in forcing the belligerents to consent to an "armed neutrality," and the storm-cloud passed over for the time being. The next few days were fully occupied with literary work for the Magazine made necessary by our long absence.

Just before our return, our staunch friend Moolji Thackersey had died, and the Society thus lost one of its most willing workers. On the evening of 4th August, a Mahatma visited H. P. B., and I was called in to see him before he left. He dictated a long and important letter to an influential friend of ours at Paris, and gave me important hints about the management of current Society affairs. I was sent away before his visit terminated, and as I left him sitting in H. P. B.'s room, I cannot say whether his departure was a phenomenal disappearance or not. It was a timely visit for me, for the very next day there was a great explosion of Miss B.'s wrath against us two—against H. P. B. on account of a certain lady of New York, a mutual acquaintance, and against me for my decision in the quarrel with Mme. Coulomb. At a moment when her back was turned towards me and she was abusing H. P. B., a note from the teacher who had been to see us the previous evening dropped from the air into my lap. On opening it I found advice given me as to my best course of action in the present difficulty. It may perhaps interest our late American colleagues to learn that the situation was

discussed by the Master as though we were the T. S. *de jure* and not merely a *de facto* body; the ingenious theory of these latter days having apparently failed to suggest itself to the members of the Great White Lodge![1]

The next day the split in our quartette began, Mr. Wimbridge taking sides with Miss Bates. Things began to grow unpleasant. The plan had been agreed upon to purchase a return ticket and send the lady back to New York; but this was subsequently rejected by her, after Mr. Seervai had made the necessary arrangements. On the third day we dined separately; H. P. B., Damodar and I, in her small bungalow, and Wimbridge and Miss B. in the dining-room, which we abandoned to them. Day by day things grew worse; we ceased speaking to each other at last; H. P. B. fretted herself into a fever; there was an impasse by the 9th, and on the 10th a complete separation between the two parties. The Coulombs moved from the adjoining compound into Miss Bates's quarters; she into theirs; Wimbridge retained his, in a small bungalow in the same enclosure with her; the door which had been cut in the dividing wall between the properties was bricked up; and two families were formed out of the original one. And how pitiful to think that this whole bother grew out of some contemptible feminine rivalries and jealousies; that it was utterly unnecessary and uncalled for; that no

[1] A reference to the absurd pretext put forward by the seceding members who followed the late Mr. Judge out of the Society, seven years ago, as an excuse for their illegal action.

great principle was involved; that it might have been avoided by exercising a little self-restraint; and that, however little it might have mattered to us individually, it had a bad effect on the Society, and cast a burden upon it which it had to stagger under for many a day. One bad result of it was that the seceders managed to gain the favor of one of the leading vernacular papers of Bombay, never very cordial to us, and it used its columns to abuse the Society and Theosophy in general with a bitterness which, so far as I know, has been exhibited down to the present day.

Before the separation I had successfully used my personal influence with a Parsi friend to get Wimbridge capital to set up an art-furniture and art-decoration business—his art-education and skill in designing well fitting him to engage in it. After a while he took suitable premises in another part of Bombay, and established a connection which has proved an extremely lucrative one, and, I believe, gained a fortune for him and his associates. We two poor literary "chums" kept moving on in the chosen path, without glancing at the Egyptian flesh-pots on either side of our thorny way; and perverse enough, from the world's point of view, to prefer our poverty and perpetual suffering from cruel slanders, to the most enticing prospects of worldly reward. And that, in truth, was the one sufficient buckler that H. P. B. could use, and did constantly use, to repel the attacks of her hostile critics: not one of them could ever show that she gained money by her phenomena or her Theosophical drudgery.

I used to think she rather overdid it in that direction, and that, to hear her speak, one might fancy that she wanted to have one believe that, because she made nothing out of her wonders, therefore none of the other charges laid against her—plagiarism, for instance, or misquotations of texts, or misrepresentations of authors' teachings—could be true! I remember very well that various persons at Simla and Allahabad took this view of the case, and I pointed it out to her very often.

To add to the gloominess of the outlook on our return from Ceylon, we found the Bombay members inert and the new Branch asleep. Two months of our absence seemed to have almost stifled the local interest in our work, and when the vernacular paper above referred to opened its batteries against us, our sky looked cloudy. Still we kept on with stout hearts, getting the *Theosophist* out punctually every month, and attending to our ever-increasing correspondence. That was one of those crises when, in quasi-isolation, H. P. B. and I were drawn together most closely for mutual support and encouragement. Though the dearest friends might prove false and the staunchest adherents fall away, we just gave each other the more words of cheer, and conspired to make each other think that the trouble was not worth mentioning and must pass over us like a flitting summer cloud. And then we knew, for both of us had the constant proof, that the Great Ones with whom we worked had their potent thought round and about us, a very shield from all harm, a harbinger of perfect success for our cause.

A few of our Hindu and Parsi coadjutors visited us regularly, and by degrees we regained our lost ground in India. In America things were at a standstill: nobody there having at that time the ability or energy to push on the movement. Judge, then but a dreaming tyro of twenty-five or twenty-six, was starving at the law, and General Doubleday, our only other quasi-effective, was living in country seclusion on his army pension, and incapacitated in various ways from devoting himself to this propaganda. More than ever, the evolutionary centre was confined to us two, and the only hope of the survival of the movement was in our living on and never permitting our energies to flag for a moment. We were not so alone as we had been, for among other real helpers whom we had found in India, there was poor, slender, fragile Damodar Mavalankar, who had thrown himself heart and soul into the work with a devotion which could not be surpassed. Frail as a girl though he was, he would sit at his table writing, sometimes all night, unless I caught him at it and drove him to bed. No child was ever more obedient to a parent, no foster-son more utterly selfless in his love to a foster-mother, than he to H. P. B.: her lightest word was to him law; her most fanciful wish an imperative command, to obey which he was ready to sacrifice life itself. When a lad, brought near to death by fever and tossing in delirium, he had had a vision of a benignant sage, who came and took his hand and told him he should not die but should live for useful work. After meeting H. P. B., his interior vision gradually opened, and in him whom we know as

Master K. H., Damodar saw revealed the visitor of his youthful crisis. That sealed his devotion to our cause, and his discipleship to H. P. B. From him, I personally had unbroken trust, affection, and respect; he defended me in my absence from public and private calumny, and deported himself towards me as a son to a father. I hold his memory in respect and love.

On the very day of the rupture between our two family groups, we received from Mr. Sinnett an invitation to visit them at Simla. It was like a draught of sweet water to the caravan, and H. P. B. telegraphed her acceptance: the post was too slow for her. She fumed about until the afternoon, when she took me away on a shopping excursion, bought herself a new outfit for her debut in "Cœrulia," as the mountain capital of the Government of India is sometimes called, and began to count the hours to the earliest practicable time of departure. What came of it is widely known through the medium of various books and many journals; one notice of our presence being that made by Marion Crawford in his *Mr. Isaacs*, where he speaks of us two and Mr. Sinnett, moving about through the rhododendrons. But as the exact truth has not been all told, it remains for me to supply the missing links in another chapter.

CHAPTER XIV

SWĀMI DAYĀNAND SARASWATI ON YOGA

On the fourth day before we left for Northern India an incident occurred in my office, which I give from my Diary notes for what it may be worth, since its genuineness has been disputed by Mme. Coulomb. At the same time I must add that I have never had any proof going to support her assertions, while her reputation for good faith is such as to demand even more corroboration than usual before I could believe them against the evidence of my own senses. H. P. B., Damodar, and I were sitting in the office conversing, when the weird portrait of the Yogi "Tiruvalla," which was phenomenally produced for Mr. Judge and myself in New York—and which had disappeared from its frame in my bedroom just before we left America—fell through the air on the desk at which I sat. Afterwards a photograph of Swāmi Dayānand, which he had given me, fell similarly from space. In noting the circumstances the same evening, I wrote that "I saw the first when it struck a tin box on my desk, and the second as it was coming obliquely through the air." Which implies, of course, that it was *not* dropped through a slit in the ceiling cloth, as the truth-loving Mme. Coulomb says it was. Three evenings later, in presence of

three witnesses besides myself, H. P. B. gave her visiting card to a visitor, who wished it, and somewhat later a duplicate card dropped from the ceiling at the gentleman's feet and was picked up by him.

We—H. P. B. and I, with our servant Babula—left Bombay for the North by the evening mail train of 27th August. After a halt at Allahabad we reached Meerut on the 30th. The entire local branch of the Arya Samaj greeted us at the railway station, escorted us to the residence of Mr. Sheonarain, and soon after Swāmi Dayānand called. In the presence of his followers, we opened a discussion intended to draw out his real views on Yoga and the alleged *Siddhis*, or human psycho-spiritual powers; his teachings to his Samajists having been calculated to discourage the practice of asceticism, and even to throw doubt on the reality of the powers; while his conversations with us had been in another tone. Our debate will be found reported in a full digest in the *Theosophist* for December, 1880, and I should content myself with referring my readers to it, but for the fact that only a very small proportion of them have probably access to that volume, and it is too interesting to the general reader on Yoga, and important in its historical connection with our Society to have it passed over or ignored. I shall, therefore, reproduce its substance herewith, as follows:

"The first question propounded to the Swāmi was whether Yoga was a true science, or but a metaphysical speculation; whether Patanjali described psychical

powers attainable by man, and whether they had been attained, or not. The Swāmi's answer was that Yoga was true and based upon a knowledge of the laws of Nature. It was then asked whether these powers could still be acquired, or had the time passed by. The answer was that Nature's laws are unchangeable and illimitable: what had been done once could be done now. Not only can the man of to-day learn to do all the things described by the ancient writers, but he himself, the Swāmi, could teach the methods to anyone who might sincerely wish to take up that course of life. Many had come to him professing their desire and asserting their ability to command success; he had tried three, but all failed. One was a resident of Agra. They began well, but soon grew impatient of having to confine themselves to what they regarded as trivial efforts, and, to their surprise, broke down suddenly. Yoga is the most difficult science of all to learn, and few men are capable of acquiring it now. He was asked if there are now living any real Yogis who can at will produce the wonderful phenomena described in Aryan books. His reply was that there are such living men. Their number is small. They live in retired places, and in their proper persons seldom or never appear in public. Their secrets are never communicated by them to the profane, nor do they teach their secret science (Vidyā) except to such as upon trial they find deserving.

"Colonel Olcott asked whether these great masters (Mahatmas) are invariably dressed in the saffron clothes of the ordinary *sannyāsi* or *fakir* we see

every day, or in common costume. The Swāmi answered, in either the one or the other, as they may prefer, or circumstances require. In reply to the request that without suggestion he would state what specific powers the proficient in Yoga enjoys, he said that the true Yogi can do that which the vulgar call miracles. It is needless to make a list of his powers, for practically his power is limited only by his desire and the strength of his will. Among other things he can exchange thoughts with his brother Yogis at any distance, even though they be as far apart as one pole from the other, and have no visible external means of communication, such as the telegraph or post. He can read the thoughts of others. He can pass (in his inner self) from one place to another, and so be independent of the ordinary means of conveyance, and that at a speed incalculably greater than that of the railway engine. He can walk upon the water or in the air above the surface of the ground. He can pass his own soul (*Ātmā*) from his own body into that of another person, either for a short time or for years, as he chooses. He can prolong the natural term of the life of his own body by withdrawing his *Ātmā* from it during the hours of sleep, and so, by reducing the activity of the vital processes to a minimum, avoid the greater part of the natural wear and tear. The time so occupied is so much time to be added to the natural sum of the physical existence of the bodily machine.

"*Q.* Up to what day, hour, or minute of his own bodily life can the Yogi exercise this power of

transferring his *Ātmā*, or inner self, to the body of another ?

"*A.* Until the last minute, or even second, of his natural term of life. He knows beforehand, to a second, when his body must die, and until that second strikes, he may project his soul into another person's body if one is ready for his occupancy. But, should he allow that instant to pass, then he can do no more. The cord is snapped for ever, and the Yogi, if not sufficiently purified and perfected to be enabled to obtain *Moksha*, must follow the common law of rebirth. The only difference between his case and that of other men is, that he, having become a far more intellectual, good, and wise being than they, is reborn under better conditions.

"*Q.* Can a Yogi prolong his life to the following extent : say the natural life of his own body is seventy years, can he, just before the death of that body, enter the body of a child of six years, live in that another term of seventy years, remove from that to another, and live in it a third seventy ?

"*A.* He can, and can thus prolong his stay on earth to about the term of four hundred years.

"*Q.* Can a Yogi thus pass from his own body into that of a woman ?

"*A.* With as much ease as a man can, if he chooses, put on himself the dress of a woman, so he can put over his own *Ātmā* her physical form. Externally, he would then be in every physical aspect and relation a woman ; internally himself.

"*Q.* I have met two such : that is to say, two persons who appeared women, but who were entirely

masculine in everything but the body. One of them, you remember, we visited together at Benares, in a temple on the bank of the Ganges.

"*A.* Yes, 'Majji.'

"*Q.* How many kinds of Yoga practice are there?

"*A.* Two—*Hatha Yoga* and *Rāja Yoga*. Under the former the student undergoes physical trials and hardships for the purpose of subjecting his physical body to the will. For example, the swinging of one's body from a tree, head downwards, at a little distance from five burning fires, etc. In *Rāja Yoga* nothing of the kind is required. It is a system of mental training by which the mind is made the servant of the will. The one—*Hatha Yoga*—gives physical results; the other—*Rāja Yoga*—spiritual powers. He who would become perfect in *Rāja* must have passed through the training in *Hatha*.

"*Q.* But are there not persons who possess the *Siddhis*, or powers, of the *Rāja Yoga*, without ever having passed through the terrible ordeal of the *Hatha*? I certainly have met three such in India, and they themselves told me they had never submitted their bodies to torture.

"*A.* Then they practised *Hatha* in their previous birth.

"*Q.* Explain, if you please, how we may distinguish between real and false phenomena when produced by one supposed to be a *Yogi*.

"*A.* Phenomena and phenomenal appearances are of three kinds: the lowest are produced by sleight-of-hand or dexterity; the second, by chemical or mechanical aids or appliances; the third

and highest, by the occult powers of man. Whenever anything of a startling nature is exhibited by either of the first two means, and it is falsely represented to have been of an unnatural, or super-natural, or miraculous character, that is properly called a *tamāsha*, or dishonest deception. But if the true and correct explanation of such surprising effect is given, then it should be classed as a simple exhibition of scientific or technical skill, and is to be called *Vyavahāra-Vidyā*. Effects produced by the sole exercise of the trained human will, without apparatus or mechanical aids, are true *Yoga*.

"*Q*. Define the nature of the human *Ātmā*.

"*A*. In the Ātmā there are twenty-four powers. Among these are will, passivity, action, determined perception or knowledge, strong memory, etc. When all these powers are brought to bear upon the external world, the practitioner produces effects which are properly classed under the head of Physical Science. When he applies them to the internal world, that is Spiritual Philosophy—*Yoga—Antaryoga* or inner *Yoga*. When two men talk to each other from far distant places by means of the telegraph, that is *Vyavahāra-Vidyā*; when without any apparatus and by employing their knowledge of natural forces and currents, it is *Yoga Vidyā*. It is also *Yoga Vidyā* when an adept in the science causes articles of any kind to be brought to him from a distance, or sends them from himself to any distant place, in either case without visible means of transportation, such as railways, messengers, or what not. The former is called *Ākarshan* (attraction), the latter *Preshana*.

The ancients thoroughly understood the laws of the attraction and repulsion of all things in Nature, between each other, and the *Yoga* phenomena are based upon that knowledge. The *Yogi* changes or intensifies these attractions and repulsions at will.

"*Q.* What are the pre-requisites for one who wishes to acquire these powers?

"*A.* These are: (1) A desire to learn. Such a desire as the starving man has for food, or a thirsty one for water: an intense and eager yearning. (2) Perfect control over the passions and desires. (3) Chastity; pure companionship; pure food—that which brings into the body none but pure influences; the frequenting of a pure locality, one free from vicious taint of any kind; pure air; and seclusion. He must be endowed with intelligence—that he may comprehend the principles of Nature; concentrativeness—that his thoughts may be prevented from wandering; and self-control—that he may always be master over his passions and weaknesses. Five things he must relinquish—Ignorance, Egotism (conceit), Passion (sensual), Selfishness, and Fear of Death.

"*Q.* You do not believe, then, that the *Yogi* acts contrary to natural laws?

"*A.* Never; nothing happens contrary to the laws of Nature. By *Hatha Yoga* one can accomplish a certain range of minor phenomena, as, for instance, to draw all his vitality into a single finger, or, when in Dhyāna (a state of mental quiescence), to know another's thoughts. By *Rāja Yoga* he becomes a *Siddha*; he can do whatever he wills, and know whatever he desires to know, even languages which

he has never studied. But all these are in strict harmony with natural laws.

"*Q.* I have occasionally seen inanimate articles duplicated before my eyes, such as letters, coins, pencils, jewelry; how is this to be accounted for?

"*A.* In the atmosphere are the particles of every visible thing, in a highly diffused state. The *Yogi* knowing how to concentrate these, does so by the exercise of his will, and forms them into any shape of which he can picture to himself this model.

"Col. Olcott asked the Swāmi what he would call certain phenomena heretofore produced by Madame Blavatsky in the presence of witnesses—such as the causing of a shower of roses to fall in a room at Benares last year, the ringing of bells in the air, the causing of the flame of a lamp to gradually diminish until it almost went out, and then at command to blaze up again to the top of the chimney, without touching the regulator in either instance, etc. The answer was that these were phenomena of *Yoga*. Some of them might be imitated by tricksters and then would be mere *tamāsha;* but these were not of that class."

I think this one of the simplest, clearest, most sententious and most suggestive digests of the Indian view of the high science of Yoga in literature. My respondent was one of the most distinctly Aryan personages of the time, a man of large erudition, an experienced ascetic, a powerful orator, and an intense patriot. Attention should be paid to the Swāmi's assertion that one *cannot* pass on to the practice of Rāja Yoga without first having subjugated the physical

body by a course of Hatha Yoga, or physiological training, and that if one be found who is confining himself with success to Rāja Yoga, this is *primā facie* proof of his having done his Hatha Yoga in the anterior birth. This idea is shared by all orthodox educated Hindus whom I have met, but my readers will decide for themselves whether it is reasonable or not. We may, at any rate, say that nothing is clearer than that man's personal evolution towards the spiritual life is progressive, and that every stage of physical self-mastery must be passed before "liberation" can be attained. To most believers in the theory of reincarnation the above hypothesis will not seem destitute of a reasonable foundation; and yet it is not so clear to me that I have ever had to sleep on pointed spikes; or hang by my heels; or sit between fierce fires; or cleanse my stomach daily by the feat of *dhoti*—the swallowing of yards upon yards of wet cotton cloth and then pulling it up again; or fill my abdominal cavity with gallons of water, to reach even my low stage of spiritual capacity. I think the will can be fortified even better without than with physical torture.

We were fortunate enough to meet at Mr. Sheonarain's house the now celebrated Pandita Ramabai, then married to a Bengali barrister or advocate, but visiting here with her late brother in the course of a tour. Ramabai's name and history are now so well known in all parts of the world that I need only say that at that time she was letter-perfect in the *Gītā* and *Rāmāyana*, could converse and write with great fluency in Sanskrit and compose verses in it impromptu on any

given subject within the range of her reading. After a lecture I delivered on the evening of 6th September, she gave her own views first in Hindi and then, by request, in Sanskrit, displaying equal fluency in both. She had not learnt English then, but could lecture in Sanskrit, Hindi, Urdu, Marathi, Guzerati, and Kanarese —the latter her mother-tongue. She was twenty-two years old; a pale, slim, ascetic-looking young woman, not at all recognizable in the stout, worldly-wise appearing matron whom I recently saw at Poona at a lecture of Mrs. Besant's. The Ramabai of 1880 was a true type of the highly meditative Brahmini; the one of Poona might have sat for the type of the Western business-woman, who is more at home with lodgers and ledgers than with literature.

My debate with the Swāmi went on day by day and evening by evening, despite a heat so oppressive as to be almost unbearable. One morning H. P. B. came to call me long before daylight, being afraid of heat-apoplexy, and determined that we should start at once for Simla, notwithstanding that the notices were out for my above-mentioned public lecture. But, finding that by adopting the Hindu custom of sleeping out-doors she might fare better, she changed her mind, countermanded by telegraph a previous telegram, and that next night had her high-post bedstead placed out of doors near my cot and our host's, and, protected by a large mosquito curtain from all flying insects, she slept soundly until the chattering crows hoarsely called to each other in the neighboring mango tope.

That day the Swāmi and I, as Presidents of our respective Societies, had a long and serious private

talk, the result being that "We agreed that neither should be responsible for the views of the other: the two Societies to be allies, yet independent."

At 4.14 in the afternoon we left Meerut for Simla. From Ambala—after a halt until 11 p.m., with Indian friends—we drove all night up the mountain road to the summer capital of the Viceroy in a *dak-gharry*, an oblong, wooden-bodied conveyance, something like a big palanquin on wheels. We slept but little as we were entering the foot-hills of the Himālayas and H. P. B. had business with the Mahatmas to attend to. I note that it was on this night that she told me the story about Swāmi Dayānand's body being occupied by a Master, which influenced me so much in my later intercourse with him. A five-hours' halt was made at Kalka, and we then went on in a *tonga*—a two-wheeled spring cart, hung very low, and with seats for four persons, the driver included—to Simla. The military road is good, though somewhat perilous at the sharper turns (with balky ponies). The scenery is imposing by reason of the altitudes and mountainous outlines and masses, but there is a great lack of woods, which robs the landscapes of the refreshing element of verdure. We came in sight of Simla just before sunset, and its sun-gilded villas gave it an attractive appearance. A servant of Mr. Sinnett's met us as we entered the town, with *jampans*—chairs carried by porters by long poles—and we were soon under the hospitable roof of our good friends the Sinnetts, where a hearty welcome awaited us.

CHAPTER XV

SIMLA AND THE CŒRULIANS

WAKING the next morning, refreshed and happy, Simla presented to us a charming aspect. Mr. Sinnett's house was so situated on a hill-slope as to command a superb view, and from the verandah the eye took in the residences of the majority of those high Anglo-Indian officials who conduct the government of this giant empire.

Mr. Sinnett's first move was to have a very serious talk with H. P. B. as to the policy she should pursue. I have noted that he most earnestly begged her to consider this visit as a holiday jaunt, and for three weeks, not even to speak a word about the T.S. or the nonsensical watching of us by Government as possible Russian spies; in short, to "sink the shop" entirely, the better to achieve results by making people friendly to us, which they would not be if we forced them to listen to our heterodox notions and complaints of our grievances. Of course, H. P. B. promised, and, equally of course, forgot all about it when the first visitor called. News from Bombay about the turn the Bates affair was taking threw her into a paroxysm of excitement, and the next morning, as usual, she made me the scapegoat; stamping up and down the room and making it appear that I was the

proximate cause of all her trials and tribulations. My notes say that Sinnett privately expressed to me his feeling of despair to see that she would not control herself, but threw away all her chances to make friends among the class whose goodwill it was most important to secure. The English, he said, always associate true merit with calm self-control.

Our faithful friend Mrs. Gordon was our first Simla visitor, and after her came a succession of the most important Government officials, whom Sinnett brought to the house to meet H. P. B. From my Diary I see that she began doing phenomena at once. She made her raps on the tables and elsewhere about the room, and out of a handkerchief, with her name embroidered on it, drew a second one marked, by request, with Mr. Sinnett's name in the same style of embroidery. Two days later, she did a queer phenomenon for a gentleman visitor: she rubbed off from the chintz cover of the chair in which she was sitting a duplicate of one of the flowers in the pattern. The flower was not a phantasm, like the smile of the Cheshire cat, but a substantial object, as though a piece of the cloth corresponding with the outline of the flower had been removed from the chintz under her hands; the chintz, however, was unmutilated. This was probably a Māyā.

From this time on, no dinner to which we were invited was considered complete without an exhibition of H. P. B.'s table-rapping and fairy-bell ringing. She even made them to sound on and within the heads of the gravest official personages. One day,

after a luncheon, she caused the ladies and gentlemen present to pile their hands on top of each other, and then, laying her own hand upon the topmost one, would cause raps to come with sharp metallic clicks under the lowest hand of the pile. There was no possibility of cheating here, and the assistants were all greatly interested in this proof that a current of psychic force could be sent through a dozen hands and produce sounds on the table beneath. This experiment was repeated on several occasions, and once was attended with a striking circumstance. In the dinner party was a certain well-known High Court Judge. When his hands were interposed in the pile, no current would pass through, but the moment he withdrew them the raps would click again. Possibly, he thought that his special shrewdness prevented the playing of tricks, but, of course, the explanation is that his nervous system was not a conductor to H. P. B.'s nerve aura.

Among the notable acquaintances we made was Mr. Kipling, the Director of the Lahore School of Arts, the genius of whose son Rudyard had not then burst upon an astonished public.

Up to this time we had been under governmental disfavor as suspected Russian agents, and one object in view was to have this foolish misunderstanding removed so that our Indian work might not be henceforth hampered. But I waited until we had personally met all the leading officials, and given them the opportunity of judging for themselves as to our characters and probable motives in coming out to India.

When the time seemed ripe I had, one day after dinner, a friendly chat with the Secretary to Government in the Foreign Department, and arranged for an exchange of letters, with copies of my credentials from the President of the United States and the American Secretary of State. For the sake of its historical interest and the importance of its results, I will fill out the record by printing the text of my letter:

"SIMLA, *27th Sept.*, 1880.

"SIR,—Referring to our conversation of Saturday with respect to the Theosophical Society and its work in India, I have the honor, in compliance with your suggestion, to put the case in writing.

"1. The Society was organized at New York in the year 1875 by a number of Orientalists and students of Psychology, for the defined purpose of studying the religions, philosophies, and sciences of ancient Asia with the help of native scholars, experts, and adepts.

"2. It had no other object; especially, it had no interest in or disposition to meddle with politics, in India or elsewhere.

"3. In 1878 two of its founders—Mme. H. P. Blavatsky, an American citizen by naturalization, and a lifelong student of Asiatic psychology, and myself—with two other members (British subjects), came to India to promote the work in hand. Two of the party being English-born, the third a naturalized citizen, and the other a native of the United States, not even the thought of mixing in Indian politics had

occurred to us. I myself bore a special passport (of the Diplomatic form) from Mr. Secretary Evarts with a special circular letter of introduction from the Department of State to American Ministers and Consuls, and one of similar import—an unprecedented honor, as I am told—from the President himself. Copies of these papers are now filed with the Bombay Government, and triplicates will be sent to your Department as soon as they can be procured from Bombay.

"4. False reports, based upon ignorance or malice, respecting the objects of our Indian Mission, having been made to the Government of India, we were placed under surveillance; but the work was so clumsily done that the attention of the whole country was attracted, and the idea was put into the native mind that to be known as our friends would incur the displeasure of high officials, and might seriously affect their individual interests. Thus the laudable and beneficent plans of our Society were seriously impeded, and we were subjected to many wholly undeserved indignities, as a consequence of the action of Government upon false and misleading rumors.

"5. It has been remarked by every one who has had the opportunity to acquaint himself with the facts, that, during our eighteen months' residence in India, we have exerted a wholesome and conservative influence upon the natives, and been accepted by them as the true friends of their race and country. We have letters from every part of the Peninsula to prove this. If the Government would but undo the

wrong it unintentionally did us, and restore the character we bore until the stigma of alleged political machination was so cruelly and unjustly placed upon us, we could render great service not only to the Hindus but to Western literature and science. It is not enough that the previous order to watch us should be rescinded, the suspicion has filtered from the officers of your Department through all the classes of the native population, and a blight rests upon us. An effectual remedy would be for the Department to order its subordinates to make known in their several localities the fact that we are no longer under suspicion, and that so far as our work is for the good of India, it is approved. And this, as an American officer and gentleman, I ask of you as the representative of British equity.

" I am, dear sir,
" Very respectfully,
" Your obedient servant."

The reply of the Government was not quite all that I wished for; while assuring us that we would not be interfered with so long as we did not meddle in politics, it did not say that the orders to British residents in native states, to watch us, would be countermanded. In a second letter, I brought this to the notice of the Foreign Office, and in due course got all that I wanted. From that time we have been free.

On 29th September, Mrs. Sinnett, H. P. B., and I went to the top of Prospect Hill. On the slate-roof of a small Hindu shrine that is there,

among the many names of visitors scribbled, I discovered the cryptograph of Mahatma M. with my own name written beneath it: but how they got there I cannot say. As we sat there chatting, H. P. B. asked what our souls would most desire. Mrs. S. said: "To have a note from the Brothers drop in my lap." H. P. B. took a bit of pink note-paper from her pocket-book; traced on it certain invisible signs with her finger; folded it in triangular shape; took it in her hand; walked to the brow of the hill—twenty yards off; faced the West; made some signs in the air; opened her hands, and the paper was gone. Instead of having the answer dropped in her lap, Mrs. Sinnett got it by climbing into the heart of a tree near by. It was written on the same pink paper, folded triangularly, and transpierced on a sprig. Inside, in a strange hand, was written: "I believe I was requested to leave a note here. What do you wish me to do?" The signature was in Tibetan characters. From the evidential point of view, the weak point about this incident was that the note was not delivered in the way desired.

I now come to the much-mooted incident of the finding of an extra cup and saucer at a picnic. I shall give the narrative exactly as I find it told in my Diary entry for the 3rd of October, 1880.

A party of six of us—three ladies and three gentleman—were leaving the house for a valley some distance from town, where we meant to find a suitable place for our purpose. The Sinnetts' butler had packed the hampers and put in a half-dozen cups and saucers of a peculiar pattern—one for each of us.

Just as we were starting, another gentleman rode up, and was invited to join our party. The servants went on ahead with the hampers, and we leisurely followed in single file, down the sinuous and rocky path which led to the valley. After a somewhat long jaunt we came to a flat space on the comb of a ridge covered with green turf, and overshadowed by great trees. Having decided to camp there, we dismounted, and flung ourselves upon the grass, while the servants laid the tablecloth upon the ground and arranged the provisions. They built a fire to boil the kettle for tea, and presently the butler came to Mrs. Sinnett, with an anxious face, telling her that there was no cup and saucer for the Sahib who had joined us at the last moment. I heard her say, in a vexed tone: "It was very stupid of you not to put in another cup and saucer when you knew that the other gentleman would have to have tea." Turning to us, she laughingly said: "Two of you good people must drink out of the same cup, it seems." I remarked that, once, in a similar quandary, we had settled the affair by giving the cup to one person and the saucer to the other. Thereupon, one of the company jokingly said to H. P. B.: "Now, Madam, here is a chance for you to do a bit of useful magic." We all laughed at the absurdity of the idea, but when H. P. B. seemed ready to accept the suggestion in sober earnest, there was an outcry of pleasure, and she was asked to forthwith do the phenomenon. Those who were lying on the grass rose and gathered near her. She said that if she was really to do this, she must have the help of her friend Major. . . . He being more than willing,

she requested him to take something to dig with, and so, snatching up a table-knife, he followed her about. She looked intently over the ground, presenting the face of her great seal-ring towards one spot after another, and finally said: "Please dig here." The gentleman plied his knife-point vigorously, and found that beneath the grass the ground was filled with a net-work of fine roots of the adjacent trees. These he cut and pulled out, until presently, brushing away the loose soil, a white object was uncovered. It proved to be a tea-cup imbedded in the ground, and on being taken out, was found to be of the identical pattern of the other six. Imagine the exclamations of surprise and the excitement of our little group! H. P. B. told the gentleman to continue his digging in the same place, and after cutting away a root as thick as my little finger, he excavated a saucer of the identical pattern desired. This capped the climax of our excitement, and the gentleman who had plied the knife was loudest in his expressions of wonder and satisfaction. To complete this part of my narrative, I will state that Mrs. Sinnett and I, reaching the house first, on the return of our party, went straight to the butler's pantry, and found the three other cups of the nine which she had left of the original dozen, put away on an upper shelf with their handles broken, and otherwise dilapidated. The seventh cup produced at the picnic had, therefore, not formed part of her broken set.

After luncheon, H. P. B. did another wonder which surprised me more than any of the rest. One of the gentlemen said that he was ready to join our Society

if H. P. B. could give him his diploma then and there-duly filled out! This was, certainly, a large order, but the old lady, nothing daunted, made a sweep of her hand, and pointing to a bush at a little distance, told him to see if he could not find it there; trees and bushes having often served as letter-boxes. Laughingly, and in apparent confidence that his test would not be complied with, he walked over to the bush—and drew forth a diploma of membership filled in with his name and that day's date, together with an official letter from myself, which I am quite sure I never wrote, but which was still in my hand-writing! This put us all in hilarious spirits, and as H. P. B. was in the vein, there is no telling with what other phenomena she might not have treated us, but for a most unexpected and disagreeable contre-temps. On our way home we stopped at a certain place to rest and chat. Two of the gentlemen—the Major and the one who last joined us—strolled away together, and, after a half-hour, returned in a very serious mood. They said that, at the time when the cup and saucer were exhumed, they thought the circumstances perfectly convincing, and were pre-pared to uphold that view against all comers. They had now, however, revisited the spot, and made up their minds that by tunnelling in, from the brow of the hillock, the articles might have been put where they were found. This being so, they regretted that they could not accept the phenomenon as perfectly satisfactory, and offered H. P. B. the ultimatum of doing another phenomenon under conditions to be dictated by themselves. I leave anyone who was

acquainted with H. P. B., her family pride and volcanic temperament, to picture to himself the explosion of wrath that followed this speech. She seemed about to take leave of her senses, and poured out upon the two unfortunate sceptics the thunder of her wrath. And so, our pleasant party ended in an angry tempest. For my part, in thinking over all the details of the cup and saucer incident, and with every desire to get at the truth, I cannot regard the theory advanced by the two sceptics as at all valid. Every one present saw that the cup and saucer were covered over with multitudinous roots which had to be cut and violently torn away to get at them, and both appeared to be imbedded in the soil as though they were fragments of stone; the turf above them was green and undisturbed, and if they had been introduced through a tunnel, the disturbance of the surface could not have escaped the eyes of our whole party, who were clustered about the digger while he was at work. However, let it pass for what it is worth; H. P. B.'s merit as a public teacher does not depend upon the many phenomena which this marvellous woman produced from time to time, for the instruction of such as could profit by them.

And certainly it is better to have launched the Eastern Doctrine than to have created in the ground a whole tea-service of porcelain.

CHAPTER XVI

WHAT HAPPENED AT SIMLA

SINCE the publication of the last chapter of these memoirs, I have found a printed circular issued by Damodar, for the private use of our members, and covering extracts from my private letter to him dated Simla, 4th October, 1880—the day after the picnic described. On reading it I find that my Diary has served me perfectly as regards the details of occurrences with a single exception, *viz.*, the official letter found by Major . . . in the deodar shrub along with his diploma, in answer to his demand, was signed "Faithfully yours . . . (the name in Tibetan characters) for H. S. Olcott, President of the Theosophical Society". The body of the letter was, however, in a facsimile of my handwriting, and, if I had not known the contrary, I should have been ready to swear that I had myself written it.

The incident of the finding of Mrs. Hume's brooch, so universally known and so often commented upon, occurred that same evening at Mr. A. O. Hume's house. I shall tell the story exactly as it happened, since not only are the facts clearly present to my mind, but they are also given in my letter to Damodar above-mentioned. One most important circumstance has hitherto been omitted from all the versions published by eye-witnesses, one which weighs strongly

in H. P. B.'s favor and against the hypothesis of fraud. The facts are these. A party of eleven of us—including Mr. and Mrs. Hume, Mr. and Mrs. Sinnett, Mrs. Gordon, Captain M., Mr. H., Mr. D., Lieutenant B., and H. P. B. and myself—were dining at Mr. Hume's. Of course, occultism and philosophy were the topics of conversation. Psychometry was also broached, and Mrs. Gordon, obtaining H. P. B.'s consent to try an experiment, went to her room and fetched a letter in a plain envelope which she gave H. P. B. to psychometrize. The latter held it to her forehead a moment and began to laugh. "This is queer," she said. "I see just the top of somebody's head with hair standing up like spikes all over it. I can't see the face. Ah! now it begins to rise slowly. Why, it is Dr. Thibaut, of course!" And so it was; the letter was from him to Mrs. Gordon. The incident gave everybody the highest satisfaction, and—as usually happens in this phenomena-hunting business—more wonders were called for; would not Madame B. cause something to be brought from a distance? She looked calmly around the table and said: "Well, who wants something?" Mrs. Hume at once spoke up: "I do," she said. "What?" asked H. P. B. "If I could really get it, I should like to have an old family jewel that I have not seen for a long time; a brooch set round with pearls." "Have you the image of it clear in your mind?" "Yes, perfectly clear; it has just come to me like a flash." H. P. B. looked fixedly at Mrs. H. for a while, seemed to be communing with herself, looked up and said: "It will not be brought into this house

but into the garden—I am told by a Brother." After a pause, she asked Mr. Hume if he had in his garden a flower-bed shaped like a star. Yes, Mr. Hume said, there were several. H. P. B. stood up and pointed in a certain direction. "I mean there," she said. Yes, there was one at that side. "Then, come with me yourself and find it, as I have seen it drop like a point of light, in such a bed." Thereupon the company rose, put on their wraps, and gathered in the drawing-room for the expedition—all save Mrs. Hume, who did not dare expose herself to the cold night breeze. Before we started I put it to the company to recall all the incidents, and say whether they lent themselves to any theory of complicity, or leading up with conversation, or mental suggestion exercised by H. P. B. "For," said I, "if a shadow of doubt hangs over the occurrence, it will be useless for us to go any further." Those present looked questioningly at each other and with one accord agreed that everything had been fair and stamped with good faith. This is the missing link of all previous versions of the story, and I submit that, in view of my challenge and the putting of them on their guard, it is nonsense to cook up any theory of trickery when the facts are so very plain and so much candor was used throughout.

We went searching the garden with lanterns, for it was a dark night and nothing could be seen. We went by twos and threes here and there, H. P. B. with Mr. Hume, Mrs. Sinnett with Captain M., etc. The large bed shaped like a star was found and Mrs. Sinnett and Captain M. were the lucky finders of a

small white paper package with something hard within. They found it by pulling up a tangled network of nasturtium and other vines that made a perfect mat of verdure. H. P. B. and Mr. Hume were at some distance and I also, until the finders called out to come and see what they had got. Mrs. Sinnett handed it to Mr. Hume, who opened it in the house, and inside was the missing brooch that had been asked for. At the suggestion of somebody—not of H. P. B. or myself—a protocol was drawn up by Mr. Hume and Mr. Sinnett, read to the company and signed by all. Now this is the plain, unvarnished story without concealment or exaggeration. Let any fair-minded reader say whether it was or was not a true phenomenon. It has been suggested that among some jewelry recovered from an adventurer who had had an intimacy with Mr. Hume's family and improperly got possession of it, this brooch was included. Granting that to be so—if it was—this no more lessens the mystery of the call for the brooch by Mrs. Hume and its discovery in the garden-bed, than the probable previous ownership by H. P. B. of the solid gold ring she caused to leap out of the rose I was holding in my hand,[1] weakens the wonderful force of that phenomenon in itself. When Mme. Blavatsky, in response to the call for a phenomenon of the *apport* class, looked around the table, she singled out nobody, but Mrs. Hume was the first to speak, and almost simultaneously one or two others followed. She being the hostess, the others yielded their own chances to her out of courtesy, and it was

[1] Described in the first volume of these Memoirs.

then that H. P. B. asked what she wished. If somebody else's wish had been given preference by the company H. P. B. would have had to deal with that person, and where, then, would the theory of her having mentally suggested the brooch to Mrs. Hume have come in? This practical difficulty is, of course, gaily disposed of by the further suggestion that H. P. B. hypnotised everybody present as to every detail, so as to make Mrs. Hume ask for the article she could most easily procure. Passing on from this, we are next confronted with the important facts (*a*) that H. P. B. had never set foot in Mr. Hume's garden; (*b*) had never been carried up the road to the door save at night; (*c*) that the garden was not lighted; (*d*) that the star-shaped bed was not within view from the drive, hence could not have been noticed by her; (*e*) that from the moment when Mrs. Hume asked for the brooch nobody left the table until all rose together; and that it was Mrs. Sinnett and Captain M. who found the packet, and not H. P. B. who led Mr. Hume to it, as she might if she knew the exact place of its hiding. Then—again supposing that H. P. B. had the brooch in keeping—we must account for its transport to the flower-bed between the time when asked for and that when found—a few minutes only. Those who do not positively hate our dear departed teacher, will, I am sure, in view of the foregoing facts, give her 'the benefit of the doubt and write this incident in the list of genuine proofs of her psycho-spiritual faculty. I now pass on.

The brutal ultimatum presented by Major H., which killed the joy of our picnic-party, kept H. P. B.

in a state of tumultuous agitation for several days, but the occurrences at Mr. Hume's dinner resulted in the joining of our Society by several influential European gentlemen, and in the manifestation of much friendly sympathy towards my poor colleague.

On 7th October I lectured at the rooms of the United Service Institution on "Spiritualism and Theosophy".[1] I was introduced by Captain Anderson, Hon. Secretary of the Institution, and the vote of thanks was moved in a very kind speech by the veteran Lieutenant-General Olpherts, C.B., V.C., R.A. The audience was the largest ever gathered together at Simla, I was told. The same evening I attended the Viceroy, Lord Ripon's, ball at Government House and received many congratulations from friends on the lecture and our improved relations with the Indian Government.

Day after day we continued receiving visitors, dining out and being lionized generally. H. P. B. kept on with her phenomena, some of them very trifling and undignified, I thought, but still such as to make half Simla believe that she was "helped by the Devil". That is how my Diary entry reads, and it is noted that the author of the theory was a certain Major S., who told H. P. B. so to her face in all seriousness. 16th October, Mrs. Gordon had the Sinnetts, Major S., and ourselves on a picnic, and H. P. B. distinguished herself by producing from a handkerchief steeped in a saucer of water a duplicate with Mrs. Sinnett's Christian name embroidered

[1] For text see *Theosophy, Religion and Occult Science*, p. 216. Also published in pamphlet-form by T. P. H.

across one corner. That evening Mr. Hume handed her for transmission his first letter to K. H., the beginning of the highly interesting correspondence about which so much has been said from time to time. Some more dinner-parties and picnics filled in the closing days of our pleasant Simla visit, and one or two excellent phenomena kept up the interest in H. P. B. at fever heat. One was very pretty. We were dining at home that day and Mrs. Sinnett, H. P. B., and I were waiting for Mr. S. in the drawing room. The ladies sat together on a sofa, Mrs. S. holding H. P. B.'s hand and admiring for the twentieth time a lovely yellow diamond ring, that had been given the latter by Mrs. Wijeratne of Galle on the occasion of our visit that same year. It was a rare and costly gem, full of sparkle and light. Mrs. Sinnett was very anxious that H. P. B. should double it for her some time, but she had not promised. Just now, however, she did it. Rubbing two fingers of the other hand to and fro across the stone, she after a moment paused, and lifting her hand exposed the gem. Alongside it, lying between that finger and the next, was another yellow diamond, not so brilliant as hers, yet a very fine stone. It is, I believe, still in the possession of our kind and dear friend. At dinner that day H. P. B. ate nothing, but while the meal progressed kept warming the palms of her hands on the hot-water plate before her. Presently she rubbed them together and one or two small gems dropped on the plate. Readers of M. A. Oxon's biography will recollect that this *apport* of gems was a very frequent phenomenon with him; sometimes

they fell on him and about the room in showers, sometimes large single stones would fall. The Orientals say these are brought by elementals belonging to the mineral kingdom, such as Westerns call gnomes—the spirits of the mines—and in the Tamil language they are named *Kalladimandan*.

Mr. Sinnett has himself described in print the occurrence of 20th October, which he has called the "pillow incident". It would seem to have been a thoroughly genuine affair. We were picnicing on Prospect Hill and Sinnett was expecting a reply to a letter he had addressed to one of the Masters, but not to receive it there, as ours was purely a pleasure party. However, somebody—I forget whom and am writing from the meagre notes in my Diary and without reference to Mr. Sinnett's narrative—asked for another phenomenon (they always do: this salt water never quenches thirst), and it was settled that something should be brought by magic. "Where will you have it besides in a tree; we must not make our phenomena stale by repetition?" asked H. P. B. A consultation between our friends ended in the agreement that it should be made to come inside the back-pillow against which Mrs. Sinnett was leaning in her jampan. "All right," said H. P. B.; "open it and see if there is anything within." Mr. S. with his pocket-knife went to ripping open the pillow. The outside cover was embroidered on the face, backed with leather or some strong fabric, sewn with very stout thread, and the seam covered with a silken cord closely sewn to it. It was an old pillow and the sewing had become so hard with time as to

make it a difficult job to rip it apart. This was done at last, however, and inside was a second pillow cover holding the feathers and also strongly sewn down the seams. When this was ripped Mr. Sinnett thrust in his hand, felt among the feathers, and soon brought forth a letter and a brooch. The letter was from "K. H.," and referred to a conversation between Mr. S. and H. P. B.; the brooch was Mrs. S.'s, and just before leaving the house she had seen it lying on her dressing table. Let sensible people draw the natural inferences from the above facts.

That nothing may be wanting to complete the record of our early relations with the Government of India, and show to what nonsensical extremes it went to protect itself from the possible political designs (!) of our Society, I have on second thoughts decided to print the first answer of the Simla authorities to my remonstrances, as made in my letter of 27th September, the text of which was given in the last chapter of my narrative. It was cordial enough, but not sufficiently broad to cover our case. Here it is:

"No. 1025 E. G.

FROM H. M. DURAND, ESQUIRE,
Under-Secretary to the Government of India,

TO COLONEL H. S. OLCOTT,
President of the Theosophical Society.

Foreign Department, SIMLA, *the 2nd October,* 1880.
General.

"SIR,—Mr. A. C. Lyall having left Simla, I am directed to answer your letter to his address dated the 27th September.

"2. You represent that the Theosophical Society has no interest in or disposition to meddle with politics, in India or elsewhere; that you have nevertheless been subjected to a disagreeable surveillance during your travels in India, on behalf of the Society; and that the beneficent plans of the Society have in consequence been seriously impeded. You request that the Government of India will undo the wrong unintentionally done to you in this matter by the watch placed upon your movements.

"3. I am to thank you for the information which you have been good enough to supply, regarding the aims and operations of the Theosophical Society, and I am to assure you that the Government of India has no desire to subject you to any inconvenience during your stay in the country. So long as the members of the Society confine themselves to the prosecution of philosophical and scientific studies wholly unconnected with politics, which you have explained to be their sole object, they need apprehend no annoyance on the part of the Police authorities.

"4. I am to add that the Government of India will be much obliged if you will have the kindness to forward to the Foreign Office—copies of the papers mentioned in the third paragraph of your letter.

"I have the honor to be, Sir,
Your most obedient servant,
(Sd.) H. M. DURAND,

Under-Secretary to the Government of India."

On 20th October I received from the Government of India the final letter I expected, setting us right

with all Anglo-Indian officials, which is certainly important enough to be inserted in this historical retrospect. It reads as follows:

"No. 1060 E. G.

FROM H. M. DURAND, ESQUIRE,
Offg. Secretary to the Government of India,

TO COLONEL H. S. OLCOTT,
President, Theosophical Society.
Dated SIMLA, *the 20th October,* 1880

Foreign Department,
General.

"SIR,—I am directed to acknowledge the receipt of your letter dated 14th October, forwarding certain documents for the information of the Government of India, and requesting that all Government officials previously warned against you may be informed that your purposes in coming to India have now been explained.

"2. I am to thank you for the copies of papers forwarded, which will be brought on record in the Foreign Office.

"3. With regard to your request, I am directed to say that those local authorities to whom communications were addressed in connection with your presence in this country, will be informed that the measures formerly ordered have been withdrawn.

"4. I am, however, to add that this step has been taken in consequence of the interest expressed in you by the President of the United States and the Secretary of State of his Government, and that it must not be taken to imply any expression of opinion on

the part of the Government of India in regard to the 'Theosophical Society', of which you are President.

"I have the honor to be, Sir,
Your most obedient servant,
(Sd.) H. M. Durand,

Offg. Secretary to the Government of India."

The reference in the concluding paragraph of Mr. Durand's letter is to the documents I sent him, among them an autograph letter from President Hayes commending me to all American Ministers and Consuls, and one of like purport from the Hon. W. M. Evarts, then Secretary of State, together with my Diplomatic passport.

Nothing more remaining for us to do at Simla, we left that delightful mountain station by tonga cart to take up a pre-arranged tour in the plains. In summing up the results of the visit, it may be said that we gained a few friends, relieved our Society of its political embarrassments, and made many enemies among the Anglo-Indian public who held to the theory of Satanic interferences in human affairs. In so prim and conservative a social world it was only to have been expected that H. P. B.'s Bohemian manners should have shocked the general sense of propriety, her immense intellectual and spiritual superiority have excited envy and resentment, and her uncanny psychical powers have made her to be regarded with a sort of terror. Still, looking at it from the broad point of view, the gain outweighed the loss and the visit was worth the making.

CHAPTER XVII

GORGEOUS SCENES

OUR progress homeward was so slow, filled as the time was with halts, visits, conversaziones by H. P. B. and lectures by myself, that we did not reach Bombay until the seventieth day after leaving Simla. The incidents of the tour were memorable, picturesque, sometimes important—among the latter an illness imperilling H. P. B.'s life. I shall treat them in their proper order.

Our first halt was at Amritsar, the city which is adorned with that architectural beauty, the Golden Temple of the warlike Sikhs. It is also the entrepôt and a chief manufacturing centre of the Kashmir shawls and Rampur *chuddars* so prized by women of good taste. As we were then in full favor of Swāmi Dayānand Saraswati, our relations with his followers were most friendly, and the local Branches of his Arya Samaj gave us cordial receptions and generous hospitality everywhere. Thirty Samajists met us at the railway station of Amritsar and took us to an empty bungalow, gave a cook to wait on us, and a few necessary articles of furniture, including large striped *durries*, or Indian cotton carpets, laid on a portion of the beaten earthen floor, for our visitors to sit upon cross-legged when calling. The

walls were of brick laid up in mud after the almost universal fashion of India, adorned with a number of cheap German lithographic pictures of ladies of palpably easy virtue, more or less bedizened with jewelry and flowers, and much uncovered as to dress. I almost exploded when—our Reception Committee having departed and H. P. B. and I being left alone in the big room—she turned her eyes from one to the other of the prints, and suddenly broke out into a most uncomplimentary and forcible remark as to the respectability of the damsels who figured in them as allegories. For hours we derived amusement and instruction from a study of a huge white-ant nest of clay that protruded from the wall at one side. Drawing our chairs up we watched the little builders coming and going by thousands and constructing their chamber walls under the evident supervision of their engineers. We punched small holes into the nest and watched them repairing the breaches; H. P. B. laid a bit of a match or an unsmoked end of a cigarette in the holes and timed the ants to see how soon they would have them covered with mud. After wearisome waiting our boy Babula and the other cook got food prepared for us, and then we drove out to see the Golden Temple.

The temple is a most poetical object to look upon. It comprises a central fluted dome, rising from four arches which cap the walls of a central tower, and is flanked at the four corners of the main, square building, by as many mauresque kiosks, like those on the Taj Mahal. The walls of the temple are capped with tiny domes standing close together; ornamental

bay windows, with highly artistic open-work carved stone lattices and screens, project from the four sides; and the first storey walls are broken into large and small panels full of carving. The structure stands on a marble-paved, bronze-railed platform, on a small island in the centre of a tank of crystal-pure water, like a magician's illusive palace rising from the sea. Access to it is by a causeway paved with squares of Italian marble, and the whole tank is bordered by a broad pavement of the same rich material. The upper portion of the temple is overlaid with gold, and its radiant appearance when the Indian sun beats upon it out of the azure sky may be imagined better than described. As it stands to-day it dates back hardly more than a century, for the original fane, begun by Ram Das in 1580 and finished by his son, was blown up with gunpowder by Ahmad Shah in 1761, the sacred tank—*Amrita Saras*, the fount of Immortality —was filled with mud, and the site was desecrated by the slaughter of cows upon the spot: a touching proof of the superiority of one religion over another for which bigoted soldiers and theological politicians have great partiality. But as I am to play neither the guide nor the moralizing archæologist, I must take H. P. B. back to our mud-walled bungalow, in our dust-and-mud-besmeared, jolting *ticca gharry* (hackney carriage), drawn by two skeleton horses, to receive visitors. Before leaving we flung our offering of copper coins on the ground in the central room of the temple, and lingered another minute to hear the *akalis* intoning verses from the Granth, or Sikh holy book, which is written on tanned bullock

hides. We were glad to retire early after a fatiguing day.

The next day a delegation of Samajists came from Lahore, headed by Rattan Chand Bary and Siris Chandra Basu, two most intelligent and honorable gentlemen, whose friendship I have been fortunate enough to keep up to the present moment. A very interesting conversation and discussion was held with some thirty or forty of the Swāmiji's followers, and in the evening, when we were alone with the two above-named friends, H. P. B. rang the "fairy bells" more clearly and beautifully than I had heard her do them before in India. She made a proposal to them which led to an unfortunate misunderstanding between them and herself, which it is best that I should narrate to prevent the fact being cited against her by an enemy in the future. Up to that time Mr. Sinnett had had no opportunity of discussing Indian mystical philosophy with any educated Indian, much to his and our regret. His correspondence with Mahatma K. H. was going on, but he wanted to come face to face with him or one of his pupils. Finding Mr. Rattan Chand well qualified to be such a spokesman, H. P. B.—as she told me and him—with the Master's concurrence, tried to persuade him to go to Mr. Sinnett as the bearer of a note from K. H. and play the part of his messenger. He was to abstain from giving Mr. S. any facts about himself, his name, condition, and place of residence, but to answer fully all his questions on religious and philosophical subjects; the assurance being given him by H. P. B. that every needed idea and argument should be put into

his head at the moment when needed. Mr. R. C. and his friend S. C. B., not aware of the extent to which this thought-transference could be made, and seeing neither Mahatma nor letter about H. P. B., showed the strongest repugnance to undertaking the affair. Finally, however, they consented and left for Lahore to get the required short leave and return next day. When they were gone H. P. B. expressed to me her satisfaction, saying that the mission would be a real one, would have the happiest effect on Mr. Sinnett, and be very fortunate for the Karma of the two young men. The next day, instead of their returning, a telegram came to say that they positively refused to carry out the compact; and in a letter they plainly said that they would not be parties to such an act of deception, as it seemed to them. H. P. B.'s annoyance and indignation were strongly expressed. She did not hesitate to call them a couple of precious fools for throwing away such a chance as few persons had had to work with the Masters in accomplishing great results; and she told me that if they had come, the letter would have been dropped out of space right before their eyes and all would have gone well with them. This is just one of those cases where a thing, entirely possible for an occultist, whose inner senses are awakened and whose psycho-dynamic powers are fully active, seems the wildest impossibility to the ordinary man, who cannot conceive of the object being attained save by the use of trickery and fraudulent conspiracy. Our undeveloped young friends being left to make their own Karma, chose what they deemed the only honorable path, and so, as was said

by H. P. B., wrought injury to themselves. In how many scores of cases has not poor H. P. B. been similarly misunderstood, and punished for the spiritual ignorance of others, to help whom was her main desire?

That same day we had another disagreeable experience. Our candid exposition of our eclectic views as regards different religions, at the conference of the day before, seemed to have so chilled the ardor of our Samajist hosts, that they left us all to ourselves in our cheerless quarters; and when we wanted our meals Babula told us that no food, fuel, ghee, or other cooking necessaries had been sent. So there was nothing for us but to send to the bazaar and buy our own supplies. At sundown, as nobody had turned up, H. P. B. and I took a hackney carriage and drove in search of the Samaj officers. We found one at last and came to an understanding with him, and through him with the others; whereupon they apologized profusely, and the next morning we had plenty to eat and fuel to cook it with.

In the afternoon we revisited the temple to enjoy its beauties once more. We saw some hundreds of fakirs and gossains, more or less ill-favored; akalis praying; crowds of pilgrims prostrating themselves; lighted lamps sparkling inside the temple; tall Punjabis moving majestically over the smooth marble pavements, and everywhere animation and life. Crowds followed us about showing kind civility, garlands and sugar candies were given us at the temple; and at a shrine where the swords, sharp steel discs, coats of mail, and other warlike weapons of the Sikh

warrior-priests are exposed to view, in charge of akalis, I was greeted, to my surprise and joy, with a loving smile by one of the Masters, who for the moment was figuring among the guardians, and who gave each of us a fresh rose, with a blessing in his eyes. The touch of his fingers as he handed me the flower caused a thrill to run throughout my body, as may easily be imagined.

On the 27th of the month (October) I lectured to a large audience on the "Arya Samaj and Theosophical Society," and again on the 29th on "The Past, Present, and Future of India," the text of which is to be found in my book *Theosophy, Religion, and Occult Science*. People who imagine the Hindus to be devoid of patriotic feeling, should have seen the effect of this lecture on my huge audience. As I depicted the greatness of ancient and the fallen state of modern India, murmurs of pleasure or sighs of pain broke from them; at one moment they would be cheering and vehemently applauding, the next keeping silent, while the tears were streaming from their eyes. I was surprised and delighted, and my own feelings were so wrought upon by the sight of their silent grief that I almost broke down myself. It was one of those occasions, so frequent in our relations with the Indians, when the bonds of brotherly affection were woven between our hearts, and when we felt we were blessed in having been able to come here to live and serve among our spiritual kinsmen. I recall just such an experience when I was escorting Mrs. Besant on her first Indian tour. It was at some South Indian station that she was lecturing—on "The Place of

India among the Nations," if my memory serves. Giving way to the divine impulse, and employing almost my identical phrases, she swept her audience with her, and made them respond as though they were one great harp from whose strings her deft fingers could awaken whatsoever harmonies she chose. Driving home in the carriage, neither of us could speak a word, but only sat in silent rapture, like one who has just left a room where a Master of Music has been evoking the symphonies of Devaloka. He who has not himself felt the thrill of inspiration pulsate through his being, knows not what the word oratory means.

I must mention the visit of a Pandit from Jummoo, Kashmir, for what he said about our learning Sanskrit. He had a clear, firm voice, a fluency of language, and an impressive appearance. We had a long and interesting discussion with him and found him rather a bigot than an eclectic. As he was leaving he turned to me and said I ought by all means to learn Sanskrit, as it was the only language that would be useful to me in my next birth. Perhaps he thought we might be reincarnated in some hitherto undiscovered Panditloka!

Our stay at Amritsar was prolonged a few days that we might have the unique pleasure of seeing the Golden Temple and tank illuminated for the celebration of Divali, their New Year's Day. The spectacle was well worth waiting for. A carriage was sent for us at dusk and we were driven to the Clock Tower, a modern construction which faces the tank, from which we had a perfect view. The beautiful temple was

crowned with golden and crimson lamps, alternately placed, in a vivid glory. From the finial of its central dome to the corner kiosks ran strings of colored lanterns. The base of the building was one fret-work of lighted *chirags*, or small clay yoni-shaped lamps, attached to a framework of bamboos arranged in the artistic geometrical patterns that one sees throughout Upper India in house-balconies, window-screens, doors, etc., the distant effect being that of the temple being enwrapped in shining gold lace. The outlines of the causeway, the steps around the whole tank, and the façades of the houses surrounding it were lit up with innumerable similar lamps. A grand display of the fireworks for which the Indians have always been famous turned the scene into a sort of fairy-land. There were huge vases of colored fires, great flower-pots of spouting flame, Catherine wheels, Roman candles, rockets, and bombs set off from the tops of the buildings at the four corners of the enclosure; each blaze of color tinging the sky, reflected back from the smooth, unruffled surface of the lake, and lighting up the large model of an ancient Hindu ship that was moored near the causeway. From time to time a flight of fire balloons would gently rise into the cloudless blue sky, trailing out their line of little lights like floating stars. In great set pieces would be displayed the religious emblems, the phallus, the yoni, the double triangle—seal of Vishnu—and others. Each was greeted with a great shout of voices mingled with the clangor of bells and the music of a military band; while at the height of the excitement a procession of thousands

of Sikhs moved around the tank, headed by a tall akali carrying the banner of the Great Gurus, and all joining in chaunts of hymns in praise of the Founder, Guru Nanak.

The next day we took train for Lahore, where a warm welcome awaited us. A large delegation of Arya Samajists met us at the railway station and took us to our quarters—a detached bungalow connected with a large Anglo-Indian boarding-house near the Public Garden. They left us to ourselves while they went to their homes for dinner, and, returning at 9 o'clock, sat on the floor along with us and talked metaphysics until a late hour, after which we were both glad to get to our rest. The crux was the nature of Īswara and the personality of God, about which H. P. B. and I entertained beliefs very antagonistic to theirs.

The Anglo Indian papers were just then full of malevolent writings against us, which made us appreciate all the more the friendliness of the Indians. I lectured to the usual overflowing audience on Sunday, 7th November, and among the Europeans present was Dr. Leitner, the famed Orientalist, then President of the Punjab University College. At the close, the alleged Yoga Sabhāpathy Swami read a rambling complimentary address in which his praises of us were mingled with much self-glorification. He came to our place the next day and favored us with his company from 9.30 a.m. until 4 p.m., by which time he had pretty thoroughly exhausted our patience. Whatever good opinion we may have formed of him before was spoilt by a yarn he told us of his exploits as a Yogī.

He had, he said, been taken up at Lake Mānsarovara, Tibet, high into the air and been transported two hundred miles along the high level to Mount Kailās, where he saw Mahadeva! Ingenuous foreigners as H. P. B. and I may have been, we could not digest such a ridiculous falsehood as that. I told him so very plainly. If, I said, he had told us that he had gone anywhere he liked in astral body or clairvoyant vision, we might have believed it possible, but in physical body, from Lake Mānsarovara, in company with two Rishis mentioned in the *Mahabharata*, and to the non-physical Mount Kailās—thanks, no: he should tell it to somebody else.

Seven of the Arya Samajists, including our two sceptical visitors of Amritsar, joined the T. S. and helped to form a local Branch. Our time at the station was largely taken up with visitors and discussions of religious topics, but we were not without other distractions. For instance, the Viceroy, Lord Ripon, arrived on the 10th, and we saw the showy pageant of his reception. He mounted a huge elephant which was covered with a housing of glittering cloth-of-gold and wore enormous gold or gilt ornaments on its head. The howdah was gilded, and over His Excellency's head a golden umbrella was held by a picturesquely clad Asiatic servant. The Punjab Maharajahs and Rajahs followed on elephants according to their right of precedence, and all were escorted—it almost seemed to H. P. B., guarded—by European civilians, also on elephants. There were European and Bengal cavalry, native soldiers in red, Indian spearsmen and halberdiers, outriders, bands of

musicians, war drums and cymbals clashing; in short, a Barnum circus-like affair which only lacked the caravans of wild beasts, the great band chariot, and a camleopard or two to make the illusion complete! I am quite sure that every Englishman in the parade felt foolish, and every once independent native chief degraded by this public exhibition of conqueror and conquered, the real meaning of which everybody knew that everybody else knew as well as himself. H. P. B. and I saw the show from one of the turrets of the battlemented, fortress-like railway station, which is, in fact, constructed so as to serve as a fort in case of need. Her comments on the show and the bedizened participants kept me in continual laughter, and later on, in one of her incomparable letters to the *Russky Vyestnick*, she set all Russia laughing over the incident of the absence of the Maharajah of Kashmir from the parade; which was at first suspected to cover some political plot, but which turned out to be only a case of diarrhœa!

The Shalimar Gardens, the far-famous plaisance built by Ali Mardān Khan in the seventeenth century, were illuminated in honor of the Viceroy's visit. Of all the spectacles I have seen in India this was one of the most pleasing. The garden was laid out in seven divisions representing the seven degrees of the Paradise of Islam, but only three now remain. The centre is occupied by a pond-like reservoir bordered by an elaborately indented coping and studded with pipes for fountains. A cascade falls into it over a slope of marble corrugated in an ornamental carved diaper. There are kiosks, towers, and other

constructions, and long narrow basins with copings almost as low as the grassplots which frame them in, stretch far away in different directions. Fancy this pleasure ground on a starlit Indian night, glittering with *chirags* which mark out the tanks and border every walk; with the trees aglow with colored lanterns, the central water-basin suffused with the gorgeous hues of chemical fires, and every inch of space in the paths and avenues crowded with the most picturesque, showily clad and virile multitude of human beings the world could produce; while over all from the serene sky the radiant stars look down. I have seen many countries and peoples, but never any human concourse that compared with that crowd of Sikhs, Punjabis, Kashmiris and Afghans, in their cloths of gold and silver, their fair olive complexions, and their turbans of every delicate shade of color that the dyer's art has produced.

CHAPTER XVIII

BENARES THE HOLY

We had our first opportunity to know at first hand the tenets of the Brahmo Samaj, on the next day after the Shalimar Garden fête, Babu Protap Chandra Mozumdar giving a lecture which we attended together. Our first impressions were probably identical with those of the thousands and tens of thousands who have heard his eloquent and scholarly addresses. Like all visitors to India, we were amazed at the command of English attained by an educated Hindu and sat under a sort of charm until he had finished. But then we began to cast up the account, and found that there was more music than solid nourishment in the discourse, for us: it was rhetorical rather than erudite, and we came away with a dissatisfied feeling, as one would after a dinner of *Meringues-à-la-crème*. He certainly defined very clearly the nature of his Society and its principles, the theme being "The Brahmo Samaj and Its Relations with Hinduism and Christianity". He spoke extemporaneously, or at any rate without MS., and not only never hesitated for a word but never failed to use the very best synonym to express his meaning. Herein he resembled Mrs. Besant. The Brahmo

Samaj, he told us, takes all that is good in the Vedas, Upanishads, Purānas, Bhārata, and Gītā, as well as in Christianity and other religions, and rejects only the dross. For a long time the "Brahmo Dharma Book" contained only extracts from the Upanishads, and I thought it a pity they had not stuck to it. They agree with the Christians in their view of man's helplessness and dependence upon a personal God, and, standing outside the door of one of their conventicles and listening to their service, I could not fail to be struck with the flavor of Nonconformism that it had. They practise some sort of Yoga and are decidedly following the Bhakti Marga along which the Salvationists go marching with their sounding brasses and tinkling cymbals. A confirmed Theists, Protap Babu spoke of Jesus as something more glorious than any other character of history, yet still a man.

A vivid contrast to this experience was afforded by the Viceregal Durbar that Lord Ripon held on 15th November under canvas. A vast room was constructed by suspending horizontally on poles, great sheets of blue-striped canvas, closing it in with canvas screens, laying the ground with crimson carpets, and lighting it with gaudy chandeliers. The Viceroy sat upon a silver gilt throne, dressed in full court costume with a profusion of gold lace and embroidery, white knee-breeches, white silk stockings, and the blue ribbon of the Bath crossing his breast amid a blaze of orders, like a blue streamlet between jewelled banks. Behind him swarth Punjabi servants in Eastern dress, waving Indian fans covered

with crimson and embroideries of the Royal arms; two others holding fly brushes (*chamars*) of the white tails of the Tibetan yak, and two more with cornucopias—all emblems of sovereignty: altogether a highly decorative get-up to American eyes.

The assemblage were seated in parallel rows of chairs facing each other, the Europeans on His Excellency's right, the Indians on his left, leaving a broad path open from the door to the throne. The Indian Rajahs, Maharajahs, and other Princes were assigned places in order of rank, the highest nearest the Viceroy. As each one drove up to the door he received an artillery salute; the troops presented arms, the band played; the Master of Ceremonies, Mr. (now Sir Alfred) Lyall, in diplomatic uniform, received and escorted him to the foot of the throne; the Prince held out a *nuzzur* (an offering of a certain number of gold coins), which the Viceroy "touched and remitted" (that is, did not take it); both bowed, and then the Prince was conducted to his seat and the next man's turn came. Fancy how monotonous it must have been to sit there for hours while this humbuggery went tediously on. I wondered the Viceroy could help yawning in their faces, towards the end. But it was a brave show and something worth seeing once. The Princes being all received, the Viceroy had to go through the ceremony of giving handsome presents of jewelry, silver-mounted arms, saddles, etc., etc., which the Princes "touched," and left the things to be carried out by the servants. No greater contrast could have been possible than that between the magnificent dresses and jewelled turbans

of the Princes, and the commonplace, sombre, and inelegant costumes of the non-military European onlookers.

Two days later I left H. P. B. at Lahore and went to Multan to fill an engagement to lecture. Five years previously, on that very evening, I gave my Inaugural Address before the newly-born T. S. at New York.

The main street of Multan is broad, paved with bricks, and lined with shops that compare well with those of other Indian cities. There are manufacturers of enamelled silver work, silk goods, cotton and woollen carpets, etc. There was a large local Arya Samaj and also a Branch of our own Society, headed by one of the best men in India, Dr. Jaswant Roy Bhojapatra. I lectured on two successive evenings, and during the day was taken about the town to see the sights, among them one which matches the grave of Adam for pathetic suggestiveness! It is the temple of the Narasinha Avatar of Vishnu, his appearance, to wit, under the from of a man-lion for the purpose of protecting virtue and punishing wicked people. The story (and what "story," to be sure) is that Vishnu split open one of the iron pillars of the bad king's durbar hall, emerged from it, and tore the tyrant into pieces. Well, they actually show the *identical pillar* in this Multan temple. What could one have better than that: unless it be the grave of Adam, over which Mark Twain—to his praise be it said—wept honest tears for the loss of that respectable ancestor, and set an example to the whole regenerate race of mankind!

When I got back to Lahore I found poor H. P. B. tossing in a Punjab fever, and the faithful boy Babula nursing her. She was restless, burning up with heat, and complaining of a feeling of suffocation. I sat up with her all night, but she would not let me send for a doctor, saying that it would be all right in the morning. It was all wrong, however, and the best physician in the place being called, he pronounced it a severe case and prescribed quinine and digitalis. I had to lecture that evening and did so; after which I turned nurse again, and the medicines gave H. P. B. a sound night's rest. The next day the crisis passed and the doctor pronounced her out of danger. Another good night followed for her, and the following day she gave unmistakable proofs of her convalescence by buying an hundred rupees' worth of shawls, embroideries, and other things from one of those Indian pedlars called *box-wallahs*, who besiege every sojourner in a dāk bungalow. She was interested in a simple mesmeric experiment I made that evening on some of my Hindu visitors who wished to know which was most sensitive to mesmeric influence. I made them stand with their faces to a wall, their toes touching it, and their eyes shut, while I stood silently behind each in turn, and, holding the palms of my hands towards his back but without touching him, concentrated my will-power and caused him to fall over backward into my outstretched arms. She watched their faces to see fair play and I did the "drawing". I should like to know how hypnotists who deny the existence of a mesmeric aura would explain this simple yet striking

experiment. Not one of the subjects had the least acquaintance with mesmeric science, nor did I utter a word to suggest my purpose.

Whatever the cause—whether her purchases or not—H. P. B. had a relapse of fever and passed a bad night, tossing about, moaning, and getting flighty now and then. She was better again in the morning, and consoled herself with more purchases! In the afternoon we held a meeting and organized a local Branch under the name of the Punjab Theosophical Society. I remember an amusing incident connected with it. A gentleman and his son, both orthodox Hindus, and both much interested in our views, though maintaining secrecy, called separately to talk with me. Each wanted to join the Society without the other's knowing it; so I appointed that the son should meet the other applicants in H. P. B.'s room, and the father come to me in mine, a quarter of an hour earlier than the fixed time. I had H. P. B. keep the others in conversation while I received and duly admitted to membership the elder man. Then, excusing myself to him for a half-hour and leaving him a book to read, I went to H. P. B.'s room and initiated the other candidates, and excused myself to them for five minutes. Then I returned to the father, told him that we were forming a Branch, and got him to come along with me and participate in the election of officers. Imagine his surprise to see his son squatting on the floor with the others, a full-fledged F. T. S.! There was but a moment's embarrassment, followed by a peal of hearty laughter when I explained the facts, and H. P. B. was the most amused of all over

the *dénouement*. We took train that evening for Ambala, and thence moved on to Cawnpore, where we had long metaphysical discussions, and I gave two lectures, after which we went back to Allahabad and our dear friends the Sinnetts.

Leaving my colleague with them, I went over to Benares as the guest of the late venerable Maharajah, whose title is so often mentioned in the Hindu and Buddhist works, and is consequently of great antiquity. He sent a carriage for me to the station and some of his suite to welcome me in his name. I was quartered in a garden-house near his palace and by a large tank, in whose placid waters a splendid temple of his erection reflected itself.

I had my first interview with His Highness the next morning, Babu Pramada Dāsā Mittra, the able and respected Sanskritist, and the *not* respected Raja Sivaprasad, coming to conduct me there. This being the young Prince's birthday, there was a grand nautch at the palace. The white-haired, white-moustached Maharajah, as handsome a patriarch as one would care to meet, received me very kindly, making me sit with himself and his son under a baldaquin of embroidered Cashmere shawls supported by four fluted silver rods, the feet of which rested on crimson and silver footstools. He was dressed in a green Cashmere gown, with silk trousers and undercoat, and a cap of brocade. His son wore a figured green brocade interwoven with gold, together with a cap adorned with a diamond aigrette and feathers.

The Indian nautch is the most doleful of amusements, one to set a Western man yawning. Here

were three pretty, young, and richly costumed girls and one old one, moving about to the sound of Indian musical instruments in an interminable series of posturings, floor-stampings with their little feet, and turnings about; with wavings of hands and snake-like motions of fingers, and the singing of inflammatory songs in Hindi, and lewd gesture eye-winkings, until one felt the creevils all over and longed to get away to the garden for a quiet smoke. But the old Maharajah seemed to like it, and beamed benevolently on us all through his gold spectacles, so I sat and bore it as best I could. In front of him stood a monster silver chillum, or water-pipe, with a very long flexible tube enwrapped in white silk, and terminating in a jewelled mouth-piece, at which he kept assiduously pulling. When, at the last, I was permitted to take my leave, he put about my neck a braided garland of gold-worked red ribbon, poured Indian perfumes on my hands, and expressed his great pleasure at seeing me. He arranged that I should move into town to his large palace known as the Mint House, and lecture on the following Tuesday.

The Mint House is so called from its having formerly been the place where his ancestors coined their money. It is a great rambling structure, almost reminding one of the Palace of Versailles *in petto*, and an ideal flitting-ground for ghosts. I felt so, indeed, that night, when I was left quite alone in a great chamber larger than many a lecture-hall, and was quite prepared to be aroused from sleep by a detachment of mischievous phantoms. But none

came and I was left in peace. The erudite Dr. G. Thibaut, Principal of Benares College, came and dined with me, and spent the evening in profitable conversation. I returned his visit the next day, and also called on Raja Sivaprasad and Babu Pramada Dāsā Mitra.[10] The next day we went to pay our respects to Majji, the female ascetic, or Yogini, and found her very amiable, and communicative about religious questions. Later in the day we visited, in his garden retreat, the naked and lovable old Yodi Bhaskaranda Swami, with whom I was delighted. At 6 p.m. I lectured on "India" in the town hall to a crowded audience of—as they told me—"all the aristocracy and learning of Benares". The old Maharajah and his son were present, and Raja Sivaprasad served me as translator with great ability; his knowledge of English having been perfect whatever his demerits may have been. He is dead now, and nothing said, whether good or bad, can affect him, but he was throughout life a supple courtier, who curried favor with every European official, played the sycophant, and got titles, estates, and honors of sorts, earned the contempt of his compatriots and, at the same time, that of the whites to whom he "bent the pregnant hinges of the knee that"—well, that he might get what he coveted. I shall never forget how Dr. Thibaut looked at me when the late Raja left us after telling us how, during Lawrence's Punjāb campaign, he had got into Runjit Singh's camp and counted his guns for Lord Lawrence. Elevating his eyebrows, the quiet German Orientalist said: "Der Radja Sahib has ferry peculiar notions of patriotism!"

in which sentiment I agreed. We three were driving back from a morning sail on the Ganges along the river front to see that unique spectacle, the morning ablutions of tens of thousands of pious Hindus. They crowded the steps of the crumbling ghāts and half-ruined palaces that line the river's edge; they sat praying on the wooden platforms, sheltered by awnings or palm-leaf roofs; they stood knee-deep in the water; they beat their washed cloths on the stone steps: ascetics smeared their bodies with sacred ashes; the women polished with mud their bright brass jars until they looked like new gold, filled them with Ganges water, and walked away with them on their left hips; they thronged the burning-ghāt, where corpses were being consumed on the pyres and others waited their turn; and the morning sun shone bright on sparkling brasses, red cloths, white turbans, and the seething multitudes that pressed up and down the broad staircases that rose to the level of the crowded city streets, while peacock-prowed quaint craft rode at their moorings or floated down the stream. Such a scene is visible nowhere else as this at Holy Benares in the early hours of the day.

What makes it more impressive is the fact that this same scene has been repeated daily from earliest ages; such as it is now it was when the Krishna Avatara moved among men. But how long it will survive no man can foretell. The hand of Time is already laid upon the structures that line the shore. Some of the finest, most majestic palaces and bathing-ghāts are falling into ruin. Great masses of masonry,

undermined by river floods, have fallen in upon each other or their foundation courses have sunk below the surface of the water; the stucco has dropped from palace-walls, leaving the bricks exposed; a grand mosque of Islam, whose dome and minarets dominate the scene, was built of the stones of ancient temples which the conquerors had demolished; the burning-ghāt is a disgraceful desolation, where the pyres are built on slopes of debris; and the very castemen who are seen at their morning devotions along the city front, seem for the most part to be doing them in a perfunctory way as if to be seen of men, not moved by deep religious impulse. "Ichabod" seems written upon this holiest of old Aryan shrines by the hand of that Western Progress which despiritualizes nations while enriching them: which empties the heart while filling the pocket.

My good friends Babu Pramada Dāsā Mittra and Ram Rao kindly took me to see a noted Yogī, whose name was, unfortunately, not entered in my Diary. He sat in the open air in a triangular courtyard of a house by the bank of the Ganges, with a throng of some fifty or sixty persons, gathered about him. He was a large, handsome man of venerable aspect, seemingly engaged in meditation and partially entranced. His personal cleanliness presented a pleasing contrast with the repulsive dirt and squalor of the majority of Sannyāsis. I was told that he was deeply versed in the system of Patanjali, and had for many years been regarded as one of the foremost Yogīs of India. Of course, being new to India, I took him at the public

valuation, and coming forward saluted him respectfully in the ancient fashion. I had some conversation with his disciples and came away. My illusions were, however, soon dispelled, for I learnt that he was actually at that moment engaged in a lawsuit for 70,000 rupees, which he was pushing on with all possible vigor. A Yogī hungry after rupees was indeed an anomaly, and, needless to say, I did not repeat my call.

From there I went to a meeting of the Society of Benares Pandits held in my honor, at which I again urged their consideration of the project to appoint a suitable committee to undertake the coinage of Sanskrit equivalents to our Western, Greek, and Latin scientific and other terms. They promised, of course, and, equally of course, never did anything.

The following day I met Pandit Bālā Shastri for the first time. Dr. Thibaut ranked him as the greatest Sanskrit scholar in all India. He was the Guru of several of the chief Indian Princes and universally respected. Since then he has died and the country thus suffered a loss that seems irreparable. I wish our Western literati could have seen him as I saw him that day. A pale man, of slight figure and medium height, calm and dignified in manner, the expression of his face mild and captivating, no trace of animalism or sordid passion there—the face of a poet or a sage, of one who lived in the world of thought and was in but light touch with the bustling world; and, lighting it up with a radiance of intellect, a pair of eyes black, brilliant, mild, serene, the memory of which haunts me after all these sixteen

years. Another Pandit, the Librarian of Benares College, accompanied him and took part in the discussion. I did my best to impress on their minds the crying need for a revival of Sanskrit Literature for the sake of its priceless contents, which were so necessary at the present time when the world's spiritual hopes were being swamped in the sea of materialism. I was bold enough to tell Bālā Shastri that if Hindu religion and philosophy were suffered to go into eclipse he would be largely responsible for the disaster, since he, more than any other man, was able to stem the current. I proposed that he and I, as representatives of the Pandit class, on the one hand, and of the world-covering agency of propaganda, on the other, should join forces; I asked him to convene a private meeting of the principal Benares Pandits and let me address them, to which he assented, and we left it to Babu Pramada Dāsā Mittra to make the necessary arrangements.

At 4 o'clock that day H. P. B. arrived from Allahabad by the slow train, and we were as glad to see each other as if we had been long separated.

CHAPTER XIX

A MASTER OF DJINNS

We were together at Benares eight days, during which time we saw much of the old Maharajah, his suite and other notables of the city. His Highness sent his Secretary to inquire after H. P. B.'s health early in the morning after her arrival, and, later, came himself with Babu Pramada Dāsā and Raja Sivaprasād as interpreters, and had hours of discussion on philosophical and religious subjects. On another occasion he had his treasurer with him and offered to have counted out, then and there, a large sum of money (many thousands of rupees) for the benefit of our Society if H. P. B. would "show him some miracles". Of course she refused him the smallest gratification, as she had other rich Hindus before—one, the late Sir Mungaldas, at Bombay—but as soon as he departed, did a number of phenomena for poor visitors who could not have afforded to give her even ten rupees. But she told the aged Prince an important secret about the hiding-place of certain lost family papers which, if I am not mistaken, had been hastily concealed during the Mutiny. Though disappointed, yet I have reason to believe that the Maharajah respected her far more than if she had accepted his present. This indifference to money is always taken in India

as good proof of the disinterested piety of religious teachers. The Lahore Yogī, who showed his samādhi to Maharajah Runjeet Singh, ruined himself for ever in the latter's eyes by accepting his costly gifts. "But for that," said an old servant of his to me once at Lahore, "the Maharajah would have kept him for life near him and revered him as a saint."

The morning sail down the Ganges past the ghāts was repeated for H. P. B., the same two gentlemen accompanying us. This time, we caused our boat to linger long off the burning-ghāt and watched the whole process, from the bringing and submersion of the corpse in the sacred stream to the raking of its ashes into the water. It is a brutally realistic scene, with no poetry or refinement about it, and if cremation had been introduced at the West in that rough guise there would not have been more than one body incinerated, I am sure. With the use of the crematorium every repulsive feature is eliminated, and it is no wonder that this method of disposing of the dead has become so popular.

On the same afternoon we visited a Muslim fair then being held, at which we saw our first examples of the phenomenal dexterity which is acquired in India in the management of the sword. A man lies flat on his stomach on the ground, with his chin resting on a guava fruit—say as large as a medium-sized pear; another man stands with his back towards him, marking time with his feet and body to the rhythmic beating of a tom-tom; he holds in his hand a sabre with an edge like a razor, and a thick and heavy back, which he also moves to the rhythm; suddenly

he wheels about face, sweeps his sabre through the air and under the man's chin, and the latter, rising, shows the guava sliced in halves. Even now, the bare recollection of it makes one shudder to think what would have happened if that trenchant blade had swerved but a trifle from its transverse path through the fruit. The same feat of skill was shown in the case of guavas and limes pressed under a man's naked heel. It should be borne in mind that in every case the swordsman's back is towards the assistant, and that his aim is taken while the sword is whirling through the air.

On 14th December the expected meeting and conference between myself, as P.T.S., and the chief Pandits of India, came off at Babu P. D. Mittra's residence. The dignity of the assemblage will be evident to all well-informed Orientalists, when they read the following list of names, some of them the most renowned in contemporary Sanskrit literature:

Dr. G. Thibaut, Principal of Benares Anglo-Sanskrit College.

Pandit Bālā Shastri, late Professor of Hindu Law, Benares Anglo-Sanskrit College.

Pandit Bapu Deva Shastri, Professor of Astronomy, Benares Anglo-Sanskrit College.

Pandit Yagneswāra Ojha, Benares Anglo-Sanskrit College.

Pandit Kesavli Shastri, Benares Anglo-Sanskrit College.

Pandit Dāmodara Shastri, Professor of Grammar, Benares Anglo-Sanskrit College.

Pandit Dhondirāga Shastri, Librarian, Benares Anglo-Sanskrit College.

Pandit Ramkrishna Shastri, Professor of Sankhya, Benares Anglo-Sanskrit College.

Pandit Ganghadeva Shastri, Professor of Poetry and Rhetoric, Benares Anglo-Sanskrit College.

Bapu Shastri.

Babu Shastri.

Govinda Shastri.

Babu Pramada Dāsā Mittra, late Professor of Anglo-Sanskrit Literature, Benares Anglo-Sanskrit College.

The last-named gentleman interpreted into Sanskrit as rapidly and fluently my address to the Pandits, as he did their replies and observations to me, in English, which he writes and speaks like an Englishman. I doubt if there is an Orientalist in any Western land, from Professor Max Müller downward, who could do that: certainly, the attempts of such as have visited India and Ceylon to converse in Sanskrit with our Pandits have not impressed the latter with their command of the "language of the gods," to judge from what they have told me.

Our conference lasted several hours, and point after point was carefully considered, each party watchful to prevent the appearance of having become subordinate to the other. The final result was the adoption and signing of the following articles of agreement:

"*Whereas*, the interest of Sanskrit Literature and Vedic Philosophy and Science will be eminently

promoted by a brotherly union of all friends of Aryan learning throughout the world; and

"*Whereas*, it is evident that the Theosophical Society is sincerely devoted to the accomplishment of this most worthy object, and possesses facilities which it is desirable to secure; therefore

"*Resolved* that this Samaj accepts the offer made on behalf of the Theosophical Society, and declares itself in friendly union with the said Society for the purposes specified, and offers to render whatever assistance it can for the carrying out of such plans as may be agreed upon between the governing officers of the two Samajas.

"*Provided*, nevertheless, that this act of union shall not be understood as making either of the two Societies subordinate to the rule or jurisdiction of the other."

(Signed) BAPU DEVA SHASTRI,
President.

(Signed) BAL SHASTRI,
Vice-President.

Accepted for the Theosophical Society,
H. S. OLCOTT, *President.*

Attest,

PRAMADA DĀSĀ MITTRA,
Secretary of the Meeting.

BENARES: *Margasirsha suddha 13th,*
Samvat 1937.

Without the help of Babu Pramada Dāsá such a result would have been quite impossible, and we have

to thank him for enabling us to vindicate the eclecticism of our Society thus early in its sojourn in India. Coming so soon after our triumphant Buddhistic progress in Ceylon and on top of H. P. B.'s and my public profession of Buddhism at the temple in Galle, it showed great high-mindedness on the part of the Benares savants, whose Hindu orthodoxy was beyond question. The feeling of the learned President of the Sabha was, however, very strongly shown in his declaration that he actually preferred Christianity to Buddhism, but at the same time he recognized that good might come to Hinduism from such an alliance as that proposed on the basis of sectarian neutrality. On account of her sex the Pandits did not want H. P. B. to take part in the conference.

Our days were fully occupied with talks, public lectures, visits from the Maharajah and other princes and commoners, and visits by ourselves to sundry temples and other local monuments of the past. We were greatly interested in one of our visitors, one Mohammed Arif, an official of one of the Courts and a very learned person. He had an extensive knowledge of the literature of Islam, and showed us a chart he had prepared, on which were inscribed the names of some 1,500 renowned adepts and mystics, from the Prophet down to our times. He had also a practical knowledge of occult chemistry, and, at our request, consented to try an experiment with my help. He had brought from the bazaar some thick and large *bratties*, or fuel-cakes of dried cow-dung, a little charcoal, two Jeypore rupees (of pure silver), and some dried vegetable products.

Scooping out a small cavity in the flat side of each bratty, he filled it with pounded cloves, ahindrā bark, and bechums (myrobolams, I think), buried a rupee in one of them, applied another bratty over it, and set fire to the lower cake. The other rupee was disposed of in like manner. The cakes burned slowly, being reduced to ashes only after a couple of hours. The rupees were then transferred to second pairs of bratties and left until the latter were consumed. A third time they were put into fresh cakes, and left to themselves all night. It was expected that in the morning we should find the coins completely oxidized, the pure metal being changed into an oxide of the consistency of lime, and crumbling between the fingers. The experiment proved, however, only partly successful, the surface of the coins being oxidized but the interior left unchanged. Mohammed Arif was dissatisfied with the result and wished to repeat the experiment under better conditions, but time did not serve either of us and we had to leave the station before it could be done. At any rate, partial oxidation was obtained, and I really cannot understand how this could be effected, with such simple agents as the feeble fire of six smouldering *bratties* and a few pinches of cloves and other vegetable products. The old gentleman, while paying full reverence to the achievements of modern science, still maintained that there was yet very much to learn from the ancients about the nature of the elements and their potential combinations. "Among Indian alchemists," he said, "it has long been a theory universally accepted, that if a diamond is, by a certain

process known to them, reduced to ashes, these ashes added to melted tin are capable of changing the latter into silver. Practically, of course, the experiment is commercially valueless, the transforming agent being more costly than the resultant product. But the thought is important in its suggestiveness, for if the ashes of one substance containing carbon, when obtained by a certain process will transmute tin into silver, it opens the inquiry whether a nearly-related ash from another carbonaceous substance might not give the same result under proper conditions. If the addition of carbon to iron converts it into steel, by some secret law not yet fully understood, why is it an unthinkable proposition that its addition to tin by some better process than any at present known to European chemists, might also harden that metal and give it properties as different from the mother metal as those of steel are from those of iron. "True"—continued the old man, looking at me with his intelligent eyes—"modern chemistry does not show any such affinity between carbon and tin, nor does it show that there is none. We do know that in ancient times a process was known for imparting to copper tools the cutting hardness of steel; and that secret is lost. Chemists may, therefore, well pause before dogmatizing as to what was or was not possible for the alchemists. They have a deal yet to learn before they recover the Lost Arts of the older time. The Indian alchemists have proved that they can harden tin by combining with it carbon; hence they cover a broader ground than modern chemists in the department of

metallurgy." "But why, then," I asked, "is Alchemy so obsolete?"

"Alchemical Science is dishonored," he replied, "by the neglect of the educated, and the trickery and base frauds of charlatans, but still it is a great Science. I believe—nay, I know—that the transmutation of metals is possible."

The old enthusiast talked in Urdu, which was admirably translated by Rai Baldeo Buksh and another high local official, and the interviews I had with him were among the most interesting I ever held with anyone. He evinced a thorough familiarity with Arabic and Persian literature, and his air of dignity was that of a high-minded scholar devoted to the acquisition of knowledge. I got him to put his ideas on paper and had them translated for the *Theosophist* (*vide* May No. of 1881, p. 178). On my last visit to Benares I found, upon inquiry, that he is now retired and living on a very modest pension in some obscure village, where, perhaps, he has not a single neighbor who can appreciate his erudition and high intelligence.

We met several persons at Benares who had had personal knowledge of the wonder-working powers of Hassan Khan Djinni, the Muslim sorcerer previously mentioned. Among others a Mr. Shavier told us the following. He had put his watch and chain into a small box, which was locked up in a chest in the presence of Hassan Khan, but the next moment he held the articles in his hand, having drawn them through the two boxes by the power of his elemental spirits. The man was a native of Hyderabad

Deccan, and learnt his art from his father, a greater adept in occultism than himself, who duly initiated him with certain weird ceremonies. He had been given power over seven *djnis*, on the condition that he should lead a moral and temperate life. But his passions took possession of him, and one by one the elementals broke loose from his control until he had but one left to do his bidding, and of this one he was in constant dread. He had to abide the convenience of this spirit, and so was not able to perform phenomena at his own pleasure. Mr. C. F. Hogan who knew him intimately, tells us (*Theosophist*, Jan., 1881, p. 81) that the proximity of the genius was made known to him by the stoppage of his breathing through one of his nostrils. In stature he was somewhat above the middle height; of dark brown complexion, and a rather robust physique; on the whole, his appearance was rather pleasing than otherwise. His dissipations, however, at last undermined his mental if not his physical strength, and he is said to have died in prison.

Mr. Shavier told me a queer story which might well have been taken from the *Arabian Nights*. Some years ago, there lived at Ghazipur a poor but learned Moulvi, who for want of better employment opened a day school for boys. Among his pupils was a bright lad who displayed much aptitude, and was always respectful to his teacher, for whom he frequently brought presents. One day he brought him some rare sweetmeats with his mother's compliments. The teacher expressing a desire to pay his respects to the parents, the lad said he would tell them and bring

back their response. The next day a satisfactory response being made, the teacher dressed himself in his best and accompanied the boy on his way home. He led him out of town and to some distance in the country, but no signs of houses being seen, he began to get worried and at last demanded an explanation. The pupil then told him that they were just near his home, but before taking him there he must tell him a secret. He was of the race of the Jinnaths (*djnis*), and a great honor was done the teacher in admitting him to a view of their hidden city. He must first, however, swear that under no provocation would he reveal the way to it; and if he should ever break his oath, he would certainly be struck stone-blind. The Moulvi took the required oath, and the lad lifting a trap-door which had been invisible to the eyes of the former, a flight of steps was disclosed, which they descended, and finally came into the city of the Jinnaths. To the Moulvi's eyes everything seemed as it was in the Upper World; streets, houses, shops, conveyances, dancing, music, and everything. The lad's father received his guest with cordiality, and the intimacy thus begun was continued for years, to the great benefit and satisfaction of the schoolmaster. His friends wondered at his prosperity, and finally persuaded the poor fool to show them the way to the trap-door at the top of the mysterious staircase. But just as he was on the point of revealing the oath-protected secret he was struck blind and never recovered his sight. The Moulvi was living in the town of G . . . at the time when Mr. Shavier related the story to me, and it is

said that everybody of his acquaintance was aware of the cause of his blindness. This subterranean town of the Jinnaths, with its houses and elemental inhabitants, recalls the similar tale of "The Coming Race," of Bulwer Lytton, and suggests a common folk-lore origin for both.

Our visit to Benares coming to an end, we packed our things, sent our luggage to the railway station, and drove from the Mint House to Fort Rāmanāgar, to take leave of our kind and venerable host, and thank him for his hospitality. The old Prince was very courteous and affectionate to us, begged us to come again, and said we must make our home with him whenever we should visit Benares. As we rose to leave, he laid a splendid Kashmir shawl over H. P. B.'s shoulders, which she wanted to "touch and return," but he looked so hurt at her rejection of his well-meant kindness, that she relented and expressed her thanks, through the gentleman who acted as interpreter. From thence we drove to the station, and at 6 that evening reached Allahabad and the Sinnetts; H. P. B. suffering excruciating pain from an attack in her left wrist from *dengue*, that terrible "broken bone" fever which gives more suffering than even the persuasive instruments by which the paternal Inquisition promoted orthodoxy.

CHAPTER XX

CEYLON BUDDHISM EXPLAINED

H. P. B.'s rheumatic fever continued several days, causing her agonizing pains: the arm swelled to the shoulder and she tossed about night after night, despite the devoted and unselfish ministrations of her physician, Dr. Avinas Chandra Banerji, of Allahabad, who won all our hearts by his kindness and patience. The first sign of her complete convalescence was her going with me to a big shop and buying a lot of things! At a ceremony of initiation of new candidates, on 24th December, some of her melodious astral bells were rung, to the surprise and delight of the persons present.

During our brief stay with the Sinnetts a number of notable visitors called, and we enjoyed many hours of improving conversation with Prof. Adityaram Bhattacharya, the erudite Sanskritist, and others, upon Indian Philosophy. I lectured two or three times to large audiences, and, H. P. B. having now quite recovered her usual health, we took train for Bombay on 28th December, and, without adventure, reached home on the 30th. The last days of 1880 were thus passed in our new bungalow, "The Crow's Nest," on the rocky slope of the hill of Breach

Candy. It had been selected and taken for us in our absence, and we were charmed with its spacious, high-studded rooms, its large verandahs, and its extensive views of sea and land. Since the beginning of the year 1879, we had been living in the thickly settled Indian quarter of Girgaum Back Road, in a grove of palms where the sea-breezes scarcely penetrated, and the shift to the new locality was delightful. A special advantage was that the number of our casual visitors became so much lessened, by reason of our distance from the centre of population, that we found time for reading, and I find my Diary contains frequent references to this fact. We occupied our new premises until December, 1882, when our Headquarters were permanently established at Adyar. The proper rental of the bungalow was Rs. 200 per mensem, but we got it for Rs. 65 because of its evil reputation for being haunted. The alleged ghosts did not trouble us, however, save in a solitary instance, and that was quickly disposed of. One night I had gone to bed and was dropping asleep, when I felt one corner of my *charpai* being lifted, as if by someone standing in the thickness of the wall, which it was touching. Instantly recovering my full consciousness, I pronounced a certain Arabic word of power, that H. P. B. had taught me in New York, and the cot was replaced on its legs and the meddlesome spook decamped and never troubled me more.

The new year came in and found me writing at my table, until 2 a.m., editorial articles for the *Theosophist*. The early weeks of the year were rather uneventful as a whole, although we were brought into

friendly or unfriendly relations with certain personalities. The writer of that since well-known treatise, *The Elixir of Life*, a Mr. Mirza Murad Ali Beg, came to us on 20th January, for the first time. He was of European birth, a scion of the old Hampshire family of the Mitfords, which has produced several noted writers, including Mary Russell Mitford, authoress of *Our Village* and other works. This young man's grandfather had come out to India with some Frenchmen, and served under Tippoo Sultan. When that cruel and sensual chieftain was killed, Mr. Mitford took service with the East India Company. His son was born at Madras, and among other eccentricities turned Mussulman, and, when we met him, was in the military employ of the Maharajah of Bhavnagar as "Chief Cavalry Officer"—practically a sinecure. His had been a wild, adventurous life, more full of misery than the opposite. He had dabbled in Black Magic, among other things, and told me that all the sufferings he had passed through within the preceding few years were directly traceable to the malign persecutions of certain evil powers which he had summoned to help him get into his power a virtuous lady whom he coveted. He had sat, under the instructions of a Muslim black magician *guru*, in a closed room, for forty days, with his gaze fixed upon a black spot on the wall, in which he was told to imagine the face of his intended victim, and repeating, some hundred thousand times, a prescribed mantram, in half Arabic, half Sanskrit. He was to continue this until he should actually see the lady's face as if alive; and when her lips moved as if to speak, she would have been

completely fascinated and would come to him of her own accord. All this happened as foretold, his nefarious object was gained, the woman ruined, and he himself fell under the power of the bad spirits whom he had not the moral strength to dominate after having accepted their compulsory service. Certainly he was a distressful person to be with. Nervous, excitable, fixed on nothing, the slave of his caprices, seeing the higher possibilities of man's nature, yet unable to reach them, he came to us as to a refuge, and shortly after took up his residence in our house for a few weeks. A strange-looking creature for an Englishman he was. His dress was that of a Muslim throughout, save that he had his long light-brown hair tied up in a Grecian knot behind his head, like a woman. His complexion was fair and his eyes light blue. In my Diary I say that he looked more like an actor made up for a part than anything else. The writing of the *Elixir of Life* occurred some time later, but I may as well tell the story while he is under my mind's eye.

From the time that he came to us he seemed to be engaged in a strong mental and moral conflict within himself. He complained of being dragged hither and thither, first by good, then by bad influences. He had a fine mind, and had done a good deal of reading; he wanted to join our Society, but, as I had no confidence in his moral stamina, I refused him. H. P. B., however, offering to become responsible for him, I relented and let her take him in. He repaid her nicely, some months later, by snatching a sword from a sepoy at Wadhwan station, and trying to kill her, crying out that she and her Mahatmas were all devils!

In short, he went mad. But to return. While with us he wrote some articles which were printed in the *Theosophist*, and one evening after a talk with us, sat himself down to write on the power of the will to affect longevity. H. P. B. and I remained in the room, and when he began his writing she went and stood behind him, just as she had in New York when Harisse was making his sketch of one of the Masters, under her thought-transference. The article of Mirza Saheb attracted deserved attention on its appearance (see *Theosophist*, III, 140, 168), and has ever since ranked as one of the most suggestive and valuable pamphlets in our Theosophical literature. He was doing well, and there was a good chance for him to retrieve much of his lost spirituality if he would only stop with us; but after giving his promise to do so, he obeyed an irresistible impulse and rushed back to Wadhwan and to destruction. His mind did not recover its equilibrium; he turned Roman Catholic, then recanted back into Islam, and finally died, and was buried at Junagadh, where I have seen his humble tomb. His case has always seemed to me a dreadful instance of the danger one runs in dabbling with occult science while the animal passions are rampant.

I shall run rapidly over the events of 1881, and note only two or three that had intrinsic importance. The case of Damodar was one of them. When this dear young man joined the Society and put his heart into the work, he got from his father permission to live with us, irrespective of caste restrictions and as though he had taken the vows of the Sannyasi. The father and an uncle were also active members at that

time. According to the custom of Guzerati Brahmins, Damodar had been betrothed in childhood, of course without his consent, and the time arrived when he would have to take up the married life. But his sole ambition in life was now to lead the existence of the spiritual recluse, and he viewed marriage with the greatest repugnance. He felt himself the victim of custom, and was passionately eager to be freed from the abhorrent contract, so that he might become a true *chela* of Mahatma K. H., whom he had seen in his youth, and again after coming to us. His father, a wise and high-minded man, at last consented, and Damodar assigned over to him his share of the ancestral estate, amounting, if I rightly recollect, to some Rs. 50,000, on condition that his child-wife should be taken to his father's house and comfortably maintained. This arrangement went on all right for a time; but when Damodar had become completely identified with us, and had even gone so far as to become a Buddhist with us in Ceylon, the family revolted and began a persecution to compel the poor boy to come back into caste. This he would not do, and the result was the withdrawal of his relatives from the Society, and their waging a not very reputable war against us, innocent objects of their anger, in the shape of scurrilous fly-sheets and other attacks on our reputations, which were printed and circulated by somebody or other at Bombay. One particularly slanderous one, I remember, was circulated to my audience on the occasion of a lecture at Framji Cowasji Hall. A copy was handed me as I was entering. Reaching the platform I read it, and,

showing it to the audience, laid it on the floor and put my foot on it, with the remark that that was my answer to our unprincipled calumniator, whoever he might be. The burst of applause that followed showed that no more need be said, and I proceeded with my discourse.

Damodar remained with us in the most intimate friendship, working with ceaseless devotion and absolute unselfishness until 1885, when he went from Madras to Tibet *via* Darjiling, and is still there, in training for his future work for mankind. False rumors of his death in the Himālayan snows have been circulated from time to time, but I have excellent reason for believing that he is alive and well and in due time will return. I shall recur to this later on. His bereaved father died soon after the unpleasant breach between them, carrying with him all our respect and best wishes.

It had been arranged that I should return alone to Ceylon and begin the collection of a National Education Fund to promote the education of Buddhist boys and girls. The scheme had—as H. P. B. assured me—the full approbation of the Mahatmas, and her own concurrence had been strongly expressed. Thereupon I had written to Ceylon and made all necessary arrangements with our friends. But, on 11th February, as it seems, H. P. B. fell out with me because I would not cancel the engagement and stop and help her on the *Theosophist*. Of course, I flatly refused to do anything of the kind, and as the natural consequence she fell into a white rage with me. She shut herself up in her room a whole

week, refusing to see me, but sending me formal notes of one sort or another, among them one in which she notified me that the Lodge would have nothing more to do with the Society or myself, and I might go to Timbuctoo if I liked. I simply said that my tour having been fully approved of by the Lodge, I should carry it through, even though I never saw the face of a Master again; that I did not believe them to be such vacillating and whimsical creatures; if they were, I preferred to work on without them. Her ill-temper burnt itself out at last, and on the 18th of that month she and I drove out in the new carriage which Damodar had presented to her! A Master visited her on the 19th and exposed to her the whole situation, about which I shall not go into details, as all has turned out as he forewarned us. On leaving, he left behind a much-worn gold-embroidered head-covering, of peculiar shape, which I took possession of, and have until this day. One result of this visit was that, on the 25th of the month, she and I had a long and serious discussion about the state of affairs, resulting—as my Diary says—"in an agreement between us to re-construct the T. S. on a different basis, putting the Brotherhood idea forward more prominently, and keeping the occultism more in the background, in short, to have a secret section for it." This, then, was the seed-planting of the E. S. T., and the beginning of the adoption of the Universal Brotherhood idea in more definite form than previously. The wording of the paragraphs was entirely my own, and is quite open to alterations.

I have recorded in the entry for one of those days, an admirable description of the potential re-appearance of latent images of past things, which I found on reading that wonderful book *The Dabistan*. Says "Abu Ali, the prince of physicians (whose spirit may God sanctify),

> "Every form and image which seems at present effaced,
> Is securely stored up in the treasury of time—
> When the same position of the heavens again recurs,
> The Almighty reproduces each from behind the mysterious veil."

These latent images are those which Buchanan's psychometers can see and describe on being put into connection with the foci of Ākasha wherein they are lying latent.

I sailed for Ceylon on 23rd April, in company with a Mr. Æneas Bruce, of Scotland, a veteran traveller and most amiable gentleman, who had joined our Society. We reached Point de Galle on the fourth day and were received with much enthusiasm. Our leading colleagues came aboard with greetings and garlands and escorted us to the shore, where over 300 Buddhist boys of our first-established school were standing in line to welcome us. White cloths were laid from the landing for us to walk upon, and there was a brave show of greenery and flags, with no end of cheers and joyful acclamations. A great multitude of people were there to follow our carriages to the schoolhouse, an upper-storied building on the Harbor beach, where rooms had been fitted up for our accommodation. As usual a number of yellow-robed monks, headed by the venerable Bulātgama Sri Sumanatissa, Chief Priest of the principal temple of Galle, were

there to welcome us with their chantings of Pāli *gāthas*, or verses.

The main object of my present visit was, as above stated, the raising of an Education Fund and the rousing of popular interest in the subject of education generally. To effect this I needed the co-operation of all the principal priests of the Island; if I could get about eight or nine men on my side, the rest would be a mere matter of detail. These men were H. Sumangala, Dhammalankāra, Wimalesāra, Piyarātna, Subhuti, Potuwila and Wēligama. Then there was Megittuwatte, the "silver-tongued orator," incomparably the finest speaker in the Island, to be dealt with, but not like the others. He had been for very many years a Thera, or ordained monk, but for certain irregularities of conduct had been reduced to the lower rank of *samanera*. This group of intellectual men swayed all the power in the two "sects" recognized among them, the Siam and the Amarapoora. As I have elsewhere explained, there is no difference whatever, of dogma, between these two Sinhalese Buddhist "sects"; only that of the sources of their respective ordinations. The Siam priests had got ordination from that country at a past epoch, when civil war had well nigh uprooted the religion of the Buddha in the spicy Island. Hindu Tamil invaders had overturned the indigenous Buddhist sovereign, destroyed their finest temples, and burnt their religious books, by stacks "as high as the tops of the cocoanut trees." In this crisis, upon the expulsion of the foreign dynasty and the re-establishment of the proper sovereign, his eyes were turned to Siam, and

an embassy was sent to that Court to ask that holy monks might be lent to re-ordain the remaining Sinhalese monks. This request being complied with, the result was the establishment of the new Siam sect under Royal patronage. Much later, when postulants of lower castes were denied ordination by the aristocratic Brotherhood, of the *Willalla* caste mainly, they sent delegates to the king of Burma, whose capital was then at Amarapoora, to seek for ordination. Succeeding in their object they returned, fully ordained *bhikshus*, to Ceylon, and the new "Amarapoora" sect sprang into existence. As usual among theologians, there was no fellowship between the two bodies; they never worked in concert, whether sitting in Council, exchanging religious services, or jointly appealing to the people. All this was too absurd to me for tolerance, and as I found myself on equally good terms with both sets of leaders, I determined, if possible, to bring about cordial co-operation for the good of the religion as a whole. There was then just arising a third sect, a schism, in the body of the Amarapoora sect, headed by a monk of great force of character, fine education and quenchless energy. His name was Ambāhagawatte, and he called his sect the Ramanya Nīkāya (I spell it as pronounced). His rallying cry was, of course, Reform: the priesthood had become lazy, unobservent of their duties, the religious education of the people was being neglected; there must be a change. He set the example of austerity of life, observing strictly the rules of Vināya, and requiring the same of those who chose to follow him. From the start he made an impression, his sect

gradually grew strong, and, although he has been dead several years, it has prospered and now embraces a large body of zealous and able monks, and devoted laity. I had to bring these various threads of power into one strong tie of union, and set myself to accomplish the purpose. Beginning with personal interviews with the leaders, and getting their individual promises of help, I took the lecturing field, moving from village to village in the Western Province, of which Colombo is the chief town and centre of influence. First, Mr. Bruce and I wrote a couple of popular tracts for campaign purposes, which, after being submitted to the priests in Sinhalese translations, were printed and put in circulation. The Missionary party were not idle, you may be sure. Private slander, open abuse, absurd attacks on Buddhism, and the copying of foreign scurrilous articles against the Society and its Founders, were the order of the day. The poor schemers had not the wisdom to see that, since the Buddhists had accepted us as their champions and co-religionists, the more we were abused and denounced, the stronger grew the popular love for us: we and they being fellow-sufferers in a common cause.

Finding out the shocking ignorance of the Sinhalese about Buddhism, I began, after vainly trying to get some monk to do it, the compilation of a *Buddhist Catechism* on the lines of the similar elementary hand-books so effectively used among Western Christian sects, working at it at odd times, as I could find leisure. To fit myself for it I had read 10,000

pages of Buddhist books. of course in English and French translations. I finished my first draft on 5th May, and on the 7th took it with me to Colombo. That evening the High Priest, Sumangala, and Megittuwatte, came to discuss my scheme of the Education Fund. After several hours' interchange of views, we agreed upon the following points, *viz.*, that it should be a Fund for the propagation of Buddhism, that there should be Trustees, that we should sell subscription tickets or Merit Cards of various denominations, that the money should be deposited in the Post Office Savings Bank, and that Megittuwatte should go on a tour with me. I got Sumangala to consent to issue an appeal to the Buddhist public for the Fund, and to endorse me as its collector. From the Government blue books we discovered that eight out of eleven of the schools in the Island were in the hands of the Missionaries, the rest belonging to Government: in the former, the children were taught that Buddhism was a dark superstition, in the other no religious teaching at all was given. So, between them both, our Buddhist children had but small chance of coming to know anything at all of the real merits of their ancestral faith. Our work was clearly cut out for us, and at it we went *con amore*. My first begging lecture was at Kelanie, on the Buddha's Birthday, and resulted in the paltry sale of Rs. 60 worth of tickets, and one subscription of Rs. 100 towards the Fund.

My *Catechism* had been translated into Sinhalese, and on 15th May I went with it to Widyodaya College

to go over the text, word by word, with the High Priest and his Assistant Principal, Hiyayentadūwe, one of his cleverest pupils and a man of learning. On the first day, although we worked eight hours, we disposed of only 6½ pages of the MS. On the 16th, beginning early in the morning and continuing until 5 p.m., we got over 8 pages; then we stuck. The impasse was created by the definition of Nirvana, or rather of the survival of some sort of "subjective entity" in that state of existence. Knowing perfectly well the strong views entertained by the school of Southern Buddhists of which Sumangala is the type, I had drafted the reply to the question: "What is Nirvana" in such a way as to just note that there was a difference of opinion among Buddhist metaphysicians as to the survival of an abstract human entity, without leaning either towards the views of the Northern or Southern school. But the two erudite critics caught me up at the first glance at the paragraph, and the High Priest denied that there was *any* such difference of opinion among Buddhist metaphysicians. Upon my citing to him the beliefs of the Tibetans, Chinese, Japanese, Mongolians, and even of a Sinhalese school of which the late Polgāhawatte was leader, he closed our discussion by saying that, if I did not alter the text, he should cancel his promise to give me a certificate that the *Catechism* was suited to the teaching of children in Buddhist schools, and should publish his reasons therefor. As this would virtually destroy the usefulness of my educational monograph, and cause such a breach between him and myself as to make it tenfold more difficult to

push on the schools project, I yielded to *force majeure*, and made the paragraph read, as it has ever since stood, in the many editions through which the *Catechism* has since passed. The tedious labor of critical revision was finally completed, the MS. fair-copied, re-revised, trimmed, added to, and at last made ready for the printer, all this taking weeks and causing no end of bother to me. It was such a novelty, this, to condense the essence of the whole body of Buddhist *Dhamma* into a little hand-book that one might read through in a couple of hours, and their inherited tendency towards passive resistance to all innovations upon the fixed order of things was so strong that I had to fight my way inch by inch, as one might say. It was not that the priests did not feel the greatest friendliness for me and the highest appreciation of the possible good that might accrue to the nation from our school project, but the conservative instinct was too strong to be pacified at once, and points that had been passed upon had to be reconsidered, and long discussions entered into as to the spirit of the Buddhist sacred books, before I could be allowed to go to Press with my work. I am perfectly convinced that if I had been an Asiatic of any race or caste, the book would never have appeared, the author would have simply been tired out and have abandoned his attempt. But, knowing something of the bull-dog pertinacity of the Anglo-Saxon character, and holding me in real personal affection, they finally succumbed to my importunity. The Sinhalese and English versions appeared simultaneously, on 24th July, 1881, and thenceforward, for some weeks, the

hand-presses of Colombo could not strike off copies fast enough to meet the demand. Sumangala ordered 100 copies for the use of the priest-pupils in his College; it became a textbook in the schools; found its way into every Sinhalese family; and within one month of its publication was admitted in Court, in a case that was being tried in the Southern Province, as an authority upon the question at issue. This, of course, thanks to Sumangala's Certificate of Orthodoxy, appended to the text of the work. This, we may say, was substantially the beginning of our campaign for Buddhism against its foes, Missionary and other, and the advantage has never been lost. For whereas previously the entire nation were virtually ignorant of the basic principles of their religion, of even one of its excellent features, now every child, one may say, is as well informed, and as ready to recognize false representations about the national faith, as the average Sunday-school child in the West about the principles of Christianity. It is a duty and a pleasure to re-state here that the money for printing the two versions of the Catechism was given me by that saintly woman and sweet friend, Mrs. Ilangakoon, of Mātara, since, alas! deceased. Thanks to the careful scrutiny given it by the two learned monks of Widyodāya College, it has found such wide favor throughout the world that up to the present time it has been translated and published in twenty different languages. I have found it in Burma, Japan, Germany, Sweden, France, Italy, Australia, America, Sandwich Islands, throughout India, and elsewhere: from the grain of mustard-seed has developed the great tree. The only disagreeable

incident in its history is, that a person calling himself "Subhadra Bhikshu" plagiarized almost its entire contents and appropriated to himself its title, in a German Catechism that he brought out, and that has since been published in English.

CHAPTER XXI

CREATING A SINHALESE BUDDHIST FUND

If anyone fancies that the influence which our Society enjoys in the East has been gained without hard work he should look through the pages of this Diary. Day after day, week after week, and month after month are to be seen the records of journeys taken in all sorts of conveyances, from the railway carriage to the ramshackle little hackney, jutka and ekka, drawn by a single pony or bullock; to the common country cart, with its huge wheels, its bottom of bamboo poles, sometimes but thinly covered with straw, and its pair of high-humped Indian oxen straining at their yoke—a thick pole laid across their tired necks and tied to them by coir ropes; to roughly built boats covered with arches of dried palm-leaves, but with neither bench nor cushion; to elephants carrying us in their howdahs, or, more frequently, on great pads, which are simply mattresses belted around them by giant girths. Journeyings by clear days are recorded here, and days of pouring tropical rains; nights of moonlight, of starlight, and heavy showers; nights, sometimes, when sleep is broken by the ear-splitting sounds of the jungle insect world, the horrid yelp of the jackal pack, the distant noise of wild elephants pushing through the cane groves,

the ceaseless shouts of the driver to his lagging bullocks, and his country songs, mostly in *falsetto* and usually discordant, to keep himself awake. Then the mosquitoes swarming about you in the cart, with their exasperating drone, menacing slow torture and white lumps swelling on the skin. Then the arrivals at villages in the dawn; the people all clustered along the road to meet you; the curiosity that must be gratified; the bath under difficulties; the early breakfast of coffee and *āppas*—a thickish sort of rice cakes—with fruit; the visit to the monastery; the discussions of plans and prospects with the Buddhist monks; the lecture in the open air, or, if there be one, the preaching pavilion, with a great crowd of interested, brown-skinned people, watching you and hanging on your interpreter's lips. Then come the spreading of the printed subscription-sheets on a table, the registering of names, the sales of Buddhistic tracts and catechisms; the afternoon meal, cooked by your servant between some stones, under a palm tree; perhaps a second lecture for the benefit of newly-arrived visitors from neighboring villages; the good-byes, the god-speeds of rattling tom-toms and squeaky gourd-pipes, the waving of flags and palm fronds, the cries of Sādhu! Sādhu! and the resumption of the journey in the creaking cart. So on and so on, day after day, I went all over the Western Province on this business, rousing popular interest in the education of their children under the auspices of their own religion, circulating literature and raising funds for the prosecution of the work. So great was my discomfort that at last

I set my Yankee ingenuity to work, and had built for me a two-wheeled travelling-cart on springs, which could give ample sleeping accommodation for four people; had lockers projecting from the sides, for holding table-furniture, tinned provisions, a small library, and my bathing kit; two large ones under the floor for baggage, sacks of vegetables and curry-stuffs; a tight canvas roof on hoop-iron ribs, a chest in front for tools and spare ropes, hooks underneath for water-bucket, cattle-trough, etc., a secure shelf over the axle for the driver's cooking-pots, and rings behind for attaching a led bullock. After we got that, our troubles were at an end, and I lived in that conveyance for weeks at a stretch. It weighed less than a country cart, and was as comfortable as need be. By a simple change of longitudinal seat-planks inside, I could, at will, have a writing room, dining room, sleeping room, or an omnibus-like arrangement, with two cushioned seats running fore and aft, to accommodate eight sitters. It was as much a novelty to the simple country folk as the *Buddhist Catechism*, and priests and laity used to flock around to see its mechanical wonders. After the lapse of fifteen years the cart is still in serviceable condition, and has been used by Dhammapala, Leadbeater, Powell, Banbery, and various other workers in Ceylon. I have travelled many miles in the best Indian bullock-coaches, but not one compares for comfort and convenience with this. It would be a kindly act for someone to build it for the public, for it is equally useful for any part of the world where there are roads for a two-wheeled

conveyance and stout oxen to draw it. If I have permitted myself to say so much about it, it is only that my readers might fancy themselves along with me in my pioneering educational mission among the good Sinhalese, and realize how some of our time has been spent in Asia.

I was occupied with this business until 13th December, with occasional long breaks for visits to Colombo and Galle, and one to Tuticorin, South India, with a Buddhist Committee, about which I shall presently have more to say. The sum subscribed by these poor villagers towards the National Fund was only about Rs. 17,000, and of this, as it turned out, the Trustees collected no more than about Rs. 5,000; so that, pecuniarily speaking, my time was not too profitably spent for the Education Fund. For myself I, of course, neither asked nor received a penny. If this scheme had been undertaken the previous year, when the whole Island was boiling with excitement and enthusiasm over H. P. B.'s and my first visit, ten or twenty times as much might have been collected, but one cannot always think of everything, and this educational movement was a natural evolution out of experience.

I had great bother and trouble in getting formed of the best men two boards, one of "Trustees" and the other of "Managers," with a lot of red-tape checks and regulations and stuff generally. There was such petty jealousy, such contemptible intriguings to get the control of the money, and such ingratitude shown towards me, that I was at one time so disgusted that I was ready to throw up the

whole thing and let them make their funds and found their schools by themselves. But then, again, I had undertaken a duty which nobody among them, with their inexperience and their troubles of caste antipathies and local jealousies, could perform, and just because of their pettiness toward me, I felt that there was the greater need for me to stick to my work. I am glad I did so, for now we see the splendid harvest that has come from that sowing of seed: schools springing up everywhere; 20,000 Buddhist children rescued from hostile religious teachers; religion reviving, and the prospect brightening every year. Under the terms of the Trust, the collections were first lodged by me in the Government Savings Bank, then turned over to the Trustees, and by them loaned out at good interest on real-estate mortgages, the annual increment being given out for the fostering of Buddhist educational enterprises. It was a foolish policy to leave a village with subscriptions unpaid, for when the excitement of the moment had died away, the makers of fine promises bethought them that rupees were rupees, and schoolhouses then existed only in the mind's eye, and they clung to the cash as something tangible and real: if the dreams should ever take shape, why then . . . They have, and the rupees withheld from me have since been generously given to the cause which sits close to the national heart—that of their religion.

About this time a cluster of sympathetic Hindus at Tinnevelly had agreed to form a Branch of our Society and wanted me to come and inaugurate it. It seemed to me a good and noble thing to get a deputation of

Buddhist Theosophists to cross to India with me and fraternize with their Hindu colleagues, if the latter would make them welcome. I found the thing feasible, and after necessary preliminaries it was carried out. Our visit and its concomitants was of the most picturesque, besides setting a precedent previously unheard of in Hindustan since the great Emperor Asoka ruled the whole Peninsula and made Brahmin priests and Buddhist bhikshus to dwell together in kindly tolerance and mutual respect. At the same time it triumphantly showed the power of our talisman of Universal Brotherhood which—as I said in the last chapter—H. P. B. and I had a little while before agreed to put forward as our leading policy.

On 21st October our party embarked at Colombo. We numbered four, *viz.*, Messrs. Samuel Perera, William D'Abrew Rajapakse, William F. Wijeyesekara, and myself. Then there was "Bob," my Sinhalese servant, a most useful and necessary adjunct, with his basket of table and cooking utensils. We reached Tuticorin, the southernmost Indian port, the next forenoon, and found waiting at the jetty a huge crowd, including many Indian gentlemen of position who took us to the hotel, saw to our comfort, and put me up to lecture to a packed house that evening in the Anglo-Vernacular School building. There was such a crowd, and they made so much noise with their shuffling feet on the stone floor, that I overtaxed my throat to make myself heard, a bad beginning for the next day's business. The President and another representative of the Tinnevelly Branch came at 7 by train and stopped all night to escort us. Tinnevelly

is but thirty miles from Tuticorin, so it did not take us long to get there the next morning. But at a wayside station we were intercepted by a waiting crowd who had us out on the platform and gave us cocoanuts, plantains, and betel leaves in token of welcome, and wreathed our necks with jessamine chaplets to do us honor after their poetical fashion. At the Tinnevelly station there was a crowd; 2,000 people at least sweltered together in and about the building to get a glimpse of us. There were all the town notables in gala costume, and the huge elephants from the Temple, with their mighty brows painted with caste marks, which were made to raise their trunks and salute us with a roar. And priests with broad and high foreheads holding before us in benediction polished platters of brass, holding betel leaves, red powder, and burning lumps of camphor. And the presentation of notabilities, of whom each gave us two limes, with courtly salutations. And the clangor of huge horns, and long slim trumpets, or shawms, blown lustily amid the din of a dozen tomtoms. Then came a great procession, headed by the elephants trumpeting, the nobility and officials, on foot, escorting our palanquins, and my "Bob" in front of us carrying a brass jar of water on his head, a tuft of betel leaves emerging from the narrow mouth of the jar. And the banners and flags, large and small, each bearing some quaint device, waved all up and down the line, the 2,000 following and shouting joyfully. The omens, too, they said, were propitious: a frightened pullet flew over my head in the right direction: a *nilakanta*, or vividly blue bird,

was seen in an adjacent field on our right; a lizard chirped over our house porch the proper number of times. So everybody was happy in the glowing sunshine, and the town had on its holiday look.

They took us to our quarters, an upstair house with an upper and a lower verandah, whose portico and whole facade were decked out with flags and greenery. The street was packed with people for hours. We held a sort of durbar, or reception, at which there were speeches, replies, written addresses, betel, more garlands, limes, etc. In the evening I initiated fourteen new candidates and organized the Branch in due form. Then something to eat, and bed, and, for me, dreamless sleep until morning.

My throat was so sore that I looked forward with some apprehension to the work I should have for it that day and the next. However, I soon had something to divert my thoughts from my physical disability, for the morning post brought me a letter from the Principal of the local Hindu College which let me into the wiles of the gentle missionary. My correspondent said that, although he called himself a Christian, he did not approve of some of the measures adopted in the interest of missionary propaganda, and enclosed for my information a copy of a pamphlet which had been circulated through the town the day before, to prejudice the community against us; the copies being distributed by hand by the servants of the missionaries, with the verbal message that they were sent "with the compliments of the Secretary of the Tinnevelly Theosophical Society". In violation of the law which requires that the names of the

printer and publisher shall appear on every printed work, this pamphlet revealed neither. Its contents were reprints of two meanly slanderous articles against us, from a London and a New York paper. The occasion to expose the dishonorable tactics of the enemy was so inviting that before beginning my lecture that afternoon at the Hindu College, I called attention to the pamphlet and denounced its authors in suitable terms. The blow recoiled upon the heads of our would-be assassins and our popularity was doubled. This is the sort of warfare that we have had to encounter throughout the whole period of our Indian work; and almost invariably the offenders have been Protestant missionaries.

On the next day occurred the ever-to-be-remembered incident of the planting of a cocoanut within the Temple compound, by our Buddhist delegation, as an act of religious amity and tolerance. The Nelliappa Pagoda, as it is called, is a very ancient stone structure with the usual pyramidal Gopurams carved to the summit with figures in high relief, and the covered stone ambulatories encircling the four sides. It was crowded to suffocation by a curious multitude when our procession reached there. Our order of formation was as follows: the frisky "Bob," wearing his Sinhalese comb and his hair in a big knot, appeared in the lead, carrying on his head his brass jar of water, with a ripe cocoanut resting on a bed of betel leaves on top; then the Temple band of musicians playing their loudest at our tympanums; then myself, followed by the three Sinhalese Buddhists; then a large body of notables, and some 1,500 people

bringing up the rear. We entered the Temple with flags flying and music playing amid a tumult of applause. Bob kept steadily on, and soon his shining jar seemed floating on a dark sea of humanity, as the crowd wedged in between him and ourselves. At last we struggled on to the platform prepared for us and mounted it. Five thousand people began shouting at once. Just a few yards back of us, in the open air, a hole had been dug for the nut, and it was covered over with an ornamental canopy. I held up my hand as the signal for silence, but as at least fifty or a hundred strong-lunged people began shouting to the rest to keep silence, it may be imagined what luck a speaker would have. When these shouters lost their voices, as many more took up the cries, and so it went on and on, until I thought I should have to give my address in pantomime; whereupon, comically enough, there came back to my memory the recollection of the fairy-like pantomimes of the Ravel Family which I had seen in boyhood! I tried to speak in the hope that when they saw my lips move and my body swaying, the crowd would give me a chance, but my bad throat compelled me to stop very soon. Then, when the case seemed hopeless, a light-skinned, intellectual-faced Brahmin, naked to the waist, arose in his place, towering above the squatting multitude, and, raising both arms full length above his head, pronounced the sacred salutation: "Hari, Hari Mahadeva-a-a!" The clear resonant sounds rolled far and wide, and silence fell upon the chattering multitude: I could even hear the sparrows twitter and the crows cawing outside. Instantly I began my

discourse and got through it more or less successfully. It was an appeal for religious tolerance and brotherly love, for their fraternal reciprocation of the good feeling which had brought over these Sinhalese, whose ancestors were Indians like theirs, and whose religious Teacher was recognized by them as one of the Avataras of Vishnu. It seemed to me I touched their hearts, for there were all the outward signs of friendliness. After I had finished, the Sinhalese chanted *Pirit*, benedictory verses in Pali, we four moved over to the place of planting, took the Ceylon cocoanut from its betel-leaf bed on the mouth of Bob's water jar, placed it properly in the ground, recited the *Mangalam* benediction, and then, sprinkling it with costliest rose-water given me by a Bengali friend for the express purpose, I christened the auspicious tree that was to be: "Kalpavriksha," after that wondrous tree of Paradise from whose all-supplying branches the happy ones may take whatsoever object their heart desires. A tempest of cheers and hand-clappings followed the completion of the ceremony, and we returned to our quarters, delighted with the day's successes. The next day we returned to Ceylon by the S.S. "Chanda" and I resumed my work for the Education Fund.

The ordinary steam-passenger sees little of the loveliness of Ceylon, although that little is calculated to whet his desire to see more. The drives about Colombo, the exquisite railway trip by the seashore to Mount Lavinia, and the climb by rail to Kandy and Nuwera Eliya are experiences never to be forgotten; but I have seen the Island thoroughly, have visited

almost every little village in the Maritime Provinces at all times of the year, and I can endorse every word of praise that Professor Ernst Hæckel has written about it as fully deserved. And I saw the people as they are, at their very best; full of smiles, and love, and hospitable impulse, and have been welcomed with triumphal arches, and flying flags, and wild Eastern music, and processions, and shouts of joy. Ah! lovely Lanka, Gem of the Summer Seas, how doth thy sweet image rise before me as I write the story of my experiences among thy dusky children, of my success in warming their hearts to revere their incomparable religion and its holiest Founder. Happy the karma which brought me to thy shores!

One of the most delightful of my trips of 1881 was that to the hill-district of Ratnapura (City of Gems), the country where the famed precious stones of Ceylon are dug, and where the lordly elephant rules the forest. The scenery is charming, the verdure that clothes the landscape is of that brilliant tint peculiar to the Tropics in the rainy season. The encircling hills are blue and misty in the clouds which float about their crests. As I strolled down the road that passes through the town I met a string of tamed elephants with their mahouts, and stopped them to pay them some agreeable civilities. I fed them with cocoanuts bought at a neighboring stall, and patted their trunks and spoke friendly to them after the fashion of the wise. It was interesting to see how they got at the contents of the hard-shelled fruit. Holding them in a curve of their trunks, they smashed them against a stone or laid them on the

ground and stepped on them just hard enough to break the shells. One cracked his against a stone, let the juice run into his proboscis, and then poured it into his mouth. A large beast is worth Rs. 1,000—say, rather more than £55 in our now degraded rupees. Feudalism still holds its own in the hill tracts of Ceylon, having hardly yet been extirpated with the change of Government from native to British rule.

I lectured first at the Dewali, a temple dedicated to one of the Indian "patron deities" of Ceylon. Iddamalgodde Basnayaki Nilami, a noble of the old regime, is the incumbent of this temple and derives from it a considerable income. These Dewalis, or Hindu shrines, one sees in many places actually adjoining the Buddhist Viharas and within the same compound (enclosure). They are an excrescence on pure Buddhism, left by the Tamil sovereigns of former days, and, for the most part, are handsomely endowed with fields and forests.

A *perehera*, or elephant procession, was a fine sight. Imagine fifteen or twenty of these huge beasts marching along, all decorated with rich trappings; tinsel covered carts; Buddhist priests in yellow robes, borne along in portable shrines, trying to look meek but really swelling with pride; devil dancers (*kappakaduwe*) in fantasic costumes, and wearing huge, hideous masks, and harlequins following after; the three *Nilamis*, or noble headmen, in carriages, and the rear brought up by a long procession of men carrying food in baskets slung to *pingoes*, flexible poles of elastic wood, such as are commonly employed for

carrying burthens: the whole wild scene lit up by torches innumerable, of dried cocoanut fronds, which burn with a bright glare that turns every dusky figure into a charming artist-model.

After breakfast the next morning we "went gemming," that is, to dig a little in a piece of ground that one Mr. Solomon Fernando had given me for what I could get out of it for the Fund. For the first and only time in my life I realized the gaming excitement of mining. The chances were even whether I should get nothing or turn over a sapphire worth £1,000. I handled the spade first myself, but the climate soon warned me to turn over the search to the hardy coolies who stood waiting. We dug a half hour, and got about a handful of sapphires, rubies, topazes, and imperfect cat's-eyes by washing the dirt. I took them away in high glee, fancying in my ignorance that the whole sum we needed for the Fund might perhaps be taken from this pit. Alas! when I had the gems appraised in Colombo, I found there was not a single stone of any commercial value in the lot. I never got anything at all from the pit, which was not the generous Mr. Fernando's fault. But I am wrong: I did get something later from him—a good *loupe*, or magnifying-glass, which he had cut for me from a pure rock crystal taken from my pit.

At 4 o'clock that day I spoke at the preaching-shed in the town and got Rs. 500 subscribed. But most of it is still unpaid; subscribing, for show, and paying, for conscience' sake, being two quite different affairs, as we found by sad experience in India as

well as in Ceylon. Stupid people, to believe in the law of Karma, and then break such voluntary contracts as these! They remind me of the Sinhalese folklore story of the dull-witted fellow who engaged a blacksmith to make him a knife, and cheated him by giving him soft iron instead of good metal!

A local Branch of the Society resulted from my visit to this town. Another lecture followed on the next day, and the five most important *Nilamis* and *Ratemahatmeyas*—chief officials—were admitted into the membership of the Society. A Baptist missionary, attended by a grinning black catechist, came to my lodgings for an intellectual wrestle with me upon the respective merits of Buddhism and Christianity. They retired sadder, if not wiser men, and made no converts that time. At 11 p.m. our party embarked in a paddy boat, a platform laid over two canoes, to descend the river to Kalutara, where we were to take train. The Captain proved a cheat and a traitor, for, although our bargain was for the exclusive occupancy of the boat, he let come aboard about twenty-five men, despite our remonstrances. Finding argument useless, I bade our friends remove our luggage, and, collaring the fellow, took him before a police magistrate, who was close at hand. Leaving him in custody we engaged another boat and pushed off at once. We learnt afterwards from an acquaintance who was on a third boat, that, tying up by the bank at a village down the river, he overheard the men on our first boat talking near him about the failure of their plot to rob me of the money I had collected at Ratnapura,

and, if necessary, dispatch me! It seems that these villains were notoriously bad characters from the Pettah of Colombo.

We spent the next day delightfully on the river, admiring the green banks, the luxuriant foliage, the bright-plumed birds, and the mountain chain with its ever-shifting tints. Our meals, cooked on board in the most primitive style, consisted of curry and rice, and were eaten off leaf-plates, with our fingers, in Eastern fashion. The night was lovely as Paradise, with first a blaze of stars and then the fairy moonlight, creating about us a dream-landscape and silver-paved stream. The jungle noises were most novel to me, a stranger, and so was a huge crawling animal we saw moving at the water's edge, which I took to be an alligator, but which proved to be a huge lizard, seemingly six feet long. We shot the rapids at one place, and enjoyed the excitement of watching to see if our frail craft should go to pieces and leave us floundering in the water. But our Captain proved a splendid helmsman, and his son, a handsome, well-shaped lad of 13 years, stuck to his bow-oar with cool courage, and we soon passed down to the calm water below. This boy was a wonder to me. He ate nothing but curry and rice, and had not got his growth, yet he plied the oar throughout the trip of fifty-seven miles, for twenty-two hours at a stretch, save occasional short reliefs, and was as fresh at the end as at the start. I thought it would be hard to find a Western youth who could equal that feat of endurance.

We had no cots or bunks to comfort us, but sat all day and slept all night on mats laid on the bamboo

deck, after a bone-crushing fashion which I prefer to leave to the reader's imagination rather than dwell too long upon details. I will only say that a night passed without a mattress, on a tiled roof, is luxury in comparison with it. We reached Kalutara before cockcrow the next morning, took train, and got back to Colombo, for early breakfast, tired enough.

As everybody knows, there is no caste in Buddhism; it is repugnant to its principles, and yet it is recognized, and tenaciously held to among the Sinhalese Buddhists. There are no Brahmins or Kshattriyas among them, the highest social division being that of the agriculturists called *Willallas*. This is but a superior grade of Sudras, yet they are the aristocrats of the Island. Below them, socially, are various subdivisions, also marked by their callings, such as peelers of cinnamon bark, fishermen, toddy-drawers, and others. It is stupid to a degree that they should stick to their old notions, but the social divisions have been accentuated under Hindu dynasties extending over centuries, and such fixed habits are hard to eradicate. My policy was, throughout, to ignore them; and the better to create a bond of sympathy among my colleagues in the interest of our work, I arranged with the intelligent leaders of the Colombo Buddhist T. S. for an anniversary dinner to celebrate the completion of its first year of existence. The function came off at our Colombo Headquarters on the evening of July 3rd, and 'was a delightful success. Fifty-seven of us sat at table regardless of castes, and good feeling prevailed. There were speeches in abundance, and the pleasant episode of presenting a diamond ring

to Mr. Wijeyesekara, the indefatigable Honorary Secretary. "The king of stones to the prince of secretaries," as I put it in my presentation speech on behalf of the subscribers. Liberal gifts of money were made for Branch expenses by members, and all went off so well that everybody felt as if the true spirit of Buddhism had descended upon us.

On 7th July I held a second Convention of priests of both sects, to take counsel as to the best way to push on our work. Sixty-seven of them attended as delegates, and the pleasing spectacle was seen of the members of the two sects eating together. This was an advance upon last year's Convention, when, as may be remembered, I had them fed in separate rooms. My Convocation address was very attentively listened to, as interpreted to them. I had had prepared a large map of the Western Province, showing the boundaries of the different *Korales* (townships?), with their respective populations, and advised them what to do. Approbative speeches were made by H. Sumangala, Waskaduwe Subhuti, and Megittuwatte—the latter, as usual, a splendid one, which warmed all hearts. Resolutions favoring my plans and pledging help were passed, and we adjourned in the best of spirits.

The religious agitation reached all classes, even penetrating into the jails. On 20th August I received a petition from the convicts in Wellikodde Jail, Colombo, to come with Megittuwatte and lecture to them on their religion, Buddhism. The monk, being a recognized religious teacher, required no special permit, but my case had to be referred to the

Colonial Secretary, who granted it after some hesitation. Our audience comprised two hundred and forty criminals, including murderers and those in for murderous assault. One bright-faced, innocent-looking lad of 14 had been implicated in nine murders; in his last case he had held the victim while his uncle stabbed him to death! The uncle and two accomplices made their living by highway robbery and murder. The lad would be set to watch passers along a certain road and give signals, when, if all were safe, the hidden assassins would come out and slay their victims, rob them, and bury their bodies in the jungle. The uncle was hung, the boy spared on account of his youth. I took as the text of my remarks—which were translated by Mr. C. P. Goonewardene—the legendary story of Angulimala, the robber and bandit, whom Lord Buddha converted and made into an exemplary man.

The report of this meeting spreading among the criminal classes, I was invited to lecture, on 25th September, to a group of a hundred convicts engaged in building the new Lunatic Asylum. Here, again, I had pointed out to me a boy murderer—a Muslim, who slew his man when only 10 years of age.

One efficient plan adopted for raising money was a house-to-house visitation in the crowded quarter of Colombo, the "Pettah". Mr. W. D'Abrew, Mr. J. R. De Silva, and other leading members of the Colombo T. S., took it up with great spirit, and achieved success. Their way was to go the length of one street at a time, with a cart filled with "penny savings-bank" earthen pots, to gather the inhabitants of a

dozen houses together, explain the objects of the fund, get each of them to take a pot and promise to put in the slot whatever sum they could spare. At the end of the month the Committee would come around again, break the pots, count the coppers, in the presence of the donors, enter the names and amounts in a register, and give fresh pots. In this simple way several hundred rupees were collected within the year. Large employers of coolie labor, like the stevedores, Messrs. Matthew and H. A. Fernando, would get donations from their men on pay-days, and, in various ways, goodwill was shown by the Buddhist public. A touching case of generosity was reported to me one evening, just before a Branch meeting. While the Committee were haranguing some householders in a certain street, a poor, tired-looking woman, miserably clad, was seen to be listening with rapt attention. Presently she turned away and entered a house, from which she soon reappeared, and, approaching the Committee, handed them a single rupee for the fund. Bashfully, and with tearful eyes, she said that she gained her livelihood by grinding rice for another poor woman who sold *āppas*—the species of girdle-cakes I have mentioned above; her husband—a cartman—was laid up and unable to work; she had been saving up coppers of the smallest denomination, during the last six months, to buy herself a decent cloth; but she felt it was much better for her to help this noble object of the fund than to keep the money for herself; she would wear her old, torn garment another half-year. The story brought the tears to my eyes when I heard

it. In the course of the evening, I addressed the Branch about this modern instance of "the widow's mite," and said: "Gentlemen, this poor woman has earned her good Karma by her pious deeds; now let us earn the same by relieving her distress." I threw a rupee on the floor and invited others to do the same. Thirty rupees were soon gathered, and I bade the Committee find the woman and give her the sum. Some time after that, I had her brought to Widyodaya College, to a lecture of mine, and made her sit quietly near the platform, on which were gathered the High Priest and many other monks. In appealing to the large audience for funds, I said that certain gentlemen —naming them—had given 500, 250, 100, and other sums of rupees out of their abundance, but I would now show them a person who had given more than them all combined. Then I told the story and called the woman on to the platform. She was greeted with thunders of applause, and we got a large subscription that day for educational purposes.

A second Convention of monks was held by me that year at Galle. There were ninety-seven delegates, and the High Priest, Sumangala, and Rev. Bulātgama were the chief speakers. The object of the meeting was to lay out a programme for the next year's work, which was to be this time confined to the Southern Province. Upon counting up, at the close, it was found that fifty-two lectures had been bespoken, five more than I had given that year in the Western Province. A committee of twelve influential priests was chosen to co-operate with the lay members of the Galle T. S., for getting up the lectures

and fixing a time-table. After a two days' session the Convention adjourned. The Trust Deed and other legal papers having—after the most vexatious and unnecessary delays and impediments—been executed, and all other business closed up, I sailed for Bombay on 13th December.

It is my pleasant duty to state that, throughout these subsequent nineteen years, a certain number of the members of the Colombo Branch have applied themselves to the onerous task of keeping alive the Buddhist movement, with unflagging conscientiousness. When one realizes their inexperience in the management of public business unconnected with Governmental supervision; their infirmities of temperament, due to an enervating climate and to centuries of national disorder and the exclusion of the ancestors of most of them from public responsibilities, the embarrassing and unprecedented relation of the laity with the priesthood, in this religious and educational movement, the well-nigh irrepressible friction of caste, and the suspicion which many uneducated and unenlightened men feel towards foreigners, who are at the same time whites, one should rather wonder at the tenacity shown in pure altruistic work, than be surprised and shocked at faults that have cropped up in the course of events. For my part, I have never changed one iota in my first estimate of the Sinhalese, nor in my brotherly affection for them; and I feel heartily grateful when I see how this reborn religious sentiment has struck its roots deep into the heart of the nation, and how highly encouraging are the prospects for the future. Our Society Branches have, with

a few exceptions, been inert and useless as centres of Theosophy, but all have the right to take credit for a great total of work done along philanthropical lines. My Western Province tour of 1881 was mismanaged, weeks of my time were frittered away, a mere fraction of the money subscribed on paper was collected; yet, in the long run, all has turned out for the best, and in reviewing the history of that year I have no reproaches to make against those who did their best according to their lights.

On 19th December I reached home and was joyously welcomed by our Headquarters group, whom I found in good health. Things in my absence had gone on in their usual way, the circulation of the *Theosophist* and the volume of our correspondence had increased, and all was peace. But a rude shock awaited me. *H. P. B. conveyed to me a most kind message from the Masters about my success in Ceylon, seeming to have completely forgotten the angry threats and even written declaration that the Society would be abandoned by them if I went there, and that neither with them nor with her would I have any further relations.* Thenceforward, I did not love or prize her less as a friend and a teacher, but the idea of her infallibility, if I had ever entertained it even approximately, was gone for ever.

CHAPTER XXII

FROM BOMBAY NORTHWARD AND BACK

A NUMBER of phenomena occurred at our house during the first week in January, 1882, upon which I shall not dwell, as the details have all been published and doubt has been cast upon the genuineness of some. My rule has ever been, throughout my forty years of psychological researches, to eliminate all incidents which appeared to me tainted with the least suspicion of bad faith: I wish to count only those which have, to my mind, the stamp of genuineness. I may be deceived, often, but I try to be honest.

An early incident of the year was the arrival at Bombay, on a round-the-world tour, of the late Mr. D. M. Bennett, Editor of the *Truthseeker*. He came on the 10th of January, and was met on board his steamer, the P. and O. "Cathay," by. K. M. Shroff (the Parsi gentleman who lectured in the States), Damodar, and myself. Mr. Bennett was a medium-sized stout man, with a big head, a high forehead, brown hair, and blue eyes. He was a very interesting and sincere person, a Free-thinker who had suffered a year's imprisonment for his bitter—often coarse—attacks upon Christian dogmatism. A sham case was manufactured against him by an unscrupulous detective of a Christian Society at New York,

who ordered of him, under an assumed name, a copy of a popular work on sexual physiology, which Mr. Bennett supplied in his capacity of bookseller, without having even read it. A prosecution was then begun against him for circulating indecent books through the post, and an evidently prejudiced judge and jury condemned him to prison. The animus and trickery were identical with those of the bigots who prosecuted Mrs. Besant and Mr. Bradlaugh in the matter of the Knowlton pamphlet. He was made to serve out his whole term of one year, despite the fact that a petition, signed by 100,000 persons, was sent to President Hayes on his behalf. When he was discharged, a monster audience welcomed him enthusiastically at the most fashionable public hall in New York, and a fund was subscribed to pay his expenses on a world-round tour of observation of the practical working of Christianity in all lands. The record of his observations was embodied in an interesting work, entitled *A Free-thinker's Journey around the World*. His shrewd and sarcastic notes on Palestine are especially striking.

In conversation, I learnt from him that both he and his wife had been members of the Shaker Society; he, for a number of years. His religious yet eclectic mind had revolted against the narrowness and intolerance of the Shakers and of Christian sectarians in general; he and the gentle Shakeress in question decided to marry and make a home of their own; they left the Community; he devoted himself to the study of Christian evidences; became a confirmed skeptic, and, after some years in mercantile business, devoted

the rest of his life to a vigorous Free-thought propaganda. There was a candor and friendliness about the man which made us sympathize at once. *The Occult World* of Mr. Sinnett had just appeared, and Mr. Bennett read it with avidity: in fact, he made very extensive quotations from it in his journal and in his new book. A full discussion about our views with H. P. B. and myself led him to apply for membership, and this put me into the dilemma which I have frequently described, orally and in writing, but which should not be omitted from my present historical sketch, as the case teaches a lesson too much needed by us all.

A blatant theological Boanerges, named Cook—Joseph Cook, the *Reverend* Joseph Cook, to be exact—a burly man who seemed to believe in the Trinity—with himself as the Third Person—happened at Bombay on a lecturing tour, simultaneously with Mr. Bennett's arrival, and was "boomed" by the Anglo-Indian public. Their journals did their best for him, and used the story of Mr. Bennett's martyrdom as a trump card, denouncing him as a corrupter of public morals and a jail-bird whom decent people should avoid. The Christ-like Joseph opened the ball at his first lecture at the town hall, and committed the blind folly of equally denouncing us, Theosophists, as adventurers, in the hearing of a large audience of Hindus and Parsis, who loved and knew us after two whole years of intercourse. The clue thus given to the hostile Press caused them to attack and revile Mr. Bennett to such an extent that I hesitated to take him into membership, for fear that

it might plunge us into another public wrangle, and thus interfere with our aim of peacefully settling down to our proper business of Theosophical study and propaganda. It was an instinct of worldly prudence, certainly not chivalric altruism, and I was punished for it, for, on expressing my views to H. P. B., she was overshadowed by a Master who told me my duty and reproached me for my faulty judgment. I was bidden to remember how far from perfect I had been when they accepted my offer of service at New York, how imperfect I was still, and not venture to sit as a judge over my fellow-man; to recall that, in the present instance, I knew that the applicant had been made the scapegoat of the whole anti-Christian party, and richly deserved all the sympathy and encouragement we could give him. I was sarcastically told to look through the whole list of our members and point out a single one without faults. That was enough; I returned to Mr. Bennett, gave him the Application blank to sign, and H. P. B. and I became his sponsors. I then turned upon our reverend slanderer and defied him to meet me in public on a given date, and make good his false charges against us. Swāmi Dayānand Sarasvati—then in Bombay—also challenged him on behalf of the Vedic Religion, and Mr. Bennett on his own account. The Swāmi and I received shifty replies, but Mr. Bennett's note went unanswered. Mr. Cook's excuse was that he had to go to Poona. Captain A. Banon, F.T.S., 39th N.I., who was with us at the time, sent him a challenge to meet us at Poona, with notice that if he again evaded us, he—the Captain—should post him as a liar and a

coward. We held the meeting at Framji Cowasji Hall, Bombay, on the evening designated in our challenges; Mr. Bennett, Captain Banon, and I made addresses; I had Damodar read some certificates of our good character and of my public services in America, and the packed multitude, which crammed every inch of room and the approaches to the Hall, thundered their approval of our conduct. The next evening H. P. B., Banon, and I went on to Poona, only to find Mr. Cook had fled to the other side of India without filling his engagement with the Poona public!

The following day I lectured at Hirabagh, in the town hall, to so large an audience that the room would not hold them, and we had to adjourn to the open air. We stopped four days at Poona, during which time there was another lecture again at the same place, and we formed the Poona T. S., which still exists under the same President, Judge N. D. Khandalavālā, whose name is familiar to all our Branches throughout the world as one of our ablest and staunchest associates. We then returned to Bombay. In due course, Mr. Bennett was formally admitted to our membership, in company with the late Professor J. Smith, M.L.C., C.M.G., of Sydney University, and a young Hindu gentleman of Bombay.

On 12th January (1882), the seventh anniversary of the T. S. was celebrated at Framji Cowasji Hall, in presence of one of our usual monster audiences. Blackguard handbills had been freely circulated to try and do us some harm, but the most cordial

and sympathetic spirit prevailed throughout the meeting. Mr. Sinnett was present and spoke, and the other speakers, besides myself, were Moorad Ali Beg, and Messrs. D. M. Bennett and K. M. Shroff; all receiving great applause. Damodar read the Treasurer's Report, which very completely vindicated H. P. B. and myself from the low calumny that we were running the Society for personal profit. I have a Diary note of a few days later, stating that Mr. Shroff brought us word that the meeting had done us great service in bringing around public sympathy to our side.

I note, among several phenomena occurring in those days, one which I think good. Damodar received four letters by one post which contained Mahatmic writing, as we found on opening them. They were from four widely separated places and all post-marked. I handed the whole mail to Professor Smith, with the remark that we often found such writings inside our mail correspondence, and asked him to kindly examine each cover to see whether there were any signs of its having been tampered with. On his returning them to me with the statement that all were perfectly satisfactory, so far as could be seen, I asked H. P. B. to lay them against her forehead and see if she could find any Mahatmic message in either of them. She did so with the first few that came to hand, and said that in two there was such writing. She then read the messages clairvoyantly, and I requested Professor Smith to open them himself. After again closely scrutinizing them, he cut open the covers, and we all saw and read the

messages exactly as H. P. B. had deciphered them by clairvoyant sight.

Within the next fortnight we saw much of Prince Harisinhji, Prince Dajiraj, Thakur Sahib of Wadhwan, the Thakur of Morvi, and other notables, and there were numerous phenomena in the way of letter-dropping from the ceilings of rooms, and once from the open sky, when we were in the garden. They have been described before, and will be found copied in *The Occult World*.

On 14th February I delivered, in the town hall, Bombay, in presence of an overflowing audience of Parsis, and with Mr. Nanabhai Byramji Jeejeebhoy, one of their most distinguished personages, in the chair, a prepared lecture on "The Spirit of the Zoroastrian Religon"[1] (vide *Theosophy, Religion, and Occult Science*, London, George Redway, 1882), in which I endeavored to show its highly spiritual character, and its identity with Hinduism and Buddhism in the matter of Yoga-training and the awakening of spiritual powers in man. The approbation of the audience was shown in a way to convince us all that the discourse was satisfactory. At the close, some interesting and kindly remarks were made by the Chairman, and by Mr. K. R. Cama and Ervad Dastur Jivanji J. Modi, the learned Orientalists. A subscription paper was subsequently circulated among the Parsis, and 20,000 copies of the lecture were printed in English and a Guzerati translation—a gratifying compliment. I must say for myself, that I only consented to prepare the discourse after I had vainly

[1] Published in pamphlet form by T.P.H.

tried to persuade Mr. Cama to do it, for I thought it somewhat presumptuous for an outsider to handle so great a subject, with so little material available for quotation. In fact, I believe the Zoroastrian religion had never been discussed from the same standpoint before. The comments of the Parsi Press were various; some very favorable, some the reverse. But it happened that the adverse criticisms were all from Editors who prided themselves upon their "reformatory" principles, and were out of sympathy with Zoroastrian orthodoxy: in short, they were Freethinkers, believing nothing in either spirit or Yoga, and the chief among them regarding the legends of their great priest-adepts of old as fairy-tales and childish nonsense. Of course, from such critics, we had nothing good to hope. To this day they are hostile, but we manage somehow to get on very well without their praise: there are more Parsi members of the T. S. now than ever before, and the Bombay T. S. is almost wholly composed of those excellent people and staunch friends.

A long tour to the North was my next important work of that season. With Pandit Bhawani Shunker as a companion, I left Bombay on 17th February, by train. H. P. B., Damodar, Shroff, and a large number of other members came to the station to see us off. Passing by Mount Abu, the sacred Jain mountain with its bare, rugged, splintered crests, and through "Malwa's fields of sleep," or poppy districts, we reached Jeypore on the second morning. The usual compliments of limes and garlands were given us at the station, and we were installed at the very

comfortable rest-house in this most bright and attractive of Indian cities. I lectured at the Maharajah's College, in a spacious quadrangle, from a platform under a great red canopy, to a large audience. There were 900 students in the College, two-thirds of them Hindus and one-third Mussulmans: there is also a separate school for young nobles. I was shown the College Library, and, being asked to make a note in the visitors' register, wrote: "This is a good Missionary Library": which it was; some Padre, having been entrusted with the book selection, filled the shelves with the driest, stupidest, most namby-pamby works on Christian Theology. I thought it a petty swindle.

The Jeypore Branch T. S. was formed on the next day with respectable officers and members.

Passing on to Delhi, whence I enjoyed my first view of the architectural wonders created by the Mohammedan Emperors of the past, and the picturesque Chandni Chowk boulevard, I lectured as usual and formed many notable acquaintances. It was while strolling along this street and noticing the imprints of Urdu seals at the doors of the seal-engravers' shops, that I was struck with the resemblance they bore to the cryptographic signature of one of our Mahatmas, and, for the mere whim of it, ordered a common brass seal (price 4d.) engraved with it, to show H. P. B. on my return. I had no ulterior purpose whatever, and as it turned out, it was a stupid mistake, for one may imagine my resentment when, many years later, I saw candle-smoke impressions of this wretched object affixed

to palpably bogus Mahatmic notes and letters sent out by the late Mr. Judge. How the wretched seal got into his possession I do not know, but when we met in London, in 1894, he told me that it was no longer in existence, and he hoped that would pacify me. On seeing an imprint of the seal on a false message, I had written him that, if I found that any scoundrel was using it for evil purposes, I should denounce the fraud and publish in the *Theosophist* a facsimile of the seal. He advised me, in reply, not to do so, because the public would believe me *particeps criminis*; to which I wrote that I did not care in the least what might be said about me, as I was perfectly innocent of wrong and my conscience would support me: but expose the swindle I certainly should. I have his letters on this subject, and suppose that mine to him are among his papers.

At Meerut and Bareilly, the next towns on my programme, the routine of lecturing and Branch-forming was repeated. At Rohilkhund Institute the subject of my discourse was a brass dinner-plate, a queer selection one would say, but it was provoked by the following incident. Here, as everywhere else, I was treated with the greatest kindness and respect by my Indian friends: they provided me with a furnished house, and had a Brahmin cook to prepare my food, which I ate off a brass plate. On the day of the lecture three or four of them were standing about, watching me eat with my fingers in the ancient fashion. They had paid me so many compliments that I was tempted to give them a lesson, so I quietly asked them what they should do

with that plate when I had gone. They blushed, and were too embarrassed to speak. I said: "Don't hesitate to tell the truth. I know what you will do. The plate will either be given to the scavenger or passed through fire to purify it before any of you Brahmins can touch it. Why is this? See that cook's filthy cloth and his generally untidy appearance, and say if I am not less likely to defile the plate than he." They hung their heads, not wishing to be impolite to their guest, but one of them finally said: "We don't know the real reason why, but only that it is so inculcated in our Shastras." "Very well, then," I said; "I shall take this plate as my text this evening and explain the mystery." So I did, discoursing upon the nature of the human aura, the theory of gradual purification by Yoga, and the theoretical state of spiritual refinement at which the true Brahmin arrives. I showed them how their custom of eating separately, father not touching son, brother brother, nor relative relative, while at meals, was strictly based on this theory of individual development as opposed to the collective one of the family, and that as electricity and magnetism are transmitted by conductors from one object to another, so, if an advanced Brahmin should touch a person less pure, he risked contamination of the aura and consequent injury to himself. The mistake made in these spiritually degenerate days, I said, was to suppose that because an unwashed person happened to have been born a Brahmin he must, of necessity, have a less polluting touch than a cleanly white person. Of caste, only the bare name now survives,

and that is usually an obstruction and a nuisance to all concerned. It should either be restored to its pristine value and utility or thrown aside as a worn-out vestment. I find, by my Diary, that I employed pictures of Hindu gods to exemplify the esoteric meaning of their quaint shapes and multiple symbols.

At Lucknow I saw the battered Residency, which withstood the five months' siege by the swarming thousands of Sepoy rebels, thanks to the heroic bravery and dauntless fortitude of its small, ill-fed, ill-armed garrison. I saw the cellars where 250 women and children lived throughout that fearful time, and where most were heroines and some died of fright.

Among the new members of our local Branch were some Princes of the Oudh Royal Family—Mohammedans—who were flatly charged with having apostatized from Islam and adopted the new religion of Theosophy! My lecture was given in the Baradari, or Hall of the Twelve Columns, a spacious structure standing in the late King's pleasaunce or Kaiserbagh, where he used to waste his useless life in sensual revels of naked women and love-dramas and songs. He must have been a beast.

To Cawnpore next, the ever-memorable scene of the brutal massacres of the Rebellion. A new Branch here, and two lectures, and then on to Allahabad and the perennially charming Sinnetts. There were meetings of Theosophists and lectures and some phenomena at Mr. Sinnett's house, which I shall not dwell upon. I sent Bhavani Shunker back to Bombay and went on myself to Behar and Bengal.

Berhampore, once the centre of military and political activity in the Company days, has always been one of the best working nuclei of the Theosophical movement. The late Babu Nobin K. Bannerji, his colleagues Dinanath Ganguly, Satcory Mukerji, and some others, possessed the two elements of success for any public movement—perfect conviction and perfect zeal. Their names figure conspicuously in our Society's Indian history. A great fuss was made over my visit, and yet they seemed to think they had failed to show me enough respect. A Rajah's carriage, with driver and footmen in gaudy liveries, came many miles to meet me on the other side of the Ganges and drive me to Berhampore; at the seven-mile post a guard of honor of red-coated sowars met and closed in behind the carriage; in the town I had to pass between two rows of saluting Sepoys, silver-sticks-in-waiting, and all sorts of more or less decorative flunkeys from the palace; there were double lines of pennons fluttering from lance-staffs; my quarters gay with bunting and greenery, and every sort of worldly flim-flam that is farcically supposed to administer to the pleasure and complacency of public men.

Besides seeing my dear colleagues I had the honor and profit of becoming acquainted with Babu Ram Das Sen, the Oriental scholar and valued correspondent of the chief European Orientalists, who also joined our Society and remained its friend until his premature death.

Calcutta was my final stage on this roundabout tour of 1882. I was first entertained there by my

excellent friends Colonel and Mrs. Gordon, and, later, by the Maharajah, Sir Jotendro Mohun Tagore, the premier Indian noble of the Metropolis. At the Gordons' happened the famous phenomenon of the dropping of letters from the medium Eglinton, and H. P. B., out of the air. All the details were published at the time by Mrs. Gordon, and may be read by everybody who chooses.

A few days later I accepted the invitation of Maharajah Sir Jotendro Mohun Tagore, and became his guest at his palatial Guest-House (Boituckhana) for the remainder of my stay in Calcutta. This gentleman is one of the courtliest, most cultured, and estimable friends I have ever known. He fills a great position with perfect dignity and graciousness. I have enjoyed his hospitality several times; once along with H. P. B., and once with Mrs. Besant and Countess Wachtmeister.

The first four days of April were devoted to writing my lecture on "Theosophy the Scientific Basis of Religion," as I could find time in the intervals of other engagements. On the 4th, the Maharajah held a reception for me, to make me acquainted with the chief Indian gentlemen of the city. On the 5th, my lecture was given at the town hall to a tremendous audience: the larger, I fancy, because of the publication in the unfriendly local journals of the then recent savage and unprovoked attack on us by Swāmi Dayānand Saraswati. Such attempts at injuring our cause have invariably recoiled on their authors. The beloved Bengali author and philanthropist, the late Babu Peary Chand Mittra, was my Chairman.

H. P. B. joined me the next day at the Boituckhana, and that evening, at the same place, we organized the Bengal Theosophical Society, one of our best known Branches, with Babu Peary Chand Mittra as President, Babu Norendranath Sen as Secretary, and Babu Balai Chand Mullick as Treasurer. For many years now, Norendra Babu has been the President, and may almost be said to have done most of the public work of the Branch himself, in his capacity of Editor of the *Indian Mirror*; for the public has been kept fully advised by him of every important event in the history of our movement, and his brave appeals have done much towards bringing about the Hindu revival in Bengal; which is a well-known and universally admitted fact.

On the 9th of the month, I went in company with Mrs. Gordon to the garden-house of Babu Janaki Nath Ghosal, a very influential Bengali gentleman, and admitted into membership his ideally beautiful wife —daughter of the venerable Debendra Nath Tagore, associate-founder, with the late Rajah Rammohun Roy, of the famed Brahmo Samaj. Mrs. Ghosal, besides being a Peri for beauty, is also one of the brightest intellects of the day, and her children inherit her talents. Along with her, I admitted three other Indian ladies. This sounds simple enough to Western people, but they should recollect that since the days of Mussulman supremacy the high-born ladies of Bengal have been secluded behind the *purdah*, or entrance-door curtain of the Zenana, the Brahmo ladies alone excepted, and the fact of my being admitted so often as I have, into the family privacy,

is a striking proof of the kindly light in which I am regarded by the Hindus.

H. P. B. and I stopped in town until the 19th (April), busy as working bees, writing, receiving visitors, holding discussions with outsiders, and meetings of the new local Branch. I see that on the 14th there was a recast of officers, the new list being as follows: *President*, Peary Chand Mittra; *Vice-Presidents*, Dijendra Nath Tagore and Raja Syama Shankar Roy; *Secretary and Treasurer*, Norendranath Sen; *Assistant Secretaries*, Balai Chand Mullick and Mohini Mohun Chatterji.

We embarked on the 19th for Madras, but the "India" lay at the wharf all night taking in cargo, and what with this awful din, the scorching heat of the cabins and the mosquitoes, one may imagine the kind of night we spent and the kind of temper H. P. B. was in, the next morning! We had our first chance to learn by personal experience the dangers and difficulties of the navigation of the Hughli River, but, after anchoring for the night, we got to sea on the 20th and headed for Madras.

We reached that port on the 23rd at 11 a.m., but got a message from T. Subba Row asking us to stop aboard until 4 p.m., for which hour a formal reception had been arranged. We did as requested, and, on landing, were greeted by the principal Indian gentlemen of Madras and a large crowd of sightseers. We enjoyed the breezy drive along the beach road—the best in India—and were lodged in the bungalow of the late Sir T. Madhava Row in the suburb of Mylapore. Our old Sinhalese colleague, Mr. W. D'Abrew,

was with us. At the house an extremely well-worded address signed by the best known Indian gentlemen of the place, and bound as a book in red morocco, was read to us by the Hon. Mir Humayun Jah, a representative of the Mysore ex-royal family of Tippoo Sultan, who then garlanded us in the customary Eastern fashion. My reply was warmly received. Our time was crowded with engagements, during the next succeeding days, with visitors and receptions of candidates into membership; among the latter, T. Subba Row, whom I had to admit alone in private, for some unfathomable reason of mystery; the venerable philanthropist and statesman, Dewan Bahadur R. Raghoonath Row; Judge P. Sreenivas Row, Judge G. Muthuswamy Chetty (also of the Court of Small Causes) and his sons, and, in fact, most of the leading men of Madras of Asiatic race. The community seemed caught by a wave of enthusiasm for the time being, and it was not strange that we two should have believed it would last, but time dispelled the illusion. Shortly afterward the Cosmopolitan Club, with lounging, reading, and billiard rooms, was started, and our excited friends gradually left metaphysics and Yoga philosophy for the elevating game of pool and the mental pabulum of the newspaper files. However, for a time our rose-garden bloomed and we inhaled the sweet odors of compliment. So great was the rush for membership that I had to admit the candidates *en bloc*, and I have an entry to the effect that I took in one party of twenty-two on the roof-terrace in the moonlight. Of course we had to state the

case of Theosophy before the general public, and so, on 26th April (1882) I lectured at Pachaiappah's Hall on "The Common Foundation of Religions," to a crushing multitude that made the Trustees dubious about the safety of the building, the public hall being in the first story, up a long flight of steps. The same question has arisen many times since, I am happy to say, for our public meetings have always overcrowded the building. H. P. B. and Abrew were on the platform beside me; she, the cynosure of all eyes. The next evening a lot of twenty-one more candidates were accepted, and after the ceremony, the Madras Theosophical Society came into being, with R. Raghoonath Row as President, and T. Subba Row as Secretary. The former used his best endeavors to make it a useful Branch, but he was not well seconded by the latter, who was a most indolent executive officer.

On the 30th of the month H. P. B. took a party of seventeen of us, including T. Subba Row, the Dewan Bahadur, and myself, to Tiruvellum, once a very holy place, owing to the great souls who lived—and some still live, as it is alleged—there. A procession, with music and flowers, met and escorted us from the station to the place assigned for our lodging. We were particularly anxious to visit the sanctuary of the temple, but, as the sordid Brahmins in charge demanded a bonus of Rs. 25, we felt so disgusted that we refused to go into the polluted shrine, and returned the same day to Madras.

A second lecture being on the programme for the next day, the Dewan Bahadur and his associate

committee-men tried to prevent a repetition of the crush of the first day by charging for reserved seats, the proceeds to go to some charity. On reaching Pachaiappah's Hall, however, we had great trouble to push our way from the door to the stage through the packed crowd, while the poor Dewan Bahadur, albeit one of the most honored personages in Madras, was so jammed into a corner that, instead of constraining the audience to go hither or thither, he was obliged to call for the help of my square shoulders and muscular strength to rescue him from his plight.

We began, the next day, a journey by canal in a house-boat, which may as well be described in a separate chapter.

CHAPTER XXIII

A HOUSE-BOAT JOURNEY WITH H. P. B.

In all our years of intercourse H. P. B. and I had never been so closely drawn together as on this boat-journey on the Buckingham Canal—a famine-relief work that fed thousands of starving peasants during a tragical epoch of the Duke of Buckingham's Governorship o Madras. Hitherto we had lived and worked in the company of third parties, whereas now we two were alone in a *budgerow*, or small house-boat, with our servant Babula and the cooly crew as our sole companions while the craft was in motion. Our quarters were cramped enough, to be sure. At either side of the small cabin was a locker covered with a mattress; the lid arranged to lift on hinges, the inside forming a huge chest for storage of one's effects. Between the two lockers—each

A bed by night, a chest of drawers by day—

was a portable table which, when not in use, could be folded up and hung from the ceiling. A lavatory a small pantry with shelves, a cooking platform outside, behind, with a broken earthen pot-bottom, laid on sand, for fire-place, and some few indispensable cooking utensils, a large jar for drinking water, and our camp table-furniture completed our domestic

arrangements and sufficed for our wants. When a fair wind blew, a sail was raised and we glided before it; when adverse, the coolies jumped ashore, and, with the tow-line passed over their shoulders, dragged us along at the rate of perhaps three miles an hour. In another boat followed some of our best and kindest Madras colleagues, among them that golden-hearted old man, P. Iyaloo Naidu, Retired Deputy Collector, whose acquaintanceship was a privilege, whose friendship an honor. Our destination was the town of Nellore, a two-days' journey by water.

As we had not started until 7 p.m. (3rd May, 1882), and the moon was almost full, it was a sort of fairy voyage we were making on the waveless silvery water. No sound broke the silence, after once leaving the city limits, save the occasional yelps of a pack of jackals, the low murmur of our boat-coolies' voices, talking together, and the lap-lap-lapping of the water against the boat. In place of glass sashes, there were hinged venetian blinds, with hooks to fasten them to the overhead deck-beams at pleasure, and through these a gentle night breeze blew cool, and brought us the smell of wet rice-fields. My colleague and I sat, enchanted with the scene and refreshed by the grateful and unaccustomed rest from our life of excitement and publicity. We talked but little, being under the witchery of the night, and went to our beds with the certainty of a refreshing sleep.

Wafted along by the breeze of the (S.W.) monsoon, our boat sailed steadily throughout the night, and morning found us well on our way. At an early hour we tied up at the bank, for the coolies to build their fire and

cook their curry and rice; our people in the other boat joined us, I went for a swim, and Babula cooked us a capital breakfast, which our colleagues, because of their caste prohibitions, could not share. Then on once more, the boats as noiseless as spectres. H. P. B. and I occupied the whole day with arrears of correspondence and editorial writing for the *Theosophist*, with occasional breaks for conversation. Of course, the one theme for us was the condition and prospects of our Society, and the probable ultimate effect on contemporary public opinion of the Eastern ideas we were spreading. In this respect we were optimists in the same degree, no shadow of doubt or difference crossing either of our minds. It was this ever-potent, overmastering feeling of confidence that made us so indifferent to calamities and obstacles which might have otherwise brought us to a stand-still fifty times during our career. It may not be gratifying to some of our present colleagues, yet it is strictly true, that our forecasts dealt with the coloring of modern thought with Theosophical ideas far more than with the possible extension of the Society throughout the world; of that, we had practically no expectation. As, when leaving New York for Bombay, we did not even dream that the Society might cover India and Ceylon with Branches, so now, on that silently moving boat, we gave no thought to the possibility of its creating a popular agitation that would plant its branches and create its centres of propaganda throughout America and Europe, to say nothing of Australasia, Africa, and the Far East. Why should we? To whom could we look then? Where were the giants fit to

carry such a heavy load on their shoulders? This was but in 1882, remember, and outside Asia there were but three Branches of the T. S. in existence (not counting the New York centre, which had not been reorganized). The London Lodge and the Corfu (Ionian) Branch were inert bodies. Mr. Judge was away in South America for a Silver-mining Company (I believe I am right about the date), and nothing like an active propaganda had been organized in the United States. We two old people in the boat were practically managing the thing alone, and our field was the East; and as H. P. B. showed no more prophetic gift than myself at the time, we talked and worked and built our foundations for the great future that neither of us foresaw.

How many of the present multitude of Fellows of the Society would give almost anything to have had the close intimacy I enjoyed with my friend on that boat journey! What made it all the pleasanter and more profitable was that she was in good health and spirits, and there was nothing to mar the charm of our companionship; otherwise, I might almost as well have been a cage-companion of a hungry lioness at the Zoo; one of us must certainly have gone ashore and walked, or shifted into Iyaloo Naidu's tender! Dear, lamented friend, companion, colleague, teacher, chum: none could be more exasperating at her worst times, none more lovable and admirable at her best. I believe we have worked in lives before, I believe we shall work in lives to come, for the good of mankind. This open page of my Diary, with its but few fragmentary notes, brings back to memory one

of the most delightful episodes of the Theosophical movement, and I see a picture of H. P. B. in her shabby wrapper, sitting on her locker opposite me, smoking cigarettes, her huge head with its brown crinkled hair bent over the page she was writing on, her forehead full of wrinkles, a look of introverted thought in her light blue eyes, her aristocratic hand driving the pen swiftly over the lines, and no sound to be heard save the liquid music of ripples against the boat's sides, or the occasional rub of a cooly's naked foot on the roof above us, as he moved to tighten a rope or obey some order of the helmsman.

The next evening at 5 o'clock we reached a place called Muttukur, where we landed to go overland to Nellore, a distance of fifteen miles. Our round of bustle recommenced. A large delegation was waiting for us: we were conducted to a tent where refreshments were offered, and our hands and necks were soon full of fragrant flowers. An Address of Welcome was responded to, and in due time we found ourselves in a light phaeton with coolies for horses. Lithe, active fellows, they ran us along so as to cover the distance within three hours. A certain weird interest attaches to them, as they are a tribe of ancient origin called "Anadhis," who are hereditary serpent-charmers and extirpators. People who wish to sleep safe in their beds without the thought of snakes getting into their rooms, call an Anadhi and he walks round and round the house, repeating charms and setting up some enchanted stick or other fetish, after which no serpent will venture to trouble the inmates. Our friends declared this to be a well-known fact,

and on their authority alone I give it record. I was told a thing worth knowing by travellers and hunters who have to camp out in snaky localities. It was this, that a serpent *will not pass over a rope of horse-hair*, and that perfect immunity may be obtained from their visits by laying such a horsehair rope around one's house, tent, or whole camp. My informants did not know whether this is attributable to the roughness of the prickly rope hurting the snake's tender skin, or to some magnetic (auric) or other occult property of the hair being antipathetic to the reptile. However, that doesn't so much matter as the fact itself, if true.

We got to Nellore at 11 p.m., and received an ovation. A splendid house had been fitted up for our party; there were many flowers, and decorative greenery, and, late as was the hour, I had to reply to two addresses—one in Sanskrit, the other in English, after which we were allowed to go to our beds, tired out. A lecture was given the next day; the following one was devoted to editorial work and admissions to membership; in the evening a delegation of the most learned Pandits of the district came and put us questions; and at 11 p.m. we formally organized the Nellore T. S. A second lecture on 9th May, more admissions of candidates, and more writing finished up our business at Nellore, and we then moved on to a canal station called Mypaud, whither the boat had been taken to save eighteen miles of canal travelling. Our writing and talks were now resumed and in due course we got to Padaganjam, the limit of canal navigation in the hot season, and the place

whence, to proceed on to Guntur, our Ultima Thule, we had to take palanquins and *jampans*, or carried chairs. They did not turn up until the following day, and as the coolies had to rest, we did not start until just before sunset.

Our caravan consisted of four palanquins and one jampan, which, added to the baggage-porters, made our coolies number fifty-three persons. We soon came to a ford where a river had to be crossed, and the performance made me laugh heartily and H. P. B. to swear. The water was so deep that, to keep our palanquin floors dry, the bearers had to balance the thick poles on their heads, to lift us high enough. Before entering the water they stripped naked, all but their *langooti*, or breech-clout. Picking their steps with greatest caution and sounding with their staves, they went in deeper and deeper until the water came up to their armpits. I politely led the way so that H. P. B. might know if I was drowned, and turn back. It was a ticklish experience to sit there motionless, so as not to destroy the balance of the round pole resting on my six coolies' heads, and, fancy what a mess I and my papers would be in if one of the men made a mis-step; however, one travels to gain experience, so I lay on my back as still as possible. When in mid-stream I began to hear the sound of a familiar voice from the next palanquin, and presently H. P. B. began shouting at me that these men would surely upset her. I shouted back that it didn't matter, as she was too fat to sink and I should fish her out. Then she began to use weighty objurgations at me, with occasional diversions at the coolies, who, not

understanding a word, kept on their way as before. At last we reached the opposite shore and my colleague rested herself by getting out and walking about, and, after a few cigarettes, had forgotten her recent troubles.

The journey was very tedious and hot, the thermometer standing at 98° F. in shade, and the coolies keeping up night and day, during the three days we were on the road, a monotonous refrain which at last became terribly trying to the nerves. Then at night they carried large torches made of a mop of cotton twist, saturated with cocoanut oil, which burnt with a cloud of smoke that almost choked us in the palanquins, and made a most villainous smell. They were carried at either side of each palanquin so that the coolies might see any snakes that might be coiled in the path, and as the wind blew across our path there was no escaping the smoke from the torch on the windward side, and when we had the chance to look at each other at the next halt we found that we and our clothes were smutted almost black. It was compensation enough, however, to see the *jemadar*, or head cooly, kill a big cobra on which the forward bearers would almost certainly have trodden but for the torch-light.

Guntur was reached at sunset on the third day, and we were plunged at once into a scene of tumultuous welcome. The whole population, they told us, saving those too old, young, or infirm to be about at night, had come outside the town to meet us. They numbered thousands, and every one of them seemed determined to come close enough to have a good look

at us. The result may be imagined: our progress was like forcing one's way through a compact wall of flesh. We were first taken to a tent where we had refreshments and introductions to the notables of the place; but the crowd became so importunate that this business was cut short, and H. P. B. and I had to mount on chairs to show ourselves. Then a short speech had to be made, and only then were we put into some sort of conveyance—jampans, I believe—and moved on in the procession. The streets were jammed with people, from house to house, and we could only move at a snail's pace. Limelights and Bengal colored fires blazed about us at every step, and it was really curious to watch the lighting up of H. P. B.'s massive head and shoulders with the different glares. As she preceded me I had a capital chance to observe the artistic effects. A more truly popular ovation could not be imagined, for all the elements were there, including the continuous roar of cheering that ran along with us, a river of sound, all the way to our destination. Of torches there was no end, and Guntur was as light as by day. Two triumphal arches spanned the principal streets. Arrived at the house, we had to receive and reply to two addresses in English and two in Telugu, the tone of exaggerated compliment in all of them making us feel like a pair of fools, and putting me to a strain to find words to answer them with proper reserve. After this ordeal came more introductions, prolonged conversations, and the initiation of one candidate, who was obliged to leave town before morning.

The next day's lecture was on "The Soul: Arguments of Science in Favor of its Existence and Transmigrations"; the subject having been given me because of the prevailing tone of scepticism among the educated young men of the place. The chief of the local Lutheran Mission, Rev. L. L. Uhl, and a number of his friends were present and took notes. If I recollect aright I stated in my discourse that the hold of theological Christianity on the educated minds of the West was weakening and a decided reaction had set in: a wave of free-thought was sweeping over Europe and America. My reverend friend gave notice that he should answer me at his chapel on the next morning, and invited me and my friends to be present. We went, and were much disappointed; his discourse being of a character which I noted as "weak and sloppy," in my Diary. As his manner towards me was friendly, I proposed that we should issue a joint pamphlet on the pro and con of Christianity, which he agreed to. I promised to send him my MS. "as soon as I could find the time to prepare it"; being careful to tell Mr. Uhl that my attention was so constantly demanded by current official business that I could not promise to be ready at any specified date. In point of fact Mr. Uhl, after waiting for me a long while—perhaps eighteen months or two years—brought out his side of the argument in a separate pamphlet, which was widely circulated by him as a campaign document, so to call it, and proof of my inability to make good my assertions. The fact is, however, that within six months from the time of the agreement I had gathered

together and sent on to the President of the Guntur T. S., a large batch of cuttings and notes suitable for the purpose, and requested him to make up from them the pamphlet and send it me for revision, as I was absolutely unable to give the needed time to the affair. I also wrote Mr. Uhl about my difficulties. But my friend waited upon other friends, and they individually and collectively did nothing, and at last, after Mr. Uhl's blast had been blown, I got back my bundle of notes; and threw it into a waste-paper basket, and so dropped the matter; it being cheaper to leave my reverend critic to enjoy his triumph than to attempt the impossible of writing my pamphlet, when I had much more important and congenial matters to attend to. By the time that his treatise appeared, I had organized seventy new Branches of the Society, and travelled over all India and Ceylon.

On the day of our departure from Guntur, H. P. B. and I enjoyed our first experience with one of those marvels of mental training, a Brahmin *Ashtavadhani*. There exist in India many men who have, by a course of training during many years, cultivated the memory to a degree incredible to those who have not witnessed their feats personally. Some can keep up fifty, and even more, separate mental processes simultaneously; in comparison with which phenomena the most marvellous stories about our Western chess-players seem commonplace. The proceeding is as follows: As many persons as are to take part in the test, seat themselves nearby, and the Pandit begins with the first on the right. Let us say, with a game of chess.

He names the first move, looks a minute at the board, and moves on to the next man, with whom, perhaps, he plays some other game. Here, again, he names his play and passes to the third man, for whom he may be asked to compose an original poem in Sanskrit on a given subject, the initial or terminal letter of each line to be one selected by the other person. He ponders deeply and then dictates a line fulfilling the conditions. From the next man he is to take, word by word, and the words out of their order at the choice of the dictator, a verse in any language whatsoever, known or unknown to the Pandit, he receiving one word at a time, repeating it until the sound becomes familiar to his ear, and laying it away in his memory until, the sitting finished, he must repeat the whole verse with each word restored to its proper sequence. The next man, perhaps, taps on a bell as many times as he chooses, and the Pandit is to recollect the whole and name the total when he makes his last round of the circle. Then may come the making of a "magic square" of figures in so many columns, each column and each cross line to figure up the same. Then, with the next man, a dispute on any one proposition in either of the six schools of Hindu Philosophy, the argument and demonstration to proceed by stages as he comes around to that person. Then the next neighbor may give him a gigantic sum in multiplication or division or some other part of arithmetic, say a sum in which multiplier and multiplicant shall each be of a dozen figures. And so on to a most bewildering extent, until one just sits amazed and wondering if the

human brain is capable of such multiplex activity. On the occasion in question H. P. B. dictated to our Pandit the celebrated Russian poem on the Volga, and I, several sentences in Spanish which I learned when a boy, but he rendered them accurately at the close of the entertainment, every word in its place. At 10 that evening we started in our palanquins on our return journey.

By morning we had covered thirty-one miles, with three changes of bearers, coming to the small village of Baput, where our baggage-coolies should have met us, but as they did not turn up until 7 p.m., we had to pass the day as best we could, and did not move on until 8-30 p.m. That night we made a stretch of twenty-three miles, which brought us to Padaganjam and the Canal. A very esteemed friend, the late Mr. Ramaswamy Naidu, Assistant Salt Inspector, had sent his servants to get ready for us a comfortable house, in which we spent the day waiting for his own house-boat, which was placed at our disposal. It arrived at 2 p.m., with our friends Messrs. P. Iyaloo Naidu and L. V. V. Naidu ("Doraswamy," to his intimates), and we embarked at sunset.

The monsoon wind being now contrary, our boat had to be dragged by the coolies. Poor devils! they had a hard time of it, for the mercury stood at 109° in the shade the next day, and neither of us felt the energy to do any work; we could only sit idle and swelter. Fortunately for the coolies, we were kept waiting nearly all the day at Rāmāpatnam for some candidates for membership and did not go on until midnight. Another fearfully hot day followed. At

night we were detained several hours by the obstinate boatmen, who refused to cross an inlet of the sea until the end of the ebb. At 3 a.m. I went outside to see how things were getting on, and found the boat noiselessly moving through the water, the coolies pulling the line on the tow-path, and the *serang* (captain) steering and singing to himself a droning chant. At 6 we reached Mypaud, where Nellore friends awaited us with carriages, but as we were to return by land to Madras, it took time to get our luggage packed, and we did not start until 8 o'clock, by which time the heat was suffocating. The poor Yanadhis seemed fairly done up, and yet we reached Nellore by 11, thankful for the shelter of the stately house, with its thick walls, brick terraced roof and wide verandahs, that keep the rooms darkened and comparatively cool.

A great Brahmin Pandit of the Vedantin school came to see us that evening, evidently with the sole object of showing up our ignorance; but in us two old campaigners, especially in H. P. B., with her wit and sarcasm, he got more than he bargained for, and in a couple of hours we were able to expose to the company present his intense selfishness, vanity, and bigoted prejudices. Our victory cost us something, however, for I see a Postscriptum note in my Diary that he subsequently showed himself "our active enemy". Good luck to him and to all the noble army of our "enemies"; their hatred never did them the least good nor the Society the least harm. Our ship does not sail on the wind of favor.

Seventeen letters, three articles for the *Theosophist*, and the reading of a pile of exchanges kept me fairly busy the next day until evening, when I lectured on "Aryan Wisdom". The next day was like it, and the next, until we—at 5 p.m.—took bullock carriages for Tiruppati, seventy-eight miles away, and the nearest station on the Madras Railway. In that scorching weather it was a hot and tedious journey, but it ended at last, and so did our waiting time of twelve hours for a train, and the train journey to Madras, which we reached in due course and were met and escorted by friends to our former bungalow.

In my travels over India and Ceylon I had been observing places, people, and climates, with a view to selecting the best place for a permanent Headquarters for the Society. Liberal offers of houses, free of rent, had been made us in Ceylon, and, certainly, the Island presented a most charming appearance to one seeking an Asian home; but several considerations, such as its isolation from India, the cost of postage, and the backward intellectual state of the people as a whole, overweighed its loveliness and led us to choose India in preference. Up to the present time, however, no good property had been offered us, and we had made no definite plans. On 31st May, however, we two were begged by Judge Muttuswamy's sons to go and look at a property that was to be had cheap. We were driven to Adyar, and at the first glance knew that our future home was found. The palatial building, its two riverside smaller bungalows, its brick-and-mortar stables, coach-house, godowns (store-rooms), and swimming-bath; its avenue of

ancient mango and banyan trees, and its large plantation of casuarinas (one of the cone-bearing trees) made up an enchanting country residence, while the price asked—Rs. 9,000 odd, or about £600—was so modest, in fact, merely nominal, as to make the project of its purchase seem feasible even for us. We accordingly decided to take it, and in due course this was effected by the noble help of P. Iyaloo Naidu and Judge Muttuswamy Chetty, the first of whom advanced part of the money and the other secured a loan of the rest, on very easy terms. An appeal was at once issued for subscriptions, and within the next year I had the satisfaction of being able to pay it all off, and receive the title-deeds. The cheapness of the price is accounted for by the fact that the opening of the railway to the foot of the Nilgiri Hills brought the lovely sanitarium of Ootacamund within a day's ride of Madras, caused the high officials to spend half the year there, and threw their grand Madras bungalows on a market without bidders. What I paid for "Huddlestone's Gardens" was about the price of the old materials if the buildings should be torn down. In fact, that was what was to have happened if we had not turned up as buyers just when we did. We stopped a week longer at Madras, during which I lectured twice, and more new members were admitted, and on the 6th of June we took train for Bombay. More than fifty friends, with flower gifts, saw us off, and prayed us to hasten our return to take up our permanent residence among them. At 11 a.m., on the 8th, we reached Bombay, and found many friends assembled to meet us and see us home.

People glibly speak of Madras as "the Benighted Presidency"; and as being insufferably hot. The fact is, however, that as regards climate I prefer it above the others, and as to Sanskrit Literature and Aryan Philosophy, it is the most enlightened of the Indian Presidencies; there are more learned Pandits in the villages, and the educated class, as a whole, have been less spoilt by Western education. In Bengal and Bombay there are more *litterateurs* of the class of Telang and Bhandarkar, but I cannot recall one equal to T. Subba Row, of Madras, in bright genius for grasping the spirit of the Ancient Wisdom. And his being at Madras was one of the causes of our fixing upon that Presidency town for our official residence, Although he is dead and gone, yet we have never regretted our choice, for Adyar is a sort of Paradise.

CHAPTER XXIV

BARODA TO CEYLON, AND THE HEALINGS OF SICK FOLK THERE

ONE of the moral thunderstorms that pelted us in those days was the ill-natured attack that the Swāmi Dayānand Saraswati made against us, in March, 1882, and I see by my Diary that my first work after our return to Bombay was the preparation of our defence. It appeared in the July *Theosophist*, as a Supplement of 18 pages, and I think it must have been tolerably convincing, since its facts have never been gainsaid by the Swāmi or his followers. Among the proofs was the facsimile of his proxy paper, empowering me to cast his vote as a Council Member in its meetings. He had denied his membership in the Society, and averred that we had used his name as a Councillor without permission; stigmatizing our conduct as cunning and unprincipled! How many equally groundless charges, innuendoes, slanders, and literary attacks have been circulated against the Society and its managers, from its foundation down to the present time, and into what complete oblivion have they successively fallen!

In June, 1882, H. P. B. and I accepted an invitation to visit Baroda, the flourishing capital of H. H. the

Gaikwar. Judge Gadgil, F.T.S., and other high officials (*Durbaris* is the name for them in all Native States) met us at the station, and took us to a bungalow adjoining the new and splendid palace of His Highness. We had as many visitors as usual on our tours, which means that our reception-room would be crowded with inquirers day and evening. The Gaikwar holding a Durbar that day I was invited to it, and later was held in talk with His Highness about Theosophy for three hours or more. I had great hopes then that I should find in him our most sympathetic friend among the Indian Princes. He was young and very patriotic, which, in India, means that he should have an ardent love for his ancestral religion and be kind to all its friends. His private life was pure and his aims high; in strong contrast with those of most of his class, who are, as a rule, debauched by the infernal influences about their Courts. I had the more reason for my hope in his markedly kind and respectful manner towards myself, but we have been disappointed: his English tutor made him a bizarre sort of materialist, the cares of State have overworked him, and, while he talks much about Theosophy, he is Theosophical in neither his belief nor practice. At the same time, he is a man of great energy and ability, and his life has been pure throughout. His Dewan, or Prime Minister, at the time of our visit, was the Raja Sir T. Madhava Row, K.C.S.I., whose conspicuous ability as a statesman has been pointed out by the *Times*. He was a handsome man, of distinguished appearance and courtly manners, and a picturesque object to look at when

dressed in his court costume. To us he was polite and genial, talked intelligently on philosophical questions, and asked from H. P. B. such phenomenal proofs of her alleged super-physical powers as would convince him of the soundness of the basis of our theories as to man's duplex nature. He got nothing more than a few raps on tables and bell-sounds in the air, but his Naib, or Assistant Dewan did. This gentleman, since also dead, was one of those highly educated, intellectually gifted graduates of the Bombay University, who have made their shining marks in contemporary Indian History. Mr. Kirtane was the old friend and college-mate of Judge Gadgil, who earnestly wanted him to join our Society and help in forming a local Branch. But the former, while pious and rather inclined towards Mysticism, was as sceptical as his chief, Sir T., about the development in our times of the Yogic powers, and looked askance at us on account of our affirmative declarations. Sir T. Madhava Row was more statesman than scholar, and nothing of a Mystic; Mr. Kirtane was more of the second and third than of the first. So he got the proofs, withheld from the Dewan Sahib. It happened in this way, as I now recollect it. I had been out to see the Gaikwar, and on my return found Kirtane and Gadgil standing at the threshold of H. P. B.'s open door, while she was in the middle of the room with her back towards us. Our two friends told me not to step inside, as Madame B. was doing a phenomenon and had just turned them out on the verandah where I found them. The next minute she came towards us, and, taking a sheet of paper

from the table, told the gentleman to mark it for identification. Receiving it back, she said: "Now turn me in the direction of his residence." They did so. She then laid the paper between her palms (held horizontally), remained quiet a moment, then held it towards us and went and sat down. Cries of amazement broke from the two Durbaris on seeing, on the just before clean sheet of paper, a letter addressed to me in the handwriting and bearing the signature of the then British Resident at that Court. It was a most peculiar, small caligraphy, and the signature more like a tiny tangle of twine than a man's name. They then told me their story. It seems that they were asking H. P. B. to explain the scientific rationale of the process of precipitating upon paper, cloth, or any other surface, a picture or writing, then invisible to the onlooker, and without the help of ink, paints, pencils, or other mechanical agents. She told them just what I have explained in my first volume of these OLD DIARY LEAVES, in connection with her New York precipitations of the Yogi's and M.A. Oxon's portraits, the writing of the latter, and other phenomena; she explained that inasmuch as the images of all objects and incidents are stored in the Astral Light, it did not require that she should have seen the person or known the writing, the image of which she wished to precipitate; she had only to be put on the trace and could find and see them for herself and then objectivate them. They urgently begged her to do the thing for them. "Well, then," she finally said, "tell me the name of some man or woman most unfriendly to the Theosophical

Society, one whom neither Olcott nor I could have ever known." At once, they mentioned Mr. . . . the British Resident, who held us and our Society in especial hatred, who never missed the chance of saying unkind things of us, and who had prevented the Gaikwar from inviting H. P. B. and myself to his enthronement, as he had otherwise intended, on the suggestion of Judge Gadgil. They thought this a poser. That it was not, the sequel proved. I thought they would explode with laughter when they read the contents of the note. It was addressed to "My dear Colonel Olcott," begged my pardon for the malicious things he had said against us, asked me to enter him as a subscriber to our "world renowned magazine, the *Theosophist*," and said he wished to become a member of the Theosophical Society: it was signed "Yours sincerely" and with his name. She had never seen a line of the gentleman's writing nor his signature, never met him in the flesh, and the note was precipitated on that sheet of paper, held between her hands, as she stood in the middle of the room, in broad daylight, with us three witnesses looking on.

I have seldom faced a more brilliant audience than that which listened to my first Baroda lecture on Theosophy. It was held in the gorgeous Marriage Hall where the members of the Royal Family of Baroda are wedded. The Gaikwar, his Prime Minister, and all the nobles and English-knowing officials of the State, together with the British Resident and staff, were present, and at the close the vote of thanks was moved by a Muslim Durbari, who became subsequently Dewan. His speech struck

me as being a gem of pure English rhetoric and polished courtesy. It was at once instructive and amusing to listen to his compliments, for I happened to know that the speaker was a thorough infidel, who believed in no religion whatsoever, except that of "Get on," had no faith in us, and his performance was a clever feat of carrying water on both shoulders simultaneously!

A second lecture on "Science and Hinduism" followed on the next day, at the same place, before the same resplendent audience. That evening we gained a very valuable colleague in Dr. Balchandra, Chief Medical Officer of Baroda, who is one of the most intellectual and best educated men of India. I think it was for his special benefit that H. P. B., that evening, read the contents of a telegram in its sealed envelope before it was opened. She also rang her atmospheric bells, and the next day complied with the Gaikwar's request to make some table rappings for him, during the course of a long interview which he sought.

From Baroda we went on to Wadhwan to see our friend the reigning Thakore Sahib. We then returned to Bombay, and divided work between us by my driving on the editorial matter for the next *Theosophist*, and her driving herself to the verge of apoplexy; for I see an entry of 28th June, that "H. P. B. is threatened with apoplexy, so my depature for Ceylon is again postponed". She recovered her normal health in due time, having meanwhile passed through a fit of extreme irritability, in which she made things lively for all of us. I finally got away to sea on

15th July, and I leave the reader to imagine how charmed I must have been on the P. and O. steamer, when it is stated that the monsoon had burst a fortnight earlier, that the ship pitched and rolled like mad in the angry sea, and that she was so stuffed full of cargo that every cabin in the second class, save the three or four we occupied, was packed with sandal-wood, onions, and licorice-wood, which mingled their various odors with that of the hot oil of the engine and the foul smell of damp cotton mattresses. I write that down as my worst episode of ocean travel.

I was returning to the Island, after a half-year's absence, to go on with the Educational propaganda. My first impressions were most discouraging. It seemed as if all the life had left the Branches and members when I had sailed for Bombay, and only Rs. 100 of the unpaid subscriptions—some Rs. 13,000—had been collected. Of the Trust Fund money, Rs. 243 had been used for current expenses, and along with it Rs. 60 belonging to the *Buddhist Catechism* Fund. Paltry excuses were made, and I had to accept them as I could do no better. There was nothing left for it but to just go to work again, re-infuse life into everything, wipe out the story of the half-year's idleness, and set the machinery in motion. So I began with the High Priest and Megittuwatte, and arranged for some lectures that the committee had asked me to give in Colombo. Then, at a Branch meeting, I explained the system of voluntary self-taxation adopted by many good Christians, by which sometimes ten per cent of their incomes is set aside for religious and charitable work; I had seen

my father and other pious Christian gentlemen doing this as a matter of conscience. Then I read a memorandum in which I had it proved that what they, our Colombo martyrs, had given and spent for this Buddhist revival movement amounted to just ¾ths of 1 per cent of their incomes: this was easy to do, as most of them were Government servants, in receipt of fixed salaries. I left them to draw the plain inference for themselves.

The town lectures were delivered, and on 27th July the Colombo T.S. celebrated its anniversary with a dinner. Our Hall was decorated with flowers and green leaves and sprays, in the tasteful fashion in which the Sinhalese excel. On the end wall was a drawing of a white and black hand clasped, under the word "Brotherhood," and on the other sides ran the following condensed statement of the Law of Karma: "The Past you cannot recall. The Present is yours. The Future will be what you make it." The next day I went on to Galle to begin my tour in that province.

My first public discourse was at Dondera, the southernmost point of the Island. I passed my fiftieth birthday at Galle in literary work and in a mental retrospect of my past life, of which more than half had been devoted to work for the public. The knowledge that I should not see another semi-centennial anniversary only strengthened my determination to accomplish as much for Theosophy as possible in the years that might be available.

I shall not burden my record with notes of the various villages that were visited, nor of the sum

subscribed to the Buddhist Fund. On 9th August, however, I lectured at Wijananda Vihara, where H. P. B. and I first publicly took Pansil and thus proclaimed ourselves Buddhists, in the year 1880. My neutrality with respect to differences of caste and sect made me welcome to all, and I passed from vihara to vihara, addressing now an audience of Willallas, now one of the Fisher caste, anon one of the great Cinnamon-peeler caste; each time collecting money for the common object. The meeting at Kelagana Junction was picturesque and radiant with the bright shades of green peculiar to tropical Ceylon. My platform was formed of large tables, and on it a small stand and three chairs, two of which were occupied by as many yellow-robed monks, the third by myself. It was under the thick shade of a bread-fruit tree. There had been a long procession with flags, banners, and tom-toms; bright-colored cloths were hung down the fronts of houses and across roads; and there were no end of cheers and shouting, but, as noted in my Diary, it was "much glory but little cash for the Fund". The collection was only Rs. 42.77, and it is not surprising that I added in my note the word "Humbug"! It was much the same the next day, when only Rs. 50 were subscribed, and I summed up the experience in the words "Procession and flummery". Things went on day by day with varying success, but everywhere plenty of goodwill and kindness. They are a loving people, the Sinhalese, and mean to do all they can according to their lights. I was in Colombo on 24th August, to attend the wedding of one of our best

workers, with the sister of our first Sinhalese friend, J. R. De Silva. The ceremony was only the signing of the civil contract and exchange of pledges at the office of the Government Registrar of Marriages, the time having not yet come for our Buddhist Registrar and the modified ancient ceremony now used by him. Mr. De Silva's house had been richly decorated in kalsomine by himself, and turned into a bower of greenery. We went in a procession of carriages to the Registrar's office with the bridal couple, and escorted them back again to the bride's house; then there were refreshments, and at 5 p.m. we all went by rail to their future residence, the village of Morutuwa. Here a *walking* procession was formed, with the newly-married couple in front, next to the band, the bride in her veil, white gown, and satin slippers. The whole village was alive; there were blue lights burning, rockets and Roman candles being let off, the Volunteers' band discoursing excellent music. But when we approached the house there was a bridge to cross and the music ceased and the procession moved on in silence. It gave me the idea of a company of ghosts moving without noise and lighted up by the moonlight. A fine supper was served in a long palm-thatched structure, specially erected, and there were toasts to everybody worth toasting, until half an hour before midnight, when we returned to town by special train. A conference with Sumangala Thero and Hiyeyentaduwe, his Assistant Principal of the College, about a number of new questions and answers that I had drafted for a new edition of the *Buddhist Catechism*, occupied the

next day, and I then returned to Galle and my touring work.

An incident occurred on the 29th of August, at China Garden, a quarter of Galle, which has become in Ceylon historic. After my lecture, the subscription paper was laid out on a table and the people came up in turn to subscribe. A man named Cornelis Appu was introduced to me by Mr. Jayasakere, the Branch President, and he subscribed the sum of half a rupee, apologizing for the pettiness of the amount because of his having been totally paralyzed in one arm and partially in one leg for eight years, and therefore unable to earn his livelihood by his trade. Now at Colombo, on my arrival from Bombay, the High Priest had told me that the Roman Catholics had made their arrangements to convert the house-well of a Catholic, near Kelanie, into a healing-shrine, after the fashion of Lourdes. One man was reported to have been miraculously cured already, but on investigation it proved a humbug. I told the High Priest that this was a serious matter and he should attend to it. If the hypnotic suggestion once got started, there would soon be real cures and there might be a rush of ignorant Buddhists into Catholicism. "What can I do?" he said. "Well, you must set to work, you or some other well-known monk, and cure people in the name of Lord Buddha." "But we can't do it; we know nothing about those things," he replied. "Nevertheless it must be done," I said. When this half-paralyzed man of Galle was speaking of his ailment, something seemed to say to me: "Here's

your chance for the holy well!" I had known all about Mesmerism and Mesmeric Healing for thirty years, though I had never practised them, save to make a few necessary experiments at the beginning, but now, moved by a feeling of sympathy (without which the healer has no healing power to radically cure), I made some passes over his arm, and said I hoped he might feel the better for it. He then left. That evening I was chatting with my Galle colleagues at my quarters on the seashore, when the paralytic hobbled in and excused his interruption by saying that he felt so much better that he had come to thank me. This unexpected good news encouraged me to go farther, so I treated his arm for a quarter of an hour and bade him return in the morning. I should mention here that nobody in Ceylon knew that I possessed or had ever exercised the power of healing the sick, nor, I fancy, that anybody had it, so the theory of hypnotic suggestion, or collective hallucination, will scarcely hold in this case—certainly not at this stage of it.

He came in the morning, eager to worship me as something superhuman, so much better did he feel. I treated him again, and the next day and the next; reaching the point on the fourth day where he could whirl his bad arm around his head, open and shut his hand, and clutch and handle objects as well as ever. Within the next four days he was able to sign his name with the cured hand, to a statement of his case, for publication; this being the first time in nine years that he had held a pen. I had also been treating his side and leg, and in a day or two more he could

jump with both feet, hop on the paralyzed one, kick equally high against the wall with both, and run freely. As a match to loose straw, the news spread throughout the town and district. Cornelis brought a paralyzed friend, whom I cured; then others came, by twos and threes first, then by dozens, and within a week or so my house was besieged by sick persons from dawn until late at night, all clamoring for the laying on of my hands. They grew so importunate at last that I was at my wits' end how to dispose of them. Of course, with the rapid growth of confidence in myself, my magnetic power multiplied itself enormously, and what I had needed days to accomplish with a patient, at the commencement, could now be done within a half hour. A most disagreable feature of the business was the selfish inconsiderateness of the crowd. They would besiege me in my bedroom before I was dressed, dog my every step, give me no time for meals, and keep pressing me, no matter how tired and exhausted I might be. I have worked at them steadily four or five hours, until I felt I had nothing more in me, then left them for a half hour while I bathed in the salt water of the harbor, just back of the house, felt currents of fresh vitality entering and re-enforcing my body, gone back and resumed the healing, until, by the middle of the afternoon, I had had enough of it, and then had actually to drive the crowd out of the house. My rooms were on the upper storey—one flight up—and most of the bad cases had to be carried up by friends and laid at my feet. I have had them completely paralyzed, with their arms and legs contracted

so that the man or woman was more like the gnarled root of a tree than anything else; and it happened sometimes that, after one or two treatments of a half hour each, I made those people straighten out their limbs and walk about. One side of the broad verandah that ran around the whole house, I christened "the cripples' race-course," for I used to mate two or three of those whose cases had been worst, and compel them to run against each other the length of that side. They and the crowd of onlookers used to laugh at this joke, and wonder at the same time, but I had a purpose in it, which was to impart to them the same unflinching confidence in the effectiveness of the remedy that I felt, so that their cures might be radical. Quite recently, while in Ceylon, on my way to London, I met one of my bad patients of those days, whom I had cured of complete paralysis, and asked him to tell those present what I had done for him. He said that he had been confined to his bed for months in a perfectly helpless state, his arms and legs paralyzed and useless. He had been carried upstairs to me. I had treated him a half hour the first day, and fifteen or twenty minutes the next. I had cured him so effectually that in the intervening fourteen years he had had no return of his malady. Fancy the pleasure it must have been to me to have relieved so much suffering, and in many cases to have restored the invalids to all the enjoyments of good health and all the activities of life.

I see that the first patient that Cornelis brought me, after he was cured, had the thumb and fingers of his right hand clenched with paralysis so that they were as

stiff as wood. They had been so for two and a half years. Within five minutes the hand was restored to its flexibility. The next day he returned with his hand all right, but the toes of his right foot constricted. I took him into my room and made him as good as new, within a quarter of an hour. This sort of thing went on even at the country villages on my routes through the Southern Province. I would reach my stopping-place in my travelling-cart, and find patients waiting for me on the verandahs, the lawn, and in all sorts of conveyances—carts, spring-waggons, hand-carts, planquins, and chairs carried on bamboo poles. An old woman afflicted (how much, indeed!) with a paralyzed tongue was cured; the bent elbow, wrist, and fingers of a little boy were freed; a woman deformed by inflammatory rheumatism was made whole. At Sandravela, a beggar woman with a bent back, of eight years' standing, gave me a quarter-rupee (about 4d.) for the Fund. When I knew what she suffered from, I cured her spine and made her walk erect.

Baddegama is a noted centre of Missionary activity and—so far as I was concerned, and Buddhism generally—of malevolence. It was the view of this lovely landscape—so it is said—which suggested to Bishop Heber the opening verse of his immortal Missionary Hymn. There had been threats that the Missionaries were going to attack me at my lecture there, and the Buddhists naturally thronged to hear me. Several of our members came out from Galle, and whom should I see there but Cornelis Appu, who *had walked the whole twelve miles*. No doubt, then, as to his

having been cured! The gentle Missionaries were conspicuous by their absence, and I had the huge audience all to myself.

I was amused by a case that came under my hands at the little hamlet of Agaliya. An old, wrinkled native woman of seventy-two years of age had been kicked by a buffalo cow while milking, some years before, had to walk with a staff, and could not stand erect. She was a comical old creature, and laughed heartily when I told her that I should soon make her dance. But after only ten minutes of passes down her spine and limbs she was almost as good as new, and I seized her hand, threw away her staff, and made her run with me over the lawn. My next patient was a boy of seven years, whose hands could not be closed, on account of a constriction of the tendons of the backs. I cured him in five minutes, and he went straight away to where the breakfast was ready for the family, and fell to eating rice with his right hand, now quite restored.

In due time I got back to the Galle Headquarters, where a second siege by the sick had to be undergone. I have noted down an incident which shows the uncharitable and selfish spirit which actuates some of the medical profession—happily, not all—with regard to the curing of patients by unpaid outsiders; for, remember, I never took a farthing for all these cures.

A number of former patients of the Galle General Hospital, who had been discharged as incurable, came to me and recovered their health; and, naturally, went to shouting the news on the house-tops, so

to say. The medical profession could not very well remain blind or indifferent to such a thing, and one day my doings with my patients were overlooked by one of the civil surgeons of the district. On that day 100 patients presented themselves and I treated twenty-three; making, as I see it noted, some wonderful cures. Dr. K. recognizing one of the men, brought him to me with the remark that he had been pronounced incurable after every treatment had failed, and he would like to see what I could make of him. What I made was to enable the sick man to walk about without a stick, for the first time in ten years. The Doctor frankly and generously admitted the efficacy of the mesmeric treatment and remained by me all day, helping me to diagnose; and doing the duties of an hospital assistant. We were mutually pleased with each other, and at parting it was agreed that he should come the next day after breakfast, and help me in whatever way he could. He, himself, was suffering from a stiff ankle or something about his foot, I forget just what, which I relieved. The next day he neither came nor sent any word. The mystery was explained by a note he wrote to the mutual friend who had introduced him to me. It seems that on leaving me, full of enthusiasm about what he had seen—as any open-minded, unspoilt young man would naturally be—he went straight to the Chief Medical Officer and reported. His superior coldly listened, and, when he had finished, delivered himself of the sentence of major and minor excommunication on me. I was a charlatan, this pretended healing was a swindle, the patients had been

paid to lie, and the young doctor was forbidden to have anything more to do with me or my money-tricks. To clench the argument, he warned the other that, if he persisted in disregarding his orders, he would run the risk of losing his commission. And if he could find that I took any fee, he should have me prosecuted for practising medicine without a licence! So my quondam assistant and admirer, forgetful of his duty to perfect himself in the healing art, of the paramount claims of Truth to his loyalty, and of science to his professional devotion, of all he had seen me do and its promise of what he could, in time, himself do, not even remembering his relieved foot, nor the claims of politeness upon those who make appointments and are prevented from keeping them, did not come the next day nor even send me one line of apology. I felt sorry for him, because all his future prospects in Government service were at stake; at the same time I am afraid I did not respect him as much as I should if he had manfully stood out against this pitiful and revolting professional slavery; this moral obliquity, which would rather that the whole of mankind should go unhealed unless they were cured by orthodox doctors, in an atmosphere of medical holiness and infallibility. The acquisition of the power to relieve physical suffering by mesmeric processes is so easy that, in ninety-nine cases out of the hundred, it would be one's own fault if it were not developed, but I think that is too important a question to broach at the end of a chapter, so let it stand over for the present.

CHAPTER XXV

POSSIBLE DISCOVERY OF THE SECRET OF PSYCHOPATHIC HEALING

THE Asiatics have certainly perfected the art of feeding the vanity of public men, and their public men seem to like it. To us Westerns, however, too much grandeur is a bother, and one is constantly being put into dilemmas where one has to quietly play the part of willing victim, or by churlish refusal make oneself seem a very underbred person to one's Oriental friends. This is apropos of my Diary entry of 3rd October, 1882, that I had that day crossed a brimful river in Ceylon, and walked a mile to the temple where I was to lecture, on white cloths spread over the whole route for my eminent feet, between two continuous lines of palm-leaf fringes, and under a white canopy (*Kodiya*) which enthusiastic Buddhists carried on painted staves, over my respectable head. At the same time paralytics, clamoring for the laying on of my hands, besieged me along the whole route. I could have dispensed with the whole *tamasha* without the least difficulty, but the crowd could not. What a fool one does feel when, perched on a decorated elephant, or carried in an open sedan chair, half smothered with thick

garlands of tuberose blooms, and surrounded by shouting thousands, one sees even one European standing by the roadside or in a verandah, looking sneeringly at one as if he were really a voluntary mountebank. Talk about nerve—this is one of the things to try it, for one can so easily foresee the circulation of the story throughout the station and the contemptuous comments that will be made upon one's abasement of the race-dignity, while one's whole heart is fixed upon doing good to others and impatient of all this childish show. The most difficult lesson for a white man in Asia to learn is, that the customs of his people and those of the dusky races are absolutely different, and that if he dreams of getting on well with the latter he must lay aside all prejudices and hereditary standards of manners, and be one with them, both in spirit and in external forms. If the English conquerors of the dark-skinned nations could only realize and act upon this principle, they would rule through love instead of by craft and force. They make themselves respected and feared, but loved?—never. However, they are not going to change their natures to please me, so I shall pass to the illustration of the point I was making in the last chapter, about the true secret of successful Psychopathy, or mesmeric healing.

The secret in question was revealed to me by an experience I had at a small village in Southern Ceylon, during this tour which we are now tracing. I think it was at Pitiwella, five miles from Galle, though I am not sure, having failed to record the case apart from others treated on the same day. My

interpreter, secretary, and servant, together with many other witnesses, will be able to recall the facts if my word is challenged, so it does not matter. A man suffering from hemiplegia, or paralysis of one side, was brought to me for treatment. I began on his arm, making passes along the nerves and muscles, and occasionally breathing upon them. In less than a half hour I had restored the arm to flexibility; so much so that he could whirl his arm around his head, open and close his fingers at will, grasp and hold a pen or even a pin, and, in fact, do anything he liked with the limb. Then—as I had been kept continuously at work on similar cases for several hours, and felt tired—I bade the committee to make him take a seat and give me time to rest. While I was smoking a pipe, the committee told me that the patient was well-to-do, had spent Rs. 1,500 on medical men without getting relief, and was an avaricious person, well known for his closeness. Now, of all things that are disgusting to the occultist, money-greed is one of the chief: it is so low and ignoble a passion. My feelings underwent an instant change towards the patient. The committee, at my suggestion, asked him how much he had decided to give towards the Buddhist National Fund for schools. He whined out that he was a poor man and had spent much on doctors, but he would give one rupee! That capped the climax. I told them to say to him that, although he had spent Rs. 1,500 in vain, he had now had his arm cured gratis, and he might now spend an equal sum, and see if the doctors would not cure his paralyzed leg, and he had better keep the

rupee he had just offered for Buddhist schools, towards the doctors' fees. I told them to take the creature away and never let me see him again. But the committee, with one accord, begged me to recall my order, as the mere mention of money would assuredly be misconstrued and misrepresented by our bitter opponents, who could not say that I had ever taken a cent for my healings, or that they had been made by the Buddhist Committee an excuse to influence subscriptions. So after a while I had the patient brought before me, and within another half hour had released his leg from its state of paralysis, and sent the man away walking as well as anyone. My secretary took from him, it seems, a certificate of the cure, and I have it among the papers connected with that Ceylon tour.

The committee in charge of my work had arranged a series of loop tours of about a fortnight each, which brought me around each time to Galle, the central point. When this particular one was finished I was asking one day how it had fared with a certain few patients whose cases had more particularly interested me than the rest, and among others, I mentioned this miser's. The reply surprised me very much: the arm, they said, remained cured, but *the leg had relapsed into the paralytic state.* Although I had read of no similar case in the books on Mesmerism, the reason suggested itself at once—I had felt no real sympathy for the man after hearing about his miserliness, and therefore my vital aura had not vibrated along his nerves, as it had when applied to the nerves of his arm; there had been a momentary

healthful stimulus followed by a return to the state of nerve-paralysis. In both cases I had had exactly the same knowledge of the science, and the same measure of vital force to transmit, but in the latter, none of that feeling of sympathy and benevolent intent which, in the case of the arm, resulted in a permanent cure. I am aware that some writers on Psychopathy—among them Younger, whose work[1] appeared five years later than my Ceylon experience —have affirmed that "sympathy is the keynote of nearly all the phases of development of the mesmeric state" (*Op. cit.*, p. 28), but I do not recall an instance like the one above cited. The good M. Deleuze, formerly of the Jardin des Plantes, in Paris, whose *Practical Instructions in Animal Magnetism* is a classic, and who describes the proper methods of treatment in various diseases, notes no case like this, although he tells us that "Magnetism is effectual in all kinds of paralysis". He says, however, that the sensitive operator will always recognize a change occurring in himself when he magnetizes. "This disposition is composed of a determined intention, which banishes all distraction [meaning mind-wandering, of course, a state absolutely obstructive to the working of cures of disease, as I know by much experience.—O.] without our making any effort, of *a lively interset which the patient inspires in us and which draws us towards him*, and of a confidence in our power, which leaves us in no doubt as to our success in alleviating him"

[1] *The Magnetic and Botanic Family Physician*, London 1887. (E. W. Allen, Pub.)

(*Op. cit.*, p. 203). But he quotes no example to prove the indispensableness of sympathetic benevolence of intent, and I am inclined to think my case almost unique. It is to be observed further, in reading up from the authorities, that although I felt no sympathy for my patient, I nevertheless did restore his leg to functional activity for the time being: I made him walk as well as he ever did. My will and skill were powerful enough for that, but not being moved by the third element, compassion, there was a relapse after the first effect of nerve stimulation had passed off. It seems to me that it also goes to prove that mesmeric healing is not necessarily attributable to the exercise of faith, but rather to the transfusion of vital aura to the patient, and its operation under varying conditions within his system.

Here was a patient who, if moved by faith in the case of his arm, must have been doubly so in the case of his leg, after the paralysis had been removed from the former; here were several bystanders whose minds and outward demonstrations of belief would follow the same rule; here, finally, was I, exercising the identical power and applying the same technical knowledge in both cases, and, if you choose to so regard it, silently making the self-same suggestion of possible cure, yet curing the arm and failing to permanently cure the leg. It is a most important bit of evidence in the question of psychopathic science, and well worth keeping in mind. I can conceive of no applicability of the theories of either the Salpétriére or Nancy Schools of Hypnotism to cases like the foregoing; it stands apart and is

explicable only on the theory of a vital transfusion from operator to patient. The case becomes stronger when one reflects that I was operating upon and in the presence of Sinhalese, who knew nothing about our Western mesmeric and hypnotic theories and results, to whom the whole thing was a puzzling mystery, and who, consequently, were not in a condition of mind to hypnotically suggest anything to the patient. MM. Binet and Féré, in their academical work on *Animal Magnetism* (International Scientific Series, vol. lx, p. 178 *et seq.*), define hypnotic suggestion as of various forms, and specify that resulting from spoken words and that from gestures. For instance, in the first case one may convey the idea of an actual object by saying: "There is a serpent at your feet," or that there is a cat or dog or bird in the room; the animal being instantly perceived by the subject through the influence of the mind-picture so evoked. In the other case the idea may be provoked by simply making gestures which indicate the motions or habits of the imaginary animal. But, they tell us, gestures are "a very inferior means . . . fairly successful in the case of subjects who have been long under treatment"; that is, often hypnotised and trained to accept suggestions of all kinds from the operator. What was there of this sort in the case of my patient? He had never been hypnotised; had never heard of such a thing; was not mesmerised by me, but in the full possession of his senses; could not understand a word of English or any other language which I knew, and as said above, if hypnotically sensitive, must have been

doubly so to the fact that his leg could be cured since the use of his arm had just been restored to him.

Finally—not to dwell too long on a subject whose importance well excuses my having given it so much space—the Ceylon case powerfully suggests the truth of the ancient teaching that kind thoughts sent out from one to another carry with them an almost magical power for good, while evil ones have the contrary effect. How much it behoves us, then, to guard ourselves from even thinking harm to our neighbors, and how easily we can grasp the idea that the old dread of sorcerers and workers of spells had a solid foundation of fact, and that the subtle powers of nature may be handled to the undoing as easily as to the blessing of men.

A case of the "Demon Lover" type was brought me at Galle by the Chief Priest of a (Buddhist) Vihara. A young monk, of perhaps twenty-seven years of age, had been haunted since two or three years by a Yakshini, or a female demon, who—the old monk told me—had been playing the part of spirit wife to him, but to such excess as to rather suggest a person afflicted by nymphomania. The poor fellow was thus obsessed seven or eight times a day and had become reduced to almost a skeleton. The Superior calmly asked me to work a cure. Fortunately, I had successfully treated a similar case in America some years before, the patient being a lady, so that I knew pretty well what to do. I put the monk on a course of mesmerised water, making him come to me every morning for a month, for the day's supply, after

which time he was completely cured. I then sent for the Chief Priest and advised him to disrobe his young friend and send him out to take up the ordinary life of the householder, which was done. The simple explanation is that the influence of the bad Elemental spirit upon its medium was nullified and destroyed by the power of my stronger human will, supplemented by the constant action of the vitalized water. Among the scientific practitioners of mesmerism there have never been two opinions, so far as I know, as to the efficacy of magnetised water as a therapeutic agent. Deleuze says "it is one of the most powerful and salutary agents that can be employed. . . . I have seen magnetised water produce effects so marvellous that I was afraid of having deceived myself, and could not be convinced until I had made a thousand experiments. Magnetisers in general have not made sufficient use of it." How long the water retains the aura has not—he says—been clearly determined, but "it certainly retains it for many days, and numerous facts seem to prove it not to have been lost after many weeks" (*Op. cit.*, pp. 216, 217).

My Southern tour rapidly approached its end. Lectures, followed by collections of subscribed sums for the National Fund, were given at Bussé, Ratgama, Dodanduwa, Kumara Vihara, Kittangoda, Hikkaduwe, Totagumuwa, Telwatte, Weeragoda, Kahawe, Madumpe, and Batticola, and my face was then turned towards Colombo; in all, there had been sixty-four public addresses made within the space of about three months, and visits to most of the larger

villages in the Galle (Southern) Province. I must mention the fact that whenever I found myself at a village on the seashore I would take a daily salt-water bath, as I found it wonderfully refreshing in the mesmeric sense; no matter how much I might have overdone my healings, a plunge into the sea would restore my vital force within a few minutes. It is a hint that should not be lost by those who follow psychopathy as a profession. I reached Colombo on 25th October, and was present at the High Priest Sumangala's Widyodaya College, at the exhibition of some genuine relics of the Buddha, which had been excavated at Sopara, from an ancient stupa, or mound, and been presented to the High Priest by the Governor of Bombay, through the Governor of Ceylon. An immense crowd was present on the occasion, and a number of representatives of the Ceylon Government attended out of respect for Sumangala Maha Thera. At his request I lectured in the evening, and Megittuwatte, the great orator, followed in an eloquent discourse.

On 1st November, in company with Mr. Thomas Perera, of Galle, a most excellent colleague of ours, I sailed for Bombay, which we reached after a smooth passage, on the third day. H. P. B. was away at Darjeeling with some of our members, having meetings in the flesh with two of our Masters. On the 8th I got from Messrs. Shroff and Pandurang Gopal, the suggestion to make the anniversary meetings of the T. S into representative conventions of all our Indian Branches. I recollect that I felt rather dubious about the practicability of the scheme, but I passed it

on to H. P. B., and when she returned, on the 25th of the month, she brought with her four Bengalis and S. Ramaswamier, of Madras Presidency, as Delegates. Two more came from Bareilly, N. W. P., and two from Baroda; the next day, others came from other places, and when our Seventh Anniversary was celebrated, in Framji Cowasji Hall, on 7th December, we had fifteen Delegates present and addresses from several of them. Mr. Sinnett had come from Allahabad and officiated as Chairman at my request. There was a very crowded audience, and the applause was hearty. Thus was inaugurated the system of Annual Branch Conventions which is now universal, and for the first time—to show the Bombay public how the Theosophical movement was spreading throughout the world—I hung around the hall as many shields as there were Branches of the Society, each inscribed with the name and charter date of a Branch.

We now set to work, packing our furniture, books, and personal effects for transfer to Madras; the lovely Adyar property having been bought at a merely nominal price. The Bombay Branch T. S. gave us a farewell reception, with nice speeches, no end of flowers, music, a collation, and the presentation of a large, artistic, and costly silver vase and platter, made specially by the clever silversmiths of the Province of Kutch. On the 17th we took train for Madras, the event being fixed in H. P. B.'s memory by the theft of her handsome Kashmir chudder, through an outside window of the railway carriage while we were occupied at the other side in giving and receiving

compliments and salaams. Her remarks upon the incident, when it was discovered, will not bear repetition.

We were welcomed to Madras at the station by a distinguished company of native gentlemen, and escorted in grand style to Adyar, which seemed to smile upon its future masters. The reader can hardly imagine our pleasure in settling into a home of our own, where we should be free from landlords, changes, and the other worries of the condition of tenancy. In my Diary I say: "Our beautiful home seemed a fairy-place to us. Happy days are in store for us here." The bitter ones, alas! we did not foresee.

The remaining days of December were filled with the petty annoyances of getting servants, overseeing mechanics, making the first necessary repairs, and receiving and unpacking our furniture. The Teacher (M.) came daily to see H.P.B., and I have it recorded that on 29th December, she "made me promise that if she should die, no one but myself should be allowed to see her face. I am to sew her up in a cloth and have her cremated." That, you see, was nine years before her corpse was carried to the Woking Crematory, near London; hence the possibility of her sudden death was even then kept in mind.

The year 1882 went out with me working at my desk alone.

CHAPTER XXVI

INCIDENTS OF HEALINGS

THE year 1883 was one of the busiest, most interesting and successful, in the Society's history: certain of its features were very picturesque, as will duly appear. Forty-three new Branches were organized, the majority in India and by myself. My travels extended over seven thousand miles, which means much more than it would in the United States, where one has a railway train to take him to any desired place, and has not to shift to the backs of elephants or have his bones ground together in springless bullock-carts. My colleague and I were separated most of the time, she stopping at home to carry on the *Theosophist* and I wandering over the Great Peninsula to lecture on Theosophy, heal the sick, and found new Branches.

The first weeks of January were given to the settlement of our household in the new Headquarters, and my Diary is full of details of the buying of furniture, the arrangement of the "Shrine Room," of now polluted memory, but which was to us, during the next two years, a spot hallowed by frequent intercourse with the Masters and many palpable phenomenal proofs of their active interest in ourselves and in the great movement.

Marion Crawford's *Mr. Isaacs* was sent us at this time by his uncle, Mr. Sam. Ward, one of our most enthusiastic members, who also wrote certain interesting particulars about its production. It was—he told us—inspired by the published accounts of Mahatma K. H., and the idea so took possession of Mr. Crawford that, having once begun writing, he gave himself no rest, scarcely even food, until it was finished. He wrote it in less than four weeks, and Mr. Ward says that it almost seemed as if his nephew had been under the influence of an outside power.

Mr. Crawford makes—as any true occultist will tell him—the mistake of having his ideal Eastern adept, Ram Lal, meddling in the love affairs of the hero and heroine, whereas this is inconsistent with the tendencies of a person who has evolved up to and lives mainly on the plane of spirituality. Bulwer was equally wrong, nay, worse, in making his adept, Zanoni, abandon, after ages of spiritual striving and success, the fruits of his Yoga, and drop to the vulgar level of us weaklings, who are held in the bonds of the flesh and give and are given in marriage. Both Zanoni and Ram Lal are, as presented to us, practically impossibilities, save as aberrations of nature and the victims of overpowering conspiracies of brutish forces, which they must have vanquished over and over again as they mounted upward from the lower levels where passion reigns and the guiding light of wisdom is hidden. Sexual unions are perfectly natural for the average human being, but perfectly unnatural for the evolved ideal man.

Friendly letters came pouring in to us this month from Sweden, France, Uruguay, Russia, and America, thus showing how the interest in Theosophical ideas was spreading. At this time the covenants for purchase of the Adyar property were signed and exchanged, and I set to work to raise the money, heading the list with a donation of Rs. 2,000, or one-fifth of the sum needed, from H. P. B. and myself—the mention of which fact is, perhaps, pardonable in view of the cruel things said about our having exploited the Society for our personal gain.

On 16th January a public reception was given us by the Madras (native) public at Pachaiappah's Hall. It was a scene of great enthusiasm and excitement. The building was packed to the doors, its approaches crowded, and everything done to signify the pleasure felt in our change of home. Raja Gajapāti Row, a well-known personage in the Madras Presidency, took the chair on the occasion, and speeches were made by him and Judges P. Sreenivasa Row and G. Muthuswamy Chetty, of the Court of Small Causes. I observe that in the course of my response I broached the idea of making a sort of Hindu Sunday School Union, to open schools and publish catechisms for the religious education of Hindu youth, on their own lines, and that it was warmly supported by the leaders of the Hindu community and unanimously ratified by the cheering audience. At that time it might, perhaps, have been regarded as a fanciful scheme; but now, thirteen years later, we see in it a fair way to being realized; a number of Hindu boys' societies are fully at work,

and the little magazine which represents their interests [1] has a constantly growing circulation.

As our lives are made up of unconsidered trifles, and as I wish to give my narrative the seal of reality, I have mentioned many little incidents which help to fill in the picture and place us, pioneers, before the mind's eye as living beings, not as the absurd exaggerations which have been so often and so unfortunately indulged in. If H. P. B. wrote mighty books, she also ate her fried eggs swimming in grease every morning, and this narrative has to do with the actual personage instead of the ideal. So I record a little detail that interested me enough at the time to make me record it. The presence of a little river back of the house awakened in us the old love of swimming, and we all went in for it, H. P. B. with the rest of us. It must have astonished our European neighbors to see us four Europeans—for that was the time of the two Coulombs—bathing along with a half dozen dark-skinned Hindus, and splashing about and laughing together, exactly as though we did not believe we belonged to a superior race. I taught my "chum" to swim, or rather to flounder about after a fashion, and also dear Damodar, who was up to a certain point one of the greatest cowards I ever saw in the water. He would shiver and tremble if the water was half-knee high, and you may believe that neither H. P. B. nor I spared him our sarcasms. I remember well how all that changed. "Fie!" said I. "A pretty adept you will make when you dare not even wet your knee."

[1] The *Arya Bala Bodhini*.

He said nothing then, but the next day when we went bathing *he plunged in and swam across the stream*: having taken my taunt as meant, and decided that he should swim or die. That's the way for people to grow into adepts. TRY, is the first, last, and eternal law of self-evolution. Fail fifty, five hundred times, if you must, but try on and try ever, and you will succeed at the end. "I cannot" never built a man or a planet.

It was in this same January that H. H. Daji Raj, the young reigning Thakur of the Kathiawar State of Wadhwan, and a member of our Society, paid us a visit. I had begged him to leave his royalty behind him and come as a private gentleman with the usual couple of servants. He said he would, but when I met him at the station he had a tail of nineteen followers, an allowance which he thought modest in the extreme. In fact, when I remonstrated on his descending upon us with such a rabble of valets, cooks, musicians, barbers, and men of the sword, he showed great astonishment at my unreasonableness, and said that, but for my having written him, he should have brought a hundred or more!

The Thakur Saheb stopped with us from 30th January until 8th February, spending his time in talks with us, visits to the theatre, a sail on the river, a nautch dance, and other distractions. On the evening of the 7th we had an evening party and reception for the Madras Branch members to meet the Raja. The Convention Hall was fresh-carpeted, brightly lighted, and decorated prettily with flowers and potted

plants. A number of addresses were made, and, by request, I gave experimental demonstrations of mesmeric control to illustrate a brief exposition of the science.

On 17th February I was again on the move, embarking for Calcutta on the French mail steamer "Tibre", After a pleasant voyage, I reached my destination on the 20th, and was put up at the Guest Palace (Boitakhana) of the Maharajah Sir Jotendra Mohun Tagore. His house was virtually converted into a hospital, for the sick crowded in upon me for treatment and their friends to look on. One of my first cases was an epileptic boy who was having fifty to sixty fits every day. His disease, however, speedily succumbed to my mesmeric passes, and by the fourth day the convulsions had entirely ceased. Whether the cure was permanent I do not know; perhaps not, for it seems unlikely that deep-seated causes, so powerful as to produce such a great number of fits in a day, should be driven out by a few days' treatment; one would have to keep up the treatment for, possibly, weeks before one could say there was a complete restoration of health. Yet it may have been so for aught I know. Epilepsy, while one of the most fearful of diseases, is at the same time one of those which yield most surely to mesmeric treatment.

I had a number of equally interesting subjects. Among them a young Brahmin, of probably twenty-eight years, who had been suffering from face paralysis for two years, sleeping with his eyes open because unable to close the eyelids, and incapable of projecting his tongue or using it for speech. When asked

his name, he could only make a horrible sound in his throat, his tongue and lips being beyond his control. It was a large room where I was at work, and I was standing at one end of it when this patient was brought in. He was stopped just within the threshold by my committee, for examination. When they stated the case they drew back and left the sick man standing alone and looking at me with an eager expression. He indicated in dumb-show the nature of his affliction. I felt myself full of power that morning; it seemed as if I might almost mesmerise an elephant. Raising my right arm and hand vertically, and fixing my eyes upon the patient, I pronounced in Bengali the words: "Be healed!" At the same time bringing my arm into the horizontal position and pointing my hand towards him. It was as though he had received an electric shock. A tremor ran through his body, his eyes closed and re-opened, his tongue, so long paralysed, was thrust out and withdrawn, and with a wild cry of joy he rushed forward and flung himself at my feet. He embraced my knees, he placed my foot on his head, he poured forth his gratitude in voluble sentences. The scene was so dramatic, the cure so instantaneous, that every person in the room partook of the young Brahmin's emotion, and there was not an eye unmoistened with tears. Not even mine, and that is saying a good deal.

A third case was the most interesting of all. One Babu Badrinath Banerji, of Bhagalpore, an enrolled pleader of the District Court, had lost his sight. He was completely blind, and had to be led by a boy. He asked me to cure him—to restore sight, that is, to

a man suffering from *glaucoma*, with atrophy of the optic disc, who had passed through the hands of the cleverest surgeons of Calcutta, and been discharged from the Hospital as incurable! Ask the nearest surgeon, and he will tell you what that means. Now I had never treated a blind man, and had no idea whatever as to the chances of my doing the patient any good; but in mesmerism one can do nothing if one has the least doubt of his power to do: self-confidence is the one thing indispensable. I first tested the man's sensitiveness to my mesmeric current, for these were not cures by hypnotic suggestion that I was making, but downright, honest, old-fashioned psychopathic, *i.e.*, mesmeric ones. I found, to my great satisfaction, that he was the most sensitive patient I had ever met with. Blind, unable even to distinguish day from night, and, therefore, unable to see my motions and take suggestions from them as to my purposes, he stood before me, and as I advanced my finger-tips to within a half-inch of his forehead, and concentrated my will upon my hand that it should be to his nerves as a strong magnet to the suspended needle, his head inclined forward towards my fingers. I moved them slowly away, but the head also moved, and so kept following them until his forehead was within a foot's distance from the floor. I then shifted the hand noiselessly to the back of his head, and at once he moved it upward and upward until I thus drew him backwards, so that he over-balanced, and I had to catch him in my arms to keep him from falling. This in silence, without a word or a sound to give him the clue to my proceedings. My

way being thus cleared, I held the thumb of my clenched right hand before one of his eyes, and that of the left over his neck, and willed a vital current to run from the one to the other, completing with my body a magnetic circuit, of which one glaucomic eye and the optic tract, to its seat of development in the brain, formed parts. This process was continued for about half an hour, the patient remaining fully conscious always and making remarks from time to time as he chose. At the end of the experiment he could see a reddish glimmer of light in that eye. The other eye was then operated upon similarly, with the same result. He returned the next day for further treatment, and this time the light lost its reddish color and became white. Persevering for ten days, I was finally rewarded by seeing him with restored sight, able to read with one eye the smallest type in a newspaper or book, to dispense with his leader, and go about like anybody else. A surgeon friend of mine pointing out to me the signs of glaucoma, I found the eye-balls as hard as nuts, and set myself to make them normally elastic, like my own, which I did by the third day, by simple passes and the holding of my thumbs, with "mesmeric intent," *i.e.* with concentration of will upon the result aimed at, before the sightless orbs. This cure naturally created much talk, as the patient held every needed written proof of his malady having been pronounced incurable by the highest medical professionals; besides which, his blindness was well known to the whole community of Bhagalpore. Two medical men, graduates of the Calcutta Medical College, studied the eyes

through an ophthalmoscope and wrote a report of their observations to the *Indian Mirror*, from which I think it was copied into the *Theosophist*. The sequel to the cure was most interesting and striking. His sight faded out twice and was twice restored by me; the first time after it had lasted six months, the second time after a whole twelvemonth. In each case I found him totally blind and restored his sight with half an hour's treatment. To cure him permanently I should need to have him by me, where I could have given him daily treatments until the glaucomic tendency had been completely extirpated.

Somehow I was extremely lucky in curing deafness. An interesting case came before me on 8th March. His brother was, and is, a high-grade functionary in the Government Telegraph Department, and he was so deaf that one had to shout in his ear to make oneself heard. In two treatments, on two successive mornings, I had got him to the point where—my Diary lies before me and I speak "by the book"—he could hear me talk in an ordinary conversational tone up to the (measured) distance of 52 feet 8 inches: he walking away from me so that I might know he did not "read my lips". I shall cite one more case coming under my observation during the Calcutta visit in question, and this must be the last, as I must yield space for other writers.

One day, my dear colleague, Norendro Nath Sen, wrote to ask me to visit a Hindu lady, lying ill of a grievous malady, and pronounce an opinion upon it. The lady's husband took me to his house and into the zenana, where I found his comely young wife lying

on a mattress on the floor, in a hysteric spasm. She would lie thus six to eight hours daily, with her eyes convulsively closed, the eyeballs introverted, the jaws clenched with tetanus, and speechless. A transfer of the sense of sight had occurred; she could read a book with her finger-tips, and by copying the lines on a slate prove her abnormal faculty. I recalled the experiments which Dr. James Esdaile, Presidency Surgeon, had made and recorded in this same Calcutta forty years before, and I repeated them. I found that the hysteriac could not only read with her finger-tips, but also with her elbow and the small toe of one foot, but with no other. She could not read at the pit of the stomach nor at the back of the head, as I had seen other patients do, and as other writers on mesmerism testify to having seen, but she could hear at the umbilicus, even while I had my fingers pressed tightly into her ears and her husband spoke to her in whispers. The case was, of course, curable by mesmerism, but I declined to take it, as I was leaving Calcutta on the second day following, and this case might need a course of treatment extending over days, if not weeks. It presented, as will be seen, features of deep interest to the psychologist, for here, if ever there were such a thing, we saw the transfer of the senses of sight and hearing to places in the body remote from their proper organs, and the fact could not be explained away on any reasonable hypothesis of a materialistic character. Here was mind functioning at the extremities of the nervous system by an extension, as it were, of its organ, the brain. From this to the prodigy of clairvoyance, or the intelligent observation of facts

at great distances from the observer's body, is but a single step. Once let the thinking faculty be displaced from its proper seat to one or more other points within the limits of the thinker's body, and there is no logical barrier to the extension of its active consciousness outside the body, save the limits of the power of the Finite to grasp the Infinite.

CHAPTER XXVII

TOURING AND HEALING IN BENGAL

UNTIL our contemporary men of science took up the serious study of mesmerism under its synonym of hypnotism, the stigma of charlatanry was, more or less justly, placed upon it. Its advocates were as culpably eager to claim too much for it as its opponents were to concede too little. The indisputable soundness of its basis is now proved beyond cavil by the results of recent hypnotic research. If such great points as the reality of clairvoyant vision, the transference of thought, and the existence of the mesmeric aura, or "fluid," are still in dispute, it is consoling to know that the evidence of their reality is daily accumulating. Before long, the materialists will be obliged to admit it, as they have had to do in the matter of the other phenomena of mesmerism.

The above thoughts are suggested to me by the record of my psychopathic experiences of the year 1883, which we are now recalling. I had wasted an enormous volume of my vital force in attempting the indiscriminate treatment of the patients presenting themselves to me. While I succeeded in curing hundreds, I had failed in hundreds of other cases and given but temporary relief in as many more,

despite my having exerted my full will power and poured out my vitality as freely as in the successful cases. Nay, I may say that when I failed I had made double and sometimes ten times as much effort as when I effected cures of the most striking and sensational character. One day, when I felt myself very tired after my morning's work, I began thinking that I might spare my forces in the future by adopting a system of selection: could I not apply some test—some auric measure, or, say, an *auræ metrum*—by which I might pick out the most sensitive patients and abstain from operating on the others? I postulated to myself the existence in each individual of a nerve-fluid which would be characteristic of himself, or herself, and unlike that of every other individual. This, being conducted by the nerves to the extremities from the source of its generation in the brain, spine, and other centres (the *sat chakrams*), would be conductible by another person's nervous system in which an identical state of vibratory thrills or pulsations of aura was occurring, and which might be brought into sympathetic relation with it, and by no other. Therefore a healer like myself could not cause his nerve-aura to enter the nerve-system of any patient which was out of sympathetic vibration with his own system, any more than an electric current could be made to run through a non-conductor. *Per contra*, the certainty and rapidity of his cure of any given patient would be in proportion to the completeness of this sympathetic vibration. The charge of charlatanism would only lie where the healer would pretend that he possessed some divine

influence which was able to cure any patient who had faith in the healer's powers, regardless of the question of nerve-sympathy between the two individuals. To proceed upon the latter hypothesis would be to bring psychopathy within the domain of positive science. Then, what test could be tried; how could one know and prove to bystanders, which were the most curable patients? The test must produce visible phenomena, such as the most illiterate might appreciate for themselves. The only one of that sort was the phenomenon of "mesmeric attraction," and it could be applied thus: The patient should be made to stand erect, out on the floor and leaning against nothing, with his hands (unless paralysed, of course) hanging by his sides and his eyes shut, so as to prevent his being controlled by the "silent suggestion" of the movements of the healer's hands. Better yet, as regards that, if his back were turned to the healer. Then the latter, concentrating his thought and will upon the patient's head, raising his hand towards it and bringing his fingers together into a point, should silently will that his hand shall become an attractive magnet to draw the patient's head towards him. This to be kept up a few minutes until it should be seen whether or not the intended effect followed. If almost immediately the patient began swaying on his feet and his head moved towards the operator's hand, then the latter might be sure that he was dealing with a very sympathetic sensitive, and the cure of his disease would be virtually instantaneous. The case of the young Brahmin, whose facial and lingual paralyses were

cured, illustrates my meaning, as does also that of Badrinath Babu, the blind man of Bhagalpore, who was marvellously sensitive. If a less extreme degree of attraction showed itself yet still a strong one, the patient would be curable after two, three, or more treatments. So on to the point where, after three or four minutes' testing, the patient's head and body gave no responsive movements. There is nothing original in this experiment so far as the act of attraction goes—for that has been known from Mesmer's time—the novelty was in the using of it as an *aurœmeter*, a gauge of psychopathic sensitiveness. I tried it the next day with the most gratifying results: my best patients proved to be the most easily effected, Badrinath Babu to such a degree that—as explained in the preceding chapter—I could thus draw his head down to the very floor, and then, shifting my hand to the back of his neck, draw him up and up and over backward, until he would fall into my extended arms. Thenceforward I had to waste no more nerve-force on rebellious nervous systems, while the confidence gained by being able to know just how sensitive my patient was helped me immensely in working cures. For my own guidance, I mentally grouped all patients into ten classes or degrees of sensitiveness and proceeded to handle them accordingly.

Among the intelligent Europeans who were drawn to the Maharajah's Guest-Palace to witness my cures was the Rev. Philip S. Smith, of the Oxford University Mission; a pale little man, highly educated, of course, presenting the type of the religious ascetic,

and clothed after the Romish fashion, in a white cassock and a hat of about the shape of an American pie. He was very pleasant towards me, and I gave him every chance to satisfy himself as to the reality of psychopathy: he watched every case, put many questions to the patients, and stopped until he and I were left alone towards dusk. Then we had a long talk together about the business, and case after case was dwelt upon and analysed. He declared himself thoroughly satisfied, and said he could not have believed possible what he had seen, upon the testimony of third parties. Then the subject of the Bible miracles was introduced by him, and he had to confess that he had seen me do a number of the things ascribed to Jesus and the Apostles in the matter of healing—sight restored to the blind, hearing to the deaf, speech to the dumb, the use of limbs to paralytics, neuralgia, colic, epilepsy, and other ills removed. "Well, then, Mr. Smith, please tell me," I said, "how you would draw the line between these healings and the identical cures wrought in the Bible narratives. If I do the same things why should they not be given the same explanation? If the Bible cases were miraculous, why not mine: and if mine are not miraculous, but perfectly natural, perfectly easy to do by anyone who has the right temperament and can pick out the right subjects, then why ask me to believe that what Paul and Peter did was proof of miraculous power? It seems to me quite illogical." The little man pondered deeply for several minutes while I quietly smoked in silence. Then he gave me an answer

that was most original and one which I can never forget: "I grant you that the phenomena are the same in both cases: I cannot doubt that. The only way I can explain it is by assuming that the healings of our Lord were done *through the human side of His nature!*"

On 9th March (1883) I dined at the house of the most learned Brahmin Pandit of Bengal, the late Taranath Tarka Vachaspati, author of the famed Sanskrit Dictionary. He cooked food for me and paid me the highest honor possible in India, by giving me the Brahminical sacred thread, adopted me into his gotra (the Sandilya) and gave me his mantra. This was a sort of brevet conferring of the caste of Brahmin, the first case, I fancy, in which the details of the ceremony had been gone through with a white man, although the thread itself was given to Warren Hastings in his time. The favor shown me was, I was given to understand, to mark the sense of gratitude felt for me by the Hindus for my services in the revival of Sanskrit literature and of religious interest among the Indian people. My deep appreciation of the honor has often been expressed by me since then, and, although an avowed and convinced Buddhist then and now, I have always worn the *poita* since the venerable Pandit placed the first one about my neck.

Our conscientious enemies have been good enough to say, quite recently, that we Founders have done nothing in India for the children, perhaps not caring to call to mind the boys' religious schools, libraries, and societies that we have formed throughout the land. I see by my Diary that the first religious

school opened by us in Calcutta was started on the 11th of the same month as the above, with Babu Mohini Mohun Chatterji as chief teacher and other members of our Calcutta Branch as helpers. Since then, society after society for the moral, religious and intellectual benefit of the young, of both sexes, has sprung up in that metropolis, and at this day hundreds are being instructed in the principles of their hoary religion. A Ladies' T.S. was formed in 1883, with the lovely and gifted Mrs. Ghosal as its President, and the outcome of this movement was the founding of the *Bharati*, a magazine fit to be compared with the great London and New York periodicals.

My work in Calcutta having been finished, including several public lectures to overflowing audiences, I resumed travel on the 12th, and turned my face towards Krishnagar. I lectured there, healed the sick, and admitted seventeen new members into the local Branch. On the following day I gave mesmerised water to one hundred and seventy applicants. There lived in the town a common potter, who must have had the soul of some old sculptor reborn in his body, so skilful was he in the modelling of figures. A tiny statuette, the price of which was but one rupee, represented a Brahmin seated for his morning devotions, and I think I never saw more character put into clay: the face showed the most intense concentration of mind and introspection and was a *chef-d'œuvre*. I did my best, later on, to persuade my good friend Maharajah Sir Jotendro Mohun Tagore, K.C.S.I., to erect in some crowded native quarter of

Calcutta a life-size statue of an Aryan Rishi, after Ram Lal's design, with suitable inscription on the pedestal to remind the modern Hindu of his glorious forefathers. With the Maidan and other open spaces studded with conspicuous statues of successful foreign soldiers and cunning politicians, it seems a vast pity that no rich Hindu gentleman or group of gentlemen comes forward to erect these mementoes for generations yet unborn, of the mighty sages and saints whose world-wide renown casts a brilliant radiance upon the Aryan race.

To Dacca next, one of the historical centres of Indian history, and, for years past, of modern culture. My host here was Babu Parbati Charan Roy, a highly educated Government employee and a materialist. I met at his house very cultivated society, among them Babu P. C. Roy, Ph.D., of London University, subsequently Registrar of Calcutta University, and his educated wife, a representative of the highest culture among Brahmo ladies. The time not needed for my lectures and other public duties was most pleasantly occupied in private discussions with these friends on philosophical and Theosophical subjects. Parbati Babu was a man well worth winning over to our side, and I was glad to answer his questions and try to resolve his doubts on religious subjects. I remember his taking me into his library and showing me his fine collection of books, almost exclusively by Western authors, and when we came to the last book-case, I made as if searching for more. He asked what I was looking for. I told him I supposed he must have still another room where he kept his Sanskrit and other

Indian works. "No," he said, "this is all; is it not enough?" "Enough," I replied, "why, certainly not, for a Brahmin who wants to know what his religion can answer to the criticisms of foreign sceptics: it might do very well for an European, who neither knows nor cares what the Aryan Shastras teach." My host flushed a little, for I fancy this was the first time that a white man had reproached him for knowing only the opinions of white men. However that may have been, in the course of time this bright University graduate turned his attention most seriously to the studies of his Shastras, and but the other day published a book announcing his full acceptance of the views of his ancestral religion.[1]

From Dacca to Darjeeling is a long stretch, even by rail. At Siliguri we were transferred from the ordinary train to the steam tram that rushes up the Himalayas by a most devious route, curving around the hills, doubling and twisting upon itself, once in a figure of eight; going through forests and wild jungle, past banks of wild flowers growing beside the track; meeting gangs of Bhooteah coolies and Bhootanese, faring along with loads carried on their backs in baskets like inverted cones, supported by straps passing across their foreheads; through small villages of hillmen and Bengali shopkeepers, whose wares were exposed at the doors of the ill-smelling and squalid dens that serve them as business and living quarters combined; up, ever up into the cold and thin air of the heights, where the lowering of the temperature compels a change of dress and the use of

[1] *From Hinduism to Hinduism.*

topcoats and rugs; new vistas of the hot, steamy plains opening out at every turn of the road, until rivers seem like glistening threads down below, houses like dolls' boxes, and moving animals and men like the figures of a toy Noah's ark. Then, finally, towards the end of the climb one finds oneself amid a confusion of mountain peaks crowned by the glittering pinnacles of Kanchanjunga, or Dhavalagiri, twice as far up in the sky as the crest of Mt. Blanc. On the station platform at Darjeeling I was met by my brothers of the local Branch, who gave me a warm welcome and took me to the mountain palace of the Maharajah of Burdwan, who had sent orders to place it at my disposal and give me hospitality.

Only one who has been living in the hot climate of the Indian plains can really know the inexpressible relief and charm it is to get up to this lofty hill-station where, at an elevation of about 8,000 feet, one finds the climate of England, and the blazing fire in the chimney-place recalls the delights of home. Out-doors, especially in the bazaar or market-place, there is little to remind one of that, for one finds oneself in a crowd of people with Mongolian features, yellow skins, quaint headgear and costumes, jabbering away in a dozen strange tongues. Here is a trader selling Tibetan prayer-wheels, turquoise necklaces, charm-boxes to wear on the neck and arm; there, another offering the thick red sleeping-rugs of Tibet, or the pretty white and blue figured bedspreads of Bhutan, or the artistic woven woollen girdles with fringed ends, which every hill man and woman appears to wear for confining their loose top-garments at the waist; and

beyond him, a third who deals in the sweet-sounding cymbals and bells of Lhassa; dealers in ponies, cloths, grains, and every sort of merchandise which is in demand, throng the place, and the scene is full of movement and clamor. As I was working my way towards the eastern side of the bazaar ground, I was brought to a sudden stop by seeing a man approaching with his splendid eyes fixed upon mine and a smile on his face. For a moment I could scarcely believe my eyes—so far away were my thoughts from the possibility of seeing him. It was one of the senior pupils of a Mahatma, with whom I had been brought into relations in a place far distant from there. I stood still, waiting for any advances he might choose to make, but just when he was quite near, he turned aside, with his smiling eyes fixed on mine, and was gone. I could find him nowhere.

During the next two days I was kept as busy as possible, receiving visitors, discussing high topics, and treating sick persons. On the 24th I lectured at the town hall on "Theosophy a True Science, not a Delusion." That morning I had seen a sight that I shall never forget until my dying day. I saw Dhawalagiri in a clear sky, without a veil of mist between it and myself. It was like the uncovering of a world of gods and immortals, and language is almost too poor to do it justice. Before dawn I had gone out of the house and was waiting for the sunrise. There was no cloud in the steel-blue sky to dim the light of the stars. Facing the east I saw, of a sudden, a pinnacle of eternal snow come into view, as if born out of the breast of the night: a small, shining white

mass, so far up in the heavens that I had to crane my neck to look at it. That was the only shining mass in the sky, all else was night and stars, while the mountains around and before me were shrouded in deep darkness. Anon, the glory burst out in another peak, and then it ran like a flash of molten silver from the one to the other: within the next few moments the whole rugged cap of the kingly mountain was a blaze of lighted snow. Towering 20,000 feet above Darjeeling and 7,000 more from the plains, seen afar like a dream more than a reality, what wonder that the Hindu popular belief should make it the home of Rishis, those ideal embodiments of all human perfections!

On the 26th I left Darjeeling, retraced my route down to Siliguri, where I was once more subjected to the heat of the plains, the more awful by reason of the contrast of forty-odd degrees Fahrenheit. My objective point, Jessore, was reached on the 28th. I lectured as usual, and on the 29th formed a local Branch. Thence to Narail, where I was put up in a travellers' bungalow composed of bamboo tattis and having a thatched roof—a flimsy construction that, one would think, could not withstand the strain of a high wind. The mercury stood at 106° Fah. So my state of comfort may be imagined. I lectured to a large crowd from the steps of a schoolhouse, for want of a room big enough for the purpose, and, as there was not a single European about, wore my muslin Hindu costume with much comfort. If Europeans in the Tropics had really good common sense, they would discard their clinging, cramping

and stuffy dress for the roomy and thin garments and head-covering of the natives of those countries. But what can be expected from people who wear Piccadilly costumes, including the bell-topper, at garden-parties, and slavishly submit to the conventional custom of making calls in the very hottest part of the day, and the most inconvenient? At Narail a Branch T. S. was formed with fourteen members. By palanquin, country boat and dāk gharry (mail coach) I went *via* Jessore to Calcutta, travelling a night and a day with the thermometer at 101°. I had yearned for a little rest on reaching the Maharajah's Guest Palace, but got none, as patients had gathered and were persistent and clamorous. So I worked through the day as well as I could, and, naturally enough, at evening had nervous fever, high temperature, and exhaustion of my forces. So I put my foot down the next morning and took my needed rest. In the evening, however, I paid a visit to my dear friends, the Gordons and later, held a meeting of the Bengal T. S. for the admission of new members. The next morning (April 4) I left for Berhampore, in the Murshidabad District.

Our Jain members of Azimganj met me as last year, and after giving me the usual garlands, bouquets, perfumed sprinklings, and refreshments, conducted me in grand state to a flower-wreathed boat in which I was taken across the river to some showy carriages sent from Berhampore for my use, in charge of my tried and trusty friend Dinanath Ganguli, Government Pleader. The reception at Berhampore was as gaudy as that on my previous

visit, and the enthusiasm and welcome equally hearty. Then were healings of the sick, a lecture in the open air of a large courtyard that was prettily illuminated for the occasion, and a large meeting of the local Branch with seven new members admitted. The third day I left, in charge of the Dewan and Private Secretary of the Nawab Nazim of the Lower Provinces, who had been sent to invite me to pass a night at his Highness' palace at Murshidabad. My host and I had a long talk together that evening, and I passed a good night despite the luxurious surroundings, which offered so great a contrast to my quarters in the bamboo screen and grass-thatched hut and the other strange houses in which I had so recently been entertained. It was amusing to see the Nawab's gleeful astonishment when, the next morning, I relieved a huge Pathan, of his military establishment, of a severe attack of sciatica before resuming my journey towards Azimganj.

My next station was Bhagalpore, which I reached at 10 p.m., and received a very kind welcome. Of course, there were addresses to reply to and flowers to be crowned with in the usual fashion. Babu Tej Naraen, a most benevolent and public-spirited man, put me up in his sumptuous Guest Palace. I healed sick persons the next day, visited a school, or rather college, founded by the above-named gentleman under the auspices of the T. S., where above 300 Hindu boys were receiving instruction in the national religion, and Muslim pupils in the tenets of Islam. He had spent Rs. 20,000 on the buildings and

made a monthly grant of Rs. 150 towards current expense account, as a supplement to the Rs. 250 per mensem derived from school fees. The able manager was Dr. Ladli Mohan Ghose, one of our old and staunch T. S. members. My cures the next day are recorded as, two Hysteria, one Lumbago, one Hemiplegia, and three Rheumatism. At the Branch meeting eight new members were admitted, among them a Jain gentleman holding a judicial appointment under Government and a man of the greatest merit. The next morning my usual clinic was held, and I see that I made a deaf man, after a half hour's treatment, hear words spoken in an ordinary conversational tone at the distance of twenty feet. Four more candidates for membership were admitted, and I then took a goods train for Jamalpur, a great railway centre, where I was lodged in a most shabby little house near the railway station, the best that our poor members could afford, and so quite as good for me as a palace would have been. A Branch meeting followed and candidates were admitted.

Twenty patients were cured by me the next day, but the heat was so excessive that I was more than glad when the hour arrived for clearing my rooms of the crowd. I lectured that evening in a large, airy hall that was crowded in every part. An European, a pig-headed fellow of some Dissenting sect, undertook to heckle me in rough language at the close, but he got what he deserved, perhaps more than he expected. Gaya, Buddha Gaya, and Dumraon came next in order; and at each the same incidents

of healings, lectures, Branch Meetings, and admissions to membership occurred. The temperature ranged from 100° to 106° day by day.

A most unpleasant and, to me as an European, mortifying thing happened at the Dumraon lecture. A drunken, foul-mouthed indigo-planter came with a bottle of brandy and a basket of soda water bottles, and while I was lecturing kept drinking pegs. Fancy what was the impression made upon the audience of sober, intelligent, and self-respectful Hindus by this misconduct! Can anyone be surprised at the contempt in which they hold the dominant race whose social habits are so different from their own standard of propriety? I am glad to say, however, that no similar degrading exhibition of bad conduct has ever been made at my lectures throughout India, however much may have been seen by the Hindus among the soldiers and sailors of the British Army and Navy.

My blind patient, Badrinath Babu, was travelling with me for daily treatment, and there was constant improvement of his vision. It was at Dumraon that the ophthalmoscope was applied to his eyes, and, as this is a question of fact and science, not of fancy and superstition, I may as well quote a passage or two from the letter of the medical man who made the observation, which he addressed to the *Indian Mirror*, of Calcutta, from Arrah, 18th April, 1883. The gentleman, Dr. Brojendra Nath Bannerji, L.M.S., is a graduate of the Calcutta Medical College, and was a favorite pupil of the ophthalmic surgeons on the College Staff. It is copied at length in

the Supplement to the *Theosophist* for May, 1883. He says:

"The word wonderful is scarcely strong enough to characterise the cures made by Colonel Olcott while on his present tour. . . . It is the simple fact that cases given up by learned European and native physicians as hopeless and incurable have been *cured* by him as by magic. . . . There is nothing secret about his methods. On the contrary, he especially invites medical men to watch his processes and learn them, if so disposed, as scientific facts. He neither takes money, desires fame, nor expects even thanks; but does all for the instruction of his Society members and the relief of suffering. The waste of vital energy he makes to cure incurable cases is something tremendous, and how a man of his advanced age can stand it seems marvellous. I have seen him treat, perhaps, thirty or forty patients, but a few examples will suffice to give you an idea of all."

The doctor then enumerates cures of a fixed pain in the chest, of four years' standing, the result of a kick by a horse; two cases of deafness, one of twenty-seven years' standing; chronic dysentery; epilepsy; and then comes to the most instructive case of the blind Badrinath. I think I had better quote rather fully. "Boidya Nath (the Bengali provincial mispronunciation of Badrinath) Banerji, an educated gentleman, a Pleader, Judge's Court, Bhaugulpore, had been suffering from glaucoma (chronic) and atrophy of both the optic discs for the last seven years. . . . The pupils did not respond to the stimulus of

light. His case was pronounced incurable by two of the best oculists in India, *viz.*, Drs. Cayley and R. C. Saunders. Boidya Nath Babu possesses certificates from Dr. Cayley to this effect. He has had fourteen treatments [from myself] only, and at intervals since 25th February last (about eight weeks). He has perfectly regained sight in his left eye, the right one is also geting better. This morning he could even discern with it the color of flowers growing at a distance of twenty yards. I and my friend, Babu Bepin Behary Gupta, Assistant surgeon, Dumraon, examined his eyes yesterday with an ophthalmoscope. We found that the atrophied discs were becoming healthy, the shrivelled blood-vessels admitting blood to circulate in and nourish the discs. . . . He can easily walk about without anybody's help, and the glaucomic tension of the eye-ball is gone. . . . Our medical books report no such case, and every ophthalmic surgeon among your readers will admit this cure to be unprecedented. I put it to my professional brethren whether the cure of this one case should not induce them to look into this subject of mesmerism which, on purely scientific principles, effects such staggering marvels of healing. . . . I have mentioned the names of Drs. Cayley and Saunders in connection with this case, only because of my respect for the eminence of their authority and the importance which their unfavorable official certificate gives to the cure which Col. Olcott has made in this instance. I have written mainly for the eyes of my professional colleagues, and none know better than they how safe I am in challenging

the medical world to produce the record of a duplicate to this case."

Generous enthusiast, to be so blinded by an unspoilt heart as to imagine that his colleagues should be moved to look through even one volume of Braithwaite to satisfy themselves that I could teach them something worth knowing, and something that would relieve human suffering: he should have taken warning from the experience of that young assistant surgeon at Galle, who also ventured to tell the truth about the cures he had seen me make of "incurable" patients!

In the same supplement to the *Theosophist* (May 1883) the curious reader will see the medical certificate sent to the Editor of the *East*, a local journal, by Purna Chundra Sen, Practitioner of Homœopathic Medicine and Surgery, of Dacca, about my curing within twenty minutes two distressing cases of malarial fever, with enlargement of the spleen and functional derangement of the heart, resulting in acute hysteria. Then, in the June *Theosophist* Supplement, of 1883, one can see Dr. Ladli Mohun Ghose's report on ten marked cases which I had cured, among them his own, which was a case of blindness in the left eye which Drs. Cayley and Macnamara, of Calcutta, had, after examination, pronounced incurable and probably congenital. "But to-day," says Dr. Ladli Mohun, "after a few minutes of simple mesmeric treatment, by breathing though a small silver tube, Col. Olcott has restored my sight. He has made me close the right eye, and with my

hitherto useless left one read ordinary print. My feelings may be better imagined than described." Yes, but fancy the feelings of those two great oculists and eye-surgeons who had pronounced the eye incurable!

I went on to Bankipur from Arrah, where I had been through the usual routine, and was received and treated throughout my visit in the most affectionate manner. My audiences at the College Hall were very large and demonstrative; the second, when I gave a special address to the pupils, excessively so. After speaking a full hour I wanted to stop, but the room rang with shouts of "Go on; please do go on!" so on I went for another hour, and the boys would have kept me at it all night, I suspect, if I had not told them I was hungry and should go straight away home for my dinner. Dear young fellows; what a limitless field of work there is among the schoolboys and college undergraduates of India for those whom they know and love! And this is the field which is incomparably the most important of all, for the boys are not yet spoilt, nor the sweetness of their young natures destroyed by contact with public life. I ask no better epitaph when I am dead and gone than to be called the Friend of Children.

CHAPTER XXVIII

FLORID COMPLIMENTS

It is very distasteful to me to be obliged to give so much space to the story of my own journeyings and doings; but how can I help it? During all those early years I was, in my official capacity, the focus of all our executive activity: America was slumbering, with its work all in the future; England had one group of friends, who shrank from publicity, and another (the Ionian T. S.) had no means of making it if they had so wished; H. P. B. stopped at home to edit the *Theosophist* and write for pay to the Russian magazines; and I had to be constantly in the field and on the platform, to compel public attention and to form local Branches. My healing of the sick had been forced upon me without premeditation, under circumstances beyond my control, and as the results aroused such wide and intense interest as to form the chief sensational feature of the Society's year's history, the reader must kindly excuse the continued use of the personal pronoun and absolve me from the charge of egotism. I want them to figure to themselves that it was the P. T. S. at work, for the Society alone, and that it was to him, not to my poor personality, that all those kindnesses were shown and complimentary speeches made. As an example of the

sort of thing I had to face, with unblushing cheek and an assumption of great interest, I have been counselled by an English friend, in whose good judgment I have confidence, to copy here, for amusement and instruction, a translation of the text of an address in Sanskrit which was read to me at Bhagalpore. Yet, really, even hiding myself behind the figure of my Presidential *carapace*, I cannot give certain of the most extravagant phrases, because these passages, which would be considered perfectly moderate here, will be read in many distant countries where the blood runs cooler and the imagination is less florid than in India. With these eliminations, indicated by the asterisks, here is the text of the paper drafted and read to me by these learned Pandits of Bengal.

"(1) O noble philanthropic Colonel Olcott: here are we, sons of old Aryavarta, come to bid you a hearty welcome—we who have long coveted the blessing of your presence. It is our good fortune you should be here in this city of Bhagalpore.

"(2) Blessing and long life to you, noble-minded Founder of the Theosophical Society. Our worst evils fly before your noble presence. Your championship revives the dry-bones of Aryan Philosophy.

"(3) O . . ., in the presence of your lotus-feet the people of this place find their tree of desire in blossom. Our good deeds of a former birth have resulted in the long-looked-for blessing of your presence among us.

"(4) O . . ., the gloom that filled our hearts is dispelled by your coming. Passion, envy, hate, and

the whole lot of *karmas* have given place to a profound calm in our minds, so fickle by nature. A mysterious charm has to-day wrought a sudden change and plunged us deep into a state of supreme blessedness.

"(5) The time-honored distinction of the Vipras vanishes in the air in your presence, which, in spite of your foreign birth, is felt as that of one of our own caste. This is the fruition of the Yoga you have practised . . ., you can make others having the benefit of your blessed company, like yourself.

"(6) Self-denial, purity, Vaidic learning, holy ritual, good manners, modesty, meditation, charity, piousness, reverence for the twice-born and the elders—these and like qualities which once formed the life of the Hindu character, were alike nearly gone from our country. They have once more come into being because of your holy contact.

"(7) Those evil giants once destroyed by Rama and other heroes of hoary antiquity, that once more ran rampant under the ægis of Western civilisation, have again been committed to the burning flames of a noble philosophy.

"(8) Many who having ceased to believe in the mighty word of the Rishis, had gone out of their path to work themselves harm and all manner of mischief by giving themselves up to foreign vices, have now returned to the flock they had strayed from.

"(9) How can we discharge the debt of gratitude we owe you for your exertions in every quarter of the world, to awake in the minds of men a holy reverence for the precious truths that lie stored up

in the systems propounded by our Rishis of old, as the fruit of their long lives of profound meditation.

"(10) All honor to thee, O India, for no less a personage than the Colonel (*karnala*=all ear) himself has listened to the mighty Rishi-word. With his noble example staring us full in the face, we the twice-born of the great Arya race, feel ashamed of our present degeneracy.

"(11-12) O you, whose great soul regards the whole world as related, whose path is the path of the Brahmins of old, having taken leave of wealth, riches, and all earthly concerns, having broken asunder all those ties which bind oneself to one's birthplace, so dear to mankind, you have taken in hand a most difficult task, to do good to us in a far country.

"(13) Where is your own country in the far-off region of Patala, and where our own country of Aryavarta? Great and immeasurable is the distance between the two. Your coming to us proves the all-powerful attraction of love acting from a previous state of existence.

"(14) From the noble Lady whose motherly care for human weal, and the word of the Mahatmas have made her 'lay all selfish cares aside' for the good of us, fallen ones, and from yourself, O Colonel, age-stricken, decayed Theosophy, revived, receives its nourishment.

"(15) Countries once known as foreign have now become more than our own home; the future world supposed to be next after this being, has come to be felt as our own world; the men once regarded of different stock have, through mutual love, become

more than brothers. Thus, before the charm of your loving nature, everything loses its alien character.

"(16) What shall we ask of you, who have all our desires gratified by getting you into our midst?

"It now remains for us to pray with our whole heart for you a long life of continuous health and uninterrupted success.

"*9th April*, 1883."

The above is a specimen of a very large number that the Founders received after coming to India. The custom is ancient, and generations must pass before it will be abandoned.

To return to our mesmeric healings: A fact important in its suggestiveness was to be noted in the case of our blind Badrinath. Supersensitive as I found him, he would nevertheless sit and let me treat him for a half-hour on end without ever losing his consciousness, but on one occasion, when the thought occurred to me that he should sleep, his head instantly fell back, his eyelids fluttered, his eyeballs rolled upward, and he was fast asleep; one moment he was wide awake, observant of his surroundings, and ready to talk with me or anyone else in the room, the next he was so oblivious to sounds that bystanders vainly tried to excite his attention by making loud noises, shouting in his ear, etc. This was as fine an example of thought-transference as was ever recorded. The change was so sudden as to startle me for a moment. It was as though his life were hanging on my pleasure, and as if, in case I so willed it hard, he would drop dead from heart-failure. I got a valuable

lesson from it, *viz.*, to keep ever alert as to the workings of one's own mind while the brain of a subject was in close mesmeric subjection to one's will. To anticipate a theory that may suggest itself to some readers skilled in Hypnotism, I might put the question whether Badrinath Babu was not equally obeying my unuttered thought when consciously undergoing my healing treatment, as when he dropped asleep in obedience to my unspoken command. This may be so, but in that case it only gives us a still more convincing proof of thought-transference, for, whereas my thought now willed him to keep awake to be treated, it then willed him to fall into the mesmeric slumber. And how wonderfully sensitive must the subject be to exhibit these different and opposite phenomena!

Yet an entry in my Diary for 21st April raises the question whether the theory of absolute mental union between my patient Badrinath and myself will hold. On the day in question, while under treatment for his eyes, upon which business my thoughts were closely concentrated, he suddenly began describing a shining man whom he saw looking benevolently on him. His clairvoyant sight had, it seemed, become partially developed, and what he saw was through closed eyelids. From the minute description he then proceeded to give me, I could not fail to recognise the portrait of one of the most revered of our Masters, a fact that was the more delightful in its being so unexpected and so independent of any mental direction on my own part. Granting, even, that Badrinath may have, by association of ideas,

connected my presence with that of some such personage, it is to the last degree unlikely that he should have described to me an individual with blue eyes, light flowing hair, light beard, and European features and complexion, for surely I have not found among the Brahmins any legend of such an adept. Yet the description, as above said, fitted accurately a real personage, the Teacher of our Teachers, a *Paramaguru*, as one such is called in India, and who had given me a small colored sketch of himself in New York, before we left for Bombay. If Badrinath was reading my mind, he must have gone down deep into my subjective memory, for, since coming to India, I had had no occasion to keep the face of that Blessed One before my mind's eye.

The *Theosophist* Supplements for the year 1883 teem with signed certificates of the cures I was so happy as to make, in most parts of India, during my long journeys of the year. Out of these I shall copy one, not because of its being more striking than many others, but because I happen to have ready to hand the original paper which was drafted and signed at the time by the bystanders. The incident occurred at Bankipur, on 22nd April, 1883. The certificate reads thus:

"BANKIPUR, 22-4-'83.

"The undersigned certifies that he has just been restored to speech by Col. Olcott, after a mesmeric treatment of not more than five minutes; and also had strength restored to his right arm, which, until then, was so powerless that he could not lift a pound's

weight. He lost the power of articulating words in the month of March 1882.

"(Sd.) RAM KISHEN LAL.

"Witnessed by the cousin of the patient.

"(Sd.) RAMBILAS.

"The above wonderful cure was wrought in our presence, as above described.

"(Sd.) Soshi Bhooshan Moitra, Amjad Ali, Jogash Chandra Banerji, Govinda Cheran, M.A., B.L., Amir Haidar, Pleader, Mohas Narayan, Gaja Dhar Pershad, Pleader, Judge's Court, Sajivan Lal, Lal Vihari Bose, Haran Chandra Mittra, M.A., Purna Chandra Mukerji, Bani Nath Banerji, Girija Sakhar Banerji, Hem Chandra Singh, Ananda Charan Mukerji, Ishwar Chandra Ghose, Baldeo Lal, B.A., and Purnendu Narayan Singh, M.A., B.L."

And it may be said, once and for all, that these healings were not done in private, without witnesses, and with some mystical paraphernalia or foolery, but openly, in the sight of all men; sometimes even in temples before crowds of people; so that my every narrative is capable of verification by living witnesses, to say nothing of the cured patients themselves, of whom many must have been radically benefited, like the Sinhalese jeweller, Don Abraham, about whom I have spoken above.

I slept that night on a bench at the railway station, to be ready for a very early train and spare my friends the very disagreeable necessity of turning out before dawn to come and see me off. I reached my next point, Durbangha, at 1 p.m., and became the

guest of the Maharajah, Lakshmiswar Singh Bahadur, a well-educated Prince, who paid me every possible attention and became a member of the Society. There was a lecture on the second evening, before a large audience, and on the 25th a Branch T. S. was formed with ten members. This Maharajah is enormously rich and has a new palace which contains a Durbar (audience) Hall that is splendid in its dimensions and architectural embellishments. In my innocence of what the future had in store for us, I wrote in my Diary the question: "Shall he be the Asoka of the T. S.?" Events have decidedly answered this in the negative, as will be shown at the proper time. On the present occasion, he could not have been more gracious or charming.

Ranegunge was my next stopping place. Here I was the guest of Kumar Dakshiniswar Malliah, owner of twenty-five coal mines, who put me up in his garden-villa, and was extremely kind. On the next day there were psychopathic treatments, and, in the evening, I organized the Searsole T. S., after which there was the usual *conversuzione*, at which I had to answer innumerable questions, and at 1 a.m. I moved on towards Bankura. I got a snatch of sleep from 7 to 11-30 a.m., and then business began again. That evening there was a lecture; the next day, healings and the mesmerisation of eight large pots of water for distribution among the sick; in the evening a meeting of the Branch T. S., with admission of six new members. The next morning, at 5.30 a.m., I went by horse carriage back to Searsole, slept at the station until 3 a.m.,

when I took train for Burdwan. I was met by the Dewan Sahib (now Raja) Bun Behari Karpur, Dr. Mohindranath Lal Gupta, and Professor Dutt, of the Maharajah's College, and lodged at the beautiful residence of the Dewan. My audience at the College that evening was very large and enthusiastic, the Chair being taken by Mr. Beighton, the Sessions Judge. For three or four hours on 3rd May, I healed the sick at the Dewan's house in presence of the Maharajah and his chief nobles, spent part of the day with him at the palace, and in the evening formed a local Branch, of which the Dewan became one of the members. The Maharajah wanted to join, but I refused him on account of his dissipated habits. Like too many of our best young princes, he was being completely ruined in health and morals by the debauched courtiers who surrounded him. It is a pretty good proof of his innate goodness of heart that my decision seemed to increase rather than abate his respect for me, and I had more than one evidence of his goodwill before his untimely death, which occurred some little time afterwards.

At Chakdighi, my next station, I was lodged in the most tastefully and comfortably furnished garden-house I had ever seen up to that time. The Zemindar's name was Lalit Mohan Sinha Rāya, and I thought him a very estimable young man. A Branch T. S. was organized that evening, and sundry mesmeric cures wrought the next morning. The next day saw me on the wing again, the station in view being Chinsurah, where a new Branch was also organized. My healings were made as usual, and a lecture given

at the Barracks before a huge audience, whose welcome was expressed in the most demonstrative manner. Then on to Calcutta again, which I reached at 9.30. a.m., on 8th May, tired enough; as may be imagined when one reflects that this was in the hottest season of the year, when the wind blew like the breath of a furnace and swirls of dust choked one, if one ventured out of doors before the going down of the sun.

CHAPTER XXIX

HEALING OF THE DUMB MAN IN THE NELLIAPPA TEMPLE

WHAT his Sunday is to the "slave of toil," my rare half-days of rest were to me on this 7,000-mile circuit around India in the year 1883. I had one such, I see, on 9th May, and up to the 14th I was, at least, settled in Calcutta, but then the ceaseless round had to be taken up again, and I left by steamboat for Midnapore, which transit by the breaking down of a second boat on the Ooloobaria-Midnapore Canal lengthened out to a two-days' journey. There was a lecture on the evening of my arrival, healings of the sick on the 17th, and the formation of a local Branch with ten members, after which I returned to Calcutta. A lecture was given at Bhowanipore on the 20th, and the next day, at the Calcutta town hall, we celebrated, in presence of a huge audience, the first anniversary of the Bengal T. S. Babu Mohini Mohun Chatterji, Secretary of the Branch, read an interesting report, in which he said that the formation of the Branch was due to my first lecture in the same hall in the preceding year; the President, Babu Norendranath Sen, gave a lengthy and eloquent discourse; Babu Dijendranath Tagore, the highly

respected and cultured Acharya of the Adi Brahmo Samaj, spoke on the subject of Brotherhood; Dr. Leopold Salzar, on Protoplasm and Dr. Jaeger's discoveries in odorant matter; and I wound up the proceedings with a historical retrospect of the doings of Dr. James Esdaile in Mesmeric Anæsthesia, as applied to surgical operations, at Calcutta, in the years 1846, '47, '48, '49, and '50. I see by the report (*Theosophist*, Supplement, July, 1883) that I read, among other things bearing upon the subject of Mesmerism, the striking passage from the *Sariraka Sutra*, where it is said: "By the aura (*ushma*) of the inner man (*sukshma sarira*) is the aura (*ushma*) of the outer man (*sthula sarira*, or body) perceived."[1] The statement of Mr. Leadbeater (*vide Theosophist*, December, 1895, art. "The Aura") that the aura extends, in the average man, to a distance of about eighteen inches or two feet from the body in all directions, is borne out by the warning in the ancient *Atharva Veda*, that if a healthy person comes within *two cubits, i.e.*, about three feet, of the body of one diseased, the malady is likely to be communicated to him; the patient's aura transmitting its germs midway between the two, at the point where the spheres blend and the microbes are transferred from the emittent to the recipient aura. According

[1] The passage reads thus: *Asyaiva chopapatte resha ushma*. In the dictionaries *ushma* is, I know, explained as heat with the implication in some cases that *prāna* is meant. That it is not the animal heat of the body is clear enough from the fact that the *ushma* of the spiritual body is mentioned. Under the circumstances, then, I think that our word aura (Sans. *tejas*) more nearly explains the idea conveyed in the context than would any English synonym.

to Susruta, "leprosy, fever, dropsy, eye-diseases, and some other abnormal conditions," are communicated from a patient to a healthy person by conversation (intercourse), contact, breath, sitting together at meals or on the same couch, use of the same clothes, garlands of flowers, and scented paste (*anulepan*). Apropos of the now raging bubonic plague of Bombay, *Atharva Veda* says that "Even if a son born of one's own loins be attacked by . . . carbuncle . . . he is never to be touched": a mandate which is not very closely observed in our time of brave, self-forgetful nursing of the sick. But to return from this digression. The above-mentioned occasion was my last public appearance of that year in that portion of India, as on the following day I sailed for Madras. It having been brought to my notice that some of the facts given in this narrative with respect to mesmerism and mesmeric healing have been rather widely commented upon by the Press, it may perhaps interest the public to read a summary of the table of statistics which was published by my friend, Nivaran Chandra Mukerji, who accompanied me throughout the tour, and kindly acted as my private secretary: his report will be found in *Theosophist*, Supplement, June, 1883. He says the table represents in one column "the number of patients (they were of both sexes, all ages, conditions of social life, and sects) upon whom he (I) actually laid his hands, and in another, that of the gifts of vitalised or mesmerised water made by him (me). I have reduced vessels of all capacities—*ghurras*, *lotahs*, jars, bottles, etc., to an uniform

standard of the pint bottle". In the first column are enumerated the twenty stations where I healed the sick, and it is reported that I dealt with 557 patients; in the other column it is shown that I gave 2,255 pint bottles of mesmerised water, and Nivaran Babu, assuming that each bottle represented but a single patient—a too moderate estimate, I fancy—makes a grand total of 2,812 sick persons treated by me in the circuit of fifty-seven days. Additional facts, of interest to my colleagues at least, are that within the time I travelled "2,000 miles by rail, steamboat, budgerow (canal boat), horse-gharry, elephant, horse-back, and palanquin, the travel being sometimes by night, sometimes by day". I gave, it seems, "twenty-seven lectures, organized twelve new Branches, visited thirteen old ones, and held daily discussions on philosophy and science with hundreds of the ablest men in Bengal and Behar." Nivaran even describes my diet with liberal praise, and tells how many potatoes, ounces of green vegetables, macaroni, vermicelli, slices of bread and butter, and cups of tea and coffee I took, and how well I thrived on non-flesh diet. That the vegetarians may not claim me as an indiscriminating convert, I must say that if Nivaran had gone the tour of 1887 with me, he would have seen me so weakened by this diet that I was peremptorily ordered to resume my usual food, and apparently saved my life by not being so fanatical as poor Powell, who lost his life through asceticism. I think it will be found true that any special diet may be a man's "meat" at one time, and his "poison" at another. I have no

sympathy with undiscriminating fanatics. At this very time of preparing this volume for the press, I am practising vegetarianism again as a preventive of hereditary gout, and find it most efficacious. To compare pigmies with giants, it seems that my case was, in this, like that of the Buddha who fainted at the end of a long fast and saved his life by eating the rich food brought him by the sweet-souled Sujata, daughter of a nobleman. I recollect that when Mrs. C. Leigh-Hunt Wallace, the authoress of a standard work on Mesmerism, saw the statistics of my year's total score of treatments, she wrote me that there was not a mesmeriser in Europe who would dream of touching with mesmeric intent half that number of patients. She meant, of course, professional healers like herself, not prodigies like Schlatter, Newton, the Curé d'Ars, Zouave Jacob, and others who have professed to have been working under an overshadowing spiritual control. So far as that is concerned, I frankly confess my belief that I could not have gone through such a great and sustained outpouring of my vitality, unless I had been helped by our Teachers, although I was never so told by them. What I am forced to realize is that I have not had so phenomenal a healing power since I got my order to stop the work, *i.e.*, towards the close of 1883; and I am convinced that, though I should try ever so hard, I should fail to cure those desperate cases which I would then dispose of with the greatest ease within a half-hour or even less.

I had a hearty welcome home from H. P. B. and the rest, and a series of phenomena were done, chiefly for my benefit, among which I shall only mention

the one noted in my entry for 6th June. I say that "not being able to decide whether to accept the invitation to Colombo or that to Allahabad, I placed A. C. B.'s letter in the shrine, locked the door, instantly reopened it, and got the written order of ∴ through . . . (a second Adept) in French. It was done while I stood there, and not a half-minute had elapsed". So far as it goes, that pretty effectually disposes of the pretence that these communications were fabricated in advance and passed through a sliding panel at the back of the shrine. A whole month of homely desk work at Adyar was a delightful episode, varied with healings of patients, reception of visitors, and metaphysical discussions with H. P. B. I restored speech to one patient, cured paralytics, deafness, etc. One case is interesting as showing a progressive cure of loss of hearing. A young man who could not hear the ticking of a clock held against his ear, was at the first treatment made to hear it at the distance of 4 feet 6 inches; at the second, at 6 feet; at the third, at 15 feet; at the second he could hear conversation at the distance of 13 feet. On 24th June a boy who had long been paralysed in his legs was, in one treatment, made to walk about the room.

On 27th June I sailed for Colombo, arrived on the third day, and plunged into the business cut out for me, *viz.*, the grievances of the Buddhists in the matter of a riotous attack made on them by the Catholics, without their getting redress from Government. The next fortnight or so was taken up with this affair, and with personal interviews with the Governor of Ceylon, the Colonial Secretary, Inspector-

General of Police, Government Agent for the Western Province, the leading Buddhists, the chief priests, and counsel. I drafted petitions, remonstrances, instructions to counsel, appeals to the Home Government and the House of Commons, had many consultations and discussions, presided at Branch meetings, and, generally, was kept busy. All having been got into trim, I crossed over to Tuticorin on 14-15th July, and began a long tour through Southern India, which was full of variety, excitement, and picturesque episodes.

Let us begin with my arrival on 17th July, at Tinnevelly, the station where our Colombo Buddhist committee and I planted the cocoanut amid the tumultuous rejoicings described in a former chapter. We reached the station at 6 p.m., and found a huge crowd waiting. Five thick ropes of flowers, rather than garlands, were put about my neck and mounted to the top of my head; my hands, arms, and pockets were filled with ripe limes—the fruit of welcome and respect; I was put into a canopied sedan-chair; the chief local and governmental officials walked beside, in front and behind me along the dusty road; a young Brahmin threw loose flowers on and about me and tossed them into the air, strewing the road with an odorous carpet; the temple Brahmins came and handed me the flower-wreathed silver lotah and the tray on which lay a broken cocoanut, some red powder, limes, and camphor. The procession moved on with waving flags and banners; two bands of musicians—one from the temple—clanged their wild music, and so we proceeded until the flower-and-plant-festooned

bungalow assigned to me was reached, and I was allowed to get in from the heat of the road and enjoy its coolness. A welcome was here spoken by an ex-judge of Travancore, a learned and estimable gentleman, to which I responded, of course. Does it not seem as if all this gave the lie to the inimical Missionary tale of 1881, that the orthodox Brahmins had felt so outraged with the pollution of the temple by our cocoanut-planting party that they had uprooted the nut and purified the premises to get rid of our unholy taint! But why waste time or "spoil one's blood," as the Russians say, in refuting the numberless calumnies that have ever been circulated against us, when they refute themselves all in good time?

The next day I lectured on the lawn outside my bungalow to an audience which included all the leading men of the place. At the close I made an earnest appeal for the supply of a good Theosophical library for Hindu boys, and got a very handsome sum subscribed on the spot. This, if my memory serves me, was the first of a long series of successes in the same direction, and down to the present moment I have continued to press the claims of Indian youth upon their elders for the means of proper religious culture. I hope that, when I leave the scene, somebody among my colleagues will thoroughly cultivate this best, most fertile of all mental and moral fields in India. There is no other to be compared with it.

As the publicity given by the Ceylon Press to my early healings created an importunate demand for repetitions on the Bengal tour, so the exciting narratives of the North Indian papers caused me to be urged

with equal pertinacity to exercise the power for the benefit of the sick in South India. They besieged me at Tinnevelly, as at all the other stations, and some marvellous cures were wrought. An entry of a few words in my Diary for 20th July recalls to memory one of the most dramatic experiences of my life. I had gone to the Pagoda to sprinkle the "Tree of Friendship" with some refined rosewater, and was followed by at least 1,000 idlers, who, for lack of better amusement, watched my every step and exchanged opinions on my personal appearance. A young man of twenty-five or thirty was brought me through the press, by his father, with a prayer that I would restore his speech, which he had lost three years before. Having neither elbow-room nor breathing-space, I climbed up on the continuous pedestal or basement that supports a long line of monolithic carved figures of Hindu deities, drew the patient up after me, called for silence, and made the father tell the people about the case. What then happened may as well be quoted from the printed contemporary record—a letter from the well-known late S. Ramaswamier, F.T.S., in *Theosophist* Supplement, August, 1883. "Amidst a great crowd," says he, "right in front of the Nelliappa temple, the Colonel laid his hands on the unfortunate dumb man. Seven circular passes on the head and seven long passes, all occupying less than five minutes, and speech was restored to the no more silent man! The Colonel, amidst deafening shouts of applause and thundering clapping of hands, made him pronounce the names of Siva, Gōpāla, Rāma, Rāmachandra and other deities as

glibly as any other bystander [could]. The news of this restoration of speech spread at once throughout the town and created a great sensation." And no wonder, for when I made the patient shout the sacred names at the top of his voice, half the crowd rushed out into the street in mad excitement, waving their arms over their heads, and crying, in Indian fashion: *Wah! Wah! Wah!* Recollecting the mean tricks the Missionaries had played on me at my first visit, in circulating a scurrilous pamphlet against H. P. B. and myself, to which, in contravention of law, no publisher's or printer's name was attached, and in putting afloat the falsehood about the cocoanut tree having been uprooted by indignant Brahmins, I planned a little deserved punishment on them. I told the patient's father to take his son to the chief Missionaries at Palamcottah—a suburb of Tinnevelly—tell them about the cure, quote to them the 17th and 18th verses of St. Mark's XVIth Chapter, and demand, on behalf of the Hindu community, that, in proof of their divine commission, they should restore speech to somebody as I had done in the Pagoda. Their reply to be communicated to the Hindu public. Several days later he came and reported to me the result. I had expected some amusement, but fancy my surprise when he told me that one of the chief *padris* had declared his story a lie, and not one would believe that his son had ever been speechless! The subterfuge was so ingenious that it excited my profund admiration, and I had a good laugh over their astuteness. More than they had, I imagine, since the man was known to the whole

town, and the cure had been made with the greatest publicity.[1]

I went on to Trivandrum, the capital of Travancore, by bullock cart, and was banged and bruised all over; the distance being about a hundred miles and the road a trying one. Trivandrum was reached on the second morning, and the principal nobles and officials came to present their compliments and welcomes. I made ceremonial calls on H. H. the Maharajah, a cultured man, well known for his magazine articles on the Vedānta and other serious subjects, and on the British Resident, the Eliyah Rajah (Heir Apparent), the Dewan (Prime Minister), and other important personages. His Highness, the Maharajah, had up his palace Pandits to meet me, and started a discussion between them and myself on the subject of Yoga, he himself serving as interpreter. At my lecture that afternoon most of the Royal Princes were present, and as one of them was notoriously intemperate, I took occasion to draw a picture of what was the ancient ideal of an Indian Prince, and compared

[1] First-hand proof of these strange cures being best of all, it will be as well to copy here the certificates which were printed in the *Theosophist* Supplement for August, 1883. They read thus: "We hereby certify that in our presence Col. Olcott has just restored speech to Oomayorubagam Pillay, son of Utheravasagam Pillay, of Palamcottah, after a treatment of less than ten minutes. For three years he has not been able to pronounce any word, except the first syllable of the name of Rāmā, and that but indistinctly. He can now articulate many words plainly and in loud voice. (Sd.) Utheravasagam Pillay (father of the patient); Soccalingam Pillay (his uncle); Sonachellum Pillay (his father-in-law); N. Padmanabha Aiyar, F.T.S.; Vallinayagam Pillay. The above is strictly true. (Sd.) Oomayorubagam Pillay (the patient). Tinnevelly, 21st July, 1883."

it with the sad contrast presented in most of the Indian Courts at the present day, of course, not mentioning its special applicability in the present instance, since that—as the French say—*sautait aux yeux*. Many patients presented themselves for treatment, and I see that on the first day all but one were more or less benefited. On the second morning the Royal Family were present at my rooms to watch operations, and among other cures recorded is that of an old woman to whom I restored speech in their presence. Before leaving town I admitted a number of respectable candidates into our membership. The ordeal by bullock-cart thumping had to be faced again and in due time I got back to Tinnevelly, with a rather realizing sense of my anatomy at the end of the journey. *En route*, I lectured at Nagercoil to a big audience. Further additions to our membership were made at Tinnevelly, and I then passed on to Srivilliputtur, where I formed a local Branch, thence to Sattur, and then onwards to Madura, one of the largest, most prosperous, and enlightened towns in Madras Presidency. The Meenakshi Temple is, I think, the finest Hindu religious structure in India—it is 847 × 744 feet in area, and full of giant monolithic statues; it was once the seat of Tamil learning, the statuettes of forty of its most renowned Pandits being kept in a closed room which, probably, few foreigners visit, and which is the sad memento of glorious days of ancient learning, now almost forgotten. There was, when I visited the town—and is now—a brilliant local bar, whose then leader, Mr. S. Subramanier, F.T.S., is now creating for himself

a permanent renown as a Justice of the High Court of Madras. I was put up in his garden-house and soon became acquainted with every man in the town worth knowing. The next evening my lecture was given in the noble palace of Tirumala Nayak (the Pandyan king of the seventeenth century), under difficulties. The palace is built and paved with stone, and the effect of the presence of a crowd within the building is to create a roar and confusion of sound quite unmanageable. I was first placed to speak on the place under the dome in the Rotunda, where the Prince of Wales had held his Durbar, but the mere rubbing of the unshod feet of 2,000 people on the pavement and the murmur of their friendly voices prevented my making myself heard, even by friends a few feet off. They craned their necks forward, curved their hands behind their ears, bored me to the centre with their anxious glances, as though their eyes had been drills, and half opened their mouths, as the deaf instinctively do, catch the air vibrations within the cavity of the mouth as well as those of the tympanum. But it was useless, I was only shouting myself dumb for nothing; so I stopped and made signs of despair and regret. A shouted confab then ensued between the Committee and myself, which ended in my going into the majestic sculptured hall where the District Court now sits. A strong guard was placed at the door of entrance, to admit only those who knew English, and from the bench on the raised dais, where British justice is dispensed, but where, formerly, the Indian Sovereign received in state, I spoke for more than an hour to a listening

crowd of perhaps 800 to 1000, including all the highest in birth, position, and influence and the brightest in intellect.[1]

The next day and the following my services as healer were in great demand, and each palpable cure added to the excitement. I had to put myself in the hands of the Committee and let them select the patients to be treated, out of the pushing mob about the door. Mr. V. Cooppooswamy Iyer's report to the *Theosophist* says that I laid hands on twenty-seven persons, and that "the most remarkable cures were three cases of deafness, one obstinate case of chronic rheumatism of the spinal column, of nine years' standing, that had long defied the skill of the medical faculty, and two cases of paralysis—one of the middle finger of the left hand, and the other of the whole of the left hand. In the last case the cure was effected within five minutes." In short, a very respectable stock of "miracles," enough, if they had been exploited by an enterprising priest of any religion, to go far towards proving to outsiders his holding of a special Divine Commission: such ignorant fools are the credulous public of every country. I hope the intelligent reader has come to see long before now, that if the two Founders of the Theosophical Society had been the speculative tricksters they have often

[1] Hunter's *Gazetteer*, describing the Palace, says it is "the most perfect relic of secular architecture in the Madras Presidency". The main structure consists of two parts, an open court and a lofty hall. The style is a mixture of Hindu and Saracenic. The courtyard is about 100 yards square, with high walls of brick, forming long galleries surmounted by domes. One side is constituted a hall and its lofty domed roof is supported by circular pillars of granite.

been said to be, they could have rolled together immense sums of money and been worshipped as superhuman personages, instead of having had such meagre revenues as the Society's yearly financial reports exhibit. It isn't as if we had never had the chance, for if ever any religious reformers in India had it, we have had. In this epoch of shrunken faith and debauched priests, whose animalized aspect is sometimes enough to turn one's stomach, H. P. B.'s unchallengeable phenomena and my healings caught hold of the popular imagination in such fashion that magnates literally laid their treasure-bags at our feet, and fabulous sums were offered us to show our various powers.[1] That we rejected all their offers with evident sincerity is the secret of much of the loyal friendship shown us throughout India, from the beginning until now. If we had ever taken a present for ourselves, the whole Indian public would have abandoned us in the Coulomb crisis, and we should have been looked upon as religious humbugs; whereas, as it is, all the Missionaries combined, of all the societies of the world, cannot rob us of our place in the hearts of India's children, degenerate, alas! as they are.

The cure of the hand-paralysis had an amusing sequel. The patient was of a good Brahmin family, the brother of a B.A., and vakil (pleader), who was impulsive by nature and not morally strong. He was

[1] A Muslim in Bengal once offered me Rs. 10,000 to turn aside for a few hours and cure his wife's paralysis, which, of course, I did not do, as I might have done, if he had been a pauper, and no friend of his had pronounced the word money to me.

eating his dinner when the lad returned from my rooms, his paralytic hand glowing and burning like fire with the restored rush of vitality through it. The vakil, a religious sceptic, too lofty in self-conceit to admit that soul is a reality, no sooner took in the fact of his brother's cure by the mere imposition of my hands, than his scepticism was swept away as by a flood; he left his meal unfinished, hurried over to me, thanked me extravagantly for the cure, hung about me all the day, became a member of the Society, and when I left for Negapatam and other stations, went with me, to serve or fight for me as I might choose. He took no change of clothes, if I remember aright, but just came as he was, like one who jumps into a boat as it is just shoving off from a foundering ship, without thinking of food, water, or luggage. Such dry-grass-burning zeal as this could not last long; despite his vows of loyalty shouted to the four quarters of the sky, my wild vakil has proved one of the shallowest friends I have met in India, broken fifty times his promises, and finally let me into paying out of my own pocket a quite large sum for building supplies which he asked me to get for Headquarters as his own gift, but never refunded the money. Quite a different sort of character was the other Brahmin vakil who accompanied me to Negapatam. He has been staunch all the way through, is a Trustee of the T. S., and has been chosen by me as one of the executors under my own Will. *Tot homines, quot sententiæ.*

At Negapatam things were much the same as at Madura. A great crowd met me on arrival, covered

me with flowers, formed in procession with a band of musicians, and led me to a decorated bungalow, where I replied to addresses, held conversations with roomfuls of questioners, formed a new Branch with twenty-seven members, lectured to one educated (*i.e.*, English-knowing) and one popular audience: the first was at my bungalow, the second in the Pagoda, through interpreters, to 3,000 persons. On 5th August I slept at the railway station and took an early train the next morning for Trichinopoly, where more hero-worship awaited me, with the thermometer at over 100° Fahr. in the shade. A warm welcome, truly!

CHAPTER XXX

SOUTH INDIAN WONDERS

POPULARITY, beyond a certain point, is very burdensome—as I found throughout the South Indian Tour of 1883. When, on the 7th of August, I got to the Trichinopoly town hall, where I was to speak, it was practically impossible for me to reach the door; a vast surging crowd occupied every foot of the approaches, and, instead of making room for me, hustled each other into a compact mass of perspiring flesh to get a look at the object of momentary curiosity. In vain my Committee pleaded, scolded, shouted, and pushed; I was brought to a standstill. So, then, I did the most natural thing, by climbing to the solid roof of a palanquin carriage where all could see me. If one wants to manage a crowd, one must never get excited nor precipitate; give the right initial impulse and let it gradually increase of itself. I knew perfectly well that not one man in perhaps a dozen there could understand English or really knew anything more about me than the fact that I was the friend and defender of their religion, and had a way of curing the sick that people called miraculous. So in standing quite still up there until they had had their fill of gazing, I was really preparing the close-wedged throng to segregate

into units. At first they shouted to each other and countercried to make order, to a degree that no voice could have made itself heard, so I kept silence. At last, however, as there came a partial lull, and as the sun beat upon me so as to make me want to get indoors, I raised my arms above my head and in silence held them there. Now a crowd is often like a crying baby whose attention can be caught by showing it some bright or strange object that excites its curiosity. I knew that and so kept silent. If I had begun speaking fifty people would have instantly shouted to another hundred to keep quiet, and there would have been a sibilation of "*hists*" and "*pstts*" on every side; but seeing me stopping in the same attitude, and wondering what I *was* going to say, the result was that I soon was able to have my intended word or two through my interpreter, who had climbed up after me. This reminds me of a trick that was played by the late Prof. James J. Mapes on a sleepy audience at one of his public lectures. I studied Scientific Agriculture under him forty-three years ago, and he told me the story himself in his inimitably comic way. Finding that his audience of tired farmers were dropping asleep in the middle of his learned discourse, he silently turned to the black-board behind him, wiped it with the cloth, stood looking at it as if meditating some problem, drew one thick vertical line through the middle, laid down the chalk, dusted his fingers, thought a minute, then turned back towards the audience—now thoroughly aroused and wondering what it was all about—and proceeded with his lecture to the end. He never

made the slightest reference to that perpendicular chalk line on the board. The farmers kept awake in the belief that he would!

When I had pacified the outside crowd at Trichinopoly, I slipped through the other sweltering crowd inside the building into a large back enclosure where, my audience following me, I gave my lecture without interruption; I standing with my back to the house wall so as to make it a sounding-board. Many a fiasco has befallen a speaker from neglect of this precaution: his voice being lost in the crowd.

The healings of the sick went on here daily, as at every other station, and on the 8th (August), it appears from the record, I treated seventy cases with more or less success. Of course, no one can foretell whether either of these healings, however effectual it may seem at the moment when the patient leaves the healer's hands, will prove radical cures or not: all depends upon the present state of his constitution. However, there were various cases of apparently perfect cure of the disease.

On the same evening I figured in a scene hard to surpass for picturesqueness and impressiveness. A lecture was to be given in one of the large squares of the venerable Vaishnava Srirangam Temple, known to all travellers as the largest religious structure in India. It comprises a central shrine surrounded by five enclosures, each including the next smaller, until the wall of the outer one is nearly a half mile long on each side. This is the place where Rāmanuja, the founder of the Visishtādvaita school of Brahmanic

Philosophy, thought out his system in the eleventh century and began his preaching mission throughout Southern India. The lecturing place assigned me was in the inner square in front of the Hall of the Thousand Columns, a structure of 450 feet by 130 feet in size, and of one storey. Fancy the scene which opened out before me as I turned the angle of the enclosure and came in sight of the giant hall and the open square. Under the canopy of the starlit sky there was a multitude of dark-faced, white-turbaned and white-robed Hindus, numbering perhaps 5,000, standing and squatting on the ground and covering the front portion of the roof-terrace of the thousand-columned structure. Many young fellows had climbed up by the carvings on the pyramidal *gopuram*, or gateway on the right, and sat on the pedestal-cornice. A small platform of planks, bedecked with flowers and greenery, had been constructed for me over the porch at the foot of the staircase leading to the roof-terrace in question, and I had to use some agility to get up to it. When I did, however, the whole picture burst into view, and by its weirdness deeply impressed my imagination. The only light, save that of the twinkling stars, came from flickering torches held by many peons stationed against the walls, and from a half-dozen on my platform which were so disposed as to bring my figure out into high light against the sombre background of the pyramid beside me. The silent crowd, half hidden in shadow, was diversified here and there by some standing figure of a Brahmin, naked to the waist, whose sacred thread showed against his bronze skin like a trickle of milk ;

and there on the platform, ten feet above their heads, the speaker, also clad in white, standing with his interpreter and one or two of the committee-men, the centre of observation, while the air of night refreshed us and the throng listened in complete silence to the elaboration of the discourse upon Hinduism and the necessity for the religious education of the young. The cheers, long restrained, broke out at the close, the torch-bearers waved their flambeaux, the sitters sprang to their feet, the boys dropped down from their perches on the *gopuram*, and, laden with garlands and hemmed in by surging thousands, I slowly worked my way to the outer enclosure where the carriage waited for me. As elsewhere, a local Branch of the T. S. was formed, and the next day I passed on to Tanjore, the capital of one of the greatest of the ancient Hindu dynasties of Southern India, and in all ages one of the chief political, literary, and religious centres of the South (Hunter's *Gaz. Ind.*, xiii, 195). What a pity it is that the stream of visitors to India hardly flows at all through the South, but all start at Bombay, and, after loafing through the towns of the North, where the seal of Muslim conquest is set on everything, empties out at Calcutta or turns back on itself to Bombay. The traveller managed by Messrs. Cook sees hardly anything at all of the India of the most ancient Indian dynasties, nor gets sight of the incomparable Hindu temples that embellish Southern India: it is like visiting Scotland and Ireland to see Great Britain, and omitting to visit London and other centres of English national development!

On arrival at the Tanjore railway station at 5 a.m., I found a crowd awaiting me, and the train steamed up to the accompaniment of a band of musicians. The notables of the place welcomed me with floral wreaths, and at a table placed on the platform I was served with coffee, and received and replied to the usual complimentary address. They put me up at the travellers' bungalow, and kindly let me enjoy my privacy until evening, when I was driven about the town and taken to the magnificent temple which, as Fergusson says, is known throughout the world. It consists of two courts and the great courtyard in which stands the shrine, a structure having a base of two storeys in height, surmounted by a pyramid rising in thirteen storeys, to the summit, which is 190 feet above the ground-level, and said to be composed of a single huge stone. Between it and the gateway lies, on a stone pedestal, the bull-colossus of Nandi, the Vāhan of Siva. The huge animal is carved, if I remember aright, out of one block of granite, and measures, though in the recumbent posture, some ten or twelve feet in height at the shoulder. The pedestal is covered by a stone canopy supported on carved square columns. My lecture was given from that pedestal, the multitude sitting on the flagged pavement of the courtyard. Directly in front of me was a huge stone lingam, the distinctive Sivaite emblem of the generative force in nature, and beyond that towered the grand pyramid, each of whose storeys is enriched with huge carved figures in high relief. I spoke through an interpreter, and in the pauses while he was speaking, as I looked about me, I was

struck with the romantic experience that I, an American, representative of the youngest and most feverish civilization of the world, should be standing there, beside the huge bull, surrounded by the chiselled emblems of the oldest of the world faiths, and talking to its living votaries about the truths embodied in the hoary teachings of their half-forgotten sages and rishis.

I was able to personally declare the falsity of a current superstitious story that the great pyramid casts no shadow. At 5 p.m., when I first saw it, there was a great black shadow stretching half across the courtyard. The Brahmin to whom I mentioned it said that the popular rumor is based upon the fact that it casts no shadow *at noon*! There was another lecture at the Reading Room in the town, and I greatly enjoyed a visit to the world-renowned Sanskrit Library in the Royal Palace, which was catalogued by Dr. Burnell, and found to contain some 35,000 palm-leaf and other MSS., and 7,000 bound volumes, among the former many very rare and valuable ones. Before leaving the town I treated many patients and made some interesting cures.

Kumbakonam, my next station—the "Oxford of Southern India"—is a famous educational centre, and the Indian professors at the College will compare favorably for learning and intellectual gifts with any in this country. At the same time their mental bias is towards Materialism, and at the time of my first visit they exercised a strong anti-religious influence upon the undergraduates, and, indirectly, on the boys in all the schools. I was warned of this in advance,

so when I lectured in the Sarangapani (Vaishnava) Temple, to an audience of 2,000 to 3,000, which filled the Eastern Prakara (side), and which—says the contemporary newspaper report—embraced "Vakils, professors, schoolmasters, mirassidars, ryots, merchants, and schoolboys," I discussed religion from the view-point of Science. The next day's lecture, at the same place, was of a more popular character, and treated largely of the duty of Hindu parents to their children. The practical results of the visit and discourses were—despite the sceptical professors and teachers—the formation of the now well-known local Branch, the turning of public interest into Hindu religious channels, and the collection of a handsome fund for a local general library. This, let it be remembered, was the year when what is now called the Hindu Revival began to spread all over India, when forty-three new Branches of the Society sprang into Being, and when the backbone of the Indian movement towards Materialism was broken. And that was ten years before the Chicago Parliament of Religions assembled.

I see recorded among the psychopathic cures wrought by me at Kumbakonam, another of those marvellous cases of deafness. The patient was a pleader of Negapatam, I think, who had come over on the chance of getting me to treat him. He could hear sounds with difficulty from a distance of a yard, but after a half-hour's treatment—on the verandah of the traveller's bungalow—I made him walk slowly away from me, listening to my voice, raised only to the ordinary pitch of conversation, and with orders to

stop the moment he lost it. I made my servant walk beside him, holding one end of a tape-measure of which I held the other extremity. When the lawyer stopped, the tape showed that he could hear me to the distance of 70 feet 6 inches, and I tested him by carrying on some conversation with him at that distance, his back turned towards me so that he might not deceive himself and me by reading my lips. I do not know what was the sequel of the case.

The reception given me at Mayavaram, my next station, was enthusiastic to a degree that could not be excelled, matching those of Tinnevelly, Trichy, and Guntur. I reached there at 7.30 a.m., was honorably received at the station, put up in the decorated rest-house, received visitors all day, and in the evening, after dark, was taken, in an open palanquin, in torchlight procession to the Mayuranathasami Temple to lecture. The newspaper report says that the procession was led by the temple elephant, bell-bearing camels, and a band of musicians. Seven thousand people were crowded into the building, and—as I was told—every man and woman in the town, not confined to bed, took part in the pageant. From a technical report of the cures, published by Mr. D. S. Amirthasamy Pillay, Civil Apothecary (a Government medical officer), it appears that some good ones were made. They included cases of paraplegia, deafness, neuralgia, and epilepsy. At this station Damodar arrived from Madras on Society's business, and brought me a new volunteer to act as my Private Secretary, *viz.*, Mr. T. Vijiaraghava Charlu, now for many years known as Manager of the *Theosophist*. He had resigned his

appointment under the Post Office Department, to work with us, and most faithfully has he done it ever since. Lacking the suave manner by which more than one worthless fellow among our associates has won wide temporary popularity, he has stuck to his work with the stern perseverance of an old Covenanter, and is best appreciated by those who know him most intimately.

A Branch being formed, I moved on to Cuddalore, where the same thing was repeated. My first lecture was in English, my second in the Pataleswaraswami Temple, to clustering thousands, when the services of an interpreter were availed of. Here an unusual compliment was paid me, as appeared from the published report of Mr. A. Rama Row. He says:

"As soon as he arrived there, he was carried in procession, followed by a large crowd, with Hindu music playing and flags flying. He was taken round the temple, inside the enclosure, which act, according to Hindu religious belief, forms the sacred *pradakshana*—a ceremony which hitherto only a Hindu has been allowed to perform. He was then taken to the gate of the temple, near the image of Nandi (the sacred bull of Siva). The *Arati* ceremony was then performed by the High Priest and the blazing camphor offered to the Colonel, and a flower garland placed about his neck. Then he went on the platform. The whole temple was crowded to suffocation."

What makes this act of respect and love the more significant is that I was not only a white man but

also a declared Buddhist, which impediments, however, did not prevent my being accepted as the chief officer of a Society which is committed to no particular religion but befriends all alike, and which was as loyally working with Indians to promote Hinduism as it had been with the Sinhalese Buddhists to revive Buddhism. They took me as the friend of their Mother India, hence as their soul-brother. As such I accepted it.

A visit to Chingleput finished up this part of the year's tour, and I went thence to Ootacamund to rejoin my dear colleague H. P. B., at the hospitable home of Major-General and Mrs. Morgan. The railway ends at Mettupalayam, at the foot of the Nilgiri Hills, and the traveller proceeds up the well-metalled mountain road in a horse tonga, or two-wheeled mail cart drawn by a pair of galloping ponies. The ride up is simply charming, and passing through forests, by banks of flowers, and past swarms of lovely painted butterflies, the air grows cooler and cooler, until midway one is obliged to stop at the rest-house and change one's light tropical costume for heavy woollens and even put on a topcoat. At almost every turn in the winding road splendid panoramas of scenery present themselves to view, while one finds Ootacamund a lovely village of picturesque houses, spreading over the foot-slopes of the grassy and forest-covered adjacent hills, the roads lined with roses, the enclosures joyous with lilies, verbenas, heliotropes, and other "floral smiles of God". At the toll-gate on the Coonoor Road, H. P. B. met me in company with our dear Mrs. Morgan, Mrs. Batchelor and

others of the family, the General being absent from home temporarily. My old "chum" seemed really overjoyed to see me and rattled on in her affectionate way like one who greets a long-absent relative. She was looking well; the champagne-like mountain air set her blood to leaping through her body, and she was in the highest spirits about the civilities that were being shown her by some of the high officials and their families. She worked off some of her excitement that same night by keeping me up until 2 a.m. to read proofs and correct her MS.! What an amusing creature she was when in the mood; how she would make a roomful of people hang on her lips as she would tell stories of her travels and adventures in search of the wonder-workers in Magic and Sorcery; and their eyes open in amazement when she would, now and again, ring some astral bell, or make some raps, or do some other minor phenomenon! And then, when they were gone and we two were at our desks working, how she used to laugh at their surprise and at their often stupid attempts to account for the remarkable facts which, up to that moment, had had no parallel in their experience! A self-satisfied ignoramus in society, giving out infantile explanations of psychical phenomena, and trying to show off his cleverness, at her expense, was her detestation, and she used to collar and crush him, metaphorically speaking, with fierce wrath. And how she hated the smug matron who, while absolutely unqualified to pronounce an opinion on these high subjects, and unblessed with Christian charitableness (!), would regard her as a horror not

to be mentioned in respectable circles! It was better than a play to hear her go on about them. She used to say that the Russian, Austrian, and French women might be very bad in their conduct, but were far more honest than the British and American women of like social standing, since they did their wicked things in the eyes of the whole world, while the others did their equally bad things behind doors and in hiding-places of all sorts. Undoubtedly, her rough ways, her daring eccentricities, her profanity, and other peculiarities, were simply her passionate protest against the shams and hypocrisy of society. A pretty woman, with her brains, would never have dreamt of making herself so talked about; being the reverse of pretty, both in face and form, she instinctively let herself make a splash all around her, as one having no admirers to lose, hence no reason to put her feelings under restraint. I am now talking, of course, about the woman, not about the sage.

To introduce our ideas to the notice of the European community of our Presidency of Madras, she and our friends were arranging for me to give two public lectures, and some of the chief officials were kindly interesting themselves in the affair. As a necessary preliminary I had to call upon them and their families, and the next two or three days were devoted to this. Out of hours our joint desk work went on and the hard labor was diversified with her bright talk and frequent grumblings at the cold. Certainly with cause, for the mercury marked forty degrees more of cold than we feel on the plains, the houses are heated with wood fires in open fire-places, the

winds blow in gusts down the open throated chimneys, filling the rooms with smoke and dusting one's paper and books with fine ashes. H. P. B. wrote in a fur coat, with a woollen shawl on her head and her feet wrapped in a travelling rug—a funny sight. Part of her work was the taking from dictation, from her invisible teacher, of the "Replies to an English F. T. S." which contained among other things the now oft-quoted prophecy of the direful things and many cataclysms that would happen in the near future, when the cycle should close. That she was taking down from dictation was fully apparent to one who was familiar with her ways. My first lecture was given at the Breeks Memorial School, to a full audience, despite a pouring rain. The plan was tried which had been adopted at Bombay by the Rev. Joseph Cook, that of having at the door a basket, with slips of paper and a pencil for the audience, as they passed in, to write the subjects on which the lecture was to be given. The slips were subsequently read out by the Chairman, Major-General Morgan, and the subject of "Occult Science" being voted for almost unanimously, I proceeded to enlarge upon it. At the end of an hour I wanted to stop, but the demand being made for me to continue, I did so for another half-hour. The second lecture was equally a success. To "keep out the rabble," as it was said, a charge had been made for admission, and on the proceeds being handed me, I sent them with a kind letter to the Treasurer of the local Hospital. He was a petty-minded, prejudiced military officer who actually refused at first to accept the gift on the score

of its being "devil money"—H. P. B. and I being regarded by him as emissaries of the King of Hell! Of course, he made himself the laughing-stock of the sensible portion of the community, and his colleagues on the Hospital Board forced him to reconsider his stupid decision. The Hon. Mr. Carmichael, a Secretary to Government, did a plucky thing in having us to dinner to meet his chief colleagues, on top of a wicked paragraph in the leading Madras paper which insinuated that we were secret political agents: this was intended and declared as his personal protest against the injustice. We were very thankful to him, it may be believed, and this repetition of the stale and baseless calumny caused me to address an official protest to the Government of Madras, upon certain petty tyrannies that had been exercised upon some of our Hindu associates in the Districts by their official superiors, because of their being members of the Society. I sent in copies of the correspondence between myself and the Government of India and its ruling in our favor, and asked the Government of Madras for protection. The question was circulated to the Governor and Members of Council, and, at the Council meeting of 12th September, full protection was officially guaranteed us so long as we infringed no law and abstained from meddling with things outside our declared field of activity. This was all that was needed to relieve us from annoyance, and since that time we have not been molested in any way.

v.3

INTRODUCTION

THE first volume of these historical sketches covered the period from the meeting of Madame Blavatsky and myself, in 1874, to our departure from New York for Bombay in December 1878; the second tells of our adventures in India and Ceylon, the formation of Branches, the giving of lectures, healings of the sick by hundreds, occult phenomena produced by H. P. B., etc., and brings us down to the autumn of 1883: at this time we take up the thread of narrative, and go forward to the month of May 1887. I think the reader will agree with me that the subject-matter of this volume possesses absorbing interest, quite equal to that in its two preceding volumes, if not even greater. Accounts are given among other things of my meetings with several of the "Masters" in the course of my travels, and of the results of the same, of our removal of the Society's Headquarters from Bombay to Madras, of H. P. B.'s last departure from her beloved Indian home into the exile of an European residence. The troublous times of the Coulomb conspiracy are dealt with in this volume, and the true story of the S. P. R. Report is placed on record, so that each member of our world-wide

Digitized by Google

organization may be in a position to refute the slanders which, even at this date, echo in some quarters round the name of Mme. Blavatsky. The building and formal installation of the Adyar Library, with ceremonies of an unprecedented character conducted by Indian pandits, Buddhist monks, Parsi mobeds, and a Muslim maulvi, are described, and numberless details of the growth of the theosophical movement, and of our Society in particular, are given. The story takes us to Europe as well as through Eastern lands, the intelligent reader being afforded the chance of watching the gradual outworking of the plan of the unseen Founders, whom their visible agents know to be at work through this channel in spreading throughout the world a knowledge of the principles which were taught by the Ancient Sages, and the general understanding and adoption of which would cure most of the evils which now afflict mankind. For men suffer because of ignorance of themselves and their environment, and the false ideals of happiness which they struggle for are begotten by their ignorance—by nothing else. The war of individual men, of classes, and of nations can never—will never—cease until the ideal of the Perfect Man, the omnipotence of His perfected Will, and the irresistible force of the law of Karma are grasped by the public mind, and the present popular ignorance is dispelled.

CHAPTER I.

OFFICIAL RECOGNITION.

IF there was ever a man who could turn a *menu* into a sort of alimentary poem, it is Brigadier-General A. Kenny-Herbert, ex-Military Secretary to the Government of Madras, now retired and living in London. He possesses so perfect a genius for cooking, that I believe he could develop the latent potentialities of a potato or parsnip so as to force one to realize what must have been the food of the Olympian gods. In fact, I should not be surprised to learn that he had been at least a *sous chef* in the Jovian kitchen, and along with his colleagues Soyer and Brillat Savarin, had reincarnated to teach our generation how to prepare digestible dishes. It is a passion with him, as it was with Alexandre Dumas, and I very much fear that—if 'tis

Digitized by Google

truly said that the ruling passion shows strong at death—he would refuse to die until he had had time to give his final orders for the preparation of the "funeral bak'd meats."

General—then only Lieut.-Colonel—Kenny-Herbert invited H. P. B. and myself to his house one day to a tiffin which, in compliment to us, he made an entirely vegetarian repast. After so many years I vainly try to recall the courses, but I have the most vivid recollection of the fact that we and the three other guests declared it to be superlatively appetizing. The service matched the food, giving one the impression that this was not a feast of Gargantua, but a Lucullan banquet, over the preparation of which an exquisitely refined taste had presided. Most of our Western vegetarian cookery, on the other hand, has given me the impression that it was but the serving up of chicken feed in a style the reverse of attractive to a refined nature. If vegetarians could but get this pseudonymic "Wyvern" to teach them how to do it, their cause would win fifty converts where it now does one. They have proved unmistakably that vegetable food is as nutritious and healthier than meat diet, they need go no farther; but their cause can never be won until their cooks learn how to make one's mouth water at sight of their dishes.

Whether it was the food, or the sweet hospitableness of our hosts, or the semi-malicious banter of Mr. Forster Webster, Mr. Reed, and Capt. Agnew, A.D.C., or the bright sunshine and flowers in the garden, or what not, Madame Blavatsky bubbled over with high spirits and kept the company in continual merriment. Anon, a jest would be followed by an occult teaching, and that by the making of "spirit raps" on

Digitized by Google

the table or silvery bell-tinkling in the air; and this party, like every other in which she had been present, broke up with the impression left on the guests that she was one of the most brilliant and entertaining, if eccentric, personages they had ever encountered. At Ooty, as at Allahabad and Simla, persons of the most influential position were disposed to be friendly to her and to the Society, some of the most impressible ready to submit themselves wholly to her charm. Here, as elsewhere, she spoilt her chances of full success by some sudden caprice of conduct, some passionate revolt against conventional narrow-mindedness, the uttering of strong language, or the indulgence of biting witticisms about some high-placed person. While eminently fitted to shine in the world, and having had many years of intimacy with it through her high birth, she had passed out of the "sphere of its influence," and brought away with her a feeling of disgust for social shams and of contempt for moral cowards. She railed at society, not like your parvenues, whose bitterness springs from their being kept beyond the threshold of the salons of the fashionable caste, but as one who, born in the purple and accustomed to equal association with peers and peeresses, had differentiated from her species and stepped up to higher ground.

The culminating point of my visit was the settlement with the Madras Government of the civil status of the Theosophical Society which, as was remarked in Chapter XXX. of the preceding volume, was successfully accomplished on the 12th September 1883 at Ootacamund. For convenient reference, I shall quote in this connection the text of

Digitized by Google

the letters which passed between myself and the Governor in Council. They were as follows :—

From Colonel HENRY S. OLCOTT,
President of the Theosophical Society,

To The Honorable E. F. WEBSTER,
Chief Secretary to the Government of Madras.

SIR,—I have the honor to address you on behalf of the Theosophical Society, of which I am President, and the objects of whose organization are as follow :—

I. (*a*) To promote the feeling of mutual tolerance and kindness between people of different races and religions ;

(*b*) To encourage the study of the philosophies, religions, and science of the ancients, particularly of the Aryans ;

(*c*) To aid scientific research into the higher nature and powers of man.

II. These are our only corporate aspirations, and, since the year 1875—when the Society was founded at New York —they have been openly declared and publicly defended. With them we have exclusively occupied ourselves, and have most strenuously refused to meddle with politics or to advocate any creed to the exclusion of others.

III. The principal seat of the Society's operations was transferred from New York to India in February 1879 for the greater convenience of our purely Oriental researches, and in December 1882 was moved from Bombay to Madras for a like reason.

IV. The Society was, in the first instance, an open body ; but it was found in practice that the successful

Digitized by Google

prosecution of physical experiments, in the progress of which the most private thoughts and aspirations of our common nature had to be expressed, demanded a more confidential relation between members. The principle of secrecy, identical with that of Free Masonry and Odd Fellowship, and with the same laudable motive, was therefore adopted as early as the second year of the Society's existence.

V. Our work being thus cut off from public view, many ladies and gentlemen of good position, socially, joined us, both in America and Europe—where branches after awhile sprang up. But coincidently with our coming to India this private relation between ourselves, and the great favor which our endeavours to revive Aryan learning excited among Hindus, caused a suspicion—to the last degree unjust and unfounded—that we might have under the mask of philosophical study some political design. Accordingly, the Government of India, at the instance of Her Majesty's Home Government, caused us to be watched both at Bombay, our residence, and while travelling over India. There being nothing whatever to discover of the nature apprehended, the expense and trouble lavished upon us only ended in proving our blamelessness of motive and conduct. For sufficient proof of which I would respectfully invite attention to the enclosed letter [No. 1025 E. G., dated Simla, the 2nd October 1880] from the Secretary to Government in the Foreign Department to myself—which I transmit in the original, with request for its return. It is therein remarked that "the Government of India has

Digitized by Google

no desire to subject you (ourselves) to any inconvenience during your (our) stay in the country," and "so long as the members of the Society confine themselves to the prosecution of philosophical and scientific studies, wholly unconnected with politics, . . . they need apprehend no annoyance, etc., etc."

VI. The above decision is in strict accordance with the oft-declared policy of Her Most Gracious Majesty's Asiatic relations with subjugated peoples, to maintain strict neutrality in all matters involving religious inquiry or belief; and, having ever faithfully observed the laws and respected the established regulations of Government in India—as everywhere else throughout the world where our Society has branches—we are entitled to protection, and demand it as our right.

VII. Entire freedom from annoyance and molestation we have not enjoyed in the Madras Presidency. In various quarters a certain pressure, none the less menacing because unofficial, has been put upon Hindu subordinates to prevent their taking active interest in our work. Though the vindication of the wisdom, virtues, and spiritual achievements of their ancestors was involved, they have been made to feel that they could not be Theosophists without losing the goodwill of their superiors—possibly their chances of promotion. Timid by nature, the subordinates have, in many—though, to the honor of true manhood, be it said, not all—instances, sacrificed their feelings to this petty tyranny. But despite all opposition, whether of sectarian bigotry or other kinds, the Society has so

Digitized by Google

rapidly increased, that it has already founded twenty Branches within the Madras Presidency. An impartial inquiry among our members will show that the influence upon the natives is excellent: improving their moral tone, making them more religious, more self-reliant, and more tractable as subjects. Should the Government of Madras care to test the truth of this assertion, I shall most gladly furnish every needed facility.

VIII. In view of the above facts, what I respectfully ask is, that the Government will make it understood that so long as the Theosophical Society shall keep to its declared field of activity, an absolute neutrality shall be observed towards it by officials throughout the Presidency; and especially forbid that the fact of membership or non-membership shall even be considered in determining the claims of any *employé*, English or Native, to official favor.

I have the honor to be, sir,

Your most obedient servant,

H. S. Olcott,

President, Theosophical Society.

Public Department.

Proceedings of the Madras Government.

Read the following [foregoing] letter from Colonel H. S. Olcott, President, Theosophical Society, dated 7th September 1883: (1) stating the objects of the Society; (2) transmitting a letter addressed to him by the Government of India, Foreign Department, of 2nd

Digitized by Google

October 1880, promising the members of the Society freedom from all annoyance so long as they confine themselves to the prosecution of philosophical and scientific studies wholly unconnected with politics; (3) complaining that in various quarters of the Madras Presidency, some native subordinates have been made to feel that they cannot join the Society without losing the goodwill of their official superiors.

ORDER.

13th September 1883, *No.* 1798.

Colonel Olcott may be assured that this Government *will strictly follow the lines that have been laid down by the Government of India* in their letter to his address. In regard to the complaint he has preferred, they observe that it is of a general nature only, no specific instances being mentioned; and His Excellency the Governor in Council need only say that he would *highly disapprove any interference with the religious or philosophical ideas* of any section of the population.

[True Extract.]

(Sd.) FORSTER WEBSTER,
Ag. Chief Secretary.

To Colonel H. S. OLCOTT,
President, Theosophical Society.

I have elsewhere mentioned H. P. B.'s inheritance of the fiery temper of the Dolgoroukis, and the terrible

Digitized by Google

struggle it was to even measurably subdue her irritability. I will now tell a story which I had from her own lips, and the incidents of which had a most lasting effect upon her through life. In childhood her temper was practically unrestrained, her noble father petting and idolizing her after the loss of his wife. When, in her eleventh year, the time came for her to leave his regimen and pass under the management of her maternal grandmother (the wife of General Fadeyef, born Princess Dolgorouki), she was warned that such unrestrained liberty would no longer be allowed her, and she was more or less awed by the dignified character of her relative. But on one occasion, in a fit of temper at her nurse, a faithful old serf who had been brought up in the family, she struck her a blow in the face. This coming to her grandmother's knowledge, the child was summoned, questioned, and confessed her fault. The grandmother at once had the castle bell rung to call in all the servants of the household of whom there were scores, and when they were assembled in the great hall, she told her niece that she had acted as no lady should, in unjustly striking a helpless serf who would not dare defend herself; and she ordered her to beg her pardon and kiss her hand in token of sincerity. The child at first, crimson with shame, was disposed to rebel, but the old lady told her that if she did not instantly obey she would send her from her house in disgrace. She added that no real noble lady would refuse to make amends for a wrong to a servant, especially one who by a lifetime of faithful service had earned the confidence and love of her superiors.

Digitized by Google

Naturally generous and kind-hearted towards the people of the lower classes, the impetuous child burst into tears, kneeled before the old nurse, kissed her hand, and asked to be forgiven. Needless to say she was thenceforth fairly worshipped by the retainers of the family. She told me that that lesson was worth everything to her, and it had taught her the principle of doing justice to those whose social rank made them incapable of compelling aggressors to do rightly towards them.

All who have published reminiscences of her childhood—Mme. Jelihovsky, her sister; Mlle. Fadeyef, her aunt; Mr. Sinnett, and others—testify to the innate kindness and chivalrousness of her disposition, notwithstanding her inability to restrain her tongue or her temper, which too often, as at Ooty, brought her into trouble. But whatever her faults, there is one chargeable to a high-placed lady at Ootacamund which does not redound to the latter's credit. My readers may remember my telling in the previous volume of H. P. B.'s "doubling" a valuable topaz or yellow diamond in a ring for Mrs. Sinnett while we were together at Simla. She did a similar favor for the lady friend at Ootacamund, a duplicate being made for her by H. P. B. of a valuable sapphire. In the course of time she and the lady fell out, or rather the lady fell away from her, but *kept the stone*, which she had had appraised by a jeweller and found its commercial value to be quite two hundred rupees. If poor, impecunious H. P. B. had played her—as was pretended—the trick of passing off a valuable sapphire (which she did not possess before it

Digitized by Google

went from her hand to the lady's) as a mysterious *apport*, at least the recipient *kept it* and made the only profit out of the transaction!

Two days after receipt of the Order in Council, we two left beautiful Ooty in tongas for Coimbatore, where we tarried three days, receiving visitors, answering questions, and taking candidates into membership. I lectured on two successive days and did a good deal of psychopathic work: on the 19th September, it appears, I mesmerized thirty large jars of water and seventeen bottles of oil for the use of the sick. H. P. B. was present when, in the usual formal way, I organized a local Branch under the name of the Coimbatore T. S. Our visit finished, we left for Pondichéry, followed by warm protestations of affectionate goodwill. This was one of the two or three occasions only in which my colleague even assisted in the formation of Indian Branches, despite the foolish idea entertained by many, ignorant of the facts, who constantly talk of her personally founding our Branches and wearing herself out with travel and its privations. Greater stuff was never spoken: her sphere was the literary and spiritual one, and her travelling in those days was mainly limited to the distances between her writing-table, the dining-room, and her bed. She was as unfit for platform and pioneer organizing work as she was for cooking; and when we remember that she thought to get boiled eggs by laying them, raw, on the hot coals, her culinary aptitude is easily gauged. Moreover, she had too much sense to try it, but kept strictly to her own department, as I did to mine.

Digitized by Google

From the Nilgiris to the French territory of Pondichéry one has to cross country from West to East by rail, at Villupuram Junction changing to a short branch line of twenty-six miles that takes one to Pondichéry. An amusing episode occurred between the two stations. At the Junction a certain elderly Hindu gentleman of our acquaintance accosted us with the usual signs of exaggerated reverence, so easily seen through by foreigners, and begged me to cure a paralytic—some rich or influential person—who would apply to me before reaching Pondichéry. Now this was too much for good nature; if I was to be pestered from morning to night by patients while stopping at stations, at least I ought to be allowed to rest myself while travelling. Naturally, I refused the man's request; but he stuck to me like a leech, got into our compartment of the train, and urged, and fawned, and begged until he wore out my patience. Just then we came to a place where there was a halt of ten minutes, and my pest abased himself to the dust to persuade me to get out and cure his man, whom we saw sitting in an arm-chair on the platform with a number of people about him. In desperation, and to rid myself of the man's importunities, I got out, went over to the sick man, handled his paralyzed limbs, made mesmeric passes over them with a little massage, got his arm flexible, then his leg, made him stand, walk, put his bad foot on his chair, lift the chair with the just-paralyzed hand, and then, as the engine whistle blew, salaamed the company and ran back to our carriage. All this while H. P. B. had sat

Digitized by Google

at a window, smoking a cigarette and watching my performance: she had never seen me at this work before and was deeply interested. As the train started, we saw my cured paralytic walk off, followed by his party and by a servant carrying the chair; not one of them looking behind him. The effect upon H. P. B. was most comical to me and set me to laughing heartily. The language she used was choice and so strong, that if her words had been leaden shot and hurled at their mark by the full force of her wrath, the backs of the retreating company would have been well peppered. Such ingratitude, such base and disgusting ingratitude, she had never seen in her life. "What do you mean?" I asked. "Mean? why, there was that man almost licking your feet in the train to get you to heal his friend; you heal him in the most marvellous way, on the platform, while the train stops ten minutes or so; and he, his friend, and his friend's friends calmly walk away, without a word of thanks or even a backward look of thankfulness. That beats everything I ever saw!" I told her that if she had travelled with me and seen my mesmeric healings, she would have realized that the number of patients who had shown real gratitude for benefits conferred were far less than one in a hundred: that if the other ninty-nine were really grateful, they concealed it from view, and left me to practice the rule that Srî Krishna gave to Arjuna, to do the necessary thing and care naught for the fruits of action. But she never forgot the incident.

CHAPTER II.

AN ADEPT SEEN AT PONDICHÉRY

CAN any of H. P. B.'s old friends figure to themselves how she must have looked and felt on being received at a railway station by a Governor's band playing "God Save the Queen," and then taken in procession, to the clang of music, to our lodging-house? That is just what happened to us on reaching Pondichéry, and I draw the veil over the amusing picture, as I have not the talent of Bret Harte to do it justice. At the house, in the presence of a select number of dark-skinned French "citizens," an address in a rickety sort of French was read to us and duly responded to by me; after which presentations, welcomes, and compliments followed, and our rooms were thronged by visitors day and evening. The next morning I had ceremonial visits to make to His Excellency the Governor, His something the Mayor, and various other local officials, by all of whom I was courteously and kindly received. Then I had a look through the town, upon which the French *cachet* was placed wherever possible—the blue-and-white enamelled

Digitized by Google

street signs at the corners, the little side-walk tables and chairs at restaurants, the Paris names and shops *in petto*, the French look of the Place Dupleix, the unmistakable French look of the functionaries and white traders, the very aping of French manners by the Natives. This little seven-by-nine colony, comparatively to British India as big as a postage stamp, and hemmed in by it on the three land sides, was totally unlike it, even in the attitude of the white and dark races towards each other. That, indeed, was what struck me most forcibly, accustomed as I had become to the immense gulf between the races in the Great British Dependency. My introducer to all these high officials was a dark, almost black, Tamil gentleman, a Membre du Conseil; and I was no less pleased than surprised to see how they received him as an equal, quite as though his dark skin did not prevent his being a human being as good as themselves. While I might have been amused to see my friend playing the citizen, I was not amused, but very much gratified, to see that his right to respect was freely conceded.

Before our arrival it had been arranged that I was to lecture in English and the Mayor would translate me into French. At the appointed hour I confronted a large audience of both races; the Mayor presided and I began speaking, but after a sentence or two, paused for my interpreter to take up the running. This went on for perhaps ten minutes, when the Mayor confessed that his stock of English was exhausted, and called the Interpreter to Government, a French gentleman, to replace him. Five or six sentences finished him up, and a third

Digitized by Google

translator, a Tamil, was brought forward, but he broke down almost at once. It is a matter of common observation that foreigners of every nation understand English when spoken by one of themselves much better than when we speak it, the accent making it more comprehensible. There I stood feeling like a fool, and ready to give it up as a hopeless case; but the Mayor, in his best French, told the audience that he had had a long conversation with me on Theosophy that morning, and that I knew quite enough French to speak without interpretation, whereupon I was called upon from all parts of the room to go ahead, and that I had finally to do despite my excuses and protestations. In a fashion that I dare not look back upon, I went on, and on, for more than an hour, expounding our ideas and Eastern philosophy as best I could; and the audience were kind enough to signify by loud applause that in coming out to India they had brought with them that lovely national trait of courtesy and forbearance for strangers who try to speak their tongue. You should, however, have seen the face and gestures of H. P. B. when I returned home and told her what I had done. She held up both hands in amazement, and made comments strongly suggestive of her horror at the possible and probable mistakes I had made in the use of genders and verbs! However, I did get through after a fashion, and we did form a T. S. Branch in the town, which was the chief thing after all.

I was so busy telling her the above and hearing her comments, that beyond a sweeping bow to the dozen or so of visitors sitting on the floor about her, whom she had

Digitized by Google

been entertaining during my absence, I took no notice of them. She, however, presently gave me a certain look, and by slightly inclining her head, made me look towards her right at one man who sat behind the others, and who met my startled gaze with a kindly smile. It was none other than one of the Masters known to me at New York during the writing of *Isis Unveiled*: one who disliked English so much that he always spoke and wrote French in his communications with me: the very one who gave me that cutting rebuke by duplicating several times the lead-pencil I hesitated to lend "H. P. B."—his temporary shell. I can't say if the others saw him, but certainly they could not have left him so unnoticed if they had, for he was to them, in majesty, as a lion to a whippet. I longed to approach and address him, but his eyes expressed the command that I should not, so I took my seat on the floor to H. P. B.'s left, where I had him in full view. The company did not stay long after my arrival, and he, after saluting H. P. B., like the rest, with folded palms, in the Indian fashion, spoke a word or two to her apart and followed them out.

We left Pondichéry for Madras, September 23rd, and got home that afternoon, rejoiced to see the dear place again. As usual after a tour, I had no end of arrears of correspondence and literary work to make up, but by the next midnight it had been disposed of. On the 25th we celebrated the first Anniversary of the Madras T. S. at Pachiayappa's Hall, a great crowd attending. Besides myself, Dewan Bahadur, R. Raghoonath Row, and the regretted T. Subba Row made speeches. My stay at

Digitized by Google

home was so very brief, that on the 27th I started again on a long journey to the northward, with our friend L. V. V. Naidu as my Private Secretary. Bellary, Adoni, and Hyderabad—the Nizam's capital—came in sequence, and the usual events of Branch-making, question-answering, and patient-healing occurred. My receptions by friends were always kind, and personal ties of brotherhood were made which are still unbroken.

At Mr. Narasimhalu Chetty's house, at Hyderabad, there was a most interesting case of the cure of blindness in one eye within the half-hour's treatment. I remember it so well. Facing the house, on the farther side of the road that skirted the compound, stood a telegraph pole. The patient, an adult Hindu, had been brought to me by his physician, Dr. Rustomji, F.T.S., to the upper verandah, where I sat talking with friends. He had done his best for the patient, but had failed to even temporarily relieve the total blindness of the eye. It looked as healthy as the other one, but, on testing in the usual way, I found that it was unmistakably sightless. I therefore breathed upon the eyeball, "with mesmeric intent," through the small silver tube I carried in my pocket for that purpose, made the proper passes over the forehead and nape of the neck, and after the time mentioned had the pleasure to receive the patient's joyous assurance that his sight was restored. To make sure, I laid my finger on the other eyeball and told him to describe what he saw straight ahead of him. He at once said: "The compound, the fence, the gate, the road, and a telegraph pole; on the glass knob

Digitized by Google

to the right hangs a bit of colored rag." All was correct. The doctor was perfectly delighted, while as for the patient, after a prostration before me he hurried away. When the doctor and I came to talk over the case, I wanted to recall the patient for us to make an optical examination with an instrument, but Dr. Rustomji soon brought back word that the fellow had gathered his few effects together and hastened away to his village to take his people the glad tidings. Whether the rumour of this got spread through the town or not I cannot say, but certainly my audience the next day was so great, that the hall was—as a Hindu correspondent wrote to his paper about another such meeting—"crowded to the proverbial pin-drop," and we had to adjourn to the compound and let them spread over the lawn. Secunderabad, Bolaram, Sholapore, and Poona followed next: at the latter place—I see by my Diary—I received the shortest address on record—a model of brevity. The members met me at the station, drove me to the bungalow prepared for my accommodation, got the company placed, and then the spokesman, taking my hand, said: "Mr. President and dear brother, I welcome you to our station." I replied: "Thank you heartily," and that finished it. Oh! that those concocters of long, tiresome addresses in Sanskrit, Pali, Sinhalese, Tamil, Telugu, Bengalee, Urdu, Hindi, Hindustani, Guramukhi, Marathi, Guzerati, and a dozen other, to me unknown, tongues that I have had to listen to, often at midnight or even at 4 o'clock in the morning, after a long, bone-banging railway journey, could only have had the inspiration of

Digitized by Google

the Sholapore President, how happy it would have made me. At this station a new recruit—Mr. W. T. Brown, of Glasgow, "Poor Brown"—joined me for the tour. He, and a Mrs. Sarah Parker, of Dublin, had just arrived at Madras under the impulse of service, and Brown had volunteered to help me. I wrote him from Hyderabad a kind but most explicit letter, warning him of the self-sacrifice he must expect to make; the public ingratitude, individual treacheries, libellous attacks on character, unjust suspicion of motives, bad fare and fatiguing journeys by nights and days in all sorts of conveyances: warning him to return to Europe if he had expected anything else, and leave H. P. B. and myself to continue the work we had begun with our eyes open. His reply was a telegraphic notice of his coming to me, and he overtook me at Sholapore.

The coming into the electric intellectual atmosphere of Poona was a delightful sensation. The cultured Marathi mind is capable of grasping the highest problems of philosophy with ease, and the tone of conversation among the cultured class is as high as one could imagine to exist anywhere, even in a German or English University town. In travelling through the East one feels acutely these contrasts, and gauges towns by the mental standard alone. If you ask me to describe their physical features I could scarcely do it, for the recollection of all these thousands of temples, dharmsalas, tanks, bazaars, streets, and bungalows is almost a dim jumble in the memory; but I can give a pretty fair description of the

Digitized by Google

intellectual state of almost any of the towns and villages which I have visited. Now that I recall it, this is just what I was surprised to find in an old classical teacher of mine whom I revisited many years after leaving his school; he recollected almost nothing of the personal appearance of my old classmates, but when I mentioned a name it associated itself with the boy's mind, and as such he remembered him. The subject given me to lecture upon at Hirabag, in the Town Hall, was "The Future Life," and Sir Jamsetji Jijibhoy, the second baronet, occupied the chair. From Poona we moved on to Bombay.

For lack of house accommodation, the Branch put us in large tents on the Esplanade, and we found it very cool and comfortable until the next day, when an untimely storm burst upon the city, and we were drenched with torrents of rain during two days. Our tents became soaked, our effects damp and mouldy, and the flat ground about our camp, not being able to receive the deluge as fast as it fell, was turned into a shallow pond. This meaning fever to us and consequent interruption of work, our colleagues put us into some large empty rooms in the old building of the *Bombay Gazette*, where we were at least dry. A lecture was given on the 17th at Framji Cowasji Hall, and young Brown's remarks at the close were received with great friendliness by the crowded audience.

It may be a relief to some of the readers of these sketches to learn that at Bombay I received orders

Digitized by Google

from my Guru to suspend all healings until farther advices, and that the narratives, which must have sorely tried their feelings, will henceforth practically cease. The prohibition came none too soon, for I am persuaded that I myself should have become paralyzed if the strain had been kept up. One morning, at Madras, just before starting on the present journey, I found my left forefinger devoid of sensation—a clear warning to be careful; and between Madras and Bombay it had taken me much longer and demanded far greater exertions to effect cures than it had previously: there was also a much larger percentage of failures. This is not to be wondered at, for, after treating one way or another some 8000 patients within the twelvemonth, the sturdiest psychopath, let alone a man of fifty-odd, might be expected to have come to the last "volt" in his vital battery: a state to which the tiring journeys, the nights of broken sleep, the often meagre food, and the ceaseless intellectual strain of a large correspondence, daily conversazioni, and almost daily extemporaneous lectures on profound themes must, naturally, have greatly helped to bring about.

On the 20th October H. P. B. joined me at Bombay to make a joint visit to the Maharaja Holkar, who had invited us and sent us money for our railway expenses. But a telegram to us at Bombay put an end to the affair, as he was unable to receive us, so H. P. B. returned to Madras and I kept on my pre-arranged itinerary. While at Bombay we received an intimation

Digitized by Google

from King Thebaw, of Burma, that he would be pleased to have us visit him at Mandalay. Mr. Brown, Damodar Mavalankar, and L. V. V. Naidu went North with me; and another F.T.S. — T. Narainswamy Naidu — got permission to join us as a mere companion. To avoid confusion on these long tours, a programme was always settled upon in advance, and printed copies circulated to the Branches and groups on the route; giving the hours and minutes of my arrivals at and departures from stations, and information as to the kind of food, the quantity of firewood, water, and accommodation required, and all other details: the Branches were left to select the subjects for my lectures, but sometimes neglected it until I was actually ready to mount the platform.

From some of our best-beloved colleagues, who were then living at Jubbulpore, we received an affectionate welcome and good service for seeing persons and places. I visited the High School and the Rajkumar College, one of those schools for young princes and nobles that the Government has founded throughout India. It was interesting to see together these lads who in time will rule over millions, and I spoke kind words of counsel to each class as I passed through the rooms. I was told later that my words had stirred the hearts of the princelings, so that they formed a friendly league between themselves, to keep up their friendship and encourage each other to lead the good life prescribed for kings in the old Scriptures. They all came to my

Digitized by Google

lecture the same evening, which, because of the crowd, was given in the open air.

The next morning we rose at 3.30, and at 5 drove away to the Marble Rocks, one of the tourist's sights of India. To one who had seen Niagara and many great rivers of the world, it was a tame affair. The sacred Nerbudda River is here hemmed in between barriers of white limestone, which it has seamed and cross-seamed with numberless cracks. The rocky scenery is rather artistic *in petto* than grand and imposing; though by moonlight it must seem quite fairy-like. Far more striking to me was an old Bawa (ascetic) whom we found living in an adjacent cave. He had great repute as a proficient in the physiological feats of Hatha Yoga, and obligingly performed a number of them—not a whit more difficult than those one sees in our modern European variety halls and hippodromes—at my request. He told us that he had spent the past forty-seven years of his life in making *Pradakshina* (circumambulation) of the Nerbudda River as a work of merit; the distance to travel is 1800 miles, and the time occupied in each circuit of his foot-pilgrimage three years. He was a fine, hale man, with a bright eye and the expression of a firm character on his face. While I was studying these details, I was startled by his asking me to be good enough to teach him how to concentrate the mind! If that was what his half century of struggle had resulted in, certainly it offered no inducement for anybody else to try his Hatha Yoga.

Digitized by Google

Here was a man who had got his body under such control that he could almost turn himself inside out and walk down his own throat, but had not yet learned how to fix that wandering mind which gives us so much trouble. Needless to say, I "improved the occasion" to tell him a little homely truth about seeming and being, on the lines of the *Gîtâ*, the *Dhammapada*, and St. Matthew xxiii. What a lesson it is in self-development!

My lecture that evening was upon the necessity for a revival of Sanskrit literature, and at the close I started a subscription for the opening of a Sanskrit School, towards which the handsome sum of rs. 1500 was pledged with a great show of enthusiasm. The same idea was broached by me at my first lecture at Allahabad, whither I went from Jubbulpore. The great audience caught at the idea at once, and rs. 2007 was subscribed that evening, and rs. 2500 more was reported at a meeting of the local Branch on the 30th as having been inscribed on the subscription paper.

On the 31st we moved on to Ghazipore, where we were given hospitality by the Maharaja of Dumraon, and where, on arrival, I had to reply to three addresses, in English, Sanskrit, and Urdu—to the last-named two through interpreters. The next halting-place was Cawnpore, of tragic memory, where the bungalow of the Maharaja of Burdwan had been placed at my disposal. When we drove through the compound we found the house illuminated with 1000 *chirags*, or Indian clay lamps, and the rooms were a blaze of light,

CHAPTER III.

THE MASTER K. H. AT LAHORE.

THIS Cawnpore visit was made memorable to me by the proofs I got of Damodar's rapid psychical development. As stated elsewhere, he had been visited when a lad, during a severe illness, by a glorious Personage, whom he was enabled to identify many years later, after connecting himself with our Society, as one of the Masters. The intimate relationship of teacher and pupil had then been established between them, and Damodar had thrown himself heart and soul into psychic training; regulating his diet, devoting specified hours to meditation, cultivating a spirit of perfect unselfishness, and working night and day, to the uttermost limits of his strength, on the duties of the official position I gave him in the Society. His coming with me on the present tour was by command of his Guru, and throughout the journey we had many proofs of the progress he was making in spiritual unfolding. I remember that he astonished me, that evening of our arrival at Cawnpore, by giving me, verbally, a message from the Master

Digitized by Google

in answer to my surmise as to what I ought to do in a certain matter that had just turned up, and telling me that I would find it written out in a note that was even then in my locked writing-desk, the key of which was in my pocket, as it had, of course, been all day. On going to the desk and unlocking it, I did find the very letter he had mentioned, and which, by-the-bye, was from Mahatma K. H., in the hand-writing subsequently pronounced by the sage S. P. R., on the authority of the infallible Mr. Netherclift, to be of H. P. B.'s concoction and nothing else! As H. P. B. and I were then five days' postal distance apart, the forgery theory will hardly cover the Cawnpore incident.

On the second day after reaching Cawnpore, I received from Adyar a rather large mail that had been re-addressed to me from there. Among the letters was one from the late Mr. Sam. Ward, dated at Capri, and enclosing a note to Mahatma K. H., which he begged me to have forwarded if possible. As Damodar was then going nightly in astral body to the *ashram* (residence) of that Master, I handed him the letter, saying that he might ask him whether he should bring on the letter, or not. This was on the afternoon of November 4 (1883), and we were at Cawnpore, N.W.P. The reader will kindly keep this in mind in view of the sequel.

On the previous evening I had lectured in the station theatre, a long narrow room with the stage at one end. Agreeably to the repulsive custom that prevails throughout British India, all Europeans, or rather whites, all half-breeds,

Digitized by Google

and even all Christian converts or pretended converts wearing European dress, were given the front seats, and all Hindus, however high-born or respectable (not always convertible terms), were placed behind them; an aisle ran through the middle of the room. Now I am rather sensitive to the auric "spheres" of persons, and quick at feeling whether they are sympathetic or hostile to myself. Every public lecturer, dramatic artist, and other public character has this same finer sense more or less acutely developed, but I fancy mine is rather quicker than the average. On this occasion I felt as if there stretched between me and the beloved Hindus a barrier, almost a wall, of antagonistic thought, and a less skilled hand might have been stricken dumb by it. But, finding the hostile current flowing towards me from the right, I planted myself opposite the aisle, put my will to work to break through the cross-current, and at last made the connection between myself and the sympathetic portion of my audience. That this is no freak of the imagination, but a very real and palpable fact in human intercourse, will be attested by every person of average nervous sensitiveness whose business it is to speak, sing, or play before the public. More than once it has happened that the presence of a single white man, not a Theosophist, in an audience of Hindus, has acted as a damper upon them and reacted upon me, and for the simple reason that, while between all Asiatics, of whatsoever race and creed, and myself there is a complete sympathy and mutual trust, between them and the average white man there is the distinct mutual antipathy based, as

Digitized by Google

I believe, upon a conflict of auric or mesmeric polarities. Closer personal intercourse and the development of mutual sympathies would change the present feeling of *noli me tangere* into the same pleasant relationship as that of all Asiatics and all recognized Theosophists.

From Cawnpore we moved on to Lucknow on the evening of the 4th November, reached that station at 9 P.M., and were welcomed at the house of Mr. Jwala Prasád, one of our active members. Every minute of the following day was occupied, the details including receptions of visitors, with conversazioni, the trial and expulsion of an unworthy half-caste member, a lecture on "Theosophy and its Claims," and then, until 1 A.M., private teaching of mesmerism, with illustrative demonstrations on one of the Hindu gentlemen of my suite. Bara Banki followed after Lúcknow, and the usual routine was gone through. I must in passing, however, pay a just tribute to the intellectual brilliancy shown by Pandit Pran Nath, F.T.S.; in summarizing my lectures at the above two places, in Urdu, with an eloquence and unhesitating fluency that were both admirable and remarkable. I have been often placed similarly under obligations by educated friends, for from first to last my lectures throughout Asia have been interpreted in eighteen different languages.

Bareilly next, where I lectured, and then on to Moradabad, where Damodar gave me another proof of his acquired power of travelling in the astral "double." He went to Adyar, conversed with H. P. B., heard the voice of a Master speak a message to me, and asked H. P. B. to

Digitized by Google

telegraph me the substance of it so as to satisfy me of his veracity in these matters. On reporting the facts to me, he dictated the message as he heard it, and all present in my room signed a certificate as to the facts. The next morning the expected telegram from H. P. B. was delivered to me by the postman, this being the rule in India as to the class of "Deferred" messages. The despatch corroborated Damodar's dictated and certificated message, and again the witnesses who were present signed their names on the back of the Government despatch. The S. P. R. has been pleased to do its best to weaken Damodar's reputation for credibility and mine for common-sense in this affair, but the facts are above honestly reported, and their opinion does not concern me in the least.

Aligarh came next on our tour-programme, and here, on the 12th of the month, we came to the sequel of the Ward-K. H. letter affair. At the post-office I received my mail from Adyar, and in it a letter posted at Headquarters *on the 5th inst.* by H. P. B., enclosing Mr. Ward's identical letter to K. H., which, it will be remembered, I received from Italy and handed to Damodar at Cawnpore on the 4th—that is to say, the evening before she posted it at Adyar. Its cover bore the despatching stamp of Adyar, November 5, and the receiving stamp of Aligarh of November 10, the two places being distant apart five days' rail journey. The letter had been awaiting me two days in the Aligarh post-office. I submit this as about as clear a provable case of instantaneous transportation of a material object between two distant points as can be found on

Digitized by Google

record. Collusion and trickery are barred by the evidence of the postal markings described. I have the letter still in my possession, and shall be happy to show it to anyone save the managers of the S. P. R., whose savage injustice to H. P. B., the most gifted and marvellous psychic of the age, makes it unseemly for those who knew her merits as well as demerits to take further notice of that clique.

In connection with this astral journey, Damodar told me an interesting fact. On putting his body to sleep as usual, he made a dash for the home of the Master among the Himalayas, but found, on arriving, that he too was away in the astral body; and, by the power of his attraction for his pupil, the latter was swept away as powerfully and instantaneously as though he had ventured into a deep and impetuous river current and been carried off his footing. The next minute Damodar found himself at Adyar, in the presence of both his Master and H. P. B. On going to sleep he had held Mr. Ward's letter in his hand, and it had, it seems, gone along with him on the astral plane—itself, of course, changed from ponderable into astral, or etheric, matter. On telling the Master about the letter, he perceived it in his hand, gave it over to him, and was bidden to return to his place. By the radical power of the occult chemistry or physics, the astralized letter was restored to its solid state, taken by H. P. B., and the next day duly posted to my Aligarh address; the sequel is known. If I were better versed in science, I should use this incident, together with that of the other Master's turban given me at New

Digitized by Google

York by my astralized visitor, and various other instances of *apport*, as a text for a discourse upon the possible changes in solid bodies, from the densely physical, objective, and ponderable condition, into that of the invisible, intangible one of bodies on the astral plane. That the changes can be worked in both directions, viz., from the objective to the hyperphysical, and back again into reintegration, or manifestation, is within the personal knowledge of many experienced investigators of psychical phenomena. These sixty-odd chapters of this series of *Old Diary Leaves* contain enough examples to prove the case, and the eye-witnesses to them are both numerous and unimpeachable: so, too, the works of an army of other writers and experimentalists in this field of natural science support my own statements. What with our X-rays, our Marconi rays, our researches in the Odic Force, in hypnotism, and, by no means the least important, in spiritualistic mediumship (*e.g.*, the cases of Mrs. Compton, Mrs. d'Esperance, and Honto and other materializations at the Eddys'), we shall soon find ourselves forced to begin again with the alphabet of physical science, and stretch out our hands to the East for help to understand the Nature in which our microcosmic selves have been so long vaunting our wisdom. The phenomenon of my rose-born, half-ounce gold ring, which all my constant readers must recollect, is the only one that I can now call to mind which proves that a solid object can exist within another solid object without possessing tangible bulk and without abrading or disturbing its particles, yet at the same time have appreciable weight.

Digitized by Google

Surely a long vista of physical discoveries is opening out before us.

We went on to Delhi next, where I lectured twice at the Town Hall, and whence I despatched young Brown and L. V. V. Naidu, of my party, to form a Branch at Rawal Pindi, my own duties precluding my going myself. From Delhi the programme took me to Meerut, the home of that gifted young Hindu lawyer, Rama Prasád, whose work on *Nature's Finer Forces* made him known, some years later, to the whole Theosophical reading public, the world over. From thence to Lahore, where things of great moment happened. Between the two stations Damodar made another astral flight which was capable of verification. Three of us—he, I, and T. Narainswamy Naidu—were in the same railway carriage, Damodar apparently moving uneasily, as if in sleep, on one of the berths : I was reading a book by the lamp-light. Damodar suddenly came over to me and asked the time, which by my watch was some minutes before 6 P.M. He told me that he had just come from Adyar, where H. P. B. had met with an accident ; whether a serious one or not, he could not tell me, but he thought she had tripped her foot in the carpet and fallen heavily on her right knee. The reader will observe that the young man was but a beginner in occult science, and incapable as yet of accurate recollection, in returning to outward consciousness, of his experiences on the other planes of being. I mention this in view of the studied unfairness of the S. P. R. toward him. For my own satisfaction I did two things on hearing his story. I wrote a certificate

Digitized by Google

of the occurrence and got Narainswamy to sign it with me, noting the time; and from the next station, Saharanpore, telegraphed H. P. B. a question as to "what accident happened at headquarters at about 6 o'clock?" We reached Lahore the next morning at 9, and were escorted to a camp of six tents and four large *shamianas* (open canvas pavilions) which had been pitched for me on the open ground (*maidán*) to the North of the city. We very soon began talking with our friends about the previous evening's incident in the train, and my memorandum was passed around for information: I got the friends present to sign it, and to say that the expected telegram from H. P. B. had not yet arrived. My party left me to take their morning bath and meal, and while I was sitting under the shadow of my tent with Mr. R. C. Bary, Editor of the *Arya* magazine, a Government telegraph peon was seen coming towards us with a brown-covered telegram in his hand. I made Mr. Ruttan Chand take it into his own hands and keep it unopened until the return of our party, in whose presence it should be opened and read. This was done at 12 noon by Mr. R. C. Bary, and the nine present signed on the back to attest the circumstances. The contents were these: "Nearly broke right leg, tumbling from Bishop's chair, dragging Coulomb, frightening Morgans. Damodar startled us." My Saharanpore despatch was received by H. P. B. late at night on the 17th: her reply was dated at Adyar at 7.55 A.M. on the 18th, and I got it at Lahore at noon. The discrepancy in Damodar's statement of details and H. P. B.'s is not even surprising in view of his then stage of spiritual evolu-

Digitized by Google

tion, while the corroboration of the major fact of the heavy fall and the injury to her right knee is full. There have been critics of limited acumen but great conceit, who wish us to believe that this might have been a vulgar conspiracy between Damodar and H. P. B. to deceive me; but I am not aware that it is likely that a fat woman of 16-stones' weight would give herself a serious injury to her knee for the purpose of befooling me, when she might as easily have agreed with Damodar that he should have seen her doing something that would have been queer and yet harmless in itself, such, for instance, as making antic gestures, tearing a newspaper into bits, or declaiming a Russian or French poem: the explanation has not the support of common-sense. And then character counts for something outside the S. P. R., and gentlemen are entitled to some credence when it is not a question of money interests; sometimes even then. H. P. B.'s telegram mentioned a fact until then unknown to us, that Major-General and Mrs. Morgan, of Ootacamund, were visiting at Adyar.

My camp was thronged with visitors during the three days of our stay, and I gave two lectures under the largest *shamiana* to multitudes, with great pots of fire standing along the sides to modify the biting November cold, for the Punjab is the reverse of tropical as to temperature in our winter months. My kind and most capable interpreter was Pandit Gopinath, F.T.S., a well-educated and most enterprising journalist, a Brahmin of Kashmir, well known to Theosophists for his unshakable loyalty to the two Founders.

Digitized by Google

I was sleeping in my tent, the night of the 19th, when I rushed back towards external consciousness on feeling a hand laid on me. The camp being on an open plain, and beyond the protection of the Lahore police, my first animal instinct was to protect myself from a possible religious fanatical assassin, so I clutched the stranger by the upper arms, and asked him in Hindustani who he was and what he wanted. It was all done in an instant, and I held the man tight, as would one who might be attacked the next moment and have to defend his life. But the next instant a kind, sweet voice said: "Do you not know me? Do you not remember me?" It was the voice of the Master K. H. A swift revulsion of feeling came over me, I relaxed my hold on his arms, joined my palms in reverential salutation, and wanted to jump out of bed to show him respect. But his hand and voice stayed me, and after a few sentences had been exchanged, he took my left hand in his, gathered the fingers of his right into the palm, and stood quiet beside my cot, from which I could see his divinely benignant face by the light of the lamp that burned on a packing-case at his back. Presently I felt some soft substance forming in my hand, and the next minute the Master laid his kind hand on my forehead, uttered a blessing, and left my half of the large tent to visit Mr. W. T. Brown, who slept in the other half behind a canvas screen that divided the tent into two rooms. When I had time to pay attention to myself, I found myself holding in my left hand a folded paper enwrapped in a silken cloth. To go to the lamp, open and read it, was naturally my first impulse. I found it

Digitized by Google

to be a letter of private counsel, containing prophecies of the death of two undesignated, then active, opponents of the Society, which were realized in the passing away of the Swami Dyánand Saraswati and Babu Keshab Chandra Sen shortly after. A point to notice is that the handwriting of this letter, formed in my own palm by the Master K. H. himself, is identical with that of all those others which the sagacious Netherclift, after much dissection of them into their original pothook-and-hanger elements, pronounced to be of Blavatskyan origin! What happened in young Brown's end of the tent he related orally to a great many still living witnesses, and published in his pamphlet, *Some Experiences in India*, my copy of which I cannot lay my hand upon at this moment. But in his other pamphlet, *The Theosophical Society: an Explanatory Treatise*, published at Madras, he says (p. 11): "It will be sufficient here to remark that Mahatma K. H. is a living Adept, and that the writer had the honor of seeing him personally at Lahore and of being spoken to by him and even touched. Letters have been received by the writer at Madras, Lahore, Jammu (Kashmir), and again at Madras, all being in the same handwriting, etc., etc." The foundation having been thus laid, and Mr. Brown's other pamphlet available after a little search, I may say that on hearing an exclamation from his side of the screen, I went in there and he showed me a silk-wrapped letter of like appearance to mine though of different contents, which he said had been given him much as mine had been to me, and which we read together. That he has since swung around a whole circle of changes, and is now a

Digitized by Google

professed Roman Catholic and a teacher in a school of that Church, does not alter in the least the facts of his receiving this letter as described, and his identifying it as in the K. H. script.

The Master's letter to me connects itself with the visit to me at New York of the other Master when, at my unspoken thought-wish, he "materialized" his turban and gave it me as an objective proof that I had received his visit. The letter says: "At New York you demanded of . . . . an objective proof that his visit to you was not a *Mâyâ*, and he gave it; [now] unasked, I give you the present one: tho' I pass out of your sight, this note will be to you the reminder of our conferences. I now go to young Mr. Brown to try his intuitiveness. To-morrow night, when the camp is quiet and the worst of the emanations from your audience have passed away, I shall visit you again for a longer conversation, as you must be forewarned against certain things in the future." He concludes with a remark that will not be very palatable reading to our ingenious American rivals who are trying to play the drama of Hamlet with the Dane omitted. He says: "Ever be vigilant, zealous, and judicious; for, remember that the usefulness of the Theosophical Society largely depends upon your exertions, and that our blessings follow its suffering 'Founders' and all who help on their work."

CHAPTER IV.

RECEPTION BY THE MAHARAJAH OF KASHMIR.

THE experience described in the last chapter was certainly calculated to make a deep impression on the dullest mind; how much more so on one whose highest aspiration was to be permitted to work in some capacity or other with the "Elder Brothers" for the good of the race! If anybody had asked me what was the rarest pleasure that I could imagine, I should have answered: "To see and converse with a Master, for in his benign atmosphere the mind and heart would expand like a flower to the sun and one's being be filled with joy." And here I had had it without the asking. Yet when I came to look back upon it, it was but like a remembered glint of sunshine on a cloudy day, seen for a moment, then gone. The whole time of the interview could not have been longer than ten minutes. The touch of his hand drew me out of the depths of the oblivion of dreamless sleep. I had had a fatiguing day, the tent was very cold, heated only by some embers in a great earthen pot, and I had covered myself to the ears

Digitized by Google

in the bed-clothes. I am touched, I wake with a start, I clutch the arms of my visitor, possibly my would-be assassin; the sweet, kind voice breaks the last stupor of slumber; he is there, standing beside my bed, his face aglow with a smile; I see it in the *chiaroscuro* of the back-light. Then the magical creation of the silk-enwrapped letter in my hand, a few words, a farewell salute, he walks past the lamp on the box, his noble form lingers an instant in the tent-door, he gives a last friendly glance at me, and is gone. It is not much as to time, but its memory will last my life through. Years before—as my readers will perhaps remember—I was bidden to go on with my work as if there were no Masters to guide and help, but only Humanity, the "Great Orphan," to labour for: to expect nothing from Them, yet to be ready for anything. So I have gone on until to-day, never asking for help, never holding back for lack of the promise of it, yet never being without it when it was really needed.

This Lahore visit of the Master was but one of many proofs vouchsafed me that we are watched and helped; never deserted, never forgotten, howsoever dark may seem the outlook, howsoever menacing the aspect of things. Twenty-odd years of this experience has begotten a constant calm and an abiding trust in my heart, as it did in that of H. P. B. Sometimes it may be a glimpse of a personage, sometimes an audible voice, sometimes a clear forecast of events, sometimes a message through third parties; like that which Mme. Mongruel,

Digitized by Google

the gifted Seeress, gave me in her somnambulic sleep last year at Paris, and which foretold the immediate future of the Society, the duration of my own life, and the aspect of things towards the end of it. Thus, in the letter made in my hand were predicted the deaths of our two opponents, then most active, and good counsel was given me. Though traitors should fill twenty corner-stones with deliberately concocted lies about the history of our movement, and forever suppress my name and Mrs. Besant's from their falsified records, it will profit them not one iota; the work will go on, and the real workers be recognized, comforted, and helped, so long as they are loyal to their duty.

The next evening, after the visits to Mr. Brown and myself, we two and Damodar sat in my tent, at 10 o'clock, waiting for an expected visit from Master K. H. The camp was quiet, the rest of our party dispersed through the city of Lahore. We sat on chairs at the back of the tent so as not to be observed from the camp: the moon was in its last quarter and had not risen. After some waiting we heard and saw a tall Hindu approaching from the side of the open plain. He came to within a few yards of us and beckoned Damodar to come to him, which he did. He told him that the Master would appear within a few minutes, and that he had some business with Damodar. It was a pupil of Master K. H. Presently we saw the latter coming from the same direction, pass his pupil—who had withdrawn to a little distance—and stop in front of our group, now

Digitized by Google

standing and saluting in the Indian fashion, some yards away. Brown and I kept our places, and Damodar went and conversed for a few minutes with the Teacher, after which he returned to us and the king-like visitor walked away. I heard his footsteps on the ground, so it was no wraith, but the man in his external body. Observe that it could not have been Damodar masquerading, for he himself formed one of our group of three. Then there are the distinguished personal peculiarities of the two, as unlike as possible, to account for, and the chela, whom I had had to do with for years. Still further proof was given me before retiring, when I was writing my Diary: the pupil lifted the *portière*, beckoned to me, and pointed to the figure of his Master, waiting for me out on the plain in the star-light. I went to him, we walked off to a safe place at some distance where intruders need not be expected, and then for about a half-hour he told me what I had to know, and what does not concern third parties, since that chapter of T. S. history was long since closed. Needless to say I slept very little on either of those two nights. The august visitor told me, however, that he had not come to me of his own motion entirely, although glad to come to me in person; but had been sent by the Authority higher than himself, who was satisfied with my fidelity and wished me to never lose confidence. There were no miracles done at the interview, no magic circles traced on the ground, no gum-burning lamps placed around it and burning with steely-blue flames: just two men talking together, a meeting,

Digitized by Google

and a parting when the talk was over. I can affirm that it was *not* Damodar, but *was* the One I was called to meet; so let it pass.

I broke up camp the next day—November 21—and left Lahore for Jammu, the lower capital of H. H. the late Maharajah of Kashmir, whose invitation to visit him I had accepted. One of his durbar officers, a Muslim and, strange to say, given to drinking, despite the prohibitions of his creed, had been sent down to escort me from Lahore. Simple affair as this was, there had been protests, explanations, and compromises before it could be arranged. I had heard that the Maharajah's custom was to make presents in cash and costly clothing to his visitors, and I positively declined to accept a single rupee, as incompatible with my life-long habit. The emissary was at his wits' end between two such stubborn men, and an active exchange of telegrams made things no better until, at last, the cloud rolled by and all was settled in a way to satisfy us both. It was agreed that the *khillat*, or present, should be given and by me received and receipted for officially, as President of the Theosophical Society, in which capacity I am ready to accept any gifts, however large, that involve no wrong to anybody. So, all being right, our party took the 6 P.M. train for Wazirabad, which was reached at 9.30. My escort had evidently been saying good-bye to friends to some purpose, as his breath smelt very bad in our closed railway carriage, and he was quite half-seas-over. His tongue got to wagging about politics, and I was assured, with mysterious hints and nods, that a revival of Moslem

Digitized by Google

power was certain, and that his fifty million Indian co-religionists would rally under the standard of the Nizam of Hyderabad. After awhile I got my fill of this nonsense and the odors of his mouth, and retired to my corner and read. He wanted to stop at Wazirabad, for that meant the chance for sleep and other things, but I declared my intention of pushing forward to Sialkot. We reached that place by horse-dawk at 3 A.M., stopped at the rest-house until noon, then moved on to Jammu. We left our carriages on the hither side of the River Tavi, and were brought on two of the royal elephants, a distance of two miles, to the huge bungalow that the Maharajah keeps for his more important guests. The road from the river leads straight through the main street of the quaint old town, whose breadth may be guessed when I tell my reader that as our elephants moved their huge bulk forward, horsemen, and even foot-passengers, had to whirl into alleys or clamber into shops to avoid being crushed! And we, seated on their backs, cross-legged in true Oriental fashion, were almost on a level with the living apartments and, if we had been discourteous according to Indian notions of politeness, might have seen the families in their private rooms. At the rest-house we were received by an army of servants with the obsequiousness that means naught else than the hope of *bakshish*. My lordship was asked to name what meats, game, fish, etc., I might prefer, whether I would begin operations now with the customary whisky "peg," and when I would have my meals. They appeared really astonished when I named my simple, non-flesh diet

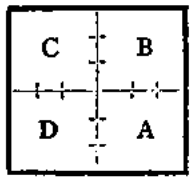
Digitized by Google

(for that time was included within my five years' trial of vegetarianism), and declined their liquors, wines, and fermented drinks : such a mad white they had never seen before. And then, too, who had ever seen a European gentleman on terms of friendly equality with Indians? Yes, here were two Sahibs, actually two, travelling with dark-skinned people as if they were as good as themselves, and apparently enjoying their company! *Bismillah!*

As we learned that a certain famous European doctor had been sent by the Maharajah's request to prescribe for him, and that he would arrive that evening and be lodged in the same house with us, I at once asked our minister-escort to change us into a smaller bungalow that stood near by, for I could not bear the sight of my dear dark-complexioned colleagues being scornfully looked down upon, as they would almost certainly be. My request being granted, we found ourselves very comfortable and independent in a house of four rooms divided by cross walls and with doors of communication. In view of what was to happen, we may as well have the ground plan. Thus :

A.—My room; used also as dining-room.

B.—Damodar's.



C.—Pandit Gopinath, L. V. V. Naidu, and T. Narainswamy.

D.—W. T. Brown.

The next morning, at 10.30, the same Minister of the Durbar brought me word that His Highness begged the honor of my presence at the Palace. In our compound

Digitized by Google

stood two elephants and four fine saddle-horses, richly caparisoned, with housings and saddle-covers of Kashmir-shawl work, and silver-mounted bridles and stirrups, awaiting my pleasure, with a guard of honor of armed sepoys. I chose the elephants, so we mounted the sagacious, kneeling beasts and went on our way, the sepoys in front to clear the road. I made the discovery that elephant-riding is not so bad when one sits on the pad in eastern fashion, the legs crossed. I had tried it elsewhere in a howdah, or structure with raised seats, and in spite of its being covered with plates of silver and otherwise gorgeously gotten up, one rode most uncomfortably, being shaken about like a bag of meal on an oscillating pivot. Again we threaded the narrow streets of Jammu, driving all wayfarers to the nearest shelters, and at last reached the Palace. There were the usual enclosing walls with massive gates, the outer compound with horses, elephants, camels, oxen, donkeys, heavy wains, light vehicles (*ekkas*), piles of straw, bags of grain, building materials, etc., all in confusion, armed sentries pacing their beats, and soldiers in untidy undress lounging about. Then came an inner court and the Palace gateway, through which we passed, mounted a wide staircase and found ourselves in the Presence Chamber. I forget after these fourteen years how it looked, but a vague memory of general untidiness remains in my mind. The Maharajah came soon and received me with an air of kindness and stately courtesy that showed beyond doubt that I was welcome. In compliment to him I wore the woollen dress of the better class in the Punjab—pyjamas,

Digitized by Google

a sleeveless waistcoat with deep flaps, an outside *chaga*, or long robe, striped Kashmir socks, and purple slippers embroidered with imitation gold braid—which, of course, I left at the door. His first expression to Pandit Gopinath, my interpreter, was one of pleasure to see me in his national costume. A carpet and back-bolster had been spread for him on a slightly raised platform, before which we were to sit on the carpeted floor; but he dragged the bolster from there, placed it on the floor, motioned me to sit beside him, called me his elder brother, and proceeded with the conversation, which he opened with the usual exchange of compliments and good wishes. He was a man of noble presence, with an intellectual face and the splendid eyes of the Hindu, which by turns can be full of pathos, blaze with anger, or penetrating with intelligent interest. His personality fitted the kingly office perfectly, which is more than can be said of some other sovereigns whom I have seen, and who looked rather like cooks or grooms than high-born rulers of men. I found him to be a thoughtful Vedantin, well acquainted with philosophical systems. He fully believed in the existence of living Mahatmas, and trusted in them to do for India all that her Karma made possible, but no more. He gently broached the subject of his own ill-health, said he knew of my cures and of the recent prohibition to continue the practice, but asked if I would not at least relieve the acute pain he was then suffering from. I consented, of course, and on his removing his turban, did what I could for him with mesmeric healing passes. He submitted to

Digitized by Google

my manipulations with perfect docility, which, I must confess, gave me a peculiar sensation, for Americans are not in the habit of handling sovereigns like common men, however they may theoretically regard them as their equals. I had the pleasure of removing His Highness's pain, and when the audience closed he begged me to visit him twice a day during my stay, that we might talk of the high religious themes which equally interested us.

The same evening, when I was sitting in our bungalow, I saw a queer procession of men enter from the verandah. First came a Court official, attended by a servant carrying a pair of scales and another with some heavy bag on his shoulder, which was gravely laid at my feet. Then followed a string of twenty-one other dark-faced, turbaned servants, each bearing on his head a flat basket of fruit or sweets, which were piled on each other on the table, counted by the Court Officer, and the men dismissed. While I was wondering what all this could mean, Gopinath was told that His Highness received me as a guest of the first-class, and, as such, twenty-one baskets were sent me; there were guests of three classes, of which the second received fourteen baskets, the third seven baskets; below that people did not count! He then opened the gunny-bag, poured the contents—silver coins—into the scales, weighed them, and took my receipt for rs. 500. This, he explained, was "table money," though why he should give me that when our every possible and impossible wish was gratified, I could not imagine. However, it was the custom of the Court of Kashmir, and His Highness's honor was involved in doing

Digitized by Google

things as they had always been done from ancient times by Indian kings.

I went twice to the Palace the next day, and resumed the Vedantic discussions and even the mesmeric passes. His Dewan (Prime Minister) was present with other officials, including the Chief Justice, and after the free eastern fashion, dipped into the conversation from time to time. That is a thing that always astonishes Europeans: if there be a wrangle in the street and a crowd gathers, they will turn to listen to a side remark by a boy as readily as though he were an adult. Can it be because, by the accepted belief in Karma, only our encasing bodies are young, the Dweller within the one being as old as that within the other? It is an idea to be considered like any other, at all events.

In the afternoon the Maharajah presided at games and a series of animal combats, and took me to his pavilion and placed me at his side. It being an entirely novel experience, I stayed the thing out, but once was enough. There were fights between rams, elephants, and horses—the first laughable, the second tame, since the elephants were not angry; the third exciting, for the splendid stallions lashed out at each other, screamed and tried to bite. A cock-fight brought the affair to a close.

The Chief Justice spent the evening with me in pleasant talk, in the course of which he dropped the remark that the Maharajah was "so taken with me that he would give me anything I might ask for." I took this for what it was worth, but after the Judge had gone, young Brown,

Digitized by Google

to my amazement, asked me to get him the appointment of Judge. "What!" I said, "you, who came to India to devote yourself to unselfish work; whom I warned by letter to expect naught but the chance of self-sacrifice; who have just been honored with a visit and letter from a Master, a distinction that has been withheld from some of the oldest of our members—you are ready to snap at the first temptation, and take a post for which you are not qualified?" I explained to him that if indeed the Maharajah respected me, it was because he had become convinced that I would not take for myself or any private friend any present or favor whatever. He at last saw the point and said no more; but his character-gauge had been exposed to me once for all, and his subsequent career has corroborated my impressions.

I went as usual, the next day, to the Palace, and in the afternoon saw a review by General Prince Ram Singh, Commander-in-Chief of the Kashmir Government Service troops, which have since then behaved so splendidly in the various British Border Expeditions. This was all very fine, but an event occurred that night which drove the recollection of everything else out of my thought: Damodar disappeared from his room, and was not to be found when I looked there for him in the early morning.

Digitized by Google

CHAPTER V.

MYSTERIOUS DISAPPEARANCE OF DAMODAR.

DAMODAR had disappeared, and left no trace behind him as a clue to show me whither he had gone or when he would return, if ever. I hastily went through the four communicating rooms, but they were empty; my other companions having gone to the river for a bath. From Damodar's window I called to a servant, and learned from him that Damodar had left the bungalow, alone, at daybreak, but left no message. Not knowing exactly what to make of it, I returned to my room, and found lying on the table a note from a Master, bidding me not to worry about the lad as he was under his protection, but giving me no hint as to his return. It had taken but a minute or so to make the the circuit of the four intercommunicating open-doored rooms, and I had heard no messenger's footstep in the gravelly compound; a person could hardly have entered my room between my leaving and re-entering it, yet here

Digitized by Google

was the mysterious letter, in the "K. H." writing and familiar Chinese envelope, lying on my table.

My first instinct was to take Damodar's luggage—his trunk and bedding—and pack it away under my own cot. I then despatched a telegram to H. P. B., telling her of his disappearance and of my having no idea as to his return. When the bathers got back from the river, they were naturally as excited as myself over the incident, and we wasted much time in speculations and surmises as to its possible sequel.

I went twice to the Palace that day and found myself increasingly welcome to His Highness. He showed me every courtesy, discussed the Vedanta philosophy with evidently deep interest, and gave me a pressing invitation to accompany him the next time he should go to his Kashmirian capital, Srinagar. Just as evening was closing in, and I was sitting alone, writing, in our bungalow, the others having gone for a ride on horseback, I heard a step on the gravel outside, and, looking around, saw a tall Kashmiri-costumed telegraph peon (messenger) bringing me a message. On opening it, I found it to be from H. P. B., in answer to mine. She said that a Master had told her that Damodar would return, and that I must *not let his luggage, especially his bedding*, be touched by any third party. That was strange, was it not, that she, at Madras—*i.e.*, some 2000 miles away—should tell me to do the very thing it had been my first impulse to do on finding out the lad's departure? Was it long-distance telepathy, or what?

Digitized by Google

There was something stranger yet to come. To open and read the despatch had not taken me a minute; the peon had not had more than time enough to get across the verandah into the compound when, like a flash, it came to me that the form of the peon was not real but a *mâya*, and that he belonged to the Brotherhood: I knew it, I could swear to it, because of a certain psychic disturbance caused in me by the approach of one of those personages; in fact, I could presently identify the peculiar vibration set up by the mesmeric current of my own Teacher, who was also H. P. B.'s Teacher. I ran to the door and looked across the bare compound, in which were no trees or bushes to serve as hiding-places, but nothing was in sight: the peon had disappeared as if into the ground.

I have been asked, when telling this story, how the transfer of the despatch from the keeping of the real peon to the simulated one, and the return of my signed receipt to the telegraph office, could be accounted for unless the messenger had been a consenting party. The thing is very simple, provided the reality of hypnotic power be conceded. The perfected hypnotism of the Orient I mean; not the rudimentary stage of it to which the schools of Nancy and La Salpétrière have hitherto attained: the secret of *mâya*, in short. The adept meets the peon; by will-power prevents his seeing him; causes him to become unconscious; leads him to any convenient place of hiding; leaves him there asleep; puts the illusive appearance of the man over his own features

Digitized by Google

and person; brings me the telegram, takes my receipt, salutes, and retires; the next moment, the nervous thrill caused in me by his sympathetic magnetism reacting in himself, warns him that I am on the alert and will naturally come to the door, so he inhibits my sight to prevent my seeing him, returns to the sleeping peon, puts the receipt in his hand, wills that he shall recollect, as if it had happened to himself, the brief episode of our meeting, awakens him, inhibits *his* sight, and sends him back to the telegraph office. A very simple sequence of events, easily comprehensible for every advanced mesmerist.

It was on the 25th November, at daylight, that Damodar left us: he returned in the evening of the 27th—after an absence of some sixty hours, but how changed! He left, a delicate-framed, pale student-like young man, frail, timid, deferential; he returned with his olive face bronzed several shades darker, seemingly robust, tough, and wiry, bold and energetic in manner: we could scarcely realize that he was the same person. He had been at the Master's retreat (*ashram*), undergoing certain training. He brought me a message from another Master, well known to me, and, to prove its genuineness, whispered in my ear a certain agreed password by which Lodge messages were authenticated to me, and which is still valid: a fact which certain transatlantic persons might profitably take note of.

At the Maharajah's request I had been giving him some mesmeric passes every day, which seemed to do him good,

Digitized by Google

or, at least, he said they did. He now began to deplore my necessary departure, and begged me to select somebody at his Court to whom I should be willing to give him over for future treatment. Upon this, I looked about me more closely than I had been doing, and found that there were three distinct parties or cliques, each trying to gain a paramount influence over the sovereign, and each as selfish and, it almost seemed to me, unscrupulous as the other. For the first time in my life, I got a clear view of the rotten moral atmosphere of an Indian Prince's Court. So I told His Highness—for it was my blunt candor that, I fancy, had given him the good opinion of me that the Chief Justice had described in Brown's hearing—I told him frankly that the only person whom I would recommend as his psychopath was his youngest son, Prince Amar Singh, who was then a handsome, honest-looking youth. His Highness approving my choice, I showed the young Prince how to treat his father, and gave him the famous silver tube with which I had worked so many cures of eye and ear affections during the course of that memorable year. But, as I afterwards learnt, no good came of it, for the son stood in such awe of the parent, that he was quite unable to feel, much less show, that firm, commanding appearance of face, gesture, and voice which is indispensable for the psychopath to have when treating a patient. Yet I would not have risked my royal patient's coming under the influence of either one of those scheming courtiers, who would certainly have used the intimacy for their selfish purposes. The Maharajah

Digitized by Google

died a few years later, and was succeeded by his eldest son, who was away at Srinagar at the time of my visit to Jammu, and whom, therefore, I did not meet. The latter was for some time suspended by the Government of India, a Council of Regency was formed, and young Prince Amar Singh was appointed its President. Major-Gen. Ram Singh, the second son, has brought the Kashmir army to such a state of proficiency, that it rendered the most valuable services to the British Commander-in-Chief, as before stated, in recent border campaigns.

The day fixed for my departure having come, the Maharajah, finding me obdurate about prolonging my visit, consented to receive me in audience of leave. So I went to the Palace for the last time, I and my suite riding on elephants, and causing every person, whether mounted or afoot, whom we met in the cramped lanes of Jammu, to scuttle out of our way into the nearest shops, courts, or blind alleys. We found His Highness, with his Prime Minister (Dewan), his Treasurer, and other officials, seated cross-legged on the floor, with a number of piles of woollen stuffs placed before him in a row: one pile much bigger than the rest. Through the able interpreter, Pandit Gopinath, he and I fell into conversation about my departure and hoped-for return, after which, on a signal from the Maharajah, a high official pushed the big pile over towards me, with the request that I should accept the articles as His Highness' *khillát* (complimentary present). At the same time the Treasurer laid before me two heavy bags of coin. To each member of

Digitized by Google

my suite was given one of the smaller piles of woollens. According to custom, I touched the presents, made a respectful salutation, by joining my palms and holding them edgewise to my forehead, which the Maharajah returned; we then rose and, saluting the officials in turn, left the audience-chamber, having seen the noble face of our host for the last time. No other reigning Indian Prince whom I have met has left so pleasant impressions on my memory. I speak only as to my personal intercourse with him; what sort of view the Government of India may have taken of him as their political ally, I cannot say; but so far as his treatment of me is concerned, no one could have shown himself a more perfect gentleman, a more generous, self-respecting Prince, or a more thoughtful host. I must not fail, moreover, to express the obligations under which Pandit Gopinath, F.T.S., of Lahore, laid the Society and myself, personally, by his unpaid and invaluable services during this visit and my whole tour in the Punjab of 1883.

When my *khillât* was examined at the bungalow, it was found to comprise a silk-lined, richly-embroidered *chaga* (outside coat); a splendid Kashmir shawl, "worked to the centre"; fine, soft woollen tissue for a turban; a green neck or waist scarf, with embroidered ends; and three pieces of *pashmina*, or soft cloth made of goat's hair, for a suit of clothes in the Punjabi fashion. The huge bags of coin contained, each, a thousand rupees; thus making the whole gift in money to me (or, rather, to the Society, since I receipted for it officially) rs. 4500.

Digitized by Google

The Treasurer's Report to that year's T. S. Convention shows that, of this sum, I gave rs. 1500 towards the purchase of the Adyar property, and the remaining rs. 1000 to the Current Expense Account. The choga and shawl I gave to H. P. B., the turban and three other pieces of fine cloth to other friends, and the little green scarf I kept for myself to protect my throat when on tour. But the moths ate it up before long, and so I kept nothing of the Jammu presents save the memory of the kindness of their donor. The presents of cloths to my suite were similar to my own, but fewer in number and of rather inferior quality. At 1 P.M. we left on our elephants for the other side of the river, and after a delay of four hours at Sialkot, reached Wazirabad and passed the night there. In the morning Damodar left us for Madras, and we went on to Kapurthala *viâ* Lahore and Kirtarpur.

Our reception at Kapurthala by the aged ex-Dewan Ramjas; the reigning one, his son Mathura Das; Mr. Harichand, Political Assistant; and other important officials, was most cordial and gratifying. The now so well-known Maharajah was then a child, and the State was administered for him by specially-chosen officials—whether British or not, I do not remember. I found the mental atmosphere much better than that at Jammu, where the sovereign seemed to me the only one who really cared much for philosophical discussions. Moreover, there was not the same heavy atmosphere of selfish intrigue; one could breathe freer. I have noted the fact in my Diary, so it

Digitized by Google

must have been very palpable. While at this station I was the guest of Dewan Mathura Das, and on the third day lectured on "The Nature of Religion," Pandit Gopinath acting as interpreter in his usual fluent fashion. The fourth and fifth days were devoted to the admission of candidates for membership, among them all the chief officials, and to the organization of the Kapurthala T. S. My visit finished, I left for Jaipur, and reached that unique city the next evening. We were accommodated at the Traveller's Bungalow—the best in India, so far as my observations go.

Our local colleagues took me the next morning to call on Atmaram Swami, a well-known and respected ascetic, who had been telling them long before my arrival that he was personally acquainted with our Masters, and that, eight years before, in Tibet, one of them known as Jivan Singh, Chohan, had told him that he need not be discouraged about the religious state of India, for they had arranged that two Europeans, a man and a woman, should soon come and revive the Eastern religions. This date corresponds with that of the formation of our Society at New York, and the intelligence was most important to me. I found the Yogi a man of dignified presence, with a calm, thoughtful countenance, quite a different sort of person from the ordinary ascetic now so common in and profitless to India. His greeting to me was charmingly affable, and he expressed the greatest desire that our members should be encouraged to practise Yoga. I told him that I dare not do that wholesale, for, unless the candidates had the right tempera-

Digitized by Google

ment, and above all, the watchful surveillance of competent teachers, they ran the risk of being seriously harmed by psychical experiments. He agreed with me in this respect, but said that everything had been foreseen and the right thing would be brought about in good time. This has, in fact, proved true, and the marvellous things that have happened with Mrs. Besant, Mr. Leadbeater, and others who were not then even members of the Society, fully corroborate the prognostics made to me in 1883, at Jaipur, by Atmaram Swami.

The same day I had to perform the unpleasant duty of degrading from office and expelling from the Society the Vice-President of our local Branch, for trying to use his position to get personal favors from an influential Anglo-Indian official and from Mr. Sinnett, both members. This degradation of our Society is an offence so heinous, that I should certainly expel anyone found guilty of it. So long as I live, at least, the honor of the Society shall be protected against such ignoble self-seekers. This business disposed of, I lectured *al fresco* in the great courtyard of the Maharajah's College to a large assemblage, and at 6 P.M. we left for Baroda, on our homeward journey. After a dusty ride of thirty hours in the train, we reached the Gaikwar's capital, and were met at the station by Judge Gadgil and other valued friends, who took us to our destined quarters, and kept me chatting until 3 A.M.! The next day, our former evil-wisher having been succeeded by another British Resident, I paid him my respects, and in the evening lectured on the "Proofs of a Future Life";

Digitized by Google

a meeting of the local Branch, with fresh admissions of candidates for membership, closed the proceedings of the day.

By the Gaikwar's special invitation I visited him at his magnificent Palace the next day, and had a long talk about several of our philanthropic schemes—among others, the promotion of Sanskrit education and literature, in which he took and still takes much interest. His Palace, as hundreds of visitors can testify, is one of the finest in all India, and will long be a grand monument of his largeness of views as to the dignity of the sovereign of a great Indian State.

From Baroda we went the long journey to Gooty, in the Madras Presidency, halting a few hours between two trains at Bombay. From Gooty we pushed on in bullock-carts to Kurnool, a distance of sixty miles. A warm welcome made us forget the fatigues of the journey; I received and replied to Sanskrit and English addresses; organized a local Branch; the next morning at 8 o'clock lectured, and at 4 P.M. started back to Gooty, which we reached after riding all night. I completed the formation of our ever active and honorably distinguished Gooty T. S., and at 5.30 P.M. took train again for Madras, where we arrived on the morning of December 15th, thus completing the 7000-mile tour on time and without accident. What impression the return made on my mind may be guessed from the following line in my Diary: "Home never seemed so delightful, nor my old Chum so dear." These home-comings are an ever recurrent delight, and no place in either

Digitized by Google

of the distant lands I visit seems half so sweet and restful as Adyar.

The approaching Annual Convention now demanded all my attention, and from that onward to the 27th my every hour was taken up with the reception and accommodation of Delegates, the erection of temporary buildings, the preparation of the annual financial and other reports, and the arrangement of the agenda. Dr. Franz Hartmann, a recent acquisition to our membership, turned up on the 17th December as Special Delegate from the old New York nucleus and the Rochester and St. Louis Branches. Since he has conveniently forgotten the fact, on seceding with the disloyal American party, I may say that neither Mr. Judge, who wrote his credentials, nor he who presented them and as Delegate addressed the Convention, nor H. P. B. nor I, had any other idea than that the official, vital, and only centre of the T. S. was at Adyar, and that what was left at New York was a few crumbs of the loaf. However, this has been all explained and backed with historical proofs,* so it is useless to dwell upon the subject any longer.

There is an entry in my Diary that rather instructively marks the different uses that a little money can be put to for the making of Karma. On the 18th December the Indian public of Madras gave a farewell banquet and reception to a high European official on his retirement on pension, on which they spent rs. 15,000; a

* See Annual Address of the President T. S. to the 21st Annual Convention, at Adyar, December 1897.

Digitized by Google

few days later we collected a lesser sum to pay for the Adyar Headquarters property. The first event went off with a splutter and glare like a firework; the money wasted, the subscribers forgotten by the beneficiary of the show: the other gave a permanent home to our Society, a noble housing, a refuge for its Founders in old age, probably a nucleus for the world-benefiting T. S. Oriental Institute that Mrs. Besant, the Countess Wachtmeister, and I have planned out. In fact, when one looks back through the whole career of the Society, one may well be amazed that such a comparatively trifling sum in the aggregate has been spent in pushing its work to the five quarters of the world.

When the Convention opened, the house and out-buildings were crammed with Delegates, and a real enthusiasm marked the whole series of meetings: our position in India seemed impregnable, not a cloud floated in our sky. Daily phenomena occurred in the "shrine"; six and even seven persons got notes, in English and Indian vernaculars simultaneously, answering questions put by them just before. On the morning of the 28th, out on the lawn, before the opening of Convention, I told H. P. B. how sorry I was that the other Madras members had allowed Judge P. Sreenevas Row to spend so large a sum as rs. 500 out of his own pocket towards the cost of the Convention, as I was sure he could not afford to be so generous. She reflected a moment, and then called Damodar to her from a group with whom he was talking a little way

Digitized by Google

off. "Go," she said, "to the shrine and bring me a packet you will find there." He went, and within less than five minutes came hurrying back with a closed letter in his hand, addressed on the cover to "P. Sreenevas Row." The Judge being called to us was given the packet and bidden to open it. He did so, and the expression of amazement on his face was indescribable when he drew forth a very kind and affectionate letter to himself from Master K. H., thanking him for his zealous services, and giving him the notes enclosed as a help towards the Convention's expenses. The enclosure was in Government Promissory Notes to the aggregate value of rs. 500, and on the back of each were written the initials "K. H." in blue pencil. I have given the facts exactly as they occurred, and one of the notes — for rs. 10—I have kept as a souvenir, by the Judge's kind permission. The points to bear in mind are: that I myself had heard, but a moment before repeating it to H. P. B., about the Judge's unstinted generosity; that Damodar had gone to the shrine and returned with the money within the next five minutes; that each note bore the familiar "K. H." initials; that neither H. P. B. nor Damodar had then between them one hundred, let alone five hundred rupees, and that the gift was at once reported to all the Delegates clustered over the lawn. That it was not "fairy gold" is evident from the fact of my having one of the very notes now at Adyar, after the lapse of nearly fourteen years.

It was at that year's Convention that the subscription

Digitized by Google

was collected to create the Subbarow Medal Fund, for the fitting recognition by the Society of important contributions to Theosophical literature. The recipients thus far have been Judge Sreenevas Row, H. P. B., Mrs. Besant, G. R. S. Mead, and A. P. Sinnett. The capital is so small that I cannot award the medal out of the interest paid by Government on the deposit every year. I should be glad to have another £100 to add to it. An interesting, though not very important, feature of the meeting was my giving the Five Precepts of the Buddhist religion to Dr. Franz Hartmann, in the presence of H. P. B., four Buddhist Delegates from Ceylon, Damodar, "Bawajee," Tookaram Tatya, and Balai Chand Mullik, of Calcutta. By Dr. Hartmann's request I procured by telegraph the High Priest Sumangala's authority to act for him in the matter.

By the last day of December the greater part of the Delegates had left for their homes, and only our house-party remained. Thus closed one of the busiest, most encouraging and successful years in our Society's history. To get through my share of the work, I had travelled 16,500 miles in India and Ceylon. The future sparkled with bright promise; but the lower gods were envious, and were already forging the thunderbolt that Mara meant to hurl at us within the next few months; to how little profit, my narrative will show in the process of its unfolding.

CHAPTER VI.

"COMING EVENTS CAST THEIR SHADOWS BEFORE."

THE eventful year 1884 now opens out before us—the tenth since H. P. B. and I first met at that Vermont farm-house. What a succession of stirring events and picturesque experiences had followed each other throughout those ten years; how immeasurably had our field widened, how great the effect upon ourselves and upon others! The epoch opened upon us amid the weird nightly seances of farmer-mediums, with "materialized," or rather objectified, phantoms of the astral world stalking before us in the gloom, sometimes nodding in dumb show, sometimes whispering, and anon even shouting their commonplace messages to the living; its close finds us settled in a noble Indian bungalow amid enthusiastic Asiatic friends, every corner of India familiar to me, our Society's name known throughout the world, and its chartered Branches established in various countries: truly, a chapter of romance.

The last of the visiting Delegates to the 8th T. S.

Digitized by Google

Anniversary had hardly left the house before I resumed my official wanderings. On the 4th January I sailed for Bimlipatam, on the Coromandel Coast, the nearest port to Vizianagram, to visit the Maharajah of which ancient Zemindary I had been invited.* Among my fellow-passengers was a Scotch gentleman endowed with the "second sight," and, like the Swiss philosopher Zschokke, compelled at times, against his own wish, to see the life-histories of strangers pass before his inner vision in phantom pictures. Everybody who has read Dale Owen or Ennemoser knows the story of how Zschokke silenced a braggart infidel, one of a party of student pedestrians whom he encountered at an inn among the Alps. The feather-brained youths drank deeply and grew very noisy and impertinent. A quiet man at a small table in a corner attracted their attention, and presently the loud-voiced braggart in question, who had denied the existence of God and the soul in the most vehement language, turned to the quiet man and challenged him to defend the opposite view. Zschokke—for it was he—saw, as in a moving picture, the whole of the boaster's life spread out before him, and replied by asking him whether he would admit the existence of a soul if he, the speaker, should tell him the secrets of his past career. The young man laughed the proposition to scorn, and dared Zschokke to expose all, even the most important of his secrets. Thereupon the latter proceeded to do so, and among other disgraceful scenes described one where the young fellow was robbing

* The Prince has died since the above was written.

Digitized by Google

his master's till. The bursting of such a bomb, it may be supposed, put a stop to the idle debate, and the philosopher left the room in quiet dignity unmolested.

On landing at Bimlipatam I found the Maharajah's carriage and pair awaiting me, and after a pleasant drive of some hours, reached Vizianagram. I had "Bawaji" with me as Private Secretary, and my Mussulman servant, Abdullah, to look after my luggage and myself. After making a toilet I drove to the Fort, and was met at the door of his residence by the Prince, who welcomed me with the extreme courtesy for which he is known to the whole European community of Madras and Calcutta, and which has earned from them the title of Prince Charming. He is quite a book-collector, and has a very fine library, most of the books in rich bindings. He talked earnestly and fluently about religious and philosophical questions, but not with the evidently deep interest and conviction shown by the Maharajah of Kashmir. In fact, it struck me that he had no very well formed belief at all in religion, but was mostly concerned in the affairs of the world, its pleasures, and his personal position. I fancy that he had had some anticipation that I would show him phenomena, and that his lack of interest in our Society during the subsequent years marks his disappointment in that respect. However, nothing could have been nicer than his behaviour as host, and his conversation, on the four days of my stay, was very enjoyable. Before we left, he refunded to Bawaji the expenses of our journey, gave a considerable order for theosophical

Digitized by Google

literature, and made a gift of rs. 500 to the Society's treasury. Two lectures were given, and a Branch organized at Vizianagram, and on the 11th January we sailed for Madras, which was reached on the third day.

I had hardly got back before a small disturbance was created by the brother of one of our Hindu colleagues, who demanded that the latter should at once quit our house under penalty of being outcasted—an ordeal that few Hindus care to face, however zealous they may be as "reformers." Under the ponderous mass of ancient custom, backed by public opinion, the individual is crushed unless he have money to bribe influential "pûjaris" (family priests). This case being referred to me, I ordered both parties to go outside the compound and settle their differences, as I should not permit any caste battles to be fought out within our precincts.

It may be as well to say a few words about the attitude of the Society towards caste and other social abuses that swarm about us. I bracket caste with them, because in the present state of India and the world I regard it as an abuse and even an infringement of personal liberty of action. What it was in the beginning, and why instituted by the unseen Managers of the Aryan race, has been explained to us by Mrs. Besant in sublime language and with masterful ability: as a working part in the plan of spiritual development its excellence is apparent. But like the rusting machinery of an abandoned mine, it is useful to nobody, a cumberer of the high road. I speak my own opinion, of course,

Digitized by Google

and that binds nobody save myself. Unquestionably we find all groups of the race, called nations, differentiate themselves into the four chief classes that correspond with the four castes of the Aryans, viz., the hand-toilers, the traders, the fighters, and rulers, and the teachers of various kinds; undeniably, therefore, the institution of caste by Srî Krishna was a wise act and bore splendid fruits. But the Western class is not a fixed but a changeful thing; the peasant of one day may become the trader, general, or teacher of the next decade: this is proved by a thousand examples. The class, therefore, is not so great an evil in our modern social order as the fixed and immovable condition of hereditary caste, which has fallen from the dignity of a nursing school for reincarnating souls, to the low state of trades guilds, social tyrannies, and unspiritual panditism and miseries of religious hypocrisy. Admitting all this, there is a necessary reformatory work to be carried on by specially-fitted caste reformers, individuals, and societies. It is as much outside the field of our Society's corporate activity as diet, intemperance, widow re-marriage, chattel slavery, the social evil, vivisection, and fifty other outlets for philanthropic zeal. As a Society we abstain from meddling with them, though as individuals we are perfectly free to plunge into the thick of either of the fights that they occasion. The Theosophical Society ignores the differences of sex, for the Higher Self has no sex; also of color, for that is neither white, black, red, or yellow like the human races; of rank,

Digitized by Google

wealth, and political condition, worldly power or literary rank, for It is above all these limitations of the physical man—spotless, immortal, divine, unchangeable. That is why, as President, I never commit the Society to one side or the other of these questions. Mrs. Besant's Central Hindu College at Benares, my three Buddhist Colleges and two hundred schools in Ceylon, and my Pariah free schools in Madras are all individual, not Society, activities.

The Sinhalese Buddhists having secured my promise to go to London and try to settle their religious disabilities, I now began to make the necessary preparations, first for a visit to Colombo for the final arrangement of matters with them, and then for the European journey. In view of possible contingencies of accident to me, I held a Council Meeting on January 20th, at which I put the management of the Society into their hands until my return, and the next day left by train for Tuticorin, the southernmost station in India, whence the British India Company's boats sail for Colombo. The Council deciding that H. P. B. should accompany me to Europe, she also began her preparations during my absence in Ceylon. On the boat from Tuticorin I met two young Russian nobles and a wealthy friend of theirs who had been enticed to India by H. P. B.'s romantic stories in her "Caves and Jungles of Hindustan," as they appeared originally in the *Roussky Vyestnik*. The young men told me that all Russia had been charmed and bewildered by them.

Reaching Colombo the next morning at dawn, I called a

Digitized by Google

meeting of leading Buddhists, under Sumangala's chairmanship, to consider the situation; and on the following day, at an adjourned meeting at Maligakanda, that useful body, the Buddhist Defence Committee, was formed, with suitable officers and a very simple and common-sense code of Rules. It was then decided that I should go to London as an Honorary Member and special delegate of the Committee. Visits of conference to the Governor, Government Agent, Inspector-General of Police, and other officials, various meetings with the Buddhists, the drafting of several petitions and addresses and other work followed. In view to possibilities, the Chief Priests of the two ancient Royal Viharas at Kandy, together with Sumangala, Subhuti, Dhammalankara, and other priests of the Maritime Provinces, united in giving me full powers to represent them in the admission of candidates into the ranks of Buddhism, on their "taking Pansil"—the Five Precepts.

The primary objects that my European visit was intended to realize were: 1. To convince Government of the actual disabilities under which the Sinhalese Buddhists suffered in a case of criminal assault, like the recent bloody attack by Roman Catholics on a Buddhist religious procession, the culprits in which riot had escaped punishment. 2. To induce Government to appoint a Buddhist Registrar of Marriages, so that the Buddhists might not be compelled to get married by an official of hostile religious belief. 3. To get some action taken on the questions of the management of the Temporalities of Buddhist Viharas, whose rights had long been trampled on by their own lay

Digitized by Google

administrators, to the shame of the Colonial officials, who had neglected their duty. 4. To try and secure an order declaring Wesak—the May Full-Moon day, Buddha's Birthday, and consequently the Buddhist Christmas—a public holiday. While each of the great sects in India enjoyed their own special holidays, the patient, long-suffering Sinhalese had no such act of justice done them. Before sailing, on February 10th, I took Sumangala to the Government House to see the Governor, and a discussion which I had previously held with His Excellency about the Wesak, was resumed between us three, and Sir Arthur gave us encouragement to count upon his friendly action when the question should be referred back to him in due course from the Colonial Office, where I was to broach it.

On reaching Adyar I found there waiting for me Mr. St. George Lane-Fox, the electrical engineer, a new recruit to our ranks. H. P. B. had gone away to Kathiawar with Dr. Hartmann, on a visit to the Thakur Saheb of Wadhwan, one of our members. I hurried up affairs, and on the 18th February the Wadhwan party met me in Bombay. On the 20th we sailed for Marseilles, on the "Chandernagore," Captain Dumont—an excellent French steamer and a super-excellent French Commander, whose friendship I have kept ever since. He is now chief manager of the Suez Canal traffic. Our party consisted of H. P. B., myself, Mohini M. Chatterji, and B. J. Padshah, one of the cleverest Parsi graduates of the Bombay University. Then there was Babula, our trusty servant. Before sailing I enlarged the Managing

Digitized by Google

Committee left in charge of Headquarters, by adding to the Council Members Dr. Hartmann, Mr. Lane-Fox, and—Mr. Coulomb. Considering what happened later, this last appointment may surprise some, but nothing whatever had occurred up to that time to make me have a bad opinion of him. As for his wife, I was as far as possible from suspecting that she had been a party to tricks, either with or without H. P. B.'s knowledge. Not a word of suspicion had been dropped, nor a thing done by her, to my knowledge, of that sort. Of course, if I had had even an inkling of her real character, instead of making her husband (at her request—she saying that he was a proud man and his feelings would be hurt if I left him out) a Committee man, I should have had our servants chase both of them out of our compound with bamboo switches. She seemed to me a hard-working woman, who was doing all she possibly could to keep the house tidy and take care of H. P. B.'s physical comfort: she bought the food, had meals very properly served, and looked after the servants. Often I felt quite sorry for her when H. P. B. scolded her for trifling faults and, I thought, showed ingratitude for her services. Her character I did not admire in the least; she was a gossip and tale-bearer, and gabbled too much about religious matters that she did not in the least comprehend. But she seemed faithful as a dog to H. P. B., and well earned the food and shelter she and her husband got from us. He was handy with tools and fond of using them, so he was given in charge the work of masons and carpenters, that in a large place like

Digitized by Google

ours is constantly needed. He was a quiet, well-behaved person, seemingly perfectly honest, and I liked him well enough to put him on the Committee. A few words of explanation as to the house will be useful.

The main building at Adyar is nearly 100 feet square; there are six large rooms and the Convention Hall (100 × 28) on the ground floor, and when we moved there, there were one large and one very small room upstairs: the rest brick-and-cement terrace. The large room upstairs was used by H. P. B. as her bed-room, a piece curtained off from which made her sitting-room. I put up a temporary kitchen for her at the N.W. corner of the roof, and the little room over the stairs was given to Damodar. My quarters were in a detached, one-storied brick bungalow in the grounds, distant an hundred yards from the house. To gain access to the upper floor of the main building, one had to go outside on the back verandah and mount by an inclosed brick staircase. When the door at its foot was locked, no one could get to the upper rooms. This should be kept in mind. Soon after coming we had built a room for use as a "shrine," and cut down a blocked-up window in H. P. B.'s room into a door to give access to it. When the room was finished, she moved her desk in and installed herself in it. But her bed-room did not suit her, so she set Mr. Coulomb to work to building another for her at the N.E. angle of the terrace, and this was in progress when we left for Europe. He having charge of the work, and his wife that of H. P. B.'s effects, they kept the key of the staircase, and nobody had the least concern in what the

Digitized by Google

workmen were doing upstairs, as even the materials were carried in at the back verandah without troubling anybody. Damodar was now sleeping and working in the office-room downstairs. The Coulombs occupied another detached bungalow in the grounds that matched my own. Dr. Hartmann, Mr. Lane-Fox, and the rest of the house-party had quarters either in the downstairs rooms or over in my bungalow, according to their choice. The easy and natural isolation of the upper floor apartments will now be clearly understood, and should be kept in mind when reading the S. P. R. report of the "Coulomb case." We may now return to the "Chandernagore," where day after day we shall find H. P. B. working in the Captain's cabin on a French translation of *Isis Unveiled* which she had undertaken at the request of our French colleagues.

Barring a very little rough weather in the Mediterranean, our voyage was exceptionally calm and delightful: in fact, the Captain said he had never had such an one, taking it throughout. I see that I have taken special notes of the lovely picture that we sailed through when passing the Straits of Messina: a cloudless azure sky, the town of Messina, picturesque Reggio, on the Calabrian side, the winding blue strait, the lighthouse standing out in high light, a red-piped coasting steamer, and a sombre contrast of black clouds massed above Ætna's smoking peak. Along the Italian shore ran the trains with their puffing engines, looking from the deck of our distant steamer like a toy railroad run for dolls. Reaching Marseilles on the 12th March, we were sent over to Trioul to be quarantined

Digitized by Google

twenty-four hours for the sanitary sins of Bombay—a vexatious experience just at the end of a long voyage, when we were impatient to set foot again on the solid ground. Trioul is a basin-harbor amid barren rocks, with clusters of silent grey pavilions and godowns in stone, and a Roman Catholic chapel perched on a rock and capped with its great cross. A tremendous gale had sprung up—the *mistral*, I presume—and our ship was so pushed by it that we broke three cables at our moorings; if the fourth had parted we must have inevitably been wrecked within the very basin. Happily it did not, and we left the Quarantine early the next morning and got safely to Marseilles; passing on the way Château d'If, about which rather commonplace, if somewhat old fortress, Alexandre Dumas has woven the golden spell of romance. No wonder tourists actually ask to be shown the cells of Edmond Dantes and the good Abbé Faria, and the rocky precipice from which the future Comte de Monte Cristo was flung as a supposed corpse; and no wonder the guides actually do show them. When Mark Twain can be forgiven for weeping at the bogus grave of Adam in Palestine, and the whole of Christendom was collectively bamboozled by toe nails of the Holy Ghost, phials of Liebfraumilch, winking statues, etc., and French Spiritistes have recorded improving messages from "Tartuffe," who shall blame the breadwinners at the Château d'If for truckling to the ignorant and harmless curiosity of a public who have been so hypnotized by Dumas' genius as to believe that D'Artagnan and Athos, Dantes and Danglars, were men of blood and bone like our-

Digitized by Google

selves? Surely their offence is not equal to that of a travelled New York ignoramus, who told me that he had seen the dungeon in the Castle of Chillon where "Lord Byron had been imprisoned so many years that he had worn a track in the stone floor of his cell!"

We were met, on landing, by our two staunch, highly-cultured friends, Baron J. Spedalieri, the pupil of Lévi, and Captain D. A. Courmes, of the French Navy, who showed us every possible attention and H. P. B. a sincere reverence. Among the throng of her admirers not one was so capable of gauging her literary and mystical abilities as the good Kabbalist of Marseilles. It is my delight to revisit his house every time I pass that way and be folded to the breast of the affectionate patriarch, whose mind is as vigorous now at 85 as it was when my chum and I first sat at his table in 1884.* The fidelity and unflagging sympathy of Captain Courmes in our work is matter of common knowledge among all readers of theosophical literature.

* Our good friend has since died.

CHAPTER VII.

PHENOMENA AND HEALING AT NICE.

ON the second day after arrival, H. P. B. and I went to Nice for a promised visit to Lady Caithness, Duchesse de Pomar ; and Mohini and Padshah preceded us to Paris. Our hostess did everything within her power to make us feel at home in her Palais Tiranty, and to draw around H. P. B. the cream of the nobility that flock to the Riviera in the colder months. Daily they visited us to talk of Theosophy, and on most of the evenings there were meetings at which discussions and expositions were followed by light suppers, for the arrangement of which Lady Caithness had a special talent. If I was delighted by this first intimate view of Continental high life, H. P. B. was still more so in meeting, after many years of voluntary expatriation, her compatriots with whom she could talk Russian by the hour, and get news at first hand of the fortunes and misfortunes of families in whose intimacy her own had always dwelt. Iconoclast she may have been as to some things, but a more enthusiastic Russian than she was never

Digitized by Google

born, albeit she took out her naturalization papers at New York and forswore allegiance to the Czar and all other monarchs or princes. I fancy she did that, as she did her two marriages, either as a caprice or for some occult reason not apparent on the surface.

We made two friends extremely well worth having, in Colonel and Mrs. Evans, of Cimiez, a couple who lived in a splendid villa, which was made for us altogether sunny by their cordial welcomes. We also met at Nice Madame Agathe Hæmmerle, of Russia, a lady of high culture, an astonishing linguist, and the regular correspondent of half the noted savants of Europe who give themselves to research in the different fields of Psychology. Then there was an evening with the astronomer Camille Flammarion, of the Paris Observatory, at that time a member of our Society. Two evenings were given in part to mesmeric experiments by M. Robert, the Parisian professional, which were very instructive; and on another occasion Mme. Hæmmerle and I attended a public lecture, with experiments, on the same subject, by Prof. Guidi, the Italian specialist. The disbelievers in thought-transference should be called upon to explain one of these experiments to which I was a party. The lecturer had two lady assistants, of whom one played the piano and the other was the mesmeric subject. He bade us notice the effect of the music on the latter—whom he had proved to us to be in a state of insensibility to pinches, pullings, and loud noises. He willed her to hear the music, and she responded in physical move-

Digitized by Google

ments to every change in its character, expressing in highly dramatic postures the feeling appealed to for the moment. Pride, anger, mirthfulness, affection, disdain, defiance, terror, were successively portrayed by this cataleptical being, as though she had been some musical instrument played upon by the pianist's fingers. Signor Guidi then said that if any gentleman present wished to satisfy himself of the power of the subject to receive mental suggestions, he would be glad to give him the chance. I rose at once and offered myself for the experiment. The lecturer came over to me, told me that I must concentrate my thought at the moment when I wished to fix the subject in the *pose* in which she might be at the time, and when he was satisfied that I understood him, grasped my hand for a moment and then stood aside. The pianist was then told to resume her playing, and the hypnotized subject began once more her statuesque poses. I took one good look at her, after which I leaned my chin on my cane and turned my eyes downward, so that I could see her movements through my eyelashes, but she could not get any hint as to my purpose. I let her go on until, in expressing the feeling of sublimity, she was leaning backward, seemingly past the centre of gravity, and was kept from falling only by the contraction of the leg-muscles: it was a posture so difficult, that in the natural state one could scarcely have retained it a minute. Then, without making the smallest gesture or muscular contraction to show my object, I mentally ordered her to become rigid. She re-

Digitized by Google

sponded instantaneously; the thought had barely been formed in mind before she caught and obeyed it. With her head thrown far back, her torso bent back from the hips at an oblique angle, her arms held at their full length pointing upward, her knees bent forward, she seemed as immovable as if she were a statue of bronze. It was to me a most instructive experiment; the more so in that the mere clasping of my hand for a moment by the mesmerizer sufficed to put me in psychical rapport with his subject, without the speaking of a word by him or by me.

The mention above of M. Robert's experiments at the Palais Tiranty recalls to my mind a story that he told us, and which conveys a useful lesson to all mesmeric experimentators. He had a certain very good clairvoyant subject who, one time when he was asleep and lucid, told his mesmerizer that a certain jeweller's shop in Nice would be entered by burglars on a certain night. Thereupon, Robert, seeing a fine chance to help the mesmerist party, and, very likely, to advertize his own business of *Masseur*, went to the jeweller, handed him his business card, and told him to take extra precautions against burglary on the night in question. The jeweller thanked him, but said that he did not believe much in clairvoyance, and that, in any case, his premises were quite secure against burglars. Yet it so happened that the predicted burglary actually was made at the time mentioned. Then there was a fine excitement, a running to the Prefect of Police, and the usual wailing on housetops.

Digitized by Google

Ah! that address card of the mesmerizer—happy thought! He must have known something about it and tried to buy him off by the offer of a bribe, failing the receipt of which he had allowed his pals to do the burglary! So the card is taken to M. le Prefect, and the poor innocent M. Robert summoned to come and stand an investigation. He went, was examined, and politely told that the Police were as incredulous as the jeweller about clairvoyance, and he must explain on some more reasonable and common-sense ground his fore-knowledge of the intended burglary. The wretched Robert managed to get off by citing a number of the most eminent personages in Nice to testify to his good character, but he had to pack off secretly his equally innocent clairvoyant, to put him beyond the clutch of the Nice detectives. Perhaps these facts will give a valid reason for the extreme reluctance of every respectable mesmerizer to allow his clairvoyant to aid in the tracking of criminals and the unravelling of crimes. The narrow escape of H. P. B. from arrest in Russia for suspected complicity in a murder, the perpetrator of which she discovered clairvoyantly at her Father's request and the special solicitation of the District Inspector-General of Police, is familiar to many of her friends, and bears me out in the precautionary word I offer to all mesmerizers who are so fortunate as to have under their control a good clairvoyant, whose aid the police would obtain :—DON'T.

It so happened that the annual "Bataille des Fleurs" (Flower Carnival) came off while we were in Nice, and I

Digitized by Google

was very glad to see one of the most charming ways in which the fashionable world contrives to kill time. The Duchess could not go out herself, but sent me, in charge of one of her lady friends, in her carriage to fall in with the procession. Almost every carriage but ours was bedecked with flowers and garlands, and bunches of them adorned the horses. From every house fronting the street, flowers were showered down upon us; the sun shone resplendently, the bosom of the Mediterranean lay like a pavement of sapphires, the cool grey-greens of the olive orchards on the hilly slopes refreshed the eye, and all was joyous laughter, gay trifling, and prankish little tricks of flower-pelting along the route. A pretty Russian Countess up in a balcony asked, by dumb show, of her friend the lady by my side, who I was, and was answered with a mysterious nodding and winking to indicate that she should hear the facts later. She did, and no mistake: the mutual friend told her that I was the Governor of Madras and her affianced husband! The flower-battle was very pretty foolery, to be sure, yet a saddening spectacle; for one can realize, in seeing the round of childish amusements followed year after year in changeless monotony, how indisposed the higher circles are to think of serious things, how completely submerged in sensuous pleasures. Yet their religious feelings can be excited to even the point of frenzy by a great preacher or a great idea set in circulation at the right time. At this moment there are many women of the highest social rank, some even among the royalties, who read theosophical literature

Digitized by Google

and think the theosophical things: this is a fact well known to me. A bit of leaven is working in the mass, and the influence will grow. But for the several scandals that have been attached to our movement since 1884, an open connection with Theosophy would not be so shunned as it has been, and, to some extent, still is, by the European aristocracy and upper middle class. The greatest obstacle in our way, however, is the iron hold that social routine has upon those classes, and the almost hopeless submergence of the individual in the fashionable, time-killing, oblivion-seeking round of daily life. Apart from the crowd, these reading and thinking entities would be free to develop all the good in themselves: as it is, they are wasting this present incarnation.

Although I thought, before leaving Adyar, that I had done with my healings, I let myself be tempted to take, at H. P. B.'s request, the cases of three Russian ladies whom we met at Lady Caithness' house on the evening of the 25th March—a Princess, a Countess, and a Baroness: the second, a cousin of H. P. B.'s; the last-named, one of her playmates in childhood. The Princess had a stubborn remnant of a stroke of hemiplegia, which, since twelve years, had prevented her raising her left hand to her head and using her left foot properly. Within a half-hour I freed both limbs from their bonds. The Countess was extremely deaf: after a treatment of fifteen minutes she could hear ordinary conversation, and was enchanted to be able to enjoy the music of a concert that evening, as she had not for years. The third lady I relieved

Digitized by Google

of a minor spinal trouble. H. P. B. and I left Nice for Paris, March 27, many of our new friends seeing us off at the station.

We reached Marseilles at 9.30 P.M., and Paris the next evening at 11 P.M. Mohini, Dr. Thurman, F.T.S., and W. Q. Judge—who had left New York for India—met us at the station and conducted us to our apartments at 46, Rue Notre Dame des Champs, which Lady Caithness had hired for us, and H. P. B. occupied, three months. Visitors thronged, and a multitude of questions were asked about our Society and its aims. It had then about 100 Branches or a sixth of its present strength. The Parisian press, always in search for sensations, gave us many columns of notices; Victor Hugo's organ, *Le Rappel*, leading off with an article of three columns on "The Buddhist Mission to Europe."

Our old Albany friends, Dr. and Mrs. Ditson, we found living in Paris, and the Doctor and I went together to see the famous healer, Zouave Jacob, a few days after our arrival. The exceptional healing power of this man was first exhibited during the Second Empire, and the press of Europe and America teemed for years with stories of his wonders. We were courteously welcomed, M. Jacob saying that he knew me by reputation as a founder of the T. S., and a healer. He was a spare man of medium size, lithe, active, and full of nervous force, with his hair cut short, black firm eyes, and a black moustache; he was dressed in black, his frock-coat buttoned, his linen scrupulously clean. He led us to his clinique-room—a

Digitized by Google

long narrow basement chamber, with a bench against the walls all around. On the average he was treating fifty patients a day, and having been at the work twenty years, there must have passed through his rooms some 300,000 patients. I was much struck with his method. At the appointed hour the entrance door would be closed, the patients seated on the benches, and in silence, and with an air of solemnity, the Zouave would enter and take his stand, with arms folded, at the centre of the lower end near the door. After a moment of meditation, he would raise his head and slowly glance at every patient, letting his eyes rest on every face deliberately and scrutinizingly. Then, beginning with the nearest on his left hand, he would stop in front of him and gaze as if trying to look his body through; then he would perhaps touch him in some part, or not, as the case might be, and ask, "*Est-ce là?*" (Is it there?), and upon receiving the affirmative reply, would give some order, or make a pass or two, or let the hand rest on the affected part, and either let the patient stop, or send him away and pass on to the next. Sometimes, after gazing at a patient, he would shake his head and say, "*Rien! Allez,*" intimating that he could do nothing and the patient should go away. So he would move around the whole room, always silent, grave, impressive; effecting many cures, rejecting some cases, directing others to return the next day for further treatment, taking no fees, but trusting for his support to sales of his photograph and literature. A striking personality, a rather vain man, bitterly resenting the petty persecutions of the doctors of medicine and the

Digitized by Google

priests, which had followed him throughout his career. I had—it will be remembered—but just completed my fifteen months of healings, and his method greatly impressed me with its efficacy and simplicity. It was pure hypnotic suggestion, and called for no outpouring of the healer's own vitality as mine had done. His impassive calm and mysterious insight into symptoms, the silence maintained, the gliding noiselessly from patient to patient, the joyful words and expressions of such as were relieved of pains in the sight of all, combined to create a vivid expectancy, which his repute as a great healer intensified, and effected spontaneous cures at the moment when his pointing finger touched the spot of suffering. The one indispensable factor was that he should show in his every motion and whole demeanor a sense of absolute self-confidence as the Master of Pain. It was collective auto-suggestion, the mighty power that helps General Booth and all great revivalists to "convert" their thousands and tens of thousands. In fact, the method of the Salvation Army is one of the most effective hypnotizing agencies ever adopted. Last summer I saw it used to perfection by Booth himself in Exeter Hall, and seventy-five subjects drawn by Braid's and Charcot's system to the "anxious bench." The rhythmic pounding of the big drums and swells and falls of the music were identical in potency with that of the tap of the huge tambourines of the Aïssouas in their blood-curdling hypnotic phenomena.

The next day Dr. Ditson and I called on another healer, a spiritualist medium named Eugene Hippolyte,

Digitized by Google

fils, who was said to have made many cures under "control." He was a large, sallow-complexioned man, and on testing him, with his consent, I found him quite sensitive to my mesmeric control—a patient whom I could have relieved of almost any functional disorder in two or three treatments. We then paid our respects to still another, M. Adolphe Didier, brother of the very celebrated "Alexis," whose marvellous clairvoyant faculty is historical. M. Adolphe had only recently resumed residence in Paris after many years spent in London in practice as a medical clairvoyant. He gave me his brother's address and we called on him, but had no opportunity of witnessing a display of his powers.

Meetings for conversation and discussion were being held by H. P. B. and myself at the houses of Lady Caithness and other friends, some of the results of which her ladyship has embodied in her work, *The Mystery of the Ages*.

CHAPTER VIII.

A STRUGGLE IN THE LONDON LODGE T. S.

ON the 5th of April I left H. P. B. and took the train for London with Mohini M. Chatterji. As a serious dispute had grown up in the London Lodge between Mrs. Anna Kingsford, Mr. Edward Maitland, and their party, on the one hand, and Mr. Sinnett and the rest of the members, on the other, about the comparatively superior value of the Indian teachings as compared with the Christo-Egyptian teachings which she was giving out, and as it lay with me to settle it or see the members divided into two camps, as it were, I had issued from Nice a circular to each registered member of the London Lodge, asking them to send me, separately, to Paris, in confidence, their views respectively on the situation. These letters I had brought with me to read in the train. I had just come to a passage in the letter of Bertram Keightley, where he affirmed his entire confidence that the Masters would order all things well, when, from the roof of the railway carriage, above Mohini's head, a

Digitized by Google

letter came fluttering down. It proved to be addressed to me and to be in the K. H. handwriting, giving me necessary advice for the treatment of the difficulty. It was as if intended as a marked response to the loyal thought of the writer of the letter I was reading at the moment. I wish that everybody in the Society could realize how certain it is that those Great Brothers who are behind our work keep a vigilant eye upon all of us who with a pure heart and unselfish mind throw our energies into it. What more comforting than to know that our labors are not in vain nor our aspirations unheeded?

The trouble in our London Lodge, like all such misunderstandings, tended to increase and ultimately to disrupt the once harmonious group. It was imperative that I should put a stop to it, if possible, and this was my principal business in going over to London. If I had had the least doubt of it before, it would have been dispelled by a letter which I received phenomenally in my cabin on board the "Shannon," the day before we reached Brindisi, and in which it was said:

"Put all needed restraint upon your feelings, so that you may do the right thing in this Western imbroglio. Watch your first impressions. The mistakes you make are from failure to do this. Let neither your personal predilections, affections, suspicions, nor antipathies affect your action. Misunderstandings have grown up between Fellows, both in London and Paris, which imperil the interests of the movement . . . . try to remove such

Digitized by Google

misconceptions as you will find, by kind persuasion and an appeal to the feeling of loyalty to the cause of truth, if not to us. Make *all* these men feel that we have no favorites, nor affections for persons, but only for their good acts and for humanity as a whole."

A great truth was stated in this same letter, viz.: "one of the most valuable effects of Upasika's (H. P. B's) mission is that it drives men to self-study, and destroys in them blind servility to persons." What a pity that some of her most ardent disciples could not have realized this, for they would have been spared the bitter pain that has been caused them and all of us by the many successful exposures of her defects of character, by opponents who accepted their foolish challenge and proved her to be the reverse of infallible. She was great enough and had quite sufficient claims upon our gratitude, without our trying to make of her a goddess, immaculate and unerring.

In the London struggle in our Branch I had to deal with a learned, clever, self-confident woman, ambitious and eccentric: a unique personality, who believed herself the angel of a new religious epoch, the reincarnation of Hermes, Joan of Arc, and other historic characters. By canvassing the opinions of all the registered members of the London Lodge T. S., I had ascertained that as between her teachings and those of the Indian sages, the verdict was almost unanimous against her. It was not that they did not appreciate her great qualities as they deserved, but that they valued those of the Masters more. Perhaps,

Digitized by Google

also, they found her inclined to be too masterful for British notions. The first step was naturally to call on her, which I did. I cannot say I altogether liked her, although it did not take many minutes for me to gauge her intellectual power and the breadth of her culture. There was something uncanny to me in her views about human affection. She said she had never felt love for a human being; that people had told her, before her child was born, to wait its appearance and she would feel the great gush of mother-love and the fountains of her affection would be unsealed: she had waited, the child had been shown her, but her only feeling was the wish that they should take it away out of her sight! Yet she lavished excessive love on a guinea-pig, and, in his *Life of Anna Kingsford*, Mr. Maitland's splendid pen has made us all see, as in a mental Kinematograph, his great colleague carrying the little beast around with her in her travels, lavishing on it her caresses, and keeping the anniversary of its death as one does that of a near relative.

The annual election of officers by the London Lodge was to come off on the following day, so I had no time to lose. I made Mrs. Kingsford the offer to give her a charter for a separate Branch of her own, to be called The Hermetic T. S., first having discussed it with Mr. C. C. Massey, her sincere friend and mine. The offer was accepted, and the election passed off harmoniously; Mr. G. B. Finch being chosen President, Mr. Sinnett Vice-President and Secretary, and Miss Arundale Treasurer. Things were proceeding smoothly, in the usual manner,

Digitized by Google

when they were interrupted by the sensational appearance of H. P. B., whom I had left in Paris, but who took a flying trip so as to be present at this meeting. The Kingsford-Maitland party, who had notified me in advance that they would not be candidates for re-election to office in the London Lodge T. S., presented me, before leaving, a formal application for a charter for the new Branch, which I promised to grant. On the 9th (April) the meeting for organization was held at the chambers of Mr. Massey, and the "Hermetic Lodge T. S." became an established fact. Besides Mr. Kingsford, Mr. Maitland, Mr. Kirby, and Mr. Massey, there were present Lady Wilde, her sons Oscar and William, and the wife and daughters of the late Dr. Keneally, the erudite and eccentric counsel of the noted Claimant. These three ladies applied for, and were admitted into, membership. Mohini M. Chatterji accompanied me, and made one of the excellent addresses on the occasion.

On the Easter Sunday I went with Miss Arundale and Mohini to Westminster Abbey to hear a preacher of high repute, and then to the Central Hall and Barracks of the Salvation Army. We all gave the palm to Mrs. Booth and the other speakers who followed her, over the stately and soulless inanity of the fashionable Abbey priest, whose discourse had not warmth enough in it to vitalize an amœba, whereas those of the others boiled over with fervor. The kingdom of Heaven will never be carried in white bands and cassocks, unless the man they hide be a bit more like "flames of fire"

Digitized by Google

than like a boxful of dictionary words and rhetorical phrases.

The change from the tropical heat of India to the bitter winds and damp days and nights of London, and the lack of warm clothing, laid me up with a pleuritic cold for two or three days, and might have been more serious but for the unselfish care of Mrs. and Miss Arundale, my hostesses, who were kindness personified. Out again on the 16th, I was given a dinner at the Junior Athenæum Club by Mr. W. H. Coffin, of the Society for Psychical Research. He had bidden to meet me Messrs. W. Crookes, F.R.S.; Prof. W. F. Barrett, F.R.S.E.; Col. Hartley, LL.D.; H. J. Hood; A. P. Sinnett; F. Podmore, M.A.; Edward Pease; Rev. Dr. Taefel; F. W. H. Myers; and Edmund Gurney. Truly a brilliant company of scholars and literati! This was in the early pre-Coulombian days, when the Theosophical Society had not been declared *taboo*, and H. P. B. had not been branded by the S. P. R. as the most accomplished and dangerous charlatan of the present world-period!

On the 17th Mohini and I visited the laboratory of Mr. Crookes, and were shown a variety of most interesting experiments. The next day we two and Mr. Sinnett dined at a private house, where Mohini saw for the first time a lady partisan of the Esthetic Reform movement, dressed in the utterly absurd style of costume affected by that body of cranks, and having her hair tousled, like a rat's nest, all over her head, and far too much of her bust exposed to suit our Hindu's notions of decency. As luck would have

Digitized by Google

it, she was given to Mohini to take in to dinner. He glanced at me hopelessly, not knowing what was expected of him, with a strange expression of eye that I could not make out and had no time to inquire into at the moment. When we were driving home, later, in the cab, the mystery was explained in a way that was nearly the death of me. "That lady that I took in to dinner," said he, "does she sometimes get dangerous?" "Dangerous? What do you mean?" I replied. "Why, she is insane, isn't she? She must be. She asked me at the table if we ever laughed in India! It was when you were telling that comical story, at which they all roared. The fact is, I kept my eyes all the while fixed on my plate, lest by catching hers I might send her off into a paroxysm and she might use one of the knives beside her plate: how *could* I laugh? Don't you think it was inhospitable in them to put such a lady in my charge without telling me what to do in case a fit should come on?" He said this in perfect sincerity, and stared in astonishment when I burst into fits of laughter; which made it worse than ever for me. He was much relieved when I at last was able to explain matters, and assured me that he thought the lady was a mad relative of the family, who was, perhaps, harmless, ordinarily, but subject to recurrent crises of the nerves, and was "allowed to dress like that to keep her quiet."

My Diary shows that the making of the "Hermetic" group did not quite settle the disturbance in the old lodge. The members generally wanted to profit by both courses of instruction and to belong to both lodges. The effect was

Digitized by Google

to keep up the excitement, so I was obliged to issue a new rule, to the effect that multiple membership would not be allowed; no person to be an active member in more than one Branch simultaneously; and where double membership existed, choice should be made in which group the individual preferred to remain. The effect was to threaten the disruption of the "Hermetic" lodge. So, after consultations with Mr. Massey, I suggested that Mrs. Kingsford should return her charter and form her friends into an independent society, and thus make it feasible for them to belong to both. For, the Hermetic being an outside body, its relation to us would be the same as that of the Asiatic, Geographical, Astronomical, or any other foreign society. Mrs. Kingsford returning a favorable answer through Mr. Massey, this plan was carried into effect, the Hermetic Lodge of the T. S. ceased to exist, and the "Hermetic Society" was born, with Mrs. Kingsford as President and Mr. Maitland as Vice-President. Calm followed the storm and all went well. The first meeting was held on May 9th, and, by request, I made a friendly address of good wishes and sympathy for the new society.

The interest in theosophical ideas was now spreading throughout all London social circles. Virtually begun by the publication of Mr. Sinnett's *Occult World*—of which the late Mr. Sam. Ward gave away 250 copies among his friends—it had been fostered by a number of agencies, literary and social, and one could pretty well foresee the extension that has since occurred. A number of persons of high standing in the world of letters, as well as in the

Digitized by Google

nobility, joined us. I had my full share of dinners to eat in company with social lions, some of whom impressed me most amiably—others didn't. At Mrs. Tennant's house I met Sir Edwin Arnold, was invited to lunch with him, and he gave me the valuable present of some pages of the original manuscript of the *Light of Asia*, which is now one of the curios of the Adyar Library. At Mrs. Bloomfield Moore's Mr. Sinnett and I met Robert Browning, and talked some Theosophy with that master of verse. Earl Russell had me up to Oxford for a night, and Lord Borthwick, F.T.S., to his place in Scotland for a fortnight. At one table I met an officer of the Queen's Household and a famous General; at another, one of the greatest of modern painters. Everywhere the theme of talk was Theosophy: the tide was rising. The ebb was to follow, but as yet no one foresaw it in Europe, for it was to begin at Madras: the Scottish Missionaries its engineers, the high-minded Coulombs their tools. We shall come to that chapter of history very soon now, as we are recalling the incidents of the month of April 1884, and the grand explosion occurred only a few weeks later.

CHAPTER IX.

H. P. B. AND THE S. P. R. REPORT.

TWO distinct and very different streams of the Society's karma were now converging, though we then realized very little their prospective importance. One was the outcome of my special mission for the Ceylon Buddhists, which had brought me to Europe this year; the other, our first contact with the Society for Psychical Research. The former, beneficent in itself, brought honor to us and joy to a whole nation; the latter cast a disrepute upon the S. P. R., caused us undeserved grief and sorrow, tarnished our reputation, and pierced the heart of that unrewarded servant of the race, H. P. B. In the sequence of events it comes first, and shall have first attention.

There had been the making of acquaintances between us and the S. P. R.; entire cordiality and unsuspicious friendliness on our part; an equally apparent sympathy on theirs; agreeable social meetings at the houses of their leaders; and, finally, a consent on my part to be examined by a Committee of the S. P. R. The sky was

Digitized by Google

purely blue, without the tiniest cloud to indicate the hurricane in preparation for us. So those were joyous days in London and Paris, and H. P. B. and I were in exuberant spirits. On the 11th May (1884) I had my first sitting and examination with Messrs. F. W. H. Myers and J. Herbert Stack. A stenographer reported the Questions and Answers. The printed Report is in a pamphlet of 130 pp. 8vo. (Private and confidential to members of the S. P. R.), which was issued in December 1884, and which also contains reports of similar examinations by the Committee of Mohini M. Chatterji, and forty-two documentary appendices. The ground covered by the inquiry was as to the appearance of phantasms of the living; the projection and material constitution of the human Double; appearances and communication with the same at distances from the physical body; visits to the witnesses from living Adepts or Mahatmas; *apports* of ponderable objects; astral bell-sounds; the phenomenal receipt of written documents; the precipitation of Mahatmic writing within closed letters from ordinary correspondents while in transit through the mails; the giving of flowers by an Adept's double to a group of observers, etc. I think that any candid reader of the Report will notice the perfect candor, openness, and evident good faith of the witnesses, and the amplitude of corroboration contained in the documents which were laid by us before the Committee. But to understand our feelings when, later on, the S. P. R. made its merciless attack upon H. P. B.,

Digitized by Google

our Masters, and ourselves, one should try to put oneself in our places. Here were we laying bare a series of personal experiences which had for us a most private and sacred character, for no possible benefit that could accrue to ourselves, but solely that our testimony might help the cause of spiritual science and give comfort to other students not yet so favored as ourselves; going before the Committee with no prepared case, but answering the questions sprung upon us, and hence putting ourselves at the mercy of those who had none of our enthusiasm, whose policy was to criticize, analyze, and pick flaws in our statements, and who in rendering their final judgment were unsparing of our feelings, sceptical as to our motives, and merciless to a degree. Worst of all, they were then incompetent through inexperience of psychical laws, misled by the conclusions of an agent—Dr. Hodgson—whom they sent out to India to verify our statements and collect evidence, and by an utterly incompetent handwriting expert's report, and so put themselves on permanent record as the self-righteous calumniators of a woman—H. P. B.—who had neither done an injury to a living person, nor asked or received any benefit or reward for her services to the world, yet whom they dared to brand as "one of the most accomplished, ingenious, and interesting impostors in history" (see *Report of the Committee appointed to investigate phenomena connected with the Theosophical Society*. Members: Messrs. E. Gurney, F. W. H. Myers, F. Podmore, H. Sidgwick, and J. H. Stack. Published in 1885).

Digitized by Google

This Second Report was received by poor H. P. B. at Adyar when she lay apparently on her death-bed, and it nearly killed her. With an agony of pathos she has written in blue pencil, in the copy that now lies before me, the following:—

"Madame Blavatsky, who will soon be dead and gone, for she is doomed, says this to her friends of the P. R. S. (S. P. R.): After my death these phenomena, which are the direct cause of my premature death, will take place better than ever. But whether dead or alive, I will be ever imploring my friends and Brothers never to make them public; never to sacrifice their rest, their honor, to satisfy public curiosity or the empty pretext of science. Read the book. Never, throughout my long and sad life, never was there so much of uncalled for, contemptuous suspicion and contempt lavished upon an innocent woman as I find here in these few pages published by so-called friends.

"H. P. BLAVATSKY."

"ADYAR, *Feb.* 5, 1885,
"on my death-bed."

She adds the remark that she shall never forgive me for "thrusting our phenomena upon the attention of the gentlemen scientists of the P. R. S. (S. P. R.)," which was rather hard on me, considering the innocent part I played in the whole affair. I knew of nothing to be concealed, had no suspicion whatever of bad faith anywhere, and was perfectly willing to put every facility in the way of those who wished

Digitized by Google

to investigate the facts. This is conclusively shown in Dr. Hodgson's Report on his investigations in India, as the special agent of the S. P. R. On page 311, he says of me: "His candor was shown by his readiness in providing me with extracts from his own diary, and the freedom with which he allowed me to inspect important documents in his possession; and he rendered me every assistance in his power in the way of my acquiring the evidence of the native witnesses. Not only so, but observing, as I thought, that Mr. Damodar was unduly endeavouring to take part in my examination of a witness, shortly after I arrived in India, he desired me not to hesitate in taking the witnesses apart for my private examination, and he made special arrangements for my convenience."

Now there are several points not to be overlooked in finally revising the wholesale condemnation of Madame Blavatsky and the discrediting of her phenomena by Dr. Hodgson and his colleagues of the S. P. R.:—

1. No prepared case was submitted to the Committee in London, Mr. Sinnett, Mr. Mohini, and I having come forward and answered questions *impromptu*, according to our best recollections about events stretching back over several years. When the incidents occurred there had been no measuring by feet and inches, consulting of watches, tying up of H. P. B. in a bag or fastening her to chairs by sealed threads, as in the case of mediums; nor did either of us think for one moment of daring to banter with the august Personages in momentary view, or to tell them to move here, or stand there, or let themselves be weighed or

Digitized by Google

handled or pinched, to satisfy us that they were real. I have never heard of anybody's so treating any saintly personage. So we simply made ourselves the easy game of a Committee who cared not a whit about our feelings, motives, or opinions as to the Living Teachers, but concerned themselves chiefly in trying to break down the standing of the great rival Society, and sweeping our rubbish off the ground which they aimed at occupying alone. This is the tone that seems to run through the whole Report.

2. That when, later on, in India, they cross-examined the Hindu and other Indian witnesses who had signed the certificates published in the *Theosophist*, in Mr. A. O. Hume's *Hints on Esoteric Theosophy* and other pamphlets, every stress was laid upon their contradictions, while no allowance whatever was made for (*a*) the utter inexperience of Asiatics in psychical research methods, and (*b*) their mental incompetency to restate accurately what had been their observations and impressions at the time of witnessing the phenomena, when no tests had been applied, measurements taken, or other details looked to: since nobody had had an idea that they would have to recall the incidents four or five or even more years later. A judicially-minded investigator would have seen at a glance that self-contradictions would, under those circumstances, have been the most natural, and mnemonic accuracy the least so, to expect. Every cool observer at mediumistic circles would know that. I have attended the late Dale Owen, Epes Sargent, and other equally honest and cultured men, to circles where they proved to me their perfect inaccuracy of

Digitized by Google

observation. How much less, then, ought to have been expected from Hindus who had never had the least personal experience in such matters?

3. The chief accuser of Madame Blavatsky was Mme. Emma Coulomb, whose moral worth is shown in her confession to the Missionaries that she had been cognizant of the fraudulent character of H. P. B.'s phenomena all along, and had served as her lying and dishonest accomplice! Inquiries at Cairo, of the ladies of the Royal harem, would yield highly interesting facts about her.

4. That the pretended letters of H. P. B. to her were *never shown me by anybody*, although I was within easy reach, a fact which does not go towards proving their genuineness.

5. That the unqualified opinion of the caligraphic expert who declared the K. H. and other alleged Mahatmic letters to have been written by H. P. B. (from certain resemblances between them and her admitted handwriting), upon which the S. P. R. Committee largely based their denunciation of her, is that of a man notorious for having declared, on like professional analyses, the "Pigot Forgeries" to have been genuine letters of Mr. Parnell, while the forger himself later killed himself in prison after confessing to his forgeries. Moreover, his professional opinion is opposed to the categorically opposite one of the chief caligraphist of the High Court of Berlin. Letters of H. P. B. and of the Mahatma K. H. were submitted for his decision by Herr G. Gebhard, Persian Consul, and he declared in writing that "it was impossible that the two letters could have been written by the same hand" (*Theosophist*, June 1886, Supplement).

Digitized by Google

6. That even if the resemblances in the handwritings to Madame Blavatsky's had been much more striking than they were, this would have been no proof of her *mala fides*, since every tyro in spiritualistic research knows that, whether a psychic message is written on a closed slate, or precipitated on a paper or card laid on the floor, or on the ceiling, or anywhere else at a distance from the medium, the writing will usually resemble that of the medium. The same rule applies to all intermediary agents through whom messages in psychic writing are transmitted. Neither Dr. Hodgson, nor either of his colleagues, nor their infallible "expert" seems to have known this elementary fact; yet this did not deter them from rendering an unjust and cruel judgment on a woman whom they almost seem to have fallen upon to claw to pieces, like so many wolves on a victim's carcase. I wish to keep my feelings within bounds, but it becomes very hard when I think of the injustice done to my old colleague. The attitude of the Committee of the S. P. R. seems to me that of a body of gifted, scholarly men, blinded by self-righteousness so as to make them incapable of seeing facts as they were, and daring to lay violent hands upon the reputation of a person entitled, under every principle of human justice, to the benefit of the doubt.* Was any

* The character of Mr. Podmore has been just recently drawn by the veteran Editor of *Light* (see issue of November 27th, 1897) in a way that will show how little chance of fair treatment H. P. B. had at the hands of his S. P. R. Committee. "Patient, unspeakably painstaking, with a wonderful eye for a crevice, and an equally wonderful wrist for jerking an incident off the rails, and putting an up-train on the down-line . . . . Mr. Podmore is an enthusiastic unbeliever. He starts with a vehement assumption against all things spiritual, and

Digitized by Google

mercy shown her? One searches in vain throughout the published *Report* for the smallest sign of it.

"Oh! for the rarity
Of Christian charity."

7. That Dr. Hodgson, the agent-detective sent by the S. P. R. to India to ferret out the facts, has since then become an avowed spiritualist, to the extent of pronouncing the medium, Mrs. Piper's phenomena, spiritualistic after six years' scrutiny of them! In his earlier days he devoted fourteen hours to the writing up of a single slate-writing seance—*i.e.*, at the time when he was as sceptical and incompetent to pronounce upon 'psychic powers' as is Mr. Podmore to this day. It is sad to think what a different report on H. P. B.'s phenomena he would have made to the S. P. R. but for his incompetence as an observer of psychic facts; sad, because he might then have done her justice instead of injustice, and spared her years of agony undeserved. The congeniality of Dr. Hodgson's mind at that time with Mr. Podmore's is apparent throughout his report of observations: a single example will suffice—*ex uno disce omnes.* Mr. S. Ramaswamier, District Registrar of Tinnevelly, Madras Presidency, encountered in Sikkim my Guru,

strictly attends to business as one whose business is to detect crevices, and stuff them up with anything that comes to hand; and if there is nothing substantial to stuff them up with, he jams in an unfailing supply of innuendos, assertions, and assumptions. But a passage, towards the end of the book [under review] gives us the key to it all. . . . 'We are bound to assume abnormality somewhere, and, of the two, it may be easier to suppose the medium abnormally dishonest than to credit him with abnormal psychic powers.'"

Digitized by Google

Mahatma M., on horseback, and had a long conversation with him, which he describes at length (*Theosophist*, Dec. 1882). Dr. Hodgson says: "I see no improbability in supposing that the Mahatma was personated by one of Madame Blavatsky's confederates." As though this penniless woman had a paid army of cheats scattered over India, even to Sikkim!

8. That weird phenomena occurred in H. P. B.'s presence from her very childhood, as is proved by the testimony of her family, and that similar ones were witnessed by myself and many other persons in America and India, long before the Coulombs came out of their obscurity, and under circumstances precluding the theory of confederacy or bad faith.* This fact should, it would seem, have great weight in the making up of the public verdict in the case at issue. The misfortune was that the S. P. R. Committee, owing to ignorance and lack of experience, doubted the possibility of such phenomena, and hence—as Mr. Podmore puts it in the passage above quoted—as they had "to assume abnormality somewhere," it was "easier to suppose the medium abnormally dishonest than to credit him with abnormal psychic powers."

If the reader will but think a moment, he will see how impossible it was that the members of the Committee could have been qualified to pronounce upon phenomena of the class of H. P. B.'s. There had been plenty of mediums in Europe and America, but no alleged adept proficients in

* See *Old Diary Leaves*, "The True History of the Theosophical Society," London, New York, and Madras, 1895.

Digitized by Google

psychical science since Cagliostro and Count St. Germain. Where is the record of verified phenomena with which H. P. B.'s could be compared and tested? In the whole range of scientific research no branch demands of the experimenter such intuitive insight, such capacity for delicate weighing of facts, such a profound knowledge of man in his physical, mental, and spiritual aspects, such an intimate acquaintance with the ancient schools of philosophy and of occultism, such a memory of the recorded powers of adepts, such a power to experimentally verify at first hand the number and play of the finer forces of nature, as this field of transcendental physics. What were the special qualifications, then, of Messrs. Myers, Gurney, Podmore, Stack, Sidgwick, and Hodgson for this inquest? What weight ought to be given to their hasty verdict? We scorn the raw opinions of the uneducated tradesman upon astronomy, mathematics, symbology, spirit survival, or any other of the great questions of human knowledge with which he has had no familiarity whatever. Yet is his case worse than that of these gentlemen amateurs in Practical Psychology, who possessed no more qualification to render a just judgment on H. P. B.'s psychical powers than our supposed greengrocer, tailor, or blacking-maker? If the S. P. R. had had to convert the public to a belief that ran counter to its preconceptions, or to some new aspect of a fixed error, such as the geocentric theory, for example, does any sane man believe that they would have brought forward so weak a case as this, and so hastily risked the indignant censure of a more enlightened posterity? But the chance of dis-

Digitized by Google

crediting a dangerous personality, by merely calling her a clever impostor and thus appealing to popular ignorance and popular prejudice, was too tempting to be resisted; so they slandered and passed on, leaving their poisoned shaft to rankle in the breast of this poor, race-loving, imprudent, impulsive thaumaturgist and teacher. They have had their day of triumph, but divine justice has still its inexorable policy to vindicate.

Whatever her other friends may have done, I, at least, have always tried to deal with H. P. B. as a natural, not a supernatural, personage. In relating my observations of her phenomena I have done my best to speak the plain truth and present my facts without bias. This policy has been adhered to in the face of the resistance of many of my colleagues who would have liked to cover up her weaknesses. What they might think of me was of no consequence whatsoever; I had my duty to do to my benefactress, friend, and co-founder of the Society. I have done it all the better, I believe, by telling the truth, adding nothing pleasant, concealing nothing unpleasant. I have taken H. P. B. as a being of different sides of character, some almost angelic, others the reverse. Often, when on lecturing tours in far-away lands, I have been asked what I had to say in defence of her against the charges of the Coulombs and Hodgson. My answer has always been that the case against her had never been judicially presented, but very crudely and in an unconvincing way; that I myself had seen so many of her phenomena produced under circumstances of an unimpeachable character, as to make me know that she was a

Digitized by Google

great adept in handling nature's occult forces; but that, even if one had to accept as proven every charge brought against her phenomena, she was still a benefactress of mankind in the teachings she had left behind, and had won the fervent gratitude of thousands of men and women to whom her writings had first shown the path up the hill of spiritual truth. And I have challenged my questioners to tell the audience whether they or any other of Mme. Blavatsky's flippant accusers dare claim the right to a tithe of the love and gratitude given her by the public, for what *they* had done for humanity. I never yet failed to win the applause of my hearers. For there is beneath all social movements, down in the heart of human nature, a passionate love of fair-play, and this will vindicate the now besmirched reputation of Helena Petrovna. In short, all of us instinctively believe in Karma. As for the victim of the S. P. R., she is beyond their reach, and can smile at their most malicious attempts to do her harm. Her Karma thrust her under this crushing burden of sorrow, but the ordeal is past, and she can now

CHAPTER X.

SUCCESSFUL ISSUE OF BUDDHIST MISSION.

TURNING our backs upon the tragical episode of the attack of the S. P. R. upon Madame Blavatsky and her associates, we will now take up the pleasanter task of recalling, for permanent record, in greater detail than was given in Chapter VI., the incidents of the Buddhistic commission with which the Sinhalese nation had honored me, and which had brought me to London in the spring of 1884. The events preceding this action are historically so important, and their consequences have been so serious, that I feel it a duty to expand the brief narrative above mentioned, and to quote, from the original documents in my possession, facts that must otherwise go unrecorded. My duty was, as above stated, to lay before the Colonial Office certain grievances for which no redress had been obtained in Ceylon. They struck at the very root of the principle of religious neutrality, so clearly and so wisely announced by Her Majesty, the Queen, as the future policy of her Government throughout her dominions.

Digitized by Google

Of course, the British Empire would not hold together under any other system than the absolute guarantee to all the followers of the various religions under its sway, of the right of private judgment as to their creeds and of personal freedom as to their forms of worship. When the Portuguese conquered the Maritime Provinces of Ceylon, they adopted the opposite policy and employed the brutal agencies of the sword, fire, confiscation, and rapine to compel the mild and inoffensive people of the Island to adopt the Christian religion, but without avail. The poor creatures saw their houses burnt, their females dishonored, and their friends put to the sword, but they only fled to the jungles and clung to Buddhism. Under the rule of the Dutch, who supplanted the Portuguese, the same stress was put upon them, but by chiefly legal enactments and appeal to selfish motives, rather than by military cruelty. Cruel enough, though, were some of their laws as, for instance, the denial of legitimacy to children born in lawful Buddhistic wedlock and of their right of inheritance, unless the parents were married in a Christian church: an infamous bit of cunning. A Jubilee Report of the C. M. Society, noticing the past and then present state of the Christian churches in Ceylon, says that these harsh measures of the Dutch bred "Christians"—*i.e.*, hypocrites—prolifically, and when the British drove out the Dutch and conquered the Maritime Provinces, the church registers bore the names of thousands of this sort of Christians, but within a brief time after the proclamation of religious freedom was made, "the flourishing

Digitized by Google

tree was wilted as though stricken by a black frost." I quote the substance of this avowal from memory, but I think I am fairly accurate.

However warlike the Sinhalese of the seaboard may have been in the far past, the fight has all been drawn out of them by three centuries of foreign rule*; yet its potentiality is always there, according to the law of sociological evolution, and it only needs the right concatenation of circumstances to set their passions ablaze again. On Easter Day, 1883, a crisis occurred which, under less wise self-restraint in the leaders of the Buddhist community, might have caused serious riots and blood-shed. If the leaders had not been under what we may call the conservative training of membership in the Theosophical Society, which had taught them the benefit of union and patient persistence in the conduct of public movements, the masses might have broken loose and taken that Lynch law redress for their wrongs which they could not get from a vacillating Governor and unsympathetic officials. Briefly, the facts were that on the Easter Day a procession of peaceful, unarmed Buddhist worshippers was passing through the streets of Colombo to Kotahena, a suburb where one of their most revered temples is situate, to make the customary offerings of flowers, fruits, and other things at the shrine, when they were assaulted violently by a large mob. To quote from the Petition laid before

* The Portuguese held the seaboard for 153 years; the Dutch, from A.D. 1658 to 1795, when the British expelled them and made themselves a present of the sovereignty. "In the interests of Christianity and civilization," of course!

Digitized by Google

the Governor: "They were murderously assaulted by a mob of Roman Catholics and other evilly-disposed rioters, who bore painted upon their persons the sign of a cross, who had inflamed their passions by intoxicant drinks, and who were armed with bludgeons, sharp weapons, and other deadly instruments; that in the affray which followed, the lives of women and children were imperilled, great bodily harm was done to a number of Buddhists, five head of cattle drawing their carts were slaughtered in the Queen's highway, and the carts themselves, with their valuable contents, were consumed by fire." It goes on to state that a Buddhist named Juan Naide was murdered, the Police looking on without interfering; that the mob was collected by the ringing of tocsins on the bells of the Catholic churches, and that certain noted persons were seen by the Police painting white crosses on the dark-skinned bodies of the rioters, organizing the attack, and giving them liquors. Although these outrages were witnessed by thousands, and the leaders were all well known, no action was taken by the authorities, and it was but too evident that the whole thing was to be ignored. After waiting some days, the leaders of the Buddhist community, taking counsel together, brought a criminal action against certain suspected parties, with such proofs as, without Police help, could be discovered. The Justice of the Peace recommended that twelve of the accused should be committed for trial, but the Acting Queen's Advocate, acting in violation of the "Ordnance (Ord. XI., of 1868) and of the settled policy of British justice,

Digitized by Google

the sitting Justice of the Peace was obliged, under instructions of the Acting Queen's Advocate, to assume the functions of the Supreme Court, and, without trial by jury, to decide the validity of the complaint and the value of the testimony offered by the accused. . . . Thus, then, as events proved, the ordinary course of justice was interrupted and the accused were released. . . ." "The result being," says the Petition, "that, notwithstanding we have spent rs. 5000 in legal and other expenses to secure justice, the murderers of an unoffending Buddhist are unpunished, no recompense has been given for property destroyed, to the value of some rs. 4000, and the whole body of Sinhalese Buddhists . . . . are left to face the possibility of similar bloody attacks in future by the various enemies of their religion. . . . So serious has the agitation upon this subject already become, that, but for the remonstrances of counsel, ten thousand Buddhists would have presented this petition in person to your Excellency; and a committee of our influential men have, in despair, taken the preliminary steps to ask of the Home Government and the Commons of England such help as may be practicable to redress their wrongs and give full effect in future to the assurances of religious neutrality in Her Majesty's Asiatic dominions which have, from time to time, in the Royal name been solemnly pledged."

Things went from bad to worse. The Buddhists, smarting under a sense of their wrongs, and goaded by the jeers and taunts of the unpunished rioters, were getting ripe for bloody reprisals. Government had not turned

Digitized by Google

over a finger to right them in more than a year. In short, there was a crisis that menaced the destruction of law and order.

The first thing that occurred to the Buddhist leaders in their time of worst trouble was, as stated in Chapter VI., to telegraph me an urgent request to come over and help them. Accepting, as in duty bound, I crossed *viâ* Tuticorin and reached Colombo on Sunday, the 27th January 1884. I went straight to Sumangala's College and organized a meeting of leading Buddhists. The next day I got them to form a Buddhist Defence Committee, with old Mr. Goonewardene, Mohandiram, as Chairman, Don Carolis, as Vice, H. A. Fernando as Treasurer, and C. P. Goonewardene as Secretary; that is to say, all most respected persons in the community. They elected me an Honorary Member, as the following extract shows:—

"At the suggestion of the High Priest, and upon the motion of Mr. Don Carolis, seconded by Mr. H. A. Fernando, and supported by Mr. J. P. Jayatilleke, it was unanimously

"Resolved, that Colonel H. S. Olcott, of Madras, be respectfully requested to generally assist the Committee to carry out the objects of its organization.

"And that provided he consent, he be made an Honorary Member, and asked to proceed to London as the Chief Agent of the Committee, with full power to represent it under any circumstances that may arise, and in its name and that of the Sinhalese Buddhists in general, to ask for

Digitized by Google

such redress and enter into such engagements as may appear to him judicious."

The next day I went to Kandy to personally confer with the new Governor, Sir Arthur Gordon, who had just succeeded Sir James R. Longden, the Feeble. I found him quite another sort of person, and from his intelligent grasp of the situation felt much encouragement for our case. He promised to forward immediately to London any papers we might wish to lay before the Colonial Office, and altogether expressed his sympathy with our party under the afflicting circumstances. Messrs. Wm. de Abrew and Goonesekara accompanied me to the interview. These preliminaries being satisfactorily settled, we returned to Colombo on the next day.

At the College I held, on the following day, a private conference with the High Priests, Sumangala, Dhammalankara, Subhuti, and Weligama, who, among other things, joined in giving me a written commission to accept, in their names, any persons, in Europe or elsewhere, who might wish to formally declare themselves Buddhists. The ranking High Priests of Malwatte and Asgiri, the Royal Temples at Kandy, had given me similar powers already. Having done all that was possible in Ceylon, I returned that evening to India, to arrange affairs at Adyar and make as early a start as possible for London.

The idea of H. P. B's accompanying me to Europe was an afterthought, it having been decided in a Council

Digitized by Google

meeting after I had foreseen that I would have to go to London for the settlement of the Ceylon business.

H. P. B., taking time by the forelock, preceded me to Bombay so as to make a promised visit to our colleague, the late Thakur of Wadhwan.

On the 15th of February I left for Bombay with Mr. St. George Lane-Fox, F.T.S., and on the 18th was rejoined by H. P. B., Dr. Hartmann, and Mohini, who had extended their Kathiawar trip as far as Sihor, to visit our always beloved and loyal colleague, Prince Harisinhji Rupsinhji. On the 20th, at noon, we sailed for Marseilles on the s.s. "Chandernagore," of one of the French lines, receiving demonstrations of affection from a large number of friends who came, with the usual bouquets and flower-wreaths, to see us off.

The particulars of our delightful voyage, our arrival at Marseilles and Nice, the incidents which occurred while we were the guests of Lady Caithness, our arrival at Paris, my leaving H. P. B. there and proceeding on to London with Mohini, the settlement of the teapot tempest in the London Lodge, and the melancholy results of our intercourse with the S. P. R., have been recorded above. We will now resume the thread of our narrative of the results of my Buddhist mission.

A long familiarity with the methods of public business as followed in governmental departments restrained me from hurrying to the Colonial Secretary's antechamber with my papers in my hand. Instead of committing that indiscretion, which has caused so many aspirants for official

Digitized by Google

favor to spend weeks and months outside the door behind which the great man sits, I made it my first business to find out how the business of the Colonial Office was transacted, which bureau had special charge of Ceylon affairs, and what was the character of the gentleman in charge of it. These inquiries—which, of course, I might have completed in an hour had I been so fortunate as to meet with the right man—took up a fortnight. Seeing at last my way clear, I called at the Colonial Office and sent in my card to the Hon. R. H. Meade. Mr. Meade received me with the utmost politeness, and showed himself entirely familiar with the details of our case. He was good enough to enlighten me about the forms of correspondence used in the British public offices, and I addressed to Lord Derby the following letter:—

77 Elgin Crescent W.,
London, *the 17th May* 1884.

To The Right Honorable The Earl of Derby,
Secretary of State for the Colonies.

My Lord:—

1. The despatch of the 18th of Feb. of H. E. Sir Arthur Gordon to your Lordship will have informed you of my having come to London as the representative of the Sinhalese Buddhists, to obtain redress for the gross wrongs done them in connection with the riots of Easter Sunday last year.

2. I have personally conferred with the Hon. R. H. Meade of the Colonial Office with respect to the matter,

Digitized by Google

and now have the honor to ask your Lordship's consideration of the enclosures herewith forwarded, copies of which are not on file in the office. They are:—

3. A copy of an official report of a meeting of Sinhalese Buddhists held at Colombo on the 28th day of January 1882, to consider the present state of Buddhism in the Island of Ceylon, and adopt such measures as may be necessary for obtaining redress for certain grievances.

4. Copy of a letter and appeal to H. E. Sir Arthur Gordon, Governor of Ceylon, asking him to take certain specified lawful steps to secure redress for the Buddhists: the writer being Edward F. Perera, Esq., leading Proctor for the Buddhists in the late riot proceedings. To which letter, although written and delivered to its addressee on the 5th of February, no response had, I believe, been received up to the most recent dates from the Island.

5. Extracts from a private letter to myself from Mr. J. R. De Silva, one of the best and most intelligent Buddhists of Ceylon, and the gentleman who was Secretary to the meeting for forming the Defence Committee named in the Document; the information showing the despairing state of feeling with regard to the prospect of getting justice from Government unless my present mission should succeed.

6. I have also shown to Mr. Meade a copy of a Colombo paper, which sets forth the unlimited power habitually enjoyed by the second law officer of the crown—the local official primarily responsible, as alleged, for the apparent miscarriage of justice complained of.

7. That your Lordship may know what the Sinhalese

Digitized by Google

people hope for as measures of justice, I would state that I am asked to beg your consideration of the following points:—

(*a*) That the Attorney-General of Ceylon * be instructed, if not illegal, to order the parties accused of the guilt of the Easter Riot and of its consequences to be committed for trial.

(*b*) That, either by extending the terms of the Imperial Indian Proclamation of religious neutrality by the British Government, or otherwise, some absolute guarantee of their religious rights and privileges shall be at once given the Sinhalese Buddhists, so that the prevailing inquietude may be done away with, and all officials be made to feel that Her Majesty's Government will hold them to stern account should they henceforth fail in the impartial performance of duty.

(*c*) That the Birthday of Buddha, viz., the Full Moon day of May, be proclaimed a full holiday for Buddhist employees of Government, as the sacred days of Mussulmans, Hindus, and Parsis are officially recognized holidays in India for employees of those several faiths. The Buddhists, who are always most loyal subjects, are compelled to either work on this, their most holy day of the year, or lose the day's pay.

(*d*) That all restrictions upon the use of their national and religious music shall be removed, and the Buddhists permitted to hold their religious processions as always hitherto since the remotest epochs. Though your Lordship's despatch to Sir Arthur Gordon of December last, as transmitted

* The title of the Queen's Advocate under the New Code.

Digitized by Google

to Mr. Perera through the Ceylon Colonial Government, declared that instructions had been given which your Lordship trusted "will enable all Her Majesty's subjects in Ceylon to practise the rites of their respective religions without interference"; yet the most revered and respected monk in the Island—Sumangala Thero, High Priest of Adam's Peak and Principal of Widyodaya College, Colombo—was, only the other day, denied the privilege of a procession with tom-toms, and thus forced to bring his religious fair, or *pinkamma*, to a premature close. Harsh and unpleasant as the sound of the tom-tom may be to European ears, yet it is music to the Asiatic, and a festival without it is lifeless and uninteresting to them.

(*e*) That Buddhist Registrars of Marriages, etc., shall be appointed in Buddhist villages and wards of cities, and the Buddhists not forced as hitherto to depend for these services upon their bitter enemies of other faiths.

(*f*) That immediate steps shall be taken to decide the question of the Buddhist Temporalities, and, by taking financial matters out of the hands of the priests who, by their ordination laws, are prohibited from meddling in worldly affairs, but nevertheless have been greatly corrupted by the hasty action of the British authorities in turning over to their custody (see Ordnance No. 10, of 1856) the vast estates of the Church, to aid in restoring the pristine virtue of the priesthood. An examination of Ceylon official records shows that the British authorites have, unwittingly, helped to a great extent to injure the tone of Buddhist morality, by first extinguishing the ancient sovereign power

Digitized by Google

of ecclesiastical discipline vested in the King, and then failing to either exercise it themselves or to vest it in a Chamber, or Board, or Council of Priests. The High Priest of the Dalada Maligawa, at Kandy, himself bitterly complained to me about this when I was at his temple in January last.

I am sorry to inform your Lordship that discontent and despair are rapidly spreading among the Sinhalese Buddhists; a fact to be the more deplored, since there is not in all the Imperial realm a more simple, peaceable community. Before the manufacture and sale of arrack was promoted for revenue purposes, they were—unless history belies them—a most kindly, quiet, and virtuous nation. Their devotion to Buddhism appears in the fact that, despite the bloody policy of the Portuguese, and the despicable and crafty one of the Dutch, they ever remained secretly true to their forefathers' faith, and as soon as it became safe under British rule, openly professed it. They feel just now, however, as though the ruling powers were secretly willing to deliver them over to the Romish mob, and determined to deny them common protection. No seer is required to foretell what the legitimate outcome of such a feeling must be, and on behalf of the better part of the nation, I do most earnestly implore your Lordship to take such steps as shall, without dangerous delay, prove to them the sincerity of the professions of Government as made from time to time.

I have the honor to be,
Your Lordship's obedient, humble servant,
(Sd.) Henry S. Olcott.

Digitized by Google

A few days later, having received further communications from Colombo, I supplemented it with a second letter, to the following effect :—

77, Elgin Crescent, Notting Hill,
London, *27th May* 1884.

To The Right Honorable The Earl of Derby,
Secretary of State for the Colonies.

My Lord,—I have the honor to enclose, for your Lordship's information, the following additional papers on the matter of the late religious riots at Colombo, Ceylon :—

Copies of eight letters and endorsements, included in a correspondence, in February last, between H. Sumangala, Thero, High Priest, and certain Government officials, with respect to a Police permit for a religious procession.

The venerable High Priest, as your Lordship will perceive, asked for permission to perform the well-known, popular rite of conveying about the city, with appropriate music, a sacred relic. The object was to help ally the prevalent apprehension "with respect to sicknesses now prevailing at Colombo," the relic being supposed to possess a certain power in itself. If this be regarded as a mere superstition, it is to be observed that it is identical in character with the popular feeling in Catholic and Greek Protestant countries, which demands the similar bearing of relics about the streets in times of pestilence. Moreover, among the Sinhalese Buddhists the ceremonial is hallowed by the custom of many ages.

Digitized by Google

The documents show that their innocent request was virtually denied, notwithstanding the benevolent assurances of your Lordship, as communicated through the Colonial authorities in January last.

My latest advices from Ceylon—May 5th, instant—indicate a continuance of the unsettled feeling among the Buddhists; and I venture to hope that, in view of the fact that they have now been patiently waiting for about thirteen months for justice, your Lordship may be able to give early and favorable consideration to the appeal which, on their behalf, I have had the honor to make. With assurances of profound respect,

I have the honor to be,
Your Lordship's obedient servant,
(Sd.) H. S. Olcott.

About this time some of the London editors, coming to know of the nature of my business in London, expressed their sympathy; and one Conservative organ, at least, intimated that there had been a miscarriage of justice, and that it was the duty of Government to make proper amends.

I will now complete the record, by giving the text of the reply of the Earl of Derby to my communications, and of the letters which subsequently passed between us:—

Downing Street,
17th June 1884.

Sir,—I am directed by the Earl of Derby to acknowledge the receipt of your letters of the 17th and 27th ultimo,

Digitized by Google

relating to certain grievances which the Buddhists of Ceylon are alleged to be suffering.

2. Lord Derby has already expressed his great regret that it has not been found possible to prosecute the ringleaders of the riots of Easter Sunday last year, and is ready to acknowledge that the sufferers on that occasion have real grounds for complaint in this respect; but in the absence of fresh evidence, it would be impossible to reopen the matter.

3. Her Majesty's Government are resolved that in Ceylon, as in other parts of the Empire, the principles of religious liberty shall be strictly adhered to, and will do their utmost to remove any grievance under which any religious community can be shown to labor, and to put an end to any appearance of disregarding the proclamations of religious neutrallty which were made at the time when the English took possession of the Island. It is impossible to make any more explicit statement of the firm intention of the Government to abide by the spirit of those ancient proclamations than has already been made by the Governor, under the instructions of the Secretary of State, as given in Lord Derby's despatch, to which reference is made in your letter of 17th May.

Lord Derby has confidence in the loyalty and good sense of the Buddhist community in Ceylon, and feels sure that they will loyally accept his assurances in this matter.

4. The question of dealing with the Buddhist Temporalities is a difficult one, and has already engaged the attention of Her Majesty's Government, and of Sir Arthur Gordon's predecessors. No doubt Sir Arthur Gordon, to whom your

Digitized by Google

letter will be referred, will carefully consider the whole matter, and Lord Derby will be glad to give his attention to any practicable scheme suggested to Sir A. Gordon and recommended by him, which would enable the Buddhist community to control the management of the Properties vested in their church, though clearly the exercise of any such control should be by the Buddhists themselves rather than through the instrumentality of any Government officials.

5. As regards the suggestion that the Birthday of Buddha should be observed as a full holiday for all Buddhist servants of the Government, and the questions of allowing tom-toms in the religious processions, and of the appointment of Buddhist registrars of marriage, Lord Derby can express no opinion without first referring to the Governor, but he is confident that it will be the wish of Sir Arthur Gordon, as it is that of Her Majesty's Government, that every consideration possible should be shown in these matters.

Your letters will accordingly be referred to the Governor by the outgoing mail.

I am, sir,
Your obedient servant,
(Sd.) R. H. MEADE.

77, ELGIN CRESCENT, NOTTING HILL, W.,
19th June 1884.

To The Right Honorable THE EARL OF DERBY,
Secretary of State for the Colonies.

MY LORD,—I have the honor to acknowledge the

Digitized by Google

receipt of your Lordship's letter of the 17th inst., replying to mine of the 17th and 27th ultimo.

II. On behalf of the Buddhists of Ceylon, I have to thank you for the frank and unequivocal declaration of the intent of Her Majesty's Government to rigidly enforce the neutrality of the Crown in the matter of religious liberty as regards the Buddhist community of Ceylon, equally with other religious communities in all parts of the Empire. Or, as you state it, "to put an end to any appearance of disregarding the Proclamations of Religious neutrality which were made at the time when the English took possession of the Island." This assurance, if published in the *Gazette* of the Local Government, and made obligatory upon all local officials, will go far towards re-establishing the confidence of the Sinhalese nation, now so deeply shaken by recent events. What the nation wants is the full conviction that they are not to be made the victims of a mob of religious fanatics who, by threatening the peace of Ceylon, can intimidate officials and escape punishment of their crimes.

III. I beg your Lordship's attention to the 2nd clause of the letter under reply, as it really touches the most vital point of the present question. It is there remarked that "*in the absence of fresh evidence*, it would be impossible to re-open the matter" of the trial of the alleged ringleaders of the riots of Easter Sunday last year. By implication this, of course, affirms that if such "fresh evidence" had been by me brought forward, Her Majesty's Government

Digitized by Google

would have felt it their duty to instruct the Colonial law officers of the Crown to proceed to prosecution, as by statute provided. If I am not mistaken in this deduction, I would most earnestly beg of your Lordship to put that affirmation into so many words. For that alone would, in the opinion of the Sinhalese, restore them to their vested rights as subjects, by showing them that the Courts are as open to them as to their foes, and they need not sue for justice in vain. Until this moment, in the absence of some such assurance since the riots, they have felt the contrary, and it was their despair which drove them to organize the "Buddhist Defence Committee" on the 28th of January last, and send me to England upon my present mission.

IV. A reference to the archives of the Colonial Office will convince your Lordship of the fact that the question of the Buddhist Temporalities is in the state of a case awaiting decision, after a full report by a Special Commission appointed to look into the entire subject. Their report is dated 17th October 1876, and the delay of Government in acting upon its recommendations has been productive of much injury to the morals of the Kandyan priesthood.

V. I thank your Lordship for the promise to refer to H.E. Sir Arthur Gordon, Governor of Ceylon, with the expression of the wish of Her Majesty's Government "that every consideration possible should be shown in these matters"—the questions of making Lord Buddha's Birthday a Government holiday for Buddhist public

Digitized by Google

servants, of allowing tom-toms in religious processions, and of the appointment of Buddhist Registrars. I have the full conviction that Sir Arthur Gordon will do all he can to give effect to the expressed sympathies of Government, and in all official matters to treat the Sinhalese with justice, when his attention is called to grievances.

VI. To complete the files of the Colonial Office to date, I hand your Lordship herewith copies of documents received by me by last mail from the Buddhist Defence Committee. They show that permission was denied for a Buddhist religious procession upon the Birthday of Lord Buddha (May 9th), and for another on the Sinhalese New Year's Day (April 11th), although permits were issued for processions, with tom-toms, during the months of February and March, to Mohammedan and Hindu applicants. Can it be that to the representatives of the most ancient religion in Ceylon these simple privileges are to be denied, while granted to communities of all the other and later faiths? That permission to march in religious procession was actually given the Buddhists in one or two instances within the past year, but was of no practical benefit to them, since they were prohibited the use of their tom-toms; and therefore the permit or permits were not availed of. For, as the correspondent shows, a procession without those musical instruments is a tame and lifeless affair. It is the commonest of things in Great Britain for the ordinary street traffic to be suspended in streets along which authorized processions are passing. It would be no great concession, therefore, for the same

Digitized by Google

thing to be done in the small town of Colombo—where the street traffic is usually very small—upon the rare occasions of Buddhist processions, seeing that the Sinhalese people have ever been loyal and peaceable subjects of Her Majesty, and the privilege for which they are contending has been enjoyed from the remotest antiquity.

I am, my Lord,

Your Lordship's obedient servant,

(Sd.) H. S. OLCOTT.

DOWNING STREET,

27th June 1884.

SIR,—I am directed by the Earl of Derby to acknowledge the receipt of your further letter of the 19th instant, on the subject of the late unfortunate riots which took place in Ceylon on Easter Sunday last year.

A copy of your letter will be sent to Sir Arthur Gordon, with the previous correspondence, for his consideration. As Governor of the Island he is responsible for the peace and order of the community, and no final decision can be taken without first referring the matter to him.

Lord Derby, however, desires me to acquaint you, with reference to paragraph 3 of your letter, *that your inference is correct that if any fresh evidence had been forthcoming, such as would justify legal proceedings, a* **prosecution would have been instituted and pressed to its conclusion.**

I am to add, what must be well known in Ceylon,* that when the new Queen's Advocate arrived in the Island,

* As above shown, this fact was not known to the Buddhists.

Digitized by Google

he was instructed to review the whole proceedings, with the view to ascertaining whether then, late as it was, those who took part in the disgraceful riots of Easter Sunday might not be brought to justice, and Lord Derby much regrets that this has not been found possible.

I am, sir,

Your obedient servant,

(Sd.) R. H. MEADE.

COLONEL OLCOTT.

The London business being thus satisfactorily disposed of, I waited, by appointment, upon Lord Derby, to take leave and to thank him for the prompt attention paid by the Colonial Office to the representations made through me by the Sinhalese Buddhists. His Lordship's reception of me was most cordial. He said that the members of Government had been much pained on hearing of the lawless events at Colombo, and he was very sorry not to be able to do more than he had; but he said that if, at any future time, the Sinhalese Buddhists should have occasion to seek the protection of the Colonial Office, he hoped that I would have no hesitancy in writing or speaking to him about it: I should always be most welcome.

The sequel to this interesting case is soon told. The demands of the Buddhists, so far as they could be in law, were complied with. Their right of religious processions was recognized. The birthday of Lord Buddha was proclaimed a full holiday for the Buddhists of Ceylon.

Digitized by Google

The displeasure of Government for the failure of justice, in the matter of prosecuting the rioters, was made known in the Island. Buddhist Registrars of Marriages were appointed; and finally, the Buddhist Temporalities problem has been recently put in the way of settlement, by the proclamation, in the Government *Gazette*, of the Buddhist Temporalities Ordinance No. 17, of 1895, which placed the vast land endowments of the *Viharas* under the control of committees of laymen, whose duties and responsibilities were defined in the Ordinance itself. In the *Gazette* of November 12th, 1897, Sir E. Noel Walker, Colonial Secretary of Ceylon, proclaimed, by the Governor's command, the rules of the Colombo Provincial Committee, of which not the least important are those relating to the trial and punishment of Buddhist priests for offences against the rules of their ordination, and to the qualifications necessary for candidates for incumbencies of temples. This being the first step in what, I sincerely hope, may be the beginning of the entire reformation of the Ceylon priesthood, I shall quote the Rules in question in this connection.

"1. A representation of an offence committed by an incumbent of a temple or any other priest or priests in violation of the 'Vinaya,' made in writing by five or more laymen, or by two Buddhist priests, or a Committee member, or by the President of District Committee of the district wherein the offender lives, shall be considered a sufficient cause for the Provincial Committee to institute an inquiry.

"2. The Provincial Committee and a chapter of five, ten,

Digitized by Google

or twenty Buddhist priests selected by the Committee shall constitute a competent body to inquire into offences committed by priests in violation of the 'Vinaya.'

"3. The chapter of Buddhist priests shall belong to the same sect as that of the offender against whom a complaint is preferred, and its opinion is to be taken by the Committee only on 'Vinaya' matters.

"4. The Provincial Committee alone shall have the power of finally deciding on the removal or otherwise of the accused from the incumbency, and in the event of the nature of the offence established at the inquiry requiring that the offender or offenders should be disrobed, it shall be competent for the said Committee, provided the action be acquiesced in by the said advisory council or a majority of its members, to entrust a Committee of priests especially appointed with the execution of this part of the finding.

"5. All charges preferred against priests shall be fully inquired into, and the proceeding duly recorded. Every such inquiry shall be in the presence of the accused, who shall have full liberty to make their defence, unless in case of their absence it is proved to the satisfaction of the Provincial Committee that they have had ample and distinct notice of the inquiry, and the Committee is satisfied that they have no valid excuse for being absent therefrom, and satisfied that they purposely evade the inquiry.

"6. If any priest who is not duly ordained a priest, or who has been disrobed under the above rules, is found wearing the robes of a Buddhist priest, the Provincial

Digitized by Google

Committee shall have the power to prosecute him at the nearest Police Court.

"7. The characteristic qualifications required in a priest of the Buddhist faith (adherence to an observation of the rules laid down in the 'Vinaya' for their guidance, knowledge of the Buddhist doctrines, and education) shall be considered essential qualifications in candidates for incumbencies, and the Provincial Committee shall give due weight and consideration to such qualifications.

"8. In selecting a candidate to fill up an incumbency Nâti-sisya and Sisyânu sisya Parâmpara successions shall be observed, provided the Provincial Committee is satisfied that the election is not liable to operate against the interest of the temple, and the candidate possesses the qualifications prescribed in rule No. 7."

The following excerpt from my address before the convention of Buddhist Priests, which met at my invitation at Galle, on July 4th, 1880, will also be of interest as showing that my original plans for the elevation and purification of the Buddhist Sangha have now, after the lapse of seventeen years, been realized in the official proclamation of the foregoing Rules. Events have clearly proved the truth of my forecast, that what a nation really needs and persistently demands, any wise Government will concede. I said, in the address in question:—

"I have noticed a very sad apathy among the priests about the question of disrobing such as have been proved immoral and to be disgracing their religion and their

Digitized by Google

Order. At a recent convention of Chief Priests and Kandyan Chiefs I spoke of this as doing enormous injury to both priests and laity. The explanation given was that the Church has no power to unfrock a bad priest, and he can continue to wear the robes in defiance of their authority. In the time of the Kandyan Kings, I was told, the King had the power and used it, but under the present Government there was no remedy. Well, my answer to this is, to point to the Vth clause of the Kandy convention rules, and to have the two million Buddhists of this Island petition and demand that its spirit as well as letter shall be strictly obeyed. The Government has there solemnly bound itself to protect and maintain Buddhism, and, if you demand it, believe me, the clever lawyers of the Crown will find a way to disrobe your bad priests and not violate Buddhist Law. Nothing would be easier than for a High Ecclesiastical Tribunal with adequate powers to be constituted by law. If the Government does nothing, no one is to blame except the Buddhists themselves. How can you expect a Christian Government to help to maintain, 'inviolable,' the religion of Buddha, *when Buddhists will not even open their mouths to ask it to do so?* . . . .

"It is my deliberate conviction, based upon these two months' observations, that the entire structure of Sinhalese Buddhism is in danger, and that if this apathy of yours continues, and no determined effort is made to reform the abuses and dissensions that now prevail among both priests and laity, in one more century all Ceylon will have become infidel or Christian—probably the former.

Digitized by Google

"One more important idea has come to me. The children of Buddhists should be taught their religion, regularly, on specified days, at a specified hour, *at every temple in the Island*. How can we expect them to grow up strong Buddhists if they are not taught the elements of their parents' religion in their childhood? The Christians do not neglect their children; why should Buddhists neglect theirs?"

It was the large endowments of the *Vihāras* by former Buddhist sovereigns that demoralized the Order of the Yellow Robe, so far as it was enriched. Private purity, piety, and spiritual aspiration have never survived the acquisition of wealth; the spirit becomes less willing as the flesh grows more and more pampered. However, we are now at the parting of the ways, and the future of Ceylon Buddhism looks brighter. To the spread of our educational movement we have every right to look, in Ceylon, for that gradual raising of the popular intelligence and purging of the national ideals which, infallibly and invariably, react upon all priestly fraternities that develop out of the body of the people.

CHAPTER XI.

REALITY OF THOUGHT-TRANSFERENCE.

OF the various methods of propaganda, I am not sure but that I should give first place to the conversazioni at private houses. True that from the lecture platform one addresses his hundreds or thousands, yet I doubt if conviction is so driven home to individual minds, if so many real inquirers are made, and so many members won for the Society, as when one is brought into close relation with the smaller company of a drawing-room. This idea first occurred to me on seeing Mohini leaning against the mantel-shelf at Mr. Sinnett's house in London, and, after a brief exposition of some given theme, answering, *seriatim*, the questions put by the interested company. Since then I have held many such *soirées* in various countries, and been present at many at which the incomparable Mrs. Besant was the expositor of our teachings, and my conviction has been strengthened by experience. I can now recommend the practice to all our Branches and groups with perfect confidence. At the house of Mrs. Campbell-Praed,

Digitized by Google

in Talbot Square, there was such a gathering on the evening of May 24th, 1884, and by the request of our gifted hostess I explained the principles and scheme of our Society to as brilliant a party of literary notables as even London could bring together. Questions followed each other rapidly and were answered, and thus in the simplest of ways everybody present came to know something of our great work. Conversazioni like this have been constantly held over the United Kingdom ever since, and, in fact, throughout the whole world wherever there is an English Colony; for the literature of Theosophy has penetrated everywhere, and in most countries its name is familiar as household words.

On the evening of the 28th May, at the private house where Mohini and I were guests, I tried the now famous experiment with our colleague, Mr. E. D. Ewen, of Scotland, which suggested the means of proving the nature of thought and the process of its evolution, that has been several times described by me, but which has its place also in this detailed historical sketch. As it interested both Mr. (now Sir William) Crookes and Prof. Balfour Stewart, besides other men of science, at the time, it is not right that I should omit it from my present narrative.

The reader of Stewart and Tait's *Unseen Universe* will remember its being said in that suggestive work that, as the evolution of a thought is accompanied by a sort of galvanic discharge from the grey matter of the brain, and as this vibration passes beyond the periphery of the brain into the ether, and no one can say how far it may extend,

Digitized by Google

it is conceivable that the evolution of thought in a human brain may affect a distant planet. (I am now quoting from memory while writing on the ocean, and from a book read many years ago, yet the above is substantially the idea as expressed by the learned authors of the work in question.) Now, this was but a scientific hypothesis, and at the time, I believe, had not been experimentally supported. It was my object to see if any facts could be obtained that might throw light upon this great problem. Circumstances came to my aid at this juncture. Mr. Ewen inherits from his Scotch forebears the gift of second sight; not one that he can exercise at pleasure, but which comes sporadically; he finds he has it on awaking some morning; the next, it is gone and he cannot recall it at will, but must wait until it chooses to reappear. It is usually active throughout the day.

At that time I was, at the urgent request of the lady's husband, giving psychopathic treatment to a well-known literary lady, and, with her permission, one day brought Ewen with me. The lady was confined to her bed, and I treated her as she lay. Mr. Ewen was present. I made the "long passes" over her, downward from her chest towards her feet: not always, however, with "mesmeric intention"—*i.e.*, with concentration of the will—but mechanically, yet without making the passes differently in the one case than in the other. To my surprise, Mr. Ewen suddenly said that he could see that my mind was not always equally bent upon the work in hand; that sometimes I made the vital fluid to flow from me, some-

Digitized by Google

times not: the difference was most palpable to his clairvoyant sight. Thereupon, I put his powers to the test, but found that he could unerringly distinguish my real from my simulated curative passes. He described it to me in this way: The patient's body was enveloped in a pale bluish aura, seemingly elastic and compressible, like a loosely-inflated toy balloon. Over the pelvic region—the seat of her disease—the aura was of a yellowish color. When I made by will a curative pass with my hands, there flowed from my finger-tips strong, clear streams of vital force, in color a bright and clear sapphire. This strong current, impinging upon the patient's pale blue aura, was met with a feeble resistance from the latter, but, overcoming this by its own strong rush, it mingled with the weaker aura, tinged it with its own hue, and set it into quick vibration; the result being a reinvigoration of the invalid's system, and the creating of a tendency towards convalescence. I am convinced of the accuracy of this description, and, in fact, in the case under mention, the lady, instead of lying in bed for months, as her doctor had predicted she must, was up and about within the next ten days. The improvement was so striking, after even the first treatment, that her medical attendant was astounded at his next visit, and said she must have something uncanny about her constitution, some extra spring in her machinery that was out of the common run. This she conveyed to me in a gleeful note the next day, and said that she and her nurse were laughing together over the doctor's illusion as to the success of his remedies, and his ignorance of the

Digitized by Google

fact of my having treated her and thus put in the suspected "spring" that had worked such a wonder.

The evening after our visit to Mrs. M. C., I was called upon by Mr. Herbert Stack to arrange for a meeting between myself and the S. P. R. Committee, and, as he was a man of high culture and of scientific tastes, I told him of Ewen's powers, and suggested that this would be a good chance for us to see whether Stewart and Tait's theory of thought-evolution was a sound one. As our Scottish friend was still possessed of the vision, and willing to assist in the experiment, it was thus arranged: We were to sit in the unlighted back drawing-room, he with his back to the solid partition to the right of the sliding doors, we two facing him, over against the opposite wall; one of us was to concentrate his thought upon any subject he might choose; if Ewen should be able to fix the moment of concentration, he was simply to say the word "Now!" and we all should then be able to see whether his power extended so far or not. The object in giving him but the one word to utter was to preclude the necessity for his making any sustained mental effort at the time when his consciousness would be functioning on the other and higher plane. Two experiments made by Mr. Stack were successful; the moment of mental concentration being detected by the clairvoyant watcher. Mr. Stack then asked me to try, as, he said, I was much more in the habit of doing these mental feats than himself. Just as I was about to do so and Ewen was all ready, it occurred to me that if I should hold Mr. Stack's hand and press it at the moment of concentrating my

Digitized by Google

thoughts, both he and I could know whether or not Ewen's power was real, and the evidence would be doubly strong. So we agreed; I took Mr. Stack's hand, and, after a moment's calming of the mind, concentrated. Instantly, before I could transmit the order to my finger muscles, Ewen cried out "Now!" and our plan was frustrated. I was vexed at this, for some instinct made me anxious that the committee-man of the S. P. R. should get such a bit of valuable proof at first hand. His ingenuity, however, was equal to the occasion, for he proposed that he should hold my hand and give me the signal for concentration. This proved all sufficient; he pressed my hand, I fixed my thought, and Ewen, as before, detected the moment of the act. So far so good; we had now four tests between us two, but I suggested, as an extension of the experiment, that we should see if Ewen could trace the *direction* of thought if it were fixed upon a certain point within the two rooms. Of the two tests made, both were successes. The first time he said: "I think your thought is directed to the ceiling over my head"; the second time he said: "I see the thought-current passing by me, to the left, as if directed to some point in the front drawing-room." In both cases he was right: the thinker, at the second attempt, directed his attention to a lady, Mme. De Steiger, who sat at the farther end of the lighted front drawing-room.

Mr. Ewen's description of the luminous appearance of a thought-current was very interesting. When one concentrates his mind upon some subject, not of an exciting nature, a shimmer of light goes forth from his brain, like the pulses

Digitized by Google

of light in an electrically charged cloud on a warm summer night. When, on the other hand, the mind sends its outflowing aura to a fixed spot or object, a ray darts from the brain towards its target, like the flash of lightning in a thunder-storm. These revelations, it will be remembered, were made in May 1884; they received no corroboration for twelve years, but then the accuracy of Mr. Ewen's observations was, I think, fully proven by those of other and more highly trained students of occult science, as will presently appear.

An acute scientific mind like Mr. Crookes' could not fail to be interested with facts like these, which pointed the way towards a splendid field of psychological research. I took Mr. Ewen to him the next morning and described what Mr. Stack and I had seen. He frankly said that this was an important matter, and he would like to follow it up if Mr. Ewen would be so obliging as to lend his services to the inquiry: he further wished to test the physical nature of the thought-current, and see whether it would pass without deflection through sheets of glass and other materials; whether the luminous wave could be focussed by lenses, reflected by mirrors, etc.; in short, whether it had any properties which would make it function on the physical plane, in any degree to be tested by laboratory appliances.* Unfortunately, Mr. Ewen's clairvoyance had not shown

* Writing from memory, without notes, and so many thousand miles away from London, I beg the indulgence of Sir William Crookes for any minor inaccuracies that may have crept into my narrative of the incidents of fourteen years ago.

Digitized by Google

itself that day, and he had to leave for Scotland in the afternoon, so that he could not aid in the suggested experiments—much to his own regret, for he is deeply interested in this branch of scientific investigation, and needed no urging. At a large public meeting of the S. P. R., on the evening of May 28th, Mr. Stack and I made our reports on the preliminary experiments, and thus made it a matter of historical record.

The bearing which this discovery has upon certain familiar phenomena will be evident to the intelligent reader; for instance, the *jettatura* and *mal occhio*, or killing glance and "evil eye," with which certain persons are congenitally cursed—the late Pope Pius IXth among them. Ignorant persons like to call this a superstitious folly, but it must be confessed that no popular belief has been more strongly supported by evidence. And it is one that is not confined to one nation or country, but is spread all over the world and recorded in all history. The glance of a human eye may either soothe or slay, according to the mental impulse behind it, provided that the person thought of is sensitive to its vibration. Find the key-note of a glass vessel or globe, and, by playing it with the right intensity on a violin, the glass will be shattered, while no other note will affect it. So man, the most sensitive of organizations, has each his key-note which, if found and played by a thought-current, will carry him out of his equilibrium, perhaps upset his moral nature, or even destroy his life. The world-history of magic and sorcery proves this amply. Thus, it is a truism of ancient date that the hateful will-current of a

Digitized by Google

black magician, if hurled at a pure and saintly person, fails to harm him and is thrown back against the sender, to his possible destruction. No woman was ever seduced, no young man ever made a criminal, unless in their moral systems there was some sympathetic tendency which had been set to quivering and vibrating by the impact of the influences of their environment. It was Horace who said: *Hic murus æneus esto, nil conscire sibi, nulla pallescere culpa.* And the experience of mankind teaches that this innocence of evil, this absence of consciousness of sin, is indeed a wall of everlasting bronze about us. Mr. Ewen's second-sight makes it possible for us to realize the truth of this old mystery. So, also, does it make clear the rationale of the charming power of animals and men. It has been denied by some scientists that the bird-charming of serpents is a fact, yet here we have the key to it. We once had at Adyar a yellow cat, which I have seen sitting under the branches of a tall tree and gazing up at a squirrel. The pretty little rodent would move uneasily, squeal, and then drop to the ground before the cat, which would quietly catch it and carry it off to her young. In *Isis Unveiled* (i. 380) is told the story of Jacques Palissier, a French peasant of Le Var, "who made a living by killing birds by simple *will power*." His case is reported by a savant, Dr. D'Alger, who saw him at work, and declares that the man, by merely fixing his gaze on a sparrow, robin, goldfinch, or meadow-lark, from a distance of twenty, twenty-five, or even thirty paces, would cause it to drop paralyzed on the ground, when he would walk up to and do what he liked with it. If asked, he

Digitized by Google

would not completely paralyze his victims, but only partially, and then restore them to animation. Or, if asked, he would kill them absolutely, before laying his hand upon them. Mme. Blavatsky says that this destructive current is a "bolt of the astral fluid," or ether, and warns against the misuse or cultivation of a power which enables one to commit murder at a distance, without detection, leaving no visible mark upon the victim's person. In such cases, she says, "the Coroner's inquest will never disclose anything but sudden death, apparently resulting from heart disease, an apoplectic fit, or some other natural but still not veritable cause."

The great mesmerizer, Regazzoni, is reported to have stricken down and instantly paralyzed a blindfolded girl-subject, by his unspoken will, when the scientific observers present requested him to give them this proof of his power.

The facts above cited deal mainly with the effect of a thought-current which operates upon objects visible to the eye. Many others offer themselves for use in the argument, but I shall take only one or two. In India, if a cultivator has a good crop of paddy or other grain that is likely to excite the envy or cupidity of passers-by, he drives a stake in the ground near the middle of the field, and hangs on it an inverted clay pot (*ghurra*) with a grotesque face smeared on it with lime, so that the evil glance may see it first and be "drawn" before it can injure the crop; for it is the first glance that does the mischief. So, too, the Hindu mother of a handsome child will smear its face with some charcoal or mud to protect its young life from

Digitized by Google

the envious glance of some childless woman. This bolt of hate or envy, if hurled, cannot quickly be followed by a second, and hence these devices to draw it away from its target.

If the reader will now turn to the number of *Lucifer* for September 1896, and read Mrs. Besant's striking article on "Thought-forms," he will see how completely her observations and those of her advanced fellow-students support the descriptions of Mr. Ewen, given me twelve years earlier, and also the folk-lore teachings about the evil eye, and the observed facts of healing of the sick by gaze alone. Here she describes, from actual vision, the luminous flashes of color that come when the thought is of a general character, and the sharp, dagger-like, darting flash when an evil thought is shot against an individual. The colored illustrations given with the text make the law of thought-evolution very clear to us. Her *figure* 4 shows a zigzag flash of dull red aura breaking out of a mental storm-cloud, for all the world like the lightning-bolt that rives an oak in a thunderstorm. This is the thought of brutal violence, sent by a man who has just stricken down a woman in an East London slum. The thought-form in *figure* 5 is that of a murderer, and exactly like the blade of a poniard. Such must have been the "air-drawn dagger" that the guilty Macbeth saw, yet could not clutch: a "one-pointed" thought, indeed; a wicked, life-taking thought. Human speech is full of expressions which indicate that their first users had an instinctive, if not a clairvoyant, sense of their fitness. For example,

Digitized by Google

the common one, "He looks daggers at me," exactly represents the shape and motion of a thought of hatred when directed towards some one: a "bright mind," a "sunny mood," a "clouded intellect," the often reiterated confession of the murderer that "all looked red about me," "green-eyed jealousy," "his glance seemed to pierce me through and through," etc., similarly support these observations of our clairvoyants.

The same rule holds as to the loving, helping, unselfish thought that would help instead of harming, do good instead of evil. No ocean is too wide, no continent too vast, to obstruct the running of such a good thought to its goal. The ancient *shastras* teach that it will even bridge the chasm of death, and follow its object into the trans-sepulchral states of existence. The moral to be drawn from these observations, none the less powerful from its being so evident, is that we have it in our power to ban or bless our fellow-men by the one-pointed thought-currents we send forth from our minds. But this has been indicated by so many speakers and writers of our literature in that of the ages which preceded our own, that I need not dwell upon it, but for the one moment needed to drive it in upon the mind of everyone who aims at spiritual advancement and the doing of good to the race.

CHAPTER XII.

THE PAINTING OF ADEPT PORTRAITS.

TWO days after the thought-testing experiments with Mr. Ewen, I went to Paris and remained there a fortnight with H. P. B. Meetings for the instruction of inquirers were held at our own rooms in the Rue Notre Dame des Champs and at those of several friends. Among them was one at the palace of Lady Caithness, at which we met M. Yves Guyot, the famous publicist, and some of his friends as sceptical as himself about things spiritual. H. P. B. and I were made by our hostess, to our great discontent, to sit in two huge throne-like gilt arm-chairs, as though we were royal personages holding a levee. M. Guyot and the others drew from us a full explanation of the principles of our Society and of the views of the Eastern school of mystics as to the constitution of nature and the alleged powers in man. All went well until they said they would now feel obliged if we would show them the phenomenal proof of the correctness of our teachings. I, for my part, had not expected this, as Lady Caithness had

Digitized by Google

not prepared us for any such demand. H. P. B. refused point blank to do the smallest marvel, and could not be moved even by the urgent request of Lady Caithness. I told M. Guyot that we had done what lay within our power to explain the Eastern views as to states of matter beyond those hitherto discovered by Western science, and must leave him to accept, reject, or test them as might seem best to him; I assured him, however, from my own experience, that if any man really wished to get the proofs at first hand, he could do so if he would but take as much trouble as he would cheerfully undergo to gain knowledge in any other department of scientific research: but I regretted as much as himself that Mme. Blavatsky was not willing to do as much for him as I had often seen her do for other inquirers. But so it was, and we must leave the matter as it stood for the present. Of course, M. Guyot and his friends were much dissatisfied, but I never expected that a man of his standing would descend to such insulting and disparaging remarks about H. P. B. and myself as he did some time later. As things turned out, I now believe that H. P. B.'s stubborn refusal was a wise one, and that she or those behind her foresaw that compliance would have been worse than useless, for spiritual phenomena can only be comprehended by the spiritually-minded, and to that class M. Guyot most certainly did *not* belong. If H. P. B. had shown him anything, the most that would have happened would, probably, have been that, on leaving the house, he would have said to his companions, "I wonder how that fraudulent old witch did that trick." What he did say

Digitized by Google

about us subsequently fully warrants the suspicion. I fancy that he and Mr. Podmore and the late Prof. Carpenter and some hundreds more of the sort, will have to be reincarnated many times before they will be able to understand the laws of spirit-action on this physical plane.

I first made the acquaintance of that illustrious man, the late Prof. Charcot, at the Hospice de la Salpétrière, Paris, on the 7th June 1884. I called there with Dr. Combret, F.T.S., a former pupil of his, and the Professor kindly showed me various experiments in hypnotism. This subject has now become so widely known, that it is useless for me to dwell at any length upon the things that were shown me fourteen years ago. It must be familiar to most of my readers, at least to those outside India, that there are two very antagonistic schools among hypnotists, viz., the one of Charcot at La Salpétrière, Paris, and the other of Nancy, Lorraine, founded by Dr. Liébault and his great disciple Dr. Bernheim. From a remote period there have existed the two parties which these schools now represent, and especially among alienists or physicians who treat patients mentally deranged. The one party, that of Charcot, attribute the abnormal mental and other phenomena of hypnotic subjects to physiological causes; while the other party, that of Nancy, trace them to psychological, *i.e.*, operative mental causes. My readers will find the questions treated at length in back numbers of the *Theosophist*,* together with an account of my

* Vol. xiii. pp. 61 and 391; art. "My Hypnotic Research in France," *q.v.*

Digitized by Google

experiments at the Salpétrière and Hôpital Civil (Nancy) in the year 1891. The observations of 1884 were valuable, as giving me my first chance to see for myself how far the so-called new science of hypnotism agreed with the century-old science of mesmerism, which I had been studying for the previous forty years. Dr. Charcot provoked in his patients the three stages of hypnosis which he claims the credit of classifying, viz. (1) the cataleptic; (2) the lethargic; (3) the somnambulic. In the first, the position of the patient's limbs is easily changed by the operator, and every position given them is unresistingly retained for some time; in the second, the subject is unconscious, and if a limb be raised and then let go, it will fall like a dead weight, the eyes are relaxed and the muscles abnormally excitable; in the third, the eyes are closed, or half closed, the muscles may be made to rigidly contract by gentle stimulation of the skin over them, and many other phenomena are producable by suggestion. The Nancy school admit the fact of all these phenomena, but ascribe them solely to the influence of suggestion upon the mind of the patient: "suggestion" covering not only ideas conveyed to him verbally by the hypnotizer, but also silently by gesture, or voluntary or involuntary movements of his body, or even the expression of his face. No one who has not made a deep study of the subject has an idea of the tremendous potentialities included in this matter of hypnotic suggestion: there is scarcely any limit to what may be done by it as regards the control of one mind over another. Charcot produced for me an artificial paralysis of a patient's limb by applying to it a strong

Digitized by Google

magnet: I can do the same without a magnet, without even touching the patient with my hand, simply by suggestion; he transferred the paralysis from one arm to the other by the same agency, viz., the magnet; I can do it without one: so can a man of the Nancy school, so can any experienced mesmerizer. Then why must we believe the effect physiological when the provoking cause is mental and lies outside the physical system of the subject?

On the 13th June I returned to London in company with Mr. Judge, who had come over from New York to see us on his way out to India, his intended future field of work. A little while before this I had instituted a friendly competition between certain of our London associates who were either professional or amateur artists, to try an important psychical experiment. My earlier readers will recall my description (see London edition *Old Diary Leaves*, ch. xxiii. pp. 370–373) of the way in which my adept Guru redeemed his promise that he would give me his portrait at a convenient time. This was a profile likeness, drawn by an amateur who was not an occultist, either trained or untrained, and so, while the resemblance was unquestionable—as I verified later in personal intercourse—it did not show the soul-splendor that lights up an adept's countenance. Naturally, I wanted to get a better portrait if possible, and bethought me to try whether my sympathetic artistic colleagues in London could get clearer, more life-like, spiritual glimpses of his divine face. Upon broaching the subject, the five—three professionals

Digitized by Google

and two amateurs—whom I addressed, very kindly and willingly consented, and I lent each in turn the photographic copy of the original crayon sketch that I had with me. The results were very instructive. One had got the right idea of his complexion, another of his profile, and a third, my respected friend Mme. De Steiger, of the luminous aura that shimmers about his head. But neither of the five was, on the whole, a better likeness than the New York sketch by Monsieur Harrisse. Before this competition was finished, Herr Hermann Schmiechen, a very well-known German portrait-painter, domiciled in London, joined the Society and, to my great delight, at once agreed to have the inspirational test tried with him. The photograph was handed him with no suggestion as to how the subject should be treated. He began work on the 19th June and finished it on the 9th July Meanwhile I visited his studio four times alone and once with H. P. B., and was enchanted with the gradual development of the mental image which had been vividly impressed upon his brain, and which resulted in as perfect a portrait of my Guru as he could have painted from life. Unlike the others, who all copied the profile idea of Harrisse, Schmiechen gave the face in full front view, and poured into the eyes such a flood of life and sense of the indwelling soul as to fairly startle the spectator. It was as clear a work of genius and proof of the fact of thought-transference as I can imagine. In the picture he has got all—the face, complexion, size, shape and expression of eyes, natural pose of head, shining aura, and majestic character. It

Digitized by Google

hangs in the Picture Annexe of the Adyar Library that I had built for it and the companion portrait which Schmiechen painted of our other chief Guru, and on entering the room the visitor feels as if those grand eyes were searching his very heart. I have noticed the signs of this first impression in nearly every case, and the feeling of awe is enhanced by the way in which the two pairs of eyes follow one about the room, still seemingly reading one, no matter where he may take his stand. Then, again, by some trick of the artist's brush, the shining aura about the two heads seems to be actually in a shimmery motion, just as it is in nature. No wonder the religiously-minded visitor finds himself, as it were, impressed with a sense of the holiness of the room where the two portraits hang, and meditative introspection is easier there than elsewhere. Grand as they are by day, the pictures are even more striking by night, when properly lighted, and the figures seem as if ready to step out of their frames and approach one. The artist has made two or more copies of the portraits, but they lack the life-like character of the original; he evidently lacking the stress of inspiration under which the latter were produced. As for the photographs which were—against my passionate protest—permitted to be made from the copies, they are as inferior to the originals at Adyar, as a tallow candle to the electric light. And it has made me inexpressibly sad that these glorious faces, in cheap photographs, have been sold over the counter by Judgeites, and published in a magazine and a book by Dr. Hartmann.

Digitized by Google

Does it not seem as if this foregoing experiment threw a great light on the mystery of art-inspiration, and helped us to see what makes the difference between a great painter or sculptor and the general rabble of the professions. The great artist must be a man whose lower mind is sensitive to the impressions that can be impressed on it by his higher, or spiritual, consciousness, and his best works would be produced in those so-called moments of "inspiration," when this transfer of consciousness is going on. Is it not illustrated in the case in point, when the artist, guided and fired by an influx from without, paints such pictures as he cannot duplicate in his normal state of independant mortality? And is not the Titian, Rubens, Claude, Cellini, Leonardo, Praxiteles, or Pheidias, one who is open to the guidance of the Higher Self, capable of receiving in "flashes" those race-lifting glimpses of the divine reality behind these walls of flesh? A point of interest in this instance is that the Schmiechen portrait of my Guru was the seventh attempt to get a worthy reflection of his image, for the helping of those who cannot as yet go in *sukshma sharira* to the *Ashram* and converse with him face to face.

At about this same time, in July 1884, occurred at the house of our dear hostess, Mrs. Arundale, the afternoon reception by H. P. B. which Mrs. Campbell-Praed has so vivaciously sketched in one of her novels, *Affinities*. It brings the scene vividly to mind, and I can see the lion-faced H. P. B. sitting there, smoking her cigarettes and resisting all the attempts of Professors Barrett, Oliver

Digitized by Google

Lodge, Coues, Mme. Novikoff, and several others to get her to make some phenomena for them; the while, an insinuatingly kittenish and supple-framed American lady sitting on the arm of her chair, and now and then snuggling her face under the old lady's double-chin, to her evident disapproval. I stood as spectator in the doorway, greatly amused at the comedy that was going on. Mrs. Campbell-Praed has it all in her story, down to the details of Babula's coming into the room, and Mohini's participation in the conversation and discussions.

The making of the acquaintance of Sir Edwin Arnold, briefly alluded to in Chapter VIII., was one of the notable incidents of that London summer. I met him at the dinner table of a well-known society lady, and shall not forget my astonishment when he was pointed out to me by the lady whom I took in to dinner. The reading of a poem or great novel gives one a sort of ideal of the probable appearance of its author. I had expected to find in the writer of the *Light of Asia* a person of a romantic type of countenance, pale, with delicate features, a dreamy eye, and a frame of rather the feminine type; instead of which, there sat at the opposite side of the table a portly man, with a large nose and mouth, thick lips, more of a worldly than cloistral look, and wearing a black silk skull-cap. "You must be mistaken," I said to the lady, "that cannot be Arnold!" But it was, as I found on going around and talking with him after the ladies left the room. He kindly asked me to lunch at his house, and was good enough to present me, as above noted, with some pages of the original manuscript of

Digitized by Google

the *Light of Asia*, which are now treasured in the Adyar Library. It was from that original that I read when we celebrated, at Adyar, the first anniversary of the death of our dear H. P. B., in compliance with the terms of her Will.

In the same month I went to the seat of Lord Borthwick, Ravenstone, in Wigtonshire, Scotland, on a visit, and thence on to Edinburgh, where I founded the Scottish Theosophical Society, with the late Robert M. Cameron as President, and E. D. Ewen as Secretary. Despite the liberalization of modern thought, the old Presbyterian influence is still so strong in the Northern Capital, as to prevent the very learned and influential men composing this excellent Branch from openly avowing their interest in our movement. Their names are concealed from the public, and admission to their meetings barred against all outsiders. It seems ridiculous that this should be so, and I, for my part, if I lived in Edinburgh, would defy the bigoted public to do their worst, even, if they dared, to burn me for a heretic, rather than submit to such moral slavery. However, men are not all of one opinion as to these questions of expediency, and the spread of our ideas goes on all the same, whether on or below the surface of contemporary society. The only other country in the world where we have encountered the same state of things is Russia, where persecution is the order of the day for such as dare swerve from the straight lines of the State religion.

On the day after the Branch was formed, I lectured on "Theosophy" in the Oddfellows Hall, to a crowded

Digitized by Google

audience. The incident is worth recording for what happened at the close. Among those who came up to shake me by the hand, was a gentleman who said that the views expressed in the lecture were identical with those which he preached from his own pulpit. I found, upon inquiry, that he was the most popular Presbyterian minister in Edinburgh, and I must say I was astonished that he had recognized in Theosophy the spirit of his particular form of creed, for, having been brought up in it myself, I had always associated it with all that was narrow, bigoted, and hateful: the embodiment of religious tyranny. The conviction now sank into my mind that the followers of even the most intolerant sects will soften and spiritualize their creeds if themselves superior to them, and that even a Scottish Presbyterian may, in exceptional cases, be as kind to his fellow-men outside his sectarian fence, as though he had not been brought up on the iron-and-thunder theology of Knox and Calvin. Do we not see it exemplified in the history of Islam? At one time, the courts of its Khalifs were homes of tolerance and religious amity; at another, hell-centres of bigotry and massacre. "In the tenth century," says Draper, "the Khalif Hakem II. had made beautiful Andalusia the paradise of the world. Christians, Mussulmans, Jews, mixed together without restraint. . . . All learned men, no matter from what country they came, or what their religious views, were welcomed. . . . His library contained four hundred thousand volumes, superbly bound and illuminated. . . . Almansor, who usurped the Khalifate . . . . put himself at the head of the

Digitized by Google

orthodox party. He therefore had the library of Hakem searched, and all works of a scientific or philosophical nature carried into the public places and burnt or thrown into the cisterns of the palace." Averroes, the ornament of Islam, a star of the first magnitude in the sky of learning, "was expelled from Spain . . . . denounced as a traitor to religion. There was hardly a philosopher who was not punished. Some were put to death, and the consequence was that Islam was full of hypocrites." *

This is the holding of the mirror up to human nature, for what happened under the Khalifs has always happened, is happening now, and ever will do the same. For the moment, the learned men who belong to our Scottish Branches may be forced to hide their connection with us, and go to meetings under cover, but as surely as the sun will rise to-morrow, the day is not far distant when Theosophy will be preached, not in one but the majority of Scottish pulpits, and it will be deemed an honor to hold our diplomas of membership. For Scottish nature is but human nature, and the national intellect is powerful beyond the average of the intellects of human races, and cannot be prevented from following wherever the thinkers of the past have been able to soar. When the day of liberty dawns, then—as I told the Edinburgh colleagues when forming the branch—I shall expect Scottish Theosophists to outstrip all others in spreading the Ancient Wisdom throughout the world.

On the 8th July there was an open meeting of the London Lodge T. S. at the Prince's Hall, Piccadilly,

* *Conflict between Religion and Science*, p. 142.

Digitized by Google

intended as a public and farewell demonstration to H. P. B. and myself. Many distinguished people in science, literature, diplomacy, and society were present, and addresses were given by Mr. G. B. Finch, then President of the London Lodge, Mr. Sinnett, Mohini, and myself. My topic was "Theosophy"; Mohini's, "The Wisdom of the Aryans"; and Mr. Finch's, a welcome and farewell to us.

My next move was towards Germany, where what happened was so interesting from the theosophical as well as the personal point of view, that I shall reserve the narrative for the next chapter.

CHAPTER XIII.

GERMAN EXPERIENCES.

I CROSSED from Queensborough to Flushing, on the night of the 23rd July, in one of the splendid boats that ply on that line, and reached Elberfeld (Germany) at 3 P.M. the following day. A most sisterly welcome was given me by Frau Gustav Gebhard, since, alas! deceased. A sweeter or more loyal character I never met. She was one of those women who shed about them an atmosphere of love and virtue, fill their homes with sunshine, make themselves indispensable to their husbands and adored by their children. Frau Gebhard possessed for her colleagues in the T. S. the special attraction of being a born mystic, and for many years a student of the occult, so far as her family duties allowed. For seven years she had been one of the two pupils of Eliphas Levi,* and after the siege of Paris was raised, that half-starved and ill-starred Occultist found generous hospitality in her house for a long period. Her impressions of him were

* Baron Spedalieri was the other.

Digitized by Google

contributed by her to the *Theosophist* for January 1886. She speaks very kindly and appreciatively of him as a learned Kabbalist, a teacher, and a friend, but says that his Epicurean nicety in the matter of eating was his weak point and was often to her "a matter of wonder." As both of them are dead, there is no harm in my saying that Mrs. Gebhard told me that Eliphas was an enormous eater, craved rich food, both animal and vegetable, and drank much wine at his dinner. Mrs Gebhard's intercourse with him was chiefly in writing, he taking her through a long course of occult instruction by this medium. A large portion of these teachings were, with the kind permission of Frau Gebhard, translated for the *Theosophist*, and will be found in the volumes for 1884 (Supplement), 1885, and 1886. The Gebhard mansion was furnished in the best taste, and, in the temporary absence in America of Herr G. Gebhard, the host, his whole family vied with each other in making the home delightful to their guests. On the upper floor Frau Gebhard had an occult room for herself, where she had a choice library of rare books on her favorite subjects, and on the wall a portrait from life, in oils, of her master, Eliphas Levi. It represented him just as he is described by her in the article above mentioned—"of a short and corpulent figure; his face was kind and benevolent, beaming with good nature, and he wore a long grey beard which covered nearly the whole of his breast." It was an intellectual face, but that of a man whose attractions were for physical rather than for spiritual things; a face totally unlike that of the type of our Indian

Digitized by Google

Adepts, upon which the majesty of a divine aspiration is enthroned. Two days after my arrival, the first of a group of expected Theosophists came in the persons of Mme. Hæmmerlé, of Odessa; Dr. Hübbe Schleiden, of Hamburg; and Dr. E. Coues, of Washington; and on the following day, at a meeting held in the "occult room," our first German Branch, the "Theosophische Gesellschaft Germania," was formed. The officers elected were: *President*, Dr. Hübbe Schleiden; *Vice-President*, Frau M. Gebhard; *Treasurer*, Consul G. Gebhard; and *Secretary*, Herr Franz Gebhard, the worthy son of excellent parents. This was the beginning of the movement in the most intellectual country of Europe, a field which in the course of time must yield a splendid harvest, though, like Scotland, local causes will long keep back its full development. While in Scotland our obstacle is the unexhausted power of Calvinism, in Germany there are several, viz., the tumultuous mental activity within the circle of pecuniary interests, the enormous development of physical science with its accompanying spiritual prostration, and the surviving distrust of mysticism, mystical teachers, and systems, which was caused by the overdose given to Germany by the Rosicrucians, the Egyptian Masonry of Cagliostro, and the misunderstood claims and labors of the mediæval alchemists. A century ago and more, Germany was the centre and hottest nucleus of all this occult research, and if we now see a reactive tendency, it is but the natural working of unchangeable law. The capacity for this high spiritual aspiration is innate in the German character, and

Digitized by Google

it is quite possible that in future some change of circumstances will bring it once more into activity. If it were wise to do so, I might mention names of high Germans secretly inclined towards our Theosophical ideas, that would make my remark seem quite warranted; but all will be made clear in time. Meanwhile, my duty is to go on as I have throughout so many years, keeping many secrets about persons and things locked up in my breast, and suffering myself and others to be maligned and misunderstood for the sake of the cause to which we have devoted "our lives, our fortunes, and our sacred honor."

We have at Adyar a souvenir of the above incident, in an excellent photograph of the group of friends who assisted in forming the new German Branch, and Frau Franz Gebhard has one of myself in an oil portrait for which I gave her sittings. In the interest of the movement in Germany, I left Elberfeld on 1st August with Dr. Hübbe Schleiden for Dresden. It was on that day that the good Doctor received in the train a letter from one of the Masters which answered a question that he had just then put to me. As his account of the incident has been published by the S. P. R. (with their usual sniffings and suspicions), there is no impropriety in my saying that he had begun a conversation about certain painful experiences of his early years, which he was then relating for the first time, and about which he had not spoken to Mme. Blavatsky. While we were thus occupied, the railway guard came to the right-hand window of the carriage for our tickets. I sat to the Doctor's left,

Digitized by Google

He took both his and my ticket and leaned to the right to hand them to the guard, across the knees of the person who sat to his right As he was resuming his seat, he saw between his body and the next passenger a letter: it was addressed to himself in the K. H. handwriting, was in a Tibetan, or, rather, Chinese envelope, and its contents not only explained the cause of the misfortunes he had just been complaining of, but also answered certain questions he had addressed to H. P. B. (then in London) in a posted letter, to which, in due course of mail, there had not been time to receive her reply.* The case *seems* free of taint of fraud, but the kind, generous S. P. R. critic who reviews it hints at the possibility of an agent of (the penniless) H. P. B. having been in the train with us! Really, with such people is it worth while to waste time in taking them seriously? At all events, poor Dr. Hübbe was much cheered up and encouraged by the contents of the letter, which, after all, was the principal thing. And I too rejoiced in his joy—as my Diary records it.

At Weisser Hirsch, a summer resort near Dresden, we visited that noble soul Herr Oskar von Hoffmann, a gentleman in every instinct as well as action. He was then engaged on a translation of *Esoteric Buddhism*, which he subsequently published at his own cost. It was at his house in Leipzig that Zöllner and the other Professors of the Leipzig University held their memorable seances with Slade, the medium, which confirmed Zöllner

* Second Report on H. P. B.'s Phenomena to the S. P. R., pp. 383-4.

Digitized by Google

in his theory of a Fourth Dimension. The Germans are a handsome race, with a suggestion of the lion, very often, in their faces, and Herr von Hoffmann was a marked example of the type. Both he and his brother who resides in England have been my dear friends for many years, and the latter, especially, has helped the Society when it most needed help.

The same evening Dr. Hübbe and I called on Herr Schroeder, the famous magnetizer, who does—or was then doing—wonders in psychopathic healing. His method was simplicity itself; he sets up an auric communication with his patient, and then just lets his superfluous vitality flow into the other's system until he is cured or helped, as the case may be. Puts himself on tap, as one might say! Well, that is what the Jewish doctors made the Shunamite woman, Abishag, do for old King David, and it is scientific therapeutics. After two more days at Dresden we went to Bayreuth, where we were in time to attend a representation of *Parsifal* in Wagner's own theatre. The performance lasted from 4 to 9 P.M., and was deeply impressive. The effect was, in fact, indescribably grand. The Doctor and I called on Baron Hans von Wolzogen, Vice-President and Manager of the Wagner Verein. He received us in his library, where he was standing at a high desk correcting proofs of an article on "Theosophy and Wagner." The coincidence struck us all as strange, and this impression was enhanced when, on hearing my name, he turned to a book-shelf and, with the remark that a friend at Helsingfors had sent it him the day before,

Digitized by Google

handed me a copy of my *Buddhist Catechism*, gilt-edged and bound in white velvet! Wagner, he told us, was deeply interested in Buddhism, and *Parsifal* was originally written to represent the Buddha's struggles after wisdom and his attainment of the Buddhahood. But at the instance of the kings of Saxony and Prussia and other august patrons, he had recomposed it into its present form, a search after the Holy Graal.

Dr. Coues and Herr Rudolph Gebhard, F.T.S., joined us at Bayreuth in time to attend the opera, and Coues went on with Dr. Hübbe and myself to Münich, which we reached at 8 P.M. on the 5th August and went to a hotel. We called on Dr. Franz Hartmann's most estimable sister, the Countess von Spreti, wife of a retired German army officer, and visited the great galleries of paintings and sculptures. The same evening those excellent people, with a Captain Urban and Herr Diesel, another popular mesmerizer, came and spent a pleasant time with us at our hotel. It was here also that I first met Baron Ernst von Weber, the veteran anti-vivisectionist, whom my Indian colleagues will recollect as a Delegate from Germany at one of our Adyar Conventions, and a F.T.S. who was proud of the title. The next morning he accompanied Dr. Hübbe and myself to Ambach, the summer villa, on the lovely Starnberger See, of Prof. Gabriel Max, the great German painter. We returned to town in the evening, but went back again the next day to Ammerland, another lake-side bit of Paradise, where Baron Carl du Prel, the Philosopher, was in the habit of spending his hot-weather seasons,

Digitized by Google

He was a short, stoutish, hardy, sun-browned man, with an honest face and a noble head, inside which worked one of the grandest brains of our times. Du Prel was the most esoteric and theosophical writer of his time in Germany. We dined at Prof. Max's. He is a short man also, with a thick and long body, a great intellectual head, and is very shy with strangers. We stopped at Ambach that night and the next day and night, returning to Münich on the 10th. A most charming and memorable experience it was throughout. Add to the grand company of high-thinkers, a perfect, sunny day, a clear sky, a lakeshore spread with velvety turf, picturesque villas, a smell of pines in the air, and before us, open, like a heavenly mirror of cloud and shore, the unruffled expanse of Starnberger See. Amid such surroundings I admitted into the Society's membership, on the 9th, the Baron and Baroness Du Prel, Prof. and Frau Max, the latter's sister, Fräulein Kitzing, Count and Countess von Spreti, Baron E. von Weber, and Captain Urban. Mme. Hæmmerlé, of Odessa, had joined us on the 8th, and was present in the capacity of an old member. That there was some high talking may be inferred from the quality of the company present. We returned to Ambach by moonlight in rowboats. A few notes on some of the new members will be interesting outside Germany, where their personal history is less known than it is at home.

Gabriel Max was born 23rd August 1840 at Prag; studied there at the Academy from 1855–58, and in Vienna until 1861; returned to his native town; in 1862

Digitized by Google

surprised the world by a series of thirteen pictures which very effectually, yet fantastically, illustrated pieces of music; from 1863–69 continued his artistic studies at Münich, and has since become, by his various pictures, one of the greatest artists of Germany. His subjects are usually of a weird and mystical character. He is also a great anthropologist, and owns a splendid ethnographical collection.

Hübbe Schleiden, Juris Utriusque Doctor, was born 20th October 1846 at Hamburg; studied jurisprudence and political economy; was, during the War of 1870–71, an *attaché* of the German Consulate General in London; travelled over almost all Europe, and lived in West Africa from 1875–77. He is the author of several very important works, and the author of the German colonial policy, his statesmanlike scheme having been adopted by Prince Bismarck, and since carried out by the Kaiser.

Baron Carl du Prel was born 3rd April 1839 in Landshut (Bavaria); studied at the University in Münich; in 1859 entered the Bavarian military service, which he left in 1872 as Captain. In 1868 he was graduated Doctor Philosophiæ by the University of Tübingen for his magisterial work on dreams, and his fame was constantly enhanced by other books until his lamented death in 1898; one of them, *The Philosophy of Mysticism*, which appeared in 1885, has been splendidly translated by my dear friend C. C. Massey.

Such were the men who clustered about me on that green slope by the shore of the sweet lake, which that

Digitized by Google

unfortunate mad king Louis, of Bavaria, loved so romantically and covered with so sad a pall by his suicide in its blue waters. My friendship with them remains unbroken, although two of them have since retired from their membership.

From Münich we passed on to Stuttgardt, Kreuznach, and Heidelberg, where we, of course, visited the Schloss, the giant wine-tun, and the other sights. We slept at Mainz, and went thence to Kreuznach to pay a visit to Mme. Hammerlé. This is a summer resort for invalids, and is very interesting to strangers. They have there an Ozone Kurhaus (Cure house) which is very curious. The walls are of birch twigs piled up on each other between the timbers of a skeleton frame. A fine spray of water is caused to trickle through the twigs from top to bottom, and in evaporating is said to liberate ozone, which serves as a very healing atmosphere for patients with weak lungs. There are baths, fine gardens lit up at night, a splendid band of musicians—one never hears a bad one in Germany—and in the Bazar numbers of little shops where one can buy at almost nominal prices jewelry and other objects in agate, onyx, carnelian, and the other stones that are found in the neighbouring mountains. Countess von Spreti and Frau Max and her sister suddenly turned up, having determined to give us an agreeable surprise. Mr. Rudolph Gebhard and I got them to consent to come on with us to Elberfeld, our faces being now turned in that direction. We all sailed down the Rhine from Mainz to Cologne, and as the day was bright, the steamboat good, and our company

Digitized by Google

congenial, we had a very happy time of it. The cloud of the Missionary plot was not yet visible, but it was approaching.

The Gebhard mansion could contain us all, and the next five days passed away like a bright dream. Dr. Coues, whom we had left behind at Kreuznach, rejoined us on the 15th (August); and on the 17th, H. P. B., Mrs. Holloway, Mohini, Bertram Keightley, and Mrs. and Miss Arundale came in a body from London. I gave up my room to Countess von Spreti, and went over to Mr. Franz Gebhard's villa. Herr Consul G. Gebhard had returned from America, and was the very type of an ideal host. In fact, I never met a more courteous gentleman nor more sympathetic friend. We celebrated his birthday on the 18th with enthusiasm. Mme. Hæmmerlé arrived that day from Kreuznach. On the 19th the Münich ladies left and Dr. Hübbe arrived. Dr. Coues departed on the 20th, and Mme. Hæmmerlé on the 21st. The reader may imagine the tone of conversation that went on during this memorable week, with H. P. B. sparkling like champagne with her witty talk, and everybody contributing his or her best to the enjoyment of the others. Dr. Hübbe, debilitated by severe mental work, left us to go to the Black Forest to recuperate his nervous system in the balsamic air of that vast piney wood. This reminds me that I have omitted mentioning an important incident of my visit to Prof. Gabriel Max.

In the compound of the villa stood some majestic old pine trees, under whose shade it was pleasant to lie and look out

Digitized by Google

upon the lake. It suddenly came to my mind that I had been told that a certain Adept in Tibet is in the habit of lying at the foot of a pine tree, resting his back against the trunk, and so absorbing into his system the pure healing aura of the tree. Now, as I have already said, my nervous system had been pretty effectually drained of vitality by the thousands of sick folk whom I had treated psychopathically, and I did not recuperate; my general health was perfect, but the ganglia along the spinal tract felt empty; after five months of rest it was no better. So I tried the tree experiment. It worked like magic, the aura poured through my system, and within two days I was as well as possible.

"H. P. B. savage," is one of my Diary entries of 24th August; which means that she was in a mood the opposite of mild, and that we all caught our share of the thunderbolts! She had an attack of rheumatism, poor thing! besides her regular ailments. On the evening of the 25th there was a letter phenomenon, strange and convincing enough to satisfy even Mr. Rudolph Gebhard, one of the cleverest conjurers in Europe. He described it in his address before the Annual Convention at Adyar in December 1884, which he attended as a Delegate (*vide* Official Report of that year's Anniversary, p. 111). He said that "from the age of seven he had studied conjuring. At the age of nineteen he went to London, and took lessons from Professor Field, the best sleight-of-hand man there. He had met the leading conjurers of the day and had exchanged tricks with them. He had made a

Digitized by Google

special study of sleight-of-hand. He then gave an interesting account of the dropping of a letter from a picture in the drawing-room of his father's house while Mme. Blavatsky was in the room. The letter was (by request) addressed to the speaker's father, and treated of the exact subject he was thinking about at the time. He offered a reward of rs. 1000 to anyone who would repeat the same thing under the same conditions. He was himself an amateur conjurer and had his eyes open." (Cheers.)

In passing judgment on this incident, one important fact is to be considered, viz., that the company present, some twelve or fifteen in number, themselves voted that the letter, if any should come, was to be addressed to Herr G. Gebhard and to be a test to him. They might equally as well have had it addressed to any other person in the room, and as the choice was made only a minute or so before the letter dropped on the piano, it is hard to imagine a more self-evident proof of H. P. B.'s real power to effect these phenomena.

Happily, we have now passed beyond the cycle of psychophysical phenomena of this sort since poor H. P. B.'s death, yet, all the same, they were of the greatest importance at that time, and did more than anything else could have done to focus public attention on the Society and open the way for the diffusion of the ideas of which it was the channel. Prof. Max Müller has done me, personally, a grievous wrong in declaring and repeating in print that in a private conversation between us, at his

Digitized by Google

house in Oxford, I had spoken of false miracles as the natural manure of new religious movements, with the implication that if H. P. B.'s phenomena were of that category it was all right. I cannot lay my hand upon the place where the statement occurs, but I believe he first printed it in the *Nineteenth Century*, and repeated it in a Gifford Lecture, though of this I am not sure. The important fact is that—probably without malevolent intention, and only because he misunderstood my remark—he made me appear to uphold trickery and falsehood as a necessary means for pushing a religious movement. As we were alone in his library when the conversation occurred, it becomes a question of his memory against mine, and all I can do is to solemnly deny having ever said anything that would bear such a construction, and offset it with the record of my whole life, which in nothing shows me to have been governed by such low principles. My word will go as far as Prof. Müller's with those who know me intimately. What I did say was that "miracles" had attended the birth of all religions, and that when real phenomena had not been forthcoming, the priests usually employed bogus ones as manure for their crops. But that had no reference to the Theosophical movement, and it was only Prof. Müller's hatred of it which caused him to misunderstand me. "You have done nobly," he said, "in helping so much to revive the love for Sanskrit, and the Orientalists have watched the development of your Society with the greatest interest from the commencement. But why will you spoil all this good reputation by pandering

Digitized by Google

to the superstitious fancies of the Hindus, by telling them that there is an esoteric meaning in their Shastras? I know the language perfectly, and I assure you there is no such thing as a Secret Doctrine in it." In reply, I simply told the Professor that every unspoilt (*i.e.*, unwesternized) Pandit throughout all India believed, as we did, in the existence of this hidden meaning; and that, as for the *Siddhis*, I personally knew men who possessed them and whom I had seen exhibit their powers. "Well, then," said my erudite host, "let us change the subject." And we did, and since then, and until his death, he attacked us and our movement whenever the spirit moved him.

Several other letter phenomena occurred during our stay at Herr Gebhard's house, but I need not relate them, as the one above described will do for all. Among the visitors of H. P. B. was that talented Russian Solovioff, whose book, which appeared long after dear H. P. B.'s death made it safe for him to tell his falsehoods about her, shows him to be as heartless and contemptible, though fifty times more talented, than the Coulombs. On the 1st September he related to all of us the wonderful waking visit he had had from an Adept and the striking phenomena attending it, not as a questionable delusion of the senses, but as an actual experience so perfect and realistic as to banish all theory of doubt. But, as Prof. Max Müller said, "let us change the subject."

CHAPTER XIV.

THE COULOMB MISSIONARY CONSPIRACY.

OUR last chapter brought us up to the 1st September. There were more days of sunny friendships and bright surroundings at Elberfeld, but on the 10th day the first growl of the coming tempest was heard, for we received from Adyar a lugubrious letter from Damodar, intimating that the Missionaries were hatching a plot, evidently with the help of Mme. Coulomb. He said that this woman was going about here and there, breathing vengeance against H. P. B. and the Society. The members of the Board of Control, to which I had confided the management of our affairs at Headquarters, became so tired of her and her wretched gossip, that they tried to get her and her husband to go to Colorado, where Dr. Hartmann offered to present them with a gold-mine claim of his. They were both willing and anxious to go, and a day for their sailing, *viâ* Hong Kong and San Francisco, had been agreed upon, when they spoilt everything by saying that they held compromising letters of H. P. B.'s, and that if they did not receive a bonus

Digitized by Google

of rs. 3000, they should give the letters for publication. Of course, that stopped all negotiation; the Board held a meeting to which the accused were summoned, affidavits of their slanders were read in their presence, and they were expelled from membership in the Society. Then came a wrangle and contention about their quitting our premises, they contending that Mme. Blavatsky had left her rooms in their custody, and that they should not leave Adyar until an order was received from her to that effect. Under advice of counsel, the Board wrote and cabled H. P. B. to send the required order; she cabled it back, and at length, after weeks of most disagreeable disturbance, the worthy couple were turned out of the compound, and went and settled themselves at St. Thomé in a house provided for them by the gentle, Christlike Missionaries! Their bombshell mortar battery was fired off in the September number of their Madras organ, the *Christian College Magazine*, and then they stood by to see the superstructure of the Theosophical Society crumble and bury its founders beneath the ruins. No reasonable person was deceived by the pretence that the employment of the self-discredited Coulombs as tools to attempt our ruin was "in the interest of public morals"; the partisan spirit underneath the attack shone clearly through. If it had been a question of attacking the leaders of one of the sects of their own religion, it is very doubtful if the interests of public morals would not have been left to take care of themselves; but when the chance of discrediting the Society which of all others had the strongest hold upon the con-

Digitized by Google

fidence of the Indian peoples offered itself, the temptation was irresistible, and even such unsavory accomplices as these were paid their price—partly in cash, partly in promises—and the Rev. Mr. Alexander is said to have served as their literary *chef de cuisine*. Very ably, too.

Naturally enough, so sensational an article achieved instant notoriety; the Calcutta correspondent of the *Times* cabled its substance to that paper on September 20th, and it very soon became known throughout the whole civilized world. Only by the reaction was it now seen how widespread the interest in our views had become, and it is doubtful if any Society had ever before had to sustain so terrible an attack. It almost seemed as if the very reactive bitterness of public denunciations of Mme. Blavatsky was the strongest proof of the deep impression which her revelations of the existence of the Eastern School of Adepts, their individual characters and spiritual attainments, and the part they play in the progress of our race, had made on the public mind.

Though I have traced the development of this conspiracy to its culmination within a single paragraph, weeks passed between our first warning from Damodar and the appearance of the Calcutta despatches in the *Times*. These were weeks of painful anxiety to us and others, but to H. P. B. herself of strong mental agony. Her supersensitive temperament made her suffer mental tortures proportionate to the length of her enforced inaction. A perfect parallel can be found in the case of my distinguished compatriot J. Fenimore Cooper, the author, of whom his biographer, Prof. Lounsbury, says:—

Digitized by Google

"The extent to which Cooper was affected by hostile criticism is something remarkable, even in the irritable race of authors. He manifested under it the irascibility of a man not simply thin-skinned, but of one whose skin was raw. Meekness was never a distinguishing characteristic of his nature; and attack invariably stung him into defiance or counter-attack." *

What H. P. B. could do under the circumstances, she did. She wrote to the *Times* of October 9th, denouncing the alleged private letters of herself to Mme. Coulomb as forgeries, and in published interviews in the *Pall Mall* and other journals declared her intention of returning to India and prosecuting the Coulombs and the Missionaries for libel. Following her letter to the Editor of the *Times*, appeared one from Mr. St. George Lane-Fox, who had just returned from Madras, and who said that, in common with all who were acquainted with the circumstances of the case, he had "no doubt whatever that, whoever wrote the letters, they were not written by Mme. Blavatsky"; moreover, that he did "not believe that the true theosophic cause suffers in the slightest degree." The accuracy of this judgment has been abundantly proven by subsequent events, for, as statistics show, the growth and strength of the theosophic movement have, year by year, been double what they had been up to the moment of the attack.

I have no intention at this late day to flog this dead

horse; the public have taken their sides, H. P. B. has cast off the burden of her earthly sorrows, and time is daily vindicating her greatness of character and dignity of life-aims. Her personal faults and weaknesses are well-nigh forgotten, and her reputation now rests upon the books she gave us, whose paramount value is being brought to view after the dust and smoke of the conflict have passed away. In company with Mr. Rudolph Gebhard, I returned to India in the first half of November, and Mme. Blavatsky followed in December, bringing with her Mr. Leadbeater and Mr. and Mrs. Cooper-Oakley, of London, and three Delegates from Ceylon, to attend the Annual Convention. Dr. Hartmann and I had joined the party at Colombo, whither I had gone to report to the Sinhalese the grand results of my mission to London in their interest.

Before her departure from Europe, H. P. B. received the most gratifying proofs of the unshaken confidence of our European colleagues in her integrity; the London Lodge and the German and French Branches unanimously adopted resolutions of a complimentary character, and the first two cabled their decisions out to Adyar. Meanwhile letters and telegrams poured into Headquarters from the Indian Branches, and the reports from our colleagues of the Board of Control—all of which are now lying on my table as I write—became bright and reassuring; we felt that the storm had passed without doing us such grievous damage after all.

Landing at Bombay on November 10, I lectured on the 11th, on "Theosophy Abroad," in Framji Cowasji Hall, to

Digitized by Google

a packed audience, and one of the most enthusiastic I ever addressed. Madras was reached on the 15th, and what sort of reception I had the local papers of the day show. More than 300 students of the very Christian College whose professors had attacked H. P. B., and a large number of our Society members, met me at the station, with cheers, a band of musicians, addresses, garlands, and perfume-sprinklings. Their joy and enthusiasm seemed boundless. The address read to me by the school-boys is very flowery, but quivers with true affection. In certain of its sentences they touch the very heart of the mystery of the failure of the Missionaries to weaken our hold on the Indian public—for a mystery, indeed, it must have seemed to them. These Indian lads identify the Theosophical Society with the revival of Sanskrit Literature, the reconciliation of Religion with Science, the throwing of light upon man's future state, the welding of the "incohesive" Indian castes and creeds into one brotherhood feeling of mutual sympathy, and the defence of Aryan wisdom and Hindu honor against all critics and all comers. With such convictions as these possessing their minds, and with such thrills of gratitude pulsing through their hearts, the poor conspiracy against H. P. B. and the Blessed Ones was foredoomed to failure—nay, was predestined to do us infinite good instead of infinite harm in the long run. One sees this in the tone of the influential Indian journals of the day. Noticing the return of Mme. Blavatsky and her party, the *Indian Mirror* of December 20 said :—

"The Hindu community, in general, is the more attracted

Digitized by Google

to Mme. Blavatsky, because they believe that the Missionaries have, in reality, attacked the ancient Hindu religion and philosophy under the guise and pretence of exposing the lady's 'trickery.' On that account the feeling of the Native community against the Missionaries and for Mme. Blavatsky is very strong."

The *Indian Chronicle* said: "We are not Theosophists ourselves . . . . but we have a great respect for the founders of the Theosophical Society. It is the only foreign movement which appeals to the national feeling of India . . . . and instead of being made the butt of ridicule, and its leaders the subject of persecution, it ought to be patiently nourished. The Christian scoffers . . . . are perhaps not aware that the existence of Mahatmas . . . . is universally believed throughout India, and it is preposterous to suppose that the Padris of Madras will do any serious harm to that belief. . . . Theosophy, though it may have to bear much temporary annoyance . . . . will come out of the fiery ordeal purer for having gone through it." The *Sahas* of 3rd November expressed the same opinions, saying that the Hindus believed in occult science before we two persons were born, and that this belief—in the case of hundreds, knowledge—cannot be affected by anything that may happen to us. The *Amrita Bazar Patrika* said that the Christian accusers were incapable of grasping the possibility of facts such as Theosophy dealt with, but the Hindus, knowing Yoga, believe in the Mahatmas implicitly. In trying to discredit the existence of such men, the Missionaries, as the tone of the whole Indian press showed, were slapping

Digitized by Google

the faces of, and offering deadly insult to, the whole Indian people.

Her reception at Madras on her return was even more tumultuously joyous than mine had been. She was met at the pier by a large Committee, garlanded, along with her party of fellow-travellers, and escorted in procession to Pacheappa's Hall, where an assemblage that crowded the place to suffocation was waiting. They rose to their feet and gave vent to their feelings in a roar of cheers and vivas, as she slowly walked through the press to the platform, her hand nervously gripping my arm, her mouth set like iron, her eyes full of glad light and almost swimming in tears of joy. The new-comers from London received each a separate ovation also. Mr. C. Ramiah, the Tahsildar of Madras, bade her welcome on behalf of the local Branch; Judge P. Sreenevasrow requested permission for the address of the Christian College and other College students, bearing some 500 signatures, to be read; and she assenting, it was read by A. G. Krishnasawmy Iyer, a student of the Christian College, amid great excitement. When the outburst of cheering at the end had somewhat subsided, H. P. B. made her first and, so far as I know, only speech from a public platform. She said that "of all the letters published, not a single one, as it stood, had been written by her. She would deny them all *in toto* . . . . she would be the greatest fool in the world to commit herself so that she might be fairly accused of such vile, disgusting things. . . . As for her accusers, she and the Colonel had treated them with all possible kindness, and what should she say of their going over to the enemy's

Digitized by Google

camp, when her back was turned, and selling her like Judas Iscariot? She had not done anything against India of which she should be ashamed, and she was determined to work for India while there was health in her." (Report in the *Madras Mail*.)

Other speeches were made by Mrs. Cooper-Oakley, Mr. Leadbeater, and myself, which were vehemently applauded, and the presentation of garlands and bouquets to H. P. B. and the rest of us terminated the proceedings.

H. P. B. came back fully determined to prosecute the Coulombs and the Missionaries; she had so declared in London and so wrote me from Cairo, where she had stopped some time to collect testimony about the antecedents of the Coulombs. From thence Mr. Leadbeater, then an Anglican curate, or clerk in Holy Orders, wrote to the *Indian Mirror* (issue of Dec. 16) about what he and the others had discovered—facts certainly not much to the credit of these champions of "public morals." He says that the information, derived from the members of Mr. Coulomb's own family, showed that his (M. C.'s) wife, formerly a Miss Emma Cutting, had been employed for a short time as governess in the family of S . . . . Pasha, "but was expelled from his household upon the discovery that she was endeavouring to instil vicious ideas into the minds of her charge"; that she pretended to be able to see clairvoyantly buried treasures; that several were induced to dig where she told them, but discovered nothing save once, when they found some doubloons—which a little girl had seen her place in the hole the

Digitized by Google

night before." Mr. Leadbeater further says that he was assured by Mr. Gregoire d'Elias, Vice-Chancellor of the Russian Legation at Cairo, that he knows Mme. Blavatsky intimately, and saw her daily during her (former) stay there, and "esteems her most highly, and has never till now heard the slightest reflection on her moral character." I think we may fairly offset this testimony of a high Russian official against the calumnious falsehoods of an accuser like Mme. Coulomb. And a fair-minded person would be disposed to look with great suspicion upon her statement that Mme. Blavatsky, one of the most brilliant women of her time, had put her reputation so completely in her power as the wretched letters in question would show. Of course, never having seen the letters themselves, nor being as infallible in determining the genuinesses of handwriting as professionals like Netherclift and Berthelot—the Government expert in the recent Zola trial, who made as ridiculous a failure about Dreyfus's writing as the other did about Parnell's — I cannot express any opinion as to their genuineness; moreover, since poor H. P. B. is dead, the truth will never be known*; but I can and do say, for the hundredth time, that I have had numberless proofs of H. P. B.'s occult powers, of the clear altruism of her motives, and the moral purity of her life; and I thrust

* In his *Leaves from a Life*, p. 263, Mr. Montague Williams, Q.C., says that in a case in which he appeared, Netherclift and Chabot swore positively to a writing as that of a certain man, and it was proved to be by quite another one; that their evidence from handwriting is quite worthless. "In fact," he says, "in my opinion they are utterly unreliable."

Digitized by Google

those old scrap-books and bundles of letters and papers back into their boxes, with the sense of relief that one feels on putting out of sight a loathsome thing. Yet not until I have shown *why* H. P. B. never redeemed her promise to prosecute the Coulombs; for that fact has been used ever since to her discredit, and most unjustly. Fortunately, it is all a matter of record. For it, we must now turn to the Annual Report of the T. S. for the year 1884.*

She sent me from Cairo the following cable: "Success complete. Outlaws. Legal proofs. Sail Colombo, *Navarino*." The meaning of this is that she had what she regarded as legal proofs of the fact that the Coulombs were outlaws who had fled the country to escape arrest for fraudulent bankruptcy. This I learnt on reading the written statements of reputable witnesses which she brought with her; statements which, however suggestive as to the line of inquiry that should be followed up in case the matter should come to trial, I saw at once were not in form for production in Court. Acting without legal advice, she had made a mess of the affair. From the day she landed, she kept urging me to take her to a judge, or solicitor, or barrister, no matter which, for her to file her affidavit and begin our action, but I positively refused. I told her that within the next few days the Convention would meet, and that our paramount duty was to lay her case before the Delegates, have a special Committee formed, of our ablest

* Cf. also my article on the death of H. P. B. in *Theosophist* for August 1891.

lawyers, and let them decide what steps she should take; that she and I had so merged our personalities into the Society, that we ought not to move until we should know the wish of our colleagues. She fretted and stormed and insisted, but I would not stir from my position, and, when she threatened to go by herself and "wipe this stain off her character," I said that I should, in that case, resign my office and let the Convention decide between us: I knew too much about legal practice to do any such foolish thing. She then yielded.

The Convention met in due course on the 29th, and in my Presidential Address I laid the matter before it. The following paragraphs will be pertinent to our present narrative:—

"With regard to the proper course for Madame Blavatsky to adopt in the matter of a lawsuit, there is a difference of opinion among her friends. She herself naturally feels anxious to go to Court with her proofs, and have her accusers punished. That was her first thought when we received the news in London, and I am not aware of her having changed her opinion. Some of her friends and all her enemies also urge it. Her assailants especially display a very eager and unanimous, not to say suspicious, anxiety for her to do so. But the vast majority of our members throughout the world have expressed a decided objection to this course. Their opinion is that, do what our counsel may, it will be impossible to avoid having the trial of Madame Blavatsky's reputation turned into a trial of the truth of the Esoteric Philosophy and of the existence of the

Digitized by Google

Mahatmas, and, as these are subjects the most sacred, not only to Hindus but to occultists of all religions . . . . the prospect is shocking to their feelings. They represent that, in view of the angry prejudice against us among the Anglo-Indians as a class, the utmost latitude is likely to be given to opposing counsel to ask the most insulting questions, and goad to desperation our witnesses, especially Madame Blavatsky, whose extreme nervousness and excitability all know. This strictly within the limits of legal practice, and without our having any redress. I have the written opinions of eminent London counsel upon this point, which will be submitted for your consideration. In face of this divergence of opinion, and in deference to the views of so many of the leading men in our Society, I have represented to Madame Blavatsky that it is her duty to be governed by the sense of the General Council and not undertake to decide for herself. . . . If for (the Society's) sake we should be required to sacrifice even our lives, we ought to be ready to do it without a moment's hesitation. And, finally, I have insisted that the present imbroglio shall be unreservedly laid before a special Committee of the best lawyers and judicial officers, selected from among the Delegates, who shall be required to examine persons and papers, and submit their recommendations for the decision of the Convention before its final adjournment; she to hold herself ready to sue or not to sue her traducers, as the Convention may order. To this she has with some reluctance finally consented."

A Committee was chosen, and, before the adjournment, duly reported as follows:—

Digitized by Google

"*Resolved*:—That the letters published in the *Christian College Magazine* under the heading "Collapse of Koot Hoomi," are only a pretext to injure the cause of Theosophy; and as these letters necessarily appear absurd to those who are acquainted with our philosophy and facts, and as those who are not acquainted with those facts could not have their opinion changed even by a judicial verdict given in favor of Madame Blavatsky, therefore it is the unanimous opinion of this Committee that Madame Blavatsky should not prosecute her defamers in a Court of Law. Signed by Norendro Nath Sen,[1] *Chairman*; A. J. Cooper-Oakley,[2] *Secy.*; Franz Hartmann, M. D.; S. Ramasamier [3]; Naoroji Dorabji Khandalvala [4]; H. R. Morgan, Major-General; Gyanendranath Chakravarti, M.A. [5]; Nobin K. Bannerji [6]; T. Subbarow [7]; P. Sreenevasrow [8]; P. Iyaloo Naidu [9]; Rudolph Gebhard; R. Raghoonath Row [10]; S. Subramania Iyer.[11] The high character and competency of this Committee cannot be questioned, and if a client is ever justified in acting in legal matters under the advice of counsel, assuredly H. P. B. was in this case.

In the course of the debate upon the above Report of the Committee, Babu Norendranath Sen cited the case of an

action for libel brought by his cousin, the late Keshab Chunder Sen, and said that "the position of plaintiff in an Indian libel case is much worse than that of defendant." This was his professional experience as a Solicitor of many years' standing. Judge Khandalvala said that, after giving the Coulomb letters a careful study, he was convinced that the one in which his own name occurred was "a perfect forgery." General Morgan said that, for reasons stated, he believed that the whole series of letters were forgeries. Judge Sreenevasrow narrated the circumstances which attended his own receipt of Mahatmic letters, and which made a deep impression on his audience; finally, he felt convinced that there was no legal proof of the genuineness of the letters in Mme. Coulomb's possession: "at the best it is but a matter of opinion." Mr. (now High Court Judge) S. Subramania Iyer's remarks were full of the luminous impartiality and common-sense which have elevated him to his present position on the Bench.

"From my experience," he said, among other things, "I know the difficulty of proving the genuineness of letters in a Court of Law, a difficulty which has existed in cases in which I have been engaged myself. It is merely a question of opinion, and I would ask if it is not better to form such an opinion from the evidence embodied in a pamphlet than by the surrender of one's judgment to the verdict of a Court of Justice. The question is whether this Society, putting itself forward as a Society for the promotion of peace and order, is justified in making an appeal to a Court of Justice in this matter. I think that every reasonable man is at

Digitized by Google

liberty to form an opinion on the evidence placed before him . . . . without going into a Court of Justice in which results are very often contrary to the truth. If Theosophy has only strength in itself, I consider it will survive such difficulties. . . . We cannot bind Madame Blavatsky, but as a member of our Society I do not think it is the proper course for us to give the world the spectacle of a spiteful cross-examination. Many are insisting that it will be necessary, *simply because it would make an interesting trial*, but as sober men engaged in spreading the truth, we ought to take a different view."

Other speakers took part in the discussion, and, the question being put to vote, "the Report of the Committee was then unanimously adopted by acclamation. Three cheers were then given for Madame Blavatsky, who was deeply (and very naturally) affected by this fresh proof of affectionate confidence." On her appearance the next evening before the audience of 1500 persons who attended the celebration of the Society's ninth anniversary, she was cheered to the echo, and every allusion to her in the speeches of the several speakers aroused great enthusiasm.

One fact, reported confidentially by a very respected colleague of ours, made a deep impression on the minds of the Committee. He had overheard a conversation between two influential Madras civilians about Madame Blavatsky and the charges against her. In reply to a question by one of them as to what would be likely to happen, the other said, "I hope she *will* bring an action, for . . . . who must try it, is determined to give the greatest latitude for cross-

Digitized by Google

examination so that this d——d fraud may be shown up, and it is not at all impossible that she may be sent to the Andaman Islands." Of course, this was equivalent to saying that the case was already prejudged, and that H. P. B. would not have a chance of getting justice. What it was that was calculated upon seemed pretty clear from the fact that when the Missionaries saw that H. P. B. had been kept from walking into the trap, they caused Mme. Coulomb to bring an action for libel against General Morgan, intending to subpœna H. P. B. as a witness and cross-examine her, but immediately withdrew it when she was sent away to Europe by her attending physician, as will hereafter appear. Their anticipated victory proved a defeat; H. P. B.'s persecution doubled the love felt for her by the Hindus and her foreign colleagues; and they were left with their disreputable informer on their hands. The Rev. Mr. Patterson, "Editor *Christian College Magazine*," in the *Madras Mail* of 6th May 1885, appealed to the public for money to send them to Europe, "as the genuineness of the Blavatsky letters may now be considered (by them?) settled, and there is therefore no longer any necessity for M. and Mme. Coulomb to remain in India. . . . They are penniless, and it is impossible for them to earn a livelihood in this country. . . . They are not without some claim upon the consideration of the public. . . . There are many who, feeling that *a good work has been done*, will be willing to contribute, etc." He acknowledges receipt of the following sums: The Rt. Rev. the Bishop of Madras, rs. 50; the Hon. H. S. Thomas, rs. 100; the Rev. Dr. Miller,

Digitized by Google

rs. 100; the Rev. J. Cooling, B.A., rs. 10. Poor Missionaries! poor Coulombs! This was their last resource, after the ghastly failure of a lecture scheme, in which the Coulombs —personally conducted—were to have made the grand tour, showing up the fraudulent tricks of H. P. B., with accessories of bladders, muslin, wigs, and pulling-strings. The one trial given them at the (Missionary) Memorial Hall, Madras, was such a *fiasco* that it was never repeated, and the poor traitors sank gradually out of sight into their congenial mud. Up to that time the Society had chartered 95 Branches in all the world, up to last December (1897) it had chartered 492.* Evidently the crumbling which was expected to follow the Coulomb episode did not happen: the engineer was 'hoist with his own petar.'

While the party were in Colombo, *en route* for Madras, an interesting episode occurred. The Rev. Mr. Leadbeater, with H. P. B. and myself acting as sponsors, "took *Pansil*" from the High Priest Sumangala and Rev. Amaramoli, in the presence of a crowded audience. This was the first instance of a Christian clergyman having publicly declared himself a follower of the Lord Buddha, and the sensation caused by it may be easily imagined.

As we are not likely to have to recur to the Coulomb scandal in any detail, it is proper that I should say what its actual effects were upon us. We have seen that the growth of the Society, as a whole, was quickened to an unexpected degree, and I must also add that very few individual resignations of members were sent in. Yet, so far as the great

* Up to the close of 1902 we had issued 714 charters.

Digitized by Google

public is concerned, undoubtedly both H. P. B. and the movement were for a long time under a cloud. It is so much easier to think ill of others than to judicially decide upon their merits and shortcomings, and "where much mud is thrown against a public person, some of it always sticks": a venerable truism. Until the attacks of the Coulombs and the S. P. R. were made, H. P. B. was simply an exceptional, eccentric, and brilliant woman *sans pareil*; after that, she was as one who had been arraigned before a Scottish jury and dismissed with the verdict "Not proven," which was very different from "Not guilty." Among our members were quite a number, and some influential ones, who had acquired doubts of her perfect innocence, yet excused her in their minds for the sake of the public benefits and private consolations she had given.* We were still under the spell of phenomena-hunting, and to have doubt cast on H.P.B.'s phenomena was to shake the whole superstructure—that now solid edifice of Theosophy which settled on its base later on. My correspondence shows the existence of this feeling of gloom and unrest, and in my succeeding chapters it will be shown how I handled the situation. As these nineteen years have gone by since that tragical 1884, the relation of H. P. B. to the movement

* This same charity has been extended to W. Q. Judge, whose guilt was much more capable of proof. One might almost fancy the author of these lines had poor H. P. B. in mind when writing them :—

"A thousand blacker names, worse calumnies,
All wit can think and pregnant spite devise,
Strike home, gash deep, no lies nor slander spare;
A wound, though cured, yet leaves behind a scar."

Digitized by Google

has greatly changed, and for the better. She is now remembered and appreciated, not so much as the thaumaturge, but as the devoted agent of the Elder Brothers for the spreading of long-hidden truth to modern times. As time goes on this will be more and more so, and in the growing effulgence of this new day the shadows cast about her martyr personality will melt away and the calumnies of her foolish foes be forgotten, as are those libels against Washington which were so rife in his lifetime. For she was the herald of truth and, as Bacon said, "the sun, though it passes through dirty places, yet remains as pure as before." He might have added, "it illumines the faces of those who stand in its glory."

CHAPTER XV.

FIRST VISIT TO BURMA.

THE attendance of Delegates at the Convention of 1884 was double that of the preceding year, and the feeling exceptionally enthusiastic. The first gold medal of the Subbarow Fund was awarded to Judge P Sreenevasa Row, of Madras, for a very able paper on the identity of two great personages as traced in the Puranas. The Convention adjourned *sine die* on the 31st December, and the Delegates gradually departed for their homes, some of them 1500 miles distant. The last left on the 8th January (1885), and the house settled down to its normal quiet. During the night before I was visited by Dj. K.—then an advanced pupil, now a Master—who talked with me about sundry persons and things. Mr. Leadbeater, who had at that time all his great spiritual enlightenment before him, sleeping on another *charpai* in the same room, heard the two voices and saw a column of light by my bedside, but could not distinguish the form of my visitor. On the following night —as my Diary entry states—"H. P. B. got from her

Digitized by Google

Teacher the plan for her *Secret Doctrine*, and it is excellent. Oakley and I tried our hands at it yesterday, but this is much better." Meanwhile, the accumulation of materials for the book had long been going on. It will be news to some that this was not originally intended to be a new book, but only a recasting and amplification of *Isis Unveiled*, with the late T. Subba Row, B.A., B.L., as co-editor with H. P. B. As first advertised in the *Theosophist*, it was to have been issued in monthly parts of 77 pp. each, and to have run to about twenty parts. This new scheme, given her by her Teacher, changed this programme, and the gradual building up of the present grand work was the result.

One night, about this time, H. P. B., unsolicited, produced for Dr. Hartmann a caricature sketch of a woman whose double, leaving the body, is waited for by a devil; while the divine ray of the Atma escapes. "Dr. H. says" —notes my Diary—"that the picture answers a question that has been mooted in his mind for several days past, and has a significance of which H. P. B. is not aware." Just so: *perhaps*.

The late King of Burma, Theebaw III., having heard of my work for Buddhism from an Italian official at Mandalay, a member of our Society, had invited me to his Court for conversation about the Ceylon Buddhist movement, and in the month of January, just after the Convention above described, I sailed for Rangoon with Mr. Leadbeater to help me in my general work. We had an easy time of it until we got abreast of Monkey Point just at the lower end

Digitized by Google

of the city, where the current of the Irrawady ran like a mill-race, and our poor, broken-down old steamer, the "Asia," had to come to an anchor and wait for high-water. At last, however, we reached the jetty, and I was received by a Burmese gentleman on behalf of a well-known English official, one of our members. He found us hospitable quarters at the private house of the late Moung Htoon Oung, an advocate and an enlightened man. The same evening our reception-rooms were crowed with the "Elders" (I forget the Burmese name) of the Buddhist community, who plied us with questions and evinced an appreciative and friendly spirit. The next morning Oo Nyoung, Municipal Commissioner, came and escorted us to the golden-domed Shway Dagôn, the finest and most revered pagoda in the Indo-Chinese countries. It is built on a spur of the Pegu hills, and the platform is in part artificially constructed of numberless baskets of earth, brought as an act of piety by Buddhist pilgrims from all parts of the country. The bell-shaped dagoba, gilded from base to apex with gold-leaf at a cost of over a lac of rupees, given by the people, is a resplendent object to one who approaches the city by steamer. When the sun shines on it the effect is very grand indeed*: one might fancy it the pharos of the mythic Jerusalem the Golden. It stands upon the upper of two terraces, which rises 166 feet from the level of the ground, and has diameters of 900 by about 700 feet. At the two sides of the foot of the grand staircase stand

* For a full description of Shway Dagohn (Dagôn) Payah, see Shway Yeo's *The Burman*, p. 193, and many other books on Burma.

Digitized by Google

monster leogryphs, built of brick covered with plaster and gaudily painted. The ascent is very tedious, but, reaching the top, one finds himself on a great flagged open space which runs all around the pagoda, and on special days is thronged by a multitude of worshippers, picturesque in costume and colors beyond any other crowd I ever saw. The dagoba stands on an octagonal plinth pierced at four sides with worshipping chambers or temples, each of which enshrines one large and many small statues of the sitting Buddha lit up by thousands of candles, and resounds with the hum of voices of devotees reciting the Five Precepts. Smaller and larger dagobas, chapels, image-houses, bells, and carved figures of lions and other animals are seen around the edges of the platform. One of the bells is so large that six men can stand inside, it being 7 feet 7½ inches across the mouth and weighs 94,628 lbs. (*op. cit.*, 197). It is the third largest bell in the world, and has a history that is worth reading.

From its eight-sided plinth springs the gold-covered pagoda, whose perimeter is 1355 feet and height 370. Think what a grand object must be this ovoid structure or hillock of masonry enveloped with gold on a bright, sunny day! But I shall not give time to mere architectural details when they can be so easily gotten from Shway Yeo's charming volumes on Burma. The peculiar sanctity of the Shway Dagôn is due to the fact "it is the only payah known to Buddhists which contains actual relics, not only of Shin Gautama, but of the three Budhs who preceded him in this world." In the relic chamber, in

Digitized by Google

the heart of the dagoba, are said to be eight hairs from the head of Gautama Sakhya Muni, and the drinking-bowl of one, the robe of another, and the staff of a third preceding Buddha. Whatever be the fact, the assertion is believed throughout Burma, Siam, Cambodia, and Corea, from all which countries pilgrims swarm to pay their homage. Its actual historical date is not easily fixed, for, though Buddhist authorities assert it to have been built in 588 B.C., yet, as Shway Yeo says, it may have been sacred for cycles upon cycles, if it contains relics of the Buddha's predecessors. The pagoda is crowned with a *htee*, or umbrella, one of the emblems of sovereignty. It is an iron, cage-like structure, gilded and hung all over with gold and silver jewelled bells "which tinkle melodiously with every breath of air." Mr. Oo Nyoung introduced me to various important personages connected with the pagoda, and arrangements were made for me to lecture there on Buddhism.

The news of my arrival having been spread, I very soon was visited by large numbers of both Burmese and resident Hindus, coming to discuss their respective religions. January 24 was a very busy day. I had a three hours' interview with the Tha-tha-na-bang, or Buddhist Archbishop, so to say, from Mandalay, and, later, the house full of Burmese and Hindus, each in a separate room, and Lead-beater and I going from one group to the other, discussing now Buddhism with one, and then Hinduism with the other party. On Sunday, the 25th, I lectured in Krishnam Koïl on "Hindu Religion, its Enemies and Friends."

Digitized by Google

A band of Native Christian rowdies attended, and by their bad behaviour created great excitement. There was every prospect of a hand-to-hand fight, with bloodshed, but I managed to stop it. My throat was, however, the worse for the excessive use of my voice at the lecture and in the interminable discussions with our visitors.

I had the opportunity for seeing a number of instructive mesmeric experiments here, by a private gentleman named Moody, upon Indian subjects. I have notes of a series involving the question of thought-transference which were tried at my suggestion. They were made with a pocket-handkerchief. The operator having brought his subject into the state of suggestibility, stood before him holding a white handkerchief in his hands. Recognizing its nature and normal color at first, he subsequently saw it, without any spoken orders, as red, blue, green, yellow, purple, black, brown, or whatsoever other color I whispered in the operator's ear. The color sensation underwent an instantaneous change when the mesmerizer visualised in his own mind the color designated by me. We also proved the community of taste and feeling between mesmerizer and subject, by the usual experiments of making the former, with his back turned towards the subject, taste successively sugar, quinine, ginger, salt, vinegar, etc., etc., and by pricking or pinching him, every taste and every physical sensation being immediately reproduced in the subject. To a reflective mind this field of mesmeric research produces most serious thoughts; there is something so awesome in the idea that two

Digitized by Google

human beings can be thus identified as to mental and physical action. Such an experiment is, in fact, a key that unlocks awful mysteries.

My first lecture at Shway Dagôn was given on the 27th January in a crimson-and-gold rest-house, beautifully carved outside and intoxicating with color inside. Pansil, or the Five Precepts, was first given by a Burmese priest, some introductory remarks were made, and I was then given speech. I spoke for an hour, but, as three interpreters had to translate me by turns, I very much doubt if my huge audience got a very clear idea of what I said. The scene, however, vividly appealed to my artistic sense, and I took in the whole picture piece-meal, while keeping an attentive ear upon my interpreters to see if they seemed to be rendering, if not my words, at least my ideas, correctly. For one of average intuitiveness of temperament can do so much by thought-reading, even though ignorant of the vernacular employed. My reasoned discourse finished, I was put through a public examination in Buddhistic theology and metaphysics by several priests, and pronounced satisfactory. I don't wonder at their taking precautions before giving me their confidence, considering what a marvel, almost an impossibility, it must have seemed to them that a *pucca* white man (that is, a pure-blooded not a mixed-blooded one) should come and, at that sacred shrine, in open day and in the presence of thousands of Burmans, avow himself a Buddhist from conviction, without ulterior motive. In fact, this suspicion followed us for years in Asia, and we had to live it

Digitized by Google

down before we won the sure place in the confidence of the Asiatic peoples which we now hold.

At 1.27 A.M. in the following night I was awakened by a telegraph peon who brought me this despatch from Damodar: "Return at once, Upasika (H. P. B.) dangerously ill." It was a thunderclap out of a clear sky. "Poor old chum!" my Diary says. "No more sleep for me that night." I spent the time in perfecting plans for carrying on the Burmah mission. At an early hour I went with Leadbeater to carry the bad news to our dear Mrs. Gordon, of Calcutta, then in Rangoon on a visit to her adopted daughter. After that to a Buddhist meeting where I was engaged to speak; then to bid farewell to the Mandalay Archbishop; and then, at 11 A.M., to the steamer "Oriental" in which I sailed for Madras. Leadbeater was left behind to go on with the work.

My older colleagues will have no trouble in figuring to themselves my state of mind while on that sea voyage. Here were we two with our vast work not yet even shaped out, the Society still staggering under the blow struck by the Missionaries; for, while we were floating along on the full tide of our co-workers' sympathy, yet outside our ship, to borrow the metaphor, the billows of angry outside hatred and suspicion were swelling, and foaming, and dashing against it all around. With us together and united, each supplying what the other lacked, and linked together in one intense thought of service to man, there was nothing to fear for the future, our cause had in it the spirit of victory. But with her stricken down, perhaps lying on

Digitized by Google

her bed of death, perhaps doomed to die before I could get back to receive her last word and close her eyes, how heavy my heart must have been needs no seventh son of a seventh son to comprehend. No wonder I wrote in my Diary, when the ship was running through a silvery sea: "My poor Chum, and is thy life of adventure, of anguish, of violent contrasts and of unswerving devotion to Humanity, ended? Alas, my loss will be greater than if thou hadst been wife, or sweetheart, or sister; for now must I carry alone the immense burden of this responsibility with which the Holy Ones have charged us."

The transit across the Bay of Bengal was as calm as a summer yachting voyage, and passed without incident, beyond my being spied out by Hindu friends at Bimlipatam, and taken ashore and made to lecture that evening. We reached Madras at 4 P.M. on the 5th February; I hurried home and found H. P. B. in a state between life and death, with congestion of the kidneys, rheumatic gout, and an alarming loss of vitality. Added to this, an enfeebled action of the heart had brought her to a crisis where her life trembled in the balance. She was so delighted to see me that she put her arms around my neck, as I came to her bedside, and wept on my breast. I was unspeakably glad to be there to, at least, bid her farewell and assure her of my steadfastness. Her attending physicians, Dr. Mary Scharlieb and Dr. Franz Hartmann, M.D., said it was simply a miracle that she was alive. Our Teacher had worked the wonder by coming one night when they were waiting for her last gasp, laying his hand

Digitized by Google

on her, and snatching her back from death. Wonderful woman! This same thing happened with her at Philadelphia, when Dr. Pancoast told her that her leg must be cut off to save her life; but she was out of the house the very next day, with her mortifying limb cured. Readers of the first volume of these O. D. L. reminiscences will recall the facts. She hung in this state the next four days, we at first not knowing whether she would live a year or years, or suddenly die from syncope. As her strength served we talked over the situation, and she rejoiced in my promise of undying loyalty to the cause we represented. But I was not left to commune with her in peace. Mr. Lane-Fox had returned from London, and he and Hartmann and the other new-comers had put their heads together, and hatched a scheme for what was simply my putting aside, and the transfer of the governing power to a Committee, composed mainly of themselves. It was an ungracious and ungrateful project, and I revolted at once. They had even got poor H. P. B. to sign the papers, which they formally handed me (and which, you may be sure, I have in the box of archives for that year). When I went to her with the paper, and asked her if it coincided with her sense of justice that I, who had watched over and built up the Society from its first germ until now, should be turned out on the road to go hang, without a word of thanks or even so much as the "chit," or character certificate, one gives to the rest-house keeper after a day's stay, or to the dhobie (washerman) or one's water-boy; she moaned out that she had signed something they had

Digitized by Google

brought to her dying-bed, and which they said was very important for the Society, but she never understood it to mean what I described, and that she repudiated any such ingratitude. She told me to tear the papers, but I said no, I should keep them as the story of an episode that might be useful to the future historian. So it passed. While we two were talking, H. P. B. got a note from our Guru in a phenomenal way, saying that she might assure Subbarow and Damodar that, upon her dying, the link between the T. S. and the Masters should *remain unbroken*. A promise which has been amply fulfilled.

By the 10th H. P. B. was about again, and so much better that, when a telegram came from Leadbeater urging my return to Rangoon as there was a very promising opening for the T. S., she consented to my going. So I sailed on the "Oriental" on the 11th. My "Chum" wept when we parted, and I should too if I had thought it was for the last time, but my mind was now completely reassured on that point. The recollection that she would not be permitted to die before her work was accomplished and somebody was ready to fill the gap she would leave, came back to me. I had forgotten that in my momentary grief at the thought of parting from her.

Mr. Leadbeater, with deputations of Burmese Elders and Hindus, received me at the jetty at Rangoon on my arrival on the 19th February. On the following day I paid my respects to the late beloved and respected Bishop Bigandet, author of *The Legend of Gaudama*, one of the most authoritative books on Southern Buddhism. His

Digitized by Google

sweet manners and noble character had earned for him the confidence and homage of all educated Burmese as well as of all Christians. We had a most agreeable talk together about Buddhism and its literature. He was past seventy and quite feeble. He expressed his regret that he should never be able to bring out another book, and, although I offered to supply him with a secretary to whom he might dictate according to his strength, he sadly shook his head and said that his work was all but finished, and the affairs of the world were receding from his sight. With that perfect courtesy of an old French courtier of the time of the Louis, he said it was now my turn to supply this want, and when I protested my incapacity, shook his finger at me and smilingly said he could not accept that excuse, since he had read my *Buddhist Catechism* and there was no more useful book on the religion of Sakhya Muni. Of course I put that down to his amiable politeness, but his manner was so charming that I could only answer by my blushes. He was a tall, spare man of graceful carriage, with white, small hands and small feet, and wore the episcopal purple cassock with red buttons, a long gold chain and cross, and the ring of his episcopal rank. When I took my leave he insisted on accompanying me downstairs to the gate, and after a final exchange of kind expressions we parted—for ever, for I never saw him again.

The next day we breakfasted in the Burmese fashion, on the floor, at a Burmese rest-house, and later received the calls of several European gentlemen interested in Mesmerism,

Digitized by Google

to whom I showed a variety of experiments in thought-control. A large Committee of English and Pali Native scholars sat the next day to complete a revision of the Burmese translation of the *Buddhist Catechism*, and accomplished it after some hours of work. Some 20,000 copies were subscribed for on the spot for gratuitous distribution, and the Elders showed quite an enthusiasm about the affair. After the adjournment Leadbeater and I called on Messrs. Duncan and Badelier, two new acquaintances, and I received the former into membership along with eight others. On the Monday following I lectured in the Town Hall on "Theosophy no Sect" to a large audience including Missionaries, and later organized the "Rangoon T. S.," a Hindu Branch with all Tamil members. On the Wednesday we dined at Mr. Duncan's, where we witnessed and assisted in some very instructive mesmeric experiments. I recollect one which recalls some narratives in Baron Du Potêt's classical work *La Magie Dévoilée*. In the centre of the drawing-room stood a large round table, and the company sat against the walls all around the room. The subject, a Hindu servant, being in another room where he could hear nothing of our conversation, I asked Mr. Duncan to draw on the floor with his finger an imaginary line from the table outward, and will that the subject should not be able to cross it. The company present chose the place where the line should be drawn, and then Mr. Duncan, approaching his finger tips to the carpet, but without touching it, willed that his subject should not be able to pass the invisible barrier. The subject was then sent for. On enter-

Digitized by Google

ing, he was told to walk around the table twice, after which he would be told what next to do. He began the circumambulation, and went on well enough until he came to the enchanted spot, when he suddenly stopped, tried to lift one foot to step forward, failed, shrank back, and said he couldn't go farther. Why? "Why, don't you see that line of fire; how could I get past it?" he answered. I told him there was nothing there; to try again. It was quite useless, he could not advance an inch until Mr. Duncan, who had all this while been standing silent, made a dispersive sweep with his hand and said "All right!" when "Tommy" completed the circuit of the table. He described it to me as a low wall of flames about six inches high.

Our preliminary discussions with the Burmese finally resulted in the formation of the "Shway Dagôn T. S.," a Buddhist Branch. They were very urgent that I should stop in Burma at least a couple of months to organize the movement, and it was really desirable, but the claims on my time elsewhere forbade it and I had to decline. I told them they must get on as best they could, on the lines I laid out for them.

Saturday, the 28th February, was a great holiday with the Burmese, as the anniversary of the Buddha's alleged descent from the Tusita heaven into his mother's womb under the form of a white elephant! We went again to Shway Dagôn and saw a great crowd of pilgrims. Meetings, talks, and Branch reunions engaged us during the next few days. Meanwhile, I was collecting the opinions of the most re-

Digitized by Google

spectable Elders about King Theebaw, with the result that I decided that I should not accept his invitation to Mandalay, as he was a monster of vice and cruelty, and his motive in asking me was not to satisfy his thirst for religious knowledge, but only to gratify an idle curiosity to see the white Buddhist. I had too much respect for the dignity of the Society and its President to put myself on show before a debauched tyrant, and sacrifice my American self-respect by kow-towing to him, merely on the chance of getting a costly ruby ring, or a sum of money, some expensive silken cloths, or such-like toys. So I sent word to that effect to our Italian colleague through whom the King's message had been transmitted, and when, a few days later, I was urged to reconsider by King Theebaw's local agent and another Burmese noble, I held my ground and gave my reasons with perfect frankness. I am not sure, but I think that at heart even the Burmans respected me for my independence.

The incoming *Madras Mail* brought us disagreeable news. Hartmann reported that the Central Committee at Adyar had resigned, and some Branches would dissolve if H. P. B.'s case were not made good against the Padris. H. P. B., with her usual inconsistency, reproached me for having prevented her—as she said, although it was not I but the Convention who had done it—from bringing suit against them; and copies were sent me of the latest Missionary pamphlet against us. As I wrote in my Diary, there was "something hostile in the air." How true is that expression—so-and-so is "in the air"; for assuredly we are constantly acted upon by currents, mental, moral, spiritual,

Digitized by Google

and physical, that are set flowing by our fellow-men. So, likewise, are others acted upon by our own thought-currents —as we now all have been taught by our advanced students in occultism. The next day came a cable from Adyar that H.P.B. had had a relapse and I must cut short my projected tour in Burma and Bengal, and come back at once. With that exhilarating intelligence on my mind, I had to lecture in the evening to an audience of 1000 in the Town Hall. The dear Missionaries had a fellow posted at the door to sell the above-mentioned pamphlet, and I saw many in the hands of my auditors; but nothing is so bracing as a savage opposition, and nothing so stirs up all the resisting power one has in him. I took the adversary by the throat, so to say, and shook him, and made my sympathetic Burmese and Hindu hearers join together in peals of applause. I don't believe our esteemed enemies made *much* profit out of their speculation of importing this poisoned weapon to use against us.

We had already a Buddhist and a Hindu Branch in Rangoon; I had now to form one of European and Eurasians interested in Mesmerism and practical Psychology in general. I gave it the name of the "Irrawady T. S."

A second urgent telegram came the next day, but I could not get a steamer until the following day, the 11th, when I sailed in the "Himalaya" for Madras. The Captain, Mr. Allen, was an old acquaintance, having commanded the "Chanda" in 1880, when H. P. B. and I returned from Colombo to Bombay. Having a day at

Digitized by Google

command before sailing, I profited by a visit from Mr. Duncan to our house, to make further and better mesmeric experiments on his boy "Tommy." The boy was made to sit with his back against the wall of the room, just beside a large French window opening on a sunny verandah; his mesmerizer, Mr. Duncan, stood facing him, with a white handkerchief in his hands; I stood in the verandah, out of Tommy's range of vision, with a book of samples of bright-colored papers, used by bookbinders and others. Mr. Duncan would say to Tommy, showing the handkerchief, "What is this?" "a handkerchief." "Color?" "white." I would then show Duncan, say, a red paper, and he, still holding the handkerchief out to Tommy, would repeat: "Color?" "Red," the boy would answer. So color after color would be silently shown to the mesmerizer, and the next moment he mentally imparted it to the linen handkerchief, and it was seen by the hypnotized subject. This was, I fancy, about as fine a proof of the possibility of thought-transference as can be found on record.

While in Paris in the October preceding, Mr. Rudolph Gebhard and I had been present on the 18th at some mesmeric experiments of M. Robert, the well-known *masseur-magnétiseur*, on one of his clairvoyant subjects. Among other things, the latter told us that he saw us sailing in a steamer on a far-off sea; a man falling overboard; the steamer stopped; a boat put out, and the steamer sailing in a circle. That sounded queer, as neither of us recollected the evident fact that a vessel, especially

Digitized by Google

a steamer, usually does sail in a circle to pick up a person who has gone overboard; however, I made a note of it at the time, and it now came vividly back to me, for, while crossing the Bay of Bengal on March 14, a Hindu deck passenger fell overboard, and the "Himalaya" sailed in a circle to pick him up. The coming event of March had, therefore, cast its astral shadow before it on the clairvoyant brain, five months in advance of its happening. I reported the fact to M. Robert by letter at the time, and he can confirm it to anybody who may have the curiosity to ask him to let them see my letter.

We touched at the usual coast ports, among them Coconada, Subbarow's native place, where I went ashore and organized the local Branch T. S. which still survives. Our steamer landed us at Madras on the 19th March, and on reaching Headquarters I "found Atra Cura enthroned and everything looking bad." But we need not sail into that cloud-bank just as we have reached port. Leave it for the next chapter.

CHAPTER XVI.

H. P. B. LEAVES FOR EUROPE.

YES, indeed, Black Care was enthroned at Adyar when I got back from Rangoon; the very moral atmosphere was dark and heavy; H. P. B. was struggling for life and as vehement as an enmeshed lioness; while certain of the European new-comers were displaying a special talent for meddling with the Headquarters' business, plotting to have me reduced to subjection to a faddish Central Committee, in which I should not have the least influence and keeping my quasi-dying "Chum" in a perpetual state of nervous explosion. Brief mention was made of this matter in Chapter XV., but it is important enough for extension. The wonder is she did not die before I could get there and fight for the *statu quo ante*. One ostensible revolt was against my autocracy, demand being made—to quote from one of the documents before me—that:

"The President-Founder should be asked to select out of the General Committee an Executive Committee consisting of five persons, including Mr. T. Subba Row and

Digitized by Google

four European gentlemen residing at Headquarters, and to transfer upon them all the supervisory, financial, and executive affairs of the Society, to distribute and direct the work of the Society, to appoint all officers—the President-Founder excepted—and to ratify all documents concerning the Society."

If this was not modesty, what would be? I was to step aside, after conveying all my powers to a group of five persons, self-picked for me out of the whole Council—four of them Europeans, recently arrived from Europe and America, having but the briefest experience in the executive management of the movement, next to no personal intimacy with the majority of our members, no association whatever with the Ceylon Buddhists, whose educational programme was then getting into full swing, no recognized hold on the affections and confidence of the Hindus and Parsis, nor, with one exception, any private means to contribute towards the up-keep of the Headquarters and of the movement generally. This last difficulty, however, they would get over by forcing H. P. B. and myself to convey our *Theosophist* and its book business to the Society, without compensation, and without reserving out of the property we had ourselves created, without a rupee's help from the Society, even the pittances needed for our modest support: they thought it highly detrimental to the Society's interests that the magazine should be private property! A fine scheme, worthy of the Red Republicans of Ninety-Three. Damodar, Bawaji, and Alnanda, our three devoted Hindu fellow-officers, denied the validity of each of the complaints,

Digitized by Google

and protested vehemently against the plan in all its details; while Mr. Leadbeater coincided with them in a very temperate yet firm paper, which is before me. But on the 5th February 1885, when poor H. P. B. was thought to be dying, they got her to scrawl the following:—

"Believing that this new arrangement is necessary for the welfare of the Society, I approve of it, so far as I am concerned. H. P. BLAVATSKY."

Mr. Leadbeater says, in his paper: "Mme. Blavatsky withdraws her endorsement of the writing, as having been given without a clear perception of the construction it bears upon its face." The imminence of death being past, her mind worked again, and she repudiated her endorsement and—as remarked in the last Chapter—begged me tear the paper, which I refused. This is but one of a number of proofs of ingratitude that I have had since the Society was founded. If I mention it at all it is not by way of protest, but as a striking corroboration of the old truth, that he who sets himself to work for his fellow-men should expect no thanks, but much unkindness. H. P. B. and I had given rs. 9000 out of the *Theosophist* fund towards the Society's necessities within the preceding twelve months, and, of the nett profits of the magazine to that date, viz., rs. 15,600, had paid the Society rs. 14,994-4-6, as I find noted in my Diary. If the charge of "autocracy" lay against me, it was because, until then, I had had to shoulder all the responsibility alone and push on all the movement. Our present helpers had not yet stepped into the ranks,

Digitized by Google

and it was not until two years later that Mr. Judge began to work in America.

The Europeans being leagued against us, I naturally turned for counsel and sympathy to my most trusted Hindu advisers, and long consultations ensued between them and myself, at the residence of Dewan Bahadur R. Raghoonath Row. The result was the adoption of a policy which shortly after I carried out; Mr. Hodgson, of the S. P. R., was still at Madras, and hearing that at an Anglo-Indian dinner-table he had expressed his belief that H. P. B. was a Russian spy, I called on him with Mr. Cooper-Oakley to discuss the matter. Both of us gave our views so clearly that we came away with the impression that Mr. Hodgson thought the charge as puerile and unfounded as we did. Yet he stuck to it, and put the cruel slander into his report to his employers of the S. P. R. Since then I have had no respect for him, for it was a stab in the back to a helpless old woman, who had never done him the least harm. He made me suffer intensely in mind for a couple of days by declaring that Hurrychand Chintamon, of Bombay, had shown him a letter of H. P. B.'s to him, from New York, in which she said I was so under her hypnotic spell that she could make me believe what she liked by just looking me in the face. I saw that such an assertion, however transparently childish and absurd, would be taken up by our opponents to do us harm. While I did not mind what they might do, if even ten times worse than this, it went to my heart that H. P. B., whose loyal friend I had been through everything, should

Digitized by Google

have done this act of treachery to me; and merely to gratify her vanity, as it would seem. But that is the inconsistent creature she was, *in her physical self*, and it was these traits which made it then so very hard for anybody to live and work with her for any length of time. I have always said that the trouble of getting on with her, *as Helena Petrovna*, was infinitely more difficult than to overcome all the outside obstacles, impediments, and opposition that stood in the way of the Society's progress. In my whole experience in the movement, nothing ever affected me so much as this. It made me desperate, and for twenty-four hours almost ready to go down to the beach and drown myself in the sea. But when I put the question to myself what I was working for, whether for the praise of men or the gratitude of H. P. B., or that of any other living person, all this despondency drifted away and my mind has never gone back to it. The sense of the paramount obligation of doing my duty, of serving the Masters in the carrying on of their lofty plans—unthanked, unappreciated, misunderstood, calumniated—it mattered not what—came in to me like the flash of a great light, and there was peace.

March 25th, I wrote to Mr. Sinnett and suggested the formation of a Central Committee or T. S. Board of Control, with Headquarters at London, to have charge of our interests in Europe; thus anticipating the idea of a Section, which was adopted later. He, however, did not like it, for, in fact, this would commit him to the policy of a popular propaganda, which H. P. B. and I, under

Digitized by Google

superior encouragement, had always followed out, but which to him was always repugnant; as it had been to Mr. Massey and Dr. Wyld before him.

March 28th was a tempestuous day at Adyar, it seems, for I have written: "A day of disagreeable experiences: H. P. B. wild and violent; news of a further step in the plot of the Missionaries against us; threatened suit against General Morgan by the Coulombs. A bazaar rumor, and improbable." But it was true, as the sequel proved. All this excitement told almost fatally upon my dear Chum's health. It was awful to see her, with her face empurpled by the blood that rushed to her head, her eyes almost standing out from their orbits and dead-looking, as she tramped up and down the floor, denouncing everybody and saying wild things. Her physicians said this could not last, she must have rest and quiet or she would drop down dead some day without giving us a moment's warning. So she listened to them, and, on the 29th March resigned her office and gave Babula orders to pack her trunks. Dr. Hartmann and I went the next day to town and took passage tickets for her, Miss Flynn, of Bombay, the Doctor, who consented at my request to go and look after H. P. B., and "Bawaji," then a devoted follower of hers. The party sailed for Naples on the Tuesday in the Messageries Co.'s steamer "Tibre." She was so helpless that Dr. Mary Scharlieb's husband, one of the Presidency Magistrates, procured the use of a hospital chair, and she, sitting in it, was lifted from the boat on board by a hoisting tackle. That night, by her request, I moved

Digitized by Google

over into her room and slept in it for the first time. She particularly asked me not to give it to any other occupant.

The following passages are copied from the official report that appeared in the *Theosophist* (Supplement) for May 1885 :—

"At about this time Madame Blavatsky was having severe attacks of palpitation of the heart, and all at Headquarters were kept in a state of alarm, as the physicians had expressed the opinion that under any sudden excitement death might be instantaneous.

"Following is the certificate of her medical attendant :—

"'I hereby certify that Madame Blavatsky is quite unfit for the constant excitement and worry to which she is exposed in Madras. The condition of her heart renders perfect quiet and a suitable climate essential. I therefore recommend that she should at once proceed to Europe, and remain in a temperate climate—in some quiet spot.

(Sd.) 'MARY SCHARLIEB,

"The local members of the General Council, meeting at Headquarters as an Executive Committee on the 12th instant, adopted unanimously the following :—

Resolution.

"'Resolved that Madame Blavatsky's resignation be accepted, and that the President be requested in the name of the Council to inform her of the great regret with which they have learnt that she is compelled, on account of her

Digitized by Google

extreme ill-health, to relinquish her duties as Corresponding Secretary of the Theosophical Society. The Council further record their high sense of the valuable services she has rendered to the cause of science and philosophy.

(Sd.) 'R. RAGHOONATH ROW,
'*Chairman.*'"

"To mark our respect for Madame Blavatsky's exceptional abilities, the vacancy caused by her retirement will not be filled, and the office of Corresponding Secretary is hereby abolished. Official correspondence upon philosophical and scientific subjects will, however, be conducted as heretofore by other members of the Executive Staff, and inquiries may be addressed to the Recording Secretary at Adyar."

Her resignation, as acted on by the Executive Committee, read as follows:—

"ADYAR, *March 21st*, 1885.

"To the GENERAL COUNCIL
of the THEOSOPHICAL SOCIETY.

"GENTLEMEN,—The resignation of office, which I handed in on September the 27th, 1884, and which I withdrew at the urgent request and solicitation of Society friends, I must now unconditionally renew. My present illness is pronounced by my medical attendants mortal; I am not promised even one certain year of life. Under these circumstances it would be an irony to profess to

Digitized by Google

perform the duty of Corresponding Secretary; and I must insist upon your allowing me to retire. I wish to devote my remaining few days to other thoughts, and to be free to seek changes of climate, should such be thought likely to do me good.

"I leave with you, one and all, and to every one of my friends and sympathizers, my loving farewell. Should this be my last word, I would implore you all, as you have regard for the welfare of mankind and your own karma, to be true to the Society and not to permit it to be overthrown by the enemy.

"Fraternally and ever yours—in life or death,

(Sd.) "H. P. BLAVATSKY."

I believe that by taking this wise step she saved her life, for it was to the last degree unlikely that she could have borne the strain much longer; and her colleagues are, in a way, indebted to Dr. Mary Scharlieb for the subsequent appearance of the *Secret Doctrine*, the *Key to Theosophy*, the *Voice of the Silence*, and all the other valuable writing she was spared to do after getting out of the psychic maelstrom that had been created about her at Adyar. Apart from the motive of her ill-health and incapacity for work, she was influenced by the wish to relieve the Society from the responsibility which her continuance in office would lay upon it. Later, at one of the Annual Conventions, she was unanimously and enthusiastically invited to return if her physician should consent, and although she could never do that, she resumed her old official status.

Digitized by Google

"The Headquarters," I wrote on April 1st, in my Diary, "is desolate, yet peaceful as it has not been before. We can now face the situation calmly. General Morgan writes that he has received a letter from Mme. Coulomb's counsel, demanding an apology for calling her a 'forger' and a 'purloiner of letters.'" On this, a Council meeting was called, and we telegraphed the loyal old veteran to ask a week's delay to give him time to prepare his answer. At an adjourned meeting, the next day, "the whole Morgan case was discussed, and the unanimous opinion was that the General had better defend the case, as he would most probably win it and expose the worthless characters of the Coulombs." He did so, but—as noted in a previous Chapter—the Missionaries withdrew the suit, as they could get no benefit from it now that H. P. B. was out of their reach!

At a Council meeting on the Sunday following (5th April), I brought forward as a tentative measure a plan for the creation of a real Executive Committee, which should share with me the management of the Society, and it was adopted. My circular was worded as follows:—

"ADYAR, *April 7th*, 1885.

"With a view to improving the administration of the Theosophical Society and relieving the President of a portion of the responsibility which now devolves upon him, I have determined to form, as an experimental measure and subject to ratification by the next Convention, an Executive Committee, of which I invite you to become a member.

Digitized by Google

"My wish is that this Committee should assume, in connection with myself, the entire management of the Society's affairs during the recess—each member and myself to have an equal vote, the President to have a casting vote in case of a tie; all questions to be decided by the majority present; the Secretary to the Society to act as Secretary to the Committee; the entire proceedings to be kept strictly confidential, save with the consent of the majority present; and the Committee to meet at least once a week for business.

"The design being merely to form a convenient working Committee of Councillors most accessible from the Headquarters, I propose that a circular be sent to each and every one of the members of the General Council, notifying him of the appointment of this Executive Committee, and inviting him to attend the sessions when in Madras, and at all times to communicate through any one of his colleagues among your number any matter he may think it advisable to have acted upon. Thus practically the entire General Council would have a share in the management of the Society throughout the year.

"It is to be understood, of course, that the present measure is adopted tentatively, and that the right is reserved of rescinding this special Rule in case difficulties should arise (as in the late Board of Control) of so serious a nature as to prove its inexpediency."

In pursuance of the invitation appended to the above circular, the Executive Committee met, and in obedience to a Resolution unanimously adopted, the following gentlemen

Digitized by Google

signed an acceptance of seats "under the conditions mentioned in the President-Founder's circular letter": R. Raghoonath Row; P. Sreenevas Row; S. Subramanier; C. Ramiah; P. Parthasarathy Chetty; T. Subba Row; A. J. Cooper-Oakley; and C W. Leadbeater.

The Committee as thus organized went on harmoniously for some months, but was ultimately abandoned, for the practical reason that nobody save myself had all the details in his head, nor the personal acquaintance with individual colleagues and their local environments, which were needed for acting with judgment in specific cases. The meetings resolved, finally, into mere sittings to agree to all my recommendations, one member after another absented himself, and it was the general wish that I should go on as previously, doing what seemed best without further obstruction. The marplots, Messrs. Lane-Fox and Hartmann, had left the country, and no one else was disposed to make trouble. Yet autocracy was my abhorrence, and I asked nothing better than that somebody should come forward and take a share of the great responsibility for the administration of our difficult business. I looked on the Society as a free and open republic of altruism, in which there should be no sect, or caste, or privileged class, nor any strife or emulation save as to who should best work for the good of the world. I put my views into a leader in the *Theosophist* for June 1885, entitled, "Infallibility." It was *à propos* of a recent move of Keshub Chunder Sen towards the assumption of quasi divine honors from his following, I said :—

Digitized by Google

"A Brahmo organ charges us with the purpose of building up 'a new order of priesthood.' Perhaps the theory is based upon the fact that certain phenomena have been shown in connection with our movement, and that the authors of two or three Theosophical books, possibly to give them more weight, have affirmed their personal relationship with Mahatmas. But whatever the phenomena, their exhibition has always had for its object to prove the existence in all mankind of certain psychic potentialities, which, under favoring conditions, develop. Was it ever pretended that only certain chosen 'vessels of election' could have these powers, or that their exercise proved their possessors to be infallible teachers? Is it not, on the contrary, absolutely true that, from the first page of *Isis Unveiled* to the last line printed about Theosophy, the uniform burden of Theosophical teaching has been that man, as man, possesses to-day exactly the same psychic and other capabilities as his remotest ancestor possessed; that in successive cycles these have been alternatively developed and latent; and that religious knowledge results from psychic development? Where is the room for a priesthood among us in the exoteric sense of the word? or the necessity, in a Society like ours, for leaders? The writer, for his part, is convinced that, whatever mental sufferings, and whatever injury to personal reputations may result from recent events, the price is not too high to pay if the last chance be destroyed of ever building up a sect and 'priesthood' in the Theosophical Society. Rather than see that calamity befall the movement, he would prefer

Digitized by Google

that the respect now felt by any friend for anyone concerned in its inception or direction should be lost; for then the field would be cleared of obstructive personalities for the consideration of first principles. In neither his official nor private capacity has he evinced any sympathy with the yearning after inspired teachers or infallible teachings. Quite the reverse: for he has never let slip an opportunity to affirm the dignity of private judgment; the necessity of individual research and interior development for the comprehension of truth; the absolute independence of Theosophy of all special teachers or groups of teachers—all sects, dogmas, confessions of faith, forms, ceremonies, and national or geographical limitations. If this is not broad enough; if, in any other language besides English, there be any stronger words to express an absolute repugnance to the idea of any thinking person blindly giving up his sovereign right of inquiry to any other person, high or low, adept or non-adept, and of giving any value to a teaching beyond its own intrinsic weight by appealing to an authoritative authorship—then those are the words the writer would wish to employ. There never was an Adept or Mahatma in the world who could have developed himself up to that degree if he had recognized any other principle. Gautama Buddha is held to have been one of the greatest in this august fraternity, and in his *Kalâma Sutta* he enforced at great length this rule, that one should accept nothing, whether written, spoken, or taught by sage, revelator, priest, or book, unless it reconciled itself with one's reason and common-sense.

Digitized by Google

"This is the ground upon which we stand; and it is our earnest hope that, when the founders of the Theosophical Society are dead and gone, it may be remembered as their 'profession of faith.' With stout old John Hales, the preacher of the 16th century, we maintain that 'to mistrust and relinquish our own faculties, and commend ourselves to others, this is nothing but poverty of spirit and indiscretion.'"

For my part, as one of the co-founders of the Society, I had persistently adhered to that policy of personal freedom and personal responsibility of the member from the beginning, and have stood for it and fought for it down to the present day. When I can no longer have such freedom within it, I shall leave the Society, and grieve over it as a lost cause. If I needed a Pope I should go to Rome, where a so-called Vicegerent of God is enthroned, and a brazen toe of a statue is always waiting to be kissed. Docile obedience to a TEACHER, who has mastered the secrets of life and death, of man and nature, is natural and proper; but servile obedience to a bald creed, or to a person no better nor spiritually wiser than oneself, is the worst of serfdoms — undignified, unmanly, a spiritual suicide. This, I repeat, is my own feeling about the matter, and nobody save myself is responsible for it. It does not bind another member of the Society, and, free-thinker as I am, I am ever ready to stand by my neighbour and defend his right of private judgment, howsoever orthodox he may be to whatsoever form of religious faith. If he is unable to reciprocate, I should ask or compel him

Digitized by Google

to resign his membership, for he has no natural place within our ranks, and "an empty house is better than bad company."

Two consoling things happened at this time, two rifts of clear sky amid the gloom: the Berhampur (Bengal) T. S. sent us a letter of sweet sympathy, and the Ceylon Buddhists reported that the Buddhist National Holiday which I had asked Lord Derby to grant them had, with their Governor, Sir Arthur Gordon's consent, been gazetted.

Under the circumstances of the situation we had the choice of two policies, the passive and the active: we might keep quiet, carry on our current business without attracting public attention, or we might adopt the bolder course of challenging public opinion, by giving lectures in the principal centres of Indian influence and thought. I declared for the latter, and, my colleagues of the Executive Committee concurring, a lecture at Pacheappa's Hall, Madras, was arranged for the 27th April—the 117th day of the year; hence, to our notions, one of good omen. The result exceeded our highest expectations; the Hall was packed in spite of the fact that, to prevent a rush, the Managing Committee made a small charge for admission. The sum of rs. 150 was taken at the doors, and given away in charity. Five professors of the Christian College attended, but their presence did not dampen the ardor of their students, who almost cheered themselves hoarse.

I see that the lecture was very fairly reported the next day in the local papers—an encouraging circumstance in

Digitized by Google

itself. T. Subba Row brought back, on the same day, our copy of Mohini's and Mrs. Holloway's *Man, a Fragment of Forgotten History*, and made a very severe criticism on it. "He condemned it utterly"—I write—"saying that its mistakes are calculated to throw discredit upon the Mahatmas, while its dogmatic tone is insufferable." When the book was announced in London, with the intimation that it embodied authoritative teaching from the Masters of Wisdom, I at once wrote to the *Pall Mall Gazette* to deny the claim *in toto*, and warned the public that the authors of the book were alone responsible for its contents. Moreover, I had pasted inside the cover of every copy sold by the *Theosophist* Manager the same notification.

The European Mail of that week brought dispiriting accounts of the feeling among our people: the result, no doubt, of H.P.B.'s not having been allowed to prosecute her slanderers in court. Still, it could not be helped; to have done otherwise than we did would have been most unwise.

If the Missionaries did not let Mme. Coulomb loose against General Morgan, it certainly was not for lack of provocation, for the *Madras Mail* of April 29 contained his reply to her plaint, in which he renewed his former insults and defied her to do her worst; the Editor, at the same time, giving notice that the discussion should not be carried further in his columns.

As a mental recreation, on the principle of offsetting one disagreeable thing by another even more lugubrious, I read a good deal just then about the Witchcraft and Witch

Digitized by Google

Trials of the 17th Century. It strikes a Theosophist, in particular, most forcibly what revolting proofs those tragedies afford of human bigotry, stupid prejudice, and densest ignorance of the laws of life, mind and soul. It is enough to make one weep to recall the pictures of ignorant and innocent hysteriacs and mediums persecuted, imprisoned, even judicially murdered, because phenomena, which they could not help, occurred in their presence, spreading panic and horror among the eye-witnesses, who were equally ignorant and powerless as the neurotic patients themselves. D'Assier has made good use of some of the thousands of recorded facts, and Prof. Charcot and his colleagues have drawn upon the judicial archives for a basis of argument; but we have only to turn over the pages of Des Mousseaux and the host of writers upon these psychical and mediumistic mysteries, to see that there exists an inexhaustible fund of proof of the occasional interplay of occult forces and the mutual interference of the planes of the living and the dead.

CHAPTER XVII.

CONCERNING SIBYLS.

AFTER a residence of only five months, Mrs. Cooper-Oakley found her health suffering so much in India that about this time she had to leave us for home under medical orders. Our loss has been the very great gain of the London Headquarters, where, under a more bracing climate, she has done a prodigious amount of work.

Our London news of that week was more calming, as it appeared that, besides Mr. F. W. H. Myers of the S. P. R., nobody had resigned his membership. Whether or not a popular disbelief in the infallibility of professional hand-writing experts influenced public opinion, or whether it was just the instinctive feeling that an accused person ought to have the benefit of the doubt, the fact above stated was gratifying to the colleagues of H. P. B. There was in the *Theosophist* (June 1898) a reference to the late Mr. Montagu Williams Q.C.'s opinion of the value of this expert testimony. Since then a copy of Mr. Williams' *Leaves from a Life* (Macmillan & Co., 1890) has been sent me by a

Digitized by Google

friend in New Zealand, and I am able to show, by the testimony of that eminent leading counsel, how unnecessary was our grief and distress on hearing that Mr. Netherclift had declared the K. H. letters forgeries by H. P. B. Mr. Williams tells (*op. cit.*, p. 263) the story of a case of alleged libel by publication on a postal card, brought against Sir Francis Wyatt Truscott by one John Kearn. Messrs. Poland and Grain conducted the prosecution, while Sir John Holker, Mr. Williams, and Horace Avory represented the accused. The prosecutor and a lady swore to the identity of the handwriting, and the evidence of Charles Chabot and Frederick George Netherclift, professional experts, was then taken. Both swore positively to the writing on the postcard as being that of the defendant, Chabot pointing out in detail to the jury the turns of letters and flourishes, the dots, cross lines, and up and down strokes which bore him out in his decision; and Netherclift, pet of the S. P. R. and slayer of the Blavatsky Medusa, said "he had made handwriting a study during more than thirty years . . . . and that, after minutely comparing the letters (of the defendant) with the postcard, he had independently come to the conclusion that the writer in both cases was the same. He produced *a most elaborately written report, calling attention to the various similarities existing between the handwriting on the different documents*, and, on being cross-examined, he adhered absolutely to the position he had taken up." Alas! for the poor man. The defence put upon the stand one Mr. Thomas Flight Smith, an acquaintance of both the parties, the accused and accuser, who

Digitized by Google

swore that he had himself written the postcard as a friendly warning to Sir Francis, yet without malice to Mr. Kearn! His father, Mr. T. J. Smith, bore him out in the assertion, and produced three other postcards written by his son. Mr. Alderman Swan Nottage, who stated that he was a friend of the accused and the witness, Mr. T. F. Smith, and had received many letters from both, and was acquainted with their respective handwriting, swore "that the postcard was undoubtedly written, not by Sir Francis, but by Mr. Smith." Mr. Williams adds: "The jury stated that they did not wish to hear any further evidence, and proceeded at once to pronounce a verdict of 'Not Guilty.' So much for the evidence of experts in handwriting!"

So much, indeed; and notwithstanding the Arab proverb about the malodorousness of proffered advice, I will venture to recommend that copies of Mr. Montagu Williams' book and of the Report of the Parnell case be placed in the library of the S. P. R., for the benefit of those who care to know what the professional opinions of handwriting experts are sometimes worth. Poor H. P. B., how those S(leuthounds) of P(sychical) R(esearch) made thee suffer under the knouts of these experts!

On the Good Friday of that year I had had an interview with a Telugu Brahmin astrologer, the possessor of a palm-leaf copy of that wonderful old book of prophecies, the *Bhima Grantham*, who had greatly astonished me by his readings in that volume. In the *Theosophist* for May 1885 (vol. vi. number 8) will be found my account of it, under the title "Indian Sibylline Books." As prophecies

Digitized by Google

acquire no value until their fulfilment, but after that become most important as proofs of the predictive faculty in man, my habit is to put on record all I hear of this sort, so that they may be cited at the proper time. That is why I published the revelations of the Telugu Brahmin at the time, and as thirteen years have now passed since then, it will be interesting to turn back to that number of the *Theosophist* and see what he foretold and how he did it. Several friends of ours told us that they had had read out of one of these ancient *ollas* accurate details of their own lives, and prophecies about their affairs which had been literally fulfilled. They had also been allowed to verify the astrologer's readings by consulting the book themselves. These friends told me, moreover, that in the course of their consultations it had transpired that their connection with our Society had been mentioned, and that the book contained much about the Society itself. On this account they had arranged the interview between the astrologer and myself, but only with much difficulty and after overcoming his objections to have a sitting with an European. Even then he would not do it until he had *consulted the book itself*, and learned from it the day, hour, and minute for the interview, the number of witnesses permissible, and the positions (relative to the cardinal points) to be assumed by the Brahmin and myself. At the appointed time we took our seats on the floor, on mats, in the Indian fashion. The book, on being unwrapped, proved to be an ordinary palm-leaf volume, the characters etched on the leaves with a stylus. I judged it to be very old. The edges were much

Digitized by Google

discolored and worn, and the characters black with age. The book was laid before me, the edges of the leaves upward, and I was told to take in my two hands the unwound binding-cord which passes through holes punched in every leaf, insert it between any two leaves I chose, and open it at that place. I did so, and the astrologer then read the contents of that and following pages. Notes were taken by one of the witnesses. The book said: "The inquirer is not a Hindu, but of foreign birth. He was born with the Moon in the constellation Pleiades, having the sign Leo in the ascendant." Here follow some particulars of the personal sacrifices which I was said to have made for the public welfare. It then continued: "With a colleague, he organized a society for the propagation of Esoteric Philosophy (*Brahmagnyanum*). This colleague is a woman, of great power (*sakti*), high family, and, like himself, a foreigner. Though born so well, she too gave up everything, and for thirty years has been working in this same direction. Yet her karma is such as to compel her to endure great trouble and anxiety; and she is hated by her own kind (the white race), for whom she has worked so hard." It then spoke of two white persons who had been most friendly, but had turned about, published bad stories about her, and tried to make the public doubt the genuineness of our movement. "Many phenomena have been shown in connection with the Society," it went on to say, "and letters received by the Founders from their Teachers have been injudiciously made public: *this has been the cause of all the present trouble.*" The prophecy then

Digitized by Google

followed that our Society would survive me by many years, and, to my surprise, for the two friends present were not aware of it any more than the astrologer, the book told about a private meeting of myself and others (that at Dewan Bahadur Raghoonath Row's private house which I have mentioned in the last chapter) held the day before, with the subject of our discussion, and prophesied the issue correctly. "The Society," said the book, "is now passing through a dark cycle, which began seven months and fourteen days ago, and will last nine months and sixteen days more; making for the whole period seventeen months exactly."

Counting backward from the date of the interview, we come to the time, in 1884, of the attack of the Missionaries upon H. P. B., which goes to the book's credit; and, tracing forward in the light of events, the prophecy as to the passing away of the Society's dark cycle and the beginning of a brighter one we find corroborated. Meanwhile, what had happened was my Indian tour of 1885, which proved a very great success, adding seventeen new Branches to our roll, and which certainly was not to be anticipated by either the astrologer or my two Hindu friends who brought him to me. That "dark cycle" of 1885 was a more serious crisis than any we have traversed since, even that of the Judge secession, for the Society was not then as impregnable in its organization, the numerical strength of its membership, or its geographical distribution, as it was when the great blow was struck at its life by its quondam Vice-President across the Atlantic.

Digitized by Google

The question, so often put me as to my belief in astrology, will naturally recur in this connection. I must answer it as I always have, that I have not yet had evidence enough to warrant my saying I either believe or disbelieve. Many facts in the experience of others, some in my own, go towards proving the truth of this alleged science, yet not enough for a cautious man to base thereon a positive belief. I am waiting, most ready to be convinced, yet determined not to say I am unless I have a good case to go with to the jury of sensible men. It seems as if we can never say what there is in astrology until we have learned all there is in thought-transference. Who is to say that when I sat with that Telugu astrologer he may not have clairvoyantly read my history and traced out its sequel in my own mind or my aura? And although I was permitted to examine his time-worm book of palm-leaves, and his readings were verified by the two Telugu friends who took notes of his readings, that leaves open two questions, viz. (1) Did he throw a glamor (hypnotic) over our eyes to make us see what was not on the pages? (2) Was he a cheat who had by hook or by crook found out about the T. S. and its founders, prepared fresh pages of ollas, made them look old by discoloring them, and inserted them among the rest? There is not much weight in either of these hypotheses, still one must think of all alternatives and suspend judgment until all the needed proofs are in. The astrologer, or let us say his book, ventured one prophecy which ought to be recalled from time to time as a test of the science. He said that at the time of my death "the Society would have 156 principal

Digitized by Google

Branches, not counting minor ones, and in them will be enrolled 5000 members. Many Branches will rise and expire, many members come and go before then." I, myself, was to live from this hour (viz., 3rd April 1885, afternoon) "28 years, 5 months, 6 days, 14 hours," which would bring us to early morning of September 9, A.D. 1913. Here we have accuracy, beyond dispute, and it only remains for somebody who survives me to enter this prognostic in his common-place book and write to the then Editor of *Theosophist* about a thing which, probably, everybody else will have forgotten! I am quite ready to believe that the prophecy will be correct to within a year or two. As to the strength of the Society at that time, it seems as if there is a mistake, for already we have about 400 living charters and more members. However, we shall see.

The interested reader will find much about the books of the Cumæan and other Roman Sibyls, and those of Egypt, in the article above mentioned (May 1885, *Theosophist*). It is a historical fact that the Sibylline Books were so accurate in all their fateful prophecies about the Roman state, that for over two centuries they were kept under the strict custody of *duumvirs*, until Sulla increased the number to fifteen. They were consulted only at times of great national crisis. St. Augustine (*De civitate Dei*, lib. xviii. c. 23) defends their veracious character, and the Early Fathers generally held them in reverence, as it is alleged they prophesied the advent, life, and sufferings of Jesus Christ.

Whatever the actual value of the astrologer's revelations

Digitized by Google

to me on that Good Friday, it is the fact that they cheered us up at a time of gloom, and no doubt helped to give me the courage to go forth on my public tours of that year. Mr. T. Subba Row went with Judge P. Sreenevas Row to consult another astrologer in Madras, who also possessed a *nadigrantham*, but with most unsatisfactory results, as he tells the public in an article on "Nadigranthams and their Interpreters," which he contributed to the *Theosophist* for July 1885. He was an extremely enlightened and advanced esotericist, and his views are entitled to the most serious consideration. The astrologer visited failed in every instance to give a correct answer, and what he read or pretended to read from his book proved to be rubbish. The one case therefore offsets the other, and leaves us as far as ever from having a satisfactory answer to the question whether the Nadigranthams deserve to be held in the high repute they enjoy throughout India. But then, again, we have the verified prognostics of my astrologer, and still further, the open question of telepathy and clairvoyance. The late Mr. Judge took a hand in the discussion of the question, giving his views in an article ("The Nadigranthams") in the *Theosophist* for October 1885. He contends that my case and that of Mr. Subba Row are not identical, as I seem to have got hold of a genuine *nadi*, and the other gentleman of a false one and a tricky astrologer. "It is," he writes, "by no means proved that no nadi is trustworthy, and that at no time could they be relied on . . . . can, then, books or leaves be made or procured which may be used in the

Digitized by Google

way pretended? I say that they can, and that there are two or more modes of doing it." He first postulates the astrologer's having the faculty of prevision or clairvoyance with which "he could have given all the details related quite easily with the aid of a few figures, letters, or verses. His second is that "it is possible to cast up certain astrological figures to be used on certain days and hours, and for certain classes of questions, from which a large number of replies and predictions can be given that would startle the average hearer, and be true not only to the past but also to the future. . . . A large number of leaves could be prepared which would enable one to make replies to any kind of question at once"—*i. e.*, at that same sitting. This again I give for what it may be worth, having no great belief in Mr. Judge's having possessed any very notable predictive power of an occult kind. The one fact that there is throughout the world at this present moment an intense and growing interest in astrology and all the "occult" sciences is sufficient excuse for my having diverged so widely from the episode of the astrologer's visit to Head-quarters, at the time with which our historical narrative is now concerned.

As I had no mind to accept blindly the revelations of the *Bhima Grantham*—the palm-leaf book in question—and as I had not had time to handle and examine it during the seance with the Telugu Brahmin, I went to Mylapore with A'nanda to hunt him up. I was allowed to examine it as closely as I chose. Any doubt I may have had about the Pandit's having befooled me with bogus leaves inter-

Digitized by Google

calated among the others was set at rest, for every lea was unquestionably ancient and equally time-worn with the rest. My notes say: "I saw the book, handled and examined it. It contains 300 answers to questions written with an iron stylus on palm ollas, is perhaps 500 years old, and written in Telugu. There seems no doubt as to its genuineness." And yet the wonder but deepens that out of those mere 300 answers, the Pandit should have found a number relating to the history and destiny of our Society. Had these verses been waiting five centuries to be read to the right questioner when he should appear in the year 1885? It seems absurd on the face of it, yet the incidents of the interview have been truthfully reported, and my account will be corroborated, I am sure, by Mr. G. Soobbiah Chetty, now the incumbent of an influential office in the Madras Sea-customs Bureau. How, then, explain the riddle? First, fraudulent conspiracy between the Pandit and the brothers Chetty who brought him to me. But they were ignorant of facts read, or seemingly read, from the *Bhima Grantham*; for example, the private meeting at Dewan Bahadoor R. Raghoonath Row's house, the nature of our discussion, and the policy determined upon; then as to the outcome of the events at that crisis, with the fixing of the exact times of their fruition. Secondly (if the Pandit had the faculty of psychic vision), the reading by him of the pictures stored up in the "Astral Light." Thirdly, his power to compel subservient elementals to cast a glamor over the eyes of the two Telugu witnesses, to compel them to be blind to the actual writing on the

Digitized by Google

leaves turned over, and to read there the totally different sentences about the Society and its Founders which he read out to us. Fourthly (and lastly, for I can form no other hypothesis), instead of his compelling enslaved elementals to cast the glamor over our eyes, it is conceivable that he might have been an ordinary medium, like the famed Govind Chetty, of Kumbakonum, and under the control of elementals or other entities who made him, their passive agent, see what they wished him to see, and not what was on the page before his eyes. In either case it is a very interesting problem.

The Council decided, April 18th, to finish the rebuilding of the former "Shrine Room" upstairs, which, in disgust at its defilement by the Coulomb conspirators, I had had demolished on my return from Europe, and to use it as a library, collecting together our several small stores of books. Our modest plan was very soon altered by the rapid accumulation of Sanskrit MSS. and other literature which about this time began. The Adyar Library building was soon projected and built, as we shall see later on.

Meanwhile our dear H. P. B. and party were on their way to Europe. I heard from them from each port of call, and, May 20th, their arrival at Naples and landing. They found cheap lodgings at Torre del Greco, near Vesuvius, and settled down to bear their exile as best they might.

To be able to answer one of Mme. Coulomb's shocking slanders about H. P. B. having been the mother of illicit offspring at Cairo, I sent for a respectable Tamil woman who had helped nurse H. P. B. throughout her dangerous

Digitized by Google

illnesses of February, and, of course, had had to discover her exact physical state. As might have been expected by all who knew H. P. B.'s character intimately, the *ayah* affirmed and declared her willingness to go into court and testify that her late mistress had never been a mother. She even went so far as to say that whatever marriage she had contracted must have been a merely nominal one. Adult readers will understand my meaning.

At about this time news was received from Paris that our sole surviving French Honorary Fellow, Alphonse Cahagnet, was dead. He and the late Baron Du Potêt were our only two, and both were distinguished authorities in psychical science. The first book of Cahagnet's that I read was his *Celestial Telegraph*, which appeared in its English translation at New York in about the year 1851 It was almost the first of my reading about the clairvoyant faculty and modern ecstatical visions of the world of spirits. Unfortunately I never had the chance of conversing with its honest and enthusiastic author, but he sent me his photograph and that of his wife, the ecstatic "Adèle," which I keep hanging in my private rooms. Not a visitor has ever guessed that the heavy-bodied peasant woman of the picture was even a clairvoyant at all, let alone that soaring visionary whose soul-flights through space took her to supernal planes, where she was swallowed up in a great blinding light, that drove back the less ethereal clairvoyants whom Cahagnet sometimes set to watching her in her upward progress. Elsewhere, when writing on the subject of clairvoyance, I have quoted from Cahagnet's book his

Digitized by Google

description of the agony felt by him on finding himself powerless to draw Adêle's soul back into her body when she felt so merged in the spirit sphere as to declare she should never re-enter the "corpse" that seemed so repugnant to her. He tells us that the body began to even change color like a real corpse, and show the preliminary signs of decomposition; while he, in the greatest distress and fear, vainly brought his strongest will to bear upon her soul to come back, and not leave him to be perhaps tried for murdering the adored wife of his bosom. Poor man! his plight is one that many have, and anyone may, experience. The last resource that he employed was prayer to God, which succeeded. Of course it would in the case of a man of his temperament, for by praying he raised his consciousness and yearning to the celestial levels on which Adêle was functioning, and so got into touch with her as he could not by the mere use of his brain-power. If one sets out to chase a bird, one must get bird's wings and fly after it; to walk on the ground will be useless.

In pursuance of the policy of propaganda adopted by the Council, I left Madras, May 9, for Vellore, in company with Messrs. R. Raghoonath Row, P. Sreenevas Row, C. Ramiah, and L. V. V. Naidu. Addresses were delivered by the Dewan Bahadur in Tamil, and myself in English. The Councillors returned to Madras, but Doraswamy kept on with me. Our next station was Arcot, where we reorganized the local Branch, then in that sort of compulsory pralaya because of the transfer to other stations of active members in Government service, which is so often happen-

Digitized by Google

ing throughout India. We went to Arnee next, where a new Branch was organized; thence to Chittoor, where there was prepared for our delectation much music, many fragrant garlands, and a procession of the 90 boys in the Sanskrit school that our Branch had formed. At 8 P.M. on the 17th we started for Madras and got home the following morning. The results of this short tour were:—1 Branch revived, 1 new one formed, 10 new members admitted, and the T. S. movement put on a healthy footing throughout that district.

Another short tour began on the 21st when I started for Madura, where a lecture was given and two candidates admitted to membership. "But for the Coulomb blight," says my Diary, "the number would have been from 20 to 30." Yet the visit stopped the retrograde tendency, and the two men gained being of influential standing, I felt that we had done well. At Trichinopoly my audiences were large, especially that in an inner court of the ancient Sreerangam Temple, where the people massed in thousands. As on the occasion of my visit in 1882, the scene was most picturesque and striking, the dark-skinned multitude and the massive stone walls, huge gateway and carved monolithic columns being lit up by hundreds of torches, and the Brahmin priests with their snowy cloths thrown up into dazzling whiteness in the glare. With this picture vivid in my mind I left at 1.30 that same night for Tanjore. My first public discourse there was given at the Reading Room; my second, in the vast open enclosure of the Temple, standing on the plinth of the colossal Bull, a monster measuring about twelve feet from the ground to

Digitized by Google

its shoulder in the sitting posture. One feels dwarfed in such an environment, and as I stood with the Bull beside me and the lofty pyramid, or *Goparam*, in front, towering up towards the sky, its numberless life-sized figures of Indian gods, goddesses, and mythological heroes brought out in high lights and deep shadows by the moonlight, the thought of the strangeness of it all rushed in upon me and gave a peculiar tone to my impromptu discourse. The sense of my American modernity, in contrast with the hoary antiquity of the temple and the race which worship in it, was overpoweringly real. A visit was paid, as usual, to the Tanjore Royal Library, once the richest literary collection in India, and even now extremely important; but it was a not too cheerful experience, for the library is but little used by scholars, since scholarship is so poorly recompensed in these utilitarian days. These repositories of the high thoughts of ancient sages are like so many granaries where the seed-corn of future harvests is kept against the time of sowing.

A little tired and used up by the heat and travel, I laid my straw mat and cotton rugs on the stone platform of the station that night and slept a deep sleep, despite hurrying trains, until 3 A.M., when I left for Kumbakonam, a two-hours' journey. I was kindly welcomed at the station, and lectured that evening at the Porter Town Hall, a fine and large room, to a very large, attentive, and appreciative audience. Kumbakonam, known as "the Cambridge of Southern India," is a centre of culture and, of course, of religious scepticism—the two going too much together.

Digitized by Google

Naturally I attacked materialistic agnosticism, vindicated our Society's policy and record of usefulness, and defended H. P. B. as a true and brave friend of India, whose unselfish exertions on its behalf put to shame the majority of modern educated Hindus, who acted as if it were a shame, instead of an honor, to have been born in the land of the Rishis. Whether I did any permanent good is impossible to say, but most assuredly the sleepers were aroused to enthusiasm for the passing moment, and who knows what are the consequences of even a moment's awakening to the sense of duties neglected and opportunities slipping away? The next day's audience, in the same hall, were extremely demonstrative as I went on to treat Idols and Idol Worship from the side of psychological science. There were many college men present who had no clear conception of the actual process by which a mere block of stone, metal, or wood, carved into a certain conventional shape, is changed into a sort of psychic dynamo, soaked with human aura and efficacious for the production of psychological and physiological effects upon sensitive worshippers. The process is called in Sanskrit *Prana pratishtha*—the focalizing of auric power (*prana*)—and is intensely interesting to the amateur of mesmerism. Without going into details, it will suffice to say that the image goes through a process which extends over forty days and includes the withdrawing from the image of all innate impurities, and the subsequent imbuing or saturating of it with a purified human magnetism—*i.e.*, aura. Then to fix this supply, as it were, it is customary for the officiating adept, or Chief Brahmin, to prepare, or

Digitized by Google

have engraved on a sheet of copper, a geometrical symbol, called *chakram*, into which a magic power is imparted by the concentration of the trained Will.* This copper-plate is placed under the image when fixed in its place, and there left so long as the temple stands. Now, the wiser and purer the adept-consecrator, the more real, effective, and permanent the infusion of *prana* into the image; and the more carefully the *chakram* is prepared and placed, the more lasting its efficacy as a storage-battery of divine power. One sees, from all this, that the good Bishop Heber was more or less silly in saying:—

> "The Heathen in his *blindness*
> Bows down to *wood and stone*."

In point of fact, neither is the Heathen blind, nor does he bow down to wood and stone: quite the contrary, and the average Missionary is the real blind one, since he knows nothing at all about the Powers, symbols, customs, or ceremonies which he reviles.

On to Cuddalore, my last station of this tour, where I lectured on Idols in the Temple, where I was surrounded by them; and on the 1st June I got back to Adyar, with a thankful heart for having escaped sunstroke or heat-apoplexy, and, despite the high temperature, having done so much to restore the old kindly feeling between the South Indian people and ourselves.

* *Vide* the standard Western books on Magic for an explanation of the occult connection between geometrical signs and the Powers of the Elementary kingdoms.

CHAPTER XVIII.

FINAL DEPARTURE OF DAMODAR.

AN official tour in Northern India having been planned as part of the year's programme, I sailed for Calcutta in the French steamer "Tibre" on the 3rd June. It was a relief most blessed to get to sea and enjoy its pure, cool breezes and its ozone after my recent tour in the South, with its concomitant heat and dust, its crowds, mental anxiety, and physical strain: never did I so gladly go out from land upon the deep blue Bay of Bengal, badly as it had treated me at times. I was in the thick of the fight for the salvation of the Society, my courage and faith rising in proportion to the obstacles; and everyone will understand what must have been the physical and mental effect of this temporary escape from the strain of public work. Life seemed pouring into my body from the physical mother of all terrestrial life, the germ-hatching sea. I could well have cried out with Uhland:—

"Take, O boatman, thrice thy fee;
Take,—I give it willingly;
For, invisible to thee,
Spirits twain have cross'd with me."

Digitized by Google

The weather fine and the sea smooth, I was well rested and refreshed by the time we reached Calcutta, on the 6th, at 5 P.M. About twenty friends met me on landing and gave me cordial welcome. A crowded meeting of the Branch was held on the next evening, and a stream of visitors kept me busy throughout each day. Instead of losing members I began to admit fresh candidates almost at once; but my first public lecturing work was fixed for Darjiling, so I took train for that mountain-cradled station on the second day. The journey occupies but twenty-five hours, and one has scarcely time to prepare his body for the change from 100° to 60° Fahrenheit before one is there. It is a most delightful little trip, provided one has good weather and is not too much delayed by landslips in the mountains.

The whole Darjiling Branch met me at the station, and with them was that excellent, philanthropical young millionaire, the late Tej Narain, of Bhagulpur, founder of the prosperous Anglo-Sanskrit College that bears his name and perpetuates his memory. He and I were old acquaintances, and the founding of this College, for the accomplishment of which act credit is largely due to Babu Ladli Mohun Ghose, L.M.S., one of our Bhagulpur members, is directly traceable to our Society's influential appeals to the Hindu heart and conscience. Tej Narain brought Sarat Chandra Dâs (the now famous Founder and Honorary Secretary of the Buddhist Text Society, a C.I.E. and Rai Bahadur for his services to Government and achievements in Philology) to see me, and many others called daily. Sarat Babu is a

Digitized by Google

most interesting man to talk with, if one cares about Tibet and Northern Buddhism, for he knows more about them than any man in India—or outside it, for that matter. He was a teacher in Government service, in charge of a Bhutia and Sikkimese school at Darjiling, and had learned a good deal of the Tibetan language, when the idea came to him to try the feat, which has baffled so many European explorers, of reaching Lhassa, the mysterious Tibetan capital. In the character of a Pandit and Indian doctor he went and actually succeeded; not only that, but he brought back with him many Tibetan versions of early Buddhistic books and a very complete knowledge of the Tibetans, their Lamas, religious ceremonies, and holy days, not to speak of the geography of Tibet between the Indian frontier and Lhassa, his notes on which had to be collected with the greatest care and preserved with the greatest cunning. For example, as he could not use a surveyor's chain, he counted distances by telling the beads of his rosary. His two reports to the Indian Government are highly interesting and instructive, the narrative comparing favorably with the best works of the kind by the world's most famed explorers; and, what is strange for an Oriental, they are free from bombastic exaggeration and extravagant hyperbole—*cf.* the "Mahavansa." In conversation, as confidence was established between us, he told me most interesting things about the white and black magic of the "yellow" and "red" Lamas—things which amply support the evidence of the Abbés Huc and Gabet, and of Mme. Blavatsky as well. But, being a Government servant, he seems to think that if he should

Digitized by Google

tell the public what he told me several times and once Mrs. Besant in my company, his reputation as a scientific observer would be jeopardized and his interests have to suffer: in short, he takes the selfish view of it, and has for many years now been hiding truth because he can't afford to give it out. He actually lived thirteen months at Teshu Lumpo, in the household of the Tashi Lama, the second in rank in the Lamaic hierarchy; made the journey thence to Lhassa under favorable auspices; saw and talked with the Dalai Lama, or Supreme Pontiff, and brought back manuscripts, printed books, and other souvenirs of his memorable journey. He was good enough to give me one of the soft silken scarfs that the Tashi Lama, at a reception, laid across his hands, after the national custom, when they were held out with joined palms in reverential salutation. I have it at Adyar among our curiosities. Woven into the tissue is a picture of the Lord Buddha, seated, with his two disciples, Sariputra and Moggallana, at his right and left.

Among my frequent visitors was Babu Parbati Charan Roy, one of the best educated of Calcutta University graduates, and then holding a position of influence under Government. Like too many of his class, his feeble spiritual belief had been submerged by Western educational influences, and he was a thorough disbeliever in the future state, though always ready to discuss those questions. I am glad to say that his contact with H. P. B. and our literature eventually worked a complete change in his ideas; he became a member of our Society, and some years later published a book giving the history of his repudiation of his ancestral religion, his

Digitized by Google

return to it, and the peace of mind and joy which this brought him.

The then young Prince of Nuddea came to see me and spent many hours in my company, seeming happy to be under the influence of one who loved his country and people. His tutor, a brilliant graduate, was another free-thinker and sceptic, so that, for all the religious good he got by it, the Prince might as well have been brought up by one of those disbelieving European tutors who have checked the pious inclinations of their young royal pupils. I could name cases if I chose or it would do the least good, but as it is, the friends of India can only grieve over the too common spectacle of heirs to ancient thrones being led out of the path trodden by their ancestors, and turned into irreligious billiard-players, pleasure-seekers, and toadies to the whites, instead of being encouraged to patronize religious men, learned scholars, and the classical literature of India which, in the good old days, shed lustre on the courts where its custodians were supported and honored. It is not the fault of the poor boys, but of the Europeanizing system under whose masterful influence they come—a system perhaps good enough for Western princes, who are not expected to shine as religious exemplars, but bad for Indian chiefs, who are called to rule over millions of unspoilt Asiatic subjects. I once visited a Rajkumar College in Northern India—*i.e.*, a school for the sons of ruling chiefs and nobles—and was taken through the rooms by the Principal, the most liberal-minded European teacher I have met. Being requested to address the lads, I tried to impress

Digitized by Google

on their minds the responsibilities imposed upon them by the fact of their princely birth, and begged them to try to emulate the examples of Ikshavaku, Harischandra, and Dharmaputra, rather than that of some of our contemporary princes, whose hoarded wealth is wasted on flitting pleasures, and whose minds are never given to holy thoughts. I have heard since from one of those boys that my offhand remarks made such an impression on them that they formed a society among themelves, to encourage each other to be good Indian rulers and leave honored names behind them. Admitting, what is more than likely, that, for want of following up, the influence was but transitory, yet I think it was a gain to have even planted the seeds of higher ideals in those receptive boyish minds, and that the forming of their society is an indication that the adoption of such a system would be a great blessing to India. We need give no weight to the objection that it would be an evil thing to encourage these future petty sovereigns to fall into gross superstition and idolatry, for that comes from the class of persons who do not know, or, if they know, dare not reveal, that when Hinduism is read with the key of Theosophy it represents no superstition, nor does its idol-worship tend to degrade the lofty conceptions of the Supreme Being which are presented in the Gîtâ and the Upanishads. What is desirable is that, not only the Indian princes, but all intelligent Indians, should realize the dignity of the religion imparted to the Aryan race in the present Manvantara, and the real meaning of their religious stories, folk-lore fables, and carven symbols, which teach, by carefully-chosen object-

Digitized by Google

lessons, the limitless power, wisdom, and justice of the One Divine Reality.

Damodar K. Mavalankar is one of the best-known characters in the early Indian history of the Theosophical Society, and has been frequently mentioned in the course of these memoirs. He left Adyar, while I was away in Burma, for the last time on the 23rd February 1885, for Calcutta, in the s.s. "Clan Graham," with the intention of going to Tibet *viâ* Darjiling. This was thirty-six days before H. P. B.'s own final departure for Europe. Four persons on this side of the Himâlayas had voices in this matter, of whom three were H. P. B., T. Subba Row, and Maji, of Benares: the chief agent, of course, was H. P. B., Mr Subba Row having merely some questions to be answered, and Maji some clairvoyant information to give. The name of the fourth party I shall not mention, but merely say that he is equally well known on both sides of the mountains, and makes frequent religious journeys between India and Tibet. Damodar hoped to be allowed to go with him on his return to Lhassa, though his constitution, naturally delicate, had run down from overwork, consumptive tendencies had shown themselves, and he had had some hæmorrhage. The most disquieting rumors were circulated, soon after he left Darjiling, about our dear boy's having perished in the attempt to cross the mountains. In the first week of July it was reported to me from Chumboi, Sikkim, that his corpse, frozen stark and stiff, had been found in the snows, and his clothing at a little distance. Despite the transparent improbability of his having thrown

Digitized by Google

off his clothing in that climate merely to die, the tale was believed by many, chiefly by those who denied the existence of the White Lodge, and who wished to cast some opprobrium on us for allowing a young fanatic to sacrifice his life in so evidently vain a quest. Well, we bore it, as we did, and ever since have, similar malicious stories, with as much equanimity as we could summon. But at Darjiling, through the courtesy of Babu Saratchandra Dâs, who interpreted for me, I had a long talk with the chief of the coolies who went with Damodar from Darjiling through Sikkim, and who brought back his superfluous luggage and his pocket Diary. From this latter important document I am now tracing Damodar from Madras to the time when he sent back the coolies and passed under other protection than ours. The value of his past work and the possibly important part he may be destined to play in the future of this movement of ours, makes me think that it is as well that I should include the chief parts of the Diary in this history.

DAMODAR'S DIARY.

"*Feb. 23rd*, 1885.—In the evening embarked on the "Clan Grant" to go to Calcutta. *Feb. 24th.*—Steamer sailed before 6 in the morning. Did not suffer from sea-sickness. *25th.*—Made friends with the Doctor of the ship, who seems to be a very nice man, but to know or care little for philosophy, though he has the capacity if he would only develop it. *27th.*—Reached Calcutta at about 4 P.M.; was met at the jetty by Norendro Babu and others, whom I told about

Digitized by Google

my illness and of the necessity for a change." [Of course, concealing the ultimate purpose of the journey. O.]

Here follow entries about his talks with friends, his visit to the local Branch, and his opinion about its activity, which was not too favorable. Then come his notes on his leaving by rail for Berhampur, where we then had about the best Branch in India, under the leadership of Babu Nobin K. Banerji, President; Babu Dinanath Ganguli, Vice-President; and Babu Satkauri Mukerji, Secretary—three as good colleagues as any man could ask for in any great public movement. After spending three days with them he moved on to Jamalpur, where we had (and still have) another Branch. I note that once in Calcutta and once at Berhampur he was recognized by persons who had seen him in their dreams, an experience that I have often had myself in different lands. The Jamalpur brothers, he says, put to him much more interesting and intelligent questions than those propounded in Calcutta, showing that they had thought deeply about the great problems of life.

"*March 8th.*—Reached Benares and went to Maji's *ashram.* Had long talks with her both morning and afternoon. She spoke about Subba Row, and told me things which he had only lately spoken to me in private. Also spoke about Bawaji and said things known only to Mme. B. and myself. Said various other startling things.

"*March 9th.*—Conversations with Maji continued. She

Digitized by Google

spoke about the portraits of the Masters at the Headquarters and told me many surprising things. Four Benares Theosophists called in the evening. Maji's talk was very interesting and instructive. In the afternoon she told me about Subba Row's Guru and about himself.

"*March 10th.*—Commenced to take internally some medicine she prepared for me. Had private talks with her during the day. Mme. B., she says, will not die for a year or more yet. When she does, she will probably reincarnate in Subba Row's family, and reappear in public life after ten years.*

"*March 11th.*—Talks continued. In the afternoon attended a meeting of the Benares Branch. The Munsiff of Benares is President. The members are all new, but earnest and intellectual. Later, Maji showed me a portrait of her father which was precipitated after his death.

"*March 12th.*—A morning talk with her, and one at noon, entirely private, in her *gupha*,† when she discussed the plans in view and the persons concerned. She tells me startling facts and something about the future. She says that for about a fortnight I am not to go to . . . . [the personage with whom he wished to go to Tibet], but then it will be determined whether I shall proceed further.

* As neither of these prophecies has been fulfilled, we must discount all of Maji's revelations to Damodar. At one visit I myself paid her, she predicted that H. P. B. would die within two years of that time and at sea. Neither of these proved true.

† A cave such as Yogis excavate for themselves to live in. The one at Maji's was used by her father, a Yogi.

Digitized by Google

"*March 13th.*—Left Benares at 11 A.M. Travelled all day and night. Reached Calcutta the next morning."

He spent the next fortnight in Calcutta, and his Diary records the visits exchanged and conversations held on different occasions.

"*March 30th.*—Received a telegram, through . . . . from . . . . that I might now come to Darjiling and matters would be arranged."

He left town on the 31st and got to Darjiling on the 1st April, where he was cordially welcomed by our members and became the guest of Babu Chhatra Dhar Ghose, F.T.S., one of our excellent colleagues. Three days later a representative of the personage who was leaving for Lhassa came to see him, and told him to keep himself in readiness, although the day of departure was not yet fixed. Damodar saw the agent several times, and all details were agreed upon. At last, on the 8th, the party arrived, and Damodar received his orders to start, which he did, as the following entry shows.

"*April 13th.* — Left Darjiling at 10.15 A.M., and reached Runjeet (about 11 miles) in the evening. Halted there.

"*April 14th.*—Left Runjeet about 7 A.M. Took rice (*i.e.*, broke his fast) at Tasding, about one and a half miles from Tasding Bridge. Reached Vecha, about four miles

Digitized by Google

beyond Kalingpong, in the evening at about 6 o'clock. Halted in a cow-shed for the night.

"*April* 15*th*.—Left Vecha after morning coffee. Took *bhât* (rice) at Podaon,* where I met Babu Opendranath Mukhopadhyaya. Reached Renanga in the evening, where I sent ——'s coolie back with the pony.

"*April* 16*th*.—Took *bhât* instead of coffee the next morning, and went on without stopping to Sanangthay, about a mile beyond Dichbring. Reached there before 5 P.M. Stopped in a Bhutia house.

"*April* 17*th*.—Left Sanangthay in the morning after taking *bhât*, and got to Bhashithang in the evening at about 5. It is about two miles from Ranevon, which is on top of a hill at whose foot is this village.

"*April* 18*th*.—Left Bhashithang in the morning, after *bhât*. Reached, about 4 P.M., the river Dichoo, at the place called Doomrah, about three miles from Longboo. After crossing the river there is an ascent for about five miles before reaching the capital of the Sikkim Raja. Stopped for the night by the river.

"*April* 19*th*.—Left the river in the early morning, after *bhât*, and reached Sikkim at noon. Stopped with the . . . (the personage with whom his journey was to be made). Saw him for an hour in the afternoon. Nothing in particular said. Am to have a talk to-morrow. Had another interview with him at night. He will tell me positively

* Some of the names of places are almost illegible, Damodar having written his Diary in soft pencil, which in the course of time has got rubbed.

Digitized by Google

to-morrow about effecting my purpose. He leaves Sikkim the day after to-morrow.

"*April* 20*th*.—Another talk with him.

"*April* 21*st*.—Saw him again to-day. I wanted to go on to Longboo, but he wants me to remain till to-morrow, when he will be a little more at leisure.

"*April* 22*nd*.—Left Sikkim in the morning at about 10 o'clock. Reached Kabi (about half a mile from Longboo) at 3 P.M. Halted there for the day. The . . . . said he had not yet fully known me, but that I am destined for some important work within the next month or two; that I must probably be a big Tibetan lama reincarnated in Tibet. The karma is great.

"*April* 23*rd*.—Took *bhât* in the morning, and proceeded on from Kabi alone, sending back my things with the coolies to Darjiling."

Here the Diary ends, and this is the last written trace of this devoted, high-minded, enthusiastic young Brahmin, whose record since joining H. P. B. and myself at Bombay is one of unbroken energy and unfaltering zeal in the cause of humanity. A nobler heart never beat in a human breast, and his departure was one of the hardest blows we ever received. As above remarked, he had almost broken down his constitution by incessant official work, and when leaving Adyar had begun to spit blood and show signs of a rapid decline. Yet, with undaunted courage, he undertook the hard journey across the Himâlayas, indifferent to the biting cold, the drifted snow, the lack of shelter and food,

Digitized by Google

intent upon reaching the Guru whom he had first seen in his youth when lying on a sick-bed, of whom he had lost sight for many years, but whom he had recovered soon after joining the Theosophical Society, as his spiritual faculties developed and he was able to seek him in the *sukshma śarira*. What made him so devotedly attached and unswervingly loyal to H. P. B. was the discovery that this Guru was one of the Adepts behind our movement, the intimate associate of "Upasika," as he always subsequently called H. P. B. From the chief coolie of his escort I got particulars about him of great interest. After the pony was sent back to Darjiling, Damodar tried to proceed on foot up the steep acclivities of the mountain track, but his strength soon gave out, and after that the coolies carried him by turns on their backs. To conceal his connection with the Tibetan functionary who had promised his protection and aid, Damodar was ordered to go on ahead two-days' marches and then wait for the other to come up. That the junction should be unwitnessed, the coolies were ordered back to Darjiling. Damodar would not keep any more clothes than the ascetic costume he was wearing, nor any of the rice, meal, pulse, or other dry provisions with which his friends had supplied him. The most he would do was to let the chief coolie bake him a dozen *chapaties*, or unleavened pancakes. The last that was seen of him by the coolies was when, with face turned towards the Tibetan frontier, he trudged painfully on and disappeared behind a turning of the road. On their way back the coolies passed the personage who was following after our dear lad; and

Digitized by Google

the *jemadar* heard subsequently that the junction had been effected, and the caravan proceeded on towards the pass through the mountains.

It is quite possible that Damodar's rejected clothing may have been found in the snows, for it was agreed that he should receive Tibetan dress, and be supplied with food, shelter, transportation, and all necessaries. The finding of his frozen corpse is quite another matter. That is certainly a lie. A mâyâ of his body *may* have been left there to make it appear as if the pilgrim had succumbed; but that he reached his destination safely, and has ever since been under the protection of his Guru, I have reason to believe. So far, however, as intercourse with him in the ordinary way is concerned, he might as well be dead, for he is inaccessible by post, telegraph, or messenger. Though he has written thrice to two persons in India, he has passed out of our reach as effectually as though his body had been dropped into the sea in a shotted hammock, and I have refused the most urgent requests to disclose his place of abode or the possible time of his return. This latter for the good reason that I do not know when, if ever, he will come back to us. That he will, I believe; and I should not be surprised if he came when H. P. B., reincarnated and, like himself, changed beyond all recognition, shall resume the world-work she had to drop on "White Lotus Day" in 1891. It would be too unreasonable to imagine that the Lords of Karma would keep any one of the best workers of the Theosophical movement idling about on the other planes of existence, when the cry of the suffering world for light and guidance

Digitized by Google

is rising to their celestial abodes. Their chief desire and paramount duty is to help our human race to climb the path to the higher levels, where delusions, born of spiritual ignorance, wither away in the blaze of Wisdom like flowers bitten by a frost.

Digitized by Google

CHAPTER XIX.

IN NORTHERN INDIA AGAIN.

I WAS loath to exchange the cool, bracing climate of Darjiling for the hot, vaporous temperature of the Plains, but I had still many hundred miles of journeying before me before my tour should be finished and I could take rest at green Adyar, with its refreshing ocean breezes and its river running just beneath my chamber window. So, after more talks with the Tibetan traveller and my other friends, more conversazioni, and a public lecture at the Town Hall, I descended the mountain to Siliguri, the junction-place of the Himâlayan Railway and the Northern Bengal, and sweltered in a temperature of 100° to a most uncomfortable extent. It suggested to me the change from the outer air on a crisp morning to that of a greenhouse. However, work had to go on all the same, and I organized the Siliguri T. S. that same evening, sat up late talking and answering the metaphysical conundrums they are so fond of putting in this country, and slept on the stone platform

Digitized by Google

of the station as the coolest—say, rather, the least hot—place to be found.

Saidpur, the next place on the programme, was reached at noon on the 19th (June 1885), and at 6 P.M. I lectured to a very large gathering on "Theosophy and the Aryan Revival." There was another lecture on the next day and the admission of several new members, as the happy proof that the malign influence of our persecutors had not spread that far. I went next to Rajshahye *vid* Nattore, and I mention the detail merely because the distance from Nattore to my destination had to be made in a palanquin—the most ignoble of all modes of conveyance, I think, to a healthy man. Fancy yourself lying at ease on your back, smoking, reading, or dozing, in a coffin-like box carried by poles on the shoulders of six or eight undersized coolies, in a pouring rain, over a sticky clay road, twenty-eight miles in nine and a half hours; the wretched pole-bearers gasping a droning refrain the whole way, except when they would groan to excite your pity and get bakshish—and say whether I am not right. True, they are trained to it from boyhood, and at the end of such a heavy journey as this would come in to your place on the trot, but still I felt thoroughly ashamed of myself, innocent though I was of any part in the business. "Talk, talk, talk"—says my Diary—"with all the clever men in Rajshahye, including a German Professor of Physics in the local College"; and there were the usual public lecture and admissions into membership. The return transit to Nattore was even worse than the other, for, leaving at 2 P.M., we did not get there until after 2 A.M.! By that

Digitized by Google

day noon we were back in Calcutta, and I went from the Sealdah station straight on to Bhowanipore to see Maji, who had come from Benares on a visit to Nobin K. Bannerji at his family house. I had a three-hours' talk with her through Nobin, and she told me that Damodar was then at a place four-days' journey from Darjiling. This we now see, on referring to his Diary, was not the fact; so it goes to make another point against the accuracy of Maji's revelations—for which I am sorry. I saw her daily during the fortnight that I spent in Calcutta, and was always much interested by her discourse. She was always surrounded by a small crowd of inquirers, and her answers displayed erudition and insight. Her attractive manner and sympathetic voice added to her popularity. Finally, there was that glamor of supposed mystical powers which attaches in India to every respectable yogî and yoginî, and which is a survival of the traditions of the olden times. These powers she must have had to some extent, for we have seen that on our first meeting, in 1879, before anything was known in India about H. P. B's connection with two certain Adepts, she told me things about them that she could not have learnt from third parties, and in Damodar's Diary we read how she astonished him with her revelations about Subba Row and others. It was my early enthusiasm about her that mainly caused Nobin, Dinanath, Bihari, and Shama Charan Babus to come to her as disciples, and to do so much to make her known and popular in Bengal and Behar; so that, naturally enough, I was most anxious for her reputation as a mystic to be fully sustained. If it has not, it is not my fault.

The local Committee had me lecturing in all the quarters of Calcutta during my fortnight's stay. Among other topics given me was a defence of Hinduism against the missionary charge of gross superstition and immorality. It will scarcely be credited by those who have even a superficial knowledge of the ethical teachings of the Aryan sages, that the chief of the Scottish Mission in Calcutta had the effrontery to put in print the assertion that Hinduism tends to make its men liars and its women unchaste; yet he did this, and it fell to me to refute this outrageous calumny. To hear me, the elite of Hindu society were invited, on the 3rd July, to the house of the venerable scholar and nobleman, Raja Radhakanta Deb, Bahadur, author of the great lexicon, *Sabdakalpadruma*. I believe every local Indian scholar of note was present, and that I had no great difficulty in proving my case.

So far from encouraging untruthfulness, dissoluteness of behaviour, or any other vice, the Shastras teem with exhortations to noble conduct and the striving after the very highest ideals. Manu (VI. 92) enumerates the following "ten-fold system of virtuous duties": Contentment; abstention from injury to others, active benevolence, and returning good for evil; resistance to sensual appetites; abstinence from theft or illicit gain; purity, chastity, and cleanliness; correction of the passions; acquisition of knowledge; acquisition of Divine Wisdom; veracity, honesty, and fidelity; freedom from wrath and hatred. A little farther on he says: "Persevere in good actions, subdue thy passions, bestow gifts in a suitable manner, be

Digitized by Google

gentle, bear hardship patiently, associate not with the malignant, and give pain to no sentient being." Again, he says (II. 239, IV. 178): "Walk in the path of good people, the path in which thy forefathers walked. Take examples of good conduct from all, as nectar is taken from poison, gentleness of speech from a child, prudent conduct from an enemy, and gold from dross." Again: "Though reduced to penury in consequence of thy righteous dealings, give not thy mind over to unrighteousness." Then, we find in the Taiteriya, the Mundaka, and the Sandilya Upanishads this injunction: "Speak the truth (*Satyam*). Truth alone conquers, not falsehood. No religion or morality is higher than truth. Nothing is higher than truth." It was hence that the Benares royal family took their motto, which, with the late Maharajah's permission, I adopted as the legend of the Theosophical Society. "Mercy is the might of the righteous," says the Vishnu Purana (I. 21), an axiom that matches the noble definition of Mercy that Shakespeare put into the mouth of Portia. And how poetical and touching is this sentiment from Hitopadesa: "A good man thinks only of benefiting all and cherishes no feelings of hostility towards anyone, even at the moment of his being destroyed by him; just as the sandal tree sheds perfume on the edge of the axe when it is being felled." Manu (VI. 47) goes so far as to say: "Being treated cruelly, do not return the cruelty. Give blessing for curses." Is there anything more noble in any other Scripture? So we might go on multiplying similar quotations from the teachings of the Aryan sages,

Digitized by Google

to prove the cruel injustice of those who concur with the Calcutta missionary that Hindu religion is the nurse of vicious tendencies. How can such people ever hope to convert intelligent Hindus to their religion? How far the sympathies of the Indian public went with us may be judged from the fact that, whereas my public audiences ran from 1500 to 2000, only a score or so of persons, and they Christians, went to listen to an address, given after my departure by one of the ablest preachers of the missionary party, denunciatory of our views!

On the 7th July I left Calcutta for Bhagulpur, but was intercepted at Nalhati Junction by our dear brothers of Berhampore, and, so to say, compelled to diverge in their direction. Between Azimgunj and Berhampur is the Palace of the Nawab of Murshedabad, an old friend of mine; and he had arranged for me to break journey, spend part of the day with him, and dine at the Palace. I did so, and he and I had a long talk about religious and scientific matters, and parted with expressions of mutual goodwill. My reception by the friends at Berhampur was, as usual, most cordial, and my four days there were full of pleasant experiences. With one exception, however; for on the 9th we heard by telegraph from Calcutta of the sudden death of Nobin K. Bannerji, President of this Branch, of whom I have spoken above. He was to have met me at Berhampur on the 9th, but died of an attack of cholera. Among our Indian colleagues not one was more prized and beloved than he, and it is a consolation for me to know that he is likely to soon reappear in the

Digitized by Google

ranks of our workers in a better body than he had in the last incarnation.

I reached Bhagulpur, my next station, on the 12th, and became the guest of Tej Narain, whom I have mentioned in my notes on the Darjiling visit. Here I met Babu Baidyanath Bannerji, my blind patient of Calcutta, whose sight I restored, as the reader will probably remember. Well, I found him again blind. His restored sight lasted only six months and then faded out, and the pall of black night again descended upon him. As before, a boy now led him into my presence, and he looked up into my face with that inexpressibly touching expression that one finds in the eyes of the sightless ones. I felt very sorry, and not altogether hopeful of being able to do any good. However, I drew him into the room, kept him standing, and began the same course of manipulation that I had employed so successfully two years before. I touched my finger-points to his closed eyes, sometimes those of one hand, sometimes of both; when it was the former it was the right hand that I held to the eyes, and the left was laid on the nape of the neck. Then I made passes before the eyes and the brow, and, finally, breathed gently on the eyeballs through a glass tube. All the while, of course, I was willing with my whole strength that the sight should be restored. Thus keeping on for a half-hour, I was at last rejoiced to hear him ask: "Is that a table behind you?" It was, and thenceforward and by degrees the blessed light came back into his darkened orbs, until he could at last distinguish every object in the

Digitized by Google

room. Ah, if you could have seen the heavenly smile that spread over his features then! You would have stood there, as I did, amazed at the discovery that you had this sort of divine gift of healing, and that it needed but a few passes of your fingers and a few breathings over a blind man's eyes to draw him out of midnight gloom into the sunlight of sight, with the whole panorama of surrounding objects opened before him.

This case of Baidyanath teaches a great scientific fact, viz., that blindness, when due to suspended nerve action, may be removed by mesmeric treatment, provided that the right conditions as to mesmerizer and patient are given; that the sight, thus restored, may fade out after a time, when, presumably, the nerve-stimulus has subsided for lack of renewal; that, even after an interval of two years, the sight may be again restored and after even a very brief treatment. The reader will recollect that when Badrinath (or Baidyanath) Babu was first treated by me at Calcutta and elsewhere, after ten treatments he was able to read fine print with one eye and see a bed of flowers at some distance with the other. On this second occasion, two years later, I made it possible for him, after a bare half-hour's treatment, to read the smallest type in a newspaper and, of course, to distinguish every object within the range of ordinary vision. It is true—as I learned subsequently—that his sight failed him a second time, but only after twice the number of months that it had before. This made me believe that if I could have had the patient under constant treatment for, say six

Digitized by Google

months, the optic nerves would have been restored to normal function and the cure completed. The lesson to professional healers is that they should never despair if there should be a relapse after a first success. Moreover, they should note that, whereas the confidence of the patient may have been shaken by the loss of sight after the first operation, it can be restored in spite of that, with one-tenth the trouble as before. The *sine quâ non* is that there shall be no lesion in the nerves, for that makes a break that can never be mended.

At Jamalpur, when lying in bed one morning, I had my first experience of an earthquake, and it was curious. It seemed to me as if the house were solid but built on a stratum of bog, or jelly, which was all of a quiver, like the generous paunch of St. Nicholas when he was laughing—if we may believe the famous Christmas poem! While it lasted, my memory recalled sundry stories of historical earthquakes, and I was not sure whether the house would not tumble about my ears; still I thought I might as well take the chances where I was, as to rush outdoors and perhaps drop down some crack.

Among the topics of discourse given me here by the local Committee was: "Theosophy not antagonistic to Hinduism." On thinking it over, I invented a new plan. Among the members of the Bhagalpur T. S. was the late Pandit Nityânand Misra, a most excellent man and capable Sanskrit scholar, who had come to Jamalpur with me. So I arranged with him that he should sit beside me at the lecture, I should go on and make my points one by one,

Digitized by Google

should pause after each, and he should then rise, repeat some sloka of Gitá without a word of comment, and then sit down, and I would go on to my next stage. Both he and I spoke extemporaneously—*i.e.*, without notes or any defined plan previously agreed upon—and this made all the more interesting and striking his flexibility of mind and thorough familiarity with his national literature. The effect on the audience may be guessed.

At Bankipur I was kept up to a very late hour, the day of arrival, by visitors, and on retiring I sank into one of those deep sleeps which I can always get when there is nothing else to do, and which brace me up for the wearisome round of a travelling tour. At the College, the next day, I had a very crowded audience, including several hundred students, the ones I most love to address. One of the Professors, an English gentleman, was good enough to preside, and his boys were particularly enthusiastic. The Principal, however, moved by an unreasoning prejudice, refused the hall for the second lecture, and the Committee had to make other arrangements. If these narrow-minded men could only realize how they weaken their personal influence with their pupils by these futile attempts to do us harm; how, in fact, they largely increase their sympathy and their enjoyment of our discourses on the national literature and religion, surely they would not be so tactless as they usually are. Not one of them ever heard a theosophical lecturer say one word that was opposed to good morals, or that had the slightest tendency to make his or her hearers worse than they are; quite the contrary: yet they go on nourishing hatred against

Digitized by Google

us, and vainly trying to belittle our strong influence in every way by word and action. Poor creatures, they might as well try to pull the stars out of the sky! While they are dreaming their impotent dreams of malice, the influence of Theosophy is travelling the whole earth, like a thrill of electric force that might run around the planet. One has to come to India to realize how a whole community of European people can become steeped in besotted prejudice against us. Their own relatives at home throng Mrs. Besant's lectures, buy our books, take in our magazines, and join our Branch Societies; but these hold themselves aloof, and use the name of our dear H. P. B. as a word to curse by. More's the pity, for I am perfectly sure that it would only need the aid of some ardent society man, like the late Samuel Ward, or society woman, like some I know of in our European and American Branches, to bring around nine-tenths of the community. But then we public speakers should have to lecture to them and such few of the higher-class Hindus as they might choose to invite, or to confine our talks to their drawing-rooms where no ordinary Hindu is welcomed. In a word, the color line is drawn across the gateway of almost every Anglo-Indian bungalow, and our obliviousness to this fact is one of the strongest causes of our unpopularity. One could see, when Mr. and Mrs. Sinnett and Mr. Hume were introducing us into Anglo-Indian society at Simla, that there were no insuperable obstacles between them and ourselves, and that if we could run in their grooves we might in time become quite friendly. But this we could never do, for that would

Digitized by Google

mean almost cutting ourselves adrift from Hindu society; and so we must go on as hitherto, close to the hearts of the Indians and far away from the other community, our blood relations and nearest of kin in the flesh—of this incarnation. It seems a pity, but we can't help it; for one reason, that we can neither afford the money that we should have to spend in society, nor the time that would have to be consumed in visiting and going to "functions of sorts" to keep up acquaintances.

At Benares, Pandit Bhavâni Shankar Ganesh—then doing duty as one of our Branch Visitors—joined me for the rest of the tour throughout the N. W. P. We took boat on the Ganges to pay a visit to Maji's *ashram*, to which she had returned from her Calcutta visit. We were caught in a heavy downpour of rain and well wetted.* In

* By an interesting coincidence, just after the above had been sent to the printer, I read in the *Indian Mirror* of a very recent date the following obituary notice of this remarkable woman:—

"We are much concerned to hear of the passing away from this worldly plane of the venerable lady, known to the numerous visitors to the holy banks of the Baruna at Benares, and to the wide circle of her admirers, as *Majee*, the *Mother*. In every respect the deceased lady was a remarkable personality. She was a Sanskrit scholar, and something of an adept in occult studies. She was easily accessible, and all those who had the privilege of close acquaintance with her, literally worshipped her as a divinity. *Majee* was one of the few who thoroughly believed in, and testified to, the mission of the late Madame Blavatsky, and bore testimony to the existence of the Great Teachers who have done so much for the propagation of Theosophical truths in the world."

Maji was a Guzerati Brâhmini by caste, but spoke other Indian languages, including Sanskrit, fluently. She was a thorough Vedantin, and of a very cheerful temperament.

Digitized by Google

the afternoon H.H. the old Maharajah of Benares presided at my lecture at the Town Hall, and the notorious Raja Siva Prasad interpreted; which did *not* give satisfaction to the better part of the audience, as he indulged in remarks of his own, adverse to my views. At the close, that ripe scholar and ex-professor at the Anglo-Sanskrit College, Babu Pramada Dasa Mitra, made a very dignified and acceptable speech in moving the vote of thanks. He was my Chairman the next day at a lecture to Indian Youth, in the course of which I gave a summary digest of the Six Schools of Indian Philosophy, and which caused an orthodox Hindu gentleman to call on me next day and say that I had now brought the orthodox community to realize that our Society was not a mere Buddhist propaganda. He said I was to be elected a member of the Sanskrit Club, which held daily sessions to recite and discuss Shastras.

We next moved on to Mirzapur, at the request of the Maharajah of Durbhunga, then stopping there at one of his many palaces. He sent Col. Jung Bahadur, of Nepal, and Babu Juggul Kissore, his own Political Agent, to meet us at the station and see us housed, and later in the day came and took me for a drive and a three-hours' talk. We spent two days with him, and before leaving he expressed his great appreciation of our Theosophical movement, which, he said, he felt sure was destined to do immense good to his country. He then handed me a Government Promissory Note for rs. 1000, which sum, he said, I might count on his giving us annually. This was done without the slightest preliminary expectation on my part, and I felt

Digitized by Google

very grateful indeed. How he kept his promise will be shown in due time.

On to Fyzabad next, where there are almost as many wild monkeys swarming over the house and shop roofs as there are people in the place. And pestiferous creatures they are: they will dart into your very room and snatch and run off with any fruit, article of dress or toilet, or any other loose and portable object that may be lying about. One tall chap sneaked at night into my servant Babula's window, carried off his trousers, leaped across the narrow street to the roofs, called his friends together, and went to biting and tearing the garment, out of sheer mischief.

At my lecture here the very large audience was swelled by the presence of some two or three dozen Europeans—an unusual circumstance. H.H. the Rajah of Ayodhya, the ancient kingdom of Srî Râma, came to call on me, as did also a number of Pandits and a Committee with the usual address and garlands.

On the 29th July I rose at 3 A.M., crossed the swollen Ghogra River in an open boat in a heavy rain-storm, took train, and reached Gorakpur at 7 in the evening. Here, as at all the Northern stations, there were long discussions on the Coulomb-Missionary case, the putting of questions, the showing of letters and papers by me, an invitation of full inquiry, and the re-establishment of confidence and good feeling between us. A tour of this kind seems to acquire a sort of spiritual force as it goes on, which follows and surrounds the lecturer, making him increasingly confident and influential, and more and more able to drive

Digitized by Google

back hostile currents that may be flowing into his vortex. I fancy this has not occurred to all the travelling representatives of our Society; they may have felt the power without having stopped to analyze its cause. To get at that, one must look on the next higher plane of consciousness above this one of our everyday world.

Digitized by Google

CHAPTER XX.

PROGRESS OF THEOSOPHY IN INDIA.

ON my fifty-third birthday (August 2nd, 1885) I reached Bara Banki, the home of that most esteemed, able, and honorable colleague, Babu Parameshri Das, where I lectured, admitted new members, and encouraged despondent old ones. Thence on to Lucknow, former capital of the Kings of Oudh, one of the immoral sinks of India where, on the whole, spirituality seems drowned in animalism, though there are many bright exceptions. We were received at the station by committees of the Kashmiri National Club, Bengali Club, Rafiam Association (a Mahomedan body), and our local Branch. They put me up in the Kaiserbagh, or King's Pleasure Garden, a great park full of palaces and kiosks, and surrounded by a quadrangle of houses which were formerly occupied by the princesses and other women of the royal harem. From all accounts this must have been the scene of debauched pleasures hard to parallel. The late King used to have all sorts of sports for his amusement, some of a most immoral character in which his

Digitized by Google

women folk played their parts. His life flowed on in a current of ignoble recreations, until he and his kingdom and all the paraphernalia of licentiousness were swept away by the thunder-burst of the Mutiny tragedy and the success of the British arms. It needs no great gift of clairvoyance to picture to oneself those ribald scenes as one sits at an open window, looking out on the square, with its artistic buildings, its close-shaven lawns, and meandering walks bathed in the tropical moonlight. Fancy brings them all back, and one cannot refrain from being thankful that this cesspool of animalism has been purged by the inrush of a purer and nobler civilization.

Almost as soon as I arrived I received a shock in the calmly announced fact that the local Committee of our Branch had engaged that I should give a public lecture the next day on the subject of "Islam." I was in a pretty fix when I found out that there was no escape, as the posters and handbills were already issued, and the whole Mussulman public were to be present. The novelty of a white man being about to lecture in a friendly spirit about their religion was, doubtless, an irresistible attraction. I could have given the Committee a good thrashing, for I had then no more than the slight knowledge of the subject which one gets in the course of his general reading, and I felt very reluctant to speak before so critical an audience as awaited me. Escape being out of the question, however, I borrowed a copy of Sale's *Koran* and another Mahomedan book, and sat up all night to read them. Here I found the immense advantage of Theosophy, for, as I read, the key to

Digitized by Google

the exoteric teachings helped me to grasp all that lay between the lines, and light was shed upon the whole system. I think I never before realized so fully its incomparable value as an interpreter of religious systems. On entering the huge Baradari, or Royal Pleasure Hall, I found it packed with an audience which included most of the notable Mahomedans of the place, together with some hundreds of educated Hindus. I treated the subject not as a professor of the religion but as an impartial Theosophist, to whom the study of all religions is equally interesting, and whose chief desire is to get at the truth beneath them and boldly announce it without fear or favor. Some good genius must have inspired me, for, as I proceeded, I seemed to be able to put myself in Mahomed's place, to translate his thoughts and depict his ideal, as though I were "a native here, and to the manner born." I could see this inspired camel-rider incarnating where he did, to work out a tremendous Karma as the Founder of one of the mightiest religious movements in history. The audience were certainly aroused to a pitch of enthusiasm, for they gave it tumultuous expression, and the next day a Committee waited on me with an address of thanks, in which every blessing of Allah was invoked for me, and the wish was expressed that their children knew "one-tenth as much about their religion" as I did. Ye gods! how cheaply a reputation is sometimes made. From this experience I venture to say that an intelligent Theosophist is better qualified than any other man to take up the study of any given religion, and will be more likely to get at its inner

Digitized by Google

meaning than the most learned philologist who has sought the key only in the crypt of his rationalistic mind. This recalls a most amusing experience at my first public lecture in London about a dozen years ago. I had gone on, in what I thought a very unpretentious way, to explain Theosophy as I understood it, and incidentally cited ideas from some of the ancient religious works. The house was packed, galleries and all, and great good feeling prevailed until the close. Then began the usual "heckling" with questions that every lecturer in Great Britain has to face, and which kept me busy for a full three-quarters of an hour. On the whole this cross-questioning is good, for it tends to draw out points which may have been overlooked by the speaker. Just when it seemed as if the ordeal was finished and the audience might be allowed to disperse, a man in the right-hand gallery cried in a loud voice: "Mr. Chairman, I should like to know how it comes that Colonel Olcott has such a general knowledge of all the Eastern religions, when I have studied one of them more than twenty years without getting to the bottom of it." Of course it was a foolish question, an exhibition of mere pique, since I had made no pretence whatever to *knowing* all or even one of the ancient cults, but many years' residence in the East and personal intercourse with learned Asiatics had certainly given me some chance to learn about the spirit and meaning of the various Scriptures. I was just about to say that much, but was saved the trouble, for instantly another voice from the opposite gallery shouted out the word "Brains!" and the whole house burst into

Digitized by Google

a roar of laughter. The chair dismissed the audience, and amid the confusion we could see the indiscreet questioner waving his hands and saying things that were lost in the hubbub. I felt greatly grieved on learning later that the gentleman was one of the best-known Orientalists of Europe, and that he was so annoyed by his discomfiture as to conceive a violent hatred for myself and the Society—both absolutely innocent of offence!

On the three remaining days of my stay in Lucknow I gave public lectures and private addresses to our Branch and other bodies. By the former I was put through a searching inquiry into the pros and cons of the Coulomb case, but was able to remove all doubts, and left our people in good spirits on our departure from the station.

On the 8th August we reached Bareilly in a drenching downpour of rain, our colleagues, Messrs. Cheda Lal, Piari Lal, and Gyanendra Nath Chakravarti receiving us at the station, with the water dripping from them as though they had been out in a surf-boat. A malicious busybody had done his best to foment suspicion against us at this station, and I underwent a very stiff examination, happily with entirely satisfactory issue. Mr. Chakravarti was one of several of our leading Indian members to write H. P. B. that I had saved the Society in India by making this tour, as I had cleared away doubts, enlisted public sympathy, and restored strength to the movement. And why should not I, considering the Powers that were gathered behind us and going forth with us to touch the popular heart? It would have been a black time for me if I had forgotten that for one

Digitized by Google

moment. But I never did; not for an instant did my faith and confidence in the Masters waver, never once did the idea of possible defeat enter my mind. That was my shield and buckler; that my tower of strength. Those who were for us were an hundred times stronger than those who were against us. On the heels of the Coulomb disaster we chartered seventeen new Branches within that year: let the reader take note of the mystical number. Neither at Bareilly, nor Moradabad, nor Meerut, nor at any other station included in my long programme, did the heavy rains of the wet season prevent my having full, even crowded audiences; though it must be admitted that the watery elementals seemed somehow to be leagued together to help me. It happened so often as to be remarked by many that, by some mysterious chance, the pouring showers would hold up just when it was time to go to my lectures, recommence while the audience was safely housed, and cease again when they had to leave for home. We all know about Queen's weather, so why should there not be some similar provision by benevolent storm-spirits to help their friend and expositor of the Theosophical Society? I leave the conundrum to answer itself, meanwhile just noting a fact that came under the personal observation of many intelligent witnesses.

At each of the stations mentioned in the foregoing paragraph, there were the like questionings and clearings up of doubts, the same lecturings, admissions of candidates, strengthening of Branches. We got to Cawnpore on the 16th, and were most kindly received and entertained by our

Digitized by Google

staunch and tried friend Capt. A. Banon, F.T.S., then with his regiment there. This is the gentleman who—it will be remembered—so valiantly backed us up against the travelling calumniator, the Rev. Joseph Cook, and caused him to run away as fast as he could to the other side of India, to escape meeting me in public and making good the malicious slanders he had uttered. In all these years this gifted yet eccentric man has remained our loyal supporter, a friend such as an Irish gentleman of good family always proves himself to be. His holding an army commission and being in a military mess unsympathetic to Theosophy, did not weigh a feather's weight with him, as it does with so many; he drove me about, took me to the mess, and was conspicuous at my lecture. In short, he displayed the same quality of moral courage that Sir William Crookes has just shown so nobly as President of the British Association.

My lecture at Cawnpore was delivered in the theatre, a long, narrow room which seems to me full of the most disagreeable influences: if it had been the scene of a massacre it could not have been worse. To make it still more unpleasant, the Committee followed the detestable custom of giving all the front seats to the most unsympathetic class, the Anglo-Indians, Eurasians, and Native Christians—the latter, low-caste people, of course, in nine cases out of ten. This made a wall of aura right across the room, through which I had to force my own auric current to reach my friends and sympathizers. One can't help getting sensitive to these influences after awhile; a sort of finer sense of

Digitized by Google

their quality, or perhaps we should say polarity, becomes developed, and in such instances as this one has to concentrate all one's will to break down and burst through this cross current, so to speak. The phenomenon is confined to India, and is due to the silent, yet irresistible auric antipathy of races: take either alone and one does not feel it, but bring them together, and at once there comes this note of discord. I got over it in this way: I placed myself opposite the aisle, the weakest point in the barrier, and pulling myself together, projected my current towards the Hindu majority until they and I were blended together in magnetic unity. The reality of this law of mutual attraction and repulsion has been too often felt and mentioned by public speakers and actors to be open to question, and anyone who has not discovered it experimentally can hardly be called spiritually sensitive. Cases have been recorded where one single person in an audience has drawn to himself or herself by an irresistible power the attention of the speaker, and actually compelled him, as it were, to address his speech or play his part to him or her. On the next evening I obliged the Committee to reserve the front seats of the left side of the aisle for Hindus and get them filled very early; and when I began speaking, I stood at that side of the stage, thus presenting my strongest, *i.e.*, most positively magnetic, side to the least sympathetic part of the audience. Thus all went well.

Among our friends at Allahabad as much unrest had been created by the Coulomb-Missionary conspiracy against our Society as at any station in India. Certain agents had been

Digitized by Google

very active in sowing distrust, and I had my work cut out for me; but I had a good case, and all came out right in the end. With Mr. Janaki Ghosal I went to pay my respects to Swami Madhavdas, an English-speaking ascetic who is much respected. Curiously enough, he is the author of a compact compilation of *Sayings of the Grecian Sages*, in whose wisdom he found the echo of the teachings of the wise men of his native country. He was good enough to lend me the MS. to read, and allow us to publish it for him, or for his disciples rather, for a man of his sort abstains from meddling in worldly concerns. Among my interrogators about the H. P. B. case was a clergyman named Hackett, who came with an armful of books and pamphlets, with his points all marked. I was very pleased with his courtesy and evident fair-mindedness, and gave him as much time as he required to go to the bottom of the business: he stopped three hours and we parted the best of friends. When I left for Jubbulpore the next day he was at the station to see me off. I wish all Missionaries were like him: but then all Missionaries are not gentlemen.

At Jubbulpore I presided at the anniversary celebration of the Sanskrit school founded by our local Branch, and which is,—thanks to the unflagging devotion of Kalicharan Bose—still flourishing. This is but one of at least a score of Sanskrit schools that our people have started, but in too many cases the others have been abandoned because of the lack of that peculiarly necessary quality of stubborn perseverance in their promoters. Not one would have failed if it had been under good European management. I am sorry

Digitized by Google

to say it, yet the Hindu is enthusiastic, loving, and faithful, but in public affairs he is at his best only when under the lead of colleagues of the more practical race. A contrast to Mr. Hackett was the character of a clique, comprising a Padri of the C. M. S., a pretended Christian doctor, and some other alleged Christians (I can't recognize them as followers of Christ because of their narrow prejudices and intolerance) who attended my second lecture and tried to create disturbance at the close. Seeing their tactics, I refused to let them address my large audience, advising them to hire a hall for themselves and say what they liked. The next day they sent me a challenge to "do a miracle" under conditions of their own prescribing! Poor creatures, let them read their Bible's description of their prototype: "Wiser in his own conceit than seven men who can render a reason." The wheel of Karma must turn many times before they can be fit to even clean a lamp in the hut of a pupil of a Master of Wisdom.

My route turned towards the West through the Central Provinces, Hoshangabad and Nagpur being my objective points. I don't know why, but from Jubbulpore onward I seemed to be passing through a better atmosphere; the dark distrust, wavering courage, and captiousness which had beset me in the N. W. P., and which I had had to dispel, were absent from this part of my circular journey. Friendly hands were offered, kind words spoken, ears opened to hear my message, and many loyal friends and well-wishers made. The Government rest-house at Hoshangabad is most beautifully situate on the banks of the Nerbudda River, and the

Digitized by Google

scene, when I stood in the bright moonlight on the top platform of the bathing ghât, addressing a multitude, was most poetic and picturesque. Among my visitors were a number of Europeans in Government employ, and they attended both of my lectures. An even more warm welcome was given me at Nagpur, where the moving spirit was Mr. C. Narainswamy Naidu, the principal pleader of the place, since unfortunately deceased, but from that time onward to the last, one of the most useful, wise, and loyal members of our Society. At his house I formed the Nagpur T. S., with himself as President, and as Chairman of the monster audience which packed the theatre to hear me discourse on "The Aryan Rishis and Hindu Philosophy." He laid over my shoulders, after the old Hindu fashion, a crimson embroidered *chadda*, or shawl. An interesting incident which happened on that evening will be remembered by the spectators. In the midst of my discourse there suddenly broke into the dead silence one of those raucous, uncanny cries that epileptics utter at the beginning of their seizures. The whole audience rose to their feet and anxiously looked towards the right, where a man stood beating the air, his face convulsed with an expression of agony, and the next moment fell to the floor. He had hardly touched the ground before I sprang from the stage, pushed my way to him, took his forehead and the nape of his neck between my hands, breathed on his face, and concentrated my will upon his disease. In less than a couple of minutes his moanings ceased, the fit passed off, somebody gave him a sup of water, he rose and passed out of the house. Then I

Digitized by Google

climbed back to the stage and took up the thread of my argument. This simple experiment showed, for the thousandth time, that epilepsy, one of the most formidable of afflictions under orthodox treatment, is quite amenable to the well-directed power of the mesmeric aura. I hope it may be remembered by all who have the power and the wish to help suffering humanity.

We reached Bombay on the morning of September 3 and were affectionately welcomed. Among other visits I paid one to Tookaram Tatya at his Bandora country-house, where we dined together in Hindu fashion. Tookaram was a man of the Sudra caste, and, like all intelligent persons of his rank, felt the pressure of the higher castes galling to him. To get rid of this in a measure, at least in his own mind, he had got me to obtain the permission of the High Priest Sumangala to give him the Pancha Sila and admit him as a Buddhist. At the same time, in view of the certain ostracism of his family by Hindu society if he openly seceded, he kept his status among them, and in later years, when Mrs. Besant's open profession of Hinduism and defence of the Aryan caste system turned the tide backward, I believe he reverted to his hereditary faith with much zeal. At any rate, of late years I heard no more about his Buddhism. After giving one lecture at Framji Cowasji Hall to a large audience, I passed on to Poona with our colleague the late Mr. Ezekiel, a member of the great Jewish family of the Sassoons and an ardent Kabbalist. At his house I met a Rabbi Silbermann, of Jerusalem, and his wife. They were put up in one half of a detached small bungalow in Ezekiel's

Digitized by Google

compound; he, an old and feeble man, with a middle-aged, bright wife and a Hebrew maid-servant. He wore the Oriental costume, as also did Mr. Ezekiel Senior, who lived in the other half of the little house. I was wearing the cool cotton Hindu dress which I find so much more comfortable than our tight European costume in the Tropics, and which I should always wear if the Salvationists had not vulgarized it so effectually. The old gentleman and I were sitting alone together one day, he watching me so closely that I thought something must be wrong about my dress, but he soon undeceived me. Beckoning me mysteriously into his bedroom, he took from a press a complete Jewish costume—turban, gabardine, and all such as he himself wore—and asked me to put them on. When I had done so, he led me by the hand along the verandah to the adjoining rooms, intimating that he was going to pass me off as a Jew. Entering into the spirit of the joke, I gravely saluted the Jerusalem family after the Eastern fashion, and was led by my guide across the room to a chair. The aged Rabbi was sitting on a mat to the left of the door, and on my unexpected entrance saluted me with great respect, pronouncing the special form of words used when greeting a Jerusalem rabbi. He then began putting me a lot of questions in Hebrew, and refused to believe that I was a mere Gentile, when young Ezekiel, laughing heartily at his bewilderment, told them who I was. No, he insisted that my nationality was too evident, and would go on with his Hebrew cross-questioning until the facts had been reiterated to him over and over again. His wife, sitting in a rocking-

Digitized by Google

chair over against the side wall of the room, with her maid on the floor at her feet, looked me over most scrutinizingly, and confirmed her husband in his belief as to my Hebraic origin. "Why," said she to the maid, "who can deny it? See, has he not the *shekinah*?" meaning the shining aura, the *tejas* as the Hindus call it. Both the Ezekiels were immensely amused at the success of the old gentleman's trick, and it was gravely proposed that Mr. Ezekiel Senior and I should be photographed together in the costume, as a souvenir. But my stay at Poona was too brief to allow of its being done. I lectured once in town on "Aryan Morals," with the eminent Mr. Ranade in the chair; and once at Ferguson College to 1000 Hindu boys, on "Education." The leading Native gentlemen were present. To illustrate my idea of what bad education is, I turned to the nearest student and took from him his Geography and glanced at the portion allotted to India. I found that to the whole of Asia—India, Burma, Siam, Ceylon, China, and Japan—were given only seventeen pages of description, while to the United Kingdom something over forty pages! Of course, I said, it is most evident that the compilers of this book thought it quite useless for Indian youth to know anything about their own native land, its history, products, capabilities, etc., but indispensable that they should know about every English county, its resources, population, industries, towns, and villages, so that they might be prepared to make a pedestrian tour over there. What nonsense to call that an enlightened system of education!

Digitized by Google

The last public event during my stay was a lecture at Hirabâg, the picturesquely placed Town Hall, on "Karma and Kismet," after which I left the station for Hyderabad, the Nizam's capital.

CHAPTER XXI.

PHENOMENAL MEMORIES OF PANDITS.

THE Nizam's Hyderabad, as it is called, to distinguish it from Hyderabad, Sind, is one of the most distinctively Asiatic cities in India. It has a picturesqueness and artistic interest in strong contrast with other large towns, especially the Presidency capitals. The streets are alive with fighting men armed and equipped like the figures in an illustrated edition of the *Arabian Nights*, elephants and camels are seen in processions, the stamp of Orientalism is upon every shop in every bazaar, and life goes on in the ancient fashion with little coloring by Western influence. At the same time, Hyderabad is one of the worst centres of dishonesty and immorality, as bad as Lucknow; bribery and corruption are said to be rife, and public mal-administration to be the normal condition of things. Yet, despite all this, there has been a centre of Theosophical work there for many years, and a few earnest souls have kept the torch burning amid the spiritual gloom. All honor to them!

I reached this place on the 11th September (1885) at

Digitized by Google

4.30 P.M., and received the usual welcome, with an address and garlands, and had to make the expected reply. An American colleague was quite right in saying in a recent letter that, with my keen sense of humor, it must often sorely tax my powers of self-restraint to listen to some of the fantastically extravagant panegyrics that are read to me on arrival at Indian stations. It would be simply impossible if it were not for my knowledge of the heartfelt sincerity that is usually covered over by these perfumed garlands of compliment. There is a voice of the soul which makes one pay no heed to mere speech, and which stirs up the responsive emotion in one of my nature.

On the day following my arrival I had the good fortune to witness a display of that superlative mnemonic training of which India affords so many examples. The reader will find in the *Theosophist* for January 1886 an article by myself on "Some Aspects of Memory," which, besides a general inquiry into the subject, covers also a report on the Hyderabad experiments under notice. Thirteen years having elapsed, it may be as well to recall the marvellous details in the present connection. I shall therefore reprint the certificate which the spectators handed to the Brahmin Pandit: it reads as follows:—

"HYDERABAD (DECCAN), *the 14th September* 1885.

"The undersigned have much pleasures in certifying to the following intellectual achievement by Vedanta Dasigachárya of Theruvellur, Madras Presidency, of which they were eye-witnesses.

Digitized by Google

"The Acharya, having arranged ten of us in two lines, simultaneously kept in mind and did the following eleven things:—

"I. Played a game of chess, without seeing the board.

"II. Carried on a conversation upon various subjects.

"III. Completed a Sanskrit sloka from the first line given.

"IV. Multiplied five figures by a multiplier of four figures.

"V. Added a sum of three columns each, of eight rows of figures.

"VI. Committed to memory a Sanskrit sloka of sixteen words—the words being given him out of their order, and at the option of the tester.

"VII. Completed a "magic square," in which the separate sums in the several squares added up to a total named, whether tried horizontally or vertically.

"VIII. Without seeing the chess-board, directed the movements of a knight so that it should make the circuit of the board within the outline of a horse traced on it, and enter no other squares than those.

"IX. Completed a second magic square with a different number from that in the above-named.

"X. Kept count of the strokes of a bell rung by a gentleman present.

"XI. Committed to memory two sentences in Spanish, given on the same system as No. VI., and correctly repeated the same at the end.

"As a study in mnemonics this was a most instructive experiment. The Acharya has, it seems, acquired the power of creating in his mind, for each of the several things he does,

Digitized by Google

a separate mnemonic point, or thought-centre, and around this forces the ideas relating to it to cluster and group themselves."

Signed by H. S. Olcott, Bezonji Aderji, G. Raghoonath, M. Raghunayekaloo, A. T. Muthukistna, Darabji Dossabhoy, Hanumant Row, Bhimaj Raojee, and Iyaloo Naidu—all members of our Society.

The plan is for the Pandit to go around the group of testers one by one, as many times as may be necessary to complete the mental tests, doing with each, each time, one part of the whole mental task set him by that person. Thus, with the first, he will think out and order one move in the game of chess; with the second, follow his lead in the conversation which is meant to disturb his mnemonic labors; to the third, dictate one line of the desired Sankrit poetry; to the fourth, name the first part of the quotient, etc., etc. He would thus have to fix in his mind every fact related to the result expected by each of his testers, and at the close reel off the final results without error. From me he took from dictation the two lines of Spanish in this fashion: the words were privately written by me on a slip of paper, and under each its proper number in the sequence was placed; thus:—

Ay	*de*	*mi!*	*un*	*año*	*felice*
1	2	3	4	5	6
Parece	*como*	*uno*	*soplo*	*legero.*	
7	8	9	10	11.	

Here we have eleven words running in a certain sequence, but I was allowed to give the Pandit any one of the eleven

Digitized by Google

out of its order each time that he stopped in front of me in his circuits. Only two things are required, viz., that the word shall be distinctly pronounced until he can catch the sound, and that as we give each we shall tell him its number in the sentence. It is his business then to keep all in memory until the eleven rounds of the circle are made, when he will ponder a moment and then recite the couplet correctly, giving each word its place in the sequence. He must do the same in the case of each of the other testers. Thus he carries forward his sum in addition, multiplication, subtraction, division, etc., one stage at each round, and when he comes again to the same person must pick up the thread of the suspended mnemonic feat and proceed on another stage. So all around the circle. Figure for yourselves the number of separate mental activities he is obliged to keep going throughout, and if this does not amaze you, you must have been reborn from some anterior wonder-breeding planet. This evident overstraining of the brain brings on at last primarily a lassitude and then an exhaustion of the mentality. I have this at first hands; in fact, the Principal of one of our Sanskrit schools who had been a proficient Asthâvadhâni, had had to give it up completely to save his "wits from falling into ruin." Whoever wishes to go farther into this important subject will find the best authorities cited in the number of the *Theosophist* above mentioned.

My audiences at the Nizam's capital and at the adjacent British military station of Secunderabad were very large and attentive. The topics given me by the Committee

Digitized by Google

were "The Unity of Religions," "Mesmerism and its relation to Occult Science" (doubtless suggested by the recollection of my healings during my previous visit), "Who am I? whence came I? and whither am I going?" These were the usual conversation (or puzzle-putting) meetings, Branch gatherings, and admissions of applicants into membership.

Adoni, the cotton carpet-weaving centre, was my next stopping-place, and here I was asked to lecture on "The Aryans and their Religion." On to Bellary next, where one of our staunchest colleagues, Mr. A. Sabhapathy Moodaliar, lives. After spending three days with our friends there, I went to Gooty, which for many years has been made a stronghold of Theosophy by our local members, especially P. Cassya Pillay, J. Sreenevas Row, and T. Ramachendra Row, than whom no society has three more active and useful workers. Before leaving Bellary I had the chance of testing the alleged efficacy of my snake-stone which, my earlier readers may recollect, I got from a snake-charmer at Bombay soon after our arrival in India. At that time the mere approach of the stone (which was no stone, but a bit of bone) to an angry cobra would make it sway on its coils, lean over backward, and finally subside to the ground; but it did not work so at Bellary. The cobra on which I tried it was apparently trained to obey the signs of his Master's hand, and paid no attention to me or the stone. So I put the failure as a counterbalance to the Bombay success.

Our Gooty friends had bought at Government auction,

Digitized by Google

a fine stone building for a nominal price, and had not only installed in it a Sanskrit school which they had established, but made it the Branch Headquarters and the chief place for lectures and other public meetings. Just at the back of the town rises a rocky hill of 1000 feet in height, crowned with a strong fort which had been captured and recaptured at different times in battle before the British occupation. Within its walled enclosure is the alleged tomb of Gautam Rishi (not the Buddha), which is a place of pilgrimage. The fort is now dismantled, and might be bought of Government for a nominal sum. As there are many good rooms that could be made habitable at trifling cost, I thought it would be an admirable place of retreat for some European friends of mine who had a mind to realize in practice Mr. Sinnett's ideal of a castleful of mystics, as described in his novel, *Karma*. So, after getting all needed information, I proposed it to them, but nothing came of it.

To reach the last station on my tour programme, Anantapur, I had to travel all night in a bullock carriage, which shook me about to such a degree that sleep was almost impossible, and I was not sorry when, a mile from the place of destination, I found ready for me a tent pitched, with bath and breakfast ready. Anantapur was all dressed out with flags, a band of musicians obstreperously greeted me, there was a public address to reply to in presence of a great crowd, and in the evening an overflowing audience listened to me on the subject of "Modern Scepticism and Brahma Vidya." The next evening I

Digitized by Google

organized the Anantapur T. S., and, later, took the "bandy" again for Gooty, which was reached at 8 A.M., after another sleepless night. Thus closed my long tour of 115 days, of 1885, in the course of which I had visited 51 Branches and given 56 public lectures besides uncounted private discussions and answerings of questions. Beyond doubt the tour did good in restoring the courage of friends, enlightening the outside public as to our views and aims, removing unjustifiable suspicions as to H. P. B. and the Masters, strengthening old centres with new members, and creating fresh ones where previously we had not been represented. In a word, the bolder policy had been vindicated, and it was very easy to see, on giving a retrospective glance over the year, that it would have been a great misfortune if I had listened to timid counsellors and stayed quietly at Adyar, waiting for the clouds to roll by.

Again I must emphasize the fact, which I tried to make clear in the last Chapter, that I did not count upon my own powers or abilities only to do this work, but also, and especially, upon the help I derived (and still get) from Those who stand behind this movement. Without them, I should have been powerless to breast and push back the adverse current of hatred which was sweeping in against us. With their aid I untwisted every coil of the Missionary serpent which was trying to crush us into a mass of broken ribs and bruised flesh. Not one of my readers can realize what we had to go through, and I especially, in those dark days. On the one hand, the active opposition of the sneering public and the faint-heartedness of many of our colleagues

Digitized by Google

whom I had the right to count upon as standing beside me, staunch and true; the outright desertion of others; a poorly filled treasury with increasing expenses to meet; a pressure on me to consent to certain radical changes in the Society's policy and platform; and, finally, my compulsory separation from H. P. B., who for eleven years had been working with me in close accord of general aims and ideals. On the other hand, the tragical situation of H. P. B. herself, virtually an exile packed away in a cheap little Italian inn on the slope of Mount Vesuvius, racked with rheumatic gout, ordered imperatively by Dr. Mary Scharlieb to keep herself perfectly quiet on peril of life, suffering privations that I had not the money to alleviate, chafing like a wounded lioness over her inability to fight her slanderers, and writing me the sharp and angry letters that might naturally be expected from her under the circumstances.

My earnest desire was to carry out the Doctor's wishes, which I knew to be based on simple common-sense; the one absolutely necessary thing for H. P. B. to do, if she would save her life, was to keep perfectly quiet in some retired spot out of reach of her friends or enemies, and especially to abstain from correspondence or newspaper reading. She was like a powder-magazine, and just an incautious bit of gossip in a letter was enough to make her explode. The Doctor so warned her before leaving, and I so wrote her in the letter, to which she replied in March. "Calm your fears," she said, "for, *with the exception of Solovioff* and Miss . . . . I know of no European theosophists with whom I would correspond, or to whom I would divulge my

Digitized by Google

address." To Solovioff—fancy that! To that contemptible person, who took advantage of her guileless confidence and her fervent love for her countrymen, to watch and spy upon her daily actions, inveigle her into confidential correspondence, and betray her in a book gotten up for pecuniary profit and written in her very mother language and published in the motherland she so adored to the day of her death. The staunch souls who were only anxious to prove how loyal they could be, she saw not before her mind's eye; but to this poor creature of a professional *litterateur*, because he was a Russian and played the devoted friend, she gave her confidence and revealed the necessary secret of her retreat. And to crush me with the sense of her displeasure for daring to doubt her discretion, she addresses me, after ten years of chumship, as "My dear Colonel Olcott!"

"Writing as I do," she says in a letter of no date, but from Torre del Greco, "in a damp room at the North side of Vesuvius, my feet on uncarpeted stone flags, and in Italy, where people suffer indoors of cold more than in Russia, for stoves are unknown and the cold air circulates from under doors and through windows *ad libitum*, I feel pretty sure to have, notwithstanding my every precaution, a relapse of rheumatic gout, unless you do what I must ask you to do. If you have not sent me away to die, and since there is no money for a better *appartement* or to buy carpets and rugs, please send me . . . . the old carpet bought at Bombay, with a few other things we want. . . . I can cut the carpet in two and thus avoid agony and suffering. It is raining and cold and damp even now, while in September it becomes so

Digitized by Google

cold that even the old landlord told me no one, least of all an invalid, could stop here after August. Wherever I go, I shall need carpets, and they are a luxury unknown in Italy and France, etc., etc."; the letter being full to the end with a statement of her miseries. How would any of our readers have felt under such a state of things? And to think that she, whose teachings have been the consolation and guiding lamp of thousands, and of many who are surrounded with luxuries, that this poor, stricken woman, this lighter up of dark paths and dispenser of spiritual brightness, should have been crying out across the seas to her old chum, as poor as herself, in accents of distress; thus doubling and quadrupling the load of care he had to carry behind his smiles and jests, for the sake of the growing multitude who had embarked in our movement and would have felt themselves dropping into a gulf of despair if it had failed. Is it too much, then, to say that naught but the knowledge of the Unseen Master Helpers would have carried me through that time and landed me at last on the farther shore of success? "For lo, the winter is past, the rain is over and gone: the flowers appear on the earth; the time of the singing of birds is come, and the voice of the turtle is heard in our land." Later on, she settled among friends in London, who saw that she lacked no comfort and did their best to lighten her every burden; but think of her in the cold spring of 1885 on the northern slope of Vesuvius, living from hand to mouth, and writing at "a rickety old table" that with great difficulty she had procured, and with her poor gouty feet on the cold stones of the uncarpeted floor!

CHAPTER XXII.

H. P. B. IN EXILE.

"CHAFING like a caged lioness" is just the expression to use to convey an idea of H. P. B.'s state of mind throughout that period of three months which she spent at Torre del Greco in 1885. What wonder, when one recalls to mind the circumstances of her compulsory exile from the Adyar home that we had built up together and that she loved. This is one of the things most distasteful about which she complained in her letters to me. Then it was most galling to keep quiet, to so brave a hereditary fighter, child of an ancient family whose swords had always flashed in the forefront of battle from generation to generation, when called for by their sovereign. To her, as to them, the ultimate chances of conflict were of no account; the overpowering instinct was to give battle without counting the odds. But we, her colleagues, mindful of the quips and and quillets of the Law, and of what her discomfiture in Court would mean to the Society, overbore her wish and wrung from her an acquiescence in the policy of silence and

Digitized by Google

forbearance towards our enemies. While at Adyar with us, she saw that we were right, but in her lonesome exile in Italy the aspect of things changed, and she upbraided me in letter after letter for what she called our "cowardice," and our haste to sacrifice her as our scapegoat. She was utterly wrong, of course; but argumentation was useless, and remonstrance a waste of time and ink. She was of a most trustful disposition in one side of her character, and hence we see her constantly deceived and victimized by people whose effusive protestations masked sometimes the basest plans of treachery.

From this present point of view, after the lapse of thirteen years (viz., 1899), when people have been sifted through the sieve of time, it is mournful to read her letters and see how her most lauded courtiers have rewarded her trust with blackest treason. To emphasize her charges against us of Adyar, she quotes their names and sayings over and over again; she even sends me notes of theirs to her, condemnatory of myself and fulsomely laudatory of herself. Solovioff had passed five weeks with her at Würzburg, her second place of refuge, so-and-so a fortnight, so-and-so was coming—all of whom turned enemies later on.

The form of the *Theosophist* was changed—it will be remembered—at the beginning of Vol. VII., from quarto to octavo, as the larger size was found to be inconvenient for binding and also for carriage through the mails. She was in sole charge of it then, but had appointed as her assistant Mr. Cooper-Oakley, M.A., a fine scholar, and put

Digitized by Google

him in full charge when leaving home for Naples. Certain malicious persons, whose identity is now known by me since looking over her papers and our correspondence, had put it into her head that I meant to remove her name from the title-page, because we dare not carry the obloquy of the connection any longer, and that this was but part of a scheme to pitch her out altogether. Certainly there was not a shadow of truth in all this, but she was so ill, her mind was in so distressing a state of nervous commotion, that she at once plunged at me. I was called all the harsh names conceivable, my supposed delinquency was stigmatized as sheer poltroonery, and she gave me solemn notice that if any other name than hers, save T. Subba Row's or mine, were put on the magazine, she should not write another word for it! But in due course the new issue of the *Theosophist* reached her, and she then wrote:—

"Well, I *knew* that the accusation of your taking off my name from the *Theosophist* was all bosh. But they all understood it and 'felt sure' it was so—even to H. S. It was in consequence of Nivaran Babu's innocent remark: 'The magazine is coming out in its new garb, and Mr. Cooper-Oakley is to be its Editor.' They said that since C.-O. had been its Editor for nearly a year already, why should Nivaran write this as news unless his name were to appear on the cover of the magazine, etc.? Well, I caught fire too. But now that's at an end. . . . Anyhow, the *Theosophist* looks very neat now—of course, a great deal better than before. I send for it a long

Digitized by Google

article, 'Have Animals Souls?' I shall write, this week, one or two more."

Then she does the very unusual thing, for her, of asking my pardon, but on the basis of mutuality. "Let us," she says, "forgive each other, be indulgent for each other's failings, and cease fighting and back-biting like Christian sectarians!" That shows the wonderfully elastic quality of her mind. In an instant she withdraws from an *impasse*, and carries off the other fellow in her retreat! Fancying this sort of thing as recurring weekly or fortnightly, along with the normal strain of executive duties at that crisis, the reader may gauge the inner life I had to lead until our ship came into smoother waters. For all the grief caused me by her cruel letters I do not, now, hold her responsible; for her wounded spirit was played upon by unprincipled third parties, whose hope was to separate her from the Society and use her power and talents for their own selfish ends; she was not in a state to be reasonable, and ten years of trial had proved to her that I should be ready to let myself be chopped into mincemeat rather than desert my duty or be unfaithful to my holy Teacher; so let her say or do what she liked, it would make no difference.

When she really set herself to looking into people's motives, however, she could do it. Thus, she unmasks to me the secret plans and speculations of one man closely connected with her Society work at that time, and whose unfavorable remarks about myself she often quotes. No doubt all this heckling was just the discipline I needed,

Digitized by Google

and undoubtedly still need as much as ever, to bring me down to my bearings, but I can't say it was nice. I am not like the negro boy who, on being found pounding his finger on an anvil, explained that it was done because "it felt so good when getting well." I could have spared three-fourths of the discipline to any other needy neophyte without regret, although, doubtless, it was best for me to have it.

H. P. B. had one trait of character that has made her memory so precious to most of her former colleagues—winsomeness. She might drive you almost mad with her sayings and doings, might make you feel ready to run as far away from her as possible, yet when she changed from one extreme to the other in her treatment of you, as she would in a flash, and looked and spoke to you with a sort of childlike blandness, your anger would vanish and you would love her in spite of herself.

There were, besides, special elements about H. P. B. which gave her power over others, viz. :—

(*a*) Her amazing occult knowledge and phenomena-working powers, together with her relation to the hidden MASTERS.

(*b*) Her sparkling talents, especially as a conversationist, with her social accomplishments, wide travels, and extraordinary adventures.

(*c*) Her insight into problems of philology, racial origins, fundamental bases of religions, and keys to old mysteries and symbols; certainly not the result of study, for a more restless and eccentric student there never was. She was not all smoothness or courtesy—far from it: when

Digitized by Google

the mood was on her she was all that, but at other times she spared nobody, no matter how rich, powerful, or highly placed they might be. As to trained literary faculty, she had none; she wrote under inspiration, thoughts flashed through her brain like meteors, scenes painted themselves before her mental vision and died out often when but half caught, parenthesis bristled through her paragraphs so as to sometimes interminably stretch out her sentences, and she would—as it now appears—catch up and use other men's writings as though they were her own—intent only on fitting their formulated thoughts into the working out of her theme. In short, she was a genius in the same sense as Shakespeare and others, who took materials as they were found, and worked them into the amalgam upon which they put the stamp of their own individuality. Take her two great books, for instance. She has sinned an hundred times against the canons of literary usage as regards acknowledgment of authors drawn upon, but upon both is spread the golden web of her own high powers, and the *Secret Doctrine* is found, year by year, more and more like an inexhaustible mine of occult knowledge. That is what makes widening circles of students reverence her memory, and turn their backs in scorn upon those pigmies, like Solovioff, who work like ants to distil acids to squirt on her clothing.

Her occult powers made her run after by Spiritualists, impelled by avid curiosity; discredited by men of science who mistrusted all such pretensions; hated by the modern priests and pastors, who ought to have been able to cap

her phenomena by like ones of their own, but could not; and feared by the orthodox multitude, who saw in her a black sorceress and dared not come near her. This uncanny evil reputation even extended to myself by reason of our association. "Dear me! Colonel Olcott," said Lady X to me one day at her luncheon-table, "how very different you are from what I had expected." "And what—may I venture to ask"—I said, "had your ladyship expected?" "Oh, you know," she replied, "we all thought that if we should meet you, you would throw on us some magic spell; but, really, you are just like ourselves!" This feeling among her acquaintances accounts for much of the latitude accorded her as to conduct and conversation. The same instinct makes the courtier think the King can do no wrong, and society pass over as "eccentricity" the millionaire's solecisms in manners, which they would revolt against in a poor man. One never knew at what moment she might do some wonderful feat of magic, or perchance whisper in their ears some message from the unseen Powers. Then, again, it was a frequent experience that the scoldings she gave her intimate friends proved subsequently to have been most timely checks in a wrong path, turnings into the right one and blessed kindnesses. Association with her was a continual excitement, and the most sluggish temperament was roused into some show of activity. She was truly a great woman—to confound, if we may, the carcase with its indwelling entity, which seemed to me as far removed as possible from the ideal of the gentler sex.

After stopping three months at Torre del Greco, she went to Würzburg which, as she writes me, bids fair to become a sort of theosophical Medina, since she was exiled from the Mecca of her heart, Adyar. "I have not much time now," she writes (Oct. 28, 1885), "with the *Secret Doctrine*. I am only at the middle of Part I., but shall in a month or two send you the first six sections. I take from *Isis* only facts, leaving out everything in the shape of dissertations, attacks on Christianity and Science—in short, all the useless stuff, and all that has lost its interest. Only myths, symbols, and dogmas explained from an *esoteric* point of view. It is actually and *de facto* a new work entirely. Cycles are explained, along with everything else, from their occult bearings. I wish you had sent me the Preface, or Introduction."

In this same most interesting letter she sketched out a form of communication she wanted me to put into the *Theosophist* in her name. I find in it the outline of the whole teaching now being given out by our chief theosophical writers, as to the persistence of the Individuality: "the same Divine monad, plus all its essence of compound spiritualities from its endless rebirths, must come down again and be reborn in a higher, hundredfold more perfected and pure earth or planet—in short, commence again its grand cycle of reincarnations."

Among the devoted friends who thronged to her at Würzburg were the Countess Wachtmeister (ever the same faithful, loyal woman of generous heart and invincible devotion), and Frau Gustav Gebhard, of Elberfeld, whom

I loved so dearly and regret so sincerely since she left us. These dear ladies nursed H. P. B. in her sore illness, being like younger sisters in their assiduous ministrations. Dr. Hübbe Schleiden and Madame Gebhard's son Franz were there also, and from this group I received a most important document. It is a complete vindication of my beloved 'chum' H. P. B. from the foul charge of the woman Coulomb and those who echoed her falsehood, that while at Cairo she became the mother of illicit offspring. The author of the document was (perhaps still is) the Royal Medical Director of that District, and the certificate was given by request of Madame Blavatsky's friends, who foresaw the immense future importance it might have. Following, is a translation of its text:—

"MEDICAL CERTIFICATE.

"The undersigned testifies, as requested, that Madame Blavatsky, of Bombay—New York Corresponding Secretary of the Theosophical Society—is at present under the medical treatment of the undersigned. She suffers from *Anteflexio Uteri*, most probably from the day of her birth; because, as proven by a minute examination, she has never borne a child, nor has she had any gynæcological illness.

(Sd.) "Dr. LEON OPPENHEIM.

"WÜRZBURG, *3rd November* 1885.

"The signature of Doctor Leon Oppenheim is hereby officially attested. WÜRZBURG *3rd Nov.* 1885.

"The Royal Medical Officer of the District.

(Sd.) "Dr. MED. RORDER.

"We, the undersigned, hereby certify that the above is a correct translation of the German original before us. WÜRZBURG, *Nov. 4th*, 1885.

The document, worded as delicately as possible, was intended to cover the whole question of H. P. B's moral history from her youth upward. She herself, as well as the friends in question, wrote me about the circumstances, and expressed the hope that I would keep the paper with care against the future time when I could make the best use of it. I think that time is the present, for now that the bitterness of that olden epoch has given place to a more charitable feeling towards her, and her underlying greatness has gradually become more and more recognized, I believe that the publication of this document, of unquestionable authority, in its proper place in this chronological narrative, will give pleasure and consolation to her friends and pupils, and afford them some sort of a shield with which to ward off the arrows of slander, shot at the heart of our benefactress. As the years roll by and this movement of ours consolidates itself upon its permanent foundation, this rugged personality behind which a giant Individuality worked for humanity will be more and more uplifted, grow brighter and brighter. For sayeth not the Buddhist aphorism: Good men shine from afar, like the snowy peaks of Himavat; while bad men are unseen, like arrows shot in the dark? "Peace to thee, H. P. B.!" is now the loving cry of thousands.

CHAPTER XXIII.

TENDER OF RESIGNATION.

LIVING in a country where omens and portents are traced in the chirp of a lizard, the cry and flight of a bird, and in innumerable other natural phenomena, what wonder if one should in time be more or less affected by such ideas, and that on the occurrence of any unusual thing the idea of its possibly occult significance should present itself to one's mind? On awaking, on the morning of the 7th October (1885), I received an unpleasant shock. The splendid portrait of one of the Masters lay inverted on the floor, the top downward, having been detached from the nail where it had hung in my room,* at some time during the night. The cord had been cut as if with a knife, and the picture had turned a summersault over a tall bookcase, and leaned itself against the glass doors without injuring them or itself, save at one corner where its heavy gilt frame had been a little crushed. I was amazed at the accident and distressed

lest it might indicate the displeasure of the Master for some serious fault that I had committed. I stood there and looked and pondered a long time, trying to recall any sin of omission or commission which had brought upon me so phenomenal a rebuke, but I could find nothing. Yet the clean cut through the cord belied any accidental rupture of the fibres, and the fact that the canvas had not been torn when the picture was falling and striking the tiled floor made the affair mysterious. No one whom I consulted gave me any reasonable explanation, and I was worried all that day. At last the puzzle solved itself; the accident had been caused by the squirrels, which then infested the house and made their nests in the drawers of our furniture and behind the books on our shelves, doing much damage in various ways. They had gnawed the cord to get fibrous nesting material, and the picture had probably been let down easily by the friction of the dragging of the cord over the nail. But this did not weaken my resentment against the little rodents, for I got very angry when I bethought me of the irreparable loss that would have been caused by the destruction of the canvas on which was painted that divine face. So I straightway had wire-gauze frames fitted in all the doorways and window-openings of rooms where protection was needed against the ravages of these pretty little pests.

I do not recollect whether or not I have mentioned a scheme propounded by an eccentric member of the Society to buy up the *Theosophist* with the idea of suppressing it and in its place starting a new magazine, under the title of

Karma. At any rate, such a proposal was made to me, which only as a matter of news I reported to H. P. B., never imagining that she would think that I should seriously entertain it; but one day I received from her a cablegram declining to sell (which cost her, as she wrote me, forty marks, or £2 !). In due course of mail a letter came, in which she said she would "as soon think of cutting off her hand" as do it! She added some uncomplimentary remarks about the person making the offer.

A few days later I lectured at Pacheappa's Hall on "The Peril of Indian Youth." A Committee of Hindu school-boys took notes and wrote out the lecture for publication at their own cost. Thousands of copies have since been sold. Their peril, I showed, lay in the fact of their irreligious education by Government and their anti-nationalistic education by the Missionaries, whose policy was to destroy their reverence for their national religion, which to a Hindu is the spur of all action, his guide and pole-star: to rob him of this is to leave him like a rudderless ship on the sea of life. This, in fact, has been the keynote of all our teaching in Asia from the very commencement; and the creation of the Central Hindu College at Benares by Mrs. Besant has been made possible thereby; it is the harvest after twenty years' sowing of thought-seed.

In November I went to Karur and formed a local Branch. One of the 18 Siddhas or high Adepts, recognized in Southern India, by name Karura, is buried in the temple at this place, and, according to popular tradition, is still alive in his tomb, sitting in *samádhi*.

On my return home, "A'nanda" and I spent a good deal of time in planning, measuring, and calculating the cost of the alterations of the house-front and *porte-cochère*, which resulted in making the present Convention Hall. According to our closest ciphering, we thought it could be done for rs. 2500, whereas the plan approved at the previous Convention for a separate building called for an outlay of about rs. 15,000. The approval of our resident councillors, Messrs. R. Raghoonath Row, P. Sreenevas Row, and T. Subba Row, having been obtained, workmen were set to breaking ground the very next day, and from that time onward they were driven at a rate of speed more often seen in America than in slow-moving India. The foundations and retaining walls were built, the earth-filling done, the marble steps transferred to the outside of the extension, a temporary roof of posts and palm-leaves lined with white cotton cloth constructed, decorations made, crystal lustres hung, and the Hall made ready for occupancy within twenty-seven days—deducting four days when it rained heavily. The Convention met at the usual time (December 27) in its own premises, and all the delegates expressed their complete satisfaction. A photograph of the empty Hall that was taken at the time, now possesses historical interest. The improvement saved us over rs. 400 that year, which we should have had to pay for the hire of a temporary *pándal* or wigwam. The improvements cost only rs. 2600, one hundred more than the estimate.

The news from France at that time was encouraging, no less than four or five leading magazines having admitted

Digitized by Google

serious articles on Theosophy by first-class writers. But the public mind of France has for many years been uncongenial to the discussion of metaphysics. The friends of that "distressful country" and of her cheerful, enthusiastic people —none are more so than Americans—have long been saddened in looking critically upon her spiritual condition. As a reaction from her crass materialism there has been a recrudescence of superstitious belief, as evidenced by the pilgrimages to Lourdes and other presumably favored shrines, and by the excitement over the jeremiads of Mlle. Couêdon: a great attention has also been given to the subject of Hypnotism. But her public men seem to be madly clutching for money and the pleasures of sense, and the current of egoism sweeps everything before it. The books of Zola are, I fear, not so much exaggerations as social photographs. Moral corruption, formerly confined to the effete aristocracy, has rotted the middle and is rotting the peasant class. This is not only an impression from personal observation during my frequent visits to the country, but I have it from long talks with persons of the highest social rank and most conservative views, who have bemoaned the facts while admitting them. When a country descends so low as to crown vice with laurels and make virtue a butt for jest; when it fills its shop windows with pornographic books and pictures, and crowds a theatre to see a shameless hussy undress herself on the stage, and she sits to the photographer for a series of views of herself in her lascivious scenes, which are sold by thousands; when a Dreyfus case—*i.e.*, the death of personal liberty and civil

Digitized by Google

law—has become possible; when all these things are, what is the use of talking Theosophy to the general public and inviting the nation to rise to the higher ideal of human perfectibility? Yet things were never, can never be, so bad but that a large minority of true, noble souls can be found, and so let every one of us send to Capt. Courmes, Dr. Th. Pascal, M. Gillard, and their little contingent of valiant workers, the fervent prayers of our hearts for the success of their efforts to spread theosophical teachings in their sunny, smiling land—the cradle of many a hero, many a genius, many a great teacher, many a divinely-inspired poet, many a master of science and arts.* For my part, I shall never altogether despair of France until she commits national suicide. *Absit omen!*

In the same month of December Mr. W. T. Brown, the "Poor Brown" of Dr. Hartmann and Mr. R. Harte, published his autobiographical pamphlet entitled *My Life*, to the regret of his well-wishers at Adyar. It shows him to have been at the time an earnest young man but an emotional sentimentalist, quite unfit for practical life in the world. He had chopped and changed before coming to us, and has been doing it pretty much ever since; the latest news being that he has turned Catholic, taken the soutane, kept it on only a few days, became again a laic, and is now teaching in a Roman Catholic college in Madras Presidency, and married to an Eurasian widow lady of ripe age. May

* Since the above was published (1899) a great change for the better has occurred. Our movement has quadrupled its strength in France.
